The conference on Planned Parenthood which met last week in New Delhi has sounded the alarm without being able to show a practical way of escape for this country. Sir Julian Huxley has built up a gloomy statistical picture to lend point to his warning of political and social disaster. He estimates that at the present rate of increase, the population would be doubled in 45 years and would reach three-fourth billion before the end of this century. In India, in contrast with other countries, there is near unanimity on the need to check the growth of population. The Government of India is the only Government in the world which has taken a positive action for family planning, through establishment of clinics and provision of other facilities. But the results so far are not substantial, and a memorandum on family planning by the Madras Government has indicated the reason. The conventional methods are too expensive, or otherwise unsuited to local conditions. The Family Planning Board in Madras has adopted a new approach with emphasis on sterilisation with necessary safeguards. The element of irrevocability in such operations should make thoughtful persons uncomfortable and hesitate to recommend it for widespread adoption by the nation. The problem is to find an effective method of controlling births short of mutilation. As Dr Bhabha has said, what is needed is a measure which will not prevent conception, but will prevent the probability of conception by 30 per cent.

Encore for Ne Win

By submitting the resignation of his Caretaker Government two months ahead of the end of its term, General Ne Win has strengthened his hands in pressing for an extension of the period which he considers essential to complete clearing-up operations. His own personal prestige has been reinforced by the scrupulous regard he has shown for preserving the spirit of the Constitution as well as for the terms of the agreement under which he took over as Prime Minister last October. The task assigned to him when the parties in Parliament unanimously nominated him for the premiership was to arrange for holding free and fair elections so that a new Government could be sworn in by April. The General's assessment of the situation is that it will not be possible to create the conditions for holding elections in the short period left before the target date. As a non-member of the Assembly, he cannot continue as Prime Minister beyond a period of six months. The indefinite extension of his term as head of the Caretaker Government will require amendment of the Constitution. He might continue by extension of his term on a six-monthly basis, but the General is opposed to such circumventing of the spirit of the existing Constitution and has made it a condition for his continuance in office that it should be formally amended, deleting the six-month limit.

The General cannot be accused of trying to prolong his office indefinitely through amendment of the Constitution. He tried hard to bring about agreement between the two factions of the A.F.P.F.L. so that a Government commanding a stable majority could take over from him. He has also offered his cooperation to any other person who assumed office and ordered general election. At the same time he has revealed himself as an able political strategist with shrewd sense of timing. Spokesmen of all the parties, except the National United Front, have declared support for extending Ne Win's term in office. The A.F.P.F.L. faction led by U Ba Swe has already assured support for Ne Win. For Thakin's Nu' group, which was hesitating, the alternative to Ne Win was U Ba Swe and its members have come round to reluctant support of the general. U Nu's threat of passive resistance has an ominous ring, if the report of what he told the Rangoon Branch of his party represents what he really meant. The reference to Gandhian methods suggests that he will content himself with a moral protest. In any case the Chamber of Deputies is expected to put through the necessary amendment to the Constitution to enable Ne Win to continue as Prime Minister. The General for his part has indicated that with the cooperation of all parties he could hold general elections early next year.

Money Tight

THE money market has known a sustained tightness for some several weeks, due, presumably, to the substantially larger demand for accommodation for the financing of crops. This has in turn meant that the interest rates in the banking sphere have been influenced by this short term consideration, whereas the lesson to be drawn from banking results in 1958 would have indicated the necessity for the banking system to refrain from paying too high a price for its Deposits. It is the short term aspect of the money market which has also been responsible for the poor showing of Treasury Bills auctions in recent weeks. In banking circles, no relief from the tight money conditions is anticipated before the end of March or the beginning of April. In this sense, the inter-bank call money rate is likely to be well maintained until that time, with a probable decline on the cards from the middle of April. As for term money rates, bankers are privately disturbed by the fact that a concerted reduction in the rates of interest offered for Deposits does not seem to be possible. As we had pointed out on an earlier occasion, the voluntary agreement among banks is not proving to be the remedy for the profit squeeze which banks suffered as a result

of the high term money rates. There is the distinct possibility that, when the 1959 slack season starts, some of the banks might express their intention to withdraw, as it were, from the voluntary agreement. Such withdrawal would be made not so much because there would be the intention to compete by offering higher rates than prescribed, but rather as a unilateral protest by individual banks against the ineffectualness of the agreement. For our part, we cannot find any rational explanation for term money rates continuing at their present levels.

Sharp Rise in Foreign Balances

The busy season continues apace as evidenced in the latest banking returns. The Reserve Bank figures for February 13 reveal that Active Note circulation has expanded by another Rs 10.05 crores to Rs 1668.14 crores. Moreover, Rupee Coin went out into circulation for Rs 0.41 crores. Currency has been expanded against Foreign Securities for Rs 13.33 crores by transfer from Balances Held Abroad in the Banking Department. On the other hand, there has been a small contraction of Rs 3.33 crores against Rupee Securities. In the result, notes held in the Banking Department are lower by Rs 0.46 crores at Rs 10.84 crores.

The feature of the week's returns is the substantial rise that has been recorded in the foreign exchange reserves held in the two departments of the Reserve Bank. On the one hand, as we have seen, Foreign Securities were higher by Rs 13.33 crores. On the other hand, in the Issue Department, Balances

Held Abroad have improved by Rs 2.11 crores. The net rise in the foreign exchange reserves is, therefore, of the order of Rs 15½ crores. The bulk of this represents the advance payment of £ 10 million against the pension agreement by the UK Government in terms of their undertaking at the Washington Conference convened by the World Bank to help India in its present predicament over foreign exchange. Nevertheless, it is to be noted that a trifle over Rs 2 crores of the increase in foreign exchange reserves is to be attributed to an export surplus. In the sense that, since the Second Plan began, there has been an unremitting import surplus, the fact that, with a break of two weeks, foreign exchange reserves since the end of November have been consistently rising, even if by small amounts, is a heartening indication that the imbalance in payments has been corrected by vigorous and effective Government action. We may also note that, with the current week's accretions to foreign balances, exchange reserves held by the Reserve Bank have, after some months, crossed the Rs 200 crore mark, to be placed at Rs 206.13 crores.

The Central Government's balances have improved by Rs 15.38 crores to Rs 65.82 crores, and this could be due to the credit derived by Government in respect of the £ 10 million received from the UK Government. But it is also possible that, during the week, there has been some element of deficit financing. For, while Rupee Securities in the Issue Department were lower by Rs 3.33 crores, investments in the Banking Department have been marked up by Rs 6.22 crores. The balances of State Governments are practically unchanged at Rs 21.99 crores and their borrowings are also more or less the same at Rs 27.79 crores. In spite of the busy season pressure, it would appear that the Reserve Balances of member banks have improved by Rs 4.48 crores to Rs 72.43 crores, but such improvement has been accomplished by larger recourse to central banking credit. The Other Loans and Advances of the Reserve Bank having gone up by Rs 6.51 crores to Rs 96.82 crores.

Notwithstanding an increase of Rs 4.15 crores to Rs 480.80 crores in Deposits, the State Bank, in its return for February 13, discloses an increase in borrowings from Rs 6.09 crores to Rs 12.00 crores. Investments are lower by a shade under Rs 1 crore at Rs 276.27 crores, being wholly as a result of disinvestment in gilt-edged. The increased resources from Deposits and borrowings have been utilised mainly in adding to Cash in Hand and with the Reserve Bank, which is marked higher by nearly Rs 6 crores at Rs 29.22 crores against Rs 23.28 crores. The total of Advances has also risen by Rs 2.51 crores to Rs 193.37 crores.

The return of Scheduled Banks for February 6 reflects the pressure of month early disbursements and

the progress of the busy season. It also confirms our anticipation last week of an increase in Deposits and a decline in Investments. Finally, it also clarifies that a typographical error was responsible for indicating last week a sharp and unusual rise in balances with other banks—to which we had drawn attention. Deposit Liabilities of Scheduled Banks appear to be fractionally lower, but this is because a number of adjustments have taken place. Borrowings both under Demand and Time Liabilities have been reduced in the aggregate by over Rs 2½ crores. A decline in net Demand Liabilities has been more than offset by what is presumably partly a switch to Time Liabilities. Secondly, the total of Advances has jumped sharply by Rs 17.77 crores to Rs 938.11 crores. Thirdly, Investments in gilt-edged have been marked down by Rs 12.00 crores at Rs 623.29 crores. There is a reduction of Rs 4.34 crores in borrowings from the Reserve Bank, but this is largely offset by an increase of Rs 2.67 crores in borrowings from the State Bank. In the result, cash balances have moved down from Rs 161.89 crores to Rs 156.95 crores. Lastly, balances with other banks should, in the return for January 30, have read as Rs 12.95 crores, and not Rs 21.95 crores as was rendered.

Outlook for Dollar

By Paul Einzig

NEARLY quarter of a century has passed since the last dollar crisis. During that long period the international stability of the dollar has been one of the few fixed points in an unstable world economy. During the post-war period an increase in the dollar price of gold as a matter of expediency was often advocated, but none of the advocates of such a measure would have suggested that circumstances might arise in which the United States Government would feel forced to resort to it. During the last few months, however, the possibility of an involuntary devaluation of the dollar has come to be envisaged in many quarters both in the United States and abroad.

The unexpected extent of duration of the business recession is mainly responsible for this pessimism. It became accentuated as a result of the Democratic victory at the Congressional election in November 1958, foreshadowing the possibility of a Democrat Administration in 1960.

In spite of the substantial outflow of gold during 1958, the size of the American gold reserve is still very formidable. With the development of doubts foreign Governments and central banks may convert, however, their holdings of dollars into gold, and private foreign holders of dollars may remove their funds from the United States in anticipation of a devaluation under a Democratic Administration. But even if all foreign-owned dollars were withdrawn

a fairly substantial gold reserve. The only people who could force the hand of the Administration to devalue against its wish would be the Americans themselves. While the extent of the gold drain due to foreign withdrawals has its natural limits, there are virtually no limits to a drain caused by an American flight from the dollar.

Up to now the extent of such a flight has been very moderate. It consists of some American demand in London for South African gold mining shares, forward buying of gold as occurred during the last few weeks in the London bullion market, and American buying of gold in Canada. The newly established gold market in Montreal caters mostly for American buyers. But the sum total of these operations need not give cause for uneasiness. After a victory of the Democrats, and perhaps even an anticipation of such a victory, the present trickle might, however, easily grow into a flood.

The United States Government has always resisted pressure in favour of making the dollar notes convertible into coins and in favour of allowing American residents to acquire and hold gold bars in the United States. This is fortunate, for, with such hoarding facilities in existence, the sky would be the potential limit of an American flight from the dollar. As it is, any distrust in the dollar is liable to be largely offset by distrust in other currencies or in the security of gold holdings in foreign countries. From this point of view the development of a gold market in Canada constitutes a source of grave danger, because many Americans who would hesitate to hold gold in Europe or in Latin America would willingly hold gold in Canada.

The re-emergence of a forward market in gold in London after its absence for twenty years must be regarded as a source of potential difficulties for the United States in case of a flight from the dollar. But in this respect the remedy lies with the Washington Administration. The relations of the United States authorities with the British and Canadian authorities could hardly be friendlier, and it seems probable that a request from Washington to co-operate in an effort to discourage the flight from the dollar would not be ignored in London and Ottawa. At present no such intervention is called for, and it is to be hoped that there never will be. But it is well to remember that in 1935 the British authorities placed a ban on forward dealing in gold in response to requests from France and other "gold bloc" countries which were finding the operations of their national in the London forward gold market a source of additional difficulties.

Hitherto it has been assumed that the International Monetary Fund is just another channel for dollar aid to European and other soft-currency countries. But surely that institution could operate a two-way traffic if necessary. It could reinforce the defences of the dollar in face of speculative exaggeration of an adverse pressure.

But remedy lies in the hands of the American authorities and especially the American people. It is arguable that the former could be a little less generous with dollar aid at a time when the possibility that before very long the dollar itself may need support cannot be ruled out altogether. Above all, resistance to domestic inflation would go a very long way toward silencing the prophets of dollar's doom.

But any firm disinflationary policies would hinder expansion of production at a time when this is vital from the point of view of

keeping pace with expansion in the Soviet Union. Moreover, credit restrictions are liable to prevent business recovery and would strengthen political pressure in favour of "New Deal" inflation. What is needed, therefore, is not so much another dose of conventional disinflationary remedies as a supreme effort to persuade the American workers to exercise self-restraint in their wage claims.

Admittedly, in Britain exhortations to that effect have failed to produce any noteworthy results, because sterling no longer seems to be in danger of a devaluation.

But the fears of a dollar devaluation should give rise to a better spirit of co-operation in America in the interest of its defence. In the long run the fate of the dollar lies in the hands of the American industrial worker. If he could be persuaded to restrain his wage demands without being forced to do so by credit squeeze and increasing unemployment the American authorities would have no difficulty in restoring international confidence in the dollar. In the absence of such self-restraint, the wave of distrust is liable to continue. (Copyright).

MUKAND
serves
the Cement Industry...

MUKAND makes both Carbon and Manganese Steel Castings in a variety of specifications, sizes and shapes for the Cement Industry. These include Lining Plates, Hammers, Beaters, Grate and Grizzly Bars, Diaphragm Walls and many, many others; also Manganese Steel Jaws, Digger Teeth, Corner Shoes etc. for Excavation, Quarrying and Crushing Machinery and Equipment.

For your needs of Carbon and Manganese Steel Castings, large or small, call in MUKAND to ensure a high standard of quality and prompt delivery.

Listless Conditions

After displaying a hardening tendency in earlier dealings the jute goods market has closed the week under review once again on a quiet note. An improvement in sentiment in the heavy goods section was noticeable almost from the start following rumours of a sizable order from Government for B Twills. At one time this construction gained upto a rupee in price. With the announcement of a rise in US burlap consumption in January, hessian prices also moved up somewhat but even here the gains could not be maintained till the end of the week.

It would appear that the Government order for 42,000 bales of 3 Twills for delivery during three months, February, March and April have not come up to the expectations of marketmen. Evidently the speculative rise in the price during last Friday's trading in B Twills had been largely motivated by the belief that the size of the order would be much bigger and that the delivery period much shorter.

A contributory factor for the lack of sustained interest at the higher price levels has been the knowledge that the performance of the industry atleast as far as sackings are concerned is far from satisfactory. The figures relating

to production of jute goods during January released on Saturday have made it clear that the rise in stocks has been brought about by lack of overseas demand for our goods. Total production of jute goods in January amounted to only 92,100 tons against 96,500 tons in the previous month and 98,300 tons in the corresponding month of last year. The lower output is to be attributed to the fall in the hours worked last month. Mills have worked for only 206 hours in January while the number of hours worked by them in December totalled 217.5. An interesting feature of the production figures is that hessian output is shown almost unchanged from the previous month's figure at 40,000 tons. Thus the decline in production has almost entirely occurred in sacking the production of which is placed at 45,200 tons, as against 49,200 tons in the previous month. Output of other varieties has also declined from 7,200 tons to 6,900 tons. The shift in emphasis as between the production of hessian and sacking will be clearly seen when the two sets of relevant figures for last month and the corresponding month of 1958 are compared. As against a production of 34,400 tons of hessian in January 1958, production in January 1959 has amounted to 40,000 tons. The relevant figures for sacking are 57,300 tons in January 1958 and 45,200 tons last month.

The figures for despatch of goods released on Wednesday leave no doubt about the unsatisfactory performance of the industry during last month. Total despatches last month have amounted to 87,691 and these compare with 92,085 tons in December. When compared with the corresponding month of last year, however, the position does not appear so bad;

for despatches in December 1958 amounted to only 75,528 tons. An analysis of the figures reveals interesting points. Taking total despatches, the two principal sections seem to stand more or less on an equal footing, as Hessians are placed at 39,188 tons and sacking at 42,909 tons as against 41,876 tons and 44,893 tons respectively in the previous month.

The export performance of these, however, shows wide disparity. Exports of hessian have amounted to 37,437 tons as against 39,742 tons in the previous month. The decline in overseas demand for heavy goods will be clearly brought out if it is noted that exports of this category of goods during January last year were of the order of 26,215 tons while Hessians accounted for only 28,103 tons to make up a total of 55,654 tons. The position last month is that out of a total of 63,723 tons, hessian have accounted for 37,437 tons. If the overall position of sacking last month has been on a par with hessian it is because of the high level of sacking despatches for internal consumption the figure for which during last month is placed at 13,309 tons as against 17,280 tons in December and 15,319 tons in January 1958.

A probable reason why hessian prices have also turned quiet after reacting favourably to the news of a rise in burlap consumption in US during last month is the belief that the availability of this category of goods may steadily increase in coming months. It may be noted that already the emphasis on hessian production is well pronounced last month as indicated above. It would appear that the depressed conditions in the raw jute market has also engendered a

feeling in overseas consumers that prices may decline further.

Conditions in the raw jute market have been dull though there has been sustained mill interest in mesta at advancing price levels. It would appear that the depressed sentiment is due to a feeling that the recent sanction accorded to balers to export a limited quantity of raw jute has not made much difference to the prevailing situation in the trade. Referring to present conditions in the raw jute market the Jute Balers' Association, Calcutta have pointed out that recent developments have upset the trade. The Association is of the view that the restriction imposed on the trade by the STC that sales should be made at £88 for export firsts, £77 for export lightnings and £63 for export hearts all per ton c.i.f., for Continental ports is unrealistic as no business is possible at these rates. It would appear that the fact that the export duty of Rs 3 per maund that is still in force is making the position further difficult for balers to conclude business overseas. It is pointed out that if exports of raw jute are to make any worthwhile contribution toward bringing stability to the raw jute market it is essential that this duty is abolished and at the same time export of raw jute is allowed to take place through the normal trade channels.

The jute goods market opened the week on a steady note on rumours of a sizable Government order for B Twills. B Twills February moved up to Rs 89.35 while hessian 40" x 10 oz Feb, also steadied up in sympathy to Rs 39.60. With covering in heavy goods in the futures market prices further moved up on Friday (the market remained closed on Thursday) and B Twills was placed at Rs 89.40 with Hessian quoting at Rs 39.85. The market ruled quiet in heavy goods and steady in hessian on Saturday with the rates as follows: B Twills Rs 88.60 and Hessian Rs 39.65. News of a rise in US burlap consumption coupled with rumours of a fresh Russian order imparted some strength to the market on Monday especially in the hessian section where the rate improved to Rs 40.05. B Twills also steadied up in sympathy to Rs 89. The news of a Government of India tender for 42,000 bales of B Twills received late on Tuesday failed to sustain interest in the sacking section as the size of the order was below market expectations. Consequently B Twills reacted to Rs 88.60. Hessian however continued to rule steady at Rs 40.05. Conditions were rather quiet on Wednesday due to selling pressure in hessian which as a consequence receded to Rs 39.60 B Twills also marked down to Rs 88.20.

In the raw jute market Assam Bottoms was quiet at close at Rs 20.50 in the absence of business after having been steadier earlier at Rs 21.

Prospects

THE prices obtained at the Calcutta Tea auctions, during the past few weeks, have been satisfactory, especially when it is considered that quality is still rather ordinary. This is mainly due to the fact that certain foreign buyers have continued to show good interest in their buying. For instance, Russia has continued to support Darjeeling teas, while stylish sorts have been dearer mainly due to increased support from Turkish buyers. Egypt is likely to continue her purchases of Fannings and Dusts, while the increased weight of brighter liquoring medium Broken Orange Pekoes and Orange Fannings may provoke more interest

S. E. RLY TENDERS

Sealed tenders are invited for (1) Tender No. CON/COS/15/F259 for supply of 300 Nos. Cells accumulator, Camp sealed in type Cells 2 Volts, 5 plates per cell 60 A.H. at 0 Hr. Rate 2 disc. CZG-6. Type, Charging Rates 16 Amps Max & 8 amp Min. Charging volts-2.75 to 3 as per Specn. BSS-440-1932. Earnest money is Rs 560/-. Tenders will be opened on 6-3-59 at 12 noon.

(ii) Tender No. CON/COS/16/F259 for supply of 90 cwt. wire rope steel galvanised 60-70 tons tensile. 7x7/22 S.W.G. Specification IRS S3-47. D.O.I. Inspection required. Earnest money is Rs 220/-. Tenders will be opened on 7-3-59 at 12 noon.

Tender forms are obtainable from the office of the under-mentioned (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs 2/- (not refundable) per copy per tender by money order to him direct in the case of outside firms and on production of cash receipts from this Rly's Chief Cashier by local firms.

Tenders should accompany the receipts for depositing earnest money as stated above with this Rly's Chief Cashier without which the tenders are liable to be rejected. Approved contractors having a permanent deposit of Rs 1000/- with the undermentioned are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

CONTROLLER OF STORES
S185

from out-market buyers. These may probably be the reasons that the bottom of the market has risen from about Rs 1.50 per pound to Rs 1.56 and, judging by the strength shown by the bazar buyers, it is possible that internal consumption has increased.

According to the official figures released this week, exports of Indian tea, during the first eleven months of 1958, were higher by 10 million pounds as compared with the exports for the whole of 1957. Over 454 million pounds of Indian tea, valued at about Rs 123 crores, was exported during January/November 1958 as against about 443.4 million pounds of about the same value exported during 1957. The increase was appreciable in the exports to the UK, USA and USSR. The UK imported 292.9 million pounds of India tea valued at Rs 79.81 crores in the first 11 months of 1958 as against 275.8 million pounds of the value of Rs 75.74 crores during the corresponding period of 1957. During the same period, exports to the USA were 22.7 million pounds valued at Rs 5.93 crores as against 20.99 million pounds valued at Rs 5.82 crores during the 11 months of 1957. Over 21.2 million pounds of the value of Rs 7.04 crores was exported to the Soviet Union as against 15.95 million pounds of the value of Rs 5.38 crores during the 11 months of 1957.

It is true that India has been able to hold its own even in the face of severe international competition. But, there is little reason for complacency. For, although the quantity exported has risen by 10 million pounds as compared to 1957, the value has remained the same, indicating a fall in prices. In other words, the increase in the volume of exports has not enabled the country to earn any additional foreign exchange.

As the competition from other tea-exporting countries is becoming more and more fierce, it will be futile to expect any upward

swing in prices, particularly in the absence of an international agreement. Any further expansion of India's tea exports will, therefore, largely depend on strengthening the competitive position of the country. Particularly, the Common teas are in a sad plight in this respect. Tax concessions can, of course, go some way towards providing relief to the producers.

Meanwhile, stocks of tea in London have remained around 170 million pounds. Stocks, as on the 6th February, were 169.08 million pounds as against 165.73 million pounds in the previous week. Seventy-seven thousand chests are scheduled to come on to the auctions each week throughout this month and for the first three weeks of March. It is encouraging that the trade has been able to absorb these quantities so far without too much strain; but there are still some stern tests ahead. This, in any case, is small consolation when the prices are already below production costs.

In the Export Sale held in Calcutta this week, offerings were 65,670 packages. There was a good general demand; but this weakened, to some extent, as the sale progressed. "Teas for price" were the strongest feature of the sale and were sold readily at 4 to 6 nP per pound above last rates and sometimes more. Plain and Medium Broken were 2 to 4 nP dearer. The cleaner Fannings came in for strong competition and were 4 to 10 nP dearer, while others in this category were irregular, but generally 2 to 6 nP above last rates. Orthodox BOPs received limited support and were generally neglected except for those showing an improvement in quality and these were upto 10 nP easier to buy. Orthodox OFs, however, received better support, particularly the cheaper varieties and these were firm and often dearer.

Best CTCs, particularly Fannings, met with strong competition and were considerably dearer. The

cheaper varieties were, however, very irregular, but generally dearer. Legg-cut teas were well supported but were irregular. Whole Leaf grades and Darjeelings met with fair enquiry, but at generally easier rates. Following rates were quoted:—Clean Black Pekoe Rs 2.00 to Rs 2.08; Plain BP Rs 1.72 to Rs 1.75; Plain Fannings Rs 1.80 to Rs 1.88; Medium BP Rs 1.68 to Rs 1.73; Medium Fannings Rs 1.80 to Rs 1.84; Best CTC Assam BP Rs 2.20 to Rs 2.30 (nominal) and Best CTC Assam Fannings Rs 2.40 to Rs 2.60 (nominal).

In the Internal Sale, offerings consisted of 21,035 packages Dusts and 2,270 packages of Leaf grades. There was a fair demand at about last rates; but this weakened somewhat towards the close for CTC grades. Orthodox descriptions were sold readily at rates which were generally firm on last week; but less enquiry for the powdery sorts was forthcoming. Legg-cut Doars showed an easier tendency; but the few Darjeelings, on offer, were irregular and sometimes dearer.

Medium and poorer CTC types, which were selling at about last rates at the commencement of the sale, eased somewhat and in the latter half of the sale were fetching rates upto 10 nP below last. The best CTC types were very irregular and were generally easier towards the close. There were some withdrawals in this category. Following rates were quoted:—Medium Doars Dust Rs 1.82 to Rs 1.84; Medium Assam Grainy Dust Rs 1.78 to Rs 1.82; Medium Assam CTC Dust Rs 1.95 to Rs 2.10 and Best Assam CTC Dust Rs 2.30 to Rs 2.90 (nominal).

There was a good demand for Leaf grades, orthodox types being generally sold at firm to dearer rates. CTC descriptions were, however, a little easier.

In the Export Quota section, business was reported done at 1½ nP. At the close, there were buyers at this level with sellers at 1½ nP per pound.

THIS IS A YOUNG FIRM

but with some of the
oldest business houses
for its clients!

Four years ago, **acbi** was founded upon two ideals; *first*, absolute sincerity with our clients; *second*, absolute objectivity in our approach to problems, including those of labour-management relations.

Surprisingly, if significantly enough, we found that this approach was welcome to managements. Indeed our forthrightness has made more friends for our firm than we thought it possible!

Well, we have grown—not spectacularly, perhaps—but, then, we are still growing! And we are proud of the fact that our roster of clients includes some of the best and oldest business houses in the country.

acbi is currently assisting reorganisation of industries in both the public and private sectors.

Let **acbi** assist you in finding answers to your problems. We specialise in problems relating to labour-management mediation; job evaluation; work study; office reorganisation; production control; waste control; stores control; incentive schemes; layout and material handling; and budgetary control.

US Notes

Economic growth is, of course, a principal objective of government policy in every country in the world. The rate of growth is widely accepted as an indicator of the performance of economy.

Soviet Premier Nikita Khrushchev's grandiose claims that the USSR would attain economic superiority over the United States by 1970 have focussed world attention on the potentialities of US economic growth in the next 15 years.

Although Administration spokesmen thus far have refrained from predicting any percentage figure projection for growth of the US economy in the years ahead, they have expressed confidence that it would be vigorous and sustainable if the appropriate public and private policies were followed.

However, American private economists have estimated the US Gross National Product will grow at the rate of four to five percent a year in the next few years. The USSR Gross National Product, according to their estimates, will increase six percent a year. The USSR, they point out, has a smaller economic base and therefore its slightly higher percentage rate is in conformity with historical experience in any economic system.

One of the Administration's top fiscal officers, Chairman William McC. Martin, Jr. of the Federal Reserve (Bank) System, spelled out at a hearing before the joint economic committee of Congress on Friday what public and private policies he believes should be followed to assure a steady and sustainable economic growth in the United States. At the same time, he explained what the nation's objectives are both at home and abroad.

"Desirable economic growth," Mr Martin said, "goes beyond increases in line with a growing population and labour force. It involves a rate that makes possible rising living standards through increasing consumption per capita (person) for present and future generations.... Fundamentally, economic growth at a more rapid rate than population is the response of men to their ever-increasing needs."

"Among the other reasons for seeking economic growth is the importance of demonstrating to the world that free economies under democratic political systems can outperform regimented economies under dictatorial political systems in providing high and rising living standards for all of the people."

"Economic progress, however, cannot be measured merely by per-

centage increases in the quantity of output. Also at stake is the opportunity to live as free man, the responsiveness of the productive system to the desires and tastes of consumers, the quality of goods and services, the desire of leisure and opportunities for using it in a satisfying way.

"These aspects of our economic performance will have a great influence on how the rest of the world judges the merits of free versus regimented economies."

Mr Martin said the Federal Reserve System, which corresponds to a central bank which exists in many countries, believes the financial basis for further growth is now established. Total economic activity, measured in real terms, has regained its earlier peak. Also, the active money supply has increased by about 2.5 per cent above the prerecession level, and holdings of other liquid assets, including time deposits, are up sharply, he said.

Looking ahead, he singled out labour productivity (output per worker) as a key factor needed for a high rate of economic growth. He is counting on advancing US technology to greatly increase productivity. Private estimates are that productivity has sharply risen since mid-1958, bringing the increase for the year as a whole to about 6 per cent. Labour productivity customarily rises sharply in a business recovery period.

This matter of US labour productivity, it turns out, also greatly concerns Soviet Premier Nikita Khrushchev. He told the 21st Soviet Communist Party Congress on January 28 that US labour productivity in industry is 2 to 2.5 times higher than in the USSR and in agriculture, 3 times higher. Actually, American economists say, the US productivity is considerably higher than the figures Khrushchev gave, particularly in agricultural productivity.

The reason for Khrushchev's concern is this: he told the Congress that communist society and the communist goal of "to each according to his need" can only be achieved when the USSR can surpass the US rate of output per man-hour.

That day seems a long, long way off—certainly not in the foreseeable future.

★

Australia

By CHARLES LYNCH

Opportunities for British industries based in Australia, and scope for further profitable outlets for British capital, are provided by Australia's expanding trade with South East Asia. Products from the heavy engineering and metal industries, in which a substantial amount of British capital is already invested, are finding keen buyers in Asian markets. Many

progressive British companies are sharing in this trade with the output from plants in Australian cities.

In the 1953-57 financial year the inflow of private investment in Australia from the United Kingdom was £A58,400,000 and in the previous year £A66,800,000. The Australian Minister for Trade, Mr John McEwen, says that more than £A200,000,000 of new capital is now being invested each year in the Australian manufacturing industries by local and overseas investors.

Much of this finance is undoubtedly attracted by the possibilities of the trade with Asia, in the last year at least 360 industrial projects, each involving a minimum new capital investment of £A 50,000 in Australia were in progress or announced to begin.

Australian trade drives in Asia are characterised by a vitality and enterprise that offers a stimulus and encouragement to new investors. A notable recent example was the chartering by Australian exporters of a special ship which visited ports in many Asian countries with a floating exhibition of Australian manufactured products. Trade promotional activities preceded and coincided with the arrival of the ship in the various trading centres.

The exporters now state that this spectacular venture has greatly exceeded their expectations, and large orders for a variety of manufactured products have been secured.

Contributions in the way of tractors, pumps, earth moving equipment and agricultural machinery, made under the Colombo Plan, have also made the products and potentialities of Australia's heavy industries better known in Asian countries.

India's imports from Australia in the last year, which bought metals, metal manufactures and machinery totalled £A6,930,081. The figures, while small in comparison with British trade with European and other countries, are continually growing and, taken in conjunction with Australia's favoured geographical position in relation to these growing markets, offer considerable encouragement for the future. They represent an opportunity for the British industrialist who is alive to the changing nature of trade with Asia and the prospects of an increasing share of this coming to Australia.

NEW EQUIPMENT FOR FORD PLANT

Expansion of the stamping plant facilities at the plant of the Ford Motor Co. of Australia Pty Ltd, at Geelong, Victoria, began recently and is expected to be completed by the end of this year.

Costing more than £A2,000,000 twenty three new presses, including one of 1,950 tons capacity, have been ordered in Great Britain and Australia. They will be installed in a new building and in the pre-

sent stamping section. The process will be used to make body panels and will increase the plant's capacity and the Australian content of Ford vehicles.

NEW COTTON-GROWING PROJECT

In Australia, where cotton planting has suffered many fluctuations and only about 10% of its cotton requirements are grown locally, there is interest in a new cotton-growing project at Narrabri, New South Wales.

A State Government experimental farm has been established and experts state that a wide section of the adjoining country, over which sheep now graze, is well suited for cotton culture on a closer settlement basis.

In the project the two staple products, wool and cotton, would be growing side by side. Under irrigation the area would yield about 1,000 lb of cotton and seed per acre.

In Queensland, on comparatively inferior soil, some farmers get up to £100 an acre from their crops.

MINING INVESTMENT STEADY IN AUSTRALIA

Reviewing mining investment in Australia in 1958, THE INDUSTRIAL AND MINING STANDARD says that base metal share prices, although marked down following lower metal returns, did not sink to any "miserable levels". This was obviously due to their popularity and the fact that excellent reserves and investments have been built up over the year. Ilmenite and rutile faded out of the share scene fairly thoroughly during the year. Until prices improve, or contracts can be obtained readily at economic levels, the future of the beach sand mining industry will be confined to a few old established and efficient producers.

