Continent, on the Black Sea
and on the West African
Coast and between the
ports on the sub-continent
of India and Burma.

SCINDIA SHIPS
SERVE
INDIA'S NEEDS

PHILIPS on the job...
all the way

In the cure of disease, detection must be quick and accurate, treatment effective. Philips helps the medical world all the way from diagnosis to therapy. Philips diagnostic X-Ray apparatus, electro-cardiograph equipment, dental units and colorimeters aid the detection of disease... Philips therapeutic X-Ray apparatus, surgical and pharmaceutical specialities help in its cure. This is not all...

Apart from the world of medicine, Philips contributes to the world of industry with its comprehensive lighting service, electronic equipment, process and quality control apparatus. In the world of entertainment Philips helps with radios, television and cinema projection equipment.

PHILIPS contributing today
to India's future

PHILIPS INDIA LIMITED

MORE FOREIGN EXCHANGE FOR THE NATIONAL PLAN

Extensive international trade is essential for the development of national economy. A country's foreign trade largely depends on efficient banking service. With a network of correspondents at all important trade centres of the world the United Bank is equipped to render adequate service and give expert guidance in matters of foreign trade.

FOR THE INVESTOR

Growing Scarcity of Blue-chips

Investment Gossip:

THE end of March has come and gone, and expenditures have been incurred by the Central and State Governments in respect of allocations that might otherwise have lapsed. There is the expectation, in money market circles, that bank Deposits would have benefited considerably; but I suppose we shall have to wait for the next week before we have confirmation—or refusal.

But available figures show that the outstandings of Government Treasury Bills were placed at Rs 1211 crores on March 27; and if we remember that, during the year, Rs 300 crores of ad hoc Treasury Bills were funded by the creation of a special issue of 4 per cent 1973 loan, we would be able to come to the conclusion that, during 1958-59, the extent of deficit financing, including public auction of Treasury Bills, has been of the order of Rs 216 crores; but, to this, we will have to add another Rs 20 crores being the probable size of deficit financing in the last two, three days of the month.

Now, deficit financing in this size and the heavy note expansion in the first week of April both may be said to have a bullish connotation for stock markets. On the other hand, however, there is a bear factor or two on the stock exchange horizon.

In the first place, it is now market gossip that a Tata rights issue is in the offing. This, it is argued, will drain a considerable amount of money from the market.

But I cannot agree that even this is unalloyed bearish news. After all, the Tata management may be relied upon to press the point that any rights issue must be made available to shareholders at par. The "bonus" value of any such rights issue need hardly be diluted upon.

Then, there has been the continuing scare about nationalisation of shipping, and it is the Gateway city that has been humming with rumours in this regard. I will not be so foolhardy as to essay a prediction in this context. But I will say this, that the generally sound corporate prospects should far outweigh any individual pieces of, shall I say, ill import.

Lastly, there has been the recurrence of talk about so called yields. Prices of shares have risen so much in the past, they say, that it is

unconscionable for the investor freshly to extend his commitments; the return is just not enough.

If the prospect is for the general structure of interest rates to stay where it is, I would agree that it is not worth the shareholder's while to add to his investment portfolio at current prices. But bank chairmen have been giving out the hint that, at least in the banking sphere, a downward readjustment in the rates offered on Deposits is essential—and perhaps inevitable.

Then, the imminence of the slack season, with its promise of money more easily available, should further exert a downward pressure upon interest rates generally.

If you argue in such a manner; and if you moreover have regard for the fact that the concentration of market activity is on the growth scrips, you will have to concede that further purchases at current prices is to be recommended.

A final talking point: responses to LIC tenders tended to be enthusiastic. Today, brokers are finding some difficulty in filling orders. As one such of the fraternity told me, there is a growing scarcity of blue-chips.

£R\$

Investment Notes:

Speculation on the size and terms of the new issue of capital by the Tata Iron & Steel Company has now started. It is learnt that the capital will be issued at par and no premium will be demanded. The question that arises is whether the issue is to be in the form of equity capital or preference capital. Some circles seem to favour an outright equity issue or an issue consisting partly of equities and partly preference shares. There is also a suggestion that, if preference shares are issued, these shares should be made redeemable over a given period. All these suggestions are still in the realm of speculation.

Thanks to the progress of the company's modernisation and the expansion programme, the TISCO has reported a substantial rise in output. Total production of saleable steel amounts to as much as 884,700 tons in 1958-59 as against only 786,900 tons in 1957-58. Production of Steel Ingots has risen to 1,149,900 tons from 1,106,800 tons and of Pig Iron to 1,137,800 tons from 1,093,300 tons.

Also, the output figures of the Indian Iron & Steel Company for March reflect the beneficial effects of the expansion programme, which is mostly completed. Pig Iron production has risen to 95,262 tns from 83,715 tons in February and Steel Ingots to 70,887 tons from 61,987 tons. Despatches of saleable steel have improved to 75,972 tons from 45,090 tons.

The directors of the Century Spinning & Manufacturing Company have decided to make an application to the Government of India for permission to issue equity shares, at par, to the shareholders on the basis of one share for every five equity shares held.

RECORD OF ACHIEVEMENT

Sound underwriting and outstanding service to Policyholders are reflected in the rapid progress made by the ORIENTAL FIRE. Transacting Fire, Marine, Motor, Accident and all other classes of non-life business ORIENTAL FIRE also offers specialized cover against Machinery Erection and Breakdown and Boiler Explosion risks.

**ORIENTAL FIRE AND GENERAL
INSURANCE CO., LTD.**

Head Office: Oriental Buildings, BOMBAY-1

Investment Briefs:

Andhra Sugar has raised the dividend from 12½ to 15 per cent for the year ended 30th September, 1958.

Travancore Rayon has raised the dividend from 10 to 12½ per cent for 1958.

Travancore Rubber & Tea Company has raised the dividend by 1 per cent to 5 per cent for last year.

Coimbatore Pioneer Mills have maintained the dividend at 20 per cent for 1958.

Orissa Minerals Pay Bonus Dividend

Balance-Sheet Reviews:

THANKS to the increase in raisings and despatches, the Orissa Minerals Development Company has reported a substantial rise in sales from Rs 88.77 lakhs to Rs 128.14 lakhs for the year ended 30th June, 1958. Naturally, the net profit, after providing for Depreciation and Taxation, amounts to as much as Rs 18.04 lakhs as against only Rs 4.74 lakhs in the previous year.

Apart from providing Rs 2 lakhs for Building Reserve, Rs 1.5 lakhs for Stores & Stock Reserve and Rs 5.5 lakhs for Mechanisation Re-

serve, the General Reserve is raised to Rs 2.51 lakhs from only Rs 315. Taxation provision to Rs 18.3 lakhs from Rs 10.9 lakhs; Depreciation to Rs 2.17 lakhs from Rs 1.85 lakhs and Development Rebate Reserve to Rs 92,500 from Rs 5,300. Even after these increased allocations, the directors have found it possible to declare a bonus of 5 per cent in addition to maintaining the dividend at 20 per cent. Shares are ruling firm at Rs 37.50 as against Rs 33.62 quoted in the previous week.

£R\$

Century Spinning

The company's working for the year 1958 makes good reading. The gross profit has gone up from Rs 67.77 lakhs to Rs 1.33 crores. Despite increased capital, the directors have proposed to maintain the overall distribution for the year at Rs 22 per Ordinary share. They have recommended the payment of a pro rata dividend for one month on the 1,25,000 Preference shares at 50 p per share. Both the dividends will be paid on the taxed profits of previous years credited to reserves.

Gross sales have amounted to Rs 10.60 crores against Rs 9.39 crores. After deducting Rs 3.75 lakhs for capital issue expenses; Rs 43 lakhs for Depreciation against Rs 37.75 lakhs; Rs 31.59 lakhs for Development Rebate against Rs 18.32 lakhs and a further appropriation of Rs 42 lakhs to Development Reserve; 8.91 lakhs for managing agency commission

against Rs 2.91 lakhs and Rs 3.06 lakhs for Taxation against Rs 7.12 lakhs, the balance of Rs 5.53 lakhs has been carried forward.

Victoria Mills

The Victoria Mills, Bombay, has also shown better results. The gross profit is higher at Rs 14.17 lakhs for 1958 as compared to Rs 10.68 lakhs in the previous year. Of the profit, the directors have provided Rs 5.02 lakhs for Depreciation against Rs 7.29 lakhs; Rs 1.28 lakhs for Statutory Development Rebate against nil, Rs 42,718 for Development and Rehabilitation Reserve against Rs 1.73 lakhs; Rs 3.6 lakhs for Taxation against Rs 45,000 and Rs 90,960 for agents' commission against Rs 50,000. The dividend is proposed to be maintained at Rs 20, comprising a dividend of Rs 15 and bonus of Rs 5.

Vishnu Cotton

The working of the Vishnu Cotton Mills Limited (Sholapur) has resulted in a loss of Rs 9.02 lakhs after providing Rs 10.81 lakhs for Depreciation and Rs 1.75 lakhs for Development Rebate. In the previous year, the loss was Rs 9.54 lakhs without providing for Depreciation. The directors have transferred Rs 6.26 lakhs from various Funds, thus leaving a loss of Rs 2.76 lakhs, which is again increased to Rs 5.01 lakhs by providing balance depreciation of Rs 2.25 lakhs for 1952 and 1956. Dividends on the Preference shares are paid out of the transfer of Rs 80,000 from General Reserve. There is no dividend on the Ordinary shares. The directors have still not been able to provide for Depreciation for 1957, amounting to Rs 11.84 lakhs.

Lakshmi Cotton

The Lakshmi Cotton Manufacturing Company has incurred a loss of Rs 3.52 lakhs after providing Rs 9.08 lakhs for Depreciation for the year and Rs 3 lakhs for Development Rebate. In 1957, the company's profit was Rs 2.12 lakhs without providing for Depreciation. The directors have now provided Rs 9.97 lakhs as Depreciation for previous years and Rs 52,000 for Wealth Tax. Thus, the total loss comes to Rs 13.99 lakhs, which has been adjusted by a transfer of Rs 16.47 lakhs from various Funds, leaving Rs 2.47 lakhs on the credit side. A dividend of Rs 15 per share is recommended on the Ordinary shares. Sales have declined to Rs 1.94 crores from Rs 2.47 crores.

Mahindra & Mahindra

The net profit of Mahindra & Mahindra Limited amounts to Rs 19.12 lakhs for the year ended 31st October 1958 as against Rs 22.16 lakhs in the previous year after raising the Depreciation amount to Rs 12.04 lakhs from Rs 5.42 lakhs; Corporate taxes to Rs 31.25 lakhs from Rs 15.5 lakhs; directors' commission to Rs 2.96 lakhs from Rs 1.97 lakhs and provided

Rs 4.01 lakhs for Development Rebate against nil.

The directors have proposed a dividend at the rate of 22 per cent per annum on the Ordinary shares and also a pro rata dividend of 22 per cent for one month on the new Ordinary shares. The allocation to General Reserve has been halved to Rs 5 lakhs. Sales have shown a drop to Rs 17.69 crores from Rs 24.41 crores.

McKenzie's Limited

McKenzie's Limited has made a profit of Rs 36,836, subject to Taxation, for the year ended 31st July 1958 as against Rs 4.07 lakhs in the previous year. (Last year's profit includes an amount of Rs 4.12 lakhs in respect of work done in Rangoon, accrued in previous years). The Development Reserve gets Rs 10,000 against nil, while an amount of Rs 15,000 is provided for Wealth Tax for the assessment year 1959-60. The directors have provided Rs 10,000 for Indian income-tax.

The directors have proposed to transfer a sum of Rs 3,61,500 from General Reserve to pay dividends and issue third Preference shares in lieu of dividends to be paid on the second preference shares for the years 1947-48 to 1957-58 at 5½ per cent per annum. If the scheme is not approved, the amount will be re-transferred to General Reserve. In other words, the company proposes to raise the paid-up capital from Rs 22 lakhs to Rs 23.82 lakhs by the issue of 18,500-5½ per cent Redeemable Third Preference shares of Rs 10 each, to be reduced by the company on the 31st July, 1960.

Coonoor Tea

Despite a smaller outturn of tea, the Coonoor Tea Estates Company has been able to report slightly larger profits for the year ended 30th September, 1958. The increase in expenses is more than offset by a higher average selling price.

The net profit, before providing for Depreciation and Taxation, amounts to Rs 2.59 lakhs as against Rs 2.48 lakhs in the previous year. The provision for Depreciation is Rs 26,004 (Rs 24,390) and Taxation Rs 1.2 lakhs (Rs 1.03 lakhs). General Reserve gets Rs 20,000 (nil) and the Dividend Equalisation Reserve Rs 15,000 (nil). The directors have recommended a final dividend of 5 per cent, making a total of 20 per cent against the same in the previous year.

Record of the LIC

THE release of the first statutory report of the Life Insurance Corporation of India in the third week of March has been greeted with adverse comment on its belated appearance. This is hardly fair, for, apart from the fact that the report had first to be submitted to Parliament before it could be released to the public, the time taken for its compilation does not compare unfavourably with the usual delays in the publication of the Insurance Year Book and the much longer delays in the publication of similar reports in the UK. Until the process of integration of the accounts of the different units is completed, preparation of the consolidated accounts will be as time-consuming as the preparation of the Insurance Year Book. The progress made in this direction, and even more the fact that the report for the first accounting period ending December 31, 1957 was ready for submission to the Finance Ministry by December 1958, should be regarded as eminently satisfactory. Having said this it must be conceded that the information presented in the report has lost much of the interest it might have held for the public if the publication had preceded the release of New Business figures for 1958. In the circumstances the achievement of the Corporation during a peculiarly difficult period, when it was beset by troubles on all hands, may not be fully appreciated from the record.

By any objective standard of evaluation, the performance of the Life Insurance Corporation must be deemed satisfactory, even if no allowance were made for the difficulties of the nationalised industry in the first year of its existence. Because the handicaps under which it laboured were so obvious, even ardent supporters of the policy of nationalisation awaited the results of the first year with apprehension, while the opponents of nationalisation hoped for the worst. In the circumstances it would not have been surprising if the figures for 1957 had shown a fall as compared with previous years. But, actually, the figures presented in the first statutory report belie alike the fears of friends and the hopes of hostile critics, and serve, on the whole, to vindicate the decision taken by Government in January 1956 to nationalise the life insurance business in the country.

Though the life insurance business was taken over by the Government on January 19, 1956, the LIC came into existence only on September 1, 1956. For the first eight months of the year, the companies were managed by 'custodians' appointed by Government and retained their separate identities in the transaction of current business. The report covers the period of sixteen months from September, 1956 to December 31, 1957 so that, in future, the accounting period of the Corporation will be the calendar year. It is, therefore, necessary to break up the figures for the period under report into figures for calendar years in order to make them comparable with those for the previous accounting periods when the life insurance business was in the hands of private insurers. While this is possible in respect of new business, it cannot be done in all cases. For instance the figures of total business in force as at the end of 1956 are not available.

The Corporation during the sixteen months' period covered by the report wrote a total sum of Rs 336.67 crores under 9,41,654 policies. This total consists of Rs 54.77 crores during the last four months of 1956 and Rs 281.90 crores during the calendar year 1957. The business written in the first eight months of 1956, under the custodians' regime amounted to Rs 145.51 crores and the total new business in 1956 was Rs 200.28 crores. The increase of business in 1957, which was practically the first year of effective functioning of the Corporation, was Rs 81.90 crores. This fact should be taken into consideration when suggestions are put forward that the nationalised life insurance business will function more efficiently if the monolithic corporation is broken up into a number of units. That was exactly the state of affairs in 1956.

The growth of business over the last few years can be seen in perspective in the following table which gives comparative figures of new business and business in force for the years 1953 to 1957. Only the figures for business in India have been included as, after nationalisation, the Corporation stopped writing new business in a number of foreign countries.

Year	(Rupees in crores)	
	New business during the year	Business in force at year end
1953	156	970
1954	238	1,091
1955	241	1,128
1956	188	Not available
1957	278	1,375
1958	345	Not available

It will be noticed from the above that the new business written in 1957 is not only higher than the peak reached in 1955, when the industry was in the private sector, but the tempo of expansion has been increased after the severe setback in 1956 and has been maintained in the subsequent year to bring total new business in 1958 to a record of Rs 345 crores. The increase in business in 1955 over the previous year it may be noted was only Rs 3 crores. It would appear that business was almost stationary and there is no reason to think, as claimed in some quarters, that private insurers would have improved on the performance of the LIC if they had been let alone to carry on the business. In this context it is regrettable that the figures of business in force, premium income, claims etc for 1956 are not separately available, so that it is not possible to assess the quality of the business secured in the year 1955 from the number of lapsed policies. It will also be in the public interest if the Life Insurance Corporation gives particulars of lapsed policies as was done in the Insurance Year Book.

The total premium income during the sixteen months covered by the report was Rs 88.12 crores as compared with Rs 58.55 crores in 1955 and Rs 37.56 crores for the first eight months of 1956. After providing for payment of claims amounting to a total sum of Rs 28.70 crores, and expenses, the life fund was augmented by about Rs 30 crores. This is the figure of the net increase. The life fund,

which at the beginning of the year stood at Rs 380.61 crores had been reduced by Rs 11.59 crores on account of divestment of the assets of foreign insurers and payment of management compensation. On the other hand, the fund has been increased by about Rs 70 lakhs, a gift from the Central Government to enable the Corporation to pay the policies issued by insolvent insurers in full. The actual addition to the life funds during the period under report, therefore, amounts to Rs 41 crores.

The total investments of the Corporation at the end of the period stood at Rs 381.90 crores, distributed as follows over different categories of investments.

	Rs Crores
Government & Approved Securities ..	260.61
Debentures & Shares of Indian Companies ..	69.14
Mortgages of Properties ..	13.86
House Property ..	21.38
Other Investments ..	16.91

The preponderance of Government securities is the most striking feature of this break-up. Another feature is the very low figure of advances against mortgages which is in marked contrast to the practice of insurers in the USA, where mortgages account for over 30 per cent of investments. With life funds increasing at a monthly rate of over three crores, it should be seriously considered whether the same ratio as between different classes of investments should be maintained in future.

The additions to the life fund account for a substantial share of investible resources and the investment policy pursued by the Corporation is a matter of vital importance for the economic development of the country. The maintenance of the old policy of investment, which has not been substantially altered, will result in starving industry of the funds required for essential expansion in desirable directions and put a curb on house-building. In this context it may be mentioned that increasing the proportion of equity holdings of the Corporation will not be of appreciable help to the large number of industrial concerns which formerly were able to raise loans from private insurers. The exit of 245 insurers from the field of life insurance business has left a vacuum in the field of industrial finance which the numerous credit institutions have not been able to fill.

The decline in mortgage loans has been explained by the legacy of bad mortgages which has involved the Corporation in litigation in about 400 cases, while another 200 law suits are anticipated. But it is difficult to understand why the Corporation should stop loans against mortgages, just because some insurers in the past lent policyholders' money without adequate security. The complete stoppage of such loans has dried up the funds available to finance house-building by individuals. This is sought to be met by diverting life funds to State-sponsored housing schemes. But industrial concerns continue to be deprived of the facility of raising loans on the security

Indian Finance

Established 1928

April 11, 1959

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right—The Analects of Confucius"

of their fixed assets. If this field of investment is considered too risky to be undertaken directly by the Corporation, part of the life funds can be made available to the different credit institutions in the country, (the Industrial Finance Corporations, the Small Industries Corporation, the Refinance Corporation etc) who may be expected to have the expert technical services needed to appraise the security of such advances.

In estimating the record of the Life Insurance Corporation in expanding its business, the cost of acquisition is a matter of vital importance. In this respect the report does not disguise the fact that the position is not quite satisfactory. Though both overall ex-

pense ratio and the renewal expense ratio are lower than the combined figures for all insurers in the past, the respective figures of 27.3 per cent and 15.89 per cent are on the high side and compare unfavourably with the experience of big insurers in the past. But improvement in this respect depends upon a helpful change in the attitude of the employees who now appear to be hell-bent on policies which add to the burden on the policy-holder. It would be helpful in extending the scope of insurance in the country, if legislators who take a keen interest in the affairs of the Corporation will take an objective view of the share of employee agitations in raising the cost of life insurance.

Do's and Don'ts

By M. SUR

MR GULZARILAL NANDA, the protagonist of tripartite conventions for labour-management relations, has now—to use his own words—propounded a code of 'do's' to supplement the 'don'ts' of the Codes for Discipline in Industry and for Inter-Union Harmony. In drawing up codes of behaviour, however, it is so much easier to say what should not be done than to say what ought to be done. When it comes to what one ought to do, it is easier to lay down broad general principles than to particularise. The classic example is the Ten Commandments, which—with the exception of the exhortation to honour one's parents—is all in the form of "Thou shalt not....." When Jesus phrased these commandments in positive instead of negative language it was in the form of two broad principles: love God, and love your neighbour. Most people have a fairly clear idea of what they should not do if they are to maintain intact the society or community to which they belong, but what they should do to make that society or community orderly, disciplined and progressive, it is much more difficult to say. So when it comes to industrial relations 'don'ts' are easier to frame than 'do's'. This is one's first thought when studying the draft Code of Efficiency and Welfare now circulated for comment by the Ministry of Labour, for what should one put into a code of 'do's' for industrial relations except perhaps the exhortation "learn to understand one another", which is just as difficult as to learn to love one another.

The title chosen for the new code calls for some comment. During the First Five Year Plan probably the word 'welfare' would have come first, but the framers of the Second Plan realised that there must be increased productivity if there were to be higher wages and more amenities for industrial workers. The productivity campaign has been launched to make all productivity-conscious, and so efficiency now takes precedence over welfare in the title of the code. If only this idea could be driven home, then perhaps there would be no need for such a code.

The draft code takes the form of an agreement in the first part of which management and union jointly agree certain clauses, then a further section commits management to certain items, and a third commits the union. Looking at the first section of the code we find first a reiteration to abide by the Code for Discipline, but the two parties to that code have still not agreed its final wording. The second clause is arresting, for by it management and unions would agree to "immediately review all cases pending before Courts and withdraw as many of them as possible for mutual settlement." This is an excellent idea in theory, but one wonders what the conciliation service has been doing if it has not already tried all avenues so that after a case has

gone to adjudication, both parties, perhaps appalled by the prospect of a lengthy court case, decide to settle out of court. However, where there are rival unions, such settlement is usually well-nigh impossible, for the reference to adjudication is as much a declaration of war by one union against another as a dispute between union and management.

The third clause of the code agrees to work out suitable incentive payment schemes. Ever since the Second Five Year Plan was published, Government have been trying to popularise payment by results, but it seems that many unions are still suspicious of the idea, and it is by no means easy to work out acceptable schemes. However, further emphasis on this point may be useful. The next clause seeks to re-introduce Joint Production Committees, but an attempt was made to introduce such bodies under the title of Joint Production Units round about 1950, and the idea did not catch on at all. The suggestion now is that these bodies should be introduced either independently or as sub-committees of Joint Councils of Management. But why complicate the situation? Joint Councils of Management are being tried out as an experiment only in a small number of companies. Reports from some of them are encouraging, but the idea is very new and needs testing out. Why not give them time to develop? It is only in the best organised companies that numerous committees can be run effectively without interfering with production work. The fourth subject of agreement in the code is the setting up of suggestion schemes and with this there can be no quarrel. Some suggestion schemes have been notably successful.

When it comes to what managements are to agree in the code, the first item is reasonable wages and provision for economic security after retirement. This seems odd for wages in the majority of cases are now decided either by tribunal awards or by agreements, and provident funds are now mostly merged in the State funds. The second item is "reasonable prospects of promotion to workers by rationalising staff policy" and "by avoiding discrimination in implementing that policy." This seems sound and within the means of the management, though what are reasonable prospects of promotion may be seen quite differently by management and workers.

Thirdly managements are to agree to provide safe and healthy working conditions and reasonable welfare amenities—but surely these are already covered to a large extent by the Factories Act—and "wherever possible suitable housing and/or transport facilities". The latter may be necessary in certain circumstances, admittedly, but in the majority of cases where factories are situated in towns, it is neither necessary nor feasible to provide housing and transport and the promise, even when limited by the phrase "wherever possible," is likely to

create misunderstanding and raise dissatisfaction.

That the management should next commit themselves to "maintain machinery and equipment in sound working condition and replace worn-out machinery and equipment at the earliest opportunity" will sound merely cynical in the ears of those who have been trying in vain to import new machinery, or who having at length obtained new equipment are met with opposition to rationalisation. Provision of suitable training facilities for all workers, supervisors and middle management, is another generalisation which is sound enough, but in practice the extent of training possible depends largely on the type of work and organisation. Finally management is to "rationalise management apparatus to avoid waste and inefficiency and to give the workers a sense of belonging to the enterprise."

On their side unions are to agree "not to resort to methods of protest which would involve loss of production"; to abide by the Inter-Union Code of Conduct; do "all in their power to induce workers to reduce absenteeism and turn-over," educate workers in their rights and responsibilities and their relation to production; make only reasonable demands of industry; and actively support schemes of rationalisation, subject to the conditions agreed at the 15th Session of the Indian Labour Conference.

It is easy, though not very helpful, to be cynical and to cite cases of deliberate flouting of previous codes, but perhaps one can be permitted to ask what is the real purpose of these codes. They are presented as agreements, but who are the signatories? They are discussed in broad principle by the tripartite Indian Labour Conference and then submitted for ratification to the main national association of employers and workers. The Code of Discipline in Industry, for instance, has been accepted in principle by the Employers' Federation, but the various employers' association are still discussing whether the wording of the code should be changed. If the first code is still not fully accepted, is it opportune to introduce more? Of course, if the main object is to keep industry thinking and talking on these subjects, then perhaps this is as good a way as any other for achieving that purpose.

There seems to be too strong a tendency to go into detail instead of sticking to general principles. Industry does not follow a common pattern; there are infinite variations in organisation. Therefore each unit should be left to work out the application of the principles to its particular conditions. This is apparent in the codes and in the model grievance procedure drawn up recently, which goes into the minutest detail on the constitution of a grievance machinery, as though all industry could be lumped together and brought under one scheme. Perhaps it is partly the fault of industry and of the community in general which is too inclined to say "If Government want such-and-such done, then they must tell us exactly how to do it."

CALCUTTA

Pushed to the Wall

In a comprehensive review of the economic situation Mr Kishorilal Dhandhanian, presiding at the annual meeting of the Bharat Chamber of Commerce, has drawn timely attention to the plight of the distributive trade in the country. While plans for raising the level of economic activity are being drawn up by the dozen, those engaged in the distributive trade, who play the vital role of linking up production and consumption, have become the victims of the step-motherly treatment meted out to them under the regime of planned development. The prevailing fashion is to damn the trader in advance, so that the blame of any rise in prices resulting from ill-coordinated policies, can be foisted on their heads.

In the prevailing atmosphere of hostility which is all pervading because unfortunately it emanates from the highest level, the very useful service rendered by the independent trader in meeting the requirements of our vast population is rarely appreciated and frequently his claims for equitable treatment go by default. Those who demand the elimination of the middlemen do not stop to reflect that the vacuum left by the disappearance of the independent trader cannot be left unfilled. What takes his place, whether a co-operative society, or a bureaucratic organisation or the State Trading

Corporation, is bound to be at once more cumbersome and more costly. Critics who accuse the traders of profiteering seldom realise the very low margins within which they are usually obliged to work. In this connexion Mr Dhandhanian has drawn attention to the authoritative conclusions of Dr Lincoln Clark, who came to India on Government's invitation to advise on the problems of marketing of the products of small industries. After surveying the situation in the country, he came to the conclusion that the Government agency following a common pattern of selling would not be able to work within the very low margins at which the distribution of goods was being effected by the Indian traders.

It is not often realised that fifty per cent of the non-agricultural work force are self employed, and most of them are engaged in a wide variety of trades. The significance of any development which affects this sector on the precarious employment situation does not appear to be realised when politicians talk airily of the elimination of the "parasitic middleman". The Second Five Year Plan looked to 'Trade and Commerce' to provide new employment to 2.7 million persons out of estimated additional employment of 8 millions in all sectors. But far from helping 'Trade and Commerce' to reach this high target, official policy appears to be calculated to push the independent trader to the wall.

*

British Budget

While announcing a long list of tax reliefs on April 7, the British Chancellor of Exchequer took care to warn the nation that it was not to be regarded as a 'spending-spree budget'. Nevertheless, it has not belied widespread expectations of an incentive budget which will allow the citizens to keep a larger share of their income for their own use. There is something in it for everyone—purchase tax reliefs, reduction in rates of income tax, both in the standard rate as well as reduced rates for the lower brackets, restoration of investment allowances for industry, earlier payment of postwar credits with interest added, and cheaper beer.

The public was led to expect a wide range of tax relief by unmistakable indications of the growing strength of the pound, which made it possible to think of relaxing the curbs on personal spending and investment. The Bank of England announced relaxation of controls on forward dealings in foreign exchanges on March 20. On the previous day, 200 million dollars was paid back to the International Monetary Fund, forty days ahead of the scheduled date. Both indicated the growing strength of sterling since the announcement of convertibility for foreign holders. This was followed by the Government's survey which painted a rosy picture of the nation's economic health and underlined the Govern-

ment's readiness to take steps to stimulate economic expansion.

With a revenue surplus of £ 377 million for the year 1958-59 and an expected surplus of £ 399 million at current tax rates, after meeting expenditure of £5223 million, for the budget year, there was no question of an austerity budget or even a stand-still budget. With such surpluses on hand, Government was expected to meet capital expenditure by borrowing instead of by taxation and to release about £ 300 million for tax relief. This is just what Mr Amory has done. The tax reliefs announced by him would cost £ 295,000,000 this year.

Suggestions are not wanting that the budget which distributes largesse all round has been framed with an eye on the coming elections. But how soon the elections will be held is anybody's guess. With his eyes fixed on the Summit, Mr Macmillan is hardly likely to welcome any distraction in the domestic sphere. Even if the Foreign Ministers, who will be meeting on May 11, succeed in eliminating the roadblocks barring the way to the Summit, the climbing party will not be ready till about August. By that time the impact of the budget on public opinion would have spent itself.

The reasons for the tax reliefs have to be sought not so much in the elections as in the economic conditions. The drastic measures adopted in September 1957 to safeguard the pound have succeeded in halting inflation and strengthening confidence in sterling. But it has been done at the cost of stagnation in production and growing volume of unemployment. With the pound out of danger, it was high time to take the national economy out of the straitjacket.

*

Broken Bearings

Anyone who has taken a bicycle to pieces at the age when every boy tries his hand at mechanical engineering, or has tried to pedal a cycle with broken bearings in the hub, will have no difficulty in appreciating the importance of ball-bearings for the smooth running of industrial machinery. It should, therefore, be a matter of concern that the going has been far from smooth for the section of the trade that supplies industry with its requirements of this essential item of equipment. Presiding over the first annual meeting of the All India Ball Bearing Dealers' Association, Mr R. L. Maheswari has drawn attention to the crisis the trade has been passing through in recent months. The rapid growth of industry has not helped the trade during a period of stringent import restrictions. In fact, for the ball bearing trade, the period of expansion in manufacturing industry has coincided with a period of decreased turnover and offtake. This was the result of the curtailment of commercial quotas accompanied by the issue of Actual Users' licences on a liberal scale. What

little was left for the trade after the issue of Actual Users' licence has been swallowed up by the State Trading Corporation.

Up to the end of February 1959 the STC has issued licence for the import of Ball and Roller bearings of the value of nearly Rs 5 lakhs for the licensing period October to March 1959. The licences have been issued for imports from Czechoslovakia and Hungary, and this perhaps explains the incursion of the STC in this very small field of imports. While considerations of economy of foreign exchange have obviously determined the policy of importing these items from Eastern Europe through the State Trading Corporation, have the authorities responsible for making this arrangement satisfied themselves whether the ball and roller bearings manufactured in Czechoslovakia or Hungary will prove suitable for machines already installed in India which have been manufactured mostly in Britain, USA, or West Germany? Only two or three years ago, our next door neighbour Burma had the sorry experience of importing a large consignment of electric bulbs and accessories from the Soviet bloc, only to find that they could not be used as they were not suitable for the voltage at which current was supplied in Burma. This is the sort of accident that is likely to occur when the Leviathan tries his hands at trade.

The entry of the STC threatens the firms which have been engaged in this trade for a long time with extinction. Having imported these ball and roller bearings through the STC, it is only fair that the distribution should be arranged through the trade, unless the STC is to play the role of an elephant let loose in a sugar plantation.

Transactions of Fiscal Year-end

Scheduled Bank Advances
Exceed Rs 1000 Crore Mark

ADVANCES in the Reserve Bank returns for April 3, which may be seen to the end of fiscal year transactions of the Central and State Governments, are rather less satisfying than they were last year. But, for that reason, they are also more intriguing. We may call, briefly, the set of complications which succeeded in obscuring the full impact of the year-end disbursements in 1958. Firstly, the net expenditure of the State Governments was considerable, and it was possible to infer at least of such expenditure related to repayment of advances to the Central Government. Secondly, advance instalments against the Pensions Agreements were received from the UK Government, and this added both to the Reserve Bank's holdings of foreign securities and to the Central Government's balances. Thirdly, with such influx of receipts of various kinds, the Central Government were in a position to institute reverse advances in a substantial amount. The transactions relating to the end of the fiscal year, 1958-59, are, we repeat, less complicated—and

therefore, for reasons we shall set out, more interesting.

- (1) The balances of the Central Government have improved by Rs 6.78 crores to Rs 60.62 crores.
- (2) The Deposits of State Governments are substantially lower by Rs 14.89 crores at Rs 11.84 crores.
- (3) The Ways and Means borrowings of State Governments are marked higher by Rs 6.49 crores at Rs 31.26 crores.
- (4) Government Treasury Bills purchased and discounted, held in the Banking Department, are steeply higher by nearly Rs 18 crores at Rs 23.11 crores.
- (5) While Investments in the Banking Department have been marked down by Rs 20.23 crores at Rs 231.46 crores, Rupee Securities in the Issue Department are shown to be higher by just under Rs 40 crores at Rs 1331.25 crores.

The first point that we may make is that the Central Government have apparently had recourse to deficit financing for Rs 20 crores. For, while it can be seen that there has been a transfer of Rs 20 crores from Investments in the Banking Department to Rupee Securities in the Issue Department, the gross rise in Rupee Securities with the Reserve Bank is of the order of Rs 40 crores. It became necessary for the Central Government to institute deficit financing in such an amount, because, apparently, the repayment of advances by State Governments was spread over two weeks or so. Thus, during the week ended March 27, the Deposits of State Governments were marked lower by over Rs 9

crores, while their borrowings from the Reserve Bank rose by Rs 4 crores. In the latest week, the net disbursements of the State Governments have been rather smaller than they were in the corresponding week of last year. We are to presume that the payment to the Central Government was also in a smaller amount. Then, there does not seem to be any receipt of foreign assistance, which might have helped to swell the Central Government's balances.

Furthermore, the Central Government exercised their option, it would seem, to tender Rs 5 crores in Rupee Coin to the Reserve Bank and obtain credit therefor. It would follow that the receipts on account of State Government loan repayment and credit against the tender of rupee coin were insufficient to cover fully the net disbursements of the Central Government during the last week of the fiscal year; and what is significant is that drafts already issued, but not encashed continue to be at the fairly high level, since Bills Payable are shown at Rs 29.60 crores. Thus it is that the Central Government's balances, in the Reserve Bank returns for April 3, are over Rs 10½ crores higher than the traditional minimum of Rs 50 crores. And this was why deficit financing was resorted to. On the part of the State Governments, their net expenditures have been so heavy that they had to replenish their balances by discounting Treasury Bills with the Reserve Bank for something like Rs 18 crores.

The heavy governmental expenditures, the continued progress of the busy season and the demand on account of month early disbursements have all combined to bring about the sharpest expansion yet in active note circulation, which has risen by Rs 42.84 crores to Rs 1744.31 crores. It is interesting to note that Rupee Coin is marked higher by Rs 2.62 crores, but, then, it is to be assumed that rupee coin would have been higher by Rs 5 crores by virtue of the tender of rupee coin in that amount by the Central Government. Thus, there has actually been an outflow of rupee coin for Rs 2.38 crores. With currency expanded for Rs 40 crores against Rupee Securities, in the result, the Reserve Bank's cash in the till is practically unchanged at Rs 15.42 crores against Rs 15.60 crores.

It is very likely that the substantial year end disbursements of the Central and State Governments have, at least a portion of them, percolated quickly to the banking system; evidence in this regard is obtainable partly in the return of the State Bank, which we shall presently study. In the Reserve Bank returns themselves, it is noteworthy that the Reserve Balances of the Scheduled Banks are higher by Rs 6.51 crores at Rs 73.08 crores, and only a part of this is attributable to the State Bank. Furthermore, there has been a sharp decline of Rs 15.69 crores to Rs 97.86 crores in the Reserve Bank's Loans and Advances;

and, certainly, a decline of such dimensions can be accounted for only by a reduction in the indebtedness of Scheduled Banks. That there has been a net improvement in the position of Scheduled Banks vis-à-vis the Reserve Bank to the extent of around Rs 23 crores, at a time which is normally a busy season period, indicates strongly that Central Government disbursements have indeed been reflected almost immediately in the resources of the banking system.

Finally, as regards the Reserve Bank returns, there is a small rise of Rs 1.27 crores to Rs 36.32 crores in Balances Held Abroad, signifying perhaps the export surplus of the week.

The return of the State Bank for April 3 shows a sharp rise of Rs 15.05 crores to Rs 532.68 crores in Deposits. This may be partly on account of the new tranche of counterpart funds being deposited with the State Bank. That such is the case is suggested by the rise of just under Rs 10 crores to Rs 29.59 crores in Other Assets, pending the purchase of Government securities in corresponding amount from the Reserve Bank. But it is significant that the total of Advances, which has risen uninterruptedly since the week ended January 23, is marked down by Rs 0.76 crores at Rs 207.34 crores. This would seem to indicate that constituents who have benefited from Central and State Government payments during the week have utilised such new resources in liquidating a part of their indebtedness. Such liquidation or repayment of debt may have concealed the extent of the expansion in Advances owing to continued busy season pressure. The decline in Advances for this reason must be considered in conjunction with the rise in Deposits to indicate possible receipts from Government by constituents. The fresh investment in gilt-edged by the State Bank is for Rs 2.01 crores. Apparently, considerable new investments in gilt-edged are in the offing, since the Other Assets of the State Bank, which were placed at Rs 5.41 crores in the return for March 6, are now shown at Rs 29.59 crores. As a result, after borrowings from the Reserve Bank to the tune of Rs 2.08 crores had been repaid, the State Bank's cash in hand and with the Reserve Bank has improved from Rs 22.63 crores to Rs 26.56 crores.

It is the busy season whose impress is mainly to be seen in the return of Scheduled Banks for March 27, which constitutes a landmark in the sense that, for the first time, Advances of Scheduled Banks, in rising by Rs 17.04 crores, have pierced the Rs 1,000 mark, to be placed at Rs 1012.97 crores. Fortunately, in the same week there was a rise of just under Rs 11 crores to Rs 1668.78 crores in Deposits, this being mainly attributable to the State Bank. As such, borrowings from the Reserve Bank appear to have risen only by Rs 1.16 crores to Rs 61.86 crores

but, since, in the relevant week, the State Bank figured as having reduced borrowings by Rs 4.12 crores, it is clear that indebtedness of other Scheduled Banks rose by over Rs 5½ crores. What is more, borrowings from the State Bank are also higher by Rs 1.89 crores. However, the Scheduled Banks did not disinvest in gilt-edged. Owing to a decline in the State Bank's balances with the Reserve Bank, the Cash Balances of Scheduled Banks are shown lower by Rs 3.91 crores at Rs 148.01 crores.

The Forward Market in Gold

By Paul Einzig

THERE has been an active forward market in gold in India and other Eastern countries since time immemorial, and Bombay bankers have forgotten more about forward dealing in gold than London bankers are in a position to know. It is true, there was an active market in London during the 'thirties. But for the last twenty years or so forward dealing in gold was subject to an official ban. This ban was relaxed last year and was recently removed. The removal of the ban on March 20 was not followed by any increase in the volume of such transactions. Until that date forward dealings were tolerated provided that the bullion firms engaged in it consulted the Bank concerning the type of transactions.

It was permissible to sell gold for forward delivery when the buyer had some legitimate commercial or financial interest to cover against the risk of a dollar devaluation. Any Central bank and others who anticipated future receipts of dollars were permitted to sell these dollars against gold for future delivery. Similarly firms with contractual obligations under a gold clause were entitled to cover their commitment.

These and other informal rules aimed at reconciling the desire for the provision of facilities for legitimate purposes with the desire to avoid the development of large-scale speculation against the dollar. The British authorities were anxious not to interfere with London's functions as a world banking centre, and free dealing in gold constitutes an essential part of those functions. Zurich and other rival centres were able to offer foreign firms facilities which the London market would have been prevented from offering under a too rigid application of the official ban on forward dealing in gold. This placed London bullion dealers at an unfair disadvantage. One of them, Samuel Montagu & Co., solved the problem by establishing an affiliated firm in Zurich. But London as a whole stood to lose even under the flexible interpretation of the official ban. For it is one thing to have to apply for permission, if not for each transaction, at any rate for borderline cases, or for exceptionally large transactions, and quite another thing to be able to proceed with the transactions unhampered.

The reason why the British authorities were anxious to proceed with caution was that the demand for forward gold facilities arose last year entirely in connection with the wave of distrust in the dollar that developed as a result of devaluation rumours. The last thing the authorities would have liked to do was to provide facilities for those who wanted to speculate against the dollar, or for Americans who wanted to hedge against the devaluation without having to use their own capital resources. Any American citizen is in a position to hedge by buying and holding gold abroad. But that would mean tying down capital resources and many Americans wanted to hedge while retaining the use of their funds. To that end they bought gold for forward delivery in Zurich. The Bank of England was opposed to the extension of such facilities in London. Yet now that the ban has been removed the dealers are in a position to offer facilities similar to those offered by Zurich.

This apparent inconsistency is explained by the fact that at the

time when the ban was removed there was not evidence of any noteworthy flight from the dollar. That movement came to a halt, and the change was timed in a way as to ensure that it is not followed by large speculative operations.

There is of course always a possibility of a revival of the dollar scare, in which case the London market will be inundated with demands for forward gold. In existing conditions there would be nothing to prevent London dealers from meeting the demand, beyond the warning that should there be speculative activity on a larger scale the ban might be reimposed. This could easily be done, for the Bank of England has retained its power to restrict dealings in gold, it merely suspended the application of that power. There is a growing feeling, however, that any move in that direction ought to come from the United States.

Forward buying of gold can be covered in some degree by forward selling of gold. The Soviet Government in particular is in the habit of selling its gold for forward delivery. Apparently the Moscow

Government is more realistic than many private firms and individuals in western countries. It considers a devaluation of gold in the near future to be most unlikely, and takes advantage of the premium which it is able to earn by selling its gold for forward delivery. In all probability an increase of the possibility of a dollar devaluation as a result of a victory of the Democrats at next year's election would discourage the USSR and others from selling gold forward.

As a general rule bullion dealers cover their forward sales by purchases of spot gold. This they are in a position to do, in possession of dollar balances which they are entitled to use for that purpose. But they would not be able to operate on a really large scale, unless the premium should increase substantially above its present level, in which case other banks would become tempted to take a hand and employ their dollar balances for the purchase of spot gold. So long as the premium remains moderate it shows the absence of any large-scale speculation.

A panoramic view of the Burnpur works of The Indian Iron & Steel Company Limited

This is the town that never sleeps—the town of steel. Night and day, the vast works throb with activity as men and machines labour to feed the iron and steel-hungry industries of the nation. Using the most modern production technique the Company manufacture, under a system of rigid quality control, a wide range of products including rails, structurals, blooms, sheets, billets, slabs, pig iron, spun iron pipes, vertically-cast iron pipes and iron, steel and non-ferrous castings.

HC 71

The Indian Bank Limited
H. O. First Line Beach, Madras-1

In consonance with its policy of inculcating the banking habit amongst the community, the Bank has been opening a number of branches in the recent past.

BThere are now no fewer than 112 branches of the Bank functioning not only in India but also in Ceylon and Malaya.

LIn addition, the 23 local offices of the Bank serve the entire Madras City and Suburbs.

Foreign Exchange Facilities Also Available.

London Agents:
Westminster Bank Limited.

New York Agents:
First National City Bank of New York.

Secretary.

WORLD OF JUTE

umption of v Jute Exports

ie first time after ten years, as resumed export of raw jute. The first consignment comprised about 1,000 bales has already been loaded for export to the Continent. This is the recent decision of the Government of India to allow export of a limited quantity of raw jute from India through the State Jute Corporation. Some more consignments are being shipped by vessels, which will leave the Port shortly.

Meanwhile, the Jute Balers' Association, Calcutta, has claimed 300 tons of raw jute, valued at £400,000 had already been sold to overseas buyers up to the end of February. The Association says that, although the Government of India had permitted export of jute as early as in November, such exports could not be effected; because, contrary to regulations, the export duty of 10 per cent on a bale had not been abated.

The trade, however, decided to make these exports just to fulfil its commitments with the foreign buyers. At present, there is a considerable demand for raw jute in world markets, this position is likely to last for long, as production of jute and other competitive commodities is increasing rapidly in all countries. The delay in removal of the export duty naturally caused a great deal of speculation in the trade. It is felt that the production of raw jute will long cease to be India's monopoly and the impost, if continued, will only adversely affect the earning of foreign exchange, which is one of the reasons for increasing export of raw jute. The opening stock of raw jute in the mills, this season, was approximately 19 lakh bales, while the estimated production of jute in Assam, during the current season, is 71 lakh bales as opposed to 60 lakh bales in the previous season. There is, therefore, a total ability, including imports from Assam, of about 93 lakh bales. The mills' consumption estimated at about 60 lakh bales and the domestic consumption of 2 lakh bales, there should thus be a total surplus of 13 lakh bales forward, at the end of this season, of not less than 31 lakh bales as compared with 20 lakh bales at the end of the previous season. This is a most gratifying development. The Government of India has planned to increase still further

the production during the Third Five Year Plan. Assuming an export demand for jute goods of 56 lakh bales in terms of raw jute at the end of the Third Plan as against 48 lakh bales at present, the proposed production target of 65 lakh bales is considered reasonable. The planners, however, rule out the possibility of substantially increasing the acreage under jute. By raising yield per acre to three bales, they point out that the target can be achieved with just 2,170,000 acres under jute cultivation. Production of other fibre—Mesta—is expected to be of the order of 10 lakh bales. All these points make it clear that the only way, in which production of jute can be increased, the cultivators provided with the necessary incentive and the surplus finding an outlet, is for the Government to remove the export duty.

The fact that the export of jute is now permitted may encourage growers to produce better fibre this year. It is equally true that it is too early to make any predictions about the outcome. But, if weather conditions remain favourable and modern methods of cultivation are used, another bumper crop may be raised.

The market sentiment is, however, affected by the reports of a good rainfall in Assam and Northern Bengal a few days ago, and that the plants, in some areas, are about a foot high and very healthy. Another factor, which has a depressing effect on the market, is the accumulation of large stocks of raw jute with the mills. These stocks are considered sufficient for about five months' requirements of the mills. Thus, there seems to be little possibility of any sustained buying on the part of the industry. Naturally, stockists are getting anxious to dispose of their stocks, as prices are expected to fall further if the next crop turns out to be a bumper one. Meanwhile, Assam Bottoms are quoted at Rs 20.25 per maund for April-May delivery.

★

JUTE GOODS:

The Jute Goods section ruled generally quiet, partly in sympathy with the easier trend in raw jute prices and partly due to an inclination on the part of operators to await the stock figures for last month. In the absence of any foreign business, price movements were, therefore, mostly influenced by the speculative activity in the futures market.

Following were the price movements of jute goods:

	April 2nd	Highest	April 8th
	Rs	Rs	Rs
Hessian:			
40" × 10 Ozs. ...	40.50	40.90	39.50
40" × 8 Ozs. ...	31.65	32.00	31.55
40" × 7 1/2 Ozs. ...	29.15	29.35	29.30
Sackings:			
B. Twills ...	93.25	93.40	93.15
Hy. Coes (Green) ...	93.50	93.85	93.80
Cornacks ...	93.25	93.50	93.25
Cubans ...	114.00	114.60	114.50
A. Twills ...	112.00	112.25	112.25
L. Twills ...	104.75	104.75	104.90
D. W. Flours ...	110.50	110.85	110.90
Sugar Twills ...	104.75	105.00	105.00

WORLD OF TEA

Output & Export Earnings

THE complete figures for the twelve months of 1958 are now available for the six major tea-producing regions of the world. The combined total of these countries was 1,341 million pounds as against 1,280.3 million pounds in 1957. The general impression is that the 60 million extra pounds of tea, though not fully absorbed in consumption, is not so heavy to weaken the markets immediately.

Ceylon produced 33.50 million pounds in February as against 33.8 million pounds in January, making a total of 67.3 million pounds for the first two months of the current year as compared with 64.6 million pounds in the corresponding period of 1958. The production figures for March are not expected to exceed 30 million pounds due to severe drought in the tea-growing areas. In March last year, 37.9 million pounds were produced.

There is also a general feeling that the pattern of consumption has changed to permit the absorption of the extra output. There is, however, an undertone of disquiet among major producers, who are considering the revival of the International Tea Agreement. What most of them want is to have an agreed machinery of regulation, although it may not be immediately used.

Stocks in the UK have passed the 200-million pounds mark. It is expected that, in the next few months, there will be a progressive reduction in UK stocks, as North India has already sold out last year's crop and supplies from other sources are at the minimum level.

According to the latest official figures, India exported 503.36 million pounds of tea valued at Rs 123.39 crores in the previous year, to 442.65 million pounds worth Rs 123.39 crores in the previous year. Though the UK accounted for the bulk of the rise in exports, offtake by other countries was very encouraging. These countries together lifted 172.42 million pounds against 140.93 million pounds in 1957 and 158.16 million pounds in 1956.

Notable increases also took place in shipments to Egypt and Russia.

At the time of going to Press, it is learnt that stocks of jute goods with the mills have declined by 4,000 tons to 106,800 tons, reflecting a further sealing of 1 1/2 per cent looms from 2nd March. Sackings are lower at 72,600 tons against 79,900 tons, while Hessians are higher at 17,000 tons against 15,500 tons and other varieties at 17,200 tons against 15,400 tons.

which lifted 25.52 million pounds and 25.28 million pounds as against 16.82 million pounds and 15.95 million pounds respectively in 1957. Exports to the USA and Canada were also slightly higher at 25.49 million pounds and 19.04 million pounds as compared to 23.39 million pounds and 16.88 million pounds respectively.

Meanwhile, in the Export Sale held in Calcutta this week, offerings amounted to 64,072 packages. The majority of the offerings were of the end-of-the-season types. There was a good general demand; but prices were somewhat irregular. Any black leaf teas of clean appearance or with bright quality liquors ruled dearer and at times were appreciably dearer. "Teas for price", plain and medium BPs were irregularly dearer; but similar Fannings ruled easier, particularly the poorer sorts containing fibre which were upto 12 nP per pound and sometimes more.

Well-made stylish Leaf grades met with a strong enquiry and were sold readily at dearer rates, poor sorts in this category being generally easier. The few best CTC grades, on offer, met with keen competition and tended dearer. The poorer and fibrous sorts were irregular and generally easier. Following rates were quoted:—Clean Black Pekoe Rs 1.92 to Rs 1.96; Plain BP Rs 1.58 to Rs 1.60; Plain Fannings Rs 1.64 to Rs 1.70; Medium BP Rs 1.56 to Rs 1.60; Medium Fannings Rs 1.64; Best CTC Assam BP unquoted and Best Assam CTC Fannings unquoted.

In the Internal Sale, offering consisted of 21,250 packages of Dusts and 3,390 packages of Leaf grades. There was a good general demand for Dusts, orthodox type being sold at firm to dearer rate. Legg-cut Dooars were generally dearer with preference shown for the brighter liquoring teas. The poorer Darjeeling teas, on offer, received only fair support, while the better teas in this category were often sold at dearer rates.

The demand for medium CTC tea was again irregular and they were sold sometimes at rates which were upto 8 nP easier. The same powdery types were, however, again strongly competed for and generally sold at dearer rates. The few best liquoring types, in this category, although selling generally easier rates, received more interest towards the close. Following rates were quoted: Medium Dooars Dust Rs 1.82 to Rs 1.86; Medium Assam Grai Dust Rs 1.76 to Rs 1.82; Medium Assam CTC Dust Rs 2.00 to Rs 2.10 and Best CTC Assam Dust Rs 2.10 to Rs 3.00.

Demand for Leaf grades was poor and prices were generally easier. The few Green teas, on offer, met with less demand and were sold at easier rates.

In the Export Quota section, business was done in Special Transferable Licence at 1 1/2 nP per pound and in Non-Transferable Shippable Licence at 1/2 to 3/4 nP.

WORLD OVERSEAS

US Notes

Activity in the automobile industry represents today one of the heartening elements in the American business picture. Some improvement was expected this year, of course. Not expected, however, was the exceptional vigour of the automotive industry's current sales and production pace.

New car sales, in fact, seem to be gathering momentum week by week. During the first two months of 1959, the upsurge in sales led to an all-time high for that period in new car deliveries, surpassing even the previous peak set in the record automobile sales year of 1955. This kind of a performance can only be described as a pleasant surprise, particularly as it comes so soon after the sharp sales slump of 1958.

And sales gains in March are bearing out the signs of the upsurge that was visible during January and February. Sales during the first 10 days of this month, exclusive of the foreign imports which have been capturing a growing share of the U.S. market, were about 23 per cent above the same period of last year.

Despite this strong pace, automobile manufacturers are not predicting that 1959 will be a record-breaking sales year, except in the "small and compact car" category which includes nearly all imports from abroad. Most industry experts still cling conservatively to their original production forecasts of about 5.5 million cars this year. While well below 1955's record 7.9 million units, this total would be 1.2 million units more than in 1958.

In view of the growing consumer acceptance of the smaller vehicles, both foreign-made and domestic, total 1959 automobile sales could well be swelled by compact new cars expected in the latter part of the year from the major U.S. manufacturers—general motors, Ford and Chrysler.

These companies now make only the larger, standard-size U.S. cars in their American plants. So far, Ford is the only one of the "big three" to acknowledge officially that it is preparing an American-made compact car for the end of this year. But it is generally accepted as certain that the other big manufacturers will soon offer their versions of the American-made small car.

Chief gainers this year have been the American Motor Corporation's Rambler and Studebaker-Packard's Lark which together have accounted for 9 per cent of the U.S.

automobile production this year—up from 4 per cent a year ago. They also are showing by far the largest retail sales gains of any U.S. autos.

These two makes and the foreign imports increased their sales penetration of the American automobile market to 17.1 per cent of all deliveries during the early part of March, as against 16.1 per cent in February and 15.1 per cent in January.

Interestingly enough, neither Studebaker-Packard nor American Motors appears overly concerned about the possible introduction of smaller cars by other manufacturers later this year or next. Both are apparently confident that the compact car is here to stay and that they can perhaps even extend the gains they have been making.

This could turn out to be a record home-building year in the United States. So say construction men, and they have facts and figures to back up their prediction.

According to a recent survey by Fortune magazine among 325 builders in 35 cities throughout the country, about 2,350,000 private, non-farm dwelling units will be started this year. This total, if achieved, would just about match the record set in 1950 and would exceed the number of private homes built four years ago, in 1955, also a year of business recovery.

It is interesting to recall that in 1955 builders also were operating at a record pace during the early part of the year. And then, as now, they expected to maintain that pace for the entire year. But their chances of actually doing so are far better in 1959 than they were in 1955, when tightening money markets led to a scarcity of mortgage funds and pared residential construction by 13 per cent in just six months, and by a third within two years.

This year, however, a high level of consumer demand for new homes is coupled with a markedly easier mortgage money position.

Buying interest in new homes has picked up almost everywhere in the US during the past 12 months and builders have been operating at the present peak rate for the past six months. It is possible, of course, that the money supply may tighten somewhat as the year progresses, and that demand for homes may slacken. But right now neither of these eventualities poses a serious threat to the builders' optimistic forecast.

Indicative of the strong demand is the fact that completed new homes are selling noticeably faster than a year ago, on top of this, the US Federal Reserve Board's latest consumer survey shows that one-fourth more families intend to buy homes this year than last, when 1,130,600 private residential dwelling units were built.

The homes being built, moreover, seem well adapted to market requirements. More than half—some 600,000—of the single-family houses being built this year are

expected to fall within or below the middle price bracket, generally held to be about the \$15,000 level in most parts of the country. Another 500,000 the same number as during the past several years—are planned to sell at a higher price. In addition, the number of dwelling units in apartment houses built in 1959 may reach 250,000 which would be a post-war record.

Readily available mortgage money has helped finance the construction and a sale of new homes and all signs indicate that home builders and buyers will continue to have reasonably good access to funds in the capital markets for the rest of this year.

One reason for this is the nature of the current business upturn, which has proceeded on a broad front and with a minimum of inflationary strain. This is in contrast to the 1955 upswing, which was particularly pronounced in such segments of the economy as capital investment and durable goods, and hence tended to restrict the supply of money available for home mortgages.

There is the additional fact that a larger proportion of today's mortgages are of the "conventional type"—that is, privately-financed—than was the case four years ago, when the majority were guaranteed by the government. Today 68 per cent of all private housing units are being financed conventionally compared to 48 per cent in early 1955.

The proportion has risen partly because of the increased apartment house construction, where conventional financing is dominant, and partly because many private lenders have lowered their down-payment requirements, and have offered longer repayment terms on the family houses.

Conventional mortgages usually can compete comparatively well in capital markets, since they are not fixed by law and can be written at interest rates dictated by current business conditions. As Fortune magazine sees it, the more conventional mortgages there are, the less chance there is that home-building will suffer a setback even if money markets tighten.

★

Britain

The United Kingdom Government repaid \$200,000,000 to the International Monetary Fund.

In a written answer in the House of Commons yesterday, the Chancellor of the Exchequer, Mr. Derick Heathcoat Amory, said: "Her Majesty's Government notified the International Monetary Fund in December 1958 that it would repay \$200,000,000 of its December 1956 drawing before the end of the Fund's financial year (April 30, 1959) and repay the outstanding balance monthly during 1960 and 1961. Her Majesty's Gov-

ernment undertook to review the position in December of each year and accelerate these repayments if the position warranted it. The first repayment of \$200,000,000 is being made today".

Arrangements were made with the International Monetary Fund in December 1956 for the immediate drawing of \$561,470,000 and a stand-by arrangement up to the equivalent of \$738,530,000 over the next 12 months. The stand-by arrangements have been renewed up to December 21, 1959.

One effect of the \$200,000,000 repayment, because of the present form of the stand-by arrangements, will be to increase automatically, by the same figure, the amount of foreign exchange the United Kingdom can draw under the stand-by arrangement between now and December 21, 1959.

In general terms, the repayment reflects the considerable improvement in the United Kingdom's foreign-exchange reserves and balance-of-payments position which has occurred since the original arrangements were made in December 1956.

* * *

The spending of £124,000,000 on atomic-energy research and development in the coming 12 months is anticipated in the Government estimates for the United Kingdom Atomic Energy Authority (UKAEA) published in London on March 19. A feature of the Bill presented to the Commons is that receipts from atomic products, totalling £24,000,000, are expected to be four times greater than in the present year.

Provision is made in the UKAEA estimates for grants of £4,600,000 to the National Institute for Research in Nuclear Science. Contributions to international atomic-energy projects will include £105,000 towards a boiling-water reactor experiment in Norway—to which the United Kingdom will contribute £240,000 over three years—and £95,000 towards reactor experiments in the United Kingdom.

The Civil Estimates also include the provision of £11,000,000 for the Department of Scientific and Industrial Research (DSIR). The department's subscriptions to international organizations will include £1,225,000 for the European Organization for Nuclear Research. This organization is concerned with the planning and organizing of inter-national co-operation in fundamental nuclear research and, in particular, with the establishment of an international nuclear-physics research laboratory at Geneva.

The note accompanying the DSIR estimate explains that "the total cost of the original scheme, which involves the construction of two large particle accelerators, is now provisionally estimated at £21,000,000, spread over nine years". The cost will be met by subscriptions from member States, and the share to be contributed by the United Kingdom is to be not more than 25 per cent.

State Trading in Two Parts

The scheme of State Trading in foodgrains provisionally decided upon by the Government of India falls into two parts, said Shri A. P. Jain, Union Minister for Food & Agriculture, making a statement in Lok Sabha on April 2. They pertain to the "ultimate pattern" and the "interim scheme to be worked till the establishment of full-scale state trading."

The Minister said that the Government were aware of the difficulties in the way of undertaking full-scale state trading immediately, in particular of the absence of an adequate administrative organisation, the lack of sufficient storage accommodation and the want of adequate buffer stocks.

He announced that the Government had broadly accepted the view of the Working group set up by the Government of India to work out the details of the scheme, that the primary objective of State trading is "to maintain price levels which are fair to the producer and the consumer and to reduce to the minimum the spread between the prices received by the farmer and the prices paid by the consumer throughout the season and over an agricultural year."

TEXT OF STATEMENT

The following is the text of the statement:

At the last meeting of the National Development Council held on November 8 and 9, 1958, it was decided that the State should take over the wholesale trade in foodgrains. It was also decided that an adequate number of primary marketing societies should be set up and linked with village cooperatives which should serve as agencies for collection and sale at assured prices at the village level.

In pursuance of the suggestion of the National Development Council that the Ministry of Food & Agriculture and the Planning Commission should work out a scheme for the state trading in foodgrains, a Working Group was constituted under the chairmanship of the Food Secretary and with representatives of the Ministry of Finance, the Ministry of Food & Agriculture, the Planning Commission, and the Reserve Bank and the State Bank of India, to consider the implications of the National Development Council's decision to socialize the wholesale trade in foodgrains and to work out the details of a scheme for the implementation of that decision.

The report of the Working Group was submitted to the Government early in January 1959 and, in accordance with the Government's

decision, copies of the Report were sent to the Chief Ministers of States for the comments of State Governments. The comments of the State Governments, except the Governments of Kerala and Andhra, were received by the end of February. The Report of the Working Group was also considered by the Planning Commission. The Government have recently given detailed consideration to the scheme prepared by the Working Group in the light of the comments received from the various State Governments and the views expressed by the Planning Commission.

FAIR PRICES TO PRODUCER AND CONSUMER

The Working Group has recommended that the primary objective of state trading in foodgrains is to maintain price levels which are fair to the producer and to the consumer and to reduce to the minimum the spread between the prices received by the farmer and the prices paid by the consumer throughout the season and over an agricultural cycle. The Government have broadly accepted this objective.

The other proposals of the Working Group were intended to provide for an orderly transition toward the assumption by the State of wholesale trade in foodgrains without suddenly dislocating the existing channels of distribution or throwing excessive burden on the administrative machinery of the Central and State Governments. They also involve the steady expansion of purchases by the Government with a view to establishing for the Government a position of strategic control over the market and the intensification of existing measures, such as the licensing of wholesale traders and imposing certain obligations on them, the system of distribution at the retail stage through fair price shops and statutory price control at the wholesale stage.

The scheme prepared by the Working Group also provides for the progressive development of cooperatives so that a comprehensive network of marketing cooperatives, capable of taking over the entire marketable surplus, may be built up.

TWO PARTS OF THE SCHEME

The Government are aware of the difficulties in the way of undertaking full-scale state trading immediately, in particular of the absence of an adequate administrative organization, the lack of sufficient storage accommodation and the want of adequate buffer stocks. The scheme, therefore, falls into two parts: (i) the ultimate pattern and (ii) the interim scheme to be worked till the establishment of full-scale state trading.

ULTIMATE PATTERN

The ultimate pattern of State trading in foodgrains will consist of a system which provides for the collection of farm surpluses through service cooperatives at the village level and the channelling of the surpluses through marketing cooperatives and apex mar-

keting cooperatives for distribution through retailers and through consumers' cooperatives. Effective steps will have to be taken for the development of consumers' cooperatives.

The Government have decided that efforts should be directed towards the speedy realization of the ultimate objective and that during the interim period, more and more of the wholesale trade in foodgrains be taken over by the cooperatives as they are progressively organized and developed.

INTERIM SCHEME

The Government will not immediately undertake the purchase of the entire marketed surplus, as that would at once cast on the Government the responsibility for feeding the consumers in the urban and semi-urban areas. They will progressively acquire larger proportions of such surpluses with a view to controlling the market more and more effectively until full-fledged state trading is established.

In the interim period, wholesale traders will be permitted to function as licensed traders who will make purchases on their own behalf but shall pay specified minimum prices to the farmer. While the Government will have the right to acquire the whole or a portion of the stocks from the licensed traders at controlled prices, the traders will be at liberty to sell the remaining stocks to the retailers at prices not exceeding the controlled prices. The will be required to maintain proper accounts of their purchase and sale transactions and of their stocks and submit periodical returns to State Governments.

OTHER CONNECTED MATTERS

The Government have considered certain other matters in relation to state trading in foodgrains and have taken the following decisions:

(i) In the initial stages, state trading will be confined only to the two major cereals viz. rice and wheat. In order to ensure that the producers get the minimum prices, the Government will set up an agency for making direct purchase of foodgrains from the producers who are desirous of selling their surplus produce to the Government.

(ii) The purchase and sale operations as a whole would be conducted on a no-profit-no-loss basis.

(iii) Uniform purchase prices will generally be fixed for a whole State or region. In certain States, however, there are some under-developed areas which are not well served by railway. The assembling markets and the mill industry being concentrated at railheads, the prices in the interior are generally determined by the prices prevailing at the assembling and milling centres at the railheads. It may become necessary to fix different prices in the case of such under-developed areas. Then again, there are certain highly deficit areas where the prices are always higher than in the surplus areas. In view of this, it may be necessary to fix

different purchase prices in the case of such highly deficit areas. Similarly, controlled prices for wholesale may vary from region to region within a State.

(iv) While the fixation of controlled prices for retail transactions does not appear to be a practicable proposition in the present circumstances, attempts will be made to influence retail prices by continuing and, where necessary, enlarging the operation of fair price shops and by the speedy formation of consumers' cooperatives. If, however, a particular State Government consider it desirable to control the retail prices in an area of the State, they may do so provided they are certain that it would be possible for them to enforce such prices without causing any dislocation of, or interruption in, supplies.

The question whether the Government should undertake as an experimental measure, the purchase of the entire marketed surplus of a particular foodgrain in certain selected areas will be examined in consultation with the State Governments concerned. The acquisition of the entire marketed surplus of such an area will immediately cast on the Government the responsibility for feeding the entire urban population of that area and, possibly, also of feeding the population of other areas which receive their supplies from such an area. As a result of such experimentation the Government will have an idea of the difficulties that may arise in undertaking full-scale state trading and the steps which may have to be taken to meet such difficulties.

DECISION ON CORPORATION DEFERRED

In regard to the establishment of Corporations in the States to deal with state trading, there are two aspects which require consideration. The first is whether there would be need or place for such a Corporation in the ultimate pattern of state trading. The basic policy is that village level cooperatives and cooperative marketing societies should be developed fast, and there may eventually be an apex marketing society in each State. In this ultimate pattern there seems to be no place for Corporation. It is not worthwhile to create such corporations even as an interim measure, for if a Corporation is created and its functionaries and agents spread out, this may well create vested interests and cause delay in the development of cooperatives. The second aspect is that there may be quite serious practical difficulties in the functioning of a Corporation, for a Corporation would be outside the Government and it will not have any legal competence to enforce any control nor will its employees enjoy the status of public servants. For these reasons a decision on the question of establishing Corporations in the States has been deferred until greater experience of state trading has been gained.

The scheme will be placed before the National Development Council at its next meeting to be held on April 3 and 4 in New Delhi.

I HAD been hoping that the last week's deliberations of the National Development Council would have indicated the lead to be given to thinking on the Third Plan. In fact, when the Budget for 1959-60 failed to give any positive reflection of what Government thought about the matter, I was almost sure that, a month later, all that we needed to know about the approach to the Third Plan would emerge in the discussion among the Chief Ministers and others who would get together under the aegis of the National Development Council. In the event, I am afraid I have been disappointed. (Also disappointing is the range of the press coverage; the published reports are sketchy in the extreme, and perhaps the only worth while speech that has had some publicity given to it is the inaugural address of Mr Nehru). Nevertheless, there is enough that has been "leaked out" about the NDC meeting to provoke a fresh consideration, in this column, of the Third Plan and what it should mean for the country. But, before I proceed to put down my thoughts on paper, it may be just as well for us briefly to take account of what Mr Nehru said as also of the reported views of the Madras Finance Minister, Mr C. Subramaniam, who opened the discussion on the Third Plan.

★

Mr Nehru, it seems to me, is much taken up these days with agriculture and cooperatives to achieve agricultural targets. There is a measurable falling off, it would seem, in his enthusiasm for industry as such, though it is always possible that he thinks it is the need of the moment to drive the point home about the centrality to Indian endeavours of food production, and it is therefore why, again for the moment, he appears to have given industry a secondary importance. Everything hinges on food and if the effort on the food front fails, the plans themselves might flounder and come to nought. Having said this, Mr Nehru goes on to define planning as a balance of various factors. How much development or emphasis did we need for, say, agriculture or communications or industry? Mr Nehru again appears merely to pose the problem, because the difficulty was that separate issues could not be decided upon until a picture of the whole was available. If this is to be the approach as regards the content of the plan, the framing of expenditure targets would be based on the one hand on certain broad economic objectives and on the other hand on certain assumptions. But both objectives and assumptions were to be subject to revision, and this, I suggest, is Mr Nehru's continued insistence on the flexible approach.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

That Mr Nehru has not altogether forgotten the place and importance of industry is evident from his assertion that India must advance on many fronts, that the foundation had to be laid of a strong industrial base. But, even here, he is seen to be harping on the basic importance of agriculture, which should mean that "the best of our men should be in charge of it." I cannot refrain from a set of parenthetical remarks, for, the trouble precisely is that it will be practically impossible to recruit the best talent, administrative or otherwise, for the supervision of agricultural production. So long as the profit motive is the main source of impetus for industrial enterprise, and so long as the return in monetary terms is, as it is, relatively unattractive in agriculture, it is hard to envisage any kind of determined effort by the individual on the farm. Even granting that this supervision will be governmental, the adage will apply of the possibility of leading a horse to water and of the impracticality of compelling it to drink. May be, the much heralded cooperatives idea (which seems to be getting watered down as each day passes) may provide a solution. But, ultimately, it is only if there is greater lure in agriculture that better talents will be drawn to it.

★

We have, thus, the problem of the need for growth. But there is also the simultaneous issue of keeping down expansion in another sector. Growth in industry and national income will be unavailing if we are unable to exercise some control over population trends. As it is, progress during the Second Plan has been vitiated by the fact that the rate of population growth has been rather higher at 1.8 per cent or 1.9 per cent against the earlier assumption of 1.5 per cent annually. Mind you, this experience is not due to an even greater fertility of the Indian; the fact is that the efforts in behalf of health, as well as the marginal improvement that has been effected in the standard of living, have both extended longevity; people are not dying as early in life as they used to. The phenomenon may be expected of a slight falling off in the birth rate as prosperity, relatively speaking, increases; but this may take quite a few years yet, and we cannot afford over this period to

have a population growth that will overwhelm any industrial advance that the country might be able to achieve. Eminent scientists have recently stated that India is tackling the problem of population bravely. But I am afraid I continue to be disturbed, because population growth depends upon private enterprise, and it is hard to curb private enterprise.

★

Mr Subramaniam, as we shall see, has been thinking in terms of a "labour tax"; and the Prime Minister seems to have anticipated a suggestion of this sort. How could demands be made on people whose barest needs were not being met? This, I suppose, is the emotional streak in Mr Nehru, for, Mr Subramaniam's idea has the merit that, in "providing" work for the under- or unemployed, a boost to morale will have been enabled. Nor need we fear that this would smack of the totalitarian methods. After all, all that is sought would be to put through the essential maintenance tasks in a community. But Mr Nehru's feelings on the subject, as his concluding remarks show, are rather warm and deep:

"We have all kinds of demands, higher salaries, higher wages, etc. But the people whose needs are the greatest seldom make any such organised demands upon

us, people who have not got good drinking water, people who have not got the simplest amenities of life. They often go unheard, while others are demanding much more than the average person in India at present has. So, we have to think in terms of supplying the basic amenities to our people and not merely talk of some future date when they will be better off. All these things we have to keep in view while we make our basic estimates."

★

If Mr Nehru's speech was couched in general terms, the particular marks the utterances of Mr Subramaniam. The Madras Finance Minister is emerging as the hard-headed realist among those who have a say in the shaping of our economy. His blunt assertion is that it is no good to draw up schemes that will need Rs 9,000 or Rs 10,000 crores to implement, at a time when we are feeling the pinch in putting through a Plan of a mere Rs 4,800 crores. By inference, he suggests that the size of the coat that we order should wait upon our finding out how much cloth we will be able to get—as well as the quality of the coat we shall be able to afford. Practical; realistic; too true. At the same time, however, there is no point in stitching a coat that will be tight for a midget, when the man who needs the coat is a giant. So it is that we may have to make do with slightly inferior material; but the size of the coat itself will have to be large enough for the giant for whom it is meant. I agree that the resources are important; and this journal has, in the thinking days about the Second Plan, been sorely exercised about how we might lay our hands on the wherewithal to see the Plan

Khira

Calcutta Madras New Delhi

through. Let us now revert to Mr Subramaniam, before we sum up the worth and value of the NDC deliberations.

That Mr Subramaniam is not unaware of the fact that it is a giant who has to be clothed is suggested by the assumption he accepts of a rise in the national income at the rate of 5 to 6 per cent per annum. The Madras Finance Minister lays as much of an emphasis on the rural sector as the Prime Minister has done, but his interest is to see how rural resources could, with the help of Panchayats, be mobilised. There is sense in the notion that local development should be tied up with local resources; and, in order that incentive be available for the

local citizenry to loosen their purse-strings, matching grants should be given by the State Governments. India's bug-bear is idle man-power, and Mr Subramaniam revealed that the empowering of Panchayats to levy a "labour tax", amounting to 10 or 15 days of labour in a year, had been "tentatively thought of." The Madras Finance Minister went on in his commendably candid fashion, to stress the need for a national wage policy. He found it hard to accept the logic which maintained that a rise in profits of banks or the insurance corporation automatically justified a demand, which had to be met, of a rise in the wages of employees. After all, if the LIC earned more, it was because the community, as policy-holders, were contributing more.

Mr Nehru's emphasis, thus, is on the considerable progress we must achieve; and the time is now for action, especially in respect of the have-nots. Mr Subramaniam's stress is on resources; and he is taken up with local availability, both in money and in men, for putting through local projects. In a sense, both have concentrated on the agricultural front. But, where, I think, some extent of new thinking is necessary is as regards the desirability of bringing prosperity to the rural sector by the expedient of drawing away the under-employed who are at present in the nature of parasites, causing a smaller share for those who work on the farm. This diversion of the under-employed to other activities than the land cannot be done by a concentration on big projects

or basic projects. Nor should I be mistaken as suggesting a series of labour-intensive schemes. No; as Mr Birla recently pointed out, what we need more of is small scale industry based on power. This is also the logical aspect of the economy on which we should, during the Third Plan, concentrate our efforts. For, with the implementation of the core of the Second Plan, we would have a sufficiency of the basic raw materials, whose utilisation will depend upon the growth of auxiliary or ancillary industry; and these are the small scale industries I have in mind. As for resources, the picture is as yet uncertain, and I am waiting to see how the new loan programme fares in 1959-60 before I start giving my views in this regard. **EAVESDROPPER.**

GATEWAY GOSSIP

I CONFESS that, with my pre-occupation in this Gateway City with the money market and cotton and bullion, I had thought that oil seeds did not merit as careful and continuous a study as other aspects of Bombay business compel me to give. I have been forcefully made to learn of not merely the present place of oil seeds in the Indian economy, but, what is more important, the stupendously expanding scope for oil seeds in a developing economy, by the speech made by Mr S. H. Turner in his capacity as Chairman at the Annual General Meeting of Hindustan Lever Limited.

The manner in which he started seemed to suggest that Mr Turner was trying to give his views in simple words of a single syllable, and the primerish start was entirely, as I later found, misleading. "Fat is a food," he said, adding that it was "a food of very high value". If I felt disheartened at this stage, I learnt quickly enough that Mr Turner considered it essential to give us a compendious picture of oil seeds, because, in the past, it has received no priority and because, in the future, it is necessary that this vital sector of the economy does not get neglected.

A study shows that, with every increase of 10 per cent in income, the demand for fat rises by a corresponding 10 per cent. This means that, in two decades, when the Indian population would be around 600 million, fat as a food will rise in consumption by roughly 3.6 million tons. This alone would suggest, in Mr Turner's words, that "it is just as important to provide for our fat supplies as for our rice and wheat". Then, fat in the form of vegetable oil has many other uses than as food. For example, soap and paint and hair dressing unguents, all use vegetable oil as a base. Obviously, in the process of industrialisation, with a greater bias toward urbanisation, the demand for soap and paint and hair oil will all increase. Machinery and new plants and the new buildings to house the new plants will require to be protected by paint; the new workers in the plants, with the improvement they would secure in their standard of living, would be more apt to use hair oil regularly and—at least, I hope!—tend more to use of soap. Mr Turner assumes that every increase of a quarter in the national income will produce a rise in the demand for soap by 40 per cent. Since India's planners seem to be proceeding on the thesis that such improvement in national income is to be vouchsafed every quinquennium, the probable population of 600 million twenty years hence, earning double the national income of today, will need "nine lakh more tons of oil for soap and paint and hair oil than is needed at present". Adding two and two together, you get a figure of 4.5 million additional tons of fat as being required 20 years from today. If we go by past experience, and if we neglect to plan for the future, the outlook for producing that extra outturn of vegetable oil is bleak in the extreme. Since 1939, the Indian output of fat, including ghee, has risen only by half a million tons. Obviously—and I agree with him—says Mr Turner, "the effort that will be needed from now on if our needs are to be met dwarfs anything that has been done up to now".

Limited, very limited, is the prospect of securing any worthwhile increase in the supplies of ghee and butter. After all, an under-nourished population in the process of achieving relative prosperity will inevitably drink more milk; and this means that this 4½ million tons of fat will have to come from oil seeds. Mr Turner here turns to the consideration of whether or no we would be able to lay our hands on such additional supplies 20 years from today.

A larger production of vegetable oil will mean that much more by way of oil seeds will have to be grown. On the basis that groundnuts have an oil content of 40 per cent, the Hindustan Lever Chairman concludes that at least 15 million tons more of oil seeds would be required. If we take present yields into account, the acreage under oil seeds would have to rise by 53 million, representing 14 per cent of land presently under cultivation. Of course, with India's experience of low yields—except, perhaps, in human terms—in everything that we grow, it would be reasonable to assume that improvements in yields will be effected and, to that extent, it might be possible to divert land now under other crops to oil seeds. Diversion in this manner might considerably increase output. But, clearly, this in itself will not solve the problem. Mr Turner states that a major objective of policy must be to bring about an increase in the yields of oil seeds per acre. He bemoans the fact that far less research has been done in respect of oil seeds than is the case with rice or wheat or cotton. Reference is made to the fact that, in other countries, in the last 20 years, improvements in yields have been effected to the extent of 25 to 50 per cent in many crops. Strangely, it is now to India's advantage that it starts with very low yields, because "the scope for improvement is specially large". So it is that Mr Turner thinks that the planners should place emphasis not merely on higher and more ambitious targets for oil seeds but also on research as to the manner in which the yields can be improved. Then, as Mr Turner tongue-in-cheek remarks, "improved seed that stays in the seed

Oil Seeds 20 Years Hence

farm, better methods that are known only to the scientists at the research centre, grow no groundnuts". The fruits of this research must be widely disbursed so that widely sown it will take root and result in better crops.

But, for all that, Mr Turner thinks it probable that the gap between Indian demand for and output of oils and fat will increasingly widen. If the prices of vegetable oils—and therefore of the products made from them—are allowed unfettered to find their levels, the situation of shortage would find its own answer, and the higher prices would cause an equilibrium between availability and demand. But this would hardly contribute to the Indian objective of a steady improvement in the standard of living.

So, there are other ways of filling this gap. Firstly, we can import oil seeds. Our foreign exchange situation two decades from today might have so improved as to allow a satisfactorily large allotment for oil seeds. For the immediate future, Mr Turner suggests negotiations with America for getting soya bean oil in terms of Public Law 480. America is known to possess an embarrassingly large surplus of this commodity. Indian will soon be known to possess a substantial inadequacy in vegetable oils. And both em-

barrassment and inadequacy could be relieved by an agreement between India and America.

Then, secondly, Mr Turner thinks that Government's policy of encouraging cotton seed crushing should add 150,000 tons to our oil supply every year.

Thirdly, there are possibilities of new crops or the fuller utilisation of old ones. Mr Turner commends the cultivation of oil palms on Indian soil.

Lastly, as more solvent extraction plants are established, a great national waste will be obviated, since ghani crushing leaves a considerable quantity of oil still in the cake; and this could contribute to additional oil supplies at 30,000 tons a year.

After having said all this, Mr Turner begins to hedge his statements, since "any attempt to look forward into the future is necessarily liable to a very large margin of error". For one thing, if family planning succeeds, our population may not rise to 600 million. For another, the Planning Commission's hopes in regard to national income may go unfulfilled. Thirdly, it is possible that an improvement in the Indian standard of living will not necessarily cause increases in demand in the sectors that Mr Turner has noted, the Indian preference possibly being in favour of something else.

BOMBAY REVIEW

This is your Heritage

As you approach the ancient town of Gwalior, you cannot fail to see the lofty towers of the world-famous Gwalior Fort. This magnificent edifice takes you back through the turbulent history of India. Within the fort are many examples of architectural beauty such as the 'Painted Palace' built by Man Singh in 1490. Throughout India, there are many wonderful monuments that speak of the past, set in a countryside that is full of exciting interest to the tourist. And wherever you motor in this vast land, your trip will be more pleasant, and free from 'car troubles', when you drive on Caltex petroleum products.

NATIONAL AND GRINDLAYS BANK LIMITED

(Amalgamating National Bank of India Ltd., & Grindlays Bank Ltd.)
Registered in London under the Companies Act of 1862 on the 23rd March, 1866. The liability of members is limited.

Bankers to the Government in Aden, Kenya Colony, Zanzibar, Uganda and Somaliland Protectorate

Capital (Authorised and Subscribed) £4,562,500
Paid-up Capital £2,851,563
Reserve Funds £3,168,579

Head Office:
26, BISHOPSGATE, LONDON, E. C. 2,
London Branches: 54, Parliament Street, S. W. 1;
13, St. James's Square, S. W. 1.

Shipping, Travel and Insurance Departments:
9, Tufton Street, S. W. 1.

BRANCHES throughout India, Pakistan, Ceylon, Burma, Aden, Somaliland Protectorate, Zanzibar Islands, Kenya, Uganda, Tanganyika Territory and Northern & Southern Rhodesia.

The Bank conducts all classes of Banking and Exchange Business throughout the world. Trusteeships and Executorships are undertaken.

The Bank undertakes the recovery of Income Tax and preparation of Income Tax returns on behalf of its constituents.

Calcutta Branches:
Netaji Subhas Road; Brabourne Road;
Chowringhee Road & Church Lane.

BOMBAY REVIEW

It was perhaps the need to keep in touch with party affairs in the State that brought Mrs Indira Gandhi, the new Congress President into the gateway city, for it is the first duty of the president elect to keep acquaintance with party units at State levels. Mrs Gandhi during her stay in the city, took upon herself the task of keeping the political opinion in the State informed of the ideals of the Congress organisation and explaining the new steps the Congress has taken at its recent Nagpur session and particularly the significance of cooperative farming which has been the subject of some heated controversy.

Mrs Gandhi's line of attack against the critics of the Nagpur resolution on cooperative farming was to point out that there was nothing new in the espousal of it by the Congress party since, co-operative farming had the blessing of Mahatma Gandhiji himself. Again the need for introduction of joint farming had also been emphasised in the First and Second Five Year Plans. It would not therefore be true to say that this resolution on cooperative farming passed at the Nagpur session of the Congress represented a precipitate move in a direction that has never been indicated by the Congress party to be in its path.

Mrs Gandhi also would not admit that cooperative farming as pointed out by the critics, would meet with the same fate as in those countries where it had been introduced and found incapable of increasing production. The analogy has, for Mrs Gandhi, no place since there is nothing to prevent its success in our country whatever might have been the results elsewhere. The results of the experiments in cooperative farming conducted in the country would according to Mrs Gandhi only prove the correctness of the Congress policy in favour of cooperative farming. Fears about compulsion being exercised for extending cooperative farming in the country were also baseless and the need for it would be obviated by preparing the mind of the peasants by the organisation of service cooperative during the next three years.

Mrs Gandhi also touched on other subjects of topical importance in the country's development such as industrialisation development of cottage and small-scale industries the need to raise food-grain production etc. When the country was engaged in a war against poverty and unemployment, it was necessary for ensuring success that a proper line is drawn at the level of population which has been one of the most disconcerting elements in the economic situation of the country. While stressing the need for spreading the message of family planning

from house to house, she made it clear, that the implementation of the programme, would not fail of results in eradicating poverty in the country.

Administrative Lapses

The Estimates Committee of the Bombay Legislative Assembly had in its report, revealed glaring lapses on the part of the Government in the implementation of projects undertaken by the Public Works Department of the State. Defective estimates of projects, lack of any policy in the selection of projects, and neglect of regional considerations in the implementation of projects are some of the charges the committee has brought forward against the Government in its report.

The Committee is particularly critical of the defective estimating of the cost of projects which the Committee says could not be justified even making allowance for uncertain factors of cost and price of materials and stores. Evidently the Committee feels that the rise in the cost of projects has exceeded the limit that could be allowed for this uncertainty of raw material prices. The Committee has therefore concluded that the original estimates had not been preceded and based on the appraisal of all the necessary data and has taken the Government to task on this grave lapse. With a view to avoiding repetition of such mistakes in the future it has been recommended that every scheme involving an expenditure of more than Rs 50 lakhs should be re-scrutinised by a senior officer if the estimates of any scheme on revision involved an enhanced expenditure of more than 20 per cent of the original estimates.

The distribution of the projects especially in the field of irrigation is found to violate considerations of regional and balanced development and a reversal of this state of things is necessary if the benefits of development are to be distributed equitably between the different regions in the State. It is a big task of cleaning up that has been assigned to the Government by the Committee by means of its report.

So far as the opposition was concerned it was a windfall opportunity for lashing at the Government for defects of administration which since it has been reported by a Committee appointed by the Government themselves, could not be denied by the latter, nor dismissed as simply the unfounded charges of the opposition. The neutral character of the Committee even emboldened some Congress members also to join the critics ranks for assailing the Government's policy.

The Ministerial benches were clearly on the defensive against

this scathing criticism of the Government contributed by both the opposition members and some Congress members. Mr Jivaraj Mehta the State Finance Minister who answered some of the charges of the opposition, could only plead the inevitability of some lapse in such a vast organisation as the PWD which had in its employ over 3 lakhs of workers.

Bombay Corporation

The Congress party has for the third time lost the contest for the mayorship of the Bombay Corporation, the candidate of the Samyukta Maharashtra Samiti winning the election all the time. The Smayukta Maharashtra Samiti, which represents a conglomeration of the political parties in the State, united by loyalty to the cause of a unilingual Maharashtra State has been sharing the Mayor's mantle between the candidates of the political parties which constitute the Bloc the first to be chosen by the Samiti being a PSP followed by a communist the outgoing mayor and now a republican. Mr P. T. Borale who is also the representative of the Scheduled castes, and for that reason is the first scheduled caste member to be elected to the Mayor's office.

The Samiti Bloc has been interpreting this hold of theirs in the civic body of the city, as a clear reflection of popular opinion on the issue of division of the present bilingual setup into two unilingual states of Mahagujarat and Maharashtra. Naturally the Samiti attaches more than ordinary importance to the election of mayor to the city corporation, and the election is the occasion to focus public attention on what is considered to be the injustice done to the people speaking the Maharashtra and Gujarati. However the Congress majority in the State Legislature, gives the organisation sufficient ground to counter the agitation of the Unilingual spokesmen of the Samiti.

It is rather strange that language fanaticism should hold together such irreconcilable forces which the different parties constituting the Maharashtra Samiti represents. For, beyond this particular issue of unilingual State, there is no love lost between one party and another of the same bloc, and in the very discussions of the civic body issues arise, when the parties of the bloc fight against each other, as was revealed by the resolution moved by a non-communist member of the Corporation seeking to condemn the execution of Mr Imre Nagy, the premier of Hungary in the days of the October revolution. On this issue the Communists found themselves isolated by all the other democratic parties.

GATEWAY NOTES

Cotton Textiles

The cotton textile industry is one of the oldest industries in the country and in this there are a few firms which have celebrated their centenary. The Ahmedabad mill industry is one such which can look back with pride to such a record, the annual gene-meeting held last week, having marked the completion of the first century of existence. The presidential address of Mr Madanmohan Mangaldas, while, it had a brief reference to this important landmark, was mostly devoted to an analysis of the problems with which the cotton textile industry in the country as a whole is faced.

What is most obvious about the cotton textile industry at present, is that the industry continues to be in hard days, facing problems that continue to plague it despite the measures taken by the Government. The worst feature of the crisis from which the industry is not yet out, was the drastic drop in production of cloth. There was a precipitate fall of the order of about 400 million yards in textile production in 1958 as compared to 1957. The drop in value was to the tune of Rs 27 crores. Possibilities of self-correction in production were, as pointed out by Mr Mangaldas, nullified by sagging demand in the home and foreign markets and the consequent accumulation of stocks with the mills. It is against this background of the crisis, that a solution to the troubles of the industry has to be sought. How far the implementation of the recommendations of the Textile Enquiry Committee would take the industry on the road to recovery remains to be seen. But Mr Mangaldas sees in the measures the Government have taken at the instance of the Textile Enquiry Committee a realistic and constructive policy towards the industry, which would not fail of effects if they are properly implemented. The permission given by the Government for the introduction of automatic looms is another piece of assistance rendered by the Government which Mr Mangaldas gratefully records as being a salutary measure.

The basic problem before the industry is, Mr Mangaldas points out, the reduction of cost of production. There cannot be any difference of opinion on this matter the high cost basis of the indigenous industry being the chief factor behind the recent fall in the Indian exports of textiles. For example from 828 million yards in 1957, exports of cloth fell to 625 million yards in 1958. In the context of increasing competition in the international market it is imperative that measures are taken to put the Indian exports on a competitive footing with cloth from other countries.

WORLD OF COTTON

Trend of Prices Upward, But Irregular

ALTHOUGH the trend of prices in the Bombay Cotton futures market was upward, it was irregular due to the hesitancy on the part of operators to come to a definite conclusion about their future course of action. With both bulls and bears eager to book profits at every small rise and dip, both the contracts—May and August—moved erratically higher. The spread between these two contracts has now widened to Rs 7, the reason being that operators resorted to switch-over operations.

In this connection, it may be mentioned that the Joint Chief Controller has notified that all contracts, registered but remaining unshipped as on the 31st March, will be allowed to be transferred for the next period, April to August 1959, provided the shipment against such contracts so transferred is made not later than 15th April, 1959. The bank guarantee, furnished in respect of such registration, will be required to be extended till the shipment is made by the 15th April 1959. This concession, it has been specially stated, should not be treated as a precedent. Similar extension will not be allowed for contracts registered with the Joint Chief Controller of Exports under a bank guarantee during the next period, i.e. April/August, 1959. Meanwhile, Jharilla May delivery closed at Rs 686.75 and August at Rs 695.25.

The Spot section continued to be remarkably firm with mills showing keen interest in a number of varieties. Staple styles were getting scarce and rates hardened. So keen were buyers that some growths were reported above the ceiling levels.

On the export front, small transactions in Wagad, Kala and Bengal Deshi took place. The Government of India came to the aid of exporters by extending the shipment period upto 15th April if the sales were registered before 31st March. According to the original schedule, shipments were to be effected before 31st March.

In the foreign section, keen interest was noticed in Egyptian cotton with sizable quantities being purchased. This was mainly due to the fact that the shipment period for the import of cotton had been extended. For cotton stapling 1 3/16 inches, it is now extended by a month to May 31. Cotton stapling 1 3/16" and above can now be imported upto May 31, if it is from Egypt and June 30 if it is from Sudan. Moreover, the contracting period for Egyptian

cotton has been extended to April 7.

Burma is reported to be unable to effect the sub-authorisation of \$1,718,000 to India under the triangular agreement. The USA, it is learnt, has permitted Burma to contract up to February 29, 1960 under the FAS procurement authorisation. This extension has benefited exporters, who can utilise the higher export subsidy of 8 cents per pound from August 1.

KARACHI COTTON MARKET

Prices on the Karachi cotton futures market displayed an easier trend following the slackness of export demand and the absence of domestic spinner demand. At the same time, new crop arrivals exerted a downward pressure on prices.

Conditions in the Alexandria cotton futures market remained unchanged. Activity was slow and turnover limited. Prices continued to fluctuate in a narrow range.

LIVERPOOL COTTON MARKET

Despite larger offers of CCC stocks of cotton from US shippers, values of cotton futures in the Alexandria market scored some gains. This was due to mill hedging and trade covering in the new crop positions. Commission house support was also forthcoming. Better interest was noted in Sudan cotton contracts, which hardened.

NEW YORK COTTON MARKET

Prices on the New York cotton futures market developed a hardening tendency, thanks to good mill and spot house support. Part of the buying was attributed to reports that the number of farmers who opted for option B, which enabled them to increase their basic acreage by 40 per cent and get a lower support price than that obtained by farmers who chose option A, was smaller than expected.

CLOTH AND PIECEGOODS

Conditions in the Bombay cloth market have taken a definite improvement during the past fortnight. Traders are hopeful that the present buying tempo will be maintained for another four to six weeks. Demand for superfine and fine varieties has been quite satisfactory, while established qualities of reputed mills have been much sought after even slightly higher prices.

On the export front, however, conditions remain stagnant. Although a number of enquiries have been received from Burma, business is delayed due to some difficulties. It may take another fortnight before this destination enters the market in right earnest. Ceylon is practically quiet due to the recently-introduced import restrictions. Demand from East Africa is also subdued and this destination has booked only for immediate requirements. The UK is reported to have booked 50 inches medium greys in sizable quantities.

GATEWAY MARKETS

New Contracts in Oilseeds

TRADING in the new contracts in Oilseeds has commenced during the week under review. This is a significant development from the market point of view. Earlier, there were apprehensions that the FMC might not be favourably inclined to permit trading in new contracts in view of the prevailing buoyancy in the prices of essential and non-essential vegetable oils and seeds. If such a decision had been taken, it would have meant the virtual closure of the market at the expiry of the current contracts.

In deciding in favour of permitting trading in new contracts, the FMC is either confident about the effectiveness of the system of graded margins, which no one seemed to share, or it was apprehending that the closure of the official market would lead to unhealthy and widespread speculation over which the FMC may not be able to exercise whatever control it had over the official market. The Government of India, as if to put to test the FMC's ability to keep prices under check, came out with liberal export quotas for linseed cake, groundnut cake, niger cake and kardi cake.

The announcement of fresh export quotas for HPS groundnut, groundnut oil and groundnut oilcake had, no doubt, a bullish impact on the market, although, in actual effect, the encouragement tended to become meaningless in view of the adverse outlook for exports of both the commodities. The foreign demand for groundnut oil has not been substantial. Moreover, the prevailing high prices of Indian oil make it extremely difficult to procure business. Indian prices are, at present, about £8 per ton higher than world prices. So far as expeller oilcake is concerned, the UK and the Continent are not prepared to buy even at £29 per ton. Even if the shippers are prepared to sell their oil at a loss now, it is not possible to make up the loss for the simple reason that prices of oilcake also have declined sharply. Meanwhile, groundnut bold quality is quoted at Rs 38.12 and groundnut oil at Rs 19.75.

Trading in the Castorseed section disclosed an uncertain trend. A section of the trade claimed business at about 12½ cents for about 275 tons of commercial castor oil afloat for the USA. Although operators were eagerly awaiting confirmation, the tendency towards the close was to cover one's sales. Castor ready was quoted at Rs 30.75 and Castor Oil, commercial quality, at Rs 15.25.

Price trends in the Linseed section were rather irregular. While the expected increase in the arri-

vals of the new crop exercised a bearish influence on the market, hopes of the Australian demand for linseed oil in the near future prevented the prices from declining. Linseed ready was quoted at Rs 32.12 and Linseed Oil at Rs 15.69.

With a view to checking the rise in Cottonseed futures, the FMC is reported to have directed the Oilseeds Exchange to impose a margin on May futures at Rs 150 per candy if the rate closed at Rs 130 or above on the outstanding long positions. The news produced only a small effect on cottonseed futures.

Gold & Silver

Prices on the Bombay Bullion Exchange displayed, on the whole, a firmer tendency. Although activity, in the Silver section, was not brisk and despite some selling at higher levels, prices did not slip back. Sentiment was encouraged by the hope that import of Tibetan coins should immediately cease owing to the tense political situation there. Expectation of bumper crops and a revival of brisk demand in the season were also contributory factors. Arrivals amounted to 8 bars as against an offtake of 9 bars. Ready rates moved between Rs 199.50 and Rs 200.12 to finish at Rs 200.12.

The Gold section displayed a fairly steady tendency. Spot demand was maintained. With the stock position tight and chances of smuggled arrivals limited, prices developed a hardening tendency. Ready rates moved between Rs 119.50 and Rs 119.69, while Sovereign was quoted at Rs 75.75. Arrivals amounted to 2,500 tolas against an offtake of the same quantity. Unrefined metal receipts amounted to only 2,000 tolas.

Non-Ferrous Metals

Conditions in the Bombay Non-Ferrous Metal market ruled generally quiet with Copper Scrap quoting Rs 218 per cwt; Zinc at Rs 84 per cwt; Lead at Rs 74 and Tin at Rs 145 per quarter.

On the London Metal Exchange, Copper is quoted at £250½; Zinc at £72; Lead at £69½ and Tin at £782 (all per ton). The position regarding Tin is considered to be much healthier now than it was a few months ago. This is due to the limiting of Soviet exports, expansion in consumption in the USA and the improvement in consumer demand elsewhere.

While tin has been settling itself, Copper has become again the dominant element in the metal market. American demand has reasserted itself as the dominant influence on the metal. But possible problems of supply, particularly those associated with the political situation in Rhodesia and with the labour situation in America, are decidedly relevant to the recent strength of this metal. In the USA especially, the growth of demand represents a considerable restocking movement, mainly a precaution against a nationwide strike in the US copper mines in July.

NORTH INDIAN
NOTES

Postscript on Tibet

WITH the safe arrival of the Dalai Lama within the Indian borders and the clarification offered by Mr Nehru at his Press Conference last Sunday, the Tibetan question has assumed a less frenzied and more balanced perspective. There is a distinct improvement in the political atmosphere here and, except for the Communist party of India, there is, for the first time since fighting began in Tibet, a sense of relief from a politically stifling atmosphere. This sense of gloom flowed from a variety of sources: first, there was the tragedy of the events themselves; second, there was the feeling of helplessness in the face of such tragedy; third, there was a sense, proved in retrospect to have been wrong, of certain ambiguity, if not active equivocation, in the policy of the Government of India over the question. And this ambiguity was seen by observers to extend to the whole gamut of the problem: from the rights and wrongs of the quarrel, our own ability to help, of the right attitude to take as regards those seeking asylum, and, lastly and most depressingly, about the right reaction to some inept and inexcusable charges against India by the People's Republic. And arising out of the last, there was the episode of the Communist party's explanation of its stand on the issue and the Prime Minister's seeming indifference to the insulting implications of some parts of

the explanatory statement. But it now appears that, on all these points, the Government and Mr Nehru have been hastily judged by the critics.

Nothing could take away the edge of poignance of the tragedy of the events themselves. It is not only the violence and the destruction that have occurred, though they are shocking enough by all accounts. It is that all this violence is the result of an attempt to force a different way of life on an unwilling people. The first thing that has been made clear by Mr Nehru in his Press Conference is that this is how he conceives the essence of the situation to be. If Mr Nehru had not expressed himself on this in such clear terms earlier, it was partly because he had not all the facts of the situation in his hands and, more importantly, he did not want to exacerbate feelings and import the stances of cold war into a situation in which there was nothing very much we could do in practical terms. This was particularly necessary earlier for two reasons: one was that feelings in the country were already running high and, secondly, if China knew our Government's real mind, it is unlikely that the Dalai Lama would have been allowed to enter our country. In other words, the striking of an attitude may satisfy the theatrical instinct of an actor and a spectator, but is quite useless for achieving our real purposes. As Mr Nehru explained in his press conference, he still hopes that the Chinese would find a satisfactory solution for the relationship that should subsist between them and the Tibetans. Any such solution involves merely the making good by the Chinese of past professions; namely, the acceptance of Tibetan autonomy within the suzerainty (or sovereignty, if you like) of China. Indeed, as Mr Nehru shrewdly observed, both the parties attribute the present troubles to the failure of the agreement that formalised precisely this kind of relationship.

It is this concern with the ultimate solution satisfactory both to China and Tibet (and therefore to us) that has made Mr Nehru deliberately curb whatever he may feel about the situation. It must be realised that Mr Nehru is the Prime Minister of the country and not a leader writer in a newspaper. He cannot relieve his feelings (or those of the proprietor of the paper he works for) by weighing the whole matter on moral scales and apportioning blame impartially and damning the consequences. People who accuse him of having temporised have too frivolous a notion of the duties of a statesman. Indeed, an attitude that implies complete condemnation of China's actions would quite simply pave the way for China overrunning

as there are now of Tibet regaining its autonomous status. For, with a "hostile" India, China would feel bound to have Tibet completely under control. As it is, it is possible for Mr Nehru to make full use of Chinese equivocation over their attitude to the Dalai Lama. They are still pretending that he has been a victim rather than an instigator of the troubles in Tibet. It should, therefore, be possible, after things calm down, to get the Chinese and the Dalai Lama together and work out an acceptable solution for Tibet.

To put it differently, the people want Mr Nehru to act as John Foster Dulles: to take up an absolutist catastrophic attitude about the complete unregeneracy of the present rulers of China. Apart from the priggish self-righteousness of this attitude, it involves a rigidity alien to statesmanship. Pancha Sheela is a code of political realism and not political utopianism though often its virtues are extolled in idealistic contexts.

All this does not mean that we are to go on equivocating about our position, or abdicate humane and compassionate duties. Mr Nehru has now made clear that the country is deeply hurt about the way Tibetan feelings have been treated by the Chinese and that our security considerations do operate in the formulation of our policy toward what China does in Tibet. Thus, fellow feeling, no less than geopolitics, determines on which side we are. Mr Nehru also made clear that there is not much autonomy allowed in the way China has been doing things in Tibet in recent years. So here, too, the Chinese cannot hope to find any comfort from Mr Nehru. And, secondly, though many felt that Mr Nehru was being needlessly circumspect about his intentions regarding political refugees, it now transpires that Mr Nehru had at no time had any doubts about what he should do if the Dalai Lama should want to stay among us. What is even more important, he had already issued instructions as to what should be done when the Dalai Lama came to India's borders. It is also now known that Mr Nehru deliberately kept the knowledge of the Dalai Lama's having reached India to himself "for reasons of security". Therefore, when Mr Nehru was making what seemed to some his "prim answers" about not giving any assurance in advance about every seeker of political asylum here, he was actually deeply exercised about the safety of the Dalai Lama; and, once he was safely within our border, Mr Nehru has assured that the Dalai Lama's safety is one hundred per cent the responsibility of his Government.

As regards Mr Nehru's attitude to the Communist party's stand over the issue, it is now seen that,

as in other things, Mr Nehru was solely guided by larger considerations of allowing tempers to cool before he made his comments. Readers may have noticed that my last week's despatch did not mention anything about what Mr Nehru himself had to say about the Communist party's seeming preference for Peking's versions of events in this country over those of our Prime Minister. This was because, the despatch was sent in before Mr Nehru had spoken. When Mr Nehru did speak, its effect was quite the reverse of what one had been led to expect by the speeches of Mr Pant the previous day. Much to the chagrin of his own party men—and it must be admitted, to many independent observers—Mr Nehru seemed to play down deliberately the implications of the policy statement of the CPI. He was giving the appearance of a man making not only the excuses for the Communist party, but also of one who was feeling that he had excuses to make for himself. The result was, from the point of view of party morale, disastrous for the Congress. The Communists, on the other hand, I suspect, could hardly believe their ears. Professor Hiren Mukherji could hardly refrain from taunting the Congressmen opposite on the seeming variance in the stances of the leader and the led.

In the event, it appears that Professor Mukherji has been too quick in his jubilation and the last laugh is with the Congressmen. Of course, Mr Nehru was stung into saying the things he said at the press conference by further silliness of the Communist party. In an article in their party organ, the New Age, they had made wild allegations of collusion between Indian officials and the Tibetans against the Chinese. Mr Nehru could not let this kind of provocation pass without comment. In effect, the Communist party was implicating the Government of India in the events in Tibet. Mr Nehru came out with a scathing attack on the party's irresponsibility and said that he deliberately "suppressed himself" at the time he spoke in Parliament. He now accused the Communist party "of a total absence of feeling of decency and nationalism". Much of the gloom into which he had plunged his partymen was lifted by this clear condemnation of the Communist attitude.

Though the Tibetan problem is nowhere near solution, attitudes have clarified themselves and the Dalai Lama is safely within our borders. A delicate and difficult situation has been handled with great finesse and sense of proportion and without sacrificing any essential principles and without shutting the door for peaceful settlement. It is yet another victory for the patient statesmanship of Mr Nehru.

Housing is one of the problem in respect of which the progress made by the country could not be said to be satisfactory at least, judged from the magnitude of the problem. This is not however, to condemn the housing policy of the Government altogether since the progress which the Government could ensure with its limited resources for this field, would necessarily look puny against the formidable magnitude of the problem. When rural housing alone demands a total sum of Rs 2000 crores for some substantial progress what trifle could be achieved by a sum of Rs 85 crores, which is what has been provided for housing of all sorts under the Second Plan can, too easily, be imagined.

Criticisms of unsatisfactory progress in this context therefore weigh rather light, and therefore it was not difficult Mr K. C. Reddi, Union Minister for Housing to stand against the attacks of the Opposition members, on the issue of housing. The fact that his particular Ministry had no exclusive responsibility for implementing housing schemes guarded him against further criticisms from the opposition. Mr Reddi pointed out that several other Ministries were also concerned in the implementation of the housing schemes incorporated in the Second Plan.

Within the means which the resources allowed, there has been progress and Mr Reddi made mention of it. The rate of expenditure on various housing schemes had been progressing year by year and there was no difficulty in realising the reappraised target of Rs 85 crores by the end of the Second Plan period. Further the LIC had allotted a sum of Rs 4 crores as loans for housing schemes, and the whole sum for 1958-59 had been lifted by the State Governments.

The substance of Mr Reddi's answer to the criticism was to make it clear that housing depended for greater progress not on the activities of the Housing Ministry at the Centre alone but also on the activities of the State Governments and the local bodies. Raising the requisite finance is perhaps the most formidable obstacle against a higher rate of progress. Mr Reddi has in this connection indicated that this could to a certain extent be solved if the Central and State Governments and the local bodies were enabled to raise debentures and loans on a large-scale. Resources of institutional agencies offers another line of assistance that could be availed of for imparting momentum to progress in housing. LIC is the only institution that has been brought into the field for rendering loan assistance.

Acquisition of land presents another problem in the field of housing, and lack of adequate and well-developed plots has been recognised by Mr Reddi. Mr Reddi also stated that the Government

had almost finalised a scheme for bulk acquisition and development of land by State Governments.

*

Third Plan

The Third Plan has become a recurring theme of official discussions and has also begun to attract considerable public interest as would be revealed from public discussions on the subject that are reported in the newspapers. Such an early enthusiasm even before the Second Plan has run its full course, only reflects the concern of the Government to place the Plan on a sound footing by a proper assessment of the resources and needs of the country. This gives scope for flexibility in the light of the views that might come out of the public discussions.

From official references to the subject it is already evident that there is a general desire to have the Third Plan in a big way with expenditure that would be double that of the Second Plan. Tentative proposals now place the total outlay for the Third Plan at Rs 10,000 crores. However, there is no unanimity of views on this point even among Congressmen and this has been made clear at the recent discussions on the subject by the National Development Council.

Mr C. Subramaniam, the Madras Minister for Finance and Education, has for example cast doubts on the advisability of having a Plan double the size of the Second Plan when the latter itself is faced with uncertain prospects about its full implementation. He has gone to the extent of saying that fixing of such an ambitious target of Rs 10,000 crores would be setting an impossible task for the country to achieve.

What would set limits to the size of the Plan, according to Mr Subramaniam is the contributions that could be available from the rural areas; for he sees the essence of planning to consist of local development plans and it was therefore necessary to see what resources could be got through local bodies like the panchayats. The idea for a labour tax to utilise the idle manpower in the villages for local development has been mentioned by Mr Subramaniam, and would, if it is found acceptable go a long way in hastening progress in the rural areas. The success of this measure would depend on the efficiency of the panchayat administration existing in the rural areas, and the confidence it can command of the people in their areas of administration.

The need for a proper wage policy suggested by Mr Subramaniam is also pressing and will have to be properly approached in the interest of preparing smooth ground for the Third Plan. A definite stand and policy on this issue would save much uncertainty that would otherwise be created for the working of the Plan by revision of

emoluments effected in the middle. The Second Plan has suffered not a little on this account from frequent rise in pay granted to clamorous sections of workers.

*

Labour Relations

Whether the Government have been holding the scales even between labour and management in their industrial and labour policy is a question which would hardly elicit a unanimous view, either from representatives of labour or the business community. Between rival claims from either side for more incentives voiced in the interest of increased production, the position of the Government is really embarrassing since it has to pacify two contenders in the same field.

Whatever might be the reactions of either labour or management to the policy of the Government in the field of industrial labour, Mr G. L. Nanda, Union Minister for Labour, would not accept the charge of partiality on the part of the Government in their dealings either with labour or management. In the course of his speech in the Lok Sabha, Mr Nanda refuted such allegations from both capital and labour which sought to cast doubts on the Government's policy to do justice to both labour and capital. There was no substance in the contention of industrialists that the labour laws were heavily loaded against them and that they sought to strengthen the interests of labour at the expense of the management. The view

would not stand the light of reasonable scrutiny of the facts involved in the charge, and Mr Nanda himself has advanced facts and figures to disprove the theory of labour bias attributed to the policy of the Government.

Mr Nanda was equally critical of the attitude of the representatives of labour which reveals a similar lack of appreciation of the Government's efforts to improve the lot of workers. While he would admit that the progress the working classes had made in recent times has not been substantial, he would not accept that they have been losing ground.

In a country where the workers are far from being assured of a satisfactory standard of living, it would not be justice to insist on equal sacrifices from labour and capital. The gains that labour had made under the industrial policy of the Government has gone only little in improving their living conditions. It is the transitional difficulties that prevent greater improvement in the conditions of workers.

Mr Nanda also stressed the importance of workers' participation in management. Though an idea of recent origin, the scheme has been introduced in some industrial firms, and is meant to be further extended to more and more industries. Inefficiency flowing from indiscriminate selection of firms and industries, and without preparing labour in the duties and responsibilities of management is a danger to be guarded against.

S. E. RLY TENDERS

Sealed tenders are invited for Tender No. CON/COS/33/GB8/59 for supply of (a) 90 Nos. Desk and Benches (C.P. Teak) and (b) 1 No. Wooden Table (oval shaped) 10'x4'x31" (C.P. Teak). Tenders will be opened on 2-5-59 at 12 noon.

Tender forms are obtainable from the office of the undermentioned (Construction Section), Garden Reach, Calcutta-23, on remittance of Rs. 2/- (not refundable) per copy by money order to him direct in the case of outside firms and on production of cash receipt from this Rly's Chief Cashier by local firms.

Tender should accompany the receipt for depositing earnest money of Rs. 220/- with this Rly's Chief Cashier without which the tender is liable to be rejected. Approved contractors having a permanent deposit of Rs. 1000/- with the undermentioned are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

NORTH INDIAN MARKETS

PRICES of Foodgrains have been developing an easier tendency during the past few weeks despite the delay in the new crop arrivals. The main contributory factor is the Food Minister's announcement of the interim system of levy and licensing as part of the Government's scheme for taking over the wholesale trade in grains. The above announcement has caused little surprise in market circles, as the trade has already reconciled itself to State trading and has a rough idea of the salient features of the scheme. The satisfaction on the part of consumers follows the feeling that prices of foodgrains will no longer be subject to the vagaries of speculation by middlemen.

To begin with the system will cover only rice and wheat—the two major cereals. But the scheme will, in all probability, be ex-

Declining Trend in Grains Prices

tended to other important grains after the Government gain a better experience of handling the job. Wholesalers will, in future, function as licensed dealers.

There is, however, a general feeling that the zonal system should be done away with. The argument is, that the Government should allow a free flow of grains from one area to another in order to let prices find their levels. But, it may be pointed out that, with the scheme announced, the zonal system loses much of its meaning and that its abolition is a natural corollary to the scheme. This is so particularly because the Government have powers to take over stocks of wheat and rice at controlled prices and sell them to the consumer at fixed rates. The Food Minister's statement that it is not worthwhile appointing State Corporations is well received, but the

trade thinks that the Government may avoid haste in setting up the agency as contemplated for the purchase of grains from producers.

Meanwhile, in the Hapur market, Wheat prices have recorded a further fall of about 50 nP to Re 1 per maund. Harvesting having begun in some areas, the new crop wheat is expected to reach the market next week. There are reports of damage to crops in many areas due to untimely rain and hailstorm. Rice prices are also depressed in sympathy with the general bearish trend. Gram has registered a further fall of 75 nP per maund following the new arrivals from east Uttar Pradesh.

Among other foodgrains, Barley and Bajra have sought lower levels owing to the beginning of new grain arrivals. Maize and Bajra have lacked seasonal demand and, as stockists are anxious to liquidate their stocks, prices have eased further. Among Pulses, Peas are ruling steady as arrivals, which are small, are being lifted to outside destinations.

Although prices of wheat in Uttar Pradesh and Rajasthan and other States have declined considerably during the past few days owing to the approach of the new crop arrivals, prices in the Delhi grains market have shot up to a new high and are expected to improve further in view of the ban on imports of wheat from Uttar Pradesh and other States. Gram prices have declined by Re 1 to Rs 1.50 per maund on expectation of increased arrivals. Lower advices from Punjab were also a contributory factor. Bajra is quoted lower by about half a rupee per maund, while Urad and Moong have declined by Re 1 to Rs 2 per maund due to pressure of arrivals.

★

Sugar

Sugar markets have been ruling quiet due to easy supply position coupled with slack demand from the consuming areas. Prices are, however, quoted at about Re 1 per maund higher than the controlled rates. Some of the factories in West Uttar Pradesh have ceased crushing due to the shortage of cane supplies.

Meanwhile, the output of sugar, during the current season, has been showing a declining trend as compared to the previous year. Up to the end of February, the production amounted to 13.31 lakh tons as compared with 13.36 lakh tons in the corresponding period of last season. With just two more months left for the season to close, indications are that the output, this season, will be lower. At any rate, it will not exceed the last season's figure. In addition, there is the diversion of cane to khandasari production. Lower production coupled with the export of one lakh tons of sugar, will obviously mean further hardship to the con-

sumer, who is already paying a stiff bill for the sweet commodity.

★

Gur

Gur markets have, been ruling steady, as arrivals have dropped to an average of 1,500 maunds in the Hapur market. Stocks at Hapur were estimated at 30,000 maunds as against over 1.25 lakh maunds last year. Gur Pansera quality is quoted at Rs 13.75 to Rs 19.12 per md.

The market for Khandasari is ruling steady. Production in some centres is continuing but on a restricted scale. Prices are quoted at Rs 33 to Rs 36 per maund, according to quality.

In the Muzaffarnagar market, however, prices have declined sharply due to lack of support from the stockists and the arrivals of inferior quality products. The demand for Chakku gur from Gujerat, the Punjab and Madhya Pradesh is poor, which has resulted in the fall of prices by 50 nP per maund.

S. E. RLY TENDERS

Sealed tenders are invited for (1) Tender No. CON/GM/16/D/59 for supply of bolts etc, as per details to be obtained from tender schedule. Earnest money is Rs 1000/-. Tender will be opened on 29-4-59 at 3 P.M. (ii) Tender No. CON/GM/17/HA/59 for supply of (a) 3 Nos. oil circuit breaker, triple pole H.T. Panel Draw out indoor floor mounting type suitable for 11 KV 30 AMPS as per specification BSS 116—1952 or latest, (b) 2 Nos. oil circuit breaker, triple pole H.T. Panel draw out indoor floor mounting type suitable for 11 KV 30 AMPS as per specification BSS 116—1952 or latest. Earnest money is Rs 1000/-. Tender will be opened on 30-4-59 at 3 P.M.

Tender forms are obtainable from the office of the Controller of Stores (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs 5/- (not refundable) per copy per tender by money order to him direct in the case of outside firms and on production of cash receipts from this Rly's Chief Cashier by local firms.

Tenders should accompany the receipts for depositing earnest money as stated above with this Rly's Chief Cashier without which the tenders are liable to be rejected. Approved contractors having a permanent deposit of Rs 1000/- with the Controller of Stores are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

S1 GENERAL MANAGER

DELHI REVIEW

THE PENINSULA

POLITICAL developments in the Madras State as indicated by the results of the Municipal elections, have taken a turn which could not be considered as favourable for the Congress Party which has been holding the reins of administration without interruption from the advent of Independence. The conclusion of the Municipal elections in the State has found the Congress party greatly reduced in strength in places where it has been enjoying a commanding majority previously. The reverses in some place are so complete as to reduce the party into near non-entity in those places.

The elections were contested with all the fervour and party spirit that characterise general elections to State and Central legislatures. Though in some places, elections were contested without party labels, since such instances were few and far between, the party positions and strength were left clearly demarcated. An exact assessment of the strength of the different parties is rendered impossible because of the election of a number of Independents whose attitude and party predilections may be a determinate factor in the final distribution of municipal power.

What is however obvious about the elections is the downfall of the Congress from the position of pre-eminence. On the basis of the final position of parties, it is doubtful whether even half of the municipalities in the State would be manned by Congressmen. Out

of 53 municipalities in the State for which elections were held Congress had obtained an absolute majority only in 19. This indicates the sagging strength of the Congress since the last municipal elections, when the party obtained absolute majority in 26 municipalities. It may well be that the Congress would be able to plant itself in more places than where it has obtained absolute majority. In this connection it has been pointed out by Mr K. Rajaram Naidu, the President of the Tamil Nad Congress Committee, that the Congress were running the municipal administration in 36 places after the last elections even though the party organisation was in undiluted leadership only in 19.

The reverses of the Congress were as unexpected as they were severe in certain municipalities. In Madura for example, the Congress had lost heavily to the Communists who have captured more seats than any other party. In the 36 member council in Madura, the Congress had obtained only 9 seats while the Communists had captured 12 seats. In Tanjore, the Congress had lost its 15 year supremacy, the Dravida Munnetra Kazhakam having increased its strength at the expense of the Congress. Tirupur is another

place where the Congress had been overthrown from leadership. There are some compensating successes for the Congress in some other places like Gopichettipalayam and Tiruchi.

The Dravida Munnetra Kazhakam and the Communists are the two parties which seem to threaten the leadership of the Congress and along with the INDC another opposition party in the State Legislature have considerably cut into the strength of the Congress. The PSP remains as obscure a force as ever and the chances of the party developing itself into a political force to be reckoned with in the State could for all practical purposes be discounted.

For the parties opposed to the Congress, the reverses of the Congress was an outcome to be welcomed more than their own successes. In the Legislative Assembly, it was pointed out that the reverses of the Congress in the elections reflected the want of popular confidence for the Congress Ministry in the State. So far as the Ministers were concerned, it could not be said that they were frightened out of their wits by the results of the elections, or the challenge of the Opposition parties. Mr C. Subramaniam, the State's Finance Minister who replied the questions of the opposition about the reactions of the Government to the defeat of the Congress only pointed out that if the people had expressed themselves against the Government, it was a matter to be studied for its causes and remedies taken to restore public confidence.

More than regretting the reverses of the Congress, Mr Subramaniam expressed worry at the confused state of party positions in some of the municipalities, with no party having an absolute majority. This is perhaps the most deplorable feature of the elections since it has given rise to a situation which would not conduce to stability or efficiency of municipal administration and which might further develop into a source of perpetual troubles resulting not unoften in deadlocks between parties. On this consideration at least, all the parties, and even the voters will have cause to rue the results of the elections. The lessons of the election would have gone home to the voters if they understand the need for one strong party and exercise their right in such a way as would place in power one party strong enough to be able to conduct municipal administration without the vagaries of support from other quarters.

So far as the Congress in the State is concerned, the party must needs be on the watch against the ominous indications which the results of the elections have disclosed. The Congress may well cover up its defeat by arguing as Mr Subramaniam has done, that in

Municipal Politics

expressing themselves against the Government the voters had also not indicated any definite preference for any other political party in the State. This is all the more reason why the Congress party, in the interest of maintaining stability in administration, should endeavour by all possible means to reneatse themselves into the public confidence. The difference between the municipal elections and general elections, the difference in the coverage of voters and eligibility to vote should not be exaggerated to lead to complacency in Congress minds. In a sense of wounded pride, Mr Subramaniam declares that he does not mind which party is voted to power so long as the results disclose distinct emphasis in favour of any particular party. In the Madras State these other parties, which on the basis of the municipal elections, seem to be gaining ground are the Dravida Munnetra Kazhakam and the Communist Party. There are not the parties whose rise to power is to be hailed considering the ideology to which these parties subscribe and the larger interests of the country. What the future holds forth for the Congress in the State would depend essentially on what the present Government make it by means of their actions and policy in all fields that touch the welfare of the people. The Congress administration it would be granted has a splendid record of service in promoting the development of the State's economy and improving public welfare. How the good impression created in the public mind by such achievements could, for the moment, be undone, to the harm of the Government, by some ill-timed steps spelling adverse effects on some sections of the population, has been amply demonstrated by the recent strike by the venders of vegetables, and other perishable articles. The strike was resorted to by the latter in answer to the decision of the Gov-

ernment to levy a small sales tax on such dealers having an annual turnover of more than Rs 30,000. The fact that the levy would have applied only on higher turnovers leaving the small venders unaffected did not prevent the strike from materialising. Similarly the fact that the measure was thoroughly hatched up at the Select Committee stage in which the opposition members also had a share, did not prevent the latter from making political capital out of the situation created by the strike. Again Government had the backing of expert opinion in their stand which therefore could not have been considered unreasonable. For, in the report on sales tax reform in the State, Mr P. S. Lokanathan had not treated these articles as deserving of special exemption from sales tax. Notwithstanding such mitigating circumstances, large sections of public opinion remained alienated from the Government on this issue. The agitation had since then petered out, with the Government having their own say in the matter. But whether and to what extent the prestige of the Government has suffered it would not be possible to say with any degree of exactitude. It is quite likely that the discontent stirred up by the Government by means of this levy of sales tax on perishable articles would have also influenced the results of the municipal elections in the some places. It is time therefore, that Government take stock of the situation and meet the challenge to its power.

In the declaration, published in our issue of March 7, 1959, in regard to the shareholders participating in Indian Financial Journals (Private) Limited, the name of Messrs Bengal Central Building Society Limited was inadvertently stated as Calcutta Insurance Company Limited. The error is regretted.

MADRAS REVIEW

Madras is one of the few States which is well served by a proper system of roads. Against the all-India average of 25 miles of roads, the Madras State has a record of 42 miles of roads per hundred square miles of area. This naturally makes the State Government less vulnerable to criticisms by the opposition parties than other subjects.

However the Government was not let off lightly by the opposition at the time of the discussion on road transport initiated by Mr P. Kakkan, the State Minister for Works. There were aspects in the Government's policy which the opposition found out of accord with the need for rapid development of roads in the State. Mr Karayalar for example condemned the present system of entrusting construction to contractors, which he argued led to inefficiency and corruption. Bad working, resulting from insufficient supervision was also alleged by another member. Further it was pointed out by Mr Ramaswami Mudaliar, leader of the opposition in the Assembly that the State was losing the service of talented engineers because of inadequate pay allowed by the State Government.

The Minister had satisfactory answers for all these criticisms. About the existence of the contract system, it was pointed out by the Minister that because of paucity of personnel at the disposal of the Government to undertake work, it was inevitable that the services of contractors had to be utilised for road construction. In regard to corruption, it was pointed out that it was not so rampant as the members alleged it to be, though the complete absence of such corruption could not be denied. The Minister also assured proper consideration of the need for enhancing the payscales of road engineers in the State whom the State is reported to be losing to the Centre because of the disparity in payscales.