Uranium shares underwent a further sorting out, and there are now only a handful of listed companies. The remainder have all done well enough, and have mines producing, and are capable of good profits and dividends.

Gold remained the steadiest section in mining. Established producers, particularly in Western Australia, continued to battle with the costs problem and mostly achieved success. THE STANDARD says that there is no doubt that a rise in the price of gold would help much more than the Government subsidy, which is welcome, but which is not the complete answer. The popular Western Mining group again did well, and should continue to hold its own. The richer mines, Australian Development and Hill 50 continued to pay high dividends.

DEMAND FOR PULP AND PAPER PRODUCTS

Australian Pulp and Paper Mills Limited, which has subsidiary companies in Tasmania operating pulp and hardboard mills, had a consolidated net profit of £A1,030,927 for 1957-58, compared with £903,724 for the previous year.

One of the companies constructed 14 miles of forest roads during the year in Tasmania. Logs felled and transported amounted to 36,000,000 super feet.

A new plant at Ipswich, Queensland, which cost £A1,600,000 began commercial production of hardboard in May. Capacity is 50,000, 000 square feet per annum.

At the Ballarat Paper Mills Proprietary Limited, at Ballarat, Victoria, a new American-type coating machine has been in operation. It has enabled an increased output and a wider range of coated papers.

The chairman of the parent company, Mr W. D. Brooks, told shareholders recently that last year he drew attention to a worthwhile slackening in demand for pulp and paper products, increasing competition and a tendency to a fall in prices. Since then demand has strengthened in Australia and overseas.

"HONEYCOMB" MATERIAL TO BE MADE IN AUSTRALIA

Materials of a type used in the United States in the construction of space vehicles are being manufactured under licence in Australia by W. J. Manufacturing Co Ltd, of Mosman, New South Wales, by agreement with Hexcel Products Inc of California.

These materials comprise a honeycomb core, made either from aluminium, stainless steel, glass fabric, or cotton.

The weight and strength characteristics of honeycomb make it suitable for many aircraft and missile applications.

Hexcel honey comb is made from a sheet material formed into a cellular structure by expanding blocks of banded sheets. It has qualities of high strength, lightness, and a high ratio of surface area to volume. The honeycomb can be made from almost any material available, in continuous web or roll form—metallic or non metallic.

SURVEY FOR OVERSEAS INVESTORS

The Stanford Research Institute of California is to make a basic survey of the Australian State of Victoria to ascertain its potential for overseas investments.

Four Australian economists and researchers will join the Stanford officers in the survey which will cover the State's physical and human resources, its capital shortages, the level of technology and production methods, markets and marketing and general industrial condition.

The Premier of Victoria, Mr H. E. Bolte, says that concrete results could follow as the survey will be the first of its kind undertaken in Victoria. In his mission to the United States last year he had found that, in addition to publicising Australia's outstanding features, it was also necessary to provide specific information to investors.

RUTILE MARKET RECOVERING

As the titanium metal industry in the United States is now show-

ing increasing activity, the future of the market for rutile is becoming clearer for producers in Australia.

The chairman of Associated Minerals Consolidated, Mr W. F. Hopkins, told company shareholders recently that the company's production was up 15 to 20 per cent.

Demand for the metal is expected to increase following lower prices, and the discovery of new methods of alloying it with other metals. Rutile continued as the base raw material for titanium metal. The welding industry was also increasing its use of rutile.

Some indication of the depressed state of the market in Australia recently can be seen in figures for production in New South Wales of rutile concentrate, and zircon concentrate.

In the first six months of 1958 production of rutile at 23,221 tons, was a little more than half below that for the same period in 1957. Zircon showed an even heavier fall. Output was 14,060 tons—down 59 per cent.

NEW PLANT TO MAKE CARPETS

A British carpet company, T. Bond-Worth and Sons, is to establish an Australian manufacturing plant at Mornington, Victoria. It has acquired a 10 acre site.

Australian plants produce about 11,899,000 yards of various types of floor coverings each year. The range includes pile and non-pile floor coverings, linoleum, rubber floor coverings, tiles, and other types.

Production in 1956-57 was 11,235,000 square yards which increased by 664,000 square yards in 1957-58.

★

Sweden

Sweden's foreign trade in 1958 showed a drop of 3 per cent for imports to Kr 12,200,000,000, while exports fell by 2 per cent to Kr10,807,000,000. The trade deficit declined from Kr 1,505,000,000 in 1957 to Kr 1,393,000,000 (£96,069,000; \$270,000,000) in 1958.

Breakdown figures for imports show that coal and coke imports decreased by 1.8 million tons to 3.3 million tons, while oil imports were up by 1.2 million tons to 10.5 million tons. Iron and steel imports fell by 50,000 tons to 763,000 tons. Automobile imports went up by close on 15,000 units to 123,928 units. Textile imports remained practically unchanged in value at Kr 747,000,000.

On the exports side, shipments of sawn and planed timber dropped by 230,000 stds to 822,000 stds and chemical pulp by 35,000 tons to 2,012,000 tons. Paper and board exports, on the other hand, went up by 17,000 tons to 978,000 tons. Iron-ore shipments fell by 2.7 million tons to 14.8 million tons whereas iron and steel exports rose by 13,000 tons to 314,000 tons. Automobile exports increased by just over 50 per cent to 37,139 units,

and ship exports rose in value by Kr 157,000,000 to Kr 958,000,000.

Sweden's total output of cars and commercial vehicles amounted to approximately 90,000 units in 1958, according to a survey by Verkstaderna, organ of the Federation of Swedish Mechanical Engineering Industries. About 40,000 units were exported, which means that Sweden's three manufacturers of automobiles now are responsible for one of the biggest items in the country's engineering industry exports.

According to preliminary figures Volvo's output in 1958 was about 71,900 units. Some 33,000 units were exported at a value of approximately Kr 310,000,000. Passenger cars constituted the bulk of exports, or about 28,000 units, including 15,500 to the United States. For 1959 the production is estimated at 82,700 units, including about 40,500 for export.

Saab produced about 14,000 passenger cars, some 5,000 units of which were exported at a value of close on Kr 30,000,000. The output in 1959 is estimated at 16,800 units. Finally, Scania-Vabis made some 4,600 trucks and buses, approximately half of them for export. A continued increase in output is expected in 1959.

The area of new forest plantations in Sweden increased by 22,000 hectares (55,000 acres) to 97,000 hectares between 1955 and 1956, according to the Statistical Forest Abstract, which has just been published by the Board of Forests. It is likely to have grown by at least as much per annum since then, following intensified reafforestation plans. Sweden's total forest area amounts to some 25,000,000 hectares (62,000,000 acres).

The value of the Swedish forests is constantly increasing, owing partly to general economic conditions, partly to the reafforestation programme. It was taxed at Kr 10,500,000 (£724,138,000; \$2,000,000,000) in 1956, or only about 20 per cent less than that of Sweden's agricultural property including buildings and other assets.

The Swedish legislation on forest care is at present being translated into Spanish for account of the Government of Chile, reports the Swedish Association for Forest Care. It is on the initiative of the Forestry Department of Chile, Fomento Forestal, that the translation is being undertaken. A Swedish, Mrs Daga Hallsten, who has lived in Chile for 22 years and is well conversant with Chilean matters, is working on the Spanish version.

The Chilean authorities are working energetically on organizing the country's forestry, fire prevention measures being an important part of the scheme which have hitherto been practically non-existent there. Mrs Hallsten reports that the authorities are anxious to learn from Sweden's long experience in this and other forest matters. She expects to have completed the translation work in a few months.

The Finnboda shipyard, situated on the Baltic entrance to the Port

of Stockholm and associated with the Svea Group of shipping companies is at present carrying on far-reaching extensions of its shipbuilding and repair facilities. The first stage of the programme, which includes the rebuilding of one of the yard's berths to a size that will make possible the building of 32,000 ton vessels, is expected to be completed some time this spring.

A new plater's workshop and another assembly hall for sectional building are at present being erected at Finnboda. To obtain the necessary ground space 85,000 cu yds have been blasted out of the surrounding rocky hills. The machinery equipment in these shops is to include a plate straightening roller, a 1,000 ton bending roller and a 500 ton hydraulic press. Two 78m (257ft) high cranes with a lifting capacity of 40 tons, at present being completed, also form part of the new scheme.

Besides the extended bed, which will have a length of 220 m (720ft), the yard has another bed for medium-sized vessels, while the repair facilities include two floating docks, capable of taking vessels of 16,000 tons and 10,000 tons respectively, and dry docks.

With the growing shipping on Stockholm—which city is now leading Sweden in respect of tonnage registered—increased repair facilities are becoming of importance. Finnboda is taking the realistic view that the slump in shipbuilding will be best fought with as diversified facilities as possible for undertaking all kinds of shipyard work. The large investments involved are considered as safeguards against any further slackening in the shipbuilding market.

The turnover in the Port of Stockholm record figures in 1958, reports the Harbour Director, Mr Helge Linder. The net register tonnage of ships arriving and departing reached the highest figure ever registered, or 11,300,000 tons, out of which 8,100,000 was noted for foreign traffic, a figure that is well over 200,000 above the previous record.

Goods handled rose by 170,000 tons from the previous year, attaining a total of 5,600,000 tons, imports accounting for 2,980,000 tons. The export figure rose by 57,000 tons over the previous record and was registered at 440,000 tons, whereas inland traffic continued on a downward grade.

Coal and coke imports show a steeply descending curve, while oil imports show an increase of a more than corresponding degree. The 1958 figure for oil for the Port of Stockholm proper was 1,727,000 tons, but Mr Linder estimates the imports for the entire Stockholm districts at some 3,000,000 tons. The coal quays are undergoing a corresponding transformation for use as oil quays. The main quay at the Loudden oil storage harbour is expected to be ready some time this year. Another large storage building, estimated to cost Kr 20,000,000, as well as quay extensions are planned for the Stockholm Free Port.

Execution of Drug Projects with Soviet Assistance

"The Report of the Soviet Team of drug experts has been under active consideration of Government and necessary steps are being taken to progress the matter," stated Shri Manubhai Shah, Minister for Industry, in the Rajya Sabha on February 11.

Replying to a question by Shri Babubhai M. Chinai, the Minister said that the Soviet Team visited India during August-October 1958 on the invitation of the Government of India to discuss the scope of different drug projects to be established with their co-operation. The team had submitted its report before departure.

The Minister laid on the table of the Sabha the following summary of the scope of development envisaged in these projects and the estimated total investment:

"With a view to meeting the increasing demands for drug and pharmaceuticals in a satisfactory manner and eliminating their imports as soon as possible, the following projects have been proposed to be established.

1. An anti-biotics plant to produce not only a large quantity of penicillin but also streptomycin, tetracyclin and new anti-biotics.

2. A synthetic drugs plant to produce a large number of sulphar drugs, anti-tubercular drugs, analgesics and anti-pyretics and a number of vitamins and equipped also to produce special intermediates required for their manufacture.

3. A medical plants laboratory and factory to produce a large number of important drugs from medicinal plants.

4. A unit for the manufacture of glandular products, such as insulin, a.c.t.h., pituitri.

5. A workshop for the manufacture of most of the important types of surgical instruments required in large numbers.

Production from these units, with the developments in the drug industry which have already taken place or are under implementation, coupled with the establishment of a unit for the manufacture of basic chemicals and intermediates which is separately under consideration, may be expected to make the country more or less self-sufficient with respect to all the important and essential and basic drugs and medicines.

"The total capital investment, excluding the investment on land, township and working capital, on the five drug units indicated above is placed at about Rs. 28.7 crores. The details of the cost of plant and machinery imported from abroad or to be fabricated locally from local as well as imported materials of construction and the cost of buildings and other facilities have still to be worked out."

The Minister added that the time required for the completion of these projects would be known only after the negotiations were completed.

Co-operative Farming Societies number 2020

At the end of 1957-58 there were 2020 co-operative farming societies, including joint farming, collective farming, tenant farming and better farming societies.

This information was given by Shri S. K. Dey, Union Minister for Community Development and Co-operation, in the Lok Sabha, in a written reply to a question by Pandit J. P. Jyotishi, on February 11.

Following is the State-wise breakdown of the Co-operative Farming Societies:—

Andhra Pradesh 31, Assam 170, Bihar 27, Bombay 402, Jammu and Kashmir 7, Kerala 55, Madhya Pradesh 140, Madras 37, Mysore 100, Orissa 28, Punjab 478, Rajasthan 105, Uttar Pradesh 255, West Bengal 148, Delhi 22, Manipur 3 and Tripura 12.

The area of land under co-operative cultivation on December 31, 1956, the Minister said, was 1,80,671 acres.

During the four years 1954-55 to 1958-59 the Central Government, the Minister added, had made grants to the extent of Rs. 3.32 lakhs to State Governments for this work. The State Governments provided assistance for development of co-operative farming societies in various forms, such as loans and subsidies, grant of Government waste lands, concession in land revenue, technical guidance, etc.

Settlement of Punjabis in Dandakaranya

There is no proposal under consideration of the Rehabilitation Ministry at present for the settlement of people from Punjab in the Dandakaranya area.

This was stated by the Deputy Minister of Rehabilitation, Shri P. S. Naskar, in a written reply to a question by Shri J. C. Chatterji in the Rajya Sabha on February 11.

Asked about the extent of land in Dandakaranya which would be surplus to the present and future needs of the displaced persons from East Pakistan, he said; that is not possible at this stage to give any indication.

Asked further whether there was any scheme to settle there people from, the densely populated areas, like East Uttar Pradesh, the Deputy Minister said; "This question can be considered only after the displaced persons from East Pakistan who have the first priority in the matter have been settled.

Self-Sufficiency in Foodgrains

Normally the States of Andhra Pradesh, Madhya Pradesh, Orissa and Punjab are surplus, while Uttar Pradesh, Rajasthan, Madras and Mysore are self-sufficient, said the Minister for Food and Agriculture in a written reply to a question by Shri Khadiwala and Shri K. B. Valvisia in Lok Sabha on February 11. He added that self-sufficiency had to be achieved for the country as a whole.

There is room for improvement in production in every State whether deficit or not but every area or State may not become self-sufficient. The problems of each State are being continuously examined and steps taken with a view to increasing agricultural production.

Subsidy on Distribution of Foodgrains

The total subsidy or trading loss on foodgrains issued from the Central stocks between April 1, 1956, and December 31, 1958 worked out to about Rs. 43 crores.

The consumer's prices, that is, the prices for ultimate retail sale to consumers vary from State to State and sometimes from area to area within a State. They also vary with the nature and quality of the grain. The difference between the issue price from Central stocks and final retail prices made up of cost of transport storage, etc., incurred by the State Governments and retailer's margin.

This was stated in a written answer by the Minister of Food and Agriculture in the Lok Sabha on February 11 in answer to a question by Shri N. R. Munisamy, enquiring about the amount spent by way of subsidies during the course of distribution of foodgrains to consumer including the State of Jammu and Kashmir during the Second Plan period.

Import of Wheat

From April 1 to December 31, 1958, a total quantity of 19.24 lakh tons of wheat was imported, said the Minister for Food and Agriculture, in a written reply to a question by Shri J. H. Joshi in the Rajya Sabha on February 12.

Answering another part of the question enquiring about the quantity of wheat distributed to each state in the country, the Minister said that a total of 2,293.4 thousand tons was distributed to the various states as follows:

Andhra Pradesh 23.1; Andamans and Nicobar 0.6; Assam 55.7; Bihar 623.0; Bombay 334.4; Delhi 19.9; Himachal Pradesh 1.8; Jammu and Kashmir 44.5; Kerala 3.7; Madhya Pradesh 87.3; Madras 61.6; Mysore 28.8; Orissa 12.0; Punjab 11.7; Rajasthan 47.5; Tripura 3.2; Uttar Pradesh 407.6; West Bengal 527.0.

(The above figures are in thousand tons).

Cement Machinery Manufacture

Six firms have been registered or licensed under the Industries (Development and Regulation) Act for the manufacture of cement machinery parts. This was stated by the Minister for Industry, Shri Manubhai Shah on February 11, in reply to a question by Shri Ram Sahai. Much of the machinery, he added, for the cement industry was likely to be manufactured in India during the Second Plan period and early part of Third Plan. A few components might have to be imported.

Export of Sugar

A quantity of 50,000 tons of sugar was released in June 1958, out of

1957-58 production for export upto January 31, 1959. A further quantity of one lakh tons has been fixed as the quota for export out of 1958-59 season's production, said the Minister for Food and Agriculture in a written answer to Shri Ram Krishan and six others in Lok Sabha on February 16.

The Minister laid a statement on the table listing the countries to which the exports were made in 1958. They are: Aden 6,742 tons; Yemen 1,768 tons; Muscat 200 tons; Sudan 9,143 tins; Federation of Malayan States and Singapore 26,308 tons; Burma 3,000 tons; Ethiopia 1,378 tons; Ceylon 1,000 tons and other countries 461 tons.

Out of the quota of one lakh tons, sales to the extent of 7,264 tons have been made for shipment during the 2nd half of February and March, 1959.

The foreign exchange so far earned from sugar exports is approximately Rs 2.3 crores.

Birla Science and Industry Museum Calcutta

In a written reply to a question by Shri D. C. Sharma in the Lok Sabha on February 12, the Union Deputy Minister for Scientific Research and Cultural Affairs, Dr. M. M. Das, laid the following statement on the table of the House showing the progress made in the establishment of the Birla Science and Industry Museum Calcutta.

"The construction of the workshop for the Birla Industrial and Technological Museum has started. A temporary workshop has been set up inside the museum building itself, and the preparation of models departmentally has started. The necessary staff has been recruited. The architects are going ahead with the preparation of the detailed drawings and the schedule of quantities necessary for calling tenders for the renovation on the existing buildings and provision of services. A few models have been received as gifts for permanent display in the museum from manufacturers and business concerns. Efforts are being made to fabricate some models with the help of local model makers. A model of a blast furnace plant has been received as donation from the Industrial Health and Safety Centre, London. It is also proposed to import a few models from abroad for which necessary action is being taken.

"The French Government made available to the Museum the services of a French Expert in Museology for making an on-the-spot investigation regarding its requirements. The expert was in Calcutta during the third week of December, 1958. On his return to France, he has submitted a report which is under consideration of the Council of Scientific and Industrial Research.

"It has been decided to formally declare the Museum open shortly with the models and exhibits we have now got at out disposal. A museum is an organisation to which exhibits have to be progressively and continually added. Naturally making the museum large and comprehensive will be spread over a few years."

IF the course of events in Pakistan had not taken the dramatic turn they did in October 1958, we should now be witnessing the first of that country's general elections. Instead, we have today no clue as to how long this uneasy interim of dictatorship will continue, and when it is that democracy will return to Pakistan. All that is clear is that the Ayub Khan regime has been a limited success, but there can be no knowing when and if another military junta may choose to oust the incumbents in office. The reader may be wondering why I have thus thought Pakistan at the moment to be fit subject for gossip, since the recent past has not thrown up any new developments. But it is precisely because there is a species of stalemate, and also because I chanced upon an interesting assessment of the causes of Pakistan's woes, that I have felt it desirable to touch on the fortunes—or misfortunes—of our neighbour country. Once the vigorous new broom sweeping of the military government had cleaned out corruption at the surface level in Pakistan, it should, I think, have been Ayub Khan's objective to see whether something worthwhile could be done to tone up the Pakistani economy. I am afraid that the Pakistani "generalissimo" has failed to show himself as possessing those attributes which could prosecute such constructive endeavours. And hence the stalemate, and hence the permissible deduction that the junta has outlived its usefulness.

Even here, mind you, very little conviction is carried by the assertion that the conditions in Pakistan could not be rid of their corruption and nepotism without the strong arm tactics inherent in a military dictatorship. Indeed, this is one of the very many interesting conclusions that Mr Charles Burton Marshall has reached in the course of a thoughtful and provocative article in the latest issue of the American quarterly, Foreign Affairs. That Mr Marshall would have more than a glimmering of what went on behind the scenes, we can take it as certain since, in the crucial years between 1955 and 1957, he was an adviser to the Prime Ministers of Pakistan. This is, I think, the first time when an American assessment has not amounted to a post facto rationalisation of events. Quite to the contrary, Mr Marshall exposes what may be the real causes of the revolution in Pakistan. The background for the purposes of this study is a definition of what is constituted by a State. The population, firstly, must be "conscious of a political identity, and aware of a common history, able to produce consensus and undoubted capabilities for running the apparatus of a State". Secondly, both

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"

—As You Like It.

habit and history must identify the people with a specific territory. Lastly, the leadership or Government must be truly representative of the people, or at least solicitous of the interests of the people and must have the flair for executive and administrative action as well as imagination for charting out new developments. I think it is obvious that Pakistan will fulfil not even a single one of these three prerequisites of a viable State. Mr Marshall himself says that note has to be taken of "disparity between juridic status and political fact as background to the consideration of the case of Pakistan". As early as in the introductory stage of his article, the author finds that whatever purposive outlook that the Pakistani people might have had, when independence was gained, has since been frittered away, because, instead of looking upon freedom as Matthew Arnold did as a horse that has to ride somewhere, "the Pakistanis have ridden it in circles and have tired it out".

The very concept of Pakistan has been a tearing asunder, a destructive force. The idea of an Islamic state or republic was thought up as something contrapuntal to the freedom that the Congress tried to win for our own people. It is much too early, historically speaking, to embark on a post mortem on the India that was truncated, so that the Pakistanis might have a land of their own. But there can hardly be any doubt that one of the strong motivating forces that impelled Mohammed Ali Jinnah stubbornly to insist on carving up India was a species of megalomania which itself was born of an envy of Mahatma Gandhi. There was nothing negative about India's fight for freedom, though the English expressions, non-violence and non-cooperation, would seem so to suggest. It is the impossibility of translating such words as ahimsa and satyagraha that resulted in negative definitions of positive words. (The reader will remember the passing remarks I made in this context last week, when I took up for Gossip a broad appraisal of Maulana Azad's book). But, so far as the birth of Pakistan was concerned, in a very real sense it was as a result of "negative" forces. Once you accept this proposition that, in the fight for Indian freedom, for all that the

Muslim League instituted "direct action", its approach was negative you would at once see the grim truth in Mr Marshall's statement that "Pakistanis have an unfailing faculty for producing scape-goats—this itself a sign of persistent colonial character in a juridically independent people."

Thus, India has long been held out as a root cause, as it were, of all Pakistan's malaises. This is something we in India have realised for quite some time, but I do not think that we have before had an American authority stating that it is sometimes India which is the scape-goat on whom the blame should be shrugged off for what Mr Marshall calls "all the rampant faults". But I do not think that Mr Marshall has realised that it was thus not only convenient but even necessary to utilise India as an always available scape-goat. The reason, it seems to me, is that, in the very many difficulties that have currently been facing Pakistan, it was essential for the sake of a national unity to rally round the masses. Nothing could be simpler than to funnel the resentment which inevitably was engendered by Pakistani economic problems to a hatred of India. Mr Marshall is charitable when he says that it is sometimes the United States which is blamed. From the Indian point of view, we might say that it was

possible for Pakistan to fool all the people for some time—but not all the people for all the time. Hence, may be, even the hate-India slogan did not continue to be as cohesive a force as it had once been. Other rivalries then manifested themselves, such things as a division between the West and East Pakistanis and as between the politicians and the administration. Matters came to a head by October 1957 when, as Mr Marshall puts it, the last piece of folly "violated the canons of a parliamentary order in removing the Prime Minister while denying him a test of strength in the Assembly". In retrospect it looks as if, even at that stage, President Mirza had decided that the constitution had to be abrogated. But it was grim and poetic justice that the man who had decided thus to flout the constitution was himself exiled.

But what sort of success has the Ayub Khan Government, if we may call it so, achieved in the last six months that it has held office? One of the first steps taken by the Martial Law Administration was to threaten to use the big stick with a view to bringing down prices. Ayub Khan succeeded only too well—as this journal had foreseen it at that time—in his effort to bring down prices. With the threat of the onerous penalties and summary trials imposed by martial law, all the hoarded stocks were brought out and prices fell. And, with the fall in prices, consumers, long starved of an outlet for their money, rushed in a wave to buy. Mr Marshall calls this bumbling, that, with the inevitable diminishing of stocks in a few days, prices moved higher than ever. Mr Marshall wryly remarks, "Generals learnt a lesson

... a medium of progress

CALCUTTA BOMBAY MADRAS NEW DELHI

that orders are not a solvent for every problem".

★ When the "revolution" took place, much was made in the foreign press about its having been a bloodless one. That such claims were altogether ersatz, has been forcefully brought out by Mr Marshall. He says: "...obviously such formidable sanctions, even held in reserve, would suffice to make claim of consent a jest". There can be no getting away from the fact that the revolution removed the last vestiges of demo-

cracy from Pakistan, but it seems to me that democracy must assert itself, especially when a military government is helpless in working out economic salvation. So, though, at the beginning of this article, I mused how long the dictatorship will continue, I am afraid that a change in government will be inevitable. How soon, I will not presume to predict, but there is such a possibility, and it makes even more tortuous than the revolution did the place of Pakistan in international affairs. It is true, each successive change

in the Pakistani Government—and there have been many—has brought with it an iteration by the new leader to stand firm by its foreign commitments and alignments. For one thing, the frequent change in leadership—it has been a tragic game of musical chairs—and the failure to make a going concern of the country 11½ years after it came to be are an indication of political weakness that will undoubtedly make its impress felt on foreign countries. Mr Marshall reveals how injurious and self-defeating the recent developments have been in regard to the outstanding issues with India. Firstly, the Indian view that there was no stable entity with whom we could negotiate has again and again been confirmed. Secondly, a country that has a military government can scarcely show signs of righteous anger at an alleged military subjugation of, say, Kashmir.

★ All this leads Mr Marshall to draw morals which the American administration would be wise to heed. In a country that is not stable, it is dangerous to treat the then ruling government as truly representative of the people. Mr Marshall calls such governments the "in-groups in politically underdeveloped states". Secondly, it may be right to treat Marshall Tito as a strong man; but there can be no such equivalent in the politically underdeveloped countries—there is the example of General Mirza. Thirdly, the arms assistance that America has given to Pakistan has been very considerable—but would not democracy in Pakistan have had a better chance if the assistance had been economic rather than military?

★ I do not know that it is very fair, but it seems to me that it is possible to suggest that part of the demoralisation stemmed from the attempt made by America to make of Pakistan a military bulwark in middle Asia. The receipt of such arms aid has, for one thing, made it possible for Pakistan unremittently to cast the scape-goat's role on India. It is the additional military power that was derived from the arms assistance which might have made some of the Pakistani leaders shoot off, if not their guns, at least their mouths. Then, the very arms assistance that was given imbued the military with such greater strength that the primary objective of American assistance was defeated, since the military was able to make a farce of democracy by seizing power.

★ By all accounts, the first Business Convention to be held in India—and that honour belongs rightly to West Bengal—has been a considerable success. The turn-out was large, and the response, thus, to the invitations exceeded even the optimistic expectations of the conveners. But this is not the only

measure of its success. Quality-wise, the convention was fortunate in getting off to a most auspicious start. The three principal addresses that were delivered have an essentially constructive approach to the role that is to be played by West Bengal in particular in the development of industry and business. Sir Bejoy Prasad Singh Roy, for example, drew attention to the "splendid opportunity for the establishment of several new industries" with the developments in the Durgapur industrial complex. One of the objectives of the convention, according to him, was to create an atmosphere and a climate favourable to the establishment of new ancillary and medium scale industries. But, then, there are also the difficulties. This does not deter Sir Bejoy Prasad from asserting that the economic outlook for West Bengal and for India is bright. Sir Bejoy Prasad has stated categorically that "there is no justification for undue pessimism." On such a bright note, he invited Sir Biren Mookerjee to inaugurate the convention.

★ The organizers could not have made a better choice, for, Sir Biren represents not merely the leading industrial figure in West Bengal, he is certainly among the very top in India's Captains of Industry. Sir Biren has, as usual, been frank and outspoken. He urged the young men of Bengal to shed their preference for white collar jobs, and suggested instead that more and more students should go in for technical courses and not "feel shy of operating machines and working with their hands". Sir Biren is surely right in stating that the new enterprises in Durgapur may "well usher an era of industrial renaissance to West Bengal and put it in the fore front of the industrial map of the country." He dispelled the apprehension that smaller industries would be squeezed out by the larger and established units. Nor does Sir Biren consider that capital, internal and even foreign, will be unavailable for well thought out schemes. However, Sir Biren is troubled by the disincentives to personal effort constituted by high taxation and also by the tendency to increase of strikes and other acts of indiscipline. But his conclusion is a cheerful one that, even though there may be an enlargement of the State sector, "there will still be vast scope for businessmen to exercise their initiative and enterprise."

★ Dr N. N. Law, who was Chairman of the Reception Committee, had naturally to make a much more formal speech. He referred in particular to the gratification felt by the sponsors about the fact that many smaller units responded readily to the invitation to participate in the convention. It should be interesting to see whether and to what extent the West Bengal Business Convention gets bigger and bigger as the years pass by and as West Bengal becomes the Ruhr of India.

EAVESDROPPER

GATEWAY GOSSIP

SPEAKING at the annual meeting of the Indian National Steamship Owners' Association in December last, Mr S. K. Patil, Union Minister for Transport and Communications, has pointed out that there is a compelling reason why the development of shipping according to schedule should get a high priority in the plans of Government. This compelling reason, in the words of Mr Patil, is that "shipping is a kind of a handmaid for everything that really makes the hard core of the plan". In this view it may be said that shipping is the core of the hard core of the Plan itself.

A rapid increase in the national shipping tonnage has assumed added significance in the present context of acute shortage of foreign exchange. The emphasis is rightly laid on the augmenting of our foreign exchange resource and it is now being increasingly realised that the only manner this can be achieved consistent with our national dignity is by maximising our exports. But at the same time strenuous efforts are to be made to cut down our expenditure of foreign exchange to the barest minimum practicable. This is also being done as will be evident from the drastic import cuts. Our shipping offers another valuable avenue for effecting a substantial saving in this regard. It is estimated that about Rs 150 crores worth of foreign exchange are being spent every year toward freight for our imports. But we are unable to stop this big drain from our already strained resources of foreign exchange as we have no adequate tonnage of our own to carry a sizable portion of our foreign trade.

The main handicap in the direction of an increased participation of our shipping in overseas routes has stemmed from its small size. For obvious reasons national shipping has remained dormant for a considerable time till recently but an important chapter in its history has begun with the coming into being of a national Government some twelve years ago. During the past few years big strides have been taken by Indian shipping though its size as compared with other maritime nations of the world is still rather insignificant. Indian tonnage is now around 6,30,000 as against the Second Plan target of 9 lakh tons. It is now expected that in the event of no further allotment of funds even this modest target will not be achieved. It has been estimated that there will be a shortfall of about 1.77 lakh tons. It is gratifying to note that the apprehensions of shipping industry have been allayed by Mr Patil who has shown by facts and figures that the balance of the tonnage can be attained before the end of the Second Plan period.

As matters stand at present, however, Indian tonnage of about

Problems of Shipping Industry

3,62,000 GRT are only participating in the overseas trade of the country. This works out to about 7 per cent in such total trade. Foreign exchange earnings that accrue to the country is about Rs 10 crores. According to the national shipping policy Indian ships are entitled to carry the entire coastal trade, 75 per cent of adjacent trade and 50 per cent of overseas trade. As the figures quoted above will show our shipping is still a long way from such participation in the country's trade. Taking overseas trade alone it would appear that our shipping's earnings of foreign exchange can be increased to about Rs 70 to 75 crores per annum if our vessels are enabled to carry 50 per cent of the trade.

While it is true that without a large tonnage it will be idle to think about the participation of our ships to the extent of 50 per cent in the country's foreign trade, it is also essential to ensure that the tonnage that we already have participate in such trade to the maximum extent possible. It would appear that despite the assurance from Government spokesmen that everything possible is being done to increase their share in the country's trade, our ships have to sail half-empty quite often in the past one year or so. Speaking at the annual general meeting of the Scindia Steam Company Limited this week Shrimati Sumati Morarji, has revealed that the present slump in world shipping has affected our shipping also. Indian shipping companies have been finding it extremely difficult to secure enough cargo to carry and this applies to both overseas and coastal trades.