The Minister also assured proper steps for the rapid development of road in the State. In the first three years of the Second Plan, an amount of Rs 244.82 lakhs was earmarked for road development out of which Rs 193.81 crores is estimated to have been spent for road construction. In concrete terms the achievement of the State included the construction of 675 miles of roads, improvement of 743 miles, completion of 94 bridges. The total length of Government roads in the State exclusive of National Highways, is now placed at 8383 miles.

While progress in road construction has not been rapid enough to provide easy means of transport and communications to all the villages in the country, a higher level of progress is envisaged under the Nagpur Road Development Plan which is expected to be

spread over a period of about 20 years. The target of this Plan is to achieve an average road mileage of 52 miles per 100 square miles.

★

Southern Food Zone

The South Food Zone has been the subject of some comments from officials of the Southern States which have joined together to form the Zone. There is dissatisfaction about the working of the zone in both Madras and Andhra the two States which are surplus in their foodgrain production, and it has been reported that these two States have asked the Central Ministry for scrapping up the zone and replacing the present setup by a new arrangement under which each State would be formed into a separate zone by itself.

The objections from the Madras Government to the continuance of the zone arise mainly from the irritating incursions made by neighbouring Kerala Government into the rice stocks of the State, and the impact of this drain on the rice supplies in the State. Under the South Food Zone arrangement, the movement of foodgrains is free between the different States constituting the zone and therefore, it is not within the normal power of the Madras Government to stop the outflow to Kerala. In Andhra Pradesh also, the working of the zonal system has not produced any satisfaction at least from the point of assuring the producer an attractive price and hence the demand for doing away with the South Food zone in that State.

In Kerala there seems to be some confusion of views about the utility of the South Food Zone. Mr E. M. S. Namboodiripad has pronounced the South Food Zone a failure since according to him the arrangement has not assured to his State unrestricted flow of rice from the surplus States of Madras and Andhra Pradesh. However, Ministerial opinion does not seem to support the idea of abolishing the South Food Zone and it has been pointed out on behalf of the Kerala Government that the abolition of the arrangement at the present state would adversely affect the supplies position in Kerala which is highly deficit in its production of foodgrains. It cannot be denied that any such move would disrupt the supplies position of foodgrains in Kerala which has been getting a major part of its requirements from Madras and Andhra Pradesh.

While the zonal arrangement for the movement of foodgrains between States could be said to have worked rather satisfactorily to prevent worse calamities in supplies position in deficit States, the entire aspect of the question seems to have been changed with the decision to socialise the wholesale trade in foodgrains. Under a regime of State trading, inter-State movement of foodgrains

Road Works

through private channels, would be completely ended and with this the chief merit of the present arrangement would also stand cancelled.

★

Forest Development

Presiding over the Centenary celebrations of the Madras Forest Administration, Mr Bishnuram Medhi, Governor of the State stressed the importance of forest development for the welfare of future generations. Though the Forest department of the State has completed hundred years of its existence, it was not a case of even care bestowed by the Department throughout the period of its hundred years of existence. For as Mr Bhaktavatsalam, the State's Home Minister pointed out, the Second World War opened a period when there was wholesale felling of forest trees as a result of which the forests in the State suffered heavy denudation. This destruction was only limited by the capacity to organise felling, conversion and extraction. However with the advent of the national Government forest development could be said to have entered a new phase of development and progress. As pointed out by Mr Bhaktavatsalam the First and Second Five year Plans have set up definite targets for forest development.

Forest development in Madras had a chequered progress mainly because of constant changes in the territories of the State. From being one of the biggest provinces in the country at the beginning of the century, the area of the State had got progressively reduced the final phase of which was marked by the State reorganisation scheme as a result of which the State had lost territories to the new States of Kerala and Andhra Pradesh. With the shrinking areas of the State, the forest resources of the State has also dwindled considerably. In this connection Mr Bhaktavatsalam, pointed out, that these changes had affected the forest areas in the State more than the areas of land under other uses, the only new acquisition being the Tamil tracts of the Travancore-Cochin State. But Mr Bhaktavatsalam has pointed out that this represented only a paltry increase in the forest areas of the State considering the areas that had been lost to other States.

Farm forestry, which Mr Bhaktavatsalam stated to be the main plank in the efforts of the Department, would have to go a long way to make use of every site which the villages in the State offer.

★

Homoeopathy

Homoeopathy is a branch of medicine that has been clamouring for Governmental recognition for some time now. This is a source

SOUTH INDIAN NOTES

of bitterness to the Homoeopaths in the country whose number is not inconsiderable. The homoeopaths have been pressing their claims for governmental recognition at every conference at which they meet to discuss their common problems.

The South Indian Homoeopathic Conference which was held in Madras provided the occasion for focussing the claims of homoeopathy to public and Governmental attention. Mr V. V. Athalye in his presidential address pointed out that Homoeopathy was not a mere form of therapy but a system to be comprehended as a whole and not in part. Much of the misgivings about homoeopathy spring from the absence in the country of recognised courses of study in the subject. Only the setting up of regular undergraduate courses of study would succeed in popularising homoeopathy in the country. Dr Athalye has therefore urged the need for setting up licentiate courses in the subject which could in course of time be upgraded into graduate courses. Without such courses of study and Governmental recognition, it is not possible to see how homoeopathy could acquire the status of modern allopathic system of medicine.

That homoeopathy has claims to recognition is evident from the actual recognition granted by the Bombay Government in 1951 though only after arduous struggle by homoeopaths. In Madras State, though recognition has been assured, legislation is yet to be passed embodying such recognition. It can now be hoped that it would be only a matter of time before Homoeopathy gets the recognition of all State Governments in the country.

When thus the system is poised for Government recognition, it is necessary to see that nothing is tolerated which would bring the system into disrepute. Dr Jai Soorya's warning against the existence of spurious institutions claiming to train students in homoeopathy is timely and in order. Dr Jai Soorya has also pleaded for the setting up of small bodies for developing the system since he considers the vastness of the country to be the major obstacle in the progress of homoeopathy.

Uniformity in syllabus and standard of training has been stressed by Dr Athlye. He has also warned against private institutions taking it upon themselves the setting up of institutions for training in homoeopathy without liberal Government support. Dr Athalye also pleaded for a separate board and faculty for each State for purposes of registration of practitioners, maintenance of medical ethics etc. Dr C. V. S. Corea, International Director for Asia for World Homoeopathic Congress stressed the need for unity among Homoeopaths.

SOUTH INDIAN MARKETS

THE production of natural Rubber in India has been disappointing and the potential for increasing it seems to have been neglected. The estimate of demand for this year is placed at 55,000 tons, while the next year will find manufacturers asking for 60,000 tons with production being short by around 30,000 tons.

If domestic production is to keep pace with demand, the replanting programme will have to be pushed forward with greater energy. As the newly-planted areas will take time to become productive, it is worth investigating whether output can be increased by consolidating small and scattered plantation holdings into bigger and more economic units.

India has a replanting scheme; but it is too small, too late too weakly supported. The industry, it is stated, may have to undertake replanting of not 70,000 acres in ten years, but three times as much in seven years.

Meanwhile, the Government have recently received representations from producers for the revision of

Growing Demand for Rubber

prices for raw rubber on the ground that the cost of production has increased considerably since 1955 on account of increased expenditure on wages and provision of amenities and provident fund benefits to labour. The rubber goods manufacturing industry, on the other hand, has represented that the controlled prices of indigenous rubber are already high. In view of the industry, any upward revision of prices will not be justified, particularly because the manufactured articles are not able to withstand competition in the world market.

The Government have carefully examined the matter. Although they feel that the rehabilitation element, which is included in the price fixed for raw rubber, has not been utilised adequately by the producers, the Government consider that there is a case for referring the question of the prices of raw rubber to the Tariff Commission for investigation. The Commission has been requested to conduct the necessary enquiries in regard to the cost of production of rubber and submit a report to the Government at an early date.

14, Netaji Subhas Road,
Calcutta, 31st March, 1959.

Note: A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

Groundnut

Activity in the Madras Groundnut was restricted last week. With seed prices maintaining higher levels, crushers were not able to buy in order to offer oil at attractive levels to the buyers. Calcutta interests, too, were not active, especially when the supply position in Bengal was better and other centres were offering oil at slightly reduced levels. Arrivals averaged about 30 tons per day. The rate for the superior oil-quality seed was quoted at Rs 174 per candy.

It is expected that the summer crop will be moving into the Madras market in a few weeks, while small quantities of the new crop are coming in.

In the Groundnut Oil section, there was only small buying by Calcutta interests. However, the rate improved to Rs 338 from Rs 336 per candy, thanks to the incentive announced by the Government of India for exporting oil.

★

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides were fair; but clearances were restricted on account of the sudden price increase in all qualities of kips asked by commission houses. Although arrivals of Buff hides were moderate, there was a fair clearance at unchanged levels. Arrivals of Cow Calf and Buff calf were patchy.

In the export section, trading was restricted on account of a tendency on the part of sellers to go slow and, in some cases, due to the oversold position of many of the

MADRAS REVIEW

tanners. In better class marks, business was reported on the basis of 65d to 70d for light weights. Supplies of Buff Calf were extremely small and a few parcels changed hands on the basis of 72d.

In the Tanned Skins section, arrivals of both goat and sheep skins were about the same level as in the previous and there was good clearance at an advance of up to

25 nP per pound. On the export front, there were several enquiries for goat skins; but sellers' prices seemed to be very high for export business. There was very good demand for inferior fifts in 11/12 lbs and 13/14 lbs with local prices advancing by 3d to 6d per pound. In sheep skins, primes and semi-primes were steady.

of western Europe, but as fresh capital can only in the last resort come from savings, the return to economic health in Europe, where so much capital has been generated in the past, can only be of benefit to the countries of Asia in which our main sphere of activity lies.

HONG KONG

The publicity which Hong Kong has received during the past year, while focussing interest abroad on many of the Colony's activities, has not been without its embarrassing features. Many of the reports have given fair and factual accounts of local conditions but a great deal has been written from a partisan approach which has been totally inaccurate. When one looks at conditions in Hong Kong today it is essential to turn back a little to find out how the present situation has developed, to examine the various problems that had to be faced, and to consider how these have been overcome. Before the last war and immediately after it Hong Kong acted as an entrepot for trade with south China, supplying that area with the imports which were required and marketing the oils and other agricultural products which were exported. There was not only a free exchange of merchandise between Hong Kong and south China, but the population of the Colony tended to rise and fall as economic conditions were prosperous or the reverse. The emergence of the Communist regime in China, together with the embargo imposed as a result of the Korean war, however, changed all that and not only did the entrepot trade fall off but the movement of population tended to be virtually a one way traffic. Under such circumstances some other kind of economic activity had to be developed to take the place of the dwindling entrepot trade with China and to give employment to the growing number of immigrants. This took the form of the establishment of light industries, many of which have been most successful, and of these the cotton spinning industry is the largest and has made the greatest impact on world markets. If conditions today are looked at from this historical background I think that on the whole the record is one of which we may be justifiably proud. That does not mean that everything is perfect or that labour conditions in all cases are what they should be, but steps have already been taken to improve these, and I do think it is fair to ask that criticism of Hong Kong should be tinged with a sense of realism and appreciation of what is possible under the circumstances as they exist. The reports of the members of the parliamentary delegation, which we were very pleased to see here in the autumn, were an example which might well be followed by others.

The rising volume of exports of cotton textiles to the United Kingdom and the growing pressure from the Lancashire cotton industry for the fixing of a ceiling have been the main causes of the publicity

which Hong Kong has recently received. Negotiations in the past failed to make much headway, but in September a delegation from the United Kingdom Cotton Board visited the Colony and had discussions with a special committee set up to negotiate on behalf of the local industry. This time it was found possible to reach agreement and a ceiling of one hundred and fifteen million square yards per annum of exports of cotton piece goods to the United Kingdom for retention there was laid down for a period of three years; and the Hong Kong government agreed to set up the necessary administrative machinery to ensure that the limit was adhered to. It was hardly to be expected that this compromise would be received with enthusiasm by either side but I hope that it will give a little breathing space, which will enable this question to be considered in the future rather more objectively than has been the case in the past. I should like to pay tribute to the tact and patience displayed by the members of the Hong Kong negotiating committee, which had considerable difficulties to overcome locally in reconciling the different points of view of the various interests involved. It is satisfactory that the Minister of State at the Board of Trade recently stated in the House of Commons that it was not their intention to sponsor similar arrangements in respect of other exports from Hong Kong.

With conditions not so favourable in neighbouring territories it is not surprising that general economic activity in the Colony showed some signs of slackening off, but the general level still remains satisfactory. Building continues on a considerable scale and it is estimated that fifty per cent of all domestic accommodation in the urban area is now of post war construction. The need to provide low priced housing remains as urgent as ever and, in spite of all that has been done, the government consider that the number of squatters now remaining is at least as great as the number which have been settled. The complaints that have been received from various countries with regard to competition from Hong Kong products have focussed emphasis on the need for diversification of local industry. There is, I think, a certain justification in this criticism but it is perhaps not surprising that private capital should tend to concentrate on the production of the well tried and easily saleable article.

Hong Kong's Trade

Hong Kong's trade in 1958 showed a decrease in value of about seven per cent compared with the previous year mainly due to a fall in imports as exports remained at about the same level. Total trade amounted to HK\$7,609 millions with imports at HK\$4,600 millions and exports at HK\$3,000 millions. China continued to be the Colony's largest supplier and

imports from this country increased by about one quarter with most other areas showing reductions, in particular Japan and the United Kingdom. Exports to Japan and Indonesia showed a drop but this was made up by higher purchases by the United States and the United Kingdom. The balance of trade with the last mentioned countries, however, still remains unfavourable to Hong Kong.

Exports of Hong Kong products showed a rise of about five per cent over last year's figure. The United Kingdom continued to be the best customer with the United States in second place, and the increases to these countries more than covered the drop in exports to Asian territories particularly Indonesia. Nearly five hundred new factories were registered during the year, a rise of about one third compared to 1957.

Business on the Stock Exchange showed a slight increase over last year but the volume is still not very large and there is no sign of a return to the more active conditions of some years ago.

Land values tended to decline during the year and it looks as if the demand, which has been so strong in recent years, is now less active.

For the first time for some years the total bank clearings showed a decrease over the previous year's figure and were at about the same level as in 1956.

FINANCES OF HONG KONG

The financial position of the Colony continues to show the steady improvement which has been such a feature of recent years. For the current year a surplus of at least HK\$40 millions is now expected as not only was revenue buoyant, but once again expenditure on non-recurrent public works was considerably lower than was expected. In fact this is the twelfth consecutive year in which there has been a surplus and revenue is now double what it was seven years ago, although there has been no major change in taxation. Since the war all expenditure, recurrent and capital, has been financed out of revenue, apart from a public loan of HK\$50 millions floated in 1948 and a loan from the United Kingdom towards the cost of the new airport.

For the financial year 1959/60 revenue is expected to remain at about the same level but the estimated expenditure shows a substantial increase, which will produce a deficit of nearly HK\$90 millions. The Financial Secretary considers it more likely this year that the money voted will in fact be spent but, even if this should turn out to be the case, it is perhaps not surprising that apart from a few minor adjustments there is no increase in taxation.

CHINA

China has been engaged during the past year on what is described as "the great leap forward" and figures issued by the official agen-

cies show a tremendous increase in industrial and agricultural production. Much statistical information is now published at frequent intervals which shows that in practically every field of production targets have been surpassed, while reports from various parts of the country describe the numerous projects such as reservoirs, irrigation work and railroad construction which have been completed or are under way. Rural society, already transformed by the merging of small units into co-operative farms, experienced an even more radical change by the organisation of the people's communes. Built on the basic rural administrative area comprising about 30,000 people, the establishment of the commune results in the whole activity of a district, agricultural, industrial, cultural and military, being under central control, while communal nurseries and dining rooms enable the women to work as hard as the men. This movement, which was started in Honan province in April spread rapidly throughout the country and was given added impetus by the military activity in the Formosan Straits. It is reported that by the end of the year "more than 99% of China's peasant households" have joined. Complementary to this policy was the development of rural industry. Small production units, many of the cottage type, were set up in all districts, and in villages and towns rapidly constructed blast furnaces turned out pig iron as a first step in the drive for more steel. Output of coal is reported to have increased by over 50%, much of it mined by hand, and numerous public works are being completed at a surprising speed by manual labour with few mechanical aids.

The above are a few of the main features relating to China's development which have been continually stressed in their own periodicals and until December there was no hint that there would be any turning back. In fact communes were to be introduced at an early date in the cities, and this was to be the final stage in the transformation from Socialism to Communism when wages and private ownership would disappear. A resolution of the Central Committee of the Communist Party published towards the end of the year, however, made it clear that the pace could not be forced and that they "should not be in a hurry to set up people's communes on a large scale in the cities". The resolution went on to warn against "any premature attempt to negate the principle of 'to each according to his work' and replace it with the principle of 'to each according to his needs' ". In conclusion the various committees were urged to make use of the winter months "to carry out an overall and thorough inspection". Reports of increasing rationing of foodstuffs and the difficulty of the export corporations fulfilling their contracts abroad are further evidence of strain, but production targets published for 1959 make no allowance for this and are about a third higher than 1958.

Even if one is not prepared to accept all their claims at their face value, and it is only necessary to study the Chinese press to find mention of inaccurate statistical reports from the countryside, there is no doubt that there has been considerable progress in practically every field and industrial production has shown a marked increase. These achievements have only been possible due to a high degree of central direction of effort, which has laid particular emphasis on speed, but the transport system in the country has been severely strained and distribution has inevitably suffered. What will probably be more surprising to shareholders, who are acquainted with China, is that labour has been found to be insufficient and the establishment of the communes was no doubt aimed at increasing the supply, particularly of female labour. It is clear however that the attempt to introduce this radical change in the countryside, to increase crops by deep ploughing, to operate small blast furnaces in the villages and to improve rural irrigation—all at the same time—has proved more than the economy can bear. In spite of this setback it cannot be denied that what has already been achieved is a challenge to other countries in Asia. How fast it will be possible to continue the process without serious dislocation is not so easy to predict.

The recently signed trade agreement with Soviet Russia which will provide for the construction over the next few years of seventy-eight large enterprises covering metal, chemical, coal and oil installations makes it clear that there is to be no turning back on the road to greater industrialisation. British trade with China during the first eleven months of the year showed considerable improvement with exports more than double the previous year's figure and imports up by one third. An interesting development has been the entry of China into the shipping market where, taking advantage of the low prices ruling during the year,—partly by charter and partly by purchase—a considerable volume of tonnage has been acquired.

JAPAN

Few countries are more directly concerned than Japan with the emergence of China as an industrial power, as the Chinese mainland is Japan's most natural source for industrial raw materials and the competition from Chinese manufactured goods in south east Asian markets is a threat to her export trade which seems likely to grow in intensity. Private discussions took place in the early part of the year, with the object of concluding a trade agreement between the two countries, and at one time it looked as if these would be successful. When it became clear however that diplomatic representation would not be granted to a Chinese trade delegation in Japan negotiations were broken off and direct trade between the two countries virtually ceased. This was a considerable blow to Japan's economy,

particularly in the Osaka area, at a time when purchasing power in some of her markets in south east Asia was falling off. It has recently been announced that there is a possibility of negotiations being resumed but there is likely to be some hard bargaining before agreement is reached.

The elections in May resulted in the return of the Liberal-Democratic party with Mr. Kishi in particular considerably strengthening his position. He was thus able to form a new cabinet in which it was claimed that factional differences were considerably reduced, with only the foreign minister remaining from his previous team. The course of the new administration seemed to be set to fair until in October the Police Duties Law revision bill was introduced which was greeted with a considerable degree of opposition. There is no doubt that since the war the police have been severely handicapped in their efforts to deal with demonstrators, as at present they are prohibited from taking preventive action. The new bill would have greatly increased their powers and permitted them to act both in private premises and public places if there was a clear and present danger of public disorder. These proposals were strongly opposed by both the Socialist party and a great part of the public as well and the prime minister in November finally bowed before the storm and agreed to shelve the bill. Although it would be unwise to attach too great significance to these developments there is no doubt that public opinion made its influence felt as never before and was the deciding factor in the course of which events took. Three members of the cabinet have since resigned, and although Mr. Kishi was recently re-elected president of the party for a further term, the strength of the opposition has weakened his position and it is clear that the factional strife, which has for so long prevented the taking of decisive action on controversial matters, will continue to be as active as ever.

In November the engagement of the Crown Prince was announced and the marriage is expected to take place in April. Traditionally the wife of the heir to the throne has been selected from one of the half dozen families closely associated with the throne and the Crown Prince's choice of a commoner is another sign of the slowly changing pattern in this basically conservative country.

The economic measures taken in 1957 to curb the boom, which was threatening the balance of payments, were successful in their immediate objective and the foreign exchange reserves at the end of the year were US\$861 millions, a rise of US\$337 millions during the year in spite of a repayment of US\$125 millions to the International Monetary Fund. Industrial production however declined and, although the drop in the value of commodities benefited Japan's terms of trade, the main cause of

the improvement in the balance of payments was a reduction in imports particularly of industrial raw materials. Imports in fact fell by about one third while exports maintained the same level as in 1957 and were unable to show the steady growth of previous years. Statistics relating to unemployment in Japan are somewhat unreliable, as in a great many cases workers become under-employed rather than being put out of work altogether, but the increase in unemployment must I think have been quite considerable. On the whole the deflationary policy would seem to have been successful and has resulted in a more healthy balance between supply and demand. Advances by the Bank of Japan to the banking system for example have registered a sharp drop.

From October onwards there have been various signs that business is picking up. Wholesale prices, the production index and exports all started to rise while letters of credit opened during the last quarter for imports showed an increase of twenty per cent over the third quarter. The outlook for iron and steel and shipbuilding is much brighter but the textile and fertiliser industries still remain somewhat depressed. Whether this general improvement will be maintained remains to be seen but the upward trend in demand from Europe and the United States should begin to make its influence felt; while China in recent months has been less active in her sales in south east Asian markets, a factor which should benefit Japan even if it may be only temporary. The rice crop turned out to be the second largest in Japan's history and would probably have been better still but for the bad weather during the harvest.

On the whole the economy enters 1959 in a fairly strong position to take advantage of any improvement in world economic activity. The problem of developing new and active export markets however remains as pressing as ever.

PHILIPPINES

The present administration, after a year in office, has not succeeded in solving the foreign exchange problem which is itself merely a symptom of a much graver economic condition. It is true that restriction on imports has halted the rapid fall in the reserves, which was such a danger in 1957, but as long as deficit finance continues any significant improvement is unlikely. In view of the administration's disinclination or inability to adopt the necessary austerity measures which alone will halt the increasing inflation, it is perhaps not surprising that applications for aid from international agencies receive lukewarm reception, and that the visit to the United States of the President of the Republic and the Governor of the Central Bank achieved only a limited success.

The budget for 1960 is expected to be balanced at the record figure

of Ps. 1,280 millions, with one fifth of the revenue being raised from additional taxation including a twenty-five per cent premium on the sale of foreign exchange. The President has made it clear that in his view "the need for fiscal and economic stabilisation is urgent" and has once again urged Congress to repeal "the no dollar import law". Similar exhortations have been made at this time of year before without any noticeable effect and Congress has been more inclined to approve expenditure than to pass the measures for raising the necessary revenue. There is perhaps more reason for hope this year as a mission from the International Monetary Fund has arrived in the Philippines to study the position on the spot. Meanwhile the rediscount rate has been raised from 4½ per cent to 6½ per cent per annum and the reserve which banks are required to hold against their demand liabilities has been increased.

Relations with the United States are going through a difficult stage and the respective ambassadors have been recalled for consultations. The American bases in the Philippines are the main cause of friction and this subject has been under discussion for some years. President Eisenhower recently described the differences as "psychological" and it would be surprising if some settlement were not reached fairly shortly. From 1st January, 1959 both countries doubled the percentage of the standard duty which will be charged on imports from each other in accordance with the gradually increasing scale arranged in 1955.

VIETNAM

The political situation in Vietnam shows little outward change but security conditions continue to improve, due to a large extent to the development of more refugee settlement schemes, supported by government grants, in the outlying regions. American assistance is an important support but progress in providing for the day when this is no longer forth-coming is very slow as industrial development schemes take a long time to mature.

Although the total of imports for the first eleven months of the year was reduced by twenty per cent, compared with the previous year, the surplus over exports continues to be very large. Exports also fell by about one third in value with the two main products, rubber and rice, both running below the previous year's figures. Importers continue to have difficulties in disposing of their stocks as the market remains sluggish, due to local purchasing power being so low and it is estimated that there will be a further reduction of about fifteen per cent in imports during 1959. The current rice crop is expected to produce a considerable exportable surplus which, if it can be sold, should show a better balance between imports and exports at the end of

the year. The internal price however is too high and it may be necessary to grant some form of subsidy if overseas markets are to be found.

The budget for 1959 is expected to be in balance at about eight per cent higher than 1958. Increased expenditure will mainly be used for development projects connected with agriculture and the setting up of light industries, such as sugar refining and paper mills, where the raw materials are available locally. In his budget address to the National Assembly, President Ngo Dinh Diem described his government's policy in the agricultural field as aimed at extending the area under cultivation and increasing production. The agreement recently signed with the French government, for the purchase of rice lands belonging to persons under French jurisdiction, will enable these rice lands to be distributed under the agrarian reform programme while the improved system of agricultural credit and the programme for improving communications should also benefit the rural population.

CAMBODIA

The internal political situation continues very much as before and the elections to the National Assembly resulted in an overwhelming victory for the Popular Socialist Party. In July Cambodia recognised Communist China but the policy of strict neutrality has not been in any way changed. A border dispute with Thailand unfortunately resulted in diplomatic relations being broken off for a time between the two countries but, thanks to the mediation of a special representative of the United Nations, a settlement appears to be in sight.

Trade for the first nine months of the year resulted in a considerable adverse balance due to a rise of about one third in imports compared with 1957. Although all categories of goods show some increase, imports of machinery, motor vehicles and textiles accounted for the major part. The foreign exchange balances are however still at a very satisfactory level.

THAILAND

The government, composed of members of the National Socialist Party, which was formed after the elections in December 1957, never seemed to be particularly secure in the saddle and by September 1958 the dissension within their ranks and the worsening economic situation made it likely that some change would be made. This took a somewhat unexpected form as Field Marshal Sarit Thanarat, returning suddenly from England, assumed absolute power on the 20th October and suspended the constitution of 1932. At the beginning of this year an interim constitution was promulgated and a constituent assembly was appointed, composed of nominated members, to prepare a fresh constitution. Field Marshal Sarit Thanarat

meanwhile headed a new cabinet and stated that improvement of the nation's administrative machinery would be one of the main tasks of his government. It is perhaps unwise to seek too close a parallel in the establishment of this military regime with similar changes that have occurred elsewhere, as politics in Thailand have always to a large extent been dependent on personalities rather than on parties, nevertheless the suspension of the 1932 constitution will postpone for an indefinite period the formation of an assembly entirely elected by the people.

Economic conditions were severely affected by the drop in export earnings which caused an increase in the adverse balance of trade. Exports of rice and tin were reduced by 400,000 tons and 5,000 tons respectively and, while shipments of rubber were higher than last year, earnings were less. Timber benefited for a time from the freight war between shipping lines to European destinations and exports were better than was expected, although they fell off at the end of the year as the market in Europe is reported to be overstocked. The new rice crop is expected to be about average but indications so far in 1959 seem to show that the price is not competitive in world markets. It is hardly surprising, in view of what I have mentioned above, that importers are being cautious about entering into new commitments.

An Economic Advisory Committee, set up immediately after the coup d'état, made a determined effort to reduce the cost of living and then turned its attention to the promotion of industry and encouragement of foreign investment. The budget, the introduction of which has once again been postponed, will no doubt eventually be conditioned to a large extent by the recommendations of this committee.

FEDERATION OF MALAYA

The first full year of independence has been extremely encouraging and the government have tackled realistically the problems which faced them both at home and overseas. The Alliance still continues to retain the confidence of the majority of the people and their prospects for the elections, which will be held later in the year, seem at the moment to be good. Considerable progress has been made in the battle against the terrorists, in particular in Johore and Perak, where until quite recently they were very active—a culmination of years of effort by men and women of many nationalities. The lessening of the military danger does not give any grounds for complacency however, as the threat of internal subversion has if anything increased, but the government seem to be fully conscious of the necessity to guard against this danger and have taken a number of steps to this end. In foreign policy an independent attitude has been adopted, the only commitment

being the mutual defence treaty with the United Kingdom. On the other hand there seems general agreement that as long as the Emergency remains in force a neutral policy is not possible and accordingly there is no form of diplomatic relationship with the communist countries. The Federation has played an active part in the United Nations and other international organisations and, at the meeting of the International Bank in New Delhi, was asked to provide an executive director for the coming year.

It is unfortunate that this new country has had to face so soon a decline in revenue due to the lower price of rubber and the reduction under the International Tin Agreement of the export of tin. A deficit of M\$90 millions is expected for 1958 and it is estimated that this will be followed by a slightly higher deficit in 1959. Basically the financial position of the Federation is sound as, although the revenue account will become overdrawn by the end of this year, there are substantial credit balances in other accounts more than sufficient to cover. Nevertheless the continuing deficit on revenue account is a matter for concern and a progressive reduction, in the words of the Minister of Finance, "would appear to be the major task of 1960". In view of the country's present financial position the development estimates for the coming year are around M\$150 millions only, or at about the same figure as in 1958, but in view of the long term loan of M\$100 millions, which has since been arranged with the Government of Brunei, it may be possible to accelerate the pace. A loan of US\$10 millions has been obtained from the U.S. Development Loan Fund to develop port facilities in the north Klang Straits and a larger loan of US\$35 millions from the International Bank for the Cameron Highlands hydro-electric scheme. In this latter loan we have agreed to a small participation in some of the earlier maturities.

Legislation was passed toward the end of the year for the regulation of banking and the establishment of the Central Bank of Malaya, which opened for business on the 26th January, 1959. Mr. W. H. Wilcock, who has been banking adviser to the government, was appointed the first Governor. The Central Bank has been granted the usual powers required by such an institution and in addition there is a clause which leaves the way open for the accession of other territories. Included in these powers is the right to issue currency, although it is not intended to do so at this stage, and the Currency Board will continue to be responsible for the note issue as in the past. This I think is a wise move as it will give a breathing space and may prevent the irrevocable severance of the currency arrangements between the Federation and Singapore,

which would I am sure not be in the best interests of either territory.

With the object of offering inducements to new industries, the Pioneer Industries Ordinance, providing for tax concessions to be granted in such cases, was introduced and it is hoped that this measure will provide an attraction to potential investors. It is the policy of the government to encourage the investment of foreign capital, and on the whole they are doing their best to create a suitable climate, but it was unfortunate that the many claims on the reduced revenue necessitated an increase in company tax from 30% to 40%.

While there is no doubt of the necessity to set up local industries it seems evident that the needs of the growing population will require the development of some of the many tracts of virgin land which are still largely unexploited. A certain amount is being done in this direction but the pace is still too slow. The conflicting claims of agriculture, forestry and mining, and the problem of reconciling with a national policy the jealously guarded rights of the States to control their own land, are some of the difficulties that will require to be overcome, but the importance of agricultural development to the whole future of the country makes it essential that some solution should be found.

Taking everything into account the present position of the Federation is a happy one and the future prospects are good. A great deal of the credit for this state of affairs is due to Tengku Abdul Rahman whose resignation from the post of prime minister was announced last month. His withdrawal from an active part in the government will be a loss to his country but there are indications that this decision may not be permanent.

TIN AND RUBBER

The reduction in industrial activity in both the United States and Europe resulted in the price of tin remaining weak and a large part of the restricted exports was absorbed by the Buffer Stock and subsequently by the special fund set up largely by producers' contributions. The position was aggravated by large stocks which came on the market from Russian sources and at the end of August the United Kingdom announced a quota on imports from Russia, a lead which other countries followed. Unfortunately this action seemed to have been taken too late and in the middle of September the Buffer Stock Manager was forced to withdraw support from the market which caused a sharp drop although the price quickly recovered. While there is no doubt that the heavy sales on Russian account were the main cause of the failure of this latest effort at stabilising the price of tin, the decision of the International Tin Council to raise the floor price in March 1957 has been criticised.

April 11, 1959

Since the beginning of the year the tendency has been firmer due to greater demand. The agreement reached with Russia to limit exports to 13,500 tons for 1959 naturally assisted this upward movement but even the increase of 3,000 tons in the export quotas for the second quarter of this year only caused a temporary reaction. At the end of last month the price reached the level at which tin in the Buffer Stock may be sold and, with the statistical position greatly improved, the Buffer Stock Manager should be able to exercise considerable influence on the market.

During the first half of the year the price of rubber was steady at an average of 76½ cents but in July it started to rise mainly on Russian buying. Demand fluctuated during the following months but Russia came in again as a buyer in the last quarter which caused prices for a time to rise to over 90 cents with an average of 83½ cents for the second half of the year. Pan-Malayan production increased by 4% compared with 1957 and December was a record month which shows that the replanting programmes since the war are now beginning to yield results. The volume of exports was slightly higher than last year.

SINGAPORE

The constitution for The State of Singapore was published at the end of the year and elections for the fifty-one member Legislative Assembly are expected to be held in May, with the constitution coming into force on the Monday after the election day. The new State will have full internal self-government but defence and external affairs will remain the responsibility of the United Kingdom.

On the whole this constitution, which has been arrived at after a considerable period of negotiation, should meet the needs of the people of Singapore, while at the same granting the United Kingdom Government the safeguards which are required. The sense of urgency, which a few years ago permeated all discussions on Singapore's future, was less in evidence last year while there are signs that all parties have retreated somewhat from the extreme positions they once held and are showing a greater sense of responsibility. This is a most significant development which, if it should continue, will do more than anything else to allay any feelings of apprehension as to the future which a constitutional change is bound to raise.

The main contenders at the elections seem likely to be the new party formed by the present Chief Minister, Mr. Lim Yew Hock—the Singapore People's Alliance—and the People's Action Party. The aims of the former have considerable support amongst a certain section of the community but strenuous efforts will have to be made in the short time still available to build up a much stronger organisation than at present exists.

The People's Action Party on the other hand have already shown, by their success in the City Council elections, the degree of efficiency which their party machine has achieved. Whichever should be successful, two important objectives would seem to be worthy of a high degree of priority—the first to maintain overseas confidence in Singapore to avoid any damage to the entrepot trade, and the second to move forward with the ultimate aim of forging closer links with the Federation of Malaya. There are already signs that the necessity for Singapore and the Federation marching in step is becoming more generally appreciated in both territories and I hope that nothing will be done to prevent this feeling from gaining strength.

Economic conditions were not as good as in previous years due to smaller shipments of tin, a less favourable price for rubber and a falling off in the transit trade with Indonesia. The improvement in the price of rubber was however beginning to have its effect at the turn of the year and I think it is true to say that, on the whole, Singapore weathered a difficult year very well. Labour relations, it is encouraging to note, show a great improvement.

The budget for 1959 is expected to be in balance due to an increase in company tax similar to the Federation and a rise both in income tax, on a graduated scale, and in the duty on cigarettes. With the object of leaving the incoming government a free hand, development expenditure has on the whole been restricted to the completion of existing commitments. These are considered to be within "the limit of what can be financed with safety and certainty in 1959" and more ambitious plans will depend to a great extent on loans. The Financial Secretary however pointed out that the prospect of raising loans at the present time can hardly be considered bright due not only to a lack locally of available resources, but also to the disinclination of investors to commit themselves until the future political outlook is clearer. The needs of this mainly young population, on the other hand, require continuing expenditure on such things as housing, education and hospitals which emphasises the importance of political stability with a satisfactory climate to encourage investors both local and foreign.

In the closing sessions of the present Legislative Assembly several measures received approval which were intended to give encouragement to local industry. These comprised the setting up of a People's Investment Corporation which, with locally raised capital—subscriptions limited to M\$500 per person—would participate in the manufacture of cigarettes and matches; legislation to control manufacturers and to encourage pioneer industries; and an amendment to the Customs Ordinance to enable tariffs to be imposed on

certain imported goods to give protection to local industries. Free trade has been for so long such an integral feature of Singapore's whole economic development that the criticism which greeted the introduction of this last measure was hardly surprising and the government were obliged to accept a number of amendments. It is quite understandable that there should be growing concern about the danger of unemployment, which is probably the most serious threat to Singapore's future, and that there should be the wish to take some positive action to encourage the setting up of local industries. It is however questionable whether protection, with the inevitable increase in the cost of living which will follow, is in the best interests of the people as a whole and this point was made by a number of speakers in the debate. Unless export markets are developed by the new industries at a fairly early stage the duties will require to be continued almost indefinitely, as the market in Singapore itself would seem to be too small to enable costs in most cases to be competitive with similar goods manufactured elsewhere.

Pan-Malayan total external trade showed a drop of nearly 9% with the adverse balance increasing by over a third compared with last year to M\$368 millions. Exports showed a drop of 10% in value while imports fell by 7%. Trade for the year was in fact the lowest since 1954.

NORTH BORNEO

North Borneo has had on the whole a very satisfactory year and, in spite of lower commodity prices, has found it possible to balance the budget without higher taxation, while the value of foreign trade has increased by about 7%. Agricultural development seems likely for many years to come to be the mainstay of any economic progress and the government are making every effort to encourage a greater variety of crops. Progress continues in the growing of hemp, and very favourable reports have been received on the possibility of large scale production of cocoa, while plans for the establishment of oil palm plantations are progressing well. The abandonment of the oil drilling project at Hankin Shoal has been a set-back, but hopes of finding oil off the coast elsewhere have not by any means been abandoned. Rubber replanting continues to be vigorously encouraged and, with the help of the Colonial Development Corporation, an area in the Kenningau Plain will be developed, with the planting of one thousand acres of rubber and the setting up of a central rubber factory. The timber industry has also done well and last year provided the most valuable single export.

The shortage of labour has been commented on frequently in these reports and was in fact one of the main causes in the past for the slow pace of development. For this reason I was interested to see

that the Governor in his budget address was able to state "that today there is no shortage whatsoever of labour for our current needs". This is apparently due to the influx of unsponsored Indonesian immigrants and the improvement in the labour situation, coupled with the greater number of technically trained personnel coming forward, should enable progress to be made at a quicker rate than has been possible in the past.

BRUNEI

Negotiations on the proposed constitution have continued during the year and it seems likely that a deputation will be going to London shortly to discuss outstanding problems. New immigration laws came into force which restricted the automatic right of entry and residence to members of the State's indigenous races. Persons who did not qualify, but had lived in the State for the previous seven years, were eligible to apply for permanent residence permits.

Revenue is expected to be slightly less in the coming year due mainly to reduced production of oil and lower prices, but the State is still very fortunately placed. The main expenditure under public works is on the very necessary programme for further road development.

One of the main events of local interest was the opening of the magnificent new mosque in the capital which has taken about five years to complete. This ceremony was performed by the Sultan, in September, in the presence of leading representatives from neighbouring territories.

SARAWAK

Our office in Kuching was opened in April and has got off to a good start in spite of the fact that trade decreased during the year by about 12%. The Governor in his budget address stated that the policy for 1959 was one of "consolidation rather than expansion", and that the rate of expenditure could not continue at the same level as previously. It was decided to impose a cess of two cents a pound on rubber exports to raise revenue for the rubber replanting scheme, to meet the increased cost of planting material due to the tax imposed on the export by the Federation of Malaya. On the whole the year has not been an easy one but the government have made every effort to improve the lot of the people with the resources available.

INDONESIA

The government were successful in withstanding the military threat from the rebel forces in Sumatra and north Celebes and in regaining possession of the major towns, but it is questionable whether their writ runs very large in the neighbouring countryside. The rebel leaders still remain at large and it has been found necessary for the military to continue to parti-

cipate, to a considerable extent, in the running of the civil administration and of the commercial enterprises taken over from the Dutch; while the State of Emergency has been extended until December 1959 and at the end of last month it was announced that the country would return to rule by Presidential decree. More success has been achieved in the control of the barter trade between Sumatra and Singapore although copra from the Celebes still continues to be exchanged for consumer goods. Certain steps have also been taken, which should go some way to meet the complaints of the outer islands that they do not receive their fair share of the foreign exchange cake.

It is hardly surprising that with the political situation remaining so disturbed economic conditions have been far from happy. The loss of the Dutch-owned coastal shipping, much of which was specially constructed for this trade, will take some time to replace and, until it is found possible to maintain a greater degree of law and order, produce from the estates will not be able to reach the ports. The budget for the coming year estimates a deficit of Rp.8,000 millions, advances to the government by Bank Indonesia have risen in twelve months from Rp.15,000 millions to nearly Rp.25,000 millions and the note issue has increased by Rp.5,600 millions. Foreign exchange reserves remain at about the same level as a year ago but this has of course resulted in the percentage of cover for the note issue being reduced. It has therefore been found necessary to amend two statutes of Bank Indonesia, one which laid down a minimum foreign exchange cover to be maintained against the note issue and the other which limited the level of advances to the government. Restrictions on private imports continue to be very severe and the future outlook for foreign business generally and the activities of our bank in particular hardly look very promising. As was advised to you by my predecessor last year our Surabaya office was closed and we are taking steps to reduce the staff of our Djakarta office to a minimum.

INDIA

The dissolution of the civil administration by the military in Pakistan has naturally been a matter of lively interest to India and the general trend in this direction in this part of the world is being carefully watched, not without a certain amount of apprehension. All has not been plain sailing for the central government internally during the past year; relations with the state government in Kerala remain difficult, quarrels between ministers and party leaders in the Punjab have been frequent, demonstrations have been organised by the extreme Hindu right-wing in Calcutta and Delhi while the pressure for the division of Bombay State remains very active. The realisation that Mr. Nehru, who threatened

to resign during the year, may wish to lay down office sooner than was once expected has naturally raised speculation about his successor and seems to have resulted in factions developing within the cabinet. Notwithstanding the various troubles with which the country has had to contend, and the continuing challenge by communism, India has good claims to be considered to be the most stable democracy in Asia and the future of parliamentary institutions in this part of the world seems likely to depend on how they develop within her borders.

The drawing down of the foreign exchange reserves, which was such an important feature of the Indian economy in 1957, continued during 1958 although at a somewhat slower pace as the balance of trade was more favourable than during the previous year. This was due to severe import licensing, which not only reduced the level of imports of consumer goods but of raw materials as well. Industrial production as a result showed a slight falling off in comparison with the steady annual rise which has been so consistent for the past few years.

In August a meeting of the countries most directly concerned was held in Washington under the aegis of the International Bank and arrangements were made to provide credit to cover India's foreign exchange commitments until March 1959. A further meeting will be held shortly at which the more difficult problem of finding the money to carry out the last two years of the second five year plan will be discussed. It seems likely that some arrangement will be arrived at which will enable the plan to be completed, if not in such an ambitious form as was once hoped, at least with the main essentials basically unaltered. This will only have been achieved at a considerable cost as not only have the sterling balances been run down to almost below safety level but a large foreign debt has been incurred which will be a burden to service much less to repay.

Development however is a continuing process which cannot be halted in mid-stream and the rising population is already resulting in an increase in unemployment, which shows how necessary it is for there to be no turning back. Consideration is already being given to the third five year plan and there are indications that many favour a more ambitious edition of the second, with concentration on the construction of further large scale industrial enterprises. This would be a further step along the path which India wishes to tread but I wonder whether the inflationary pressure will not prove to be too great unless self-sufficiency in food grains has been achieved. It is true that the present harvest is a good one but planning cannot depend on the vagaries of the monsoon, nor can the country

continue indefinitely on the present austerity level of imports. Would it not be better, as a first step, to concentrate on a well planned programme of agricultural development in conjunction with an active campaign to improve existing farm methods? This would give the necessary base without which rapid industrialisation can hardly hope to succeed, namely, steadily rising agricultural production. Unfortunately the recent decisions at the Congress Party conference at Nagpur are not encouraging, nor is the proposal to impose an immediate ceiling on land holdings, with the surplus being run by peasant co-operatives, likely to result in any short term improvement in food production which is the most immediate problem.

BURMA

The dissensions within the Anti-Fascist People's Freedom League, which had been simmering beneath the surface for some time, finally erupted in April when the party was split into two factions. The Prime Minister, U Nu, who led one of these factions was able to reorganise his cabinet in June but the loss of the support of his former deputies seriously weakened his position in the country. In an effort to regain his former authority he proclaimed a general amnesty, with the object of bringing to an end the activities of the insurgents, but this task, which the united party found beyond their powers, proved even more intractable after the split. In September he handed over the premiership to the supreme commander of the army, General Ne Win, who formed a caretaker government which was intended to remain in office until April when fresh elections would be held. These seem likely to be postponed and the constitution has recently been amended to permit General Ne Win to continue as Prime Minister, notwithstanding the fact that he is not a member of parliament.

This basically military government has in a short time brought about a considerable improvement in conditions throughout the country. Prices have been reduced as a result of active steps being taken against hoarders, a drive has been instituted to clean up Rangoon city and many industrial projects, which seemed likely to be a strain on the economy, have been abandoned. Trade has however suffered and the volume financed by the commercial banks in November compared with the same month in 1957 was only about one third.

The import restrictions which were introduced with the object of halting the drop in the foreign exchange reserves were extremely successful and almost the whole of the loss sustained in 1957 has been recovered. The rice crop is expected to be good and there are estimates of an exportable surplus of two million tons in 1959, although marketing may not be so easy with large surpluses elsewhere. The future economic outlook must depend to a large extent

on political conditions but, if the present difficulties should be resolved, an improvement in trade should result even if progress at first may be slow.

CEYLON

The civil strife and communal rioting, which occurred in May, left a scar which will take a long time to heal and it has not yet been found possible to repeal the State of Emergency. The passing of the bill to provide for "the reasonable use of Tamil" is a step towards a solution of the language question but this measure suffers from the usual defects of any compromise. Labour relations have been most unhappy and the long line of waiting ships, which has been such a familiar sight on the Colombo skyline for most of the year, is practical evidence of the conditions in the port. At the turn of the year the banks were involved in a strike which had some rather unpleasant features but, as a settlement of the matters under dispute has now been reached, I do not propose to make any further comment on our particular experience. There is however little doubt that even a country, as richly endowed by nature as Ceylon is, cannot afford an indefinite continuance of the racial and labour troubles which have been such a feature of 1958.

The budget for the coming year showed a deficit of nearly Rps. 500 millions and to meet part of this gap an increase in direct taxation was proposed, with the introduction of a completely new range of taxes on gifts, wealth and expenditure. These proposals met with an unfavourable reception from the commercial community but so far the finance bill incorporating them has not been published and it is thus difficult for tax payers to estimate their liability.

Preliminary figures show that trade was almost in balance last year, with imports somewhat below the previous year's level. The tea crop was a record but conditions in the port of Colombo held up shipments and at one time there was a danger that plucking and manufacture would cease. Arrangements made to utilise the ports of Galle and Trincomalee averted this stoppage, which would have been a disaster to the island's economy, and nearly one third of the year's exports were shipped through these ports. The price obtained for high grown teas showed a slightly higher average than in 1957 but sellers of other grades had to accept less favourable terms.

CONCLUSION

As usual I have tried to give shareholders a brief review of the main events in the eastern territories in which we are interested. Economically the year has not been too favourable for these countries but on the whole they have managed to bear with the burden of low commodity prices without any serious dislocation. The future outlook seems brighter but much will depend on the speed with

April 11, 1959

which industrial production rises in the west, particularly in Europe, and the strength of the competition from China which the rice producing countries may have to face.

A great deal of progress has been made since the war in promoting development in countries where the standard of living is low and the work in this field seems likely to grow. There are however two matters which I should like to mention as it seems likely that they will become increasingly important in the future.

The first is the necessity for the less developed countries to attract foreign private investment. Since the war a large part of the capital these countries have received has come from governmental sources and international agencies, which have to a large extent taken the place of the private investor. This is a development with which I should not wish to quarrel and in many cases the large amounts required could not have come from any other source. There still remains none the less a role for private capital to play, particularly in the supporting industries without which any broad basis of industrialisation is impossible. Not only that, but private has one advantage over institutional capital in that there is less likelihood of the repatriation of the original investment and, provided the venture is successful, a portion of the profits will be ploughed back each year for future development. It would seem therefore that countries which are short of capital should, in their own interests, make every effort to see that a suitable climate exists which will encourage foreign private investment. This I am afraid is not always the case and, making due allowance for the fear of foreign exploitation, I am sure that the present policy of some countries is most unwise.

The second concerns the necessity for countries which are setting up new industries to be able to find markets in which they can sell their manufactured goods. These will be to a large extent in countries where the purchasing power is high and probably in competition with existing home industries. It is here that the more highly developed countries can help, but from our experience in Hong Kong the outlook is not too promising. I do not underestimate the political difficulties, as it is obvious that pressure will continue to be applied on governments to give protection to their own industries. Nevertheless I am sure that, if it is the policy of the western nations to encourage development in countries less fortunately placed, then it will be necessary for them to go further and to open up their markets to some of the products which this development will cause. Aid has been given on a most generous scale in recent years and has achieved much. It remains to be seen whether the same enlightened attitude will be adopted over the more difficult problem of trade.

Hindustan Lever Limited

Speech of The Chairman at the Annual General Meeting

India's Future Needs of Oils and Fats

The Annual General Meeting of Hindustan Lever Limited was held in Bombay on April 6, 1959. The following is the text of the speech made at the meeting by the Chairman, Mr. S. H. Turner.

It gives me great pleasure to welcome you to this Annual General Meeting of the Company.

I shall take as read the Report & Accounts for the year 1958 which have been with you for some time. I have also circulated to you my review of their salient features. I shall, therefore, proceed to talk to you about some aspects of vegetable oils and fats which are the principal raw materials of our industry.

Fat is a food. This is true whether it is solid or liquid, whether it is ghee or vanaspati or oil, whether it comes from a cow or out of the ground. It is indeed a food of very high value. Weight for weight it provides 2½ times as many calories, 2½ times as much energy, as the foodgrains, and the hard fats, vanaspati and ghee, have a vitamin A and D content the foodgrains lack.

Therefore, when we plan for a future in which the national income is to double and the population to go up to perhaps 600 million in twenty years, it is just as important to provide for our fat supplies as for our rice and our wheat. In some ways it may even be more important. As people get richer, they spend an ever lessening percentage of their income upon cereals, but an ever increasing percentage on fat. In technical terms the expenditure elasticity of demand for edible oil is 0.5 and for hard fat 1.7 which gives a total elasticity of approximately 1. In other words, for every increase of 10 per cent in income there will be an increase of 17 per cent in the demand for hard fat and of just about 10 per cent in the demand for all fat. A population of 600 million with a national income twice that of today will require 36 lakh tons more fat to eat.

Moreover, vegetable oil is not only used as a food. It is also used in the manufacture of other products such as soap and paint and as a hair dressing. Much more of all these will be required in a richer and more urbanised country. Paint will be needed for machinery and for the new buildings in the growing towns and the better buildings we all hope to see in the countryside as the villages get richer. The habit of using oil to dress the hair is universal, and as the farmer and the worker get more prosperous, one must expect to see them put oil on their hair with a regularity which at present

only a clerk or a shopkeeper can afford. Finally, no country in the world sets a higher value on cleanliness than India does, yet very few countries have a lower consumption of soap per head.

The explanation for the last is two-fold. First, there is poverty. Many people cannot afford as much soap as they would like. Secondly, many villagers still live a largely self-contained existence and they use earth or gram flour or plain water to clean themselves and their clothes.

As poverty diminishes and the villager gets drawn more and more into the money economy, all past experience suggests that the demand for soap will go up sharply. Our own expectation is that every time the national income goes up by 25 per cent which the planners expect it to do roughly every five years, the demand for soap will go up by over 40 per cent. In twenty years' time, a population of 600 million with twice the present national income will need 9 lakh more tons of oil for soap and paint and the hair than is needed at present.

Taking food and industrial uses together, we will in twenty years' time need 45 lakh more tons of fat. Twenty years is no longer than the time which separates us from the outbreak of the second world war. But since 1939 our output of fat (ghee and oilseeds together) has gone up by only 5 lakh tons. Obviously the effort that will be needed from now on if our needs are to be met dwarfs anything that has been done up to now.

We can hope for very little extra supplies of ghee and butter. Over the last 20 years production has, if anything, declined. The demand for liquid milk goes up so sharply when the national income increases and communications improve that the supply from the whole of India's cattle may only just keep up with this demand.

The 45 lakh tons of fat which are needed will have to come from oilseeds, consumed either as oil or vanaspati. How large a requirement of extra oilseeds this will mean depends on which oilseeds are grown. Groundnuts have an oil content of over 40 per cent, rape and mustard of only 30 per cent. Even if we assume that the great bulk of the demand will be met by groundnuts—and this will be the sensible thing because groundnuts give much the highest yield of oil per acre—at least 150 lakh tons more oilseeds would be required.

At present yields this would mean another 53 million acres

under oilseeds. This is 14 per cent of India's present cultivated land. Diversion from other crops on such a scale is not possible. We should not, however, assume that there can be no diversion at all. As our standards of farming go up we might be able to produce our requirements of foodgrains on smaller acreages. When that happens there will be an automatic shift from millets to groundnuts, which are a more profitable way of using the same acreage. The farmer has been inhibited from making the shift in the past because he had to grow the millets for his family to eat. Once he can satisfy the needs of his family from a smaller part of his land, he will naturally, and probably without any Governmental urging, turn the land thus freed over to oilseeds.

Over a generation this might increase the present output to a sizeable extent. By itself, however, it will not solve the problem. It is necessary also to make an increase in the yield of oilseeds per acre a major objective of policy. Up to now far less research has been done on, for instance, improved seeds and manurial requirements for oilseeds than has been done for rice or wheat or cotton. And even what has been done has not been properly conveyed to the farmer. In the National Extension Service the village level worker talks a great deal about the Japanese method of rice cultivation, or the advantages of longer staple cotton and rustless wheat. He very rarely mentions oilseeds, and very few of his demonstration plots demonstrate any method by which our fat requirements could be more adequately met. If our immense future needs are to be satisfied, this error in priorities must be corrected. In such states as Andhra, Bombay and Madras, where oilseeds form a large part of the acreage under crop and they contribute an even larger part of the farmer's cash income, oilseeds must be given top priority.

Over the last 20 years in other countries, increases in yield per acre of between a quarter and half in many crops have been achieved; and India has the advantage that since it starts from particularly low present yields, the scope for improvement is quite specially large. Moreover, the application of science to tropical crops is relatively recent. Research efforts in oilseeds particularly have been relatively small and unco-ordinated. From the next plan onwards, if the very large targets which the planners habitually give for oilseeds is followed up with an equally big programme

of research, it should be possible to develop improved seeds and practices and manures and to increase resistance to disease at a speed far faster than anything that has been done in the past.

It is not enough to find the research answers. They must be taken to the people. Improved seed that stays in the seed farm, better methods that are known only to the scientist at the research centre, grow no groundnuts. The seed and the fertiliser must be made available to the farmer where he wants them and when he wants them; and if he needs money to pay for them there must be a co-operative society or other suitable agency to lend it to him. The new methods must be taught to the village level worker in terms simple enough for him and the farmer to understand them, and the village level worker must be able to demonstrate them on a plot in the farmer's own village, and using implements and bullocks of a sort the farmer himself uses.

Nevertheless, whatever the future triumphs of science, however high the priority given to oilseeds, and however large the diversion from millets to groundnuts, it is probable that the next twenty years will see an increasingly widening gap between the amount of oils and fat we produce and the amount we want for soap, for hair oil, and for edible purposes. This gap can be filled simply by letting the price of fat go up relatively to that of other commodities. When the demand for a product is so sensitive to income as that of fat, relatively limited increases in price can cut down demand very sharply. But this is obviously a last resort. If the price of fat has to increase to an extent that makes people buy something else instead, then we will hardly be raising their standard of life.

There are other possible ways of filling at any rate part of the gap. The first is imports. In 10 or 15 years of time, if the need for foreign exchange is not quite so desperate, India might be able to import more of her requirements from abroad. More immediately it might be possible to get quite large quantities of soya bean oil from the United States under P.L. 480.

Secondly, the Government's policy of encouraging cottonseed crushing is likely to have more and more success. Four per cent of the oil the vanaspati industry used last year was cottonseed oil and we shall strive to increase this to 10 per cent by 1961. But the key, here as so often, rests with the farmer. If he will feed his cattle with cottonseed cake instead of cottonseed, to their very considerable benefit, the cottonseed will naturally go to the crusher. Government has now decided to launch a vigorous campaign to persuade the farmer to make this change in his habits. It is important that the village level worker should do a good educational job in the field.

If he succeeds and all the country's cottonseed goes to the crusher, it would add 150,000 tons to our oil supply every year.

Thirdly, there are possibilities with new crops or with the fuller utilisation of old ones. The cultivation of the oil palm on Indian soil is well worth examination. Meanwhile, great efforts are being made to collect minor oilseeds.

Finally, as more and more solvent extraction plants go up, they will recover more and more of the oil which ghani crushing leaves behind in the cake and will thus reduce what has hitherto been a serious national waste. This by itself might increase oil supplies by 30,000 tons a year.

Any attempt to look forward into the future is necessarily liable to a very large margin of error. A successful campaign of family planning might keep population below 600 million. On the other hand, circumstances might prevent the national income from increasing at quite the rate the Planning Commission thinks it will. Again, our estimates of the elasticity of demand have been based upon the figures for the 4th to the 7th rounds of the National Sample Survey. They are, therefore, figures for the conditions of the early 50's. In the different India and the different world of the 1960's, the elasticities might be different too. If, for instance, television were to come to India, it is possible that many people who today celebrate an increase in income by buying some more ghee or some more vanaspati, might decide to pay an instalment on a television set instead. Or in the India of the late 60's people might do more of their washing of themselves and their clothes with non-soapy detergents and less with soap, as has already happened in the United States of America. On the other hand, the use of fat in the diet is only 1/4th of the nutritional optimum, and it is particularly low in the villages. An increase in village incomes and village knowledge of simple nutrition might well lead to an even larger increase in the demand for fat than we have assumed.

We need not argue about just which assumptions one should make. Whatever assumptions one may choose, if we develop at all, the demand for fat is bound to be enormously larger than it is at present; and the increase will be for purposes, notably food and cleanliness, upon which the citizen's happiness depends. If we are to have an adequate supply to meet this great demand, we must begin to plan for it now; which means giving oilseeds a priority in money and men and research and extension work they have never yet had.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

Buying Spree Continues

Watch-Dog Writes:

ALTHOUGH equity prices have been fluctuating rather erratically, sentiment in stock markets still continues to be confident and most of the popular scrips have forged ahead despite intermittent profit-taking. The main inspiration is derived from the fact that the news from the industrial front is favourable.

The leading companies are either maintaining their dividends or raising the rates thereof to some slight extent. News relating to bonus issues are also in the offing in many cases. Above all, there is a general view that the pressure of business recovery will no longer be balked by changes in the Government policy hereafter.

The upward trend in prices on the Calcutta Stock Exchange gathered further momentum, although profit-taking eased some of the extreme gains at the close.

Equities on the Bombay Stock Exchange, after falling initially, tumbled down appreciably due to bull liquidation at the close following the disappointment over the status quo dividend by National Rayons.

On the Madras Stock Exchange, there was considerable activity although price movements were confined to a narrow range.

The London Stock Exchange finished the week on a buoyant note.

Calcutta

Calcutta, Friday Evening.

THE local Stock Exchange started the week on a buoyant note and, with renewed support for the speculative and selected Jute shares, prices continued their upward trend on a broad front. The main contributory factors were the scarcity of stocks, absence of sellers and the publication of encouraging results by some leading companies.

Many investment scrips of companies with excellent growth prospects were absorbed at rising levels in the hope that these companies would be able to pay higher dividends to make good, at least to a large extent, the loss to shareholders on account of change in the mode of taxation. Operators, however, appeared to be cautious at higher levels for two reasons—the lowering of yield pattern and fears of fresh credit curb aimed at checking undue speculation. Nevertheless, the undertone remained still buoyant.

Conditions in the Gilt-edged section continued to remain quiet with the volume of business at a

low level. Institutional investors showed little interest due to acute stringency in the money market. 3 per cent 1986 Conversion Loan opened quiet at Rs 74 and, after improving at one time to Rs 74.30, receded again at the close to Rs 74.15.

Jute shares remained active with selected scrips meeting with good demand at enhanced levels, thanks to the announcement of encouraging dividends by Andrew Yule and McLeod group of companies. This announcement led to a belief that, despite the lack of overseas enquiry for jute goods, mills might be making satisfactory margin of profits in view of the easier tendency in raw jute prices. Alliance were taken upto Rs 135 from Rs 129; Anglo-India upto Rs 259 from Rs 239; Barnagore upto Rs 159 from Rs 150; Chitavalsah upto Rs 16.25 from Rs 15.75; India upto Rs 16.62 from Rs 16.25; New Central upto Rs 16.06 from Rs 14.81 and Union upto Rs 227 from Rs 218. National and Howrah, after touching Rs 24.44 and Rs 25; closed a shade easier at Rs 24.37 and Rs 24.50 respectively.

S. E. RLY TENDERS

Sealed tenders are invited for (i) Tender No. CON[COS] 27/WP[F2]59 for supply of 1 No. Interlocking frame catch handle looking complete 42 levers as per IRS Drg. No. SLO. 1956 (SA) 1101 (Adv). Earnest money is Rs 280/-. Tenders will be opened on 25-4-59 at 12 noon. (ii) Tender No. CON[COS]28/P&M[B]59 for supply of 4 No. Pump, capacity 10,000 G.P.H. as per details to be obtained from tender schedule. Earnest money is Rs 480/-. Tenders will be opened on 27-4-59 at 12 noon. (iii) Tender No. CON[COS]29/WP[GB4]59 for supply of 200 cwt pig lead, DGS&D's Specn. G[Metal] 46C, 99.8 per cent purity. Earnest money is Rs 320/-. Tenders will be opened on 28-4-59 at 12 noon.

Tender forms are obtainable from the office of the under-mentioned (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs 2/- (not refundable) per copy per tender by money order to him direct in the case of outside firms and on production of cash receipt from this Rly's Chief Cashier by local firms.

Tenders should accompany the receipt for depositing earnest money as stated above with this Rly's Chief Cashier without which the tenders are liable to be rejected. Approved contractors having a permanent deposit of Rs 1000/- with the undermentioned are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

CONTROLLER OF STORES
S2

Coal shares, especially of those companies with prospects of expansion, were in good favour. It was also hoped that the Government would take reasonable measures to analyse the reasons for the slow-down in the rate of production and put one of India's basic industries on a sound footing. Bengal were enquired upto Rs 318 from Rs 305; Equitable upto Rs 31.75 from Rs 31.12; Central India upto Rs 8.53 from Rs 8.15; South Karanpura upto Rs 14.62 from Rs 13.91 and Western Bengal upto Rs 6.56 from Rs 6.34. Burrakur, after touching a new high of Rs 19.50 from Rs 18.56, closed at Rs 18.94.

Buying interest in the Tea section seemed to have abated and prices, in some cases, even tended to fall on lack of enquiry. Operators were rather cautious in their commitments, pending the prospects for the new crop. Amongst the few dealings recorded, prominent were Banarhat changing hands at Rs 284 to Rs 287; Brooke Bond at Rs 18.19 to Rs 18.44; Dhunseri at Rs 18.56 to Rs 18.69; Hasimara at Rs 23.37 to Rs 23.62; Jaysree at Rs 13.37 to Rs 13.72; Methoni at Rs 20.87 to Rs 21.12 and Rydak at Rs 29.75 to Rs 30.

Textile scrips continued to fare better on reports of a considerable decline in stocks with the mills and in anticipation of the present improvement in the offtake of cloth being maintained in the coming months. Elgins changed hands at Rs 13.31 to Rs 13.87; Kesoram at Rs 13.19 to Rs 13.69; New Victoria at Rs 1.37 to Rs 1.47 and Jayshree at Rs 9.06 to Rs 9.12 x.d.

Sugar shares were selectively supported. Raza/Buland had buyers at Rs 13.75 to Rs 14.00; Carew at Rs 8.25 to Rs 8.56; Champaran at Rs 18.81 to Rs 17.06 and SKG at Rs 11.00 to Rs 11.25.

In the Engineering section, price movements were mainly influenced by the speculative activity in Indian Irons which, in turn, were subjected to heavy speculative buying. After opening steady at Rs 24.36, Indian Irons steadily advanced at one time to Rs 24.78 at which level some selling pressure caused the scrip to slip down to Rs 24.57, to finish the week at Rs 24.60. In sympathy, TEXMACO were taken upto 25/65 from Rs

BRITISH INDIA ELECTRIC CONSTRUCTION CO. LTD.

The Board of Directors has decided to recommend to the forthcoming Annual General Meeting of the Company a final dividend of 15 per cent for the year ended 31st December, 1958.

By Order of the Board,
BALMER LAWRIE & CO. LTD.
D. MANSON
Secretary,
Managing Agents.

21, Netaji Subhas Road,
Calcutta.
1st April, 1959.

23.70, to close at Rs 25.60. Jessop were keenly sought after upto Rs 31.50 from Rs 29.12; Braithwaite upto Rs 32.12 from Rs 30 and Indian Standard Wagon upto Rs 100 from Rs 92. Kumardhubi and Marshalls were nearly maintained around last levels.

Although price movements were irregular, Miscellaneous issues ruled generally steady due to sustained support and lack of sellers at lower levels, thanks to the flow of encouraging corporate news. Orient Paper were taken upto Rs 38.50 from Rs 36.90 (Rs 38.10); Titagur upto Rs 47 from Rs 45.02 (Rs 46.50); Sirpur upto Rs 13.94 from Rs 13.25 (Rs 13.69); Indian Cable upto Rs 32.75 from Rs 32.37 (Rs 32.62); Indian Aluminium upto Rs 22.00 from Rs 21.16 (Rs 21.69); Indian Copper upto Rs 4.40 from Rs 4.30 (Rs 4.37); Rohas upto Rs 23.94 from Rs 22.87 (Rs 23.56); Dunlop upto Rs 35.37 from Rs 35.12 (Rs 35.25); Aluminium Corporation upto Rs 14.75 from Rs 13.81 (Rs 14.06); Indian Oxygen upto Rs 27.62 from Rs 27.12 (Rs 27.50); Hindustan Motors upto Rs 9.25 from Rs 8.94 (Rs 9.12); Philips India upto Rs 21 from Rs 20.31 (Rs 21); Alkali Chemicals upto Rs 22.75 from Rs 20.56 (Rs 22.50) and Orissa Minerals upto Rs 37.12 from Rs 36.50 (Rs 36.25). Figures shown within brackets were the closing rates for the week, India Steamship were rather quiet at Rs 14.09 against Rs 14.25 and Clive Row Investments at Rs 11.34 against Rs 11.62.

Bombay

EQUITIES on the Bombay Stock Exchange remained active during most part of the week due to renewed speculative support with selected scrips registering a significant improvement in prices. There was, however, a sentiment reaction towards the close following the disappointment over the status quota dividend by National Rayons. Turnover was fairly heavy.

TEXTILES: This section gathered fresh strength from the reports that activity in the cloth market had improved substantially and the trend would continue till the onset of the monsoon. Century were in the limelight following the news of a right issue, subject to the Government sanction. The shares, after touching a high of Rs 500 from Rs 492.50, receded at the close to Rs 493.75 on profit-taking. Kohinoor and Svadeshi met with heavy profit-selling and closed at Rs 253 and Rs 216.50 after touching Rs 257 and Rs 220 respectively. Bombay Dyeing received fair attention and changed hands at Rs 60.10 to Rs 60.90.

STEELS: Although Steel shares gained in line with general sentiment and on rumours of a likely issue of shares to the existing shareholders, they lost some ground towards the close on reports of heavy selling of Tata Ordinaries by a prominent operator. The scrip started at Rs 182 and, after improving at one time to Rs 183.75, finished slightly lower at Rs 183.

Indian Iron moved between Rs 24.08 and Rs 24.64, to close finally at Rs 24.56.

MISCELLANEOUS: This section produced some brilliant features, although higher levels could not be retained till the close due to general profit-taking. In the Cement group, ACC were taken upto Rs 150.50 from Rs 147 to finish at Rs 149, while Digvijay were almost steady at Rs 148. Among Engineering scrips, Tata Loco registered a marked rise to Rs 198 from Rs 184.75 on renewed investment buying, to close at Rs 192.50. Similarly, Premier Construction closed at Rs 270.75 after touching a high of Rs 275.50 from Rs 265. Shipping shares met with bargain hunting, Scindia changing hands at Rs 18.32 to Rs 18.64. Sugar shares were well supported, Belapur having support upto Rs 296.50 and Phalton upto Rs 158.75 from Rs 293 and Rs 156.50 respectively. Automobile scrips received good support, Premier having buyers at Rs 116.75 to Rs 119.50. Elsewhere, National Rayon, after being lifted upto Rs 299 from Rs 292.75 on expectation of a higher dividend, receded at the close to Rs 286.75 on reports of the dividend being maintained. Bombay Burmah Trading moved between Rs 509.50 and Rs 522, to close finally at Rs 509.50.

Madras

THERE was considerable activity on the Madras Stock Exchange, although the upward trend received a general check, evidently in the process of consolidation.

TEXTILES: Cotton Mill continued to show a steady trend. Coimbatore Pioneers improved to Rs 270 cd following the maintenance of the dividend. Travancore Rayons were, however, soft at Rs 19.50 as the increase in dividend was higher by only 2½ per cent. Madras had buyers at Rs 25.55 to Rs 25.70; and Cannanore at Rs 142. Loyals and Janardanas met with some sellers at the market rates.

PLANTINGS: Prices in this section showed a mixed trend. Tea shares were rather quiet. Coorgs turned soft at Rs 5.25, while Peermades receded to Rs 20 sellers. Talayars, Haileyburias, Nilgiris and Twyforas came in for some selling at the closing rates.

Rubber shares were steady. Cochín Malabars were unchanged at Rs 6.23 c.d., while Midlands were enquired upto Rs 12.37 and Thirumbadis at Rs 1.76.

In the Coffee group, Ouchterlony's met with a good turnover and improved to Rs 5.67 from Rs 5.50, but closed at Rs 5.60 on a cum-dividend basis. Consolidated Coffees were maintained at Rs 21 with Coffee Lands quoted at Rs 23.50.

MISCELLANEOUS: In this section, Sugar shares were slightly lower after the recent sharp rise

in values, although Deccans maintained interest at Rs 11.20. Travancore attracted some sellers at Rs 11.75. Among other scrips, there was demand for Aluminium Industries upto Rs 19.55. Ashok Leylands were firm at Rs 7.65 on the announcement of a six per cent dividend. FACTs were slightly higher at Rs 8.70 due to better enquiry. Ruby Rubbers met with some demand at the market rate.

★

London

SENTIMENT on the London Stock Exchange remained generally buoyant with widespread gains being recorded in most sections. Industrials continued to advance, although the market was not without a dull spot or two. Harland and Wolff were appreciably lower following news that no takeover bid was coming from Camp Bird. Among the good features were Unilever following the Chairman's remarks on profit margins. Beechams, Liebig's and Rio Flour were particularly good spots. Gold shares made a good showing under the lead of finance issues. Gilt-edged issues remained firm.

S. E. RLY TENDERS

Sealed tenders are invited for (1) Tender No. CON[COS] 31/B/59 for supply of 2 Nos. 40 BHP Diesel Engine centrifugal pump directly coupled 5" suction×3" delivery having capacity of pumping 20,000 gallons of reasonably clean water per hour with a lift of 200'-0" all heads. Earnest money is Rs 400/-. Tenders will be opened on 2-5-59 at 12 noon. (ii) Tender No. CON[COS]32/D/59 for supply of 600 cwt. spikes dog §" sq.×6½" long as per Drg. No. IRS(T)-T-276 IRS T2-1953. Earnest money is Rs 520/-. Tenders will be opened on 5-5-59 at 12 noon.

Tender forms are obtainable from the office of the under-mentioned (Construction Section) Garden Reach, Calcutta-23 on remittance of Rs 2/- (not refundable) per copy per tender by money order to him direct in the case of outside firms and on production of cash receipt from this Rly's Chief Cashier by local firms.

Tenders should accompany the receipts for depositing earnest money as stated above with this Rly's Chief Cashier without which the tenders are liable to be rejected. Approved contractors having a permanent deposit of Rs 1000/- with the undermentioned are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

Roads to Prosperity

For over 100 years now, the Indian Railways have led the way to prosperity. Wherever the railways have gone, trade, commerce and prosperity have followed. The railways have made industrialisation possible. Agriculture, too, can flourish only with the help of the railways.

Food for the people, consumer goods for the family, coal and other raw materials for the industry, and countless other needs of the community—all move by rail.

The country's vast development projects, the nation's chief hope, would have remained paper projects, were it not for the railways.

The railways are the nation's life-line. They are the king-pin of the national economy.

INDIAN RAILWAYS

serve the individual and build the nation

106 years of National Service.

FOR THE INVESTOR

Rights Issue is Bonus Issue

Investment Gossip:

MARKETS have been fair to mid-
dling. Punctuated as the week
was by holidays, there was bound
to be, as there was, a mood
of hesitancy just prior to the tem-
porary stoppages of market acti-
vity. The fluctuations have been
small either way, and all in all it
has been a thoroughly uninterest-
ing week.

As expected, there has been a
great upsurge in the Deposits with
the banking system. But, strangely
enough, this has not so far brought
about any easiness in the interest
rates. Hence, the markets are still
to derive the benefit in respect of
the anticipated slack season.

But corporate news continues to
be good, and this is what should
sustain market cheer until such
time as the slack season makes its
appearance felt.

However, there is reason to be-
lieve that a number of companies
(among them Texmaco) may come
to the market to secure new capi-
tal. Normally, a wave of new
rights issues may have a bearish

"Olympus was not received at the
time of going to press."

connotation, since they siphon off
capital from the market.

But, then, with Mr Morarji
Desai's decision to include the
share premium account within the
scope of bonus tax, it seems un-
likely that any company would be
willing or ready to offer any rights
issue at a premium.

So, future rights issues have
greater chance of having in them
an element of "bonus", in that new
shares will be offered at par, and
hence at a price much lower than
the ruling market quotation.

I might suggest that, in broad
terms, it is the new rights issues
which should be considered bonus
issues. I have little doubt that
each such offer will be fully and
gratefully taken up by the share-
holding public.

However, with the busy season
continuing to hold sway, it is
possible that the new issues will
not come upon the market scene
for some time. Presumably, the
government's borrowing programme
will first be got out of the way.
In that case, the new issues may
come in a flood in August/Septem-
ber this year.

Investment Notes:

Colour-Chem Limited has anno-
unced the offer of 35,000 equity
shares of the nominal value of Rs
100 each for public subscription.
The list will open on the 23rd
April and will close on the 28th
April or earlier at the discretion
of the directors.

Atic Industries Private Limited,
an enterprise jointly owned by
Imperial Chemical Industries and
Atul Products, has commissioned
a new Dyes factory forming a ma-
jor extension to that dyestuff plant
at Bulsar, Bombay. This new plant
will greatly strengthen the coun-
try's dyestuff industry.

Two South-Indian Tea compa-
nies—Twyford and Hillebury are
understood to have dropped the
proposals to issue bonus shares.
The directors of the Twyford Tea
Company have now resolved to
issue 45,000 equity shares of Rs 10
each, at par, to the shareholders
in the proportion of 2:5. The di-
rectors of the Hillebury Tea Es-
tates have decided to raise the
authorised capital to Rs 50 lakhs,
divided into 475,000 equity shares
of Rs 10 each and 2,500-5 per cent
Cumulative Preference shares of Rs
100 each. It is decided to issue
now 62,500 equity right shares of
Rs 10 each at par, in the ratio of
1:3.

Chitavalsah Jute

Although sales are lower at Rs
1.57 crores against Rs 1.69 crores,
the Chitavalsah Jute Mills Com-
pany Limited has reported an in-
crease in the net profit, after pro-
viding for Depreciation and Taxa-
tion, to Rs 6.86 lakhs from Rs 5.15
lakhs for the 13-month period end-
ing 31st July, 1957. A sum of Rs
3.53 lakhs (Rs 3.11 lakhs) is pro-
vided for Depreciation; Rs 5.96 lakhs
(Rs 4.16 lakhs) for Taxation; Rs
34,200 (Rs 64,000) for Wealth Tax
and Rs 1.00 lakh (nil) for General
Reserve and Rs 1.75 lakhs (same)
for Development Rebate Reserve.
The dividend on the Ordinary
shares is raised to 12½ from 10 2/3
per cent.

£ R\$

Empire Jute

The Empire Jute Company
Limited has reported, however, a
rise in sales from Rs 1.14 crores
to Rs 1.34 crores. The net profit
is higher at Rs 3.79 lakhs against
Rs 2.23 lakhs. A sum of Rs 2.92
lakhs against Rs 2.22 lakhs is pro-
vided for Depreciation; Rs 2.60

Standard Coal

The Standard Coal Company of the Heggels group has raised the dividend from 10 to 12½ per cent for 1958, thanks to increased earnings. The net profit, after making certain adjustments, amounts to Rs 2.55 lakhs against only Rs 47,379 in the previous year. Besides allocating Rs 1.5 lakhs to General Reserve, the provision for Taxation has been raised from Rs 73,396 to Rs 1.51 lakhs. No provision is made for Wealth Tax against Rs 7,505 last year. It may be added that dividend for 1957 was possible only after transferring Rs 25,000 from Reserve.

₹ ₹ ₹

National Rayon

The National Rayon Corporation has maintained the dividend on the increased Ordinary capital at 14 per cent for 1958. Although the gross profit is higher at Rs 2.09 crores against Rs 1.50 crores, the net profit, after providing for Depreciation at Rs 92 lakhs against Rs 75 lakhs, for Taxation at Rs 55 lakhs against Rs 12 lakhs, for Development Rebate Reserve at Rs 3.25 lakhs against nil and for managing agents' commission at Rs 16.01 lakhs against Rs 10.88 lakhs, is lower by Rs 9.23 lakhs at Rs 43.35 lakhs.

Sales are higher by Rs 1 crore at Rs 6.37 crores. The provision for redemption of Debentures and Gratuity has been maintained at Rs 10 lakhs and Rs 3 lakhs respectively.

The company will soon start the manufacture of Tyre Cord, as necessary agreements have been entered into with foreign technical experts. The plants for rayon and other auxiliary products like sulphuric acid, carbon disulphide and caustic soda worked to their full capacity during 1958.

₹ ₹ ₹

Polson Limited

The Polson Limited has shown a lower net profit of Rs 4.31 lakhs for 1958 against Rs 6.77 lakhs in the previous year. Although sales have risen to Rs 1.08 crores from Rs 1.01 crores, the rise in the price of milk and consequent increase in the cost of production has told adversely on profits.

In respect of allocations to Funds, Development Reserve gets Rs 58,802 against Rs 73,137. The additional Depreciation allowable up to the assessment year 1958-59 has not been provided for 1958, since the relevant provision has not been renewed under the Finance Bill, 1959. The distribution on the Ordinary shares has been maintained at Rs 10 per share on the increased capital.

₹ ₹ ₹

Buckingham & Carnatic

The Buckingham & Carnatic Company Limited has reported a lower gross profit of Rs 1.05 crores for 1958 as against Rs 1 crore in the previous year. The distribution to the shareholders is, however, maintained at Rs 10 per Ordinary share. Sales have declined to Rs 9.88 crores from Rs 9.97 crores. After providing Rs 7.51 lakhs (Rs 7.80 lakhs) for managing agents' remuneration; Rs

35.22 lakhs (Rs 35.80 lakhs) for Depreciation; Rs 20.50 lakhs (Rs 18.50 lakhs) for Taxation; Rs 27,586 for taxation payments relating to previous years and Rs 33,959 for bad debts written off, the net profit is lower at Rs 36.62 lakhs against Rs 41.01 lakhs in the previous year.

With Rs 1.92 lakhs brought in from 1957 and adding thereto Rs 28,572 being the profit on the sales of machinery and Rs 9 lakhs transferred from reserve for tax, the amount available for allocation is Rs 47.83 lakhs. The directors have provided Rs 3 lakhs (Rs 5 lakhs) for Debenture Redemption Fund and Rs 8.67 lakhs (Rs 8.10 lakhs) for Development Rebate Reserve.

₹ ₹ ₹

Bangalore Woollen

The Bangalore Woollen, Cotton & Silk Mills Limited has, however, reported satisfactory results for 1958, the gross profit having risen by Rs 25.65 lakhs to Rs 73.32 lakhs. Sales have increased to Rs 5.54 crores from Rs 5.42 crores. The dividend on the Ordinary shares is maintained at 10 per cent.

After providing Rs 6.35 lakhs (Rs 3.78 lakhs) for managing agents' remuneration; Rs 14.89 lakhs (Rs 12.72 lakhs) for Depreciation and Rs 29.50 lakhs (Rs 12 lakhs) for Taxation, the net profit works out to as much as Rs 22.58 lakhs as against only Rs 19.17 lakhs in 1957. A sum of Rs 1.5 lakhs (Rs 3.59 lakhs) is provided for Development Rebate Reserve and Rs 6 lakhs (nil) for General Reserve.

₹ ₹ ₹

Parry & Company

The Parry & Company Limited has reported a lower net profit, subject to Taxation, of Rs 15.01 lakhs for the year ended 30th September 1958 as against as much as Rs 21.02 lakhs in the preceding year. Of this, Taxation provision claims Rs 9.67 lakhs against Rs 12.96 lakhs. After providing Rs 3 lakhs for General Reserve against Rs 4 lakhs and for the dividend on the Preference shares, a sum of Rs 2.19 lakhs has been carried forward against Rs 1.94 lakhs.

The directors, in consultation with the Board of the holding company, have again decided not to recommend the payment of any dividend on the ordinary share capital for the year and to utilise the whole of the profit for strengthening the company's resources.

State Trading with Safeguards

THE scheme of State trading in foodgrains which was placed before Lok Sabha early this month is calculated to allay the apprehensions that were raised when the National Development Council decided last November that the State should take over the wholesale trade in foodgrains. The experience of the previous year, which witnessed a sharp rise in foodgrain prices, was a compelling argument for the adoption of comprehensive measures to hold the price line. This was further reinforced by the findings of the Food Grains Inquiry Committee. One of the important recommendations of this Committee, of which Mr Asoka Mehta was chairman, was that the ultimate policy should be that of progressive and planned socialisation of the wholesale trade in food grains. The Committee pointed out that the experience of the last few years had shown that unfettered private trade was undesirable because it tended to aggravate price fluctuations and impede the course of planned development. On the other hand the Committee did not consider that full control including procurement and rationing was desirable in present circumstances. The solution of the food problem, it suggested, would have to lie somewhere between complete free trade and full controls. Controls, it was further suggested, should be of the countervailing or regulatory rather than restrictive type, the objective being to stabilise prices of food grains through the operation of buffer stocks. For this purpose the Committee recommended the setting up of a Price Stabilisation Board or the formulation of price policy and a Food Grains Stabilisation Organisation to carry out the policies, laid down by the former, through buffer stock operations.

At the time the Committee submitted its report, which was in November 1957, the country was faced with a critical food position. There was a shortfall in the production of foodgrains in 1957-58 of 67 lakh tons. In foodgrains the quantities released from Government stocks, the total deficit in 1958 was above 100 lakh tons. Any announcement of Government's decision to introduce State trading in food grains would have aggravated the pressure of demand on limited stocks. It is, therefore, surprising that the Government was not in a position to implement the Committee's recommendations in regard to State trading, straightaway, and sought to control prices by restrictions on bank credit, supplemented by action under the Essential Commodities Act which empowered State Governments to commandeer stocks with dealers at the average price of the preceding three months.

But even one year later, when the National Development Council endorsed the proposal of State trading in food grains, the crucial decision was apparently taken far ahead of administrative preparedness for its enforcement. Government policy, moreover, was far from clear, if we are to judge by the administrative actions which followed. The long drawn out process of framing the programme, as described in the statement presented to Lok Sabha, certainly suggests a mountain in labour; but the lady member who described the animal fathered by the Asoka Mehta

Committee as a mouse was exaggerating. It is a much bigger species of rodent.

While this process was going on, the State Governments were taking uncoordinated action to control prices and the lack of clarity regarding the objectives of Government policy raised grave apprehensions. These were not confined to the trade, which was threatened with immediate extinction. The general public was fearful about the effect of State trading on supplies and prices. The impression of a Government working apparently at cross purposes heightened the anxiety of those who realised alike the necessity of State Trading as well as the difficulties of its successful working.

To these doubts and apprehensions, the scheme presented by the Government provides more or less satisfactory answers. In the first place it has been made clear that the scheme would be operated on a "no-profit no loss" basis. There is no reason to fear that profiteering by the trade will be replaced by profiteering by the Government. The statement makes the categorical declaration that "the primary objective of State Trading in food grains is to maintain price levels which are fair to the producer and to the consumer and to reduce to the minimum the spread between prices received by the farmer and the prices paid by the consumer throughout the season and an agricultural cycle." Government is also anxious to ensure that the transition towards socialisation of wholesale trade in food grains does not lead to dislocation of the existing channels of distribution or place an excessive burden on the administrative machinery. The scheme drawn up by the Government with that end in view is in two parts. The first part outlines the ultimate pattern, when the entire trade in food grains through all its stages will be handled by a complex of cooperative societies, stretching from service cooperatives in the villages, through apex marketing bodies, to consumers' cooperatives. The system cannot function until all the links in the cooperative chain from the producer to the consumer are in position and in working order. Perhaps it is premature at this stage to enquire how far the replacement of the "middleman" by an assorted collection of cooperative organisations will make for economy in distribution costs. The second part which deals with the period of transition is of more immediate importance, for not only the maintenance of supplies and prices in the near future, but the success of State trading itself depends on the practicability of measures taken during the interim period.

In drawing up this part of the scheme, Government, it is satisfactory to note, have been guided more by a realistic appreciation of the difficulties in the way of full scale State trading than by ideological bias against traders as a class, which unfortunately continues to obscure understanding of the causal relationships responsible for rise in prices at particular junctures. These difficulties arise from the inadequacy of the administrative machinery, both in terms of personnel and the storage space at its command, to undertake the colossal task of buying and selling the entire marketable surplus. It has been recog-

Indian Finance

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right"—The Analects of Confucius.

nised that purchase through government officials will not be helpful in reducing the spread between the price paid to the farmer and the price paid by the consumer. Even the ultimate pattern for the socialisation of the food grains trade does not envisage utilisation of the administrative machinery for the purpose. That objective is to be achieved by a vast expansion of the cooperative organisations. An immediately practical programme has, therefore, been drawn up which will maintain supplies and regulate price fluctuations within narrow limits, through control applied at strategic points and through the deployment of buffer stocks, as recommended by the Asoka Mehta Committee.

The success of any such programme of price control, without prejudice to production, will depend on three factors which are closely interlinked. These are: (1) floor prices for farmers; (2) ceiling prices at which Government will be able to acquire stocks from wholesalers; and (3) possession of adequate buffer stocks to be utilised for controlling retail prices. The fixation of minimum prices will not be effective unless adequate machinery is also set up for purchasing and stocking foodgrains when prices tend to fall below the minimum, as they are likely to do after a good harvest. This will serve the two-fold purpose of maintaining the incentives to increased production and helping Government to build up buffer stocks to be utilised for stabilising price fluctuations. There are good reasons to think that the absence of machinery for performing this essential function was the main reason for the strange omission to fix minimum prices in recent orders fixing prices in a number of States.

Within the price limits fixed, the scheme permits wholesalers who will be licensed for the purpose to purchase foodgrains from producers and to sell to retailers the balance left after meeting Government requisitions, at controlled prices.

The licensed dealers who have been granted a temporary reprieve have a pivotal role in ensuring the success of the scheme. It will be part of wisdom to frame the details so as to enlist their willing and enthusiastic cooperation. It will not be out of place to suggest that the future of the wholesale trade in foodgrains should be determined by their performance under control rather than by ideological bias in favour of cooperatives. The competence of the cooperatives in the mass to deal with the huge task of purchase and sale of the marketable surplus of food grains has yet to be established. Cooperatives are not immune to attacks of red tapism, while corruption only gets more strongly entrenched when it assumes a cooperative form. Retention of licensed dealers, even after all the 500,000 villages have been covered by service cooperatives, will be an essential safeguard against the possibility of breakdown of the cooperative service for the distribution of food grains. Even if there is no breakdown, permission to licensed dealers will ensure prompt payments to the actual producers of the price of the grain sold by them, and they have, therefore, good reason to welcome the continued existence of private trade in food grains.

EDITORIAL NOTES

Non-Ferrous Metal Manufactures

If the year 1958 was admittedly a difficult one for non-ferrous metals manufacturers, the prospects for the current and succeeding years are definitely more encouraging. Severe restrictions on imports continued throughout last year so that metals like copper, zinc, lead and tin, for which the country depends very largely on imports, were in chronic short supply. While the issue of licences for import of metals to 'actual users' was helpful to fabricators having their own rolling mills, others who do not have such facilities were in a difficult position. The available quota was further reduced by the adoption of the year 1956, when manufacturing activity was restricted for various reasons, as the base year for the issue of licences. However the prospects for the current year appear to be slightly better. Some attempt has been made to meet these difficulties in the import policy for the half-year April-September, 1959, which was announced a few days ago. Import quotas have been issued for copper and zinc in addition to actual users' licences. The basic period has also been extended to cover 1957-58 in respect of a number of items. But as far as non-ferrous metal industry is concerned, the pride of place belongs to alumi-

nium. Indigenous resources of copper, lead and zinc are extremely limited and, as the need to economise on foreign exchange is likely to persist as far as we can see ahead, there is little hope that the shortage of these metals will be met by imports. The development of the non-ferrous metals industry has, therefore, to be increasingly based on aluminium. The metal is already finding application in the electrical, structural, transport, building and other industries as a substitute for other metals. And it is in the field of manufacture of aluminium that it is possible to report heartening progress. The 10,000 ton smelter which recently went into production at Hirakud has immediately stepped the total Indian production to 17,500 tons a year. Production at this smelter will be soon increased by another 10,000 tons. Programmes for aluminium under consideration envisage a production of about 50,000 tons by 1961.

Drawing attention to these satisfactory developments, Mr Vithaldas H. Shah, President of the All India Non-Ferrous Metalware Manufacturers' Association, has done well to stress the need for diversifying the range of aluminium manufacture, now made possible by the increased availability of the virgin metal. Hitherto aluminium manufacture, leaving aside cables, has been largely confined to the manufacture of utensils. Mr Shah has pointed out that utensil manufacture has reached the limit of its expansion. While the domestic market for aluminium utensils has reached the point of saturation, exports are dwindling as a result of the restrictions imposed by foreign countries against the entry of this type of goods. In this connexion he has also drawn attention to the rivalry of stainless steel ware which has already captured a large share of the market in spite of higher prices. At present stainless steel is in short supply and there is a large price differential in favour of aluminium. But with the establishment of a plant to make stainless steel without use of costly nickel, the price of metal will come down to a substantial extent and aluminium is likely to be pushed out of the market for domestic utensils. This is another reason why aluminium manufacturers should be on the look-out for introducing new lines of manufactures.

★

Costly Sweets

Indian youngsters are no more allergic to sweets than youngsters in other countries. But the market for confections, like the market for cotton textiles, has been facing a glut and for similar reasons. The Second Five Year Plan held down the target of production to 10,000 tons, which is one-fifth of the installed capacity. The industry was easily able to surpass the target in the very first year to the Plan. But the achievement also brought in its train the problem of

markets and materials. The optimistic estimates regarding the growth of the domestic market, on the basis of which plans for expansion were drawn up in the immediate post war years when the installed capacity was built up, has not been borne out by subsequent experience. The cost at which organised units are able to sell is the limiting factor both in the domestic as well as in foreign markets. In the former, the industry is also handicapped by the competition of the products of the decentralised sector, which have also managed to give a bad name to confectionery among the general public.

Sugar is the principal material required for confections. And for this essential component, Indian Confectionery Manufacturers have to pay as high a price as Rs 38 per maund, as compared with the price of Rs 17 per maund at which sugar is available to their competitors abroad. That gives a measure of the severe handicap under which the industry labours while just maintaining its existing market. The difficulties are aggravated by shortage of tin for packing and of materials like colours, flavours, essences, wrapping paper etc for which the industry is still dependent on imports. On account of foreign exchange shortage supplies of these items are restricted.

While drawing attention to these difficulties, Mr Khanchand J. Pamnani, presiding over annual meeting of the Indian Confectionery Manufacturers Association, has also pleaded for rebate of internal taxes on sugar used in manufacture of confectionery, liberalisation of imports of essential requirements and for arrangements to ensure that sugar for the manufactures intended for export is made available at the same price at which it is exported by the Indian Sugar Mills Association. While Government may be agreeable to consider the last item as it may help the export drive, it is not possible to be optimistic about the other demands.

In view of the shortage of a wide range of materials used in the manufacture of confectionery, and the high cost of sugar, one wonders whether the manufacturers or their Association have ever paid adequate attention to research. In the modern world no industry can hope to thrive without research on new materials and processes. Instead of appealing to the Government to liberalise import quotas, they could have taken steps to initiate manufacture of the imported items like colours, flavours and printed wrapping paper. And have they investigated the possibility of replacing costly white sugar by gur or palm-gur, before asking for tax rebate on white sugar? The president of the Confectionery Manufacturers' Association has referred to the food value of confections. Have the manufacturers thought of improving the nutritive value of their preparations by fortifying them with Vitamins and Calcium which are notoriously deficient in the average Indian diet?

Bardahl

Until one sees it in action, it is not possible to realise what Bardahl additive can do to add to the lubricity of lubricating oils, that is to say, their ability to overcome friction between two metallic surfaces in contact and thus to save engine parts from premature wear and tear. While the practice of lubrication goes back to the dawn of civilisation and the invention of wheeled traffic, the science is of recent origin. The supply of vegetable oils, which did duty in the pre-industrial era, proved inadequate with the rapid growth of industry and, especially, after the invention of the internal combustion engine. Mineral Oils were increasingly pressed into service, but they too had their limitations. The progress of lubrication is punctuated first by the introduction of Heavy Duty Oils and, later, of Solvent Refined Oils with high viscosity index. But the introduction of Bardahl additive marked a leap forward in the practice of lubrication. It has been extensively used throughout the United States and in 26 foreign countries and has acquired the distinction of the 'world's best seller oil additive'. Its secret is that it continues working where ordinary hydrocarbon lubricants stop. Bardahl products, having resistance to heat three times more than normal lubricating oils, are able to reduce wear and tear proportionately. A reduction of 75 per cent in wear and tear of mechanical parts is guaranteed by the makers. It also prevents the lubricant from completely draining into the sump when the engine is stopped and thus eliminates the considerable period during which the engine runs dry at the time of starting.

WORLD OF FINANCE

Bank Deposits: Over Rs 1700 Crores

UR anticipations as regards immediate benefit accruing to Scheduled Banks in respect of the heavy governmental disbursements at the end of the fiscal year have been fully borne out. The return of Scheduled Banks for April 3 constitutes a new landmark in that, with an increase registered during the week of Rs 36.42 crores, deposits of the banking system have gone past the Rs 1700 crore mark, to be placed at Rs 1705.20 crores. It is to be noted that the share of the State Bank, whose creations are frequently put down to receipts of windfall Deposits, is Rs 15 crores. As we argued last week, even the increase in the State Bank Deposits could be seen to be not wholly connected with counterpart funds. As we shall presently see, the latest return of the State Bank suggests that the recent accretions to the bank's deposits may not have been in connection with special transactions. This would mean that the hole of the rise of over Rs 36 crores in Deposits flowed directly from the immediate percolation to the banking system of the year-end payments of the Central and State Governments. However, we need to note that around Rs 6

crores of the rise in Deposits in the latest week is due to a rise in borrowings from banks as figuring under Deposits. Indeed, this fact is reflected in a rise of a little over Rs 3 crores in money at call and short notice. Meantime, the busy season pressure continues, or perhaps it is the demand arising from beginning of the month disbursements, which has caused a further rise of Rs 8.15 crores to Rs 1021.12 crores in the total of Advances. Nevertheless, Scheduled Banks were in a position to reduce considerably, by Rs 12.17 crores, their borrowings from the Reserve Bank; the State Bank's reduction in debt was Rs 2 crores. There has been disinvestment in gilt-edged for slightly less than Rs 2 crores. In the result, Cash Balances stand improved by Rs 12.71 crores at Rs 160.72 crores.

A rise of such dimensions in Deposits, which we had foreseen some months ago as likely to occur in the wake of the year-end governmental transactions, could normally have been expected so to relieve the money market tightness as effectively to ring down the curtain on the current busy season. The experience has, however, been somewhat different. Money rates are being well maintained, the pressure for funds apparently continues. Nor is it as if we could come to the conclusion that the continued tightness was due to month early demand for funds. For, it is now the middle of the month, and interest rates in the banking sphere, we repeat, hardly show any signs of slackening. The question then that we have to consider is whether the tenure of the 1958-59 busy season is likely to prove to be somewhat longer than in the last two years.

We may as well confess at the outset that our expectations of the current busy season drawing to a close as a result of the year-end disbursements of Government have been belied. But the reason partly is that the Scheduled Banks are carrying a rather heavier investment portfolio. Thus, Advances as at April 3 were higher only by Rs 53 crores as compared with the relevant figure for the corresponding week of last year; and, meantime, Deposits have risen by nearly Rs 195 crores. But almost the whole of this increase in Deposits—Rs 171 crores—has been utilised in an expansion of the investment portfolio. This very considerable addition to the gilt-edged holdings of Scheduled Banks was, we may remark, consequent upon the extremely easy conditions during the 1958 slack season, as also the fact that it was prolonged. Since banks were paying high rates on their Deposits, and since Advances, until around December 1958, showed no signs of an upward trend, banks invested heavily in gilt-edged. There is no great eagerness to disinvest in gilt-edged—the extent of disinvestment is merely Rs 26 crores—because, apparently, the banks feel that, during the 1959 slack season, they once again may be facing the problem of surplus resources for which they have to find profitable use. It is, we suggest, the somewhat unusually high level of investments which has sharpened the tightness of the current busy season. But we have as yet to find the answer for the fact that, from around the beginning of December 1958, the expansion in Advances of Scheduled Banks has been for an amount in the region of Rs 200 crores.

It cannot be that there has been any considerable rise in the financing of foreign trade, since the restrictions on imports continued to be as severe as heretofore. Indeed, the complaint from some banking circles has been that the reduced level of demand for Advances during the greater part of 1958 was due to governmental policy in regard to imports. Secondly, the expansion in Advances cannot be due to the financing of crops. For, with a view to curbing any undue tendency in the price of foodgrains, the Reserve Bank clamped down severely on the extension of Scheduled Bank credit against foodgrains. The one possible explanation, which at any rate occurred to the Reserve Bank, is that camouflaged credit might have been obtained from banks for the withholding of stocks. But even this could not explain a rise in Advances of the dimension of Rs 200 crores. By elimination, therefore, we are led to believe that the spectacular rise in Advances must be owing to a combination of a higher level of industrial production, a higher level of business activity and, perhaps, a higher level of stocks carried in some industries, such as cement. Thus it is that we are to welcome the unusually large size

of the expansion in Advances during the 1958-59 busy season.

If our reasoning is correct, then, automatically, we have the answer to the question: why has the busy season tended to be of longer duration? The simple fact of the matter would be that it is the expanding normal activity rather than the special busy season demand for funds which has been responsible for the expansion in Advances. Therefore, the rise in Advances is not entirely seasonal. Therefore, also, the continued rise in Advances does not necessarily mean the continued progress of the busy season. But does this mean that we shall not have the traditional slack season during 1959?

We have stated that there is reason to believe that the index of industrial production, after having remained static at a plateau level for some time, is once again on the up trend. Meantime, due to the current bumper food crops, it is to be anticipated that substantial purchasing power will accrue with the masses of the people. This should induce fresh consumption, at a higher level, of goods which were slow to move during the earlier two years, because, during that period, poor food crops reduced purchasing power in the hands of the masses. It would follow that, with demand picking up, stocks of manufactured goods would no longer be static but would decline. As a result, the level of Advances, whether relating to industry or trade or commerce, should also tend to come down. Meanwhile, there would be a seasonal return of funds, this being unaffected by other developments in the economy. The combination, of the seasonal return of funds and a higher level of demand for consumer goods may both be expected to exert a downward pressure on Advances, though the extent of the contraction during the 1959 slack season may be of smaller proportions than during 1958. On the other hand, the size of the foreign exchange gap not covered by foreign credits or assistance is likely to be rather smaller during 1959, and this would mean that the contractionist influence of the balance of payments deficit will, in 1959, be less pronounced than in 1958. So, the outlook is, other things being equal, for Deposits of Scheduled Banks to stage a bigger rise during 1959.

Larger deposit accretions in combination with some extent of contraction in Advances should, in due course, produce the 1959 slack season. But it is possible that we may not see evidence of the slack season until May or even possibly June. In turn, this would imply that the new loan borrowing programme of the Central Government would have to be deferred to, say, July.

Then, a satisfactorily high level of advances, together with sustained level of gilt-edged investments, should both mean that banking earnings during 1959 will turn out to be much better than was the experience during 1958.

According to the return of the Reserve Bank for April 10, there has been fresh expansion of notes in circulation for Rs 20.17 crores, with the relevant figure going up to Rs 1764.48 crores. Rupee Coin also went out into circulation for Rs 1.02 crores. Currency has been expanded against Rupee Securities for Rs 20 crores by transfer from Investment in the Banking Department. In the result, the Reserve Bank's cash in the till is lower by Rs 1.20 crores at Rs 14.22 crores.

The Balances of the Central Government stand denuded by Rs 11.02 crores at Rs 49.59 crores

Also, it is worth noting that Bills Payable are lower by Rs 4.37 crores at Rs 25.23 crores. Both show the continued impact of month early disbursements and payments relating to the end of the fiscal year. The expansion in the currency circulation is not on Government account, since there is no trace of deficit financing, but is seen to have arisen from governmental disbursements. The State Governments have also felt the twin impact of the month early disbursements and fiscal year-end payments. Notwithstanding a rise of Rs 4.73 crores in their Ways

and Means borrowings from the Reserve Bank, the Deposits of State Governments have declined further by Rs 4.34 crores to Rs 7.50 crores. It would appear that State Governments' disbursements were so heavy that their resources had to be replenished by the discounting of Treasury Bills with the Reserve Bank, the figure under which head shows another smart rise of Rs 11.15 crores to Rs 34.26 crores.

The Reserve Balances of Scheduled Banks have improved sharply by Rs 18.45 crores to Rs 91.53 crores. This is entirely due to the

Indian Finance

State Bank. At the same time, it would appear that Scheduled Banks reduced their indebtedness to the central banking institution, since the Reserve Bank's Other Loans and Advances have declined by Rs 8.80 crores to Rs 89.06 crores; and the State Bank does not figure in the relevant week as having reduced its indebtedness to the Reserve Bank.

There is a rise of Rs 11.12 crores to Rs 23.68 crores in Other Assets, for which we can find no adequate explanation. Finally, Balances Held Abroad show a small drop of Rs 0.27 crores to Rs 35.99 crores.

Britain's Reflationary Budget

By Paul Einzig

THE Budget for 1959-60 aims at stimulating consumption and production with the aid of the fiscal device of a considerably increased deficit. In consequence of tax reductions, accelerated repayments of post-war credits, and increases of investment expenditure in the public sector of the economy, revenue during the current financial year is expected to fall short of expenditure by over £700 million. The prospective deficit is about twice the estimated amount of savings during 1958. Even if the public continued to save at the same rate as in 1958 about half of the deficit would be left uncovered by savings and would therefore produce a reflationary effect.

From this point of view it is a matter of detail what form the tax concessions and other devices of budgetary reflation assume. To the extent to which the excess of expenditure over revenue will not be covered by the issue of loans taken up by the public it is bound to stimulate demand, which in turn is bound to stimulate production. The Budget will tend to accentuate the business recovery which is already in progress. It is therefore reasonable to assume that we shall witness an improvement of trade in Britain during the opening and the summer.

Can Britain afford in prevailing conditions at home and abroad such a dose of reflation? Will the advantages gained by it not be offset by the disadvantages of a revival of inflation and by a deterioration of the balance of payments? It is all very well for economic purists to argue that in existing conditions reflation entails grave risks. The politicians who had to take the decision had to allow for political considerations arising from the fact that a general election is due in the near future. If for the sake of sound economic principles the Government had abstained from unbalancing the Budget the chances of a Conservative victory at the General Election would have been sacrificed. No political realist expects that the electorate would vote Conservative out of sheer gratitude for paying 2d. less for a pint of beer and for the reduction of the income tax by 9d. in the £.

April 18, 1959

But it stands to reason that if the election is held amidst conditions of more or less full employment the Government is much more likely to be returned to power.

Admittedly the present measures carry the possibility of future difficulties. But the choice was between a bigger and a smaller evil. For the advent of a Socialist Government would greatly increase the prospects of inflation, so that by abstaining from reflationary measures the present Government assumed an inflationary risk for the sake of avoiding a much graver inflationary risk.

Whether this Budgetary reflation will in fact produce the political results it is expected to produce depends on the timing of the General Election, on the progress made by economic recovery between now and the General Election and on the progress of the inflationary effects to be produced by the Budget. The extent to which there will be a lasting increase in the Government's popularity as a result of the Budgetary measures is doubtful. The Socialist Opposition in accusing the Government of having produced an "electioneering the budget is guilty of gross inconsistency of a kind that textbooks on logic could quote as a typical instance of inconsistency. It accuses the Government of having deliberately deferred long overdue reflationary measures for the sake of timing them to take place in Election year. At the same time, however, it also accuses the Government of having confined practically the entire benefit of the Budgetary concessions to the upper income groups. These upper income groups represent a negligible percentage of the electorate and in any case they would vote Tory even in the absence of any special beneficial treatment. If the Socialist contention about the unilateral character of Budget concessions were justified it would mean that with this Budget the Government has committed political suicide.

The Government, so far from having gone too far, did not dare to go far enough in its attempt to reverse the trend towards equalitarianism that has been proceeding for two decades. In spite of the reductions in the present Budget direct taxation in Britain remains higher than in any other country. The British middle classes are likely to vote for the Government, even though they have no reason to be satisfied with the treatment they receive from it, because they know that they would receive from a Socialist Government a much less satisfactory treatment.

The Budget is likely to produce inflationary effects mainly because it is likely to stiffen the attitude of trade unions towards wage demands. In recent months such demands were not pressed unduly, though considering that prices were stable and production static, even such wage increases as were conceded were economically unjustified. As a result of the Socialist propaganda against the Govern-

ment on the ground that in the Budget it has discriminated in favour of the higher income groups, there is bound to be an increased pressure on trade union leaders by the rank and file to step up wage demands and pursue them with vigour. Moreover, since Budgetary reflation has undoubtedly improved business prospects the unions may feel that they are now in a better bargaining position to press for wage claims, as employers are more likely to concede them.

Budgetary reflation by increasing domestic consumption and by leading to higher wages is likely to have an adverse effect on the balance of payments. This does not mean however, that another balance of payment crisis is likely to arise this autumn. At present sterling is very steady and there is now enough gold to enable the authorities to face some degree of deterioration in the balance of payments. Such deterioration is not likely to be accompanied by the speculative pressure against sterling experienced on many previous occasions because speculators now concentrate on the dollar and have little time to spare for sterling. A revival of pressure on sterling is bound to occur before the Election, but this would become reversed in case of a Conservative victory. Except in the case of a Conservative defeat sterling is reasonably safe in spite of two reflationations that the Budget is likely to produce.

Dull Conditions

ONCE again, conditions in the Jute Goods market have remained dull with prices suffering a further setback from last week's levels, although there is remarkable recovery towards the close, thanks to the news of a sharp rise in US burlap consumption to 82.7 million yards in March from 70 million yards in February and 71 million yards in March last year. Quieter conditions from the raw jute section and the absence of sustained enquiry from overseas buyers are the main contributory factors.

Even the encouraging stock and production figures for March have had no effect on sentiment. Total stocks are shown at 106,800 tons of which hessians account for 17,000 tons against 15,500 tons at February-end, sackings for 72,600 tons against 79,900 tons and other varieties for 17,200 tons against 15,400 tons. Production has also shown a small decline from 83,600 tons to 83,300 tons, reflecting a further sealing off 1½ per cent looms with effect from the 2nd March. Of this, hessians are higher at 38,100 tons against 36,900 tons, while sackings are lower at 37,200 tons against 39,500 tons, mainly due to a gradual switch-over from sacking to hessian production.

Despite the decrease of as much as 7,300 tons in stocks, sacking goods are still subjected to heavy selling pressure, as operators had been expecting a still larger decline in this category of goods, especially when the mills have been gradually switching over looms from hessian to sacking production during the past many months and the IJMA had sealed off a further 1½ per cent looms from the 2nd March.

Again, as seasonal demand for jute goods has not yet revived, buyers seem to be awaiting further developments before extending their commitments. It appears that overseas buyers will not enter the market and will continue their hand-to-mouth buying policy for the time being.

Further, Pakistan is reported to be offering very stiff competition and has been able to secure a substantial portion of the orders coming from Burma, Australia and South Africa. Moreover, with the prospect of a larger jute crop, mills are very eager to dispose of goods at market rates; but hardly any business was possible for want of genuine buyers.

It, however, appears that, despite the absence of foreign business, speculators are supporting the market for sacking goods, because of two factors. First, doubts

are expressed in certain quarters with regard to the correctness of the stock figures. It is felt that a number of mills has overstated stocks and suggestions are even put forward in favour of a physical check by the IJMA. Secondly, it is confidently expected that enquiries, especially from Australia and New Zealand, may broaden in the near future, as stocks of sackings in these countries will be depleted in the face of larger crops.

In the case of hessians, a good Argentine demand is forecast for the current year. The present shortage of foreign exchange is the main problem in importing burlap. But, since burlap as a commodity is essential to the Argentine economy, the foreign exchange will have to be made available despite a stringent balance of payments. If the Indian industry can try to persuade the Government to overcome Argentina's difficulty in this regard, it will ensure against that country looking to other sources like Pakistan for its burlap needs.

★

RAW JUTE:

The prospects of a larger jute crop in the coming season have been the dominating influence on the Raw Jute section. Another factor is the accumulation of large stocks with the mills, which, it is felt, will be sufficient for about five months' requirements. Sellers are, therefore, anxious to liquidate their stocks on fears that prices may fall further if the next crop turns out to be a bumper one. Thus, the market has turned bearish at a time when usually the trend is upward. Assam Bottoms are quoted at Rs 20.25 and Assam Middles at Rs 23.25, both per maund for April-May delivery.

Meanwhile, the outlook for export is considered to be discouraging in view of the Government decision to maintain the export duty on raw jute. The trade is of the view that big successes in the sphere of exports will only come after the Government decide to abolish the duty of Rs 3 per maund.

Following were the price trends during the week:—

	April 8th	Highest	April 14th
Hessian:	Rs	Rs	Rs
40" x 10 Ozs.			
Ready	39.50	40.00	39.80
May/June	38.85	39.85	39.15
July/Sept.	38.75	39.15	38.95
40" x 8 Ozs.	31.55	32.10	32.10
40" x 7½ Ozs.	29.30	29.70	29.70
Sackings:			
B. Twills:			
Ready	93.15	93.40	92.90
May/June	93.30	93.55	92.25
July/Sept.	93.50	93.65	92.25
Hy. Coes (Green)	93.50	93.50	93.5
Corn sacks	93.25	93.25	93.00
Cubans	114.50	115.00	115.00
A. Twills	112.25	112.25	112.00
L. Twills	104.00	104.00	103.00

Sacking—May	93.05	93.35	92.80
Raw Jute—June	21.16	21.54	21.38

Prospects

THE marketing season for the 1958/59 North Indian Tea is drawing to a close in an encouraging mood. The major export auctions have been completed, although there will be one or two clearing sales in the coming weeks. The Dust sale is expected to continue for some more weeks.

The generally good demand, that has been noticed at the export auctions during the past many weeks, is an indication that, despite the larger world output last year and huge stocks now held in London, tea exports from India may be maintained at earlier levels if they do not rise to any appreciable extent. Judging from the steady trend at the London auctions recently, it appears that the demand from that country may be maintained.

It is now time to assess the prospect for the next season. As this year's sales have ended earlier than usual, market men are of the new season. Apart from a substantial measures of buying by the UK Russia has doubled her purchases to 24 million pounds. Under the trade agreement, Iraq will buy 12½ per cent of her requirements of tea from India, while Egypt proposes to make arrangements of her own for buying Indian tea by establishing an Indian company. Iran is also exploring the possibilities of buying Indian tea although, in her opinion, Indian prices are comparatively higher.

Nervertheless, there is little reason for complacency. Despite a fair balance between supply and demand being established, there are adequate supplies of Common teas in the Pipeline and buyers are likely to take their requirements of such grades only on a hand-to-mouth basis. If tea is to be sold in foreign markets, attention should be concentrated on quality as well as production costs. It is hoped that an improvement in quality will be evident this year.

In this connection, the latest report, released by Messrs Carrlitt Moran & Company, says that the outlook for the new season should be satisfactory, although the position will be entirely dependent on the crop to be manufactured as consumption cannot be expected to continue indefinitely to absorb increases of the order of 50 million pounds each year. The report adds that the comparative balance between production and consumption imply the possibility of a severe fall in prices in the event of considerable over-production which cannot be discounted if both Ceylon and India experience favourable climatic conditions.

Also, Chinese competition is being increasingly felt in the tea trade. There is a threat that a considerable weight will be consigned to London to sell for what it will fetch as part of the Communist economic campaign. This country is also offering tea of a satisfactory standard to Iraq at rates with which other countries cannot compete. Furthermore, China is ready to accept dates in exchange for tea.

Again, according to trade sources in Djakarta, the UK has taken the place of Holland as the largest buyer of Indonesian tea. Out of 71.55 million pounds of tea shipped abroad in the first eleven months of 1958, the UK alone accounted for as much as 32.9 million pounds, while the Netherlands took 12.31 million pounds and other countries 25.35 million pounds.

Tea stocks in London, as on the 3rd April, were 166.83 million pounds as compared to 169.95 million pounds in the previous week. Total afloat was 17.22 million pounds including from Calcutta 4.35 million pounds; from Chittagong nil; from Cochin 494,980 pounds; from Ceylon 8.54 million pounds and from other Ports 3.84 million pounds. Average price realised during the week ended April 3 was 51.47d per pound as against 50.85d in the previous week and 55.42d in the corresponding week of last year.

Though supplies to the UK from almost all countries recorded an improvement, those from Ceylon rose sharply from 7.51 million pounds in February 1958 to 10.32 million pounds in February, 1959. Imports from India and Pakistan also increased from 18.22 million pounds and 537,800 pounds to 19.6 million pounds and 1.03 million pounds respectively. In the first two months of the current year, teas imports into the UK totalled as much as 103.25 million pounds as against only 75.14 million pounds in the corresponding period of last year.

In the Internal Sale, offerings amounted to 21,652 packages of Dusts and 1,558 packages of Leaf grades. There was a good general demand for Dusts at slightly lower rates. Orthodox teas were generally 2 nP per pound easier, while leggs-cut Dooars followed this trend. Powdery types, however, continued to be well-supported. Medium CTC teas were irregular, sometimes selling upto 8 nP below last rates, although the stronger liquoring powdery often advanced in price. The brighter liquoring grainy types in this category were sold at generally dearer rates. The few best teas in this category were also rather irregular and though earlier in the sale received fair support, as the sale progressed, declined and eventually sold at rates which were upto 10 nP and sometimes 15 nP below valuations. Following rates were quoted:—Medium Dooars Dust Rs 1.80 to Rs 1.84; Medium Assam Grainy Dust Rs 1.74 to Rs 1.80; Medium Assam CTC Dust Rs 2.00 to Rs 2.15 and Best Assam CTC Dust Rs 2.65 to Rs 3.00.

Britain

THE Chancellor of the Exchequer, Mr Derick Heathcoat Amory, reported a year of solid achievement in Britain's economy when, on April 7, he presented to the House of Commons a Budget to secure expansion in demand and at the same time maintain price stability. "Behind us is a year of solid achievement," he said. "Our economy is stronger and more firmly based than at any time since the end of the war. We have an opportunity now to resume a steady rate of advance—not full steam ahead, but steady ahead with confidence."

"This is not a 'spending spree' Budget. . . I believe the measures I have proposed will bring benefits directly and indirectly to every section of the community . . . and encourage the nation to make the most of the opportunities that lie before us."

The Chancellor announced a wide variety of tax reliefs which would cost £295,000,000. Among the main changes announced were:

Income tax reduced by 9d in the standard rate, and 6d in each of the other rates.

Purchase tax to be 50 per cent. instead of 60 per cent., 25 per cent. instead of 30 per cent., and 12½ per cent. instead of 15 per cent.

General restoration of investment allowances for capital expenditure: 20 per cent. on the new plant and machinery, and 10 per cent. of expenditure on the construction of new industrial buildings. Additionally, new plant and machinery would have a 10 per cent. initial allowance, and industrial buildings 5 per cent.

Purchase tax on commercial-vehicle chassis abolished.

The retail price of beer reduced by 2d a pint.

The Chancellor pointed out that the basic assumption of his Budget was that there were possibilities for an appreciable increase in production in the United Kingdom. The trend of total production of goods and services in the United Kingdom was likely to be upward in the coming months.

"If the renewed growth of production and trade goes forward satisfactorily in the world as a whole, we shall benefit from it in a stronger demand for our exports. . . I am confident British industry is now in a condition to take the fullest advantage of such opportunities."

Opening his speech, the Chancellor described the situation as encouraging, and borrowed a recent

newspaper phrase to illustrate the future outlook—"this is a spring-time of opportunity and not a harvest of prosperity."

"Externally, the pound is standing firmly on its feet. Sterling is again in a position to play to the full its immensely important role as a reserve currency for the world."

The share of fixed investment in the United Kingdom's national production had risen steadily since 1952. In the year just ended, investment of all kinds took 20 per cent. of the United Kingdom's gross national product, compared with 16 per cent. eight years ago.

"Another good thing," the Chancellor continued, "is that this increased investment has included a massive effort in overseas investment, nearly the whole of it in the Common-wealth. Long-term investment overseas last year came to about £240,000,000, nearly double the rate obtaining eight years ago."

Turning to exports, the Chancellor said the decline he had foreseen occurred, but there had been some recovery by the year's end.

Mr Heathcoat Amory said: "Taken altogether, we have had a year in which much had been achieved. We have maintained a record level of investment and reached a new record level of consumption combined with near price stability and a very satisfactory balance of payments."

On the external side, it had been an exceptionally good year. The surplus on current account in the balance of payments was estimated at £455,000,000—far higher than in any year since the war, and may be the highest for many decades.

The year was very satisfactory because the current surplus was amply sufficient to pay for investments abroad and leave a healthy balance to improve the United Kingdom's monetary position.

The monetary position last year improved by more than £200,000,000.

Telling the House how the Exchequer had fared over the past year, the Chancellor said revenue was £5,480 million—£137,000,000 more than in the preceding year and £41,000,000 above the estimate.

Expenditure above the line was £5,103 million, which was £28,000,000 more than the estimate.

Advances for export credit guarantees had exceeded estimates by £18,000,000, mainly as a result of increased assistance to the Commonwealth.

The Chancellor said: "The output can be summarised as follows: above the line, a surplus of £377,000,000; below the line, a deficit of £559,000,000; so that, overall, the result which determines how much Government expenditure has to be met by borrowing was a deficit of £182,000,000, as compared with my estimate last year of £236,000,000."

Of Exchequer prospects for the year ahead, the Chancellor said:

"On the basis of existing rates of taxation, we have total revenue estimated at £5,620 million, against expenditure of £5,223 million, giving a surplus above the line of £397,000,000, or £20,000,000 more than the actual surplus last year."

The Chancellor estimated that payments below the line would be £23,000,000 more than were needed last year for the operations of the Export Credits Guarantee Department, mainly for loans. He expected to provide, for the first time, £20,000,000 for advances to colonial governments under recent legislation.

The Chancellor then reviewed the outlook for the coming year. The external prospect was "satisfactory". The current surplus on the balance of payments would certainly be a good deal smaller, but would reach a respectable level and be sufficient to cover investments abroad. "In this connection I expect in 1959 a larger outflow of capital on Government account than in recent years. This results partly from the decision we took at the Montreal conference to help still further the less-developed countries of the Commonwealth."

Turning to the gold reserves, the Chancellor said that the payment later in the year to the International Monetary Fund of the increased quota of £58,000,000, coupled with other factors, meant that the reserves would probably show some fall in 1959. Despite this, the year should be "a satisfactory year both for the balance of payments and for the external economic position generally".

Economic expansion would bring a higher import bill, and this must be matched by a rise in export earnings. "The conclusion I reach is that it is impossible to exaggerate the importance of our maintaining, and indeed improving, our competitive position through efficient investment and lower costs. This, indeed, to my mind is the key to our success in the future."

Mr Heathcoat Amory added that the physical possibility, both of capital equipment and of manpower, existed for an appreciable increase in United Kingdom production over its present level, and that was one of the basic pre-supposition in his Budget.

Discussing export prospects, the Chancellor said: "My expectation is that our total exports will continue at round about the present levels for a few months to come, and then, if our salesmen and business men continue to exploit their opportunities with energy, they should increase somewhat."

Production of goods and services was likely to rise in the coming months, following the trend since the third quarter of last year. But the rise was not likely to be rapid, and might slow down in the second half of the year.

The Chancellor said the rise in output might be proportionately greater than the rise in employment. Measures already taken

were having effect; the increase in hire-purchase sales and in private house building and the big growth in public-sector investment were three convincing examples.

"I have, therefore, thought seriously whether it is right to consider if further stimulus can be given to the economy through the Budget", the Chancellor went on. But before recommending stimulating measures, he had to ask himself how they could be justified—for example, from the point of view of the balance of payments.

He had concluded that "we can now think of a moderate increase in imports which is the natural accompaniment of the recovery in demand and production at home."

"If the renewed growth of production and trade went forward satisfactorily in the world as a whole, Britain would benefit from a stronger demand for exports and other services, provided we could give delivery at the right time and price."

The Chancellor continued: "My conclusion is that external considerations coincide with domestic ones in making it possible as well as desirable to accelerate the somewhat already slightly rising trend in production."

The Chancellor said the cost of living had been virtually stable now for almost a year, and he hoped all those concerned would realize the exceptional opportunity they now had to keep it so.

"If we do so, we shall secure two priceless advantages—first, our export prices will remain competitive in world markets, and secondly, social hardships and injustices, inevitably resulting from rising prices, will be avoided for the future."

"The possibility of securing these two advantages—indeed, the overwhelming need to secure them—have dominated my approach to the framing of this Budget."

The Chancellor stressed the need to improve the competitiveness of Britain's economy and to maintain a strong balance of payments. Exports must be competitive; costs and prices kept stable. The object of this Budget was to keep the cost of living steady, and to lower the cost of production, with a continuing high rate of industrial investment.

Emphasizing the necessity of avoiding overloading the economy, the Chancellor said he would seek, through the Budget, to give further limited and effective impetus to the expansion of Britain's economic activity.

"I can, therefore, now contemplate with safety some tax reductions that will lead to a fuller use of our resources without creating a dangerous pressure on the economy", Mr Heathcoat Amory then said.

There were four minor measures for relief from inland revenue taxes.

Gift insurance policies would be treated just like gifts of other kinds of property.

Corporation tax would be abolished.

Stamp duties on sea insurance policies would be abolished and subject only to a fixed duty of 6d.

Another small relief would concern the remuneration of the directors of director-controlled companies.

Mr Heathcoat Amory then turned to what he termed "my major Budget proposals."

"First, purchase tax:

"I propose to abolish purchase tax on commercial vehicle chassis...

"I propose to free replacement television tubes from tax....

"I propose to lighten the weight of purchase tax in general by reducing higher rates by one-sixth... the 60 per cent rate will, therefore, be reduced to 50 per cent, 30 per cent to 25 per cent, and 15 per cent to 12½ per cent".

The total cost of these reliefs which will operate from April 8 is £59,000,000 this year and £81,000,000 in the full year.

The tax on beer would be reduced from April 8 by a total of 48s a barrel—or about 2d a pint. This would cost the Exchequer about £40,000,000 in a full year.

Income-tax: A reduction of 9d in the standard rate and 6d in each of the other rates. The changes—costing £229,000,000 in a full year—would not be effective until June, because of the necessary revision of tax tables.

The strengthening of the United Kingdom's competitive position in world markets demanded continuous progress towards higher levels of investment, and the general effect of his proposals, said the Chancellor, would be to "stimulate the economy and, in the process to stimulate investment".

Investment and initial allowances: New mining works, now qualifying for 40 per cent, would qualify for 20 per cent investment allowance plus 20 per cent initial allowance. Capital expenditure on new agricultural and forestry building works would become entitled to an investment allowance of 10 per cent.

The Chancellor said the tax concessions would cost £295,000,000 this year.