The present serious depression in world shipping is of course the main cause for this unsatisfactory state of affairs in our shipping also. But the question arises whether we have no other alternative but to allow our shipping to be adversely affected by the slump in world shipping. It is common knowledge that our overseas trade is so large as to require much more shipping space than can be provided by our ships. Then how is one to reconcile the statement from our shipowners that our ships are sailing with empty space for more than a year now. This is all the more surprising because the national shipping policy lays down that our ships are entitled to 50 per cent of the overseas trade. It is estimated that currently our ships are carrying only about 7 per cent of the foreign trade while the balance is being shared by a wide number of foreign flag vessels. Mr Patil in his speech referred to above has pointed out why our Government despite their abiding interest in the development of shipping are obliged to proceed slowly in the matter of reserving cargo for our ships. Even so it is incumbent on Government to take energetic steps to utilise

fully our shipping space, because the future of our shipping depends to a considerable extent on their present profits. In this regard Shrimati Sumati Morarji's four-point plan for aiding our shipping deserves the attention of Government. It is unfortunate that even though there is now a Shipping Coordination Committee to deal with the question of the

availability of Government and Semi-Government cargoes for Indian ships, there is not much improvement in the situation. Now that the State Trading Corporation is fast emerging into the biggest importer as well as exporter in our country it should not be difficult for Government to make arrangements in such a way as to utilise our shipping space in full.

GATEWAY NOTES

Supply of Paper

The present scarcity of paper and paper products stems from the fact that domestic production has not reached such a level as to meet the demand in full. Our paper industry has no doubt taken rapid strides during the First Five Year Plan period. Paper production has increased from 135,000 tons at the beginning of that period to 200,000 tons in 1955-56. In view of the anticipated increase in consumption of paper and paper products during the current plan period on account of the progress envisaged in the field of education and other spheres of life of the people, it has been estimated that the demand by 1960-61 may be of the order of 350,000 tons. Taking the average production at 80 per cent capacity, it has been deemed necessary to bring up the installed capacity of the industry to about 450,000 tons. The Planning Commission have also made a note of the possibility of demand expanding more rapidly than estimated. As a matter of fact this has actually been the case in the First Plan. During the period 1951-52 to 1955-56, actual consumption has been of the order of 238,000 tons whereas the Planning Commission's estimate has been only 200,000 tons. It is however interesting to note that during the First Plan period the increase in domestic production has been able to meet the increase in demand as throughout the period imports have remained at a fairly constant level.

Referring to the plea for allowing a sufficient quantity of imports till such time as domestic production is able to reach the level of demand, Mr Lal Bahadur Shastri has made it clear that it will not be possible for Government in the present context of stringency of foreign exchange to liberalise imports of paper. He has further stated that even when the foreign exchange position improves it will be in the larger interests of the nation to use the foreign exchange that may be available to import paper machinery rather than for imports of paper. It would appear that the present scarcity is a temporary phase. For one thing the expansion programmes of the paper industry are making headway and it may be confidently expected that a progressive increase in production will be recorded. In their appraisal of the Second Plan, the Planning Commission have pointed out that the industry could achieve a capacity of 410,000 tons with the sanction of about Rs 1 crore additional foreign exchange. As this additional requirement is in connection with schemes already in progress it is to be presumed that the required funds will be made available. It is also to be noted that the Commission have pointed

out that though the target that can be achieved falls short of the original target by 40,000 tons it may be sufficient to achieve the production target of 350,000 tons.

*

The Two Sectors

Speaking at the Indian Merchants Chamber this week in Bombay Mr Lal Bahadur Shastri has strongly denied the suggestion that Government are opposed to the private sector. The apprehensions about the future of private enterprise seem to have stemmed largely from the belief that there is an ideological conflict between the two sectors. Mr Shastri has pointed out that the proper way to a correct assessment of the position of the private sector would be to find out whether it has been denied the necessary facilities for its orderly growth.

As Mr Shastri has said the private sector has a fine record of achievement during the First Five Year Plan. It has attained all its targets and so far in the Second Plan period also it seems to have done remarkably well despite serious difficulties in the direction of mobilizing resources after meeting the heavy tax liabilities. It may be noted in this connection that according to the Governor of the Reserve Bank the private sector has already in the first three years of the current plan period attained the target of investment set for it. It is idle therefore to think that Government can afford to ignore the claim of a section of the community who has a fine record of service to the nation. Mr Shastri has also made it clear that the country will continue to utilise the services of the private sector. As regards the public sector's apparent encroachment into the sphere of the private sector, the concept of a healthy competition is now being advanced. Evidently the Minister has in mind the recent decision of Government to allow Defence Ministry to have its own automobile plant which will be able to produce trucks in excess of the needs of the armed forces thereby necessitating sales in the civilian market. It would appear that now that there is no going back on the decision private enterprise has no other alternative but to accept the thesis that such competition will help the concerned units in both the sectors to get "into the proper stride".

While it is true that private enterprise should attune itself to the concept of the "Welfare State", it is equally incumbent on Government to remind themselves constantly of the concomitant concept of a mixed economy. Mr G. P. Kapadia, President of the Indian Merchants Chamber, has pointed out that if the private sector is to work efficiently Government should take active steps to remove the "shackles" on it. He thinks that the present tax system should be replaced by a system which is at once simple and capable of creating a climate of confidence in the private sector.

GATEWAY MARKETS

Liquidation in Oils and Oilseeds

PRICES on the Bombay Oilseeds Exchange recorded a further decline in prices due to renewed liquidation by bulls on reports about fixation of ceiling levels with the continuance of margin. As a matter of fact, it is learnt, that the Board of the Oilseeds Exchange has decided to urge the Forward Markets Commission to fix ceiling prices of four important oilseeds—groundnuts, castor, linseed and cottonseeds—on an all-India basis. If that is not possible, the Board has urged the Commission to fix ceiling prices locally at its own discretion.

The FMC has already issued a stern warning to the speculators dealing in commodities, which has, no doubt, brought some sanity to the market. Now, the Reserve Bank has directed all the scheduled banks to maintain a margin of not less than 45 per cent of the value of the stocks in respect of advances against the security of groundnuts. In effect, this means a doubling of the margin from around 20 to 25 per cent to 45 per cent. This should act as a deterrent to further speculative manipulation and restore normalcy in groundnuts, even as the stern warning should help restore normal conditions in other commodities. According to some market circles, prices may not go down very much, but will tend to stabilise at around the present low levels. Groundnut Bold ready is quoted at Rs 35.50 and Groundnut Oil at Rs 18.50.

In the Castorseed section, prices showed the continued decline in the absence of any overseas business in castor oil. Ready rate is quoted at Rs 30.31 and Castor Oil, commercial quality, at Rs 15.50. Although insufficient arrivals and higher rapeseed advices from North India accounted for a slight firmer tendency in prices early in the week, the tendency in the Linseed section was generally easy towards the close in sympathy with the weakness in other oilseeds. Ready rate is quoted at Rs 33.50 and Linseed Oil at Rs 16.62.

Gold & Silver

Price movements on the Bullion Exchange were rather irregular, being induced mainly by the warning given by the FMC to speculators in various markets and the consequent fall in commodities.

In the Silver section, prices after ruling initially firm, developed an easier tendency towards the close due to more arrivals. Arrivals amounted to as much as 18 bars against an offtake of only 11 bars. Unrefined metal receipts totalled 18 bars. Spot rates moved between

Rs 194.50 and Rs 194.87 for .916 fineness.

Following firmness in the ready section due to the decline in receipts and very steady offtake, Gold ruled higher throughout the week. Higher upcountry advices provided further encouragement. The premium on Indian Government Mint gold, which was about three annas in the initial stages, widened to as much as ten annas at the close. Arrivals amounted to 2,000 tolas as compared to an offtake of 3,000 tolas. Unrefined metal receipts amounted to 1,500 tolas. Spot rates moved between Rs 117.69 and Rs 118, while Sovereign was quoted around Rs 73.75.

*

Yarn

According to the latest figures, imports of foreign Art Silk yarn in Bombay, during January, amounted to 3,411,947 lbs as against 4,110,512 lbs in the preceding month and 1,619,331 lbs in January, 1958. Imports of synthetic yarn have gone up to 430,823 lbs as against 297,728 lbs in the previous month.

Staple-Fibre Yarn imports came to 5,370 lbs as against 3,200 lbs. Spun-silk was very much lower at 250 lbs against 3,041 lbs.

Cotton Yarn imports were reduced by 50 per cent to 95,077 lbs as against 190,329 lbs in December, 1958.

Meanwhile, cotton yarn exports have suffered a setback to 1,065,400 lbs in January as against 1,589,888 lbs in December, while exports of Sewing thread were also lower at 35,381 lbs against 44,311 lbs in the preceding month.

*

Non-Ferrous Metals

Barring Copper, prices of all the Non-Ferrous Metals depicted an easy trend. The price of Copper remained firm at Rs 212 per cwt as releases from the State Trading Corporation were not up to expectations. Zinc turned quiet at Rs 94 per cwt on lack of demand, mainly due to releases by the STC. The Lead market remained depressed with the rate hovering idly around Rs 78 per cwt. Despite steady conditions prevailing in the London and Singapore markets, Tin ruled easy at Rs 149.50 per quarter, mainly due to the liquidation of past speculative purchases.

On the London Metal Exchange, Copper spot is quoted firm at £237 per ton against £236½ in the previous week. In the Zinc section, steady conditions prevailed due to satisfactory demand for the metal, the rate being quoted around £74 per ton. Due to uncertain outlook, Lead remained neglected around £70 per ton. Tin was dull at £77½ and the rates moved between Str. \$396 and Str. \$396½ per picul in the Singapore market. Although demand for the metal reported to be fair, some of the important consumers have preferred to defer their purchases to a later date after the next meeting of the International Tin Council.

WORLD OF COTTON

THE modified export promotion scheme for textiles, announced by the Government of India, has generally been welcomed by the trade. While the merchants controlling about 80 per cent of the export trade are excluded from the scheme announced on October 31 and amended on November 5 last, the processors are bracketed with the mills. But, under the present scheme, all the participants in the export trade are made eligible for import licences. It is hoped that import facilities under the scheme will be utilised fully.

Mills exporting cotton cloth or yarn will be permitted to import cotton to the tune of 60 per cent of the f.o.b value of their exports, with effect from the January-March 1959 quarter onwards. A special additional entitlement of 6 2/3 per cent will also be allowed to the eligible mills for each of the two quarterly periods—January-March and April-June 1959. Out of the raw cotton entitlement under the scheme, the eligible mill may import and retain for its own use cotton equal to 10 per cent of the entitlement, of such categories as may be specified from time to time by the Textile Commissioner. The balance entitlements shall be made available to the Textile Commissioner on such terms and conditions as may be prescribed by him from time to time.

It is estimated that, on the basis of exports of 800 million yards at a price of 65 nP per yard, the amount, that will accrue, will be of the order of Rs 52 crores. Taking another Rs 4 crores earned out of exports of cotton yarn, the overall export earnings will be Rs 56 crores. Now 75 per cent of the foreign exchange earnings of these exports will be utilised for the import of foreign cotton and the balance for the import of chemicals, dyes and other accessories. Exporting mills will be permitted to utilize the full quantity of the foreign exchange on the above basis and licences will be issued to them accordingly.

Meanwhile, there is a feeling among the trade that the volume of business in the piecegoods market is not as large as was expected usually at this part of the year, although there is demand for all kinds of seasonal goods. This is attributed to the acute shortage of funds in the hands of consumers and the upcountry merchants. It is stated that, in certain textile centres, forward deals which had been entered into in anticipation of the satisfactory crop conditions have been cancelled. In the circumstances, the prospects of any improvement in the textile trade are not considered bright.

On the export front, there is no appreciable change. There is practically no business with Burma,

Modified Export Promotion Scheme

though there are possibilities of fair business towards the end of the month under PL/480. The Indonesian Government have not yet issued import licences and so business with this country is limited. Ceylon remains listless following the Ceylon Government's move to link textile imports with the compulsory purchase of the indigenous cloth.

Above all, the drastic fall in cotton prices in the world markets this year has presented a fresh problem to the Indian textile industry in regard to its exports of cloth. This new development, it is feared, will tell on exports of Indian piecegoods during the current year. Total cloth exports have already declined by about 250 million yards to about 600 million yards in 1958 on account of a number of adverse factors. The US decision to raise its cotton export subsidy by 1.5 cents to 8 cents per pound from August 1, 1959 has also come as a fresh damper.

x

FUTURES MARKET

Prices in the Cotton futures market developed an easy tendency following the caution given

to speculators by the Forward Markets Commission against rigging up prices. Rumours were current that the FMC would soon impose margins on cotton. These, together with reports of heavy arrivals of the new crop from Saurashtra, induced speculators not to lend fresh support to the market. There was, therefore, a landslide in the prices of both the contracts. Jharilla March delivery declined to Rs 664.50 from Rs 671 and May delivery to Rs 665.25 from Rs 673.50.

x

SPOT MARKET

The Spot section also witnessed the general reluctance on the part of the mills to augment stocks of raw material. Poor reports from the cloth market, heavy arrivals of the new crop and the financial stringency chilled the buying enthusiasm. The spinners' demand was very moderate and was for only popular varieties.

In the export section, however, there were good enquiries for Bengals and shippers were reported to have bought a large quantity against their export commitments.

BOMBAY REVIEW

In the foreign section, rumours were current that the Government would soon announce plans for further imports of cotton during the current season. Mills were, however, perturbed at the drastic fall in world cotton prices and feared that their cloth exports would decline considerably in the coming months.

Imports into India from September 1, 1958 to January 31, 1959 amounted to 99,409 bales, although the quantity licensed was to the extent of 2.15 lakh bales.

The Government of India have decided to allot for the mills, on the usual basis adopted so far, the balance of 48,000 bales of American cotton of 1 1/16" and above in staple. The allotment letters will be sent to the mills in due course. Out of the quantity earmarked for distribution under the export promotion scheme, 25,000 bales of cotton stapling 1 3/16" and above and 60,000 bales of cotton stapling 1 1/16" and above but below 1 3/16" will be distributed to the actual-user mills. Apart from these quantities, separate allotments of foreign cotton will be granted to the exporter-mill against their retention entitlements.

OLYMPUS

WERE it solely a matter of inference from speeches in Parliament, no one would guess that this was February and the Budget proposals for 1959-60 were just round the corner. The world outside might have its hopes and fears, but Parliament itself is apparently supremely untouched by them. I am not saying that it is possible to discuss a Budget even before it is presented, but the motion of thanks to the President deserved a better debate than it actually got and could have revealed, however obliquely, preoccupation with the financial proposals for the next year. With notable exceptions, this was not the case. If one were asked what the major preoccupation of the Budget session so far has been, it would not be unfair to say that it has been Mr M. O. Mathai's past. Ever since the session began, Communist opposition has purposefully directed the energies of Parliament to a consideration, in one form or the other, of Mr Mathai's recent and remote past. Considerable tactical ingenuity has gone into the sustaining of this interest. First, it was a privilege motion: that conceded, it was a partially successful bid for an inquiry. One would have thought that that would be the end of the affair, at least for the present. But it was not to be. In both the Lower and Upper Houses, repeated references were made to it. It was considered to be of such earth shaking importance, that Mr Bhupesh Gupta devoted his entire speech to it.

Debate on the President's Address

Surely, this was to reveal an odd sense of relative urgency and importance? It is true that the facts that Mr Gupta has so industriously gathered are of great relevance to the inquiry that has been ordered. It is also true that Parliament is entitled to turn its pitiless gaze on the murky spots of the administration. But the feeling is inescapable that the energies of some members of Parliament are bent toward seeing that the members of the "Public" are not disappointed. This, they do, by successfully producing some skeleton or the other from the official cupboards. Last year it was the LIC deal. And this year, it is Mr Mathai.

But it is important to realise that the principal business of Parliament is law making and running the country through the Government. In this task, misdemeanours of individuals, however important, are comparatively of little importance. While no one wishes these matters ignored, it is necessary to see that not more time than is needed to deal with them adequately is spent on them. Considering how the legislative programme of Parliament is heavily in arrears and how few of private members' bills—a precious right and a valuable instrument of reform—get a chance of discussion, it is necessary that Parliament should make a less socially expensive use of its time.

But as I said in the beginning, not all speeches on the President's address were barren. Both Mr

Kripalani and Mr Masani made useful contribution to the discussion of the state of the republic. One rather topical point of interest was Mr Kripalani's reply to Mr Nehru's call for cooperation from all and to consider the tasks before the nation as national and not party tasks. More than usual interest perhaps attaches to both the invitation and the reply, because Mrs Indra Gandhi, in her capacity as Congress President, had appealed for similar cooperation. Such appeals have been made in the past too, and considering that they are chiefly addressed to those who have broken away from the Congress, the purpose of such calls seems somewhat nebulous. It is rather an emotional appeal to an earlier camaraderie. But without any cynicism about the sincerity of such calls, one can legitimately ask for a clearer indication in practical terms of what such exhortations mean. This is practically what Mr Kripalani has done. He puts the implications of the request for cooperation in their bluntest terms and says that sharing in tasks implies sharing in power. If we do really face an emergency that calls for every one pulling together then the proper thing to do would be to have a national government. The Congress is not apparently ready for this extension of its own thesis of the supreme need for shedding party labels at this juncture of the country's history. I think that Mr Kripalani is right in saying that no mealy mouthed call for cooperation should be made for another reason. Though the PSP is nebulous in its organisational set-up and though its differences with the Congress are not on matters of policy, yet it is the only party which many in the country will consider as an acceptable alternative to the Congress. If that is so, it is necessary to build up an identity for it and foster it as a viable opposition. This is the logic of Rajaji's original demand that the Congress should create its own opposition, though, since then, he has come to the conclusion that the real alternative to the Congress is a conservative party. This line of reasoning has its obvious dangers, but that is another matter. The point is that, unless the Congress feels genuinely that the situation in the country is of such gravity as to make it necessary for it to share the responsibility of running it, it should desist from appeals of the sort it is making.

Mr Masani, on the other hand, concentrated his fire on the dangers of the desires to have cooperatives farming. In many ways, Mr Masani would answer Rajaji's requirements of a leader of a conservative party. But it is the emergence of the party itself that seems extremely unlikely. Historically, the "land party" was

always first in the seat of power and was dislodged by other interests. As in much else, we have the opposite situation prevailing in India. In the prevailing atmosphere, it takes courage to preach on intellectual grounds the intelligent preservation of certain form of vested interests. The danger that these are mere rationalisations are very real and that is why the assent is not readily forthcoming to such arguments even from intelligent and ideologically uncommitted people.

Though Parliament was not conspicuously concerned with Budget proposals, there were others who were exercised about the shape of the financial proposals for the coming year. The actuals for the current year so far have given some indication of the way things are shaping. Receipts from direct taxes, especially the new ones, have been disappointing. The expenditure tax, especially has been particularly ineffective from the point of view of revenue. Mr Kaldor has recently criticised the form given to his ideas by the legislation that was finally adopted by Parliament, and his criticism seems justified. As for Customs revenue, restrictions of import and inducements for exports have both reduced it considerably. Excise duties alone have shown encouraging results and performance of particular commodities—like steel and cement—have made things easy. The last three months are traditionally the period in which direct tax collections show massive increase and, therefore, income-tax and corporation tax may come up to Budget estimate.

But despite all these, there is an expectation of any new levy. One reason for this would be the expectation of greater yield from current rates. For, some of the Second Plan projects will start yielding results from the next year and industrial production also expected to pick up as consequence. Secondly, there is general hope, how far justified is difficult to say at the moment that there will be significant reduction in unproductive expenditure. One has learnt to be cynical about economies by Governments, but the case for a reduction in defence expenditure has been made so often that one has the hope that some impressive would have been made on Government.

It is time that balancing Budgets was looked at from the angle of reducing unplanned and unproductive expenditure rather than from that of increasing revenue. And Mr Krishnamachari promise that no important tax will be levied in the last years of the Plan deserves to be redeemed since that was one of the reasons that reconciled many to his massive imposts.

DELHI REVIEW

NORTH INDIAN NOTES

UP Budget

The Budget for 1959-60 presented by Mr Ali Zaheer, Finance Minister of UP to the Vidhan Sabha last Friday discloses Revenue deficit of Rs 1.86 crores, revenue receipts and expenditure being estimated at Rs 119.61 crores and Rs 121.47 crores respectively. No fresh taxation has been proposed. There are however minor increases in Stamp Duty, Court Fees and Motor Vehicles tax; but these are the result of the recent amendments to the relevant Acts. The estimated increase of about Rs 9 crores in revenue receipts is explained by the fact that during the next financial year there will be increased receipts from tax on large land holdings, UP Roadways, Stamp duty, Court Fees, Motor Vehicles Tax and the State's share of the income-tax. It has been indicated that the State Government propose to go in for a market loan amounting to about Rs 8 crores.

Significant concessions to a number of sections of the people have found a place in the Budget. But it is evident that the State Government are particularly anxious to speed up the industrialisation of the State. Mr Ali Zaheer has pointed out that in view of the fact that it is becoming more and more difficult for agriculture to sustain the growing population of the State, the way-out is to be found in increasing the tempo of industrialisation of the State. This explains the new valuable concession given to industry in the current budget. Industrial consumers are now exempted from Electricity Duty. The fresh incentive is bound to give a fillip to the setting up of more industrial enterprises, as the Electricity Duty constitutes a considerable portion of the cost of production in most industrial concerns.

The other concessions are a further temporary increase in dearness allowance of low paid Government employees at a rate of Rs 2.50 per month to those whose total emoluments after this increase does not exceed Rs 100 per month and Rs 5 for those employees whose total monthly emoluments are between Rs 100 and Rs 200. With a view to give relief to the educated unemployed it is proposed to start 1425 more primary schools, each with two teachers. This scheme is however being entirely financed by the Central Government. In the sphere of direct taxation, the beneficiaries are foodgrain traders whose annual turnover is less than Rs 25,000. This category of traders has been given complete exemption from sales tax. Those with an annual turnover of Rs 25,000 and above will however be required to pay sales tax at the rate of one per cent. At present sales tax is levied on a slab basis.

Referring to the urgent need for speeding up the industrialisation of the State, the Finance Minister, first of all has entered a fervent appeal to the central Government to locate more public sector industries in the State. As for the private sector, the State Government has already provided a number of incentives both for small and big businessmen. Apart from the establishment of industrial estates and liberal loans from the State Financial Corporation to small and medium scale industries, strenuous efforts are being made to increase the State's power potential. The Banaras-Mooahal Sarai-Mirzapur region offers good scope for the setting up of more industrial units as electricity, one of the main requirements of industry, will be available in abundance with the completion of the Rihand hydro-electric project.

*

Industrial Relations

Speaking at the ninth All India Conference of the Institute of Personnel Management in Kanpur last week Mr V. V. Giri, Governor of Uttar Pradesh, has pointed out that an effective system of personnel management will go a long way in bringing about good industrial relations in the country. One of the unsatisfactory elements in our programmes for the rapid development of the country is the continued lack of sustained amity among the two partners in industry, labour and management. While it is very well recognised on all hands that good industrial relations are an essential prerequisite for the complete success of our five year plans we are yet to see the desired result obtained in this regard.

As Mr Giri has noted this problem can brook no delay as the maintenance of the industrial pace for raising the tempo of production is of vital importance at the present crucial juncture. There are indications however that the urgency of the problem has led to sustained efforts at enlarging the area of employer-worker amity and to emphasis being increasingly placed on the human element in industrial relations. Scientific management of industry now recognises that both the employers and the workers have a common interest in industry. It is no longer a question of squeezing as much profit as possible by the owners and a continued struggle for getting a living wage by labour. It is now being increasingly realised that the welfare of the worker is the responsibility of management while the problems of the management are matters of vital interest to workers.

This healthy relationship between labour and employers can be fostered effectively by a system of personnel management.

As Mr Giri has pointed out Personnel officers must be able to function as free people whose main function is to serve equally interest of both the partners in an industrial enterprise.

NORTH INDIAN MARKETS

Forward Trading in Gur Suspended

FORWARD trading in Gur was suspended on February 12; but the order asking all outstanding transactions to be squared up at the average of rates prevailing in the past three months has created some confusion in the trade circles. Following the Government order bringing gur futures under the purview of the Forward Contracts Regulation Act, ready prices which, touched the highest level of Rs 18.37 per maund for the best Pansera quality a few days ago, declined to Rs 17.50.

It may be recalled that forward trading in gur started in Uttar Pradesh and the Punjab after the Government of India removed the ban on trading in 1954. The Government was, so far, not inclined to bring the commodity under the purview of the Forward Markets Commission; but the latest speculative rise taking prices to fresh higher levels every week has compelled the Government to revise their earlier decision. The authorities feel that there is now need to regulate trading in the commodity.

Since Uttar Pradesh and the Punjab produce about 57 per cent of total gur in the country, the Government have felt that forward markets should be established only in that region at Hapur, Meerut, Agra, Muzaffarnagar and Delhi. Production in the Bombay State is only about 10 per cent and the balance is shared by Madras, Mysore, Andhra and Orissa. It is believed that the business will be resumed after about three months when the associations at these five centres prepared suitable bye-laws for trading.

It is pointed out that the ruling now given by the authorities to settle business at the average rate prevailing during the past three months will create new difficulties. The average rate for the March contract works at about Rs 14.90 per maund, thereby leaving a difference of Rs 1.75 which the buyer will have to pay to the seller. It is pleaded that business should be allowed to be settled at the closing rate on February 11 as was done in the case of grains, pulses and guar on the 17th July, 1958.

*

Sugar

Sugar markets have continued to rule steady, as the demand is much higher than the quota released by the Government. As a matter of fact, some of the factories are quoting higher prices than fixed by the government. Traders attribute the present bullish tendency in prices to the inadequacy of supplies.

Details of the allotments of the recent quota of 1.65 lakh tons disclose that the actual quantum released for supply is only 1.41 lakh tons. This is insufficient to meet buying orders from the consuming mandies. Normally, during this period, the market witnesses a seasonal expansion in demand. Moreover, February, being the Budget month, usually shows a broadening in enquiries, with dealers turning anxious to build up stocks in line with their capacity. In this connection, traders have a feeling that the Government should have released a higher quota and permitted free allotment against tenders as had been their practice in the past.

In the Hapur market, Shamli (D29) is quoted at Rs 36.75; Dhampur (C29) at Rs 38.12; Amroha (D29) at Rs 37.31; Seohara (D29) at Rs 37.37 and Bijmore (D29) at Rs 37.25. In the Muzaffarnagar market, conditions remained firm and paucity of stocks resulted in a sharp rise in prices. Most of the factories have already sold out their released quotas and the rates of other mills, which still have some stock, are being quoted in the market a premium ranging from Rs 1.37 to Rs 2.00 per maund for D/29 quality over the control price of Rs 36 fixed by the Government. Daurala, Mowana, Shamli, Rohana, Seohara, Deoband, Khatauli and Iqbalpur sugar factories have already sold their quotas at the controlled prices.

Meanwhile, according to the Chairman of the Development Council for the Sugar Industry, grant of further licence is not being considered at present as the entire additional targeted capacity for the second Five-Year Plan has already been licensed. Twenty-five new factories with capacity of about 2.61 lakh tons went into production by January 1959. Six more new factories with capacity of 73,000 tons will go into production during 1958-59 season and seven with an equal production capacity in 1959-60 and the rest in subsequent years.

*

Foodgrains

Quietly easy conditions were noticed in the Hapur Foodgrains market. Prices of all grains developed an easier tendency following reports of good "rabi" crop prospects. Pulses, however, continued to be steady due to paucity of stocks.

Wheat prices have registered a fall of about 50 nP per maund, while stockists are anxious to sell their stocks before the advent of new crop in the markets. The market for Rice continues steady, as supplies are restricted due to a ban on exports from the surplus districts. Gram has eased by 25 nP per maund on expectation of a good crop following timely winter rains; but supplies in the market are small. Barley and Bejher have sought lower levels as demand is slack and a bumper crop is expected.

MADRAS REVIEW

ONE important result of Mr Lal Bahadur Shastri's visit to Madras last week is the dispelling of the lurking apprehension in the Peninsula that it will be left behind in the industrialisation of the country. During his brief sojourn in the south he has declared open the first Indian works of the well-known electrical equipment manufacturers, the English Electric Company. Though this new factory has been declared officially open only last week it is in commission for nearly a year now. There is a great demand in our country for electrical equipment consequent on the implementation of various development projects and the products of this factory are now meeting a part of our requirements which were hitherto imported.

Mr Lal Bahadur Shastri has made the most welcome announcement in the course of his address to the South Indian Chamber of Commerce. The Government of India have now finalised the arrangements for the setting up of an aluminium plant near Salem in the private sector in collaboration with an Italian firm. People in the State have been agreeably surprised at this announcement because only the other day questioners in the Legislative Assembly could only elicit the information that the two experts from Italy, who came to India and inspected the bauxite-bearing areas in Salem district in November 1958 had expressed the view that the ore contained sufficient aluminium and therefore the question of setting up an aluminium factory in the district could be pursued further.

On the other question of the establishment of a raw film factory in Mettupalayam also Mr Shastri has brought good tidings. He has pointed out that nothing is farther from the thought of Government than the dropping of the project. As a matter of fact Government are convinced that in view of the large drain of foreign exchange from the country on account of the import of raw film, there is need for not one raw film producing factory but for several units. The proposed plant at Mettupalayam is very much in the attention of Government. No doubt there has been some unavoidable delay but Mr Shastri has expressed the hope that it will be possible to come to a decision soon. The general policy of the Government of India in regard to location of industries has also been stated in unambiguous terms by him in his speech (which was read by Mr R. Venkataraman, State Minister for Industries and Labour, in the unavoidable absence of Mr Shastri) at the opening ceremony of the Ambattur factory of Dunlops, the pioneer manufacturers of rubber goods in our country. "It is the earnest desire of the Government to see that the development of new industries is as widespread as possible and

not concentrated in a few major cities".

The fact that it has taken barely three years for Dunlops to translate the idea of putting up a second factory at Ambattur into concrete shape bespeaks at once of the efficiency of the entrepreneur company and the helpful attitude of the both the Central and State Governments. Erected at a cost of Rs 2.5 crores Dunlops Ambattur factory is expected to turn out every year 15 lakh tyres for bicycles and 1,34,000 tyres for trucks and buses. An interesting feature of Dunlops participation in India's industrialisation is that though it is a world-wide organisation Dunlop (India) is very much an Indian company. One-half of the company's equity shares is owned by Indians, and in its management also the proportion of indigenous personnel is high.

With the commissioning of the Ambattur factory rubber goods production in the country will be sizably increased. It may be noted that though a wide variety of rubber goods are being manufactured in India, tyres and tubes constitute the bulk of the production of the industry. It is to be expected that the demand for different types of tyres will go up considerably in coming years with the improvement in the standard of living of the people. It has been estimated that the demand for automobile tyres will increase to about 1.6 million by the end of the current five year plan period while that for cycle tyres will go up to 16 million. As against this demand the installed capacity is still inadequate. Presently production may be in the neighbourhood of 10 million tyres. The progress of tyre production in the country can be gauged from the fact that as against 7.6 million tyres in 1956, production in 1957 has increased to 8.6 million in 1957. Mr Lal Bahadur Shastri has revealed that output has been placed at 7.2 million tyres for the first nine months of 1958 as against 6.4 million in the corresponding period of the previous year. With a view to meet the anticipated increase in demand it has been decided to undertake the expansion of existing factories and to grant licences for the setting up of new units.

An indication of the tremendous changes that have taken place in our country in the past ten, twelve years is the fact that whereas till 1936 we were entirely dependent on exports for the disposal of our raw rubber production, we are now importing quite a sizable quantity of it. It is true that production of raw rubber has increased from about 17,000 tons to nearly 24,000 tons during the past five six years. But it must be borne in mind that consumption has long outstripped demand and at present it is some 10,000 tons above production. It will be seen, therefore, that the problem that is confronting the industry and Government is one of

augmenting the supply of indigenous raw rubber so as to meet our increased requirements. In the present context of the stringency of foreign exchange the continued import of large quantities of rubber is untenable. It is therefore gratifying to note that Government have taken necessary measures to increase indigenous production of rubber. The proposed synthetic rubber plant is expected to be commissioned early during the Third Five Year Plan period. In the meantime it should be the endeavour of all concerned with the rubber industry to take energetic measures to increase the production of natural rubber. The fact that yield in our country is still very low shows that there is large scope for augmenting our resources of raw rubber to a considerable extent through improved planting practices.