Post-war credits: "I propose this year to start a comprehensive attack on this problem". The agreement for repayment would be lowered to 63 for men and 5 for women. This would cost an extra £35,000,000. More proposals might follow later in the year economic circumstances permitting. Beneficiaries with outstanding credits would be paid forthwith, and in future credits would be repaid on the death of the holder.

Post-war credits not eligible for repayment by October 1 would earn 2½ per cent compound interest from that date until repayment was made.

The Chancellor added: "I have decided upon a general restoration of investment allowances in respect of capital expenditure becoming due and payable after today. The rates for investment allowance for the main classes of assets will be 20 per cent for new plant and machinery and 10 per cent for expenditure on the construction of industrial buildings. These were the rates under the 1954 Finance Act.

"In addition, I propose that expenditure on new plant and machinery shall be eligible for a 1 per cent initial allowance, an expenditure on the construction of industrial buildings for a five per cent initial allowance".

The amounts due to building societies should carry interest from October 1 at 2½ per cent, free of tax.

The Chancellor said his changes would leave the sum below the line to be met by borrowing at £721,000,000 which represents the right balance between taxation and borrowing.

The Chancellor said: "Behind us is a year of solid achievement. Our economy is stronger and more firmly based than at any time since the end of the war. We have an opportunity now to resume steady rate of advance—not fit steam ahead, but steady ahead with confidence".

The Chancellor said it was not a "spending spree". Budget, he concluded: "I believe the measures I have proposed will bring benefits directly and indirectly every section of the community and encourage the nation to make the most of the opportunities that lie before us".

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"

—As You Like It.

TO the rest of the world, America is always presented as the land of opportunity. I suppose that, so long as there was unfettered laissez faire, this statement held true both in the realm of economics and in the sphere of politics. There have been persons who started out on a shoe-string and made enormous millions. There have been people born in the proverbial log cabin and destined one day to occupy the White House. In broad terms, these are generalisations we would have to go along with—the prideful American boast that those with ambition and drive, energy and courage, could make their way up as nowhere else in the world. Of course, like all generalisations, the statements are not quite true. For example, it will be only if Senator John Kennedy, as he threatens now to do, is elected President in 1960 that a Catholic would hold this highest office in the land. I am not sure that I will be able to give as glib an instance of where the economic aspirations of an American citizen have been circumscribed or stunted. What is more, strictly speaking, except that I thought I should like to embroider on the theme of America being the land of the free, my theme really is, not America, but India, though it is an American who provokes me to this particular discussion of the new land of opportunity; of this, later.

For the past several weeks, Calcutta has played host to the United States Small Industries Exhibit. We may recall that, in the early part of December, the first of what has apparently been planned as a series of four exhibits was inaugurated in New Delhi. Both at New Delhi and in respect of Calcutta, as complementary to the holding of the exhibit, the United States Department of Commerce sent out a Trade Mission to answer enquiries which might arise from the holding of the exhibits. When, through the courtesy of the United States Information Service, I had a look at the Delhi curtain raiser, I found myself enthusiastic about what was on show, but more than a bit puzzled as to its worth as far as India was concerned. After all, while many of the items of machinery on show could provide small industrialists with a profitable and lucrative business, it was crystal clear that the state of our foreign exchange reserves would not allow of any expenditure being incurred on the import of such equipment. I said as much to America friends in Delhi, and, in an enlightening though short discussion with Mr Howard Houston, TCM Director in India, I was able to have a glimmering of what the purpose of the exhibit could possibly be. Apart from propaganda for the United States, which it inevitably

would be, (mind you, the propaganda itself might have turned sour, if all that the exhibit did was to put on display wares easily available in God's own country, but which were almost for ever beyond the ability of India to afford), it was clear that the United States Department of Commerce was embarking on a specific programme of creating the climate and perhaps the opportunities for joint enterprises between American manufacturers and Indian entrepreneurs. It is, I am sure, no coincidence at all that the United States Department of Commerce is to bring out later this year a revised version of its brochure on the investment climate in this country. But this is very much by the way. The important thing is that the US Administration has seized the initiative in making it possible, as far as it lies in its power, to usher in a new era of cooperative enterprise where both partners thereof are not gigantic corporations, but rather the small and medium industrialists. Naturally, the motivating factor for such interest being shown would be American anxiety as is the concern in the rest of free world that democracy should thrive and prosper in India. But I was also certain that this factor by itself would not have exerted so powerful an influence as to evoke this many pronged attempt at inducing a greater measure of interest from and cooperation from American manufacturers. What the subsidiary reasons might be, I got an idea about in my talk with Mr Houston.

★

First, we may deal with that aspect of the raison d'être of the exhibit which reveals a certain amount of enlightened self-interest on the part of America. Considerable emphasis has been placed, in the exhibit, on agriculture. I thought it was the limit when hymns of praise were sung about soya bean oil, and I was slightly amused to find doughnuts being eagerly offered. (In reading Mr Turner's speech at the annual general meeting of Hindustan Lever Limited, I have to revise my views about the scope that there might be of America being in a position to unload its surplus of soya bean oil as well as the capacity of India usefully to import the commodity in terms of Public Law 480; Mr Turner foresees a widening gap

between the indigenous production of vegetable oils and demand, and he has suggested that US surplus stocks of soya bean oil may, in the immediate future, be imported under Public Law 480. I add my voice to Mr Turner's in suggesting that negotiations be started and energetically pursued in this regard). The emphasis is on agriculture because, to a certain extent, by means of the exhibit, America might hope to make available from this surplus a much larger quantity of such things as wheat and soya bean oil. (However, I learnt with some amusement that there is some sort of agency in New Delhi, under American auspices, to propagate an increasing use of wheat and wheat products. After all, the North Indian citizen does not need to be converted to wheat, and I don't believe that the South Indian, or for that matter a Bengalee, could ever be persuaded by one grain to divert his food habit from rice to wheat). But this is not the sum and substance of the emphasis on agriculture, since a number of simple implements were also on show, as well as the machinery to make these. What this country has undoubtedly needed is an awareness of these small agricultural implements, for, more than what the Japanese method of rice cultivation will ever do to increase production, productivity, in terms

of man hours worked, will depend upon "modernising" farming practices in India.

★

The other motivation for the official American attempt to whip up an enthusiasm for Indo-American joint enterprise is, I have inferred, the existence of a large cache of unused money which could be pressed into service in behalf of Indian development. I refer here to that element in the counterpart funds which are gathering in India under the Public Law 480 that is to be described as Cooley Amendment Funds. I do not have all the details about the Cooley Amendment, but, in broad terms, a portion of counterpart funds in respect of agreements under Public Law 480 is, in terms of the amendment, to be set apart for three specific uses. The three uses are: Loans to American enterprises operating in particular countries; loans to projects which would result in greater demand for US agricultural commodities; and loans to enterprises where there is cooperation as between American manufacturers on the one part and Indian entrepreneurs on the other part. It is, I believe, the snowballing funds lying to the credit of the Cooley Amendment which may have persuaded the US Administration to institute efforts whereby those funds would not lie waste, unused.

★

Having thus given the background to the Small Industries Exhibit, I would like to introduce Mr Paul H. Brent, who is the leader of the US Trade Mission to Eastern India. You might remember that I said early in this article that it was an American who is responsible for my having chosen the particular topic I am dealing with; that American is Mr Brent. It happened last week that Mr

Brent, as a sort of farewell party and as returning the hospitality that he had enjoyed while in this part of India, invited a few friends to dinner at the Great Eastern. (The fact that it was a dry day perhaps infused the excellent culinary fare with added taste and flavour). Dinner over, Mr Brent made an impromptu speech which, of its sort, is certainly one of the best that I have heard. What he was trying to do was to share with us the impressions that he had gleaned during his brief—it was also his first—visit to this country.

(Strangely enough, six members out of 7 were seeing India for the first time). The burden of the theme that Mr Brent kept repeating again and again was that the opportunities for business in India were something enormous. In his mind's eye, he could visualise India as the new land of opportunities, whereas many of our own countrymen seem, with their ceaseless carping about taxes and the rest, to be oblivious to the unlimited scope for expansion that has been offered on a silver platter to the Indian industrialists and busi-

nessmen. Mr Brent said that he and the members of his team, knowing much more as they did about India, would talk much more about India when they got back home. The objective of the exhibit was to encourage the manufacture of American type machinery under licensing schemes in India. He was equally frank when he said that it was by no means enough that a few stray Americans got to know what India was really like, and insisted that it was up to the individual business men and industrialists to have the push and gumption which would enable the American counterparts to show greater interest in this country. Mr Brent had a few words to say on such things as India's need for better agriculture and the necessity for Indian shippers to maintain quality standards. He revealed that as many as 800 enquiries had been dealt with by his team, on subjects ranging from the manufacture of safety pins to various heavy machinery projects. Mr Brent emphasised that, in the final analysis, India's need would be of engineers since, without them, no industry could make headway. Then, after iterating once more that, if only Americans could be made aware of the opportunities in India, we could rely upon a greater measure of cooperative enterprises between the two countries, Mr Brent ended his speech most gracefully with folded arms in the gesture that is Namaste.

I am hoping that, in due course, a joint programme of manufacture in India under licensing arrangements will become a very significant part of the Indian economy. I am hoping, too, that the machinery for small industry will be available in time, so that, during the Third Plan, the expansion of ancillary industries, with their tremendous potential for employment, will be facilitated. Mr Brent's task force has done a gruelling job well and they deserve our thanks for the trouble they have taken.

In a compendious review of Far Eastern countries the Hon'ble Michael W. Turner, Chairman of the Hongkong & Shanghai Banking Corporation, has done real service to students of the economies of South East Asian countries with his penetrating observations on China. Than Mr Turner, I suppose there are few others fitted to speak with knowledge and authority about the significance of developments in this vast new country to the rest of Asia. Before I proceed, I might condense Mr Turner's remarks on China. It has been engaged on the great leap forward; both industrial and agricultural production have gone up tremendously; rural society, with its system of communes, is in process of being transformed; what has already been achieved is a challenge to the rest of Asia; a recent agreement with Russia makes it clear that there is no turning back on the road to greater industrialisation. Then, Mr Turner has stated:

"Few countries are more directly concerned (than Japan) with the emergence of China as an industrial power, as the Chinese mainland is Japan's most natural source for industrial raw materials, and the competition from China's manufactured goods in South East Asian countries is a threat to her export trade which seems likely to grow in intensity."

Mr Turner's comparison is as between Japan and China, but we would not be erring if we extended the comparison to include India. Indeed, while it is from the point of view of a threat to Japan's own trade that Mr Turner has fashioned his views, much more interesting to the world at large is the comparison between India and China as engaged in a competition for ridding the countries of age old poverty. Then, with India, too, emerging as an exporter of industrial goods, it will not be incorrect to say that the prospect of China being able to emerge as a large scale exporter of manufactures constitutes a threat to India's foreign exchange earnings—and, therefore, to all of our planned endeavours, since a diminution in exchange earnings will restrict our ability to import capital goods from abroad. Now, I wonder whether China can actually set out to be a large scale exporter of manufactures, such that Japan and India would find their economies adversely affected. For, Russia in the past and the East European countries have possessed considerable capacity for manufactured goods. It would have been easy for them, as it will be easy for China, to impose greater austerity on internal consumption so as to make possible a variety of dumping, which could upset the world markets. Except in stray instances, the extent of dumping so far has been very small. For, the fact of the matter is, as both Poland and Hungary have shown, that there is a limit to the deprivation that the subject of even communist countries will undergo. There is always the last straw which will break the camel's back; to mix a metaphor there is always the final forced sacrifice imposed which will make the worm turn. So, while, academically speaking, it would require nothing more than an edict from on top for Communist countries to dump goods in the world markets, I am not sure that, except for stray assaults, the Communists would wish to do battle in this arena of world trade. Perhaps, after a few years, when there is greater relative satisfaction with his own lot on the part of the denizen of a Communist country, you might see a real threat emerging to the democracies. But, until then, while we cannot afford to be complacent, I do not think we need to plan on an undue disturbance of the equilibrium in Far East trade. What Mr Turner might say next year in this context should be extremely interesting.

GATEWAY GOSSIP

I reported two weeks ago, that venerable Gateway citizen, Sir Homi Mody, seems to have made his mind to divest himself of any of the chores that have been a lot for the past many years. The reader will recollect that I reported this as Gateway gossip coming to my ken. It was at a rumour at that stage, but a last week yielded some evidence pointing to the possibility that, in fact, Sir Homi might be girding his loins for entering into the political arena. At any rate, it is a fact that he has stepped down from his office as President of the Employers' Federation of India. His step shows the measure of Sir Homi's withdrawal from his heretofore interests, since a man could not lightly give up an office which he has held ever since the institution of an organisation. It is as Sir Homi and Sir Edward Meston, who together, some 26 years ago, conceived the need of a body which would act as the outthrust, as it were, of employers. In the years since then, when Sir Homi has gone on from success to success, the work done by the Employers' Federation has been of importance and usefulness. It is to be hoped that Sir Homi's successor will give the same kind of inspiring lead that has distinguished the first quarter of a century of the Employers' Federation of India.

To return to Sir Modi, and his self-acknowledged swan song, I seem to sense a bias already existing in favour of the politics that, as he whispered about, he is likely to take up in his new found time. For, his address delivered at the annual general meeting of the Employers' Federation has a perceptible balance between that which directly affects the Federation and that which directly affects Sir Homi.

First, Sir Homi as a politician. Although it is economics he deals with, his assessment of Indian planning has the hall marks of an electioneering stint addressed to those who do not favour the way in which planning has so far been conducted in this country. Thus, during the past year, Sir Homi points out that, though production is a whole improved, declines were registered in certain commodities and manufactures; that the employment situation has noticeably worsened; that consumption goods industries are in a tight corner; that costs of production in most industries have become unduly high; that it is the fiscal and legislative measures which are responsible for this increase in costs; that the capacity to save and invest has been crippled by taxation; that the rigmarole of controls renders difficult the business like functioning of enterprise; and that the adoption of modern techniques is being obstructed. Now, the facts as they are given are irrefutable. But, surely, there is no need

Employers' Federation

to rub it in. After all, the most important fact, though it does not relate to the year past, is that India has no alternative to planning for its future; Sir Homi himself has repeatedly stated that no one questions the concept of a planned economy. That planning itself has become necessary because you might say that the masses of the Indian population are in a ferment; they are in a hurry to see their lot improved; the freedom that we have won means little to them because they are still slaves to poverty. Government, in recognition of this urgency to deal as best as they can with the problem of securing a higher standard of life for the poverty-stricken millions, have inevitably to add to their revenues by taxation. So the fiscal, legislative and taxation measures have been inevitable, and I am afraid that, for better or worse, Indian industry must learn to base whatever development it is capable of or willing to undertake upon the hard fact of high taxation.

However, as far as Sir Homi's point that taxation cripples the capacity to save and invest is concerned, as an individual, with the imposts of recent years, I have perforce to complain that room for incentive or initiative—without which enterprise in an individual capacity becomes impossible—has been pitifully reduced. So far, Government's tax efforts do follow the general pattern of providing incentive for industry while proving irksome to individuals. It is high time that some relief was offered to the poor tax payer.

We have, then, Sir Homi's comments on planning. Here, too, Sir Homi's grouse is that realities have been conveniently overlooked and that such a philosophy of planning "cannot but place the country into recurring difficulties with regard to its internal and external resources". Sir Homi admits that, in recent years, considerable accomplishment is to India's credit. Sir Homi's point essentially is that lessons of the past cannot be ignored: "It is essential that our planners should squarely and fairly face whatever difficulties have been encountered or mistakes that have been made in the process".

The rest of Sir Homi's speech is connected mainly with developments in the labour field during the year. Two Codes for regulating relations between employers and workers were formed. Firstly, there is the Code of discipline and this is deemed to have come into force from the middle of last year. He says, "The basic principles are a just recognition by employers and workers of their rights and responsibilities and a willing discharge of both their obligations consequent on such recognition". We have now to wait and see whether this attempt to ensure harmonious conditions will prove to be successful. The second Code "lays

down certain basic principles for maintaining harmonious relations between the various labour units". But, as we have seen in the past, inter-union rivalries are rife, and there is little point in expecting agreements between employers and employees to be effective when there is such dissension within the body of the workers themselves.

Obviously, there is a crying need for workers to be educated, so that unscrupulous politicking for power will not be countenanced by the labour force. It is to be devoutly wished, as Sir Homi has hoped, that there will emerge, in the trade union field, "a government of the workers, by the workers and for the workers".

BOMBAY REVIEW

THE SECRET RESERVES OF MR. K.

Mr. K. knows that he can easily withstand the nervous strain and rush of every busy day, because he replenishes his reserves of vitality through deep, sound, restful sleep—in the soothing coolness of his 'Crystal' conditioned bedroom.

Keep Cool with a

Crystal trimline ROOM AIR CONDITIONER

Only the 'Crystal' gives you all these advantages:

- Over one ton cooling capacity
- Protrusion of less than three inches into the room
- Universally adjustable air-flow
- Voltas' unrivalled after-sale service that never lets you down

Made by

BOMBAY REVIEW

The inroads which increasing international competition is making into Indian exports of cotton textiles is one of the most serious problems with which the industry is affected at present. The threat to this, one of the leading industries in the country has taken a serious turn with the disappearance of the advantage of low prices for cotton, which the industry has been enjoying and on the basis of which it had built up its exports. In the absence of other compensating factors, to raise the competitiveness of Indian textiles, high price for cotton is a definite disadvantage for the industry.

The growth of the textile industry, in the erstwhile importing countries and the emergence of subsidised competition especially from China are the main features of the altered picture of the cotton textile industry and trade in the world. In this situation, the problem of regaining the lost ground

in the international market becomes all the more difficult for the industry to solve with its own resources.

Mr Kasturbhai Lalbhai, laid his finger on the core of the textile problem when he pointed out, that the difficulties with which the textile industry is afflicted, both in the foreign market and the internal market, stem from the phenomenon of cost inflation. While therefore, it is necessary that the cost of production in the industry should be brought down, there are definite limits set to such reduction in the existing situation. The lack of co-ordinated relation between wages of labour and labour productivity is, an anomalous feature of the cost structure.

Housing

The Housing Board came under heavy fire at the hands of the opposition in the legislative Assembly,

Cotton Textiles

bly, when the working of that body came up for discussion. There was widespread dissatisfaction at the working of the Board expressed by members on either side though, so far the opposition was concerned it was a case of virulent attack for failure in stepping up the pace of housing construction.

Though charges of favouritism, nepotism and corruption were freely hurled at the Government by the communist members, the most effective critic of the Government was Mr F. M. Pinto the PSP member of the Assembly. Mr Pinto compared the snail's pace in the construction of new hutments with the tremendous progress which foreign governments such as the USA, England and Japan were making in the same field. The existence of unutilised funds for housing gave much valid ground for such criticism against the Government. For, it was pointed out that only about 54 per cent of the total allotment for housing was spent leaving a balance of 46 per cent unspent, in respect of which interest had accumulated up to June of Rs 4.77 lakhs for which the Government are liable.

A plea was also made by members belonging to all the parties in the house for a general reduction of rent since it was believed that the Board was making enormous profits in its activities. There was also demand from Congress members themselves for more fund for building houses in the city. While the existence of a vast population of pavement dwellers in the city would warrant more funds for housing to meet the growling demand for accommodation it is doubtful whether the entire demand could be met within the limits of the city itself which is already heavily congested. The development of new townships around the city would offer the best solution to the acute congestion and resulting shortage of housing accommodation.

It was one of the points agreed to by the members of the opposition that the affairs of the Housing Board were not conducted or managed in the best fashion and that it was necessary that an enquiry should be instituted into its working. The need for the present vast organisation was itself questioned by one member it being pointed out that there was much of redundancy and superfluity in this in view of the fact that the construction work was entrusted to contractors.

The inability of the Minister in charge to provide adequate answers for all the points raised by the opposition members made him the victim of the speaker's mild rebuke for what he termed the amazing indifference of the Minister. The speaker also took objection to the undue delay in the submission of the administration report, and the programme, budget and the sche-

dule of the staff of the Housing Board.

Road Development

Presiding over the annual dinner of the Indian Institute of Road Transport, Mr Raj Bahadur, Union Minister of State for Transport and Communications, stressed the importance of road transport in the country. That road transport has immense scope for development is a fact that is widely recognised; but a combination of unfavourable factors, such as restrictions on motor transport operations, distance restrictions, limited load factor, illiberal issue of permits etc had greatly restricted the role of road motor transport in the country. It is really anomalous that these restrictions should be persisted with in spite of the increasing demand for road transport in the country.

The absence of a well-developed automobile industry is another limitation that detracts considerably from the utility of road transport in the country. The automobile industry is not yet completely developed being dependent on imports for some components and spare parts. The development of the road transport is therefore contingent on the further growth of an indigenous automobile industry self-sufficient unto itself, in respect of all the components.

The self-financing character of road transport is another consideration that urges more concentrated attention on the development of road transport. In this connection Mr Raj Bahadur pointed out that the net yield from road transport in 1958-59, was about Rs 60 crores. Mr Raj Bahadur has therefore suggested that road development should be promoted by a fund consisting of the surplus accretions, and a matching grant, of equal amount. Considering the importance of road transport for economic development of the country, the creation of such a fund for the development of road transport should not be grudged.

It also augurs well for the development of road transport in the country that the Government of India has begun to take keener interest in the development of road transport, as would be evidenced by the setting up of the Inter-State Transport Commission, the Masani Committee etc. Road development had, of course had a rather step-motherly treatment under the Second Plan, the whole emphasis on transport development under the Second Plan having fallen on railways and shipping. However Mr Raj Bahadur had indicated that allocations under the Third Plan would be much larger than under the Second Plan and therefore it would be possible to look forward to more rapid development in the years ahead.

GATEWAY NOTES

April 18, 1959

WORLD OF COTTON

Futures Weak: Spot Firm

WHILE the Spot section of the Bombay Cotton market continued to rule firm due to persistent mill buying, futures suffered a sharp setback from the recent high levels. With upcountry markets reporting easier conditions, bulls were inclined to liquidate their holdings, while bears were in no mood to cover.

Early in the week, it was reported that Vijay cotton would be tendered in Ahmerabad against the maturing Kalyan April contract and that the chances of these tenders passing the survey were not bleak. With only two more weeks left for the maturity of the Jharilla May contract, these rumours induced a wave of liquidation in Bombay. Moreover, advices from Saurashtra and elsewhere were also discouraging.

The Spot section, however, continued to rule firm. With mills buying selected varieties, the market improved. Digvijay, Vijay and Surti varieties were quoted well above the ceiling with others rising in sympathy.

On the export front, not much business was reported done. Small lots of the usual growths were bought.

In the foreign section, importers evinced only moderate enquiry in Egyptians, Sudanese and East African varieties.

KARACHI COTTON MARKET

In contrast to the easy trend noticed last week, the Karachi cotton futures market ruled fully steady during the week under review. A limited volume of buying and some export demand led to a modest improvement in prices.

ALEXANDRIA COTTON MARKET

Better activity was reported on the Alexandria cotton futures market. There was renewed demand from India. Rumours, that negotiations were going on between Egypt and East Germany for enabling the latter to lift more cotton from the former in exchange for heavy industrial equipment, imparted some strength to the market.

Although, in general, export demand was not encouraging, India bought in fair volume against 30,000 bales of Egyptian growths allowed to be imported by the mills recently. Shipments, during the current season till the 18th March, were 511,612 bales of 720 lbs each as against 412,762 bales in the corresponding period last season. The variety-wise details of shipments this season were (in bales):—Karnak 65,173 bales; Menoufi 288,680; Giza/30 16,086; Den-

dera 39,464; Ashmouni 95,553 and others 6,656. Total 511,612 bales.

The demand was active for Sudanese cotton and India figured as the principal buyer. Accordingly, auctions witnessed good interest and turnover was encouraging.

Values of East African varieties rose sharply and offerings grew very scarce. This situation was due to continued good demand and the marked reduction in crop estimates.

LIVERPOOL COTTON MARKET

Prices on the Liverpool cotton futures market showed a mixed trend. The near-month continued under liquidation pressure at limits; but new crops showed improvement with trade covering and some mill fixations on smaller entries and larger repossession in the United States 1958 loan. Trading was, however, generally quiet. The Sudan contract ruled quiet and unchanged.

NEW YORK COTTON MARKET

Values on the New York cotton futures market moved up on buying by New Orleans interest and trade support, being influenced by optimism regarding export and expectation of higher export subsidy. News of higher cotton consumption also favourably affected sentiment.

CLOTH AND PIECEGOODS

Fairly active conditions prevailed in the Bombay Cloth market. While the export section was able to maintain the previous week's level of activity, the offtake in the domestic sector was rather encouraging.

In the superfine categories of cloth, seasonal goods were in fair demand. There was a slight increase in the prices of certain special varieties of cloth. Reports are, that the stocks with the mills as well as the trade have declined by a substantial quantity.

On the export front, Hong Kong was reported to have booked small quantities, while moderate business was put through with Singapore and Bangkok. Ceylon continued to be quiet, while no appreciable business was done with Burma. It is reported that the validity of the licences, issued by the Burmese Government under PL/480, has been extended up to the end of August. Further business was reported done with Indonesia in lower qualities. Saudi Arabia accounted for small quantities. There are expectations in the market that Sudan will enter the market before long.

Mr J. Vyoral, Technical and commercial director of Bata Shoe Company Private Ltd., has been appointed the managing director of the Company from April, 1959.

Prior to joining the Indian Bata Company in 1955, Mr Vyoral has had many years of service with different Bata Companies overseas. Mr Vyoral succeeds Mr J. F. Bartos who is due to retire next year.

WE MUST LOOK AHEAD

Despite the depression I am confident there is a great and profitable future for shipping

"WISELY improve the present. It is thine. Go forth to meet the shadowy future, without fear", quoted the P & O's Chairman, Sir William Currie, from the poet Longfellow, when he addressed his stockholders at the Company's Annual General Meeting.

"Twelve months ago", said Sir William, "the shipping slump was already with us and there is as yet no sign of any improvement. The level of tramp shipping freight rates has a material bearing on our Group profits. The tonnage of dry cargo ships available in the world has increased from 59 million gross tons at the end of 1949 to 78 million gross tons at the end of 1953. The supply of ships has outstripped the demand, and until the position is rectified, tramp freight rates must remain depressed. The investment allowance has reduced the taxation charge from 50 per cent. of the profits in 1954 to 35 per cent. in 1958, in which year it had the effect of doubling the amount of retained profits."

ORIENT & PACIFIC LINES

Speaking of the Orient and Pacific Lines service, the Chairman said that a service had been planned from the Pacific ports of North America to Japan and the East. They had great hopes for the future of tourism in the Pacific. There had been a remarkable increase in travel through that area in the last five years, the bulk of which originated in America.

FLAG DISCRIMINATION

Referring to the present depression, he said that many foreign ships were receiving aid from their Governments, the most dangerous threat being discrimination by Governments, which often closed the door to ships of other flags by reserving cargoes for their own ships.

"Transport by sea is the cheapest form of movement", but a continuation of flag discrimination by the Governments which now practise it will inevitably lead to other nations adopting the same methods, with a resultant increase in the cost of goods to the consumer. If we and others of the traditional maritime countries decided that all our imports were to be carried in our own flag ships, a one way traffic with ships returning empty would result which would be most expensive and a grievous waste of tonnage. In an industry which is essentially international and which is affected by so many different and changing circumstances, economic and political, and in many cases sudden, it is impossible to prophesy what the future may hold. But the shipping industry has faced recessions before and, with the support of Government and the public, will weather this one.

THE OUTLOOK FOR THE FUTURE

"British shipping was not built up from pessimism—if it had been we would not have survived the first world war.

"We are a nation of seafarers; British shipping has given indispensable service to the nation in peace and in war and it must continue to do so. We must look ahead. Our policy hitherto has been to rebuild our fleets after the war and to seek new outlets for shipping enterprise in the trade of the world. The morale of those who serve in our ships is high and they have fine ships to operate. I am confident that there is a great and profitable task for shipping in the future and that we as a Group are well equipped to meet the changing needs of world trade and to play our part in its development."

This is an extract from the Chairman's address, copies of which together with the Annual Report, can be obtained from the Secretary of the Peninsular and Oriental Steam Navigation Company, 122 Leadenhall Street, London, E.C.3.

THE BAREILLY CORPORATION (BANK), LIMITED

THIRTY-FIRST ANNUAL REPORT OF THE BOARD OF DIRECTORS TO THE SHAREHOLDERS.

The Directors beg to submit to the shareholders the Balance Sheet and Profit and Loss Account of the Bank for the year ended 31st December, 1958. The Auditors' report is also annexed.

The Net Profit for the year including Rs. 386.47 brought forward from the previous year amounts to

Rs. 81,546.64	Rs. 81,546.64
Rs. 42,000.00	Rs. 42,000.00
Rs. 2,500.00	Rs. 2,500.00
Rs. 4,110.00	Rs. 4,110.00
Rs. 6,000.00	Rs. 6,000.00
Rs. 22,293.00	Rs. 22,293.00
Rs. 2,279.00	Rs. 2,279.00
Rs. 2,364.64	Rs. 2,364.64
Rs. 81,546.64	Rs. 81,546.64

The Directors recommend that the following appropriations be made out of the aforesaid amount:—

- To provision for income-tax
- To transfer to Gratuity Fund
- To payment of dividends at 6 per cent per annum (less income-tax) on Preference 'A' Shares
- To payment of dividends at 6 per cent per annum (free of income-tax) on Preference 'B' Shares
- To payment of dividends at 43 per cent per annum (free of income-tax) on Deferred Shares
- To carry forward to next year's account

NOTE:—Shri Sri Ram Khanna, Chairman being unable to attend the meeting has not signed the Report.

The Bank's business was satisfactory during the year. The deposits have increased by more than Rs. 6 lacs and on account of the competition of bigger banks in the matter of deposit rates we also had to offer higher rates to fall in line with them. Thus you will find that payment under the head 'Interest on deposits' has considerably increased.

During the year a charter of demands was served upon the Bank on behalf of its employees for increase in their pay and allowances etc. In order to maintain harmonious relations between the Bank and its staff we settled the dispute by private negotiations and it has cost the Bank about Rs. 28,000/- in the shape of increase in salaries and dearness allowance and payment of bonus. You will notice that although the gross earnings of the Bank have increased by more than Rs. 53,000/- but the net profit has declined on account of the heavy increase in establishment expenses as mentioned before and we are obliged to reduce the dividend on ordinary and deferred shares. It is hoped that with the cooperation of the staff, better results would be attained in the current year.

The shareholders will be glad to know that it is now for the first time after November, 1951, when there was a steep fall in the prices of Government Securities due to the increasing of Bank Rate by the Reserve Bank of India, that the market value of our investments in Government Securities exceeds their book-value as shown in the Balance Sheet.

BALANCE SHEET AS AT 31st DECEMBER, 1958

CAPITAL AND LIABILITIES.		Figures for the current year.		Figures for the previous year.		PROPERTY AND ASSETS.		Figures for the current year.		Figures for the previous year.

AUDITORS' REPORT TO THE SHAREHOLDERS OF THE BAREILLY CORPORATION (BANK), LIMITED, BAREILLY.

We have audited the annexed Balance Sheet of THE BAREILLY CORPORATION (BANK) Limited, Bareilly, as at 31st December, 1958 and also the annexed Profit and Loss Account of the Bank for the year ended that date in which are incorporated the returns of 4 branches audited by us and the unaudited returns of 12 branches not visited by us.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisions to Sub-sections (1) and (2) of Section 211 and Sub-section (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The accounts are, therefore, drawn up in conformity with forms 'A' and 'B' of the Third Schedule to the Banking Companies Act, 1949.

We report that:—

- (a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;
- (b) The transactions of the Bank, which have come to our notice, have been within the powers of the Bank;
- (c) In our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purposes of our audit have been received from the Branches of the Bank;
- (d) The Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;
- (e) In our opinion and to the best of our knowledge and information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet read along with the notes appearing thereon, gives a true and fair view of the state of affairs of the Bank as at 31st December, 1958 and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

Dated, 4th March, 1959.

GATEWAY
MARKETSFirm Trend in
Oils and Oilseeds

THE markets for both Oils and Oilseeds continued to present a firm front, although higher levels attracted some profit-taking towards the close. The Government's announcement with regard to the export quotas for khardiseed, nigerseed and their oils served only to aggravate the bullish undertone; but traders were inclined to rule out the possibility of much business.

So far as exports of these commodities are concerned, the outlook is considered to be far from encouraging. There has been poor enquiry from abroad for quite some time in view of the fact that Indian prices tend to be out of parity with world rates. For instance, Indian khardiseed is nominally indicated in the UK at about £40 per ton as against £35 for the South African variety. In nigerseed and niger oil, too, prices are not likely to be workable; but the exporters are awaiting the latest quotations. So far as kardi oil is concerned, Australia is expected to evince some interest as judged by its purchases last year. A clear idea of the prospects will, however, be available only after a few days.

In the Groundnut section, sentiment remained bullish with the arrivals remaining poor in relation to the steady demand from

the crushers and vanaspati manufacturers.

In the Castorseed section, there was an improvement in sentiment following reports regarding exports of castor oil. With the claims of business for about 300 tons with the USA at 12.50 to 12.70 cents per pound for commercial oil, hopes revived that the American demand would be more active in the near future, especially in view of its lower stock and the reduced offerings from Brazil. Rumours of business with the Communist countries also imparted strength to the market. While fears of larger arrivals of the new crop in Gujerat and Hyderabad tended to check the advance in prices, the absence of the expected improvement in this respect helped the rally towards the close.

Trading in the Linseed section was active. While the market was initially hesitant on account of the fears of an improved inflow of the new crop in the growing areas, hopes of an early issue of tenders for linseed oil by Australia prompted support towards the close.

Trading in the Cottonseed section was a tame affair with prices moving within a narrow range. For the first three months of the current year, castor oil exports from Bombay have totalled 1,764 tons; groundnut oil 1,009 tons; linseed oil 803 tons; sesame oil 90 tons and rape and mustard oil 65 tons.

Among oilseeds exports during March, groundnut HPS accounted for 759 tons and sesame 43 tons. Thus, for the first three months of the year, groundnut HPS exports have amounted to 3,825 tons; sesame 80 tons; niger 737 tons and khardiseed 6 tons.

Gold & Silver

Prices on the Bombay Bullion Exchange recorded new peak levels. With the smuggling activity much reduced and rumours about the withdrawal of Indian currency from the Near Eastern countries, both the metals showed a firmer tendency.

Sentiment in the Silver section ruled better, being influenced by reports that the import of Tibetan coins would hereafter be affected as a result of the tense political situation in that State. Although spot demand did not come up to expectations, forward rates moved up on speculative support. Spot rates moved between Rs 199.50 and Rs 201.44.

The Gold section displayed remarkable strength and prices scaled a new peak in several years. Arrivals of smuggled gold were reported to be slowing down. Talks about tightening of the machinery to check inflow of smuggled gold from the Middle East provided a fresh stimulant to the market. The rise in prices was also aided by the reports of satisfactory offtake from certain up-country centres. Spot rates moved between Rs 119.50 and Rs 120.31, while Sovereign remained firm Rs 75.75.

Yarn

Conditions in the Bombay Yarn market remained depressed and the trend of prices was easy. Sentiment was adversely affected by the increasing arrivals of imported yarn under the export promotion scheme as well as by the reported move of the Silk and Art Silk Mills Association to set up a Corporation for handling the distribution of yarn. The uncertain-

ty over the import policy for rayon yarn, which is yet to be announced, also caused some uneasiness in the market.

The question of formation of a Corporation is reported to have been considered at the last meeting of the Development Council and is expected to take a final shape at the next meeting of the Council, to be held in Bombay later this month. Meanwhile, the Yarn Merchant's Association maintains that it is in a position to handle distribution work in an efficient manner.

Traders have preferred to unburden some of their commitments at a time when larger quantities of imported yarn have already started arriving. This explains the present weakness in the Bombay yarn market.

Staple-Fibre yarns declined further due to slackness in the demand from the consuming centres and also due to fear of pressure of sales from the local mills.

*

Non-Ferrous Metals

The Government of India have announced their policy for the imports of non-ferrous metals during the licensing period April/September, 1959. The changed policy has been welcomed by the market. The quotas for Zinc and Copper have been restored to the established importers, although the percentage allowed is not considered to be satisfactory. On the one hand, quotas for Lead have not been restored while, on the other, some reduction has been made in the Tin quotas. But, there will be a ceiling on profits at 7½ per cent. This limit of profit has disappointed the market.

April 18, 1959

MAHINDRA & MAHINDRA LIMITED

NOTICE

The Thirteenth Annual General Meeting of the Shareholders of Mahindra & Mahindra Limited will be held at the Taj Mahal Hotel, Apollo Bunder, Bombay 1, on Monday, 18th May 1959, at 4 p.m. to transact the following business:—

- (1) To receive and adopt the Directors' Report, and audited Balance Sheet and Profit and Loss Account for the year ended 31st October, 1958.
- (2) To declare dividends on Preference and Ordinary Shares.
- (3) To appoint a Director in place of Mr. A. K. Mitra who retires by rotation under Article 110 of the Articles of Association of the Company and who being eligible offers himself for re-election.

- (4) To appoint a Director in place of Mr. K. C. Mahindra who retires under Article 110 of the Articles of Association of the Company and under the provisions of Section 280 of the Companies Act, 1956, and offers himself for re-appointment and to consider and if thought fit to pass, with or without modification, if any, as may be agreed upon at the Meeting, the following resolution of which special notice under Section 281 of the Companies Act, 1956, has been duly received by the Company and is hereby given:—
"RESOLVED that the age limit specified in Section 280 of the Companies Act, 1956, shall not apply to Mr. K. C. Mahindra who is now 65 years of age and that Mr. K. C. Mahindra be and is hereby appointed a Director of the Company."
- (5) To appoint auditors for the current year and to fix their remuneration.
- (6) To consider and if thought fit to pass, with or without modifications, if any, as may be agreed upon at the Meeting, the following ordinary resolution:—
"RESOLVED that from 1st August 1959, i.e., after the expiry of their respective existing contracts, the remuneration of each of the three existing Executive Directors be increased from Rs. 3,000/- per month to Rs. 5,000/- per month, the commission payable to them be reduced from 5/3% to 1% of the net profits of the Company and that they be continued also to be paid and allowed all the other benefits, remunerations and emoluments as at present, that the appointment be not for any definite period and be terminable on 12 months

notice and the Board of Directors is hereby authorised to execute fresh contracts with each of these three Executive Directors on terms of the draft put before the meeting and initialled by the Chairman, with such modifications, if any, as may be prescribed by Central Government in according sanction under the provisions of the Companies Act, 1956."

- (7) To consider and if thought fit to pass the following special resolution with or without modifications, if any, as may be agreed upon at the Meeting:—
"RESOLVED that in Article 98 of the Articles of Association of the Company the word "nine" be substituted by the word "twelve"."

By Order of the Board,
MAHINDAR SINGH,
Secretary.

Bombay,
31st March, 1959.

ANNEXURE TO THE NOTICE
EXPLANATORY STATEMENTS
AS REQUIRED BY SECTION 173
OF THE COMPANIES ACT, 1956.

Item No. 4:

Mr. K. C. Mahindra, who has been a Director and Chairman of the Company since its incorporation in 1945, has attained the age of 65 years on March 15th, 1959. The proposed resolution seeks to have Mr. K. C. Mahindra re-elected as a Director and your necessary declaration that the age limit specified in Section 280 of the Companies Act, 1956, shall not apply to him. Your Directors feel that it is in the interest of the Company that the Board should continue to receive the benefit of Mr. K. C. Mahindra's long experience and able guidance.

The Company has received Special Notices from two members notifying their intention to move the resolution set out in the Notice.

Item No. 6:

The Company has three Executive Directors, viz., Mr. Keshub Mahindra, Mr. Harish C. Mahindra (the son and nephew respectively of Mr. K. C. Mahindra), and Mr. Aloke K. Mitra. They have been Directors of your Company since 1948 and were last appointed Executive Directors under their respective contracts dated 25th August, 1954.

These contracts being for a period of five years expire on 31st July, 1959. Under these contracts the remuneration of each of these Directors is Rs. 3,000/- per month plus commission of 5/3% of the net profits of the Company as certified by the auditors of the Company.

Under these existing contracts each of these Executive Directors also enjoys the following other benefits, remuneration and emoluments:—

- (a) Medical, surgical, hospital and other such expenses.
- (b) A lump-sum entertainment allowance of Rs. 500/- per month representing the estimated normal disbursements made by the Executive Directors for entertainment on behalf of the Company.
- (c) Suitable unfurnished residential accommodation.
- (d) A motor car.
- (e) First class return passage by sea or air for the Executive Director and his wife every two years for leave abroad of not less than four months, and during such leave abroad a travel allowance of £400/- for each two months period of leave subject to sanction by the Reserve Bank of India. During such leave abroad the Executive Director is required to undertake such work for the Company as the Company may direct and generally to look after the interest of the Company abroad in the various countries that the Executive Director may visit.

Each of these Directors has been in charge of such sections of your Company's activities as have been assigned to him from time to time.

Since 1954 the work of the Executive Directors has appreciably increased in volume and in responsibility and in this period of five years your Company has become a full fledged manufacturing concern.

It is proposed that the salaries of each of these Executive Directors be increased from Rs. 3,000/- to Rs. 5,000/- per month, the existing commission being reduced from 5/3% to 1% of the net profits of the Company and the rest of the remuneration, benefits and emoluments as above remaining the same.

The draft contracts have been prepared for each of these Directors amending the existing contracts in conformity with the above. Reference is also made to the Pro-

vident Fund benefits. The fixed duration of their employment limited to five years is also dispensed with and corresponding changes made in the existing terms making the contracts terminable on 12 months' notice. It is also expressly provided that the Executive Directors will be assigned such work and be in charge of such sections of the Company's activities as the Board of Directors may decide from time to time. The rest of the provisions of the existing contracts have been retained in these drafts. These draft contracts and the existing contracts are open to inspection of the members between 11-00 a.m. to 1-00 p.m. on any working day excepting Saturdays.

Item No. 7:

The Articles of Association provide that the number of Directors shall not be less than 3 nor more than 9 until otherwise determined by the Company in General Meeting. Since 1955 the Company's operations have greatly expanded both in scope and content. It is therefore desirable to make provision for an increase in the number of Directors and hence the proposed Special Resolution that Article 98 of the Articles of Association be so amended as to increase the strength of the Board from '9' to '12'. This resolution will be subject to the approval by Central Government and shall not have effect so far as the increase is disapproved by that Government as per Section 259 of the Companies Act, 1956.

By Order of the Board,
MAHINDAR SINGH,
Secretary.

Bombay,
31st March, 1959.

S. E. RLY TENDERS

Sealed tenders are invited for Tender No. CON/COS/30/GB10/59 for supply of 1 No. Portable X-ray unit with dark room accessories as per details to be obtained from the tender schedule. Tenders will be opened on 1-5-59 at 12 noon.

Tender forms are obtainable from the office of the under-mentioned (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs 2/- (not refundable) per copy by money order to him direct in the case of outside firms and on production of cash receipt from this Rly's Chief Cashier by local firms.

Tender should accompany the receipt for depositing earnest money of Rs 200/- without which the tender is liable to be rejected. Approved contractors having a permanent deposit of Rs 1000/- with the under-mentioned are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

AUDITORS' REPORT TO THE SHAREHOLDERS

We have audited the above Balance Sheet of the Indian Bank Limited, as at 31st December, 1958 and also the above Profit and Loss Account of the Bank for the year ended on that date with the books of account of the Head Office and Branches, other than those in Malaya, and with certified returns from Malayan Branches and report that:

- We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purpose of our audit;
- Such information and explanations have been found to be satisfactory;
- The returns received from the branches have been found adequate for the purpose of our audit;
- The transactions of the Bank as have come to our notice have been, in our opinion, within the powers of the Bank;
- In our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956 in the manner so required;
- In our opinion,
 - The Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December, 1958;
 - The Profit and Loss Account gives a true and fair view of the Profit or Loss for the year ended that date and shows a true balance of profit for the period covered by the audit; and
 - proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books; and
- The Bank's Balance Sheet and the Profit and Loss Account dealt with by the Report are in agreement with the books of account and Returns.

THE PENINSULA

THE Centenary celebrations of the Madras Forest Administration had served to focus public attention on a subject which lies remote from the general field of public interest. Forestry is not a subject which evokes public appreciation of its importance. This is notwithstanding the fact that forests had in the country an appeal and significance right from the ancient puranic days. It was with reverential awe than people looked upon forests in the olden days. All this is however changed and in its place it is an attitude of indifference and even ignorance that one meets with among the public. This might perhaps be the result of the lack of publicity about the importance of forests and the absence of vigorous organised efforts for its development. For, in common with many other fields of development activity, forestry is just on the threshold of an organised campaign of development and it is only when attempts are made to interest the people in the development of forests that there would be wider appreciation of its importance.

Presiding over the Centenary celebrations of the Madras Forest Administration, Mr Bishnuram Medhi, Governor of the State stressed the importance of forest development from the point of view of the welfare of the future generations. The connection between public welfare and forest development is less patent than with other more immediately productive fields of economic endeavour; but all the same it is very real and the benefits in the long run are substantial. The centenary celebration is in itself significant and reflects the importance which attaches to such development.

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED (Incorporated in England)

Notice is hereby given that the Board of Directors of this Company have declared payment of a Final Dividend on the Company's Preference Stock for the year ended 31st March 1959 at the rate of £2.15.11-1/49 per cent less income tax at 7s.9d. in the pound equal to £1.14.3d. per cent. Payment will be made on 15th May 1959 to those stockholders whose names are registered in the Company's Stock Register on 30th April, 1959.

Applications for transfers received in this office before 12 O'clock noon on Thursday, the 30th April 1959, will, if otherwise satisfactory, be registered at that date for the purpose of participation in the above dividend.

By Order of the Board,
D. H. P. HENDERSON
Agent.

Victoria House,
Calcutta, 11th April, 1959.

Forest Development

That Madras State should take pride of place in the efficient administration of forests was inherent in the early attempts made to preserve and develop forestry in the State. However, in respect of forest wealth and resources, the State presents a picture of gradual diminution brought about by territorial changes which began with the formation of the Orissa State and which culminated with the State reorganisation scheme. The State reorganisation scheme which saw the birth of the new Andhra Pradesh and the cession of the Malabar area which formerly formed part of the Madras State to the new Kerala State, cost the State the forest areas of these places which was of no small order in respect of extent or richness. Mr Bhaktavatsalam, the Madras Home Minister has in this connection pointed out, that the loss of areas under forests as a result of the State reorganisation scheme was proportionately greater than loss of land under other uses. The addition to the forest area of the Madras State as a result of the acquisition from the Tamil speaking areas of the erstwhile Travancore-Cochin State was meagre compensation to the loss suffered by the State.

It is on a programme of vigorous development of forests that the Government is launched. The existence of a century old administration has not in any way mitigated the need for development. On the contrary the wholesale felling of forest trees to meet the demands created by the world war II had left a heavy backlog of development activity which is only beginning to be taken up. To this the First and the Second Plans have added new responsibilities by charting out new programmes of forest development. The First Plan signalled the first beginnings of organised attempt to develop forests throughout the country. The one important gain to the State from the existence of a century old administration, is the legacy of an efficient administrative cadre that is technically well-equipped to take up responsibilities of whatever kind.

How great an importance the Government attaches to develop forests in the State was indicated when Mr Bhaktavatsalam stressed the need for utilising all available grounds and sites in the villages for planting forest trees. The scope for such work was indicated by Mr Tackle when he pointed out that if two to three trees per acre were grown in half the cultivated area the total addition of the forest resources would be of the magnitude of approximately 15,000 to 18,000 sq miles. Towards this he has suggested the creation of a sinking fund. It is gratifying that such farm forestry is to be the important plank in the activities of

the forest department in the State. It is necessary for success in this field, that the people should be interested and educated into the value of forest development.

Forest development thus presents a wide range of problems including rehabilitation of degraded areas provision of pasture lands for cattle grazing etc. In the Madras State rehabilitation assumes great importance in view of the heavy destruction which forests suffered following the World War II. A vast field of consolidation work has also been left to the Forest Department consequent on the acquisition of ex-Zamin and Ex-inam forest lands. Further responsibilities would be added when the forest under Panchayat control would be entrusted to the Forest Department.

Provision of pasture lands acquires significance in view of the large cattle population in the country and the lack of sufficient grazing lands, with adequate stocks of eatable and nutritious grasses. This, Mr Tackle has pointed out, would remain one of the main objects of managements for some years to come, and a sum of Rs 1 crore is indicated to be available for this. The provision of separate pasture lands is further necessary to prevent encroachment by cattle and the consequent havoc which they cause to the forest resources in the country.

Prevention of the loss caused by human agencies is another aspect of forest administration that has to be vigorously pursued. Large-scale smuggling of timber from forest areas has been reported in the Madras State and acknowledged by the authorities themselves. Dr P. S. Deshmukh the Union Minister for Agriculture has advocated severe penalties for the prevention of such anti-social activities. Though the Forest Administration has been maintaining strict attitude in this matter, it could not be said that steps had been taken against all avoidable losses.

Research is one of the fundamental needs for the future development of forests along proper lines. There is a forest Research station at Bangalore dealing with utilisation problems and more particularly with the vexed problem of the spike disease in sandal. Further, Dr P. S. Deshmukh, has stated that an extension of this station is being organised at Coimbatore. Such research is particularly important in the context of the many adverse factors operating against the rapid development of forests in the country. Unfavourable climate, inadequate rainfall and their erratic distribution, uneven soil etc are some of the factors that would have to be tackled in any scheme for the development of forests in the country. Extension forestry is another important need of the hour.

MADRAS REVIEW

BRITISH INDIA ELECTRIC CONSTRUCTION CO. LTD.

NOTICE is hereby given to the members of the above-named Company that the Annual General Meeting (being the seventy-fifth Ordinary General Meeting of the Company) will be held at the Registered Office of the Company 21, Netaji Subhas Road, Calcutta on Monday, the 4th May, 1959, at noon, to consider the Accounts of the Company for the year ended 31st December, 1958, and to transact other ordinary business and the under-noted special business.

SPECIAL BUSINESS.
NOTICE is also hereby given of the following Resolution which will be proposed as a Special Resolution:—

"That the following contract between the Company and The Bengal Paper Mill Co. Ltd., an Associate (as defined by Section 2(4) of the Companies Act, 1955) of Balmer Lawrie & Co. Ltd the Company's Managing Agent, a draft whereof has for the purpose of identification been subscribed by the Chairman of this Meeting be and the same is hereby approved and the Directors are hereby authorised to execute the said Agreement on behalf of the Company with a convenient despatch:

for sales of such electrical switchgear, apparatus and electrical stores and services, which the Company regularly trades or does business in which the Associate may require for the purpose of its business, payment for such sales being due within one month from the date of the supply of such goods or the supply or rendering of such goods or the supply or rendering of such services;

it being a term of the above contract that the prices at which transactions take place shall be at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable."

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 20th April 1959 to 4th May, 1959, both days inclusive.

By Order of the Board,
BALMER LAWRIE & CO. LTD.
D. MANSON
Secretary
Managing Agent
21, Netaji Subhas Road,
Calcutta, 31st March, 1959.

Note: A member entitled to attend and vote at this meeting entitled to appoint a proxy to attend and vote in its stead. Such proxy need not be a member of the Company.

SOUTH INDIAN NOTES

Land Reform

The land Reform policy of the Government of India came for severe criticism at the symposium on "Land tenure reforms and agricultural improvements" organised by the Gokhale Institute of Public Affairs in Bangalore, this week. All the speakers were unanimous in their view on the results that would follow the introduction of cooperative farming in the country as contemplated by the Government.

Mr N. Madhava Rao, a former Dewan of Mysore, referred to the futility of fixing ceilings for increasing production of food-grains and recalled the recommendations of the Jatti Committee on land reforms in the Mysore State which had insisted on the fixation of similar ceilings on income from other sources which however the Government of India had not found acceptable. The ceilings on individual land holdings was according to Mr Madhava Rao the weakest part of the land reform policy of the Government of India.

Mr Madhava Rao was also highly critical of the Government's policy in respect of cooperative farming. It appeared to him an impossible task to cover the whole country with service cooperatives in the short span of three years as at present envisaged by the Government. Similarly all the arguments about the voluntary basis of cooperative farming was so much of pious thinking and the resort to external pressure in the introduction of such farming was inevitable in the very nature of the scheme. It was necessary for the smooth progress that the introduction on an organised basis should be preceded by few successful experiments in each State.

Sardar Lal Singh, President, All-India Agriculturists' Federation, found the absence of any specific provision for compensation, the most serious flaw in the land reform policy of the Government, and called for proper clarification of the basis for the fixation of such compensation and the mode of payment of such compensation.

He had no doubt that the proposed policy of the Government in respect of cooperative farming would ultimately lead the country towards communism. Mr Lal Singh also made it clear that opposition to the Government's land reform policy did not spring from hostility towards the introduction of modern scientific methods of cultivation or other reformatory measures such as fixation of fair rent, prevention of ejectment etc. He also urged the Government to take steps to reclaim all lands that were going fallow.

Cottage Industry

Though cottage industries form one of the important fields mark-

ed for development activity, the ground that remains to be covered to realise in full measure the benefits generally credited to them remains still vast. The need for more rapid development would therefore have to be kept in constant view if a satisfactory pace is to be maintained.

What stands in the way of a more rapid development of cottage industries in the country is the fact that they depend too much on Governmental assistance for their development. It is only when they are able to stand on their own legs without Government doing everything to keep them in going concern, that the cottage industries could be said to have justified their objects for which they draw at present large-scale Governmental assistance.

One of the major handicaps in the development of the cottage industries in the country is lack of adequate demand for their products and this sets definite limits to the scope for their development. In respect of many of the products it is the Government which provides the major outlet Governmental purchases being the medium for subsidising the development of cottage industries. That, however, such cottage industries could not continue to depend on the Government indefinitely was made clear by Mr Morarjee Desai, Union Minister for Finance, when he inaugurated the fourth All-India Hand-Pounding of Rice Industry Workers' Conference at Hyderabad.

Mr Morarjee Desai, at the same time, deprecated the sophisticated attitude of the people towards the products of the cottage industries which results in drawing away a large part of the demand from the products of cottage industries. Generation of public demand for the products of cottage industries is one of the important needs in the development of cottage industries. While publicity for their products could be of immense help, improvement in the technique of marketing with the introduction of cooperative marketing which will have a favourable effect on the price of cottage industries products and consequently on demand is also of vital importance.

That there are many cottage industries which could hold their own against competition from more organised sectors, is a fact that is testified by the survival in healthy conditions of some of the cottage industries. The Hand-pounding industry is an outstanding instance. Mr A. Bhagavantha Rao, Minister for Endowments and Industries and Chairman of the Andhra Pradesh Khadi and Village Industries Board has stated that till recently 75 per cent of the paddy was deshused in cottages.

The Industry is, however, not free from the fears of competition from the mill sector and therefore, it is necessary to see that proper measures are taken to protect the interests of the hand-pounding industry.

SOUTH INDIAN MARKETS

Pepper Markets Quiet

PEPPER markets have been ruling quiet during the past few weeks in the absence of any foreign enquiry. In the Kozhikode market, Wynaad quality is quoted at Rs 700 and the Country variety at Rs 675, both per candy. Soft attitude adopted by some of the Indian sellers for attracting new business is taken as a sign of weakness of the market and has scared the prospective buyers from the USA. This has made Indian exporters all the more anxious, who are offering in New York at as low as 24 cents per pound.

In contrast, the growers have been resisting lower levels and are bringing only small quantities to the terminal markets. This is mainly due to the fact that they are bullishly inclined on expectation of some favourable developments in the foreign demand in the near future. The news of a sale of 3,000 tons of Lampung black pepper to Russia has failed to unnervise them, as they think that the lifting of such a big quantity will lessen burden on Singapore, which is sure to react sharply on any favourable future development in overseas enquiries.

Looking to the poor prospects of new crops in both Sarawak and Indonesia, the future of Malabar black pepper looks eventual; but much depends upon the timely foreign demand. Meanwhile, exports of black pepper from India have shown a rise in January. Shipments are reported at 39,185 cwts as against 34,412 cwts in December 1958 and 54,704 cwts in the corresponding month of January, 1958. Total exports of black pepper, during the current season up to January 1959, amount to as much as 93,296 cwts as against only 90,400 cwts in the corresponding period of the previous season.

Ginger

The Ginger market is also ruling quiet in the absence of demand. This is reflected in the exports, which amounted to only 10,643 cwts in January as against 8,058 cwts in December 1958 and as much as 21,719 cwts in January, 1958. Total exports during the current season, up to the end of January 1959, amount to only 25,767 cwts as against as much as 38,213 cwts in the corresponding period of the previous season. The rate for the commodity is quoted at Rs 400 per candy.

Coffee

According to the Newsletter issued by the Indian Coffee Board, planters are getting alarmed about the Coffee crop prospects for 1958-59. The showers which the

planters had been anxiously awaiting for since early March have not yet materialised except at a few scattered points. Hopes of a 50,000-ton crop are, therefore receding.

In regard to internal releases, the Newsletter states that internal offtake, during March, amounted to 2,505 tonnes as compared with 2,022 tonnes in March, 1958. On the export front, against the export allocation of 14,494 tonnes out of the 1958-59 crop, 4,685 tonnes have been sold. Tenders have been invited for export sales of 1,731 tonnes.

Groundnut

Condition in the Madras Groundnut market remained steady with prices showing a small rise over last levels. Due to the imposition of sales tax at the first selling point in Madras and at last buyer's stage in Andhra and the abolition of the commission agency system in Madras, there was no inclination to bring in goods from Andhra for sale in Madras. Arrivals were only 20 to 25 tons per day. The rate for superior oil-quality seeds is quoted at Rs 178 per candy.

In the Groundnut Oil section, the rate for the ready position improved to Rs 341 from Rs 336 per candy, thanks to buying interest from vanaspathi manufacturers. As arrivals of seeds were small in most of the areas and prices were also higher, crushers were unable to offer substantial quantities and were also unwilling to commit themselves for forward position.

Hides and Skins

Conditions in the Madras Tanned Hides market ruled generally firm. The main contributory factor was the fact that sellers were unwilling to sell and adopted a "wait and see" policy. Arrivals of Cow hides were restricted as tanners were reported to be holding back supplies. Clearances were difficult as sellers were actively pushing up prices. There was no change in Buffalo hides. In the Calf section, arrivals were restricted. Prices were erratic and showed an advance of 25 nP per pound.

In the Tanned Skins section, arrivals of Sheep skins were moderate, while those of goat skins were negligible.

On the export front, prices of Goat skins were pushed up by 3d to 6d. Inferior fifts were scarce and prices were very high. In Sheep skins, rates were higher in sympathy with the other sections.

Bangalore Silk

There was hardly any change in the prices of either the Filature or Charka raw silk in the Bangalore Silk market for the week ended 9-4-1959. The pattern of trading reflected an undercurrent of steadiness, presumably because of the slight improvement in the demand as also due to the meagre supply position of raw silk.

The prices of Reeling Cocoons registered a moderate decline during the period under review.

Recovery After A Sharp Setback

Watch-Dog Writes:

STOCK markets have turned subdued during the week under review and prices have shown moderate declines over a wide front. This is mainly due to lack of fresh support, as operators appear to be cautious for three reasons—the lowering of yield pattern, fears of fresh credit curb and the uncertainty with regard to the percentage of tax deductions in between cum-dividend and ex-dividend stages. However, the closing tone is better, thanks to some bear-covering at lower levels.

Activity on the Calcutta Stock Exchange was restricted during the short week under review when prices, after developing distinctly easier trend due to bull liquidation, staged a marked recovery towards the close.

Equities on the Bombay Stock Exchange, after ruling initially steady, receded moderately towards the close due to fair bull liquidation.

Price trends on the Madras Stock Exchange were steady, though higher levels attracted some profit-taking in the more active stocks.

The London Stock Exchange ruled generally steady with gains in prices predominated on balance.

Wall Street closed barely steady.

Calcutta

Calcutta, Friday.

CONDITIONS on the local Stock Exchange ruled generally quiet and the easier trend in equity prices, that was noticed over the week-end, was more pronounced during the short week under review, mainly due to lack of follow-up support at the recent high levels. There was a conspicuous flagging of interest and some of the prominent bulls also started liquidating their holdings, being influenced by three main factors. First, they felt that stocks had already got overpriced. Secondly, fears were entertained that there might be fresh credit curb aimed at checking undue speculation. A third factor was the uncertainty about the Finance Minister's reactions to the demand from the stock exchange for prescribing a uniform aggregate tax rate of 30 per cent for both individuals and companies. Nevertheless, the undertone remained steady and the market closed with only small losses on balance.

The Gilt-edged market remained dull. Institutional enquiry remained at a low level, due largely to monetary stringency and, in the absence of business, prices showed no consequential changes. 3 per cent 1986 Conversion Loan changed hands at Rs 74.20 to Rs 74.50.

Bank shares ruled quiet with Punjab National hovering idly around Rs 24.12.

Despite the announcements of encouraging dividends by the Andrew Yule and MacLeod group of companies, Jute shares remained quiet with prices developing a slightly reactionary tendency due to scattered liquidation following quieter advices from the jute goods market in the absence of any foreign enquiry. Even the news of a decline in stocks of jute

goods with the mills at the end of March had no effect on sentiment. The only steady features were Alliance having sustained buyers upto Rs 130; Gourepore upto Rs 384; Kamarhatti upto Rs 200 and Reliance upto Rs 8.25. Howrah, after touching a high of Rs 24.62, receded at the close to Rs 24.50, while National were done upto Rs 24.62 from Rs 24.37 on speculative buying. New Central changed hands at Rs 15.37 to Rs 15.62.

Coal shares solicited good buying enquiries, induced by the reports that the Government would soon announce the increase in the price of the commodity in the light of the Price Revision Inquiry Committee's findings, although profit-taking erased some of the extreme gains towards the close. The only two firm features were Amalgamated having buyers at Rs 25.25 to Rs 25.37 and Central India at Rs 8.37 to Rs 8.50. Western Bengal were enquired upto Rs 6.69 from Rs 6.50. Burrakur fluctuated between Rs 18.37 and Rs 19.19, to finish at Rs 19.00.

In the Tea section, turnover continued to be limited as operators were cautious in their commitments, pending the assessment of prospects for the new season's crop. However, selected scrips of the Assam and Dooars gardens were well maintained on the hope that the dividends of these companies might be higher for 1958 than for 1957 in view of the increase in the average export prices obtained. It was also believed that, as the 1958 crop had almost been sold out, the new season's tea should get off to a good start. Amongst the few dealings recorded, prominent were Brooke Bond changing hands at Rs 18.31 to Rs 18.50; East India at Rs 19 to Rs 19.25; Hasimara at Rs 23 to Rs 23.12 and Tezpur at Rs 16.69 to Rs 16.81.

Sugar shares were in good demand and there was a marked rise in prices. The sudden turn in sentiment in this section was influenced by three main factors—the rise in the ex-mill rates, the latest monthly release being lower than the previous one and rumours of the possibility of the Government raising the ex-mill prices of North Indian sugar in order to meet the demand of cane-growers for higher prices. Carew were taken upto Rs 9.25 from Rs 8.56; SKG upto Rs 11.50 from Rs 11.31 and Dyer Meakin upto Rs 16.25 from Rs 15.25. Belsund remained firm at Rs 13.25 following the maintenance of the dividend for last year.

Textile scrips shaped well on reports of improving offtake of cloth and the hope that the present improvement would be maintained in the coming months. Cawnpore were done at Rs 5.16 to Rs 5.25 and Elgins at Rs 14 to Rs 14.25. New Victoria were quoted around Rs 14.4.

In the Engineering section, price movements were mostly influenced by the speculative activity in Indian Irons which, in turn, suffered a sharp setback early in the week on reports of heavy unloading by a prominent operator. Settlement considerations were another contributory factor. After opening steady at Rs 24.68, Indian Irons was pushed down at one time to Rs 24.13 at which level some

replacement buying caused the scrip to recover partially at the close to Rs 24.32. TEXMACO touched a new peak level of Rs 25.65, to finish at Rs 25.60 on profit-taking. G. K. Williams were keenly sought after upto Rs 40.75 from Rs 40, while Britannia met with business at Rs 13.25 to Rs 13.69; Indian Galvanizing at Rs 17 to Rs 17.19 and Jessop at Rs 31.25 to Rs 32.00.

Miscellaneous issues were no exception to the general trend of the market and prices of most scrips suffered a setback, although the closing tone was better due to support extended at lower levels. Orient Paper was marked down at one time to Rs 37.30 from the recent high of Rs 38.45 (Rs 37.70); Sirpur to Rs 13.84 from Rs 14.19 (Rs 13.62); Indian Cable to Rs 32 from Rs 32.62 (Rs 32.37); Indian Aluminium to Rs 21.25 from Rs 21.75 (Rs 21.25); Indian Copper to Rs 4.31 from Rs 4.38 (Rs 4.32); Rohtas to Rs 22.75 from Rs 23.56 (Rs 22.87); NICO to Rs 33 from Rs 33.50 (Rs 33.00); Aluminium Corporation to Rs 14.31 from Rs 14.56 (Rs 14.50); Alkali Chemicals to Rs 21.87 from Rs 22.56 (Rs 22.25) and Dunlop Rubber to Rs 34.75 from Rs 35 (Rs 34.87). Figures shown within brackets were the week's closing rates. India Steamship changed hands at Rs 14.56 to Rs 15; National Carbon at Rs 31.37 to Rs 31.69; Indian Oxygen at Rs 27.75 to Rs 28.50 and Hindustan Lever at Rs 30.50 to Rs 30.62. Rallis were steady feature at Rs 71.00 with BIC having support upto Rs 5.56 from Rs 5.40.

*

Bombay

EQUITIES on the Bombay Stock Exchange, after suffering a sharp setback in mid-week, staged a marked recovery towards the close on bear-covering. The initial sharp reaction was mainly due to tired liquidation by bulls, while bears were not anxious to cover their commitments. Political news background also had a bearish impact on trading sentiment, while there was talk of heavy unloading in Tata Steels by a leading operator. There was, however, a broad-front rally, as the lower levels attracted scattered support.

Steels: Steel shares looked hesitant from the start and rumours, that deliveries in Indian Irons might be considerably heavy, adversely affected sentiment. After opening at Rs 182.50, Tata Ordinaries touched a low of Rs 179.25 at which level some bear-covering caused the scrip to recover to Rs 180.25 at the close. Indian Irons steadied up to Rs 24.20 from a low of Rs 23.96, to finish at Rs 24.16.

Textiles: Textile scrips met with less liquidation and displayed generally a steady tone. Century were in the limelight and sharply advanced to Rs 496 from Rs 485.50 on sustained professional support. Bombay Dyeing followed its wake and rallied from Rs 59.50 to Rs 60.80, to close finally at Rs 60.40. Kohinoor improved to Rs 261 from Rs 253.50, before reacting to Rs 259.50. Sva-deshi advanced by a little over Rs 4 to Rs 214.25. Indu Ordinaries were, however, a weak feature and declined further to Rs 8.20 from Rs 8.72.

Men and Oil . . . 7

The Welfare Officer

Most of the world's great oilfields lie under deserts, swamps and jungles, far away from established centres of civilisation. Near the wells and refineries live the geologists, drillers and technicians, and as operations expand so the oil camps grow into permanent settlements. In time, new towns are established, whose citizens are the thousands of people employed in the industry.

Oil companies are very much aware of their responsibility for the welfare of these new communities, and most oil towns are, for that reason, models of thoughtful planning and administration.

So it is in Digboi. Once just a clearing in the dense jungle, Digboi is now one of India's most modern industrial towns. The Assam Oil Company devotes great attention to the provision of health services, good housing and sanitation, schools and other amenities for its employees.

And this is where the Welfare Officer comes in. He is the link between the Company and the community; the man who administers projects that make a fuller, happier life for everybody.

Just as the Assam Oil Company recognises that it has a duty to serve the people of India, so, through its Welfare Officers, does it promote the happiness and benefit the lives of the men who make their living by oil.

ASSAM OIL

a full-scale petroleum industry

HIGHLIGHTS OF THIS ISSUE

Mr Morarji Desai had occasion last week to make two speeches, both of which contain much that has to be read between the lines.

For, what emerges is an interpretation of what the Finance Minister's budgetary policy is going to be.

Read Clive Street for Eavesdropper's assessment.

"Lost your shirt, Parameswar?"

"Don't remind me of shirts! One dozen shirts, made just 6 months ago, returned from the dhobi 'phut'!"

"Tut, tut! You must have been so busy hunting for fancy cloth that you haven't heard of BINNY'S! BINNY'S Quality Control* their production, you know..."

"What is this Quality Control?"

"Modern machines process yarn and cloth so fast that often defects, invisible to the naked eye, creep into the cloth. Quality Control is laboratory testing to root out defects at every stage of production. That's why BINNY'S fabrics last so long."

"Your words give me courage, brother. Lead me to the nearest BINNY'S shop."

BINNY — a great name in textiles

*Testing the uniformity of cotton fibres

Durability of cloth depends on the strength of the yarn used. This, in turn, depends on the uniformity of the fibre in the cotton. Only specially selected cotton goes into BINNY'S fabrics. That's why BINNY'S cloth lasts so long.

BINNY'S manufacture nearly 90 million yards of cloth every year. Here are some of the varieties they make:
Shirtings - Khaki Drills - Bleached and Dyed Drills - Towels - Anticrease Suitings - Tussorees - Union Fabrics - Silk Sarrees - Rugs - etc etc

FOR THE INVESTOR

Prices Soon on Ascendant Investment Gossip:

PERCEPTIBLE weakness held sway over stock exchanges last week, and an attempt midway to inject new enthusiasm proved abortive.

Here is proof positive that the stock exchanges can, when the mood takes them, refuse to take account of developments of intrinsic value.

Here was a week during which the Finance Minister made two important speeches, whose implications for stock exchanges, on a correct and careful reading, could not be otherwise than constructive and cheerful.

Nationalise the banks, the Communists cried.

No nationalisation, the Finance Minister replied.

Nationalise your minds instead, the Finance Minister said.

Reliefs? You shall have them, but not more than are justified at the moment.

Company prospects? The prudent shall reap a reward, and, among the spendthrifts, there shall be knashing of teeth.

Dividends? No shareholder in a prudent company will lose his gross return.

Corporate tax prospects? All that Government sought to do was to fix the advance rate of tax for companies at 45 per cent.

What if there were miscalculations? "As the scheme goes into operation, we shall be able to notice its defects and we shall certainly take steps to correct them."

After all, the rate fixed for advance payment of tax does not represent the final rate for the assessment year 1960-61.

So, the implication is clear that, if Government revenues on the basis of 45 per cent advance tax are greater than the realisations at the old rate, the Finance Minister would, in his Budget for 1960-61, announce a reduction in the rate of corporate tax as such.

On all hands, the muttering is that Government may gain in revenue. The whisper that should go about now is that that gain in revenues will be restored to companies.

Why, then, have we had this bearish phase in the week just ended?

You cannot put your finger on what it is precisely that has disheartened stock exchange sentiment. Some say that yields are too low, others assert that prospects are far from bright.

But when corporate news is generally good, when Mr Manu-

bhai Shah gives the assurance in Parliament that NIDC resources will be available for modernisation of the cotton mill industry, when the money market slack season is already in sight, you should have an upward trend, and not a declining phase, in stock exchange prices.

Which is why I maintain that the bear phase must prove to be short-lived. And prices must soon be on the ascendant.

£ R\$

Dunlops

Investment Special:

DUNLOPS have had a good year. As Mr John Luckham, the Chairman, reported at the annual general meeting, "a further increase in production was achieved during the year under review in almost all lines, though this could not keep pace with the ever rising demand."

This is seen reflected in a rise in the net profit (that is, after depreciation, interest and tax) from Rs 80.67 lakhs to Rs 82.43 lakhs. The emphasis on expansion is also brought out in the accounts: Rs 30 lakhs have been transferred to Development Rebate Reserve, as a result of the establishment of the Ambattur factory. The Reserves and surplus have, during the year, risen by roughly Rs 25 lakhs; and the ordinary capital is covered more than one and a half times. The ordinary dividend is maintained—but is payable as for a full year on the new shares issued in 1957; and so the amount involved is Rs 10½ lakhs higher at Rs 48.75 lakhs.

As for the future, with Ambattur getting ready before schedule, three-shift production is the target; and, at Sahaganj, the output of (or rather, capacity for) giant and cycle tyres is now much higher.

It is thus that Dunlops are a continuing favourite with the Indian investor.

£ R\$

Investment Notes:

It is learnt that the subscription list for the Colour-Chem Limited will be closed on the 25th April instead of the 28th April in view of the good response from the investing public. It is also learnt that the cheques of applicants will not be cashed by the company till actual allotments are made.

The shares of the Nagpur Electric Light & Power Company—both ordinary and preference shares—have been listed on the cash list of the Bombay Stock Exchange. Business will be allowed in lots of five shares.

A meeting of the representatives of the shareholders of the Premier Construction Company has been convened on the 27th April. The shareholders will be free to express their views in regard to the scheme of conversion of the Promoters' shares.

The two firms which are entrusted with the manufacture of sugar plants in the country—the Walchandnagar Industries and the

preciation and Taxation, amounts to only Rs 3.02 lakhs as against Rs 3.11 lakhs in the previous year. Apart from providing a sum of Rs 50,000 for General Reserve, the Depreciation amount is reduced to Rs 69,489 from Rs 84,228 and Taxation provision to Rs 4.12 lakhs from Rs 4.50 lakhs. The quantity of cane crushed is lower at 24.91 lakh maunds against 34.12 lakh maunds.

According to the directors' report, the first phase of extension of the factory has been completed, thereby extending the crushing capacity to 1,000 tons per day from 850 tons. The second phase of extension, which will increase the crushing capacity to 1,200 tons per day, is expected to be completed by the end of 1960. The crushing for the current season is expected to be higher at about 28 lakh maunds.

₹ ₹

B. I. Electric

The British India Electric Construction Company has reported a net profit of only Rs 3.52 lakhs for 1958 as against as much as Rs 5.94 lakhs in the previous year. Sales are, however, higher at Rs 72.44 lakhs against Rs 63.05 lakhs. Apart from providing Rs 4.12 lakhs for Taxation and Rs 3,706 for Development Rebate Reserve, the allocation to General Reserve has been raised to Rs 2.52 lakhs from Rs 2 lakhs. The Depreciation amount is reduced to Rs 1.09 lakhs from Rs 1.19 lakhs. The dividend is maintained at 20 per cent.

₹ ₹

Kohinoor Mills

The working of the Kohinoor Mills Company Limited, for 1958, makes very disappointing reading. Net sales have increased to Rs 6.27 crores from Rs 6.18 crores while the gross profit, after providing for managing agents' commission at Rs 43,981 (Rs 1.80 lakhs), has amounted to only Rs 9.64 lakhs against Rs 22.28 lakhs. The directors have provided for Depreciation Rs 5.67 lakhs (Rs 6.13 lakhs); Taxation Rs 2.00 lakhs (Rs 9.50 lakhs) and Development Rebate Rs 1.31 lakhs (nil).

The directors have drawn Rs 5.50 lakhs from Machinery Reserve and Rs 4 lakhs from Dividend Reserve for the payment of dividend of Rs 10. In the previous year, Rs 5.25 lakhs was drawn

from General Reserve and Rs 5 lakhs from the Dividend Equalisation Fund with a view to distribute the dividend of Rs 18 per share. Thus, during the past two years, the sum of as much as Rs 19.75 lakhs has been drawn from the accumulated reserves for payments of dividends.

The directors state that, during the year, the purchase of cotton was made difficult owing to bad weather in some of the main cotton-growing tracts. In consequence, the company's mills had to use less suitable cotton which, in many cases, was available only at high prices. Moreover, the cloth and yarn markets remained dull. They add that the large overall stocks have continued to act as a constant strain on cloth and yarn prices and there has tended to be a small reduction in the prices realised for the company's products.

₹ ₹

WIMCO

The Western India Match Company Limited has reported excellent results for 1958. The construction of the paper mill, which was completed in December last, was formally opened in February this year and the mill is said to be working satisfactorily in that it is at present producing paper for the company's own requirements. The company's earning capacity has increased considerably as is reflected by the sharp rise in sales from Rs 12.85 crores to Rs 15.65 crores. Considering that the benefit of the new units, which have gone into production recently, would be reflected only in the current year, the company should be in a position to compensate the shareholders for the loss sustained by them as a result of the abolition of the grossing-up of dividends.

The gross profit for the year has crossed the Re 1 crore mark by moving up by nearly Rs 17 lakhs to Rs 104.41 lakhs. After providing Rs 13.76 lakhs (Rs 11.08 lakhs) for Depreciation; Rs 13.10 lakhs (Rs 5.17 lakhs) for Development Rebate Reserve; Rs 8.98 lakhs (Rs 1.44 lakhs) for managing agents' commission and Rs 37.60 lakhs (Rs 36.60 lakhs) for Taxation, the net profit is higher by Rs 3.80 lakhs at Rs 30.98 lakhs. The directors have proposed to maintain the dividend at Rs 10 per share plus a Bonus of Re 1 per share.

Consensus

THE growth of a consensus among important sectors of public opinion over the broad objectives of economic policy is one of the more heartening developments of recent months. This has led in turn to a relaxation of rigid attitudes on either side of the great divide, which encourage hopes of fruitful coordination of the activities of the State and Private Sectors. The importance of stepping up the rate of development, in order to overtake the growth of population, is now recognised on all hands. It is also realised that not much progress could be achieved without stabilising the agricultural base. These are the main points which the Prime Minister has been ceaselessly reiterating in his speeches during his recent South Indian tour. The attention of businessmen was drawn to these points during the discussions at the annual session of the Federation of Indian Chambers of Commerce and Industry held early last month. These have been further elaborated in the presidential address of Mr D. N. Jalan to the annual meeting of the Indian Chamber.

Mr Jalan has stressed the general objectives which will command universal acceptance. Many of the measures which he has suggested for their attainment are also likely to receive a large measure of support. The country cannot afford to lose any more time in getting to grips with the problem of unemployment. Closely linked with the solution of this problem is that of increasing the purchasing power of the community, which has shown a tendency to stagnate just at the time when a number of important industries were in a position to deliver the goods. The country, as Mr Jalan has observed, has to think in terms of a more rapid increase in national income than it has been possible to achieve in the recent past. The key to the problem of unemployment and low purchasing power is the strengthening of the rural sector of the economy. Eighty per cent of our population are dependant on the precarious yield of agriculture. Unless it is possible to organise a higher level of economic activity in the villages, purchasing power will remain at a low level inhibiting further industrial development. And measures to cope with urban unemployment will be swamped by the migration of landless labour from the countryside.

Stabilisation of the rural sector and creation of subsidiary sources of income are the essential conditions which must be achieved before the economy reaches the stage of self-sustaining growth. The Government's economic and fiscal policies, whether in the realm of land reforms or taxation, will stand or fall by their success in helping the attainment of these conditions of progress. It is great thing that leaders of business and industry in our country have so clearly recognised that, without raising the source of income of the agriculturists and creating more purchasing power, it will be impossible to develop industries in the country. Not long ago they were harping on the theme of rural prosperity which justified a higher level of taxes on rural incomes. It is, therefore, not unreasonable to hope that they will also arrive at an understanding of

the compelling force of objective factors of the national economy in such fields as taxation, State enterprise or cooperative farming.

At a time when it is of the utmost importance to step up the rate of development, the country has been faced with a stalemate both in the industrial and agricultural spheres. Despite continuous efforts, the rate of increase of industrial production recorded a decline last year. This was aggravated by a large deficit in foodgrains output, whose effects are reflected in all sectors of economic activity. The food shortage has released inflationary pressures and contributed substantially to the increase in the cost of living. While the index for all commodities has increased from 104.7 in February 1958 to 113.3 in February 1959, an increase of 8.2 per cent the index for 'Food Articles' has increased from 100.8 to 115.7 during the same period, an increase of 14.8 per cent. In this group, Cereal prices have increased by about 11.1 per cent, and pulses have recorded an increase of as much as 60.5 per cent.

While the decline in production was to a large extent the result of climatic factors, at the same time it shows up the ineffectiveness of the efforts made by the Government over the last one decade and more to increase agricultural output. In spite of massive effort, the fact still remains that the increase in production potential that has been achieved is less than the fluctuations caused by bad seasons. This should naturally suggest the need for rethinking on methods of agricultural organisation which will be able to make effective use of improved techniques, and will also ensure that new facilities of irrigation created at such great cost are not allowed to run to waste. This is not a question which can be decided by academic disputation or political polemics. The solution will not be facilitated if ideological prepossessions are not scrupulously excluded in considering the problems. And the disputants will do well to remember that unless the problem is solved and solved quickly, there will be none left to carry on the dispute either in favour of individual cultivation or of joint cultivation under the aegis of cooperative farms. We, therefore, are not able to consider that Mr Jalan has made a helpful contribution when he poses the question of land cooperatives against the philosophical background of human freedom, political, economic and cultural. Agricultural production in our country, so far, has been carried on by individual enterprise, and the recurrent famines, which cannot be overlooked in any objective consideration of our economic history, will belie the claim that individual enterprise in the field of agriculture has enabled productivity to keep in step with the rise in population.

The shortage of food production has also led to a fall in export earnings and aggravation of the shortage of foreign exchange. This has further reacted on industrial production by leading to the unavoidable restriction of imports of raw materials and capital goods. A vicious circle has been set up in which fall in production and loss of export earnings have in turn aggravated the difficulties in the way of larger production and exports.

Indian Finance

Established 1928

April 25, 1959

'The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right'—The Analects of Confucius.

Against this background Mr Jalan has posed the problem of resources for industrial expansion and indicated the Government's responsibility to avoid policies likely to impede the flow of savings towards investment in new ventures. He has also drawn attention to several inhibiting elements in Government's fiscal policy. While on the question of resources, we wonder whether the theme of foreign participation in equity capital has not been overdone. At any rate, it is inexpedient, for it is likely to give rise to suspicions that a concerted attempt is being made to bolster up sectional interests with foreign assistance, and encourage the adoption of irredentist positions which cannot be helpful for ordered progress.

Mr Jalan has naturally devoted considerable attention to Government's tax policy. The tax system, as even the Finance Minister will readily agree, is by no means perfect. But adjustment of the burden will be facilitated if there is recognition that taxation is bound to remain at a high level and that it will not be realistic to look for substantial reductions. There will be wide agreement with the proposition that transfer of resources from the private to the public sector cannot by itself result in economic expansion. But in an underdeveloped country, where industrial progress has been arrested at a low level of achievement, the State has to take the initiative in providing the infra-structure to sustain further progress. The diversion of funds from the private to the public sector will be unavoidable until this task has been accomplished. Many of these are tasks which private enterprise left to itself will not undertake. In the heyday of laissez faire, private enterprise came forward to build the Indian railways only after the Government of the day had guaranteed a satisfactory return on the investment. Merely to free resources for industrial investment will not lead very far. There is a severe limit to the extent to which development can proceed until the facilities like power, transport and the basic materials are available to an adequate extent. The task can be accomplished in a shorter period if all concerned pull together instead of engaging in a game of tug-o-war.

Mr Jalan has himself emphasised the need to initiate a campaign for embarking on an ambitious programme of public works in order to create employment, which he recognises will create additional purchasing power, expand sources of consumption and result in larger production. He has also referred to the vital role of the State in the transformation of the countryside through the establishment of subsidiary industries and the provision of essential facilities like transportation roads and power to foster their growth. This would suggest the conclusion that he would not be opposed to the diversion of resources to the public sector, if it demonstrably leads to their maximum utilisation and the creation of immediate employment on a large scale. What he is entitled to object to, and with perfect justification, is the duplication of effort involved in the intrusion of the State in the sphere of trade, which only succeeds in raising costs all round and in reducing the volume of employment.

Kerala Industrial Relations Bill

By M. SUR

THE Kerala Industrial Relations Bill is an interesting attempt to deal with that most intractable of problems, rival unions, and to provide, in the words of the preamble, "for the prevention, investigation and settlement of industrial disputes by negotiation." It is supplementary to the Central Industrial Disputes Act, as it is held that the arrangements under that Act do not "give full scope for negotiation and conciliation." "When there is a difference of opinion between the employer and workman" says the statement of objects, "the tendency should be 'to discuss and not to dispute.' It is the only sure means of achieving industrial peace and creating a proper climate for industrial progress. This is the supreme need of the hour." No-one could quarrel with such an approach.

The Bill is very comprehensive in its application, covering all persons employed directly or through a contractor, including apprentices, casual or badli workmen, without any limit of remuneration, and excluding only those mainly in a managerial capacity, or employed in the armed services or the police. All types of establishment employing more than 10 persons are covered, including employment under Government or local authority.

The Code of Discipline has been incorporated in the Bill in order to give statutory authority to it. Under the Bill Works Committees must be set up in any establishment employing 50 persons or more, and Government may also by notification constitute Industrial Relations Committees, consisting of equal numbers of employer and worker representatives (including any recognised unions in the unit) for the settlement of industrial disputes in any establishment, industry, or area. This is an entirely new form of machinery. It is remarked in the statement of objects that though such committees exist voluntarily in almost all important industries (a rather sweeping statement surely?) "the one inhibiting factor in their working is that they are not clothed with statutory authority. The Bill seeks to rectify this defect." One has always looked upon negotiation as a voluntary effort and its growth as an indication of a developing sense of responsibility on the part of management and labour, but here it is clothed with the authority of Government, which may also prescribe its rules of procedure. Its purpose is to round off the procedure of negotiation set in motion by the Conciliation Officer if direct settlement is not achieved. In addition to these committees, the Bill envisages a State Industrial Relations Board to advise Government and to help settle disputes. This, like the committees, will be composed of equal numbers of representatives of employers and workmen, but will have an independent chairman.

In dealing with the problem of what unions should be recognised and who should be the negotiating agent, the Bill shows an ingenious flexibility. Any union will be entitled to recognition if it is registered and its rules comply with proper trade union practice, including the procedure for calling a strike; if it abides by the Code of Discipline; and if it has at least 15 per cent of the workmen of the establishment in its membership. Thus more than one union can be recognised, and if the employers do not give recognition the union can appeal to the registering authority to make its recognition compulsory. The decision of the registering authority, which has to satisfy itself that the conditions of recognition have been fulfilled, is final and

cannot be questioned in any court of law. Similarly the decision of the registering authority on withdrawal of recognition is final. This is a departure from normal democratic practice which admits the right of appeal.

Once recognised, a union can negotiate on day-to-day problems, individual grievances, discipline, lay-off, discharge and dismissal on behalf of its members, can display notices on the premises, collect subscriptions within the premises on pay days, and be present to represent the case of any member at an enquiry in a disciplinary case. For collective bargaining or the negotiation of long-term agreements, however, there must be a certified negotiating agent, and this will be the recognised trade union having a majority or the largest support of the workmen in the unit. Government may declare from time to time the unit appropriate for collective bargaining, which can be an establishment, an industry or a craft. Not more than one negotiating agent is to be allowed for the appropriate unit, but where there is more than one recognised union, an agreement when negotiated will only be binding on all the workmen if ratified by a majority of them.

It is the registering authority again who will decide which trade union shall be the negotiating agent, but if any objection is raised by another union a ballot may be taken to decide the issue, and an appeal may be made to the State Industrial Relations Board, which may direct a referendum. Two or more unions, if they apply jointly, may be certified as the negotiating agent. Provision is also made for an association of employers to make a collective agreement on behalf of its members. A careful distinction is made in the first and second schedules between matters which may be taken up by a negotiating agent

and which relate to general conditions of employment and remuneration and to the minor or individual disputes which may be taken up by any of the recognised unions.

Under the procedure for dealing with disputes in the Bill, failure to reach direct agreement on a demand raised by either party within 14 days brings in the State Conciliation Officer, and he may refer the dispute to the Industrial Relations Committee, where again the period allowed for settlement is 14 days. Only if there is failure at this stage does the adjudication machinery of the Industrial Disputes Act come into operation, but there is also the alternative of reference to the Industrial Relations Board. The point of all these intervening steps is to discourage reference to adjudication.

Another important point in the Bill is that no employer shall dispense with the services of a workman if he has been continuously employed for not less than six months without a charge of misconduct, supported by satisfactory evidence recorded at an enquiry, except on the grounds of continued ill-health, which is to be treated as retrenchment.

Unfair labour practices including violation of the Code of Discipline by employers and recognised trade unions have been laid down in a schedule to the Bill, and fines for unfair labour practices by employers may extend to Rs 1,000. The penalty for irregular strikes (i.e. those declared during pendency of negotiations or during the operation of an agreement covering the matter of dispute) is laid down as forfeiture of wages for the period of the strike, while an employer for an irregular lockout is liable to pay one and a half times the wages and other benefits due to the workmen.

If this Bill goes through in Kerala, it will be most interesting to see whether its effect will be to lessen rivalry between unions, and encourage settlement of disputes outside the industrial courts. There is no doubt that the Kerala Government are making a determined effort to bring about settlement by negotiation.

L.I.C.—Policies with Profit

By K. V. IYER

IT IS well known that the L.I.C., is a mammoth Corporation formed by the merger of nearly 250 Life Insurance Companies and that, of these companies, some were good, some bad and some indifferent. They were managed by different agencies in diverse ways. Some were managed prudently, built up surpluses from quinquennium to quinquennium and declared a good rate of bonus on their policies with profit; some were not so good and declared bonus at poor rates or none at all and the rest merely languished. It follows that, in the compact L.I.C., some steps should be taken to distinguish between policy-holders in good companies with an exemplary record from the rest of them.

In the L.I.C. all the funds are utilised in the same way, the expenses are uniform and the surplus is a single whole so far as the erstwhile individual companies are concerned.

Is it equitable that a with-profit policy holder in one of the good companies should be treated no better than one in a company not so good or poor? A single rate for all alike would be a monstrosity. A distinction requires to be made either by increasing the amount of the policy or by reducing the rate of premium. The latter may be welcome to some. But there must be many who, having commenced paying premium at a certain rate, would prefer

to continue to pay the same rate of premium. For their benefit, which is also to the benefit of the Corporation and for the benefit of those whose policies are for a specific number of years or payments, the amount of the policy should be enhanced.

Once this remedy is applied, all policies will stand on the same footing and the insured need not worry about the evaluation of the L.I.C.'s assets once a quinquennium or at any other interval, any evaluation being carried out as a matter of principle or for the satisfaction of the authorities that the Corporation is solvent, apart from the fact that the Government are responsible in the last resort.

NOTES

Economic & Military Aid

While public opinion in India is exercised over the implications of US military aid to Pakistan, the manner in which that country has been utilising the aid given for economic purposes is apparently causing concern to the donors. US Economic Aid to Pakistan during the current year will amount to \$233 million. By 1959, the United States would have provided aid to Pakistan for economic development to the extent of \$990 million since 1951. There is little positive evidence to show that massive assistance of this size has resulted in economic development on an adequate scale. Those responsible for administering the aid programme appear to be disillusioned and disheartened and their reports are not exactly flattering to the Pakistan administration.

Some months ago, an official concerned with the administration of the aid programme in Pakistan made a statement which amounted to a scathing indictment. Mr C. Douglas Dillon, US Under Secretary of State for Economic Affairs, testifying before the House Foreign Affairs Committee on January 29, described Pakistan as "one of the countries that gives us great trouble economically". He further mentioned that, in spite of large grants of aid, the standard of living in that country had not

increased at all. He illustrated the point by referring to the deterioration in food production. Pakistan, which, at the time of the partition, was surplus in food grains production, had now become an area of substantial food deficit. More recently, the utilisation of US aid in Pakistan has also been criticised by Congressional auditors.

While the United States authorities who have made aid available on such a generous scale are entitled to express their disappointment at the final result, it is also up to them to examine whether the circumstances in which the aid has been given have not themselves contributed to the debacle. When Mr Dillon was giving his testimony, he was asked by Mr D. S. Saund, Democratic Congressman from California, what portion of the aid given by the United States to Pakistan in recent years was military assistance and what portion was technical assistance. Mr Dillon answered: "Since I have been familiar with the programme, the sums that have gone for economic aid have been far larger than the military assistance programme, the military assistance programme being primarily the delivery of weapons."

We feel that the position is not so simple, and that it would be unfair to charge the administration of Pakistan with incompetence, it not worse, in utilising aid funds, without going further into the question of the economic consequences of military assistance to the recipient country. Military Aid does not end with the delivery of weapons. If Pakistan gets the equipment free, it has to incur a considerable volume of expenditure in training and equipping the men who are to handle them. The more costly the equipment, the higher will be the scale of ancillary expenditure. Mr Dillon has admitted, that if you deliver a tank it does not help". If he examines the problem a little more deeply, he will go further and say that, far from helping, it positively hinders progress in the economic sphere. It is not unlikely that Pakistan has been obliged to divert the large amounts received as aid for economic development in order to maintain the equipment received under the programme of military assistance in working order. Economic aid is neutralised by military aid. Free military equipment has to be paid for in economic stagnation. Growing frustration in Pakistan at this state of affairs is perhaps responsible for the increasing frequency of border troubles and such distressing incidents as the shooting down of the Indian Canberra, which strayed into Pakistan air space, by trigger-happy Pakistanis.

★

Utility Finance

What should be the appropriate rate policy for public utilities? Is it sound policy to subsidise industrial development by fixing low rates for the goods and services provided by the public utilities?

Or should the rates be fixed so as to cover not only the cost but also to provide the funds for future development? The case for "adequate" rates as the indispensable condition for healthy economic development of under-developed countries has been put forward in trenchant language by the President of the World Bank in his address to the last UNESCO Conference in Mexico. Incidentally, Mr Eugene Black has also paid a compliment to the sound financial management of public utilities in India, like railroads, which have contributed substantial amounts to general revenues out of operating surpluses.

Mr Black has emphasised that underdeveloped countries have no choice in the matter if they are to find the resources for steady expansion of essential public utilities. There is no way in which the required amounts could be raised, unless the utilities themselves are in a position to plough back profits. Over three-quarters of the World Bank's lending has been for power projects, railroads and other public services, and it has been insisting on recognition of the principle that utilities should pay their way.

Mr Black does not agree that rates for power should be pushed down to uneconomic levels in order to foster industry and commerce. He has pointed out that, except for aluminium manufacture, cost of power does not account for more than a small percentage of the total costs of production. A survey of industries in Mexico undertaken by the Bank showed that cost of electric power averaged only 1.7 per cent of the total. The figures do not support the contention that marginal differences in the cost of power make a substantial difference to the establishment of industry in any particular location. On the other hand, low rates charged for power can inhibit industrial development by limiting the expansion of power facilities.

The powerful plea put forward by the World Bank President for adequate rates will be readily echoed by the Electric Supply concerns in our country who have been trying to draw the attention of the authorities to the fact that the rate of "standard return" allowed by legislation places them at a serious disadvantage. For a number of years the rate was five per cent and after persistent representations the return has been fixed at 2 per cent over the prevailing bank rate. If Government accept the principle that public utilities must charge adequate rates, they cannot make a distinction in the matter between privately-owned and publicly-owned utilities.

★

Foreign Collaboration

At a time when the case for foreign collaboration and foreign investment is being advocated with missionary zeal, of all persons by our leading businessmen, it is also necessary to keep in view different aspects of such collaboration to see how far it is helpful in accelerating the pace of industrial deve-

lopment. This is one of the important points touched upon by Mr S. P. Sen in his thoughtful presidential address to the last annual meeting of the Bengal National Chamber of Commerce. Mr Sen is not opposed to foreign collaboration as a matter of principle. He is certainly no xenophobe who wants all foreigners to quit the country. He has emphasised that, situated as we are at present, we have to seek foreign collaboration to start many industries, for financial and technical reasons. But, while sharing the general view that foreign assistance is essential for the economic development of the country, he feels that "we should have a correct perspective of the whole problem and should take adequate care to see that the real interest of the country is not exploited in the name of foreign collaboration."

In this context he has drawn attention to instances in which foreign participation has not been very helpful. According to him, there are many foreign firms, whose manufacturing activities in India are confined to assembling of imported components. Such foreign collaboration is not of much help either in saving foreign exchange or in increasing industrial potential. On the other hand such firms block the way to the establishment of industries for processing the locally available materials. Many of these firms also add to the drain of foreign exchange by employing foreign technicians at fabulous terms which could be performed by our youngmen if they were given the chance to acquire the requisite training.

Mr Sen has drawn attention to some of the features of foreign collaboration which, instead of lightening, add to the cost of industrial development. But to be

quite fair we should recognise that the practice of importing materials in semi-finished state for final processing in India is not confined to foreign firms. Much of the impressive growth of industries in recent years has proceeded on this shaky basis, and has been responsible for bringing on the foreign exchange crisis.

Wanted Supermen

The administrative problem of organising the service cooperatives, which has been accorded top priority in Government's plan for better land management, is now and then allowed to peep through chinks in the propaganda. Now, in addition to helping the kisans to adopt better methods of tillage, the cooperatives are also to act as procuring agents. According to a recent estimate there are over one lakh of service cooperatives. Of these, thirty per cent are moribund. In addition to resuscitating them, it will be necessary to establish another four lakhs of cooperative societies in villages in the next three years.

To judge by the tenor of speeches made in Lok Sabha on the demand for the Ministry of Co-operation and Community Development, officials like traders are in the black list. Both are supposed to be endowed with an extra powerful dose of original sin and, therefore, not to be trusted to usher in the golden era of cooperation.

The tendency at first was to rely on the innocence of illiteracy, to ensure the success of cooperation. There was a strident demand for simplification of rules and regulations. Even if the rules are reduced and made more elastic, some knowledge of reading and writing, and of accounts, will be necessary on the part of the functionaries of the cooperatives. Attention is now being concentrated on the village schoolmasters and the village level workers. Considering the unending demands that are made on these hardworked and distracted functionaries, they must be supermen, indeed, if they are to make a success of working the cooperatives in faction-ridden villages. We cannot afford to be dogmatic on the number of supermen in the country and their distribution among the various professions. But the probability that they have all become VLMs is not on the face of it very convincing.

English in our Future

The Language Committee's report has been received too late for comment in the current issue, but space and time allow of a brief mention. The future of English appears to be as uncertain as has been the language's fate, as far as India is concerned, over the last decade. But there seems to be growing recognition of the fact that to rule it out altogether would be folly. At best, however, English has won a reprieve—and not quite full pardon as yet. It remains for time to set pride and necessity in their proper perspective.

IFC Investment in KOEL

The operations of the International Finance Corporation in India, it will be noted with satisfaction, are gathering momentum. Legislation enabling the IFC to start business in India was enacted last September at the time of the Fund-Bank Meeting. The first loan by the IFC, for \$1.5 million to the foundry forge project in Hyderabad, was announced in February. This has been quickly followed by the announcement of April 14 that the IFC had agreed to invest \$850,000 in Kirloskar Oil Engines Ltd. The investment, which will be a dollar loan bearing interest at 6½ per cent maturing from 1965-70, will help to finance part of the cost of the company's programme for the expansion and diversification of its manufacturing activities in four fields. In addition to the interest of 6½ per cent, payable in dollars, IFC will also receive contingent interest payable in Indian rupees depending on the amount of earnings, and an option to subscribe at par to ordinary shares of Kirloskar Oil Engines Ltd. The IFC Commitment is subject to the completion of the necessary legal formalities.

Kirloskar Oil Engines Ltd. (KOEL) is one of the five industrial units built up by Kirloskar Brothers. The growth of the activities of this firm is one of the romances of Indian industry. Starting as a bicycle repair shop in 1888, the firm has gradually branched out into the manufacture of farm implements, hand and power driven pumps, electric motors and generators, machine tools and oil engines. When the scheme of expansion is completed, KOEL will be the largest manufacturer of diesel engines in India with a substantial addition to its export potential. The company has built up a growing export market in S.E. Asia, Middle East, Africa and Central America. The total cost of the scheme is estimated at over Rs 2 crores of which the foreign exchange component will be met by the IFC loan. The balance will be provided by additional share capital and by ploughing back the additional profits from the expansion of manufacturing capacity.

The expansion schemes will enable KOEL to manufacture heavy engines of 80-440 hp, of a type which are not now manufactured in India, diesel engines for stationary generating sets, small shunting locomotives, and marine auxiliary and propulsion units. The programme also includes manufacture of small 3 hp engines for rural pumping sets; increased pro-

duction of the company's 5-40 hp diesel engines which it had been manufacturing since 1949; and bi-metal bearings for internal combustion engines. The Company, it is learnt, has entered into licensing agreements with Glacier Metal Company of England for manufacture of bi-metal bearings and with Maschinenfabrik Augsburg-Nürnberg A. G. (MAN) of Germany for the manufacture of the 80-440 hp engines.

★

IBRD Activities

The annual meetings of the World Bank and the International Finance Corporation in New Delhi last September have served to focus attention on the increasingly important role of these organisations in evening out the regional disparities in economic development by stimulating progress in underdeveloped areas. While the operations of the Bank have been steadily increasing in magnitude, a larger proportion of the investments is now directed towards the under-developed areas. In his address to the UNESCO Council, which met in Mexico on April 10, Mr Eugene Black, President of the International Bank for Reconstruction and Development, has reported that, during the preceding twelve months, the Bank made 34 loans—about one every ten days—and has given loans amounting to more than 750 million U.S. dollars. The distribution of this amount over the different regions is instructive.

The share of Europe was \$90 million. About \$150 million was lent to the Latin American Republics, most of it to enlarge projects started with Bank support in past years. The Bank lent \$110 million in Africa, including the first loans in Nigeria and the Sudan. The largest investments were in Asia where the total loans exceeded \$400 million. The bulk of this was for projects in India and Japan. The Bank also made its first loan to the Federation of Malaya.

Mr Black, who is also Chairman of the International Finance Corporation, has stated that the Corporation's operations have been gathering momentum. The Corporation has made four new investments since the last annual meeting, which are included in the supplement to the annual report which describes its activities up to the end of March last. These four investments are in an industrial steel forging plant in India, a cement plant in Brazil, a flour mill in Guatemala and an industrial rubber plant in Australia.

Apart from loans, the Bank's technical assistance programme is also increasing in significance, variety and importance. World Bank Missions have played a special role in the study of development planning, and in economic surveys in Libya, Tanganyika, Thailand, Venezuela, Ecuador and Peru. The Bank assisted in organising an international panel of experts to help Italian authorities to investigate the feasibility of an atomic power plant in Southern

Italy. It has also provided assistance in organising industrial development Banks in many parts of the world.

The Bank was also able to report two striking successes in the field of mediation in international disputes. It took a leading role in the negotiations which led to the signing of the compensation agreement between the United Arab Republic and the reorganised Suez Canal Company last July. This has been followed by financial settlement between the Governments of the United Kingdom and the UAR which was signed last February.

The expansion of the lending activity of the Bank has brought up the problem of augmenting its resources. During the past year, the Bank has stepped up its borrowings very substantially. The Bank's Board voted a few weeks ago to approve a general doubling of the authorised capital with certain further additions. A number of member countries have already taken action to increase their subscriptions. The increase in subscription does not, in most cases, call for additional cash payments to the Bank. But they will serve to enlarge the backing for the Bank's borrowings.

The Bank has also under consideration proposals that would help to provide additional capital for development, including proposals for regional institutions in Latin America and the Middle East. The President of the World Bank estimates that the amount of public capital available for international assistance to development will continue to increase.

S. E. RLY TENDERS

Sealed tenders are invited for Tender No. CON/COS/34/F2/59 for supply of 2030 Nos. Cross arm 3" deep 6 way for Rail Post as per drawing No. 24322/1/SE, IRS. M-5-Class II to be hot galvanized after manufacture. Tenders will be opened on 9.5.59 at 12 noon.

Tender forms are obtainable from the office of the undermentioned (Construction Section) Garden Reach, Calcutta-23, on remittance of Rs. 2/- (not refundable) per copy by money order to him direct in the case of outside firms and on production of cash receipt from this Rly's Chief Cashier by local firms.

Tender should accompany the receipt for depositing earnest money of Rs. 540/- with this Rly's Chief Cashier without which the tender is liable to be rejected. Approved contractors having a permanent deposit of Rs. 1,000/- with the undermentioned are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the Tender.

New Role for Banks—Mr Jain

THE experience of banks during 1958 has gently persuaded Bank Chairmen to turn their minds to the consideration of ways in which the banking system can render greater service to the country—the while, of course, expanding their own scope for utilisation of their resources. For, if it is true that the unconscionable rates paid for Deposits were responsible for a sharp rise in the expenditure incurred under that head, it is also true that the slackening demand for Advances accounted for their earnings in this regard to be static. It would seem that the voluntary agreement among banks, fixing maxima for rates to be paid on Deposits, can affect only one side of the ledger. A real problem that may emerge is that, with sharper impact being felt by Bank Deposits of governmental disbursements, idle resources, representing the difference between Deposits and Advances, may gather in volume. It is in this background that significance is to be attached to the speech made by Mr Shanti Prasad Jain in his capacity as Chairman at the annual general meeting of the Punjab National Bank Ltd.

In his opening paragraphs, Mr Jain has stated that banks experienced a diminution in their profits because of "higher cost of money and higher establishment expenses coupled with low demand for funds from Trade and Industry." He reports that the bank "has been investigating and studying the commodities market and the needs of newly developing industries." Mr Jain then comes to a point which has a basic lesson to offer to India's bankers:

"It is," he said, "a paradox that while banks with surplus funds have need to employ them more profitably, the industries needing finance for expansion and development are handicapped for want of finance. Admittedly, the needs of industry for development purposes are much greater than what the financial institutions in the country find it possible to meet... The present situation of increasing funds with banks and the needs of industry and trade not being adequately met by the financial institutions and the capital market has to be considered by the Reserve Bank and the Government of India with a view to giving banks new opportunities."

Indeed, Mr Morarji Desai, the Finance Minister, had occasion last

week in Delhi to say that banks would have to consider that they had new duties to perform. But, at the present moment, both tradition of banking as it is known in India and watchfulness on the part of the Reserve Bank to ensure that credit is not put to speculative use prevent any such efforts.

Mr Jain, in this regard, has a number of specific suggestions to make. Firstly, with the "blessing" given by Mr H. V. R. Iengar to the extension of medium credit to industries, the PNB Chairman thinks that it should be possible for the banking system to acquire experience in a "new class of business". Secondly, hire purchase has been very much in vogue in respect of motor cars and more especially trucks; and this is a new technique that banks have learnt. "There is," Mr Jain says, "great scope for extending the system leading to increased consumption of different consumer goods and expansion of industries." Thirdly, banks might consider financing "small individual houses."

We favour especially the last suggestion of Mr Jain's. For, house building is an activity that an economy with an unemployment problem needs must concentrate on. As it is, with nationalisation of life insurance, what was once a source of housing finance has been lost—though only temporarily, we hope. So, banks would be of real service if part of their Advances portfolio included housing loans—always, of course, with the blessings of the Reserve Bank, to ensure that such loans were not being put to speculative use.

+

Very Considerable Deficit Financing?

THE returns of the Reserve Bank for April 17 indicate, or at least seem to hint at, considerable recourse having been taken by the Central Government to deficit financing. If the Reserve Bank figures are studied in conjunction with the return of the State Bank for the same week, the suggested conclusion is that ad hoc Treasury Bills sold in favour of the Reserve Bank by the Central Government must have been for an even larger amount. For, in the Reserve Bank returns, though Rupee Securities in the Issue Department are unchanged at Rs 1351.10 crores, Investments in the Banking Department are seen to have risen substantially by Rs 34.56 crores to Rs 246.07 crores. Obviously, the Reserve Bank in its open market operations would not have felt compelled, nor even found it possible, to purchase securities in such an amount. Moreover, as we shall presently see, the State Bank figures as having added to its gilt-edged portfolio by Rs 7.06 crores. It is unlikely that the State Bank would have secured securities in such magnitude from any source other than the Reserve

Bank. Therefore, the inevitable conclusion is that the expansion in Rupee Securities held by the Reserve Bank, prior to sale of a portion thereof to the State Bank, must have been around Rs 42 crores. This, it would seem, is the probable size of the deficit financing incurred by the Central Government during the week under review; the only important head of disbursements that can be plumed in the Reserve Bank returns is probable payment of monthly instalments by the Central Government to the State Governments. For, notwithstanding probable deficit financing of hefty proportions, the Central Government's balances are only fractionally higher at Rs 49.62 crores against Rs 49.59 crores; on the other hand, the Deposits of State Governments have registered a considerable improvement of Rs 17.21 crores to Rs 24.71 crores, although the Ways and Means borrowings from the Reserve Bank have also moved up by a little over Rs 2 crores. We are to presume, since no other clue is readily available in the banking returns, that the net disbursements of the Central Government were rather heavy owing to presentation for encashment of drafts issued in connection with the end of fiscal year payments. Similarly, the payment by the Central Government to the State Governments may be larger than is suggested by the rise in the balances of State Governments, the extent of such payment being concealed partly by the relatively heavy disbursements of State Governments in respect of their own end of fiscal year transactions.

But, then, we should have anticipated an expansion occurring in Active Note circulation consequent on fresh effective Government

expenditures. But, in fact, notes in circulation are higher only by Rs 0.70 crores at Rs 1765.18 crores, whereas Rupee Coin has returned from circulation for Rs 0.15 crores. We suggest that the expansion in currency circulation owing to governmental expenditures has been offset partly by contraction in currency circulation owing to the slackening off of the busy season. We may add here that there has occurred in the latest week a decline of Rs 9.60 crores to Rs 79.45 crores in the Other Loans and Advances of the Reserve Bank—the lowest such level since the beginning of the year. This, too, lends weight to the theory that the busy season is, if it has not already done so, tapering off. Finally in this context, the sizable decline of Rs 13.62 crores to Rs 77.91 crores in Scheduled Banks' Reserve Balances should not be misconstrued as signs of continuing busy season pressure, the State Bank having drawn down its cash in hand and with the Reserve Bank by over Rs 16 crores in order to make purchase of gilt-edged. Thus, the other Scheduled Banks have actually added to their Reserve Balances in the latest week.

There is a decline of nearly Rs 7 crores in Government Treasury Bills held in the Banking Department and the deficit financing had recourse to by Government may possibly relate to their commitment to meet this maturing liability. Lastly, Balances Held Abroad, for the first time in several weeks, show a drop of some dimensions in declining by Rs 3.07 crores to Rs 32.86 crores.

+

The return of the State Bank for April 17 indicates fresh investments in gilt-edged for Rs 7.05

The Indian Bank Limited
H. O. First Line Beach, Madras-1

In consonance with its policy of inculcating the banking habit amongst the community, the Bank has been opening a number of branches in the recent past.

BThere are now no fewer than 112 Branches of the Bank functioning not only in India but also in Ceylon and Malaya.

LIn addition, the 23 Local offices of the Bank serve the entire Madras City and Suburbs.

Foreign Exchange Facilities Also Available.

Westminster Bank Limited.

New York Agents:
First National City Bank of New York.

D. P. PARTHASARATHY
Secretary.

16/VSM/59

crores and a commitment for further investments of the order of possibly like amount. (Owing to pressure of space, the analysis of the State Bank return in the last issue had to be held over). It is intriguing to find that the State Bank has in this wise added to its gilt-edged portfolio, this presumably relating to investments of a contra nature in respect of receipts of special Deposits. Why, then, in the return for April 10, did Other Assets decline to a relatively normal level of Rs 8.32 crores from Rs 29.59 crores, without any fresh investment in gilt-edged? Are we to understand that, for procedural or special reasons, the contra investment was deferred or delayed? The fact that Other Assets are marked higher by Rs 7.71 crores in the latest week—does it indicate a fresh tranche of investment in gilt-edged, also relating to counterpart Deposits? These are questions which can be posed, but for which we are unable to fathom an answer. The increase in Investments and in Other Assets has meant that Cash in Hand and with the Reserve Bank has been drawn down by Rs 16.42 crores to Rs 30.15 crores. Deposits are just a trifle lower at Rs 524.92 crores against Rs 525.03 crores. The upward pressure on Advances has been slight, with a rise registered during the week of Rs 0.68 crores to Rs 208.01 crores. In the result, the State Bank figures as a nominal borrower, being indebted to the tune of Rs 0.04 crores.

The return of Scheduled Banks for April 10 continues, apparently, to bear the impress of the year-end transactions of the Central Govern-

ment. For, notwithstanding the pressure of beginning of the month disbursements and of the busy season demand, the total of Advances shows a drop of Rs 0.73 crores to Rs 1020.34 crores. What is more, Deposits are slightly higher by Rs 4.12 crores, the State Bank in the relevant week having reported a decline of Rs 7.65 crores. So, it is legitimate to argue that constituents have utilised a portion of their receipts from Government to liquidate some part of bank credit, and this fact has offset such rise in Advances as may have taken place owing to month early disbursements or busy season demand. Perhaps, moreover, the magnitude of rise in Deposits would have been higher still were it not for such "cancelling out" on the part of constituents of indebtedness to Scheduled Banks. This happy position has enabled Scheduled Banks to reduce the level of their borrowings from the Reserve Bank by Rs 8.36 crores to Rs 40.33 crores, while indebtedness to the State Bank has also moved down by Rs 1.63 crores. There was disinvestment in gilt-edged for the small amount of Rs 3.76 crores, with the State Bank responsible for Rs 2.90 crores of the amount. In the result, with the State Bank being again mainly responsible, Cash Balances have moved up by Rs 21.38 crores to Rs 182.10 crores. The next return of Scheduled Banks should reflect the State Bank's transactions in regard to gilt-edged, with a probable decline occurring in Cash Balances and a rise in Investments.

Indian Bank

The balance sheet of The Indian Bank Limited as at December 1958 discloses a substantial rise of Rs 5.72 crores to Rs 40.93 crores in Deposits. The Indian Bank found it possible, contrary to the experience of the banking system generally, to utilise a fair portion of its fresh resources in an expansion of Advances, which are marked Rs 3.17 crores higher at Rs 23.15 crores. Nevertheless, it was necessary to increase the investment portfolio also by Rs 4.16 crores to Rs 14.19 crores. This has been accomplished by a small addition to Cash and Balances with banks, but also by a reduction of Rs 2.21 crores to Rs 1.61 crores in money at call and short notice.

The higher level of Advances enabled The Indian Bank to earn rather more from interest and discount at Rs 1.80 crores against Rs 1.43 crores. On the other hand, the income by commission, exchange and brokerage fell off by Rs 20 lakhs to Rs 44.15 lakhs.

The improvement in earnings proved to be unavailing, since the increase in expenditure was steeper still. The interest paid on Deposits has risen sharply by Rs 0.24 crores to Rs 1.08 crores, and salaries and allowances have absorbed Rs 3½ lakhs more at Rs 71.97 lakhs. As a result, the balance of profit

has been eaten into, having declined from Rs 32.01 lakhs to Rs 21.31 lakhs.

The dividend paid for the year is at 13 per cent, absorbing Rs 8.64 lakhs. The provision for taxes is Rs 6.50 lakhs. The transfer to Reserve Fund is in the amount of Rs 7.30 lakhs. Another sum of Rs 30,000 has been transferred to Bank's Building Account.

The carry forward has been placed at Rs 60,933 against Rs 2.04 lakhs brought in.

Bareilly Corporation

The accounts of The Bareilly Corporation (Bank) Limited for 1958 show that Deposits have risen fractionally from Rs 1.15 crores to Rs 1.21 crores. The Advances portfolio marks a rise of Rs 2.77 lakhs to Rs 61.31 lakhs. Bareilly Corporation disinvested in gilt-edged for about Rs 5 lakhs, preferring, apparently, to keep larger cash resources. But it is worth remarking that, with the improvement in gilt-edged prices in 1958, the book value of Government securities held by the bank, for the first time since November 1951, is below the market value; it may be recalled that, with the raising of bank rate in November 1951, the consequent landslide in gilt-edged values caused great embarrassment to banks. The Bareilly Corporation has happily got over this embarrassment—as some other banks have yet been unable to do.

The profit and loss account shows that gross income improved by over half a lakh of rupees to Rs 7.89 lakhs. But the two main heads of expenditure proved to be a much heavier burden, interest paid costing Rs 0.28 lakhs more and salaries and allowances absorbing Rs 0.28 lakhs more. Consequently, the balance of profit has shrunk from Rs 1.00 lakh to Rs 0.81 lakhs. The provision for taxes is placed at Rs 42,000. The dividend on ordinary shares is at 6 per cent. The gratuity fund reserve receives a transfer of Rs 2,500. The carry forward is shown at Rs 2,365 against Rs 386 brought in.

Government Treasury Bills

Tenders for Rs 2 crores of 91 days' Government of India Treasury Bills were opened on Wednesday, the 22nd April 1959. Total amount offered was Rs 2 crores. Tenders at Rs 99.300 were accepted in full. Total amount accepted was Rs 2 crores the average rate of accepted tenders being Rs 2.800 per cent per annum.

Tenders for Rs 2 crores of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on Monday, the 27th April 1959. Successful tenderers should make payment on Friday, the 1st May 1959. Other conditions are as usual.

Indian Finance

During the week ended the 17th April 1959 Government of India Treasury Bills for Rs 232.56 crores were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 23rd April to 25th April 1959 at Rs 99.316 per cent. Sales can be stopped at any time without notice if Government think it necessary.

There were no sales of 91 days' Intermediate Treasury Bills during the period 15th April to 20th April 1959.

British Trade with Russia

By Paul Einzig

BEFORE very long a high powered trade delegation will pay a visit to Moscow to negotiate about a substantial increase in Russian imports of British goods. The Soviet Government expressed its willingness to increase its purchases of British goods, in particular of heavy capital equipment. Some important orders of such equipment were placed recently with British firms, to foreshadow the possibility of further and bigger orders. The Soviet Government made it quite plain, however, that an increase of orders would only be possible if the British Government was prepared to grant credits. An amount of £200 million was tentatively mentioned in well-informed circles as the likely size of Soviet imports of British goods, provided that a substantial part of this amount is financed with the aid of British credits under Government guarantee.

Sir David Eccles in his speech in the House of Commons on April 9th, said that during recent months British manufacturers had approached the Export Credit Guarantees Department in the light of the greatly increased Russian enquiries for capital goods. The Government would now have to consider very carefully, he said, how far the sums involved could be insured. By this remark he appears to have implied that the Government has already conceded the principle that, to some extent at any rate, an increase of Russian purchases of British goods should be financed under British Government guarantee. All that seems to remain is to come to agreement with the Soviet Government about the proportion of purchases to be financed under British Government guarantee and the length of time for which such guaranteed credits should be granted.

Although the possibility of British credits to Soviet Russia has been discussed for several weeks there is an almost complete absence of any opposition to the idea either in Parliament or in the Press. It is indeed very tempting to adopt a device by which it would be possible to increase production in the capital goods industries, which industries have been particularly affected by the business recession. While recover-

April 25, 1959

in the consumer goods industries has been effectively stimulated by recent reflationary measures, the stimulation of recovery in capital goods industries is a much slower process.

As a result of the recession and of the recent disinflationary measures, most firms had curtailed their capital expansion schemes and it is bound to take some time for this tendency to become reversed. There is at present in most industries a relatively high proportion of unused producing capacity. It may take some time before that capacity becomes fully employed and meanwhile most firms have little inducement to go ahead with projects of expanding or modernising further their plant.

It is very tempting indeed for the Government to increase employment in the capital goods industries with the aid of assisting in the financing of large Russian orders. The chances are that the General Election will not be delayed beyond the Autumn and it would help the Government if by then the capital goods industries would be fully employed. Unless big orders for capital equipment are secured by means of concluding a trade agreement with the Soviet Union the Government would be at a disadvantage in industrial areas because the Socialist candidates would certainly promise that under a Labour Government large Russian orders would be financed under British Government guarantee. This has been advocated by the Opposition for years.

Irritation caused in Britain by discriminatory measures taken recently in the United States against placing orders for British capital goods also goes a long way towards discouraging any possible opposition to an increase of trade with Russia. Those who view the prospects of such increase with concern are hoping that the United States Government might succeed in persuading the British Government to abstain from granting official financial facilities to Russia, in return for an American undertaking to abstain from discouraging British imports by the United States. The American market for British goods has assumed first-rate importance for Britain, and the dollars earned by British exporters to the United States are indispensable. The United States Government is, therefore, in a strong bargaining position. By promising not to impede a further expansion of British exports to the United States it might be able to counteract the temptation of increasing exports to Soviet Russia.

Admittedly, an increase in employment in the capital goods industries is of great importance from the point of view of the prospects of a Conservative victory at the General Election. The Soviet Government is in a position to place immediately large orders leading to an immediate reduction in unemployment.

On the other hand the effective help that unrequited exports of capital goods to Russia would assist in the expansion of Soviet

production. It would be short-sighted for a British Government to assist in the success of the Communist Seven Year Plan. Even though the delivery of British heavy equipment may increase employment in Britain, the same result might just as well be achieved by the proverbial method of digging holes in the ground and filling them up again. Such a futile device would do no good beyond artificially creating employment but it would certainly do less harm than an acceleration of the Seven Year Plan making for

Communist industrial supremacy with all the economic and political dangers this would entail for the free world.

The conclusion of a trade agreement with Russia in the near future would materially weaken the bargaining position of the Western powers over Berlin. The placing of large Russian orders in Britain would enable the the Soviet Union to threaten with the cancellation of such orders in case of disagreement over Berlin, and the possibility of unemployment in the capital goods industries

resulting from such cancellations is liable to affect British public opinion and the British official attitude. For this reason alone apart altogether from the all-important economic disadvantages of assisting in the Russian Seven Year Plan, it would be to the interest of the United States to dissuade Britain from granting Government credits to Russia, by offering to the British Government the inducement of an undertaking not to resist the import of British goods.

Building FOR THE 5 Year Plan and far beyond it

In steelworks construction at Durgapur, Jamshedpur and Burnpur . . . in coal and ore handling plants, coal washeries and coke ovens . . . in India's first polythene factory at Rishra . . . in many sulphuric acid and other chemical plants . . . in such great installations and many others, some already in service, some under construction, the work of Simon-Carves will speed the march of Indian industry for years to come.

SIMON-CARVES SPECIALITIES INCLUDE:

Steelworks erection and plant installation
Civil engineering construction
Coal washeries, coke ovens and by-product plants
Central and industrial power stations
Chemical plants for sulphuric acid, hydrochloric acid, chlorine, caustic soda, tar distillation, benzole refining and many other purposes
High-efficiency electro-precipitation of industrial mists and dusts
Simon-Carves design, engineer and execute complete contracts of any magnitude from site preparation to plant commissioning and operation

COLLIERY, STEELWORKS, POWER AND CHEMICAL PLANTS BY

Simon-Carves Ltd

Incorporated in England. The liability of the members is limited.

WORLD OF JUTE

Outlook for Sackings

CONDITIONS in both the raw jute and jute goods markets have been extremely quiet during the week under review. Except for some speculative activity in the futures market, no fresh business is reported done with foreign buyers, who seem to continue their hand-to-mouth buying policy for the time being. Local sellers and dealers are, however, active in the hope that prices may harden in the near future. The 17-million-yard increase in US burlap consumption, during the first quarter of the current year, and the recovery in the US economy have led the operators to believe that the US demand will be maintained at a high level throughout the year. It is also hoped that Argentina may increase her offtake in the current year.

But, the outlook for sackings is not considered to be encouraging in view of the growing competition from Pakistan. The reports that, for the second time in recent weeks, Pakistan was able to divert from India an Australian order for heavy goods, indicate that production in Pakistan is increasing and that this country is left with some export surplus.

There is no gainsaying the fact that the quality of Pakistani production is infinitely better than the goods produced in India. This is due to the natural advantage Pakistan enjoys in jute of the finest quality.

According to some reports from Dacca, Pakistan's exports of jute goods, this season, are expected to increase by roughly one lakh tons from last year's level of 1.5 lakh tons. This has been made possible, largely because of the peaceful conditions prevailing in the industrial sector after the advent of the new regime in October last year.

Pakistan now has almost all her total installed capacity of 7,750 looms, in 13 mills, in operation. Under a short-term plan, the Pakistani Government intend to increase the sacking production capacity of the existing mills by over 1,000 looms.

It is being argued that Pakistan is able to take this decision at a time when India has reduced her sacking production; because she is now in a more favourable position vis-a-vis India as a producer of sacking. Her inferior quality jute is much cheaper than that available in India, while she has now a glut of Cuttings as a result of India's refusal to buy Cuttings from Pakistan.

The above factors have naturally brought to the forefront the im-

perative need for improving the quality of Indian jute. At this stage, it will be of interest to study the production, export and stock trends during the past three month (figures in tons):—

	Hessian	Sacking	*Total
PRODUCTION:			
January	40,000	45,200	92,100
February	36,900	39,500	83,600
March	38,100	37,200	83,300

EXPORTS INCLUDING INTERNAL CONSUMPTION:			
January	37,437	23,600	63,723
February	36,349	25,253	64,211
March	34,312	27,010	64,567

STOCKS:			
Jan-end	16,800	82,700	113,600
Feb-end	15,500	79,900	110,800
Mar-end	17,000	72,600	106,800

*Includes also Other Varieties.

From the comparative figures, it is clear that, despite the lacking of buying interest from overseas buyers, the statistical position of both hessians and sackings continues to remain healthy, thanks to the IJMA's decision to seal off another 1½ per cent looms from the 2nd March. Both production and stocks have been showing a steady decline from the beginning of the year. It is also encouraging to note that the switch-over from sacking to hessian production has been carried to such a stage, that stocks, especially of sackings, will be balanced in the near future. Moreover, the slight improvement in raw jute prices on reports of tenders for export may also help to brighten sentiment in the market for sacking goods.

RAW JUTE

The Raw Jute section developed a slightly steadier tendency following the announcement of the STC tender for about 50,000 bales for export. Mills, however, did not show much interest in view of their over-bought position and the shortage of accommodation for the incoming raw jute. Only small business was reported done in Mesta varieties, Assam Mesta being done at Rs 17.75; Deshi Mesta at Rs 18.25 and Northern Mesta at Rs 18, all per maund for April/May delivery.

Following were the price trends:

	April 16th	Highest	April 22nd
HESSIAN			
40"×10 Ozs			
Ready	Rs 40.50	Rs 40.80	Rs 40.00
May/June	39.80	40.00	39.60

WORLD OF TEA

Final Export Sale

MUCH earlier than usual, the export sale of the 1958-59 North Indian tea has come to a close with the auction held this week. However, it is likely that the Dust sales will continue for some more weeks. These are aimed at clearing away any quantities that may have left the gardens, but reached Calcutta so far.

It is with a measure of enthusiasm that trade circles note that practically the exportable types of the 1958 production have been exhausted. The export sales for this year's production will commence from June and this gives a break of six weeks between the closure of the 1958-59 auctions and the beginning of the 1959-60 auctions for export. By this time, the new season's tea should be arriving in substantial quantities. The trade feels that, in the early auctions, accumulation of demand will lead to buoyancy.

The same rosy position cannot be painted of Common teas. In this connection, the representatives of gardens in Terai and Dooars have presented a strong case for tax relief. The news from New Delhi that a decision had been arrived at to take over uneconomic gardens, is, however, noted with concern. For, it is felt that, by taking over these gardens, the Government will, in no way, bring a solution to the problem of uneconomic working.

Meanwhile, it is felt that, if the Persian Gulf Ports, Iran and Iraq are to be retained as buyers of Indian tea, the Government of India should do something immediately to help exporters, as inroads made in these areas are already substantial.

In the final Export Sale held this week, offerings amounted to 28,184 packages. There was a rather poor selection and most offerings were end-of-season types. There was a strong general demand, the strongest features being "Teas for price" which were about 2 to 6 nP per pound dearer and any clean black leaf teas together with the few lots with bright liquors which were sold well.

Plain and Medium Broken were 2 to 6 nP per pound dearer, similar Fannings being irregular and generally easier. CTC grades were irregular, the more ordinary kinds tending dearer. The better liquoring Medium types were often easier. Whole Leaf grades were well supported and were often appreciably dearer. Due to the absence of representative teas, no rates were given.

In the Internal Sale, offerings consisted of 21,047 packages of Dusts. There was a good general demand. The few brighter liquor-

ing orthodox types were keenly competed for; but the remainder were upto 6 nP per pound easier. Powdery types were, however, well supported and sometimes dearer. Legg-cut Dooars teas were irregular, some brighter liquoring invoices meeting with a strong demand at generally dearer rates. The remainder were sold at 4 to 6 nP per pound below valuations. There was a better demand than in recent weeks for the Darjeeling Dusts and these were sometimes sold at dearer rates.

Medium CTC teas were irregular and sold at rates which were upto 10 nP and sometimes 15 nP below valuations. The clean grainy brighter liquoring kinds received good support and were sometimes dearer. Powdery types continued to sell at generally dearer rates. Following rates were quoted:—Medium Dooars Dust Rs 1.76 to Rs 1.80; Medium Assam Grainy Dust Rs 1.70 to Rs 1.76; Medium Assam CTC Dust Rs 1.95 to Rs 2.15 and Best Assam CTC Dust Rs 2.65 to Rs 3.00 (nominal). Also, 1,201 packages of Leaf grades were offered for internal consumption. There was a good general demand and were sold at irregular and often dearer rates.

In the Cochin market, about 9 lakhs pounds of Leaf tea were offered for export. There was a useful selection of teas though the quality in general showed a slight seasonal decline. There was a good general demand, particularly for low medium and medium teas, which were sold well and prices for these were irregularly 5 nP per pound dearer. Good medium and high-grown Broken met with less demand and were sold at easier rates. Similar Fannings, though meeting with improved enquiry, were sold at lower rates.

A small selection of CTC types met with less demand and were sold at easier rates. Well-made Whole Leaf grades were strong and were sold at easier rates. Following rates were quoted:—Low Medium Rs 1.65 to Rs 1.75; Medium Rs 1.80 to Rs 2.25; Good Medium Rs 2.25 to Rs 2.85 and Quality Rs 2.60 to Rs 5.12.

In Mincing Lane, offerings were 26,940 packages including 18,495 packages from North India and 1,380 packages from Pakistan. There was a very fair demand with attention concentrated on the better liquoring teas, which were strong to dearer. Teas from the Dooars met with a strong competition at dearer rates; but for all other kinds the market remained fully firm.

In general, good demand for quality teas and poor demand for plainer varieties have continued to be the feature of London tea auctions. This pattern looks like going on for some time. A threat that still more plain teas will be brought on the world markets has been provided by reports from Pakistan that her Government is determined to force the trade to export half the Pakistani crop to acquire foreign exchange. This, however, can be difficult since the internal price of tea in Pakistan is well above the world price.

WORLD OVERSEAS

US Notes

Two events of more than passing significance are in the news these days. And while any direct connection between them may be largely coincidental, they nevertheless have a common bond in that they epitomize the kind of fruitful co-operation that increasingly has marked relations between the United States and its 20 "good neighbours" to the South.

It is entirely appropriate, in this context, that the charter of a new, \$1,000 million, government-supported Inter-American Development Bank should have been unveiled here late last week, just a few days before the start of Pan-American Week, celebrated April 14-20.

Pan-American Week recalls the founding in 1948 of the Organization of American States (OAS). This organisation has devoted a growing share of its activities to improving the well-being of the 360 million inhabitants of its 21 member nations. Areas in which the OAS is working include nuclear energy, tourism, trade transportation, housing, labour, agriculture technical assistance and education.

And now the new development bank—the Charter of which was worked out jointly by representatives of the United States and the 20 other American Republics—will be making its contribution to the continued economic advancement of Latin America. The institution is expected to be a going concern here in Washington by the end of this year, when enough countries ratify the agreement and pay in the first of three annual installments on their capital quotas by the end of the three-year payment of the complete quotas by the end of the three-year period, the institution's Board of Directors can vote to increase the capital another \$500 million to a total of 1,500 million.

Actually, the Bank will comprise two distinct types of financing operations. The larger will make most of its loans repayable in dollars and will carry commercial terms on financing of economic development projects in Latin America. Its capitalization formula provides for \$850 in paid-in and callable capital, of which the United States will subscribe \$350 million and the 20 other American Republics an aggregate of \$500 million.

Segregated from this "hard" loan capital will be a \$150 million "fund for special operations," of which the United States will contribute \$100 million and the other countries the balance. This money will be used for "soft" lending operations—that is, for development

credits that may be repaid in non-dollar currencies and that carry what might be called "non-commercial" rated, based on low interest charges and easy repayment terms.

The Charter does not "tie" loans to goods and services from Western hemisphere suppliers. Thus, a borrowing country would be free to contract for equipment in world markets, where feasible. This could conceivably enhance the Bank's effectiveness in some instances, as an aid not only to economic development but also to financial stability.

An Inter-American Lending Institution to help accelerate economic development has long been sought by Latin American countries. The hope is that it will supplement effectively the large supply of capital already flowing into the area—capital coming, for instance, from such bodies as the US Export-Import Bank and the United Nations World Bank, both of which have financed Latin American economic projects on a large scale.

Since its founding in 1934, the Export-Import Bank has made net loans—authorized credits minus cancellations—of about \$3,000 million to Latin American countries. The World Bank has lent \$642 million to these countries since it started operations in 1947.

Loans from these two institutions have constituted important additions to private US investment, which historically has been the major source of outside assistance to Latin America's economic development. It is interesting to note, in this connection, that the Inter-American Bank will provide financing for private as well as public projects, and that it will guarantee private loans deemed to be beneficial to the economic development of a member nation.

In the process of organization is a little-heralded US Government Agency designed to assist in the economic development of other lands by stimulating the flow of private American investment abroad. Known as the Office of Private Enterprise (OPE), it functions under the International Cooperation Administration (ICA), the government's over-all foreign aid agency.

Edwin H. Arnold, who as Deputy Director of ICA heads the new OPE, says that when fully organized his agency should be able to simplify the complexities of foreign investment for American companies and help them find the best investment opportunities. Plans also are afoot to expand the existing programme under which the US Government offers guarantees to American business entering the foreign field.

OPE's first goal, in fact, will be the expansion on this private overseas investment guarantee programme. While basic action to broaden the programme is up to Congress, OPE officials are working on administrative steps to increase the programme's effectiveness.

Meanwhile, Congress is considering, as part of this year's proposed Mutual Security legislation, an increase from \$500 million to \$1,000 million in the total value of foreign investments the government may insure. Such a new authorization would not involve any actual expenditure, unless circumstances required the government to make good on the investment insurance.

Also part of this legislation is the proposed expansion of available investment risk-protection to cover capital losses incurred abroad through disorders such as civil strike. Investment guarantee agreements already have been signed with 37 nations to permit the United States to insure US nationals against losses on their investments through currency convertibility, expropriation and war damage. OPE officials are hopeful of entering into agreements with about 10 more countries in the near future.

"There is plenty of money willing to go abroad if only the American businessman knows he can depend on protection against some of the risk of foreign investment," Arnold is quoted as saying in a recent article in the newspaper Journal of Commerce.

At the same time, he points out, OPE will "attempt to show the under-developed country that it can get \$4 to \$5 in private funds invested."

The job of encouraging American businessmen to invest in economic development project abroad will be handled jointly by OPE and the Commerce Department. Together, the two agencies will publicize industrial projects which offer an opportunity to private American venture capital, with emphasis on the special needs of developing countries.

As OPE officials see it, the investment guarantee technique will for the time being be the main lever for implementing the recommendations of the Straus report, released a few weeks ago. This study, prepared for the government by Ralph L. Straus of the large retailing firm of R. H. Macy and Company, contains scores of recommendations designed to give private enterprise a bigger role in the US foreign aid programme.

Mr Straus makes clear in his preface to the report that its recommendations are his alone. Nevertheless, the State Department, which published it, says the report will receive "careful study" throughout the government. And OPE officials believe that the report, in its underlying philosophy and its approach to development problems, represents a "clear re-statement" of OPE objectives.

Significance, in this regard, is the study's stress on the humanitarian as well as the economic and political interest in aiding the developing nations of Asia, Africa and Latin America. The report is based, in its own words on the conviction that "the encouragement and release of private initiative will greatly accelerate the

rate of growth" in developing lands. And it cautions that its recommendations "are not intended to replace the current government programmes for assisting the development efforts of other countries."

★

Britain

TRADE UNIONS PLAN POLICY FOR ANOTHER YEAR
By JOHN WALTON.

Easter is the start of the yearly round of trade-union conferences in Britain. Among those holding the first meetings have been the shopworkers, the clerks, and the draughtsmen.

From then until the Trades Union Congress (TUC) meets about six months later, some 70 union conferences take place. They represent trade-union democracy in action at its highest level.

Like the unions which organize them, these conferences differ greatly in size and composition. The biggest unions do not necessarily have the largest conferences.

For example, Britain's second-biggest union, the Amalgamated Engineering Union, with 950,000 members, has a national conference with little more than 50 delegates. Another relatively large union, the 370,000-strong National Union of Railwaymen, takes only about 80 delegates to its annual meeting.

On the other hand, the Union of Post Office Workers has a conference of more than 1,000 delegates, to represent its 160,000 members, and other unions in the middle-size range appoint delegates running into several hundreds. The clerical workers, who always meet at Easter, have a conference of more than 300 delegates from a membership of 53,000.

Some unions, like the giant Transport & General Workers with about 1,300,000 members, do not call a conference every year, preferring a biennial meeting. This is a year for the Transport & General Workers' meeting.

Only relatively few unions dispense with delegate conferences altogether. They choose, instead, to have gatherings on a regional basis. The Iron & Steel Trades Confederation—biggest in the steel industry—is one of these.

At the end of the conference pens with delegate conferences annual Trades Union Congress to which all 185 affiliated unions may send delegates and to whose agenda they may forward motions. Many of these motions have earlier passed through the delegate conferences of the unions.

Like the TUC itself, many conferences in the bigger unions last a week. But the engineers and the railwaymen take two weeks to transact their business and some of the tiny unions—half the TUC's unions have less than 5,000 members—manage to get through in one or two days.

To seaside resorts in Britain, union conferences are an important source of extra business and the local authorities generally

make a point of providing a civic welcome. For those unions which have very large conferences the choice is limited to those resorts which combine a large enough conference hall and sufficient hotel rooms.

In recent years the TUC, for example, because of its size, has generally had to choose from among four or five resorts. Not only does it need a hall and rooms for 1,000 delegates, but visitors and press, radio, and television representatives bring the total seeking accommodation to close on 3,000.

Those conference agenda which have already been published show that, as in the past, strictly domestic matters will occupy much of the time. Union machinery, education, the affairs of their industries are three of the headings under which there are resolutions from branches.

But this year one subject of national importance will be at the back of all delegates' minds, and often in the forefront of their discussions. It is unemployment. Though the mid-March total of 550,000 is down from its late-winter peak, the out-of-work still represent a sizable problem in a country which has largely enjoyed full employment since the war. For trade unionists, "jobs for all" has become more than a slogan.

As an aid to union discussions on this subject, the TUC General Council has already made known, at some length, its own view. Briefly, this amounts to a call for raising the general level of demand sufficiently to restore full employment and industrial expansion; and it is very much on this main issue that unions will judge the Government's performance in economic affairs. It may well be the first time for many years that unemployment and the means to cure it will play a major role at the unions' delegate conferences.

The business of a delegate conference guides and directs the elected union executive during the year. Whatever its subject, the resolution that finds its way on to the conference agenda after discussion back in the branch or district committee is a symbol of trade-union democracy—of the right of the rank-and-file to take a hand in initiating policy and in appointing their representatives to make a decision about it. This freedom of trade-union expression and autonomy of policy-making is perhaps the most important attribute of free labour.

UK EXPORTS AND IMPORTS BOTH UP IN MARCH

United Kingdom exports and imports both rose in March from the seasonally low level of February, according to provisional trade figures for the month released on April 14 in London by the Board of Trade. A more detailed analysis of trade returns will be issued later in the month.

United Kingdom exports were valued at £270,800,000 in March, £20,000,000 more than in February. Re-exports showed a seasonal rise of £2,500,000 to £12,800,000.

Educational Facilities in Union Territories

In a written reply to a question by Shri Ram Krishan Gupta in the Lok Sabha on April 2, as to the nature of steps taken or proposed to be taken to provide educational facilities in backward areas of the Union Territories, and the total amount to be spent during 1959-60 for this purpose, the Union Minister of Education Dr K. L. Shrimall, stated as follows:—

Increased educational facilities have been and are proposed to be provided in backward areas of Union Territories by opening new schools mostly of the basic type, award of stipends and scholarships, grant of fee concessions, monetary help for purchase of text books, etc, hostel facilities in urban schools for rural children, adult literacy and community centres and social service camps, establishment of libraries; expansion and streamlining of existing educational institutions by providing adequate equipment, trained teaching personnel and teaching aids.

Steps are also being taken to provide increased educational facilities at various stages of education.

The following provision has been made for educational development

Imports amounted to £322,500, 000—£31,000,000 more than in February.

Excess of imports (valued cif over exports and re-exports (valued f.o.b.) was £39,000,000 in March £8,500,000 more than in February.

UK CONFERENCE ON AIRCRAFT PRODUCTION PROBLEMS

Over 150 delegates, representing all sections of the British aircraft industry, will attend a two-day conference on "Problems of Aircraft Production" at the University of Southampton this week. The theme of the conference (on April 16 and 17) will be "Aircraft Industry—A National Asset".

The conference is the seventh sponsored by the Institution of Production Engineers on the British aircraft industry, which at the present time employs more than 600,000 people and which since the war has earned £800,000,000 in foreign exchange. Exports of aircraft and spares from the United Kingdom are increasingly annually, and in 1958 totalled £150,000,000.

Three papers will be read at the conference. One of these, by Marshal of the Royal Air Force Lord Douglas of Kirtleside, chairman of British European Airways, is entitled "The Operators' Point of View".

schemes for 1959-60:—

- (1) Delhi Rs 93,05,000/-
- (2) Tripura Rs 28,30,500/-
- (3) Manipur Rs 21,25,900/-
- (4) Himachal Pradesh Rs 39,94,000/-
- (5) Andaman and Nicobar Islands Rs 7,93,900/-
- (6) Laccadive, Minicoy and Amin-di Islands Rs 3,61,200/-

Development of Sanskrit

Dr K. L. Shrimall, Union Minister of Education, told Shri Ram Krishan Gupta and Shri Jhulan Sinha in the Lok Sabha on April 2, that a sum of Rs 3,27,700 was spent during 1958-59 for the development of Sanskrit and the amount proposed to be spent during 1959-60 would be Rs 3,76,100.

Shri Vidya Sharan Shukla asked in the Lok Sabha today whether the examination of the proposal relating to the establishment of Hindi teachers' training colleges for non-Hindi speaking States had been completed. Replying in the affirmative, Dr K. L. Shrimall, said that it had been decided to open Hindi teachers' training colleges non-Hindi speaking States on a zonal basis, depending on actual requirements. One hundred per cent expenditure on this scheme would be borne by the Central Government, he added.

Smokeless Domestic Coke

Replying to a question by Shri S. C. Samanta and two other members regarding the results of the research to produce smokeless domestic coke by the Fuel Research Institute, Dhanbad, Shri Humayun Kabir, Union Minister of Scientific Research and Cultural Affairs, said in the Lok Sabha on April 2 that a process had been developed at the Institute for making smokeless domestic coke from low-grade high ash coal in the country and entrusted to the National Research Development Corporation for commercial exploitation.

Considerable work on by-product recovery, the Minister added, had been done in both the Central Fuel Research Institute and the Regional Research Laboratory (formerly known as Central Laboratories for Scientific and Industrial Research) Hyderabad, but a comparison was difficult as by-products of coal carbonisation covered a wide field and depended on the quality and composition of the raw materials.

Replying in the affirmative to a question by Shri Keshava whether any coal washers had been designed by the Central Fuel Research Institute and the amount of foreign exchange saved thereby, Shri Humayun Kabir said that the Central washers in the public sector of approximate value of Rs 14.00 crores, which had already been set up or were being planned, had been designed at the Central Fuel Research Institute.

He added that it was not possible to assess the exact amount involved, but even if the fees for foreign consultants, who would otherwise have been consulted, were calculated at 3 per cent, exclusive of investigation the saving would be of the order of Rs 14.00 crores.

Privy Purses for Former State Rulers

The Budget estimate for 1959-60 for payment of privy purses to former Rulers of States was about Rs 5 lakh less than the revised budget estimate for 1958-59, which was Rs 5,41,93,000.

Shri Govind Ballabh Pant, Union Home Minister, who gave this information in a written reply to a question by Shri Ram Krishan Gupta in the Lok Sabha on April 2, added that the actual expenditure during 1958-59 was not known yet.

Shri Pant added that the actual amount paid during 1957-58 was about Rs 5,40,20,000.

Background:

The merger/integration agreements executed by the Rules of former Indian States provide for the payment of a fixed annual privy purse free from taxes to the rulers thus guaranteed is intended to meet all expenses of the rulers and their families including expenses on residence, marriage and other ceremonies etc., and is neither to be increased or reduced for any reason whatsoever.

In the case of rulers whose privy purse amounts have been fixed at a figure exceeding Rs 10 lakh per annum, these covenants/agreements provide that these amounts shall be payable only to the present Rulers and not to their successor for whom provision will be made by the Government of India subsequently.

Bye-Elections in India

Six bye-elections to Lok Sabha and 55 to the Legislative Assemblies of State were held during 1958-59.

This was stated by Shri R. M. Hajarnavis, Deputy Minister of Law, in a written reply to a question by Shri Ram Krishan Gupta.

The Deputy Minister added that bye-elections to Lok Sabha were in the States of Bihar, Bombay, Madhya Pradesh, Punjab, Uttar Pradesh and West Bengal. The figures of the State Legislative Assemblies' bye-elections were: Andhra Pradesh—five; Assam—five; Bihar—six; Bombay—nine; Kerala—one; Madhya Pradesh—four; Madras—two; Mysore—two; Orissa—four; Punjab—two; Rajasthan—three; Uttar Pradesh—eight and West Bengal—four.

Pakistanis in India

As on November 1, 1958, almost 64,000 Pakistanis were staying in India either without valid passports or after the expiry of their visas.

Those who were staying without valid passports numbered 25,056 and those overstaying after the expiry of their visas were 38,768.

This was stated by Shri Govind Ballabh Pant, Union Home Minister, in a written reply to a question by Shri D. C. Sharma and sardar Iqbal Singh.

The Union Home Minister added that prosecution was launched for unlawful entry or unauthorised residents under the Indian Passport Act or the Foreign Act, as the case might be. Deportation was resorted to when the persons concerned did not leave even after conviction.

IT is not, I suppose, as if Mr Morarji Desai, the Finance Minister, has had second thoughts, but merely that, in order to provide a sop for those who, offered any the most merciful budget, would still ask for reliefs and concessions, he had included, in his original budget, some proposals which, possibly, he never intended to put through without revision or modification. This, at least, is the impression that I gained from his matter-of-fact speech when he moved for consideration the Finance Bill for 1959-60. On the other hand, when he replied to the debate on the Finance Ministry's demands for grants, he showed how zealously he intended to keep not merely to the spirit but even to the letter of his budget proposals. My concern, frankly, is not so much with the concessions that Mr Desai has, seemingly, reluctantly granted so much as with the broader interpretation we are now enabled to have of budgetary policy under the Finance Minister. Nevertheless, for the sake of record, we may note down the concessions (which, it would appear, have been disappointing). Firstly, the Khandasari sugar industry is to benefit in the sense that, that, as against the proposal of a basic excise duty of Rs 5.60 per cwt. plus an additional duty of 70 nP in lieu of sales tax, Mr Desai has announced that the industry as such is to bear lower rates.

Differentiation has been made as between Khandasari sugar produced with the aid of sulphitation which will bear a total duty of Rs 5.67, and Khandasari sugar without such aid, the imposts in whose case would work out to Rs 4.41 per cwt. Relief to the industry will be worth Rs 61 lakhs during the current year; in a full year, the concession will cost the Exchequer Rs 81 lakhs. Moreover, it is only when power-driven centrifugals are used in the manufacture of Khandasari sugar that it will be assessable to the new excise. Secondly, in regard to vegetable nonessential oils, a simplification has been decided upon in procedure; the Finance Minister has stated that this is a "concession" to set at rest fears of harassment in respect of smaller units; and its cost to the Exchequer is to be Rs 11 lakhs this year and Rs 12 lakhs in a full year. Thirdly, suitable changes are to be made in the excise duties on art silk fabrics, with concessions being restricted to the cottage type manufacturers; the value of the excise duty foregone will be Rs 23 lakhs in 1959-60 and Rs 25 lakhs in a full year. Also, changes in the additional duties on art silk will mean a loss of Rs 14 lakhs to Government revenues in the current year and Rs 15 lakhs in a full year. This, then, is the sum of the budget concessions. Adding it up, one finds that Mr Desai has

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

foregone Rs 1.09 crores, or roughly 5 per cent, of his new imposts as far as the budget year is concerned. In a full year, the estimated loss to the Exchequer is slightly more at Rs 1.33 crores. None of the concessions really hits the head lines because, if anything, more and not less relief had been, if not anticipated, at least hoped for.

★

The second half of Mr Desai's speech initiating the debate showed the Finance Minister firm and immutable. There are, however, two revealing factors which show how Mr Desai's mind might be working. In reference to criticism of the rate that has been fixed for advance payment of tax, Mr Desai gently reminded the Parliamentarians that this was not the juncture at which Government could lightly afford to sacrifice revenues; and he went on to add that, while the new scheme was expected to secure the same tax revenues from companies as before, no substantial increase in the incidence of tax is either aimed at or expected. There is, of course, the qualification that, in the process of rounding off or of averaging, particular corporate entities might pay more, while others were paying less. Mr Desai has confirmed that, "where the incidence of excess dividend tax or wealth tax has been low or where exemption is enjoyed by certain class of companies under wealth tax or where the dividend distributions exhaust the bulk of available profits, an over all rate of 45 per cent may prove to be somewhat higher". In broad terms, what the Finance Minister has said is that companies with small wealth and/or a low rate of dividend paying capacity will be "subsidising" companies with large wealth and/or a high rate of dividend distribution. I am afraid that Mr Desai could not have done anything to mitigate, as it were, the unfairly higher rate of tax borne by the first class of companies. Nor would he have been troubled by any charge that it was the prudent company that has been penalised. Nothing of the sort. On the contrary, it is companies which have consistently ploughed back profits which had any measure of wealth tax to pay. It was companies whose earnings had in this wise risen sharply who had a dividends tax to meet. So, rightly, it is prudence and

efficiency which have an injustice removed by Mr Desai's budget. However, it is, I think, pertinent for me to suggest here that, quite possibly, in effect, the simplification of corporate taxes will tantamount to a greater burden on private limited companies. Though we are now in an era where the biggest of the corporations are private limited companies, the bulk of such companies are essentially small, family-owned. I do not know whether statistics are available in this regard, but my impression is that there would be very few private limited companies who would have had wealth tax to pay. Of course, by dint of the Section 23A requirement, they were getting mulcted with excess dividend tax. But, here too, with some measure of capitalisation, the excess dividends tax has been sought to be obviated, or its vigours made less burdensome. So, the position would now be that private limited companies will have a larger tax constituent in lieu of the wealth tax that has been eliminated; this might be partly offset by the relief in respect of dividends tax; but, I believe, experience will show that the tax paid by private limited companies will be found to be somewhat, if not rather, higher. So, in 1960-61, there might be a case for affording some relief to Section 23A companies in manner similar to last

year's reduction of the excess dividends tax on this class of companies. The fundamental point, according to Mr Desai, is that the tax payable by all companies will be at a standard and uniform rate. This much about the new corporate tax system as having its impact on the companies.

★

Turning his attention to shareholders, Mr Desai confesses that he does not "rule out the possibility of diminishing dividends in certain cases". But he stresses that the new scheme will be favourable to companies whose distribution policy has been "prudent". It is at this stage that I should like to hark back for a moment to the situation in which the steel companies find themselves. In the past, managements have not found it possible to secure justice for their shareholders, with Government insisting that the conservation of resources had a priority higher than any participation in increased prosperity by the shareholders. Indian Finance has said it before, and I will repeat it here, that Government's policy in the matter of steel dividends has been anything but just or fair to shareholders. The steel companies will more than fulfil the conditions enabling entities to maintain the gross return to shareholders. But Government should state categorically that, for their part, they will have no objection to any increases in the dividends payable by the steel companies. I feel such assurance as being necessary now because we are on the threshold of the slack season and, if Investment Gossip is to be believed, a number of new issues are waiting to come on the market. Such an announcement by Government will provide just that fillip to the investment climate which will facilitate the placing of the new issues; and

such an investment climate is also desirable if development in the private sector is to fulfil, and possibly exceed, targets set down for the Second Plan.

Nevertheless, I consider as both significant and important Mr Desai's statement that the prudent companies will be able to maintain their effective gross return to shareholders. For, this would mean, this would imply, that, wherever Government do possess a restraining hand in the matter of dividends, they will not exercise such right. The more prudent the company, the greater scope or prospect for increasing the return to shareholders. I should not be surprised if the tax saving in the case of some corporate entities may not turn out to be so substantial as to enable a considerably larger gross return to shareholders. Investors, I may remark parenthetically, would be well advised to seek out such companies as may have this scope.

By then, Mr Desai had reached his concluding paragraphs. He

brushed aside certain varieties of criticism with the assertion that, with the introduction of a new scheme, difficulties are inevitable, though of a transitional nature. Then we come to what I consider to be the really meaty portion of Mr Desai's speech. (It is strange that many of the press reports omitted these sentences). After saying that there was no point in exaggerating ephemeral difficulties, Mr Desai added:

"One must also remember that the rates prescribed in the Bill are merely for purposes of advance payment of tax and do not represent the final rate for the assessment year 1960-61. As the scheme comes into operation, we shall be able to notice its defects and we shall certainly take steps to correct them."

These two sentences must be read in conjunction with Mr Desai's iteration that, under the new scheme, Government wanted to "secure the same tax revenue from companies". It is also at this

juncture that we have to take account of widespread criticisms from usually knowledgeable circles that, with the rate fixed at 45 per cent for advance tax, the revenues to Government will show some increase. If such is the case, the second sentence that I have quoted, together with Mr Desai's insistence that no additional revenue was being sought, should mean categorically that, when the time comes for fixing the rate of corporate tax for the assessment year 1960-61, some relief will be in the offing. Prospects are, therefore, for the Finance Minister to honour his commitment given today to take steps to correct defects—one of them, may I suggest, is a quantum of revenue exceeding anticipations or calculations—and announce a reduction in the assessment rate from the 45 per cent postulated for advance payment of tax. It is thus that I consider Mr Desai's speech as being of moment to the shareholding public.

The first clue that we thus have as to budgetary policy is that, in the corporate sector, there is little reason to apprehend that the tax rates fixed for 1960-61 may be higher than the 45 per cent stipulated as the advance payment of tax. On the contrary, as I have shown, there is a clear case for some modicum of relief being given to private limited companies and there may emerge sufficient statistical information as regards the collection of corporate taxes representing advance payments to enable the Finance Minister to give effect to the corrective measures that he has assured he will institute if they were found necessary; and, on the basis of current calculations, it would appear that what is on the cards is a reduction in the corporate tax rate for 1960-61 as from 45 per cent.

Even more interesting and even more forthright was Mr Morarji Desai's speech when he replied to the debate on the demands for grants for the Ministry of Finance. Bluntly and categorically, he said there was no question of nationalisation of banks, which was "neither necessary nor useful, nor in any way profitable to the country". He refuted the suggestion that India was committing future generations to poverty by its borrowing programme, both internally and externally. We have, he said, "borrowed only within our capacity and always considering our capacity to repay it in time". The Finance Minister maintained that there was no basis in wild allegations emanating from some quarters that India was passing through economic chaos and was on the brink of bankruptcy. Furthermore, the rise in food prices was not as a result of any increase in the money supply, and not, therefore, as a consequence of deficit financing incurred by Government for putting the Second Plan through, but owing merely to the fact that have been two successive

crop failures. It was a hard hitting reply and the tone that the Finance Minister used can be imagined from his oblique reference to the Communists, as a retort to their demand for nationalisation of banks, that what this country needed was not the nationalisation of banks but the nationalisation of minds.

Here stands India's Finance Minister giving reliefs where they were admissible, abiding hard by his basic proposals, promising corrective measures where necessary, denouncing any suggestion of nationalisation of banks, refuting criticism that India's future generations were doomed to poverty and affirming that deficit financing had not, in the past, led to inflationary tendencies in foodgrains. You could hardly have a more cheerful assessment of the Indian economy, or a more hopeful statement of budgetary policy. But it amazes me that so little note has apparently been taken of these two, the latest of Mr Morarji Desai's speeches.

EAVESDROPPER

S. E. RLY TENDERS

Sealed tenders are invited for (1) Tender No. CON/GM/18/F2/59 for supply of 5000 Nos. Joint Solid 1½" as per IRS Drg. No. SA 6050. Earnest money is Rs. 1000/-. Tenders will be opened on 6-5-59 at 3 P.M. (II) Tender No. CON/GM/19/F2/59 for supply of (a) 8 Nos. Signal 2 Arm 31'-0" (outer & 'warner') Type 'A' (Lattice) complete with all fittings except arm and roundel (M.A.) as per EIR drg. No. 2008/1 and (b) 60 Nos. D. W. Compensator type 'B' Single 72 stroke as per IRS Drg. No. SA-7300 (Adv.). Earnest money is Rs. 1000/-. Tenders will be opened on 7-5-59 at 3 P.M.

Tender forms are obtainable from the office of the Controller of Stores (Construction Section), Garden Reach, Calcutta-23, on remittance of Rs. 5/- (not refundable) per copy per tender by money order to him direct in the case of outside firms and on production of cash receipts from this Rly's Chief Cashier by local firms.

Tender should accompany the receipts for depositing earnest money as stated above with this Rly's Chief Cashier without which the tenders are liable to be rejected. Approved contractors having a permanent deposit of Rs. 1000/- with the Controller of Stores are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

GATEWAY GOSSIP

IT took some time for me to make up my mind, but I do not think I owe readers an apology for reverting to what is essentially a money market subject and what, therefore, may be said to be the preserve of the World of Finance section. For, the Gateway gossip that I have been hearing these past few days has been very much about the future in store for Scheduled Banks, and a whisper that has reached my ears is, I am afraid, somewhat disquieting. But let us take up these matters in their proper chronological or perhaps logical order.

Now that almost all the banking results for 1958 have been made public, curiosity is excited by the fact that the decline in profits has been of considerable magnitude. There are some who immediately and brashly charge that the 1958 banking results reflect the unavailing quality of the inter-bank agreement, the voluntary agreement among banks, to impose limits on the interest that may be paid on Deposits. There is even the snide suggestion—others, claiming to have evidence, call it a justifiable charge—that the voluntary agreement was able to impose limits but not to observe them. In the language of a reporter, usually reliable sources assure me that there have been instances where both letter and spirit of the agreement have been broken—though they concede that these instances have been few and far between. The answer to such a charge—and I here refer to the futility of the agreement as far as concerns the 1958 results—is that the agreement would begin to produce the intended effect only after it had been in force for a year, since 12 months' Deposits taken up before October 1958 would be at the pre-agreement rates. This is quite true. It is not fair to expect that the full benefit of the agreement will be discernible before the expiry of a year.

Then, there seems to be an under-current of feeling that, notwithstanding Sir Homi Mody's brave call, in his speech at the annual general meeting of the Central Bank, for the limits to be scaled down, it is neither desirable nor necessary to effect any such reduction.

It is not necessary, I am told, because, at any rate during the first half of 1959, bank resources will have been very profitably utilised. At the end of March, for example, Advances, as a ratio of net Deposits, were placed at 61.90 per cent. While this is somewhat lower than the ratio of 66.34 per cent at the end of March last year, the ratio of Investments to net Deposits is, at the end of March this year, rather higher at 37.43 per cent against 30.35 per cent. Thus, earning resources of banks amounted to 99.38 per cent of net

Deposit rates agreement: What Now?

Deposits as at the end of March 1959; and the relative figure for the end of March 1958 was 96.69 per cent. What is more, at no time this year has the total of Investments and Advances fallen below 98 per cent, whereas, in the first three months of 1958, the total of Advances and Investments vacillated between just over 95 per cent and 96.69 per cent. This extra margin of earnings during the first three months of 1959 will, it is reasoned, provide a more than sufficient guarantee as regards a higher level of bank profits for 1959. In this sense, the conclusion is that a reduction in the limit is not necessary.

It is not desirable, I have been told, because of various species of competition that banks continue to experience. Firstly, so long as there is a maximum, no bank can really afford to refuse Deposits at the maximum rate, for the fear that some of the other banks might take it up. There is the competition, then, from Government, because the interest offered on small savings compares favourably with the upper limits set for Deposits. Thirdly, there is a practical necessity for banks to woo Deposits because, although the Advances Deposits ratio is low, the high level of investments in gilt-edged has left very little by way of spare resources with banks.

For all three reasons, therefore, there is no easy acceptance of any suggestion that the limits on Deposit rates be brought down. Indeed, if I may share a whisper with

readers, I have been told that a specific suggestion in this regard made to the proper authorities was by such proper authorities found unworthy of implementation.

I am afraid, however, that such a situation will not long endure. The slack season is imminent, if it has not already started, the sustained money market rates notwithstanding. The returning funds from the mofussil will gather strength in coming weeks. There is no reason at all to apprehend that the rising trend in Deposits will suddenly be halted. Neither is there any reason to hope that the new Deposits, conveniently, will be in the form of current accounts. The gap will widen as between resources available and remunerative uses thereof. The slack season will compel second thoughts about the rates to be fixed under the voluntary agreement.

On the other hand, there is likely to be a slight complicating factor. The pleasantly unexpected magnitude of the expansion in Advances during the 1958-59 busy season has stirred banking circles to work out new theories or ideas about prospects over the short term future.

For one thing, it is believed that there has been a resurgence in industrial production. For, with the very strict watch that the Reserve Bank has been keeping on bank credit against foodgrains, the only rational explanation for the sharp rise in Advances is a measure of increase in industrial activity, particularly since, with

the import restrictions continuing, the finance required for financing imports would have shown little change.

For another, much significance is attached to the fact that the current crop is a very good one. There are expectations—or at least, hopes—that the demand for consumer goods will pick up.

Some bankers are already thinking longingly of the so-called 1956 slack season; (in 1956, there was no slack season); and it is being increasingly hoped that there will be no falling off in the demand for Advances during the 1959 slack season.

This, of course is rather specious reasoning. If consumer goods are no longer a drug in the market, stocks carried by trade and the industry will resultantly be smaller. Bank finance required thereagainst will also, consequently, be of smaller magnitude. The counter argument, therefore, is that there will be a slack season during 1959, although conditions may not be so easy as in 1958.

In any case, the money market rates are in the balance; and it will occasion little surprise if, in another month or two, strident moves are made to reduce the limits under the voluntary agreement. Pressure in this regard (perhaps we had rather call it friendly persuasion) is likely to emanate from the Exchange Banks, whose business in India during 1958 has been hardly satisfactory from the viewpoint of profits.

THIS IS A YOUNG FIRM

but with some of the oldest business houses for its clients!

Four years ago, **acbi** was founded upon two ideals; *first*, absolute sincerity with our clients; *second*, absolute objectivity in our approach to problems, including those of labour-management relations.

Surprisingly, if significantly enough, we found that this approach was welcome to managements. Indeed our forthrightness has made more friends for our firm than we thought it possible!

Well, we have grown—not spectacularly, perhaps—but, then, we are still growing! And we are proud of the fact that our roster of clients includes some of the best and oldest business houses in the country.

acbi is currently assisting reorganisation of industries in both the public and private sectors.

Let **acbi** assist you in finding answers to your problems. We specialise in problems relating to labour-management mediation; job evaluation; work study; office reorganisation; production control; waste control; stores control; incentive schemes; layout and material handling; and budgetary control.

GATEWAY NOTES

Company Management

Inaugurating the second All-India Convention of secretaries of companies and other public bodies, Mr G. L. Mehta, Chairman of the Industrial Credit and Investment Corporation of India, referred to the growing importance of company management and pointed out that business was becoming associated with administration and that it was not merely a matter of enterprise and profit.

It is the complexities which company administration involve, which invest company management with the peculiar importance which now attaches to it. The vast changes that had been made in the company law in the last two years have also profoundly affected the working of companies and have made company management even more intricate than before. Trends in business organisation have further served to make management the most important aspect of business conduct. As Mr Mehta pointed out, management is becoming institutional rather than personal in character. Efficient management raises difficult questions of company law, taxation, labour relations, price control, exchange and import control and these are aspects which, as Mr Mehta pointed out, require technical knowledge.

In such circumstance, efficiency in management calls for specialised courses of study in the subject, though it makes demands on talent and capacity. However, since the importance of management is only beginning to be recognised, provision of facilities for training in company management is yet to make much progress. There is however great need and scope for moving faster in this field. There is already a keenly felt shortage of efficiently trained people to take up the responsibilities of company administration. As pointed out by Mr C. H. Bhabha the situation is such that the country has to meet "the managerial or secretarial challenge." The growth of industries as well as the birth of new ones put a further premium on the training of personnel for efficient management in adequate scale. It is not the private sector alone to whom the challenge of efficient management applies. The public sector which is growing in importance and scale has to go by the same standards that apply to the private sector.

Penicillin Production

Production of penicillin within the country, one of the important aims of the Government in the field of public health has since the factory at Pimpri begun pro-

duction, made so much of headway that nearly 50 per cent of the country's demand for penicillin is now estimated to be met by production within the country itself. Naturally production at the Pimpri factory also touched the highest water mark being estimated at 29 million megaunits against 21.5 million megaunits in 1957-58 and 9.89 million megaunits in 1956-57. There has thus been a three-fold increase in the production of penicillin in the course of only two years. Considering that nearly 3.8 million megaunits were prepared from imported first crystals the net production of penicillin during the year would be about 25.2 million megaunits against the target of production at 24 million megaunits.

Referring to the steady progress made in respect of penicillin production, Mr S. T. Raja, Managing Director Pimpri Penicillin Factory, pointed out that with the production already achieved in the country, there has been a saving in foreign exchange to the tune of nearly Rs 1.5 crores. Mr Raja further expressed the hope that by the end of the Second Five Year Plan the total output of the Pimpri factory and that of some private firms would enable the country to meet its total demand resulting in a saving in foreign exchange to the tune of Rs 4 crores.

There are further schemes envisaged by the Government for the production of antibiotics some of which are the subjects of some controversy. The project for the manufacture of broad spectrum antibiotics to meet the entire requirements of the country is one of the important of the schemes. Estimated to cost about Rs 1.3 crores, out of which Rs 70 lakhs represents the foreign exchange component, the details of the project are reported to have been worked out by the research department of the Hindustan Antibiotics and is awaiting the Government's sanction.

LIC's Foreign Business

Speaking in Bombay, Mr P. A. Gopalakrishnan, Chairman of the Life Insurance Corporation of India, referred to the great scope for increasing the Corporation's business in such foreign countries as Malaya, Singapore etc. While there is thus scope there is also need for making effective use of the field which these countries offer. It was one of the after-effects of nationalisation of life insurance business and the setting up of the Life Insurance Corporation, that there was a fall in the foreign insurance business transacted by the country.

While the Corporation has some good scope in these countries, it is not a completely free field that is available. The very keen and stiff competition offered by other insurance companies is one of the difficulties that the Corporation will encounter in its business in these countries and this calls from the Corporation special efforts to give efficient service if it is to gain new business in these countries.

GATEWAY MARKETS

Outlook for Copper

ON the London Metal Exchange, Copper prices have fallen below £230 per ton this week for the first time since January on reports that Washington considers releasing the metal from the American stock-pile. An American official has stated that the position is being studied with a view to selling small quantities which will not upset the market; but no decision has yet been reached. Dealers feel that stock-pile sales now will not be surprising since the market has improved a great deal in the recent months. This may also prevent runaway prices in the event of the strike, which is threatened throughout the US copper industry this summer. The rate for the metal, after touching a low of £22½ from the recent high of £250½, is now quoted better at £23½ per ton.

In India, Copper prices have been settling down on the belief that the increased imports, during the April-September period, will be adequate for requirements. For the time being, speculators take a more optimistic view about supplies and are, therefore, less inclined to hold on to their purchases. It is learnt that US mine-owners have built up big stocks in warehouses away from the mines. So, even in the event of a strike, supplies may not be interrupted. It is, therefore, expected that the price of copper will remain steady and there is a balance between supply and demand on current indications. In the Bombay market, the rate for the metal is quoted at Rs 221 per cwt.

Among other metals, trading in Lead continues to be dull with the rate hovering around Rs 73.00 per cwt. Zinc prices moved erratically between Rs 92 and Rs 94 on alternate bouts of buying and selling, to finish at the former level. Easy advices from the Singapore market did not affect local Tin prices, which are quoted at Rs 146 per quarter.

Oils & Oilseeds

Except for the renewed firmness in Groundnut, conditions in other sections of the Bombay Oilseeds Exchange remained quiet with price movements confined to a narrow range. The firmness in Groundnut was mainly due to the sustained shortage of spot supplies, resulting from inadequate arrivals in almost all major producing areas. Crushers and Vanaspathi manufacturers were steady buyers, resulting in prices soaring to new high levels. Moreover, there were rumours that a few shippers had succeeded in placing business for about 1,000 tons of groundnut oil with some of the Communist countries at £116 per ton in bulk

Indian Finance

on the f.o.b. basis. Groundnut ready sold was quoted at Rs 39 and Groundnut Oil at Rs 20.75.

Trading in the Castorseed section was relatively tame with price variations being confined to only Rs 2 per candy. While buyers were not inclined to be aggressive at higher levels, there was little to indicate nervousness since a large section of the trade continued to nurse hopes of business in castor oil with the USA. Ready castor was done at Rs 31.25 and Castor Oil, commercial, quality, at Rs 15.50.

Prices in the Linseed section displayed a slightly easier tendency on reports that the Australian demand for Linseed Oils might be delayed. Ready Linseed was done at Rs 32.50 and Linseed Oil at Rs 16.00.

The behaviour of the Cottonseed section was bearish, especially towards the close of the week on lower Ahmedabad advices.

Gold & Silver

The rising trend of the bullion market gathered momentum, both gold and silver seeking new high levels for the week following large-scale enquiries from Madras, Delhi and Indore. The firmer trend is a sequel to the uncertain political tension between India and Pakistan, the unrest in Tibet and the overall demand due to the marriage season. There were also fresh investment enquiries on hopes of capital appreciation in the coming months.

In the Gold section, prices forged ahead on sustained demand in the ready section and active short-covering. Bullish fervour was increased on reports of strict vigilance on smuggled imports of the metal from the Middle East. With expectations of bumper crops this season, demand from agriculturists in particular was expected to increase to a marked extent. Ready rates moved between Rs 122.16 and Rs 122.69, while Sovereign firmed up to Rs 76.25 from Rs 75.75. Arrivals amounted to only 500 tolas against an offtake of as much of 2,300 tolas.

The Silver section showed remarkable resiliency. Bulls still continued to dominate the scene, as prospects of increase in the offtake with the progress of the busy season were regarded as promising. Arrivals amounted to 20 bars as against an offtake of as much as 45 bars. Ready rates fluctuated between Rs 201.12 and Rs 201.44.

Yarn

The Bombay Yarn market witnessed a sharp setback in prices. Art Silk Yarn met with heavy bull selling following arrivals against import licences under the export incentive scheme last season. Similarly, there was a sharp decline in the rates for Nylon yarns. Advices from the Art Silk fabrics market were far from encouraging, as the stocks have begun to accumulate for want of demand. The Staple-Fibre yarn section was no exception to the prevailing trend, as the selling pressure was equally heavy due to poor offtake.

WORLD OF COTTON

STEADY conditions prevailed in the Bombay Cotton Piecegoods market and the same tempo of activity is expected to continue for about a month and a half. In superfine and fine categories, demand is maintained, although there is no appreciable price increase. Consuming centres are Bihar, Kanpur and other parts of Uttar Pradesh, Amritsar and Delhi. In short, modest activity in a number of varieties has continued. Though the activity cannot be termed brisk, traders consider it satisfactory as, due to overall demand, the stock position is happily decreasing with the mills as well as with the merchants.

On the export front, however, conditions remain stationary. While there is no demand worth the name from Hong Kong, Singapore has continued to book bleached longcloth. Indonesia is reported to have booked some business, while the UK has shown interest. West Africa is still quiet in the absence of any demand. On the whole, trading conditions have continued to be far from satisfactory.

While the Government of India is placing renewed emphasis on accelerating the exports of Indian piecegoods, the odds which the exporters and exporting mills have to surmount continue to grow in dimensions. Not only the fierce competition from our competitors, but also the world-wide inclination for industrialisation to achieve self-sufficiency result into higher tariff rates and import restrictions and block the way of the passage of even our cheaper goods in the traditional markets. All these warrant a re-thinking of our export prospects.

FUTURES MARKET

Sentiment in the Cotton Futures market remained subdued and price movements were confined to a narrow range due to lack of support and unpreparedness on the part of operators to sell short following the steady trend in the spot section. The unsettled conditions prevailing in the market were mainly due to the fears that varieties like Laxmi might be tendered against the maturing contract. It was also thought that deliveries might be heavy, which induced bulls to cash profits when the rates were still high. To add to these, the Forward Markets Commission came down once again with a heavy hand on the oilseeds market. Jharilla May delivery fluctuated between Rs 683 and Rs 681.50 and August delivery between Rs 692.25 and Rs 694.

SPOT MARKET

The Spot market was generally firm with prices of all popular varieties showing a small rise over

Domestic Sector Steady: Export Front Dull

last levels. This was mainly due to investment demand, based on fears that the overall production of cotton in the country would not be even 27 lakh bales this season against 57 lakh bales estimated at the beginning of the season. This rise in prices has taken place in spite of the fact that export enquiries for India's short-staple varieties have been exceptionally poor this year.

In fact, exportable varieties have looked up in line with other growths, as it is felt that the shortage of popular varieties will finally compel the textile industry to use some of the short-staple growths in the coming months. The only exception to the firm trend is CO2, which has witnessed a recession in prices on fears that the Government will soon permit higher im-

ports of East African and Sudanese cottons, which are cheaper than CO2.

Although the Government have allowed an overall cotton export quota of 5 lakh bales in the current season, the performance so far is disappointing and doubts are expressed as to the eventual fulfilment of the quota. The quantity exported up to 28th March was 227,048 bales as compared with 69,074 bales during the corresponding period of last year. While this figure may present a bright picture, considering that it includes exports for the previous season as well and that it is against the overall quota of 5 lakh bales, the performance is far from satisfactory.

It may be recalled that the export quota of 5 lakh bales of cot-

ton was announced in two instalments—one for 2.5 lakh bales expiring on the 15th April and the other for 2.5 lakh bales expiring on the 31st August this year. Of the quota that expired on April 15, the share of shippers is 212,500 bales and the co-operative societies account for 37,500 bales. Out of the second quota, the sales registered by shippers are only 103,170 bales and 22,870 bales are on account of co-operative societies. Of the share of the co-operative societies, viz., 22,870 bales, the actual quantity passed for shipment is hardly 1,200 bales. The authorities should, therefore, take immediate steps to stimulate exports.

On the import front, enquiries continued in Sudanese growths.

WORLD CHAMPIONS CHOOSE Firestone ..SO SHOULD YOU

because — in the world's foremost racing events, Firestone tyres prove their safety year after year in standing up to the tortuous twisting, pounding and heat without a single tyre failure. You, too, can have this same safety and dependability because the Firestone tyres for your car are built with the same safety construction features as racing tyres. Firestone tyres are Safety-Proved by performance.

To the ever growing list of Firestone racing champions, comes Mickey Thompson who recorded an average speed of over 266 miles an hour at Bonneville Salt Flats in Utah.

DELHI REVIEW

WE have had the divorcement this year from the Explanatory Memorandum to the Budget of the so-called notes on important schemes, Mr Morarji Desai's explanation at the time being that a new procedure was to be adopted whereby each Ministry would be presenting its own progress report on the particular projects under its wings. As such, no opportunity was offered this year at Budget time, as was the case in previous years, to leaf through the Explanatory Memorandum and chance upon choice items of interest. Undoubtedly, keen interest was in the past aroused by, say, what was happening in regard to Hindustan machine tools or some such other public sector entity. Of course, with the categorisation, as it were, of public sector projects which have fallen to the care of particular Ministries, you are no longer able to have a composite picture of progress in the public sector. Apart from steel, by far the most important Ministry under which, presently and prospectively, development is proceeding apace is the Ministry of Commerce and Industry. Last week, intervening in the debate in the Lok Sabha on the demands for grants, Mr Manubhai Shah, the Minister for Industry, has sought efficiently to remedy any lack on this score.

The debate evoked, Mr Shah has said, both pride and humility in some of the hierarchy in the Ministry. I am glad to find Mr Shah expressing such a sentiment because, outside of the insistence that Mr Nehru has been placing on the need for an humble approach, the impression has been allowed to gather strength that New Delhi officialdom, in the new found sense of power arising from the augmentation of the public sector, has had scant respect for any other constituent in the economic landscape. Similarly, apart from an implied compliment to the private sector paid by Mr H. V. R. Iengar in a speech in Bombay, I do not believe that there has been official recognition of the achievements of private enterprise. Often, all too often, on

Mr Shah on Industrial Progress

the other hand, we have had barbed and not so veiled threats hurled in the face of the private sector. Even Mr Nehru, in a speech at Calcutta, provoked though he was, had uncharitable things to say about the private sector which, undoubtedly, he regretted later on. I find I am getting long winded, but, to put it pithily, it can also be Mr Shah's legitimate claim that, as guide and mentor of industrial development in both sectors, he has given public expression to his awareness of the fact that credit rightly belongs to private enterprise for its notable achievements during the Plan.

Starting off from a feeling of pride and humility, Mr Shah immediately got down to the business on hand. Industrial development needs foreign exchange, whether for capital goods or for raw materials. But foreign exchange is a commodity in short supply. Indian industrialists have lately been harping on the refrain that the slackening in the pace of economic growth during 1958 was due to the restrictive import policy of Government. The Minister for Industry has quoted Mr Morarji Desai as suggesting that the bleakness in our foreign exchange situation has really been in the nature of a blessing in disguise. For, and I quote Mr Shah, it has "given a great opportunity for the small, medium and big entrepreneurs in this country both in the public and private sectors to face up to the new challenge". I suppose we are to interpret this challenge in terms of a vigorous attempt at producing indigenously what heretofore we had to import; on the other side, we have to produce even more vigorously of those articles which we can export.

Export promotion is a subject which, perhaps, is the responsibility rather of Mr Lal Bahadur Shastri and Mr Nityananda Kanungo than it is of Mr Shah. But, then, it is Indian industrial development which will enable a greater surplus being made available for export, and this is very much the responsibility of Mr Shah. So it is that he has felt fit to emphasise that "all incentives of various types for reduction of costs structure" are being attended to by Government, in order that Indian goods may sell better in foreign markets. Unfortunately, the Minister for Industry does not give us a clue as to what he or the Government have in mind in this regard.

Then, approaching the problem from the point of view of imports, Mr Shah finds that 60 per cent of foreign exchange expenditure relating to industries is taken up by basic raw materials. In this sense, official policy has been directed at making this country as self-sufficient as possible, as early as possible, in the basic raw materials.

Heading this list is steel, and Mr Shah justifiably has not dilated on the subject, since steel has received enough—may be too much—publicity. It is nevertheless interesting to find Mr Shah asserting that the targeted output of 4.8 million tons of finished steel by 1962 will not leave us any surplus. Indeed, he goes to the extent of saying that, after a "little small period of a year or so," India might again experience a shortage in steel, unless the new expansion programme to be undertaken satisfies emerging demand.

But steel is only one, though possibly the most basic, of the basic raw materials. What India spends in the import of alloy and tool steels is rather high. He goes on to say that Government are contemplating the setting up of a plant for alloy, tool and stainless steel. It is at this stage that, the revised industrial resolution withal, Mr Shah has come out with the interesting suggestion that, over and above the public sector, he "would appeal to the industrialists in this country to wake up to this requirement as early as possible." As if to leave Parliamentarians in no doubt, Mr Shah stated explicitly that Indian industrialists should be mindful of the need for special steel and that he could assure, as far as Government were concerned, that they would "extend to them the maximum possible help." This, surely, is an invitation to the private sector to show initiative in a sphere of the economy which apparently had been reserved for the public sector. And, surely, this is also an indication of the flexibility and pragmatism in approach that is typifying governmental policy.

Next among the basic raw materials are non-ferrous metals. The Zavar Plant in Udaipur shows, Mr Shah said, "a potentiality not of 10,000 tons as we have earlier surveyed, but of 25,000 tons of zinc." However, since, toward the end of Third Plan, it is anticipated that India's requirement will be of the order of 100,000 tons, the indigenous production will still be pitifully small. As far as copper is concerned, all that has been done is to have the Khetri mine surveyed. Apparently, there is little that India can do to step up considerably the output of non-ferrous metals. He adds: "I would like to appeal to the industrialists that as far as these non-ferrous metals are concerned, instead of waiting for the day when the country can be sure of all the raw materials and mines and ores in this country, they should, even if necessary, base our smelter capacities on the imported ore."

The cause for Mr Shah's pride becomes clear in his listing of the progress in chemicals. Over the past seven years, the output of heavy chemicals, in terms of

value, has gone up by Rs 180 crores. India is practically self-sufficient in caustic soda, soda ash and sulphuric acid. The intention is not only to become self-sufficient but also to have a surplus in heavy chemicals for export. In the case of organic basic chemicals, imports have been costing Rs 30 crores a year. But, with German collaboration, which Mr Shah hopes "will fructify soon," a stage of near self-sufficiency in the organic intermediates is expected by the end of the second year of the Third Plan. Output of drugs was worth some Rs 45 crores last year. In the current year, with a phenomenal rise, the value may go up to between Rs 55 crores and Rs 60 crores.

Turning his attention to heavy machine building plants, the second largest item on the foreign exchange front,—it is constituted by machinery, capital goods and equipment—Mr Shah is able to report that the value of Indian production has multiplied eightfold to Rs 80 crores since 1951. In this context, Mr Shah says "... I must congratulate the industrialists in this country, particularly in the private sector, who have helped us in developing our machine building capacity". The Ranchi plant is coming up; and it would be able to produce "more or less one steel plant from A to Z", not to speak of various components for oil and mining machinery, cement machinery and various other types of heavy machinery. Mr Shah assured the House that he anticipated that, by the end of the Third Plan, 80 to 85 per cent of India's requirement of from Rs 300 crores to Rs 350 crores worth of machinery would be met by indigenous production.

The Minister for Industry has placed great stress on small and cottage industries. The provision of Rs 200 crores for the Second Plan has been described as totally inadequate. This is because his view is that, "if this country is to become industrialised in every nook and corner ... small industry is the only messenger of technology and a friend of industrialisation." So the provision that Mr Shah thinks necessary in the Third Plan for small industries is around Rs 500 crores to Rs 600 crores.

After dealing with stray other matters, Mr Shah revealed that the National Industrial Development Corporation has drawn up a new scheme whereunder it is hoped to further the modernisation of the textile mill industry. Apparently, a good deal of red tape is to be avoided, and, in manner similar to the utilisation of NIDC resources by the jute mills industry, the cotton mill industry is to be helped to replace its obsolete machinery. This end on a constructive note is typical of the energetic Mr Shah, Minister for Industry.

OLYMPUS

April 25, 1959

NORTH INDIAN NOTES

Industrial Development

Speaking in the Lok Sabha, on the demands of the Ministry for Commerce and Industry, Mr Manubhai Shah, reviewed the achievements of the country in the field of industrialisation since the Second Plan. While there was recognisable progress in some directions, there was an overall imbalance deriving from the absence of industry for manufacturing machinery required for industrialisation, as well as dependence on imports for basic raw materials.

On the credit side, the country had attained near self-sufficiency in the production of caustic soda, soda ash and sulphuric acid. Prospects of self-sufficiency are also indicated in respect of organic intermediaries. Production of many individual industries had also gone up to make a vast difference in total industrial production.

But the progress has not made much of a difference to dependence on imports for machinery and for basic industrial raw materials. The country is able to meet only a part of the demand for machinery from internal production the larger portion being still drawn from imports. Similarly import of basic industrial raw materials consume about 60 per cent of the total foreign exchange expended on imports. A significant reduction of the total import bill is inconceivable without progress in these lines.

However there are developments which would give ground for hope that the situation in respect of both would be changed in the foreseeable future. Mr Manubhai Shah has for example indicated that by the end of the Third Plan period the country would be producing annually 80 to 85 per cent of the Rs 300 to Rs 350 crores worth of machinery she would require for her industrialisation. Similarly the beginning already made in the production of steel, should go some way in supplying the country's demand for steel and thus effectively close a gap that was responsible for considerable drain of foreign exchange. Production of alloy and tool steel is a question that, in view of the lack of internal production capacity would have to be taken up and in this connection Mr Manubhai Shah has called upon the private industrialists to address themselves to this matter.

Mr Manubhai Shah also referred to the current imports of non-ferrous metals and the possibilities of finding deposits within the country itself. However, he stressed the need for at least an increase in the smelting capacity without waiting for the time when the raw materials could be had exclusively from internal sources.

Road Transport

The Road Transport Reorganisation Committee had, in the report which it submitted to the Lok Sabha, stressed the importance of developing road transport and has made a number of recommendations intended to stimulate road transport in the country.

At the outset, the Committee refutes the contention of railways that road transport is not to be encouraged in view of the higher cost of carriage by roads as compared to carriage by railways. In this connection, the Committee refers to the preference shown by distributors of consumers goods in favour of road transport and this the Committee explains in terms of the quicker delivery and other benefits such as door to door delivery which road transport provides. The Committee has condemned the undemocratic character of any attempts to determine the mode of transport which the consumer should use.

The Committee has recognised great scope for development of road transport in the country and at the same time notes with satisfaction that the mileage of roads in relation to territory and population and the number of motor vehicles in use compare very favourably with other countries. However road transport is hampered by restrictions such as inadequate road system, rigid load restrictions, lack of encouragement to truck trailer combinations, inadequate supply of vehicles multiplicity of taxes etc.

With a view to encouraging road transport in the country the Committee has urged liberalisation in the issue of permits for the carriage of goods and passenger transport. Priority of finance for road construction, and import of tensile steel for construction of bridges are the other important suggestions made by the Committee for developing road transport. The Committee has also stressed the need for withdrawal of restrictions against the use of truck-trailer combinations. The Committee has urged the removal of such restrictions in the interest of maximising transport facilities and reducing cost of road transport.

The Committee has also pleaded for caution in the nationalisation policy of the State Governments and has pointed out that this should be done only after careful assessment of the effects by way of assuring efficient, adequate economic and properly co-ordinated service to the public. With a view to avoiding apprehensions to the existing investors the Committee has urged that nationalisation, if at all it were to be decided, should be implemented only in a gradual process.

About the administrative set-up, the Committee has suggested that there should be a Transport Minister and a Transport Ministry in each State to deal exclusively with road and road transport. It is further suggested that the Ministry should have two wings, one to deal with roads, and the other with transport.

NORTH INDIAN MARKETS

Steadier Tendency in Sugar Prices

SUGAR markets have continued to rule steady. Despite the ceiling fixed by the Union Government some months ago, prices have continued to record a steady to firm trend and are quoted considerably higher than fixed by the Government. The demand from the Malabar sides has been brisk on account of the usual pre-monsoon buying for stocks purposes. Goods are generally moved by country-craft and this movement is expected to cease by about the first week of May. In view of this pre-monsoon demand, certain quarters feel that the Government should release a supplementary quota immediately to the Deccan factories to check the rising prices of the commodity.

According to the Indian Sugar Mills Association, production was 3.86 lakh tons in March, bringing the total production to 16.97 lakh tons up to 31st March 1959 as against 3.78 lakh tons in March 1958 and 17.14 lakh tons upto 31st March 1958 during the 1957-58 season. Offtake of sugar from the factories, during the month under review, was 1.71 lakh tons as against 1.72 lakh tons during the corresponding period last season. Total despatches from factories, during the first five months of the 1958-59 season, were 8.62 lakh tons against 8.08 lakh tons during the corresponding period of last season. Total closing stocks of sugar with the factories, as on the 31st March, were 11.68 lakh tons as against 13.34 lakh tons on the corresponding date last year.

Month-wise figures of production and despatches during the current season with the corresponding figures for 1957-58 are given below (in tons):—

PRODUCTION			
	1958-59	1957-58	
Novr., 1958	1,19,504	1,35,521	
Decr., 1958	3,55,658	3,67,163	
Jany., 1959	4,44,563	4,28,684	
Feby., 1959	4,11,175	4,14,440	
Total	13,30,905	13,35,778	

DESPATCHES			
	1958-59	1957-58	
Novr., 1958	1,65,483	1,53,711	
Decr., 1958	1,40,926	1,41,449	
Jany., 1959	1,88,620	1,45,918	
Feby., 1959	1,95,935	1,95,009	
Total	6,90,964	6,36,087	

It is reported that the Union Government have given licences to 22 sugar mills in Uttar Pradesh for expansion of their units. The Uttar Pradesh Government have set a target of 11.25 lakh tons of sugar output by the end of the Second Five-Year Plan. It is expected that the above decision will help the State Government to achieve the target.

Khandsari

The Khandsari market has been ruling steady and production in some centres is still continued. Rates are moving between Rs 33 and Rs 33 per maund, according to quality. Full reaction of the market to the announcement of concessions in the excise duty on the commodity will be known in the coming week.

*

Gur

In the Hapur market, Gur prices have registered small gains following a heavy fall in daily arrivals. Production in the season has virtually come to a close; but arrivals are still at an average of 500 maunds out of the stocks retained by the producers. Stocks are estimated at 95,000 maunds as against the corresponding figure of last year at 1.45 maunds. Pansara quality is quoted at Rs 19.87 to Rs 20.25 per maund.

*

Foodgrains

The bearish trend in prices, that was noticed in the Hapur Foodgrains market during the past few weeks, has continued during the week under review, thanks to increased arrivals of the new crop and the reluctance on the part of stockists to enter the market. Consumer's demand from rural areas is also dimant as it is being met locally. Harvesting of all crops including wheat is finished and winnowing operations are in full swing.

Wheat prices have recorded a further fall of over Rs 2 per maund, while Gram has also registered a further fall due to increased arrivals of new grains. In sympathy, Barley and Bejher prices are also marked down, although Jowar is ruling comparatively steady due to fresh demand for seed purposes. Pulses have registered a downward trend.

Prices in the Delhi grains market presented an easier trend on lower Punjab and Rajasthan advices coupled with large new crop arrivals. Demand remains poor on expectations of a further fall in prices. After declining sharply, Gram prices have recovered partially in response to revival of demand at lower levels from the consuming centres. Despatches to Madhya Pradesh and Madras are satisfactory. Dealers are, however, anxious to dispose of their stocks even at lower levels on fears of a further fall in prices.

The Punjab has set up an all-time record in food production this year. Wheat constitutes the principal crop and diet of the Punjab. The following statistics will speak for themselves:—1957-58—2,010,000 tons; 1956-57—2,114,000 tons; 1954-55—1,927,000 tons; 1953-54—1,735,000 tons and 1950-51—1,326,000 tons. Official estimate for the current year (1958-59) is placed at 22 lakh tons—again an all-time high record. Unofficial estimate goes up to 24 lakh tons, while internal requirements of the State are placed around 10 to 20 lakh tons.

THE PENINSULA

MADRAS city has been more in the news for the last week and the element of publicity was provided by Prime Minister Nehru's presence in the city. Mr Nehru's arrival fell on an auspicious day, the day being the Tamil New Year Day, and naturally his presence added a fresh relish to the festivities of the occasion.

The most important of the assignments of Mr Nehru in the city was the unveiling of the newly erected double size statue of Mahatma Gandhi on the Marina and though there were numerous other engagements which allowed not even a moment's respite, it was on the function on the Marina that Mr Nehru himself attached the greatest significance. Mr Nehru was evidently touched by the solemn importance of the occasion and spoke feelingly of the Mahatma's message for the uplift of the poverty-stricken millions of the country. But the major part of the speech was devoted to an analysis of the problem of the country's development and for clarifying some of the issues in the programme of the Congress party which had provoked controversy in some quarters.

Mr Nehru defined the core of the problem of the country's development as consisting in the achievement of increased production all round. The emphasis was not only on agricultural production but also on production in other sectors though in view of the predominance of agriculture, increase in production in this field has to have primacy of place. At the same time, it was also important to erect new industries especially of the heavy type for the production of iron and steel, and industry for manufacturing machinery required for industrialisation.

The real test of progress lay therefore, in the addition to the nation's wealth and, to indicate any progress, such addition has to be proportionately greater than the rate of population growth. The present high rate of population growth presented the most formidable obstacle to economic progress, and therefore Mr Nehru attached the greatest importance to population planning. The present rate was alarming and reflects the results of the measures the Government had taken for improving public health and for reducing the death rate in the country. The rate of growth has, as a consequence increased from 1.5 per cent per annum to 2 per cent and had to be brought down in the interest of rapid economic development by means of family planning schemes. Thus, it was the capacity of the country to plan for surpluses out of its total production of national wealth that sets the pace of development. A 2 per cent increase in national income would keep the economy at a stationary level of

Economic Development

progress only. In this context, the significance of a six per cent increase in national income as at present envisaged and aimed at by the Government is only obvious. The task has been rendered difficult by the fact that the expectations of the people for better life had been stimulated by the achievement of independence while at the same time, there was disinclination for sacrifices in the short-run.

In the light of the complex and formidable task which development assumes in the country, Mr Nehru justified the rate of development aimed at by the Government which however had been criticised in other quarters as being overambitious and impossible of achievement by the country. In defence of the decision of the Government in sticking to its plans Mr Nehru pointed to the massive thinking that had gone into the shaping of the country's plan and the backing, both official and unofficial, it had received. It was therefore inappropriate to say that it was an imposition on the people of the country from above and that the plan was not drawn on realistic lines or related to the resources of the country. Mr Nehru made it clear that unless the country went fast in developing the resources potential, it would be overwhelmed by the tide of increasing humanity and poverty. At the same time, there was no short run remedy for the economic ills and development had perforce to be a long term process achieving results in a gradual process consistent with the resources that could be mustered and depending on the sacrifices the people are prepared to make in its cause.

Mr Nehru envisaged a measurable rate of progress to be registered through implementing the Third Plan that is in the process of being thrashed out now. The establishment of the country's agriculture on a sure and stable foundation and the setting up basic heavy industries are the programmes set for achievement at the end of the Third Plan. This would also mark the stage when the economy would have developed self-propelling properties.

In a reference to the Nagpur resolution of the Congress in favour of cooperative farming, Mr. Nehru dealt with the criticism that had been made against Government's decision, and pointed out that such criticisms were out of place and irrelevant in view of the fact that a majority of the people had welcomed it. Mr Nehru also declared that it was his personal opinion that the cooperative principle could most profitably be applied to solve the agricultural problem and, especially in the form of service cooperatives as envisaged by the Congress Resolution, was as innocuous a measure

as could have been conceived. The technological drawbacks from which Indian agriculture suffers at present such as predominance of small and tiny holdings, lack of resources with the cultivator for the introduction of more modernised and scientific cultural practices would, Mr Nehru said, point to cooperatives as the only constructive method of approach for achieving increase in production for all time. There was therefore nothing abnormal in the step which the Congress had taken in opting for cooperative farming. While justifying the merits of cooperative and joint farming, Mr Nehru stressed the voluntary basis of such joint farming. However, to make it a success it was necessary to properly train people in the cooperative methods.

Mr Nehru also explained the concept of socialism that has been adopted and accepted as the creed of the Congress and that had been familiarised by the Avadi session of the Congress. Mr Nehru, in this connection pointed out, that the socialism of the Congress, is socialism only in so far as it indicates and defines certain broad goals of social objectives such as raising of the standard of living of the people, provision of progressively greater equality of opportunities and reduction of social and economic differences between people. The absence of rigid dogmatism Mr Nehru explained was the strongest point of merit about the socialism which the Congress had accepted. The Congress acceptance of socialism however definitely implied the unsuitability of laissez-faire approach to the problems of the country. As Mr Nehru explained it was not simply that capitalism could not increase production but that it did not have a system of priorities and therefore could not be expected to dispense justice to every section of the population. In contrast, in a country like India, where resources were limited planning was inevitable if the aspirations of the people for a better life had to be satisfied.

While, thus, planning was absolutely important for economic development, with opportunities for all people to share in the benefits, planning raised many difficult problems, formulation of a plan in a practical way and properly related to the resources of the country being perhaps the most difficult aspect of planning itself. As Mr Nehru put it, it is a question of "evolving with the resources, human energy and ability at our disposal, a plan of action" to solve the great problem of poverty that confronts the country. It was impossible for one man alone to offer a solution for this problem.

Mr Nehru also referred to the criticism which the Plans drawn by the Government and their implementation have aroused and pointed out that such criticisms

should be welcomed in the light of the good points they might contain and for the reason that any attempt at planning was liable to go wrong at some points and therefore, there was need for sentinels to put the Government right. At the same time, Mr Nehru made it plain that such criticisms should be constructive and take into account the tremendous nature of the problem that is to be solved by means of planning.

Addressing a meeting at Palayamcottai, Prime Minister Nehru underlined the need for early self-sufficiency in the production of foodgrains, if the country was to make headway in its development plans. He set this problem in the context of the fall in foodgrain production that was witnessed in recent years and the threatening rate of population growth of the order of 2 per cent per annum. While admitting the lagging progress in agricultural production as compared with performance in industries Mr Nehru attributed it to the unfavourable seasonal conditions and the persistence of low per acre yield in spite of greater potentialities.

The high rate of population growth urges prime consideration for stepping up foodgrain production to meet the yearly addition to demand. Family planning measures form part of the long-term approach to the food problem and there is no alternative to physical increase in internal production of foodgrains if regard is to be had to the need for conserving foreign exchange for more productive purposes than for importing foodgrains.

Intensive cultivation offered the only practical way out of the present morass in agricultural production; and the Government's policy is biased to favour the adoption by the agriculturists of intensive agricultural methods. But it was on co-operative farming that Mr Nehru laid the main stress in stepping up foodgrain production. In referring to the need for co-operative farming, Mr Nehru also touched on the controversy that had been stirred up in the country about the suitability of co-operative farming and the vague fears expressed about the final outcome of the measure. Mr Nehru made it clear that joint farming would be introduced only after proper preparation of the ground by the prior formation of service co-operatives.

Mr Nehru counselled patience to those who were all the time making comparisons between the country's development and the progress in the more advanced countries of the world. The progress the country was making was not slow considering the long process that was involved in the growth of the advanced countries of the West to their present industrial stature and economic position.

MADRAS REVIEW

LETTERS TO BHAI SAHIB.

This is the last in a series of 9 advertisements.

The most important man in the Tea Industry

Dear Bhai Sahib,

In your recent letter you asked a vital question: Who plays the most important part in the tea industry?

Like any other industry, the tea industry depends upon contributions made by many people, each of whom is as important as the other—it's like a chain, the strength lying in each link. Take for instance a tea planter or a tea plucker. The role played by either of them is equally important. Growing and plucking tea needs the utmost care and years of experience. The experts in the Estate Factory are responsible for manufacturing tea and sorting it into various grades through a series

of complicated processes. Then comes the delicate stage of tea-tasting and blending. Brooke Bond's experts create the right blends from hundreds of varieties. Thereafter, our salesmen, through our own system of distribution, deliver the factory-fresh tea to every part of the country, to our millions of customers, wherever they may be, in town or village.

You see, Bhai Sahib, all these people help to keep our market supplied with good tea, but the most important man in the tea industry, Bhai Sahib, is YOU — the CONSUMER.

It is for you that we have established 5 factories, 30 branches, 2,360 depots and sub-depots. Your demand for good tea keeps us striving to maintain the high standard of our blends and delivering them to the local shop in record time—fresh and pure. The consumers play the most vital role in the tea industry, because the industry exists, primarily, to satisfy you. If we achieve this, prosperity for all must surely follow.

Yours truly,

(G. V. Krishnamurthy)

Chairman

Brooke Bond India Private Limited

Please write to us at P. O. Box No. 187, Calcutta, for the free booklet 'Letters to Bhai Sahib' containing all advertisements in the series.

SOUTH INDIAN NOTES

Mysore Administration

The Gorwala report on the Mysore administration came up for discussion in the State legislature and provoked some controversy between the Government benches and the Opposition about the legitimacy of some of the criticisms which Mr Gorwala had directed against the State's administration in the report.

Mr Gorwala's reference to the conduct of the State Government in the construction of the State's

Vidhan Soudha was particularly unsympathetic and Government spokesmen were eager to deny the charge of mystery contained in Mr Gorwala's report. Opposition demand for the appointment of further investigation committees to go over the affair once again was also not found acceptable, it being pointed that the matter was the subject of thorough investigation by the Deo Committee. Mr Chennabasappa, the Minister for Public Works also pointed to the inappropriateness of the term "scandal" used by Mr Gorwala in describing the developments leading to the construction of the Vidhan Soudha, and it was pointed out that all the estimates and plans of the Vidhan Soudha had been properly approved and funds sanctioned from time to time by the State Legislature.

Mr Gorwala's remarks about the progress of the community development programme in the State were also not relished by the Minister and it was pointed out that some of the statements of Mr Gorwala on this subject were based on inaccurate data. There was no basis for condemning the community development movement in the State in view of the pretty good work done in the field.

The suggestion of Mr Gorwala for scrapping up prohibition was also attacked by the Minister for Excise, though it was not strictly on the economic merits of the case but on ideological grounds that the Minister sought to differ from Mr Gorwala on this issue. It was also denied that prohibition was a failure as was alleged by some members including Mr Gorwala himself.

Indian Finance

In view of such viewpoints expressed by the Ministers on the report of Mr Gorwala, it is quite likely that Mr Gorwala's report would for the most part remain a dead letter. The reaction of the Government benches to the report could be easily gauged from some of the scathing criticisms indulged in by Congress members against the Gorwala report. Mr Chennabasappa himself condemned the report as an "unjust attempt at blacking the Mysore administration" while another member described it as "exaggerated, unfair, and uncalled for."

★

Starch Factory

A starch producing firm for the Southern region to meet the demand of the cotton textile industry and the pharmaceutical industry for starch, was one of the long felt needs and this met with realisation only this week, when Mr Sanjiva Reddi, Chief Minister of Andhra Pradesh declared open the Starch Products Factory in the Azambad Industrial area in Hyderabad. The total capital of the company is valued at Rs 18 lakhs out of which the value of capital obtained from foreign countries represents 9.5 lakhs. The production capacity of the factory is now placed at about 20 tons per annum and it is expected to consume about 12,000 tons of maize a year.

The relative undeveloped nature of the starch industry was one of the anomalies which even the Second World War, which for the first time opened out scope for the development of the industry could not undo completely. On the contrary, the emergency starch control order proclaimed following the outbreak of the war narrowed the field even for the erstwhile small units engaged in producing starch. It was not until the Tariff Board recommended protection to the industry by the conversion of the revenue duty of 18 per cent levied then into a protective duty that the industry could set up units for production on an organised scale. Protection granted by the Government had stimulated growth of the industry and there are at present about six companies with a capital of Rs 16 crores accounting for a production of 50,000 tons of starch.

A growing demand for starch from Indian cotton textile and pharmaceutical industries provides ample scope for further development of the industry. The fact that the country at present produces maize far in excess of the quantity consumed by the starch industry endows the further development of the industry with certain prospects of success.

Mr Sanjiva Reddi expressed appreciation of the efforts made by the promoters of the company to set up a starch factory in Hyderabad which would cater to the demand for starch from the South. Mr Sanjiva Reddi also assured Government encouragement of whatever kind for the further development of the industry in the State.

25, 1959

YOUTH INDIAN MARKETS

NKS to the lead given by pepper and Ginger, the Spices set has been generally active during the past few weeks. Pepper prices in Cochin and Bombay recorded a small rise with the latter quoting Rs 663.50 per candy. The Alleppey market and Rs 96 maund in the Bombay market. Prices in both the centres, are said to be sitting tight on their own ideas that active US and should revive very soon. Prices from Lampong indicate the price of black pepper has recently moved up from 24 cents 5½ cents per pound. This has led the US consumers to turn to India which, until a few days indicated a lower parity. The expectations are, that the price will improve further in view of the fact that the new crop from Lampong will not reach the market till August next and that there is hardly any competition at present from Sarawak.

It is also expected that the supply of pepper, this year, will be smaller than last year's if present estimates turn true. Indian crop is estimated at 100 tons for the season January as against last season's 24,000 tons. The Sarawak crop, which

S. E. RLY TENDERS

Sealed tenders are invited for (i) Tender No. PB37/58 for supply of 1135 Nos. of Bracket and Guard as per ELS g. No. YO 226. Earnest money is Rs 300/-. Closing date of the tender is 14-5-59 at 12 noon.

(ii) Tender No. PB55/59 for supply of 1266 Nos. of Ring Packing and Assembly XD & WG as per Alt. 5 of CSL g. No. 504 and to specification M.31/Gr. 12 & M. 18 (16 G) etc. Earnest money is Rs 270/-. Closing date of the tender is 25-5-59 at 12 noon.

Tender forms are obtainable from the office of the undersigned (PB Section), General Reach, Calcutta-23 on payment of Rs 2/- (not refundable) per copy per tender money order to him direct or in the case of outside firms and production of cash receipts from this Rly's Chief Cashier local firms.

Firms not on this Rly's list of approved contractors must deposit in cash the earnest money as stated above with the Rly's Chief Cashier and enclose his deposit receipts therewith a valid Income Clearance Certificate along with the tender.

CONTROLLER OF STORES

Mixed Trend in Spice Prices

will be available from next month. The price of black pepper is now estimated at 9,000 tons as compared with 14,000 tons last year. The Indonesian crop, which amounted to 17,500 tons last year, is also expected to be lower this year. This anticipated shortage in the world supply of pepper may result in a mild recovery in the price of pepper this year and this is one of the factors responsible for the recent speculative activity in the pepper markets in India.

Ginger is ruling firm at Rs 400 per candy. Though the fundamental reason for the firmness in prices is the overall shortage of the new crop, the revival of demand from Aden and other West Asian centres is a contributory factor. Moreover, the recent low levels in the Indian market have attracted buyers and reports are that, within the last fortnight, Aden accounted for the purchase of 100 to 150 tons.

Cinnamon prices have, however, suffered a sharp setback during the past fortnight with ready declining to Rs 405 per Bengal maund from Rs 425. Although normally prices should have risen in view of the reduction in the importers' quota by 2½ per cent to 10 per cent, the decline in the price is attributed to the supplies of imitation cinnamon that has been discovered in Silchar, Assam. This imitation material is quoted lower at Rs 85 per maund and is said to be well-received in the market, especially in view of the growing scarcity of imported supplies.

★

Rubber

In the London market, the price of natural Rubber has risen to its highest level since June 1957 in the face of increasing demand from several sources. Spot rubber was quoted at around 25s per pound at the beginning of the year since when it has risen steadily to its present level of around 25s 4d. The main weight of the increased buying has come from the USA where the improved economic situation has encouraged dealers to replenish their stocks.

The USSR has also been in the market as a buyer although no sales have been reported in the past week or so.

Dealers are now worried that natural rubber will go on rising and tend to price itself out of the market. The further the price upswing goes, the wider becomes the gap between natural and synthetic rubber prices and the greater the incentive to use synthetic material instead.

★

Groundnut

Steady conditions prevailed in the Madras Groundnut market, thanks to the scarcity of sellers following good demand for spot goods. Arrivals averaged 25 to 30 tons per day and were mostly in the shape of new crop summer peanuts. These were taken up to Rs 178 per candy.

In the Groundnut Oil section, there was keen buying by Andhra vanaspathi interests and dealers, while Calcutta interests were buying only moderately. The rate for the ready position was quoted at Rs 346 to Rs 351 per candy.

★

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides were restricted and the available supplies were briskly cleared at levels showing an advance of 10 to 15 nP per pound. Commission houses were reported to be holding back supplies in anticipation of a further rise in prices. Arrivals of Buff hides showed no change and stocks were taken up 6 to 9 nP per pound higher. Arrivals of Calf hides were restricted.

On the export front, trading with the UK was restricted. Kip sellers, who were pushing up prices by leaps and bounds, met with some success and business was reported in common qualities of light weights up to 64d.

In the Tanned Skins section, arrivals of Sheep skins were moderate and supplies were briskly

MADRAS REVIEW

cleared. Arrivals of Goat skins were, however, negligible.

In the export section, better class goat skins were very active and sellers were quoting an advance of 3d to 6d per pound. In sheep skins, market middle class linings were strong and exorbitant prices were asked for.

★

Bangalore Silk

While the price trend in respect of Filature Silk continued to remain unchanged at the high levels during the week ended 16-4-1959, prices of Charka varieties reflected a uniform rise of 50 nP over the week. It is reported that there has been an improvement in the demand for raw silk.

Prices of Reeling Cocoons of First and Second Qualities also showed a moderate rise during the period under review.

S. E. RLY TENDERS

Sealed tenders are invited for (1) Tender No. CON/GM/22/WP/GB/59 for supply of (a) 400 cwt. Bolts M.S. hex head with nuts ¾" x 2" (b) 124 cwt Bolts M.S. hex head with nuts ¾" x 3¼" and (c) 325 cwt bolts M.S. hex head with nuts ¾" x 3¼" B.S. specification No. 916-53. Earnest money is Rs. 1000/-. Tenders will be opened on 12-5-59 at 3 P.M.

(II) Tender No. CON/GM/21/P&M/C/59 for supply of 1 No. combined punching and shearing machines. Details to be obtained from the tender schedule. Earnest money is Rs. 1000/-. Tenders will be opened on 11-5-59 at 3 p.m.

Tender forms are obtainable from the office of the Controller of Stores (construction section), Garden Reach, Calcutta-23, on remittance of Rs. 5/- (not refundable), per copy per tender by money order to him direct in the case of outside firms and on production of cash receipt from this Railway's Chief Cashier by local firms.

Tenders should accompany the receipts for depositing earnest money as stated above with this Railway's Chief Cashier without which the tenders are liable to be rejected. Approved contractors having a permanent deposit of Rs. 1000/- with the Controller of Stores are exempted. Firms not on this Railway's list of approved Contractors must enclose a valid Income Tax clearance certificate with the tender.

S9 GENERAL MANAGER

This is your Heritage

In a picturesque mountainous drive from Mahabaleshwar to Mahad, you can visit the ancient fort of Pratapggarh. This fortress is 3543 feet above sea level, and was built in 1656 by Shivaji, who at this fort defeated the army of Sultan of Bijapur. From the bastions of Pratapggarh, you have a magnificent view of the Western Ghats, an area which depicts the rugged beauty of India. And wherever you motor in this vast country, your trip will be more pleasant, and free from 'car troubles', when you drive on Caltex petroleum products.

SEE YOUR COUNTRY ON CALTEX PETROLEUM PRODUCTS

THE DUNLOP RUBBER CO. (INDIA) LTD.

Mr. John Luckham's Review

The 33rd Annual General Meeting of The Dunlop Rubber Co. (India) Ltd., was held in Calcutta on the 23rd April. Mr. John Luckham, Managing Director, said:

Gentlemen,

The Directors' Report and Accounts for the year 1958 have been in your hands for some time, and with your permission I will take them as read.

You will have seen from the Directors' Report that Mr. Reay Geddes resigned from your Board in March, 1959. It was with very great regret that the Directors had to accept his resignation which he felt necessary to submit in view of his increased responsibilities as Managing Director of the Dunlop Rubber Co. Ltd. I am sure you will want to join me in expressing the Company's appreciation of all the advice and guidance which we have received from him.

To fill the vacancy caused by the resignation of Mr. Reay Geddes, the Board appointed Mr. Cecil Stack who now retires by rotation and offers himself for re-election.

Mr. Stack is now Overseas General Manager of the Dunlop Rubber Co. Ltd., which position he took up after his retirement from India two years ago. I am sure that his great experience will be of real value to the Company.

It is also with regret that I have to report the resignations of Mr. A. W. Gillespie and Mr. F. G. W. Jackson.

Mr. Gillespie came to India in 1935, as Secretary and Chief Accountant of the Company, and was appointed a Director in 1947. I should like to express appreciation of his services, and extend best wishes to him in his retirement.

Mr. Jackson came to India in 1951 and has been Works Director since 1954. During his time at Sahaganj considerable expansions have taken place there and, of course, our new factory at Ambattur has been completed under Mr. Jackson's guidance. He is now taking up an appointment with the Dunlop Rubber Co. Ltd., and I should like to thank him for his valuable services and wish him success in his new appointment.

In the places of Mr. Gillespie and Mr. Jackson the Board are recommending the appointments of Mr. J. A. Moore and Mr. K. C. Ferguson respectively, who have each had long and varied experience in Dunlop organisation and are fully qualified to take up these appointments.

The Directors have the question of filling the remaining vacancies on the Board under very careful consideration.

THE YEAR'S TRADING:

A further increase in production was achieved during the year under review in almost all lines, though this could not keep pace with the ever rising demand.

The expansion of road transport, in particular long-distance goods traffic, referred to in my speech last year, resulted in a steady increase in the demand for truck tyres as the year progressed. In fact, even in the rainy season when, in the past years, a falling off in demand has always been felt, there was for the first time no respite and our order book remained full throughout the year.

In the car tyre market, despite a fall off in demand from the car manufacturers who were affected by the general cut in import licences, our Replacement sales continued to increase. During the year, plans were made for the introduction of a new and improved car tyre, the Gold Seal, and production of these tyres will commence shortly in all the popular sizes. I should mention here that the position of the car industry in 1959 has improved and the level of production is already increasing.

Though the bicycle manufacturers were also affected by the import restrictions on components, they managed nevertheless to increase their production during the year, with a consequent rise in their offtake of tyres. The Replacement demand was also the highest ever, and we were unable to meet this in full.

Due to the rapid industrialisation of the country, the demand for our range of Industrial Rubber Products rose to a level far above our present capacity. One of the most important items involved is Conveyor Belting and we have already put up to Government our scheme for expansion.

Our total sales of Dunlopillo increased during the year. There was a smaller demand from car manufacturers but this was more than made up by increased sales of household items.

RAW MATERIALS:

The raw material supply position was generally satisfactory except for a temporary shortage of steel for the manufacture of bicycle rims. Government's policy for the import of steel was altered during the second half of 1958, which resulted in some delay in securing supplies and we were unable to increase production of bicycle rims to our full capacity.

Our consumption of rubber in 1958 increased to 15,926 tons as against 14,424 tons in 1957. We had to import a considerable quantity of rubber in 1958 because production in India did not show any appreciable increase being 24,327 tons as against 23,767 tons

in 1957. The total all-India consumption of rubber in 1958 touched a new record at 38,006 tons as against 34,797 tons in 1957.

The world price of raw rubber was considerably lower than the Indian controlled price throughout the year and as a result we paid to the Rubber Board Rs. 48,83,913 being the difference between the imported rubber price and the Indian controlled price.

Prices of other principal raw materials remained steady throughout the year but there was some increase in local transport charges.

EXPANSION PLANS:

Last year I expressed the hope to you that our new factory at Ambattur would be ready to start production at the beginning of this year.

I am very happy to tell you that that hope has been fulfilled and in fact initial production of cycle tyres started there in December. I am sure that you would like me to express your appreciation to all those who contributed to the completion of this project on schedule.

We now have the task of getting this new factory into full production on three shifts per day and the training of labour towards this end is proceeding well.

During the year our programme for increased production of giant and cycle tyres at Sahaganj was completed and the first phase of our cycle rim expansion was also ready for operation by the end of the year. However, we could not utilise the extra rim capacity immediately as there was a raw material difficulty of which I have made mention elsewhere.

You will recall that as an initial step in providing the required additional finance for all this expansion, the sum of Rs. 203 lakhs was raised in 1957 by the issue of 14 lakhs of new Ordinary Shares of ten rupees at a premium of five rupees. This was followed by an offer to the public in September, 1958, of Rs. 1 crore of 6½% Debenture Stock 1968/73 at par, ranking pari passu with the balance of the original Debenture Stock created in 1950. I am glad to be able to report that this issue was an unqualified success.

PROFIT & LOSS ACCOUNT:

The net profit for the year after providing for depreciation, interest and taxation was Rs. 82,42,813 compared with Rs. 80,67,449 for 1957. As a result of the establishment of the Company's new factory at Ambattur the development rebate allowable in respect of the accounting year 1958 is abnormally high, and under the Finance Act 1958 the Company is required to credit to a reserve account not less than 75% of the amount allowable. Accordingly a sum of Rs. 30 lakhs has been transferred to Development Rebate Reserve and the Directors do not therefore consider it necessary, for this year, to make a further appropriation to General Reserve. After allowing for the transfer to General Reserve of the

expenses of the Debenture Stock Issue the total Reserves and Surplus have been increased by approximately Rs. 25 lakhs and cover the Ordinary Share Capital more than one and a half times. These reserves are, of course, fully employed in the business. The Directors are recommending the same rate of Ordinary Dividend as for 1957, that is 16½%. As, however, this dividend is payable for a full year on the new shares issued in the middle of 1957 the amount to be distributed is considerably higher than in the previous year, namely Rs. 48,75,000 as against Rs. 38,25,000. The surplus carried forward will then be Rs. 22,46,000.

BALANCE SHEET:

The additions to Fixed Assets during the year amounted to Rs. 2,29,14,000, the bulk of which was in respect of buildings and plant for the new Ambattur factory. The amount of depreciation written off in 1958 was Rs. 31,47,000 as against Rs. 27,69,000 in 1957.

Stock Inventories at Rs. 5,03,31,000 were Rs. 16,47,000 higher than at the close of the previous year but finished goods stocks continue to be abnormally low arising from the constantly increasing demand for the Company's products. In spite of the greater Sales turnover, Sundry Debtors remained at approximately the same level as at the end of 1957.

Turning to the liabilities side of the Balance Sheet, I have already mentioned that Reserves and Surplus are higher by Rs. 25 lakhs and Debenture Stock by Rs. 1 crore. In addition there has been an increase of Rs. 59 lakhs in bank borrowings. These figures reflect the large additional investment in Fixed Assets which has taken place during the year.

EMPLOYEE RELATIONS:

During the last year a greater strain was put upon our labour relations than at any time in the past. However, I am sure that mutual confidence has not been seriously impaired and that our management and our labour will continue to resolve their problems as in the past.

It is essential for the country's welfare that productivity should be raised to the highest level and this is a necessary and principal step to increase the standard of living. Absenteeism is one of the factors which reduces productivity in our own and other industries, and the damaging effect of this on the country's economy is not generally realised.

On the whole, staff and operatives have given us their loyal support and contributed greatly towards the successful outcome of the year's activities. I am sure you will wish to join with the Directors in thanking them.

NOTE:—THIS DOES NOT PURPORT TO BE A RECORD OF THE PROCEEDINGS OF THE ANNUAL GENERAL MEETING.

The Punjab National Bank Limited

Role of Banks in Developing Economy

Continued rise in Bank's Deposits

Statement of the Chairman Shri S. P. Jain

DEPOSITS

The deposits of your Bank during 1958 increased by Rs. 5 crores bringing the total to more than Rs. 129 crores. Most of the increase in the deposits of your Bank has been in time deposits whereas the demand deposits increased only slightly. The demand deposits in respect of all banks (excluding the State Bank) declined by about 6.4 per cent during 1953 while time deposits increased by about 26.8 per cent. The competition for deposits continued and the interest rates were ruling high. Your Bank did not, however, bid for deposits at the prevailing high rates. It intends pursuing the same policy this year as well. I express the hope that the Inter-Bank Agreement reached in September last will help not only in arresting the trend of higher deposit rates but actually scale them down to a level consistent with economic banking operations.

ADVANCES

The advance deposit ratio of all banks in the country registered a fall from 62.7 per cent to 55 per cent during the year. This has been largely due to the Reserve Bank's restrictions on advances against foodgrains etc., and also lack of demand for funds due to curtailment of imports. Your Bank's ratio of advances to deposits has been comparatively low. It has been the keen desire of your Bank to widen the scope of advances for better and profitable employment of its funds and at the same time assist national development. With this view, your Bank has been investigating and studying the commodities market and the needs of newly developing industries. Your Bank is already taking interest to the extent possible in the development of small-scale industries. It is in fact a paradox that while banks with surplus funds have need to employ them more profitably, the industries needing finance for expansion and development are handicapped for want of finance. Admittedly, the needs of industry for development purposes are much greater than what the financial institutions in the country find it possible to meet. In this connection, the commercial banks in the country can play a more effective role as a credit institution than they are able to do at present. The present situation of increasing funds with banks and the needs of industry and trade not being

adequately met by the financial institutions and the capital market has to be considered by the Reserve Bank and the Government of India with a view to giving banks new opportunities.

INVESTMENTS

With the availability of more funds advances not rising, the banks have been able to pay off a substantial amount of borrowings from the Reserve Bank and enlarge their investment portfolio. Your Bank's investments in the year increased by nearly Rs. 24 crores to more than Rs. 62 crores. The investments of all Scheduled Banks stood at an all time high of Rs. 638 crores and in Government Securities at the end of 1958 they were as much as 40.50 per cent of deposits compared with 31.69 per cent at the end of 1957.

SECOND PLAN & FOREIGN ECONOMIC ASSISTANCE

This leads me to the general trends affecting our economy and its development. The last two years have been a difficult period for our country. Many hurdles appeared in the path of the Plan's progress. But for the kindly, timely and liberal measures of assistance in terms of food supplies, aids and loans from friendly foreign countries, the World Bank and other financial institutions, it would have been impossible to meet the crisis that faced the country. The World Bank under the stewardship of Mr. Eugene Black has been taking a lead in mobilising assistance for India's development. Mr. Erhard of West Germany and Mr. Samuel Waugh, President, Export-Import Bank, U.S.A. have been responsible for positive measures of help. It is the flow of good-will from various directions through many channels that we experienced. This has been the silver lining.

THIRD PLAN: RESOURCES—INTERNAL & EXTERNAL

The need of our country is more production, larger development at a faster rate and larger savings for productive investment. In order to meet the needs of employment and higher living standards, there should be progressive acceleration in the rate of development of our economy. The tempo of development has to be kept high. Obviously, the ensuing Plan has to be larger. With the need for a big Plan, the pressure on resources domestic and foreign should obviously prove larger.

During the last two years, so far as foreign resources were concerned, we were able to pull through only the core of the Plan with finance from abroad substantially through governmental agencies. Our capacity to borrow has been strained. Our requirements are bound to grow higher with a faster rate of economic development. Having regard to this, our ideas and policies would need some alteration. Some adjustment in the quantum of foreign exchange demand is possible through a discerning policy of imports. Imports are already greatly pruned, but further scrutiny is possible in certain directions. Essential developmental needs should be able to get precedence over production of less essential goods. There may be selective imports giving high priority to developmental import to meet the more basic needs of the economy. Even with these changes, the demand for foreign exchange would remain considerable and be beyond our capacity with our present technique of borrowing. The Government and the Planning Commission should study the industrial policy from the point of view of an appropriate re-shaping. Apart from Government to Government borrowings from abroad, foreign capital both in the shape of private loans and equity participation should be induced to come into the country, work with the people shoulder to shoulder in the development of the country's economy and share the prosperity. Such private projects will be self-propelling.

So far as internal resources are concerned, many economists and experts have engaged themselves in analysing and working out the effects of increased national income and the channels of utilisation. They have also been assessing the percentage of national income to be saved for development and what and how it could be attracted to the exchequer. The invariable conclusion of the experts appears to have been that adequate resources are not saved by the society on account of increased consumption arising from higher national income. This has led the Government to the policy of cutting consumption through higher and higher excise duties and introducing compulsion or savings through higher and new taxes, Provident Fund, small savings and even proposing compulsory insurance. This policy tried during the past few years

has not yielded and does not appear likely to yield sufficient resources to the Government for carrying on the development programme at the desired level. On the other hand, the policy has resulted in lower production even in the existing industries. Thus in effect, the policy of creating compulsory savings by reducing consumption so that the money may be utilised for development to create employment has led to non-utilisation of available industrial capacity creating unemployment. This off-shoot of the policy needs study and review by the Planning Commission and the Government.

DEVELOPMENT & PRIVATE ENTERPRISE

In implementing the policy of compulsory mobilisation of domestic resources for development, it is the State which comes in for more prominent part. Incentives to efforts and initiative of individuals are relegated to a secondary place though they are appreciated in principle. In this connection, the larger enterprises in the public sector are in themselves useful in the development of the country. Many of the big projects generate factors helpful to the economy. This is so especially with regard to the steel plants, electric grids etc. But criticisms arise when public resources are utilised in fields in which individuals are anxious to carry on business and where they can operate more efficiently. Individual resources that could be available for development and which would have induced many others to save are siphoned off. Such criticisms as are made are obviously not against the public sector or public sector enterprises as such but only against the policy of including such fields of activity possible under individual initiative into the public sector.

BANK FINANCE FOR DEVELOPMENT

In widening the base of industrial development, the commercial banks in the country can play a more effective role by extending necessary credit. The Reserve Bank of India under the leadership of its Governor, Shri H. V. R. Iengar, with his knowledge of industrial development in this country and outside has given a sort of blessing to banks extending medium credit to industries. This will enable the banks to acquire experience in a new class of business and in due course contribute further through the new channels to the development of the economy.

HOUSING & HIRE PURCHASE

In recent years, the banks have learnt the technique of financing hire purchase of consumer goods. The system of hire purchase has in the past few years greatly helped the development of road transport in our country reducing pressure on the railway system. There is great scope for extend-

ing the system leading to increased consumption of different consumer goods and expansion of industries. This technique of financing can be further extended to apply to small individual houses which will not cost more than either a car or a truck. Such small houses costing anything between Rs. 10,000 to Rs. 30,000 should be easily and readily marketable. In Western Europe, credit is being extended on such securities to Housing Societies. A great handicap in this respect in our country is that the land laws both in rural and urban areas are very rigorous. This needs careful study by the Central Ministry and State Governments.

RESULTS THROUGH INCENTIVES AND INITIATIVE

The purpose of our Plans is to create a better life for the people. In this effort, the approach makes for the difference between the communist and the democratic ways of life. What is sought to be achieved through an element of compulsion in the communist way of life is sought to be achieved in the democratic way of life through incentives and initiative. It is a truth under any circumstances that compulsion produces minimum results with maximum effort. Incentives and initiative produce maximum out of the individual with the least effort. The system of incentives has been recognised in the communist way of life as is evident from the introduction of output awards, bonus etc. The more efficient machinery of the democratic way of life is thus being used in the communist society while keeping the element of compulsion in the over-all structure. India that has chosen the democratic form of Government and democratic way of life must use the means that count for results, sure and enduring.

NOTE:—This does not purport to be a record of the proceedings of the annual general meeting.

THE CHAMPDANY JUTE CO., LTD.

Notice is hereby given that an Interim Dividend of 3% for the year ended 31st March, 1959, has been declared payable on 29th May, 1959. Dividend Warrants will be issued to the registered shareholders whose names appear in the Register on the latter date or to their mandatees.

The Share Register of the Company will be closed from 13th to 29th May, 1959, both days inclusive.

By order of the Board,
JAMES FINLAY & CO.,
LIMITED.
Managing Agents.

2, Netaji Subhas Road,
Calcutta,
21st April, 1959.

BASANTI COTTON MILLS LIMITED

NOTICE is hereby given that the Twenty-sixth Annual General Meeting of the above named Company will be held at the Registered Office 24, Netaji Subhas Road, (Top Floor), Calcutta on the 30th day of May, 1959 at 11-30 A.M. for the following purposes:

- (1) To consider and adopt the Directors' Report.
- (2) To consider and adopt the statement of Accounts and Balance Sheet for the year ended 31st December, 1958.
- (3) To sanction the declaration of Dividends on Preference and Ordinary Shares.
- (4) To elect Directors.

Sir B. P. Singh Roy, one of the retiring Directors and offering himself for re-election has already completed 65 years on 11-1-1959; as it is desirable to avail of his valuable advice and service by retaining him as a Director of the Company, the following resolution will be proposed as ordinary resolution as required by Sec. 261 of the Companies Act 1956, a special notice of which has been received by the Company and is also hereby given to the shareholders.

"Resolved that Sir B. P. Singh Roy who has already completed 65 years be and is hereby re-elected a Director of the Company and that the age limit prescribed under Sec. 280 of the Companies Act 1956 shall not apply to him."

Mr. N. Beed, a Director of the Company, having attained the age of 65 years on 17-4-1959 shall vacate his office under Sec. 280(2) of the Companies Act but offers himself for re-election. As it is desirable to avail of his valuable services by retaining him as the Director of the Company the following resolution will be proposed as ordinary resolution under Sec. 281 of the Companies Act, 1956, special notice of which has been received by the Company and is also hereby given to the shareholders.

"Resolved that Mr. N. Beed who has already completed 65 years be and is hereby re-elected a director of the Company and that the age limit prescribed under Sec. 281 of the Companies Act, 1956 shall not apply to him."

Mr. P. K. Mitter who is an associate of the Managing Agents is retiring by rotation and offers himself for re-election. Special resolution under Sec. 261 of the Companies Act 1956 is necessary for his appointment. Since it is desirable to avail of his valuable advice and service by retaining him as a director of the Company, following special resolution will be proposed special notice of which has been received by the Company and is also given to the shareholders.

"Resolved that Mr. P. K. Mitter an associate of the Managing Agents under the Companies Act

1956 be and is hereby re-elected a director of the Company."

Messrs. R. C. Deb, S. K. Dutt and D. P. Mukherjee, Directors of the Company who are retiring by rotation being eligible offer themselves for re-election as directors of the Company.

- (5) To appoint Auditors and to fix their remuneration.
- (6) To re-appoint Managing Agents:

Pursuant to Sec. 330 of the Companies Act 1956 the term of office of The Calcutta Agency Private Ltd. Managing Agents of the Company, will terminate on the 15th August, 1960.

Under Sec. 326(1) of the said Act the Managing Agents are to be re-appointed by the Company in general meeting subject to the approval of the Central Government and subject to such modifications in the Managing Agency Agreement as may be made by the said Government. The following resolution will be proposed as an ordinary resolution in this respect:

"Resolved that the Calcutta Agency Private Ltd. be and is hereby re-appointed Managing Agents of Basanti Cotton Mills Ltd. for 10 years with effect from 16th August, 1960 on the existing terms and conditions subject to the approval of the Central Government and subject also to such modifications in the Managing Agency Agreement as may be made by the Central Government."

- (7) To transact any other business that may be brought forward.

The Share Transfer Books of the Company will be closed from 30th April, 1959 to 30th May, 1959 both days inclusive.

By order of the Board
THE CALCUTTA AGENCY
PRIVATE LTD.

Managing Agents.
24, Netaji Subhas Road,
Calcutta-1
The 18th April, 1959.

EXPLANATORY STATEMENT (Item 6)

The existing Managing Agency Agreement may be inspected at the Head Office of the Company during usual business hours of any week day upto and including the day of the meeting.

N.B.—Payment of any dividend, if declared, will be paid to those shareholders whose names stand registered in the books of the Company on 30th May, 1959 or to their Mandatees.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself. A proxy need not be a member.

A Corrective Reaction

Watch-Dog Writes:

STOCK markets were inclined to sag during the major part of the week, mainly due to two factors—technical considerations and the disappointment over the absence of the anticipated relief in company taxation. Towards the close of the week, however, there were some signs of steadiness, thanks to some bear-covering coupled with replacement buying.

Equities on the Calcutta Stock Exchange, after suffering a sharp setback, displayed a steadier tendency towards the close due to fresh buying support.

Prices on the Bombay Stock Exchange declined sharply in mid-week; but a number of scrips recovered sizably towards the close.

Conditions on the Madras Stock Exchange ruled fairly steady.

The London Stock Exchange gave an encouraging performance. Wall Street closed firm.

Calcutta

Calcutta, Friday Evening.

ACTIVITY on the local Stock Exchange was generally restricted last week. Lack of support coupled with renewed offerings imparted an easier trend in prices till the middle of the week. Investors, who were so long supporting the market, turned cautious on the feeling that the stocks had already got over-priced on the consideration of yield. Again, the small range of concessions announced by the Finance Minister and the absence of any relief in regard to direct taxes induced heavy selling pressure, resulting in prices developing a steady downward trend. Thanks to the emergence of buying support at lower levels and the resultant bear-covering, the market staged a slight recovery towards the close, although the turnover continued to be limited as operators were found to be cautious in their commitments.

The Giltedged section remained dull with business at a much reduced level. With the monetary conditions difficult, institutional investors showed little interest. With the result, price movements were confined to a narrow range. 3 per cent 1986 Conversion Loan touched a high of Rs 74.25 and a low of Rs 73.95, to finish at Rs 74.

Except Howrah and National which remained generally firm on sustained speculative support, Jute shares were generally neglected due to quieter advices from the

jute goods market. The news of the rise in US burlap consumption had only a temporary effect on sentiment. Howrah were taken upto Rs 24.75 from Rs 24.19 and National upto Rs 24.50 from Rs 24.37. Anglo-India were, however, marked down to Rs 239 from Rs 250; Gourepore to Rs 375 from Rs 379; India to Rs 15.81 from Rs 16.19 and New Central to Rs 15.19 from Rs 15.62. Kamarhatt met with some enquiry upto Rs 207 from Rs 197.

Coal shares ruled initially firm on reports that the industry's claim for price increase had been accepted by the Prices Revision Committee. It was also felt that the announcement in this respect would be made shortly. But, subsequent rumours that there would be no possibility of an increase in

the price caused a quieter tendency towards the close. The only three steady features were Bengal, New Beerbhoom and Western Bengal, quoting Rs 317; Rs 20.87 and Rs 6.62 respectively. Amalgamated touched at one time a high of Rs 25.75 from Rs 25 and Burrakur Rs 18.69 from Rs 18.44 to recede towards the close to Rs 25.25 and Rs 18.75 respectively. Central India were on offer at Rs 8.09 to Rs 8.25 against Rs 8.50.

Textile scrips lacked fresh support, resulting in a slight reaction from the recent high levels. Operators were generally inclined to await further developments on the cloth front. The only two scrips which met with sustained enquiry were Elgins changing hands at Rs 14 to Rs 14.25 and Kesoram at Rs 13.12 to Rs 13.50. Cawnpore

were, however, quiet at Rs 5.90 against Rs 5.19 and Jayshree at Rs 8.75 against Rs 8.94.

Trading in the Tea section continued to be restricted, as operators were inclined to await a clearer picture about the outlook for the new season's crop. Whatever dealings took place were mostly confined to the scrips of the Assam and Dooars gardens on the feeling that the dividends of these companies might be higher for 1958 than for 1957. Dauracherra changed hands at Rs 9.09 to Rs 9.25; Dhelakhath at Rs 21.94 to Rs 22.31; Grob "A" at Rs 30.37 to Rs 30.87; Grob "B" at Rs 15.56 to Rs 15.87; Hasimara at Rs 22.94 to Rs 23.06; Jayshree at Rs 12.75 to Rs 13.06; Mathoni at Rs 21.75 to Rs 22.31 and Seajuli at Rs 28.50 to Rs 29.06.

BOMBAY

Sugar shares turned quiet on lack of fresh support. Belsund were marked down slightly to Rs 13.25 from Rs 13.56; Cawnpore to Rs 10.87 from Rs 11.44; Darbhanga to Rs 21.12 from Rs 21.37 and S.K.G. to Rs 11.25 from Rs 11.75.

In the Engineering section, price movements were mostly influenced by the speculative activity in Indian Irons which, in turn, were subjected to heavy selling pressure till the middle of the week. After opening steady at Rs 24.36 and improving to Rs 24.40, Indian Irons were steadily pushed down to Rs 23.92 at which level some bear-covering coupled with replacement buying caused the scrip to recover to Rs 24.22, to close finally at Rs 24.05. TEXMACO, were however, exceptionally firm and, after touching a new high level of Rs 26.65 from Rs 25.65, finished at Rs 25.85. Britannia were at one time taken upto Rs 13.87 from Rs 13.56; Jessop upto Rs 33.75 from Rs 32.94 and I. S. Wagon upto Rs 105 from Rs 103.50, to finish at Rs 13.62; Rs 33.50 and Rs 104.50 respectively. Guest, Keen, Williams turned quiet at Rs 40.25 against Rs 40.62.

Miscellaneous issues shared the general trend of the market. Orient Paper touched at one time a low of Rs 36 from Rs 37.25 (Rs 36.80); Indian Cable Rs 32 from Rs 32.50 (Rs 32.25); Indian Aluminium Rs 22.12 from Rs 21.62 (Rs 22.12); Indian Copper Rs 4.19 from Rs 4.33

JENSON AND NICHOLSON (INDIA) LIMITED

NOTICE

NOTICE is hereby given that the Annual General Meeting of Members of the Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Monday, 18th May, 1959 at 11 a.m., for the following purposes:—

1. To receive and consider the Directors' and Auditors' Reports and the Profit and Loss Account for the year ended 31st December, 1958 and the Balance Sheet as at that date.
2. To declare Dividends.
3. To elect Directors.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from the 9th to 18th May, 1959, both days inclusive.

By Order of the Board,
H. S. CHALLIS,
Secretary.

2, Fairlie Place,
Calcutta,
23rd April, 1959.

NOTE: A member entitled to attend and vote at the above Meeting may appoint a proxy to attend and vote instead of him. A proxy need not also be a Member of the Company.

(Rs 4.24); Alkali Chemicals Rs 21.62 from Rs 22 (Rs 22.56); Dunlop Rs 34.62 from Rs 34.87 (Rs 34.75); Rohtas Rs 22.37 from Rs 22.94 (Rs 22.69); Sirpur Paper Rs 12.87 from Rs 13.50 (Rs 13.25); Aluminium Corporation Rs 13.94 from Rs 14.37 (Rs 14.31); India Steamship Rs 14.37 from Rs 14.75 (Rs 14.69) and NICCO Rs 33.12 from Rs 33.50 (Rs 33.31). Figures shown within brackets were the closing rates for the week. India Oxygen were quiet at Rs 28.12 against Rs 28.75 and so also B.I.C. at Rs 5.31 against Rs 5.44. Some Valley changed hands at Rs 5.87 to Rs 6.12; Hindustan Motors at Rs 8.91 to Rs 9.25 and Rallis at Rs 70 to Rs 71.

Bombay

EQUITIES on the Bombay Stock Exchange opened on a firm note with selected scrips showing sharp initial gains, partly reflecting normal budla charges. With higher advices from Ahmedabad and bear-covering and renewed speculative buying, the entire list advanced further with lack of sellers in some counters adding the upward trend in prices. This was, however, short-lived and the market developed a sudden reaction following the disappointment over the absence of the anticipated relief in company taxation. Again, towards the close, prices staged a slight recovery due to some short-covering coupled with replacement buying.

TEXTILES: A further significant rise in Century after higher opening highlighted trading in this section. The scrip resumed Rs 12 higher at Rs 508 and advanced further to Rs 513 on a buying spree due to limited offerings, to recede towards the close to Rs 507.50 on profit-taking. Svadeshi scored over Rs 8 on speculative buying, being influenced by the encouraging working results and the increased dividend for 1958. Bombay Dyeing started at Rs 61.20 and, after touching a high of Rs 61.50, closed lower at Rs 60.80. Kothinor changed hands at Rs 257.25 to Rs 264 to finish at Rs 260.50.

STEELS: Steel shares ruled generally quiet, as both speculative support as also offerings remained small. Tata Ordinaries opened at Rs 182.75 and, after touching a high of Rs 183 and a low of Rs 179, finished better at Rs 180.50. Indian Irons moved between Rs 23.88 and Rs 24.40, to close at Rs 24.20.

MISCELLANEOUS: Price trends in this section were mixed and there was generally realising pressure at higher levels. Shipping shares were in doldrums following a somewhat pessimistic feeling about the outlook. Scindias were on offer at Rs 17.60 to Rs 17.68 against Rs 18.12. Automobile shares were steady with Hindustan having support upto Rs 9.04 and Premier upto Rs 116.50. Sugar shares came in for selective enquiry with Belapur changing

hands at Rs 287 to Rs 292. Cement shares depicted a quietly steady tone with ACC and Digvijay moving narrowly around Rs 149 and Rs 147 respectively. In the Engineering group, Premier Construction hit a new high level of Rs 295.50 from Rs 278 on hectic demand and paucity of offerings. Among others, WIMCO met with some investment buying upto Rs 213. Bombay Burmah changed hands at Rs 492.50 to Rs 510 and National Rayon at Rs 285.50 to Rs 293.

Madras

THE Madras Stock Exchange remained fairly active and buying support was confined to only a few selected stocks.

TEXTILES: This section was active. There was a sharp jump in Madras to Rs 30.55 from Rs 25.40 quoted in the previous week, while Metturs showed a rise of Rs 10 to Rs 400 on prospects of a higher dividend. Buckinghams were marked up to Rs 180 on better demand; Bangalore Woollens to Rs 179; Kotharis to Rs 10 and Lakshmis to Rs 116.50. Loyals met with some business at Rs 31.

PLANTINBS: Tea shares were prominent in this section, thanks to better prices obtained for high-grown teas. The only exception were Periakaramalais, which remained subdued. Chembra Peaks met with some demand and ruled firm at Rs 4.24, while Highland Produce and Kalasas noted enquiries at the market rates.

Rubber shares were, however, quiet, the only firm feature being Cochin Malabar having sustained support upto Rs 6.15. Rajagiris had some sellers, while Midlands had some buyers, both at the market rates.

In the Coffee group, Ouchterlony continued to occupy the pride of place. There was good buying of this scrip form special quarters and a heavy turnover was possible upto Rs 5.68. Consolidated Coffees were done at Rs 21.30.

MISCELLANEOUS: In this section, FACTS continued to receive enquiry at Rs 8.68. Ashok Leylands maintained interest at the market rate. There was moderate enquiry for Mettur Chemicals, Aluminium Industries, Mysore Papers and Parry's Confectionery.

London

THE London Stock Exchange gave a good performance and business continued to be on a sizable scale. There was a good selective demand for industrial equities where the election appeared to have become less of a market factor. Buying was stimulated, to some extent, by good company news.

Engineering shares met with good favour, while Motor shares remained firm. Stores improved under the lead of Marks and Spencer. Oil shares were quiet with Rubber shares forging ahead. Copper shares remained rather depressed due to uncertainty re-

INDUSTRIAL INFORMATION

BOOKS FOR NEW-READING PUBLIC

The UNESCO, in co-operation with the Government of India, announced the holding of the competition for books for the new reading public in Hindi, Tar Bengali and Urdu. The object of the scheme is to encourage the production of high class and standard literature for the new-reading public. Ten prizes of the value of \$ (Rs 2,280 approximately) each will be awarded to Indian authors the best books in these languages. Four of these prizes will be awarded for Hindi books, three for Bengali, two for Bengali and one for Urdu.

The term new-reading public means who have advanced beyond the age of neo-literates, but are yet unable to comprehend material containing subtle literary flourish relatively technical language a abstract ideas. The books should relate to any one of the subjects: international understanding, science economic and social development or translations of similar classics written on any of the subjects. They should possess reading comprehensibility and literary grace.

One thousand five hundred copies of every prize-winning book may be purchased by the Government of India for distribution in Community Development and N Blocks at a price which the Ministry of Education consider reasonable in view of the prevailing in the open market. 25 per cent discount as allowed publishers on bulk purchases.

Books on simple science, international understanding and so and economic development the should comprise 96 to 144 pages while translations of simple classics may cover 160 to 256 pages. Copies of each printed book should be submitted. No manuscripts be accepted.

Authors who wish to participate in the scheme may apply or contact the Assistant Educational Officer (SW 2), Ministry of Education Room No. 26, 'M' Block, New Delhi for rules of entry and instructions for submitting the books.

The last date for the receipt entries is April 30, 1959.

New York

CONDITIONS on Wall Street generally firm. Leading commodity market averages finished at all-time peaks. Anaconda per was quoted at \$87½; General Motors at \$47 and U. S. Steel at \$90½.

PHILIPS on the job...
all the way

In industry, research begets improved quality,
increased production and major economies. All
round the world Philips research sets new stan-
dards. Philips wide range of electronic equip-
ment provides dependable means for measuring,
controlling and recording the physical properties
of matter right from its raw state to its finished
form.

This is not all...

Philips research has contributed nuclear acce-
lerators and radio isotopes; diagnostic and thera-
peutic X-Ray apparatus and pharmaceutical
specialties; time-saving appliances that create
leisure... radios, television and cinema equipment
that make it more enjoyable. Philips research
gives life more purpose—makes living more fun.

HIGHLIGHTS OF THIS ISSUE

With the availability of Reserve Bank and State Bank
returns for April 24, it is possible tentatively to suggest that
the 1958-59 busy season has drawn to its close.

Read World of Finance to discover indications suggesting
that the 1959 slack season has started.

How banking serves the PLYWOOD INDUSTRY

TIMBER suitable for plywood and tea chests is plentiful on the south-western coast, and the plywood industry in India is expanding every year. Production capacity has doubled since 1948, rating over 150 million square feet per annum now. Out of India's 53 plywood factories, more than half are in Malabar, Cochin, Travancore and Bangalore.

Banking has greatly helped in the rapid growth of the plywood industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the plywood industry.

We at Palai are proud that so many leading plywood manufacturers of South India employ the complete banking service we offer.

Current Accounts—Demand Drafts—
Telegraphic Transfers—Investments—
Letters of Credit—Bill Collection—
Deposits—Loans & Overdrafts—
Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 24 branches are strategically located, 22 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns and have the amounts credited to their accounts at any of our branches.

PALAI CENTRAL BANK LTD.

Head Office:
PALAI, KERALA STATE.

Branches at: Madras, Cochin, Quilon, Trivandrum, Alleppey, Mangalore, Bangalore, etc. Also at: Delhi & New Delhi.

FOR THE INVESTOR

Stability, Consolidation

Investment Gossip:

PRICES did prove to be on the ascendant during the week past. With the Finance Minister's clarification of so-called adjustments in regard to corporate taxation, not least being the assurance that the position of subsidiary companies would receive careful consideration, the stock exchanges took a more hopeful view than they have had for some time past. Corporate news continue to be good, selective counters continue to show gains.

Nevertheless, I sense that there has not yet started a revival of the bull phase such as we knew from the time the Budget for 1959-60 was presented. The break that interrupted the phase last week has not quite been got over as yet. So the rise in prices at the moment may prove temporary, although, with my predilection for that which is cheerful, I do not seriously believe any landslide of dimensions can occur.

But, as I say, you still have an uncertainty about the future. For example, I have been hearing iterations of the thesis that yields are far from satisfactory and will prevent any emphatic trend in prices—upward, that is.

Meantime, there were other developments as well, which served to emphasise the oscillations and fluctuations in speculative activity. Thus, the possibility of one of the steel companies being allowed to export pig iron was greeted as being of cheerful import. Similarly, reportedly, negotiations for sale to Japan of metallurgical coal and speculation about the revised prices of coal both served to bring about greater activity in the coal section. As the week ended, however, the inter-relationship between Indian Irons and Life Insurance Corporation purchases was a dampening factor, but, as if to insure that the gains during the week would not lightly be surrendered or foregone, substantial purchases, reportedly from an important quarter, enabled full and complete recovery.

But these are all speculative considerations. All this is to approach the question merely from the short term point of view. For the immediate future, which way the prices in stock exchanges will move, depends not so much on intrinsic considerations as on the whims and caprices of the stock exchange fraternity.

As a scribe safeguarding the interests of the investor, I have

necessarily to keep in view the impact of speculative activities, and I am therefore obliged to report on such movements, at some length. But, from the long term point of view, which is essentially the investor's point of view, I do not see that I should hesitate at all in affirming that I am convinced that the outlook for share prices must inevitably be upward, not merely for some time, but for the rest of the Second Plan period at the least. The heavy over-subscription to a recent new issue in Bombay is, to me, proof positive that the investor has the money with him to support any worthwhile venture, and to support the stock exchanges generally. In a word, as far as the investor is concerned, my cheerfulness is undimmed.

£ R\$

Investment Notes:

SHIPPING shares have been a firm feature during the past few weeks. In Calcutta, India Steamships are meeting with persistent support upto Rs 14.69 from Rs 14.53. In Bombay, Great Easterns are engaged upto Rs 21.66 from Rs 20.88 and Scindia upto Rs 18.24 from Rs 17.68. The main inspiration is derived from the reports that tramp freight rates have tended to harden in world markets. It is, therefore, felt that the Indian shipping companies will also stand to benefit from this development.

It is learnt that the representatives of the shareholders of the Premier Construction Company have urged the management to issue bonus shares in the ratio of one share for every two ordinary shares held while implementing the scheme of converting the Promoters' shares into Ordinary shares. They have also suggested to increase simultaneously the capital of the company by issuing one share, at par, for every six shares held. These proposals will be placed before the Board of Directors shortly.

In Bombay, there continues to be speculation and conjecture about the terms and timing of the rights issue to be made by Tata Steel. There is, unfortunately, little by way of pucca news, and much by way of rumour. It is proving an impossible enterprise to sift that which is rumour from that which may be fact. The only thing that appears to be sure is that, for their part, the Tata management are striving to put through the rights issue at par.

Hind Cycles Limited has offered, for public subscription, 27,758-6 per cent tax-free Redeemable Cumulative Preference shares of Rs 100 each, at par. The present issue represents the shares not taken up by the Company's shareholders in respect of its earlier offer of 30,000 new preference shares. The subscription list has already been opened and will close on the 6th June, 1959. The proceeds of the issue will be utilised to pay back some of the company's borrowings.

The response to the recent issue of the Colour-Chem Limited is

reported to be extremely good. The issue is expected to be over-subscribed by about six times. Meanwhile, the shares are commanding a premium of about Rs 80 per share in unofficial dealings.

£ R\$

Investment Briefs:

Assam Match has maintained the dividend at 12½ per cent (including a bonus of 2½ per cent) for 1958.

In Ahmedabad, Tarun Commercial Mills have reduced the dividend from Rs 10 to Rs 8 per share.