The rapid growth of the rubber industry has also focussed attention on the problem of the supply of other important materials required in the manufacture of rubber products. Some of these materials are now imported involving the expenditure of a sizable amount of foreign exchange. Even so the manufacturers are increasingly able to obtain their requirements from indigenous sources. This is borne out by the high value of stores locally purchased by a company like Dunlops. It is said that the amount in this regard was placed at over Rs 8 crores last year. Efforts are being continuously made to produce improved rubber chemicals within the country and it may be expected that we will be completely self-sufficient in all the raw materials required by the rubber industry in the next few years.

The continuous expansion of Dunlop, India, will expose the hollowness of the oft-repeated criticism that conditions in our country are not conducive to foreign investment. It is interesting to note that in his speech at the opening ceremony of the Ambattur factory Mr John Luckham, Managing Director of the Company, has deemed worth mentioning the fact that the new "factory is situated only a few miles from the site of the famous Avadi Session of the Indian National Congress held in 1955, where the aim of a "Welfare State" was declared." The speed with which the Ambattur factory has been brought into existence is clear evidence of the mutual confidence between the company and the Government. It is not surprising that Government have given ready sanction for the expansion of Dunlop in India because this company during its long association with our country (Dunlop, India is now sixty years old) has demonstrated that for all practical purposes it is a national concern. This basic Dunlop idea as Mr G. E. Beharrell, Chairman of Dunlop Rubber Co., Ltd., has put it is that "companies should seek a blend of independ-

ence and inter-dependence." The inter-dependence in the case of Dunlop, India is to its great advantage, because it can have the benefits of the basic research undertaken by the Dunlop Research Centre with its fifty laboratories in the United Kingdom, and also in other research centres throughout the world. Such close contact with the parent organisation also enables Dunlop, India to keep abreast of the latest developments in vehicle designs and the consequent tyre requirements.

S. E. RLY TENDERS

Sealed tenders are invited for (i) Tender No. CON/GM/4 F1/59 for supply of 6000 Rft. G. I. Pipe 4" dia. IRS W3-53 class "B". Earnest money is Rs 1000/-. Tenders will be opened on 10-3-59 at 3 P.M. (ii) Tender No. CON/GM/5 D/59 for supply of 564 Nos. Spring Points Lever Self Reversing Steel handles IRS Drg. S.A. 900 Specification IRS-S13 (current). Earnest money is Rs 1000/-. Tenders will be opened on 11-3-59 at 3 P.M.

Tender forms are obtainable from the office of the Controller of Stores (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs 5/- (not refundable) per copy per tender by money order to him direct in the case of outside firms and on production of cash receipts from this Rly's Chief Cashier by local firms.

Tenders should accompany the receipts for depositing earnest money as stated above with this Rly's Chief Cashier without which the tenders are liable to be rejected. Approved contractors having a permanent deposit of Rs 1000/- with the Controller of Stores are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

SOUTH INDIAN NOTES

Aluminium Plant

The establishment of an aluminium manufacturing plant near Salem now waits on assurance of adequate supply of firm power. The finalisation by Government of the proposal to set up an aluminium manufacturing plant in the private sector in collaboration with the Italian firm of Montecatini, was announced by Mr Lal Bahadur Shastri in a speech to the Southern India Chamber of Commerce last week. Originally it was the intention of the Madras Government to take up manufacture of aluminium in the public sector. But following rephrasing of the Second Plan, the aluminium plant in Salem was assigned a low priority and there was no prospect of its establishment unless private sector came forward to take charge. Effective action was also delayed by a wrong sample of bauxite originally taken to estimate its content of alumina. Fresh tests recently carried out have confirmed that Shevaroy bauxite contains sufficient percentage of alumina to serve as basis for an aluminium manufacturing industry. The Government of Madras had constituted a committee of industrialists with Mr R. Venkataswamy Naidu, former Chairman of the South Indian Mill Owners' Association, as Convener, to draw up plans for establishment of plant capable of manufacturing 10,000 tons of aluminium per year in Salem District. This Committee has arranged for collaboration with Italian firm. The complete plant is estimated to cost about Rs 12 to Rs 14 crores and will be set up in three stages. The first stage will be setting up of plant for processing bauxite into alumina and this will cost about Rs 5 crores. In the second stage, the alumina will be converted to aluminium ingots (by electrolytic process) and the cost of this plant will also be about Rs 5 crores. The third stage will be the manufacture of aluminium alloys, sheets and structurals. There is also a proposal under consideration to change the order of the three stages in view of certain advantages. Under this proposal plant for manufacture of ingots will be set up immediately and will operate with imported raw material while the plant for processing bauxite will be set up later. At present the country is importing large quantities of aluminium ingots at a price of Rs 2500 per ton. Alumina costs only about Rs 350 per ton and its conversion into the metal in the country will result in substantial saving of foreign exchange. Moreover, the plant for manufacture of the metal which is required immediately can be set up at less capital cost. Manufacture of aluminium will however require large quantities of electric energy.

It is authoritatively estimated that the plant in Salem will require about 30,000 k.W. and it has been suggested that the entire power output of the Mettur system should be reserved for aluminium manufacture, supplemented by the installation of additional generators which will utilise the surplus flow during the seven months of the year when water is let out for irrigation in large quantities. But the economies of operating a large industrial plant involving heavy capital outlay on a seasonal basis will require closer examination.

★

Manufacture of Electric Equipment

With the rapid industrialisation envisaged in our country the demand for electrical equipments of all types will show a marked rise. Already many of the items are tending to become short in supply as rural electrification has taken rapid strides in recent years and is likely to make further headway in coming years. The establishment of more and more large scale and small industries depends on the availability of electricity the production of which is consequently being augmented in the country by the construction of new projects. Hence provision has also been made for the supply of the necessary electric equipment in sufficient quantities as otherwise the progress in power output or the establishment of new industries will not be able to achieve the desired result. It is true that the installed capacity of various electrical equipment is being steadily stepped up and that a large heavy electrical equipments factory in the public sector is under construction. Even so present demand is nowhere near being satisfied in certain types of equipment. It is therefore gratifying to find that the well-known English Electric Company have put up their first factory in India for the manufacture of electric equipment. This factory is situated in Pallavaram, near Madras.

Though the formal opening of the company has been performed only the other day by Mr Lal Bahadur Shastri, Union Minister for Commerce and Industry, the works are in commission for nearly a year now. The equipment manufactured in this factory include heavy duty industrial type low voltage distribution gear, ranging from 30 to 300 amp. ratings, fuse boards, overhead busbar systems and distribution boards made up to individual customer's requirements. The production of HRC fuses will be taken up later this year. According to Mr R. Bruce, Manager of the Works, production will progressively increase to the value of Rs 40 lakhs in about a couple of years. A significant point in the manufacturing programme of the works is that provision has been made for a progressive increase in the percentage of indigenous components in the finished products.

SOUTH INDIAN MARKETS

Outlook for Rubber

ACCORDING to the figures released by the Indian Rubber Board, production of Rubber, in December 1958, was 2873, while imports during the month were 1,233, thus making a total of 4,107. Adding the opening stock, as on the 1st December 1958, of 11,007, there was an available balance of 15,114. Consumption amounted to 3,526. Thus, stocks with the estates, dealers and the manufacturers, as on the 31st December 1958, were 11,587. Stocks of synthetic rubber, on the same date, was 1,365. Thus, there was a total stock of 12,953. (All figures are given in metric tons).

Meanwhile, world production capacity for synthetic rubber is estimated to be 1.9 million tons during the current year—roughly equal to the estimated production total of natural rubber. Total production of natural rubber has risen only by small amounts in the last five years, with the trend of world demand for all kinds of rubber showing a steady rise.

Unless there is a drastic change in the pattern of demand, it looks as though the next few years will see a further switch in the ratio of natural to synthetic consumption. Manufacturers say that, at the moment, about one-third of rubber requirements are for natural rubber only and about the same proportion for the synthetic product. The remaining third can be met with by either type. At the moment, this will be the limit of the possible switch-over to the synthetic material. Natural rubber producers can place no reliance, however, on the long-term picture remaining constant, as research may reveal new types of synthetic material, capable of new uses, or the pattern of demand may change.

For natural rubber producers, a good deal, therefore, depends on Russian policy. If Soviet capacity for producing synthetic rubber is being increased, the recent heavy Russian buying of natural rubber may turn out to have been only a temporary feature in the market. A fall-off in Russian demand will have the effect of lowering prices in the market and of ruling out a good deal of the fluctuations which were present last year. Although producers may suffer from the price declines, it may be that this will in itself make the material more competitive with synthetic rubber.

★

Pepper

Three shipping conference have announced cuts in freight rates for

Pepper exports from Singapore to the United States to \$60 a ton. The reduction follows complaints from the exporters that the exporter in India is in an advantageous position with the rate from India having now been fixed at \$50 a ton after two reductions from \$80.

Meanwhile, pepper markets have continued to rule firm due to renewed speculative activity. In the Alleppey market, Wynaad quality is quoted at Rs 876 and the Country variety at Rs 800 to Rs 825 per candy. The present rise in prices has been brought by reports of smaller estimate of production.

In the Singapore market, Lampong pepper has rallied to Str. \$85. Exporters of Lampong are now said to be presenting a firmer front and are quoting higher, as stock of Lampong at Singapore and at Indonesia are reported to be in the vicinity of only 4,000 tons and 2,000 tons respectively.

In the New York market, the rate has improved to 26 from 24 cents per pound. If grinders decide to come out to buy in the present mood of the supplying markets, the world pepper prices are likely to advance in the near future.

★

Groundnut

The action taken by the Reserve Bank restricting credit imparted a nervous feeling in the Madras Groundnut market. Market circles anticipate some panicky selling during the next few days due to the necessity for paying back some of the advances taken to meet the new margin requirements of banks. Business was, therefore, restricted in view of fall in prices, while small crushers were buying only limited quantities. Bold quality was quoted at Rs 163 per candy as against Rs 170 in the previous week.

In the Groundnut section, both buyers and sellers were naturally hesitant to do any business. The rate for the ready position was quoted at Rs 325 per candy as against Rs 335 quoted in the previous week.

★

Bangalore Silk

There has been no change in the prevailing high rates for Filature Silk in the Bangalore Silk market during the week ended 12-2-1959. However, the rates for Charka Silks in general tended to show a declining trend. The supply position of raw silk remained constant. Shortage of Filature Silk continues to be felt.

The prices of Reeling Cocoons in the State indicated slight variations.

Prices for Silkwaste varieties have not been quoted as there was no movement of Silkwaste in the market. Overseas demand was practically nil.

Scindia Steam Navigation Company, Limited

Dearth of Cargo Availabilities

Need for Broad-Based and Long-Term Policy from STC

Srimati Sumati Morarji's Four-Point Plan for Aiding Indian Shipping

The following is a summary of the speech delivered by Smt. Sumati Morarji in the absence of the Chairman, Mr. Dharamsey M. Khatau, at the 39th annual general meeting of the Scindia Steam Navigation Co. Ltd., held on Wednesday, February 18, 1959 at 4-00 p.m. at Scindia House, Ballard Estate, Bombay.

After welcoming the Shareholders to the 39th Annual General Meeting, Smt. Morarji explained how the net profit for the year ending 30th June, 1958, was lower by Rs. 14 lacs, even though the gross earnings were higher. The "Reserves and Surplus" Account was increased by Rs. 1.92 crores during the year making a total in this account of Rs. 10.95 crores. Rs. 21.51 lacs were credited to Fleet Reserve, Rs. 13.05 lacs to Sinking Fund and Rs. 20 lacs to the Dividend Equalisation Reserve.

The Coastal and Adjacent trades showed lower freight earning due to the rate of freight being lower by Rs. 17/- than the previous year on the carriage of Rice from Burma. Even though the Rail-Sea-Co-ordination Committee had recommended that bulk cargoes like coal, salt, food grains and fertilisers should move by the sea-route, so that sufficient employment was available to keep the coastal tonnage fully utilised, the Railway Authorities are however placing more and more wagons for such cargoes with the result that ships on the coast are feeling the dearth of cargo availabilities.

Smt. Morarji explained that the Company's overseas services had done well during the year but even here the effects of reduced and uneconomic freight rates had begun to be felt and the prospects for the year ending 30th June, 1959, appeared to be discouraging and poor.

The Company's total fleet stood at 48 ships aggregating to 2,55,572 G.R.T. and further two ships on order in Germany would be delivered in 1959 and in 1960. The Government has allotted to the Company a portion of the 3 million Yen Credit loan and a provisional contract has been signed with a Japanese Yard for building a fast vessel to be delivered in 1960.

After referring to the Merchant Shipping Act and the constitution of the National Shipping Board and the Shipping Development Fund thereunder which is likely to benefit Indian Shipowners, Smt. Morarji referred to the heavy drain on the available financial resources of shipowners

by the application of the Capital Gains Tax and Section 10(2) (vii) of the Indian Income tax Act and suggested that shipping should be exempted from the imposition of these two taxes.

Speaking of world wide depression and the laid-up tonnage abroad, Smt. Morarji said:

"Since the last twelve months or more, there has been a gradual but serious depression in shipping all over the world. More and more tonnage has been laid-up abroad and is a matter of great concern to shipowners. Freight rates have had to be cut down drastically in many cases to uneconomic levels in order to meet the competition from tramp shipowners. Several foreign shipping lines are seeking pastures anew with a view to find a footing in Indian trades in order to cut their losses. This is likely to result in further keen competition in the existing trade routes of Indian shipping companies who have not yet found the opportunity to stabilise and strengthen their own resources to withstand depressions or severe competitions.

"Our ships are sailing today with empty space in the overseas trades and even on the coast our vessels are feeling the pinch due to increased carryings by road transport and the railways. Under the present circumstances, it has become a vital necessity both for the Government and for the shipping companies to work in closer co-operation to mutual advantage. With this in mind, I feel that the following suggestions will have to be carefully considered by the Government to support and expand Indian shipping in various directions:

- (1) The Government should allot as much as possible of the cargo imported and exported on its own account and on account of various projects to Indian ships.
- (2) The rates of freight which Government should sanction for the carriage of such cargoes should be reasonable and economic and should not be compared with the prevailing tramp rates.
- (3) There should be cautious planned expansion based on the availabilities of cargo after a careful study of the prospective employment of such newly acquired ships in the routes in which they would operate.
- (4) Improvement in the port conditions and port equipments so that ships based on India get quicker turn-

round atleast in their home ports.

"In regard to the first two points mentioned above, which I shall deal together, I may say that the State Trading Corporation of the Government could assist Indian shipping considerably by contracting for exports on a C.I.F. basis and imports on a F.O.B. basis and thus utilise Indian tonnage to the fullest extent possible. The present policy of the State Trading Corporation, however, appears to be to choose the cheapest carrier available and thus encourage foreign tramp ships at the expense of Indian Liner tonnage which is ready to offer regular service at steady rates of freight throughout the year. If Indian shipping is to expand and stabilise itself, Government should ask the State Trading Corporation to follow a broad-based and a long-term policy and assign its cargoes to Indian ships at economic rates so that out of such earnings there is sufficient scope to create resources for the purchase of newly constructed or near-new secondhand ships.

"The Shipping Co-ordination Committee established by the Government to co-ordinate and co-relate Governments' shipping space requirements also does not seem to have achieved much to support the cause of Indian shipping as such. The United States of America, the foremost maritime nation in the World today, has decreed that at least 50% of its aided cargoes would be reserved for American ships. This is an example for the Government of India to emulate with a view to support Indian shipping. Unfortunately the powers that be, are in no mood to support Indian shipping, unless freight space is available at rates suitable to them and which may be even a little lower than the world market rates under one pretext or another.

"As regards the third point mentioned by me above, I would say that with a view to finance several long term schemes under our Five-Year Plans, Government is very keen on promoting the export drive of indigenous products either in the raw state or in the semi-manufactured or manufactured state and thereby earn foreign exchange. The Government is also very keen that the shipowners should take a prominent part in supporting such export promotion schemes by placing ships in the various routes so that our exports could find adequate shipping space as and when required. In this we need not assure the Government of our whole-hearted co-operation,

but we certainly expect that the Government, whilst sanctioning entry of new-comers into the overseas trade, would see that there is a sufficient and suitable spread of ships in all the overseas trades of the country. This should be done without encouraging concentration of ships in one particular trade and thereby creating unnecessary and wasteful competition amongst the Indian shipowners. It will, therefore, be necessary for the Government to study the expansion programme of each shipping company so that there is no idle tonnage or no tonnage not fully utilised remaining with the shipping companies, which they would be tempted to place in trades which presently appear to be fully catered for by the Indian ships. Before the proposal for purchase of any new tonnage is sanctioned by Government, the route on which such a vessel would operate should be specified. Such sanction should only be given after the Government has satisfied itself that such addition is necessary in the route concerned, thereby avoiding wastage and utilising to the best advantage our limited available resources. Acquisition of additional tonnage may be warranted by India's maritime trade which is large enough to support expansion to enable Indian ships to carry their legitimate share. From experience, however, we have found that under the present state of affairs, our trade is still largely carried by other lines. The availability of cargo for Indian Lines is limited. The real issue, therefore, is not so much the question of acquisition of additional tonnage but that of availability of our own cargo for our own ships.

"Lastly, the Government should also pay serious attention to the development not only of the major ports but also quite a few of the minor ports so that ships would get a quicker turn-round. The port of Calcutta, which handles a heavy volume of traffic both inwards and outwards has deteriorated due to falling drafts and the resultant inefficiency of that port is a source of constant worry to the shipowners. Apart from affecting navigation depths, the reduction in head water supplied has led to accumulation of silt and a gradual deterioration of the river conditions, not to mention the increase in the intensity of the tidal bore so frequently experienced, of late. This situation will have to be remedied and it may be necessary to locate an ancillary port down the river to be used as an anchor age port for discharge of bul-

February 21, 1959

cargoes like foodgrains and fertilisers thereby reducing the heavy strain on the Calcutta Port.

"Even in Bombay there is considerable siltation in the harbour particularly in the approach channel. Two out of three docks, in Bombay namely, the Prince's and Victoria Docks, appear to be outmoded and not suitable even to accommodate some of the ships operating in the coastal trades. There has been considerable delay in taking a decision regarding the implementation of the "minimum" scheme which appears to be essential in itself for rehabilitation of the two most important assets of the Bombay dock system.

"The cargo handling and stacking equipment at many Indian ports are both outmoded and insufficient and are not commensurate with the requirements of the ships calling at such ports. Unless such modern handling equipment is purchased and pressed into service early, I am afraid, in a moment of crisis our ports are again likely to be the insurmountable bottlenecks, resulting in delay not only to ships and shipping but also to the development programme under our economic plans."

Referring to the results of the subsidiaries, Scindia Workshop Private Ltd., Jalanath Insurance Ltd., and the Kamal Shipping Co. Private Ltd., which were satisfactory, Smt. Morarji explained the unsatisfactory state of affairs in the B.S.N. Co. (1953) private Ltd., and said:

"As will have been observed from a study of the Statement of Accounts with you, this Company has again made a loss of Rs. 7.43 lacs in spite of the best efforts to exercise as much effective control on expenditure as possible. These continuous losses which have accumulated to Rs. 16.52 lacs are constantly before us and we are exploring all possible avenues to reduce the losses. This, however, is not likely to bring about satisfactory results in view of the heavy repair and survey expenses that the Company has to incur on four of its very old vessels, apart from the fact that about 85% of the Company's annual expenditure is of such a nature as to provide little or no effective scope for economy. This unsatisfactory state of affairs has been brought to the notice of the Government on several occasions and even if the Company is not allowed to make profits, it should certainly be allowed to make both ends meet and be left with sufficient margin to wipe off its previous losses. For this purpose it is very necessary that a High Power Committee should immediately be instituted by the Government to go into the question without much delay so that some satisfactory solution is found in the interest of about 8/10 lakhs of passengers working in industrial undertakings in the State and utilising these transport services."

But, business was meagre in the extreme. This was mainly due to the fact that both the bulls and bears were concerned about the future taxation policy and, in the absence of special pointers one way or the other, preferred to lighten their commitments as far as possible. The falling trend in the prices of commodities following the series of measures taken by the Government also adversely affected sentiment in the market.

The Giltedged market followed the same pattern as in the previous weeks. Barring the persistent demand for the State Loans, conditions remained generally easy following the continued stringency in the money market. 3 per cent 1986 Conversion Loan opened at Rs. 73.40 and, after improving at one time to Rs. 73.95, receded again

Note: The above does not purport to be a record of the proceedings of the Annual General Meeting.

STOCK

EXCHANGES

Recovery After A Shake-out

Watch-Dog Writes:

STOCK markets have recovered moderately from the sharp shake-out in mid-week and finished quietly steady with fair gains. Absence of any fresh imposts in the State Budgets so far announced as well as in the Railway Budget, and lack of any further sales in the speculative scrips have, no doubt, created a better feeling. However, business continues to be on a small scale, as operators have preferred to mark time.

After an initial shake-out, the Calcutta Stock Exchange witnessed a slight recovery towards the close.

Although trading was dull and dealings were slow on the Bombay Stock Exchange, sentiment improved appreciably towards the close in the absence of any fresh imposts in the State Budget.

With no fresh incentive, the general tendency on the Madras Stock Exchange was distinctly cautious.

Wall Street closed easy, showing liberally distributed losses extending mostly to a dollar or more.

Calcutta

Friday Evening.

LACK of activity was the keynote of trading on the local Stock Exchange during the week under review. Equities, after moving narrowly irregular, witnessed a sharp setback on Wednesday due to lower Bombay advices. Thanks to the absence of any fresh levy in the State Budgets so far announced as well as in the Railway Budget, the market staged a partial recovery towards the close.

But, business was meagre in the extreme. This was mainly due to the fact that both the bulls and bears were concerned about the future taxation policy and, in the absence of special pointers one way or the other, preferred to lighten their commitments as far as possible. The falling trend in the prices of commodities following the series of measures taken by the Government also adversely affected sentiment in the market.

The Giltedged market followed the same pattern as in the previous weeks. Barring the persistent demand for the State Loans, conditions remained generally easy following the continued stringency in the money market. 3 per cent 1986 Conversion Loan opened at Rs. 73.40 and, after improving at one time to Rs. 73.95, receded again

at the close to Rs. 73.65 on lack of institutional support.

Bank shares ruled generally steady with only minor changes in values.

Jute shares, which had been receiving sustained support during the past few weeks, turned suddenly quiet. Although a few scrips maintained their previous levels, others were subjected to realising pressure. Apart from the news of a further rise in stocks at the end of last month, operators were anxious to await the impact of the two-fold decision recently made by the IJMA. They entertained the fears that the new measures might not relieve accumulation of sacking stocks. The only bright spots were Alliance improving to Rs. 120 from Rs. 118; India to Rs. 15 from Rs. 14.94 and New Central to Rs. 13.50 from Rs. 13.37. Howrah were a firm feature at Rs. 19.19, while National were offered at Rs. 25.62 against Rs. 26; Nuddea at Rs. 56.50 against Rs. 57; Fort Gloster at Rs. 247 against Rs. 250 and Champdany at Rs. 117 against Rs. 121.

Coal shares enjoyed selective support, as it was believed that the Price Revision Committee's recommendations were now receiving Government attention. Amalgamated had buyers at Rs. 21.69 to Rs. 22; Central India at Rs. 7.31 to Rs. 7.31 to Rs. 7.37; Western Bengal at Rs. 5.87 to Rs. 6.00 and Bengal at Rs. 283 to 285. Burrakur, after being marked up at one time from Rs. 17.25 to Rs. 17.87 due to increase in total dividend, closed at Rs. 17.50.

Textile scrips showed a halting trend in view of the obscure outlook for the industry. The only two steady features were Jayshree and Elgins, having sustained support upto Rs. 8.25 and Rs. 12.19 respectively. Kesoram moved irregularly between Rs. 12 and Rs. 12.25, to finish at Rs. 12.09. New Victoria closed better at Rs. 1.25 against Rs. 1.19.

A bright feature of the week's trading was a widening of interest in the Tea section. However, attention was mostly directed towards the scrips of the Assam and Dooars gardens on the belief that their results for last year might show an improvement over 1957. Most active were Baghmari changing hands at Rs. 20.12 to Rs. 20.25; Betjan at Rs. 22.50 to Rs. 22.62; Bishnauth at Rs. 13 to Rs. 13.37; Bormah Jan at Rs. 17.50 to Rs. 17.81; Dhela-khat at Rs. 23.25 to Rs. 23.37; Grob "A" at Rs. 27.50 to Rs. 27.94; Jayshree at Rs. 12.12 to Rs. 12.31 and Tezpor at Rs. 14.04 to Rs. 15.00.

Sugar shares were practically neglected. Operators were inclined to await further developments in the sugar situation, before extending their commitments. The only exceptional feature was Bel-sund, which were enquired upto Rs. 12 from Rs. 11.87. Raza/Buland were on offer at Rs. 12.75 to Rs. 12.81, while Carew were marked back to Rs. 8.50 from Rs. 8.62 and Cawnpore to Rs. 10.06 from Rs. 10.50.

Price movements in the Engineering section were mostly influenced by the speculative activity in Indian Irons. After starting better at Rs. 25.91, Indian Irons were

gradually pushed down to Rs. 25.77 due to selling pressure on lower Bombay advices. Towards the close, however, there was a marked recovery to Rs. 26.09, thanks to some replacement buying coupled with bear-covering at lower levels. In sympathy, TEXMACO were marked down to Rs. 20.65 from a high of Rs. 20.88, to recover to Rs. 20.85 at the close. G. K. Williams changed hands at Rs. 37.25 to Rs. 37.50; Britannia at Rs. 11.19 to Rs. 11.25; Marshalls at Rs. 5.69 to Rs. 5.75 and Kumardhubi at Rs. 8.56 to Rs. 8.57.

Miscellaneous issues moved with the general trend of the market. Orient Paper moved between Rs. 31.15 and Rs. 31.40 (Rs. 31.30); Sripur between Rs. 13.75 and Rs. 14 Rs. 28.87 and Rs. 29 (Rs. 29.94); Indian Aluminium between Rs. 16.94 and Rs. 17 (Rs. 16.94); India Steamship between Rs. 14 and Rs. 14.19 (Rs. 14.12); Indian Copper between Rs. 3.51 and Rs. 3.57 (Rs. 3.55); BIC between Rs. 4.12 and Rs. 4.34; Aluminium Cor-

THE ALKALI & CHEMICAL CORPORATION OF INDIA LTD.

NOTICE TO MEMBERS

The Twentysecond Ordinary General Meeting of the Members will be held on the 16th March 1959 at 2-30 P.M. at the registered office 34 Chowringhee, Calcutta-16.

Notice of the Meeting has already been posted to the Shareholders direct.

The Ordinary Share Registers of the Company will remain closed from the 27th February to the 16th March 1959 both the days inclusive.

By Order of the Board,
Imperial Chemical Industries
(India) Private Ltd.
Secretaries.

Calcutta,
14th February 1959.

S. E. RLY TENDERS

Sealed tenders are invited for Tender No. COS/PA/127/CS/GB10 for supply of Khush Khush Tatties 50,000 sq. ft. complete with ropes and putties.

Tender forms are obtainable from the office of the under-mentioned (PA Section), S. E. Rly., Garden Reach, Calcutta-23 on remittance of Rs. 2/- (not refundable) per copy per tender by money order to him direct in the case of outside firms and on production of cash receipt from this Rly's Chief Cashier by local firms. Earnest money against the tender is Rs. 500/-. Closing date of the tender is 6-3-59 at 12 noon.

Firms not on the Railway's list of approved contractors must enclose a valid Income Tax Clearance Certificate along with the earnest money deposit receipt with the tender.

CONTROLLER OF STORES
S187

poration between Rs 10.69 and Rs 10.87 (Rs 10.87); Indian Oxygen between Rs 23.62 and Rs 24.31 (Rs 23.62); Dunlop between Rs 29.37 and Rs 29.62 (Rs 29.62) and Alkali Chemicals between Rs 18.37 and Rs 18.62 (Rs 18.62). Figures shown within brackets were the week's closing rates.

Bombay

BARRING a slight improvement in sentiment noticed towards the closing stages of the week, there was no outstanding development on the Bombay Stock Exchange during the week. After opening on a quiet note in the absence of any driving force, equities witnessed a small decline in prices on Tuesday due to stray liquidation. However, from Wednesday, there were signs of some activity and prices recorded a gradual recovery from the low levels following the announcement of a surplus Railway Budget. Moreover, the absence of any fresh imports in the State Budget aided sentiment.

STEELS: Although this section failed to impress early in the week due to the absence of any speculative activity, prices staged a marked recovery at the close due to the support lent by a prominent operator. Tata Ordinary, after opening at Rs 171.75, touched a low of Rs 171.25 at which level renewed support pushed up the rate to Rs 173.75 at the close.

TEXTILES: This section failed to evoke any special interest and ruled quiet with moderate changes in prices before closing a shade better in sympathy with the general

trend of the market. Bombay Dyeing touched at one time a low of Rs 56.40; Century Rs 432.50; Sva-deshi Rs 203.50 and Kohinoor Rs 233.50, to recover towards the close to Rs 57.10; Rs 437.50; Rs 204.75 and Rs 236 respectively.

BANKS: Bank shares were a steady feature. Central changed hands at Rs 59.10 to Rs 59.30, while Bank of India remained unchanged at Rs 141. Bank of Baroda, however, moved down to Rs 119.50 from Rs 121 at the close.

MISCELLANEOUS: Although trading in this section was devoid of any special feature, prices of most of the active counters were well maintained. Scindia Steams were the only share to rule weak at Rs 20.76 on rumours that the current working results were not encouraging. Sugar shares shot up handsomely as fears of an agricultural tax in the State Budget were belied. Belapur were taken up to Rs 272 from a low of Rs 263.50, while Phalton were done at Rs 148 c.f. Buying interest in Killick Industries seemed to have abated and the shares were done at Rs 156.75. ACC changed hands at Rs 146.15 to Rs 147; Bombay Burmah at Rs 462 to Rs 466; Premier Construction at Rs 222.50 to Rs 226.25; National Rayon at Rs 237.75 to Rs 242 and TELCO at Rs 162.75 to Rs 164.50.

Madras

ACTIVITY: on the Madras Stock Exchange was restricted. In slow dealings, selected Planting issues met with some business, while the clearing shares were dull.

TEXTILES: This section was stagnant and business continued to be

small. There was some demand for Adonis, Bangalore Woollens and Buckingham's at the market rates. Travancore Rayons remained steady at Rs 16.60, while Virudhunagars rose to Rs 31.50 on better support. Madurars were quiet, with selling enquiry.

PLANTINGS: The Planting section showed a mixed trend with some Rubber shares being steadily absorbed, while a few others came in for profit-taking. Cochin Malabars were one such scrip where profit-taking was visible and the rate declined from Rs 5.92 to Rs 5.80. Valikundams were favoured at the market rate, while TRTS dropped down to Rs 7.60 with sellers at this level. Midlands were done at Rs 11.70 and Thirumbadis at Rs 1.85 c.d.

In the Tea section, United Nilgiris remained firm at Rs 17.50, while sellers were seen in Talayars and Highlands. Halleryburias were in request up to Rs 17. Chembras met with some business at Rs 3.50 and Twyford's at Rs 16.

Among Coffee shares, Consolidated Coffees declined to Rs 19.70 and Coffee Lands to Rs 21.62. There was a smart rise in Bababuddins to Rs 14 after the dividend announcement.

MISCELLANEOUS: There was some buying of Deccan Sugar up to Rs 9.75 on reports of an interim dividend. Aluminium Industries improved sharply to Rs 18.45; but some profit-taking resulted in the drop in the rate to Rs 18.38. Ashok Leylands met with steady investment enquiry at the market, while FACTS remained steady at Rs 7.50. Travancore Cements were enquired

upto Rs 8.90; Travancore Ogale Glass upto Rs 4.60 and Sen Raleigh upto Rs 16. India Cements (Rs 5) were quoted at Rs 5.30 and Ruby Rubbers at Rs 9.70.

New York

WALL STREET ruled generally quiet with prices developing an easier tendency. International Oils were the leaders of the downward movement, attracting further selling on the uncertainty of crude oil prices. Other issues moving lower were assorted Steels and Motors. Anaconda Copper was quoted at \$67½; General Motors at \$45½ and US Steel Common at \$89½.

In Briefs

Alkali & Chemical Corporation has maintained the dividend at 8 per cent for the year ended 30th September, 1958.

Killick Industries have proposed a final dividend of Rs 5, making a total of Rs 13 for the 17 months ended November 10, 1958. The company paid a dividend of Rs 11 per share for the year ended 30th June, 1957.

Standard Batteries have maintained the dividend at Rs 8 per share for the year ended 30th June, 1958.

Gokul Rubber has maintained the dividend at 6 per cent for 1958.

Coimbatore Cotton has reduced the dividend from 9 to 6 per cent for the year ended 31st March, 1958.

United Nilgiri Tea has announced an interim dividend of 7½ per cent for the year ended 31st March, 1959.

Dhanalakshmi Mills have maintained the dividend at 10 per cent for 1958.

After transferring Rs 50,000 from General Reserve and Rs 7,550 being over provision of liabilities in previous years.

(a) Preference dividend for eleven months ended 31-3-1957 at 5 per cent per annum.

capital of Rs 16,53,47,000 were registered under the Companies Act, 1956, in the Northern Region. The Region consists of the Punjab and Himachal Pradesh, Uttar Pradesh, Rajasthan and Delhi.

Of the 44 companies, two were public and 42 private companies.

During the period 32 companies went into liquidation and names of 109 companies were struck off the register under section 560 of the Companies Act.

In Punjab and Himachal Pradesh 9 companies, all private limited, with an authorised capital of Rs 32.87 lakhs, were registered and nine companies with paid up capital of Rs 13.974 lakhs went into liquidation. Names of 17 companies with paid up capital of Rs 9.122 lakhs were struck off the register.

Twenty-eight fresh prosecutions were launched by the Registrar for defaults of Companies Act, 1956 during the period under review. Of the cases decided during the quarter 27 cases resulted in conviction and a total fine of Rs 1,555 was imposed on the accused.

In Delhi during the quarter under review, one public and 26 private companies with an authorised capital of Rs 5 lakhs and Rs 15,95.1 lakhs respectively were registered and six companies with a paid up capital of Rs 1.450 lakhs went into liquidation. Names of ten companies were struck off the register.

During the period 143 fresh prosecutions were launched by the Registrar of Companies of the State against different companies for non-compliance with the various provisions of the Companies Act. Ten cases resulted in conviction and a total fine of Rs 1,365 was imposed on the accused in these cases.

In Uttar Pradesh five companies, all private limited, with an authorised capital of Rs 15.5 lakhs and one association not for profit were registered and seven companies with paid up capital of Rs 5.095 lakhs went into liquidation. Names of 80 companies with a paid up capital of Rs 12.797 were struck off the register. During the same period 28 fresh prosecutions were launched by the State Registrar against the companies and their directors or officers for the defaults under various sections of the Companies Act.

Eleven cases resulted in conviction and a total fine of Rs 300 was imposed on the accused in these cases.

In Rajasthan two private companies, one limited by guarantee and the other with an authorised capital of Rs. 3 lakhs and one public company with an authorised capital of Rs two lakhs were registered and ten companies with a paid up capital of Rs 5.855 lakhs went into liquidation. Names of two companies were struck off the register under section 560 of the Companies Act, 1956 during the same period.

Seventy-seven fresh prosecutions were launched by the State Registrar against companies for defaults under various provisions of the Companies Act. A total fine of Rs 6,500 was imposed on the accused in the cases decided during the quarter.

EXTRA LOW VOLTAGE TRANSFORMERS

The Indian Standards Institution has issued for eliciting comments, a draft specification for extra low voltage transformers.

The draft standard applies to single phase transformers, rated at less than 1 KVA, and having input and output voltages less than 250 and 50 volts respectively. The transformers, covered in the standard, are intended for use for both outdoor and indoor purposes.

The specification, however, does not cover transformers used in mines or of special types like flame-proof transformers, or those in which voltage across any two points in the transformers in normal use, exceeds 250 volts.

Comments, on the draft standard may be sent before March 24, 1959 to the Indian Standards Institution, New Delhi.

SELF-SUFFICIENCY IN CHEMICAL INDUSTRIES DURING SECOND PLAN

The production in a number of chemical industries, which has increased appreciably in the first three years of the Second Plan, is expected to show a remarkable spurt during the remaining two years of the Plan. This indication is given by the progress made in the implementation of schemes for expanding production, including steps taken for ordering machinery, both within the country and from abroad.

The output of sulphuric acid, a basic chemical, rose from 1,65,215 tons in 1956 to 2,27,000 tons in 1958. This is expected to be doubled by 1961. The production is estimated to rise to 5.5 lakh tons. The increase will be achieved by the implementation of 12 schemes for which the foreign exchange required for the import of machinery has already been secured. There are also proposals under consideration for increasing the capacity for sulphuric acid further.

The production of yet another basic chemical, caustic soda, is expected to show a big increase in the next two years. The output of this chemical which was 39,416 tons in 1956 rose to 55,400 tons in 1958. It is expected to rise to 1,40,000 tons in 1961. A new unit with a capacity of 80 tons of caustic soda per day will begin production at Tinneveli in Madras State during this year. The expansion of existing units as well as the setting up of new units is in progress.

At the same time, efforts are being made to ensure that further additional capacity required to meet the rising demand for caustic soda is created during the Second Plan.

Self-sufficiency is likely to be achieved in soda ash by 1961 when the production is expected to rise to 2.5 lakh tons as against 86,200 tons in 1958. Two new units are expected to start trial production this year while one of the existing units will double its capacity next year.

FERTILISER OUTPUT

The production of superphosphate, which is being increasingly used by our farmers, has more than doubled in the last two years. The output in

1958 was 1,81,000 tons as against 81,170 tons in 1956. Four schemes for increasing the production capacity for superphosphate are in the process of implementation. This is expected to raise superphosphate production to 6,00,000 tons in 1961.

The production of nitrogenous fertilisers, which has been more or less steady in the last two years at the level of 80,000 tons of nitrogen (about four lakh tons of ammonium sulphate) is expected to rise to about four lakh tons of nitrogen (about two million tons of ammonium sulphate) by 1961.

The expansion of Sindri and the factory at Alwaye and the construction of new factories at Nangal, Rourkela, Neyveli and Varanasi will help to achieve this result.

The production of calcium carbide, which stood at 3,800 tons in 1958, roughly a third of the total requirements, is likely to go up to 20,000 tons in 1961. Two new units have been licensed while the two existing units are expanding their capacities.

The production of hydro-sulphite of soda, an important chemical for the textile industry, which has now to be imported at the cost of Rs. 1 crore per year, will begin for the first time this year. Two units which will go into production will have a capacity of 3,000 tons by 1961. This would meet about 60 per cent of the total requirements by the end of the Plan.

DEVELOPMENT IN TRIPURA.

Tripura has spent Rs 10 crores so far on various schemes of assistance to and welfare of the displaced persons in the territory. A further sum of Rs 2.50 crores is likely to be spent in the next financial year.

Nine Tribal colonies have been set up for the Jhumias (shifting cultivators) at various places and the people are gradually taking to settled cultivation. A sum of Rs 81.55 lakhs has so far been spent on this scheme. Betterment of ex-servicemen and labourers is also receiving due attention.

EDUCATION.

The number of primary schools has risen from 403 in 1950-51 to 1,041 at present, including 112 Junior Basic Schools. The number of Secondary Schools has increased from 64 to 110. A beginning has also been made in the field of technical education by starting a Polytechnic with Diploma courses in Civil, Electrical and Mechanical Engineering. Hospital facilities have increased and the number of beds has risen from 46 to 247.

The Second Plan provision for Tripura is over Rs 8.46 crores, of which Rs 3.50 crores is intended for construction and improvement of roads and Rs 3 crores for social services like Education, Health, etc. A scheme for survey and settlement operation has also been sanctioned at a cost of Rs 1.33 crores and work on it is in progress.

GLOSSARY OF TERMS APPLICABLE TO TIMBER, PLYWOOD AND JOINERY

The Indian Standards Institution has issued an Indian standard on the glossary of terms applicable to

Indian Finance

timber plywood and joinery (IS: 707-1958).

The standard covers definitions of common terms applicable to timber, plywood and joinery. Botanical features are excluded from the scope of the standard.

The glossary includes definitions of terms relating to logs, timber and timber products, anatomical features defects in timber, terms used in regard to plywood and coreboard and also in joinery work.

An important aspect covered by this standard is the definition of terms denoting different sizes of converted timber from the smallest to the largest.

The Institution has already issued a number of Indian standard specifications, covering timber and wood products; and these include a large number of technical terms relating to timber and wood technology. The extensive use of some of the terms and their likely misconstruction has necessitated the preparation of this glossary.

It is hoped that the issue of this specification will eliminate ambiguities in the terms currently used to the country in the field.

Copies of the standard, published in English, are available from the offices of the Indian Standard Institution at New Delhi, Bombay, Calcutta and Madras.

EXTENDERS IN ADHESIVES FOR PLYWOOD

The Indian Standards Institution has issued a draft Indian standard specification for extenders for use in synthetic resin adhesives for plywood.

This standard covers materials used as extenders in plywood industry like wheat flour, rice flour, tamarind seed flour, tapoca flour and various starches and other vegetable starch and protein based materials.

Extenders are largely used along with adhesives as diluents with a view to lessening the cost of adhesives and also to obtain certain desirable properties in the glue mix, facilitating spreading of the glue.

The extenders have to be such as not to affect glue adhesion adversely both in regard to its strength as well as its durability and resistance to attack by micro-organisms. The effectiveness of the glue mix will depend very largely on a proper selection of the extender to be used along with the glue and its method of use.

Comments on the draft standard may be sent before February 25, 1959 to the Indian Standards Institution, Mahak Bhavan 9 Mathura Road, New Delhi 1.

DRAFT STANDARDS.

The Indian Standards Institution has issued the Indian standard specification for commercial metric carat weights (IS: 1057-1958).

The standard prescribes the requirements for commercial metric carat weights intended for use in weighing pearls, diamonds and other precious stones.

Following the Standards of Weight and Measures Act, 1956, the Indian Standards Institution has been taking

February 21, 1959

steps to help the industry in the smooth changeover to the metric system.

Since the existing weights and measures, in use in all parts of the country, are to be replaced by metric weights and measures, within a period of 10 years, the Institution has already issued five Indian standards. They are IS: 1056-1957 for commercial metric weights, IS: 1058-1957 for commercial metric capacity measures, IS: 1059-1958 for commercial metric length measures (non-flexible), IS: 1160-1957 for metric dispensing measures and IS: 1269-1958 for metric woven metallic tape measures.

Copies of the standards, published in English, are available from the offices of the Indian Standards Institution at New Delhi, Bombay, Calcutta and Madras.

SECOND PLAN TARGET FOR DIESEL ENGINES EXCEEDED

The Second Five-Year Plan target for production of diesel engines for agricultural requirements has been exceeded.

The production of diesel engines to drive agricultural pumps rose to 27,165 in 1958, substantially higher than the target of 20,500 engines per year scheduled to be achieved by the end of the Second Plan. The value of the production in 1958 was about Rs. 5.43 crores.

The production of this type of diesel engines was first started in Satara in Bombay State in 1932. By 1951 there were five units in the country producing 7,200 engines, valued at Rs. 1.44 crores.

In that year the industry was brought under the purview of the Industries (Development and Regulation) Act and a Development Council was subsequently set up to recommend measures for the growth of the industry to meet the rising demand from the farmers.

The industry has now grown to a level where there are 17 units manufacturing diesel engines in different parts of the country with a capacity of over 22,000 engines per year.

The production of diesel engines of non-agricultural types has been also steadily expanding. Two factories are now manufacturing diesel engines for automobiles and supplying these to the automobile manufacturers and transport fleets in the country. Two other automobile manufacturers are making their own diesel engines. Capacity has also been established for the manufacture of diesel road rollers in three factories.

Some of the manufacturers of diesel engines have also planned for production of industrial diesel engines required for agricultural tractors, concrete mixers, stone crushers, air compressors, etc. Proposals are also under consideration for the manufacture of diesel engines for railways and ships.

The growth of the diesel engine industry has encouraged the setting up of units to manufacture ancillary items required for running the engines. Considerable progress has been made in the manufacture of such ancillary items, such as pistons,

piston rings, fuel induction equipment, radiators, fuel and air filters, etc. The extent of the progress made can be seen from the fact that while the total production of these items in 1951, was worthy only Rs 15.2 lakhs their total output in 1958 stood at Rs 4.8 crores.

EXPORT PROMOTION SCHEME FOR COTTON TEXTILES MODIFIED

The Export Promotion Scheme announced on October 31, 1958 under which licences are issued for import of certain coal-tar dyes, textile chemicals and gums against exports of cotton textiles or yarn, has been partially modified. The modified scheme comes into force during the present quarter, January-March, 1959.

According to an Import Trade Control Public Notice issued Yesterday, under the revised scheme mills, whose cotton textiles or yarn is exported, will be eligible for import licences equal to three per cent of the f.o.b. value of exports of grey cloth, yarn, dyed or processed cloth to markets other than the American continent and Europe (except the United Kingdom). The percentage will be increased to five if the exports are made to the American continent and Europe (except the United Kingdom).

Registered processors processing cloth in bond or mills processing cloth will be given import licences equal to two percent of the f.o.b. value of exports of dyed or processed cloth, whether exported to the American continent and Europe or to other countries. Registered processors mean processors licensed under the central Excise Rules.

Exporters will be entitled to import licences equal in value to one per cent of the f.o.b. value of exports of grey cloth, dyed or processed cloth or yarn effected to the American continent, Europe or any other countries.

Any party who performs more than one of the functions of manufacture, processing and exporting will be entitled to claim licences equal to these admissible under the respective categories, whether manufacturer, processor or exporter.

The All India Handloom Fabrics Society, the State apex societies of handloom weavers and other co-operative organisations dealing with weavers will be granted licences for import of cotton yarn of 100 counts or above and/or coal-tar dyes equal to ten per cent of the f.o.b. value of the exports of handloom cloth.

Applicants seeking import licences should apply to the Joint Chief Controller of Imports and Exports, Bombay, for mill-cloth, yarn and handloom cloth, as specified in Appendix XXXIII to the Import Policy Book for October 1958—March 1959, after obtaining certificates of their import entitlement from the Textile Commissioner according to the procedure which may be prescribed by him. Licences will be granted once in a quarter on the basis of exports effected in the preceding quarter.

SPECIFICATION FOR COCOA-BUTTER

The Indian Standards Institution has issued a specification of cocoa-butter (IS: 1263-1859).

The standard prescribes the general requirements and methods of tests for detecting admixture with other fats and oils and for the determination of refractive index, specific gravity, melting point as also saponification and iodine values.

Cocoa-butter, the fat present in cocoa beans, is generally used for the enhancement of the organoleptic qualities of chocolate. It is obtained by the removal of fat in hydraulic presses or in mechanical expellers from decorticated cocoa beans.

Copies of the standard, published in English, are available from the offices of the Indian Standards Institution at New Delhi, Bombay, Calcutta and Madras.

STC'S ARRANGEMENTS FOR EXPORT OF RAW JUTE

Following the recent decision taken by the Government of India to promote export of limited quantities of raw jute through the State Trading Corporation of India, the Corporation has made necessary arrangements.

Only those grades and markings of raw jute which are well known to the London and Continental markets will be exported through established balers who enter into an agreement with the S.T.C. to export jute on its behalf. The size of the exports will be determined from time to time, having regard to the requirements of the Indian jute mills for manufactures of hessian and sackings for overseas markets as well as internal consumption.

No official floor prices for export of raw jute have been fixed by the Government of India. Prices at which export will be permitted will be reviewed from time to time by a Committee set up by the S.T.C. in Calcutta. Export offers will be accepted subject to these prices.

FUTURES TRADING IN GUR BROUGHT UNDER FORWARD CONTRACTS ACT.

The prices of gur have shown an upward trend and the Government of India have received representations that speculation in the forward markets is pushing up these prices further.

Government have reviewed the position and have decided to bring with immediate effect forward contracts for the sale or purchase of gur within the purview of the regulatory provisions of the Forward Contracts (Regulation) Act, 1952 and to establish in due course regulated future markets at Hapur, Meerut, Agra, Muzaffarnagar and Delhi. Suitable associations at these centres will be granted recognition by Government on the recommendation of the Forward Markets Commission.

A notification applying Section 15 of the Forward Contracts (Regulation) Act to gur throughout the country has been issued today in the Gazette of India Extraordinary in this connection.

Outstanding contracts entered into on or before February 11,

1959 and remaining to be performed after that date will be closed out at the average of the rates prevailing in the forward markets during the period of three months immediately preceding the date of the notification.

OIL PASTE FOR PAINTS, ZINC OXIDE

The Indian Standards Institution has issued the first licence to M/s. Savlar Paint & Varnish Works, Bombay for the use of ISI Certification Mark for the two products oil paste for paints, zinc oxide and oil paste for paints, zinc oxide (reduced).

The Certification Mark carries a third-party assurance to the consumers and purchasers that the two products have been manufactured under controlled conditions and that they meet the requirements of the relevant Indian standards (IS: 98 & 99-1950).

The ISI Certification Mark, consisting of the monograms of the Indian Standards Institution with the number designation of the Indian standards being inscribed in the top side of the monogram, will be stencilled on the containers of these products.

In any case of complaint regarding the quality of products bearing ISI Certification Mark, purchasers are requested to refer to the Indian Standards Institution or to the licencee.

CODE OF PRACTICE FOR LAYING MASTIC ASPHALT FLOORING.

An Indian standard code of practice for laying mastic asphalt flooring (IS: 1196-1958) has been issued by the Indian Standards Institution.

This code of practice lays down the procedure for laying of mastic asphalt flooring and its maintenance.

Mastic asphalt flooring has been considered very suitable for use in industrial buildings, storage houses, foot-paths, etc., because of its resilience, wearing quality, and ease of maintenance. This code of practice has been prepared with a view to assisting the consumers in laying the floor in the right manner and its proper maintenance.

Copies of the standard, published in English, are available from the offices of the Indian Standards Institution, at New Delhi, Bombay, Calcutta and Madras.

PAYMENT OF LIFE INSURANCE POLICY MONEY

Reports have appeared in a section of the Press that Government are considering a suggestion for putting a moratorium on complete draws of the Life Insurance policies by putting a ceiling on the amount of cash to be paid and retaining the balance in the shape of Government bonds. In this connection, it may be stated that no such proposal is under consideration of Government. Attention is also invited to Section 37 of the Life Insurance Corporation Act which guarantees payment of all amounts assured under the policies whether issued by the Corporation or the erstwhile insurers and bonuses declared thereon in cash by the Central Government.

TWO Great BENEFITS

The change-over to the Metric System of Weights and Measures will benefit us in two important ways. At home, there will be an end to the confusion and loss arising from innumerable systems.

The first step in achieving this two-fold objective is the use of Metric Weights already introduced in selected areas of the States and industries.

We will at the same time have the system which has been internationally well established. The Metric System is recognised the world-over.

for
Simplicity
and
Uniformity

DA 58/433

ISSUED BY THE GOVERNMENT OF INDIA

February 28, 1959

FOR THE INVESTOR

Hopes and Fears Investment Gossip:

HERE is a last minute round-up of expectations and apprehensions in the Stock Exchanges.

Feeling tends to be just a bit diffident, although there is the confidence that Mr Morarji Desai's Budget is unlikely to contain anything much by way of new tax proposals.

Of course—and this is what is constituted by the apprehensions—excise duty increases are anticipated. The reasoning is that, where commodities are in scarce supply, the "windfall" profits now being made can partly be diverted to Government through a higher excise. In this view, three industries on whose products the market thinks a higher duty possible are steels, rayon yarn and electric cables.

Logic similarly suggests that the commodities falling under this definition that are imported will also attract some method of mopping up or skimming off of extra profit; higher import duties may well figure, in the Finance Minister's Budget, on all articles of "luxury" bought from abroad.

Logic, it seems, is a strong-point of the market-men. For, they now reason that, if articles in short supply attract a higher duty, by the same token, where surpluses exist, there is a clear case for relief. Tea has already received relief. But, because of the need to maximise our export earnings, the market expects a further reduction in the excise duty on teas—with a possible stipulation that only common teas are to benefit.

Cement is another case in point where there seems to be a glut; and this is said to be reason enough to count on some relief being forthcoming.

Changes in direct taxes are considered extremely unlikely—but "adjustments" for this purpose are an entirely different animal.

Then, I have been recurrently hearing that changes may be in the offing in regard to the Dividends Tax and the Tax on Bonus shares. As regards the former, some say a penal rate (can it get more penal than it already is?) may be imposed; and others assert that a reduction in rates is to be anticipated. As for the latter, some hope that the rate will be reduced; and others fear that capitalisation of the share premium account will also attract the tax.

Such, speculation; and now the end of all conjecture. A little patience is required—and we will then know whether that patience is rewarded—or penalised.

Investment Notes:

FOR the third week in succession, the Tea section, on the Calcutta Stock Exchange, continued to be the centre of attraction with selected scrips of the Assam and Dooars gardens recording fresh higher levels. The main inspiration for the sustained support is derived from two favourable factors. First, hopes are entertained about relief in the fiscal burden for making Common tea production remunerative. Secondly, there is a belief that selected companies may pay higher dividends for 1958 in view of the increase in the average export prices obtained.

The directors of the Indo-Burma Petroleum Company Limited have been considering the question of bringing into India the profits earned on trading operations in Burma and are of the opinion that the question can best be resolved by a subsidiary company. There is a proposal to transfer the marketing and distributing petroleum products to I.B.P. (Burma Trading) Limited, a company incorporated in Burma and an associate of Steel Brothers & Company Limited, managing agents of the Indo-Burma Petroleum Company.

The purchaser, the IBP (Burma Trading) Limited, will purchase the company's fixed physical assets and current trading assets in the nature of stocks, work-in-progress and book debts relating to its business in Burma, but excluding cash. If the foregoing proposal is carried out, the directors of the IBP consider that the following benefits will accrue to the company:—(1) It will result in earlier receipt in India in the form of dividends of profits earned on trading operations in Burma; (2) It will facilitate speedier settlement of the income-tax assessment of the company and (3) It will improve the administrative machinery, as the management will be vested in a local Board of Directors of the subsidiary company. In this connection, a general meeting will be held on the 23rd March, 1959.

The Pandyan Bank Limited has obtained for the issue of 20,000 Ordinary shares of Rs 25 each, at par, in the ratio of one share for every two shares to those holders as on the 31st March, 1959. Last date for the receipt of applications with Rs 25 per share and renunciation letters is 31st March. The new shares rank for dividend from the 1st April, 1959.

₹ ₹

Investment Briets:

Sirpur Paper has raised the dividend from 50 NP to 65 NP per share for the year ended 30th June, 1958.

The Industrial Credit & Investment Corporation has proposed to maintain the dividend at 4 per cent for 1958.

The Central India Spinning has passed over the dividend for last year.

In Madras, Coonoor Tea has maintained the dividend at 20 per

cent for the year ended 30th September, 1958.

Anapari Estates have declared a total dividend of 35 per cent for the year ended 30th June, 1958 as against 40 per cent in the previous year.

₹ ₹

1958—Bad year for Textiles

Balance-Sheet Reviews:

BOTH the textile mills in Brady group—New Great and New City—have reported losses for the second year in succession. The adverse working results of these two mills generally reflect the difficult conditions experienced by the industry.

₹ ₹

New Great

The New Great Eastern Spinning & Weaving Company has reported a loss of Rs 4.83 lakhs as against a loss of Rs 9.55 lakhs in the previous year. After providing Rs 44,000 for the proposed dividend on the Preference shares, there is a net loss of Rs 5.27 lakhs, which has been set off against the General Reserve Fund.

Sales have totalled Rs 1.98 crores against Rs 1.97 crores. The dividend on the Ordinary shares is passed over. The year 1958, like its predecessor is another difficult one for the industry. The amount of excise duty the company paid was Rs 16.57 lakhs. This, together with

the increased wages and dearness allowance has prevented the company from making a profit. However, despite these increases, a saving in cotton costs coupled with the attention paid on economizing to expenses generally, has enabled the management to reduce the working loss by over Rs 4 lakhs when compared with 1957.

₹ ₹

New City of Bombay

The New City of Bombay Manufacturing Company has reported a loss of Rs 3.03 lakhs after adjusting Rs 1,495 brought in from the previous year and providing Rs 17,036 for Development Rebate Reserve. The trading results are again disappointing and are in line with those of 1957. Efforts to improve sales at more remunerative prices have been offset by increased overheads, especially dearness allowance, which reached a record level. Some progress has been made in the modernisation of the mill, and the management is now working on a scheme of rationalisation on a much large scale. Sales have totalled Rs 1.31 crores against Rs 1.39 crores.

₹ ₹

Empire Dyeing

After Rs 42135 for Depreciation (Rs 37,433); Rs 2.50 lakhs for Taxation (Rs 1.06 lakhs) and Rs 16,132 for Development Rebate Reserve (nil) and charging Rs 37,273 as managing agents' commission, the Empire Dyeing & Manufacturing Company has reported

a lower profit of Rs 76,900 for 1958 as against Rs 1.73 lakhs in the previous year. After transferring a sum of Rs 1.10 lakhs from General Reserve, the directors have recommended a dividend of Rs 3 per share.

£RS

Killick Industries

The Killick Industries Limited has reported a net profit of Rs 9.09 lakhs for 17 months ended 30th November 1958 as compared with Rs 8.98 lakhs for the full year ended 30th June, 1957, after providing Rs 1.61 lakhs (Rs 1.35 lakhs) for Depreciation and Rs 18.20 lakhs (Rs 15.73 lakhs) for Taxation. After transferring Rs 2.00 lakhs from Dividend Equalisation Reserve and Rs 2.5 lakhs from General Reserve, the directors have written off Rs 26,399 towards the expenses of the new capital issue. They have recommended a final dividend of Rs 5, making a total of Rs 13 per share for the 17-month period.

£RS

Ravalgaon Sugar

The Ravalgaon Sugar Farm Company has earned a profit of Rs 10.43 lakhs for the year ended 30th September 1958 as against Rs 13.06 lakhs in the previous year. The profit has been arrived at after providing Rs 3.44 lakhs for Depreciation against Rs 4.10 lakhs; Rs 1.13 lakhs for Development Rebate against nil; Rs 1.51 lakhs for managing agents' remuneration against Rs 2.54 lakhs and Rs 2.25 lakhs for Taxation against Rs 8.50 lakhs. The dividend is maintained at Rs 12 per share for the year.

The company has received a licence for the manufacturing of sugar mill machinery and component parts. Sugarcane crushed, during the season, amounted to 1.62 lakh tons, while the output was 1.65 lakh bags.

£RS

Tractors (India) Ltd.

Tractors (India) Limited has made a net profit of Rs 29.31 lakhs for the year ended 30th June 1958 as against Rs 18.66 lakhs in the previous year. The directors have provided Rs 15.36 lakhs for Taxation and transferred Rs 10 lakhs to General Reserve. A dividend of Rs 2.25 per share is recommended. Total sales have gone up to Rs 1.49 crores.

£RS

Volta

The Volta Limited has reported satisfactory results for the year ended 31st August, 1958. The gross profit is Rs 80.80 lakhs as against Rs 80.20 lakhs in the previous year. Proceeds from sales and services are, however, lower at Rs 19.66 crores against Rs 20.80 crores. The directors have maintained the Ordinary dividend at 9 per cent.

After providing Rs 5.65 lakhs (Rs 4.69 lakhs) for Depreciation and Rs 46.50 lakhs (Rs 50 lakhs) for Taxation, the net profit amounts to Rs 28.75 lakhs against Rs 25.51 lakhs in the previous year. A sum of Rs 3.75 lakhs (Rs 3.25 lakhs) is provided for General Reserve; Rs 1.50 lakhs (Rs 2.00 lakhs) for Gratuity

Reserve and Rs 85,208 (nil) for Development Rebate Reserve.

The directors have, in their report, pointed out that the current year will again show a substantial drop in turnover; but they are confident that the continued imports of shares on import quota and actual users' licences will produce a reasonable margin of profit.

£RS

Brady Engineering

The Brady Engineering Company Limited has fared somewhat better in 1958. Proceeds of engineering work have fetched Rs 10.04 lakhs against Rs 10.37 lakhs. After providing Rs 66,880 (Rs 34,787) for Depreciation; Rs 1.20 lakhs (Rs 1.34 lakhs) for Taxation and Rs 22,703 (nil) for Development Rebate Reserve, the net profit amounts to Rs 84,419 against Rs 77,065 in the previous year. The directors have transferred Rs 10,000 (Rs 20,000) to General Reserve. The dividend is maintained at Rs 3 per share.

The directors have pointed out that the nature of the work carried out by the company has been undergoing a change during the last several months from general engineering to work of a more specialised nature. Progress has, however, been considerably retarded due to lack of raw materials.

£RS

Gobind Sugar

The Gobind Sugar Mills Limited has reported a substantial decline in earnings for the year ended 30th June, 1958, mainly due to a considerable drop in the quantity of cane crushed from 33,50,981 maunds to 18,80,420 maunds. But for the slightly higher recovery of 10.50 per cent against 10.05 per cent previously, the working results would have been even poorer.

The net profit, before providing for Depreciation and Taxation, amounts to Rs 5.58 lakhs as against as much as Rs 10.76 lakhs in the previous year. The charge on account of Depreciation is lower at Rs 1.58 lakhs (Rs 2.67 lakhs) and Development Rebate Rs 32,000 (Rs 1.13 lakhs). The provision for Taxation is higher at Rs 3.37 lakhs against Rs 88,500. On the last occasion, a debit balance of Rs 5.39 lakhs brought in from 1955-56 was wiped out. On the previous occasion, however, since there is no large disposable balance, only the preference dividend is payable as formerly.

Background to the Budget

THE eleventh hour is come, and conjecture about the possible contents of the Finance Minister's brief-case is now at fever-pitch. There are valid reasons for hoping that Mr Morarji Desai will be merciful, but there are equally cogent reasons for apprehending a fresh attempt by Government to increase their revenues. Moreover, we have also had informed speculation about the possibility of certain specific tax concessions which may be in the offing; nor is there any dearth of rumour as to the new proposals which the Finance Minister may intend to present to Parliament. The time for prediction is, of course, long past, but a knowledgeable assessment of the background to the Finance Minister's Budget speech is perhaps permissible.

What, in this view, are the economic highlights of the fiscal year that is nearing its end? The general tendency is to shrug off the summation that it has been a year of crises. Like all generalisations, this statement is only partly true. It is emphatically not true because the problems which cropped up have largely been solved; but it is true in the sense that difficulties were in fact encountered. But what marks out 1958-59 from the earlier two years of the Second Plan is that, though the crises built up to a crescendo, there was for the first time tangible proof of solutions being found and obstacles overcome.

Let us note what this roster of crises was. Paramount among the seemingly insuperable and intractable problems was the balance of payments position. The foreign exchange reserves built up during the Second World War had been drawn upon, during the first two years of the Second Plan, at a pace that took one's breath away. The Government, in recognition of the need to conserve resources in this sphere for meeting foreign exchange liabilities in the latter half of the Plan, drew up and implemented an austerity policy for imports as from the end of 1956. This apparently had no effect, for, during 1957-58, the weekly import surplus was in no measure reduced. Meantime, emergency measures were instituted whereby the foreign exchange reserves held by the Reserve Bank could be allowed to decline to an all but nominal figure. Meantime, too, currency was purchased from the International Monetary Fund, and half of India's quota with that institution was utilised for buttressing our foreign exchange reserves. But the import surplus persisted, and it became obvious that external developments, over which India obviously had no control, were at least partly responsible for the continuing difficulties in the balance of trade. On the one hand, during the early part of the Second Plan, inflation in the industrialised West put up the cost of our capital imports. On the other hand, the recession which followed in the wake of governmental attempts to control that inflation reduced both the value of and the volume of demand for India's exports. Thus did the terms of trade go against this country. So it was that, as the current fiscal year began, with precious little that could be kept in reserve, the level of our foreign exchange reserves aroused great anxiety. This was the predominating crisis, and we shall now see how this crisis came to be solved.

Partly, we suggest, it was because, at long last, the import restrictions began to be reflected in the minimisation of non-plan foreign exchange expenditure. Also, partly it was because the recession at last drew to its end, and India's export earnings therefore improved substantially as from the second quarter of 1958-59. In the main, however, it was because of the friendly and generous interest shown in this country by foreign Governments which enabled foreign loans to be arranged for meeting an exchange gap that was anticipated to materialise at this time. What is significant is that the solution that has been forthcoming for foreign exchange is not merely a short-term remedy, but promises to underwrite the magnitude of our needs for the rest of the Plan period. And what is important is that difficulties in this regard were overcome both as a result of our own efforts and as a consequence of what may be called international aid.