The Maneklal Harilal Mills have maintained the dividend at Rs 30 per share (including a bonus of Rs 10) for 1958.

In Bombay, the Modern Mills have reduced the dividend from Rs 5 to Rs 3 per share for the year ended 31st October, 1958.

Shivrajpur-Sydicare has proposed to maintain the distribution at Rs 8 per share, including a bonus of Rs 3 per share, for the year ended 30th November, 1958.

Gwallor Rayon has declared a final dividend of 50 p, making a total of one rupee per share for the year ended 31st March, 1959. This is the maiden dividend of the company.

£ R\$

Ashok Leyland Repeats

Balance-Sheet Reviews:

ASHOK LEYLAND LIMITED has reported a sizable increase in the net profit, before providing for Depreciation and Taxation, to Rs 40.66 lakhs for 1958 from only Rs 25.44 lakhs for the previous year. Sales are much higher at Rs 4.99 crores against Rs 4.26 crores. It is stated that the implementation of

the manufacturing programme has made satisfactory progress and that, at the end of last year, components representing about 45 per cent of the cif value of a complete chassis were being manufactured at the company's factory.

The amount provided for Depreciation is appreciably higher at Rs 12.66 lakhs against Rs 6.93 lakhs. The Development Reserve gets the large sum of Rs 8.73 lakhs against the transfer to General Reserve on the last occasion of Rs 5 lakhs. The big sum of Rs 6.08 lakhs was provided towards sales tax on the last occasion, while the latest regular provision for Taxation is Rs 8.09 lakhs (Rs 3.50 lakhs). The dividend on the Ordinary shares is maintained at 6 per cent.

In order to provide finance for further expansion plans of the company, arrangements are being made to issue the balance of the authorised capital. New shares will, therefore, be issued for Rs 1.25 crores. Substantial additions to buildings and machinery and other assets have been made during the year under reference.

£ R\$

Travancore Rubber

The Travancore Rubber & Tea Company has reported a net profit of as much as Rs 8.12 lakhs for the year 1958 as against only Rs 2.42 lakhs in the previous year. The amount set aside to Depreciation is Rs 1.29 lakhs (Rs 1.23 lakhs) and Rubber Rehabilitation Rs 72,186 (Rs 63,918). The provision for Taxation is Rs 2.91 lakhs (Rs 1.08 lakhs). The dividend is raised by 1 per cent to 5 per cent for the year. The earnings for the year are helped by the profit realised on the sale of land amounting to Rs 1.56 lakhs, although there is a small loss on the production of tea.

London and Overseas Representatives: Keith & Slater Ltd., Napier House, 24/7 High Holborn, London W.C. 1. Telephone: Holborn 8022.

The tea crop is bigger at 1.18 million pounds against 1.00 million pounds with the average price realised slightly higher at 160.67 cents. Likewise, the rubber crop is higher at 1.06 million pounds against 0.93 million pounds with a lower cost of production and the realisation of a higher average sale price.

£ R\$

India Sugars

India Sugars & Refineries Limited has done much better in the year ended 30th September 1958, there being a net profit of Rs 10.24 lakhs before providing for Depreciation and Taxation against a loss of Rs 3.88 lakhs in the previous year. The provision towards Depreciation is Rs 4.94 lakhs. In addition, a sum of Rs 4.87 lakhs is transferred to the Depreciation and Rehabilitation Reserve and Rs 8,000 to Development Rebate Reserve. The dividend on the Preference shares and a dividend of 10 per cent on the Ordinary shares (same) are to be paid with a transfer of Rs 6.75 lakhs from the Reserve. A quantity of 1,36,817 tons of sugarcane was crushed, while the output of sugar was 13,262 tons.

The distillery has not been able to utilise existing capacity to any considerable extent on account of continued restrictions and limited offtake.

£ R\$

Royalseema Mills

The net profit of the Royalseema Mills, before providing for Depreciation and Taxation, amounts to Rs 6.29 lakhs for 1958 as against Rs 3.67 lakhs in the previous year, thanks to higher sales, favourable cotton prices and a better yarn market from the middle of the year. The provision towards Depreciation is Rs 2.72 lakhs (Rs 1.93 lakhs). The Development Rebate Reserve gets Rs 29,000 (nil). The allocation to Taxation is Rs 1.31 lakhs (Rs 51,140) and Wealth Tax Rs 26,316 (Rs 13,288). The dividend on the Ordinary shares is maintained at 10 per cent with a transfer of Rs 60,000 (Rs 90,000) from the Dividend Equalisation Reserve.

£ R\$

Binny & Company

The lower level of imports and reduced commission received from managed companies are fully reflected in the working results of

the Binny & Company (Madras) Limited for 1958. The net profit works out to only Rs 23.80 lakhs as against as much as Rs 27.96 lakhs in the previous year. The amount provided for Taxation is smaller at Rs 12.53 lakhs against Rs 17.72 lakhs, while the sum transferred to General Reserve is Rs 50,000 (nil). The total distribution is, however, maintained at Rs 10 per share.

According to the directors' report, the company has received a licence for the establishment of a new forge plant and the requisite machinery is now being installed. Additional plant for the manufacture of sugar machinery has been imported and installed.

£ R\$

Tata Textile Group

The working results of the Tata group of textile mills—Tata Mills and the Swadeshi—tell a different tale as between the two units. While the Tata Mills have reported disappointing results—the gross profit having declined by as much as Rs 10.75 lakhs to Rs 2.20 lakhs—the Swadeshi Mills have done better. The gross profit in this case is higher by Rs 5 lakhs at Rs 28.82 lakhs. This is probably because the modernisation and renovation programme of the Swadeshi Mills has almost been completed, while a substantial programme of the Tata Mills is yet to be completed. Another fortunate feature of the working of the Swadeshi Mills is, that this company has been avoiding heavy accumulation of cloth during a major part of the year.

After providing Rs 1.5 lakhs for Depreciation (Rs 10.25 lakhs) and Rs 50,000 for Wealth Tax (same), the net profit of the Tata Mills Limited is lower at Rs 20,449 as compared with Rs 1.70 lakhs in the previous year. The dividend, as a result, is reduced to Rs 1.50 from Rs 2.00 per share.

The profit of the Swadeshi Mills has, however, gone up by Rs 5 lakhs to 28.82 lakhs. After providing Rs 1.14 lakhs for managing agents' commission (Rs 89,243); Rs 14.95 lakhs for Depreciation (Rs 13.68 lakhs); Rs 4.75 lakhs for Development Reserve (nil) and Rs 1.25 lakhs for Wealth Tax (Rs 2.50 lakhs), the net profit is nearly maintained at Rs 6.73 lakhs. The Ordinary dividend recommended is Rs 10 per share against Rs 9 per share.

Shipping

SHIPPING is an important subject that has kept the Government preoccupied with its problems during the last two months. During the last session, Parliament passed the Merchant Shipping Bill which seeks to revise and consolidate the scattered statutes on shipping in the country. Subsequently, a National Shipping Board, which is to be the highest policy making body with powers to advise on matters relating to shipping, was inaugurated. Following these developments, the problems of the shipping industry have received wider publicity, while the need for measures to stimulate its further development has also been more keenly appreciated by the Government than before.

From the very first, the Government had been associated with the industry in a role of active assistance which subsequently widened into direct participation. It is to the measures taken by the Government such as reservation of the coastal trade, loans granted to shipping companies for acquiring fresh tonnage, the indirect subsidy given by accepting higher prices for ships built in the country etc., that the country owes the little progress that it has been possible to make. As a result, the tonnage of shipping showed a commendable increase from 125,000 tons in 1946 to 646,000 tons gross today. The establishment of the Hindustan Shipyard at Visakhapatnam marked the birth of the shipbuilding industry on a modern scale and is the most outstanding instance of success in the efforts the country has taken to develop shipping.

The importance of the shipping industry, accepted and acknowledged by the Government by means of the several steps they have taken to promote its growth, has, however, not ensured a rate of progress that, having regard to the great leeway shipping has to make, could be considered satisfactory. In fact, against the background of the original emphasis laid on shipping in 1947, when a target of 2 million tons was laid down for achievement in the course of five to seven years, the subsequent attitude of the Government under both the First Plan as well as the Second Plan appears rather lukewarm. The Second Plan target for the shipping industry does not even approach 1 million tons, not to speak of 2 million tons. Even the attainment of this modest target is surrounded with uncertainty regarding both rupee and foreign exchange resources required for acquiring the balance of 171,000 tons that is now estimated to be the shortfall. In retrospect, the Government, thus, seem to have underestimated the magnitude of the problem which development of shipping presented.

There was, at no time, greater need for increasing Governmental assistance to the shipping industry than at present, when scarcity of foreign exchange bids fair to become the most formidable obstacle in the way of the country's development; which the shipping industry would have reduced to comparatively milder proportions had it been allowed more funds for acquisition of tonnage, with which to replace foreign tonnage that was otherwise inevitable. It brings out the extremely low standing of the shipping industry in

the country, that the industry is able to carry only 7 per cent of the country's overseas trade. Besides stopping the outflow of foreign exchange, the shipping industry could also add to foreign exchange resources by arranging for efficient and economic service to the export industries in their overseas trade. The time lag between the acquisition of fresh shipping tonnage and foreign exchange earning is comparatively short to rule out objections against allotment of larger funds that might be advanced on the score of the extreme tightness of the foreign exchange situation.

Priority for shipping is therefore essential and is warranted by the need to stop the heavy outflow of foreign exchange that has to be expended for the utilisation of foreign tonnage for the country's overseas trade. That the country cannot remain content with the present pace of progress without involving the whole economy also in a reduced rate of growth will not admit of any denial. The Estimates Committee of the Lok Sabha has, for example, expressed dissatisfaction with the rate of progress which has followed the implementation of schemes under the Second Plan and considers that, at this rate, it would take the country more than 20 years to reach the target of 2 million tons laid down in the shipping policy statement of 1947, which itself represents a modest target in relation to the needs of the country. The Committee has, therefore, urged higher priority for shipping under the Third Plan with allotment of larger funds than under the Second Plan, in order that the objectives of the Government's shipping policy could be achieved within a reasonable time.

Against this background to the problem of shipping development, the recent steps taken by the Government for promoting shipping assume some significance. Particularly, the setting up of the National Shipping Board brings some hope and promise to the future of shipping in the country. The Board, in the words of its Chairman, Mr G. L. Mehta, "symbolises the aspirations of Government and of Parliament for a rapid and healthy development of our merchant navy which is vital to national economy and valuable for national defence". The speeches delivered on the occasion of the Board's inauguration also suggest that a turning point in the development of shipping is near at hand. Both Mr S. K. Fatil, the Union Minister for Transport, and Prime Minister Nehru testified to concern for more rapid development of shipping and expressed the hope that the Shipping Board would successfully see this realised. Mr G. L. Mehta, the Chairman of the newly constituted Board, also brought to bear on the subject his intimate experience of the shipping industry that ensures a purposive approach to the problems of its future development.

Mr Mehta dealt with the problem straight and direct and pleaded for priority for shipping, regretting at the same time its exclusion from the core of the Second Plan. Mr Mehta explained the role of the shipping industry in the context of the current shortage of foreign exchange and stressed its vital importance from the point of view of the balance of pay-

ments position. That shipping fetches a net sum of the order of £200 million or more per annum to the United Kingdom's coffers should be an eye opener to those who doubt the importance of according priority to development of shipping. While the country will have to go a long way to develop shipping to the point of making it self-sufficient to our needs, a target of a 50 per cent share in overseas trade does not look unfeasible and therefore should merit the consideration of the Government.

In this connection, Mr Mehta has suggested a 10 year Plan for the development of shipping, so as to coincide with the Third and Fourth Plans. The need for a long term plan lies in the relatively long period taken by both ship building as well as training of personnel. A ten year plan enables more substantial results to be reaped and it should also be possible to look for a legitimate share of the international seaborne trade at the end.

As in other fields, in shipping also, finance presents the limiting factor in development. The establishment of the Shipping Development Fund has solved this problem only as far as concerns the rupee part of it, though, even in respect of this, it is a matter for doubt whether considerations of adequacy have been fully met and satisfied. Scarcity of foreign exchange presents the most formidable obstacle against the purchase of ships. There is no alternative to imports for accumulating an adequate level of tonnage within the shortest possible time. Building capacity in the country is extremely inadequate and low. Mr Mehta has in this connection suggested that the Shipping Development Fund should have adequate foreign exchange resources guaranteed to it by the creation of foreign exchange pool under its aegis constituted initially by an allocation from free foreign exchange resources and built up later by earnings of ships which are purchased in future. The merit of the scheme is that, barring the initial outlay that would have to be found from the general resources, development schemes would for all practical purposes become self-financing and for this reason the proposal seems worth considering.

Ship-building will also have to be considerably stepped up if even a modest part of the country's requirements were to be met from within. The inadequacy of one ship-building yard for a country with a vast coastline as India is recognised by the Government and made it possible for plans to be drawn up for the construction of a second shipyard. The foreign team which went into this question has, while recommending the suitability of several ports, expressed preference for Enakulam. The Government also seem agreeable to this suggestion.

The level of world prices for ships now obtaining, would indicate the present time as the most opportune for acquiring more tonnage. If the Government are, therefore, serious about seeing that shipping develops fast, they should take cognisance of the current depression in world shipping and lose no time in arranging for more tonnage.

EDITORIAL

NOTES

Targets & Techniques

The Ford Foundation team of American agricultural experts, in its report to the Government of India, has suggested 110 million tons as the Third Plan target for foodgrains production. The target is the minimum required to keep pace with the normal growth of population, even though it will involve an increase in production of the order of 40 to 45 million tons to be achieved in seven years. At the present rate of increase, it is estimated, there would be a deficit of 28 million tons by 1965-66 which cannot be filled by any programme of imports or rationing. For the attainment of the target, the annual rate of increase in food grains production will have to be tripled. Will it be possible to achieve an increase in production of this order? The team is confident that it is, provided that food problem is tackled on an emergency basis and the average output is brought to the highest levels achieved by some individual cultivators. A few weeks ago, the Finance Minister of Madras was reported to have said that the cultivators of Coimbatore, his own district, had already reached the Japanese level of output, which is over three times the all India average. What has been done in Coimbatore can be repeated in other parts of the country, through a coordinated effort to introduce improved methods of cultivation,

simultaneously with the facilities necessary for the purpose, like supply of seeds, manure, chemical fertilisers and irrigation.

The team has not only suggested the target, it has also outlined a comprehensive programme of action for its achievement. At the head of the suggestions is a public works programme for increasing, at one stroke food production and village employment. The team has suggested utilising the unemployed and under-employed in the villages for launching a programme for projects requiring primarily hand labour, such as contour bunding, land levelling, surface drainage, irrigation, wells and tanks. The suggestion is eminently practical and should be implemented without delay, especially as it only repeats the directive contained in the Nagpur Congress resolution on Approach to the Third Plan, which stressed the importance of utilising idle man-power for building up community assets of lasting value.

Other recommendations include the greater use of fertiliser, extension of irrigation, technical assistance on making better use of water, selection of areas for application of methods of intensive cultivation, reorganisation of the facilities of credit and marketing which now act as deterrents to production, and assurance of stability of tenure by getting land reforms out of the way as quickly as possible. Unfortunately a controversy over land reforms has raised so much dust as to choke any practical programme of action.

Supply of Fertilisers

The use of fertilisers to the extent necessary to reach the targets suggested by the Ford Foundation team will be possible only if there is a nine-fold increase in their supply. The problem now is not so much to overcome the prejudices of the conservative peasants, as to make adequate supplies available. The Agriculture Minister of Madras told the Fertiliser Workshop Seminar, recently held at the Coimbatore Agricultural College, that the demand for fertilisers was so great that Government had to undertake control measures under the Essential Commodities Act.

Even if fertiliser production is given adequate priority in the Third Plan, the supplies will be available only during the succeeding period. The point for consideration is whether it will be possible to find the foreign exchange, or to make alternative arrangements of payment, for fertiliser requirements which, according to the Union Food Ministry's estimate, will be of the order of 1,500,000 tons of nitrogen and 750,000 tons of phosphoric acid.

In the meantime, it will be advisable to undertake a comprehensive soil survey to investigate the present fertility status of the soils and the kind of manurial treatment best suited to the soil type. This point was stressed at the

Seminar by the Director of Agriculture, Madras, who said that it was proposed to start six more centres in the State, in addition to the one at Coimbatore established under the TCM agreement, where soils were tested free of cost and suitable fertiliser recommendations made. When fertiliser is in short supply, the available quantity should be put to the best possible use and that can be done only if fertiliser is applied after an adequate soil survey, to discover where it can be used with maximum advantage.

Plastics for Industry

Mr Lal Bahadur Shastri gave the Indian Plastics industry a new slogan when he inaugurated the convention of plastic manufacturers held in Calcutta last week. His speech suggested that it was high time that plastics manufacturers turned their attention from catering to the demands of the nursery to the requirements of industry.

Although the plastic industry is only an infant as industries go, it has already attained a giant's size in the West. Plastics are now being put to an amazing variety of uses, both in manufacturing industry and in construction, Indian Plastics manufacturers who have so far made encouraging progress in the field of consumer goods, can make an important contribution to the progress of Indian industry on up-to-date lines.

Along with the slogan, Mr Shastri also presented the manufacturers with an ambitious development programme. If the industry is to seize its opportunity, it should have a more positive outlook than is evident in the summarised reports of the president's address, which is mainly taken up with complaints against import restrictions and the quality of indigenous raw materials.

Research is indispensable for the development of an industry which is branching out in so many new directions. Surely, the Indian plastics industry has grown to the stage when it can take steps to sponsor the research on materials and processes which is essential to sustain its future development as source of industrial materials.

Mr Birla and the Eggheads

In an address to an audience of businessmen early last month, Mr B. M. Birla has given the eggheads of the Planning Commission something to think about. In a very engaging manner Mr Birla has drawn attention to certain facts of economic life which have not always been kept in view in drawing up the national plans of economic development. The manner in which he has presented his views is at least as important as the matter. The way he puts it, the propositions appear self-evident; but this must be an illusion. Otherwise, how is it that the Planning Commission came to overlook them?

The fundamental fact stressed by Mr Birla is the organic connexion between production and consumption: "Unless we produce we cannot sell, and unless we sell we cannot produce." This leads on to the idea that planning should aim at raising consumption levels through creation of additional employment and purchasing power. Mr Birla has also gently indicated how these objectives could be achieved if we plan in a really big way to build roads and houses and to bring the amenities of civilised existence to the rural areas.

Mr Birla is thoroughly dissatisfied with the rate of increase in national income envisaged by the Planning Commission. At that rate, it will take ages to double our standard of living. And he is confident that the level of investment necessary to double the national income in ten years will be possible, if suitable steps are taken to create a favourable climate for investment.

At the last session of the FICCI, the Prime Minister promised that businessmen would be consulted before deciding on the contours of the Third Plan. If the consultation is to take place, the time is now, when the Third Plan objectives are being laid down in concrete terms. The insights of Mr Birla into the realities of economic progress should provide a useful corrective to the theoretical formulations of the experts of the Planning Commission. There is no reason to fear that he will press the brake on ambitious targets; more likely, he will step on the gas to such an extent as to make them all dizzy. And the eggheads for their part may be able to show Mr Birla some of the snags which stand in the way of acting on ideas which seem so obvious.

WORLD OF FINANCE

Deficit Finance in 1958-59

IT is now possible to make an estimate about the extent of deficit financing that had to be incurred during the fiscal year 1958-59. It may be recalled that, in February last year, the Budget then presented took credit for Rs 205 crores as the overall deficit to be met by sale of ad hoc Treasury Bills in favour of the Reserve Bank. Incidentally, this constituted the smallest quantum of deficit financing since 1955-56. In the fiscal year 1956-57, deficit financing, as measured by the increase in the outstandings of Government of India Treasury Bills, amounted to Rs 240 crores. In 1957-58, there was a sharp increase in the quantum of deficit financing to Rs 459 crores. Thus, within the first two years of the Second Plan, Government had had recourse to created money for Rs 700 crores as against Rs 1200 crores estimated for the Plan period as a whole. At that stage, that is to say, at the end of the second year of the Plan, it seemed impossible for Government not to over-run, perhaps substantially, their utilisation of deficit financing as a means of meeting expenditures in connection with planned endeavours. So it is that the figure given at Budget time last year, of Rs 205 crores, was considered in many circles to be a rather optimistic estimate. Then, as the year 1958-59 progressed, and as a variety of concessions was offered, such as the relief to the cotton textile and tea industries and the suspension of compulsory reserve deposit requirements, it appeared certain that the overall deficit that would face Government would be considerably larger than as noted in the Budget. But, as the year progressed, it also became clear that governmental receipts were improving, in particular their realisations from market loans. It is at such a juncture, soon after the recommencement of public auctions of Treasury Bills, that we suggested that the figure of deficit financing given in the Budget, far from being a conservative estimate or an under estimate, would prove to be on the high side. Our expectations in this regard have been fully borne out, though the quantum of deficit financing is still higher than we had thought. This is partly because of an increase in the scale of governmental expenditures and also partly because Government's realisations from public auction of Treasury Bills and from small savings did not fulfil anticipations. Nevertheless, it came to us as a

distinct surprise when the Finance Minister, in his Budget for 1959-60, seemed to hint that deficit financing during 1958-59 was, in the Revised Estimates for that year, somewhat higher than the Budget figure. The Explanatory Memorandum seemed also to confirm the likelihood of such a phenomenon.

The summary of capital receipts, published in the Explanatory Memorandum for 1959-60, indicated that the revised figure for 1958-59 would place the net receipts from Treasury Bills at minus Rs 20 crores. But this was obviously because Rs 300 crores of Treasury Bills had been funded during the year by the creation of a special issue of 4 per cent 1973 Loan, which was sold to the Reserve Bank. This meant that, in effect, the expansion in Treasury Bills was expected to be in the environs of Rs 280 crores. Again, part of this would relate to sales of Treasury Bills by public auction. In round figures, this might have amounted to, or might have been expected to amount to, Rs 30 crores. Thus, the extent of deficit financing as such in the Revised Estimates for 1958-59 placed the figure at roughly Rs 250 crores. This marked an increase of Rs 45 crores over the Budget figure.

It is now possible to assert that the outstandings of Treasury Bills as between the end of March 1958 and the last Friday in March 1959 rose by Rs 216 crores. We believe that rise in outstandings of Treasury Bills on account of public auctions would be placed at Rs 25 crores to Rs 30 crores. Thus, the deficit financing as such, during the fiscal year 1958-59 up to the last Friday in March, could be seen to be around Rs 190 crores; in effect, therefore, the actuals of deficit financing for 1958-59 may be found to be some Rs 15 crores lower than the Budget figure and some Rs 65 crores lower than the Revised Estimates for 1958-59.

What, we may ask ourselves, is responsible for a lower volume of deficit financing than had been anticipated by the framers of the Budget? A number of factors may be adduced in this regard, and it may be worth our while to state briefly what these might be.

Firstly, there was undoubted improvement in the subscriptions to Government's new loan programme. Indeed, but for the much more satisfactory response to the gilt-edged issues during 1958-59, Government may have had to meet a rather larger overall deficit through the medium of created money.

Secondly, however, we suggest that, during March 1959, the scale of Government receipts was much better than expected. Thus, we believe that, on the receipts side, there was such an improvement under the budgetary heads that less reliance had to be placed by Government on the artifice of Treasury Bills.

Thirdly, we believe the adoption of the new procedure during last year whereby the Central Government's payments, of loans and

grants and share of excise duties, etc., to the State Governments were made by instalments, reduced the liability of the Centre in this regard during the end of the fiscal year. That is to say, during March 1959, the inter-governmental transactions should have proved to be less of a burden on the Central Government than had been the case in previous years. On the expenditure side, therefore, the procedure of payment by instalments reduced the March liability of the Central Government.

Fourthly, it is likely that expenditures generally of Government may have been less than as set down in the Revised Estimates for 1958-59. This alone of the factors that we have advanced is hypothetical, and confirmation in this regard will be available only with the next Budget, when the actuals for 1958-59 will be made known.

This brings us to the prospects for the current fiscal year. Net receipts from Treasury Bills during 1959-60 are put down at Rs 260 crores. Included in this is an element of Rs 25 crores relating to expansion in outstandings of Treasury Bills through public auction. We need to make a qualifying statement here. This figure of Rs 260 crores was arrived at before taking into account the effect of the Budget proposals. The Budget proposals, it may be recalled, increased the revenue receipts by Rs 23 crores. In that sense, the revenue deficit would correspondingly be lower and the corrected figure for receipts from Treasury Bills would be in the environs of Rs 240 crores. Even then, it will be seen that the quantum of deficit financing, after allowing for Rs 25 crores being expansion in outstandings of Treasury Bills sold through auction, would be around Rs 215 crores. Thus, the extent of deficit financing during 1959-60 was expected by the Finance Minister to be lower than the Revised Estimates for 1958-59 by something like Rs 15 crores. As compared to the probable actuals for 1958-59, however, the extent of deficit financing for 1959-60 is some Rs 25 crores higher.

The question that remains is, whether, in fact, deficit financing during 1959-60 will amount to such a figure. If it does, deficit financing during the first four years of the Second Plan would have amounted to Rs 1105 crores, leaving hardly any scope, as compared with the original estimate of Rs 1200 crores over the Plan period, for the last year of the Plan. Frankly, we believe that the prospect of whether or not created money will be smaller or larger than the budgeted figure will depend on Government's market borrowings during the current year. The Central Government, in their Budget, have taken credit for only Rs 225 crores by way of new market loans; and this compares with Rs 202 crores from market loans during 1958-59. But maturing debt to be discharged during

1959-60 amounts to Rs 118 crores against only Rs 22 crores during 1958-59. Thus, the Budget too credit from market loans for less by way of new cash than in fact has been gleaned to the Central Government's exchequer during 1958-59. At the moment, the money market does not offer much hope that market loans will fetch as large a sum as in the previous year. But, once the slack season gets into stride, we may be able to have a better idea of what the idle resources with banks will prove to be. It is at that stage that we will be able to ascertain the extent of the impact upon deficit financing of Government's market borrowings. However intuitively, we wish to suggest at this stage that the quantum of deficit financing during the current year will be much less than the Budget figure—perhaps, around Rs 175 crores.

Busy Season Tapers Off?

WITH the banking returns for the last Friday in April, there is ever sign of the 1958-59 busy season having drawn to its close. The conclusion can be drawn from figures appearing in the statutory returns of the Reserve Bank and the State Bank for April 24. However, since the relative informatic about the Scheduled Banks will not be available until the next week, we shall have to defer our analysis of the busy season just ended. Thus, we shall have to content ourselves at the moment with noting down such signs as are available of the busy season just ended:

- (1) In the week ended April 18, Active Note circulation stands contracted by Rs 13.7 crores at Rs 1751.46 crores.
- (2) There has been return of Rupee Coin from circulation for Rs 0.96 crores.
- (3) Balances of both the Central and State Governments have improved, the former by Rs 4.01 crores and the latter by Rs 11.25 crores.
- (4) The Reserve Balances of Scheduled Banks have risen by the considerable amount of Rs 13.69 crores.
- (5) The Other Loans and Advances of the Reserve Bank have declined by Rs 6.4 crores to Rs 73.44 crores.
- (6) The total of Advances of the State Bank has shown a significant decline of Rs 4.4 crores to Rs 203.22 crores.

It is to be remarked that the contraction in Active Note circulation has occurred for the first time in over six weeks. This again, the first time in several weeks that there has been an inflow of Rupee Coin in such a considerable amount. Thirdly, as from inter-governmental transactions, of which also there is evidence, the improvement in the position of both State and Central Governments would seem to in

cate that there have been net receipts to their Balances. Fourthly, although the increase in the Reserve Balances of member banks is due almost solely to the State Bank, it is of importance that the decline in the Other Loans and Advances of the Reserve Bank is due mainly to a reduction in the indebtedness of other Scheduled Banks. Finally, the contraction in the advances of the State Bank would seem to signify waning demand for money.

According to the return of the Reserve Bank for April 24, there was contraction of currency circulation both in regard to Notes and to Rupee Coin. With Rupee Securities and Foreign Securities unchanged, the Reserve Bank's cash in the till has more than doubled from Rs 13.53 crores to Rs 28.14 crores.

In the Banking Department, the fact that Investments have risen by Rs 29.44 crores is apt to be misconstrued. For, this undoubtedly relates to deficit financing incurred by Government during the week; and the misinterpretation might be that this signifies a time of need for the Central Government, in the sense that they had to replenish their balances for meeting their normal expenditures. This is far from being the case. It is true that the Central Government had to have recourse to deficit financing, but the reason that impelled them to do so did not appertain to any difficulty arising from their normal transactions. It will be seen that Government Treasury Bills held in the Banking Department of the Reserve Bank stand reduced by Rs 20.34 crores at Rs 7.06 crores. The Reserve Bank, it may be recalled, carried for some time a heavy portfolio of Government Treasury Bills purchased and discounted, because, owing to the end of fiscal year transactions of the State Governments, the latter sought to replenish their resources by sale of Treasury Bills to the Reserve Bank. Such Treasury Bills held by the Reserve Bank have apparently matured during the week and the Central Government were obliged to meet this commitment, for which purpose sales of ad hoc Treasury Bills were made in favour of the Reserve Bank. Thus, with deficit financing instituted for a special purpose, the Balances of the Central Government have, nevertheless, improved; so also with the State Governments, despite the fact that their receipts, if any, from the Central Government may have been in small amount.

The improvement in the Reserve Balances of member banks has already been traced to an increase in the State Bank's cash and balances with the Reserve Bank. The decline in Other Loans and Advances bears testimony, we repeat, to the waning or waned influence of the busy season. There is a decline of Rs 5.90 crores to Rs 18.54 crores in Bills Payable, and this might relate to further presentation of drafts issued by the Central Government in connection with their year-end dis-

bursements. Finally as regards the Reserve Bank returns, there has again been an import surplus—the recent report that exports in January and February were poor is ominously confirmed—with Balances Held Abroad marked lower by Rs 2.18 crores at Rs 30.66 crores.

The return of the State Bank for April 24 shows a rise of Rs 3.68 crores to Rs 528.62 crores in Deposits. Other Assets continue to behave in a mystifying manner, being practically halved to Rs 8.12 crores. Meantime, the total of Advances is lower by Rs 4.79 crores at Rs 203.22 crores. Investments in Government Securities are higher by nearly Rs 2 crores and, in the result, cash in hand and with the Reserve Bank benefits from all these changes, in being marked up by Rs 13.04 crores at Rs 43.20 crores.

During the week ended April 13, a smart rise has been registered in the Deposits of Scheduled Banks, being marked higher by Rs 17.34 crores at Rs 1726.67 crores. This, of course, is a new peak in bank Deposits. It is noteworthy that the State Bank, in the relevant week, experienced practically no change in its own Deposits. At the same time, the tapering off of the busy season is seen reflected in the fact that the total of Advances has risen by merely Rs 3.12 crores to Rs 1023.44 crores. It was thus possible for the Scheduled Banks to reduce their indebtedness to the Reserve Bank by Rs 7.23 crores to Rs 33.10 crores. There has been an increase in Investments to the tune of Rs 6.37 crores, and a decline in Cash Balances to the extent of Rs 13.70 crores. Both are on account of the State Bank.

The Funding—Defunding Fashion

By Paul Einzig

There was a certain amount of criticism of the Government recently on the ground that, while pursuing a fairly effective policy of cheaper money in the sphere of short-term credits, it has taken no effective measures to reduce the cost of long-term loans. The critics argue that the absence of an adequate revival of capital expenditure is mainly to blame for the slow pace of recovery from the business recession. They claim that a lowering of long-term rates of interest would go a long way towards stimulating capital expenditure. This argument is open to question, since a high proportion even of the existing producing capacity is at present unused, and cheaper capital would not, therefore, provide adequate inducement for a further expansion of producing capacity. The only sphere in which lower long-term interest rates might tend to stimulate expansion is that of building activity.

In any case, it is not so easy for the Government to reduce long-

term interest rates as it is to reduce short-term interest rates. No doubt, if the Treasury were to revert to the inflationary policy pursued during Dr Dalton's Chancellorship, when the authorities were large-scale buyers of Government loans in order to bolster up their prices, it would be possible to bring about an artificial reduction of the cost of long-term loans. But the lessons of this ill-advised experiment are well remembered, and the Government's critics do not advocate a return to that device. The Government's critics are in favour of the Keynesian remedy of de-funding. Dr Dalton is disowned, because he applied that remedy during inflation.

It is indeed amazing how the stocks of the late Lord Keynes fluctuate in academic circles in inverse ratio to business fluctuations. During the prolonged period of inflationary post-War boom the popularity of Keynesian doctrines underwent a decline on the ground that Keynes was a "depression economist" whose teachings are not valid amidst conditions of expansion and prosperity. His policy of defunding, thanks to which Britain and most other belligerent countries were able to finance the Second World War at relatively low rates of interest, became thoroughly discredited during the period of creeping inflation. That policy resulted in an unduly high proportion of floating debt, assuming in Britain mainly the form of a large volume of Treasury Bills. Now under the British system of liquidity ratios banks are in a position to expand credit as a result of an increase in their holdings of Treasury bills. For this reason an expansion of the Treasury bill issue makes for inflation.

This fact was first stated by Sir Hilton Young (now Lord Kennet) in 1919, during the inflationary period that followed the first World War. It was rediscovered again four years ago. The doctrine gained immense popularity and induced the authorities to embark on a policy of debt funding in order to reduce the Treasury bill issue. The result was that Government loans were thrust upon a market which, owing to the gradual realisation of the depreciation of sterling's purchasing power, was ing as a method of reflation. increasingly unwilling to hold fixed interest-bearing securities. Hence the increase in the yield of Government Loans under the combined effect of inflation and ill-advised funding policy. That policy must have cost the tax payer many millions of additional debt charges.

Now that the immediate problem is the creation of conditions to stimulate a business revival, many of those who had advocated a policy of funding are in favour of reversing that policy and reverting to the Keynesian method of reflation through de-funding. Their attitude has at any rate the merit of being consistent. Since they advocated funding as a method of disinflation it may seem reasonable that they should advocate de-fund-

While this idea of managing the business cycle with the aid of alternating between funding and de-funding may appear sensible from the point of view of its objective, it seems to be highly questionable from the point of view of the management of the public debt. We saw above that the application of the policy of funding during the period of post-War inflation was highly detrimental from the point of view of the terms on which the Treasury was able to fund its maturing short-term debt. In order to induce an increasingly reluctant market to absorb an artificially increased amount of long-term Loan and medium terms Loans the Treasury had to offer a higher yield.

The business recession has made the prospects of equities now appear to many people less attractive than twelve months ago. At the same time since the rise in the cost of living has halted there seems now to be more willingness on the part of the investors to hold Government Loans. For this reason now would be the time for the Treasury to fund floating debt and maturing loans on relatively favourable terms.

But to do so would conflict with the view that it is the Government's duty to stimulate business revival during a recession by means of de-funding. A reduction in the Treasury Bill issue would be denounced on the ground that it tends to reduce or keep down the volume of credit and thereby to delay recovery. So the official policy now aims at an increase of Treasury Bills, even though this means that the good opportunity for funding on reasonable terms is revised.

The application of the fashionable policy of funding during boom and de-funding during depression means that the Treasury always has to undertake funding when market conditions are the least favourable for such operations which could only be effected on costly terms. If the policy provided an effective answer to booms and depressions there would be a case for bearing the burden of the additional interest charges for the sake of mitigating booms and slumps. As I pointed out at the beginning of the article, however, the extent to which a policy of de-funding is liable to contribute towards business recovery should not be overrated. Moreover, it might be worth while to give some thought to the alternative solution which is a reduction of the extent to which the volume of credit depends on the volume of Treasury Bills. This end could be achieved by bringing about a radical change in the rules that govern liquidity ratios in the British banking system.

Those who reject this solution on the ground that it flavours Socialist interference with market trends seem to be unable to realise that the utterly perverse mismanagement of debt funding constitutes a much more artificial interference.

Pump Industry—Progress & Problems

The Pump Industry has in recent years recorded steady progress in production, manufacturing capacity and diversification of product and has reached a stage when the entire demand of the country can be met by indigenous manufacturers. Production has increased from 34,441 units in 1955 to 63,776 units in 1957. The total production during 1958 is estimated at 75,000 units by Mr J. R. Bammi, Chairman of the Indian Pump Manufacturers' Association. The increase in production would have been even more impressive if the demand had been up to expectations. At present the industry is working below rated capacity. This is particularly true of the manufacture of vertical turbine pumps. As against rated capacity of 2,500 units, the most optimistic estimate does not place current demand higher than 1200 units for this type of pumps. With present rated capacity of the 27 manufacturers on the books of the Development Wing and the additional capacity that has been licensed, the industry will have no difficulty in reaching the production target of 86,000 units fixed for 1960-61, provided the demand is fully maintained. The total installed capacity in 1959, including the expansion of existing units, will be 91,384 units. Licences have also been issued for special types of pumps to the extent of 19,818 units. When these units start production, the total rated capacity will be 1,11,202 pumps a year.

Apart from the steady increase in the standard type of Turbine and Centrifugal pumps, the industry has also branched out in manufacture of special types required for industrial applications. Pumps for the cement and paper industries are already in the market. Plans for manufacture of kerbside petrol and metering pumps, trailer pumps for fire fighting, high capacity low lift pumps for the irrigation and canal systems and submersible pumps are at different stages of progress.

The extension of production into new lines has also brought into clear relief the importance of research. The most heartening feature about the growth of this industry is the progressive attitude of its spokesmen, regarding its future prospects and the role of research, which ought to serve as an example to other industries. The industry is not content to follow the beaten track at a respectable distance behind foreign

manufacturers. Mr Bammi told the annual meeting of Pump Manufacturers! "Now that the industry has fairly established itself, we look forward to developing special types of pumps which would be ideally suited for our own country and also to develop pumps which would be more advanced in design and construction than the various types of pumps being manufactured in the world. For this purpose it is necessary to set up development and research laboratories." That is the proper spirit and, if it permeates the rest of the industrial field, the problems of development which now loom so large could be easily manageable. Mr Bammi has suggested that the industry should be prepared to take the initiative in establishing a Hydro-Mechanical Institute, if the Government agrees to contribute fifty per cent of the cost.

Like agricultural production, pump manufacture has also been adversely affected by lack of co-ordination in the planning of irrigation schemes. While the manufacturing capacity for turbine pumps has been laid down in the Second Plan on the basis of an estimated demand of 3,000 units per annum, demand has now dropped to about 1000 units per year. Many of the tube well schemes included in the Central and State Government Plans have yet to be implemented. As a matter of fact, many of the tube wells sunk during the First Plan have not been commissioned, on account of lack of electric power, feeder canals and so on. Another instance of lack of coordination is furnished by the report that Government is considering issue of licences for manufacture of turbine pumps to new manufacturers. The attitude of the industry to the issue of new licences, as defined by the Chairman, is eminently reasonable. There can be no objection if the manufacture of such pumps is to be carried on with indigenous resources only. But, in view of the shortage of foreign exchange, there is a strong case for re-examining the position, if the schemes involve foreign collaboration and expenditure of foreign exchange.

The industry has been able to get over the problem of short supply of materials, especially coke and pig iron, except in South India. The difficulties experienced by small manufacturers in respect of supply and prices of electric motors have also been solved satisfactorily, with the announcement of new fixed list of prices by a number of motor manufacturers. The one remaining problem relates to the supply and quality of indigenous ball-bearings. It is expected that the intervention of the Development Officer of the ball bearing industry who has been apprised of the difficulties of pump manufacturers will lead to the initiation of better methods of quality control. The pump manufacturers who have to guarantee the performance of their product can reasonably expect similar guarantees

from the manufacturers of vital components like ball bearings.

The pump industry is a new entrant in the export markets and has to make headway against entrenched foreign competitors. The constructive suggestion has been put forward by the Chairman of the Association, that the industry should form an export pool in India which would undertake export. This will help both maintenance of quality and also place the industry in a better position to seek redress, at the hands of the Government, of the difficulties encountered in building up exports, than if the exports were handled by individual manufacturers.

Indian Sugar

The last year was not a particularly easy one for the sugar industry. For one thing, production after reaching a peak of 20.26 lakh tons in 1956-57 dropped to 19.75 lakh tons in 1957-58 and is expected to decline further to 18.6 lakh tons in the current season. The industry had to operate under a regime of price control and a system of taxation which worked to its disadvantage as against the khandasari industry. The industry moreover had to arrange for substantial exports.

The various problems of the sugar industry are surveyed in a number of authoritative articles in the annual number of 'Indian Sugar' brought out as usual in connexion with the Annual General Meeting of the Indian Sugar Mills Association. The technical articles afford gratifying indication of the volume and quality of the research carried on in this country in the field of sugar technology. A useful statistical section giving up-to-date information adds to the value of the annual as a work of reference.

During the nine years of its existence this well-produced journal has increased its usefulness to the industry, as well to the reading public interested in industrial developments, as a record of the progress of the sugar industry and as a forum for the discussion of its problems economic or technical. The annual which is priced Rs 3/- per copy is published by the Indian Sugar Mills Association from India Exchange, Calcutta-1.

India—A Programme in Action

The business interests, Indian and American, who have co-sponsored the publication of this special advertising supplement of the 'New York Times' deserve congratulations on an excellent job of public relations. The publication presents a panoramic view of India's economic development from the standpoint of closer Indo-American cooperation in the field of trade and industry. While, Mr Chagla, India's Ambassador to the

United States, has stressed that the return from the point of view of America must not be assessed in terms of dollars and cents, there is a vast potential for the development of trade between the two countries to mutual advantage.

The history of Indo-American Trade and its vicissitudes are reviewed in an interesting article by Ambassador Bunker, while Senator Humphrey deals with US Aid for India's economic development. Mr B. K. Nehru contributes an article on Indian Planning within the democratic framework, and the qualities of that frame-work are analysed by Mr P. N. Saprú. There is an article on Hydro-Electric Power Development by Mr Hafiz Mohammad Ibrahim, Union Minister for Irrigation and Power, on cottage industries by Mrs Kamaladevi Chattopadhyaya, and on Jute by William A. Nugent, vice-president of the Burlap Council of the Indian Jute Mills Association. And the Tourist Department of the Government of India will be grateful to Justice William O. Douglas for his reminiscent article on travel in India. The text and descriptive material of the supplement was prepared under the direction of the Consulate General of India, New York, in collaboration with Frank Barth, advertising and public relations counsel, assisted by Allen Roberts and Jay Mehta.

Exports Disappointing

It would appear that receipts of foreign assistance in recent months had obscured at that time and for the time being the state of India's export earnings. For, it has undoubtedly been true that the stable character of foreign reserves as given from week to week in the Reserve Bank returns was immediately taken to connote some equilibrium being achieved as between imports and exports. This is also partly on the reasoning that, since much of foreign assistance was against specific projects, such items did not enter into our normal import/export statistics.

Even then, it is difficult to explain away the dawning complacency about our foreign exchange position. For, the current reports about a low volume of exports in January and February imply that, during these two months, imports were also at a low level.

Unfortunately, as it is the winter months which seasonally witness an expansion in export earnings, the unpalatable fact, then, is that the quantum of exports, in volume and in value, has not been up to the mark during the current season.

It is significant, in this context, that, after a long period during which foreign exchange reserves with the Reserve Bank kept stable, in two of the last three weeks, foreign exchange reserves fell by Rs 2½ crores a time. Clearly, more strenuous effort on the export front is called for.

WORLD OF JUTE

Pakistani Vs Indian Mills

THE outlook for Indian Jute Goods remains as yet uncertain. Even the enthusiasm created by the recent news of a substantial increase in US burlap consumption did not last long in the face of poor enquiry from that country. Although US consumption in March is higher by 12 million yards than the corresponding figure of last year, it is not considered to be an encouraging sign for the local mills on account of the fact that the stock figure there shows, at the same time, a rise of 37 million yards over the previous year.

With such a large stock in hand and alternate sources of supply, it seems that the USA is withholding purchases to bargain on the issue of prices. In brief, the extra consumption of burlap in the USA has not created such tight conditions as to warrant any immediate flow of orders to India.

Enquiry from other sources is also disappointing and no business is reported done with any other country. Dealers are, therefore, not very active in the absence of genuine demand. Whatever business was transacted has taken place because of shipper covering in hessians. Sackings are practically neglected with virtually no enquiry from overseas buyers. Advices from the raw jute section are also not encouraging. It is even feared that, with the increase in production of raw jute and poor shipments, stocks may show some rise at the end of April.

It is but natural for the growing feeling that it is time the Indian jute industry started thinking a little more seriously about the competition from its rival in Pakistan where, it is reported, production is running at a rate of nearly 240,000 tons a year or roughly 80,000 tons a year more than before. This is really something to think seriously about.

It is clear that the need for pushing up exports is all the more important in view of the keen competition from the Pakistani mills. That reports from Pakistan, especially when they relate to India and/or competition against Indian industries, always carry with them an amount of exaggeration is not in doubt here. But, even after making allowance for this, it is stated that Pakistani mills are rapidly increasing their production. On the other hand, Indian mills have been gradually curtailing their output by the sealing off of looms.

There are two main factors which have greatly increased the Pakistani mills' ability to compete with India. Firstly, the recently-introduced export bonus scheme, devised by West German foreign trade experts, has enabled the jute industry in Pakistan to retain a specified proportion of the foreign exchange earnings for its own use. Secondly, India is now not at all interested in Pakistani Cuttings, for which there has been no great market excepting India. In the result, Pakistani mills have been forced to consume the greater part of these Cuttings. Naturally, the production of sackings has increased.

The force of Pakistani competition has already been reflected in the recent diversion of orders. It is well-known that a large proportion of sacking orders from Burma and Australia have recently gone to the East Bengal mills, which are now directing their competition in markets once assured for Indian jute goods. It is, therefore, to be emphasised that the Indian jute mills have to bear in mind at least two things. One is that the prosperity of the Indian jute mills depends on the adequacy and cheapness of raw jute supplies. The second thing is that they should try to sell their goods according to the standards required by the overseas consumers.

★

RAW JUTE:

The Raw Jute section continued to rule quiet due to the prospects of good crop in the coming season and poor demand from the mills, who are in a position to wait till the arrival of the next crop. Moreover, as jute stocks are almost equal to five months' consumption, mills are under no obligation to buy to stabilise the raw jute market. Dealers are, therefore, eager to dispose of available supplies as early as possible, especially when the new crop is reported to be on offer at a discount. Assam Bottoms are nominally quoted around Rs 20.75 a maund for April/May delivery.

Reports from the jute-growing areas suggest that the crop is making satisfactory progress in Assam and Northern Bengal in spite of hot and dry weather. In other areas, land preparation and sowing are in progress. Preliminary reports have suggested that the next crop may turn out to be as large as the current season's.

Following were the price trends:

	April 23rd Rs.	Highest Rs.	April 29th Rs.
Hessian:			
40" x 10 Ozs.			
Ready	39.95	40.15	40.10
July-Sept.	39.15	39.75	39.35
Oct.-Decr.	38.65	38.90	38.90
40" x 8 Ozs.	32.25	32.00	32.25
40" x 7 1/2 Ozs.	29.85	30.15	30.10

Sackings:			
B. Twills:			
Ready	92.70	93.30	93.00
July-Sept.	93.50	94.50	93.75
Oct.-Decr.	93.10	93.75	93.40
Hy. Coes (Green)	93.00	93.75	93.75
Cornsacks	93.00	94.50	94.25
Cubans	116.00	117.00	116.00
A. Twills	112.00	112.50	112.50
L. Twills	104.50	105.50	105.00
D. W. Flours	109.50	110.00	109.50
Sugar Twills	106.00	107.75	107.75

Future:			
Hessian—May	39.26	39.62	39.52
Sacking—May	92.45	93.60	93.00
Raw Jute—June	21.18	21.50	21.20

WORLD OF TEA

Revival of ITA

LONDON Tea traders have expressed interest at the news of the possibility of Commonwealth talks being arranged to revive the International Tea Agreement. While welcoming such talks, they have stressed the practical difficulties for its revival.

The regulation of exports by participating member producing countries in any future agreement can be difficult to resolve. India, for example, retains a substantial part of her production for internal consumption. Her consumption has been increasing faster than her production for years and, according to one trader, that this trend will continue. Ceylon, on the other hand, exports the greater part of her production.

The attitude of the British East African growers to entering a new agreement is also problematical, especially as their production has grown so much over the past two or three decades. A bright feature has been predicted for these producers which, with a steadily mounting production, may be reluctant to participate in a new regulation scheme.

Although arrivals of tea into Calcutta have declined to 13,235 packages in March from 25,165 packages in the corresponding month of last year, total arrivals in the 1958-59 season ended March 1959 are higher at 4.64 million packages. Stocks of tea in the warehouses, at the end of March, were lower at 546,384 packages as compared to 595,239 packages at the close of March, 1958.

Meanwhile, in the Internal Sale held this week, offerings were 21,534 packages of Dusts. There was a good general demand although rates were often easier. Grainy orthodox types were sold readily at up to 4 nP per pound below last rates; but where teas of this manufacture showed a quality improvement or where small land powdery competition was keen, these were sold at about firm rates and sometimes above. Legg-cut Dooars were irregular, depending on the size of leaf appearance. The few lines of Darjeeling teas, on offer, were generally sold above valuations, depending on quality.

The plain and roored medium CTC grades were rather irregular and generally easier. Good medium types, in this category were well sought after and generally tended to be dearer. The best liquoring CTC types were also in good demand and these were sold above valuations. Following rates were quoted:— Medium Dooars Dust Rs 1.74 to Rs 1.78; Medium Assam Grainy Dust Rs 1.70 to Rs 1.74; Medium Assam CTC Dust Rs 2.10

to Rs 2.30 and Best CTC Dust Rs 2.70 to Rs 3.10. Also, 605 packages of Leaf grades were offered for internal consumption and these met with a good general demand.

In the Cochin market, about 525,000 pounds of tea were offered for internal consumption. A quite useful selection of Dusts was on offer. There was a good demand for all types. Prices for low medium Dusts with useful colour met with keen competition from the buyers and were sold at firm to dearer rates. Milled Dusts were firm and occasionally dearer. There was less enquiry for high-grown dusts and these were sold at easier rates. CTC Dusts met with better enquiry and were firm at last week's rates.

South India harvested a crop of 8.9 million pounds in February as compared to 8.7 million pounds in the corresponding month of last year. This puts the total crop, for the first two months of the current year, at 19.2 million pounds as compared to 18.6 million pounds in the corresponding period of last year.

Trade circles believe that the increased foreign interest for the South Indian tea will be maintained if prices as well as quality remain competitive. It is felt that the introduction of a cumbersome ad valorem duty in Ceylon may divert demand from there to South India. The differential between high-grown in Ceylon and South India will thus be considerable and can easily influence buyers in favour of the South Indian offerings or produce a lower price for Ceylon teas of similar quality. Nevertheless, the Common tea produced in South India has to cope with the problem of world over-production. Producers are, therefore, expected to concentrate on quality by more careful plucking.

A total of 96 million pounds of tea was exported through Cochin in 1958 as against 85 million pounds in 1957. Exports to the UK increased by almost 6 million pounds, representing slightly more than one-third of the total South India tea output. The other important foreign buyers of South Indian tea were USA, Canada and Australia. There had also been demands for more tea from the USSR and the UAR.

For the past several months, the London tea auctions have been experiencing a firm and active demand for the best quality teas with the best Assam grades selling at up to 7sh 9d per pound and the trade believes that the price will go higher. However, the prices of poorer quality teas have been falling steadily since early 1958 when they were averaging a little under 4sh a pound. The average is now 3sh. Moreover, the situation for Plain teas is now worsened by a Pakistani Government decision to try to export 20,000 tons in order to acquire foreign exchange. But, Pakistan tea prices are a good deal higher than world prices and the tea growers are likely to raise opposition to the Government's decision.

ALL modes of apprehension," ohnson once said, "the Time : most obsequious to the imation." As usual, his devastat-ommonsense has fished up a ological truth of an order: is normally accessible only to : insight. "Obsequious", in ontext, is surely Shakespea- in its utter felicity. Reading Parliamentary Committee's t on Official Language, I found lf constantly harking back to ohnson's dictum about the with which human imagina- can "order" Time about. In en or so contexts, the Cmo- e talks about doing this or "eventually," "after giving notice," "in gradual and ly stages" and so on. Its ipal recommendation has the paph heading: "Comple geover to Hindi by 1965 is not icable". And yet, its recom- ication itself is to the effect rom 1965, Hindi is to become "principal official language" English as a "subsidiary offi- language." I am far from ing a conscious equivocation e part of the Committee. ad, it is possible to reconcile seeming imminence of Hindi's tion to a higher status with plea for gradualism implied ghout and explicitly stated a variety of contexts. Of e, such a reconciliation, though ally and linguistically possible, e literally valueless since, in tice, either of the two positions d have to be definitely aban- d. I shall revert to this point moment, but, for the present, . concerned with the "obsequi- ess of time". The point is e every one, whether he wants oes not want Hindi as the al language, can, depending his mood and temperament, e the utmost comfort or me prey to the most lively ings about the precise atti- ves of the Committee. In either he will be unconsciously hing undue importance to the factor in certain portions of report; by the same compul- he would be discounting the istance of the same factor in r contexts. Even in the para- h and indeed in the sentence seeks to invest 1965 with a acteric significance, there is nscious equivocation. After , says the Committee, "English ld be used as a subsidiary al language for purposes pecified by Parliament by law ue course, for as long as ssary." When is this Parlia- tary specification due—before after 1965? Champions of li will, if optimistic, believe assert that it is before 1965, if pessimistic, openly o- etly fear that it will be beyond . Opponents of Hindi will o the opposite. For either ude, there is room, though paradoxical accommodation is a psychological than logical.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"

—As You Like It.

Indicating its "general approach", the Committee says: "The process of changeover from English to Hindi as the Union official language has to be so developed and regulated that it may be effected without causing any dislocation and with the minimum of inconvenience, and in determining the pace at which changes should be brought about, consideration has to be given, among other things, to the progress of Hindi in non-Hindi areas and the linguistic capacity of existing Government servants. The process of changeover should also not have the effect of placing any linguistic group at a disadvantage in the matter of recruitment to the public service." One needs to be particularly obtuse to imagine that the pace suggested here is anything but leisurely and considerate to the non-Hindi public. It certainly does not suggest the imminence of Parliament deciding the purposes for which English is to be confined by way of exceptions to a general adoption of Hindi as the principal language for conducting the affairs of the Union. It is barely possible, of course, to interpret this recommendation to mean that Parliament should specify that English, though in status a subsidiary language from 1965, will continue to be used as heretofore for all or most of the purposes for which it is being used. In other words, the list of exceptions will be longer than even the principal list. Though, logically, there is nothing absurd in this, the position would be rather odd from a practical point of view. Meantime, the psychological advantages (or disadvantages) will continue to operate. Hindi champions can derive such comfort as is possible from assuming that such a palpably odd situation could not have been contemplated by the Committee, but they can never be sure. Opponents of Hindi will find themselves in a similar psychological predicament. If anything, the latter will have the better cause for satisfaction, for the simple reason that, in practice, it is extremely unlikely that any substantial enlargement of the spheres in which Hindi can be used after 1965 is immediately possible. For this conclusion, they will be able to cite a hundred reasons from the report itself.

★

Consider only the minimum preliminary and preparatory work

The Government of India are advised "to review the position" and take such steps as may be found necessary. Who can believe, in the light of the assessment of the state of preliminary work already done, that 1965 will—as is implied by the principal recommendation—see Hindi as a ready instrument of administrative tasks?

★

And when the Committee comes to the preparatory work that must precede changeover to Hindi in the higher judiciary, the tasks listed are intimidating. These are, mainly, the preparation of a standard legal lexicon and the reenactment of the Statute Book in Hindi in respect of all past legislation of the Centre and the States. I am so appalled at the magnitude of these two tasks that I cannot even properly start listing the hundred difficulties that readily spring to the mind. Let one objection suffice as illustration. The Law Commission, which is merely engaged in revising central enactments, has been functioning for some years now and it has not gone even half way through its task. I have really no idea of the total number of enactments in the centre and the states; and even if one were to translate only the more important ones, I am sure that it cannot be done (in any form that is satisfactory for the purposes to which they will be put) within a reasonable period of time. Indeed Dr Raghuvira, an ardent Hindi-enthusiast, says in his minute of dissent, "A commission must be appointed for translating all the past English enactments into Hindi. It is a long work and will take a long time. The staff should be large enough to prepare complete translations in not more than ten years time." The point is that every translation will have to be carefully gone through to verify

whether it conveys all the nuances in the original enactments. And then all these have got to be re-enacted and this means long drawn out preliminary discussion (and legislation). With Parliament (and State legislatures) already cluttered with a formidable backlog of essential legislation, these reenactments will be a wasteful time-consuming project.

But the evasion by the committee of this crucial "time factor" is nowhere more apparent than in its refusal to draw up a specific programme of changeover. Like the commission that went before it, it considers that "the actual drawing up of a plan of action and the setting up of a time-schedule therewithin must be left to the Government of India themselves to do after a study of the relevant factors such as the assessment of the volume of preparatory work involved, present linguistic capacity of Government staff, approximate dates by which they could be trained, etc...." The minutes of dissent from those who support the supplanting of English at the earliest possible moment have made a grievance of this refusal to draw up a time table and from their point of view is a legitimate one. But the reason for the Committee's eagerness is not far to seek. The moment it tries its hand at the task, it will be overwhelmed with evidence of the utter impossibility of any fixed deadline for changeover. Indeed, the report in

its entirety is an eloquent argument against any kind of dogmatic expectation that the switch-over will either be easy or immediate.

And yet, the Committee has apparently implied that Hindi could be the "principal official language from 1965." One reason is, of course, that the report as a whole expresses the maximum consensus and in such reports considerable mental reservations are camouflaged under verbal legerdemain. But the more serious reason is the constitutional strait-jacket that has been incommencing both the Commission and the Committee. Even the quibble about the principal and subsidiary official language is the result of the constitutional provisions. As a matter of fact, in a foot note to Mr Frank Anthony's exposure in his minute of dissent of this ambivalence on the part of the Committee, the Chairman points out rather demurely the fact that even now Hindi is the principal official language! Many people are not aware of the fact that the chapter on official language begins with the postulate that "the official language of the Union shall be Hindi in Devanagari script" (Article 343). The use of English for all official purposes for the first fifteen years after the constitution comes into force appears as a qualification of this principal position. As a further exception to this qualification, it is provided that Hindi can be used within the first fifteen years, in addition to English, for purposes specified by the President. Clause three of article 343 states that, after fifteen years, Parliament can provide for the use of English for purposes to be specified by it. Therefore, an objection like that of Mr Anthony to Hindi being considered "the principal official language" after 1965 can be met legally by the bland assertion that, in so far as it is possible to talk of principal and subsidiary official language, Hindi is even now the principal official language! As in the case of the time factor, champions of Hindi can draw much comfort from the fact that designation of Hindi as the "principal official language"; and opponents of Hindi, on the other hand, can tell themselves that such a designation has no particular significance either before or after 1965. Reading the report, one cannot help the feeling that the Committee was seriously hampered by these and other provisions in the constitution on the subject. The very terms of its constitution made it impossible for it to express itself differently, even if it felt differently. Under Article 344, the Committee's duty is to report on the recommendations of the Commission whose duty it is to recommend as to (sic):

- the progressive use of the Hindi language for the official purposes of the Union;
- restrictions on the use of the English language for all

or any of the official purposes of the Union.

With such terms of reference, how can any one say that use of Hindi cannot be enlarged at all or that the use of English should not be restricted even by a jot? The consequence has been that its most important recommendation has been couched in equivocal terms like "principal" and "subsidiary." Without any indication of their precise practical scope, these words are emotive rather than meaningful. And what is even more significant, the recommendation is incapable of being acted upon in practice, if the rest of the argument of the report is to be taken seriously. There are certain other aspects of the report I should like to comment upon. These I will hold over for the next week.

GATEWAY GOSSIP

THE comparison between India and America has once again been invoked to support an argument, this time by Mr Chinubhai Kilachand. I shall presently come to what the context is, but I am afraid that it requires to be said now, that this tendency so to compare is getting hackneyed and tedious. The so-called basic similarities are there, I concede; it may even be that the similarity exists in the areas and spheres where it really counts; but, then, there is a very great difference as well, and, from other points of view, it is not comparison but contrast that can be made of India and the USA. What bothers me is that, where contrast there should be, comparisons are sometimes sought. Take, for example, advertising, which is what Mr Kilachand's subject was. Mr Kilachand was addressing the seventh anniversary celebrations of the Indian Society of Advertisers, and while I am in agreement with practically all that he has said about the role of advertising in the national economy, I find his reference to America, for purposes of showing that India and the USA are similarly placed, empty and unconvincing.

Was it really necessary for Mr Kilachand to assert that India and the USA are both "democracies", and that the consumer is here a king? It merely enables the poor Indian consumer to charge that, more often than not, he has in the past been mulcted. The consumer in India has been no monarch; rather is it true to say

that he has been a serf. What is more, the stage has not yet been reached when we have generally in this country a buyer's market, though it is true that, in certain spheres of production, output has drawn ahead of demand. But, even here, in sugar or cotton textiles, for example, the benefit that has accrued to the consumer has been negligible. No; I am afraid that it was an error of judgment for Mr Kilachand to have thought to say that, in both India and the USA, the consumer is king.

However, my duty as the Gateway scribe cannot conceivably be all criticism; and where certain suggestions deserve to be considered by the powers there be, it is no less my duty to acclaim them, and add perhaps my voice for the adoption and speedy implementation of such suggestions.

In this context, Mr Kilachand has not strayed from what is proper in his definition of the role of advertising, as far as India is concerned, in expanding export markets. (I shall, if I may, say no more about the role of advertising in the internal economy; that needs to be discussed only when the consumer does, in fact, rule the roost; and that may not be for some years, even many years).

Mr Kilachand has neatly tied in advertising with our present and prospective foreign exchange position. He says in this context:

"It is common knowledge that India needs a vast amount of foreign exchange for buying capital equipment, know-how and essential raw materials and that India must do its best to expand its exports so that its dependence on foreign help could be kept to the minimum. In this highly competitive world, with every country trying to show a surplus on foreign trade, winning export markets for a less developed country like India is a more difficult job than creating domestic markets. Sales promotion techniques have to be of the highest calibre."

So, apt advertisement's artful aid is to be pressed into service for maximising our exports. But I don't see that publicity abroad can succeed, unless the Indian business community becomes advertisement-minded within India itself. After all, if, within India, there is no need for advertising, except that minimum which, more often than not, is given as "patronage", you can't expect a campaign that "sells" to be drawn up for overseas markets.

But, then, I am happy to find that, in the Indian future, Mr Kilachand looks upon advertising as the means of "building up a vast consumer market." If, in fact, we begin to see evidence of entrepreneurs creating greater demand for their wares, through scientifically conceived advertising cam-

paigns, I shall be more hopeful than I am now about the prospects of India being able to augment its export earnings through the medium of publicity.

Mr Ellsworth Bunker presided over the celebrations; and Mr Kilachand thought fit to address to him what in effect is a series of requests. The teams of study groups that have been invited out to the USA are legion; bankers, productivity experts, newspapermen; not to speak of doctors and teachers and the rest. Mr Kilachand makes the serious suggestion, and makes it seriously, that a similar study tour should be invited of advertising personnel; intention? These forming the study tour group could observe and learn modern methods of marketing, sales promotion and advertising. I am disposed to think the idea a good one, especially if its result were to prove to be to imbue our advertising personnel with the notion basic to advertising, that publicity costs are to be considered part of the costs of production.

Development of animal husbandry, which is accepted to be of basic importance for improving the low nutritional standards of the population, has tended to lag behind expectations. The problem, aggravated by inadequate attention paid in the past, is essentially one of keeping the cattle population well fed and nourished. This requires tremendous efforts, considering the vast dimensions of the problem. The large number of livestock compete with the massive human population for subsistence on an area of land that has not been yielding enough for meeting the requirements of both or perhaps even either adequately.

Taken up for development since the First Five-Year Plan, results have been comparatively meagre mainly because of inability to provide larger resources, which alone could have ensured rapid progress. While there is thus need for more funds, it is also necessary to see that the problem is tackled on right lines indicated by existing deficiencies and the needs of better nutritional standards.

The need for a proper approach was particularly stressed by Dr Punjabrao Deshmukh, Union Minister for Agriculture, when he inaugurated the 13th meeting of the animal husbandry wing at the Aarey Milk Colony. A proper plan of production is one of the essentials for a system of agriculture that would meet the needs of both the livestock as well as the human population. Such a plan is still in the experimental stage. The advantages of mixed farming, fairly well established and recognised by farming experts, should commend it for countrywide adoption. Pilot projects, sought to be set up by Government to demonstrate the utility of mixed farming should popularise the technique among the agriculturists. The comparative possibilities

BOMBAY REVIEW

of specialised dairy farming have also to be explored with a view to determining the scope for it in the country. With the valuable work that is being done in these fields by the Indian Council of Agricultural Research, it should be possible to devise a production plan which would ensure maximum results.

Dr Deshmukh also stressed the need for a shift in emphasis from draught animals to milch cows. This is necessary for raising living standards, by increasing milk production and providing for more milk consumption. The present per capita consumption of milk and ghee in the country bears no comparison with world standards, and is far below the minimum level warranted by nutritional standards. Against 10 ozs. of fluid milk required (apart from ghee or oil) on the basis of nutritional standards, the present consumption milk, including ghee, works out of only 5 ozs. per capita per day.

Thus the place of advertising, and thus the need for more attention being paid to animal husbandry. I make no apology for such esoteric combination of subjects forming the basis of this week's Gateway Gossip. After all, if you accept that advertising is part of the industrial and consumption apparatus, you have also to admit that planned animal husbandry will, as it were, enable a gain in nutritional standards for the human population. Both are subjects, therefore, which result, or should result, in an increase in the standard of living.

S. E. RLY TENDERS

Sealed tenders are invited for Tender No. CONJGM[23] WP[B]59 for supply of Railway Weigh Bridge as per specification to be obtained from the tender schedule. Tenders will be opened on 18-5-59 at 3 P.M.

Tender forms are obtainable from the office of the Controller of Stores (Construction Section), Garden Reach, Calcutta-23, on remittance of Rs 5/- (not refundable) per copy by money order to him direct in the case of outside firms and on production of cash receipt from this Rly's Chief Cashier by local firms.

Tender should accompany the receipt for depositing earnest money of Rs 1000/- with this Rly's Chief Cashier at Garden Reach, Calcutta-23 without which the tender is liable to be rejected. Approved contractors having a permanent deposit of Rs 1000/- with the Controller of Stores are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

S13 GENERAL MANAGER

GATEWAY NOTES

Cotton Textile Industry

The crisis in the Cotton textile industry which started nearly a year ago has continued without any indications of improvement in conditions. The reduction in the excise duty thrice done between December 1957 and July 1958, has failed to achieve effects on the scale expected. The difficulties of the industry are reflected in the curtailment of production, accumulation of textile stocks with the mills, low sale prices, deterioration in the employment situation and sharp fall in the exports of cloth.

Addressing the annual general meeting of the Mill-owners' Association in Bombay, Mr Ramnath A. Podar, Chairman of the Association, traced the troubles of the industry to consumer resistance to prices. If this were to be true, the increased production of foodgrains this year and the consequent possible rise in agricultural income, should offer some hopeful prospects for an abatement of the present uneasy situation.

Resilience of the cost structure is of utmost importance in the present conditions of extreme rigidity and towards this end, the various elements of the cost structure would need re-examination. Considering that cotton prices and wages constitute the major part of the cost of cloth, it is evident, that reduction in the cost of production would be insubstantial without revision of the cotton prices and wages. The tendency to pile up burdens on the industry to placate hostile labour, has in this context, ominous implications for the industry. Similarly the prices for cotton in the country are out of parity with world prices and will have to be progressively brought down.

Replacement and rehabilitation of out-worn machinery are long-delayed reforms indispensable for cost reduction. It is heartening that the Government, at the suggestion of the Textile Inquiry Committee have appreciated the need for such measures and have accepted the suggestion of the Committee for the installation of about 3000 automatic looms for purposes of promoting cloth exports, besides agreeing to a scheme for the progressive replacement of the present looms by automatic ones, at the rate of 2,500 automatic looms a year. The National Industrial Development Corporation could promote such rehabilitation by the provision, on an adequate scale, of the finance needed for acquiring new machinery. It was only recently that Mr Mahubhai Shah indicated in the Parliament that the NIDC has streamlined its procedure for extending credit facilities to needy industries. It was the credit provided by the NIDC which enabled the jute mill industry to complete

its rehabilitation scheme. The cotton textile industry which is confronted with a rehabilitation problem which is no less formidable than that of the jute industry has a strong case for similar assistance from the NIDC.

★

American Aid

ADDRESSING the inaugural meeting of the Indo-American Society, Mr Elsworth Bunker, American Ambassador in India, explained the objectives of US policy of economic and technical assistance to the less developed countries. Mr Bunker made it clear that the US policy, in this respect, was innocent of any sinister motive and that it had also nothing to do with fighting communism. It was only from the idealistic motive of sharing her abundance of wealth with less fortunate countries with a view to promoting peace and stability throughout the world that the US had embarked on its vast programme of extensive assistance to the under-developed countries.

That there are no misgivings in our country about American intentions in their programme of economic aid, would be clear from the very fact that India had welcomed and accepted large-scale aid of all kinds from the US because such aid had been given without strings attached. However, American policy regarding aid in other contexts and to other countries had not remained unsuspect. America is the sponsor and leading partner of many military alliances such as the Nato, Seato, Baghdad Pact etc and this had involved her in programmes of military assistance to the countries participating in such alliances with the US. Unlike the purely economic aid extended by America, the military aid programme has been the cause of some embarrassment to countries which are friendly with the US, because of the misuse of such American aid for purposes not originally meant for. The American military aid to Pakistan has been the subject of such misunderstanding in India because of the frequent incursions which the Pakistan military, which is armed with weapons supplied by America, is inclined to make into the Indian territory. The recent shooting down of the IAF plane which had happened to stray into the Pakistan territory, by Pakistan military came as a climax to such activities of Pakistan. The Pakistani action was without precedent; for there had been innumerable instances of trespass committed by Pakistan military planes on the Indian territory, which, however, the India Government had rightly overlooked. The incident has raised feelings in the country against American military aid to Pakistan. The assurance given by Mr Bunker that America will not countenance any aggression by Pakistan against India and that, in case of any serious aggression America would side with the aggrieved, should in such context, remove any feeling of insecurity that the Pakistan action would have caused in Indian minds.

GATEWAY MARKETS

Bullion Prices Touch All-time Peak

BUOYANT conditions were noticed on the Bombay Bullion Exchange, both Gold and Silver touching new peak levels and breaking all previous records. Increasing spot demand, less arrivals, declining stocks and much reduced receipts of unauthorised gold were the bullish factors.

Although the factors, which have contributed to the sustained firmness at this time of the year are common knowledge, the phenomenal levels to which the yellow metal has been pushed up this year is largely attributed to scarcity of contracts and the recent Syndicate buying at all important centres like Delhi, Bombay and Madras.

A significant factor, that has helped the upward trend in prices, is the relatively low arrivals of unauthorised metal these days, thanks to the vigilance exercised by the customs. Moreover, the United Arab Republic Government's decision to demonetise Egyptian bank notes is considered as a big blow to smugglers, particularly in Gold. The rumours have gained currency that the Indian notes will also be withdrawn from West Asia so as to eradicate smuggling of yellow metal in the country. Bulls are jubilant over these news and have further strengthened their hold on the market. With meagre floating stocks and the heavy budia rates in favour of their opponents, bears are compelled to cover their outstandings.

It is also interesting to note that the price of sovereign has reached to a record level of Rs 78.25, due mainly to acute scarcity of supply. Arrivals of gold amounted to 9,000 tolas as against an offtake of 4,000 tolas. Ready rates moved between Rs 124.12 and Rs 124.56.

Although sentiment in the Silver section was affected adversely by reports of relaxation of imports of Chinese dollars from Tibet, the underlying sentiment remained strong and prices managed to hold their high levels. Ready rates moved between Rs 202.62 and Rs 203.37.

★

Oils & Oilseeds

Conditions on the Bombay Oilseeds Exchange ruled generally quiet. The tendency in Groundnut, however, continued to be firm.

Prices in the Castorseed section remained generally steady on the hope of a revival in export enquiries in castor oil. Reports from the USA indicated that Brazil had been able to realise a slightly higher price of 13½ cents per pound. This induced hopes that the USA might be more responsive in respect of Indian commercial oil around 13 cents. Although the domestic prices

continued to be higher by about a quarter cent, shippers felt that the prospects for business had improved significantly. In the ready section, ready rate was quoted at Rs 31.19 and Castor Oil, commercial quality, at Rs 15.44.

Prices in the Linseed section ruled generally easy. Reports of heavy floods in Argentina raised hopes of business in Indian linseed oil and recurring rumours of the issue of tenders for linseed oil by Australia also imparted stability at lower levels. Linseed Bold ready was quoted at Rs 32.44 and Linseed Oil at Rs 15.94.

In the Groundnut section, prices moved within a narrow range. The spot position continued to be as tight as ever with the arrivals, both in the city and at the terminal markets in the growing areas, declining day by day. The offtake, on the other hand, was well maintained. Nizam Bold quality was quoted at Rs 39.50 and Groundnut Oil at Rs 20.87.

★

Yarn

Listless conditions continued to prevail in the Yarn market with prices showing a downward tendency in the absence of any support. The relief granted by the Union Finance Minister failed to impress the market. It was felt that the relief would not be enough to place the industry on a sound footing. Further there was considerable anxiety over the proposed formation of a Corporation to handle the distribution of imported as well as the indigenously-produced yarns. Staple-fibre yarns were also subjected to selling pressure, while Cotton yarns presented a dull front.

The Development Council for Art Silk industry has concluded its deliberations over the revised export promotion scheme for rayon textiles. Draft proposals, in this connection, have already been formulated and a green signal from the Government of India will enable the industry to resume exports, which are virtually at a standstill for the last two months.

It is proposed to establish a central organisation for exports, which may be known as the Rayon Textiles Export Corporation. This Corporation will function as an agency for the import of yarn and pulp, but not other raw materials such as chemicals and colours for which licences are proposed to be given against exports of rayon textiles. It will charge such margins on yarn and pulp as may be decided upon by the Government for every period of six months in consultation with the industry. The funds built up from such levies will be utilised for compensating exporters for losses in exports, research in rayon textiles and sales promotion.

It is also proposed to prescribe the minimum and maximum levels of prices for different export varieties to avoid the possibilities of under-invoicing or over-invoicing. The proposals provide for pre-shipment inspection by the Government or by an institution approved by the Government with the understanding that the cost of inspection will not exceed 0.1 per cent of the value of exports.

May 2, 1959

WORLD OF COTTON

SENTIMENT on the Bombay Cotton futures market remained generally bullish during the week under review, thanks to various favourable factors. Operators derived inspiration from the "room rates" fixed for the maturing May contract. The basis fixed was construed bullish, since it was observed that attraction to offer tenders would now be less. Unless the price of May contract hardens by about Rs 10 to Rs 15 and that ready prices remain unaltered, chances of Jaydhar finding place in tenders are now considered low. This accelerated the pace of recovery in the futures section, which tended to revive since Friday last. The improving cloth position, increased optimism about exports of Indian cotton and the persistent strong position of raw cotton also helped sentiment to improve. Jharilla May contract moved between Rs 686.25 and Rs 693.25 and August between Rs 694.50 and Rs 698.75, to finish at Rs 693 and Rs 698.25 respectively.

Conditions in the Spot market continued to remain firm and, owing to the dearth of good quality cotton, prices showed a gradual improvement. The spectacular rise in prices has, however, caused serious concern to both the Government and the textile industry. The authorities seem to be busy studying measures to avert a fur-

KYANG TEA SEED COMPANY, LIMITED.

Notice is hereby given that the Thirty-first Annual General Meeting of the Members will be held at the Registered Office of the Company, No. 4, Bankshall Street, Calcutta, on Thursday, the 28th May 1959, at 3 P.M., for the following purposes:—

- (1) To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1958.
- (2) To declare a Dividend.
- (3) To elect a Director.
- (4) To appoint Auditors and to fix their remuneration.

The Transfer Register will be closed from the 20th May, 1959 to 28th May, 1959 both days inclusive.

N.B.—A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and the Proxy need not be a Member of the Company.

By Order of the Board,
SHAW WALLACE & COMPANY LTD.

Managing Agents.
Calcutta, 28th April, 1959.

Bullish Sentiment

ther rise in prices; but are reluctant at present to take drastic steps like requisitioning of stocks and introducing rationing of cotton.

With each succeeding month, the Indian cotton crop estimate for the current season is being progressively revised downwards. The overall crop outturn is now placed at only 46.50 lakh bales against earlier expectations of over 55 lakh bales at the beginning of the season. More than 70 per cent of the crop has by now been marketed and the season in Bombay, Madhya Pradesh and the Punjab States has almost ended. Mills have started buying their requirements directly from the producing centres in Mysore and Andhra. With the result, arrivals in Bombay have considerably declined.

Meanwhile, the mill consumption of indigenous cotton has been steadily going up, the figure for the first six months of the current season being higher at 23.49 lakh bales against 22.96 lakh bales in the corresponding period of last season. The Government of India are, therefore, expected to expedite imports of cotton with a view to reducing the pressure of domestic growths.

The earlier quotas for both sterling and dollar area cottons are reported to have been almost exhausted, the quantity licensed for import till the 15th April, this season, being estimated at 3.30 lakh bales. So far, imports of 3.57 lakh bales have been permitted. This suggests that further imports of about 2.5 lakh bales will be allowed during the season.

The question of permitting further imports of cotton is expected to be discussed. There are indications that mills are eager buyers of Sudanese, East African and Egyptian cottons at the current rates, since many of them fear that the shortage will continue till the end of the season. Rumours are current that the Government will prefer imports of American cotton to those from the sterling area countries. However, mills are not inclined to buy more cotton from America this season, since other cottons have also considerably declined during the past three months.

On the export front, this season's exports are far better than the previous season's. Though the USA bought less, considerable improvement has been recorded in our exports to other countries, notably Japan, which imported, up to March 28, some 1.5 lakh bales against only 48,000 bales in the corresponding period of the previous season. Hong Kong and the Continent were the other countries, whose offtake of our cotton showed an appreciable rise.

Exports by rail, from 1st September 1958 to the 16th April 1959, amounted 133,480 bales. Estimated

mill consumption in Bombay, during the same period, was 818,528 bales as against 831,944 bales in the corresponding period of last season. Estimated stock of raw cotton, held by the exporters, dealers and mills in Bombay, as on the 16th April 1959, was 581,322 bales as against 729,635 bales on the corresponding date of last year.

x

CLOTH AND PIECEGOODS

Conditions in the Bombay Piecegoods market showed a perceptible improvement. In the domestic sector, there was increased offtake in all varieties of cloth with better prices obtained for certain special qualities. The improved offtake was reflected in the reduced stocks with the mills. At 494,900 bales at the end of February, the position compares very favourably with 601,800 bales at the end of October and 557,900 bales at the end of the corresponding period of last year. More or less, a similar situation prevails in Yarn also. There has been an impressive reduction in the unsold stocks of yarn, held by the mills at the end of February when these were substantially lower at 53,900 bales as compared with 63,900 bales in the previous month and 94,500 bales at the corresponding period of last year.

Meanwhile, production of mill cloth has been nearly maintained, the provisional figure for March being 407 million yards as compared with 406 million yards for March last year. However, the output in March shows a distinct improvement over the previous month by as much as 15 million yards. Yarn production in March is 15 million pounds higher at 138 million pounds. The comparable figure last year was 141 million pounds.

On the export front, conditions are better than in the previous week. Indications are now available that the protracted lull in India's cloth trade with the Sudan will end shortly. The Sudanese Government has already announced its decision to allow imports of 4.5 lakh pounds of cotton textiles from India. In terms of bales, these imports will amount to 8,000 bales. It is believed that the purchases from India will start in the next few days on receipt of licences by the Sudanese importers.

BOMBAY REVIEW

THE MODERN MILLS, LIMITED.

NOTICE

NOTICE is hereby given that the Twentyfifth Annual General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, Temple Bar Building, 70, Forbes St., Fort, Bombay, on Tuesday the 9th June 1959 at 3-30 P.M. to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Statements of Accounts for the year ended 31st October, 1958.
2. To declare a dividend.
3. To appoint Directors in place of those who retire but who are eligible for reappointment.
4. To appoint Auditors for the current year and to fix their remuneration.

The Transfer Books of the Company will be closed from the 12th May 1959 to 3rd June 1959, both days inclusive.

Any member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and a Proxy need not be a member.

Detailed Notice setting forth all the items of business to be transacted at the above Meeting is being published in the Press and will be posted to the Shareholders individually.

By Order of the Board,
N. SIRUR & COMPANY PRIVATE LIMITED,

Managing Agents,
N. D. SIRUR,
Managing Director.
Bombay, 20th April, 1959.

N.B.—The dividend when declared will be made payable at the State Bank of India, Bombay, on and after Monday the 22nd June 1959 to those Shareholders whose names stand on the Register of Members on the 12th May 1959. The Dividend Warrants will be made negotiable at par at the State Bank of India, Bangalore. Shareholders are requested to intimate change of address, if any.

DELHI REVIEW

ONE day, the whole story of the Dalai Lama's escape into freedom will get written and when it does, it is sure to be an epic of serene heroism in the face of the most provocative of totalitarian pressure. Meantime, we are obliged to piece together the story with a variety of guesses and rumours. Characteristically, epic qualities were over-shadowed by the farcical, once the Living Buddha was safely on Indian soil and the "Press" took over. If one is to believe all the stories that are circulating about the "coverage" of the "news", professional newspaper men must possess a paradoxical combination of heartlessness and naivete. Obviously, the Dalai Lama's escape, even without cold war overtones, is the kind of "story" that rarely comes the way of newspaper men. It combines politics, religion, mystery and oriental exoticism in the right proportions. No wonder, therefore, that all the important news agencies of the free world, together with special correspondents from both Indian and foreign newspapers, were crowding the local people out at Shillong and Tejpur. And in the unwritten and dubious code governing news-gathering, the supreme dictate is the necessity to gather what will pass for news, without regard to the feelings of those who provide the news. Though the Dalai Lama was not more inconvenienced than absolutely necessary, the process of newsgathering and beating the other man "to it" provided many amusing (to the onlooker) situations. A story is doing its round here about the correspondent of a well known paper abroad who solved his problem by the simple expedient of filing his stories from his hotel suite in Shillong. This led to the correspondents of other papers, whose copy being more honestly obtained, was less colourful, being routed out of their beds by cables from their editors asking them irately for confirmation of the report sent in by "X". Then there was the mishap to the inge-

India, China and Tibet

nious photographer who had thought of the idea of developing his film in the plane itself and thus beat his rivals. Alas, for him, he had captioned the persons in the photographs wrong and the pictures had to be "killed". And then there was the young man who left his camera by mistake in Tejpur and when he flew back to recover it, the rolls had gone. (It is sad that it took all the charm of an experienced air hostess to dissuade him from throwing himself out of the plane at Dum Dum). Scoops, real and fake, abounded. Tittle-tattle gathered from the fringes of the Tibetan party, gossip and whispers collected from the periphery of the Government of India's representatives gone to receive the Dalai Lama, were processed and cabled.

Through all this hullabaloo, the Dalai Lama himself remained calm; and, after consultations with the Government of India, chose Mussoorie as his place of residence in India. At Tejpur, he gave his public version of the events that led to his leaving the country. The Chinese, with the ineptitude that has characterised their handling of this entire episode, have been trying to read a sinister significance into the fact that the English version of the Dalai Lama's statement was delivered to the press by the representative of the Government of India. The Dalai Lama has been quick to dispel such propagandist and tendentious suggestions.

The sequence of events in Tibet before the flare up in Lhasa as given by the Dalai Lama broadly corresponds to the version presented to the Indian Parliament by Mr Nehru. It now appears Mr Nehru had ascertained this fact from the Dalai Lama during his interview with him last week-end—that the letters that the Chinese had published were actually written by the Dalai Lama. As Mr Nehru sympathetically pointed out, it must be remembered that the Tibetan leader was going through great stress and, until the last moment he was trying to do his best to find a modus vivendi that would make the Chinese want to work the 1951 agreement. But when the chances of this happening became dim and his personal safety itself was at stake, he had to leave his country.

Developments in the Chinese attitude since the arrival of the Dalai Lama in this country have been distressing. The official line still is that the Dalai Lama left the country under duress—a position specifically repudiated by him. Obviously, the Chinese would seek support for their position from the letters now admittedly written by him. This persistence in the notion of the Dalai Lama leaving

necessarily a misfortune, for, so long as the Chinese do not openly break with the Dalai Lama, it should be possible for finding a way out satisfactory to all concerned. Indian leadership is too practical in its adherence to peace to mind the vagueness and equivocation in the Chinese attitude to the Dalai Lama. Unfortunately, the Chinese do not appear to be in a mood for allowing this dim possibility of a rapprochement to develop into something positive. More recent utterances have, by imperceptible degrees, attempted to involve India in the supposed hostility to China. The idea of "duress", originally confined to the compulsion that led to the Dalai Lama leaving the country, has now been extended in several directions. It is no longer "Tibetan reactionaries" or even "foreign imperialists" that are exercising this unwholesome influence on the Dalai Lama. Moreover, the duress is not only in regard to leaving the country but also in regard to the subsequent utterances of the Dalai Lama. The Panchen Lama in his speech to the Chinese National Council made some observations which are obviously put into his mouth. Mr Nehru promptly called the bluff by saying that whoever wanted to see the Dalai Lama could do so without let or hindrance. The Panchen Lama, or the Chinese ambassador, or whoever else it may be, can meet the Dalai Lama and ascertain facts. Indeed, if they could evolve a way out of the impasse, we would be only too happy.

But the Chinese have scaled fresh heights of absurdity when they accuse India of expansionist ambitions in regard to Tibet. For sheer virtuosity of the big lie, this will take some beating.

The truth is that, in this unhappy business of Indo-Tibetan-Chinese relationships, Mr Nehru has laid himself constantly open to the criticism of appeasement of the Chinese by merely being scrupulous about disowning any claims to Tibet. From 1951, Indian opinion has been deeply unhappy about what it has considered a deliberate repudiation of our traditional and legitimate interest in Tibet. Many have seen in it a needless and flamboyant gesture toward Pancha Sheela. Unfriendly critics have gone further and suggested that the Indian foreign office gave Tibet on a platter to the Chinese because of imperfect instruction in the niceties of political terms. The technique consists in a simple transference of one's own characteristic to your opponent and flaying him for it. It is a device as old as the wolf and the fox. The parallel is complete even to the detail of our being blamed by inference for what the British did in the first decade of this century.

It has been argued that, at a crucial point in negotiation, the Indian Foreign Office failed to notice the blurring of the difference between "sovereignty" and "sovereignty" and allowed itself to become a party to an agreement that conceded sovereignty over Tibet instead of merely conceding "sovereignty" to China. It has even been suggested that this purely verbal oversight due, perhaps, to difficulties in translation, has ever since been supported out of cowardice to own up to a crucial slip. Whatever may be the truth in the belief, it is very clear that, from having any desire to mal Tibet part of India, we have deliberately cut ourselves adrift from it. The wisdom of this step has often been disputed in this country, but its factual accuracy has never been doubted by anyone. Now, the Chinese want to prove to the world that we have allowed the Dalai Lama to cross over our country because we desire to take over Tibet. Consider Tibet's backwardness, the difficult terrain, and its geography, it cannot be for economic advantage likely to accrue from such annexation. What, then, remain? Are the Chinese seriously suggesting that we are harbouring aggressive intentions toward China? Is too preposterous for words, considering that we are almost only friends they have this side of the Iron Curtain—and even behind it, there are signs of strained relationship, especially with the Big Brother—and we have in every conceivable circumstance stood by them, much to the annoyance of others, such an accusation comes with particular grace.

What, then, is the explanation for this conduct? "Face" is, by accounts of Chinese and Japanese psychology, a far more important consideration with them than with certain other peoples. It works in self-defeating ways, as is so obviously doing in this case. If only the Chinese will have sense to see it, Mr Nehru, desisting from provocations from them, desperately trying to save very "face". He tells them it is open to them to meet Dalai Lama and evolve an amicable settlement. Instead of attacking him at his word and asking for a tripartite conference between China, Tibet and India, they off trying to stiffen the back of one people who are willing to be friendly with them. Even elementary reckoning of political profit and loss will show the folly of allowing chagrin at not allowing one's way blighting chances of an overall settlement to which the Tibetans and Indians are willing parties. The alternative is further isolation from the rest of the world, and sullen cooperation of an unwilling

OLYMPUS

NORTH INDIAN NOTES

Railway Sleepers

THE Railway Ministry's purchase policy of railway sleepers came under criticism in the Lok Sabha in the course of the discussion on the subject, which was initiated by a Congress member from Madhya Bharat. It was pointed out that the deal negotiated by the Ministry for import of sleepers from abroad was detrimental to the interests of the country and that intensive efforts to procure sleepers within the country would have reduced the burden of imports which had accounted for about Rs 15.5 crores.

Defending the Railway Ministry's action in inviting foreign tenders for the import of sleepers for the railways, Mr Jagjivan Ram Minister for Railways, stated that it was not as if the imports were rushed in, in disregard of internal availability; but that internal insufficiency left no alternative but to secure sleepers from foreign countries. In this connection it was pointed out, that against an annual average requirement of sleepers worth about Rs 63 lakhs, the present supply position within the country reaches only about Rs 25 lakhs.

However, it was not evident what the Government had done to increase the production of sleepers in the country. That the country offers immense potentialities for the production of wooden sleepers for ensuring internal adequacy is too patent to need any stressing. There has been some demand made in Parliament for use of iron sleepers as a safeguard against train derailments. However, the connection between the use of wooden sleepers and railway accidents appears rather far-fetched. Wooden sleepers have been in use in all the countries and the theory that use of wooden sleepers causes accidents in railways cannot hold good. However there is need for care to be taken in the selection and processing of timber for use as sleepers.

Use of iron sleepers, in view of the higher cost and the substitutability of wooden sleepers, appears rather superfluous for the country. However, production of wooden sleepers will have to be encouraged by the Government if the supply position in the country were to be improved. Mr V. C. Shukla's suggestion that the Centre along with the States should invest about Rs 10 to 12 crores for the development of forests is worth considering. Having regard to the mass requirement of sleepers by railways there is also need for research into the processing and preservation of timber so that the life span of sleepers could be prolonged. Research into the utility of different types of timbers for use as sleepers is also essential.

Tourism

The tourist industry is one of the important foreign exchange earners for the country and takes rank as one of the first ten. The attraction of the country as a tourist centre has increased with the wider international contacts that was possible since the attainment of independence and the number of tourists to have visited the country had increased from 33,000 in 1955 to 80,000 in 1957, while the earnings from tourism had also registered a parallel increase from Rs 10.3 crores in 1955 to Rs 16 crores in 1957. In 1958, the income from tourist traffic is estimated to have gone up further to Rs 19 crores.

The rising trend in the number of tourists and the income earned from tourism points to the immense scope for attracting more of such traffic provided proper facilities were ensured to suit the requirements and tastes of the foreign visitors. It has been estimated that the country's income from this source could very well be raised to Rs 50 crores in the span of five years. The prospect is attractive enough to warrant measures that could promote the interests of the tourist industry.

Speaking at the eighth annual convention of the Travel Agents Association of India, held at Mussoorie, Mr K. C. Khanna President of the Association, listed the factors that affect the tourist industry in a deterrent way, as inadequacy of internal air services, insufficiency of hotel accommodation except in the Delhi city, and the restriction on drinking in tourist hotels etc.

Shortage of hotel accommodation, threatens to be the greatest deterrent to tourist traffic, and Mr M. S. Oberoi, President of the Hoteliers' Federation, has, in this connection pointed out that at least 9,000 more beds would be needed in hotels to cope up with the anticipated increase of 100 per cent in tourist inflow. This could be met only by providing for an outlay of Rs 20 crores, which it would be impossible to expect the hotel industry to find by itself. Mr Oberoi, has ruled out the scope for foreign participation in this venture. The Life Insurance Corporation could be a possible source for financing the expansion of the hotel industry to meet the anticipated increase in demand.

Coordination of the Airlines Corporation's activities with the needs of the tourists industry is prevented by the extreme thinness of the tourists' share in the airlines volume of traffic. However, the yearly 15 per cent increase in the facilities that is now the aim of the Indian airlines should go some way to provide greater facilities for the foreign tourists.

Mr Khanna also pointed out the inconsistency of the present restrictions imposed on Indian tourists abroad on account of shortage of foreign exchange and urged the removal of such restrictions in the interest of providing for a two-way traffic.

NORTH INDIAN MARKETS

Statistical Position of Sugar

SUGAR prices have been ruling very steady and, with the season nearing its end, it is gathered that production in the current season will be lower than last season. On the other hand, the domestic off-take is gradually increasing and, with a carry-over of 3.60 lakh tons from last year, the total quantity available amounts to about 22.36 lakh tons from which it has to provide for increased consumption and export and the balance at the beginning of the next season is not likely to be more than 1.5 lakh tons.

Sugar prices are already recording a firm trend and are likely to shoot up from August onwards when the demand is usually higher, while exports are likely to inflict a larger burden on the consumers. As despatches from the factories are running at a satisfactory level, there will be a squeeze towards the end of the present season. If 50,000 tons of mill sugar are exported, the trade estimates that a stock of only 80,000 tons will be left at the end of the current season against 3.36 lakh tons brought in from the 1957-58 season.

Trade stocks have already fallen to a low ebb and hence this buffer will be inadequate. It is almost certain, therefore, that the Government will find it difficult to maintain the releases at their present levels. In fact, a section of the industry feels that the supply position will tend to be precarious from August onwards when the demand is usually higher. It is, therefore, feared that supplies will run short and prices may increase unless vigorous measures are taken from now to ensure that the consumers get sugar at a fair price.

The statistical position of the sweet commodity indicates that exports should not be permitted. Prices have already shot up by nearly Rs 5 per bag during the past eight to ten weeks and this upward trend will be accelerated by the continued insistence on exports. Actually, there are grave fears of a sharp rise in prices much earlier if the quantity contracted for exports has to be bought from the open markets. According to some sources, the situation is such that the Government may eventually have to consider not only applying a brake on exports, but also undertaking imports. It looks as if the country is heading for a revival of rationing and imports of the commodity.

Although sugar exports got off to a good start this year, the outlook is far from encouraging in view of the persistent fall in prices of sugar in the world market due to excessive supplies.

The present price of sugar in the world is about Rs 350 per ton, when the f.o.b. cost of Indian sugar, even allowing for full remission of excise duties and cane cess, amount to Rs 775 per ton. Thus, the country is expected to lose about Rs 425 on the export of a ton of sugar in addition to the loss of more than Rs 340 to the Exchequer.

Meanwhile, in the Kanpur market, prices have shot up by Rs 3 per bag due to the prevailing scarcity of supplies coupled with brisk seasonal demand. Arrivals are lagging behind, as mills have exhausted their allocations against the last quota, resulting in the emergence of a sellers' market. Another factor stimulating the rise in prices is the termination of the crushing season in a majority of factories in the North. The few units, that are still working, are expected to stop operations within the next two weeks.

★

Khandsari

Now that the excise duty on Khandsari sugar has been reduced, it is just possible that its supply will increase and khandsari will tend to keep down mill sugar prices. The distinction made by the Union Finance Minister between units manufacturing khandsari with the aid of sulphitation plants and those without it, while granting relief to the khandsari industry in excise duty, will be widely appreciated. The former category, which had established itself during the past two or three years, had been offering more direct competition, both in the matter of cane supplies and the marketability of its production; because of its lower cost of production and better quality. Even after taking into account the excise advantage which khandsari enjoys, there is no reason why white sugar cannot face competition.

★

Gur

In the Hapur market, ready Gur prices have continued to rule steady. Arrivals, mostly from stocks and retained by the producers, are at an average of 400 to 500 maunds daily. Total arrivals, during the season which is nearing its end, are about 6.4 lakh maunds as against 3.97 lakh maunds in the previous year. Local stock is estimated at 94,000 maunds against 1.44 lakh maunds on the corresponding date of last year.

★

Foodgrains

Foodgrains markets have been ruling quiet. As earlier expected, the Government of India have fixed the purchase price of wheat in the Punjab, Uttar Pradesh, Rajasthan and Madhya Pradesh at Rs 14 per maund for the average quality and the price of the inferior quality will be Re 1 less and of superior quality Re 1 to Rs 2 more per maund.

MADRAS REVIEW

THE Andhra Pradesh Political Conference convened by the Congress Party, is an event of seemingly local significance, as compared with the all-India session of the Party. While all-India issues are taken up for discussion it is generally the internal problems of the party organisation in the State that provide the more important subjects for deliberation and discussion. In the present conditions of the Party's position and strength in the State, it is on such internal problems of organisation that the party will have to concentrate its attention.

The Party is meeting at a time, when the Congress stock has gone down not only in Andhra Pradesh but also in neighbouring States. In Madras, the recently concluded municipal elections have demonstrated the declining popularity of the Congress in the major cities such as Madras, Madurai etc. though in total number of seats captured, Congress continues to be the dominant party. In Communist Kerala, Mr Nambudiripad, would chuckle at the mere mention of Congress hopes of a return to power at the next polls. In Mysore also, the organisation has lost its old solidity, and the spectacle of Chief Ministers having had to resign because of hostility of party colleagues, indicates the existence of internal dissensions which even now do not seem to have completely ended.

In Andhra Pradesh itself, death and defection have left the party greatly lessened in strength. With

S. E. RLY TENDERS

Sealed tenders are invited for Tender No. PB[3]59/GM[1] WS[42]A/NGP[EB]1 for supply of 756 Nos. Axle Box 7"x3 1/2" for IRS (NG) Wagon NCL, NOL, NR and NTP type as per Drg. No. 2591/62 Item A and to Specn. R-7/45. Closing date of tender is 18-5-59 at 3 P.M.

Tender forms are obtainable from the office of the Controller of Stores (PB Section), South Eastern Rly., Garden Reach, Calcutta-23 on remittance of Rs 5/- (not refundable) per copy by money order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, South Eastern Railway, Garden Reach, Calcutta-23 by local firms.

Firms not on the Rly's list of approved contractors must deposit in cash Rs 1520/- as earnest money with this Rly's Chief Cashier and enclose his deposit receipt together with a valid Income Tax Clearance Certificate along with the tender.

GENERAL MANAGER

S12

Congress in Andhra

the death of the old guards like T. Prakasam, Bulusu Sambamoorthy, and Kala Venketara Rao, the Congress leadership has suffered some eclipse, while defection has done greater harm to the popularity of the Party. Though the exit of the malcontents has left the party clear of internal dissensions, this has given rise to problems of internal reorganisation of the party setup in the State.

The ignorance of the party members at the lower level, of the creed and ideology of the party was considered to be one of the serious defects standing against the growth of the party in the State. A resolution on the subject emphasised the need for preparing and distributing party literature and for training workers to carry the Congress creed to every nook and corner. Reorganisation of the Mandal Committees at the lower level is one of the means suggested for strengthening the party organisation. Constitution of Mandal committees at various levels, is also contemplated to ensure proper implementation by the administration of the orders of the Government, which as is alleged now, are being flouted by officials, at the lower level.

While the need for a membership drive has been recognised in terms of a resolution which stresses this aspect of the party's work, the party's attitude to its future prospects seem to be one of complacency which, in the light of the recent development culminating in the exit of the dissident group led by Dr Chenna Reddi seem rather premature. The local leaders who spoke at the conference seem to make light of the position and prospects of the other parties in the State and especially of the Communist party which at one time threatened the supremacy of the Congress for pre-eminence. Though the Communists have been driven to the walls in the elections conducted in 1955, the violent fluctuations of political fortunes as between the Communists and the Congress, which the two elections conducted in 1952 and 1955 have disclosed, would seem to make prospects at the next elections for either of these parties less predictable. How the move for forging a united front of the dissident socialist group, led by Mr P. V. G. Raju, of the dissident Congress group led by Dr Chenna Reddi and of the Praja party that is now smelt would affect the fortunes of the Congress is also a matter for speculation. Communist expectations of repeating the Kerala performance in Andhra Pradesh are also high.

In such circumstances, whether the political fortunes in the State could be turned in its favour by the Congress by implementing land reforms on the lines indicated by the Nagpur resolution on the subject remains to be seen. However, the local leaders would seem to

set some store by the implementation of such reforms for improving the party's position and prospects.

A major part of the proceedings of the conference was devoted to explaining the role of co-operative farming and its importance in the present context of agricultural production in the country. Almost all the leaders spoke enthusiastically on it. While Mr Sanjiva Reddi, the State's Chief Minister sought to justify co-operative farming against the disadvantages which the existence of small and tiny holdings constitutes, Mr Alluri Satyanarayana Raju, General Secretary of the Congress pointed out that co-operative farming was a reform which the Congress was pledged to take up in terms of the 1946 election manifesto of the Party. Co-operative farming was also approved by the Agrarian Reforms Committee constituted by the Congress in 1949. There was, therefore, nothing new or radical in Congress sponsoring it now. Further, there was immense scope for co-operative farming in the country and in Andhra Pradesh alone out of a total cultivable area of 113.35 lakh acres, only about 19.95 lakh acres had been brought under the plough in the course of the First Five Year Plan.

Whether the discussion on co-operative farming within Congress ranks had passed the phase of controversy, it would not be possible to say with any definiteness. In Andhra Pradesh, the reaction against the Congress resolution on co-operative farming within the Congress organisation, was led by Mr N. G. Ranga one of the old guards of the Congress party in the State. Mr Ranga's earlier outburst against co-operative farming had been followed by comparative silence which makes it rather impossible to assess the volume of opposition to it within the State. In such circumstances it is too early for the Congress to expect a favourable turn for it on the strength on the Congress programme of co-operative farming.

The only international issue to figure prominently in the proceedings was that relating to Tibet. The resolution on the subject moved by Mr M. Tirumala Rao, supported the Government of India's stand and regretted the imputation of extra territorial ambitions to India by individuals outside the country. Mr Tirumala Rao also had a fling at the Indian Communists for their lack of appreciation for the Government of India's policy on this matter. The Communist party's stand on the Tibetan crisis was also taken up for criticism by Mrs Indira Gandhi, the Congress President. While justifying the asylum granted to the Dalai Lama which was in keeping with the best traditions of the country, she explained that expression of sympathy for the Tibetans in the present crisis, did not amount to lack of friendship for China and also did

not involve a departure from the neutralist foreign policy of the country. Mrs Gandhi also stated that India's attempts to find a solution to the present Tibetan crisis was in keeping with the country's past history.

Mrs Gandhi gave a warning against the threat which the Communists constitute to the unity of the country. And as parties representing disruptive forces to the unity of the country, Mr Gandhi bracketed the Jan Sangh with the Communists, and in doing so she appears to have given an importance to the Jan Sangh as a political force in the country which even the followers of this party would find hard to believe. Except in Uttar Pradesh, where the Jan Sang is supposed to be active and somewhat strong, the party has practically little following in other States, and with its present ideology it is not likely that the party would be able to make any further headway in these other States.

For the rest, the Conference was concerned with discussing the problems which the need for economic development has brought to the fore. While the State was self-sufficient and surplus in the production of foodgrains there was scope for bringing down the cost of cultivation by raising productivity of land. In this connection, the importance of minor irrigation was emphasised and a non-official resolution on the subject urged restoration of breached tanks as well as larger allotments of funds under the Third Plan.

In the industrial field, while the progress so far made was not considered unsatisfactory, the need for developing new industries was stressed. Establishment of new units for manufacturing fertilisers, heavy and basic chemicals and newsprint as well as expansion of existing units were also urged. That the Government attaches special importance to the setting up of a fertiliser plant has been evident from the speeches of the Government spokesmen in recent weeks. The 1959-60 budget of the State Government makes a token provision for the development of the fertiliser industry and in one of his recent speeches Mr Sanjiva Reddi the State's Chief Minister stated that the Government are keenly aware of the need for early steps for setting up the factory.

A resolution on planning urged the need for a planning commission for the State to ensure balanced development. The appointment of a sub-committee of the APCC to formulate suitable proposals for the Third Plan of the State is also envisaged in the resolution.

Power generation also received attention, and the Pochampad project was mentioned as one deserving of Centre's help for early implementation. The Srisailem project another one on which hopes are placed for a substantial increase in the power supply in the State.

THE PENINSULA

SOUTH INDIAN NOTES

Food Policy

Dissatisfaction with the food policy of the Madras Government was expressed by the opposition members in the course of the debate on the subject which was raised by Mr V. K. Ramaswami Mudaliar, leader of the Opposition in the Legislative Assembly. Continuing rise in the prices for foodgrains in spite of recent harvests and the lack of adequate supply of paddy for the mills resulting in the closure of some of the mills were advanced as evidence of the insufficiency of the measures taken by the Government to bring the food situation under control. The inadequacy of the present machinery of control was pointed out by some of the Congress members also.

While denying the opposition charges of complacency of the Government in the midst of the food situation, Mr Bhaktavatsalam agreed that there was scope for further improvement, but at the same time pointed out that rice procurement and rice control were all that was possible in the present circumstance; and if the measures had not yielded results on the expected scale it was because of the lack of adequate response from wholesale merchants and millers. While agreeing that there was scope for bringing prices further down Mr Bhaktavatsalam pointed out that in the absence of the price control machinery instituted by the Government prices would have gone up higher than their present level.

It was also pointed out that mere increase in production did not ensure lower prices and in this connection Mr Bhaktavatsalam pointed to the high level of prices ruling in Andhra Pradesh which has a present surplus of about 6 lakh tons. Mr Bhaktavatsalam also dismissed charges of Governmental apathy to the question of State trading, pointing out that the scheme was capable of implementation only in a gradual process. And the State had not been behindhand in enforcing the preliminary steps such as licensing of dealers, fixation of price control and procurement.

Mr Bhaktavatsalam also referred to the South Food Zone and agreed that the State's interests lay in the abolition of the present arrangement and its replacement by a scheme under which very State would constitute a one by itself. Even though the Andhra Pradesh Government could seem to have similar views on the subject, non-acceptance of the proposal by the Centre leaves an alternative but to make shift with the existing set up. It is noteworthy that continuance of the zonal arrangements drew support only from the Communist members and it is apparent that

it was Kerala's interests that were uppermost in the Communist minds.

The argument for the opening of fair price shops advanced by some members found no support from the Minister, it being pointed out that there was no need for adding to their existing number in the present conditions of supply and prices.

★

Electricity in Mysore

One of the major problems confronting Mysore in the march towards further industrial development is shortage of power supplies. Though not as acute as it once was, the situation in regard to availability of power for industrial units is far from satisfactory, and calls for efforts for more rapid development of the power potentials of the State. Unlike the neighbouring States of Madras and Andhra Pradesh which have, besides hydro-electric sources, thermal sources of power also in the Neyveli lignite project and the Singerei collieries respectively, Mysore has to depend mainly on hydro-electric sources for feeding her industries. The State has, however, a few major power projects under implementation which could ensure power supply adequate for a substantial rate of industrial development to be sustained. The Sharavathi Project which has already been taken up is one of such major schemes under implementation. The progress of this project has been hindered by difficulties about securing the needed foreign exchange. The inclusion of this project under the Second Plan should ensure completion of the project earlier than originally envisaged.

However, the complaint was made in the course of the discussion of the budget estimates of the Mysore Electricity Board that the Government had not laid sufficient emphasis on electricity schemes in the Second Plan. The slow progress of work in connection with the Sharavathi project was another point of criticism against Government policy in the field of industrial power. In this connection it is pertinent to note that Mysore has been lagging behind most other States in the matter of expenditure on the Second Plan and has one of the lowest averages. The problems created by the State's reorganisation scheme are considered to have interfered with the progress of expenditure on the Second Plan. That individual projects should have shared in the general slow down of expenditure and activity is therefore understandable.

However the good work by the State Electricity Board was commended and if the Board could not show better results it was because of the inability of the State Government to render adequate assistance to the Board. The fact that the Board was incurring losses in some of its activities and especially in the supply of power to irrigation pumpsets, was made the ground for the argument that the State Government should meet

SOUTH INDIAN MARKETS

Sharp Fall in Rubber Production

ACCORDING to the figures released by the Rubber Board, the production of Rubber has shown a sharp decline to 952 tonnes in February from 2,323 tonnes in the previous month. The increase in consumption from 2,866 tonnes to 2,922 tonnes is fully reflected in the stock figures. Stocks with the estates and dealers, as on the 28th February 1959, are shown at only 4,592 tonnes against 5,950 tonnes. Stocks with the manufacturers, on the same date, are only slightly higher at 5,846 tonnes against 5,765 tonnes in the previous month.

The opening stock, as on the 1st February 1959, was 11,716 tonnes and, adding the production of 952 tonnes and imports of 693 tonnes, there is a total availability of 13,360 tonnes. Deducting the consumption of 2,922 tonnes, stocks with the estates, dealers and the manufacturers amount to 10,438 tonnes. Stock of synthetic rubber is reported at 751 tonnes. Thus, there is now a total stock of 11,189 tonnes.

Coffee

With the continued dry weather in the coffee-growing tracts of Mysore, Coorg and the South, the prospects of a 50,000-ton coffee crop are said to be receding. The planters in these regions have been sorely disturbed by the absence of showers since March last. Doubts are even expressed whether this country can spare a sizable quantity of coffee for export during this season.

Meanwhile, the internal offtake has shown broadening signs, the quantity lifted in March being higher at 2,505 tons as compared with 2,022 tons for the corresponding month of last year. This brings the total internal offtake, for the first quarter of this year, to 7,478 tons, representing a rise of nearly 5 per cent over the figure for the corresponding quarter of last year. Out of the export allocation of 14,494 tons from the 1958-59 crop, only 4,685 tons are estimated to have been sold, including 1,100 tons sold direct by the Indian Coffee Board to West Germany.

Groundnut

Despite the efforts of the Forward Markets Commission to check

such losses incurred by the Board by subsidising such supplies. The suggestion was not found acceptable by the Minister in charge of Electricity, who, however assured that the Government would try to create the atmosphere whereby the Board could avoid incurring such losses.

the rising trend by imposing special margins, prices in the Madras Groundnut market displayed a firmer tendency, thanks to the rise in the internal price levels against exports. Arrivals have shown a distinct improvement and are about 325 tons. The rates for the summer crop and superior oil-quality seed have improved by about Rs 4 to Rs 182 and Rs 187 per candy respectively. In view of the high prices, business done is reported to be small as crushers are unwilling to operate.

In the Groundnut Oil section, the rate for the ready position has moved up to Rs 363 per candy from Rs 352. There has been a steady demand for oil from Andhra and Calcutta parties. Business is, however, restricted as sellers remain rather reserved in their ideas of prices.

★

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides were on the same level as in the previous week and there was a fair clearance. Arrivals of Buff hides were moderate and there was a steady clearance at unchanged levels. In the Calf section, there was no change except in the case of prices, which have recorded a further increase of 50 NP per pound.

On the export front, trading is restricted in the absence of enquiry from the UK. Dressers in London are stated to be nervous to operate for forward at current prices. They have stated that prices must decline by at least 6d in the first instance to make business workable. In general, buyers seem to be interested only in prices much lower than the sellers' asking prices.

However, in the Calf section, prices are ruling higher. One or two stray transactions are reported in 2/2 1/2 lbs at 90d.

In the Tanned Skins section, arrivals of sheep skins are moderate. There are reports that tanners are holding back supplies in anticipation of a further rise in prices. There are no features in the Goat section.

On the export front, prime Goat skins, particularly 8/9 lbs and 11/12 lbs; are reported to have secured an advance of 6d to 9d during the week. In sheep skins, the market continues to be excited and erratic prices are quoted for common and middle classes. In other qualities, the market is higher by 6d to 1sh with restricted enquiry for runs and fifths.

The market for Raw Hides is ruling firm, thanks to small supplies and the sustained buying by E. I. Kip tanners.

The Raw Skins market is also ruling firm with prices recording a rise of Rs 25 per 100 skins.

Reports from London state that, at the auction to be held on the 4th May, offerings will be about 60,000 goat skins and 210,000 sheep skins.

Bengal Coal Company Limited

Increase in Raisings

Dividend Maintained at 17½ per cent

Mr N. Stenhouse, on future problems

Presiding at the Annual General Meeting of the Bengal Coal Company Limited, (Managing Agents: Andrew Yule & Co. Ltd.) held on 29th April, 1959 at the Registered Office of the company, 8, Clive Row, Calcutta, the Chairman, Mr N. Stenhouse, said:—

Gentlemen,

You will have seen from the Directors' Report for the year ended 31st October, 1958 that there was an increase in the total raisings from 2,801,164 tons to 2,862,170 tons and an increase of some Rs. 5 lakhs in the gross profit. Your Directors have recommended a final dividend which will maintain the annual distribution on the Ordinary Capital of the Company at Rs. 17.50 per share; this, however, represents only 5.82% on the capital employed in the undertaking. Provision for Wealth and other Taxes totals Rs. 51 lakhs—a heavy burden and over 68% of the Company's profit for the year, and nearly three times the aggregate of the dividends paid or recommended on the Preference and Ordinary Shares. In the case of a major unit in an expanding industry such as Coal, the constant strain on the Company's finances occasioned by Capital Expenditure required for development and, what is equally important, to increase the safety and efficiency of your collieries, as also amenities to labour, is indeed a serious matter. You will observe that although the net balance on the Company's Block Account has increased by nearly Rs. 16 lakhs, the Company has been able to provide by transfers to Reserve a net amount of Rs. 7 lakhs only.

The year under review was clouded by the very serious accident on 19th February, 1958, at Chinakuri 1 and 2 Pits Colliery. The Court of Inquiry appointed by Government concluded its work after detailed investigations which extended over a period of five months and, as a summary of the Court's findings, I would like to repeat what the Board stated in their Annual Report to shareholders:

"The conclusions arrived at by the Court were to the effect that shortly before the actual explosion there was an outburst of methane gas from a splinter seam below the main Disergan seam. An outburst of this magnitude had not previously occurred in India but was known to have taken place in other countries. The Court was not, however, able to establish definitely the cause of the ignition which resulted in the explosion. What did appear certain, however, was that the vast majority of the miners who lost their lives so tragically were asphyxiated by the original outburst

of gas before the explosion took place."

These then were the basic findings of the Court on this most unfortunate disaster which caused the death of 176 fine men under such tragic circumstances.

The Report of the Court of Inquiry has received considerable publicity in the Press and has been the subject of much discussion in Parliament. Whilst welcoming constructive suggestions arising out of the recommendations in the Report, I am sure that I am voicing the thoughts of you all when I decry the biased and, indeed, vicious criticism which has emanated so freely from certain quarters as a result of the published Report. For instance, the accusation that the Company should have concealed the number of the unfortunate victims of the accident is completely abhorrent to us. It has been our policy throughout to place before the Court of Inquiry and the officials all the facts and information available to us, all members of our staff were instructed to co-operate in every way in the investigation, and the assistance rendered by the Company was duly acknowledged in the Report. Is it too much to hope that these fantastic allegations will now cease? Their continuance can only have the effect of lowering the morale of all those in the coal fields who bear heavy responsibilities connected with the industry, whether they be in the Public or the Private Sector. Such persons should be encouraged in their endeavours to produce, with due regard to safety, the coal so vitally required by the country, and they should not be subjected to such a persistent campaign of destructive criticism.

We welcome any detailed study of the recommendations put forward by the Court which can assist the industry in overcoming the many problems connected with deep and gassy mines, and in fact these recommendations were considered at the second of a series of Official Safety Conferences held early this year. It must be remembered that much of the high grade coal required in the Third and subsequent Plans will have to be mined from deep and gassy seams, and all investigations directed towards the reduction of the inherent hazards must receive the support and encouragement of the whole country. We also look forward to the completion of the

Mining Research Station, whose primary responsibility it will be to investigate these matters.

It may not generally be known that there are only three collieries in India which have shafts sunk to a depth of over 1,400 feet; these three large collieries are owned and operated by your Company. This will come as a surprise to those who may have recently read about a reference in the Lok Sabha to the enormous losses being incurred by certain of the State collieries, and to the statement that this was due to the fact that these State collieries continue to work deep and difficult seams, whereas the Private Sector operate "only those mines where the working conditions are easy". The three collieries to which I have referred are certainly not easy to work; they have deep shafts; they have the hazard of gas to contend with; and their operating costs are high.

It may not be out of place to mention that there appears to be considerable misunderstanding in certain quarters regarding ownership of some of the large Indian coal companies. In the case of Bengal Coal Co., Ltd., just over 93 per cent of the issued share capital is held by shareholders resident in India, and of the total number of 1,573 shareholders, as many as 1,320 hold not more than 50 shares each. It will therefore be seen that your Company has its roots in India and that its shareholding is indeed widely spread.

Labour: Last year my predecessor referred to the problem of inter-Union rivalry. Although during the year under review there have been no major disputes or stoppages at any of your collieries, the uneasy truce continues. There is still much room for the expansion of enlightened Union leadership directed towards the best interests of the miners. It is only by the effective working of genuine and constructive Unions in the Coalfields area, which has aptly been called the Ruhr of India, that the Coal and other major industries there will be able to make their full contribution to the national interests, and it is to be hoped that responsible leaders in the labour field will soon appreciate this fact.

Welfare: Considerable progress has been made in the construction of Workers' quarters at your collieries under the auspices of the excellent scheme of the Coal Mines

Housing Board, and this work is receiving top priority. We are completing 908 houses during the first year of the scheme, and it is our intention to construct 850 more quarters during the coming year. Much has been heard of the Central schemes for the supply of water in the Raniganj Coalfields but, while these schemes may be admirable when completed they are still in the discussion stage. Shortage of good water is one of the main problems experienced at the majority of collieries, and we are therefore undertaking extensive projects for the purification and supply of water at all your large collieries. The first of such major projects, costing Rs. 2 lakhs, at Seetalpur colliery has already proved a great success, and others are now being completed. These are, we feel, very real and practical ways of improving the living conditions of the miners. Also, as an indication of the improvement in the earnings of the Company's workers, it may interest you to know that, since 1956, the total amount paid to them has increased by Rs. 108 lakhs—55% while the number of employees remains virtually the same.

Price Revision: The Chairmen of the three Associations of coal producers, in their annual speeches delivered during recent weeks, have referred in no uncertain terms to the necessity for an immediate and adequate price increase, and I fully endorse all that has been said on this subject by these prominent spokesmen of the industry. Although the Bengal Coal Co., Ltd., is still operating on a profitable basis, the main reason for this is the increase in raisings—mainly at the mechanised collieries. It is, however, impossible to overlook the fact that costs are continuing to increase, not only due to higher prices for stores and equipment, but also because of the more advanced safety measures which are being introduced. Your Company is a large company and therefore can to a certain extent carry the burden of the losses which some of its collieries incur. Indeed, 14 of these collieries which produced over 1½ million tons during the year made either actual losses or only small profits.

Sandstowing: You may have noticed from the Accounts that the Company has had to bear a difference of over Rs. 9 lakhs between the cost of sandstowing at your collieries and the quantum of assistance received from the Coal Board. Three additional collieries will be stowing during the current year and the overall cost to the Company will thus, I fear, be very much greater in future. This is a very real contribution not only towards safety in our gassy mines but also to ensure maximum extraction from the high quality seams. We therefore welcome the

May 2, 1959

recent announcement that the quantum of assistance towards stowing by the Coal Board is being increased, albeit by the inadequate amount of 3 annas per ton of sand stowed hydraulically.

Railways: No speech from this Chair or at any similar meeting connected with the Coal Industry can be complete without a reference to rail transport. As always, we continue to have difficulty in getting sufficient wagons to keep stocks at collieries down to reasonable levels, and this subject has already been amply dealt with in recent speeches connected with the industry. I must, however, in all fairness thank the Eastern Railway for their efforts in assisting the large portion of the industry which they serve. Wagon offerings on the Eastern Railway during the year have shown a gratifying increase over the previous year's figures, and this Railway has also appreciated what, in the eyes of the Coal Industry, should be one of the main functions of the Railways: the provision of sufficient siding and pilot capacity at those collieries which are actually producing increasing quantities of coal.

Exports: I am glad to be able to say that more encouragement has been given during the past year to the export of coal but, as your Chairman said last year, it will take some time to repair the damage occasioned by official apathy in the past. We are vigorously pursuing all possible outlets and potential markets, and I would like to mention particularly the fact that we have regained the 1959 Contract for the entire requirements of the Ceylon Government Railways, which contract was shared equally with China during the previous year.

Staff: The Company has always owed a great deal to its senior staff working in the coalfields, but there can seldom have been a more trying year than 1958. Your Chief Mining Engineer, Mr. Rosser, and his staff have had to face the considerable additional strain occasioned by the aftermath of the Chinakuri explosion and the Inquiry, and it is to their credit that they have not only coped with this and brought Chinakuri back into production, but have also been able to proceed with the development plans at your other collieries. Mr. Rosser is with us this morning and I know that it will be your wish that I should express to him, and through him to all members of the coalfields staff, our very great appreciation of their excellent work.

I do not suppose that there is any one here today who will remember the time when, in October, 1908, Andrew Yule & Company were first appointed Managing Agents of your Company. It has been my great privilege to address you today on the completion of the 50th year of this association.

This does not purport to be a record of the proceedings of the Annual General Meeting.

The Bangalore Woollen, Cotton & Silk Mills Company, Limited

Severe Competition in Export Markets

Satisfactory Results Despite Adverse Factors

Improved Results in Woollen Section

Statement of Mr E. F. G. Hunter, the Chairman

Presiding at the Seventy-sixth Annual General Meeting of the Shareholders held at the Registered Office of the Company, Agharam Road, Bangalore City, on Wednesday the 29th April 1959, Mr. E. F. G. Hunter, said:

Gentlemen,

The Directors' Report and the Audited Accounts for the year ended 31st December, 1958 having been in your hands for the prescribed period, I propose, with your permission, to adopt the usual procedure and to take them as read.

1958 was yet another difficult year for the industry, and more Mills closed; while shift working had to be reduced in others. The industry's total production fell by nearly 400 million yards, being partly offset by the lower quantity exported, so that the reduction in stocks at the end of December was not as great as it would have been if exports had been maintained at the 1957 level.

During the year under review, world trade in textiles continued to shrink, and as many countries, especially cotton producing countries, have in recent years installed weaving and spinning equipment, competition in export markets became more severe. However, your Company was able to ship overseas goods to the value of nearly Rs. 20 lacs. In recent months, restrictions on the import of foreign cotton has resulted in an increased demand for indigenous cotton. This has forced prices of Indian cotton upwards and has had the unfortunate effect of enhancing the cost of the qualities that India traditionally exports.

Although the domestic market conditions continued to be difficult, your Company was able to increase its sales of cloth and to avoid any material increase in closing stocks. There is no doubt that the reduction in excise duties in 1957 and in March and July, 1958, assisted Mills to reduce their stocks and to market their products at more attractive prices. While these reductions were welcome, the cost of raw materials, stores, machinery parts and dearness allowance continued to rise. The satisfactory results achieved despite these adverse factors, reflect the value of your Company's distribution organisation.

Turning to the Woollen Section, lower prices ruled for imported wool in consequence of reduced activity in overseas manufacturing centres. This unexpected benefit enabled that part of the woollen section using imported wool, to show improved results compared with the previous year. However, it became apparent that it was no longer economic to continue to manufacture coarse qualities and towards the end of the year, production in this section was curtailed. This development, although discouraging to your Company, reflects the rising standards of living throughout the country in that those who used to be content with coarse woollen products, now demand something better. It is unfortunate that this natural desire by consumers for better articles comes at a time when foreign exchange is limited because raw wool for the finer qualities has to be imported.

It is your Company's policy to continue to produce a range of woollen goods that meets the public's exacting demands, consonant with the quantity of wool that can be purchased with the import licences at their disposal. In this context, I am pleased to inform you that there is some hope that the Government of India will issue wool licences for a 12-month period instead of for 6 months; this will give Mills greater latitude and more time in which to effect purchases. It is hoped that sufficient licences will be issued to enable the Fine Woollen Section to work at full capacity during the current year.

In the Spun Silk Section, production has once more declined due to lack of import licences for spun silk. It is also disheartening that the only supplier of indigenous spun silk has recently ceased operations. Unless, therefore, supplies are resumed, this Section may have to close down on the exhaustion of present stocks. With regard to the Filature Silk Section, however, I am glad to report that Government is aware of the need to improve the quality of indigenous filature silk, but only insistence by the public on higher standards will really provide the incentive. Although I am sure there will always be a market for high quality filature silk goods, there is no doubt that materials manufactured

from man made fibres are making considerable headway.

Cotswol, our popular Union Cloth, continued to find a ready sale and there is no doubt that it has now established for itself a market of its own amongst discriminating consumers throughout the country. The sale of the heavier cloth—Angola—is making progress and I am pleased to inform you that your Company continues to supply Anglo in considerable quantities to the Armed Forces.

The water supply position at the Mill is still serious. In my opinion the needs of your Company, which is one of the oldest and largest consumers in Bangalore, should receive more sympathetic and generous treatment from the Corporation, particularly as your Company employs directly and indirectly a large number of Bangalore citizens. Your company has done its best to assist itself by sinking bore wells but this water is not entirely suitable for processing purposes. With the object of improving this source of supply, plans have been made to treat the bore well water but we shall always require large quantities from the Corporation.

Your Company's programme for rehabilitation and replacement of machinery continues to be retarded by the difficulty in obtaining import licences for plant and spare parts not yet manufactured in the country although, in view of the shortage of foreign exchange and the demands of other Mills, I cannot say that we have been treated ungenerously.

Last year, Mr. E. J. M. Leigh referred to long discussions and negotiations with the Labour Association and I am pleased to record that there has been a considerable improvement in relationship between the Labour Association and the Management. Whilst the Compromise Agreement which we have been negotiating with them for many months is not yet signed, I am happy to say that discussions have been carried on in a very cordial atmosphere with the spirit of give and take ever present. Provided the same reasonable attitude is continued by both parties, final agreement should not long be delayed.

Shareholders will be interested to know that during the year an

agreement was reached between the Company and the Staff Association, covering wages, terms and conditions of service, etc., of the monthly paid staff.

Besides direct payments by way of wages, bonus, dearness and other allowances, employees benefit from substantial expenditure on welfare activities, and during the year another 72 work-people's houses were completed and occupied.

Turning to the Accounts, I would like to draw your attention to the figure of sales given in the Profit and Loss Account which at

Rs. 5,54,18,535/- represents a record for your Company.

The withdrawal of the allowance for extra normal depreciation which is one reason for the higher provision for taxation, is not of importance to your Company as the effect of the allowance was only to defer taxation. An appropriate provision has been made by your Company in previous years to meet the liability in respect of this allowance. The improved profits made it possible for your Directors to allocate Rs. 6 lacs to the General Reserve, which allocation will assist

in financing our capital expenditure programme. Your Directors were also able to provide Rs. 2,50,000/- for Workpeople's housing.

The liability of the Workpeople's and Employees' Provident Funds as at 31st December, 1958 amounted to Rs. 85,63,207 and Rs. 4,40,343 respectively; corresponding amounts have been invested in Trustee Securities and these are held by the Trustees of the Funds.

It gives me great pleasure to record our thanks for the valuable services which have been rendered

to your Company by the Managing Agents. No commentary on your Company's activities during 1958 would be complete unless I were also to record our appreciation of the continued loyal and devoted services to the Company by the Mill Manager and his staff. Our thanks are also due to the employees for their contribution to the successful results for the Company during the year under review.

Note.—This document does not purport to be a report of the proceedings of the General Meeting.

Indian Aluminium Company Limited

Chairman Reviews Record Year

The following is an abbreviated version of the address delivered by Mr K. C. Mahindra, Chairman, Indian Aluminium Company, Limited, at the Annual General Meeting of the Company held at Calcutta on 27th April 1959:

The Directors' report submitted to you along with the audited accounts for the year 1958 gives you the factual background of record activity in the operations of the Company. Production of bauxite ore and alumina, of primary ingots and rolled products reached new high levels, as also sales of own and agency products.

Since our last meeting the Company has passed an important milestone in its history. Our Hirakud smelter started operations on the sixth of January this year and it is a measure of the eminently successful start-up that in February aluminium production at the plant attained its rated capacity of 10,000 tons per annum. There is reason for additional pride and satisfaction in that this smelter costing nearly Rs. 5 crores was built largely by the Company's Indian technicians. We took care in providing for highly skilled supervision from Canada for a short period during the concluding phase. That all the smelter pots have functioned without interruption, since the start-up, and functioned efficiently speaks well of the technical proficiency and care and skill devoted during the construction and initial operating stages. And our Canadian friends tell us that to have operated without break during the initial period and to have reached the capacity output within two months is a record achievement.

The Company is now a significant producer of the metal with an annual production rate of nearly 16,000 tons of aluminium. The members of this Company can justly take pride in this achievement and the contribution it makes to strengthening the foundations of the country's economy.

Turning to the financial accounts for 1958, you will notice that a sum of Rs. 11.1 lakhs has been transferred to Development Rebate Reserve—a statutory requirement if the Company wishes to avail of

certain tax concessions in respect of new plant and machinery. The allocation for 1958 related principally to the additional plant at Muri where production facilities have been increased to 18,000 tons of alumina per year. For 1959 the Development Rebate Reserve will be correspondingly high because of the new installation at Hirakud. A further amount of Rs. 60 lakhs has been provided for current taxes. While gross profits show a healthy corresponding increase, corporate taxation absorbs over 55% more than it did last year. Because of these heavy deductions, the net profit was reduced to Rs. 36.6 lakhs in 1958, which still is an improvement on the previous year.

The higher rate of production and the resulting increase in total profits enables and justifies a slightly higher dividend on ordinary shares than that declared for 1957. At the present time, however, when the Company is engaged in an expansion programme of considerable magnitude and the effect of annual changes in tax measures on our finances cannot be accurately foreseen, your Directors feel that it would be prudent to conserve cash resources somewhat and yet meet the legitimate expectation of a higher dividend. We have therefore recommended a dividend of 7% on the ordinary share capital and I trust this will meet with your approval.

For private enterprises such as ours, it is the profits we make and the cash the shareholders receive in dividends which determine whether or not the Company will continue to attract the capital needed for expansion of the industry. With the completion of the Hirakud Smelter we are entering the second stage of expansion—the Hirakud smelter to 20,000 tons, the Muri alumina plant sufficient to meet the requirements of both the Hirakud and Alupuram smelters and the provision of requisite additional fabrication facilities. The implementation of these plans will require considerable funds from internal as well as external sources and our ability to obtain

them will be influenced greatly by the policies of the Government.

As shareholders will probably have read, the Chief Minister of Orissa announced at the formal opening of our Hirakud smelter on 12th February, 1959 that the electric power required to expand the smelter to 20,000 tons capacity will be made available to us in two years' time. In the light of this announcement, we have been actively pursuing our negotiations with the Orissa Government and hope that a satisfactory power contract will soon be concluded permitting us to proceed with the expansion.

Keeping in view the needs of our expanding business and its complexity, we have during the past year sent a number of our employees for technical and administrative training in North America and Europe. This training has been provided by the subsidiary companies of our Canadian shareholder, Aluminium Limited. We have also continued to receive their assistance by the loan of some of their specialists for various assignments in our Company. These facilities, as you will appreciate, represent a valuable asset to the Company and enable it to maintain its technological leadership in the Indian aluminium industry.

It has been customary with me to utilise this occasion to offer a few personal comments on the economic questions raised during the past twelve months, to take stock of the prevailing moods and submit for critical appraisal a suggestion or two. Thus, I made an unusual suggestion last year, namely that a taxpayer may be permitted to "invest" 10% of the tax amounts due from him in soil improvements and soil productivity in the locality of his choice and in the manner he considered most effective. This suggestion was novel and met with no response. Yet if I repeat it with some variation it is in the belief that it is paramount for the non-farming citizen not merely to know the complex agricultural problems facing our country, but to learn to know how to help

in reaching practical solutions. The variation is in the line that joint stock manufacturing units may be permitted to "adopt" a village or cluster of villages and in co-operation and consultation with the local authorities as well as the Community Development officers make itself responsible for the economy and health of the village or group of villages so adopted. Expenditure of the corporation on this account, duly checked and certified, may be treated as a business expense for taxation purposes. I regard it as of growing importance that the people engaged in the development of industries should get mixed up somehow and in some manner actively with village economies.

Joint co-operative farming proposals as enunciated by the Congress Party and now supported in a generalised manner by the Lok Sabha have evoked contrary and highly surcharged emotions. Criticisms, appraisals, appreciations of fundamental problems are within the rights of democratic people but the controversies which have raged round the joint farming proposals have reached the nadir of bickering and bathos and reveal the alleged essentially Indian capacity for sustained confusion. The political and intellectual opponents of the proposals see in them the fatal approaches to a totalitarian system, for to them coercion is implicit and extinction of individual identity and proprietorship inevitable. Yet they seem to ignore the urges behind land reform which aim to correct a situation which has made the agriculturist a veritable serf and a situation disturbing and explosive enough to demand immediate attention. The advocates on the other hand refuse to be daunted by economic equations composed entirely of variables and acclaim the support of many economists and operators in statistics.

It is confusing for a lay citizen to read on the one hand, a distinguished economist (who perhaps has never been near a farm) affirm that co-operative farming would enable Government to provide employment to the unemployed and the under-employed in the villages, and on the other, to listen to a practical agriculturist

May 2, 1959

land-owner who states categorically that joint farming means surplus hands, that if pooling takes place some people will be thrown out of work—they will become absentee landowners. Joint farming is proposed for increasing production—yet the same enthusiastic economist proclaims that the smaller the holding, the larger the production per acre. Amidst such confusion of advice one can only paraphrase the old English adage: "if you consult a doctor, nothing is wholesome; if you consult the soldiers nothing is safe"—and say in modern parlance that if you consult the economists, nothing would remain economic.

I am conscious of the fact that what would make economic sense often makes political nonsense and that while continuation of large one-unit farms owned by a single individual or family would make for increased production rapidly, given the necessary assistance by way of better seeds, fertilizers, irrigation water and mechanised power, there may be gained larger social satisfaction if the ownership was broken up and land distributed to tillers.

The basic problem however remains—the problem of how to release and guide the energies of the millions now locked up in the rural subsistence economy. The joint farming Co-operatives aim to meet this challenge. We should recognise the psychological as well as the emotional implications of the proposals, but for practical ends one does not see in the villages either the democratic interplay of cohesive forces or the emotional appeals of sustaining faiths and credo. It is therefore going to be

a long, long process and a most expensive one if the country is to be covered with joint co-operatives at all levels of ownership, tilling, production, marketing and credit within a short period. It is questionable if the individual owner of a small plot of land would voluntarily agree to join the pool, when he knows he may have no work to do and would hereafter depend upon the toils of others. A Japanese proverb is apt: "Nobody is more stupid than the man who allows his pot to be stolen on a moonlit night".

In statecraft one pursues not what is most desirable, but what is best attainable in the shortest time. Discussions on the platform, in Parliament and in the press have been free and uncurbed; it is good to see our Prime Minister lashing at the critics of the joint co-operative farming proposals and inviting a better alternative course. Without being critical of the ultimate of the socialist ideal of a co-operative commonwealth, I can visualise the immense difficulties in formulating the details of a practical programme and then in executing and administering the same with speed and determination.

I venture to suggest an alternative which will not disrupt the course of social reform and does not conflict with any ideological acceptances. The aim is to increase agricultural productivity per acre and per man in as short a period as possible. I suggest that agriculture be declared an "Industry" under the Industries (Development & Regulation) Act of 1951 and henceforth be treated as such in Government thinking. That India imported about Rs. 1200 crores

worth of food grains during the last ten years is a most harrowing fact. The record of handling of our food problem both at the Centre and at the States level has not hitherto been bright—on the contrary, the various survey reports confirm that there has been a considerable amount of confusion and muddle over this problem. Throw open the land for massive and intensive development with the one and sole end-purpose of increased production and increased productivity per acre. Scientific aggregation of culturable areas, mechanisation, technology, experience and co-ordination should override, at any rate for the next 20 years, demands for factionising of land.

The inclusion of agriculture under the 1951 Act would mean that invitation is given to farmers and others to apply for a licence to set up agronomical estates for economic production. The size, the location, the crop selected, the financial structure, employment factor—these would receive the scrutiny of the agricultural Development Wing before a licence is granted. It may be in accord with the accepted social principles that only leasehold rights be granted to the applicants and for a period of say 40/50 years only; it will be in accord with the country's needs that the programme of cultivation be got under way as soon as possible. The 1951 Act contains sufficient powers for the Government to control production and prices and direct distribution channels, and take over in the event of mismanagement. At the start, the experiment may be confined to regions where "new" water

goes, to gramdan villages and newly reclaimed colonies where betterment levies can be openly accepted. A success will serve as a signal example to others who are shy of paying today for something which they are not sure will yield better fortune. As the estates will remain leasehold and safeguarding provisions can be evolved for the benefit of the workers employed, there can arise no conflict with the concept of joint co-operative farming; in fact if a joint stock company promotes the estates, the gradual development of shares of the company to the workers on the estate is possible and may be considered desirable, thereby ultimately leading to the estate being substantially owned by the workers in joint title. Government may then consider converting the leasehold into a freehold co-operatively held by the workers of soil.

Since our last meeting, Mr. W. A. Russel resigned from the Board on his departure from India. Mr. Russel served as a Director for five years and I would like to express, on your behalf and mine, our appreciation of the services he rendered to the Company. I am sure all of you would also like to join me in the praise which is due to the Management and employees of the Company for the notable achievements to which I referred earlier. Their sustained effort has largely been responsible for the progress and on them we depend to further enhance the stature of the Company in the years ahead.

(Note: This does not purport to be a record of the proceedings of the Annual General Meeting.)

Sizable Gains on Balance

Watch-Dog Writes:

STOCK markets have generally displayed a steady to firm undertone during the week under review. In contrast to the dull conditions that prevailed last week, there is a significant flutter in the prices of a few chosen active counters, thanks to the emergence of bull support. But, activity remains rather restricted due to the cautious attitude adopted by the operators.

With the speculative issues encountering good support at improved levels, cheerful conditions prevailed on the Calcutta Stock Exchange.

A few bright spots highlighted trading on the Bombay Stock Exchange.

On the Madras Stock Exchange, there was a broadening of activity, bright spots being provided by the Planting and the Textile sections. Wall Street closed barely steady.

Calcutta

Calcutta, Friday Evening.

IN refreshing contrast to the mild reaction noted last week, the local Stock Exchange presented a cheerful appearance during the week under report when prices in almost all sections staged a smart recovery under the lead of the speculative issues. The market opened with a measure of steadiness. Although activity was not so brisk, the tendency was good due to expectations of tax concessions. In this respect, the Finance Minister's clarification, that he would consider the question of giving tax relief in respect of dividends declared out of past reserves as also of subsidiary companies, provided some comfort to the market circles. The news of the Government having granted the licence to the Indian Iron & Steel Company to export pig iron to Japan and of the proposed deal with the same country for the supply of metallurgical coal was also a contributory factor.

The Gilt-edged market continued to remain dull. Institutional support

was lacking due to difficult monetary conditions and, on small offerings, prices tended to ease slightly. 3 per cent 1986 Conversion Loan opened lower at Rs 73.90 and, after improving to Rs 74.30, receded again at the close to Rs 73.94.

Despite quieter advices from the jute goods market, Jute shares remained generally steady although price movements were confined to a narrow range. It was believed that the industry would be able to face competition in overseas markets, at least so long as the present advantages would continue, although some operators seemed to be worried over the continued lack of foreign enquiry. Anglo-India changed hands at Rs 240 to Rs 244; Howrah at Rs 24.50 to Rs 24.75; India at Rs 16.00 to Rs 16.31; Kamarahatty at Rs 203 to Rs 210; National at Rs 24.37 to Rs 24.50 and New Central at Rs 14.69 to Rs 15.37. Belvedere hardened to Rs 170 from Rs 166 following the announcement of a dividend of Rs 5 per Ordinary share for 1958 as against nil in the previous year.

Thanks to the proposed deal for the supply of 500,000 tons of metallurgical coal to Japan, Coal shares, especially of those companies producing this variety of coal, firmed up from last levels. Equitable were wanted upto Rs 31.56 from Rs 31.25,

while Bengal remained firm at Rs 317. Central India moved between Rs 7.94 and Rs 8.25 and Western Bengal between Rs 6.44 and Rs 6.69, to close finally at Rs 8.06 and Rs 6.55 respectively. Burrakur fluctuated rather erratically between Rs 18.44 and Rs 18.75 on alternate buying and selling, to finish at Rs 18.62.

The Textile section gave an encouraging performance on reports of the improved conditions prevailing in the cloth market and the expectation of better working results for the current year. Elgins were taken upto Rs 14.87 from a low of Rs 14.19 and Kesoram upto Rs 14.37 from Rs 13.31. Jayshree and New Victoria moved narrowly around Rs 8.81 and Rs 1.59 respectively.

Although Tea shares remained early in the week on reports that no more concession would be granted to the industry, selected scrips came in for good support at improved levels on the belief that the dividends of these companies might be higher for 1958 than for 1957. Prominent amongst these were Baghmari changing hands at Rs 22.25 to Rs 22.56; Grob "A" at Rs 31.50 to Rs 31.81; Hasimara at Rs 23.25 to Rs 23.87; Hantapara at Rs 110 to Rs 120; Jayshree at Rs 12.62 to Rs 12.95; Methoni at Rs 22.31 to Rs 23.25 and Tezpur at Rs 16.25 to Rs 16.50.

Sugar shares were rather quiet with prices developing a slightly reactionary tendency. It was felt that the proposed concessions to the Khandasari units might make no material difference to the organised sector. The only firm feature was Carew, having sustained support up to Rs 9.12 from Rs 9.00. Darbhanga were, however, on offer at Rs 19.75 and Dyer Meakin at Rs 15.25 against Rs 21.12 and Rs 16.00 respectively.

In the Engineering section, price movements were mostly influenced by the speculative activity in Indian Irons which, in turn, were subjected to heavy bull activity on reports of the Government having granted licence to the Indian Iron & Steel Company for the export of pig iron to Japan. Against the week-end closing of Rs 24.07, Indian Irons opened steady at Rs 24.10 and gradually advanced to Rs 24.56, to finish the week at Rs 24.47. In sympathy, TEXMACO were taken up to Rs 25.95 and Burn upto Rs 453, to close finally at Rs 25.70 and Rs 450 respectively on profit-taking. Lack of fresh support caused Jessop to be marked back to Rs 32.50 from Rs 33.50 and Guest, Keen, Williams to Rs 37.75 from Rs 39.50. Marshalls changed hands at Rs 6.19 to Rs 6.31; Indian Galvanizing at Rs 16.69 to Rs 16.75 and Kumardhubi at Rs 9.75 to Rs 9.81.

Miscellaneous issues moved with the general trend of the market. Arkali Chemicals were keenly sought after upto Rs 22.69 from Rs 22.37 following the reports that the company's polythene project would start working early next month.

Orissa Minerals was a very firm feature at Rs 38 on the belief that the production of iron ores might increase in view of the possible demand for the Government steel plants. Orient Paper were taken up to Rs 37.30 from a low of Rs 36.65 (Rs 37.00); Indian Cable upto Rs 32.62 from Rs 32.31 (Rs 32.37); Indian Aluminium upto Rs 22.44 x.d. from Rs 22 x.d. (Rs 22.37); Aluminium Corporation upto Rs 15.12 from Rs 14.31 (Rs 15.12); Indian Copper upto Rs 4.28 from Rs 4.23 (Rs 4.26); India Steamship upto Rs 14.69 from Rs 14.53 (Rs 14.66); NICCO upto Rs 33.81 from Rs 33.25 (Rs 33.81); National Carbon upto Rs 32.87 from Rs 32.50 (Rs 32.75); Sirpur Paper upto Rs 13.50 from Rs 13.19 (Rs 13.31) and Rohtas upto Rs 22.50 from Rs 22.37 (Rs 22.00). Figures shown within brackets were the week's closing rates.

Bombay

AFTER ruling steady for a major part of the week's session, sudden revival of activity at the fag-end caused a significant flutter in the prices of a few chosen active counters on the Bombay Stock Exchange. Activity, however, varied from counter to counter and the turnover was fair in the active scrips, but remained far from satisfactory in others.

Textiles: Several bright features were provided in this section on the hope of better working results for the current year. Bombay Dyeing were concerned in talks of more benefits being reaped as a result of ex-

port incentive scheme. This scrip rallied to Rs 62.50 from Rs 61.80, while Central shot up to Rs 104 from Rs 96.00. Kohinoor added a rupee at Rs 258.50 and Svadeshi a couple of rupees at Rs 226.50. Century moved between Rs 504.50 and Rs 511.50, while Simplex hardened to Rs 180 from Rs 178 and Indu Ordinary to Rs 8.32 from Rs 8.16.

Steels Steel shares, though fairly active, did not make much headway, mainly due to the apathetic sentiment which resulted from the approaching new issue of shares and the pressure of deliveries. However, the management has not thought of the issue, which may be tackled after a month or so. Hopes are held that the issue, when it materialises, will not be in such proportion so to prove burdensome for the shareholders. Tata Ordinaries, after touching a low of Rs 179.25 from the opening rate of Rs 181.25, improved steadily to Rs 181.75 at the close.

Miscellaneous In this section, Shipping shares came in for good demand on the feeling that the Indian shipping companies might stand to benefit from the increase in freight rates. Scindia Steams were enquired upto Rs 18.32 from a low of Rs 17.56. Although Automobile shares moved irregularly the tone was fairly steady. Premier met with business at Rs 122 and Hindustan Motors at Rs 9.08. Cement shares ruled quietly steady with ACC changing hands at Rs 149.25 to Rs 150 and Digvijay at Rs 144.50 to Rs 146. In the Engineering group, Premier Construction firmed up to Rs 307 from Rs 280.50 on hopes of a favourable outcome of the suggestions made by the shareholders to the management. Among Mining shares, Shivrajpur Syndicate remained steady at Rs 103.50 following the dividend being maintained for last year. Sugar shares came in for good demand with Belapur being taken up to Rs 309 from Rs 290 and Phalton up to Rs 167 from Rs 162. Among others, Bombay Burmah Trading were quite active on buying and selling enquiries. The shares moved between Rs 506.50 and Rs 520.50. National Rayon were enquired upto Rs 290.25 from Rs 286 and WIMCO upto Rs 215 from Rs 213.

Madras

THE Madras Stock Exchange displayed a better tone during the week under review. Selected shares in the Planting and Industrial sections were in demand.

Textiles: This section was active and renewed buying was in evidence in several shares. Anglo-French moved up further to Rs 82, while Buckinghams and Coimbatore Cottons met with good demand at the market rates. Lakshmis were supported at the improved rate of Rs 127. Maduras were, however, a shade quieter at Rs 30 on lack of fresh support. Loyals were enquired upto Rs 32 and Travancore Rayons upto Rs 19.70.

Plantings In this section, shares of the high-grown tea continued to be in good demand once again high prices were offered. Devashola evok-

INDUSTRIAL INFORMATION

WROUGHT ALUMINIUM AND ALLOYS.

The Indian Standards Institution has issued a specification for wrought aluminium and aluminium alloys, extruded round tube and hollow sections for general engineering purposes (IS: 1285-1958).

The standard, which is one of a series of Indian standards for wrought aluminium and aluminium alloys in various forms for general engineering purposes, covers requirements of three grades of aluminium and ten aluminium alloys in the form of extruded round tube and hollow sections.

The standard is divided into two parts. The first part gives general requirements for each type of materials, while the second part gives specific requirements applicable to it.

Copies of the standards, published in English, are available from the offices of the Indian Standards Institution at New Delhi, Bombay, Calcutta and Madras.

I.L.O. INDUSTRIAL COMMITTEE ON COAL MINES

Principles and methods of wage determination, labour-management relations and decent developments in the coal mining industry are among the subjects to be discussed at the Seventh Session of the I.L.O. Industrial Committee on Coal Mines, to be held at Geneva from April 27 to May 8, 1959.

The Indian delegation to the Session will consist of: Dr S. T. Merani, Labour Attache, Consulate-General of India, Geneva, (Government delegate); Shri R. Lall, Deputy Chairman, Indian Mining Asso-

ed support at Rs 27.50, while Highlands were done at the improved rate of Rs 12 and Periakaramalais at Rs 4.29. Blue Mountain moved upto Rs 3.57 from Rs 3.53.

Among Rubber shares, there was support for Cochin Malabars, with the rate moving upto Rs 6.25. Midlands were done at Rs 12.70 to Rs 12.80; TRTs at Rs 7.85 to Rs 7.95 cd and Kil Kotagiris at Rs 8.35 x.d.

In the Coffee section, Consolidated Coffees looked up to Rs 22.35, while Mysore Coffees were a shade cheaper. Shevroys were enquired at Rs 1.88.

Miscellaneous In this section, Aluminium Industries noted improvement at Rs 19.35, while FACT's maintained interest at Rs 8.80. India Cements continued to receive support at the market rate. Singareni Collieries had some sellers at the market rate. Radio & Electricals met with business at Rs 6.05; Mettur Chemicals at Rs 13.10 and Andhra Cements at Rs 10.10.

Indian Finance

ciation, and Shri Inder Mohan Thapar, Chairman Indian Mining Federation, (employers' delegates); and Shri Bindeshwari Dubey, Colliery Mazdoor Sangh, Bermo, and Shri K. E. Chougule, Nowrozabad Colliery Mazdoor Sangh, Nowrozabad (workers' delegates).

CEMENT PLASTER AND CEMENT-LIME PLASTER

The Indian Standards Institution has issued a draft code of practice for cement plaster and cement-lime plaster.

The standard covers cement and cement-lime plaster finishes to walls and ceilings on backgrounds normally met with such as brick, stone or concrete. The code lays down recommendations with regard to minimum preparation of surfaces to receive the plaster. Different materials available, their suitable mixes and the best methods of their application are also discussed with suitable recommendations.

Both cement plaster and cement plaster gauged with lime are widely used in this country for internal finishing of walls and ceilings of buildings. Practice with regard to the preparation and application of materials and the finishings of plaster varies considerably from State to State and from department to department. The standard has been issued with a view to laying down a code of practice, generally suitable to Indian conditions.

To ensure that the code is not too radical as compared with existing practice, the Indian Standards Institution has taken into consideration the specifications for plastering currently in force in the Public Works Department at the Centre and in the States, in the Military Engineering Services in India, and also in the Reports of the National Buildings Organisations.

Comments on the draft standard may be sent before June 17, 1959 to the Indian Standards Institution, New Delhi.

New York

CONDITIONS on Wall Street ruled generally steady. Although corporate news remained largely bullish, uncertainty was evidence due to the possibility of a Federal Reserve Board move to restrict further the use of stock market credit.

American Motors were a feature of the week's trading, rising on the declaration of a 60 per cent quarterly dividend. This is the first cash payment by this company in nearly five years; and it was more than Wall Street anticipated. There was a secondary offering of the American Telephone. The 330,000-share offering was over-subscribed and the old stock moved up from its low point, although it did not move to the advancing side, National Lead and Zenith Radio were both firm features, the former on a good first quarter by dividend and stock-split rumours and the later on good earning prospects.

The Welfare Officer

Most of the world's great oilfields lie under deserts, swamps and jungles, far away from established centres of civilisation. Near the wells and refineries live the geologists, drillers and technicians, and as operations expand so the oil camps grow into permanent settlements. In time, new towns are established, whose citizens are the thousands of people employed in the industry.

Oil companies are very much aware of their responsibility for the welfare of these new communities, and most oil towns are, for that reason, models of thoughtful planning and administration.

So it is in Digboi. Once just a clearing in the dense jungle, Digboi is now one of India's most modern industrial towns. The Assam Oil Company devotes great attention to the provision of health services, good housing and sanitation, schools and other amenities for its employees.

And this is where the Welfare Officer comes in. He is the link between the Company and the community; the man who administers projects that make a fuller, happier life for everybody.

Just as the Assam Oil Company recognises that it has a duty to serve the people of India, so, through its Welfare Officers, does it promote the happiness and benefit the lives of the men who make their living by oil.

ASSAM OIL

a full-scale petroleum industry

a member of the Burmah Group of Oil Companies

INVESTOR'S SUPPLEMENT

Irregular Trends in Prices in April

IRREGULAR fluctuations in prices characterised trading on the local Stock Exchange during the month of April. Although the market, reopening after the Easter holidays, experienced a mild boom and the gains in prices were extended further on renewed speculative support, there was a sizable amount of profit-taking, resulting a reaction from the top levels. There was a general feeling that values had risen too fast since the Budget and that the market should consolidate the ground before advancing further.

There were also other factors which brought forth realising pressure on a broad front. Investors, who were also supporting the market along with the professional operators, turned cautious on the feeling that the stocks had already got over-priced on the consideration of yield, while some of them were inclined to liquidate a part of their holdings to make room for the forthcoming new issues by certain companies. However, sentiment still continued to be confident, thanks to scarcity of stocks, favourable news from the industrial front and the publication of encouraging results by some leading companies. Moreover, some of the operators were inclined to the view that the recent rise in prices was not mainly speculative, but partly due to investment demand for some of the shares of the miscellaneous industries. Their view was supported by the overwhelmingly good response to a number of recent new share issues and the optimism they entertained with regard to the availability of sufficient investible funds.

At the beginning of the month, the news of a substantial rise in production in March by the Indian Iron & Steel Company enthused the operators to turn active in their dealings in the speculative counters. It was also thought that the facilities offered to the industries for importing raw materials on a more liberal basis, following the announcement of the import policy for the April-September period, would be greatly useful; that there would be no interruption to production and that the available capacity could be used more purposively. The view expressed by the Planning Commission with regard to the top priority to be given to the machine-building industry in the Third Plan gave rise to a feeling that the target for the iron and steel industry might be raised and that such industries might be benefitted to a great extent. Thus, the consensus of opinion in market circles seemed to be, that the readjustment of the technical position might pay the way for a fresh rise in prices.

As a matter of fact, the market displayed a cheerful appearance during the second week of the month when prices continued their

upward trend on a broad front despite intermittent profit-taking. This was mainly due to the fact that professional operators were inclined to take the view that the pressure of business recovery would no longer be baulked by changes in Government policy hereafter, while genuine investors were absorbing scrips of those companies with excellent growth prospects in the hope that these companies

be retained till the close of the week due to lack of follow-up support and general profit-taking. Apart from technical considerations and the political news background having a bearish impact on trading sentiment, the steady and sharp setback in prices was mainly influenced by the disappointment over the small range of concessions announced by the Finance Minister and the absence of anticipated

would be able to pay higher dividends. Thus, most of the scrips forged ahead to hit new peaks for the month.

The market, however, developed hesitancy during the third week of the month and, except for a few scrips, prices were marked down by a sizable extent due to tired bull liquidation over a wide front. Although attempts at rally were made, higher levels could not

relief in company taxation. It was felt that, if the rate of tax on corporate profits was fixed at 45 per cent, the companies had to pay more taxes than they did at present. It was also feared that the companies, which had been paying dividends out of taxed reserves, would be put to great difficulty and that much larger sums would have to be transferred from reserves if the dividend payments had to be adjusted.

Again, there were indications that the continued stringency of the money market would come to an early end as the peak period of the busy season had already been seen. In this respect, there were discussions with regard to the possibility of the Government of India raising as big a loan as possible. It was thought that, in such an event, the siphoning off of large sums would create a lack of investible funds. Naturally, bears took full advantage of the situation and hammered prices by voluminous blanket sales. But for the replacemen buying and some bear-covering, the market would have finished at the lowest levels for the month.

In general, trading was rather brisk towards the close of the month, being influenced by the revival of hopes of some relief in the corporate sector in the light of the remarks made by the Finance Minister. The new improvement in sentiment was also aided by the news of the Indian Iron & Steel Company having obtained the licence for exporting pig iron to Japan and of the proposed deal with the same country for the supply of metallurgical coal. Thus, the market finished the month on a steady note.

In the month's dealings, speculative scrips were subjected to alternate bouts of buying and selling under the lead of Indian Irons. Although the conflicting rumour with regard to the unloading of shares by the Dalhousie Holdings Company caused a sharp setback in Indian Irons in the last week of the month, there was a sizable recovery towards the close due to renewed bull support, being influenced by the reports of the company having obtained the licence for exporting pig iron to Japan.

Despite lower advices from the jute goods market, Jute shares attempted at rally following the announcement of encouraging dividends by the Andrew Yule group of companies. Higher levels could not, however, be retained till the close due to lack of support. Operators seemed to be worried about the lack of overseas enquiry and the possibility of increasing competition from Pakistan in those main markets, which were once assured for Indian jute goods.

Coal shares, especially of those companies having export possibilities, enjoyed good support; but there was lack of support towards the end of the month in view of the inordinate delay in the release of the Prices Revision Committee's report.

Although trading in the Tea section remained restricted, scrips of the Assam and Doars gardens met with good support at improved levels on expectation of higher dividends for 1958. The Miscellaneous section provided several firm features, thanks to the scarcity of offerings.

A Bout of Speculative Fever

Investment Gossip:

I wish I could say that I am entirely pleased with the developments over the last week. I should normally have felt enthusiastic about a prediction of mine, however obliquely phrased materialising. But the fact that prices have been stridently on the ascendant during the week past does not, I am afraid, afford me satisfaction.

For, what we have been seeing these last few days is speculative fever. The Gateway City seems to have been affected by summer's heat, and, with the thermometer, both speculative fever and share prices have been rising.

Thus, what we have had in effect is a forging ahead in prices under the leadership of Tata Steel, and mainly because there is now a good deal of conjecture about what the rights issue in the offing of Tata Steel might prove to be.

Hence, the while that bullish fervour had seized Dalal Street, both Calcutta and Madras were relatively quiet. Indeed, I understand that the pressure from Calcutta is bearish—but the Bombay bulls are proving much too ebullient.

And that is exactly why I do not have the sense of cheer which I should have had. For, this speculative bull phase is likely to prove ephemeral. And even as prices have gone up they should, in two weeks or may be four, again slide again.

However, when I talk here of the certainty of this bull phase yielding place to a bear phase, I have in mind mainly the current speculative cycle in prices. Intrinsicly, the outlook for stock exchanges is good. So, with investor interest, I should have expected a gradual and sustained upward movement. But when it happens, as it happened last week, that all of a sudden there is a crazy movement upward, I am afraid I am none too happy.

For, it shows that the investor is no longer in the picture. It shows that it is the speculators who hold sway over the markets.

It shows that the whims and caprices of stock exchange operators are at their most fanciful.

It shows, in short, an all too temporary appearance of good health—but the heart of the movement being speculative in character, it bodes nobody any good.

Investment Notes:

THE Metal Corporation of India is making a fresh issue of capital in connection with its expansion programme. The company is calling a meeting to approve of the issue of 13 lakhs new Ordinary shares and one lakh 6 per cent Redeemable Cumulative Preference shares. Out of this issue, 6 lakhs shares are to be taken up, at par, by Rio Tinto Company; another 6 lakhs shares by the Indian Steel & Wire Products Limited and the balance of one lakh shares are to be offered for subscription to "others". Of the shares to be offered to "others", preference will be given to the existing shareholders.

Guest, Keen, Williams, Limited has proposed to diversify its activity by obtaining a controlling interest in Sankey Electrical Stampings Private Limited. The latter's share capital—consisting of 117,334 Ordinary shares of Rs 100 each—is sought to be acquired by offering in exchange 470,850 Ordinary shares of Rs 10 each in Guest, Keen, Williams, Limited.

According to the figures released by the Indian Iron & Steel Company, output of pig iron has fallen from 95,262 tons in March to 86,826 tons in April, while Steel Ingots are 9,705 tons lower at 61,132 tons. Saleable Steel has declined from 59,707 tons to 40,151 tons with semis contributing 9,885 tons against 24,873 tons and finished steel 30,286 tons (34,834). Despatches of saleable steel have fallen from 75,972 tons to 40,405 tons.

In the case of the Tata Iron & Steel Company, production of saleable steel amounts to 93,300 tons in April against 100,700 tons in the previous month. The output of semi and finished steel has dropped from 43,000 and 57,700 tons respectively. Production of Pig Iron and Steel Ingots has, however, increased from 127,400 tons and 123,600 tons to 130,600 tons and 124,200 tons respectively in April.

In Madras, Arthala Tea Estates have proposed to issue 20,000—6 per cent tax-free Cumulative Preference shares of Rs 10 each and 60,000 Ordinary shares of Rs 5 each and offer the same to the shareholders, as on the 31st March 1959, in equal proportion to their existing holdings.

Investment Briefs:

National Rubber Manufacturers have reduced the dividend from Re 1 to 60 p per share for last year.

In Madras, Tropical Plantations have raised the dividend from 4 to 6 per cent for 1958.

Andrew Yule Jute Group Results

ORIENTAL FIRE AND GENERAL INSURANCE CO., LTD.

Head Office: Oriental Buildings, BOMBAY-1

results for last year. The sales of the Budge-Budge Jute Mills Company Limited have risen to Rs 1.71 crores for the year ended 31st October 1958 from Rs 1.66 crores in previous year. The net profit, after providing for Depreciation and Taxation, amounts to Rs 2.74 lakhs against a loss of Rs 81,355. Apart from providing Rs 12,200 for Taxation; Rs 32,000 for Wealth Tax and Rs 924 for Development Rebate Reserve, the provision for Depreciation has been raised to Rs 2.47 lakhs from Rs 2.44 lakhs. The directors have recommended an Ordinary dividend of Rs 5 per share against nil in 1957.

The Orient Jute Mills Company Limited has shown a net profit of Rs 56,726 for the year ended 30th November, 1958 as against a loss of Rs 55,117 incurred in the previous year. Depreciation has been reduced to Rs 96,000 from Rs 1.00 lakh. After transferring Rs 22,150 from General Reserve, the directors have provided Rs 11,600 for Taxation; Rs 22,150 for Wealth Tax and Rs 2,325 for Development Rebate Reserve. A dividend of Rs 2.50 per share has been recommended on the Ordinary shares against nil in the previous year.

Thanks to a net profit of Rs 5.27 lakhs against a loss of Rs 50,051, the Caledonian Jute Mills Company Limited has found it possible to declare a dividend of as much as Rs 15 per share for the year ended 30th November, 1958 as against nil in the previous year. Sales are shown at Rs 1.15 crores against Rs 1.04 crores. The directors have set apart Rs 2.87 lakhs

(Rs 3.12 lakhs) for Depreciation; Rs 27,000 (Rs 25,000) for Wealth Tax; Rs 1.50 lakhs (nil) for General Reserve and Rs 1,889 (nil) for Development Rebate Reserve.

The Cheviot Mills Company Limited has also recommended a dividend of Rs 5 against nil following a net profit of Rs 1.40 lakhs against a loss of Rs 88,343. Sales are slightly lower at Rs 92.82 lakhs against Rs 93.65 lakhs. A sum of Rs 1.06 lakhs (Rs 1.08 lakhs) is provided for Depreciation. After transferring a sum of Rs 22,500 from General Reserve, the directors have allocated Rs 20,800 (nil) to Taxations; Rs 22,500 (Rs 23,000) to Wealth Tax and Rs 888 (nil) to Development Rebate Reserve.

Cawnpore Sugar

The Cawnpore Sugar Works Limited has reported disappointing results for the year ended 31st October, 1958. This is mainly due to the heavy losses incurred at Padrauna and Kathkuiyan factories. The reasons for the heavy losses at these two units are due to the relatively poorer yields of sugar from the cane supplied coupled with considerable mechanical difficulties in operating the factories by virtue of the High Court order restraining the company from undertaking any overhaul or replacing worn-out machinery.

Despite a rise in sales from Rs 2.89 crores to Rs 3.61 crores, the accounts reveal a net loss of Rs 13.46 lakhs for the year as against a loss of Rs 8.51 lakhs in the previ-

ous year. The directors have provided Rs 6.50 lakhs (Rs 8.00 lakhs) for Depreciation; Rs 25,000 (nil) for Development Rebate Reserve and Rs 17,537 (75,000) for Taxation. The dividend is again passed over. The debit balance carried over to next year is over Rs 22 lakhs.

£ Rs

South Karanpur Coal

The profit earned by the South Karanpur Coal Company Limited, for the year ended 31st August 1958, has amounted to Rs 3.87 lakhs as against Rs 2.85 lakhs in the preceding year. The Ordinary dividend is maintained at 7½ per cent, including the final dividend of 3.80 per cent. Allocations include Rs 1.70 lakhs for Taxation against Rs 1.12 lakhs; Rs 5,500 for Development Rebate Reserve against Rs 3,200; Rs 16,000 for Wealth Tax against Rs 25,000 and Rs 25,000 for Development Reserve against nil. After necessary adjustments, a sum of Rs 1.36 lakhs is carried forward.

A quantity of 193,010 tons of coal is raised against 187,703 tons and the despatches amount to 182,200 tons against 186,382 tons. The directors state that, at West Sirka, two cross-cut inclines went into full production during the year.

£ Rs

Godfrey Phillips

Godfrey Phillips (India) Limited has reported satisfactory results for 1958. The gross profit has registered a rise of Rs 6.18 lakhs to Rs 29.54 lakhs. The directors have proposed to raise the dividend from Rs 1.50 to Rs 2.00 per share.

After providing Rs 4.89 lakhs for Depreciation against Rs 4.83 lakhs and Rs 14.75 lakhs for Taxation against Rs 11.00 lakhs, the net profit is higher at Rs 9.89 lakhs against Rs 7.51 lakhs. Sales of cigarettes amount to Rs 3.33 crores against Rs 3.37 crores. Gratuity reserve absorbs Rs 1.23 lakhs against Rs 57,000 and Development Rebate Reserve claims Rs 40,000 against nil.

£ Rs

Marsden Mills

The working of the Marsdel Mills Limited has resulted in a profit of Rs 4.13 lakhs for 1958. The dividend of Rs 12 per share, which is maintained, is to be paid from Reserve. Out of the profits,

managing agents' commission has been provided at Rs 50,000; Depreciation Rs 2.84 lakhs; Development Rebate Rs 23,400; Rehabilitation Reserve Rs 7,800 and Taxation Rs 30,000.

£ Rs

Monogram Mills

The gross profit of the Monogram Mills Limited has amounted to Rs 4.53 lakhs. Out of this, managing agency commission takes up Rs 50,000; Depreciation Rs 2.42 lakhs; Development and Rehabilitation Rs 22,813, while Taxation provision has been made at Rs 1.45 lakhs. A dividend of Rs 12 per share is recommended from the Reserve Fund.

£ Rs

Maneklal Harilal Mills

The Maneklal Harilal Mills Limited of Ahmedabad has reported a gross profit of Rs 8.53 lakhs against Rs 2.22 lakhs in 1957. After crediting Rs 1.45 lakhs from General Reserve, the total comes to Rs 9.43 lakhs. Out of this, managing agents' commission has been provided at Rs 50,000; Depreciation Rs 4.17 lakhs; Development Rebate Reserve Rs 1.48 lakhs and Taxation Rs 27,000. The directors have transferred Rs 1.80 lakhs to special Reserve. They have maintained the dividend at Rs 30 per share, including a bonus of Rs 10 per share. Better results are attributed to the installation of some of the latest manufacturing and processing machinery upto sanforizing, costing about Rs 25 lakhs in all.

£ Rs

Lucky Valley

A substantial increase in the average price realised has more than offset the disadvantage experienced by Lucky Valley (Nilgiri Hills) Tea Estates Limited in 1958. The outturn of tea is only 235,914 pounds against 245,839 pounds; but the average realised is significantly higher at 274.84 nP per pound against 206.84 nP previously.

The net profit, before providing for Taxation and Depreciation, is sharply higher at Rs 1.68 lakhs against only Rs 82,939 in the previous year. The amount set aside towards Depreciation is Rs 13,459 against Rs 12,801 and Taxation Rs 75,500 against Rs 35,500. A sum of Rs 5,000 is written off preliminary expenses. The dividend is maintained at 10 per cent.

Coal: Costs and Prices

DURING the last few months the coal industry in our country has been passing through an anxious time. The anxiety has been heightened by rumours current in the market that Government's decision on the recommendations of the Coal Prices Revision Committee may be announced any moment and the surmise that Government proposed fixing ceiling prices. Though the industry last year rendered a good account of itself on the production front, its spokesmen have insistently drawn attention to the unsatisfactory features of the coal economy. The industry has to operate under a system of regulations which take particular care to control the main source of income, namely the selling price of coal in the interests of the consumers, while costs are allowed to mount without let or hindrance and the process is even accelerated by the operation of some of these regulations. For some years the industry has been handicapped by steadily mounting costs and the position was repeatedly brought to the notice of the authorities. That the industry had a prima facie case in asking for rise in scheduled prices was acknowledged by the appointment of the Coal Prices Revision Committee in 1957 and the fact that the Committee was asked to report within two months showed that the urgency of the problem was fully realised. On account of the complex nature of the issues involved, the Committee was not able to keep to the schedule and an interim increase in coal prices of Rs 1.50 per ton was announced. Though the industry considered that the increase was hardly adequate to cover increase in cost consequent on the implementation of the Labour Appellate Tribunal Award, it was accepted in the interests of maintenance of satisfactory industrial relations and also because the industry was assured that it was only an interim increase and any deficiencies would be adjusted in the final recommendations of the Coal Prices Revision Committee.

The case of the industry for substantial increase in prices is simple and straightforward. The claim is justified by the all-round increase in all items of cost and the additional expenditure the industry has to undertake for the purposes of rehabilitation. The strength of the case presented by the industry before the Price Revision Committee has only been reinforced by subsequent developments. Almost all items of stores have gone up in price, the increase ranging from 48 per cent in the case of one brand of explosive to 171.8 per cent in the case of timber props. The average increase in "stores costs" which has occurred since 1947 is estimated at about 75 per cent and the resulting increase in the cost of coal at 88 nP per ton. The implementation of Coal Mines Rules and Regulations, of both 1955 and 1957, has imposed on the industry an additional burden which works out to Rs 2 per ton in the cost of raising coal. Since 1955 the industry has been incurring the additional expenditure without any corresponding increase in price. Apart from the rise in the price of stores, the cost of electric power also shows a sharp increase, the rate per unit having increased from 0.60 annas in 1946-47 to 1.34 annas.

Some mines have to be closed for various reasons, for reasons of safety, exhaustion of seams, floods, fire and so on. The provision of Section 22(3) of the Mines Act of 1952 which empowers the Mine Inspector to order closure for reasons of safety are being rigorously enforced during the last six months. In all such cases of closure, lay off compensation and/or retrenchment relief is payable to the workers. The industry can claim that this additional item of expenditure should be taken into consideration in the assessment of costs for determining the price structure.

After last year's tragedy at Chinakuri the industry, the Government and the public have become more safety conscious. Additional measures of ensuring safety have been discussed at a number of safety conferences. The expenditure incurred on this account will be an additional element of cost. Similarly in respect of sandstowing, unless the Coal Board comes forward to meet the full cost, the prices of coal should allow a margin to enable the mines to undertake the essential expenditure.

The industry can also justly claim that it should be treated at least on the same footing as the Steel, Textile, Cement and Sugar industries as regards an adequate margin for rehabilitation in the controlled prices for its product. To the coal industry, the possibility of creating reserves out of profits to meet the cost of renewal of equipment is of special importance, because of its large investments in wasting assets. If the price structure does not allow an adequate margin, the industry will find it difficult to replace the existing equipment, most of which was purchased before or during the war and is in urgent need of replacement. Without replacements and additions, the industry may not be able to reach the target of production set for it under the Second Five Year Plan.

The most important item which is responsible for increased costs is the additional expenditure made obligatory by Labour Appellate Tribunal decisions. The cost per ton in giving effect to the decisions is estimated at between 1.25 and 1.75 depending on the nature of the mine, apart from the expenditure of giving retrospective effect to these decisions from May 26, 1956.

In view of the persistent tendency for increase in consumers' cost of living index, the likely increase in cost of paying Dearness Allowance, which has to be increased by Rs 4.88 for every increase of ten points in the cost of living over the 1949 figure, must be taken into account in any formula for fixing the selling price of coal. In this connexion it is regrettable that the industry is not able to report any increase in production consequent of the implementation of the Tribunal Awards which have effected substantial improvements in wages and amenities. The slight increase in output per man-shift from 0.39 in 1956 to 0.41 in 1957 is attributed to increased mechanisation and adoption of improved mining methods.

In view of the factual position set out above, the industry's claim for substantial increase in the selling price of coal cannot be easily set aside. And it has caught the Government in a dilemma which, probably, is the reason for the delay in announcing the decision on the

Indian Finance

Established 1928

May 9, 1959

'The Wise Man in His Attitude towards the World has neither Predictions, nor Prejudices. He is on the side of what is Right'—The Analects of Confucius

Coal Price Revision Committee's report which was submitted in November last year. While the industry's claim cannot be rejected off-hand, Government has also to take into account the impact of any upward revision of coal prices on industrial costs in general and in particular on the cost of the programmes of development under the Second Plan. The Government Railways are the biggest consumers of coal in the country. Any increase in coal prices may lead to further increase in the cost of operation. The steel projects in the public sector have already become the target of criticism in Parliament on account of steadily mounting capital costs. If coal prices are increased, the operating costs will also become higher than originally estimated.

Government's difficulties in balancing the rival considerations can be easily appreciated. But it may be asked how far it will be fair to shift the difficulties to the coal industry by forcing them to carry on with a price structure which bears no relation to costs. In view of the importance of increasing output of coal, the price structure that is approved should be such as to enable medium-sized, marginal units to function economically. Imposition of ceiling prices will place them at a serious disadvantage and force many of them to close down. While it is true that the coal industry has been able to maintain a steady rate of dividend, it cannot be said that the rates are high in comparison with other major industries in the country. Against the average for the five years 1951-55 of 13.4 per cent in Steel, 11.3 per cent in Sugar, 10.8 per cent in paper and matches, 17.4 per cent in Tea 9.2 per cent in Cement and 8.7 per cent in Cotton Textiles, the average rate of dividend paid by the coal industry is only 7.1 per cent. Because of its heavy investments in wasting assets, it is reasonable to look for a higher level of profit distribution in the coal industry if it is to attract new investment.

But it has also to be recognised that there is a limit to which problems which beset the coal industry can be solved by price increases. Coal is a basic material of industry and any increase in the price of coal will give a sharp upward turn to the inflationary spiral, so that the benefit to the coal mines from a price increase cannot be of more than temporary significance. Very soon the increase in price of coal will be reflected in increased costs. The ultimate solution of the problems of the industry has to be sought in increased productivity and, in the Indian context, this means the productivity of labour.

A National Productivity Council was recently inaugurated in New Delhi to the accompaniment of the customary fanfare. The Council cannot do better than direct its attention immediately to the problems of productivity in the coal fields, for supply of coal at stable prices is fundamental to any campaign for increase of productivity in other sectors of industry.

The problem might be usefully tackled at a tri-partite conference of representatives of Government, the coal industry and the mine workers. Once it is found possible to ensure steady increase in productivity, the way will be open for rationalising the structure of costs and prices.

EDITORIAL NOTES

Amendment of Companies Act

THE Companies Act, with its 658 sections and twelve schedules has been described as the longest and most complicated piece of legislation enacted in India. And the amendment Bill introduced in the Lok Sabha on May 1, is in proportion. It has as many as 210 clauses designed to remove the defects and deficiencies in the original enactment and to ensure better fulfilment of its underlying purposes. The Companies Act came into force on April 1, 1956. Within one year of its working, it was clear that length was not a safeguard against loop-holes. Accordingly the Viswanatha Sastri Committee was set up in May 1957 to spot out the defects and to suggest remedial action. The Committee reported in November last year and the amendment bill now before the Lok Sabha is largely based on its recommendations. The statement of objects and reasons says that these recommendations have been modified in certain particulars in order to accommodate the views of the Chambers of Commerce and other parties.

The amendments, which are on the whole calculated to tighten the enforcement of company legislation, can be divided into three categories: (1) amendments considered necessary to overcome

practical difficulties experienced in the course of the working of the Act; (2) amendments of a clarificatory nature, designed to remove drafting defects and obscurities which have caused difficulty in the interpretation of the Statute and (3) amendments considered necessary to ensure better fulfilment of the purposes of the Act and to remove lacunae in the existing provisions.

Company legislation has proceeded on the assumption that shareholders on the whole are a set of morons in need of special protection against crafty and unscrupulous managements and it is therefore the duty of the State to protect the former against their own folly. Though the activities of some company managements lend colour to this assumption, like all generalisations it includes a large element of inaccuracy. While the need for regulation of operations of companies in order to safeguard investments against misfeasance is conceded, there is room for doubt whether regulation of every little detail will make for efficiency or enterprise. The position of director has now become a perilous job beset by numerous pitfalls. The result may be that intelligent shareholders will hesitate to accept the responsibility and the management of companies will be more firmly entrenched in the hands of a class of professional company directors and their henchmen.

The proposed amendments have incorporated the Sastri committee recommendations regarding donations to political parties, a topic which has aroused considerable public interest, with the amplification that the disclosure regarding donations should apply to any donation made for any political purpose to any individual or body and that the provision should apply to all companies and not merely public companies. The amendments also seek to stop the trend towards transformation of public into private companies and of managing agents into selling agents, for which the original Act afforded scope and incentive. One amendment is directed against the evil of top-heavy management and prohibits companies from having more than one category of managerial personnel. The powers of Registrar and the authorities responsible for enforcement of provisions of the Act have been enhanced. But nothing has been done to rationalise Section 314 which has made the word 'relative' a nightmare to the company director by making each of a numerous category of relatives for three generations either way, a potential menace to his position on the Board.

Taming the Kosi

The joint Indo-Nepalese project to tame the Kosi is of great importance to the stabilisation of the agricultural economy of North Bihar which has been subject to the annual depredations of this erratic river. It is of even greater

significance as a joint venture in international economic co-operation. This aspect was stressed in the speeches made on the historic occasion both by King Mahendra of Nepal and Prime Minister Nehru. Such cooperation has prepared the way for the ambitious project to check the annual ravages of the wayward Kosi, which shares with the Yellow River of China the distinction of being the most unpredictable river in the world. The 17-crore barrage is located in Nepal, and the entire scheme costing Rs 45 crores is designed to serve the three-fold purposes of flood control, irrigation and generation of hydro-electric power.

The problem of checking the depredations of the Kosi has been under consideration since 1937, but expert opinion was hesitant about the value of a high dam as the river is reputed to be one of the largest silt removers in the world. Moreover a comprehensive scheme had to wait on the conclusion of appropriate agreements with Nepal. The agreement to begin work on the project was signed in 1954, and the completion of the present limited stage of the work, besides providing valuable experience should also give a preview of the benefits to be expected from the complete scheme.

One of the striking aspects of the work on the project is that this is the first experiment in this country in mobilising public cooperation for the execution of a nation-building project. The Prime Minister referred in appreciative terms to the efforts of the Bharat Sevak Samaj in organising such public cooperation.

Too Many Holidays

A resolution moved by a private member, one of the most eminent economists in the country, to curtail the number of holidays showed a surprising measure of agreement between the spokesmen of the Government and the Opposition. Neither was prepared to stir a hornet's nest by tampering with the traditional concessions to the national penchant for doing nothing.

Dr Thomas, who moved the resolution in Rajya Sabha, argued that a large number of holidays was not compatible with the desire for rapid economic progress. The number of holidays in India hindered quick economic growth, he said, and suggested that their number be drastically reduced. Only two members one a Congressman and the other a Praja Socialist spoke in support of the proposition. The opponents however, did not choose to make a frontal attack. While conceding the principle, some of them argued that reduction of the number of holidays would not necessarily improve the output of work in Government offices. That may be a correct estimate of the way the work is organised in Government offices. Both Mr B N Datar and Mr Bhupesh Gupta joined together in requesting the mover to withdraw the resolution.

Indian Finance

Apparently holidays unite where Tibet divides.

Investment in Progress

Speaking on the occasion of the inauguration of the Birla Industrial Museum in Calcutta last Saturday by the Union Minister for Education and Scientific Research, Dr B. C. Roy observed that while it was true that everyone could not make money, it was also true that everybody who could make money could not have the willingness to give it for a public purpose. But the Birlas had demonstrated long ago that they could do both and on an impressive scale. What is striking about the present gift is not the munificence, for that can be taken for granted, but the purpose for which the gift is to be utilised. Mr B. M. Birla has taken the public into confidence regarding the discussions preceding the finalisation of the offer. When sometime back, members of the Birla family decided to make a gift of their palatial mansion in Calcutta for a public cause, the question arose how the accommodation could be best utilised—as hospital, boarding houses, museum of some sort or an industrial museum. Finally the last alternative was chosen, which has made this gift an investment in progress. Mr Birla spoke with a keen appreciation of the role of such institutions in fostering the growth of science and technology which is indispensable for industrial development. He also expressed the hope that the idea of establishing such museums would spread and that other cities of India would have such museums in course of time. It is now for the businessmen and industrialists elsewhere to take the hint and show that they yield to none in their appreciation or the basic conditions of industrial progress.

May 2, 1958

WORLD OF FINANCE

Analysis of 1958-59 Busy Season

THE 1958-59 busy season, which may, for official purposes, now be deemed to have ended, has turned out to be as unexpected and surprising in the course that it took as was the busy season experienced during 1957-58. It may be recalled that the 1957-58 seasonal pressure confounded such prophets of doom as had anticipated that, in manner similar to 1956-57, an intolerable strain would be placed upon the banking system.

Some element of recapitulation will be helpful, though the relevant figures have been provided. In 1956-57, with the Second Plan just gathering up steam, the Indian Scheduled Banks were found to be in a considerably over-extended position. Bank Deposits were rising, but the increase in Advances was even steeper. Thus, on the eve of that busy season, the official authorities had discussions with Indian bankers, as a result of which arrangements were made for granting liberal lines of credit to Scheduled Banks against usance bills. As it happened, the rise in Deposits which transpired had not originally been taken into account, so that the extent of accommodation sought from the Reserve Bank was rather smaller than the provision made. Nevertheless, the 1956-57 busy season seemed to augur a series of busy seasons during which India's banking system would be continually under strain.

The 1957 slack season was in this regard an eye opener. Not only was there a fair sized decline in Advances, there was an even sharper rise in bank Deposits. Hence, on the eve of the 1957-58 busy season, banks were fully prepared for the months of monetary stringency that the immediate future was expected to hold in store. The Advances Deposits ratio of the State Bank fell to 45.1 per cent on the eve of 1957-58 busy season as against a ratio of 61.3 per cent at the end of the 1956-57 busy season and 56.5 per cent at the eve of the 1956-57 busy season. In the case of other Scheduled Banks, the Advances Deposits ratio fell from 77.7 per cent at the end of the 1956-57 busy season to 68.3 per cent on the eve of the 1957-58 busy season.

The 1957-58 busy season was, at the time, termed by Indian Finance as "unusual". For, busy it did not appear to be. There was a rise in the Deposits of the banking system as a whole; and, for the first time, it began to be acknowledged in

money market circles that governmental disbursements on the Plan were being reflected in the Deposits of Scheduled Banks; formerly, it had been fashionable to attribute such increase as was taking place in Deposits to the receipt of special funds on account of the agreement under Public Law 480 with America. During this busy season, the rise in Deposits outpaced the expansion in the demand for accommodation, so that, in the case of other Scheduled Banks, we had the rare spectacle of the Advances Deposits ratio moving down during a busy season.

The 1958-59 busy season has turned out to be as active as the 1957-58 busy season was anticipated to be. For one thing, active note circulation expanded much more sharply than in the previous two seasons, in being marked up by Rs 217.02 crores. This, of course, could mainly be as a result of the much smaller contractionist influence of a much smaller balance of payment deficit. We are, perhaps, to read in this the seedlings of inflationary pressures, since the non-availability of a cushion in the form of foreign exchange reserves will add to the threat of inflation. Secondly, the Scheduled Banks made increasing utilisation of Reserve Bank credit, the latter's Other Loans and Advances rising by over Rs 20 crores as against a decline in the previous season of Rs 13.18 crores. However, we should not fall into the error of misinterpreting this trend in borrowings from the Reserve Bank as signs of undue stringency being experienced by banks. We have, in our assessment, skipped the 1958 busy season. The 1958 slack season was a period of unalloyed slackness. Firstly, during the slack months of 1958, with both a rise in Deposits and a decline in Advances, the State Bank's ratio of Advances to Deposits fell by nearly 15 percentage points. Similarly, in the case of other Scheduled Banks, the Advances Deposits ratio fell from the 1957-58 end of busy season figure of 66.8 per cent to 58.2 per cent by the eve of the 1958-59 busy season. This created a complexing situation for banks. Most of the new Deposits were in the form of Time Liabilities, and hence the cost of the Deposits of

Scheduled Banks as a whole had risen. Meantime, their earnings from Advances, by dint of the contraction during the slack season, were falling week by week. Secondly, Scheduled Banks, during the 1958 slack season, invested phenomenally in giltedged. The giltedged investments of the State Bank, over the period, rose by Rs 77 crores; the giltedged investments of the other Scheduled Banks were marked higher, during this period, by Rs 97 crores. It is especially as a result of this considerable investment in giltedged, as the following paragraph will show, that the Scheduled Banks were compelled to have recourse to Reserve Bank credit on a much larger scale.

During the 1958-59 busy season, the Deposits of the banking system rose by almost exactly Rs 100 crores, shared almost equally by the State Bank, on the one hand, and the other Scheduled Banks, on the other. But the Advances of the State Bank rose by Rs 41

crores, while those of the other Scheduled Banks increased by Rs 141 crores. Thus, with the increase in Deposits inadequate as compared with the expansion in Advances, the Scheduled Banks had necessarily to find new resources, since there was a limit to their drawing upon Cash Balances. As far as the other Scheduled Banks were concerned, they disinvested in giltedged to the extent of Rs 28 crores, the while that they increased their borrowings from the Reserve Bank by Rs 25 crores. But what is significant is that, though, admittedly, the Advances Deposits ratio of the other Scheduled Banks rose by a fair size during the 1958-59 busy season, the level of such ratio as at the end of 1958-59 busy season is merely fractionally higher than a year ago and, indeed, lower than the level obtaining on the eve of the 1957-58 busy season. So, if the banks were troubled with stringency, it is because of the unusually high investments during

the 1958 slack season, rather than owing to undue expansion in Advances.

Little more needs to be said about the 1958-59 busy season. We have to remark that the considerably larger expansion in Advances is symptomatic of the recovery in industrial production. 1957-58 was the time-lag year, during which plant and machinery paid for in 1956-57 was being set up. 1958-59 is the third of a trilogy of years, in the sense that plant paid for during the first year and set up in the second year began to manufacture in the third year. Hence, in Advances, the steep expansion in 1956-57, the marking time during 1957-58 and the resumed upward curve in 1958-59.

Active Notes Marked Lower

BEGINNING of the month disbursements notwithstanding, Active Note circulation during the week ended May 1, as revealed in the latest returns of the Reserve Bank, shows a small contraction of Rs 0.35 crores to Rs 1751.11 crores. However, Rupee Coin went out into circulation for Rs 0.74 crores. In the result, after some routine adjustments under Rupee Securities, which are lower by Rs 0.23 crores, the Reserve Bank's cash in the till has been drawn down by Rs 0.62 crores to Rs 27.53 crores. Thus, the returns of the Reserve Bank for May 1 again bear testimony to the 1958-59 busy season having drawn to its close.

In the Banking Department, it is interesting to note that Investments are lower by Rs 10.53 crores at Rs 264.98 crores. This is not due to deficit financing, since there is no reason to believe that the Central Government stood in need of replenishing their resources. On the contrary, there is evidence, in the State Bank return, of a parcel of securities having been sold by the Reserve Bank to that institution. Thus, the month early disbursements again notwithstanding, the Central Government's balances are practically unchanged at Rs 53.28 crores against Rs 53.63 crores. The State Governments, however, seem to have been not quite so well off. Their Deposits have been drawn down by Rs 10.53 crores to Rs 22.44 crores though, in the process, their indebtedness to the Reserve Bank has been reduced by Rs 4.56 crores.

The month early demand may, however, have somewhat affected the Scheduled Banks. But the decline of Rs 6.89 crores to Rs 83.70 crores in the Reserve Balances of member banks is not an index in this regard, since this decline was due to the State Bank having drawn on its balances to pay for its gilt-edged purchases from the Reserve Bank. But, then, the Other Loans and Advances of the Reserve Bank have been marked up by Rs 2.53 crores, and it is this which is suggestive of the Scheduled Banks having felt some

pressure as a result of month early disbursements. Finally, Balances Held Abroad are, relative to the recent behaviour in the foreign exchange reserves held by the Reserve Bank, sharply lower: the decline during the week has amounted to Rs 5.47 crores and, as at 1st May, the Reserve Bank's holdings of foreign securities in both departments amount barely to Rs 203 crores.

The return of the State Bank for May 1 is important primarily for its indication that further investment in gilt-edged has taken place for Rs 7.96 crores. Since the end of February, the rise in the gilt-edged portfolio has been to the tune of Rs 27 crores; and, during the same period, coincidental though it might seem, Deposits also moved up by Rs 27 crores. We would suggest that the coincidental nature of the two figures indicates the strong possibility of such increase in Deposits as having been due to accruals in the latest tranche of Public Law 480 counterpart funds. But we wish there would be clarification from the State Bank as to the manner in which investments take place. The behaviour, particularly of Other Assets, is mystifying, the rise in gilt-edged is not simultaneous with the rise in Deposits. That is a question which we may have to address ourselves to on a future occasion. To continue with the week's review, month early disbursements may be held accountable for the small decline of Rs 1.35 crores to Rs 524.27 crores in Deposits. Such drawing down of Deposits obviated the need for greater accommodation being sought, and hence the total of Advances has been marked down by Rs 1.78 crores at Rs 201.43 crores. The fresh investment in gilt-edged is reflected in a decline in cash in hand and with the Reserve Bank, which is lower by Rs 6.55 crores at Rs 36.65 crores.

The return of Scheduled Banks for April 24 may well relate to the end of the 1958-59 busy season. The total of Advances has declined by nearly Rs 3 crores from Rs 1023.44 crores to Rs 1020.58 crores. However, it was the State Bank which experienced a fall in its Advances during the relevant week, with the other Scheduled Banks possibly experiencing a small rise. But Cash Balances have risen considerably by Rs 16.11 crores to Rs 185.51 crores; and only Rs 13 crores of this is accountable by the State Bank. Such improvement in Cash Balances was possible even after the other Scheduled Banks—the State Bank did not figure as a borrower—had reduced their indebtedness both to the State Bank and the Reserve Bank. Borrowings from the State Bank are shown to be lower by Rs 3.40 crores, while indebtedness to the Reserve Bank is lower by Rs 5.89 crores. This happy position was due mainly to a considerable rise of nearly Rs 13 crores to Rs 1739.60 crores in Deposits—only Rs 3.68 crores of this being attributable to the State Bank.

Reconstruction of Lancashire Textile

By Paul Einzig

THE announcement of the Government's scheme for a drastic reconstruction of the Lancashire textile industry constitutes an important landmark in the development of the Government's attitude towards industries. Details of the scheme will be available shortly, but the official statement made it clear that the Government is prepared to contribute £30 million towards compensating the owners of inefficient plant which would be closed down and towards the cost of the installation of modern equipment. The scheme will have to be agreed between the owners of the firms concerned. It will be a voluntary scheme somewhat comparable with the methods applied in the United States by the Tennessee Valley Authority. The only compulsory aspect of the scheme will be the payment of a levy by firms which will survive the reconstruction, and the condition that the firms which will close down will have to compensate their dismissed employees.

Richard Cobden and the Manchester free traders will presumably turn in their grave at the sight of a reorganisation of their favourite industry by means of such a drastic State intervention. Their sacred doctrine was "the survival of the fittest" and they would doubtless have preferred a series of bankruptcies following on a long-drawn-out agony through the free play of supply and demand rather than reconstruction under Government auspices and with the aid of Government subsidies. But judging by experience of recent years, even the inefficient firms have enough capital resources to hold out for a long time in spite of all their difficulties, and their continued existence would constitute a millstone around the neck of the long-suffering industry.

Everybody is thoroughly tired of listening to the unending complaints of Lancashire against competition by rivals in India, Hong Kong, and other countries with recently developed textile industries. It has become politically difficult to resist the demand for protection put forward by the district that was the birthplace of 19th century free trade. The Government has succeeded in finding temporary and partial solutions by securing voluntary limitations of textile exports to the United Kingdom. But in the absence of a drastic reconstruction sooner or later heavy protective tariff would have been introduced.

Everybody realises that Lancashire's salvation lies in concentrating on the production of high-grade textiles instead of fighting a losing battle for retaining its markets of low-grade textiles at home and abroad. But in the absence of Government intervention most firms would be unable or unwilling to scrap their obsolete plant and to embark on the installation of new equipment required for the production of high-graded textiles

with up to date methods. So the Government decided to depart from the ideological dogmatism of laissez-faire and to spend the taxpayer's money on a far-reaching reconstruction scheme. It resisted, however, the pressure in favour of Government compensation to redundant employees, which would have established a very dangerous precedent.

Much depends on the details of the scheme. But its underlying principle is undoubtedly sound. It breaks away from the diehard attitude that because Lancashire was able to build up its prosperity a hundred years ago when it enjoyed a monopolistic situation it is entitled to prosperous existence by continuing to produce the types of goods it produced a hundred years ago. Surely, it should take advantage of its long experience by producing the high-class goods which newly-established industries are as yet unable to produce.

Hitherto the Lancashire textile situation has been one of the weak spots in Britain's post-war economy. Possibly the elimination of this weak spot will create a precedent with far-reaching effects. There are other inefficient industries which are kept in existence by the law of inertia and by the reluctance of vested interests to cut their losses. Britain's manpower is not used to its best advantage. This may not appear disastrous at a moment when the economy is not fully employed. But the chances are that before very long there will be once more acute scarcity of labour. In such a situation it is a dead loss to the national economy if a large proportion of labour is wastefully employed for the sake of maintaining industries which in the changed situation have lost their raison d'être in their present form.

Possibly the example of Lancashire may inspire other out of date industries to remedy their defects. More likely, the Government will be expected to take a hand and to secure reconstruction scheme by providing guidance and subsidies. The Lancashire precedent is likely to cost the British taxpayer many millions of pounds. But the price will be well worth paying if it should lead to a thorough-going modernisation of British industries and of consumption. The increased national income earned as a result of producing higher grade goods would make it easy to pay the additional taxes arising from the industrial subsidies.

From the point of view of under-developed countries the Lancashire scheme may mean that Britain will henceforth concentrate on high quality textiles, so that the marketing of cheaper grades will be easier. To the extent to which the re-equipped textile works will continue to produce low-grade textiles, the change will mean that the more highly mechanised firms will be able to offset the advantages of cheaper manpower. This may force the under-developed countries to speed up their mechanisation, in order to combine the advantages of up to date methods with those of cheap labour.

May 9, 1959

Comfortable Raw Jute Supply Position

CONDITIONS in the Raw Jute market have been ruling quiet during the past few weeks with only small business done. Although sellers are reported to be closing down their agencies and offering what remained at reduced rates, mills do not show much interest. This is mainly due to the fact that, apart from sufficient stocks held by them, the mills are afraid to augment their stocks in view of the increasing number of godown fires since the beginning of the year.

Again, crop reports from the various jute-growing areas indicate that sowings are completed in most of the midland areas and plants, despite the lack of more rain, have been progressing well with Assam and Northern Bengal leading the way.

At this stage, it will be of interest to study the supply position. The current jute season is expected to end with a large carry-forward of over 25 lakh bales as compared with 18 lakh bales. According to official forecasts, jute and mesta crops, during the current season are placed at 51.8 lakh bales and 15.8 lakh bales against 40.5 lakh bales and 12.9 lakh bales respectively in the 1957-58 season. Imports from Pakistan are placed around 300,000 bales against 695,000 bales. Thus, the total available supply, in the current season, comes to 88.6 lakh bales against 79.10 lakh bales in the previous season.

Consumption of raw jute by the mills, which was 62.20 lakh bales in the 1957-58 season, is likely to show some decline as a result of the sealing of looms and change-over from sacking to hessian production. Little change is expected in the ex-factory consumption of 2 lakh bales.

Exports of raw jute have been allowed; but actual shipments are likely to be negligible. In this connection, market circles are apprehensive about the competitive nature of prices which the fibre will be exported. For, it is said that the procedure followed by the STC is rather cumbersome. First, the fibre is bought by the Corporation, which permits balers to export the fibre on its behalf. The balers must purchase the jute for export from the Corporation at rates higher than the market prices and, in addition, balers are required to pay a commission to the STC. Added to these, there is the export duty, which is Rs 3 per maund.

Here, the trade points out that raw jute output is increasing and

that, in the forthcoming season, it is even estimated to be higher than the last season's bumper crop. As such, it is essential for the country to expand fibre exports and abolish the present limitations in this regard.

The Bengal Jute Balers' Association has urged the Government of India to immediately lift the export duty on raw jute and keep the export market open for normal trade channels. The Association states that the Government can really help boost up prices and save the growers only by such measures. The Association adds that the continuance of this export duty of Rs 15 per bale is not conducive to the improvement of the home market and claims that the STC's share of purchases is insignificant, totalling only about 60,000 maunds as against available surplus of 40 lakh maunds.

It is true that the purchase of fibre from the market by the STC at prices higher than those ruling acted as a support. But, since most jute had left the cultivators before the export scheme was announced, the benefit, if any, of higher prices will not go to the cultivators. Under the circumstances, there is no point whatsoever for the STC to purchase for export in preference to direct course. Meanwhile, Assam Bottoms are nominally quoted at Rs 20.25 per maund for May/June delivery.

JUTE GOODS:

Conditions in the Jute Goods market have continued to remain dull. Except for small business done in Cornsacks with Australia in the forward position, enquiry from other overseas remained poor. The news of the Government of India having invited tenders for the supply of 31,000 bales of B. Twills—1,000 bales to be delivered on the 15th May; 19,000 bales within the end of May and balance of 11,000 bales within the end of June—had only a temporary effect on market sentiment.

Even the USA, the main consumer of burlap, has not shown any interest yet and seems to be withholding purchases to bargain on the issue of prices. Thus, whatever business was transacted, is mainly of a speculative character. The force of Pakistani competition has already been directed to Burma and Australia which were once assured markets for Indian jute goods. This is really something for the Indian mills to think seriously about.

Following were the price trends:

	April 30th Rs.	May 4th Rs.	May 6th Rs.
Hessian:			
40" x 10 Ozs.			
Ready	40.10	39.90	39.70

Sugar Twills			

Firmer Prices in Mincing Lane

DESPITE the large quantity of Tea still catalogued each week at the Mincing Lane auctions, the general rate of demand shows no sign of abatement. Prices have continued to appreciate, especially for the good liquoring types, which are quoting 3d to 6d per pound dearer. The best of the clean plain teas are also wanted.

Tea stocks have continued to decline and teas afloat to the UK are still only about the half the quantity of a year ago. Stocks, as on the 24th April, totalled only 154.16 million pounds against 157.06 million pounds in the previous week. Deliveries totalled 11.95 million pounds and landings 9.05 million pounds.

Total afloat, on the 24th April, was 14.01 million pounds including 5.33 million pounds from Calcutta; nil from Chittagong; 2.02 million pounds from Cochin; 3.87 million pounds from Ceylon and 2.79 million pounds from other Ports. The average price realised at the auction was as much as 56.03d per pound as compared with only 54.31d in the previous week and 61.32d a year ago.

In general, the UK continues to buy more tea from the non-export duty countries and this is borne out by the statistics given by the President of the Indian Tea Planters' Association. He says that the non-export countries have no labour welfare laws and that African countries, for instance, can sell their tea at about 15h per pound less than India on the London market.

In the Internal Sale held in Calcutta this week, offerings consisted of 22,106 packages of Dusts for which there was a good and general demand. Black-leafed orthodox types were sold at firm to slightly easier rates and were sometimes upto 4 nP per pound easier. The smaller kinds in this category, however, met with better demand and often sold at firm to dearer rates. Legg-cut teas were rather irregular and often showed a slightly easier tendency. The very few Darjeelings, on offer, were sold at dearer rates.

Medium CTC teas were irregular and generally easier, although some of the poorest descriptions were sold at firm to dearer rates. Good Mediums and the best liquoring CTCs were upto 10 nP easier. Following rates were quoted:—Medium Doars Dust Rs 1.74 to Rs 1.78; Medium Assam Grainy Dust Rs 1.70 to Rs 1.74; Medium Assam CTC Dust Rs 2.05 to Rs 2.25 and Best CTC Assam Dust Rs 2.65 to Rs 3.05 (nominal). Also 419 pack-

ages of Leaf grades were offered for internal consumption. There was a good general demand and these were sold at dearer rates.

In the Export Quota section, no business was done in Special Export Quota and there were sellers at 1 1/4 nP per pound. In shipping non-transferable licence, business was reported done at 1 nP.

In the Colombo market, there was less active demand and buying was more selective. Low-grown varieties advanced by 1d per pound and occasionally more, while the better liquoring Dimbula and Dikoya teas were well computed for without much change in price. But some of the lighter thinner liquoring invoices were irregularly lower and the less attractive teas from the Uva side of the island were irregular and sometimes easier. Broken Orange Pekoe Fannings met with less competition. Offerings amounted to 14,322 packages.

In the Cochin market, a quantity of 650,000 pounds of Leaf tea was offered for export. Quality from all districts showed a further seasonal decline. Against a strong general demand, low medium and medium Broken were sold well at steady rates; but similar Fannings were fully firm to dearer. The demand for good medium teas was good and these were sold at firm rates and were occasionally dearer. However, best liquoring high-grown were sold at easier rates following the drop in quality.

A few lines of CTC teas, on offer, were well supported and sold at higher rates than last time. Whole Leaf grades met with fair enquiry at about last rates. Low Medium was quoted at Rs 1.70 to Rs 1.80; Medium at Rs 1.80 to Rs 2.10; Good Medium at Rs 2.35 to Rs 2.90 and Quality at Rs 2.45 to Rs 4.02.

Pakistan has raised the excise duty on tea from two annas a pound to six annas and this has been effective from the 29th April; but this increase will not affect the present retail price of tea. Moreover, the Pakistani Government have decided to fix a minimum export quota of 20 million pounds of tea for 1959-60. In this connection, it may be added that the average annual production of tea in Pakistan is 53 million pounds. During 1951 to 1957, export of tea averaged 15.5 million pounds. But, in 1957-58, exports dropped to 7.2 million pounds. During the current year exports have not exceeded 11.4 million pounds although the production is slightly higher than in the previous year. There are indications that, if necessary, the Pakistani Government will restrict domestic consumption of tea to boost export.

In London auction held this week, there was less active demand for Ceylon tea offerings and buying was more selective. Among the 4,836 packages of South-Indian growths, improved quality tea was sold well at fully steady to dearer rates. But, there was less demand for the plainer light liquoring sorts and prices were often lower, particularly towards the close of the sale.

Alkathene

INAUGURATING India's first polythene plant built by Alkali and Chemical Corporation of India Limited, with the assistance of the parent Company, Mr Morarji Desai described it as of "public interest and importance". No one who has followed the trend of modern industrial processes can miss the importance of the occasion for the economic development of the country. For, as Mr J. M. Lall, Chairman of the Company, observed in his welcome address, as the first largescale unit manufacturing bulk plastic from basic materials, it marks the "coming of age" of the plastics industry. Though the industry in India is of recent origin, it has grown to such an extent as to feel the sharp pinch of foreign exchange shortage. To the resolution of these difficulties, the new plant will make a significant contribution. Built at a cost of Rs 4 crores and with an annual capacity of 3,500 tons of Alkathene (the ICI brand of polythene), it is expected to save the country Rs 1.5 crores of foreign exchange every year.

Mr Lall who traced the fascinating development of the plastics described it as one of the success stories of modern technology. This moreover is a story in which Britain in general, and the I.C.I. in particular, have played an outstanding role. The contribution of the I.C.I. to the repertoire of plastic materials covers a very wide range, including phenol formaldehyde and related plastics, p.v.c., perspex and polythene. The last is a versatile plastic with a unique combination of properties, and a wide range of applications for industrial and domestic purposes. It is tough, chemically inert, flexible at low temperatures, resistant to water and water vapour and possesses excellent electrical insulation qualities. It is used to the greatest extent in the form of film, which is cheap, hygienic packaging material for many types of goods, from foodstuff to fertilizers, as well as for water-proofing buildings. Other articles made of polythene range from cable insulation and unbreakable industrial carboys, to water bottles, buckets bowls and toys. Polythene pipe is finding increasing application in domestic and industrial plumbing installations.

Of particular interest and importance to India is the fact that the raw material used for the manufacture of polythene at this plant is ethyl alcohol, a byproduct of the sugar industry. Most of the other plants throughout the world use ethylene gas. The only other ICI plant working on alcohol is in Australia and their experience was

freely available for the Indian plant. A team of Indian chemists and engineers were trained in the Australian plant, while another team specialised on the high pressure reaction in England.

The manufacture of polythene is one of the most difficult and exacting chemical processes in which very high pressures are required. The untamed polythene reaction, said Mr Lall, would be just about as explosive as cordite. Mr F. Stedman, Joint Managing Director of the I.C.I. Alkali Division—it may be mentioned in this context that polythene was discovered in the laboratories of the Alkali Division 25 years ago—who participated in the function as representative of the ICI in the United Kingdom, paid a well deserved tribute to the skill and workmanship of the local craftsmen who have assembled and operated the plant with so little trouble. Messrs Simon Carves, who were the main contractors for the job, have again shown their competence for difficult and intricate tasks of industrial construction.

Mr Stedman described the decision to establish a plant in India, which was taken three years ago, as "a great act of faith" which however has been justified by subsequent developments. At that time the consumption of polythene in India was less than 1000 tons per year, which was not sufficient to justify building of a plant. But consumption of polythene has grown rapidly and reached 2000 tons last year. It is estimated that by 1961, the demand will reach 6000 to 7000 tons, and there is scope, therefore, for initiating further schemes of manufacture, based on the experience gained in the plant that has been already set up.

Mr Lall has emphasised the importance of maintaining the tempo of industrial development which depends on the rate of investment. Investment of the order required will call for a large volume of resources both internal and external. As far as the Rishra plant is concerned, the ACCI has invested about Rs 4 crores, while the technical knowledge and the foreign exchange have been provided by the ICI, England. Referring to the need to encourage capital formation in the country, in order to sustain industrial development in the future, Mr Lall has underlined the need for the elimination of inequities in fiscal legislation and expressed the hope that the trend indicated in this year's budget will continue. He has referred in particular to the need to lighten the burden of taxes on inter-corporate investment.

★

Indian Aluminium

The aluminium industry in India, last January, took a big step forward towards self-sufficiency in the production of this versatile metal which is finding increasing application in industry and in the

manufacture of a wide range of consumer goods. The metal, which till recent years was regarded as suitable only for cheap domestic utensils, has already entered the electrical, structural, transport, building and other industries. Aluminium conductors are now extensively used in transmission of electric power. Aluminium is also being increasingly used in packaging and in the manufacture of containers. Already in India aluminium accounts for the bulk of the output of non-ferrous metals. In view of the country's inadequate resources of other non-ferrous metals like copper, zinc, tin, lead etc, aluminium is destined to be the metal of preference in India and its manufacture should be developed so that it can economically replace other non-ferrous metals. That means not only a substantial increase of production, but also availability of cheap electric power without which such increase in production would not be economically feasible. A survey recently conducted by World Bank Experts in Mexico, on the cost structure of different industries, showed that Aluminium is one of the very few industries in which cost of power forms a substantial element of the cost of the product. The growth of the industry has therefore to follow largely the implementation of the multipurpose projects. One of the first and most gratifying results of the completion of the Hirakud project was the starting of the Indian Aluminium Company's 10,000-ton smelter at Hirakud, last January, bringing the total production of this metal in the country to 17,500 tons.

The very satisfactory progress of the new plant at Hirakud and the arrangements regarding personnel, power and funds for further expansion of output have been reviewed in the Chairman's speech of Mr K. C. Mahindra at the annual meeting of the Indian Aluminium Company Ltd, held in Calcutta on April 27, 1959. Though production was started only in January, the full rated capacity was reached in the very next month. The public will share with Mr Mahindra the great satisfaction that this Rs 5 crore plant was built largely by the Company's Indian technicians, and that all the smelter pots have functioned efficiently and without interruption since the start-up.

The Company is already a significant producer of the metal with an annual output of 16,000 tons. But it does not propose to rest on its laurels. With the completion of the Hirakud smelter, Indian Aluminium has entered the second stage of expansion. This will include stepping up of production at Hirakud to 20,000 tons per year, the development of the Mura alumina plant so that it could meet the demands of both the Hirakud and Alupuram smelters, and the provision of the requisite fabrication facilities. Mr Mahindra has hinted that the availability of the considerable funds from internal and external resources that will be necessary to finance the project will be largely influenced by the policies of the Government.

Indian Finance

Hurricane Lanterns

Manufacture of hurricane lanterns is one of the light engineering industries which has made very rapid progress in reaching the targets set for it. In fact the very rapid rate of progress has led to a temporary set-back at a time when the shortage of materials has obliged the industry to curtail its output.

In estimating the demand for lanterns in 1961, the Planning Commission has taken into consideration the effect of the extension of rural electrification schemes on the demand for lanterns. But Mr Hruska, President of the Lantern Manufacturers' Association, does not agree that extension of electrification will necessarily lead to a shrinkage in the total demand for lanterns in the country. In his presidential address to the Fourth Annual meeting of the Association, he has observed that, with the gradual improvement in the standard of living of the masses, the demand for lanterns is likely to increase further. Electrification, even if completed within the next five years, will not provide pukka houses in villages throughout the country and use of lanterns will continue for many years to come. Besides, hurricane lanterns are useful for many outdoor jobs.

The industry now is not only in a position to meet the entire requirements of the country, but it also has a sizable surplus for export. In spite of sharp increase by nearly 30 per cent, it has been able to reduce prices by 32 per cent. This is indeed a very creditable achievement which shows that the industry is following a far-sighted policy in building up its markets in India and abroad. But it will also be necessary, as Mr Hruska suggested, to stop the trend to unhealthy competition among the manufacturing units, and to seek to stabilise the markets by diversifying the products, as for instance, by taking up the manufacture of other types of lanterns required by Railways, Municipalities etc.

★

Mr John Exter

A press release from the First National City Bank of New York, announcing the appointment of Mr John Exter, of the Federal Reserve Bank of New York, as Vice President, states that Mr Exter would join the Bank on May 1, 1959. The acceptance by Mr Exter, of the new assignment with the First National City Bank of New York, follows a period of active association in varied capacities with Banking institutions in several parts of the world. A graduate of the College of Wooster, Wooster, Ohio, Mr Exter served as an Economist on the staff of the Board of Governors of the Federal Reserve System, and then, he helped to organise the Central Bank of Ceylon being its first Governor from 1950 to 1953. In the International Bank for Reconstruction and Development which he subsequently joined, Mr Exter was Chief of Division, Department of Operations-Asia and Middle East.

May 9, 1959

US Notes

WHAT is being called America's "Fourth Seacost" opened to commercial shipping Saturday as a flotilla of Cargo vessels steamed up the St Lawrence river headed for the great lakes and inland American and Canadian ports in the Middle West.

Thus, the dream of a century is realized. The St Lawrence seaway, built jointly by the United States and Canada at great cost, finally becomes a new water route linking the markets of the world directly with the American heartland.

It is truly an ambitious project that has now reached fruition. The 27-foot (8.2 meter) navigation depth from the Canadian city of Montreal westward to Lake Erie, one of the five great lakes, has cost nearly \$500 million, of which Canada has put up about \$340 million. Channels have been widened and deepened, new canals cut, the number of locks reduced.

In three more years, 27-foot navigation will extend even further westward to the very head of the lakes. In the US, engineering work has been in progress for more than a year of this \$141 million task of deepening the up-lake channels.

Now that the seaway is a reality, it is being greeted with an understandable mixture of emotions. In cities along the lakes and among some western railroads, there is obvious jubilation, as they foresee a great expansion of their commerce with the rest of the world and a consequent boost to their economic growth.

But reaction is far more restrained in such Atlantic and Gulf Port cities as New York, Philadelphia, Baltimore and New Orleans. And among some eastern railroads, three groups waged a long and at times bitter battle against the seaway, seeing in it a disruption of established trading patterns and a possible threat to their preeminence in the field of foreign commerce.

Among the factors that in the end helped to overcome resistance to the seaway, two are considered outstanding. For one thing, New York state and the Canadian province of Ontario have built a \$650 million power project providing needed facilities that otherwise would have had to be built by the seaway agencies, probably at the cost of much higher vessel tools.

For another, large and rich deposits of iron ore have been uncovered in recent years in the Canadian provinces of Quebec and Labrador. This ore is in great demand among the busy steel mills of the US which now can obtain it through the seaway.

With the seaway open, attention turns to the changes it may bring. That there will be big changes is a matter of general agreement. But even now, with the first ships plying the St Lawrence and the great lakes, exactly what these changes will amount to is still far from clear.

Estimates on how heavy the seaway traffic will be, for instance, still vary widely. The old 14-foot (4.3 meter) St Lawrence canals carried 13 million short (11.9 metric) tons in comparatively small ships last year. Now the seaway can accommodate general and bulk Cargo carries with capacities of five to ten times that of the smaller vessels.

The St Lawrence Seaway Development Corporation—the US agency for seaway affairs—now predicts that 1959 traffic will total 25 million short (22.8 million metric) tons, but critics say this is too high. There also is some skepticism about the 1968 projection of 50 million short (45.5 million metric) tons for the seaway.

Nor is it at all certain to what extent the various major lake ports—of which there are more than 50 on the US side alone—will share in the seaway business. All ship operators, obviously, will not find it worthwhile to stop at every port. In addition, some ports, despite efforts to expand their facilities, still are not ready to handle the new trade. At any rate, new routing patterns will have to be established.

It appears likely that at least five major US cities—Chicago, Milwaukee, Detroit, Cleveland and Toledo—stand to gain substantially. These five already accounted for about 80 per cent of the lake ports' overseas trade and seem certain to remain ports of call of most shipping lines.

Actually, of course, these and other US lake ports are no strangers to handling large tonnages. For years they have been involved in shipping such products as grains, ores, limestone, coal and automobiles up and down the great lake.

But it is the direct overseas trade that will be new. And regardless of the accuracy of the forecasts, there is no doubt that millions of tons of cargo going to and coming from all parts of the world will be involved, compared with today's annual total of 800,000 short (728,000 metric) tons for US and Canadian ports combined.

★

Britain

A spokesman for Rolls-Royce (quoted in an agency message from New York) said on April 13 that his firm had sold all seven cars on its stand at the New York International Motor Show, including one costing more than \$23,000 (£8,200). The show ended on April 12.

Rolls-Royce made what was probably the quickest sale in the show, selling a Silver Cloud model half-an-hour after the doors were opened on April 4.

The British Ford company sold 46 cars, costing a total of some \$83,000. This, however, was not the total of the sales, for several Ford dealers attended the show and made sales not immediately recorded at the stand. A representative of British Ford said: "There was certainly more interest this year than ever before, and the Zephyr was one of the models that proved to be very popular."

Mr. George Jessop, vice-president of J. F. Inskip & Co.—distributors for Rolls-Royce throughout the United States, for the British Motor Corp. in parts of the United States, and for Aston Martins in the eastern half of the country—said that for his United Kingdom clients the show was "enormously successful, the most successful ever held here." His firm sold about \$500,000 worth of cars, taking into account all its distributorships.

Mr Brian Rootes, managing director of Rootes Motors, says: "The sales of Rootes cars, already at an all-time high, have been further accelerated by the New York International Motor Show. We have \$5,473,000 in orders for our two new cars, the Singer Gazelle and the Humber Snipe, which were introduced to America less than 10 days ago. The total orders for all our cars, now outstanding for delivery through the month of June, amount to a record-breaking \$25,189,000. The first-quarter sales of \$16,650,000 were almost double those for the same period last year."

★

A new capital investment programme for the expansion of technical education in Britain, planned to cost £54,000,000 in the three years from 1961, was announced in London on April 15. This expansion is expected to increase the turn-out of advanced students in science and technology to 17,000 a year by 1970.

The new programme will increase total capital investment on education within the next few years to about £150,000,000 a year.

In a circular to local education authorities, the Minister of Education, Mr Geoffrey Lloyd, explains that to maintain the momentum of advance in technical education a £15,000,000 building programme will be approved for 1961-62, and programmes for the two following years will be set provisionally at the same figure. This £45,000,000 programme is expected to involve a consequential expenditure of £9,000,000 on equipment.

The announcement says the £70,000,000 building programme for the five-year period (up to 1961) covered by the 1956 White Paper is progressing steadily. Building projects under this plan for new colleges or major extensions now number 359, and last year the value of work started amounted to £15,000,000.

The three-year programme provides for increases in the turnout of advanced students in science and technology beyond the 15,000 a year which the plans announced in the White Paper were designed to make possible. It will also expand educational provision for

technicians and craftsmen to match the training opportunities which it is the industry's task to provide for the growing number of young people who will be available for employment. Finally, it will provide for improved facilities in colleges.

★

British nuclear power reactors could, in future, help raise living standards throughout the world. This forecast is made in a review of the prospects for the industry published in London by Political and Economic Planning, an organization which concerns itself with studies of modern problems.

The review says that it is clear there is, or will be, an overseas market for reactors. At the moment the market will be for relatively large reactors developing over 100MW of electricity. But there is a potential market for small reactors similar to that for modestly powered gas-turbine and Diesel-powered generating sets.

"A small reactor," the review points out, "has the advantage that it can be sited where the power is needed, and its fuel requirements are small, thus doing away with transmission lines and high fuel transport costs. If cheap, it could transform areas which are now undeveloped or unexploited, and help to raise the standard of living of millions of people throughout the world who are now forced to do with little or no power and to rely on inefficient fuel burning, on human labour or on animals."

To feed the reactor, the United Kingdom has adopted a fuel supply service. Fuel could be sent, for example, from Britain to Italy, and when it had been used, shipped back to the United Kingdom and re-processed.

The review adds that in industrial countries, particularly in Europe, atomic power is the best answer to the long-term problem. "Expansion is running ahead of fuel supplies, and fuel will be more expensive as time goes on, so that nuclear power costs will be more and more competitive."

★

Wales has been going through the greatest economic transformation that any area of Britain has undergone since the Industrial Revolution, said the Lord Chancellor, Viscount Kilmuir, speaking in Cardiff, Wales, on April 11.

In the process, he said, "Wales has reached a state of overall prosperity she has not known for half-a-century. Firstly, there are great technological changes. The coal industry is being steadily reorganized at a cost of millions of pounds. New, modern collieries are replacing old, uneconomic pits."

"The other staple industry of Wales—iron and steel—has undergone even more startling transformations. Wales now boasts of the biggest blast furnace and the most modern steelworks in Europe, and the most progressive tinplate industry in the world."

"Power in the form of gas and electricity has also undergone great transformation. In addition, petroleum and—soon—nuclear power are established industries in Wales."

Import Licences for Steel Wire

The Government of India granted import licences for steel wire to 519 parties during 1958-59. This was stated by Shri G. P. Sinha, Parliamentary Secretary in the Ministry of Steel, Mines and Fuel, in a written reply to a question by Shri Daljit Singh in the Lok Sabha on April 16. Shri Singh added that indigenously produced steel wire was distributed for small scale industries against quotas placed at the disposal of the Development Commissioner, Small Scale Industries, Ministry of Commerce and Industry.

For imported steel wire licences were issued on the recommendations of the sponsoring authorities, which in the case of small scale industries, are the State Governments.

Industrial scrap which also contained some wire as wire shorts, etc., was distributed *ad hoc* by the Iron and Steel Controller on the recommendations of the concerned sponsoring authorities.

Steel Allocation for small Scale Industries

In a written reply to a question by Shri S. M. Banerjee in the Lok Sabha on April 18, the Minister for Commerce and Industry, Shri Lal Bahadur Shastri, said that the steel allocation to States for small-scale industries had been increased to 5,250 tons in April-June 1959 from 2,750 tons in January-March 1959.

Production of Special Steels in India

The production of special steels in 1958-59 amounted to 3,300 tons against about 2,000 tons in the previous year.

This was stated by Sardar Swamin Singh, Minister for Steel, Mines and Fuel, in a written reply to a question by Shri Pangarkar in the Lok Sabha today.

The Minister added that it was proposed to put up in the public sector a special steels plant for the manufacture of the higher grades of special steels. A few electric furnaces had also been licensed to be put up for the manufacture of the lower grades of special steels.

Hindustan Machine Tools Factory

In a written reply to a question by Shri Tangamani and Shri S. M. Banerjee in the Lok Sabha today, Shri Lal Bahadur Shastri, Minister for Commerce and Industry stated that the production of lathes of the batignolles type at the Hindustan Machine Tools Factory, Ban-

galore, was expected to commence from June 1959.

The Minister added that the price of the smallest size lathe of this type would be Rs 13,250 as compared with 29,250—the price of the smallest size of the lathe of the oerlikon type now being manufactured in the Hindustan Machine Tools Factory.

Manufacture of Electric Metres

An industrial licence has been granted to a New Delhi firm for the manufacture of 60,000 single phase watt hour metres per annum in collaboration with meter factory 'Ganz', Budapest. This information was given by the Minister for Commerce and Industry, Shri Lal Bahadur Shastri, in a written reply to a question by Shri Ram Krishan Gupta and three other Members in the Lok Sabha on April 22.

The Minister said that the factory was proposed to be established by August 1960, either at Faridabad or at Chandigarh. The collaboration agreement concluded by the first was for ten years on payment of royalty.

Manufacture of Photographic Materials

Replying to a question in the Lok Sabha on April 18, by Shri D. C. Sharma and Shri Pangarkar, on the progress of the manufacture of photographic materials, the Minister for Industry, Shri Manubhai Shah, stated that revised proposals had recently been received from the trade representation of the German Democratic Republic in regard to the proposed plant for the manufacture of cinematographic and x-ray films.

According to these proposals the project report would not commence till the end of 1961 and the delivery of equipment would begin only in 1964. This involved the postponement of the project for a much longer period. The Minister said that the Government of India had, therefore, decided to explore also the possibilities of technical collaboration from other established manufacturers elsewhere.

The Minister also stated that an Indian firm would be shortly going into production of box-cameras in collaboration with a West German firm. In the light of experience gained, manufacture of 35 mm film strip projectors would be taken up by them later.

Ferro-Manganese Plant

The licensed capacity of the ferro-manganese plant at Rayagada was 10—12,000 tons per annum.

This was stated by Shri G. P. Sinha, Parliamentary Secretary in the Ministry of Steel, Mines and Fuel, in reply to a question by Shri Rameshwar Tantia in the Lok Sabha on April 14.

The firm was putting up the plant in two stages—the first stage had been completed and the first electric furnace with a capacity of 7,200 tons per annum had started production. The furnace for the second stage was

now under erection and when completed would increase the capacity to 12,000 tons per annum.

Plantation Labour Housing Scheme

Replying to a question by Shri Ram Krishan Gupta in the Lok Sabha on April 14, the Deputy Minister of Works, Housing and Supply, Shri Anil K. Chanda, said that the original allocation of Rs 2 crores for the plantation labour housing scheme was likely to be reduced to Rs 50 lakhs as a result of reappraisal of the Second Five-Year Plan. The State Governments implementing this scheme were able to draw Rs 3.60 lakhs only upto March 31, 1959, and were expected to draw Rs 12.50 lakhs during the current financial year for disbursement of loans to the planters.

The main reason for the shortfall had been the inability of the planters to give to the State Governments adequate security for the loans. Various suggestions were being examined in order to work out a satisfactory solution of the problem.

Production and Export of Cement

In a written reply to a question by Shri Ram Krishan Gupta in the Lok Sabha today the Minister for Commerce and Industry, Shri Lal Bahadur Shastri, said that the foreign exchange earned by exports during 1958-59 was Rs 52.20 lakhs. The countries to which Indian cement was exported were Ceylon, South Vietnam, Pakistan, Persian Gulf ports, Cambodia, East Africa, Madagascar, Afghanistan and Aden.

The Minister said that the total output of cement during 1958-59 was 59,83,247 tons.

Specialised Training in Radio Engineering

In written reply to a question by Shri Ram Krishan Gupta about the nature of scheme proposed by All-India Radio Delhi for giving intensive specialised training in radio engineering to the recruits, Dr. B. V. Keskar, Union Minister for Information and Broadcasting, said in the Lok Sabha on April 14, that the scheme for giving specialised training in radio engineering to new recruits has been designed to cater for two distinct categories of personnel who are recruited. Shift Assistants who normally do not have training in radio engineering before joining All-India Radio are given instructions in the theory and practice of broadcast engineering for a period of six months. Direct recruits in the grades of Technical Assistants and Assistant Engineers who undergo a regular course in Radio Engineering as a part of their College training are to undergo an orientation course in order to make them familiar with the technical practices and standards in the Department. For this purpose an Engineering Staff Training School

Indian Finance

has been operating at Delhi with effect from May 1, 1958.

Progress so far made by Wage Boards for Industries

The Deputy Minister for Labour, Shri Abid Ali, reviewed in Lok Sabha on April 14, the progress so far made by the Wage Boards for Cotton Textiles, Sugar and Cement Industries.

He said the Cotton Textiles Wage Board had just concluded its hearing on the subject of wages of the lowest paid operatives. The Sugar Wage Board was hearing the parties at various centres. The Cement Wage Board had begun hearing from April 2, 1959.

He added that requests for grant of interim relief were received from workers in the sugar and cement industries and were forwarded to the respective Wage Boards. The Sugar Wage Board had already recommended interim relief to workers. The Cement Wage Board proposed to discuss the matter at its subsequent sittings.

Shri Abid Ali was replying to a question by Sarvashri Ram Krishan Gupta, R. C. Majhi, Subodh Hansda, Kesava, S. M. Banerjee, T. B. Vittal Rao and Tangamani.

Tobacco Cultivation in Orissa

The Finance Minister, Shri Morarji Desai, confirmed in Lok Sabha today that the total acreage of land under tobacco cultivation in Orissa had decreased in the crop years 1957-58 and 1958-59.

He gave the following figures of arrears of excise duty on tobacco in the States since 1952-53:

Year	Amount of arrears (In Rupees)
1952-53	99,755
1953-54	1,05,929
1954-55	1,13,171
1955-56	84,643
1956-57	1,03,956
1957-58	1,27,327
1958-59	83,814

These details formed the written answer to a question by Shri Panigrahi. The Finance Minister who gave the answer replied in the negative to question whether the difficulties of tobacco cultivators in the States had been brought to the notice of Government.

Over 26,000 Craftsmen so far Trained

Under the Second Plan, 26,109 craftsmen have so far been trained under the craftsmen training programme. Of these, about 5,000 were trained in Uttar Pradesh and over 3,000 in West Bengal.

About 25,000 more craftsmen are likely to be trained during the remaining period of the Second Plan.

This was stated by the Union Deputy Minister for Labour, Shri Abid Ali, in a written reply to a question by Shri Ram Krishan Gupta in Lok Sabha today.

May 9, 1959

UNPOLITICAL citizens may find one fact about our current linguistic squabbles somewhat intriguing. It is Authority's apparently gratuitous assistance in keeping the controversies alive by periodical publication of reports on the subject by some commission or the other. In fairness to Government, it should be noted that these reports are the consequences of definite Constitutional directions. Article 344 of the Constitution has made it mandatory for the President to appoint a commission at the expiration of five years from the commencement of the Constitution and thereafter, at the expiration of ten years from such commencement. The commission is to make recommendations regarding, among other things, the "progressive use of the Hindi language for official purposes" and "restriction on the use of the English language for all or any of the official purposes". The same article provides that a parliamentary committee shall be appointed for the purpose of examining the recommendations of the commission and report thereon to the President, who will then "issue directions in accordance with the whole or any part of that report".

In pursuance of these provisions, the Kher Commission was appointed and it made its recommendations about two years ago. Its report brought to the boil a good deal of the simmering discontent over the whole question. Important and influential sections of the public in the non-Hindi areas came out with serious reservations about the wisdom of accepting the recommendations. The West Bengal Legislature passed a unanimous resolution specifically asking for an indefinite continuation of the present arrangements. And before passions roused by the Commission's report could cool off, the parliamentary committee has come out with recommendations to the President. This is bound to stir up once again the profound wells of unreason from which these controversies draw their principal sustenance. And before normalcy is achieved, the time will have come for a second commission, for 1960 is just round the corner, and thus a permanent machinery for keeping the controversial fires alive has been unwittingly devised by the Constitution itself.

★

Apart from these, there are other consequences of these provisions that are unfortunate from the point of view of rational discussion. In the first place, the substantial provisions regarding the official language seem to exclude any examination of the validity of the assumptions behind them. I shall perhaps be told that this is neither more nor less than the immunity enjoyed by other provisions of the Constitution. One can understand universality and immutability being assigned to provisions relating to fundamental rights and directive principles, since they flow, to a greater or lesser extent, from certain categorical imperatives. (Ironically enough, these provisions have been amended from time to time). But empirical rather than a priori considerations ought to govern the choice of a suitable language of administration. And to tie one's hands in advance with constitutional ropes on an eminently practical matter is surely an unsatisfactory way to deal with it. That is why the labours of all the ad hoc bodies dealing with this question are of doubtful value. Their terms of reference, written into the Constitution, do not envisage the consideration of the unsuitability or unreadiness, at any particular point of time of Hindi for the duties as an official language. Thus every discussion of the subject has been hag-ridden by the Constitutional provisions. The spectre of evasions discreetly hidden behind tortuously expressed provisions is emerging into the open making everyone tie himself into argumentative knots.

★

To those who have been watching with deep misgiving the painfully built sense of national cohesion continually giving way at the least whiff of sub-national impulses, this is not the least serious objection to the constitutional provisions. But there are others, to which Mr Frank Anthony has drawn attention in his closely argued minute of dissent. As will be seen from the provisions of the

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

Constitution summarised earlier, the recommendations of the committee are not subject to any modification by Parliament itself, since it reports directly to the President. In effect, about twenty men sitting in camera have become the final arbiters of this important question. And when these men are deeply divided in their counsel, the President cannot derive any evidence from them. And when it is further realised that such divides in opinion do not cut across the country but fall into a well-defined regional and linguistic pattern, the political dangers of decisions based on these recommendations will loom even larger.

★

Many will recall the atmosphere of appeasement, on the one hand, and wheedling, on the other, in which these provisions were debated in the Constituent Assembly. Champions of Hindi had the psychological advantage of the fortuitous association in public mind of Hindi with the national struggle and made the most of it. Opponents of Hindi, in many cases embarrassed by their earlier stances, were nevertheless able to make their misgivings felt. That these misgivings were not imaginary was evident even at that time and time has only sharpened their points. Indeed, the ulterior psychological sources of the enthusiasm for Hindi could not have borne (and cannot bear now) too close a scrutiny as was revealed at that time by the absurd furore over the form of numerals and the status of Urdu. However, it was imagined that the solution lay in draftsmanship and mental reservations were neatly tucked away behind qualifications and provisos. Thus we had, as I showed last week, as the only official language a language that could not be employed at all, except for particular purposes by special order of the President. The normal business is to be conducted in a language that is carefully not designated as the official language. It is easy to see how this involved arrange-

ment achieves at least for the moment the seemingly impossible feat of at once meeting half way objections coming from opposite directions. But such lordly defiance of the laws of dynamics brings in its wake its inevitable embarrassments. The consequence of trying to be in two places at the same time is that you are neither here nor there and are merely running round in circles.

Khira

ment achieves at least for the moment the seemingly impossible feat of at once meeting half way objections coming from opposite directions. But such lordly defiance of the laws of dynamics brings in its wake its inevitable embarrassments. The consequence of trying to be in two places at the same time is that you are neither here nor there and are merely running round in circles.

★

The time has therefore come to cut ourselves free from the constitutional meshes. Otherwise, we shall be faced with the logical absurdity that vitiates the report of the parliamentary committee. The report in its entirety is an eloquent argument against any attempt at tinkering with the status quo. And yet it recommends the status of the principal official language to Hindi, which means, if words have any meaning, that the major portion of the work of the Union should be done in that language from 1965. Having said this, it yet refuses to specify the purposes for which such use should be made, nor does it commit itself to a firm time table. And it has gone on record in a number of places as not satisfied with the pace of the minimum preliminary work involved to make possible an eventual switchover.

★

Supposing one were to ignore the specific recommendation of the Committee and examine the factual position recorded and the committee's views on what requires to be done before a change can be effected. Several things will at once forcibly impress an impartial

person. Firstly, the utter unreadiness of Hindi for its contemplated duties from 1965. Secondly, the recommended change will run counter to a number of national policies devised in other contexts. And, thirdly, the distortion of priorities of national tasks involved in bringing about, willy nilly, these changes is simply scandalous. Fourthly, a precipitous fall in standards of performance will be inevitable in the use of tools, admittedly imperfect, and the use of which will have to be painfully learnt by people who are in many cases too old to learn. I shall deal with some of these in the following paragraphs.

About the unreadiness of Hindi for its tasks, there is abundant evidence throughout the report. Apart from this, the report evades some crucial issues in this connection. The commission that preceded the committee had made

some recommendations about the language for purposes of law making in Parliament and State legislatures. The committee feels that these are beyond the terms of reference of the commission and therefore should be left out of consideration. Now, this may show a very proper sense of one's limitation, but it seems odd that the language of the courts should be considered at length, while the language of parliament should be virtuously left out of consideration. Law making precedes interpretation of law and it seems queer that nothing should be said about the language to be used by law makers. There are other anomalies. It is recommended that until 1965 or until English is replaced, legislation is to be in English with authorised translations being provided. It would appear from this recommendation that law-making is apparently not comprehended as a 'principal task' of the Union, since replacement of English for the purpose of law making is left

indefinitely even after 1965. Surely, it is an odd evaluation of the relative importance of the duties of the Union that places parliamentary activities below those of the executive and judiciary. I can only hope that some self important member of parliament does not spot this and argue contempt of Parliament in this implied order of importance!

The reason for this evasion is obvious. Members of Parliament, unlike employees of Government, cannot be coerced into learning Hindi within a specified time. And so the whole question is left vague and indefinite. In practice, we may well have a gilbertian situation in which law is made in one language and administered and interpreted in other languages!

It is readily agreed by every one that linguistic loyalties are perhaps the most potent danger to a sense of Indian nationality. The reorganisation of State boundaries has demonstrated forcibly this danger. It is sheer folly to provide this irrational exclusiveness with grievances to feed on. In its most immediate and palpable form, the question of official language is a bread and butter problem. However much you may try to provide balancing disadvantages, the initial disadvantage is something that can form the basis for a real or imagined grievance. Mr Frank Anthony has detailed with great cogency the complications arising from these consequences of the recommendations.

But the most intimidating thing about the recommendations is the appalling diversion of national energy involved in the preparations for the switchover. The only persons likely to benefit immediately are the translators who are to be employed to translate every conceivable thing. It is doubtful whether we have men in sufficient number with the necessary technical and linguistic equipment to undertake the task. Assuming that we have, has the committee reckoned the cost in money and man hours of this sterile endeavour that will not add one jot to national wealth? The whole project chills you like the bureaucratic nightmares described with cruel precision by Kafka. Thousands of industrious ants burrowing into old enactments and official codes and producing at the end of all the same enactments and codes in a different language. It seems to me an unforgivable disloyalty to our essential tasks to indulge in this orgy of translation at a time when more important national tasks do not get the attention they deserve. Not a day passes without some one exhorting us to follow the Chinese example of producing pig iron in the backyard! And yet a parliamentary committee seriously suggests a formidable

Indian Finance

machinery for a task that is perhaps the aptest example of unproductive labour and which, in any case, is a duplication. I shall be told that the Chinese do not have a language problem. That is precisely the point. I would recommend one exercise in imagination to my fellow countrymen. Fancy for a moment the consequences of all of us agreeing to forget the language problem and getting on with the real job. This simple projection into a possible future can give, as no exhortation can, an idea of the appalling expense of spirit in the current linguistic squabbles.

An all too brief a visit—how I wish it could have been longer—to Bombay last week gave me the splendid opportunity of meeting Mr Gaganvihari Lal Mehta, ensconced in a comfortable chair, in a comfortable room. It is some time since I met him, and it is a good deal longer since we both could find a few minutes in which we might share our thoughts. I might here add, parenthetically, that I had hoped, when his distinguished tour of office as Ambassador in Washington had drawn to its close, that his unique faculties would be pressed into service in behalf of Government. But then, he has chosen, it would appear, to keep a tenuous relationship with Government. And he sees purpose, not to speak of national interest, in directing the activities of the Industrial Credit and Investment Corporation. A little consideration will show that Mr Mehta has been indisputably right. After all, the emphasis of the Third Plan has necessarily to be on small and medium industries, and if a small and medium industry is to grow and flourish, thrive and prosper, it is the private sector which has to work out its fortunes. So it is, I suppose, that we have Mr Mehta as ICIC Chairman. I was once worried that the ICIC was not fully extending itself in the assistance, and the varieties of assistance that it could proffer. But Mr Mehta has been most reassuring in this respect. The line of credit obtained from the World Bank has been fully committed, and with Mr Mehta's intimate knowledge of America, we need be in little doubt about his ability to get further credit for the development of the private sector projects. I also understand that, as far as rupee resources are concerned, there is a tacit arrangement that ICIC will not starve of funds. But where Mr Mehta is somewhat concerned is about the reluctance of small and medium industry to put up projects for ICIC to consider. I suppose that not a sufficient number, by a long chalk, of our small and medium businessmen know about the ICIC. If this is so, for the next few years, Mr Mehta's work is cut out for him—in inviting and ensuring that small industry will develop in this country.

EAVESDROPPER

GATEWAY GOSSIP

THE price gyrations on Dalal Street are the talk of the town. Everybody wants to get into the act; everybody wants to buy Tata Ordinaries. A buying spree is on, and some friends tell me that they expect the scrip to touch, before long, the Rs 225 mark—cum rights and dividend, that is. The phenomenon that currently holds the Gateway city stage is, of course, speculative fever; and you could, if you wanted, coin a grand-sounding word for it. But, in its essentials, and shorn of all verbosity, all that we have is a steep upward climb in share prices, more particularly in Tata Ordinaries, directly as a result of the machinations of the speculative fraternity. Where it will stop, none dare with impunity predict.

Knowledgeable circles are not at all happy. They point out that the Tata management have had nothing to say about the inspired guessing game that is going on about the anticipated rights issue. It needs hardly to be said that, for their part, those that control the destiny of Tata shareholders—as distinct from those who influence the fortunes of the Tata ordinary share quotations—will try their best to ensure that the terms of the proposed new issue will be attractive to the investor. But it need not follow that what is best for the investor is also best for the company. Indeed, the opposite may be true: it is in the anticipation that the shareholder finds zest, not to speak of profit; it is in the event that the shareholder gets his due. So, we have had all this hazy talk about the rights issue consisting both of ordinary shares and of preference shares. The reasoning is supposed to be that it is only by such a combination that the company will be able to get the quantum of money it hopes to raise through the issue.

But this is surely specious reasoning. I take it that the company will not require all the money all at once. What could be simpler than to make the rights issue an ordinary share issue? It would be offered to shareholders at par; and time would be given to the shareholders to find the money, with, I suggest, three calls being made, in manner similar to the last time when a rights issue was offered to shareholders.

Nor should I think that the present is the most opportune time for an issue of preference shares. The prospect of appreciation in values is fairly certain in regard to ordinary shares; there is no such certainty in the case of preference shares.

Then there is, too, the interest that would have to be offered, if the issue is to be in the form of preference shares. With "grossing up" a dead letter in the income-tax statute books, the nominal interest payable on the new issue

would have to be correspondingly higher—and also bear some relation to the yields now available on preference shares generally. Thus, the present quotations of existing preference issues in the company may become distorted; and that would not at all be welcome. There is even the possibility that present preference shareholders may have a valid objection to any proposed new preference share issue.

So, why all this fuss? The ado possibly arises because of the ready pretext that speculators found therein for indulging in their proclivities. It is in this light that I am told that the boom conditions witnessed on Dalal Street will prove to be short-lived, extremely short-lived.

Meantime, it looks as if the investor is nevertheless going to have an exciting time of it during the 1959 slack season. Sasoons are expected to come on the market; and so, too, a prominent paper company; and these are but two in a fairly long list of anticipated new issues. But, currently, calculations are being somewhat upset by the continued stringency in the money market, in spite of the fact that the 1958-59 busy season appears to have drawn to its close.

Even Government's borrowing programme seems to have undergone revision. An early new loan is clearly ruled out. Present plans are on the basis that the Centre will get its borrowing effort out of the way only by the end of July, leaving the middle of August free for the State Governments. Another important by-product, as it were, of the way the busy season ran its course is that realisations by the Central and State Governments are expected to be considerably lower than last year.

All this cramps the new issue market as well. The success of a recent Gateway issue is not taken to be evidence that every new issue has a one hundred per cent chance of success. Far from it. Especially is there some diffidence, if the Tata new issue comes on the market. For, much money would then have been drained from the investors' bank accounts, and the support that may be available thereafter may be disappointing.

But all this thinking is predicated on the assumption that the money market will be static, that there will be no such animal as a slack season during 1959. This may prove to be a totally wrong assumption. Deposits may conceivably improve at a surprising pace; Advances may contract in a manner not at all anticipated. If, in such wise, the money market begins to know real slackness, the gloomy forebodings of stock exchange academicians will not materialise. Instead, the markets should be able to takt well in their stride any the number of new issues that may come their way.

New Issue Prospects

Again, the fact that, at least in the Budget, Government calculate on much less new money to be raised from new loans should not be overlooked. Last year's slack season was despite spectacular investment in glitged by the banking system; if, this year, the quantum of money taken away by governmental borrowing programmes is much smaller, it would follow that much more, relatively speaking, would be available for investment in private sector issues—other things, such as the existence of a slack season, being granted.

Hence, for my part I take with a pinch of salt the tall stories of slack season stringency that my ears have lately been getting assailed by. I do not believe that the governmental borrowing programme will be as ambitious as last year's; I do believe that the rising trend in bank Deposits, and the declining trend in bank Advances, will continue; I do not believe that money will not easily be forthcoming for the private sector projects; I do believe that the Indian investor has sufficient resources stashed away to support every worthwhile new issue, as a Tata ordinary rights issue would be.

However, I concede that the speculation in the stock exchanges, reaching dangerous proportions, I trust that the decision of the Tata management will not be long delayed. The sooner that management announce the terms of the new issue, the sooner will unhealthy speculation be curbed. That should pave the way for an important season of new issues. For the investor.

But what is to be done about the current bout of speculative activity? All that the investor can do is to seize the opportunity offered of booking profits in the areas he desires, switching to scrip which relatively speaking, are underpriced. It is by such guile that the investor will be able to best the speculator.

I understand that the Life Insurance Corporation has completed new business worth Rs 48.78 crores during the first four months of 1959, showing an increase of Rs

5.55 crores over the corresponding period of 1958. Business introduced during this period is higher by Rs 20.12 crores.

A statement announcing the new business for the period 1-1-1959 to 30-4-1959 shows that there has been all-round increase in the proposed business from different Zones. The Western Zone leads with the business proposed amounting to Rs 21.72 crores.

The number of new policies issued during the period also shows a considerable increase over the corresponding period of 1958, in that over 15,000 more new policies have been completed during this period. During the first four months of 1958, the Corporation issued 132,406 policies, the number of policies issued during the first four months of 1959 were 1,47,519.

These are, I hope it will generally be conceded, most impressive figures. And this may well turn out to be the turning point in the fortunes of the Life Insurance Corporation. For, immediately after nationalisation, the complexity of tasks that had to be taken on hand by the custodians in the first instance and by the Corporation thereafter had been such as to prevent energy and effort being concentrated on the securing of new business.

But the publication of relatively disappointing figures was immediately seized as ample pretext for decrying the governmental decision to nationalise the life insurance industry. This pretext by dint of the new business written in during 1958 and also in view of the eminently satisfactory progress notched during the first four months of this year, is no longer available.

It remains, therefore, for the LIC to go full speed ahead. But, side by side with its efforts to make the people more and more insurance minded, I trust that equal attention will be paid to the utilisation of the gathering resources. For example, a question well worth the study is: How can LIC funds be pressed into service, during the new issue season of which I have written this week?

Mirakud Power Station is protected with Shalimar Tarfals

Project proofing by Shalimar TAR

Over 15,000,000 sq. ft. of Shalimar Tar waterproofing were supplied in one year to protect the roofs of India.

Waterproofing is our business and has been so for several decades now. As a result, in every corner of India, you will find scores of buildings from thermal power stations to the shell arch roofed working bays of new and expanding industries, from public buildings, old and new, to vast labour colonies all water-proofed by Shalimar Tar Products—manufactured, applied and guaranteed by

GATEWAY NOTES

Export Promotion

Inaugurating the All-India Exporters' Chamber at the Indian Merchants' Chamber Hall, Mr Lal Bahadur Shastri, Union Minister for Commerce and Industry, stressed the importance of the contribution of the country's foreign trade to the development of the economy. The export promotion scheme, which the Government are now firmly set to foster, is conceived to facilitate the achievement of a surplus with which to meet the country's demand for essential goods and machinery. The present trend in exports however, is far from encouraging, and bears no impact of the measures the Government have taken to increase exports.

The main point of defect about the existing structure of export trade of the country, is the rigidity that has affected it consequent on the dependence on a few select items for the major part of the foreign exchange earned. Considering that most of these articles are subject to great fluctuations of demand from the importing countries, the country is hard put to it to maintain even a steady flow of foreign exchange. It is significant that the decline in the exports of the country in the last year is accounted for by drop in off-take by the US, UK, West Germany which are the important purchasers of Indian goods. While the importance of measure which would step up the export of these articles cannot too strongly be emphasised, it is also necessary that attempts are made to introduce new goods into the export front, with a view to diversification.

In connection with export promotion, Mr Lal Bahadur Shastri, laid very great importance on quality of goods which are sought to be offered to the foreign purchaser. Japan is the example of a country which had succeeded eminently well in stepping up exports by means of improvement in quality of goods exported. Towards this, Mr Shastri has suggested the introduction of the system of proper pre-inspection of goods before they are exported. Mr Shastri also appealed to the business community to avail of the services of the Indian Standards Institute for improving the quality of goods produced in the country.

The Export Risk Insurance Corporation is also expected to do some useful service for promoting exports. Referring to the corporation set up by the chamber for promoting exports, Mr Shastri, said that the Government would render assistance to the corporation to enable it to sell some produces at bare cost prices.

Mr Naranji L. Kara, President of the All-India Exporters' Chamber, in the course of his speech

pleaded for a change in the attitude of industrialists and businessmen and urged them to pay more attention to foreign markets for their goods rather than be content with operating in the home market. Referring to the proposed formation of the Amalgamated Export Corporation Ltd, Mr Kara said that the Corporation represented a joint and cooperative effort by the general body of exporters to give a vigorous drive to the export trade by seeking new outlets and new items of export.

Fisheries

Increasing the food production and development of fisheries are mutually related since fish is an important article of food in short supply. Against the present requirement of about 4 million metric tons, total consumption of fish in the country is only about 1 million tons. With the further increase in the country's population, the present supply per capita will get further dwindled unless steps are taken for development of fisheries.

While emphasising the importance which the Government attach to developing fisheries, Mr M. V. Krishnappa also referred to the difficulties which have to be encountered and overcome for success of Government's plan for development of fisheries. The lack of adequate statistical data on the marine and inland resources makes it difficult even for proper plans to be laid down. Even the schemes for the collection of statistical data relating to fisheries, are only in the process of implementation. In this connection, Mr M. V. Krishnappa, referred to the pilot surveys started on the Malabar Coast by the Indian Council of Agricultural Research.

An improvement in the living conditions of fishermen is also considered important and forms a part of the Government's scheme for improvement of the villages in the coastal areas. A quinquennial census of fishermen recommended by the Committee set up by the Government for improvement of fishery statistics is to be a vital part of the statistical machinery that is to be erected for facilitating planning in respect of fishing.

Mechanisation of fishing craft generally considered desirable for increasing the supply of fish, will have to contend with considerations of the adverse effects which such a step would have on the fishermen. A critical study of the effects of mechanisation is yet to be undertaken and in the absence of such a study to assess the relative merits and demerits, it would be rather unwise to introduce mechanisation.

Establishment of institutions for imparting training in the art of fishing, is an important aspect of the development plan; but such training institutions are only in the process of being provided on a scale adequate to the needs of the country. While the FAO has started some intensive training courses, such facilities would need further extension for more substantial results.

GATEWAY MARKETS

Yarn Market Subdued

CONDITIONS in the Bombay Yarn market have continued to remain dull and uninteresting and prices in all cases have declined further from last levels. The immediate outlook for yarns is not considered good. Although a section of the trade anticipates a rise in the prices of Rayon yarn after the suspension of the export promotion scheme last month, stockists appear to be eager sellers following reports that arrivals of imported rayon yarns against the previous import licences are heavy. The financial stringency has also induced some of them to liquidate a part of their stocks.

Stocks of all qualities of Art Silk Yarn with the importers as well as the dealers are reported to have increased further, mainly due to recent arrivals against the purchases made on the basis of licences received against export promotion. Fears are entertained that further arrivals of imported yarns may be still larger, as the purchases made against export promotion licences are presumed to be large.

In the case of Staple-Fibre yarns, there has been continued pressure of sales from the South Indian mills. It is even reported that, during the last two weeks, sales to the extent of about three to four thousand bales have been effected mostly for the Punjab markets at prices which are lower than the prices at which business was done in the previous weeks. It is also reported that the situation with regard to the supply of raw staple fibre has considerably improved and many of the spinning as well as composite mills, who are inclined to spin staple-fibre yarns, are generally able to get their requirements from the indigenous producer in satisfactory quantities.