The second doleful fact about the year just ending was the price situation. Particularly in the sphere of foodgrains, the pressure on prices was alarming. At one time, it seemed as if the very considerable recourse to deficit financing in the earlier years of the Plan was now about to make us reap the whirlwind of inflation. However, it soon became apparent that it was the failure of two successive food crops that had created a specific sector of shortages in the economy, and that there had not occurred a general depreciation in the value of the currency. Here, too, in the matter of crisis in food, the solution that was found has a many-sided aspect.

Primarily, the situation did not get out of hand because of the generous agreements concluded with the USA under Public Law 480 of that country whereby surplus commodities—chiefly wheat—were secured. Then, there was also the fact that the scope for banking finance to be utilised for the with-holding of stocks was minimised by means of directives issued by the Reserve Bank. Lastly, weather at last turned favourable, the current crops promising to be bumper ones. As far as the price situation generally is concerned, an official assessment—made by Mr H. V. R. Iengar, Governor of the Reserve Bank—suggested that the phenomenon in India was not inflation, since the fluctuations and oscillations were both ways. But there is no certainty that, at some future date, if much further use is made of created money, such deficit financing would not lead to inflation. Mr Iengar has stated that the Reserve Bank is keeping a vigilant watch out for such signs of incipient inflation; and, in respect of the two way fluctuations, selective monetary control would minimise the extent of the oscillations.

In any event, what the current fiscal year proves is that the limit of deficit financing has not yet been reached. It also offers the lesson that the economy will recurrently be possessing pockets of plenty and pockets of scarcity. It is in this light that we can explain the emerging surplus of production over demand in such commodities and articles as cement and cotton textiles and sugar.

Another lesson that 1958-59 offers is that it confirms the basic nature of agriculture to

Indian planning. At the one extreme, a failure of agricultural crops immediately makes its impact felt in reduced purchasing power, which in turn brings about a decline in the demand for consumer goods. At the other extreme, a good year of crops not only injects fresh purchasing power, it also prevents any undue price increase in the fundamental necessity—foodgrains.

The foreign exchange shortage had an offshoot of creating another if minor crisis. This related to the shortages of raw materials, which compelled a lower rate of production in various facets of industry. Fortunately, even though the pace at which industrial production has been rising since planned endeavours began perceptibly slowed down, this was a development to be welcomed since, due to causes such as the decline in purchasing power, a plateau of consumption appeared to have been reached. So, except for two or three industries, production and demand continued to be equated.

But the plateau of production did not by any means have as its sole cause a reduced or insufficient availability of raw materials. The authoritative viewpoint is that, by the end of the fiscal year, the investment programme of the private sector for the Second Plan as a whole would have been completed. In the previous years, when impressive increases in production had been chalked up, part at least of the additional output was due to the pressing into service of already existing capacity. By the end of the First Plan, there remained very little by way of spare or idle capacity. The pause in production in 1958-59 is, in this view, symptomatic of new productive capacity installed during the year.

None of these developments, however, is, for our part, as significant as the establishment of a "boomerang" impact of governmental disbursements. We make this statement in the face of expressed fears that governmental revenues have been lagging. For, while we concede that tax revenues may prove this year to be somewhat disappointing, we must remember that the "net" created by the integrated tax structure will take some time before it closes the gaps now available to evasion. But, in all other respects, governmental revenues and resources show every sign of a dynamic return of funds. Bank Deposits, in particular, can be seen as directly benefiting from the stepped up rate of governmental expenditures. The satisfactory revenues from excise duties are, again, an indication of increase in production. The small savings campaign has been a relative failure, but the success of the borrowing programme of the Central and State Governments has been resounding.

And this is as it should be. Until such time as there is a significant increase in and diversification of industrial production; until tax-evasion is made practically impossible; and until there is some improvement in the lot of the agriculturist, such that the imposition of a tax on him will not be unduly resented, it is difficult to envisage any worth while increase in tax revenues. And so, the main avenues of resources for Government will

have to be deficit financing, foreign aid and market borrowings. The first is the negation of any effort; the second is the opposite of self-help. If we value our self-respect, therefore, it is necessary that we should persevere with market borrowings. The most hopeful lesson to be drawn from 1958-59 is that the capacity of the market to absorb gilt-edged securities is being enlarged day by

Industrialisation in the ECAFE Region

THE countries in that part of the world, now compendiously known as the ECAFE region, are, with rare exceptions, typical instances of economic stagnation, with their large populations caught up in the vicious circle of under-development. Climate and the colonial system, which persisted until very recent times, have combined to stabilise the economies of these countries at a very low level of productivity, except in the matter of numbers. Depending on the point of view, this state of affairs can be regarded as either the cause or the result of the low order of importance of industries both in the employment structure, as well as in terms of shares of the national product, which is the rule in most of the countries in this region. This simultaneously emphasises the supreme importance of industrialisation for initiating the process of development as well as the difficulties of achieving the break-through. In most of the countries of this region, agriculture and related occupations account for more than 70 per cent of the employment and over 50 per cent of the national product. The share of industry ranges from 2.2 per cent in Thailand to 9 per cent in India which, (with the exception of Japan and Singapore among States for which figures are available and possibly China) has the highest proportion of its working population engaged in manufacturing industry. The relevance of industrialisation for the economic progress of these regions is no longer a matter of controversy. The argument that the role of these countries in the world economy is to serve as producers of raw materials for export to the industrial nations has ceased to be respectable with the disappearance of colonial empires. Acceleration of the pace of industrialisation is now an article of faith with the Governments of the newly enfranchised nations in the region. Programmes of industrialisation have been drawn up and implemented with a notable measure of international assistance. Eleven countries in this region have formulated plans for economic development. While the plans differ in scope and timing and in the relative roles assigned to the public and the private sectors, they are all agreed in recognising the need to develop industries for economic and social advancement.

While the level of industrialisation already attained, as well as the potential, differ as between the different countries, the scope for expansion in the region as a whole is very large, especially in relation to the broad range of natural resources. But the rate of advance is obviously limited by major factors like shortage of capital, entrepreneurship, managerial and technical skill and lack of adequate infra-structure. The working party of the ECAFE, which studied the problems of industrialisation in Asia and the Far East, has emphasised the role of Governments in providing the basic facilities to support a programme of industrial expansion. These belong to two categories. The extension of economic overheads, such as power, transport and communications and research establishments, might, says the report, will have an effect on output in the short run. On the other hand, social overheads, like schools, and health

day. Always provided that Government's borrowing programme is based on a position of strength, the problem of resources can be forever solved.

All of which is why an assessment of the background to the Budget suggests that Mr Morarji Desai would be right to approach his task of appraising the economy from the money market point of view.

services, might take somewhat longer to yield returns in the form of higher productivity.

The Working Party's report which has been published in the last U. N. Bulletin for Asia and the Far East, which contains a comprehensive review of the problems of industrialisation in this region, indicates the limiting factors and the means of overcoming them. It also deals with the criteria for the selection of industries for development and the problem of choice of techniques and scale of production. The suggestions put forward should throw helpful light on the problems of drawing up a programme for industrialisation under the Third Five Year Plan in this country. Increase in productivity—in predominantly agricultural economies this means increase in agricultural productivity—it is stressed, is the essential precondition for development and industrialisation. This finding is of considerable interest in view of the measures foreshadowed in this country to effect structural changes in the organisation of agricultural production. While there is room for legitimate difference of opinion on the effectiveness of applying the cooperative principle in the organisation of agricultural activities, these proposals stem from a recognition of the inescapable need to step up agricultural productivity if the country is to break through the barrier to further development.

The choice of techniques involves some of the most difficult decisions for the planning authorities, decisions that are not by any means made easier by the play of political factors. The discussion on techniques reviews the relevant considerations and draws attention to the benefits and the limitations of capital-intensive techniques. The primary consideration is the effective use of all available resources of which the largest is redundant manpower. While introduction of capital intensive techniques is necessary for creating the conditions for economic growth, it may lead, in the short-term period, to displacement of labour and worsening of the unemployment position. The report also makes the relevant point that, in any assessment of the comparative cost of different techniques, it is not enough to calculate only the economic cost. The cost of providing employment or relief to the persons displaced from employment as a result of the adoption of such techniques should also be taken into account. The choice of techniques is also determined by the nature of the manufacturing process concerned. A distinction has to be made between "continuous flow processes", where highly advanced technological methods are to be preferred, and the processes where the differentials in productivity through the substitution of human labour for machines is not substantial. In both categories of industries, there is scope for substantial employment of labour in auxiliary operations, internal transport, materials handling, packaging and so on. If the overweening importance of providing remunerative employment to the available workforce is conceded, the choice of technique is not a matter of ideology but a problem to be decided on technical considerations. The result then will be a composite pattern which will provide for maximum co-ordination of capital-intensive and labour-

intensive techniques, promoting sub-contracting arrangements between large manufacturing firms and small producers. It will also be useful to recognise that there can be no unchanging pattern in economic development which is a dynamic process. There should be constant endeavour to step up the productivity of small scale producers and constant revision of the appropriate combinations of capital-intensive and labour-intensive techniques.

From the foregoing it will be clear that choice of techniques has a bearing on the selection of industries for development and the order of priorities. The Working Party has drawn up a list of relevant criteria, at the same time taking care to emphasise that these are not mutually exclusive and should be considered as largely complementary to each other. These criteria include, comparative costs, diversification of the economy, increased employment opportunities, increased use of domestic resources, building the industrial base of the future, immediate consumption goals, substitution of imports, and promotion of exports. To this we may add another, the rate of population growth. Professor Mahalanobis has pointed out that, starting from low levels of living, the immediate result of economic development and larger incomes will be an increase in the population. This will continue until a critical level is reached when the size of the family would tend to decrease and the rate of population growth would level off. The problem, therefore, is to achieve a rate of economic development which will enable the critical level to be reached at a sufficiently early stage before the population becomes unmanageable. It is only after the critical stage is reached that promotion of family planning will begin to yield results.

The criteria of promotion of exports or substitution of imports in determining the selection of industries in individual countries can lead to a condition of stalemate, unless the national plans of the different countries which form part of a common trading area are co-ordinated. There is not much point in adopting measures to promote exports of goods in respect of which other countries are adopting policies of import substitution. Planning will be more purposive if planning authorities in one country are aware of the ideas and programmes of their opposite numbers in other countries. Apart from saving the waste of energy in rushing up blind alleys in the realm of foreign trade, it can also be helpful in providing useful hints in stepping up the level of achievement. In this context may be mentioned the consistently higher rate of increase of industrial production in both Mainland China and in Taiwan as compared with India, to which the UN bulletin has drawn pointed attention. During the period 1952 to 1957, power production in China (Mainland) registered an increase of 160 per cent as against 75 per cent in India; steel by 288 per cent as compared with 9 per cent in India, ammonium sulphate by 274 per cent against 72 per cent; cement by 130 per cent against 58 per cent; cotton yarn by 28 per cent against 23 per cent; cotton cloth by 40 per cent against 16 per cent and paper by 144 per cent against 52 per cent. Planning authorities in India will have to bestir themselves to find out the reason. To attribute the difference to totalitarian methods will be to give credit to that system for industrial competence which it does not deserve and, incidentally, such an excuse will also tend to undermine the faith in democratic methods. The real reason will have to be sought in the quantity, quality and timing of external assistance that China has received for stepping up the pace of industry as compared with democratic countries. By contrast the assistance received by the other countries in the area have been haphazard and scattered over too many programmes of little significance.

Cyprus Settlement

Satisfaction will be widespread over the agreement on Cyprus which brings to an end an unhappy chapter of bitterness and strife in the history of the island. For the British, the problem has been one of disengaging themselves without prejudice to strategic considerations, and they got little credit for the sincere efforts repeatedly made to arrive at a basis for settlement. The picture was badly blurred by the interaction of terrorism and repression to allow of objective judgment either by the parties concerned or the world at large. No praise can be too high for the diplomatic persuasion which has induced the three parties, the Governments of Greece and Turkey and Archbishop Makarios, to reach a unanimous agreement regarding the establishment of a free republic of Cyprus which has been formally endorsed at the Round Table Conference held in London last week.

The Republic will be established in three months and its independence, territorial integrity and constitution will be guaranteed by a treaty to be concluded between the Republic, Greece, Turkey and the U.K. A treaty of military assistance will also be concluded by Cyprus, Greece and Turkey. The constitutional force of these treaties will be ensured by the insertion of a special article in the constitution. The agreement also provides for

the retention under British sovereignty of two areas as military bases. Both enosis and partition are categorically rejected under the terms of the agreement.

It would have been surprising if an agreement reached after so many years of strife, in which more than two parties were interested, had been immediately acceptable to extremists on all sides. But it is expected that the Governments of Greece and Turkey and the Archbishop will be able to keep their partisans in order.

The incorporation of tripartite treaties into the constitution of the Republic introduces an element of rigidity which may limit the effective exercise of autonomy by the republic. But, in the context of a unanimous settlement, no one will be inclined to look too closely to find whether Cypriots have got a better deal than they were offered by Britain last June. For by that time sentiments had been too badly ruffled to permit of its acceptance.

Machinery Manufacture

One of the topics which figured prominently at the last meeting of the Standing Committee of the Central Advisory Committee of Industries related to the manufacture of industrial machinery in the country. The Planning Commission, as the Union Minister for Industry told the Committee, had constituted a Panel to study the requirements, and the Ministry for its part had set up six Standing Committees for different industries. Assessment of requirements must be accompanied by the mobilisation of indigenous talent and enterprise. If this is done, and appropriate methods of organisation adopted, the target of 80 per cent of requirements to be reached by the end of the Third Plan will not appear too ambitious.

The discussions have emphasised facilities for training of technicians and designers. The establishment of design institutes and training centres must be supplemented by assiduous search for talent and encouragement of those who have shown remarkable evidence of enterprise and inventive ability. One wonders, in this connexion, if the remarkable potential represented by the engineering complex in Howrah and, possibly, in some other centres, has been adequately investigated by those responsible for initiating manufacture of machines in this country.

This is not a field of manufacture where it will be possible to record progress by importing equipment wholesale from abroad. The history of the Prototype factory at Ambernath should serve as a warning against heavy investment in ambitious projects. Much better results could be achieved by striking out along their chosen lines, instead of frustrating their efforts by extending the public sector to fields where it cannot be very effective.

Machinery manufacture by its very nature is a field which re-

quires individual talent and enterprise as well as the type of organisation which allows maximum scope for both. The wide range and variety of the machines required for industry call for a degree of specialisation which will be economic only in the case of small enterprises. While it will be necessary to centralise design and assembly in comparatively large units in the organised sector, the actual manufacture of the parts can be farmed out to numerous small operators and individual technicians. This will be the surest way of creating a pool of technical talent which can serve as the nursery of incentive genius.

The complaint voiced by Mr S. L. Kirloskar, in his presidential address to the Machine Tool Manufacturers' Association, raises the question whether this aspect has always been kept in view. Mr Kirloskar has drawn attention to the entry of the Hindusthan Machine Tools Factory into the field of manufacture of small lathes. This, as he has pointed out, would create conditions of unfair competition for the small scale industries who will be forced to give up the manufacture of machine tools which they were encouraged to take up in view of the progressive industrialisation of the country. Such action will also be going back on the assurance given at the time Hindusthan Machine Tools Factory was established that it was intended to complement the production of machine tools in the private sector by concentrating on super quality lathes, and would never compete with it.

Embarrassing Support

The strident support which the General Secretary of the CPI has extended to the Nagpur decision on land reform will be received with mixed feelings in Congress ranks. Those whom Mr Ajay Ghosh has described as the "forces of sabotage" will be delighted, for their case against land reforms will now appear more persuasive. The millions of Congressmen whom Mr Ghosh has charitably credited with "good intentions" will be puzzled by the Communist approval of the Congress decision of land reforms. In any case they will be tempted to look more closely at the Nagpur Resolution to discover if there is really any totalitarian taint as suggested by elder statesmen like Munshi and Rajaji.

The skilful advocacy by the latter of the case of landed interests has already induced the Prime Minister to stage a tactical retreat. The emphasis has been shifted from 'joint farming' to 'service cooperatives', which will hold the field for three years. 'Joint farming' will come later, if the farmers so desire; The Prime Minister hopes they will when they are able to visualise its advantages. The critics have also got a categorical assurance that there will be no compulsion to induce cultivators into 'joint farm-

ing', a point which was left vague even after the long debate at Nagpur.

Howlers

Dr Prafulla Gosh tried to make heavy weather in the West Bengal Assembly by quoting some answers reported to have been given by candidates at the Union Public Service Commission Examinations. An IAS candidate was said to have described the 'hormone' as the person who invented the harmonium, while a candidate for Railway Service identified that Sri Lal Bahadur Shastri was the 'Animal Minister of the Bihar Government'.

If the subject is closely examined, the answers will be found to be less preposterous than they appear at first sight. Physiologists and Psychologists between them have agreed that hormones form the material basis of creative activity. Even those who detest the harmonium will not deny that its invention was the result of creative activity.

The other candidate, it is true, got a bit mixed up with names and portfolios. But he should get pass marks on the analogy of the old ICS man who translated 'Comrade' as Hathi in the Urdu test and got fifty per cent marks as he went wrong only by one letter.

Restraint upon Bank Advances

THE Reserve Bank has absolute discretion as to whether or not it will lend to a bank against gilt-edged securities or usance bills. Two years ago, in November 1956, when it was generally apprehended that the 1956-57 busy season could be beyond the capacity of the banking system, on the basis of its already over-extended position; its eye, to finance, the central banking authority thought it desirable to give the assurance that banks would be helped to tide over the difficult period. This was necessary equally because, otherwise, banks would have been compelled to sell their gilt-edged in order to raise resources for meeting the busy season pressure. Today, at the half-way mark of the 1958-59 busy season, the Reserve Bank Governor, Mr H. V. R. Iengar, has indicated that Scheduled Banks can no longer take or granted the securing of accommodation from the central banking institution. Though it is a request that Mr Iengar has made, it is clear enough that a not so veiled threat has been levelled at the banks in respect of Advances.

How is it that things have come to such a pass in the money market, that Mr Iengar should apprehend the utilisation of bank credit

for speculative purposes? The table published in the body of this article gives the relevant figures, and the inescapable conclusion is that, in fact, credit expansion during the current busy season has been at a pace much faster than in the corresponding period of the 1956-57 busy season. For our part, we have been anticipating official action of this nature, since we have been in some puzzlement about the magnitude of the increase in Advances since November last year. (Indeed, if it is remembered that the current busy season got off to a late start, it will be realised that the weekly average of increase in Advances has been very substantially higher than in 1956-57). This is because known factors at work in the Indian economy should have caused a moderation—and not accentuation—in the demand for bank finance. These factors may be summarised as:

(1) Imports continue to be restricted; and even the recent spurt in exports is not of such size as to have caused a much bigger demand being made on bank finance. Whether for financing foreign trade or for providing credit against imported commodities, the quantum of demand should have been on the low side.

(2) While the year's agricultural crops are perceptibly larger, it needs to be borne in mind that the restrictions on credit against food-grains, which have been recurrently and almost unremittably in force because of the relative failure of two consecutive crops, will mean that there need not—and indeed should not—be any increase in banking finance there-against.

(3) The third important head against which bank credit might have expanded legitimately is if

industrial production had shot up. But it is known that 1958 has been a "marking time" year; it is obvious that the rate of increase in industrial production has decelerated; that raw material shortages have been partly responsible. In any event, it is patent that there need not have been any vast augmentation of demand for financing industry.

By elimination, it would seem that the expansion in Advances during the current busy season has received a stimulus because of finance sought and obtained for the speculative with-holding of stocks. The conditions would attract and conduce to such speculative activity: existing or anticipated shortages in the economy would naturally provoke a desire to make quick money by hoarding stocks of commodities that filled the description.

Mr Iengar should know, and he has asserted that "there is evidence that increased bank credit has been utilised for building up highly speculative positions, more particularly in certain commodities." Now, it is an essential function of the Reserve Bank to ensure that price oscillations are kept to a minimum; and, in this light, the utilisation of banking finance for speculative credit cannot be permitted. So it is that Mr Iengar has asked banks to "exercise restraint on the further expansion of credit during the current busy season and limit to a minimum their reliance on the Reserve Bank for funds." Speculative financing is further to be discouraged because, to corresponding extent, bank credit might become unavailable for productive enterprises.

While we are in entire agreement with Mr Iengar's call for restraint in the proffering of accommodation and also with his suggestion that there be a "rigorous scrutiny of clean Advances", we are not sure that the implied "closure" of the Reserve Bank as an avenue of Scheduled Bank resources is a step in the correct direction. For, if the banking system is finding it necessary to have recourse to Reserve Bank credit, it is because, during 1958, practically the whole of the increase in Deposits was invested in gilt-edged securities. It is because of a high investment ratio to Deposits that banks need to find fresh resources. The table shows that the investments/Deposits ratio is very much higher, and that the Advances/Deposits ratio is very much lower, than they were two years ago.

We admit that the banks may not show a cautionary attitude unless they are compelled to, as they would be if Reserve Bank credit is not available to them. At the same time, it is part of the policy of the central banking institution that finance be freely available for productive enterprises. In this light, and also in the view that the expanded demand for Advances may be for a short duration, the Scheduled Banks have so far, during the current busy season, sought to raise resources from the Reserve Bank. But, if the Reserve Bank

SCHEDULED BANKS

(The following figures set out the progress of the busy season as reflected in the pertinent returns of the Scheduled Banks, and offer a comparison over the last three years. Figures in Rs Crores; figures in parentheses indicate percentages)

	26-10-56	15-2-57
Deposits	1104.23	1147.04
RBI Borrowings	57.81	92.48
Investments	371.44	356.20
—as Deposits ratio	(33.8)	(31.1)
Total of Advances	760.87	860.82
—as Deposits ratio	(68.9)	(75.0)
	25-10-57	14-2-58
Deposits	1395.94	1439.16
RBI Borrowings	29.77	31.51
Investments	393.95	432.80
—as Deposits ratio	(28.2)	(30.1)
Total of Advances	867.93	923.74
—as Deposits ratio	(63.2)	(64.2)
	24-10-58	13-2-59
Deposits	1651.68	1632.58
RBI Borrowings	1.81	42.27
Investments	600.85	617.32
—as Deposits ratio	(36.4)	(37.8)
Total of Advances	840.32	946.44
—as Deposits ratio	(50.9)	(58.0)

is "closed" to them, the consequences may be anything but desirable.

There may be the fear that the latter half of 1959 will, like last year, witness a considerable contraction in Advances in combination with a significant increase in Deposits. So, the banks might feel that, while the going is good they should reap as much of profit from the enlarged demand for Advances as they can. They might even consider that they will be able to satisfy the Reserve Bank about the worthiness of particular increases in overdraft limits; and, in order to finance them, they might be ready and willing to sell securities—if the Reserve Bank does not see its way to meet their requests for large credits; and they might be willing to sell the securities on the market if the Reserve Bank is not prepared to buy them. After all, the would merely be booking the profit on investments, since gilt-edged prices are rather better today than they were a year ago, when the banks started buying. Their intention will be to replenish their stocks of gilt-edged as and when there is a return of Advances.

This will not in the least be helpful to the gilt-edged climate, in which the Reserve Bank is vitally interested. For, such selling pressure will undoubtedly push prices down.

Thus, even in the matter of advocating restraint upon Scheduled Banks, the Reserve Bank must be circumspect. There should be a reiteration of its view that banking finance should continue to be freely available for productive enterprises.

The watch on the economic situation, and on whether or not banking finance is being speculatively utilised, should be alert; and, necessary, more detailed statements may be called for from the banks. It should also be made clear that Reserve Bank credit will continue to be readily granted banks against their financing industry; and nothing should be said or done which will have the effect of Scheduled Banks unloading their securities on the open market.

Further Rise in Foreign Balances

THAT there is a distinct improvement in the balance of trade is borne testimony to by the returns of the Reserve Bank for February 20, in which a further increase in Balances Held Abroad—without apparent benefit of foreign assistance—is discernible.

The returns are for the third week of the month and, therefore, in the midst of the busy season, there has occurred a contraction of Rs 8.65 crores to Rs 1659.45 crores in Active Note circulation. There has also been an inflow of rupee coin for Rs 0.52 crores. Resultantly, the Reserve Bank's cash in the till has risen from Rs 10.84 crores to Rs 20.01 crores.

In the Banking Department, there is a conspicuous lack of changes of magnitude in the figures relating to Central and State Governments. For example, the balances of the Central Government are lower by Rs 4.37 crores at Rs 61.44 crores; the fractional rise in investments to Rs 260.04 crores suggests that there has been no deficit financing during the week.

The Deposits of State Governments have declined by Rs 2.67 crores to Rs 19.31 crores, but, against this, we have to note that the indebtedness of State Governments to the Reserve Bank is lower substantially by nearly Rs 6 crores at Rs 21.90 crores. The reason why we have drawn attention to such lack of changes being unusual is that, in recent months, the third week has usually seen a number of transactions whereby payment has been made by the Central Government to the State Governments of instalments pertaining to grants and advances. A possible explanation is that considerable Government revenues during the week enabled the Centre to make these payments without recourse to created money, and the net improvement of nearly Rs 4 crores in the position of the State Governments vis-a-vis the Reserve Bank might be after the bulk of receipts from the Centre were disbursed.

The Reserve Balances of member banks are lower by Rs 1.01 crores at Rs 71.42 crores, but the indebtedness of Scheduled Banks is apparently sizably reduced, since the Other Loans and Advances of the Reserve Bank have declined by Rs 12.44 crores to Rs 84.38 crores.

Balances Held Abroad have improved by Rs 5.34 crores to Rs 33.47 crores and, at this level, the Reserve Bank's holdings of foreign securities in both Departments exceed Rs 210 crores.

According to the return of the State Bank for February 20, a further increase of Rs 7.05 crores to Rs 487.85 crores has been registered in Deposits. The Advances portfolio is practically unchanged. With disinvestment in Government securities for Rs 1.61 crores, the State Bank was in a position to liquidate its borrowings which in the earlier week had been placed

at Rs 12 crores. (This decline in borrowings confirms that the decrease in the Other Loans and Advances of the Reserve Bank was due to the reduction of debt by the State Bank.) In the result, however, cash in hand and with the Reserve Bank is marked down by Rs 1.55 crores at Rs 26.77 crores; and this would suggest that the other Scheduled Banks would have increased their Reserve Balances by a small amount.

The return of Scheduled Banks for February 13 shows the continued impact of the busy season, with the total of Advances rising by Rs 8.13 crores to Rs 946.44 crores. This has compelled the Scheduled Banks—and the relevant figures of the State Bank show that it was not responsible—to disinvest in gilt-edged for nearly Rs 6 crores. In spite of an improvement of Rs 2.61 crores to Rs 1632.53 crores in Deposits, the Scheduled Banks were nevertheless obliged to increase their borrowings from the Reserve Bank by Rs 7.05 crores to Rs 42.27 crores; and the State Bank accounted for roughly Rs 6 crores of this. As an end result, cash balances are nearly Rs 3 crores higher at Rs 159.92 crores against Rs 156.95 crores.

National and Grindlays Bank Ltd have received the following advice from their Head Office in London:—

"Directors have declared Second Interim dividend for the year to December 1958 of 7½ per cent less income-tax payable 3rd April."

British Credits for Russia?

By Paul Einzig

IN recent months the Soviet authorities made some tentative approaches concerning trade credits. As is well known a similar approach made by Mr Mikoyan in Washington on the occasion of his recent visit, met with categorical refusal. There is no indication what the official British attitude is in respect of a request for credits. As The Times points out under visiting arrangements there is nothing to prevent the Export Guarantees Department from guaranteeing credits given by British exporters to Soviet Russia. Official circles are rather non-committal when sounded in the respect of their intention.

The officials who accompany Mr Macmillan to Moscow include a representative of the Board of Trade, which is the department under whose auspices official export guarantees would come. His presence does not in itself indicate, however, that the subject would be raised. It only confirms that an attempt to increase the volume of Anglo-Soviet trade will be made during Mr Macmillan's Moscow discussions. The Press published some exaggerated forecasts about prospective increases in that trade that is supposed to be envisaged in official circles. The amount of £120 million was mentioned, but when questioned in the House of Commons, Mr Macmillan said that this

was only newspaper talk. There can be no doubt, however, that the Government is very keen on bringing back from Moscow a trade agreement leading to an expansion of British exports to Russia.

Mr Macmillan was until recently of the opinion that a trade recession could be easily reversed by reflationary measures, but experience during the last two months or so appears to indicate that this is not so easy as it was expected to be.

So it would not be surprising if Mr Macmillan were to make a real effort in Moscow to secure an increased market for British goods. The trouble is that there is not much scope for an increase of British imports of Russian goods. That being so the question of financing a British export surplus to Russia might conceivably arise in the course of the negotiations. There will be a strong temptation for Mr Macmillan to agree to a solution under which credit by British export would be encouraged by means of the application of the official credit guarantee scheme to export to Russia.

It is to be hoped that Mr Macmillan will resist, however, such a temptation. Such immediate advantages as might be derived from an arrangement on the lines suggested would be heavily outweighed by economic and political disadvantages. Indeed the situation bears much similarity to that of before the war when Germany made efforts to secure British credits. German industries were heavily engaged in arms production and their capacity of producing for civilian requirements—whether at home or for export—was therefore limited. She had to choose between guns and butter, and she chose the former. The granting of substantial credits abroad would have enabled the Nazi regime to provide Germany both with guns and butter. It would have facilitated the task of rearmament.

Moreover it would have enabled Germany to intensify the bloodless economic penetration into South Eastern Europe.

In present-day Soviet Russia too the volume of consumer goods is kept down because a large proportion of the country's resources is used for military purposes. Nevertheless, since the Soviet Government is determined to pursue economic cold war by means of offering credits to uncommitted countries, some proportion of its resources have to be diverted both from guns and butter. Notwithstanding constant pressure from China for increased economic assistance by no means inconsiderable resources are found to serve the purpose of economic penetration in uncommitted countries. Such resources could be increased if the Soviet Government succeeded in securing credits from abroad. Alternatively, the economic cold war could be pursued without unduly reducing the resources available for military production, civilian requirements and assistance to China. In either case, the Free World would suffer a disadvantage because the power and influence of the Soviet Union would increase.

The Soviet Government would stand no chance of obtaining pri-

vate credit in Britain without British Government guarantees. Anxious as British firms are to secure new markets, none of them would be prepared to risk losses arising from cancellation of orders by the Soviet Government. In any case the acceptance of large orders from the Soviet Government would entail considerable risk unless the Soviet Government is prepared to arrange confirmed credits covering the grand total of the orders placed. Under that arrangement a London bank would guarantee the payment for goods on delivery. Such a guarantee is only given however, if the London bank itself has adequate security from the Soviet Government. Even such an arrangement does not provide absolute safeguards against losses if the execution of Soviet orders necessitate the installation of machine tools and other equipment which could only be suitable for the production of goods for Russian requirements. If in addition there is also a credit risk then British firms would be very unwise if they yielded to the temptation of expanding the markets in Russia.

S. E. RLY TENDERS

Sealed tenders are invited for (1) Tender No. CON/COS/19/GB1/59 for supply of 300 cwt Bolts hex head M. S. Black with nuts ¾"x2½" long as per specification No. BSS 916-1953. Earnest money is Rs 440/-. Tenders will be opened on 17-3-59 at 12 noon.

(2) Tender No. CON/COS/20/P&M/C/59 for supply of 1 No. Screwing Machine Nine Spud, arranged for motor drive to suit 400 volts, 3 phase, 50 cycles A.C. supply equipped with all controls and threading attachments with worth standard thread ½" dia. to 3" dia. complete with accessories and spares similar to 'Kenco' size: 6-3 of M/s. Kendel and Gent. Earnest money is Rs 200/-. Tenders will be opened on 19-3-59 at 12 noon.

Tender forms are obtainable from the office of the undermentioned (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs 2/- (not refundable) per copy per tender by money order to him direct in the case of outside firms and on production of cash receipt from this Rly's Chief Cashier by local firms.

Tenders should accompany the receipts for depositing earnest money as stated above with this Rly's Chief Cashier without which the tenders are liable to be rejected. Approved contractors having a permanent deposit of Rs 1000/- with the undermentioned are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

**you are
always
welcome**

Dear Bhai Sahib,

In your last letter you referred to the thousands of tea shops, hotels and restaurants all over the country where hot tea is served, and said you were amazed at the many different ways in which tea is prepared in these places.

How right you are, Bhai Sahib! Tea has been known for so long in India that methods of making it vary from one part of the country to another—almost as much as our food habits and other customs. Mind you, all the methods are good provided the tea used is good!