In the case of Indian cotton yarns, prices have remained very steady, presumably due to very firm cotton prices; but off-take remains very limited. There has been some improvement in the medium, fine and superfine counts. In the case of coarse counts, demand has continued to remain slack. The future tendency of the market continues to remain easy in almost all kinds of yarns.

Oils & Oilseeds

Prices on the Bombay Oilseeds Exchange failed to consolidate further gains registered early in the week. Following a higher start, values improved further on short-covering, which encountered realising pressure. The undertone at the close was, however, steady.

Groundnut prices established new high levels in their recent ascent as the outlook was considered to be bullish with the receipt

remaining smaller than the off-take. With the result, the crushers and vanaspathi manufacturers were obliged to pay higher prices for their normal requirements. In the ready section, Boid quality was quoted at Rs 40.75 and Groundnut Oil at Rs 21.62.

Trading in Castorseed reflected a significant improvement in the outlook. Sellers were reserved, while buyers were inclined to support the market at lower levels on the belief that the future trend would be bullish in view of the improved prospects for the export of castor oil. Although the business with the UK continued to be small, the much-awaited demand from the USA turned more active. Castor ready was quoted at Rs 32 and Castor Oil commercial quality at Rs 16.06.

Conditions in the Linseed section were comparatively dull with prices moving within a narrow range after initial firmness which was attributed to the reports of business done in linseed oil with Australia on the basis of £111 per ton.

Prices in the Cottonseed section registered an impressive rise. Speculative support from Gujarat and Akola operators and the marked firmness in cotton induced the bears to get out of the market before the prices went up further.

Gold & Silver

At long last, a halt was cried to the steady rise in prices noticed on the Bombay Bullion Exchange. After signs of resistance early in the week, both the metals turned downward when prominent bull magnates started unloading their accounts.

Heavy margin requirements along with the reports of slackness in off-take of spot goods retarded buying. However, Gold displayed remarkable strength although higher levels attracted a good deal of profit-taking. Spot rates moved between Rs 124.31 and Rs 125.37, to finish at Rs 124.37. Sovereign was quoted at Rs 78.75.

In the Silver section, activity was restricted and prices developed a slightly reactionary tendency on some selling pressure from Calcutta. Spot rates moved between Rs 203.06 and Rs 200.75 to finish at Rs 201.19.

Non-Ferrous Metals

Conditions in the Non-Ferrous Metal market remained generally firm with Copper Scrap quoting Rs 222; Zinc Rs 106; Lead Rs 81 and Tin Rs 147 (per quarter).

The rise in Zinc prices is more pronounced, mainly due to speculative support and keen demand for ready stocks from strong holders on ideas that the floating stocks, which are mentioned to be very small, will fetch attractive prices even under controlled distribution of the goods imported by the trade. Importers do not have stock of the metal and whatever stocks there are in the market are reported to be held by the speculators. They probably think that, when consumers do not get permits for imports for the quantities they need, they will naturally have to turn to the open market.

WORLD OF COTTON

THE outlook for Cotton appears to have undergone a radical change. Earlier talks of heavy carryover for the next season have receded. Some mills, on the other hand, have expressed fears about the acute shortage of tenderable varieties of cotton by the end of the season in August. Reports of an indigenous production of only 46.50 lakh bales have made some spinners panicky about the supply position. They are, therefore, prepared to buy their requirements of cotton even at advancing prices.

Meanwhile, consumption of Indian cotton by the mills, during March at 380,569 bales, compares very favourably with the previous month as well as the corresponding month of last year, at 376,105 bales and 354,288 bales respectively. Indeed, the March 1959 figure should be considered encouraging if the number of holidays in the month is taken into account.

The consumption of foreign cotton has shown a downward trend, being 33,867 bales in March against 47,643 bales in March last year. There has, however, been an improvement over the previous month when it stood at 31,580 bales. The consumption is fully reflected in the behaviour of the futures market, which has advanced stridently. With the recent improvement in the off-take of cloth and the consequent reduction in stocks of unsold cloth with the

S. E. RLY TENDERS

Sealed tenders are invited for Tender No. CON|GM|24|F2|59 for supply of 1742 Nos. Foundation "A" type for wheels in signal cranks as per Drg. No. S3529. Tenders will be opened on 26-5-59 at 3 P.M.

Tender forms are obtainable from the office of the Controller of Stores (Construction of Stores), Garden Reach, Calcutta-23 on remittance of Rs 5/- (not refundable) per copy by money order to him direct in the case of outside firms and on production of cash receipt from this Rly's Chief Cashier by local firms.

Tender should accompany the receipt for depositing the earnest money of Rs 1000/- with this Rly's Chief Cashier at Garden Reach, Calcutta without which the tender is liable to be rejected. Approved contractors having a permanent deposit of Rs 1000/- with the Controller of Stores are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

S15 GENERAL MANAGER

Production and Consumption

mills, the consumption of cotton is bound to increase further in the coming weeks.

FUTURES MARKET

The Cotton futures market was active and prices, after touching fresh higher levels, reacted slightly towards the close due to lack of fresh buying enquiries and scattered liquidation. The general expectation that tenders against the maturing May contract would be small, viewed in relation to the prevailing high spot prices, led to some short-covering early in the week. Jharilla August delivery, after touching a high of Rs 704.50, finished the week at Rs 701.

SPOT MARKET

The Spot market also showed fresh advance in the prices of popular varieties.

On the export front, small transactions were concluded with shippers in Bengals, Oomra Delhi and Kala Gin. But, Bengals remained almost unchanged, as stocks with traders were reported to be heavy, while enquiries from abroad continued to be few. Of the export quota of 2.50 lakh bales for which the deadline for shipment was April 15, about 1.46 lakh bales remained unutilised. Of the balance quota of 2.5 lakh bales for which the last date of shipment is August 31, 1959, registered sales totalled 31,349 bales till April 29.

This has left a balance of about 1.7 lakh bales available for sale by the trade excluding 37,500 bales earmarked for co-operative societies. Shippers, however, point out that the export demand for India's short-staple varieties is, at present, at a very low ebb as principal buyers like Japan, the UK and France are not inclined to buy Indian cotton. Shippers point out that they have not put through any sizable business during the past three weeks.

Meanwhile, shippers are reported to be perturbed by the alleged intrusion of the customs authorities in the matter of cotton shipments, which are now certified by the ad hoc committee set up by the Textile Commissioner. It is difficult enough to find foreign buyers for Yellow Pickings, but the customs seem determined to make their exports more difficult. Exports of cotton are already in the doldrums. Instead of helping to boost exports, the customs appear to be unconsciously hindering them by their unimaginative handling of cotton exports.

On the import front, there were no fresh developments. The protracted delay in the Government announcement of additional import quotas for cotton caused concern to mills, particularly from Ahmedabad, who apprehended that they would be facing an acute short-

age of foreign cottons within two months. The Government of India are, therefore, urged to announce additional imports of about 1.5 lakh bales as early as possible.

Exports by rail, from 1st September 1958 to 30th April 1959, were 143,758 bales. Estimated mill consumption in Bombay, during the same period, was 858,991 bales as against 876,044 bales in the corresponding period of last year. Estimated stock of raw cotton, held by exporters, dealers and mills in Bombay, as on the 30th April 1959, was 603,369 bales as against 705,968 bales on the corresponding date of last year.

CLOTH AND PIECEGOODS:

There has been a revival of activity in the domestic Piece goods market on reported reduction in cloth stocks. Though it cannot be

S. E. RLY TENDERS

Sealed tenders are invited for (1) Tender No. CON|COS|35|F1|59 for supply of 6600 Nos. Bolts holding down M.S. 5/8" x 18" complete with nuts and washers but without clip on the lines of CE's Drawing No. 10880/1 Specification BSS 916, Mat-M5 Class 11. Earnest money is Rs 440/-. Tenders will be opened on 25-5-59 at 12 noon.

(ii) Tender No. CON|COS|36|F1|59 for supply of 1 No. Pressed Steel tank complete with all fittings and steel stagings 40'-0" height complete of size 28'-0" x 6'-0" 39200 gallons capacity (IRS Type No. Drg. No. HA|113). Earnest money Rs 320/-. Tenders will be opened on 26-5-59 at 12 noon.

Tender forms are obtainable from the office of the under-mentioned (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs 2/- (not refundable) per copy per tender by money order to him direct in the case of outside firms and on production of cash receipt from this Rly's Chief Cashier by local firms.

Tenders should accompany the receipts for depositing the earnest money as stated above with this Rly's Chief Cashier at Garden Reach, Calcutta without which the tenders are liable to be rejected. Approved contractors having a permanent deposit of Rs 1000/- with the undermentioned are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

BOMBAY REVIEW

said that a buying spree has started, traders feel considerably relieved at the turn of the market from the prolonged spell of inactivity. There has been a brisk movement, which should result in a substantial decline in stocks with the mills.

On the export front, too, there has been some improvement. Singapore continues to evince interest in bleached longcloth, while Hong Kong and Ceylon remain practically dormant. Burma has booked fair business. Australia is reported to have placed some orders in her usual varieties of interest. Very good booking is reported for the US and the entry of this country in the Indian market should be a welcome sign as this country can become an important buyer if, India is able to supply quality goods at competitive prices.

S. E. RLY TENDERS

Sealed tenders are invited for (1) Tender No. CON|COS|37|F1|59 for supply of 340 cwt. Bolts 'J' type 3/4"x6" long with squerenuts I.S.S. 730-1958. Earnest money is Rs. 480/-. Tenders will be opened on 27-5-59 at 12 noon. (2) Tender No. CON|COS|38|GB|59 for supply of 340 cwt. Bolts Hexagon head with Nut, Black 3/4"x2 1/2" Steel M5 class II B.S.S. 916-1953. Earnest Money is Rs. 500/-. Tenders will be opened on 28-5-59 at 12 noon. (3) Tender No. CON|COS|39|GB|59 for supply of 200 cwt. Bolts M.S. Hex. Head with Hex. Nuts 3/4"x1 1/2" Material I.R.S. M5 Class II specification BSS 916. Earnest money is Rs. 220/-. Tenders will be opened on 29-5-59 at 12 noon.

The US and Indian Development

NOT many in this country appear to know—or if they did, to show sufficient appreciation—of the sympathetic interest of important sections of American opinion in India's developmental efforts. This lack of appreciation is, in many ways, inexcusable. For American friends of India have shown not only a commendable idealism in the matter, but characteristic practical acumen and energy. It is hard to find a parallel to this disinterested preoccupation with a subject that many would consider remote from their normal spheres of interest. And if one thinks about the organisational efforts involved in keeping the subject constantly before the American public, one would be staggered. Senator Kennedy and Senator Cooper have in the last two years seemed to have made this the major preoccupation of their politics, at least in so far as they relate to foreign policy. There are countless others, including those in seats of authority, who have never made a secret of their views in the matter. And hardly a day passes without our having some evidence of the fact that such interest is continual and energetic and characteristically American. The

GENERAL MANAGER

S17

most recent example is the two-day conference organised by the Committee for International Economic Growth for the specific purpose of discussing ways of assisting India's economic development. Reports of the conference that have come here show that it has succeeded wonderfully in its principal aim of spotlighting the essentials of the problem.

Of course, the conference was conceived and executed as a major exercise in public relations, in characteristic American fashion. I, for one, would be extremely reluctant to be supercilious about the organisational details of the effort to focus attention on the problem. As the world's greatest salesmen of all things under the sun, from vacuum cleaners to revolutionary ideas, Americans ought to know their business. Thus, unfamiliar to us, the idea of buying space in newspapers to present to American public the economic achievements and needs of India, has a long line of American precedents. (Two or three years ago, if I remember right, The New York Times used to carry advertisements in favour of nuclear disarmament). But the advertisement had made such an admirable job of it, that it is only the most stuffy that will object to the fact that it is an advertisement. (Considering how many "puffs" pass for news items, this is at least honest). At the conference itself (which took months of preparations), we had a most impressive list of participants, both Indian and American. The speeches made on the occasion clearly spelt out the essentials of the problem. What is perhaps even more important, the irrelevances were pointed out and specifically asked to be kept out of consideration.

Of course, this conference was not officially sponsored, but the fact that many important Americans think along these lines is important. Mr Nixon, who participated in the conference, had some extremely important things to say. He is Vice-President in the present administration. Mr John Kennedy, one of the moving spirits behind the idea, is tipped as the democratic candidate for the next presidential nomination. The views of these men are not new and indeed have been urged by them on numerous occasions in the past. And yet, the reiteration in the present context has the value of reminding the American public of the issues involved.

Mr Nixon cleared one of the irrelevances that bother Americans in discussing the problem of economic aid to India. He emphasised that economic assistance to under-developed countries had no tie up with agreement with American foreign policy. "The purpose of US aid," he declared, "has been and must always be not to make

any country dependent on us but to allow the country to be independent of us and independent of any foreign domination." He also cleared the confusion that ties up aid with containing communism by pointing out that mass poverty and communism were two different problems; and, even if "there was no communism in the world, if there were no communist threat to the United States and other free nations, there would still be poverty, misery and disease." So, economic aid has its own logic unrelated to the United States' opposition to communism. In so far as communism had anything to do with the problem, it is that communism batters on poverty and squalor.

Mr Averell Harriman, who was recently in India and who participated in the conference, made some important points at a dinner meeting arranged by the committee. American irritation at our supposed neutrality is one of the obstacles to clear thinking on the subject. And this irritation at our foreign policy sometimes overflows into suspicion that we are communists at heart. This gratuitous assumption is buttressed by a complete misunderstanding of the nature of the economic policies pursued at home. Thus, our use of the word "socialist" in describing our economic policies is held against us, for, do not the communists describe their policies as socialistic?

Mr Harriman dispels this thick blanket of confused thinking by pointing out how we are "really one of America's most vital allies", despite our seeming neutralism. "India is in no sense neutral on the fundamental domestic principles on which our nation was founded. Nehru and his associates are deeply committed not only to the independence of India from the outside interference but to the full protection of the dignity and freedom of the individual." Joining issues with those who are bothered by the word "socialist", Mr Harriman argued interestingly that the Indian use of it has actually given respectability to a word that has been grossly misused by the communists "for their own purposes".

Mr Kennedy looked at the question from another and in some respects a typically American point of view. He compared the rate of progress achieved in recent years by China with that of India and said that conclusions unfavourable to free ways of life may be drawn, especially in under-developed countries, from their relative performances. Mr Kennedy gave facts and figures to support this conclusion. He even feared that China may launch the first earth satellite within next year and may soon become a member of the select band of nuclear powers. Of course, if China is going to waste its time, energy and resources on earth satellites and nuclear arma-

ments, it will be gratuitously putting itself at a disadvantage in the race with India. But the economic advancement achieved by China by adopting methods that we cannot ever think of adopting is very real. The question whether we can achieve the same measure of success but without paying for it in human cost is crucial: it faces all who believe in freedom and democratic ways of life. So, Mr Kennedy urges that it is necessary that the United States and other free nations of the world should plan on a fairly long enough range for giving financial and other aid to India.

Mrs Barbara Ward, formerly of The Economist, who participated in the discussion, said that "the Western powers should make an annual outlay of perhaps 5000 million or 6000 million dollars in long term development loans to under-developed countries for the next four or five decades. For India, this would mean a general Western guarantee each year of between 1000 and 1500 million dollars in investment capital during the next five year plan."

Indian speakers at the conference were principally Mr B. K. Nehru, most intimately connected with negotiations of foreign assistance in the last few years; Mr H. V. R. Iengar, Governor of the Reserve Bank; and Mr Asoka Mehta, the PSP leader. Mr Nehru pointed out that being committed to preferring the carrot to the stick, India was handicapped by not only not being able to use the stick but also by not having a "large enough carrot to offer." He emphasised that India was constantly aware of the need for self help to the utmost and assured that we shall not ask for a cent more than was absolutely necessary, nor shall we depend upon foreign aid even for a minute longer than is absolutely necessary. Mr H. V. R. Iengar drew attention to the fact that the private sector had a definite role in the current plans of development and has been the beneficiary of such planned endeavour to a far greater extent than appears to be generally acknowledged. Mr Asoka Mehta said that Indians could have, if they chose, taken the "easier" communist way toward material advancement, but it was their faith in freedom that made them prefer the "hard way." Our institutions are anchored in democracy. Having achieved the anchorage, we see no point in working up steam.

Any American who wants to inform himself of the logic behind the need for a well thought out long term underwriting of India's efforts to achieve economic salvation will find a complete answer in the proceedings of the conference. To have provided such an answer is an important service to the cause of Indo-American friendship, for which all of us are beholden to the organisers of the conference.

NORTH INDIAN NOTES

Price Stabilisation

Stabilisation of agricultural prices is one of the measures to which the Government are committed for increasing agricultural production as well as for keeping foodgrain prices low, for the benefit of the lower income classes a major part of whose income is expended on food items. The matter that was relatively unimportant when there was fairly enough production within, had been precipitated by the scarcity that ruled last year and the consequent rise in prices.

Price stabilisation is however, an issue with which the whole of South East Asian countries, which like India are predominantly agricultural, are concerned. The importance of this issue for all these countries of the region was highlighted by the technical meeting organised by the Food and Agricultural Organisation of the United Nations, and the Economic Commission for Asia and Far East, at New Delhi for discussing the problem.

In view of the similarity of the problem, the measures that had been taken in India for achieving stabilisation of agricultural prices have more than local significance. Explaining the steps the Government had taken in this field, Mr A. P. Jain, Union Minister for Agriculture, stressed the indispensability of State trading for achieving price stabilisation. As he explained it, the object of State trading, was to maintain price levels which are fair to the producer and to the consumer and to reduce to the minimum the spread between prices received by the farmer and those paid by the consumer throughout the season and over an agricultural cycle. In the ultimate pattern of State trading the surpluses of the farmers would be collected at the village level by the service co-operatives which would be channelled through the marketing co-operative society and the apex society at the State level for distribution through the consumer.

However, the complex nature of this ultimate pattern makes the transition to it a gradual process and involves the introduction of interim measures for assuring adequate supply and keeping the price level under control. In this period of transition, while the traders would continue to operate they would be under obligation to pay a prescribed price for the farmer for foodgrains not exceeding the maximum laid down by the Government. The Government would also have the right to purchase the whole or part of the foodgrains in the possession of the stockist or the wholesaler at the prescribed prices. The object of this is to enable the Government to build up reasonable stock which would facilitate proper control of the market.

Industrial Alcohol

The need for popularisation of power alcohol for industrial purposes has been stressed by the Power Alcohol Committee set up by the Government and with a view to stepping up the use of power alcohol by industries, the Committee has suggested that there should be a ceiling on the ex-distillery prices of power and industrial alcohol.

The Committee has suggested a ceiling of 80 nP per gallon for alcohol of strength 99.5 per cent by volume, and 78 nP per gallon for alcohol of strength 96 per cent by volume, and an additional charge of 37 nP per gallon in both cases to cover transport charges incurred on molasses.

Price control of power alcohol involves similar control on the prices of molasses which make up for the major part of the cost of production of power alcohol. Price control is now in force only in a few States and the Committee is against disturbing the existing machinery of control in those States. However, it has been suggested that for purposes of fixing power alcohol prices, the price of molasses with sugar content of more than 50 per cent should be fixed at 4 annas per maund, molasses with lower sugar content commanding correspondingly lower prices. While the Government have accepted the basic need for price ceiling, they seem to be favouring a re-examination of the question of price determination to make allowance for the lapse of time since the report of the Alcohol Committee was submitted.

Central control over distribution of power alcohol recommended by the Committee for encouraging availability of alcohol in adequate quantities, has not secured the Centre's support, and it has been pointed out on behalf of the latter that this is a matter which should more appropriately belong to the States' sphere. The question of taxation of alcohol including the provision for supply of tax-free alcohol for the specified categories of industries has also been left to be decided by the State Governments.

On the question of minimum capacity for a power alcohol distillery to enable economic production, the Committee has suggested one million gallons per year capacity as the minimum size. While the Government have accepted this recommendation of the Committee, it has been pointed out that this condition would be waived permitting the erection of smaller units, when warranted by special circumstances.

The suggestion for the establishment of a standing advisory committee on denaturants with powers for enlarging or altering the list of special denaturants for alcohol intended for different industrial uses, has also been accepted. Plea for lowering of freight rates has been agreed to only in so far as it relates to ethyl alcohol meant for largescale industrial uses.

NORTH INDIAN MARKETS

Upward Tendency in Sugar Prices

DESPITE the release of a further quantity of 1.40 lakhs for sale by the factories, Sugar rates have continued their upward trend on more demand than supplies. This is mainly due to the fact that stockists have been hoarding as a result of less production this season. Reports from the Punjab indicate that the commodity has shot up to Rs 199 from Rs 107 per cwt, while the mill rates are commanding a premium of Rs 1.25 per maund over the controlled price. Also, in Bombay, small grain variety is reported to have moved up to Rs 119 from Rs 115 per bag during the past few days.

The main factor responsible for the steady rise in prices is the drastic cut in quota allocations of several factories. Mills are unable to enter into large-scale deals, as the new quota is far short of their expectations. It is felt that mills in the controlled zone are likely to be the worst hit on account of the curtailment in the monthly quota. Traders complain that they are unable to replace the stocks sold during the past three weeks.

Meanwhile, as the current season 1958-59 is nearing its end, sugar production ideas have been further revised downward to 18.75 lakh tons against earlier expectations of 20 to 21 lakh tons. The output, up to the end of March, amounted to 16.97 lakh tons as compared with 17.14 lakh tons in the corresponding period of the previous season. With the carryover of 3.6 lakh tons, the total supply in the country comes to 22.35 lakh tons. The consumption, on the other hand, has tended to increase.

On the basis of monthly offtake of 1.70 to 1.72 lakh tons, the total consumption, during the season, is estimated around 20.50 lakhs tons. Supposing that exports reach the stipulated quantity of 50,000 tons, the carryover to the next season will be of the order of only 1.35 lakh tons. Stocks with the factories, as at the end of March at 11.68 lakh tons, was also lower against 13.34 lakh tons at this time last year.

The Government have already introduced some changes in the allotment of tender sugar with a view to checking the diversion of stocks intended for Delhi to other areas in the Punjab and Rajasthan. The change is, that the parties can claim refund of the earnest money deposited with the Government at the time of quota allotment only after producing the receipt of payment of octroi duty in Delhi. While the details of how the Government propose to strengthen the tender system so as not to affect the total availability of sugar in the market are not known, knowledgeable circles feel that the lower free sale quota

implies that more allotment will be made against tenders. As soon as this is done, the prices, it is said, are likely to come down to the normal level.

Foodgrains

Quietly steady conditions prevailed in the Hapur Foodgrains market. The factor, which influenced the market most, was that, contrary to earlier expectations, the new crop arrivals were poor. However, the tendency of prices was downward towards the close of the week. Farm quality Wheat was quoted at Rs 17 to Rs 17.50 against Rs 19. Rice prices eased fractionally, while Pulses were steady. Prices of Urad, Moong and Masoor were steady at last levels.

In the Bhatinda market, Gram prices, after ruling steady to firm, developed an easier tendency. Buying spree was widely expanded due to short-covering on behalf of those who had sold earlier for April despatches to the southern States, Bombay, Bihar and Uttar Pradesh, entered the market although bargains could not materialise due to tight loading position. Fresh buying on behalf of the South was also missing.

Arrivals at Bhatinda still do not present a healthy outlook, growers being busy with "rabi" harvesting and "kharif" sowing. Arrivals are likely to touch the peak level during the next week.

In the Delhi grains market, Wheat suffered a further setback of about Re 1 per maund due to increased supply against decreased buying activity. There was, however, good demand for Gram from Hyderabad and Madras, which resulted in a modest rise to Rs 12.75 per maund. Reports from the producing centres were also encouraging. Barley was quoted slightly higher on better enquiry. The rise in the price of Rice continued due to persistent good buying. Pulses recorded small losses on lower advices from the upcountry centres.

Prices in the Bombay grains market showed an around moderate improvement, reflecting higher upcountry advices and replenishing demand. Prices of several popular varieties of indigenous Rice are reported to have improved by about Rs 5 per candy. The receding fears regarding State trading in foodgrains, higher advices from the growing areas and buying support at lower levels provided the main factors responsible for the improvement. Wheat reflected a steadier undertone with the prices rising by about Rs 5 per candy.

In the Coarse grains section, Jowar looked up by Rs 3 per candy for the Sholapur quality. Arrivals continued to be relatively small in view of the higher prices prevailing in the producing areas. Bajra revealed a steady tone with the Deccan quality realising Rs 150 to Rs 180 per candy. The offtake continued to be subdued due to the unfavourable weather. Firmer advices from Uttar Pradesh and the broader buying interest imparted a firm tone to the Pulses market. Gram rose by about Rs 5 per candy, as dealers were inclined to support the market on the belief that the worst was over.

MADRAS REVIEW

THE decision of the Madras Government to hold the summer session of the Legislature at Ootacamund, had provided the legislators a refuge from the sweltering heat at the State capital. The climatic advantages of Ooty at this time of the year seem to have brought in a larger number of legislators to their duties and consequently a record average of attendance has been reported. The attendance would have been larger had the Dravida Munnetra Kazhagam members who had abstained from attending on the plea that the change of venue represented unwarranted extravagance on the part of the Government, been less puritanical in their ideas about legislation and legislators' duties.

For the people of the Nilgiri area, the holding of the session at Ootacamund has importance in view of the knowledge which the members would have gained through personal contracts, of the peculiar problems affecting the areas as well as the people; which should issue in prompt measures calculated to better their lot. For example soil conservation is a measure of which the Nilgiri district is in greater need than other areas of the State. It was appropriate that the State Government had taken up for consideration at the Ooty session, the Madras Land Improvement Schemes Bill which brings this problem into particular focus, and which provides for steps to be taken by the Government for promoting soil conservation. At least in respect of this Bill, the holding of the session at Ooty has significance since this would have ensured better appreciation of the various provisions of the Bill, by members who had time and opportunity to study the problem of soil erosion first hand, and at close quarters.

Whether the cool atmosphere of Ooty would have induced calmer deliberations is more than could be said. But the session was marked by a cooperative approach to the business in hand. The three Bills, namely the Madras Hindu Religious and Charitable Endowments Bill, The Madras Agricultural Produce Markets Bill and the Madras Khadi and Village Industries Board Bill, which formed the main part of the legislative business at Ooty, had the broad acceptance of almost all the members of the Opposition present. The absence of the members of the DMK would have been felt at least in the discussion on the Hindu Religious Endowments Bill, for they would have lit some lively sparks in its discussion.

The Madras Hindu Religious and Charitable Endowments Bill, which is to replace the existing enactment on the subject, seeks to rectify defects in the existing law and to remove irregularities for ensuring efficient management of temples.

That such a Bill does not contravene the secularist principles which the Government are committed to observe, was evident from the fact that not a single member criticised it on that score. The near unanimous welcome the Bill received from the members would, on the contrary, seem to give the impression that in the absence of safeguards provided by law, temples were not proof against mismanagement nor temple funds against misappropriation. Some of the members who participated in the discussion complained of improper administration of some of the temples. The Bill seeks to clean up the administration of temples by providing for submission of the scales of expenditure by the trustee to the area committee, review of budget and audit report by the assistant commissioner and finally by providing for proper action to be taken against trustees in case of mis-appropriation of funds. Apart from these provisions which imply a negative approach, the Bill also contains provisions for preserving the artistic beauty of temples and temple properties, as also for preservation and renovation of old and poor temples. For this purpose the Bill envisages the setting up of a separate fund raised from the contributions voluntarily made by religious institutions.

Unanimity in regard to the need for ensuring proper management did not however hold up differences on detail. The absence of fundamental changes in the Bill was pointed out by one member and for this reason the Bill was less welcome to him. Similarly the Communist member put up a plea for using the surplus funds of religious institutions for nation building purposes. The Government also do not seem to have treated temple funds as exclusively meant for temple purposes and the Bill envisages the diversion of surplus temple funds, on the initiative of trustees and on the sanction of Commissioners, for other charitable and educative purposes.

While the utility of the Bill was not challenged by any of the members present, it was questioned whether it was the Hindu religion alone, which the Government considered as requiring Governmental attention with a view to protecting its interests by providing for efficient management of temples. Mr Bhaktavatsalam had therefore to draw the attention of the members to the Central Act to control Muslim institutions. The members also evinced concern that only religious and god-fearing people should be in charge of temples administration, and therefore the need to keep this consideration in mind in the appointment of executive officers and commissioners was stressed.

There was also a large measure of support for the other two bills

Ooty Session

namely the Madras Agricultural Produce Markets Bill and the Madras Khadi and Village Industries Board Bill. The former seeks to provide for the better regulation of buying and selling of agricultural produce. The main opposition to this Bill came from the Congress members one of whom pointed out that the measure clothed the Government with a dangerous weapon which would be used for introducing State trading in every commodity. He also expressed the fear that the measure would add to the burden of agriculturists. Another Congress member pointed out that regulated marketing and co-operative marketing were mutually exclusive implying thereby the redundancy of regulated marketing when cooperative marketing was a worthier ideal.

Mr Bhaktavatsalam allayed these fears of the members by pointing out that far from imposing any burden on the producers, the measure would confer real benefits on

them and therefore it was but fitting that they should be made to bear part of the cost of running market committees. Mr Bhaktavatsalam also explained the change of expression from "Commercial produce" in the previous bill on the subject into "Agricultural produce" in terms of the recommendations of the Krishnaswami Naidu Committee to that effect.

The Khadi and Village Industries Board Bill, is intended to resolve the difficulties experienced by the State Khadi and Village Industries Board in preparing and executing development schemes in this sphere. By the Bill, the State Board had been given statutory status, and vested with power for the preparation and implementation of development schemes. It is to be recalled that similar difficulties had been experienced by the All-India Khadi and Village Industries Board which had necessitated the setting of a statutory commission under the Khadi and Village Industries Commission Act.

BENGAL JUTE MILL COMPANY, LIMITED

NOTICE

NOTICE is hereby given that the 28th Annual General Meeting of the Members of the Company will be held at the Registered Office of the Company at 8, Dalhousie Square East, Calcutta on Saturday the 30th May, 1959 at 2 P.M. for the purpose of receiving the Directors' Report passing the Audited Accounts, declaring Dividend, electing Director in place of the retiring Director, appointing Auditors and for transacting any other business of the Company that may be transacted thereat.

1. To elect a Director in place of a Director retiring under Section 280(2) of the Companies Act, 1956, for which purpose notice is hereby given of the intention to move the following resolution as Ordinary Resolution.

"Resolved and it is hereby declared that the age limit specified in Section 280 of the Companies Act, 1956 shall not apply to Sir B. P. Singh Roy who has attained the age of 65 years and who retires under Section 280(2) of the Companies Act, at the conclusion of the next Annual General Meeting and that he be and is hereby re-appointed a Director of the Company."

Special notice pursuant to Section 190(1) and 281(2) of the foregoing resolution has been received by the Company.

EXPLANATORY NOTE

(1) Sir B. P. Singh Roy who is proposed to be appointed a Director of the Company has attained the age of 65 years and under

Section 280(2) of the Companies Act, 1956, retires at the conclusion of this Meeting which is the 28th Annual General Meeting since the commencement of the Companies Act, 1956. The resolution includes a declaration that the age limit of 65 years prescribed by Section 280 of the Act, shall not apply to him as provided in Section 281 of the Act.

During his long association with the Company Sir B. P. Singh Roy has rendered very valuable services and his guidance and advice have been of considerable benefit to the Company. As it is in the interest of the members that the Company should continue to receive the benefit of his advice as a member of the Board, it is desirable that he be re-appointed a Director.

The Share Transfer Registers of the Company will remain closed from the 20th May 1959 to 30th May 1959 both days inclusive.

By order of the Board,
For and on behalf of
BENGAL JUTE MILL CO. LTD.
SOORAJMULL NAGARMULL,
Managing Agents.
8, Dalhousie Square East,
Calcutta.

Dated the 1st May, 1959.

N.B.—A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote at the meeting instead of himself and a proxy need not be a member.

SOUTH INDIAN NOTES

Co-operative Farming

The Ministry of Cooperation and Housing in Andhra Pradesh had started preparations by way of preliminary discussions for the setting up of service cooperatives, thereby making it clear that co-operative farming as adumbrated by the Nagpur Resolution, was not simply a political catchword but an economic reform needing speedy implementation. In the discussion on the subject that was initiated by the Minister for Co-operation and Housing all the known arguments about the merits of cooperative farming were reiterated with a view to leaving the public in no doubt about the Government's attitude in this matter. It was pointed out by Mr Mehdi Nawaz Jung, Minister for Co-operation and Housing that doubts about cooperative farming existing in the minds of the opponents were the figments of their imagination. Mr V. B. Raju, General Secretary of Andhra Pradesh Congress Committee pointed out that cooperative farming was a measure which had received the support of the important opposition parties in the country, and therefore it was not simply an exclusive Congress party resolution. At the same time, he ruled out compulsion in the introduction of joint farming towards which the smooth working of the service cooperatives would prepare the way. Mr Raju also explained that the service cooperative that would be set up now, would look after credit, services, and the supplies associated with them and at a later stage of banking and insurance.

It augurs well for the success of cooperatives in the State that this problem is not viewed with complacency. On the contrary, the lack of sufficient experience in the working of such cooperatives and the existence of other difficulties in the implementation of the programme are all well recognised. Training of personnel in adequate numbers, is the first item that has been stressed by the Minister. In this connection the need for saving the movement from falling into bureaucratic hands by providing for training of non-officials is also recognised. How formidable the problem is would be evident from the fact that 7,240 non-officials would have to be trained in every year for every district. The decision of the Andhra Pradesh Congress Committee to organise three regional training camps is therefore welcome. For ensuring safe implementation of the Nagpur Resolution, it has been suggested that there should be pilot schemes to demonstrate the utility and benefits of the reform measures the Congress had recommended. The discussions had one benefit in removing the vagueness in the

public mind about the nature of the schemes which the Government propose to implement in the name of cooperative farming.

Agricultural Development

Not all the progress that had been registered in agricultural production under both the First and the Second Plans had, in any measure, mitigated the importance of agricultural development and as is now felt in official circles in New Delhi, agriculture would have primacy of place in the Third Plan. A 30 per cent increase in foodgrain production achieved since the First Plan, had been more than neutralised by the growth of population, making it necessary to give even greater attention to foodgrain production in the Third Plan than was accorded under both the First and Second Plans. That foodgrain production had not so far received the emphasis due to it, is a matter of official recognition and was pointed out by Mr A. P. Jain, Union Minister for Food and Agriculture when he inaugurated the seventh meeting of the All-India Farmers' Council in Mysore.

In contrast to foodgrain production, production of some of the commercial crops had shown spectacular increase. Jute production had, since the time of partition, increased from 17 lakh bales to 53 lakh bales. Success on a similar scale had also attended production of cotton since the time of partition of the country.

One of the major obstacles to increased production of foodgrains is shortage of fertilisers. The foreign exchange difficulty had precluded the possibility of making available greater quantities of fertilisers by means of imports. This had underlined the need for setting up more fertiliser factories which would, at least, reduce dependence on imports. Referring to this need for greater use of fertilisers, Mr A. P. Jain stated that it was not possible for the food Ministry alone to find a solution, since the issue involved the co-operation of sister Ministries like the Finance Ministry. It was only the Finance Ministry which could provide larger funds as well as foreign exchange required for importing fertilisers.

Mr Jain also dwelt on the significance of co-operative farming as envisaged by the Nagpur Congress Resolution and appealed to all the farmers to co-operate in the implementation of the measure which is intended to raise their economic status. Mr Jain laid particular stress on service co-operatives which he explained would operate as the chief sources of credit for the farmers. It is on the success that is made of such service co-operatives that the prospects of joint farming greatly depend.

Dr Punjabrao Deshmukh, Union Minister of State for Agriculture, pointed out that so far as the All-India Farmers' Forum was concerned, cooperative farming was no new political slogan, since the forum had expressed faith in co-operative farming and accepted the principle right from the begin-

SOUTH INDIAN MARKETS

Outlook for Rubber

THE London price of natural Rubber has now touched 28½d per pound—the highest level for over two years. The rate in Malaya has gone up by about 2d. The firmer tendency in prices is attributed to heavy purchases made by Russia and other Communist countries in the Malayan market. Reports indicate that Russia will make more purchases from Malaya. The price is, therefore, expected to remain steady for some time, thanks to the strong statistical position.

Consumption in the USA has also increased. If demand from Russia and other Communist countries is maintained at the last year's level, consumption may amount to 2 million tons. Although production may increase slightly this year due to the remunerative price, supply and demand are likely to be well matched.

Even at the present level, the world price is lower than the Indian controlled price. Meanwhile, the Tariff Commission, to which the question of determining raw rubber prices has been referred by the Government, is shortly expected to issue a questionnaire to the interests concerned. It is believed that the questionnaire, among other things, will seek information on the cost of production, with particular reference to the rubber replanting scheme introduced last year. While growers have urged an upward revision of raw rubber prices in view of the inflated cost structure, manufacturers of rubber goods are of the view that, as the controlled prices of indigenous rubber are already high, no further upward revision in prices should be allowed.

Pepper

Conditions in Pepper markets have been ruling steady with prices moving within a narrow range. Basically, the market appears to be healthy; but prices fail to move upward due to paucity of overseas demand. Any development in foreign demand is likely to push up prices. Arrivals at all the terminal centres are restricted and growers are resisting lower prices. The market analysts are interpreting smaller arrivals last month as an indication of smaller crop this year as, otherwise, growers may have brought down greater quantity at the Ports before the monsoon.

Cashewnut

Prices in the Cashewnut market are ruling firm. Apart from the paucity of supplies of the commodity, the existence of cooperative farming societies, run by the Krishak Samaj was pointed out to justify the merits of the measure.

dity in the world markets, renewed demand from overseas consumers accounts mainly for the marked improvement in the prices.

Russia is reported to have bought about 2 lakh cases during the course of last three months. There are also indications that this country will account for about 1.5 lakh cases in the near future. The USA, which has lately been keeping away from the Indian market on expectations of a drop in prices, is also now interested in booking business for a substantial quantity.

Groundnut

Conditions in the Madras Groundnut market remained generally firm with superior oil-quality seed quoting upto Rs 186 and the summer crop upto Rs 181 per caddy. Arrivals were 100 to 150 tons per day and these were mostly in the form of summer crop.

In the Groundnut Oil section, a fair volume of business was reported done on Calcutta account for ready delivery. The rate for the ready position is quoted at Rs 366 against Rs 362 per caddy in the previous week.

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides were as last week; but clearances were effected on account of the easier tone of the export market. Locally, some clearances were reported at a reduction of 12 to 18 nP per pound. Business in the Calf section was affected in view of the absence of support.

On the export front, fresh business was difficult to confirm. Dressers were holding back fresh purchases, expecting a decline in Madras levels.

In the Tanned Skins section, arrivals of both goat and sheep skins were fair; but further advance in prices was halted.

On the export front, goat skins ruled firm, light weights being quoted at 18sh 6d for one or two top marks. In sheep skins, market middle classes were quoted at high levels.

Bangalore Silk

The pattern of trading in the Bangalore Silk market reflected a declining trend in the prices of filatures during the week ended 30th April 1959 following the revision of prices of Kollegal, T. Narasipur and Kanakapura from 22-4-1959 by the Government of Mysore. Thus, Kollegal, T. Narasipur and Kanakapura were quoted at Rs 38.00, Rs 37.25 to Rs 38.75 and Rs 42.85, respectively, as against Rs 38, to Rs 40, Rs 37.25 to 40.75 and Rs 42.85 to Rs 44.85, in the previous week.

Charka varieties, excepting third quality, maintained their previous week's levels throughout the period under review. It is reported that the demand for raw silk was not quite encouraging in spite of Government filature silk. The supply position of raw silk also continued to be poor on account of scarcity conditions of cocoons.

In the absence of transactions in the market, prices of silkwaste varieties are not being quoted.

THE BUCKINGHAM & CARNATIC COMPANY LIMITED

Welcome Improvement in Exports

Satisfactory Year's Trading

Mr E.F.G. Hunter, the chairman, on Modernisation

Presiding at the Thirty-eight Annual General Meeting of the Shareholders held at the Company's Office, 7, Armenian Street, Madras, on Thursday the 30th April, 1959, Mr. E. F. G. Hunter said:

Gentlemen,

The Report of the Directors and the Audited Accounts for the year ended 31st December, 1958 having been in your hands for the prescribed period, I propose, with your permission, to adopt the usual procedure and to take them as read.

The year under review, which was another critical one for the Textile Industry, witnessed the closure of more Mills and the reduction of shift working in many others. Yardage production fell by nearly 400 million yards to approximately 4,930 million and had exports not also fallen by 291 million yards to 587 million, the lowest figure since 1949, the reduction in stocks would have been more substantial.

Following reductions in excise duties in December, 1957 and again in March, 1958 there was some improvement in offtake but this was shortlived and as stocks again mounted, certain further reliefs were announced in July in respect of coarse and medium varieties.

During the closing months of 1958, there was a welcome improvement in exports, assisted by incentive schemes and closing unsold stocks with Mills fell to approximately 181 million yards.

When he addressed you last year, Mr. E. J. M. Leigh pointed out that clearances from Mills in 1957 for home consumption fell by some 550 million yards when compared with the previous year. According to our calculations, clearances from Mills for Home market sales were approximately:

4,550 million yards in 1956,
4,000 million yards in 1957,
and 4,050 million yards in 1958.

It will be appreciated, however, that these figures do not necessarily relate to consumer purchases at the retail point. 1956 was a year of rising prices and at such times clearances from Mills are high and the distribution pipe line is comparatively full. A period of falling prices followed, resulting in lack of confidence, and dealers tended to reduce their stocks and to adopt a hand to mouth policy. Due to recurring crises in 1958 confidence failed to return to the market during that year: until confidence revives, there will be only a minimum flow in the pipe line and the

trade will leave the Mills to carry stocks. In short I contend that there has been little, if any, fall in actual consumer offtake and that in fact it may well have been rising all the time, though not spectacularly. Indeed there are shortages in some of the better types of cloth and quite a considerable portion of the surplus stocks with Mills are definite surpluses, in quality and type, to consumer requirements.

Thanks to the constant attention that has always been given to quality control, market research and the development of a scientific sales policy, your Company has had a satisfactory year's trading. Due to its conservative dividend policy and to the care given to the maintenance of its machinery and plant, your Company is in a relatively strong position to face the future, when the biggest challenge will be in the export field.

India's exports in 1958 fell by approximately 30% by comparison with those for the previous year against an average fall of 13% in the case of all non-communist countries put together. The position is serious when the country is so short of foreign exchange and one does not have to look very far to find the reasons for this disparity. Export incentives though welcome will at best serve only as short term palliatives and success in the long run must depend on the removal of several basic disadvantages.

Costs of manufacture are far too high and must be reduced substantially with the proper relation of wages to productivity.

Quality must be improved; the Industry must be allowed to modernise and rationalise its plant and expand substantially its capacity to dye, print and finish fabrics to satisfy overseas customers' requirements. The demand for cheap loom state cloth has shrunk severely and will continue to do so with the development of new textile units in many countries, several of which are themselves growers of cotton.

Indian cotton prices must be brought down to, or if possible below, international parity, as they were until recently. The high prices ruling at present, resulting from restrictions on the import of cheap foreign cotton and a partial failure of the local crop, cannot but have the most serious effect on India's export performance.

Another grave threat to India's textile exports is the entry of China as an apparently unchallengeable competitor offering good

and well finished cloths at whatever prices are necessary to obtain bulk business. The development of this Government directed and assisted drive will be watched with anxiety by many textile exporting countries.

In the face of adverse circumstances, your Company achieved export earnings to the extent of Rs. 1.85 crores. Though down on last year's record figure it represents a very creditable achievement and your Company will derive substantial benefits this year under the export incentive schemes.

When he addressed you last year, Mr. E. J. M. Leigh reported that progress had been made with the construction of the second New Weaving Shed. The northern half of that shed was completed during the year and, with the transfer of some rehabilitated looms from older sheds, production has already commenced in this section on a substantial scale. Work on part of the southern half of the shed was started during the latter half of 1958 and contracts have recently been placed for the completion of the flooring and associated works.

I am pleased to tell you that, despite the difficult import licensing position, a few much needed machines were imported during the year including three modern Sizing Machines which have gone into production. The rehabilitation of looms continued steadily throughout the year, and it is expected that this work will be completed before the end of 1959.

As you will have seen from the Directors' Report, the workers embarked on an illegal strike in June and in its settlement secured considerable benefits in the shape of bonus payments for past years and a more favourable formula for computing bonus in the future. The question of higher bonus has been, as you are aware, a subject of agitation over a number of years and your Directors are hopeful that its settlement will lead to a happier relationship.

Undoubtedly, before further benefits are given to workers in the shape of enhanced wages, allowances or bonuses, more satisfactory workloads must be established. I realise that when considering workloads, the bogey of retrenchment is ever present in the minds of workers, but your Company has assured its employees and their leaders that there will be no retrenchment as a result of modernisation and rationalisation and that no employee will in consequence suffer a reduction in wages. Despite these assurances, labour has resisted changes at every turn and has indicated its displeasure by frequent short lightning illegal stoppages. This attitude is incomprehensible and must in the long run operate against the interests of labour. However, the Management has recently discerned a better understanding of this matter by the labour leaders and it is hoped that as a result, our labour will work

peacefully and without interruption and co-operate in bringing about the further improvements in methods of production which are so necessary if we are to retain our position, particularly in the export field.

Turning now to the accounts, the substantial reduction in stocks which, as mentioned in the Report, is mainly responsible for the lower overdraft at the close of the year, is a healthy sign and reflects the virility of your Company's sales organisation.

The amount charged in the Profit and Loss Account for bonus to employees—Rs. 27,09,613—represents a record bonus payment and was made in pursuance of the settlement reached with labour to which I have already referred.

The provision for taxation at Rs. 20,50,000 would have been substantially higher had it not been for the increased bonus for 1958 and the additional bonus payments for previous years. The increased liability for taxation, despite a slightly lower profit than that made in 1957, is the result of the withdrawal of the allowance for extra normal depreciation. While this allowance is no doubt very welcome to, and possibly desirable for, a new developing industry, the consequent deferment of tax payments which this allowance entails, can lead to misunderstanding and to difficulties when the tax has to be paid, unless adequate provision is made. An appropriate provision has been made by your Company in previous years and appears in the Schedule of Reserves under the heading "Deferred Taxation".

Other matters of special interest in the accounts have, I think, been covered adequately in the Directors' Report.

Having read the Report and heard my remarks, you will, I believe have some understanding and appreciation of the difficulties which your Company has had to face and overcome during the year under review, and while I do not expect that our anxieties will be any the less in the future, I do believe that with Government's new recognition of the industries' difficulties, and given the co-operation and goodwill of labour and above all freedom from interference, we can look forward to the future with some measure of optimism.

I am sure you would not wish me to conclude without recording your appreciation of the valuable services which have again been rendered to your Company by the Managing Agents. I also wish to record our thanks to the Mill Manager and his staff for their continued loyal and devoted service to the Company, and to the employees for their contribution to the result for the year under review, which I consider may be regarded as satisfactory.

NOTE:—This document does not purport to be a report of the proceedings of the General Meeting.

United Bank of India Limited

Satisfactory Progress

Chairman Dr N. N. Law, on Banking and National Plan

Excerpts from the speech delivered by Dr. N. N. Law, Chairman of United Bank of India Ltd. at the Annual General Meeting held on 4th May 1959 at the Bank's Head Office in Calcutta.

In delivering his speech at the Annual General Meeting of the Bank, Dr. N. N. Law observed—

BANK'S PROGRESS:

The working results during 1958 depict another year of progress. The Deposits of the Bank at Rs 43.54 crores were higher by Rs 5.18 crores, i.e., roughly 13.50 per cent over the previous year's figure. Advances at Rs 27.64 crores were higher by Rs 4.09 crores, being about 17.3 per cent over the previous year. The gross earnings of the Bank at Rs 2.19 crores show a rise of about Rs 29.30 lakhs or 15.2 per cent over the previous year. The progress achieved in these directions may be deemed to be satisfactory, in comparison with the performance of other major banks in 1958. Despite this increase in the volume of business and gross earnings, however, the profit of the Bank continues to be low. Progressive rise in operating costs, which has been the common experience of all the major banks in the country, materially contributed to this result.

ESTABLISHMENT COST:

The two major items of expenses, viz., Establishment expenses and Interest on Deposits still continue to mount in such a manner that they remain a matter of serious concern for the banking system. During the period 1950-57 the Establishment expenses of Indian Scheduled Banks rose by about 74 per cent. Figures for 1958 are not yet available, but the rate of increase during the year cannot be expected to be any lower. In your Bank, the rise in establishment costs during 1958 was over Rs 21 lakhs. It is no exaggeration to suggest that the rise in Establishment expenses has been abnormal. The banks are trying their best to step up the quantum of earnings, but in view of the faster growth of the operating expenses such efforts cannot be expected to neutralise the imbalance. I, therefore, submit for consideration of the bank workers that there should be a realisation of the fact that it is as much in their own interest as in the interest of the national economy that there should be a suitable correlation between the increase in cost, and improvement in productivity or enhancement of earning potential. After all, bank-

ing is basic to development and it is also the linchpin of the monetary system which finances economic activities and promotes a higher standard of living. We, therefore, feel that in the larger interest of the country, a change in outlook is called for, and there should be common appreciation of the fact that the various branches of economic activity are inter-linked and inter-dependent.

INTEREST ON DEPOSITS:

I am glad to mention that, during the latter part of the last year, the Indian Banks Association succeeded in their efforts to bring about an inter-bank agreement on rates of interest to be allowed on various types of Deposits. This is a good augury, and it is hoped that, it will prove to be a beginning of more and more co-operation and co-ordination as between different banks. I would, however, point out here that the maximum rate of interest on Deposits, as postulated in the inter-bank agreement, is still rather high and eats into the level of profit. In the ultimate analysis, the rate of interest on Deposits, as we have on many occasions pointed out, should be adjusted to what is in the interest of the community. Unfortunately, if the rates payable on Deposits are themselves high, and, if, at the same time, a higher rate of charges for Advances is either impracticable or undesirable, banks have inevitably to lend more, and the consequence is that the ratio of their Advances to Deposits rises. This, in turn, compels banks further to seek new deposits at higher rates. This vicious circle can be broken if, instead, efforts are made to control the interest rates on Deposits. Also, if the banking industry is to function properly and adapt itself to India's progressive economy, the margin between the rate of interest on Deposits and the rate of interest on Advances should be wider than what it is today. Last year, we had suggested that the maximum rate of interest allowed on Time Deposits should not exceed two-thirds of the Bank Rate in force for the time being. I think this point deserves immediate consideration by all concerned.

COMPETITION FROM PUBLIC SECTOR:

While on this subject, I would like to refer to another matter having a direct bearing on interest on bank deposits. I refer here to the rate of interest on Deposits allowed by the public sector in the small savings schemes. The public sector has to, and needs to

collect resources through mobilisation of small savings. But their efforts towards diverting bank deposits to small savings schemes of the public sector have been very much marked. It is our view that, if efforts were made towards collecting such resources from non-banked areas (high cost notwithstanding), it would have been an invaluable service to the country's economy. The commercial banks thus have to face not only competition amongst themselves but also the competition from the public sector. This has resulted in a scramble for Deposits on all sides. The commercial banks have now demonstrated, by entering into an agreement amongst themselves, that they are alive to the fact that such blind competition is not only unhealthy but also harmful to the country's economy. It is to be hoped that the public sector will also co-operate in this effort to put a stop to the wasting race of pushing up the rate of interest on Deposits.

UNUTILISED CREDIT LIMITS:

Statistics are not available about the quantum of the unutilised portion of credit limits granted by banks. While it is true that different banks try to keep a control in this regard, if a proper survey is made, it may be found that the aggregate of such unutilised credit limits is proportionately higher in relation to bank Deposits. In some countries in Europe as well as in the USA, there is a system of levying a charge on the unutilised portion of the sanctioned limits. I think some system of commitment charges may also be adopted in this country. It may then encourage making correct estimation of requirements, and effectively control the tendency to arrange for limits much higher than what can be utilised. Such an imposition is suggested more as a deterrent than as a source of revenue for banks.

BANKING AND NATIONAL PLANS:

Available information indicates that the Third Plan is going to be much larger than the Second Plan. Since results of the projects undertaken in the First and the Second Plans are expected to be utilised in a larger measure during the Third Plan period, it can be visualised that the tempo of economic activity will be very much higher than heretofore. This again highlights the necessity for planned efforts for development and spread of the banking services in the country, if only, at least to main-

tain the value of the Rupee. In a fast changing economy, the banking system must reorganise and equip itself in such a manner that it may cater to the new requirements and conform to the changed pattern of the economy. But efforts in this direction have been inadequate. I repeat the suggestion made by me in my speech in 1957 that a Convention of all the banks should be organised under the auspices of the Indian Banks Association with a view to sponsoring the idea of forming a "Banking Expansion Commission" and to appointing a "Standing Plan Committee of the Convention" to maintain liaison with the proposed "Banking Expansion Commission".

CREDIT INVESTIGATION:

Banks in this country suffer from the disadvantage in not having any organised credit investigation agency through which they can obtain adequate information about the prospective borrowers and other customers. Of course, banks have their own credit investigation departments, but that by itself cannot bring out all the relevant information which would be more helpful in consideration of extension of bank credit. It is, therefore, necessary that credit investigation agencies should be organised in this country on the lines of such institutions in other advanced countries of the world. Furthermore, there should be more free and frank exchange of information amongst the banks. This will, apart from encouraging the growth of a healthy credit investigation system, also act as an effective check on excessive or undesirable utilisation of bank credit. In this regard, I feel that the Indian Banks Association may make useful contribution towards organising such an agency and establishing the practice of free and frank exchange of information as amongst banks, and I have no doubt that if such a lead be given by the said Association, it will receive the wholehearted support from the commercial banks.

AUDITORS' REPORT ON THE INDIAN BRANCHES OF LLOYDS BANK LIMITED UNDER SECTION 30 OF THE BANKING COMPANIES ACT, 1949

We have audited the Balance Sheet of the Indian Branches of Lloyds Bank Limited dated 31st December 1958 and above set forth and the annexed Profit and Loss Account for the year ended 31st October 1958 with the books and accounts as kept at the Chief Managers' (Eastern Branches) Office, Calcutta, in which are incorporated certified returns from the ten Indian Branches and also with the books and accounts kept at the Calcutta Branch.

In accordance with the provisions of Section 29 of the Banking Companies Act 1949, read with the provisions of Section 211(1), (2) and (5) and Section 227(5) of the Companies Act 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with Schedule VI of the Companies Act 1956. The accounts are therefore drawn up in conformity with Forms A and B of the Third Schedule of the Banking Companies Act 1949.

We report that:—

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief were necessary for the purpose of our audit.

(b) In our opinion proper books of account as required by law have been kept by the Chief Managers' (Eastern Branches) Office and the Calcutta Branch so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the 9 Branches not visited by us.

(c) The Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the certified returns.

(d) In our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Branches as at 31st December 1958 and the Profit and Loss Account gives a true and fair view of the profit for the year ended 31st October 1958.

Indian Finance

May 9, 1959

the total number of units in production to 31. The expansion programme of two of the existing factories was also completed last year.

The internal supply position of cement has eased comparatively. While the statutory control on the price and distribution of cement continues to be in force, the State Governments, on the advice of the Central Government, have abolished the permit system for supply of cement to the general consumer.

Nearly 2.3 million tons, out of the additional production capacity licensed, is covered by licences for import of cement making machinery. This would mean that a firm capacity of nearly 10 million tons would be reached during the Second Plan period.

Assistance from the Development Loan Fund and the Technical Co-operation Mission of the United States has been utilised to meet some of the foreign exchange requirements for cement expansion schemes.

It is expected that by 1962 the major part of the country's requirements of cement machinery will be met from indigenous production.

Efforts are being made to develop export markets for cement. Out of a quota of two lakh tons of cement set apart for export, contracts for export of 1,48,000 tons have so far been concluded and nearly 76,000 tons have been exported.

PRODUCTION OF PLASTICS IN INDIA

1. Plastic industry is comparatively new in India. It made phenomenal progress in our country during the years 1946 to 1956.

2. The production of plastic goods and plastic raw materials which was nearly Rs 75 lakhs in 1946 rose to Rs 2 crores in 1951 and to Rs 8 crores in 1956.

3. During the period of the First Plan, production of plastic industrial goods claimed more attention. Radio cabinets, telephone receiver sets, gramophone records of polythene injection and blow mouldings of polythene, spectacle frames, fountain pens and tooth brushes manufacture become well established.

4. Tool making for the industry advanced under the guidance of a group of experts from the United Nations, whose services were lent by the Central Government to the industry. Import of moulds fell from 261 members in 1953 to only 87 in 1955.

5. The value of production of the organised sector in 1958 may be estimated at Rs 12 to Rs 14 crores for both raw materials and plastic goods.

6. Expansion of the plastic processing industry would involve additional machinery and plants for moulding operations. The Government are already studying requirements of machinery and are taking measures for arranging their indigenous manufacture.

7. It has been estimated that at least Rs 10 crores worth of machinery and tools for the industry would be required during the next seven years.

Two experts from the United Nations have been secured for the industry to assist firms for improving their moulding operations and construction of moulds.

9. The consumption of the plastic materials, which is at present of the order of 25 million lbs., is expected to increase at least five-fold by the end of the Third Plan.

PURCHASE OF GOVERNMENT STORES

Eleven more items of stores purchased by the Directorate General of Supplies and Disposals, Government of India, have been reserved for exclusive purchase from small-scale industries.

These items are: glass ampoules; handles wooden & bamboo; washing soap or laundry soap; metal polish; scissors cutting (ordinary scissor); coil fibre and coil yarn; postal weighing scales; cotton hosiery; woollen hosiery; keys wooden and stone; curry and stone curley roller. This brings the total number of reserved items of stores for procurement from the small scale sector to 27.

So far 3,335 small units have been enlisted for participation in the Central Government's stores purchase programme. The value of contracts given by the Directorate General of Supplies & Disposals through the National Small Industries Corporation to small units aggregated over Rs 3 crores.

The National Small Industries Corporation has set up a separate division in order to help small industries in the execution of these contracts.

Small units are given technical advice by the Small Industries Service Institutes and loans are also advanced by the State Bank of India on the pledge of raw materials under guarantee scheme entered into with the National Small Industries Corporation.

IRON ORE PRODUCTION IN INDIA

The total output of iron ore during the month of February, 1959, was estimated at 801,000 metric tons, according to the Indian Bureau of Mines.

The largest output was reported from Bihar and Orissa with 258,000 metric tons and 197,000 metric tons, respectively.

Among the minor producing states Mysore, Madhya Pradesh and Bombay accounted for 55,000 metric tons, 54,000 metric tons and 20,000 metric tons respectively.

During the month despatches of iron ore to iron and steel plants and export market were 429,000 and 126,000 metric tons respectively.

IRON AND STEEL FOR AGRICULTURAL PURPOSES

The quota of iron and steel for agricultural purposes for the first three months of 1959-60 has been fixed at 80,000 tons, representing an increase of 100 per cent over the allotment for the preceding three-month period.

This was disclosed by the Iron and Steel Controller at a meeting

of States' representatives held here today to discuss measures for expediting supplies of iron and steel for agricultural purposes. Dr P. S. Deshmukh, Union Agriculture Minister, presided.

The Iron and Steel Controller said that the position regarding the supply of iron and steel was improving. Many of the difficulties experienced so far may be eliminated in the future.

He agreed to make special efforts to give as large supplies as possible for the kharif campaign, provided State Governments furnished special indentments showing their immediate requirements of the essential categories.

The meeting recommended adoption by all States of the system of distribution through registered stockists and cooperative societies as in Bombay State.

It was felt that Directors of Agriculture should be empowered to indent the agricultural quota direct on the Iron and Steel Controller.

The meeting recommended the setting up of cells in the office of the Directors of Agriculture to keep a watch on the progress of supplies and financial arrangements, etc.

DUTY REFUND ON MORE ITEMS OF EXPORTED STEEL PRODUCTS

Draft rules providing for rebate, on export, of the Cust and Central Excise Duties paid on imported and indigenously roll sections of steel used in the manufacture of enamelware, fabricated steel structural, steel ghamelas, rat traps, watering cane and tinplate washers, have been published in the Gazette of India.

The rate of rebate will be Rs 60 per ton of tinplate content in respect of tinplate washers and Rs 50 per ton of steel content in respect of other items of steel. For further information, interested manufacturers and exporters are advised to address the Officer on Special Duty, Ministry of Finance, Department of Revenue, Central Revenues Building, Mathura Road, New Delhi.

Any suggestion received regarding these draft rules before May 6, 1959, will be considered by the Government of India before the draft rules are finalised.

PRESSURE FEET FOR SEWING MACHINES

The Indian Standards Institution has issued a standard specification for pressure feet for sewing Machines (IS:1296-1958).

The standard covers the requirements for hinged type pressure feet for sewing machines of the so-called household pattern.

The standard is intended to assist in regulating the quality of indigenous pressure feet. It is one of a series of Indian standards for sewing machines and their components, being prepared on the recommendations of the Tariff Commission and at the instance of the Development Commissioner for Small Scale Industries, Ministry of Commerce & Industry.

The series at present comprises of four Indian Standards Specifications. They are IS:1294-1958 for bobbins, IS:1295-1959 for needle bars, IS:1296-1958 for pressure feet and IS:1297-1959 for pressure bars for sewing machines.

Copies of the standards, published in English, are available from the offices of the Indian Standards Institution located at New Delhi, Bombay, Calcutta and Madras.

RECORD PRODUCTION OF MESTA THIS YEAR

An all-time record has been achieved this year in the production of Mesta, according to the Directorate of Economics and Statistics, Ministry of Food and Agriculture.

The all-India Final Estimate for 1958-59 puts the area and the production at 851,000 acres and 1,581,000 bales (of 400 lbs each), respectively. According to the partially revised estimate for 1957-58, the area that year was 764,000 acres and the production 1,291,000 bales. Thus in 1958-59 there has been an increase of 87,000 acres, or 11.5 per cent, and 290,000 bales or 22.5 per cent in production.

The increase in area this year, as also the substantial increase in production, has been shared mainly by Bihar and West Bengal. The better production is due more to higher per acre yields than increase in acreage. The per acre yield in 1958-59 works out to 743 lbs as against 676 lbs in 1957-58, showing an increase of about 10 per cent.

DRY CELLS AND BATTERIES

The Indian Standards Institution has issued, for eliciting comments, three draft Indian standards relating to dry cells and batteries.

The first draft standard is a revision of the standard (IS:556-1954) for Leclanche type batteries for radio receivers. It lays down the dimensions, tests and performance requirements of Leclanche type dry batteries used for radio receivers and allied electronic equipment.

The second standard, which is also a revision of IS: 586-1955, prescribes the dimensions, tests and performance requirements of cylindrical dry cells of Leclanche type, of nominal voltage of 1.5 V and intended to be used for telecommunication, signalling and general purposes.

Both the above revisions have been aligned more or less, with IEC recommendation for primary cells and batteries. The manner of designating unit cells and batteries has been changed to follow the IEC practice. The tests and requirements have also been aligned with the IEC recommendations, as far as possible.

The third specification is for Leclanche type sack cells. This standard, which is a revision of IS: 268-1951, lays down the dimensions, tests and performance requirements applicable to two sizes of Leclanche type sack cells, having a nominal open-circuit voltage of 1.5 V.

INDUSTRIAL INFORMATION

EXPORT POSITION IN INDIA.

In the first six months of the year 1958, the figure of exports from India stood at the comparatively low level of Rs 260 crores, but since then there has been a welcome increase in exports. The year ended with a total of Rs 580 crores.

The largest single contribution to our export earnings in 1958 has been made by tea. In the first

half of the year, the exports were on the low side, but this has been more than made up by the performance during the second half.

The earnings from tea during July-December 1958 reached the high figure of Rs 90 crores, with the result that for the year as a whole we earned from tea Rs 14 crores more than we did in the previous year.

While imports from some countries of Western Europe continue to run at a high figure, our exports to them have remained mostly static. A large part of deficit in our external payments is accounted for by our trade with these countries.

We have been unable to expand exports to these countries, partly because of the inadequacy of trading links, and partly because

of the high duties and severe quota restrictions imposed on our goods.

The formation of the European Common Market may result in creating new problems for our exports. Already the six member-states have reduced duties and eased quota restrictions on their imports from one another and from their dependent overseas territories.

Industrial users are attaching increasing importance to reasonable steadiness of price and supply. It has become urgently necessary to devote attention to finding new uses for old products and to seek and cultivate new markets.

Enjoying certain natural advantages in the past, we did not really go out to seek foreign markets. Now it will be necessary to

work hard to increase output, improve quality, reduce prices and organise marketing before we can hope to reach our objectives in terms of export.

PRODUCTION OF CEMENT IN INDIA.

There has been a steady increase in the output of cement in India. In 1953, the rated capacity of 24 existing factories was 4.3 million tons. In 1957, the number of factories increased to 29 and their rated capacity went up to 6.6 million tons though their actual production was 5.6 million tons. The production of cement in 1958 went up by 4.6 lakh tons, thus bringing the output figure to 6.06 million tons.

Two new cement factories went into production in 1958, bringing

This standard was first published in 1951, based principally on the then-existing Indian Post and Telegraph Department specifications and British standard specification.

In the present draft revision, the experience gained in the past few years in the use and testing of sack cells has been taken into consideration as also latest trends at the international level. In this draft revision, a new design of circular plate zinc electrode has been introduced in line with the current manufacturing practice.

Comments on the draft standards may be sent before June 5, 1959 to the Indian Standards Institutions, New Delhi.

DRAFT STANDARD FOR FAN CONDENSERS

A draft Indian standard, covering the basic mechanical and electrical requirements of and methods of tests on fixed capacitors for use with various types of electric fans and similar other appliances, has been issued by the Indian standards Institution.

The draft standard gives preferred capacity values and physical dimensions of such capacitors, in accordance with current usage.

Comments on the draft standard may be sent before June 24, 1959 to the Indian Standards Institution, New Delhi.

STANDARDS FOR FIRE FIGHTING EQUIPMENT

The Indian Standards Institution has issued four standards relating to fire fighting equipment.

The first standard, (IS: 901-1958), lays down the requirements regarding material, shape and dimensions, construction and test of couplings, double male and double female, instantaneous pattern, used for fire fighting purposes.

The second standard specification is for fire bell (IS: 928-1958). The standard lays down the requirements regarding material shape and dimensions, manufacture, workmanship and finish of 250 mm diameter fire bell which is used on fire appliances and in the appliance rooms of stations for raising alarms at the time of receipt of fire call.

The third standard is for blower and exhaustor for fire fighting (IS: 941-1958). This lays down the requirements regarding material, design and performance of blower and exhaustor. The purpose of blower and exhaustor is to provide a supply of fresh clean air to firemen who may be working in unventilated places, or alternatively, where there is accumulation of foul air, and to exhaust fumes and smoke from storage tanks, ships holds, godowns, living rooms and the like.

The last standard (IS: 942-1958) lays down the requirements regarding material and design of 275-1 min (or 60-gal/min) portable pump set for fire fighting.

It may be recalled that the work on the formulation of Indian standards for fire fighting equipment and appliances was undertaken by ISI at the instance of the Ministry of Home Affairs, Government of India, who expressed ur-

gency for standardizing fire fighting equipment on a nation-wide scale so that a national fire fighting service having similar equipment all over the country could be organized.

It is hoped that the formulation of standard specifications for various items of fire fighting equipment and their implementation through the Ministry of Home Affairs and the Fire Insurance Association of India will secure for the country an integrated system of fire fighting units spread all over the country and ready to be mobilized in any emergency without experiencing difficulties on account of non-standard appliances, etc.

Copies of the standards, published in English, are available from the offices of the Indian Standards Institution at New Delhi, Bombay, Calcutta and Madras.

DRAFT SPECIFICATION FOR ROUND VANASPATI TINS

The Indian Standards Institution has issued a draft specification for round vanaspati tins covering the requirements of round containers, manufactured from tinplate for packing vanaspati in four sizes 4 kilo, 2 kilo, 1 kilo and 0.5 kilo.

The standard prescribes the nominal and gross capacities of such tins their capacity, dimensions and tolerances; and thicknesses of tinplate used in the manufacture of such tins.

Comments on the draft standard may be sent before May 23, 1959 to the Indian Standards Institutions, New Delhi.

METHODS OF EXAMINATION AND ANALYSIS OF MILK

The Indian Standards Institution has issued, for eliciting comments, a draft Indian standard on methods of examination and analysis of milk.

Milk is one of the most important commodities entering trade and required in every day life. The basic public health and economic considerations require that consumers should be provided with pure and unadulterated milk free from pathogenic bacteria.

To maintain quality standards, control operations are to be performed at all stages of production of milk which include maintenance of sanitary conditions in byres, cleanliness of utensils and of the milking machines if used, and storage and handling. Besides, wilful adulteration at the producing or supplying centre, by carriers or by middlemen has to be prevented. The only means of ensuring quality—since the average purchaser cannot exercise a direct control over the production, transport and handling of milk—is by subjecting representative samples to chemical and bacteriological analysis.

But it is often not possible to subject all the samples of milk to a regular and elaborate chemical and bacteriological analysis. Therefore, rapid examination of milk has to be carried out for routine control with the object of ensuring purity of milk, its hygienic conditions and fitness for accep-

tance as raw milk or for further processing.

In order to provide uniform methods for this purpose, such of the methods as can be easily used even under rural conditions, where facilities of a well equipped laboratory are not always available, have been given in the draft standard.

Comments on the draft standard may be sent before June 4, 1959 to the Indian Standards Institution, New Delhi.

STANDARDS FOR PEST CONTROL PRODUCTS

The Indian Standards Institution has published two Indian standards for pest control products.

The first standard (IS: 561-1958) is for BHC dusting powders (revised). It prescribes the requirements and the methods of test for BHC dusting powders containing varying percentages of gamma isomer of BHC.

The second standard (IS: 562-1958) is for BHC water dispersible power concentrates (revised). It prescribes the requirements and the methods of test for BHC (benzene hexachloride) water dispersible powder concentrates containing varying percentages of gamma isomer of BHC.

Both the standards are the revised editions of the earlier standards which were first issued as IS: 561-1955 and IS: 562-1955. In the earlier standards a combined method, namely chromatographic, was prescribed for the determination of gamma isomer content in BHC dusting powders and water dispersible concentrates.

Since facilities for testing in accordance with the combined method are not at present available in the country, it has not been found practicable to employ the combined method.

Considering this difficulty, and having decided that it would be sufficient to use only one of the methods, namely either of chromatographic or poligraphic instead of the combined method, the Institution has now issued the revised versions.

Copies of the standards, published in English, are available from the offices of the Indian Standards Institution at New Delhi, Bombay, Calcutta and Madras.

FOREIGN TRADE OF INDIA IN JANUARY 1959

The provisional figures of foreign trade of India by all routes, i.e., sea, air and land, on private and Government accounts during January 1959, according to information available to-date in the Department of Commercial Intelligence and Statistics, Calcutta, are given below:—

Merchandise, excluding transit of Pakistan and other overland foreign countries viz., Nepal, Tibet, Sikkim and Bhutan: Exports Rs 44.97 crores, re-exports Rs 37 lakhs, imports Rs 66.58 crores; total trade Rs 111.92 crores. The import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment.

Treasure: Exports (including re-exports) of currency notes Rs 40 lakhs, gold negligible, current coins

(excluding gold coins) Rs 4 lakhs. Imports of currency notes Rs 2.43 crores, gold Rs 5 lakhs, current coins (excluding gold coins) negligible.

Balance of Trade: Subject to the limitation in import figures mentioned in para two above, the total value exports (including re-exports) of merchandise and gold fell short of imports by Rs 21.29 crores.

FOREIGN TRADE OF INDIA IN FEBRUARY 1959

The provisional figures of foreign trade of India by routes (i.e., sea, air and land, on private and Government accounts during February 1959, according to information available to-day in the Department of Commercial Intelligence and Statistics, Calcutta, are given below:—

Merchandise, excluding transit trade of Pakistan and other overland foreign countries viz., Nepal, Tibet, Sikkim and Bhutan:

Exports Rs 42.65 lakhs, re-exports Rs 25 lakhs, imports Rs 59.79 lakhs, total trade Rs 102.69 lakhs. The import figures are exclusive of the value of certain consignments of Government Stores awaiting adjustment.

Treasure: Exports (including re-exports) of currency notes Rs 202 lakhs, gold Rs 1 lakh, current coins (excluding gold coins) negligible. Imports of currency notes Rs 1.71 lakhs, gold Rs 2 lakhs, current coins (excluding gold coins) negligible.

Balance of trade: Subject to the limitation in import figures mentioned in para 2 above, the total value of exports (including re-exports) of merchandise and gold fell short of imports by Rs 16.90 lakhs.

SPECIFICATION FOR TEMPORARY CORROSION PREVENTIVE

Indian Standard Issued

The Indian Standards Institution has published a specification for temporary corrosion preventive, grease, soft film, cold application (IS: 958-1959).

The temporary corrosion preventive, grease, soft film, cold application, is suitable for protection of clean metal surfaces during transport and storage. The standard has been issued with a view to prescribing requirements and methods of tests for such type of grease, and also to facilitate the supply to large and small consumers of such a material of quality, most suited for use in the Indian climatic conditions.

This standard is one of a series of Indian standards on corrosion preventives of various types, namely hard film, solvent deposited type; soft film, solvent deposited type; soft film, hot dipping type; soft film; grease type; soft film, slushing type; and oil film type.

The other standards published so far in the series are IS: 1153-1957 for temporary corrosion preventive fluid, hard film, solvent deposited and IS: 1154-1957 for temporary corrosion preventive fluid, soft film, solvent deposited, water displacing.

Outstanding Performance

Watch-Dog Writes:

STOCK markets have put up an outstanding performance. The mild recovery, which set in towards the end of last week, gathered some more momentum, although profit-taking erased some of the extreme gains at the close of the week under review.

Equities on the Calcutta Stock Exchange, after recording fresh higher levels, developed a slightly reactionary tendency towards the close due to profit-taking.

On the Bombay Stock Exchange, the new account experienced buoyant conditions till the middle of the week, although sentiment turned a bit subdued towards the close.

Prices on the Madras Stock Exchange developed a firmer tendency although price trends were erratic.

Calcutta

Calcutta, Friday Evening.

CHEERFUL conditions prevailed on the local Stock Exchange during the week under report when prices staged a further recovery from last levels due to sustained bull support. Apart from stronger advices from Bombay, the main inspiration was derived from the excellent company reports and company developments. Moreover, some of the operators were inclined to support the market on the view that the recent rise in prices was not mainly speculative, but partly due to investment demand for some of the shares. Their view was supported by the overwhelmingly good response to a number of recent new share issues and the optimism they entertained with regard to the availability of sufficient investible funds. However, in the week's dealings, attention was mostly directed towards the Tea section where many scrips recorded substantial gains on balance. Although the market suffered a slight setback due to profit-taking at the close, the undertone remained fully steady.

The Giltedged section was devoid of activity. Conditions were dull with buying support as also selling pressure absent. Even in the State Loans, business remained at a low ebb. 3 per cent 1986 Conversion Loan opened at Rs 73.85 and, after improving at one time to Rs 74, receded at the close to the former level.

Despite the announcement of encouraging dividends by the Andrew Yule group of companies, Jute shares ruled generally quiet on lack of support. Operators seemed to be worried about the outlook for jute goods, especially in the face of increasing competition from Pakis-

tan in those main markets which were once assured for Indian jute goods. But for the news of a further decline in stocks with the mills at the end of last month, prices would have touched the worst levels for the week. Anglo-India were on offer at Rs 230 against Rs 242; Champdany at Rs 134 against Rs 137; Howrah at Rs 24.25 against Rs 24.75; Megna at Rs 15.44 against Rs 15.81 and National at Rs 24 against Rs 24.50.

Thanks to the proposed deal with Japan for the supply of 500,000 tons of metallurgical coal, Coal shares, especially of those companies having export possibilities, enjoyed good support although higher levels could not be retained, in a few cases, till the close. Bengal were taken upto Rs 314 from Rs 307; Equitable upto Rs 31.69 from Rs 31.25 and Amalgamated upto Rs 25.50 from Rs 25.19. Burrakur moved rather erratically between Rs 18.50 and Rs 18.71 on alternate buying and selling to finish at Rs 18.50.

In the week's dealings, activity was prominent in the Tea section where almost all scrips met with sustained demand at enhanced levels, although profit-taking erased some of the extreme gains at the close. Buying was more confined to the scrips of the Assam and Dooars gardens in expectation of higher dividends for last year. Baghmari were taken upto Rs 25.50 from Rs 23.37 (Rs 25.37); Beljar upto Rs 26.37 from Rs 23.19 (Rs 26.31); Brooke Bond upto Rs 20 from Rs 18.12 (Rs 19.37); Bishnauth upto Rs 21.87 from Rs 19.37 (Rs 21.12); Grob upto Rs 18.62 from Rs 17.25 (Rs 17.69); Hantapara upto Rs 128 from Rs 121.50 (Rs 134); Hasimara upto Rs 25.75 from Rs 23.75 (Rs 24.94); Killcott upto Rs 21.50 from Rs 19.37 (Rs 21.12) and Tezapore upto Rs 19.22 from Rs 16.50 (Rs 19). Figures shown within brackets were the closing rates for the week.

Except the shares of those companies manufacturing distillery products which met with some support from influential quarters, trading in the Sugar section was generally dull and featureless. Dyer Meakin were well supported upto Rs 15.75 from Rs 15, while Carew remained firm at Rs 8.62. SKG were, however, on offer at Rs 9.87 to Rs 10 against Rs 10.25; Cawnpore at Rs 11.06 to Rs 11.44; and Belsund at Rs 13.25 to Rs 13.50 against Rs 13.56.

Textile scrips were again in limelight; but there was a general disposition to book profits at the recent high levels. The only two scrips, which met with steady demand, were Jayshree and Cawnpore having buyers upto Rs 9.00 and Rs 5.19 from Rs 8.94 and Rs 5.06 respectively. Egins touched at one time a high of Rs 15.67 from Rs 15.25 and Kesoram Rs 14.94 from Rs 14.62, to recede towards the close to Rs 15.31 and Rs 14.25 respectively. New Victoria were a narrow market around Rs 1.62.

The general rise in prices was mainly led by the speculative scrips under the lead of Indian Irons which, in turn, were subjected to heavy buying till the middle of the week. Against the week-end closing

of Rs 24.45, Indian Irons opened quiet at Rs 24.42 and steadily improved to touch Rs 24.7, in mid-week. Profit-taking at this level proved to touch Rs 24.76, in mid-to finish the week at Rs 24.62. TEXMACO were at one time taken upto Rs 26.10 from a Rs 25.65; G. K. Williams upto Rs 41.12 from Rs 38; Jessop upto Rs 32.50 and Burn upto Rs 452, to finish slightly lower at Rs 25.75; Rs 40.31; 32.12 and Rs 452 respectively.

Miscellaneous issues followed the general trend of the market. Orient Paper advanced at one time to Rs 37.30 from Rs 37 (Rs 36.40); Indian Cable to Rs 32.56 from Rs 32.25 (Rs 31.62); India Aluminium to Rs 22.25 from Rs 22.06 (Rs 21.75); Indian Copper to Rs 4.35 from Rs 4.26 (Rs 4.30); Dunlop to Rs 34.19 from Rs 33.50 (Rs 33.31); Alkali Chemicals to Rs 24.62 from Rs 23.25 (Rs 24.31); Rohtas to Rs 22.16 from Rs 21.81 (Rs 21.94); India Steamship to Rs 14.87 from Rs 14.62 (Rs 14.87); Aluminium Corporation to Rs 15.12 from Rs 14.87 (Rs 14.62); Sirpur Paper to Rs 13.44 from Rs 13 (Rs 13.19); NCSO to Rs 34.50 from Rs 34 (Rs 34.44) and Phillips India to Rs 23.00 from Rs 22.37 (Rs 23.00). Figures shown were the week's closing rates.

Bombay

BUOYANT conditions prevailed on the Bombay Stock Exchange during the week under review. Continued buying fervour coupled with hectic bear-covering lifted the prices of most of the active speculative counters to new high levels, although profit-taking erased some of the extreme gains at the close.

The new account started on a promising note and buying fervour gathered momentum as trading proceeded. The main inspiration was derived from the Finance Minister's assurance that he would look into the demand for reducing the rigour of the new system of corporate taxation.

TEXTILES: This section conspicuous with smart rise in several scrips on good support following the report that stocks with the mills had declined and that the offtake of cloth in the domestic sector had improved. The announcement of a higher dividend of Rs 10 per share pushed up Sri Niwas to Rs 176 from Rs 171, while Century met with good speculative buying up to Rs 534 from Rs 510.50, to finish at Rs 531. Bombay Dyeing changed hands at Rs 62.60 to Rs 63; Kohinoor at Rs 257.75 to Rs 268 and Svadeshi at Rs 225.50 to Rs 233. Indu Ordinaries were a shade quieter at Rs 8.36 with Finlay around Rs 275.

STEELS: Steel shares ruled comparatively steady and prices were well maintained despite stray profit-taking. It is learnt that the Committee of the Bombay Shareholders' Association has decided to request the management of the Tata Iron & Steel Company that the new capital to be raised by the company consists of both Ordinary and Preference shares. The Committee is also of the view that half the new capital should be in the form of Ordinary shares and the balance in preference shares. The Management of the company is

reported to have invited the representatives of the shareholders for informal discussions on the new issue of capital on Thursday next Meanwhile. Tata Ordinaries moved between Rs 182 and Rs 189, to finish at the last quoted level.

MISCELLANEOUS: Two-sided swift fluctuations in prices trading in the Miscellaneous section. Buying interest in Cement shares looked abated a little and the improved level was not maintained, ACC being quoted at Rs 156.50 and Digvijay at Rs 151. Sugar shares were a steady feature with Belapur changing hands at Rs 310 to Rs 314. Voltas and Bombay Burmah succumbed to realising pressure and the rates receded to Rs 169.50 and Rs 545.50 from Rs 171 and Rs 548 respectively. Automobile shares were in request following the improved outlook for these shares, Premier being enquired upto Rs 116 and Hindustan Motors upto Rs 9.20. National Rayons remained active and, after touching a high of Rs 307.50 from Rs 291, finished at Rs 304 on profit-taking. Scindia steams were on offer at Rs 18.28 against Rs 18.44; while Shivrampur Syndicate were fairly steady at Rs 100 following the publication of satisfactory working results.

Madras

CONDITIONS on the Madras Stock Exchange remained generally firm with an impressive turnover. Fresh support was seen for selected scrips in the Sugar, Planting and the Textile sections.

TEXTILES: Thanks to the improvement in the conditions of the piecegoods market, this section recorded a good turnover at improved levels. Madras showed a steadier tendency at Rs 29.80, while Anglo-French rose further to Rs 90 from Rs 86. Travancore Rayons continued to rule firm at Rs 19.92. Buckinghams were, however, offered at Rs 181 and Bangalore Woollens at Rs 172. Mettur Industries turned sellers at Rs 398.

PLANTINGS: This section remained active and good buying was seen in high-grown Tea shares. Pariakaramalais came in for good business with the rate rising to Rs 4.33 although the closing rate was a shade quieter at Rs 4.31. Chembras were maintained at Rs 4.40, while buying enquiry continued for Non-such at the market rate.

Coffee shares met with good demand. Consolidated Coffees were done at Rs 22.10; Oucherlony at Rs 5.45 and Shevroys at Rs 1.83. Coffee Lands were taken upto Rs 23.85.

In the Rubber group, Cochin Malabars met with renewed selling pressure and declined to Rs 6.20 from Rs 6.25. Sellers were seen for Midlands and TRTs at the market rates. Cochin Malabars were quoted around Rs 6.24.

MISCELLANEOUS: In this section, Sugar shares continued to forge ahead and once again high prices were offered. Travancore were enquired upto Rs 12.10, while Deccan met with active support upto Rs 12.

HIGHLIGHTS OF THIS ISSUE

A dire prophecy made by Indian Finance at this
time last year has now become fact.

Read the Leading Article.

Indian Finance
is included in
the 928
by
C. S. Rangaswami

"Why this fancy dress,
Ram Gopal?"

"No more suits for me. After three washes, my suits get as limp as
wet blotting paper. This outfit may be cumbersome, but it certainly
retains its shape."

"What a pity! But, surely you've heard of BINNY'S?
BINNY'S cloth retains its new look even after repeated
washing. They Quality Control* their production, you know..."

"Quality Control? What's that?"

"Modern machines process yarn and cloth so fast that often
defects, invisible to the naked eye, creep into the cloth. Quality
Control is laboratory testing to root out defects at every stage
of production. That's why BINNY'S fabrics retain their shape
even after repeated washing."

"Is the suit you are wearing made of BINNY'S cloth?"

"It certainly is"

"Then show me the nearest BINNY'S shop, my friend."

BINNY - a great name in textiles

*Testing defects in processing
To guarantee that the yarns BINNY'S
produce are uniform in strength and
appearance, processing defects are
continuously checked and remedied at
every stage of their manufacture. That
is why BINNY'S are able to supply
quality fabrics to their customers.

BINNY'S manufacture nearly 90 million yards of cloth every
year. Here are some of the varieties they make:
Shirtings - Khaki Drills - Bleached & Dyed Drills - Towels -
Anticrease Suits - Tussore - Union Fabrics - Silk Sarees
Rugs - etc etc

Quick and easy communications are
essential for the fulfilment of India's
targets for steel. The Indian
Railways are accordingly devoting
their allotment under the
Second Five Year Plan to develop
and improve their capacity

THE STEEL

LINE

to handle traffic for the five steel
plants. Thousands of labourers
and hundreds of technicians and
engineers are working round the
clock on difficult terrain, levelling
the earth, clearing thick forests,
building embankments and bridges
and laying over 700 miles of track
over a vast area covering four
major States.
The Indian Iron & Steel Co. Ltd.
is also helping the Indian
Railways by providing...150,000
tons of steel per annum for the
Steel Line.

STEEL
IS THE STARTING POINT

Use steel only when
you must today,
there will be more tomorrow.

FOR THE INVESTOR

p, then Down, then Caution

Investment Gossip:

The reaction did set in but was
followed by a burst of bullish
enthusiasm; an official inkling of what
Tata management intended to
do, by way of rights shares, was
allable; and this largely confirmed
earlier anticipation of the market
it would be a combination of
equity capital and preference shares.

But, as the week ended, caution
set in. Dalal Street continued
to take an unduly cheerful attitude.
Lyons Range, on the other hand,
seemed to feel that, perhaps, prices
had been overdone. All this, let me
make it clear, were oscillations and
fluctuations with the definite char-
acteristic of speculative fever and
ravour.

I hesitate to predict what course
prices in the immediate future will
take. Nevertheless, I cannot shirk
sinting out what may be a possible
percussion of the waiting list of
new issues. For example, this issue
of Indian Finance contains a pros-
pectus announcement; and I under-
stand that the details of another issue
will be made known next week.
Meantime, we have had some news
about the Tata rights issue. What
does this spate of new issues mean
for the Stock Exchange?

Some circles say that the new
issues will be of bearish import; their
reasoning is that a considerable
train will be placed upon the in-
vestor, in regard to supporting the
new issues. Money will be drained
away, less will be available for stock
exchange activity. And so the con-
clusion is that, inevitably, a declining
trend in share quotations is to be
envisaged.

I don't agree with this logic. It
seems to me that the new issues will
serve as a tonic. The investor, in
my opinion, has kept by sufficient
resources for investment in attractive
new issues; and every new issue
of merit will receive his full
support. Hence, even before the
new issues; and every new issue
will oftentimes be the phenomenon
of the scrip in question quoting at a
premium. Such strength in the new
issues will lend sympathetic strength
to the existing share prices.

Normally, therefore, the outlook
would be for stock exchange prices,
during the currency of the 1959 slack
season, to rise steadily and gradually
—but, then, there are the machina-
tions of the speculative fraternity.
They, the latter I mean, may well
take it into their minds that what
the market deserves is a depressing
of prices. So speculative activity
may offset such intrinsic rise in
prices as there might be.

Investment Special:

Indian Rayon

A new issue of considerable im-
portance—and attractiveness—is
the offer made by the Indian Rayon
Corporation. What is being of-
fered to the public for subscription
are 53,000 7 per cent tax free
cumulative redeemable preference
shares and 47,000 ordinary shares,
both with a face value of Rs 100
and the issue being made at par.

What should be particularly at-
tractive is the "scheme" for the
amount payable by investors. On
application, a sum of Rs 12.50 is
to be paid; another amount of
Rs 12.50 is due upon allotment; and,
thereafter, the balance would be
called up in six equal instalments,
with the proviso that there would
be an interval of three months
between each call.

The official literature contains
the following sentence, which
should prove interesting to the
intending investor: "The Rayon
Industry, while enjoying a unique
scope for expansion, has been re-
ceiving protection from Govern-
ment by the regulation of imports
in relation to the capacity of the
indigenous units and also by the
imposition of protective duties on
foreign yarns which ensure profit-
able returns to the investors in
indigenous units."

All these are reasons why the
issue should be a success.

Investment Notes:

The Indian Rayon Corporation,
which will manufacture rayon yarn
at Veraval, proposes to enter the
market for raising capital amount-
ing to Rs one crore. The new
capital, which is offered at par
for public subscription, comprises
47,000 equity shares and 53,000-7
per cent Cumulative Preference
shares, both of Rs 100 each. The
subscription list will open on the
25th May. It is stated that insti-
tutional investors have already in-
dicated their willingness to sub-
scribe to the extent of 35 per cent
of the capital offered to the public.
Market circles, therefore, expect
that this will be yet another suc-
cessful issue.

Also, Khandelwal Ferro Alloys
Limited will enter the market shor-
tly for raising fresh capital. The
company proposes to offer, for pub-
lic subscription, at par Rs 84.94
lakhs comprising 34,937 equity sha-
res and 50,000-7½ per cent Cumula-
tive Preference shares, both of Rs
100 each. The subscription list is
likely to open towards the end of
this month.

It is learnt that Colour-Chem
Limited has proposed to draw lots
for the allotment of shares to the
public. The cheques of those
whose names are drawn in lots,
will be cashed before allotment. It
is also learnt that total applications
have amounted to 75,000 for 590,000
shares.

Ashok Leylands Limited of Mad-
ras has proposed to issue 25 lakhs
equity shares of Rs 5 each, at par,
to those shareholders whose names
are registered as on the 22nd May.

1959. The last date for submission
of applications for "right" shares
and renunciation letters will be the
16th June.

Investment Briefs:

Nagri Mills Company of Ahmeda-
bad has maintained the dividend
at Rs 50 per share for 1958.

New Beerbhoom Coal has raised
the total distribution from 75 nP
to Re 1 per share for the year ended
31st October, 1958.

In Kiriampudi Sugar has passed
over the dividend for 1958.

United Flour has reduced the
dividend from 40 to 37½ per cent
for the year ended 30-11-1958.

Shree Niwas Pays More

Balance-Sheet Reviews:

THANKS to better working results,
Shree Niwas Cotton Mills Limited
has raised the dividend from Rs 8
to Rs 10 per share for 1958. Sales
have risen to Rs 4.12 crores from
Rs 3.98 crores, while the gross
profit is higher at Rs 18.30 lakhs
against Rs 11.75 lakhs. The pro-
vision for managing agency remu-
neration amounts to Rs 66,645
against Rs 50,000 and that for
Depreciation Rs 8.33 lakhs against
Rs 8.87 lakhs. The provision for
Taxation is nil against Rs 50,000.

A sum of Rs 5 lakhs has been
transferred to Renewal and Re-
placement Reserve and Rs 4.65
lakhs to Development Reserve
Fund. A sum of Rs 8.20 lakhs
has been drawn from General
Reserve, which has already borne
tax for the payment of the pro-
posed dividends.

The company has invested,
during the year, a sum of Rs 25
lakhs in new plant and machinery,
mostly in the spinning department.
Further orders for 64 new ring
frames at a cost of about Rs 20
lakhs have also been placed. With
the execution of the new order,
the renovation of the spinning
department will be completed
during the year. The directors are
confident that the company will
be able to show better results
during the current year due to the
scheme of modernising the mills.

The Victoria Mills have made a
gross profit of Rs 14.17 lakhs
against a profit of Rs 10.49 lakhs
in 1957. The directors have, after
providing Rs 90,000 (Rs 50,000)

for managing agents' commission;
Rs 5.02 lakhs (Rs 7.29 lakhs) for
Depreciation; Rs 42,000 (Rs 1.73
lakhs) for Development and Re-
habilitation Reserve; Rs 1.28 lakhs
(nil) for Statutory Development
Rebate and Rs 3.60 lakhs (45,000)
for Taxation, maintained the divi-
dend at Rs 20 including a bonus of
Rs 5 per share.

Sholapur Spinning

The Sholapur Spinning & Weav-
ing Company has suffered a trading
loss of Rs 5 lakhs for the year
ended 31st March, 1958 without
providing for Depreciation. The
loss in 1956-57 was Rs 25.33 lakhs
with the carried forward loss of
Rs 34.14 lakhs. With the loss for
the current year, the total loss
comes to Rs 89.21 lakhs, which is
carried forward.

Cloth and yarn sales, during the
year, dropped down to Rs 1.14
crores from Rs 2.17 crores. This
heavy loss is attributed to disas-
trous trade conditions that pre-
vailed in the markets for the
coarse and medium counts.

The company's financial position
has been crippled since several
years due to past heavy losses
and distress sales. The company
could not maintain the price
standard of sales owing to prevail-
ing conditions. However, the
directors made an attempt to re-
start the mills by paying a scheme
on the 21st October, 1958 with
partial working, gradually in-
creasing the number of spindles
and looms worked. As on the
13th April 1959, the mills were
working with about 37,000 spindles
and 990 looms in two shifts, giving
employment to about 3,500 em-
ployees.

Sirsilk Limited

The working of the Sirsilk
Limited shows a surplus of 5.01
lakhs for the year ended 30th
September 1958, providing a sum
of Rs 15.18 lakhs being interest on
loans; Rs 10 lakhs towards Depre-
ciation; Rs 2 lakhs towards provi-
sion for contingencies; Rs 8,332
towards preliminary expenses; Rs
38,571 for prospecting and inves-
tigation and Rs 2.90 lakhs towards
brokerage on shares. This surplus
has been adjusted against the loss
brought forward. The company
has been able to provide only
partially for Depreciation, because
of inadequate profits.

The production of yarn and
fabrics reached almost full capacity
during the year as a result of the
steps taken by the manage-
ment in improving the working
and efficiency of various plants.

Shivrajpur Syndicate

Despite a slump in the manganese ore market, the shares of the Shivrajpur Syndicate Limited have been a firm feature during the past few weeks. The strength in the shares is fully supported by the company's working results for the year ended 30th November, 1958.

Due to forward sales contracted in previous years, shipments and sales have totalled 91,642 tons as compared with 114,337 tons in 1956-57. Satisfactory progress has been maintained in the development of mining operations and an additional power plant has been set up. The company has earned a lower profit of Rs 26.11 lakhs against Rs 30.44 lakhs in the previous year. Sales of ore have declined from Rs 173.98 lakhs to Rs 144.68 lakhs. The provision for Taxation is slightly lower at Rs 14.5 lakhs (Rs 15.75 lakhs) and that for managing agents' remuneration at Rs 2.92 lakhs (Rs 3.36 lakhs). The distribution to the shareholders is maintained at Rs 5 per share, plus a bonus of Rs 3 per share.

£ R S

Guest, Keen, Williams Ltd.

The level of production by Guest, Keen, Williams, Limited has recorded an improvement in 1958 and this is reflected in sales, which have risen to Rs 10.25 crores from Rs 9.07 crores. The net profit, after providing for Depreciation and Taxation and making certain adjustments, amounts to Rs 49.78 lakhs as against only Rs 48.87 lakhs in the previous year. Apart from providing Rs 8.42 lakhs for Development Rebate Reserve, the amount set aside for Depreciation is raised to Rs 22.68 lakhs from Rs 17.91 lakhs; additional Depreciation Reserve to Rs 2.59 lakhs from Rs 2.45 lakhs and Taxation provision to Rs 74.20 lakhs from Rs 72 lakhs. General Reserve is, however, reduced to Rs 1.36 lakhs from Rs 25.91 lakhs. The directors have recommended a final dividend of Rs 1.20, making a total of Rs 2.00 per share for 53 weeks ending 3rd January, 1959.

Subject to the consent of the Controller of Capital Issues, the directors have decided to allot and issue 4,76,850 equity shares of Rs 10 each, credited as fully paid-up, by way of exchange for the issue shares in the capital of

Sankey Electrical Stampings Private Limited, without such new equity (ordinary) shares being first offered to the members in the proportion to the existing shares held by them.

£ R S

Indian Galvanizing

For the third year in succession, the Indian Galvanizing Company Limited has passed over the dividend for 1958. Sales have declined to Rs 1.01 crores from Rs 1.92 crores, while the accounts, after providing for Depreciation, reveal a loss of Rs 11.31 lakhs against a net profit of Rs 3.49 lakhs in the previous year, reflecting the closure of the Calcutta factory and the consequent liability for retrenchment compensation. The sum provided for Depreciation is reduced to Rs 1.39 lakhs from Rs 2.96 lakhs.

£ R S

Tide Water Oil

The Tide Water Oil Company (India) Limited has raised the total distribution from 12½ to 15 per cent for the year ended 31st Oct ber, 1958. Sales are shown at Rs 62.35 lakhs against Rs 57.49 lakhs, while the net profit, after providing for Depreciation and Taxation, amounts to Rs 86,212 against only Rs 74,756 in the previous year. The directors have provided Rs 13,761 (Rs 11,478) for Depreciation; Rs 1.23 lakhs (Rs 1.79 lakhs) for Taxation; Rs 8,060 (Rs 11,500) for Wealth Tax and Rs 2,504 (nil) for Development Rebate Reserve. The directors have, in their report, stated that, with India's present shortage of foreign exchange, it is not possible to obtain licences for all requirements and the company's prospects mainly depend on the Government's future licensing policy.

£ R S

Dunlop Rubber, London

The Dunlop Rubber Company Limited, London, has reported a net profit, after providing for Taxation, of as much as £3,567,000 for 1958 as against only £3,017,000 in the previous year. A sum of £1,100,000 (£1,000,000) is provided for General Reserve. The dividend on the Ordinary shares is raised to 16½ from 14 per cent. The amount carried forward is £1,522,000 against £1,509,000 brought in from 1957.

The Big Nine

1958 has not been a good year for the banking system, and our apprehension at this time last year has materialised all too ominously. In making an assessment of the performance of the Big Nine among Indian Scheduled Banks, we had, it may be recalled, suggested that "it would be folly to ignore the impact already discernible of high money rates, and of the repercussions that these might have on the future of banking earnings". For, 1957 itself, for all that it recorded a substantial increase in the balance of profits, was already showing much signs of evidence that the prospect before banks was anything but satisfactory. We had concluded the article with these words:

"Unless action is taken to halt the dangerously rising trend in the interest paid on Deposits, we fear that the banking system may soon experience a reduction in its earnings because of the squeeze effected by rising operating costs".

It is true that, during the year under review, although it was late in the year, some sort of voluntary agreement among banks as regards maxima of interest that may be paid on Deposits was drawn up and ratified. It is also true that the favourable consequences flowing from the fixing of such maxima could be expected to manifest themselves fully only during 1959. But, for all that, the fact remains that, in spite of the warning signals that were apparent during 1957, the Scheduled Banks delayed unduly the action that they could take and the measures that they could institute to meet the challenge offered by the impending threat to their earnings. As a result, as the table published on the following page shows, 1953 will go down on record as not only a disappointing year for the banking system, but one which held evidence of real danger that, in time to come, banks might be operating at a loss. However, since the turn of the year, with the 1958-59 busy season proving to be more strident than was the case in 1957-58, there has been more remunerative utilisation of banking resources such that it is possible that the results during 1959 may not, comparatively speaking, make such poor reading. But what we are under commitment to do here is to assess the performance of banks during 1958 through a study of the figures for the Big Nine among the Indian Scheduled Banks.

It is not as if banks did not have an accretion to their Deposits. On the contrary, the rising trend in Deposits has been maintained, although the extent of increase, in the case of the Big Nine, has been somewhat smaller during 1958. The Deposits of the Big Nine have risen from Rs 957 crores to Rs 1132 crores and, at this latter figure, Deposits work out to 172.9 per cent of Deposits in 1954. It need hardly be said that it is the State Bank which has had the largest increase in Deposits, one of Rs 111 crores. Every one of the Big Nine experienced an increase in Deposits during 1958. Aside from the State Bank, the credit for the largest increase, both proportionately and in absolute figures, goes to the United Commercial Bank. However, if the period from 1954 is taken into account, both the Bank of Baroda and the United Commercial Bank have the distinction of almost doubling their Deposits within this five-year period.

The trend in borrowings from banks is, after the sharp decline in 1957, again upward. This was due to the fact that, as 1958 drew to its close, the resurgence of busy season demand for funds, preceded as it had been by considerable investments in giltedged, compelled banks to replenish their resources through borrowings. The State Bank accounted for more than half of the figure for the Big Nine taken as a whole. Only two of the banks, Bank of India and the Indian Bank, did not figure as borrowers in their 1958 balance sheets. Apart from the State Bank, the Punjab National Bank is shown as the highest borrower.

The Cash Balances of the Big Nine have been marked slightly higher, but, as testifying to the need experienced by Scheduled Banks to maximise their remunerative earnings, Cash Balances as a ratio of Deposits have declined. It is interesting to note that only three of the Big Nine had a level of Cash Balances by the end of 1958 which was higher than in the previous year.

Every bank among the Big Nine added sharply to its giltedged portfolio during 1958, and the total for the nine banks at the end of 1958 is very nearly double the level obtaining in 1954. The State Bank, owing to its special Deposits, has had a spectacular increase in giltedged holdings to record. But acquisition of giltedged by other banks is of no less spectacular proportions. The Punjab National Bank added to its giltedged portfolio by Rs 23 crores, whereas the giltedged holdings of the United Commercial Bank went up by Rs 15 crores.

Banks were compelled to invest idle resources in giltedged because Advances, during 1958, tended to be sluggish. As against an increase of Rs 176 crores in Deposits, Loans, Cash Credits and Overdrafts rose only by Rs 22 crores, while Bills Purchased and Discounted declined by Rs 6 crores. The Punjab National Bank, among Scheduled Banks other than the State Bank, had the distinction of largest addition to its giltedged portfolio; it is, we may presume, partly because it is the only one of the Big Nine to have experienced a decline in its Advances. As far as the Bill portfolio is concerned, two banks show notable reductions, Bank of India and the State Bank.

Though the Advances portfolio was sluggish, income as a whole showed a satisfactory, even substantial, rise during 1958. Thus, the income of the Big Nine by interest and discount improved by Rs 8 crores; the figure for 1958 is almost double the relative figure for 1954. All the Big Nine participated in this improvement, significant rises having been recorded by the State Bank and the Punjab National Bank. On the other hand, income by commission, exchange and brokerage was somewhat lower; Allahabad Bank, Central Bank and United Commercial Bank emerge as the only entities among the Big Nine to have registered an improvement under this head. Apparently, other heads of revenue more than offset such decline in income. For, gross income has been marked up by over Rs 8 crores, for the Big Nine, to Rs 51 crores. Every bank has experienced an improvement in its gross earnings. The State Bank's increase is again spectacular, and other banks that merit recognition are

Allahabad Bank, Punjab National Bank and United Commercial Bank.

Unfortunately, the advantages accruing from such increase in gross income were nullified by the higher charge of interest paid and of salaries and allowances. Bearing testimony to the deleterious high interest Deposits, interest paid has been marked up by nearly Rs 6 crores. The figure for 1958 is almost three times the 1954 level for the Big Nine. Again, every bank has had to pay more by way of interest. This charge has been particularly higher in the case of Bank of India, Punjab National Bank, State Bank and United Commercial Bank. Secondly, salaries and allowances rose from Rs 15 crores, for the Big Nine, to Rs 17½ crores. The steepest increases have been recorded by Punjab National Bank and the State Bank.

As a result, the balance of profit fell during 1958 from Rs 6.66 crores to Rs 6.06 crores for the Big Nine. Only two banks have reported an increase in profit during 1958, the Allahabad Bank and the State Bank of India. The sharpest declines have been registered by Bank of Baroda, Indian Bank and United Commercial Bank.

Partly as a consequence to the smaller balance of profit, taxes have absorbed less at Rs 96 lakhs against Rs 1.52 crores. But such lower provision for taxes is also partly due to the fact that many of the banks were apparently able to utilise the interest deducted at source on Government securities for taking care of the provision. The two banks that show the sharpest decline in their provision for tax are Bank of Baroda and Punjab National Bank. In this context, it may also be noted that the United Bank of India joins the company of the Allahabad Bank and the State Bank of India in reporting its balance of profit after full provision for tax.

The transfer to Reserves and Contingencies is more or less unchanged at Rs 79.25 lakhs. As last year, again this year, only five of the banks have made such transfers. Punjab National Bank, State Bank and United Commercial Bank figure as having made substantial provision for reserves.

Staff bonus and funds proved to be more costly during 1958. The figure for the Big Nine for 1958 works out to 184 per cent of the 1954 figure.

The amount paid as dividend by the Big Nine is fractionally higher at Rs 2.60 crores. In the period since 1954, the smallest increase has been registered, of all the constituent figures that we have examined, in the amount absorbed by dividends.

The ratio of gross income to Deposits, for the Big Nine, is unchanged at 4.5 per cent. Every bank, except the State Bank, has a considerably higher ratio, but the very low level of the State Bank's ratio, 3.3 per cent, serves to bring down the average for the Big Nine. The Punjab National Bank has the highest ratio of gross income to Deposits at 6.1 per cent, and Indian Bank is second with 5.6 per cent.

The ratio of balance of profit to Deposits has, however, fallen sharply from 0.70 per cent to 0.53 per cent for the Big Nine. This is the lowest figure in this five-year period. In 1957, the Bank of India had the distinction of being

[illegible]

the only bank with a ratio of balance of profit to Deposits which exceeded one per cent. In 1958, there is no bank with a ratio higher than one per cent, but the Bank of India continues to show the highest ratio, one of 0.97 per cent.

The results are, it will be admitted, disheartening. But the remunerative use that the banks could find for their money during the early part of 1959 may conceivably retard the development of a proper structure of interest rates in the monetary sphere. We are hoping, however, that, well before the slack season gets under way, the Scheduled Banks will agree on revising downward the maxima of interest that may be paid on Deposits. If this is not done, the results for 1959, better though they might be than those for 1958, will still be disappointing.

Unfortunately, there seems a reluctance on the part of the banks thus to bring down the maxima of interest that may be paid on Deposits. Various reasons are adduced in this behalf. For example, there has been the suggestion that, if the rates on Deposits were to be reduced, the competition encountered from

Government's small savings schemes would be so severe as to cause a diversion from banking resources. Again, there is the feeling that there have been stray instances where both the spirit and letter of the agreement have been breached; and the Indian Banks Association, it is said, has now power to enforce the agreement.

The choice would seem to be Reserve Bank action; but objection is made to such course because that would constitute official interference. Then, from the Government viewpoint, there seems some difficulty in merely laying down maxima on rates payable on Deposits, without any such restriction on the interest that may be charged on Advances.

We have, thus, an impasse. But there can be no doubt that the virtual stale-mate cannot be allowed to persist. But we are hoping that official action, whether on the part of the Indian Banks Association or on the part of the Government, will become inevitable if, as we anticipate, the 1959 slack season really gets into stride.

Workers' Management Councils in Yugoslavia

By M. SUR

IN 1950 the Yugoslav Government promulgated the basic law "entrusting management of undertakings to the workers themselves". The system of management as now evolved in Yugoslavia is different from any other form of worker participation in management operating elsewhere, and it is not usually understood. Therefore the record recently circulated by the I.L.O. of an informal discussion held on the subject with the Yugoslav delegates at the 1958 International Labour Conference makes extremely interesting reading.

There are four main elements in the Yugoslav management system. First the workers' Council, to which is entrusted the policy of the undertaking is elected by secret ballot by the 'community of workers', that is by the entire personnel of the undertaking. This workers' council draws up and adopts the economic plan and internal regulations of the undertaking, and decides, within the framework of existing legislation, the distribution of the undertaking's revenue. It is a decision-making body. The second organ is the management Board, which is an executive body. It is elected by the workers' council, and three-quarters of its members must be workers engaged in production. While the council deals with policy, the board deals with day-to-day matters. Particularly important matters may be decided by a referendum of the entire personnel. Thirdly the person responsible for the organisation of production is the Director of the undertaking, who is assisted by a staff of technicians. This official is selected by a joint panel which includes representatives of the Communal People's Committee as well as the workers' council. The people's committee, which is the fourth element, is the body in charge of public administration at the communal or district level, so when the director is selected the body representing the general public comes in as a check on the workers' council.

The director is responsible for seeing that the undertaking acts within the limits set by law. Therefore he has the right to suspend the implementation of a decision of the workers' council if he considers that it runs counter

to existing legislation. As this may produce conflict between the director and the council, the matter can be brought before the communal people's committee. The workers' council can recommend the dismissal of the director, but again it is for the people's committee to take the decision. They can send the proposal back to the workers' council for further consideration. If the council insists on dismissal of the director then the people's committee may dissolve the council and decree new elections. Only if the newly elected workers' council re-submits the same proposal must the people's committee abide by the decision and dismiss the director. There is, therefore, a most careful system of checks and balances. This is part of what the Yugoslavs call 'direct democracy'.

The communal people's committees are made up of two chambers with equal rights. There is a general representative chamber, which is elected by all the citizens, and the producers' council, which is elected only by workers engaged in production. Representation within these producers' councils is based on the relative contribution of industry and other branches of the economy to the gross national production. The republican assemblies and the federal assembly are organised in the same manner. Thus the twofold rights of the citizen as producer and consumer are safeguarded, and in each capacity he is given adequate opportunity to express his views.

Where does the trade union come into this system? Nominations to workers' councils are submitted by the trade union in the undertaking, but candidates can also be put forward by a group of workers, and voting is for the individual and not for a list. The workers' councils are elected for a period of one year, and the members of the management board may not serve for more than two consecutive years. Members of both board and council may not be dismissed during their period of election, but they can be removed from membership of the board or council by those who elected them.

The workers' council not only draws up the economic plan of the undertaking, but decides

the work relationships within the undertaking and outlines the remuneration system and rates of pay. The law has defined certain fundamental rights of workers which cannot be reduced, but within undertakings latitude is given, for instance, to grant longer annual leave than the legal minimum, to vary the length of the working day, provided an average of eight hours is maintained, and to decide the conditions under which leave without pay may be granted, and the working of overtime, subject to authorisation from the labour inspector.

The new law of 1st January, 1958, gave very broad powers to workers' councils in the sphere of employment. Recruitment, dismissal and disciplinary action are entirely taken out of the hands of individuals and have become a collective responsibility. Thus the Yugoslavs maintain that the concept of the wage earner is disappearing in favour of the concept of a worker as a member of an association of free producers.

The income of each undertaking is subject to a tax calculated on a progressive scale, but the undertaking retains at least 28 per cent of its income after deduction of the guaranteed minimum remuneration, and can dispose of this. On an average 2½ months' pay is given as bonus, and the rest is allocated by workers' councils for housing, health, education and general welfare.

The workers' council decides how much of the net revenue is to be distributed as remuneration and how much retained in the undertaking. Wages, or workers' personal income, as it is called, consist of a guaranteed minimum secured by law, regardless of the financial position of the business, and a share in the undertaking's net income which is allocated on different systems decided by the workers' council and directed at providing an incentive for productivity. Wage rates are not entirely in the hands of the workers' councils, however, for this is a subject on which the community as a whole may exercise some influence. The rules governing remuneration as decided by the workers' councils must be communicated to the trade union and to the communal people's committee, which may raise questions. If neither body takes any action within one month, the rules automatically take effect. If there is disagreement between the workers' council, the trade union or the people's committee, then the matter is referred to a tripartite arbitration board, whose decision is final. The theory is that society should exercise some influence over labour remuneration if the economic system is to function satisfactorily and if wide variations in rates paid in different occupational groups or undertakings is to be avoided. The same principle is applied to production standards.

It is claimed that since the introduction of workers' management in Yugoslavia in 1950 one-third of all manual and non-manual workers in the Yugoslav economy have participated in the work of 'self-management' bodies, and that this is the best method of educating the workers and giving them an understanding of the problems of production. It should be noted that the Workers' councils are primarily concerned with what directly interests the workers. The technical side of production is in the hands of the director and his assistant technicians. One wonders how continuity of policy is achieved with frequent change of personnel on the policy-forming body. Obviously the director must play an important part in ensuring continuity, but his is a very delicate position and surely great tact and skill are required if he is not to come into conflict with the workers' councils. It is certainly a most interesting experiment in industrial democracy that is going on in Yugoslavia and worth watching.

EDITORIAL NOTES

Utilization of Foreign Aid

While the manner in which India has made good use of the financial assistance actually received for development projects has been favourably commented upon, the avoidable delays in drawing on the loans that have already been sanctioned have also attracted critical notice. One of the most striking instances is the loan from the Export Import Bank of the USA. Under an agreement with the Government of India, the Export Import Bank of the USA extended a credit of \$150,000,000 in June 1958, to assist in financing purchase of United States capital equipment required for India's development programme. The Chairman of the Export Import Bank who came to India last October, when the World Bank meeting was in session, commented on the fact that the credit had not been drawn upon though more than three months had elapsed after the loan was sanctioned. The Economic Survey for 1958-59, which was released along with the budget papers, shows that loan from the Export Import Bank remained unutilised as at the end of January 1959. It appears from reports that have appeared in Indian and foreign papers that not much progress has been made subsequent to that date.

It is true that the loan from the Export Import Bank is subject to certain conditions. One of the principal functions of the Bank is the financing of American exports. Therefore, apart from the fact that the loans have to be repaid in dollars, the proceeds of any loans granted by the Bank must be spent in the United States. But this cannot be regarded as the main reason for the delay in utilising the loan granted to India. It appears that procedural delays, in complying with the formalities which must be gone through at both ends before the credit can be drawn upon, are responsible for the hold-up. Allotment of the amount over different projects and the processing of applications from private concerns are taking an unduly long time. It is essential that such procedural hold-ups should be eliminated, for the reports that have appeared of large unutilised funds can prejudice the case for further large scale assistance, for which the ground is being prepared by our friends in the USA.

Pilferage on Railways

A conference of Railway General Managers, which met in New Delhi early this month, is reported to have discussed, among other things, the need for devising measures calculated to improve the present service to the commercial community. One of the conclusions reported to have been taken was on the desirability of extending to more towns the street delivery and collection service for goods which is now provided in certain towns to a limited extent. The desirability of establishing closer contacts with representative commercial bodies was also recognised. But even without the benefit of such consultation with commercial organisations, or adoption, of measures designed to provide new facilities like street delivery, the Railway Administration, if they are so minded, can take immediate action to improve the quality of service to a remarkable extent by ensuring honest, efficient and expeditious discharge of work by their employees, especially those responsible for handling of goods and parcels at different stages.

The report does not mention whether the question of pilferage of consignments in transit was on the agenda of the General Managers' Conference. If not, it is a serious omission, for pilferage has become, along with graft, a serious menace to the efficient functioning of the Railway service. No one can now send a consignment of goods by Railways with the confidence that it will be received intact by the consignee. Irrespective of the nature of the packing, a very large proportion of packages are received in a damaged condition. The weighments at stations of consignment and destination seldom tally.

Not all persons have the time or the facilities to insist on a sur-

vvey or pursue the complaint or claim. Most of the consignees are traders who accept the shortages as the price for avoiding trouble when they have to book their own consignments. But such systematic pilferage adds to the cost of transport of goods by Railways, and is one of the principal reasons for the diversion of goods traffic from the railways to the roads, which is now causing anxiety to Railway Managements.

Railways, it is true, have a difficult job to safeguard their own property, including furniture and fixtures from the depredations of organised gangs. Even rails and overhead electric wires are not safe in some sections where bulky material is apparently removed in lorryloads. But the existence of this problem of law and order is no reason why the Railways should not be more active in checking pilferage of consignments which they have contracted to carry on behalf of their customers. Elimination of this evil should be the principal item in the programme for improving the quality of their service to the commercial community.

An Elected Premier

While representative democratic Government has not thrived in countries where it has been introduced after the last war following changes in political status, and has yielded with alarming frequency to military or other types of authoritarian regimes, Ceylon has made a constructive attempt to grapple with the problems created by the existence of a multiplicity of parties. The Prime Minister of Ceylon has already expressed the view that party system is not suitable for underdeveloped countries. While the formal structure can be introduced, the conventions which maintain its stability are not so easily transplanted. The result of thinking on these lines, in which, it seems, the Opposition also had a vital share, has led to the emergence of the new proposal which has interesting possibilities. It has been circulated jointly by the Prime Minister, Mr Solomon Bandaranaike and the Leader of the Opposition in the House of Representatives, Mr N. M. Perera, as an improvement on the British system of Cabinet Government. According to the proposal, on the first meeting of the Parliament after a General Election, the prime minister will be elected in the same manner as the Speaker is at present chosen. The prime minister so elected will be free to choose his team from amongst members of Parliament without restriction of party. The proposal is likely to come up before the Joint Select Committee of the Ceylon Parliament for incorporation in the new republican Constitution.

The new proposal might enable the elected prime minister to form a broad-based government consisting of leaders of different parties, which for that reason will not be subjected to the pressures

of party politics. But it is difficult to see how such a motley team will be able to agree on a common policy. Perhaps the proposal is an acknowledgment of an actual situation in which party alignments have more to do with personalities than with policy considerations.

District Approach

The principal problem of planning in India is that of eliminating of regional disparities in industrial development. Planners have to counter the pressures of economic and historical forces which have led to present lopsided growth of the national economy with all the industries concentrated in a few areas in two or three States. The attempt to rectify the balance can be a costly process unless it is tackled with care.

As Mr Shah told the annual meeting of the All India Small Industries Board at Hyderabad, hitherto, the States have been taken as the units of planning. While this has often led to controversy over the location of important Central projects like an oil refinery, a steel plant or a ship yard, it has not served to even out the disparities in different regions. Even in those States which are regarded as highly industrialised, there are depressed areas. If the disparities are to be eliminated, the district must be taken as the unit of planning and that will mean special emphasis on small scale industries, for, while all districts need industries, not all of them are suitable for establishment of large units. In Mr Shah's picturesque language, "small industries are the messengers of technology and science, of industrialisation and research for an industrially less developed region and district".

WORLD OF FINANCE

Sharp Switch to Time Liabilities

AS was to be expected, beginning of the month disbursements, which had caused barely a ripple in the returns of the Reserve Bank for May 1, have made their impact felt in the relevant figures for May 8. Active Note circulation, which had remained practically unchanged as on May 1, is shown to have risen substantially by Rs 23.61 crores to Rs 1774.72 crores. Moreover, there was outflow of Rupee Coin in the considerable amount of Rs 2.37 crores. Currency has been expanded against Rupee Securities for Rs 10 crores by transfer from the Banking Department. In the result, the Reserve Bank's cash in the till has been run down by Rs 16.02 crores to Rs 11.51 crores.

In the Banking Department, it is noteworthy that Investments are lower by Rs 20.16 crores at Rs 244.81 crores. Of this decline, Rs 10 crores can be explained as having been owing to the transfer to the Issue Department. The balance of Rs 10 crores relates, as the return of the State Bank shows, to sales of gilt-edged by the Reserve Bank to that institution during the week under review. Hence, it is clear that the Central Government did not stand in need of any deficit financing. Nevertheless, beginning of the month disbursements are responsible for a small decline of Rs 1.53 crores to Rs 51.75 crores in the Central Government's balances. The Deposits of State Governments have been denuded by a larger amount in declining by Rs 6.00 crores to Rs 16.44 crores; and, meantime, their Ways and Means borrowings from the Reserve Bank are also shown higher by Rs 2.00 crores at Rs 41.39 crores.

The Reserve Balances of member banks are sharply lower by Rs 15.04 crores at Rs 68.67 crores. This, however, is wholly due to the State Bank, whose cash in hand and with the Reserve Bank was thus drawn upon for purchases of gilt-edged from the Reserve Bank. Similarly, the rise of Rs 11.71 crores to Rs 87.68 crores in the Other Loans and Advances of the Reserve Bank can be mainly attributed to the State Bank.

Finally as regards the Reserve Bank returns, it may be noted that, after a lapse of three weeks, Balances Held Abroad have improved somewhat. The relevant figure has been marked up by Rs 0.51 crores to Rs 25.73 crores.

The considerable expansion in Active Note circulation during the week ended May 8 should not be misinterpreted as indicative of the

continuance of busy season pressure. Even though the expansion in currency circulation has been in considerable amount, we believe that it is the month early disbursements which have thus caused a rise in Active Note circulation.

The return of the State Bank for May 8 shows a rise of Rs 9.39 crores to Rs 299.86 crores in gilt-edged investments. Apparently contra investment against receipts of counterpart funds is proceeding merrily apace. Interestingly, however, in the latest week, the Deposits of the State Bank have declined by Rs 4.64 crores to Rs 519.63 crores. It may be suggested, in this context, that a part of the increase in Deposits owing to receipt of counterpart funds has been offset by drawing down by constituents in order to meet month early disbursements. In order to make this investment in gilt-edged, the State Bank, as we have seen, ran down its cash in hand and with the Reserve Bank. Other Assets are higher by Rs 3.25 crores, and this pinpoints the possibility of further purchases of gilt-edged by the State Bank. Month early disbursements are, again, seen reflected in a rise of Rs 2.77 crores to Rs 204.20 crores in Advances. The considerable investment in gilt-edged, accompanied as it was by both a decline in Deposits and a rise in Advances, has compelled the State Bank to borrow from the Reserve Bank to the tune of Rs 7.50 crores.

The return of Scheduled Banks for May 1 partly reflects the impact of beginning of the month disbursements, but it is intriguing particularly for the fact that there has been a very sharp switch from Demand Liabilities to Time Liabilities. The total of Advances has risen only by Rs 0.49 crores to Rs 1021.07 crores. But Deposits have been marked lower by Rs 5.30 crores at Rs 1734.30 crores. We are to presume that constituents preferred, or were in a position, to run down their Deposits rather than to add to their borrowings. Then, as far as the "switch" is concerned, Demand Liabilities are seen to have declined by Rs 37.10 crores to Rs 739.95 crores. On the other hand, Time Liabilities have been marked up by Rs 31.80 crores to Rs 994.35 crores. Occurring as this switch-over does at the threshold of the slack season, Scheduled Banks may be said to have lost the benefit that would have accrued to them in this behalf if, as now seems possible, it is intended to reduce the maxima payable as interest on Deposits. Incidentally, the decline in Demand Liabilities is larger than the rise in Time Liabilities, and it is the disparity of roughly Rs 5 crores, which is indicative of current accounts being drawn down in order to meet month early disbursements. Investments are higher by Rs 8.05 crores at Rs 623.67 crores; this is almost wholly on account of the purchase of gilt-edged in the relevant week by the State Bank.

Borrowings from the Reserve Bank are slightly higher by Rs 1.91 crores at Rs 29.11 crores. In the result, Cash Balances are shown lower by Rs 15.14 crores at Rs 169.37 crores. This fall in Cash Balances is accounted for mainly by a decline in the Reserve Balances and a decline in money at call and short notice. As far as the fall in Reserve Balances is concerned, it is owing to the State Bank. On the other hand, the decline in money at call and short notice is presumably on account of other Scheduled Banks.

West German Loan for India

In the Lok Sabha on May 7, the Deputy Minister of Finance, Shri-mati Tarkeshwari Sinha, replied in the negative to a question whether Government were negotiating for a DM 252 million loan from West Germany for the current financial year. The question had been put by Shri Sem Barua and two others. The Deputy Minister invited their attention to an earlier answer in the House about the meeting of friendly countries including West Germany held last March under the auspices of the World Bank to consider financial assistance to India. In that answer, it had been stated that from the proceedings of March meeting, it could be inferred that during 1959-60, India could reasonably expect to maintain the momentum of its development programmes and meet the essential

needs of the economy without undue strain on its external reserves. The amount of financial assistance that might be made available by any of the participating countries and the purposes for which it might be used was to be determined by bilateral agreements to be negotiated individually with the countries concerned.

A New Wage Inflation?

By Paul Einzig

EXCESSIVE wage demands are once more beginning to rear their ugly heads in Britain. The Amalgamated Engineering Union rejected the advice of its leaders to concentrate on shorter working week instead of higher wages for the time being. Under Communist inspiration it passed a resolution deciding to press both shorter hours and considerably higher pay. The Mine-workers Union, too, has put in for a substantial wage increase, in spite of the fact that unsold and unsaleable coal supplies are accumulating at the pitheads on an alarming scale, and in disregard of the fact that the miners in Western Germany have just decided to accept a substantial cut in their wages in order to mitigate the crisis in their industry. The railwaymen, too, are ready to fight for higher pay. In spite of the growing deficit of the nationalised railways. All these demands are

Your goods have a ready market in South East Asia

EXPORT NOW

INDIA produces the very commodities which the South East Asian countries need—jute, textiles, tea, handlooms, handicrafts, cycles, sewing machines and many other manufactured goods. Export them now—they'll buy them.

likely to mature by the autumn, so that Britain will then be facing some major industrial disputes. There is possibility of a clash during the late spring or the early summer in the printing industry in which the Trade Unions are pressing for a major wage increase, regardless of the fact that at present the industry is doing rather badly.

Wage inflation has never stopped entirely in Britain; in spite of all disinflationary measures which caused unemployment and a decline in production and capital investment wages have continued to creep up regardless of the stable cost of living. But on the whole the Unions were anxious to avoid a showdown, and many wage claims were scaled down or deferred, and offers of moderate increases were

readily accepted. Most economists expected that this reasonable attitude would continue until the proportion of unemployed would decline below 2 per cent of the working population. They proved to be too optimistic. The moderate recovery experienced during the last two months or so seems to have been sufficient to revive the former aggressive spirit in organised industrial workers. The Communists who have been lying low are once more on the warpath, and under their influence the majority of union members is in favour of a showdown unless the employers are prepared to satisfy their demands to a considerable degree if not in full. Speakers at the recent annual conference of the Amalgamated Engineering Union threatened the employers that they will have

"the fight of their life on hand" unless they accept the demands. That the capital goods industry is still considerably under-employed, and that profit margins are still falling, does not make the slightest difference in this attitude.

In support of the miners' claim for higher wages the argument was put forward that unless the purchasing power of the workers is increased there is no hope for a full recovery from the business recession. This is a new line, and a very dangerous one, because it appears to provide theoretical justification for the unwarranted wage demands put forward in disregard of the stability of the cost of living, the decline in orders, the decline in productivity and the decline in profit margins. Hitherto such unjustified demands were

pressed simply on the ground that twelve months have passed since the last wage increase. Public opinion was turning against such an unreasonable attitude. But the new argument is liable to have some superficial appeal to the man in the street who considers the pace of recovery too slow. He may be tempted to adopt the view that, since unemployment is still high in spite of all the deflationary measures, it is time to attempt to reflate by granting higher wages.

The attitude of employers will depend on the progress towards recovery between now and the autumn. If, as seems probable, unemployment will continue to decrease during the next few months, there will be growing reluctance on the part of employers to risk a strike. Having just emerged from a lean period, they are likely to be anxious to reap the benefit of the recovery instead of closing down temporarily as a result of their refusal to concede wage demands. They may feel once more that they would now be in a position to pass on to the consumer the wage increases instead of having to cut their profit margin. It is that will be the attitude cost inflation will be once more in full swing by the end of the year.

Official resistance to such increase in cost inflation may conceivably be mitigated by two circumstances. The Government may hesitate to adopt an attitude leading to major strikes that would interfere with the progress of trade recovery. Another factor is not nearly as vulnerable as it was on previous occasions when it came under pressure as a result of wage increases. In spite of this it seems probable that the Government will resist excessive wage increases in nationalised industries, and that it may consider pressure on sterling through strikes a smaller evil than pressure on sterling through excessive wage increases.

From an electioneering point of view the Government stands to gain rather than lose popularity by adopting a firm attitude towards strike threats. The possibility of a coal stoppage is not unduly alarming, for it would provide an opportunity to liquidate the excessive accumulations of coal stocks. Unfortunately the chances are that a miners' strike would be accompanied by a railway strike, in which case the transportation of coal would encounter difficulties. But if the unions concerned see that the Government is quite prepared to face such a crisis they would probably moderate their demands and might even be prepared to accept face-saving concessions.

Nor are employers in engineering industries likely to give way too lightly. The position of the order books of most firms is no such as to encourage substantial wage increases. Here too a compromise is indicated, and it is likely to be a relatively lean compromise from the point of view of the unions. But should boom-like conditions develop by the autumn the employees would hold one more most of the trumps.

Textile Problems—With a Difference!

It is a heartening change from the general run of Chairmen's speeches at annual meetings of Cotton Textile Mill companies, with their interminable tale of woe, to the one delivered by Mr E. F. G. Hunter at the thirty-eighth annual meeting of the Buckingham & Carnatic. Problems of the textile industry would have appeared in a different light if more company chairmen had been able to say with Mr Hunter: "Thanks to the constant attention that has always been given to quality control, market research and the development of a scientific sales policy, your Company has had a satisfactory year's trading. Due to its conservative dividend policy and to the care given to the maintenance of its machinery and plant, your Company is in a relatively strong position to face the future, when the biggest challenge will be in the export field." These two sentences highlight all the aspects of efficient and enterprising management, to which other units in the industry, which are not so fortunately placed, will do well to pay some attention.

Mr Hunter has not ignored the experience of the industry as a whole in a difficult year which witnessed the closure of more Mills and reduction of shift working in others. During the year production fell by nearly 400 million yards to 4930 million yards, while exports declined by 291 million yards to 587 million, the lowest level since 1949. Mr Hunter's speech affords new insights into the problem of accumulating stocks which was a bug-bear of the Cotton Textile Mills for the last two years. Clearances from Mills for home consumption during 1957 and 1958 were substantially below the figure for 1956. Clearances for sales in the Home market declined from 4,550 million yards in 1956, to 4,000 million yards in 1957 and recovered slightly to 4,050 million yards in 1958. From this the usual inference drawn in discussions on the problems of the textile industry is that consumer demand has fallen off and this is attributed to various causes. Mr Hunter, however, does not share the view that these figures of off-take give a reliable indication of the actual level of consumer purchases at the retail point. He contends that there has been little, if any, fall in actual consumer off-take and that in fact it may well have been rising all the time, though not spectacularly. The variations in the level of off-take reflect the dealers' estimate

of the likely trend of prices. Clearances were high in 1956 when prices were on the upgrade. In the subsequent period of falling prices, dealers naturally tended to reduce their commitments, leaving the Mills to carry stocks. This explanation of the causes for the accumulation of stocks serves to underline the importance of a stable price policy for restoration of confidence in the trade.

All the accumulated stocks cannot, however, be attributed to the feeling of uncertainty in the trade regarding future trend of prices. A considerable portion of surplus stocks with Mills, as Mr Hunter recognises, are definite surpluses, in quality and type, to consumer requirements. All Mills have not been equally alert in forestalling changes of consumer preference and very few have been in the favourable position of initiating these changes in directions advantageous to themselves.

The most serious problem facing the industry is the sharp fall in exports. While the export incentives provided by the Government are helpful, stabilisation of exports at targeted level will call for a substantial effort to eliminate the factors which react on the competitiveness of Indian textiles in foreign markets. These include reduction of cost of manufacture and improvement of quality. The first depends on establishing a proper relationship between wages and productivity. As regards quality, the market for cheap unprocessed cloth has almost disappeared. The industry should be enabled to produce the dyed, printed and finished products to meet the requirements of overseas customers. Cotton prices which form an important element in the cost of manufacture should be brought down to international parity. The one advantage that India had hitherto enjoyed in export markets was the availability of cheap cotton. Availability of raw material at reasonable prices should be ensured if Indian Textiles are to regain their position in export markets.

While the problems of the cotton textile industry are dealt with in Mr Hunter's speech at the annual meeting of the Buckingham and Carnatic, he has also drawn attention to the special problems of the sections of the industry manufacturing woollen and silk fabrics, in his speech delivered a day earlier at the annual meeting of the Bangalore Woollen, Cotton and Silk Mills Company Ltd. In the case of both Woollen and Silk manufactures, production last year was hampered on account of import restrictions.

Within the country there has been a noticeable shift in consumers' preferences, from coarse woollen products to finer varieties, and this has resulted in the curtailment of production in the sections manufacturing coarse qualities. But the new demand for finer varieties could not be met in full as the foreign exchange available for imports of finer grades of wool

was limited. The consumers can, however, derive satisfaction from the reiteration of the Company's policy "to produce a range of woollen goods that meets the public's exacting demands, consonant with the quantity of wool that can be purchased with the import licences at their disposal."

Production in the Spun Silk Section has also declined on account of lack of import licences for spun silk. The position was aggravated by the closure of the only indigenous supplier of spun silk. This section, Mr Hunter has pointed out may have to close down, unless supplies are resumed before present stocks are exhausted.

★

Glass Industry

Both in volume of output and the variety of its products, the Glass Industry has grown to a stage when it is recognised as one of the major industries in the country of vital importance to the balanced development of the national economy. Production has been stepped up from about 87,000 tons in 1950 to about 1,58,000 tons in 1957. Production in 1958 estimated at about 1,80,000 tons has already surpassed the Second Plan target of 160,000 tons for 1960-61. The increase in output, it may be noted with satisfaction, is shared by the different lines of manufacture. Such lines as Sheet Glass, Table and Pressed-ware, Thermos Flasks, Safety Glass etc., have shown remarkable results. The processes of manufacture have also undergone changes in keeping with the development of modern techniques of glass manufacture. There is a progressive trend toward adoption of semi or fully automatic methods of production which has been helped by the enlargement of the market and the growing demand for better quality goods.

The growth of the industry, its present position and its future prospects are set out in the presidential address of Mr P. N. Talukdar to the Fourteenth Annual General Meeting of the Bengal Glass Manufacturers Association, which is notable alike for its clarity and comprehensiveness. In the hands of Mr Talukdar, the problems of the industry become as transparent as the product it manufactures. There is no ambiguity and no attempt at equivocation. The facts are squarely stated, even if they may not be received with pleasure in some quarters.

While the country has reason to feel proud of the achievement of this young industry, it appears that planning for productive capacity has not been marked by prudent estimate of requirements. The industry is burdened by heavy unused capacity—at present level of output, only fifty per cent of installed capacity is utilised—leading to high overheads and increased cost of production. The existence of unused capacity seems to have been overlooked by the licensing authorities who have gone out of

the way to issue licences to consuming industries for the manufacture of glass containers. As Mr Talukdar has pointed out, such a policy is not at all conducive to the health of the industry.

The main problems of the industry relate to the supply of materials, both indigenous and imported, and their transport from the source to factory site. The glass industry deals in bulky materials and therefore transport costs form an important item of the cost of the product, and availability of adequate transport is as important as availability of material in maintaining continuous stream of production. Most of the important chemicals consumed by the industry are imported. Consequent on import restrictions, the industry has been experiencing severe difficulty in getting the materials in adequate quantities. It is not clear why the Government have not yet considered the claims of the glass industry for issue of Actual Users' licences.

While supply of imported chemicals has been adversely affected by import restrictions, supplies of indigenous materials like sand, lime, limestone, dolomite, felspar and others have been highly irregular on account of non-availability of adequate transport in time. The distribution of the finished products has also been adversely affected as wagons are not readily available. The freight structure and, especially, the conditions for registration of indents for wagons, introduced since last October, act to the disadvantage of the glass industry. The industry is also handicapped by the precarious position of the fuel supply.

On account of the various handicaps which have added to the costs of manufacture, it is not surprising if the industry has not been able to render a good account of itself in the export field. Against average annual target of Rs 50 lakhs set in the Second Plan, exports have actually declined from Rs 41.53 lakhs in 1951-52 to Rs 19.71 lakhs in 1958. As Mr A. K. Sen, Union Minister of Law, who was the Chief Guest, pointed out what is lacking is not quality. But there must be sustained effort to build up export markets, aided by publicity and market surveys.

S. N. K. SUNDARAM, Mg. Director,

This expert has won the trust of millions in the label 'Sanforized'

Meet our American-trained expert who makes sure that any fabric marked 'Sanforized' won't shrink. Every day, all through the year, he tests fabrics bearing this international label; so that your clothes won't shrink out of fit—even after many, many washings!

This is how he does it:

Travelling from mill to mill, he advises and helps them with their technical problems and makes on-the-spot tests that ensure value in the cloth you buy labelled 'Sanforized'.

Whenever he visits the mills, he takes at random several samples from their godowns as well as off the processing machine. These samples are first measured, and then given a standard wash test.

And then, the samples are re-measured. This is the first stage of ensuring quality. All fabric must meet the Company's strict anti-shrinkage specifications before it can use the label 'Sanforized'.

These tested samples are sent to the New York office for re-checking, and with them goes the expert's detailed report. These documents record the progress and prosperity of each individual mill.

The New York office checks thousands of samples from all over the world. This is your assurance that fabric labelled 'Sanforized' is of a uniformly high standard, and is welcomed everywhere in the world!

Look for

on the label

and your clothes will never shrink out of fit!

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

WORLD OF JUTE

Regulation in Jute Trading

THE East India Jute & Hessian Exchange Limited, Calcutta, has been recognised by the Government of India, under the Forward Contracts (Regulation) Act 1952, as the sole body under whose aegis forward trading in raw jute and jute goods will be conducted in this country. To start with, with effect from the 29th March 1958, trading in futures (hedge) contracts in raw jute and jute goods is being carried on under the control of this Association. Thus, trading in forward contracts in raw jute and jute goods, except between the members of this Association or through or with any such member, became illegal from the 29th March, 1958.

So far, however, as forward trading in Transferable Specific Delivery Contracts in raw jute and jute goods was concerned, it was specifically exempted by notifications issued under Section 18 of the Forward Contracts (Regulation) Act. It was intended that the regulation should soon extend to forward trading in these types of contracts, so that the existing system of trading in raw jute and jute goods on the basis of Indian Jute Mills Association Raw Jute and Gunny Contract Forms and of the Transferable Pucca Delivery Orders for jute goods issued by the mills may be brought under the rules of this Exchange and there should, at the same time, be no dislocation in the existing pattern of trading. In order that the whole position may be carefully thrashed out and suitable bye-laws for regulation of trading may be framed, this period of exemption has been extended from time to time and is now due to expire on the 31st May, 1959.

The existing IJMA Contract Forms, referred to above, had been in existence for a long time from the beginning of this century and they had well served the purpose for which they were designed and proved to be very useful to both the trade and industry. Conditions of trading have since been changed in certain respects which sometimes led to trade disputes and the trading people are now more legally-minded. In so far as Transferable Pucca Delivery Orders for jute goods are concerned, certain abuses were also noticed in the process of their business operation. On the whole, it was considered by the Government that the enforcement of these contracts on a uniform statutory basis along with a standard Form of Pucca Delivery Order for jute goods would not only considerably facilitate

the process of trading, but would also do away with any abuses which might be prevalent.

Particularly in the Gunny Contract Form, provision has been made for insurance of jute goods within the limits of the Port of Calcutta, which will go a long way to meet the point raised by India's overseas buyers. Moreover, facilities have been provided for lodging any claims by the buyers with the sellers of jute goods and such claims can be made within 60 days of the arrival of the goods at the destination, which may be specified in the relevant documents.

Similarly, as regards raw jute contract, certain grievances of the sellers in the matter of receiving payment of claims have been remedied as far as possible. Moreover, it has been suggested to the Government that the Transferable Specific Delivery Contracts in raw jute and jute goods, which may be entered into on the existing basis, prior to the date of enforcement of regulation, may be exempted for some time to enable these contracts to be fulfilled by the parties on that basis.

In the circumstances, if futures as well as forward trading is regulated by a single body—The East India Jute & Hessian Exchange—speculation in jute and jute goods may be curbed considerably. It is hoped that, by regulating forward trading also, greater stability will return, thus enabling the foreign buyers to enter the market with more confidence.

Meanwhile, the market for Jute Goods had continued to display a firmer tendency and recorded fresh higher levels for the week. The news of a further decline of 1,800 tons in overall stocks with the mills at the end of April with a sharp fall of 4,800 tons in heavy goods imparted fresh strength to the market, resulting in the prices of sackings rising smartly and hessians moving up in sympathy. Reports of some business done in Cornsacks with Australia and in hessians with Argentina and the placing of an order by Russia for hessians—all these factors also contributed to the steady rise in prices, although higher levels could not be retained till the close due to some selling pressure from mills.

Despite the firmness of manufactured goods prices, the Raw Jute section remained quiet. As mills did not show much interest, sellers were forced to hedge their holdings by sales in the futures market, which was consequently depressed. Assam Bottoms were done at Rs 20.25 to Rs 20.50 per maund, while the new crop is quoted at Rs 21.50 for August/September delivery. Following were the price trends:

	May 7th Rs	High-est Rs	May 13th Rs
Hessians:			
40" x 10 Ozs. ...	40.25	41.20	41.05
Ready			
40" x 10 Ozs. ...	39.80	40.70	40.50
June	32.20	32.75	32.70
40" x 8 Ozs. ...	30.10	30.60	30.65
40" x 7 1/2 Ozs. ...			
Sackings:			
B. Twills Ready	94.30	96.10	94.80
B. Twills June	94.15	94.40	94.15
Hy. Cees (Green)	94.00	94.75	94.50
Cornsacks	95.25	96.00	95.75

WORLD OF TEA

Prospects for New Season's Crop

THE prospects for the New Season's crop are viewed optimistically on the basis of several favourable factors. Afloat stocks in London are now lower than expected, indicating increased consumption in the producing countries. It is also felt that the excessive supplies amounting to 60 million pounds might have been absorbed considerably. Hence, a greater balance between supply and demand is foreshadowed. Moreover, there are rumours about the revival of the international tea agreement. It is possible that it may be confined to India and Ceylon. Hopes are also entertained that the levies by the West Bengal and the Assam Governments may be reduced following the recent decision by the Pakistani Government to export a big quantity amounting to 20 million pounds.

According to the tea circles in Calcutta, the substantial increase in production in 1958 will be absorbed by consumers without any great strain on the market. They feel that, in the coming season, the pattern of the last two years' trading will likely be repeated. Quality teas will almost certainly be in short supply and command high prices. Although the outlook for the plainer kinds is more uncertain, it is reasonable to suppose that these will fare better under the influence of rising internal demand than in other selling centres.

Again, consumption of tea, in India, is growing at the rate of about 10 to 15 million pounds per year and is placed at 240 million pounds annually. It is estimated that, after the completion of shipments of the 1958 season's teas, some 230 million pounds will remain in India and this is a fair indication that stocks in the country are by no means substantial.

Looking further ahead, a bright feature for the Indian tea industry is seen. The quality of Indian tea cannot be matched by other growers and will always command a ready sale overseas, while the Common tea producer may find, in India, a market which had its days

of greatest expansion just around the corner. Consumption of tea here is expected to rise to about 320 million pounds by the end of 1965.

Meanwhile, stocks in London had, for some time past, been causing anxiety; but these are partly due to very expeditious shipments compared with previous years. But, the latest figures seem to indicate a comfortable position rather than a glut. Stocks in London, as on the 1st May, totalled only 149.60 million pounds as against as much as 154.16 million pounds in the previous week. Total afloat was 15.22 million pounds including 5.07 million pounds from Calcutta; nil from Chittagong; 1.67 million pounds from Cochin; 4.76 million pounds from Colombo and 3.73 million pounds from other Ports.

In the Internal Sale held in Calcutta this week, offerings were 21,595 packages of Dusts. There was a good general demand. Orthodox types were upto 4 np per pound dearer with the powdery kinds continuing to sell well. Leg-cut Dooars received good support and were sold at about last rates. The few Darjeelings, on offer, were irregular and prices for these were generally easier. Medium CTC teas were irregular, sometimes selling upto 8 np per pound below valuations. Powdery kinds, in this category, were, however, well supported and often dearer. The few best liquoring CTC teas were upto 10 np easier, the smaller types showing an easier tendency. Following rates were quoted:—Medium Dooars Dust Rs 1.78 to Rs 1.82; Medium Assam Grainy Dust Rs 1.74 to Rs 1.78; Medium Assam CTC Dust Rs 2.05 to Rs 2.20 and Best CTC Assam Dust Rs 2.60 to Rs 2.95 (nominal). Also, 451 packages of Leaf grades were offered for internal consumption and these met with a good general demand at irregular rates.

In the Cochin market, about 800,000 pounds of Leaf tea were offered for exports. The offerings from all districts showed a further decline in quality and, in particular, high-grown teas had less flavour. There was useful enquiry for low medium and medium teas which were sold well and were irregularly 5 np per pound dearer in particular. Fannings grade: were in good demand. There was, however, less enquiry for good medium Broken and these were sometimes difficult to sell. There were a number of withdrawal under this category. However, similar Fannings met with keen competition and were sold well.

Best liquoring high-grown continued to be easier following quality with Broken grades in demand. CTC teas, on offer, were sold well at slightly easier rate. There was a strong demand for Whole Leaf grades at dearer rate. Following rates were quoted:—Lc Medium Rs 1.75 to Rs 1.85; Medium Rs 1.85 to Rs 2.15; Good Medium Rs 2.40 to Rs 2.75 and Quality Rs 2.45 to Rs 4.22.

WORLD OVERSEAS

US Notes

A special Commerce Department study, perhaps the broadest of its kind yet undertaken, throws new light on the U.S. Government's foreign aid endeavours. The analysis, which is concerned with actual outlays rather than with scheduled or authorized spending, reveals some hitherto little-appreciated trends and points to some significant directions in future aid disbursements.

The over-all figures show that the US Government gave or lent a net total of \$5,100 million to other countries last year, about the same as in 1957. This outlay brought to \$72,600 million the total amount the US Government has made available to other lands since the end of World War II—well over half of it for all sorts of economic aid. Included in this postwar total is \$3,500 million put into such United Nations institutions as the World Bank, the International Monetary Fund, and the International Finance Corporation.

Impressive as these totals are, they by no means tell the full story. Their most interesting aspect lies in the nature and relationships of the various programmes that fall within the total U.S. assistance effort.

Not generally realized, for instance, is the fact that the U.S. Government extended more economic aid last year from sources outside the basic mutual security programme than under the programme itself. This is a point not to be overlooked, especially with President Eisenhower's proposed \$900 million mutual security programme for the 1960 fiscal year beginning next July 1 now up for Congressional action. This recommended total, of course, includes both economic and military assistance.

Economic aid in the calendar year 1958 under the mutual security programme, for which the U.S. International Co-operation Administration is generally responsible, came to about \$1,500 million—roughly the same as in other recent years. But aid from other U.S. Government programmes in that same year came to about \$1,800 million. A major item in this were new loans by the U.S. Export-Import Bank, which received an enlarged lending authority from Congress.

Also prominent were sales of U.S. farm reserves for foreign currencies. The bulk of these currencies are granted or lent back by the United States for economic development projects in the countries acquiring the agricultural reserves. Among other important items were the Government's outright gifts to

other nations of U.S. foodstuffs in the form of disaster relief or donations to American private charitable organizations for shipments abroad.

This year, assuming Congressional acceptance of Administration recommendations, there will be nearly \$2,000 million in aid available from programmes outside the mutual security legislation. The rise would stem largely from the increased U.S. contribution to the International Monetary Fund, and the U.S. share of the new Inter-American Development Bank to stimulate economic growth in Latin American lands.

At the same time, there is reason to expect that economic aid disbursements under the mutual security programme itself may start to rise this year. This is mainly because of the U.S. Development Loan Fund (DLF), which began operations only last year.

Already, DLF has committed nearly all of its currently available \$700 million for projects in approximately 35 countries around the world. But because of its recent start, it was able to disburse only a small portion of this last year. As time goes on, disbursements should rise.

Moreover, Congress right now is considering a supplemental authorization, in the neighbourhood of \$100 million to \$200 million, for DLF operations during the current 1959 fiscal year ending this June 30. And a recommendation for another \$700 million for DLF is part of the President's regular mutual security request for the 1960 fiscal year.

Meanwhile, no reductions have been recommended—indeed, in some instances slight increases have been proposed—for other economic aid portions of the mutual security programme for fiscal 1960. These include provisions for technical co-operation and other special needs abroad.

All of this, barring unforeseen contingencies, may point to a rising trend in the U.S. Government's economic aid outlays next year, and possibly in the years ahead.

Britain

THE Daily Telegraph (May 5), writing on the strength of sterling, says: "A straightforward £40,000,000 rise in Britain's gold reserves in April—or in any month, for that matter—speaks for itself. It speaks even more for the soundness of the Government's policy reflecting fully restored confidence in sterling and a basically good trading position capped by favourable seasonal influence."

"True, the increase is not so great as a year ago. But a lot of money was then returning to this country as a result of the Government's measures to put our house in order late in 1957. That the reserves, at £1,161 million, should now have exceeded the peak reached last November is an indication of how the position has been consolidated. Indeed, it may well prove to be the case that the reserves have been helped by certain measures of preference abroad

for holding money in sterling rather than dollars.

"It is in its broader aspect, as a pointer to the balance of payments of the Sterling Area, that the April return deserves attention. Here the result is rather better than was expected, even allowing for the seasonal trend."

"Although world commodity prices are generally still depressed, it happens that commodities mainly produced in the Sterling Area have suffered the least. Rubber, wool, and cocoa prices, notably, have moved in our favour."

"This sort of help may be regarded as fortuitous. But it is only one of many elements that go to the making of our balance of payments, and the real test of policy, as the latest figures show, is to ensure that every favourable opportunity is turned to good account."

The Financial Times (May 5) says: "The movement of the gold reserve during April was refreshingly straightforward. There were no special receipts to allow for, and only one small special payment of £4,000,000. The rise of £40,000,000 in the reserve which took place during the month can, therefore, be taken at its face value and welcomed without reservation."

"With the exception of December and March—both months in which substantial repayments of debt took place—the reserve has risen continuously since the autumn of 1957."

The dominant factor in the United Kingdom economic situation in April was the Budget speech and the reactions it produced. Production had already risen in the closing stages of 1958, thanks partly to earlier Government measures. But (writes a London correspondent) the Chancellor of the Exchequer took the view in the Budget that it was not only possible but also desirable to speed up the increase in production. The key motive here was the need to reinforce future demand, particularly for investment; at the same time, the country's reserves were considered to be strong enough to afford an increase in imports which would accompany greater demand and output at home.

Industrial production in the first quarter of this year was maintained at the higher level reached in the closing months of 1958. There was further expansion in the chemicals industry, and in the first quarter of this year steel output stopped falling. There have also been marked gains in the textile industry, in wool, and in man-made fibres. A resurgence in cotton awaits the effect of the Government reorganization plan.

There are also indications that the demand for labour is no longer falling. Unemployment in March was sharply down on January and February, to 2 1/2 per cent of the labour force, and returns for April showed a rather more than seasonal fall. The fall in unemployment was widespread over the country.

On the wages front, activity may be increasing after a quiet period, but since November the index of wage rates has been sta-

ble, and no marked upward movement seems likely in the near future.

The retail price index has also been steady between mid-February and mid-March, and it has, in fact, been relatively stable for almost a year. The outlook for the coming months promises continued stability.

On the external economic front there has been no change in the trend in April or, indeed, in recent months. Rising activity at home is bound to result in some increase in imports, and the tendency for imports to increase will probably precede an expansion in United Kingdom exports. But in due course exports, too, should expand with an improvement in the purchasing power of Britain's overseas customers.

In general, of course, the effects of the Budget concessions have not yet had time to make themselves appreciably felt.

"The standard of living of the (British) nation is higher than ever before; overseas, we are investing a bigger proportion of our income than any other nation, and double what we could manage eight years ago; and far and away the greater part of this is in the Commonwealth." These points were emphasized by the Chancellor of the Exchequer, Mr. Derick Heathcoat Amory, in a speech at the annual meeting of the Primrose League in London on May 1.

"At the same time," Mr. Heathcoat Amory continued, "we are steadily building up our reserves and faithfully repaying our debts. And today our currency—sterling—is held in high repute and confidence throughout the world."

"Let us call to mind the two great economic problems which have cast their shadow across our generation—mass unemployment, which was the blight of the inter-war years, and persistent inflation which, since the war, has eroded the purchasing power of money in almost every country in the world. How to combine maximum employment with maximum stability of prices is still the most intractable economic problem of our time. Inflation proved a most powerful and insidious enemy. Stern action proved necessary to deal with it, culminating in the drastic measures imposed by the Government in the time when my predecessor, Mr. Peter Thorneycroft, was Chancellor of Exchequer."

"These remedies have worked and, over the past 18 months, inflation has been eliminated—by world recession, has stayed practically the lowest of any industrial nation in the world, and is now falling further. I cannot too often repeat that we seek the highest level of employment we can get consistently with safeguarding the economic foundations on which security of employment rests."

"And so we have been able over the past 12 months gradually, with safety, to relax those anti-inflationary restrictions like the credit squeeze. A careful and cautious resumption of expansion has now become a safe and desirable policy."

Inquiry into Allegations Against Shri M.O. Mathai

The following documents relating to the examination of allegations made against Shri M. O. Mathai, former Special Assistant to the Prime Minister, were placed on the table of Rajya Sabha on May 7, 1959.

Letter No. 1046 PMH/59 dated May 6, 1959, from the Prime Minister to the Chairman, Rajya Sabha.

As you are aware, various allegations were made against Shri M. O. Mathai in Parliament. On the 11th February I requested the Cabinet Secretary to examine these allegations and to find out if Shri M. O. Mathai had made any improper use of his official position during the period of his employment with Government. This enquiry was in the nature of an investigation for my own guidance. I stated however in Parliament that when I received the report of the Cabinet Secretary, I would send it to the Finance Minister and separately to the Comptroller & Auditor-General so that they may judge the financial propriety of any action that had been taken.

The Cabinet Secretary submitted his report to me on May 2, 1959. I sent copies of it to the Finance Minister and the Comptroller and Auditor-General. I attach their comments.

It is not usual for departmental enquiries to be given publicity. The present report was not even a departmental enquiry; it was in the nature of an investigation to establish the facts.

I had previously stated that I would either submit the Cabinet Secretary's report or my own report to you. I am therefore writing to you now on this subject and enclosing a note prepared by me based on the Cabinet Secretary's report. In this note, the Cabinet Secretary's comments and findings have been briefly given.

As a result of considering the report of the Cabinet Secretary as well as the comments of the Finance Minister and the Comptroller and Auditor-General, I am of opinion that during the period of his employment with Government, Shri Mathai has made no improper use of his official position.

Note by the Prime Minister in regard to certain allegations made against Shri M. O. Mathai.

The Cabinet Secretary was asked by me on the 11th February 1959 "to examine the allegations against Shri M. O. Mathai of improper use of his official position during the period of his employment with the Government and submit a report." Some days later, on the 17th

February, the Home Minister announced in the Rajya Sabha that anyone who had material information on this subject could send it to the Cabinet Secretary. No such information was sent to him, except a letter from a person in prison who made some general charges without supporting evidence, and an anonymous communication.

The Cabinet Secretary received various statements from Shri Mathai in regard to his finances. He also saw income-tax assessment figures and wealth tax returns. The pass-book from one Bank and a statement of account from another Bank were also consulted by the Cabinet Secretary. He found that these various statements and the information from the Banks tallied.

The charge made against Shri Mathai was of improper use of his official position during the period of his employment with Government. Before this employment began, he had a considerable sum of money with him as a result of his service with the American Red Cross on the Assam-Burma border as well as by his obtaining some American surpluses. Shri Mathai came to me in Allahabad about a year before I entered Government. I had informed him then that I could not afford to pay him any suitable salary. He had told me in reply that he had earned a considerable sum during his service with the American Red Cross in the Assam-Burma border and that he could support himself without any difficulty for some years without any salary. So far as I can remember, he mentioned the sum of Rs two or three lakhs with him then. He served me therefore without any salary till some time after I had joined Government, when a salary was fixed for him, which began with Rs 750 a month and later was fixed at Rs 1500 a month. He was treated as a special officer and did not have a regular post which was an integral part of the Prime Minister's Secretariat. His appointment was an ad hoc and temporary one and he was not treated as a permanent Government servant.

The initial sums that he brought with him plus his salary and the income from dividends and interest have been found by the Cabinet Secretary to be adequate for the various purchases or payments that he made subsequently and which are referred to in the statements and Bank accounts. It was out of this that he sent remittances from time to time to his relatives.

The purchase of a property in the Kulu Valley was made for Rs 1,20,000 by a registered sale deed. He disposed of some of his shares and investments for this purpose. After some time, finding that he could not manage this Kulu property from Delhi, he sold it for approximately the same amount as the purchase price. He had mentioned this transaction to me both before the purchase and at the time of sale. The Cabinet Secretary finds that there is no evidence

of improper use of his official position in this transaction.

In regard to the insurance policies that he had taken and the conversion of some of them into annuities, payment was made partly from the money with him and partly from his provident fund which he realised. According to the Cabinet Secretary, there is no evidence of any improper use of his official position in these transactions.

As regards the Trust called "The Chechamma Memorial Trust", this was a public charitable trust formed in August, 1956, the original trustees being Rajkumari Amrit Kaur and Shri M. O. Mathai. The objects of the Trust are: Grant of financial assistance for the production of books of historical and educational value, grant of scholarships to students, grant of financial assistance to persons devoted to voluntary social service, to hospitals and other public institutions devoted to medical relief and institutions established for the purpose of advancing the welfare of women and children. Subsequently a third trustee was appointed, namely, Kumari Padmaja Naidu. There was no single Managing Trustee. Shri M. O. Mathai has stated and Rajkumari Amrit Kaur has confirmed that all the donations were collected by Rajkumari. Shri M. O. Mathai had nothing to do with approaching donors or collecting donations.

At the time of the formation of this Trust, Shri M. O. Mathai mentioned this matter to the Comptroller and Auditor-General of India and asked him about the propriety of his becoming a trustee. He was told in reply that there was no objection to it. Shri Mathai however wrote formally to the Ministry of Home Affairs on this subject. The Home Secretary replied that there was no objection to the proposed course. He had also mentioned this matter to me.

The cash donations received by this Trust amount to Rs 10,12,000. In addition, a house at 9 Tees January Marg was given to the Trust on the 3rd January 1958 by Messrs Birla Cotton Spinning & Weaving Mills, Delhi. The Cabinet Secretary had this valued by the Superintending Surveyor who has reported that the total value of the property, both house and land, is about 1,87,000. Shri B. M. Birla has stated that the gift was made at the request of Rajkumari Amrit Kaur for the purposes of the Trust.

Rajkumari Amrit Kaur stated that all the donations were collected by her on the understanding that they would be treated as anonymous donations. She was not prepared therefore to make public the names of the donors. As a matter of fact, she showed the names of the donors both to me and the Cabinet Secretary, but on the express understanding that they would not be made public. In this list there are twenty donations mentioned being given from 14th October 1954 to the 17th December 1958. More than half the money was collected by Rajkumari Amrit

Kaur before the Trust was actually formed.

Only Rs 25,000 has been spent out of the corpus of the Trust money. The rest is intact, except for the payment of Rs 73,000 to the Land Development Officer, Delhi in consideration of permission to transfer lease-hold of the house in Tees January Marg. Further, a sum of Rs 1798.56 nP was paid to the Mills on account of stamp duty and registration charges which had been incurred by the donor. Apart from these payments, the corpus of the Trust money is intact. This is supported by a statement from the Bank. Rajkumari Amrit Kaur said that she did not wish to spend the money in dribbles but was aiming at collecting enough money so that the trust could function as a foundation for charitable purposes.

The Cabinet Secretary states that according to the facts placed before him, Shri Mathai did not abuse his official position in connection with the Trust.

As regards the charge that Shri Mathai had undeclared money in foreign banks, there appears to be no truth in it. It appears that some money was sent by the Prime Minister to Shri A. C. N. Nambiar, then Ambassador in Western Germany, for a particular purpose. Shri A. C. N. Nambiar having fallen ill later thought it desirable to place the amount in a joint account so as to avoid any difficulties arising later in regard to its withdrawal in the event of his unexpected death. As the money had been sent to him through Shri M. O. Mathai, he had his name added and made this account a joint account. No cheque book was sent to Shri Mathai nor indeed did Shri Mathai deal with this account in any way. On enquiry it was found that there was a balance of Swiss Francs 948.50 in this account.

Comments of Shri Morarji Desai, Minister of Finance, on the Cabinet Secretary's report.

After having gone carefully through the report of the Cabinet Secretary on the allegations against Shri M. O. Mathai, I had a discussion with the former on the subject matter of the enquiry and the enquiry held by him and have come to the following conclusions:

The Kulu Orchards were purchased from some Scottish ladies in a proper manner and there cannot be any question of an improper dealing in this case. There was nothing wrong or improper in the sale of this property to a company which dealt in fruit canning as the sale price was not more than the price paid for the property. Shri Mathai had informed the Prime Minister before entering into both transactions.

I find nothing irregular in the insurance policies of Shri Mathai. There does not seem to be anything unaccounted for as regards the premia paid for the various policies. The payments made by Shri Mathai in this connection were from his salary income and the moneys possessed by him before

he joined the Prime Minister in the beginning of 1946. The large policy for which a lump payment of Rs 48,000 was made was paid for out of provident fund receipt and sale of savings certificates.

The moneys sent by him to his brothers and sisters during the last 10 years amount to about Rs 1,25,000. These were sent by registered and insured postal parcels which were sent through the clerks in the office and there was no secrecy about these remittances.

The question which arises from those transactions is how Shri Mathai came into the possession of all these moneys, that is, whether the possession was legitimate or whether the moneys were obtained in an illegitimate manner.

The total amount of the following five items comes to Rs 5,75,000.

Living expenses at the estimated rate of Rs 250 p.m. for 13 years	39,000
Insurance premia paid ..	1,38,466
Money spent on acquiring existing assets ..	2,47,000
Remittances to brothers and sisters ..	1,25,000
Bank Balance on 24.2.59	25,000
Total	5,75,247

Shri Mathai's statement shows that he had Rs 3,90,000 out of which Rs 1,25,000 were set apart for his brothers and sisters, before he joined the Prime Minister early in 1946. His net income from salary and investments upto date amounts to Rs 2,31,074. The total of the two amounts comes to Rs 6,21,000. This will show that the original assets plus the income from salary and investments exceeded the disbursements and the bank balance by Rs 45,753. The explanation, that this amount would represent personal expenditure other than living expenses as well as some remittances which would be in addition to Rs 1,25,000 mentioned earlier, appears quite reasonable.

The question that would arise would be whether the statement that Shri Mathai had with him Rs 3,90,000 including Rs 1,25,000 earmarked for his brothers and sisters before he joined the Prime Minister is acceptable. Shri Mathai was serving in the American Red Cross before he joined the Prime Minister. We have been told that Shri Mathai's work was very much appreciated by the Red Cross Authorities. It is stated that as a mark of their appreciation they gave him some part of the surplus stocks which they were disposing of at the conclusion of the war. Much of this surplus stocks was destroyed, part of it was given to their Indian officials. I had heard of this method of disposal from different sources in 1946. There is, therefore, no reason to disbelieve Shri Mathai's statement in this matter, especially when it is remembered that Shri Mathai had told the Prime Minister, at the beginning of his service with him, that he had in his possession about rupees two to three lakhs. His income tax and wealth tax returns after 1947 are in order.

Shri Mathai has stated that he had no other properties or moneys and nobody has given any material to show that he had any other assets. The explanation is, as I have said above, reasonable and there is no evidence whatsoever to the contrary. It would not, therefore, be right for anybody to say without any reasonable evidence that Shri Mathai obtained these assets by improper means or by abuse of his official position.

He had reported to the Prime Minister his assets before he joined him and also reported to him the transactions regarding the Kulu Orchards. If he did not report his insurance policies, he did not do so because he had no idea that he had to do so. Many highly placed Government officials have not reported their insurance policies as they did not think that the rules required such report. This has been clarified only recently. Moreover, Shri Mathai was a temporary Government servant and would have left Government service with the Prime Minister, that is, he would not be a permanent servant at any time. He was not in ordinary Government service. In any case, the point of substance is not reporting, but whether they were proper. I have already commented that the payments were fully explained.

The only question that remains to be dealt with is that of the Chechamma Trust. Shri Vishnu Sahay's inquiry has shown that there was nothing irregular in this Trust and that the moneys obtained through the efforts of Rajkumari Amrit Kaur. The correspondence between one of the donors and Rajkumariji supports this contention. Shri Mathai while writing to the Home Secretary in 1954 to find out if there was anything wrong in being a Trustee of this Trust had stated explicitly that he would not be collecting any funds for the Trust. The giving of Shri Mathai's mother's name by Rajkumariji to the Trust and Shri Mathai's agreeing to it may be called imprudent but cannot be called an abuse of official position or immoral in any sense.

The Home Minister has stated in the Rajya Sabha that anybody who has any information and evidence as regards any allegation against Shri Mathai should give it to Shri Vishnu Sahay. The fact that nobody has come forward with any reliable information or evidence is significant. In view of this and the facts given above, as elicited in the enquiry by Shri Vishnu Sahay, it is obvious that Shri Mathai cannot be held guilty of any abuse of official position as alleged or of any illegitimate action.

COMMENTS OF COMPTROLLER & AUDITOR GENERAL OF INDIA ON THE CABINET SECRETARY'S REPORT

In his report to the Prime Minister, the Cabinet Secretary has examined the allegations that Shri M. O. Mathai has made improper use of his official position during

his tenure as Special Assistant to the Prime Minister. After analysing all available material, the Cabinet Secretary has reached the conclusion that there is no evidence of the improper use of his official position by Shri M. O. Mathai. From a reading of the report, I see no reasons to disagree with this conclusion.

Educational Concessions to Dependents of Political Sufferers

Dr K. L. Shrimali, Union Minister of Education, in a statement laid on the table of the Lok Sabha on May 7, gave details of replies received from various State Governments in regard to grant of educational concessions to dependents of political sufferers. The Minister said that the State Governments and the Union Territories concerned were being asked to expedite finalisation of their proposals. Generally speaking, Dr Shrimali said, delay was inherent in the working out of the scheme as an estimate of the number of persons likely to be benefited had to be ascertained first and the financial implications worked out. The State Governments which had yet to reply had not given any reasons for the delay. The statement said:

Andhra—Will introduce the Scheme in the current academic year. Details are under preparation and a provision of Rs 1,00,000 has been made tentatively for the purpose.

Assam—Will introduce the Scheme in the current financial year. Details are under preparation and Rs 1,20,000 has been estimated as the probable expenditure.

Bihar—No reply forthcoming yet.

Bombay—The matter is receiving attention.

Jammu & Kashmir—Apparently do not intend to introduce the Scheme.

Kerala—The matter is receiving attention.

Madhya Pradesh—Will introduce the Scheme. Details are under preparation.

Madras—The matter is receiving attention.

Mysore—Introduced a Scheme of their own in November, 1958. They are now preparing details for a new Scheme in the light of the proposal received from the Government of India.

Orissa—No reply forthcoming yet.

Punjab—The matter is receiving attention.

Rajasthan—No reply forthcoming yet.

Uttar Pradesh—Are considering a revision of their own scheme in the light of the proposal received from the Government of India.

West Bengal—The matter is receiving attention.

Delhi—The Scheme will be introduced in the current academic year. Proposals for the grant of freeships and half-freeships have been worked out and will be put into effect at the appropriate time. The question of the grant of certain other concessions is under examination.

Himachal Pradesh—No reply forthcoming yet.

Manipur—Details of the Scheme are under preparation.

Tripura—The Scheme will be implemented in the current academic year. Details have not so far been communicated by the Administration.

N.B.—The Andaman and Nicobar Islands and the Laccadiv, Minicoy and Amindive Islands do not have political sufferers.

This Minister was replying to a question by Shri Bhakt Darshan in the Lok Sabha on May 7, 1959.

Compulsory Elementary Education Programme

Estimates for the compulsory elementary education programme for the Third Five-Year Plan have so far been received from the Governments of Andhra Pradesh, Assam, Bihar, Bombay, Kerala, Madhya Pradesh, Mysore, Orissa, Punjab, Rajasthan and Uttar Pradesh. This information was given by Dr K. L. Shrimali, Union Minister of Education, in a written reply to a question by Shri Subodh Hansda and two other members in the Lok Sabha on May 7.

The Minister replied in the affirmative to another part of the question whether any assessment had been made by the Government of India as to the total amount required for the purpose. The amount would be above Rs 300 crores, he added.

Students Receiving Engineering Education

Twenty-nine thousand two hundred and ninety-five students were receiving engineering education in the country at present. This information was given by the Union Deputy Minister of Scientific Research and Cultural Affairs, Dr M. M. Das, in a written reply to a question by Shri D. C. Sharma in the Lok Sabha on May 7.

In a written reply to another question by Shri Naval Prabhakar and Shri Bhakt Darshan regarding the number of students who had completed their engineering and technical education at degree and diploma levels during the last five years, Dr M. M. Das said that their number was: Degree—20,243; Diploma—22,923.

Asked as to the number among them who received their training abroad, the Deputy Minister said that similar figures in respect of students who received their training abroad during the last five years were not available, but it might be mentioned that over 2,000 engineers, scientists and technologists had registered themselves in the 'Indians Abroad' Section of the National Register Unit.

Central Grants for Basic Education

In a written reply to a question by Shri Pangarkar and Shri D. C. Sharma, Dr K. L. Shrimali, Union Minister of Education, laid the following statement on the table of the Lok Sabha today giving the total expenditure, recurring and non-recurring, incurred during 1918-59 by the Central Government on each Scheme of Basic

Education and estimate of the annual expenditure for 1959-60:— During 1958-59 Rs 755.75 lakhs was sanctioned to various State Governments for Schemes pertaining to Basic and Elementary Edu-

cation for Basic Education alone was made. The estimated expenditure on these Schemes during 1959-60 is Rs 1,050.00 lakhs. The position regarding Central Schemes on Basic Education is as follows:—

Name of Scheme.	Total expenditure, recurring and non-recurring during 1958-59. Rs.	Estimates of the annual expenditure for 1959-60. Rs.
1. National Institute of Basic Education ...	1,29,408	1,88,000
2. Grants to Voluntary Organisations in the field of Basic Education ...	1,28,547	6,54,000 (includes pre-primary Education)
3. Production of Literature and other material for Basic Education ...	3,400	2,00,000
4. Loans for Hostels ...	1,55,300	10,00,000
5. Scheme to encourage Post-Basic Education ...	43,000	4,50,000
6. Seminars in Basic Education ...	15,446	19,000
7. Committee to study introduction of Basic Education in Public Schools ...	2,064	

Medium of Instruction in Delhi University

Shri Ram Krishan Gupta and Shri Ajit Singh asked the Union Minister of Education whether it was a fact that Delhi University had decided to change over to teaching through the medium of Hindi, and if so, whether Government had approved the scheme. Replying, Dr K. L. Shrimali stated in the Lok Sabha on May 7, that in October, 1955, the Academic Council of the University of Delhi had drawn up a time-table for the introduction of Hindi as medium of instruction and examination, which was as follows:—

Examination	Medium of Instruction	Medium of Exam.
B.A. (Pass)	July, 1959	1962
B.Sc. (Pass)	" 1963	1966
B.A. (Hons.)	" 1960	1963
B. Sc. (Hons.)	" 1964	1967
M.A.	" 1963	1965
M.Sc.	" 1967	1969
Technical and Professional subjects	" 1969	1972-75.

Although a time-table was drawn up, the necessary steps to implement the programme had not yet been taken by the Colleges or the University. The Vice-Chancellor, University of Delhi, convened a meeting of the Principals, at which the Deans of the Faculties of Arts, Science and Social Sciences were also present, on April 21, 1959, to consider the question of introduction of Hindi as medium of instruction and examination in the University.

According to the revised programme proposed at the meeting, steps should be taken to make Hindi the medium of instruction and examination for the B.A. (Pass) classes from July, 1962.

The programme proposed at the meeting is as follows:—

Examination	Medium of Instruction	Medium of Exam.
B.A. (Pass)	July, 1962	1965
B.Sc. (Pass)	" 1964	1967
B.A. (Hons.)	" 1963	1966
B.Sc. (Hons.)	" 1965	1968
M.A.	" 1966	1968
M.Sc.	" 1970	1972
Technical and Professional subjects	" 1970	1972-75.

These proposals are expected to be placed before the Academic Council and other authorities of the University for consideration after the long vacation, the Minister added.

Excise Revenue from Khandasari

The total collection of Central duty on khandasari sugar in March 1959 amounted to approximately Rs 70,000, said Shri Morarji Desai, Minister of Finance, in reply to a question by Shri Liladhar Kotoki and two others in the Lok Sabha on May 4.

He explained that since the reimposition of Central excise duty at the enhanced rates, hardly more than a month-and-a-half had elapsed; the production season had now almost come, to an end. The revenue from khandasari sugar was expected mainly from the production next season, the stock lying in the factories on the last day of February 1959 not being liable to pay the duty. In the circumstances, he said the question of short-fall did not arise.

Canadian Wheat Gift

India has recently accepted a wheat gift from Canada, said the Minister for Food and Agriculture, in a written reply to Moulana M. Faruqi in Rajya Sabha on May 7. The amount of the gift is ten million dollars, which is expected to fetch about 1.5 lakh tons of wheat.

Spun Pipe Factory at Durgapur

The installed capacity of annual outturn of the spun pipe factory started at Durgapur was Rs five lakhs on the basis of single shift working and Rs nine lakhs on double shift working, stated Shri Jalsuklal Hathi, Union Deputy Minister of Irrigation and power, in a written reply to Moulana M. Faruqi, in the Rajya Sabha on May 4.

Moulana Faruqi had asked the Deputy Minister about the capacity of the spun pipe factory which had been started to meet the urgent demands for hump pipes and collars for construction of canals.

Shri Hathi added that the factory was started in February, 1957 and the capital investment up to the end of March, 1959, was Rs 2,26,825.

New Factory to Manufacture Rail Parts

A factory is being constructed at Manduadhi near Varanasi to meet the shortfall in the manufacture of spares in the railway repair workshops against rolling stock maintenance requirements. It is also proposed to undertake reconditioning of machine tools in common use on the railways. Shri S. V. Ramaswamy, Deputy Minister of Railways, gave this information in the Rajya Sabha on May 4 in a written reply to a question by Shri Nawab Singh Chauhan.

Replying to another part of the question, the Deputy Minister said that it was estimated that the project would cost approximately Rs 4.79 crores. It was, however, difficult to forecast the extent of expenditure during this Plan period as the subject of further progress in the construction of this factory was under review due to a difficulty having arisen for the supply of the requisite electric power. The expenditure on the project so far was approximately Rs 70 lakhs.

Export of Iron Ore

During 1958, 20.18 lakh tons of iron ore were exported to various countries from 15 Indian ports. This information was given by the Minister for Commerce and Industry, Shri Lal Bahadur Shastri, in the Rajya Sabha on May 6 in a written reply to a question by Shri Jugal Kishore.

Shri Shastri said that the countries which imported Indian iron ore included Japan, Czechoslovakia, Poland, Yugoslavia, Italy, East Germany, France, Holland and West Germany.

The Minister said that the iron ore exported was surplus to India's requirements. He added that the annual iron ore requirements for the steel plants in the public and private sectors were 111.8 lakh tons. Of this, the Rourkela plant required 17 lakh tons; the Bhilai and Durgapur plants 19.4 lakh tons each; Mysore Iron and Steel Works 2 lakh tons; Tata Iron and Steel Co. 32 lakhs; and Indian Iron and Steel Co. 21.8 lakh tons.

Asansol Polytechnic

Amounts so far sanctioned for construction of buildings for the Mining Engineering Section of the Asansol Polytechnic have been fully utilised. Out of Rs 65,000 sanctioned for the purchase of equipment, Rs 25,736 has been utilised.

This was stated by the Deputy Minister of Scientific Research and Cultural Affairs, Shri M. M. Das, in a written reply to Shri Subodh Hansda and Shri S. C. Samanta in the Lok Sabha on Monday.

The anticipations of the Institute regarding availability of equipment were not realized and orders have been placed for supplies, some of which will be received from abroad, the Deputy Minister added.

Indo-German Co-operation for oil Exploration

Shri K. D. Malaviya, Minister for Mines and Oil, said in the Lok Sabha on May 7, that an offer had been made by the German Government indicating that they were prepared to depute a German seismographical team to come to India for conducting necessary geological and geophysical investigations of the soil and to collect data for examination.

The Minister was replying to a question by Shri Vidya Charan Shukla in the Lok Sabha on May 7. The Minister added that the offer was under consideration of the Government.

Over 770 Villages Supplied with power by 1958 Schemes for Rural Electrification

Seven thousand, seven hundred and one villages had been electrified from the beginning of the Second Five Year Plan up to the end of December, 1958, stated Hafiz Mohd. Ibrahim, Union Minister of Irrigation & Power, in a written reply to a question by Sarvaswari Kodan and Warior in the Lok Sabha on May 6.

Hafiz Sahib also added that it had been decided to extend loan assistance to the State Governments from 1959-60 for rural electrification schemes included in the plans of the States on the same terms as were sanctions for the programme for the expansion of power facilities for increasing employment opportunities; i.e., for the first five years only interest would be paid and thereafter the loan and the interest together would be recovered in equal instalments spread over 25 years.

For a scheme to qualify for this assistance, the Minister continued, it should fall into one or the other of the following categories:— (a) Rural distribution extended from grid system; (b) in the case of urban schemes, extensions from urban area to the adjoining rural area; and (c) small generating stations with their associated feeder and distribution lines where these were intended to serve one village or a group of villages.

Disposal of Election Petitions

As on May 1, 1959, 423 election petitions, 53 in respect of Lok Sabha and 370 relating to Legislative Assemblies, had been disposed of by Election Tribunals.

In all 52 elections had been declared void including four to the Lok Sabha and 48 to the State Assemblies.

The total number of election petitions still pending with Election Tribunals, High Courts or Supreme Court was 55. Of these ten were petitions relating to Lok Sabha and the rest respecting Legislative Assembly elections.

This information was given in a statement laid on the table of the Lok Sabha by Shri R. M. Hajar-navis, Deputy Union Minister for law, who was replying to a question by Sarvaswari D. C. Sharma, Ram Krishan Gupta, D. N. Tiwary, Bhakt Darshan and Bibhuti Mishra.

MR NEHRU was not on the dais. And so began the first session of the All India Congress Committee since Mrs Indira Gandhi became its President. I wish I were in a position to say that there was something auspicious or hopeful or cheering about the first of the sessions under Mrs Gandhi's leadership. Unfortunately, this session has been like many another that we have had in recent years, and there has been a babel of voices from not many that made sense, a few that strove to be helpful, but, as far as the overall picture was concerned, you got the feeling inescapably that Congress sessions were getting to be monotonous affairs these days. Where is the sparkle, the glitter and the excitement that we knew in the past? No, you cannot dish up the excuse that the days themselves were exciting in bygone years. If anything, it is the present time which should be more thrilling and purposeful. There is a great adventure on which India has embarked, and the Congress is the party in power that needs unrelentingly to search for and discover solutions for our problems. But let me hasten slowly, as a friend once advised me. What was this New Delhi session of Congress about? What was its purpose, what did it seek to do, what has it done and what has it left undone?

★

In a limited way, I suppose you could say that the Nagpur Congress was an eventful session. The New Delhi meetings of last week could be described as having been a business session, whereas the Nagpur Congress was more in the nature of an ideological session. At New Delhi, the task that presumably lay before the Congress was to draw up a programme of action for implementing the Nagpur resolution on the co-operative organisation of agriculture. It is true that, though the Working Committee had, on the eve of the AICC session, adopted two resolutions—one supporting the Indian Government's stand on Tibet and the other deploring recent occurrences of communal disturbances in some places—neither was placed before the AICC for discussion. This presumably left the AICC with all the time in the world to attend to the business on hand. The only resolution that was adopted recommended the extension of the co-operative principle to all industrial units in the country, and it is intriguing to find that the resolution as adopted contains an amendment suggested by Mr Nehru that the words "as far as possible" should be added to it. Now, we have a perfect example of a sweeping generalisation; without Mr Nehru's thoughtful qualifica-

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

tion, the resolution could merely have been a visible suggestion from the party in power. The Congress President was obviously anxious to imbue the deliberations of the body with aim, clarity and direction; but the members generally appeared to have a rather hazy notion of the purpose for which they had got together. I do not think it is too unfair or uncharitable to say that, for some years now, the average member has been in the habit of automatically recording his vote for proposals from the dais; and then he goes into hibernation until his vote or vote-catching capacity is again called for.

★

This is a sentiment which I have very reluctantly put on paper. But the fact unfortunately is true that, after the struggle for freedom had ended, the Congress, apart from approving formulations of policy in general terms, has had no occasion to discuss a programme of practical action. So, if one member was busy building castles in the air, the other was preoccupied with gathering wool. It is in such background that it gratifies me to find that Mrs Gandhi has shown firmness and resolution in rescuing the session from becoming desultory, if not worse. She was repeatedly urging members to be precise in what they had to say, and therefore to cut out all verbosity. The success with which Mrs Gandhi has conducted the New Delhi session—it is only in this sense that the session was at all a success—should dispel any doubts that still linger about her ability to preside over the deliberations of an assembly of hard-bitten Congressmen. Her address, I may add, was a workman like review of the state of the Congress as also an indication of the issues that needed the immediate attention of the Congressmen.

×

Within the Congress organisation itself, there is little scope for a philosophical discussion of the pros and cons of the cooperative approach to the solution of the age-old problems of Indian agriculture. The debate had lasted over-long and, with the adoption of the resolution on cooperatives and joint farming at the Nagpur Congress, the problem now is to

farming continues to occupy the central place in congress policy, was reiterated by Prime Minister Nehru. He said that it would be wrong to isolate service cooperatives from joint farming. While the immediate emphasis might be on service cooperatives, "they could think of joint cooperative farming in a limited way, so that by example they could show how successful it could be."

★

Mr Nehru spoke with intensity and passion about the importance of cooperative organisation to raise agriculture to a higher level. But, unfortunately, he has not been able to communicate even a tithe of his passionate conviction to the Congressmen who endorsed the proposal with their votes at Nagpur and whose active and understanding cooperation is indispensable for its successful implementation. While they are apparently ready to endorse the proposal in theory, they seem unready to shoulder the burden. It is universally acknowledged that establishment of cooperatives will not be possible without a trained cadre of workers to guide the villagers in forming cooperative societies. Speakers at the AICC session have estimated the number of trained workers required at over 75,000. But the response to the Congress President's request for the names of a hundred persons who would be prepared to undergo training for a short period at a centre in Madras should act as a check on unbridled enthusiasm. Against the hundred names asked by the Congress President, she had received only six names while two more came forward when she announced this sorry fact at the AICC meeting. The disheartening response to the President's appeal may be re-

garded as a measure of the concrete support that is likely to be forthcoming from Congressmen in implementing the policy of establishing cooperatives. It will also serve to strengthen the doubts spread by the critics of the Nagpur Resolution that any policy of organising agriculture on cooperative lines will break on account of the inadequacies of the human element.

While the AICC thus had a foretaste of the difficulties in the way of covering the country with a net-

work of cooperatives, it could not derive much cheer from considering the problem of resources for the Third Plan on the basis of a note prepared by Mr U. N. Dhebar, the chairman of its planning sub-committee. The ways suggested by him, for mobilisation of resources, cover most of the familiar items indicated in the resolution or Approach to Planning adopted at Nagpur. These include increase in production, contribution of public enterprises, mobilisation of idle manpower, State trading etc. The

note makes two new suggestions regarding mobilisation of gold and silver and of funds with religious and communal organisations. The question of drawing out hoards of gold and silver has been discussed for a long time, but action has been deferred on account of practical difficulties. The question of drawing on funds of religious institutions for financing plan projects requires further clarification. The only legitimate way in which this could be done will be to secure the investment of surplus funds with such organisations in National Plan bonds. The note also makes far-reaching suggestions regarding wage, price and income policy. The planning sub-committee has yet to finalise its report and it is to be hoped that it will be mindful of the pitfalls of a doctrinaire approach to these intricate questions.

And what now, for the future? I am afraid Mrs Gandhi has to face a task of considerable difficulty. That the Second Plan is being put through in abbreviated form will have sapped Congressmen of part of their enthusiasm. But the Third Plan, clearly, has to be a much more ambitious effort. You will necessarily need to have a high sense of dedicated duty among Congressmen, if the required amount of inspiration and leadership, at the grass roots level, is to be vouchsafed for putting through the Third Plan. It will be Mrs Gandhi's job of work to see to it that diffidence discarded. We are at that enthusiasm is whipped up, the dangerous stage today, when sufficiently constructive thinking is not being devoted to framing the Third Plan; and this, because, I repeat, difficulties seem to have overwhelmed the Second Plan. Mrs Gandhi deserves the good wishes, not to mention the willing cooperation of Congressmen, of all of us, for dealing adequately with her job of work.

A word, now, about the Life Insurance Corporation. The activities of the Life Insurance Corporation of India in the first four months of 1959 are highlighted by the increase in the foreign business done by it. Referring to this, a press release from the LIC states that the business introduced by the LIC in foreign countries had increased from Rs 1.32 crores in the first four months of 1958 to Rs 2.01 crores in the corresponding period of 1959. The increase in the business completed during the same period is from Rs 50 lakhs to Rs 1.28 crores. These work out to an increase of 53 per cent in the case of business introduced and 156 per cent in the case of business completed.

This increase in business had been achieved by means of special measures taken by the LIC following the visit to East Africa, Malaya, and Singapore, of Mr P. A. Gopalakrishnan, Chairman of the LIC for the reorganisation of its foreign offices. They were aimed at an improvement in policy holders' servicing and rapid deve-

Indian Finance

lopment of new business. On the basis of the increase that has been achieved in the first four months of 1959, the foreign business of the LIC is expected to increase to Rs 10 crores during 1959 from Rs 5.62 crores in 1958.

By virtue of this achievement, the LIC has disproved the theory that became current following the shrinkage of the foreign business of the LIC in the post-nationalisation period, that nationalised insurance would be less efficient and businesslike than private enterprise in the same field. It is now apparent that the fall in its foreign business was due to the transitional difficulties created by the change in management. Since the fall in business has been halted and an increase registered, it may be expected that the Corporation would be able to further step up its business in the years to come.

At the time of going to press, copy for Gateway Gossip had not been received in this office. We publish below, therefore, a summary of the speech made by the Chairman of Kohinoor Mills Co Ltd; and this is, since it relates to the Gateway city, apposite for publication in this section.

Kohinoor Mills

Referring to the unsatisfactory year for Kohinoor Mills, Mr A. N. Haksar said that it has been a year of rising costs and lower selling rates in common with the majority of medium count mills in India.

As regards the poor results he said that the management of the company had taken steps to put matters right.

As a first step they have drawn up a modernisation and rehabilitation scheme to cost roughly Rs 60 lacs. He said that this will take a year or two but work has already begun. Primarily he said that their aim so far has been to alter the spinning machinery to achieve more efficient spinning of the short staple cotton that they are now forced to use. Out of the total figure of Rs 60 lacs, about Rs 42 lacs will be spent on installing new ring frames. In order to improve the quality, he said that they have obtained a licence to import combers which will increase their combing capacity by nearly 25 per cent. The balance will be utilised for purchasing more finishing machinery.

He added that the second step that has been taken to tackle the difficult problems that exist is in the efforts to make a more rational use of labour. After protracted negotiations with the Union, he said that the company was given an award by the Industrial Court permitting to reduce its labour force by 400 men. He said that the implementation of this award was carried out smoothly.

SOUTH EASTERN RAILWAY OPENING DATE OF TENDER EXTENDED

The opening date of tender No. CON/GM/23/WP/B/59 for supply of Railway Weigh Bridge, a notice for which appeared in this paper recently, has been extended upto 3 P.M. on 2-6-59 instead of 18-5-59. Detail modification of the quantities of materials are to be obtained from the tender schedule.

Tender forms are obtainable from the office of the Controller of Stores (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs 5/- (not refundable) per copy by money order to him direct in the case of outside firms and on production of cash receipt from this Rly's Chief Cashier by local firms.

S19 GENERAL MANAGER

He said that the third step that has been taken by the Management has been a concerted drive to reduce the miscellaneous expenses involved in running the mill. He stated that with every step forward that they take along the path of economy they are forced by rising costs elsewhere to take two steps back. In this connection he drew attention to the increased expenditure on Electric Power and Fuel amounting to Rs 1,16,000 which is attributable almost entirely to the rise in the cost of electricity fuel oil which between them cost Rs 1,04,000 more than in the previous year in spite of lower consumption. Similarly, he said that there has been an increase of Rs 2 lacs in Rates and Taxes over the previous year. This, of course, includes an increase in water charges.

He said that due to higher consumption of dyes and chemicals because of higher production of fancy sorts the consumption of stores and spare parts was Rs 6 lacs higher than in 1957. He pointed out that the increased expenditure has been on account of scarcity and consequent higher prices of dyes, caustic soda and soda ash. He stressed that Government should give every encouragement to local manufacturers and feels that where indigenous suppliers are unable to supply sufficient quantities of these basic millstores, Government should allow higher imports. He stated that mills have taken advantage of the imports scheme for dyes and chemicals which is linked with their export earnings.

He pointed out that the last and largest item of expense which has increased during the last year has been the D.A. paid to labour. He said that the mills have paid nearly Rs 9 lacs more in D.A. in 1958.

As regards the production of the mills, Mr Haksar expressed his satisfaction. He stated that with the increasing use of short staple cotton, it has been more difficult to maintain production on a satisfactory level. He also stated that the mill is eminently suited to spin foreign cotton and expressed the difficulty that has been experienced in trying to spin short staple cotton. He regretted that, in certain cases, there has been a falling off in the quality of their products. However, with the introduction of apron drafting, the first stage of which will be completed before the end of the monsoon, they will be able to improve the quality of their products.

As regards exports, he stated that attempts are being made to increase the volume and a certain measure of success has already been achieved. He hopes that, with the better quality products, they will be able to increase their export sales in the second half of this year. He was sure that, unless urgent measures are taken to bring the price of Indian cotton down, India may find that it will suffer an even greater recession in export sales. Imports of cotton should be freed completely as long as the price of foreign cotton remains at the existing low levels, and the effect of this would be to reduce the price of all Indian cotton from the best to the cheapest. If this were to happen, the fabrics made from Indian cotton could be sold cheaper. The foreign exchange difficulties

were there, but the volume of export trade that would be generated would go a long way to paying for the raw cotton that would be imported as a result of free licensing. On the whole, 1957-58 was a poor year for Indian cotton. Certain crops failed miserably and a number of others were extremely dirty and almost all, more expensive.

Before turning to the accounts, Mr Haksar referred to the Sub-Committee set up after the last year's Annual General Meeting, comprising Mr E. D. Sheppard, Mr Yogindra Mafatlal and himself.

It had held a number of meetings to look into the working of the Mills and in general all the main criticisms of the shareholders at the meeting. They had gone into them most thoroughly and the recommendations of the Committee have been implemented. Every purchase of cotton was investigated and the prices paid were found to have been in line with the ruling market prices. The investigation of sales found that their selling Agents have been doing their job well, and in many cases their Mills get higher prices for their products.

INDUSTRIALIST WITH A SECRET

Mr. X can easily withstand the nervous strain and rush of every busy day, because he replenishes his reserves of vitality through deep, sound restful sleep—in the soothing coolness of his 'Crystal' conditioned bedroom.

Keep Cool with a

Crystal trimline ROOM AIR CONDITIONER

Only the 'Crystal' gives you all these advantages:

- Over one ton cooling capacity
- Protrusion of less than three inches into the room
- Universally adjustable air-flow
- Voltas' unrivalled after-sale service that never lets you down

Made by

VOLTAS

the people who know
air conditioning best!

Remember, more 'Crystals' are bought
than any other room air conditioner

GATEWAY NOTES

Non-alignment

ADDRESSING the fifteenth annual general meeting of the Indian Council of World Affairs, at the Indian Merchants Chamber, Mr G. L. Mehta, explained the significance of the policy of non-alignment which had been adopted and followed by India in its relations with the power blocs. Mr Mehta pointed out that uncommitted countries could make some contribution to the relaxation of international tension because no single power was great enough to win a world war, and because both the Great powers, were vulnerable to the actions of the other.

Mr Mehta pointed out that there were shades of differences in the non-alignment policies pursued by different countries of the world, the most important point of difference being that some countries which profess non-alignment in their relations between the power blocs were receiving military assistance from one of the big powers. Non-alignment has not also been materially affected by the large economic aid received by some of these countries from the big powers since such aid had been given without strings attached to it.

Mr Mehta pointed out that the military pressure from the West and the threat of subversion and infiltration from the Communist bloc presented a dilemma for the non-aligned countries of Asia, and it was difficult to steer clear of these two extremes. The problem was only rendered more difficult for these countries, by the military pacts alliances and bases of the West which though intended to contain communism only served to help it. However communism was to be eschewed in view of the fact that it involved supra-national loyalty and denied many of the fundamental values of life cherished and respected by countries of Asia. In this connection Mr Mehta referred to the recent upheaval in Tibet and the unscrupulous use of force by the Chinese in suppressing the popular rising.

Mr Mehta pointed out that it was not easy for countries which prize their independence and want to maintain their way of life without meddling in other peoples' affairs and without being dominated and exploited by rival power blocs, to find a way out. However, a solution had to be searched for and found out. For this it was necessary to strengthen the national unity of the country based on institutions providing for freedom and cooperation between all sections of opinion. It was on this national strength that the status and influence of the country in the international relations depended. Mr Mehta also stressed that contributions to peace in the world could be made only on the basis of

faith that men will not destroy themselves and their creative works.

Hydroquinone

Opening the public inquiry into the question of continuance of protection to the Hydroquinone industry, at Bombay, Mr C. Ramasubban, Chairman of the Tariff Commission traced the progress of the industry from the time of protection. Production of hydroquinone was a comparatively small affair before the grant of protection to the industry and it was this fact which entitled it to fiscal protection from the Government. Protection that was granted to the industry by the Government from July 1951 by conversion of the existing revenue duty of 27.3 per cent ad valorem preferential and 37.8 ad valorem standard into protective duty has been continued until now though with variations in rates of protective duty. From August 1953 the rate of protection was increased to 50 per cent ad valorem preferential and 60 per cent ad valorem standard.

During this period the industry had taken tremendous strides both in stepping up production of hydroquinone, and in increasing the production capacity. In this connection it is pointed out that the Salyadev Chemicals Ltd, had stepped up its capacity to 42,000 lbs per annum in 1957 while production by same mill had increased from 771 lbs in 1951 to 37,361 lbs in 1958. Kesar Sugar Works Ltd, which suspended production in 1952 has resumed production in 1955. The increase in production of hydroquinone that had followed the grant of protection has enabled the industry to meet most of the requirements of the country from internal sources itself. In this connection it is pointed out that the domestic demand for hydroquinone had increased from 40,000 lbs in 1955 to 50,000 lbs now.

One of the satisfactory features in the progress of the industry is the fact that it had grown on the basis of raw materials available from the country. Dependence on imports is restricted to aniline which is reported to be not available in India. In respect of other raw materials such as sulphuric acid, manganese dioxide and iron powder, internal availability has obviated the need for imports. The use of internal raw materials has also been found not to affect the quality of the product adversely.

The weakness of the industry at present relates to the high cost of its production, and this arises from the low demand for the product of the industry which falls far short of the actual rated capacity. Mr Ramasubban has therefore suggested that the industry should turn its attention to exploring foreign markets for hydroquinone. If as is claimed by the producers the Indian product could stand on a par with foreign products in point of quality, export should present less difficulties for the hydroquinone industry than for many others for which low quality constitutes a disadvantage against competition from foreign products.

GATEWAY MARKETS

Castor in Limelight

BUOYANT conditions prevailed on the Bombay Oilseeds Exchange where prices forged ahead under the lead of Castorseed. The buying movement was sparked by reports of further castor oil business with the USA. The outlook for castorseed registered a significant change for the better with the US figuring as an active buyer of castor oil after a lapse of almost sixteen months. Several shippers were able to put through business in commercial oil at prices ranging from 13.25 to 13.75 cents per pound for May/June delivery and there were hopes of realising even 14 cents in the near future.

In view of the somewhat obscure crop prospects of Brazil and the low inventories, US buyers had no other alternative than to turn their attention to the Indian market for their requirements. A few cautious dealers, however, preferred to wait for a clearer picture of the US demand and the supply position in Brazil. Meanwhile, Castor ready was quoted at Rs 32.62 and Castor Oil, commercial quality, at Rs 17.31.

The Groundnut section continued to present a firm front, thanks to the reduced arrivals, both into the city and upcountry centres. Crushers and vanaspathi manufacturers were reported to be still facing an acute shortage of supplies and were obliged to pay unusually high prices. Groundnut Bold quality was quoted at Rs 40.50 and Groundnut Oil at Rs 21.75.

Trading in Linseed lacked features of its own; but the overall tendency was upward in line with the firmness in castorseed and groundnut. Ready was quoted at Rs 33.62 and Linseed Oil at Rs 16.37.

Conditions in the Cottonseeds section remained quiet although the undertone was fully steady.

The comparative export figures for the first four months of this year are as follows (in tons):—

	January to April 1959	1958
HPS Groundnut	5,087	NH
Sesame	130	NH
Niger	237	32
Groundnut Oil	1,096	125
Linseed Oil	1,090	4,790
Castor Oil	2,750	4,797
Sesame Oil	134	NH
Rape & Mustard Oil	111	11

The protection enjoyed by the industry having expired on 31st December 1959, the industry is facing a fresh inquiry by the Tariff Commission to decide the question of continuance of protection to it. It has been urged on behalf of the industry that being still of small size to stand on its own feet, protection should not only be continued but be given for a prolonged period to ensure steady progress.

Indian Finance

	January to April 1959	1958
Kardil Oil	NH	452
Niger Oil	NH	47
Cottonseed Oil	NH	1,571
Groundnut Meal	44,044	15,155
Linseed Cake	3,928	1,778
Cotton Cake	9,478	1,605
Niger Cake	397	206
Kardil Cake	100	NH

Gold & Silver

The Bombay Bullion Exchange presented a markedly bearish appearance during the past few days with both silver and gold registering a sharp decline in values.

The main factors responsible for the sharp setback in Silver included the official confirmation of the removal of the ban on import of Chinese dollars into India, rumours of substantial arrivals of the metal in upcountry centres, reports about duty having been paid on import of Chinese dollars and fears that with the approaching end of the busy season demand might ease off. Arrivals amounted to 17 bars against an offtake of 12 bars. Ready rates moved between Rs 195.12 and Rs 196 to finish at Rs 195.31.

In addition to the above factors, the setback in Gold was aggravated by the feeling shared by several operators that the Government's recent measures, viz., the amendment to the Reserve Bank Act, might not result in a complete suppression of smuggled imports. The fact, that the offtake had been consistently less than the receipt even in the midst of the busy season, also underlined buyer's resistance to unusually high prices. Ready rates moved between Rs 119.69 and Rs 120.19, to finish at Rs 119.69. Sovereign was quoted at Rs 77.75.

Yarn

After a long spell of weakness, conditions in the Bombay Yarn market took a slight turn for the better with prices of Nylon yarn showing an improvement of about a rupee per pound in sympathy, the markets for viscose and staple-fibre yarns turned steadier. This sudden turn in market sentiment was mainly due to reduced selling pressure, being influenced by a general feeling that the worst spell for the market was over. The improvement in the offtake of cloth, particularly in Northern India, was another factor to improve the market sentiment. Consequently, the premium commanded by import licences for rayon yarn has now risen from 40 to 48 per cent.

The problems affecting the trade and the industry have, however, not disappeared. The resumption of exports still seems to be distant. The development Council for Art Silk Industry has submitted the revised scheme for exports to the Government of India. It is pointed out that, even if the scheme is approved fully, it will take a fairly long time to implement it. It is therefore, felt that the Government should announce an interim scheme

WORLD OF COTTON

THE consumption of indigenous Cotton by the industry is expected to go up this season. The provisional figures of mill consumption, for the first seven months of the 1958-59 season, totalled 27.30 lakh bales of indigenous cotton as against only 26.50 lakh bales in the corresponding period of the previous season. The consumption of foreign cotton, during the same period, however, declined from 3.49 lakh bales to 2.58 lakh bales. The table below shows the monthly consumption of both Indian and foreign cotton in the first seven months of the current cotton season as compared with the corresponding period of 1957-58 (figures in bales):—

	INDIAN	1957-58
March	389,569*	354,288
February	376,105	350,474
January	413,181	392,007
December	410,814	391,490
November	363,650	390,784
October	394,558	372,781
Sept	382,499	399,125
Total	2,730,370	2,650,949

	FOREIGN	1957-58
March	33,867*	47,643
February	31,580	43,863
January	34,370	48,804
December	39,301	51,858
November	35,644	51,031
October	41,303	48,415
September	42,554	49,310
Total	258,619	340,929

*Provisional

FUTURES MARKET:

Prices in the Cotton futures market have continued to display a firmer tendency although price movements were rather irregular. Bulls have dominated the scene on fears that the cotton supply position will continue to be tight in the coming months. Jharilla August delivery, after touching a high of Rs 704, reacted towards the close to Rs 703.75, while the May contract closed at Rs 699.25.

SPOT MARKET:

The Spot section witnessed cheerful conditions throughout the week under review. Demand has been fairly active for all popular domestic varieties, particularly Lakshmi, Jaydhar, Vijay and good Jharilla.

In the upcountry centres, mills were active buyers, as many of them were heavy to find that the stocks of unsold cloth with them had considerably declined, thanks to the revival of demand for their product. Latest advices from the Textile Commissioner have also indicated that the unsold stocks of cloth with the mills, as on the 28th March, amounted to only 2.67

Consumption Expected to Go Up

lakh bales. This quantity was lower than a month's production. The unsold stocks of yarn have also declined to 0.56 lakh bales—a little less than 15 days' requirements for the decentralised sectors at the current rate of delivery.

Mills are happy to note that the export demand for their cloth is gradually reviving. They are, however, perturbed at the Government's delay in announcing additional import licences for cotton. Rumours are current that additional imports will be announced only after May 20. On that basis, small transactions have taken place in Sudans and East Africans for June delivery. Some spinners are anxious to cover Sudans against their future quotas. Prominent operators have, however, suspended offering Sudanese varieties to the mills on account of the fact that Sudanese cotton has shown a sharp rise in prices during the past two weeks.

Meanwhile, the Alexandria Cotton Exporters' Association is reported to have taken a decision that future arbitration and sampling of cotton should be done at the port of shipment instead of the port of destination as has been the practice hitherto. This has caused a stir among cotton buyers in Bombay. For, this will mean considerable hardship to the buyers of Egyptian cotton, as they will have to nominate their controllers in Egypt to act on their behalf.

On the export front, listless conditions have prevailed. Although

active enquiry for choice Bengals from shippers offering fancy prices continued, little business resulted due to the scarcity of stocks. A small turnover was reported to have taken place in Kala Gin, CP Deshi, Zoda and Yellow Pickings.

KARACHI COTTON MARKET:

Quiet conditions prevailed in the Karachi cotton market. In the absence of any new development, trading interest was low. Turnover was limited and prices moved within a narrow range, showing practically no change over last levels.

ALEXANDRIA COTTON MARKET

Values in the Alexandria cotton futures market made small gains, thanks to the support influenced by export demand from East Europe. Prices were steady.

The Ministry of Agriculture, in its fourth and final crop estimate, put production at round 1,327,324 bales (of 720 lbs). This compares with the third estimate of 1,323,766 bales and the second and first estimates of 1,330,284 and 1,328,493 bales respectively.

LIVERPOOL COTTON MARKET:

A steadier tone prevailed in the Liverpool cotton futures market. However, long liquidation continued to weigh on the near positions under the threat of unwanted tenders. New crops, on the other hand, have regained most of the

BOMBAY REVIEW

S. E. RLY TENDERS

Sealed tenders are invited for Tender No. CON/COS/40/F1/59 for supply of 1900 Nos. Rain Water C. I. Pipes 4" dia x 6'-0" long. B.S.S. 460 (Medium Grade). Tenders will be opened on 30-5-59 at 12 noon.

Tender forms are obtainable from the office of the undermentioned (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs 2/- (not refundable) per copy by money order to him direct in the case of outside firms and on production of cash receipt from this Rly's Chief Cashier by local firms.

Tender should accompany the receipt for depositing the earnest money of Rs 460/- with this Rly's Chief Cashier, at Garden Reach, Calcutta without which the tender is liable to be rejected. Approved contractors having a permanent deposit of Rs 1000/- with the undermentioned are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

DELHI REVIEW

THE deliberations of the AICC currently going on in Delhi are the first since Mrs Indira Gandhi became the President of the Congress. Certain obvious changes in the conventional setting and pattern were noticeable though, perhaps, it is possible that more may be read into them than is warranted by facts. For instance, the "Old Guard" did not loom large this time, and even Mr Nehru sat among the delegates instead of on the dais among the "leaders". (Readers may recall that Mr Nehru is not a member of the Working Committee and is only a special, though, invariable invitee!) The leaders themselves made their presence felt much less intimidatingly and there was some evidence of the "back benches" having his say.

But the problems before the Committee were very much the same and the decisions were not far different from what they would have been in the past. Though, chronologically, it was taken up later, discussion of the coalition move in Orissa was, in some respects, the crucial one. From the beginning, it was evident that members wanted a closer look at the principles governing the rather protracted negotiations between the State Congress authorities and the Ganatantra Parishad. In the discussion at the working Committee that preceded the AICC meeting itself, counsel was divided. Even in the AICC, there was no unanimity about the wisdom or even the propriety of the step. Those who are aware of the wheels within wheels of the politics of Orissa are hardly likely to imagine that the coalition will automatically bring stability to the politics of the State. The very fact that these negotiations have been going on for over a month now would seem to point to the

attributes of horse trading in it. News from Bhubaneswar has given at different times estimates of the price that the Congress is likely to pay for this piece of expediency. It was little wonder, therefore, that the AICC wanted to consider the whole question. Mr Nehru welcomed the debate as a good precedent for obtaining the AICC's sanction on all important questions.

The fact that the Congress has at all come to consider possibilities of coalition with other parties shows that the Congress has increasingly become reconciled to the status of one among several political parties. This is a great come down for a party that was once synonymous with the nation. This fact, though sad, is not entirely a disaster from the point of democracy. The continuance of the Congress for ever as the only voice of the nation, however authentic that voice may be, is not an attribute of democratic health. For, democracy needs at least two voices. (Some say it should have only two voices. The point is debatable, though there can be no question that a babel of voices is just as bad as an exclusive voice.) In any case, squeamishness at the very word of coalition is somewhat grotesque. It implies a certain political romanticism that is still a prisoner of the past. Time was, it is true, when even a hint of coming to terms with others used to be rejected out of hand by the Congress. But nothing is so comic as a present posture that is geared to a past glory. Equally incongruous is the self righteousness that opposes coalition on the ground that the other person is not as high minded as oneself. After all, coming to terms with dissidents and possible rivals is not entirely unknown to post-independent Congress. Indeed, in at least one instance, it has paid off remarkably

well. I am referring to the strategy that won Andhra for the Congress from the Communists. No one who remembers the hold of Communists on that area in the late forties and early fifties can fail to be impressed by the decisive results achieved by meeting dissidents half way.

But the question about the wisdom of a coalition in Orissa, and that with the Ganatantra Parishad, remains. Though squeamishness and off handness about coalition as much is politically naive, it is still true that coalition is not to be thought of lightly. Normally, coalition is thought of only in times of emergency like a war. It is, of course, possible to talk somewhat hyperbolically of our problems being tackled on a "war-footing", appeals are made from time to time to opposition parties to join hands with Government in the national tasks of reconstruction. But, when it comes to the stalking point, the ruling party has shown itself chary of letting others share power with it at the Centre. This was revealed some time ago when Acharya Kripalani bluntly asked whether Congress overtures meant genuine sharing of power. In the case of Orissa, it is, unfortunately, only too true that the common man is getting a raw deal because of political instability, and the administration is at sixes and sevens because the ruling party is precariously perching on the seat of power. If lack of political stability can be argued as a state of emergency, then thoughts of coalition are not ruled out. But several questions arise at once. One is, whether this is the real reason for the Congress in Orissa wanting a coalition. Can it be that the Congress is reluctant to leave the seat of power and wants to remain there at any cost? It may well be that the Congress is drawing its own lessons from Kerala where early hopes of dislodging the Communists within a short time have been belied. This, and probably the fear that a general election would be against them, (though this fear is euphemistically rendered as the fear that present political instability will continue even after the elections) make the Congressmen of Orissa prefer coalition. The next question is: why Ganatantra Parishad? and why not the PSP, which is ideologically nearer the Congress? Here again, the question is not capable of being answered easily. Local appraisal of the precise orientation of the PSP—which party is notoriously divided in counsel—may be different and justifiably so. Of course, it is possible that the "progressiveness of the Ganatantra Parishad" is being too loudly protested and too readily conceded by local Congressmen to carry much genuine conviction. But at least the assurance that the Ganatantra

Parishad will be required to subscribe to the Congress policies, especially those enunciated at Nagpur, will be comforting to those who have their misgivings about this marriage of convenience. Since the Ganatantra Parishad is supposed to consist principally of feudal elements belonging to the former princely states of Orissa, this assurance, hurting as it does their supposed vested interests, may well be considered as evidence of the Congress having driven a hard bargain.

There are some among the Congress who consider that the coalition is but the first step in destroying the individual identity of the Ganatantra Parishad. Such a plan need not necessarily be considered either a piece of diabolism or mere wishful thinking. Critics of Congress, on the other hand, may infer from this the unregenerate nature of the Congress itself. But the real test will come when the actual coalition starts working. There is already a fear that the alignment of the influence of the Congress and of the Ganatantra Parishad is regional and, therefore, regional considerations may operate in practice. Whether the coalition will work as a team is another question that can only be answered in the future.

The other important subject discussed by the AICC was the progress made in the carrying out of the Nagpur resolution on the land question. The practical consequence of the deliberations was the proposal to train a hundred workers on the principles and practice of cooperation. The training camp will be situated in Madras. How slow and heart breaking progress in cooperative endeavour can be, despite much earnest exhortation from the top, was tellingly demonstrated at the AICC meeting. Mr Mishra, belonging to the "ginger group", said that a hundred workers were far too inadequate for the purpose of propagating the cooperative ideal. This elicited the sharp rejoinder from the Congress President that her circulars earlier, calling for names of trainees, brought her only six names. She said that she was even now prepared to consider the enlargement of the programme if she could get more persons. Mr Dhebar drew attention to the vast gulf separating aspirations from readiness for practical endeavour in this regard. He sharply criticised the inaction of Mandal committees—an institution he sponsored as President. He complained that Congressmen were more ornamental than useful in committees designed to promote community development. Plainly, a lot needs to be done before the idea of cooperation seeps into the thinking and practice of even Congressmen.

OLYMPUS

NORTH INDIAN NOTES

Agricultural Marketing

The FAO/ECAFE technical meeting on marketing has brought into focus the importance of efficient agricultural marketing for economic development which aims at eliminating poverty of the agricultural population and reducing consumer prices or earning more foreign exchange. Defective agricultural marketing structure in most of the countries of South East Asia, has made it impossible for the farmers in these countries, to get a fair part of the price paid by the consumer. This big spread between the price paid by the consumer and the price received by the producer is explained by the existence of middlemen in the chain of marketing who do no useful service except to take care of their own pockets at the expense of both the producer as well as the consumer. The prevalence of various kinds of malpractices is another weakness of the marketing structure which work to the disadvantage of the producer. Reform of the agricultural marketing system in these countries has, therefore, to follow lines indicated by the existing defects and deficiencies.

The FAO/ECAFE meeting has emphasised that it is to the advantage of the producers if a state of perfect competition is ensured between private dealers in agricultural produce. The lack of such competition is noted to be the main weakness of the existing marketing system. The meeting has correctly diagnosed this hold of monopoly elements in the marketing system as arising from the utter necessity of the producers to dispose of their produce immediately after harvest for livelihood means. The meeting has, therefore, pointed out that it would increase the staying power of the agriculturists and producers, if sufficient arrangements could be made for providing adequate credit for the producers which would obviate the need for immediate disposal of their produce after the harvests. Such credit facilities are conspicuously absent or scantily provided in most of the countries. Organisation of cooperative marketing societies should pave the way for the evolution of such facilities which would make marketing more efficient both for the producer as well as the consumer.

The meeting has also stressed the importance of warehousing facilities for the orderly marketing of agricultural produce. Such warehousing facilities would also ensure regular supply of produce both during the peak and lean periods and eliminate fluctuations in the price of the produce during these periods. Setting up of market news service, collection and dissemination of market information, extension work at both the farm and marketing level are the other as-

pects of marketing which the meeting has thought fit to stress in the context of agricultural marketing in the countries of South East Asia. The need for facilities for proper training of marketing personnel is considered immediate and imperative and towards this, the meeting has recommended the setting up of a centralised regional institute which would provide such training in efficient marketing.

*

Cement Production

The Second Plan for the cement industry has fixed a production target of about 13 million tons to be achieved by 1960-61 and for this the capacity of the industry was envisaged to be increased from 4.93 million tons in 1955-56 to 16 million tons in 1960-61. However, present trends in regard to the progress of the expansion programme in the industry would seem to indicate that the Second Plan target may remain unrealised by 1960-61. For, speaking at a meeting of the Consultative Committee of Parliament for the Ministry of Commerce and Industry, Mr Manubhai Shah, Minister for Industry stated that the additional capacity that has been approved was for about 6.75 million tons and that this would bring the total installed capacity by the end of the Second Plan to 14.49 million tons. Against this additional capacity approved, the capacity that is covered by import licences for plant and machinery is only for about 2.31 million tons so that the anticipated installed annual capacity during the current Plan period would add up to about ten million tons of cement.

However, production even at this level is considered adequate for the needs of the country during the rest of the Second Plan period. The slowing down of construction activities by the Government because of shortage of steel has given rise to a slump in the demand for cement also and until the supply position in regard to steel in the country improves, it would be unwise to plan for higher production which would be much in excess of internal demand.

Exports provide an outlet to stimulate the production of cement. However, the record in this sphere is by no means flattering. More vigorous efforts taken by the State Trading Corporation for promotion of exports seemed to have been rewarded by an increase in exports in the current year. In this connection, Mr K. B. Lal, Director-General of Foreign Trade, stated that out of a total quantity of 1,56,000 tons contracted for, about 1,00,000 tons had been actually exported.

Referring to the role of the State Trading Corporation in the distribution of cement, Mr Manubhai Shah, said that the handling of the business by the STC had proved beneficial to the industry. This statement will not go unchallenged by representatives of the industry, for it has been their contention, that the profits appropriated by the Corporation is one of the inflationary elements in the

NORTH INDIAN MARKETS

Spurt in Gur Prices

GUR prices have been showing a rising tendency during the past few weeks and the present rate, quoting at Rs 20.25 per maund in the Hapur market, is the highest touched so far in the current season as against Rs 15.50 quoted in the beginning of the year. Earlier expectations of an easy trend, as a sequel to the imposition of a ban by the Government in February on forward trading in the commodity, have not materialised. It appears that the speculative elements have switched over to non-specific delivery contracts, which are not within the purview of the Forward Markets Commission at present. Even fears are entertained that the rates will move up further on account of inadequate stocks at the terminal markets, as the manufacturing season has already ended in the Punjab, Bombay and Uttar Pradesh.

The steady rise in prices is in line with the firm trend prevailing in sugar, based on reports that the output during the current season will be lower by nearly 10 per cent. Another factor, affecting adversely the production of gur this season, is the establishment of a number of co-operative sugar factories, which have consumed a large part of the cane usually used for gur manufacture.

Naturally, the spectacular rise in the price of the commodity has caused serious concern to the authorities. The Government of India are now reported to be busy devising measures to arrest the rise in prices.

*

Sugar

Sugar markets have continued to rule firm due to poor supplies. Ex-mill deliveries are quoted at a premium of Rs 4.25 to Rs 4.50 per maund over the controlled price. The Uttar Pradesh Government have, it is learnt, decided to enter the market as a seller, while the Centre has decided to rush additional supplies of the commodity to the State.

In order to check the present rise in prices, the Government of India have decided to license wholesale dealers in sugars in Uttar Pradesh and other States. While there is enough sugar in the country, the quantity is not unlimited. The Government have, therefore, to exercise some control to discourage hoarding.

For some time, it has been the policy of the Government to increase the quantity of sugar to be

price of cement and that the price contains no incentive element for the industry.

sold through direct allocations by the Government and correspondingly reduce the quantities to be sold by the mills, while the overall quantities allocated by the Government and sold by the mills remain at the old level. This has been done to control the market conditions and the allocations by the Government will be strengthened as need arises. It is generally expected that the sugar markets in Uttar Pradesh will soon be under control.

It is learnt that a definite policy of the country's export policy will emerge shortly. The Government had announced its policy of exporting one lakh tons of sugar during the current season and the task of selling sugar abroad was entrusted to the Indian Sugar Mills Association. The Association has, however, not entered into fresh commitments in the last few months, because of the petition filed by two sugar mills with the Supreme Court challenging the validity of the Sugar Export Promotion Act, 1958.

It is pointed out, however, that irrespective of the future policy, there will be little activity on the export front for another three months. At any rate, exports from Bombay will be negligible on account of the monsoon. But, preparations are said to have been made to effect shipments of the balance of about 5,000 tons against previous commitments. This quantity has already been acquitted from the mills.

The market for Khandasari has also firmed up in line with the bullish trend in crystal sugar coupled with good demand due to marriage season. Rates are quoted at Rs 34 to Rs 38.50 per maund, according to quality.

*

Foodgrains

Steady conditions were witnessed in the Hapur Foodgrains market. Wheat prices scored a rise of about Re 1 per maund due to the drop in arrivals following the implementation of the wheat levy scheme. The market for Rice ruled quiet in the absence of new urges and the supply position was reported to be fair. Gram prices sought higher levels in sympathy with wheat. Barley and Bejhar showed a hardening tendency, as arrivals were not heavy. The Pulses market remained firm, while there was a good demand for Peas from the stockists.

In the Delhi grains market, Wheat prices firmed up on buying by mill-owners in the Punjab. Barley advanced by a rupee per maund. There was good enquiry for Gram. Rice prices rose by Re 1 to Rs 2 per maund on account of better offtake, while higher outside advices also aided sentiment. In view of the improvement in wheat, Coarse grains were firm. Maize and Bajra moved up by about half a rupee per maund. Good demand and higher advices from the upcountry centres pushed up the prices of Moong and Urad by about Re 1 per maund.

MADRAS REVIEW

POWER development is a recurrent theme that comes up for discussion in the State Legislature. This reflects the concern evinced by the members for rapid development of the power resources. The State Government have also been ahead of public demand in placing prime importance on power development and have given their earnest and devoted attention to it. The state's policy in this field has also corresponded to the public conception of its importance for the all-round improvement of the State's economy. With the completion of the important schemes that are now under execution, the State would almost have reached the limit of its hydro-electric potentials.

In such circumstances it was not surprising that there was nothing which the members could point to which would have detracted from the overall performance in this field. What was more, there was genuine satisfaction at the record and the Minister for Electricity made sure of further praise by recounting some of the achievements of the Government in the field of power development. Mr V. Ramalaiah, drew pointed attention to the completion of the Periyar Project in record time and at much cheaper cost than the original estimates and said that of all the hydro-electric projects in the whole of Asia, the Periyar Project had taken the shortest time. From the Minister's satisfaction at the pace of work at the Kundah Project this project would seem to bid fair to beat the Periyar Project in the matter of time taken for completion.

Supply of power to agriculturists is one of the important indices of improvement in power development. In the Madras State, during the last three years, over 80,000 pumpsets had been given electric connections, while the area to benefit by irrigation from pumpsets is about 250,000 acres. This in itself is a highly satisfying record of work of which any Government could feel legitimately proud. Considerable headway has also been made in respect of rural electrification, and the fast progress made in recent years in this sphere, has enabled the Madras State to take a lead over most other States.

Notwithstanding such tremendous progress, there were aspects of the Government's policy in regard to power development which were picked up by members for criticism. The illegitimacy of the Government collecting surcharge from the ryots, the need for supplying power to agriculturists at cheaper rates, the need for better treatment, with higher emoluments, to the engineers working in the State Electricity Department, lopsided development of electricity, with inadequate supplies for some districts such as Ramanathapuram, Tirunelveli, supply of electricity free of cost for audio-visual education

purposes and for installation of radio sets in schools, the importance of constituting local electricity advisory committees etc were some of the points made out by members in the course of the discussion in the Legislative Council. Mr Patanjali Sastri, made a plea for rationalisation of electricity tariff on the basis of cheaper rates for domestic users and higher rates for industrial users. He also criticised the continuance of the "war surcharge" even though it is more than fifteen years since the war had ended.

The Minister's reaction to most of these suggestions was just an expression of thanks, though it is to be hoped that at least a few of these suggestions will not fail to guide the policy of the Government. For example, the Government cannot long remain blind to the need for uniform development of electricity in every district of the State. In respect of the complaint about the minimum charges, Mr Ramalaiah pointed out that a high level committee had been asked to go into the matter and submit its report. The suggestion for constitution of local electricity advisory committees met with denial of its utility in view of existence of District Development Councils which could take up the functions which the local committees would have to do.

The Minister also came to the defence of the State Electricity Board against criticisms levelled against it by some of the members. It was pointed out by Mr Ramalaiah that the Electricity Board had justified the objects with which it was constituted and that the administration of electricity undertakings had only gained in efficiency by the Board taking charge of responsibility. Mr Ramalaiah also denied the charge that the Electricity Board was functioning as a commercial undertaking.

As proof of the efficiency of the Electricity Department Mr Ramalaiah pointed out that the Board not only kept up to the financial and physical targets laid down under the Second Plan, but had exceeded them. In this connection it was pointed out that the total outlay on power schemes under the Second Five Year Plan would finally amount to Rs 63 crores excluding the Canadian aid to the Kundah Project.

One of the important points which elicited unanimity of views from all the members was about the need for having an atomic power station in the State. This agreement of views arises out of the recognition of the fast exhausting hydro-electric potentials in the State. In this connection, Mr Ramalaiah pointed out that even with the commissioning of the projects that are now under implementation, there would be a power deficit at the end of the Third Plan. Against this, the demand for power is estimated to go up from 375,000 k.w. in 1960-61 to 812,000 k.w. in

Power Development

1965-66 and further to 1,271,000 k.w. in 1970-71. There is therefore imperative need for the early exploration of schemes which would forestall the shortfall that is now forecast. Mr Ramalaiah has indicated that setting up of atomic power station would be a possible source for adding to the power resources of the State. Setting up of atomic power plants has also been engaging the attention of the Centre though the schemes are only under preparation and are yet to be finalised. The interests of the Madras Government would require some urgent consideration being paid to the possibilities of setting up atomic power plants in the State; since otherwise, the future progress of industrialisation would be hampered by shortage of power for industries. Even at present the position of supply for industries is hardly one of surfeit while until lately industries were operating under severe restrictions in supply. There is therefore every case for the utmost efforts for seeing that a progressive increase in power supply is maintained. Mr Ramalaiah's statement that the Government are alive to this need and that they are taking steps for getting the approval and sanction of the Central Government and the Planning Commission is therefore reassuring. The Government's action in constituting a working group for power to examine schemes under the Third Plan will be appreciated as indicative of the interest they are taking in speeding up development programmes

RAJNAGAR TEA COMPANY, LIMITED

NOTICE is hereby given that the Sixty-sixth Annual General Meeting of the members will be held at the Registered Office of the Company, No. 4, Bankshall Street, Calcutta, on Thursday, the 4th June, 1959 at 3 P.M. for the following purposes:—

- To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1958.
- To elect a Director.
- To appoint Auditors and to fix their remuneration.
- To consider and if deemed fit to pass the following Resolution as a special Resolution:—

"That it is hereby approved that Clause (2) of the contract entered into between the Company and the Managing Agents Messrs. Shaw Wallace & Co. Ltd. in terms of special Resolution No. 6 passed by the Shareholders in the General Meeting of the Company held on 16th April 1958 and contained in letters dated 1st and 2nd May 1958 exchanged between the Company and Messrs. Shaw Wallace & Co. Ltd. respectively, whereby the Company was inter alia authorised to borrow money at interest from Messrs. Shaw Wallace & Co. Ltd. the Managing Agents, to the extent of Rs. 3 lacs at any particular time, be varied to read as follows, such variation to come into force from 1st January 1959, and that such contract varied in conformity with this resolution shall be valid for a maximum period of 5 Years from 1st March, 1958 unless previously terminated by

either party giving to the other one month's notice in writing".

Clause (2) "Money lent by Shaw Wallace & Co. Ltd. to the Company which shall not at any time exceed Rs. 6 lacs in the aggregate may be repaid by the Company without notice and shall be repaid within three days of demand".

The Transfer Register will be closed from the 26th May, 1959 to 4th June, 1959, both days inclusive.

N.B. A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and the Proxy need not be a Member of the Company.

By Order of the Board,
SHAW WALLACE & COMPANY LTD

Managing Agents.
EXPLANATORY STATEMENT:

The above Resolution has been necessitated due to the fact that the Company's funds could not be transferred from Pakistan to India and the Managing Agents are having to advance money to the Company to meet the expenses in India. These advances by the Managing Agents will continue to increase till such time as the Company is able to receive sanction from State Bank of Pakistan to transfer its funds to India, and such advances from the Managing Agents have already exceeded the limit of Rs. 3,00,000 sanctioned in the General Meeting of the Company held on 16th April 1958. In order therefore to regularise the recurring increase in advances by the Managing Agents to the Company the above Resolution is necessary.

Calcutta, 28th April, 1959.

THE PENINSULA

SOUTH INDIAN NOTES

Foodgrain Production

Self-sufficiency in foodgrain production achieved by the Madras State not long ago, had proved rather short-lived and figures for the current Fasil, indicate a fall in production confronting the State with a deficit of nearly 5 lakh tons.

This fall in production comes against anticipations of a small increase over the last year and is attributed to adverse seasonal conditions in Tirunelveli, Ramanathapuram, North Arcot and Tiruchirappalli districts. Seasonal conditions were reported to be least favourable in the North Arcot district and production is reported to have declined to an eighth of the normal yield. Crop failure in this district is more complete than elsewhere deficit in production being estimated at 3 lakh tons out of a total of 5 lakh tons. Adverse seasonal conditions are believed to have brought about decline in production in the other three districts also, though on a smaller scale than in the North Arcot district, and the sum total of the loss in production thus suffered was of a larger order than the increase obtained in the other districts.

With this picture of the prospective food situation, the stand of the State Government on the South Food zone is likely to become firmer. It is well known that the Madras State has put up a strong plea before the Centre for the abolition of the present arrangement. It is contended by the Madras Government that, while on the one hand, there is large-scale diversion of rice from Madras to the Kerala State, the attitude of the Andhra Pradesh Government in the matter of price is least helpful for making up the loss from diversion to Kerala, or to supplement its own resources. What steps the State Government would take in the face of the adverse turn the food situation had taken would be known only after the discussions which the Madras Ministers are expected to have with the Union Food Minister on the subject are over. It is also possible that the fate of the South Food Zone would be finally decided at the discussions.

Viewed against the background of the recent municipal elections at which the Congress party suffered severe reverses, this fall in foodgrain production could be the most unsettling factor for the prestige or popularity of the Government. At least, this risk should influence the Centre in adopting a more extensible attitude in regard to the and of the State Government on the South Food Zone. Excepting for the Communist members the whole political opinion in the State is finite about the disadvantages which continuance of the South Food Zone presents in the matter of supply and price of rice to the people of the State.

Road Accidents

Increasing road accidents in the Madras State has set a major problem for the State Government and the road authorities. The members of the State Legislative Council, who discussed the problem recently expressed concern at the alarming increase in road accidents and urged the State Government to take steps to prevent traffic accidents.

Dr A. Lakshmanaswami Mudaliar, the leader of the Opposition in the Legislative Council suggested the appointment of a special committee to indicate steps for the prevention of traffic accidents in the city and the State. Dr Mudaliar attributed the rising incidence of road accidents to such factors as overloading of lorries, glaring head lights of vehicles, absence of roads sufficiently wide to permit safe passage for pedestrians and vehicles, etc. As a safety device, Dr Mudaliar, insists that drivers of vehicles, should have their licences granted to them only after a thorough medical examination of their physical fitness, with particular stress on eyesight. A school for giving instructions to drivers in safe driving is another suggestion of Dr Mudaliar for reducing traffic accidents. Dr Mudaliar also criticised the attitude of the Government in allowing the construction of multi-storied buildings in heavily congested areas which increases the risk of road accidents.

The other members who spoke on the subject also shared Dr Mudaliar's views on the need for early steps to be taken by the Government to make travel by motor transport less dangerous. Most of the members would seem to be of the view that it was the growing volume of lorry traffic and the lapse of lorry drivers that cause a majority of accidents and therefore special measures had been urged for the regulation of lorry traffic.

Special measures against lorries advocated by the members were however disapproved by the Minister for Road Transport Mr Ramalaiah, on the ground that such a step taken nearly a decade ago had proved ineffective in reducing accidents. The Minister was also not in favour of imposing speed restrictions on private cars since fast travelling was not something to be discouraged but to be made less risky and dangerous by educating drivers to develop road sense. He, however, assured the members that the Transport Advisory Committee would give full consideration to the several suggestions made by the members to prevent traffic accidents.

That urgent attention is required in this matter would be clear from the growing volume of motor traffic. While, at present, there are, according to estimates, about 4,000 buses and 8,000 lorries, their number is bound to increase with further strides in economic development. Unless steps are taken to avert them, accidents would, in such circumstances, only tend to increase.

SOUTH INDIAN MARKETS

Hides and Skins Steady

CONDITIONS in the Madras tanned Hides and Skins markets remained generally steady last week. Although arrivals of Cow hides were moderate, clearances were staggered on account of the weak tone of the export market. Arrivals of Buff hides were also moderate; but there was fair clearance at steady prices. There was no change in the Calf section.

On the export front, trading with the UK was difficult, as buyers in London were reported to be holding back purchases in anticipation that prices would settle down to more reasonable levels. In premium qualities, light weights were quoting a shade easy, while medium weights were quoting 65d to 66d at which level support was lacking. The market for inferior fifties declined further and buyers were reported to be quoting 2d below the current Madras levels.

In the Calf section, "A" class Buff Calf remained unchanged; but the price in Madras is of no value as supplies are extremely small or are not obtainable. "B" class marks are quoted lower around 74d. In Cow Calf, the market is rather erratic and rates are quoted on the basis of 110d to 115d, depending on the mark.

In the Tanned Skins section, arrivals were on the same level as in the previous week and there was fair clearance at about 12 nP per pound lower as compared to the previous week. It was stated that one or two operators were trying to maintain the market at the previous levels. In market quality Goat skins, turnover was negligible and only small quantities were reported to have changed hands.

On the export front, trading was rather quiet although buyers were responding to the offers made.

Following were the results of the London auction. The Goat auction commenced with a total catalogue of 60,000 skins. There was a good attendance of the home trade and a few representatives on French account. German interests were absent. The market was active for all descriptions and the rates were up by 2sh to 2sh 6d over March figures. Out of the offerings, 42,000 skins were reported to have been sold, representing 84 per cent of the total offer.

The sheep auction followed with a good attendance of buyers. The market was reported to be strong with the best examples advancing by 2d to 3d per pound. Buyers were, however, selective. It is reported that, out of a total offering of 212,000 skins, only 105,000 skins were sold, representing 50 per cent of the total offer.

Coffee

The latest estimate of the 1958-59 coffee crop stands at 45,430 tons.

The quantity comprises of 19,360 tons of Robusta; 19,505 tons of Plantation and 7,020 tons of Arabica. The Robusta crop, picked during the season, is the biggest so far, the previous best being 14,710 tons in 1957-58. According to present expectations, the 1959-60 crop will be about the same as the crop just harvested. Almost all coffee-growing districts received blossom showers in April. The quantity of coffee sold for export, during the period January to April this year, amounted to 6,903 tons.

According to an official report, Indian Coffee can be exported in a substantial quantity to Belgium despite stiff competition from the Belgian Congo and South American countries, provided regular supplies are ensured at competitive prices.

Belgium imports a considerable amount of coffee for internal consumption. Her imports of coffee amounted to 40,806 tons in 1958 as compared to 37,005 tons in the previous year.

India's share in the total coffee imports of Belgium was very negligible and totalled 537.2 tons in January/August, 1958. Indian coffee, however, enjoys a good reputation in the Continental coffee market for its quality.

Groundnut

Prices in the Madras Groundnut market, after ruling initially firm, developed a slightly easier tendency towards the close on Calcutta advices. Buyers, in general, were found to be reserved. Arrivals ranged between 50 and 75 tons a day in the shape of summer peanuts and summer coromandel. Demand for seeds continued to be good, not only on account of local crushers, but also on account of other States, notably Andhra. Superior oil quality seed was quoted at Rs 188 per candy and the summer crop at Rs 185.

In the Groundnut Oil section, fairly large quantities were reported to have been taken up by Calcutta interests for ready and nearby deliveries. Activity was, however, restricted in the forward position. The rate for the ready position improved to Rs 375 from Rs 366 per candy, although the closing rate was easier at Rs 369 on lower Calcutta advices.

Bangalore Silk

There has been no change in the prevailing rates for Filature Raw Silk, in the Bangalore Silk market, during the week ended 7-5-59.

Prices of Charka varieties, excepting for First Quality, which quoted Rs 27.50 to Rs 30.25 as against Rs 27.50 to Rs 30.00 per lb remained at the previous week's levels throughout the period under review.

Reeling Cocoons of 2nd Quality (Channaptna) and Mugur indicated slight rises in their prices, while First Quality (Siddaghatta) closed at the previous week's level of Rs 1.50 to Rs 2.50 per lb.

Seed Cocoons for Mysore declined by four points to quote at Rs 10.00 to Rs 16.00 as against Rs 10.00 to Rs 20.00.

This is only an announcement for information and not a prospectus and applications are invited on the basis of the prospectus copies whereof are available from the Company's Bankers and Brokers mentioned herein

Consent of the Central Government has been obtained to this Issue by an Order, of which a complete copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent, the Government of India do not take any responsibility for the financial soundness of any scheme or for the correctness of any statements made or opinions expressed with regard to them.

A Licence has been obtained from the Central Government for the establishment of this new Industrial Undertaking, of which a copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in granting this Licence the Government of India do not take any responsibility for the correctness of any of the statements made or opinions expressed in regard to it.

A copy of this Prospectus, having attached to it the documents required by Section 60 of the Companies Act, 1956, has been delivered for registration to the Registrar of Companies, Bombay.

An application is being made to the Stock Exchanges of Bombay & Calcutta for permission to deal in the shares now being offered and in due course for an official quotation.

THE INDIAN RAYON CORPORATION LIMITED

(Incorporated on 26th September 1956 under the Companies Act, 1956)

AUTHORISED CAPITAL ... Rs. 10,00,00,000

Divided into 4,00,000—7% TAX FREE Cumulative Redeemable Preference Shares of Rs. 100 each, 4,00,000—Equity Shares of Rs. 100 each and 2,00,000—Unclassified Shares of Rs. 100 each.

ISSUED CAPITAL ... Rs. 2,00,00,000

Divided into 60,000—7% TAX FREE Cumulative Redeemable Preference Shares of Rs. 100 each and 1,40,000—Equity Shares of Rs. 100 each.

ALREADY ISSUED AND SUBSCRIBED Rs. 6,24,100

comprising of 2,070—7% TAX FREE Cumulative Redeemable Preference Shares of Rs. 100 each and 4,171—Equity Shares of Rs. 100 each (on both of which Rs. 25/- Per share has been paid).

CAPITAL AGREED TO BE TAKEN UP :

By the Financial and Development Fund Inc., and Messrs. Von Kohorn International Corporation of USA (suppliers of machinery) :	
39,187—Equity Shares of Rs. 100 each	... Rs. 39,18,700
By the Promoters, Managing Agents, Directors, Selling Agents and their friends :	
4,930—7% TAX FREE Cumulative Redeemable Preference Shares of Rs. 100 each.	... Rs. 4,93,000

	Rs. 93,75,900

NOW OFFERED AT PAR FOR PUBLIC SUBSCRIPTION :

53,000—7% TAX FREE Cumulative Redeemable Preference Shares of Rs. 100/- each ... Rs. 53,00,000	
47,000—Equity Shares of Rs. 100/- Each. ... Rs. 47,00,000	
	Rs. 1,00,00,000

AMOUNT PAYABLE IN RESPECT OF SHARES:

The amount payable in respect of both the classes of shares, namely Preference and Equity is as follows:

Rs. 12.50 per share on application.
Rs. 12.50 per share on allotment.

and the balance in six equal instalments provided that there shall be an interval of not less than three months each between calls and between the allotment and the first call.

APPLICATION FOR SHARES:

Each application must be for a minimum of 5 shares, either Equity or Preference, or in multiples thereof.

Complete application forms along with payment must be delivered before the closing date of the subscription list to the Bankers of the Company or to the Managing Brokers or Brokers to this Issue or at the Registered Office of the Company. Upcountry drafts or cheques should include appropriate Bank Charges.

Where no allotment is made, the deposit will be returned in full, and where a partial allotment is made, the unutilised balance will be returned.

The Directors reserve the right to refuse any application wholly or in part without assigning any reason. Failure to pay any amount due on the shares allotted, when due, will render previous payments and shares liable to forfeiture. The shares when issued will be subject to the Memorandum and Articles of Association of the Company, a copy of which may be inspected at the Registered Office of the Company, during office hours.

The Share certificates will be issued within six months of the date of allotment.

OBJECTS OF THE COMPANY:

The Company was incorporated on the 26th day of September 1956 with the objects mentioned in the Memorandum of Association and in particular to undertake the manufacture of Viscose Rayon Yarns, other Synthetic Fibres, Yarns and Fabrics and ancillary Chemicals and Products.

May 16, 1959

MACHINERY AND TECHNICAL SERVICES:

The Company has entered into agreements on 2nd October 1958, with (1) Messrs. Von Kohorn International Corporation (who jointly with The Financial and Development Fund Inc., of U.S.A., have agreed to invest in the equity capital of our Company, a sum of U.S. Dollars 825,000 which is equivalent to about Rs. 40 lakhs), (2) Messrs. Von Kohorn International (London) Limited, and (3) Messrs. Von Kohorn Eastern Corporation Limited, under which the entire plant and machinery for the Company's rayon factory at Veraval will be designed and supplied by them from the U.S.A., and U.K.

The Von Kohorn Group of Companies has long experience of building rayon factories all over the world numbering about 40 upto now including Century Rayon at Kalyan, near Bombay.

THE SCOPE AND PROSPECTS:

The growing demand for rayon yarn in the country is much larger than the indigenous production capacity. Total consumption of rayon yarn in 1958 was 6,72,78,000 lbs. out of which 3,36,80,000 lbs. were imported. In 1956 consumption had reached a figure of nearly 8,00,00,000 lbs. out of which about 6,00,00,000 lbs. were imported. The restrictions on imports by Government have naturally resulted in a ready demand for Indian Rayon Yarn.

The Planning Commission have estimated the consumption of Viscose Rayon Yarn in the country by 1960/1961 at 80 million lbs. and have fixed the target of production at 60 million lbs. during the same period.

Considering the great scope for expansion of indigenous production, the Government of India has licensed the establishment of a few new units of rayon production in the country in accordance with the recommendations of the Planning Commission. It may be added that even if all the new licensed units go into production by 1960/1961, there will still be a considerable gap between the consumption and production of rayon yarn in India. There will be further scope also for expansion of existing units and of new units being established.

The Rayon Industry, while enjoying a unique scope for expansion, has been receiving protection from Government by the regulation of imports in relation to the capacity of the indigenous units and also by the imposition of protective duties on foreign yarns which ensure profitable returns to the investors in indigenous units. The recent drastic cuts in rayon yarn imports have further widened the scope of the indigenous units.

PLANT CAPACITY:

The Company's factory, proposed to be established at Veraval, in Saurashtra, is one of such newly licensed units. The licensed capacity of the factory is 10 tons of rayon filament yarn per day.

The first phase of production in the factory is expected to yield about 5 tons of rayon yarn per day. The remaining licensed capacity is proposed to be attained in subsequent phases. Manufacture of Staple Fibre and other viscose and synthetic fibre products may also be undertaken at a later stage.

SELLING ARRANGEMENTS:

The Company will have the benefit of the association as Selling Agents of **FORBES FORBES CAMPBELL & CO., PRIVATE LTD.**, a well known business house of Bombay who have long and wide experience in India as distributors of world famous foreign rayon and other synthetic yarns. The Company is entering into the necessary agreement, with them, appointing them as the Sole Selling Agents of the Company.

INCENTIVE TO RAYON WEAVERS:

It is proposed, as an incentive to rayon weavers who subscribe to shares in the present Issue of the Company, that preferential treatment by way of priority in the allocation of rayon yarn to the extent of annual sale value equivalent to their share subscription be given to them.

LOCATION OF THE FACTORY:

After a thorough investigation by Experts, a very favourable site at Veraval, in Saurashtra, has been selected for the factory, as it offers important facilities for production of rayon yarn.

WATER SUPPLY:

Guaranteed water supply at a reasonable rate, to the extent of 6 to 7 million gallons per day has been assured by the then State Government by constructing the requisite water works, dam, etc., on the river Hiran in the Gir Forest. The construction of these works is scheduled to be completed before the Company's factory goes into production.

ELECTRIC POWER:

Electric Power will be available at the site of the factory from the Shapur Power House which has already commenced generation. The Corporation proposes to further generate its own power to the extent necessary and is rendered economical by the generation of steam for the processing work.

LAND:

Land to the extent of about 171 acres has been acquired at Veraval through the State Government and is being developed by the Company. The Company proposes to give five acres of land to the Bombay State Electricity Board, for Veraval Sub-Station, at cost price.

TRANSPORT FACILITIES:

Veraval is a sea port adequately equipped for handling heavy cargo. A meter gauge line of the Western Railway links the docks with the rest of the country and an all-weather road connects it to the other parts of Saurashtra and the rest of India, via Junagadh, Rajkot and Ahmedabad. Veraval is served by the Keshod Airport (through the air services

SUBSCRIPTION LIST WILL OPEN AT 10 A.M. ON MONDAY 25th MAY 1959 & WILL CLOSE AT 1 P.M. ON SATURDAY 30th MAY 1959.

running between Bombay-Saurashtra and Kutch) which is a regular point of call and is about 25 miles from Veraval and is connected by an asphalt road and a concrete highway.

IMPORT LICENCE:

The Company has already obtained the Import Licence No. 001190/HQ.C.C.I.C.G./A.U. dated 6th May 1957 from the Government of India for the import of plant, machinery and equipment upto a value of Rs. 2,13,00,000/- on deferred payment terms.

GOVERNMENT ASSISTANCE:

It will be observed from what has been stated above that the Central and State Governments have been extremely helpful and have offered every possible assistance and facility.

CAPITAL OUTLAY:

The total cost of the project will be about Rs. 3,32,00,000 estimated as under:

(1) F.O.B. Value of Plant and Machinery	..	Rs.	76,00,000
(2) Freight, Import Duty, Transport to site, etc.	..	Rs.	27,00,000
(3) Technical Assistance	..	Rs.	12,00,000
(4) Erection and implementation expenses	..	Rs.	10,00,000
(5) Lands and Buildings, etc.	..	Rs.	45,00,000
(6) Financing Charges	..	Rs.	8,71,578
(7) Local Purchase and Fabrication	..	Rs.	8,00,000
(8) Working Capital and Reserve for Contingencies	..	Rs.	40,78,422
(9) Preliminary expenses including Brokerage and other share issue expenses	..	Rs.	4,50,000
		Rs.	3,32,00,000

The Directors are convinced that the Capital Outlay for this project compares favourably with the capital cost of other rayon projects undertaken in our country.

FINANCIAL RESOURCES:

(1) Capital subscriptions from promoters, directors, Selling Agents. The Financial and Development Fund, Inc. of New York, Von Kohorn International Corporation and friends	..	Rs.	1,00,00,000
(2) Capital Subscriptions to be offered to the public	..	Rs.	1,00,00,000
(3) Long-term Credits provided by Von Kohorn International (London) Limited, for purchase of Plant and Machinery, excluding 15% payment to be made in October, 1960	..	Rs.	1,32,00,000
		Rs.	3,32,00,000

MINIMUM SUBSCRIPTION

The Directors will proceed to allotment on the subscription to shares amounting to Rs. 1,35,00,000 inclusive of the shares agreed to be taken up by the promoters, directors and then friends and the foreign parties as mentioned above.

ESTIMATE OF PROFITS

The existing rayon factories in our country have been making substantial profits and the shareholders of these companies have not only been receiving attractive dividends but have also benefited in the form of capital appreciation.

After a thorough investigation into manufacturing costs, it is estimated on conservative basis that under existing conditions within a short period of the working of the Company's factory, the profits will be sufficient after payment of dividends on Preference Shares, to provide an attractive return to the Equity Shareholders.

SPECIAL BENEFITS

The Company will be entitled to the Special Benefits under the Indian Income-Tax Act with respect to development rebate. It will also enjoy the benefit of Section 15C of the Indian Income-Tax Act whereby profits upto 6% on the employed capital will be exempted from tax for the first five years of operation. It is, therefore, very unlikely that the Company will be liable for Income-tax for the first few years of its operation.

Preliminary Expenses:—The estimated amount of the preliminary expenses including brokerage on share subscriptions is Rs. 4,50,000 out of which a sum of Rs. 84,938 has already been incurred upto 15th day of February 1959.

BROKERAGE

Brokerage at the rate of 1% on the nominal value of each Ordinary and/or Preference Share will be paid to recognised Brokers or Banks on allotment being made in respect of applications bearing the stamp of such brokers or Banks.

Messrs. Merwanjee Bomanjee Dalal, Bombay, are the Managing Brokers to this Issue and will be in addition entitled to a Brokerage of 1/4% per Ordinary and/or Preference Shares subscribed by the Public.

AUDITORS' REPORT:

After the date of Certificate of Commencement of business dated 13th February 1958 the Company has not carried on any business but has incurred certain expenses out of the moneys received in respect of the shares allotted prior to the date of the issue of this Prospectus. The Auditors Messrs. G. P. Kapadia & Co. & Messrs. Khimji Kunverji & Co., have made a report on that behalf.

United Bank of India Limited

Regd. Office: UNITED BANK BUILDINGS, 4, CLIVE GHAT STREET, CALCUTTA—1.

Annual Report of the Directors for the year ended 31st December, 1958.

The Directors beg to submit to the shareholders the Audited Balance Sheet of the Company as at 31st December, 1958 and Profit and Loss Account for the year ended 31st December, 1958 together with the Auditors' Report thereon.

The profit for the year after making provision for taxation and including the balance of Rs. 1,77,452.78 brought forward from the previous year's account amounts to ... Rs. 15,92,224.29

Out of this amount the following appropriations have been made:

To Reserve Fund under Section 17 of the Banking Companies Act ... Rs. 3,45,000.00
To Bonus to Staff ... Rs. 2,83,083.80
Rs. 6,28,083.80

Leaving an available balance of ... Rs. 9,64,140.49

Out of the above the Directors recommend the payment of a dividend to the shareholders at the rate of 3% per annum, free of income-tax absorbing ... Rs. 7,82,598.00

To be carried forward to next year's account ... Rs. 1,81,542.49

The Bank's business during the year made satisfactory progress.

During the year under report three branches were opened in the State of West Bengal at Alipur Duar, Durgapur and Lilloah, one branch was opened in the State of Orissa at Rourkela and one branch was opened at Imphal in Manipur State.

Dr. S. B. Dutt, Dr. N. N. Law, Sir Chunilal B. Mehta, Kt., Directors, retire under Article 117 of the Articles of Association of the Company read with Section 256 of

the Companies Act. Dr. S. B. Dutt, being eligible, offers himself for re-election. Dr. N. N. Law and Sir Chunilal B. Mehta, Kt. are also eligible subject to compliance with the provisions of Section 281 of the Companies Act, and as such they offer themselves for re-election.

Nawab Sir K. G. M. Farouki, Kt. and Sri T. S. Santhanam, Directors, retire under Article 123 of the Articles of Association of the Company and they have been recommended by the Board for election and are eligible and offer themselves for election.

Messrs. Ray & Ray, Auditors of the Bank, retire and offer themselves for re-appointment.

The shareholders are requested to appoint auditors for the ensuing year and to fix their remuneration.

UNITED BANK OF INDIA LIMITED BALANCE SHEET—(Contd.)

AUDITORS' REPORT

We have audited the annexed Balance Sheet of United Bank of India Ltd., as at 31st December, 1958 and also the annexed Profit and Loss Account of the Bank for the year ended upon that date in which are incorporated the Returns from the Branches audited by other Auditors.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisions to Sub-sections (1) and (2) of Section 211 and (3) Sub-section (5) of Section 211 and Section 227(5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956. The Accounts are therefore drawn up in conformity with Forms A & B of the Third Schedule to the Banking Companies Act, 1949.

We report that:

- We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;
- The transactions of the bank which have come to our notice, have been within the powers of the Bank;
- In our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the bank;
- The Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;
- In our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1958, and the Profit and Loss Account gives a true and fair view of the Profit for the year ended upon that date.

Dated, Calcutta,
The 30th March, 1959.

RAY & RAY,
Chartered Accountants.

Schedule of particulars required under the Banking Companies Act, 1949, attached to and forming part of the Balance Sheet as at 31st December, 1958.