Brooke Bond's expert tea-tasters have given a great deal of thought to the type of tea suitable for all hot tea shops, and they have come up with two excellent blends—"Special Hotel Blend" and "A-1 Dust". These blends—which often contain 30 or more different teas—have proved tremendously popular and are in great demand from the 1,75,000 tea shops and canteens visited by our salesmen every week.

And at these tea shops—whether large or small, located next to a bus stop, near a place of worship or on the railway

platform—you are always welcome! Here you will get the latest news, service with a smile and best of all a cup of well made hot tea to cheer you up and send you on your way, rested and refreshed.

To these shops, which have become a social institution, our salesmen deliver the tea direct and at frequent intervals. That is why the tea served is always fresh and good. And to the shopkeeper himself, hard-worked as he is, this system of direct supply is a great boon for he can rely on receiving regularly the main ingredient of his trade—Brooke Bond Tea.

Yours truly,

(G. V. Krishnamurthy)
Chairman

Brooke Bond India Private Limited

Some Facts About Brooke Bond

Number of brands of Brooke Bond Tea	15
Number of packets of Brooke Bond Tea produced per week	2,89,00,000
Number of dealers and hot tea shops regularly selling Brooke Bond Tea	5,30,684

WORLD OF JUTE

Outlook for Sackings

CONDITIONS in the jute goods market have continued to be listless in the absence of foreign enquiries. The lack of support for sackings is not surprising because the industry is presently carrying a heavy load of unsold stocks of this category of goods. The anxiety of the industry in this regard is evidenced by the recent decision to curtail production by sealing a further percentage of looms. It is presumed that the additional looms to be sealed will be from the sacking section.

It would, however, appear that the demand for heavy goods may pick up in coming months. This is the inference that is derivable from the detailed report issued last week by the IJMA from its delegation which toured Australia, New Zealand and South East Asia in October-December 1958. The general conclusion of the delegation is that given concerted measures from India there is no reason to believe that our jute goods will not make considerable headway in all these markets. "Broadly speaking, therefore, and taking the area that we visited as a whole, our general impression is that, despite the inexorable advance of bulk handling methods in the sugar and fertilizer industries and in the movement of wheat in Australia, there is no occasion for undue pessimism about our future trade with this part of the world."

Referring to bulk handling, perhaps the most powerful adverse factor in our trade in heavy goods overseas, the delegation points out that it is likely to spread in Australia and the Philippines. The threat from paper need not be considered to be serious because jute goods by their price advantage will be able to withstand the competition from this quarter quite well. The New Zealand market is likely to remain favourable provided our jute goods are able to maintain a high quality and a stable price level. These two requisites should however obtain in all the cases. The delegation is of the view that despite the progress of bulk handling prospects for heavy goods are bright in Australia atleast in the near future because the current year's crop has been a bumper one, as compared with last year when the crop had been seriously damaged by drought. Moreover there is also scope for introducing jute in new fields as the Australian economy is taking big strides forward. In the South Eastern markets it is the growth of the indigenous jute goods industry that is standing in the way of

Year by year expansion of Firestone-India keeps in step with nation's requirements

It was in 1939 that the original Firestone Plant in Bombay went into operation. But from the commencement, plans were envisaged for a series of expansions, and staff training programmes were prepared in order to meet the production needs of the years to come.

Through the critical war period, and the years that followed, the Firestone plant continued to expand, and introduced the first balloon tyre; the first

double white sidewall tyre, the first earthmover tyre and the first Nylon tyre manufactured in India.

And now the Firestone plant reaches the final stages of the original expansion programme. With a proud record of producing over five and half million tyres in India, Firestone aims to keep the wheels of transportation moving, still retaining the original policy which is now a tradition—"Best Today—Still Better Tomorrow".

further expansion of demand for our jute goods. But even there the delegation thinks that the growth of population coupled with the vigorous export drive will go a long way toward increasing the demand for our goods.

The jute goods market closed the past week ending Wednesday on a quiet note. Conditions were however steadier in earlier dealings especially round the heavy goods section. Hessians were comparatively quiet despite reports of a sizable improvement in the American burlap markets where prices had recorded some advance on buying support. It would appear that the unusual increase to 75 million yards in burlap consumption during last month, a period which generally shows a decline in consumption, coupled with reports of Russian interest in hessian and the Indian industry's move to curtail production by sealing a further percentage of its total looms have been responsible for the renewed interest in hessian in the American market. As noted above this

has failed to make any impression on the Calcutta market where hessian has been subjected to selling pressure intermittently throughout the past week.

The market opened the week on Thursday with heavy goods fairly steady and hessian encountering pressure. Hessian 40" x 10 oz Feb. closed the day at Rs 39.20 and B Twills at Rs 88.45. In Friday's trading it was sacking that was again active while hessian prices further declined in the absence of interest. Toward close sacking prices were also marked down in sympathy with hessian. Prices at close were Hessian Rs 38.80 and B Twills Rs 88.25. With reports of the completion of the business in connection with the Government of India's tender in B Twills reported last week the market turned quiet on Saturday.

Monday found the market almost unchanged except for some interest evinced by buyers in ready delivery goods in both the sections. Prices steadied up on Tuesday on reports of overseas interest in both categories of goods for ready as

well as forward deliveries. There were reports of mill business for forward deliveries. Rates consequently showed some improvement as follows: Hessian Rs 39.00 and B Twills Rs 88.70. In the absence of further foreign enquiries the market ruled unchanged with prices moving within a narrow groove on Wednesday to close with Hessian at Rs 39 and B Twills at Rs 88.30.

The raw jute market ruled generally quiet as mills did not evince interest at prevailing levels. Assam Bottom closed the opening day at Rs 20.00 but on Friday the rate steadied up to Rs 20.25. By Tuesday the reactionary tendency reasserted itself and the quotation came back to Rs 20.00 at which level it continued to remain the next day also.

PRICE TRENDS.

	Opening	Closing
Hessian 40" x 10 oz.	Rs.	Rs.
Ready	39.20	39.00
Sacking:		
B. Twills Ready	88.50	88.30
Cornsacks	88.50	88.40
A. Twills	106.00	105.00
L. Twills	100.50	100.25

WORLD OF TEA

General Demand for all Types

TEA has continued to witness a strong general demand, although prices have developed a slightly easier tendency during the week under report. In the London market, gains of upto 3d per pound are reported for well-made black leaf descriptions and considerably more for some of the better liquoring invoices. The firm tone, discernible over the past few weeks, raises hopes that the future offerings will continue to receive keen competition, especially as the trend at Calcutta and Colombo has been upwards as well.

In the Export Sale held in Calcutta this week, offerings were 62,426 packages. There was a good but less general demand and prices often showed an easier tendency, particularly towards the close of the sale. "Teas for price" were about steady. Plain Broken and Fannings were often 2 to 4 nP per pound easier, while Mediums were about 4 to 6 nP easier apart from the brighter sorts.

The few orthodox BOPs with bright liquors were sold well, but others again received a restricted enquiry and were about 10 nP easier with some withdrawals. Orange Fannings were well supported, the brighter liquoring kinds being sometimes dearer, others tending easier. Useful liquoring CTCs were sold well at often dearer prices, the poorer kinds being also well supported but at irregular rates.

Legg-cut teas were readily absorbed at prices which were sometimes 4 nP easier. Whole Leaf grades met with only a fair enquiry at generally easier rates. The few Darjeelings with improved autumnal flavour were sold readily,

but others were irregular and generally easier. Following rates were quoted:—Clean Black Pekoe Rs 1.96 to Rs 2.04; Plain BP Rs 1.68 to Rs 1.72; Plain Fannings Rs 1.78 to Rs 1.84; Medium BP Rs 1.64 to Rs 1.68; Medium Fannings Rs 1.74 to Rs 1.80; Best Assam CTC BP Rs 2.30 (nominal) and Best Assam CTC Fannings Rs 2.50 to Rs 2.70 (nominal).

In the Internal Sale, offerings were 20,784 packages of Dusts and 2,089 packages of Leaf grades. There was a good demand for Dusts at irregular though generally easier rates. Orthodox grades were sold readily, but generally showed a drop of some 4 nP per pound, although, where teas were small and powdery, there was more competition. Legg-cut Doosars also shared in the easier market and were sold at rates 4 to 6 nP below last levels. The few Darjeelings, on offer, met with a strong enquiry and prices showed an appreciable advance over valuations.

The poorer and medium CTC types met with fair enquiry, but at rates which were generally 10 nP below last and sometimes more.

The good and best liquoring kinds were somewhat irregular, but generally sold at firm to dearer rates. Towards the end of the sale, there was less demand for all CTC grades, resulting in some withdrawals. Following rates were quoted:—Medium Doosars Dust Rs 1.80; Medium Assam Grainy Dust Rs 1.74 to Rs 1.78; Medium Assam CTC Dust Rs 1.85 to Rs 2.00 and Best Assam CTC Dust Rs 2.20 to Rs 2.90 (nominal).

In the export Quota section, business was reported done at 1½ to 1¾ nP per pound. At the close, there were buyers at the former level with sellers at the latter level.

With quality rather irregular, less general demand prevailed at the Colombo auction where offerings consisted of 6,842,572 pounds. All centres operated rather quietly. Dimbula/Dickoya teas were generally 30 to 50 cents per pound lower, while medium-grown Uva teas declined by about 20 cents. Medium teas were 10 to 20 cents lower and low-grown about 5 cents lower for small leaf sorts. Middle East and Persian Gulf teas also registered declines of 5 to 10 cents per pound. Teas, suitable for the Australian market, followed the same trend, registering lower rates.

In the Cochin market, about 7 lakh pounds of Leaf tea were offered for export. Quality again showed an improvement, particularly from the Nilgiris district and some useful flavoury teas were on offer. Internal buyers were again quiet; but exporters continued to compete strongly for the improved teas.

Good Medium Broken were 5 to 10 nP per pound dearer; but similar Fannings were again the weakest feature of the sale and were difficult of sale. Low Mediums were about steady; but bright liquoring medium teas were slightly dearer on last week's rates. Whole Leaf grades were rather irregular, but improved types were sold well.

Leaf tea sales for exports at the tea auctions in Cochin will be held weekly throughout the current year. Announcing this, the Committee of the Tea Trade Association of Cochin has stated that this decision has been taken to bring the Cochin tea market in parity with other world tea centres.

In Mincing Lane, offerings were 28,545 packages, including 24,098 packages from Northern India and 972 packages from Pakistan. All good liquoring teas met with a strong demand and prices were decidedly dearer. Good plain teas were well supported and last week's rates were fully maintained. Rates remained unchanged.

Tea stocks in London, as on the 13th February, were 170.05 million pounds as against 163.08 million pounds in the previous week. The total quantity to be landed on the same date was 25.46 million pounds. Total afloat was 25.97 million pounds including 15.73 million pounds from Calcutta; 1.01 million pounds from Chittagong; 997,500 pounds from Cochin; 5.00 million pounds from Colombo and 3.24 million pounds from other Ports. The average price realised was 49.56d per pound as against 48.22d in the previous week and 52.08d a year ago.

US Notes

In a very basic sense, the growth of electric power in the United States is both a cause and an effect of the dynamic expansion of the nation's economy in post-war years. And what is more, when one of the electric power industry's roles subsides, the other keeps on demanding increased output.

In the past eight years alone, for example, US power production has more than doubled. Yet, despite this enormous increase, the electric power industry has proved to be less vulnerable than business in general: power output has increased every year during the post-war period in spite of three moderate business declines.

Taking the combined output of all 1,255 utility plants (private and public) in the United States, the remarkable thing is that it reached even last year a new record of 644,760 million kilowatt hours—a gain of 13,253 million KWH or 2.1 per cent over 1957.

Part of this high output stems, of course, from the fact that, as we now know, 1958 as only in the first half a time of recession, and a time of rapid recovery in the second half. But another explanation for the high output last year nevertheless is that the industry has some "built-in" stabilizers: chief among these are the steady increase in the number of customers and the steady increase in the use of electricity by residential customers, which is to say in the American household.

The private utility company, which produce three times as much electric currents as the public utilities, estimate that in 1958 the average annual use of electricity by their residential customers reached a new high of 3,385 KWH per residence, an increase of 211 KWH over the preceding year. Coupled with this gain was the addition of 1,000,000 customers during the year, increasing the year-end total to 56,200,000. More than 35 per cent of the private industry's new customers were residential users.

The increased usage of electric power by residential customers last year substantially offset lower consumption by manufacturers and processors.

Despite the lower power consumption, however, industry remains the prime user of power—absorbing about 45 per cent of total output of all generating plants.

Industry's mounting reliance on electricity is, in fact, a key feature of the post-war US economy. For power is the propelling force in advancing labour productivity.

For example, it has been estimated that the physical energy an

average worker exerts in a year is equivalent to about 67 KWH of electricity. But to supplement the efforts of the American worker, industry has given him, in the form of electrical machinery and equipment, the equivalent of 290 fellow-workers. Thirty years ago, with power less plentiful, his electrical helpers numbered about 70.

Aside from industry, the other major consumers of electrical power are the households of America. Projection of residential electrical consumption have been continually revised upward as the widespread ownership of household appliances has brought an electrical revolution to the home, fully doubling home consumption in the last 10 years.

The growth of power consumption in America has necessitated huge capital expenditures. In the last decade, private utilities have spent more than \$28,000 million on new plant and equipment.

In adding 11,500,000 kilowatts generating capacity, the private utilities last year alone spent \$3,800 million of new plants and equipment. This was a record outlay. Yet they plan to spend a similar amount this year to add another 10,200,000 kilowatts.

The privately owned power companies with pride to comparisons with the state-owned power industry in the USSR.

Total generating capacity in the United States at the end of 1958 was 149,500,000 kilowatts. During the next three years, the combined private and public utilities plan to add more than 50,000,000 kilowatts of new capacity. This is more than the USSR's total installed generating capacity of 48,300,000 kilowatts at the end of 1957.

The Soviet seven-year plan calls for an annual output of 500,000 million KWH to 520,000 million KWH by 1965. US power output in 1958 totalled 721,000 million KWH. By 1965 it is expected to reach 1,250,000 million KWH annually.

US per-capita usage of electricity in 1957 was four times the Soviet per-capita usage, with residential and rural consumption exceeding USSR's six to one.

★

Britain

BRITAIN'S EXPORT PROSPECTS

Britain's export prospects were looking better, and the signs of an early rise were good, said Dr Charles Hill, Chancellor of the Duchy of Lancaster, at a dinner of the Liverpool and District Bankers Institute.

In the fourth quarter of last year, British shipments were no longer declining, Dr Hill said.

Fixed investment at home was expected to rise again this year. The likely fall in investment spending by manufacturers looked like being more than offset by increases elsewhere in the private and public sectors.

Consumption, exports and fixed investment all appeared to be getting on to the upgrade, and they might expect to see develop more clearly the slight upturn in the

production index which emerged towards the end of last year.

"The first result of this may well be a gain in productivity as under-employed capacity is brought more fully into use, and this will have a welcome effect on costs", the Minister went on. "Later, we may reasonably expect more employment opportunities to be created. As we move into the spring, the seasonal trend in unemployment should be downwards, and it will then, it is reasonable to expect, be reinforced by a general quickening of activity".

Dr Hill concluded: "Our special efforts will be more effective if the economy as a whole is sound. It is sound today, and the Government is determined to keep it that way, moving in the right direction and, we judge, at the right pace. Neither here nor elsewhere do we want panic solutions".

An ore-crushing plant for a new ironstone mine which is being opened up near Bara Jamda, in Orissa, is being manufactured by a British firm of crushing and screening machinery specialist. First deliveries are expected to leave the works in England at the end of this month.

Of the £250,000 worth of equipment which the mine will require, the British firm—Pegson Ltd., of Coalville, Leicestershire—has been awarded contracts for the first two stages, amounting to a total of £150,000.

The order for the first stage, worth £100,000, was obtained by the firm's managing director, Mr George A. Hannah, who during a 25,000 mile business tour of India and other Asian countries undertaken before Christmas visited the jungle-surrounded site.

Foreign Capital in India

The total quantum of U.S. private capital invested in India was Rs 11.17 crores at the end of June 1948, Rs 30.06 crores on December 31, 1953, Rs 39.76 crores on December 31, 1955 and Rs 46.84 crores on December 31, 1956. The trend of American investment in India has been increasing.

The Deputy Minister of Finance, Shri B. R. Bhagat, who gave this information in reply to a question by Dr Ram Subhag Singh in the Lok Sabha on February 20, added that complete information for periods prior to June 30, 1948 and subsequent to 1956 was not available.

In reply to another question by Shri Pangarkar and two others on U.K. investments in India, the Finance Minister, Shri Morarji Desai, placed a statement on the table of the House, giving some details of the allotment of shares to U.K. residents during 1957-58.

S. E. RLY TENDERS

Scaled tenders are invited for tender No. CON/COS/17/P&M/B/59 for supply of (1) 100 Nos. Rook cutting tools Tungsten Carbide tipped drill steels 3/4" hollow Hexagon alloyed steel with 4 1/2" shank 5'-3" long with 33 m.m. wide cutting edge similar to Sandwick Coromont drilling rods. (ii) 100 Nos. Rook cutting tools Tungsten Carbide tipped drill steels 3/4" hollow Hexagon alloyed steel with 4 1/2" shank 2'-7" long 34 m.m. wide cutting edge. Tenders will be opened on 16-3-59 at 12 noon.

Tender forms are obtainable from the office of the under-mentioned (Construction Section), Garden Reach, Calcutta-23 at Rs 2/- (not refundable) per copy by money order to him direct in the case of outside firms and on production of cash receipt from this Rly's Chief Cashier by local firms.

Tenders should accompany the receipt for depositing earnest money of Rs 260/- with this Rly's Chief Cashier without which the tender is liable to be rejected. Approved contractors having a permanent deposit of Rs 1000/- with the undermentioned are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

CONTROLLER OF STORES
S189

and April-October 1958. According to the statement Rs 3.42 crores worth of shares were allotted to U.K. residents in 1957-58. The allotment during the period April-October 1958 amounted to Rs 1.1 crores. The figures were provisional and did not cover (A) investments in the tranches of U.K. Companies, (B) investments in the share of retained profits, and (C) investments in the shape of goods. The figures of Rs 1.17 crores for April-October 1958 was incomplete, as the full picture of allotments during that period was not known as yet. The Finance Minister observed that the figures were thus subject to revision, particularly in the case of the year 1958-59.

Wind Tunnel Project at Bangalore

The proposal for setting up transonic/supersonic wind tunnel at Bangalore at an approximate cost of Rs 1 crore has been approved by the Council of Scientific and Industrial Research. This information was given by Shri Humayun Kabir, Union Minister of Scientific Research and Cultural Affairs, in a written reply to a question by Shri Ram Krishan and Shri N. R. Muniyandy in the Lok Sabha on Feb 17. The Minister added that the full scale tunnel was to be located at Bangalore at a suitable site close to the Hindustan Aircraft Ltd. and not at the Indian Institute of Science, Bangalore.

Giving details of the scheme, Shri Kabir said: "The work for the major wind tunnel project is to be carried out in the following three phases:—

Phase I—The construction of a scale pilot tunnel.

Phase II—The detailed design of the full scale tunnel components and a 6 component wind tunnel balance.

Phase III—The actual construction of the full scale tunnel. "The work of Phase I and II is to be undertaken by the Aeronautical Engineering Department of the Indian Institute of Science, Bangalore, and for this purpose a grant of Rs 3.50 lakhs has already been sanctioned.

"The work of Phase II- is initially to be undertaken by an engineering team, which is to be set up 6 months after the initiation of Phase I work. Detailed phased programming of Phase I will be finalised then, and is to consist of the actual construction of full scale tunnel".

Experiments Conducted at National Botanic Gardens Lucknow

In reply to a question by Shri Naval Prabhakar in the Lok Sabha, the Union Minister of Scientific Research and Cultural Affairs, Shri Humayun Kabir, laid the following statement on the table of the House giving the results of experiments conducted on plants at the National Botanic Gardens, Lucknow:—

"As a result of surveys carried out by it in the country the National Botanic Gardens, Lucknow, has collected a large number of medicinal plants, aromatic plants and plants of other economic importance.

Nearly 1,000 specimens of plants have been labelled and registered and about 7,000 have been identified. Systematic studies regarding the effect of climate on 16 varieties of Jasminum are in progress. A large collection of Rauvolfia serpentina has been made and propagation of the plant by seed has been fairly successful. Cross-breeding experiments in small flowering types of petunia (from America) have resulted in the production of new types of petunia with a range of attractive colours from deep red to pale blue.

"A process for the isolation of an active compound named lancamarone from lantana camara known ghaneri in Bombay State, a common weed which is considered as a nuisance in the forest areas throughout the country, has been developed and patented. The compound may be useful as a fish-poison, cardio-active principle and in the synthesis of therapeutic compounds.

"Useful work has been done on the reclamation of usar lands (alkaline lands). Investigations have shown that the use of weeds like argemone and addition of green manure to soil and adoption of suitable cropping scheme are beneficial for reclamation of alkaline soils for cultivation of crops. It has created hope of reclaiming extensive lands in different parts of the country and especially in Uttar Pradesh. The Government of Uttar Pradesh and the Government of India are following the results with interest and examining the possibility of extending the work as far as possible.

LIC Business in 1958

In the Lok Sabha today the Deputy Minister of Finance, Shrimati Tarkeshwari Sinha, replied in the negative to a question by Shri N. Keshava and 13 others whether the quantum of new insurance business done during 1958 was less than the business done in 1957. The Deputy Minister said the figure of new business completed during 1957 and 1958 were Rs 281.90 crores and Rs 313.85 crores respectively. The figure for 1958 were provisional.

IAS Probationers

On an average, 79 to 80 probationers were admitted in the IAS School every session from 1955 to 1958. Between 1957 and 1954, the entrance was confined to 30 to 40 persons.

Shri G. B. Pant, Union Home Minister, gave this information in a written reply to a question by Shri Ram Krishan, who asked whether the number of IAS probationers admitted and the strength of the staff of the IAS school had been increased.

Shri Pant stated that while the strength of the staff was now 29, it was 16 before 1955.

Sugar Factories and Cane Production

The number of sugar factories in the country having their own sugarcane farms is 79 said the Minister for Food and Agriculture in a written reply to a question by Shri A. K. Gopalan in the Lok Sabha

on Feb 19. The extent of these farms is 2.28 lakh acres, with 1.04 lakh acres under cane in the crop year 1957-58.

The yield of sugarcane per acre in these farms is 32 tons.

Konya Project

The International Bank for Reconstruction and Development has agreed to consider the grant of a loan to India for the completion of the Konya Project.

Giving this information in the Lok Sabha on February 20, the Deputy Minister of Finance, Shri B. R. Bhagat, told Sarvashri Goray and Assar that negotiations for a loan were yet to take place. It was, therefore, not possible to give an indication of the size or terms of the loan which would be subject of negotiation.

Heavy Engineering Corporation

Replying to a question by Shri Rajendra Singh and six other members in the Lok Sabha on February 13 the Minister for Industry Shri Manubhai Shah, said that the authorised capital of the Heavy Engineering Corporation was Rs 50 crores. Of this, Rs 10 crores had been issued to start with.

The Heavy Engineering Projects, Shri Shah added, entrusted to the Corporation included the heavy machine building plant, the foundry forge plant and the coal mining machinery plant. Technical and financial help was obtained for these plants from the Soviet Union and Czechoslovakia.

Life Insurance Corporation

The Life Insurance Corporation has so far received 10 applications from co-operative housing societies for loans. Out of these applications, seven are from Bombay and one each from West Bengal, Madras and Uttar Pradesh. The Corporation has also received applications for loans from the Bombay Co-operative Housing Finance Society Ltd., in Bombay State and the proposed Central Co-operative Housing Mortgage Bank in Madras State.

These details were given in the Lok Sabha on February 20 by the Finance Minister, Shri Morarji Desai, in a written reply to a question by Shri Aurobindo Ghosal and Shri Wodeyar.

Employees' State Insurance Scheme

The Employees' State Insurance Scheme has so far been introduced at 73 centres and is likely to be introduced at 20 more centres by the end of June 1959.

This was stated by the Union Deputy Minister for Labour, Shri Abid Ali, in a written reply to a question by Shri Raghunath Singh in Lok Sabha on February 13.

Shri Abid Ali said that all these centres were cities or towns and included, in some cases, adjoining villages or taluqas which had coverable factories.

EVEN if it were no more than an accident, the sudden coming into the open of the importance of underwriting by Western Powers of India's development efforts is a significant and, to us, an encouraging feature. Within a week, important practical efforts no less than important pronouncements in this regard have been reported in the press. Those indefatigable friends of India, Senator Cooper and Senator Kennedy, have come out with a far reaching suggestion to the American Senate. There is then the testimony before the American House of Representatives of Mr Douglas Dillon, the percipient Under Secretary of State for Economic Affairs. A US Trade Mission is in India reconnoitring for assistance.

Those austere spirits that have been criticising authority over over-ambition in planning may consider this a misfortune. To them, the timing, no less than the content, of these intimations of practical interest in our welfare will seem unfortunate. For, India is tentatively formulating the size and shape of its Third Plan at the moment. It must appear, therefore, to these somewhat jaundiced observers that such pronouncements and efforts will provide the cue for some eventually untenable assumptions by the planners. But to people with a steadier vision of both needs and prospects, such inferences would appear to be merely the extravagance of despair.

In discussing this subject even in the abstract, there are certain inherent difficulties that are, in my opinion, not sufficiently aired. For instance, almost anything that one says in support of the idea is sure to sound like special and specious pleading. The lofty despatch of foreign assistance is sure to appear as morally a tougher man since he will appear to be more self-reliant for raising himself by the boot strap. If he is also a disingenuous person, he can simulate a passionate concern for not bartering away our hard-won freedom for a mess of economic pottage. He can see strings where they are invisible to others, he can fancy slights where none was intended, he can unearth conspiracy out of nothing more than a polite greeting. And, in all this, he would be cunningly working upon our self-esteem, because of our avowed policy of avoiding entanglement and our sensitivity to criticism in this regard.

There is another difficulty which is even more serious. The most compulsive arguments in favour of foreign aid, in general, and aid to India, in particular, are precisely those that we are prevented, by a variety of inhibitions, from ad-

vancing without embarrassment. However objective and matter-of-fact you try to be, the feeling is difficult to shake off that the chap at the other end is only half listening to your arguments. You are corroded with the suspicion that his mind is philosophically reflecting on man's infinite resources of rationalisation of self-interest. Such a predicament is inescapable even when you are doing nothing more than merely assenting to an argument, often from a friendly foreigner. And the embarrassment becomes insupportable when, after outlining general considerations, he states the special reasons for assistance to India. This embarrassment proceeds from a variety of sources. There is the social embarrassment, very real I assure you, in an open assent that must seem a kind of arrogance at worst or smugness at best. More importantly, it makes an honest examination of our public stances morally obligatory. It makes inevitable a pitiless scrutiny of the murky corners of our minds where we have tucked away our mental reservations. It impinges on our neutralist profession. It exposes the conscious hypocrisy or the unconscious ambivalence in our attitude to China and Russia.

"Competitive co-existence" is a phrase I can never hear from a foreigner without looking through the corner of my eye whether he is not trying it on me. You see, the competition is between "them" and with my avowed neutrality. I cannot logically wish one or the other success. But since the competition is in helping me, my seeming indifference to the ultimate outcome may look perilously like trying to make the best of both the worlds by wishing them both success! Indeed, it can reach grotesque proportions, at least to unfriendly eyes. For instance, in a recent Parliamentary debate some unconscious humour was provided by a particular implied extension of our neutrality. It was suggested that our friendliness to all was demonstrated by our readiness to accept aid from all without any discrimination inter se!

Again, when the compulsions behind aid to India are rendered in stark terms of a gigantic struggle for winning Asia for democracy, embarrassment is overlaid with awe. Not that we do not see the essential point

about India made in such a rendering of the argument. We are not all that incurably modest or blind. We, at least those of us who cherish liberal and humanist values, do see the point of the note of urgency in the rendering of contemporary Asian history as a struggle for the soul of Asia between India and China. (Though being nearer to the scene of action, we feel that the distant observer exaggerates the deadliness of the combative grapple.) But the awe really arises from a realisation of immensity of the faith reposed and of the not infrequent manifesting of weaknesses in our own equipment. Therefore, automatic assent to the status is not available though, on consideration, we do see the essential justice of the honour.

All the time, you are nagged with the doubt whether, in accepting or advancing these arguments, you are not really laying the flattering unction to your soul. And when some of your countrymen pityingly refer to our pathetic craving for testimonials, you do not, of course, fail to see that that a particular pretension is as infantile as the alleged defect in the national character it pretends to despise. But, such is the havoc wrought by Freud, you begin to wonder whether you are not deceiving yourself!

There is one other difficulty. Many of the arguments about foreign aid and its proper shape would involve a certain amount of criticism of the policies pursued by those who are urged to help. And such criticism would not be just incidental or on matters of detail, but would constitute the core of the argument. For instance, if one were to suggest that even an infinitesimal fraction of the expenditure on armaments—competitively and wastefully produced for reasons of prestige—would provide several times the amount needed for our development purposes, one would be advancing a valid argument. But fancy its effect even on a person who is not actively hostile but just uncommitted. First of all, he is being asked to bear a tax burden in order that you may be helped. This is bad enough. But if this is to be done at the risk of his security, he may, not surprisingly, lose his temper.

But to say all this is not to fail to see the complete validity of all the arguments that we are chary of advancing ourselves. When Senator Kennedy and Senator Cooper refer to India as the "Hinge of Asia" and propose a "donors club" of the US, Canada, Britain Germany and Japan, no one need be cynical about our ready acceptance of the premises of the arguments. Likewise, it is not self interest or self-delusion that make us feel gratified when we hear Mr Dillon assert categorically that "the Indian Development Program me and the pushing of development in India is probably the most important economic project we have anywhere in the world." Of course he criticised Pakistan in the same breath, saying: "One of the countries which has given us great trouble economically is Pakistan."

... the synthesis of elegance and utility

CALCUTTA MADRAS NEW DELHI

where the standard of living has not increased at all. Economic aid is not as effective as we like because of the absence of an effective domestic economic policy and programme." This fact may, in some eyes, diminish the value of his testimony regarding India, but such a conclusion would be non-sequitur.

Incidentally, this illustrates another facet of my earlier argument. If an Indian were to put his case in these terms, his case would have

at once been suspect. Of course, Mr Dillon was not using Pakistan's failure as a reason for aid to India. But comparisons are implicit, whether avowed or not. For, a question that will always be asked and will always have to be answered in such contexts is: "Why India? Why not Pakistan or Burma?" Now, Mr Dillon can say, without embarrassment, "India is further advanced on the path. They have individuals able to organise, plan and operate. They need capital and they have a tremendous country with 400 million people. As

they go, all of Asia and Africa will go." If we did say all this, it may sound like bragging, and our references to Pakistan may be put down to ulterior hostility.

Perhaps I am exaggerating. It should be possible to discuss these things as technical problems in international economics. There are always people in this world—and God be thanked for them—who have the happy vocation of arranging these things with a clear-eyed objectivity. Their method is to

reduce everything to a technical problem. And that is why a country with an apparatus of planning has a better chance of utilising foreign aid. For, planning—despite its mystical worshippers, on the one hand, and ritualistic haters, on the other—is nothing more than an orderly solution of a series of technical problems in economics. Their solution cannot in the nature of things be sequential, but that need not offer any difficulty. A movement on a broad front is possible, so long as your army is organised and it has some idea where it is going. For the rest, it is staff work. Utilisation of foreign aid is, both for those who give it and for those who use it, a matter of dovetailing the needs with the availabilities and devising the institutional channels. To take a concrete example: the Third Plan's emphasis is bound to be on the utilisation of manpower by labour incentive modes of production. The Second Plan had a similar aim but it has largely remained unrealised so far for the simple reason that productive apparatus, both efficient and small, was absent. One form that US aid for the Third Plan may take is the provision, where necessary, of this productive apparatus. That is what the US Trade Mission now in the country is apparently trying to do. Such specific correlation is sure to be of immense benefit to both the giver and the taker.

I am not so improvident or impractical as not to realise that foreign assistance—which I want only as loans—has its price. The economic arguments for giving and receiving assistance may be irrefragable. But its consequences and the obligations it imposes are not matters of irrelevance. First, foreign aid cannot and should not be accepted unless there is readiness for self-help, which should be made measurable, among other things, by the readiness to sacrifice. We are told often enough that the maturing during the Third Plan period of currently deferred obligations is of the order of Rs 500 crores. This is an additional burden we have to provide for. But that does not argue the need for less investment in the economy, though it does argue a complete elimination of unproductive and unnecessary drain on foreign exchange. A simple calculation will show how we can, by internal effort, nullify the effect of this backlog of obligation. A million tons of foodgrains will cost us about Rs 40 crores. If internal production increased by three million tons a year, we should be able to get over this particular embarrassment. Likewise, a bold programme of iron ore export can be intelligently dovetailed into a barter arrangement for suitable imports. A determined effort at bringing into the open hoarded gold will be another way which will both reduce our dependence on foreign exchange and provide internal finance for the Plan.

Indian Finance

February 28, 1959

GATEWAY GOSSIP

THE Bombay State Budget for 1959-60 presented to the Legislative Assembly last week by Dr Jivraj Mehta, Finance Minister, has not laid any claim for distinction from the budgets presented by other States so far as it has not also proposed any new taxation. But it is not without some distinguishing features. In the first place though the estimates show a small revenue deficit this is expected to be more than covered by the increase in accruals from two items of revenue. Secondly, the Bombay Budget has made provision for a reduction in land revenue assessment in some areas of the State. Another distinguishing mark is the proposal to make education at all levels free to the children of people with low income irrespective of caste or creed.

Dr Jivraj Mehta has estimated the revenue receipts for 1959-60 at Rs 136.74 crores and the revenue expenditure at Rs 137.72 crores thus leaving a deficit of Rs 98 lakhs. This small deficit, however, is expected to be more than covered as a result of the unification of sales tax and court fees. The Finance Minister estimates that the additional income from sales tax may be of the order of Rs 1 crore and that from court fees Rs 25 lakhs. The result of this additional income of Rs 1.25 crores will be that the deficit of Rs 98 lakhs will be converted into a surplus of Rs 27 lakhs.

It is evident that Dr Mehta has been mainly influenced in his decision not to impose fresh taxation by the sound financial position of the State. It may be recalled that an indication of the comfortable financial position of Bombay has been given by the Governor in his address on the occasion of the opening of the budget session of the Legislative Assembly. Mr Sri Prakasa has pointed out in his speech that Bombay is in the fortunate position of having the requisite resources both financial and physical for the successful implementation of the Second Plan. The budget figures now made available make the picture quite clear. The revised estimates for 1957-58 had put the revenue surplus at Rs 5.57 crores. The accounts for this year now show that the actuals have been much higher. As against the revised estimates for revenue receipts of Rs 117.34 crores actuals have totalled Rs 128.35 crores. Expenditure has also gone up to Rs 116.27 from Rs 111.77 thus leaving a surplus of Rs 12.08 crores as against Rs 5.57 crores. Dr Mehta has pointed out that many of the items which have gone up to give the surplus could not have been anticipated at the time of the framing of the revised estimates.

The revised estimates for 1958-59 show a surplus of Rs 44 lakhs as against a surplus of Rs 24 lakhs estimated in the budget. The revised estimates which are based on the actuals for the first 8

Bombay Budget

months of the current year put revenue receipts at Rs 132.02 crores as against the Budget estimate of Rs 123.00 crores, revenue expenditure at Rs 131.58 crores against Rs 122.76 crores. Thus the surplus is Rs 44 lakhs against Rs 24 lakhs. Both in the actuals for 1957-58 and the revised estimates for 1958-59 receipts from sales tax figure prominently. In the actuals for 1957-58 the increase from this source was as much as Rs 1.72 crores above the revised estimates for that year. In the revised estimates for 1958-59 the increase from sales tax accounts for as much as Rs 4.54 crores out of a total increase of Rs 8.82 crores. The Budget estimates for 1959-60 put revenue receipts Rs 4.72 crores above the revised estimates at Rs 136.74 crores. But the expenditure has been estimated to increase by about Rs 6.14 crores to Rs 137.72 crores thereby leaving a deficit of Rs 98 lakhs. The smaller increase in receipts is of course partly accounted for by the fact that the budget on receipts side takes into account the reduction in land revenue as a result of the proposed reduction in the rates of assessments in some areas of the State. The increase in expenditure is due to larger outlay under the various Plan schemes.

Dr Mehta seeks to fill the gap between receipts and expenditure in an unexceptional manner. Largely because of the state's reorganisation, sales tax laws are differently administered in different regions of the State. In other words certain regions are more advantageously placed with regard to the rate of sales tax to be paid. This is now sought to be remedied and in the process the State Government will benefit to the extent of Rs 1 crore. A Bill that will shortly be introduced in the State Legislative Assembly will bring another Rs 25 lakhs in respect of revenue from judicial stamps used in law courts.

The current year has witnessed significant progress being made with regard to the implementation of Plan schemes. The dislocation caused in the State's efforts in this regard by the State's reorganisation seems to have been more or less remedied by the end of the second year of the Plan. Considerable work has been done by the State Government during the past year to prepare the State for concerted steps to make up for lost time, and if the rate of Plan expenditure in the current year is any indication, it would appear that the attainment of the targets under the Second Plan according to schedule may not be difficult. For the next financial year Dr Mehta has programmed for a Plan expenditure of Rs 90.18 crores as against Rs 78 crores estimated to be expended during the current year in this regard. In the first two years of the Plan the outlay totalled only Rs 98.5 crores. The fact that the expenditure has been

stepped to Rs 78 crores from only Rs 51.5 crores is indicative of the increase in the Plan scheme implementing capacity of the State during the current year.

It is in the fitness of things that the highest priority has been given to food production schemes. The allotment under this head next year is Rs 44.90 crores out of the total Plan provision of Rs 90.18 crores. The fact that nearly 50 per cent of the total outlay for next year is being allotted for food production is an eloquent testimony to the determination of the Government to tackle the problem of attaining self-sufficiency in food

BOMBAY REVIEW

as quickly as practicable. Apart from the overwhelming need for reducing the outgo of foreign exchange for the import of foodgrains, Bombay has a special reason to devote its concerted attention on the foodfront, because it is deficit in food production and it is not a pleasant task to depend on the Central Government to meet the food needs of its population. Though it has not been possible for the Government to ensure the full utilisation of the irrigation facilities already created, it is to be hoped that this matter will receive special attention in coming months.

Over 700 Branches and Enlarged Service

Do you know how rapidly the State Bank of India is expanding? On 1st July 1955, when the Imperial Bank of India was reconstituted into the State Bank of India, there were only 243 branches. As at the end of December 1958, 262 additional branches were opened in urban and semi-urban areas. The rate of growth now exceeds 100 branches a year. The Bank has also 218 sub offices.

With a net-work of more than 700 offices spread all over the country and many more to follow, the State Bank is particularly suited to handle your remittance and collection business.

Thousands of account holders have benefited by the wide range of services offered by the Bank. You too can take advantage of the Bank's services.

Why not contact the nearest Agent of the Bank to talk things over?

Food Preservation Industry

Though the production of preserved fruits has more than doubled in the course of the past four, five years, there is still need for taking concerted measures to utilise in full all the fruits and vegetables that are produced in the country. The fruit and vegetable preservation industry has gained special significance in view of the present shortage of food as well as the need for improving the health of the nation as a whole. Apart from the conservation of valuable food, the canning industry of which fruit preservation is only a part has a bright future in India because, with the improvement in the standard of living, the demand for canned foods will also increase. Canning also enables one to have all fruits and vegetables all the year round. Another important aspect of this industry is its export possibilities and this is of particular importance to us in the country at the present juncture when we are making strenuous efforts to augment our foreign exchange resources.

Speaking at the All India Food Preservers' Association Mr Manubhai Shah, Union Minister of Industry, has pointed out that there is good scope for increasing our export trade in fruit and vegetable products. Even now our exports in this regard are sizable as India exported last year 2,500 tons. The fact that the Planning Commission have fixed a target of 11,000 tons for export by 1960-61 clearly indicates that considerable headway still remains to be made in regard to increasing the production of the canning industry. The canning industry is now utilising only about 0.2 per cent of the production of fruits and vegetables. Mr Shah has placed the wastage of fruits and vegetables in our country at between 15 to 20 per cent. It is evident that if adequate facilities for canning are available it should be possible for us to minimise this huge waste of valuable food. Considering the progress that has been made in the past few years it will not be difficult for the canning industry to attain the Second Plan target of 50,000 tons. If it is noted that even if the industry is to account for just one per cent of the present production of fruits and vegetables, it will be able to produce about 150,000 tons or thrice its Second Plan target. And it can well be imagined what will be its stature when it is in a position to take care of only the proportion that is being wasted now.

★

Cost Structure of Industries

It will be no exaggeration to say that the new drive for maxi-

misng exports has generally been quite beneficial to the indigenous industries. Even the drastic import cuts have been so applied as to cause the least disturbance to domestic industry. The scarcity of imported items has given a fillip to entrepreneurs in the country to embark upon the production of these items internally. The various concessions that are now available for export articles have engendered renewed enthusiasm for stepping up the manufacture of those articles that have a good demand overseas. Apart from these direct benefits there is now discernible in Authority a readiness to initiate such remedial measures as are deemed necessary for the promotion of exports. An important point that has come to the fore in the discussions about export drive is the growing difficulty experienced by exporters from this country to push the sales of their products in foreign markets. The case of our cotton textiles is too well known to bear repetition.

It is now found that in the case of both sugar and cement we have to sell below cost of production if at all we are to be successful in persuading overseas buyers to take these commodities from us. The position is more or less the same with regard to some other items also and it is increasingly felt that unless we succeed in bringing down our cost of production it will be idle to expect our export earnings to bring any substantial help toward meeting the present shortage in foreign exchange. But it is imperative that we make our exports yield sizable foreign exchange for the simple reason that, as Mr Manubhai Shah told the Marketing Conference held the other day in Bombay, exports alone in the long run will be helpful in enabling us to reach our objective of a rapid industrialisation of the country.

While it is undeniable that measures like marketing research and export promotion measures will be of some help it is the quality and the price of our products which will finally determine the popularity of our products overseas. As for the first it is a matter that is entirely within the realm of the manufacturers. But the second point is a matter that can be solved only by the active co-operation between the manufacturer and Government. Strictly speaking it must be said that this concerns a third party also. The third party is labour. One of the reasons why we are losing ground in foreign markets in recent years is that unlike in earlier years we are unable to compete effectively with other countries in overseas markets because our country has far left behind the time when it was a low cost producing country. It is gratifying to note that Government now realise the need for devoting attention to studying the reasons for the high cost structure of the Indian industry. Such a study is bound to reveal that amongst other factors, labour cost constitutes a goodly portion of the present cost of production in our country.

GATEWAY MARKETS

Mixed Trends in Metal Prices

PRICES of Non-Ferrous Metals have shown a mixed trend during the week under review. Copper Scrap has been ruling very steady at Rs 212 per cwt, as releases by the State Trading Corporation to industries are not considered to be appreciable. The markets for other metals are ruling quiet with prices showing an easier tendency. Zinc is quoted lower at Rs 94.75 per cwt due to liquidation by speculative buyers who had earlier purchased the metal in the hope that the Government might accept some zinc against their tender for 1,500 tons. But, the Government had scrapped this tender on the ground that foreign exchange was not available. Lead is quiet at Rs 79 per cwt, as speculative purchases made earlier are now reported to be in weak hands. Unless these holdings are liquidated, chances of prices picking up are dim.

Quite a paradox prevails in the Tin market. While the Singapore price is Str. \$380 per picul, the local price is Rs 150.50 per quarter. This unhealthiness has developed due to failure of speculative buyers to lift the material and this state of affairs is likely to persist until tin reaches the consuming industries.

Meanwhile, prices of tin, on the London Metal Exchange, have developed a reactionary tendency with the rate quoted at £772 against £774 per ton following the raising of the export quota to 23,000 tons for the second quarter of 1959. The International Tin Council has decided to allow 48 per cent of basic tonnage to be exported in the second quarter as compared with only 40 per cent in the present quarter. This will mean an extra 3,000 tons for the three months April to June.

Copper is quoted steady at £236½ per ton. The steadiness is attributed to the healthy tone in the US market. It is strongly rumoured that there is a possibility of a further rise in the customer smelter price for the metal.

Zinc is ruling steady at £174½ per ton due to paucity of nearby material, while Lead remains dull at £69½ per ton. In this connection, there are reports of a proposal to seek an international conference on lead and zinc. The proposed conference will be attended by all world producers of the metals. Canada has been hoping that the question of the USA lifting her import quotas on the metals can be settled without going into broader international consultations. For, the USA quotas have been causing a good deal of difficulty for producers, particularly in Mexico where it is claimed that 100 mines have had to be closed and 20,000 miners

have lost their jobs in recent months as a direct result of the policy.

★

Oils & Oilseeds

Prices on the Bombay Oilseeds Exchange showed a mixed trend. Groundnut and Castorseed finished the week with small gains, while Linseed remained steady. Cottonseed futures registered a small setback.

After the nervousness in the previous week, the market for Groundnut exhibited a slightly steadier tendency due to the absence of further selling pressure. In the ready section, bold quality was quoted at Rs 35.37 and Groundnut Oil at Rs 18.44.

Although prices in the Castorseed section suffered an initial setback on reports of improving arrivals, there was a marked recovery towards the close on rumours that some shippers had been able to put through a substantial business with Russia in castor oil. Ready Castor was done at Rs 30.12 and Castor Oil, commercial quality, at Rs 15.44.

Reports of the Australian tenders for about 1,300 tons of linseed oil created a feeling of subdued optimism in the Linseed section where ready was quoted better at Rs 33.12 and Linseed Oil at Rs 16.50.

The tendency in the Cottonseed section was quiet, although price movements were confined to a narrow range.

★

Yarn

Conditions in the Bombay Yarn market ruled steady. There were persistent rumours that the Union Budget might visualise a sizable increase in import duties on all varieties of nylon yarn. These reports have followed the recent Government notification which grants an increased rebate of the import duty on nylon yarn against exporters of nylon cloth. Consequently, the overall tendency in nylon cloth was steadier with the current prices showing an improvement of As 2 per yard as compared with those prevailing a fortnight ago.

It is also learnt that the State Trading Corporation will shortly enter into Art Silk yarn import trade. Its entry into this fresh field follows the Government's directive to ask silk mills in the country to utilise at least 24 per cent of the value of their import licences for the current period for obtaining supplies from the rupee payment countries. The actual users have been advised to book their orders through the Corporation. They will, however, be free to utilise the balance of 76 per cent of their licences as they wish. It is obvious that the decision has been taken with a view to minimising the expenditure of foreign exchange on yarn imports; but several importers feel that the course suggested by the Government will present several difficulties in practice.

WORLD OF COTTON

Activity on the Import Front

THANKS to the announcement of additional import quotas, activity on the Cotton Import front has now broadened. The announcement releasing a quantity of 133,000 bales of cotton for import (48,000 bales American; 60,000 bales cotton stapling 1 1/16" and above but below 1 3/16" and 25,000 bales cotton stapling 1 3/16" and above) has been welcomed both by the trade and the textile interests.

However, there seems to be some confusion with regard to the distribution of this quantity. But, it appears that the actual users will now have to import cotton within the f.o.b. value of cloth exports surrendered to them by the exporting mills and mentioned in the allotment letters issued by the Textile Commissioner by paying a premium of 10 per cent.

It is considered likely that the allotment letters covering 60,000 bales of cotton stapling 1 1/16" and above but below 1 3/16" and 25,000 bales of cotton stapling 1 3/16" will be issued to the mills in the course of the next few days. Allotment letters covering 48,000 bales of American cotton are already under issue.

The entitlement of 15 per cent, which is valid for the past six months ending December 1958, has now been reduced to 10 per cent for the two quarters—January/March and April/June. This means,

S. E. RLY TENDERS

Sealed tenders are invited for tender No. CON/COS/18/GB4/59 for supply of 200 cwts. Lead Wool as per ISD's Spec. No. G/Metal/36C. Tenders will be opened on 14-3-59 at 3 P.M.

Tender forms are obtainable from the office of the undermentioned (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs 2/- (not refundable) per copy by money order to him direct in the case of outside firms and on production of cash receipt from this Rly's Chief Cashier by local firms.

Tenders should accompany the receipt for depositing earnest money of Rs 400/- with this Rly's Chief Cashier without which the tender is liable to be rejected. Approved contractors having a permanent deposit of Rs 1000/- with the undermentioned are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

CONTROLLER OF STORES
S186

that further import of cotton will now be permitted only under the "Textile Export Incentive Scheme". The total import planned, during the current cotton season, is 600,000 bales.

×

FORWARD MARKET:

After earlier easiness, prices in the cotton futures market made a brisk recovery towards the close due to bear-covering on rumours that, with a view to giving incentive to cotton exports, the Government of India could do away with the export duty. Moreover, operators were busy in adjusting their commitments in view of the maturity of the current contract. However, prominent bull operators still preferred to be cautious in their dealings, pending a clearer picture of the Government measures to curb the speculative rise in prices. Jharilla March contract moved between Rs 657.50 and Rs 663.50 and May contract between Rs 656 and Rs 661.50, to finish at Rs 663.50 and Rs 661.25 respectively.

The noteworthy feature of the market was that there had been a switch-over from May to March delivery on considerations that tenders against the expiring March contract would be smaller than earlier expectations.

×

SPOT MARKET:

In the Spot section, spinners showed good interest in Kalvan, Dhanduka and other quality styles. It was believed that spot rates were not likely to decline in the coming months even though the pressure of the new crop arrivals increased.

Meanwhile, the trade estimate for this season's crop has been lower at 49.50 lakh bales. As per the provisional estimates, the production in the Bombay State will be around 27 lakh bales; in the Punjab at 6.80 lakh bales and in Mysore and Madhya Pradesh at 4.53 and 4.94 lakh bales respectively. Madras will have 2.75 lakh bales; Andhra 1.53 and Rajasthan 1.80 lakh bales.

According to the latest reports, the marketing season has practically ended in Khandesh, Moglai and Rajasthan areas. Almost 70 per cent of the crop in Vidarbha and Madhya Pradesh has also been marketed. The season has been in full swing in Gujerat and Saurashtra. Latest reports from Rajkot indicate that daily arrivals in that area have almost doubled during the past few days.

×

NEW YORK COTTON MARKET:

Prices on the New York cotton futures market developed a firmer tendency, supported by trade and commission house demand coupled with buying of October and December deliveries by a leading Houston spot firm. Prospects of a tight supply position also helped values. Middling Spot was quoted at 35.55 cents per pound.

×

LIVERPOOL COTTON MARKET:

Dull conditions prevailed in the Liverpool cotton futures market. Prices tended to weaken under hedge pressure and commission house liquidation. Operators seem-

ed to be concerned at the prospect of continual changes in the US export subsidy. They were, therefore, reluctant to enter into larger commitments.

×

ALEXANDRIA COTTON MARKET:

Prices in the Alexandria cotton futures market suffered a setback from last levels. Despite enquiries from Russia and China for Karnak, the market attracted little support. Increasing competition from Sudan and slow demand from the traditional customers discouraged buying. Profit-taking and hedge selling also led to a fall in prices.

The Ministry of Agriculture, in its third estimate of cotton production for the current season, has placed the crop at 3,837,640 cantars as against the second estimate of 9,879,000 cantars and the first estimate of 9,021,000 cantars. The fourth and final estimate is expected to be published in April.

×

KARACHI COTTON MARKET:

The easy trend in prices, noticed in the Karachi cotton futures market, gathered further momentum last week. Support from mills was lacking, while speculators sold heavily. Export demand was weak.

OLYMPUS

The Third Plan Frame

THE month of March will see a number of crucial decisions regarding the shape of the Third Plan. The National Development Council will meet toward the end of March and examine a variety of data industriously garnered by the Planning Commission. Early in March, the Panel of Economists advising the Planning Commission will have an opportunity to examine some of the conclusions of working groups of the Planning Commission and will be able to give the benefit of their views thereon. Though we may have to wait till the end of 1959 for a reasonably clear picture of the Third Plan, certain conclusions about the shape of things to come can be had next month.

Neither the National Development Council nor the Panel of Economists is likely to be handicapped for lack of data. Indeed, the embarrassment is likely to be one of opulence in this respect. Different aspects of the Plan are being examined by the Planning Commission, central ministries and State Governments. Working groups, both within and without the Planning Commission, have dealt with various special problems and their findings form a formidable pile. Questions relating to the probable order of investment, of the steps for mobilisation of resources, and organisational problems are under study. Specific groups on steel, fuel, industrial machinery, technical education, scientific research and social services are at work besides those on agriculture, irrigation and power, which had been set up even earlier. Ideas on land reforms and ceilings on holdings have crystallised, at least in official thinking, but detailed discussion of the organisational implications of these policies is available in the working papers prepared by the Planning Commission. Altogether, an intimidating range of counsel, which may not always be an aid to clear thinking. The following paragraphs will deal only with a few of the many relevant basic considerations.

Readers may recall some press reports that appeared a few weeks ago giving some tentative targets of investments reportedly envisaged by the Planning Commission. These estimates were prepared by the "perspective planning" wing of the Planning Commission and envisaged an investment for both public and private sectors of the order of Rs 10,000 crores. These estimates are by no means final, since they have been the result of calculations based on investment being a percentage of national income. Such mundane things like statistics of actual performance in the raising of resources, contained in the figures gathered by the Reserve Bank of India and the central and provincial Boards of

Revenue, need to be studied before any conclusions of a final nature are arrived at. This is not to say that investment of this order is hopelessly ambitious, but only to underscore other relevant considerations for final decisions.

In framing its final views, the National Development Council will doubtless draw on the lessons of the first two Plans. These lessons have not necessarily been cautionary. But the lessons from failure are more important than those from success, since they are more damaging to our self-esteem. But these must be drawn.

As Mr Asoka Mehta put it in a recent article, the First Plan "was smaller than our resources: the Second Plan strained the resources because the Plan was large but the resources remained given. The Third Plan demands us to work on both the resources and the Plan through organised efforts and to impart a new resilience to our resources." The First Plan's modesty was aided further by favourable circumstances whereas the Second Plan's comparative ambition was exaggerated by unfavourable external factors. Thus, two good monsoons after an almost continuous failure eased the food situation. World prices of primary commodities were favourable to their producers and we were able to reap the advantages of planned increase in acreage of these commodities. India's terms of trade throughout this period were favourable, with the result that we had a gain of Rs 325 crores. The accumulated sterling balances made imports easy and acted as an anti-inflationary cushion by making possible liberal imports. And our organised industry had considerable unused capacity which could expand under favourable circumstances like increased raw material production. Finally, the extensive damage caused to the transport system by reckless use of the Railways during the war years was remedied by the Railway rehabilitation programme of this Plan.

With the exhaustion by use by the First Plan, some of these advantages were not available. For instance, greater industrial production now meant greater investment, and no mere use of unused capacity. But far more serious was the change for the worse of the other factors. The monsoon started playing its tricks once again, and the expected increase in agricultural production did not materialise. A recession in world prices of primary commodities, and increased cost of imports partly caused by the Suez crisis, threw the delicately balanced payments position wholly out of gear. There were also mistakes in priorities over imports which "helped" in the alarmingly precipitous rate of drawing of our foreign reserves. Depending upon their particular

affiliations, different lessons are being drawn by different people from these difficulties. Those who can be compendiously described as champions of the private sector feel that most of our difficulties have arisen by a "fatal fascination" for steel and rapid basic industrialisation. They also blame the Government for a doctrinaire approach to industrial and agricultural production. They actually advocate a slowing down of the pace of development and a period of consolidation and a "breathing space" and so forth.

There is no doubt that this is not only a counsel of despair but also an impractical suggestion. The rate of population increase will require a fairly substantial investment even to stay where we are. In the second place, politically and morally, the ambition involved in the order of investment envisaged is pitifully modest. Moreover, though we may break up periods of planning into convenient quinquenniums, planning is a continuous process and is really a constant grappling with economic reality. In this embattled encounter, a long range view is an essential strategy. As envisaged in the First and Second Plans, the aim is to double the per capita income by 1973-74. Considering that the present per capita income is so appallingly low, no one can consider this a heaven-vaulting ambition. And it has been calculated that this will involve an investment of nearly Rs 10,000 crores in the Third Plan period. Considering that some of the calculations regarding population increase in the Second Plan are now known to err on the side of under-estimate, this rate of investment cannot be said to be excessive.

Apart from abstract considerations like per capita income, the broad lines of economic development envisaged by the national plans are reasonable. There can be no serious difference of opinion about the need for diversifying the economy and the consequent employment potential. Difference of opinion is more marked on the best way to do this: whether a massive basic industrialisation should precede secondary and tertiary industrialisation or vice versa is a question on which there is a sharp cleavage of opinion. One of the failures of the Second Plan has been its inability to redeem so far its promise of substantial production of consumer goods by cottage and home industries to mop up the purchasing power released by expenditure on currently unproductive basic industries. This failure has been all the more unfortunate, because of its relevance to the question of unemployment. But to argue from this that the logic of the strategy itself is faulty is a non sequitur. This also has its lessons for the Third Plan.

The logic of the Third Plan can hardly be fundamentally different from that of the Second. Bearing this in mind, it is possible to indicate certain broad lines it is bound to take. Fortunately, two things on which almost all of us are agreed are also things of the highest priority: the overriding importance of agricultural production and population control. The priority is not so much in the size of monetary allocations—though this will have to be large in absolute though not relative terms—as in the order of effort to be put in. Though differences are often emphasised in this regard, there is a large area of agreement even on particular points of policy. For instance, it is generally agreed that one of the important failures of the Second Plan has been the inadequate use of available resources of irrigation, lack of coordination in avoiding a time-lag between the creation of resources and their use. It is also agreed that there has been too exclusive preoccupation with "big projects" and traditional sources of irrigation like wells and tanks have been seriously neglected. These have been allowed to fall in desuetude with the result that they have to be repaired at far greater expense than if they had been kept alive. The need for increased use of fertilisers and better seeds and the virtues of scientific farming and soil conservation are things on which there can be no real dispute. Serious quarrels arise only on what constitutes the best institutional agencies of production. Here, again, there is no dispute about voluntary extension of cooperation and the creation of service cooperatives. The Third Plan is sure to make a determined effort to extend the principle of cooperation to as large an area as possible.

The second preoccupation that will engage our energies in the Third Plan is again one of high priority in terms of effort, population control. The logic of this priority arises from the nullification of absolute increases in national product by the increasing number of persons to share it. The Second Plan has recognised this, but its efforts in this regard are still to gather momentum. The need for reducing the pace of present annual addition to the population by the end of the Third Plan is absolute if all the sacrifices demanded of the present generation are not to be in vain.

I shouldn't forget to add that while the priorities may need to be equally distributed between population control and provision of employment opportunities, our major task, from the point of view of resources, may be to find the foreign exchange. Planning in the Third Plan will require much greater attention to this aspect than the Second Plan received.

DELHI REVIEW

NORTH INDIAN NOTES

Safety in Mines

Inaugurating the sixth session of the Industrial Committee on Coal Mining, Mr Gulzari Lal Nanda, Union Minister for Labour, stressed the need for taking measures to ensure and preserve safety in mines. It had taken a couple of major accidents in mines to open the eyes of the Government to the dangers involved in mining and the hazardous nature of the occupation. Since the Chinnakuri disaster which took a heavy toll of the lives of the miners underground, a good deal of attention had been given to this safety aspect of mining.

Safety in mines could be ensured only by the joint endeavours of the management, workers, and the inspectorate staff. The responsibility of management is very clear in regard to the imparting of the necessary training to the workers who are required to go underground. This is an aspect which seems to have been given scant attention by the management and on Mr Nanda's own admission workers recruited for mines today had practically little knowledge of the hazard to which they were exposed in the course of their work underground. It is only right therefore, that, as pointed out by Mr Nanda, some sort of initial training, at least, should be given to the workers before they are asked to go underground. How many of the accidents that had taken place in the country could be attributed to the neglect of this factor would, now, remain a matter for anybody's guess.

Maintenance of proper amity and understanding between labour and management in the coal mining industry is yet another problem which presses for a solution. That things are not running quite happy for the industry is a matter well recognised by Mr Nanda himself, and, he has expressed his disquiet at the existing state of affairs in regard to industrial relations in the coal mining industry. The most unhappy feature of the labour relations in the coal mining industry is the unprovoked violence indulged in by labour and intimidations, which create an element of insecurity for management. Mr Nanda has in this connection pointed to the persistence of certain malpractices which in some cases are the creations of the employers themselves, acting as the provocative element to acts of indiscipline and violence on the part of labour. In other cases it is the non-implementation of awards or agreements which disrupts the normal relations between employers and employees and workers. These are all matters which have got to be properly looked into in the interest of sound industrial relations, in the coal mining industry.

There is also much leeway to be made up in regard to improvement in the welfare of labour and also in methods of recruitment.

Punjab's Progress

Punjab's progress under the Second Plan has been very commendable and it ranks as one of the States to have incurred more than fifty per cent of the total Plan outlay in the first three years of the Plan. Out of a total outlay of about Rs 162.6 crores approved by the Planning Commission, a sum of about Rs 82.86 crores had been spent in the course of the first three years. This fact was brought to particular prominence by Mr N. V. Gadgil, Governor of Punjab in the course of his address to the joint session of the State Legislature.

The progress of the State is particularly remarkable so far as concerns the development of co-operatives and education. In respect of the latter, Punjab, has, by virtue of its achievement in making education free up to the sixth class, given a lead to the rest of the country. Now, the aim has been set to make education free up to the seventh class from the next year.

In the field of co-operation, already about 26,000 co-operatives had been established in the State covering about 80 per cent of the inhabited villages and 40 per cent of the population. Plans envisaged for the Second Plan when implemented will bring in 65 per cent of the rural families within the fold of co-operatives of all types. The Governor affirmed the decision of the Government to take up seriously the question of setting up service co-operatives the need for which had been stressed in the Congress resolution at Nagpur. Another significant achievement in the field of co-operation was the setting up of a land mortgage bank in the State. This bank, the Governor pointed out would perform functions similar to those performed by the finance corporations for industries.

The socialisation of the wholesale trade in foodgrains in accordance with the decision of the National Development Council would be the main business with which the Government would be preoccupied in the immediate future. While reiterating the Government's intention to take over wholesale trading in foodgrains the Governor also assured that his Government would willingly utilise all upright commercial talent available in the State for this purpose.

It also augurs well for the development of the State that the Bhakra Nangal, one of the major multi-purpose projects in the country, is fast progressing towards its completion. The irrigation potentialities of this project are great and would effectively solve the problem of irrigation to the cultivators in the State. In this connection, the Governor said that about 5,00,000 acre feet of water would be stored in the Gobind Sagar (Bhakra Lake) in the coming monsoon, for use in the subsequent winter. The first unit of the left power plant at Bhakra is also expected to go into operation in 1960.

NORTH INDIAN MARKETS

Sugar Prices Steady

SUGAR markets have been ruling very steady despite a marked decline in the prices of other commodities following the series of measures taken recently by the Government and the release of a further quantity of 1.65 lakh tons for free sale. This is mainly due to the fact that the demand for the sweet commodity has been much higher than the quota released by the Government can meet. Pre-Budget purchases are also reported to have been made on a heavy scale. In this respect, there are rumours that there may be an increase in the excise duty on sugar or a levy on khandsari, the output of latter having recorded a sharp increase recently.

It is not clear how the keen preference for factory sugar continues to be in evidence when the higher khandsari output has also been absorbed. It only goes to show that factory sugar is being used in increasing quantities by a larger section of the population. Fortunately, the strike by cane-growers in Uttar Pradesh particularly, which threatened to affect the working of a number of mills seriously at one stage, has petered out. But, the standing crop in Bihar is stated to have been affected by unfavourable conditions. It is again feared that the two major sugar producing States will not be able to manufacture up to their capacity on account of the inadequacy of cane supplies. It remains to be seen whether other regions will be able to offset any shortfall in these two States and bring about, at the same time, an increase in total output.

*

Gur

After a fall of about Rs 2 per maund following the ban on futures trading by the Government of India at the last weekend, ready Gur prices have again tended to go up due to brisk outside demand and the small arrivals of 2,500 maunds daily. The total arrivals, from the beginning of the season, are put at 4.80 lakh maunds as against 3.35 lakh maunds in the corresponding period of last year.

Meanwhile, the Hapur Chamber of Commerce has resolved the deadlock in squaring up the outstanding gur contracts and has fixed the settlement rate at Rs 15.48. The Chamber has framed new rules and regulation for conducting forward trading and forwarded them to the Forward Markets Commission for approval. Trading in the new gur contract is expected to start at Hapur by the first week of March.

Foodgrains

Thanks to very good "rabi" prospects and selling pressure from stockists, prices of Foodgrains have been developing a reactionary tendency in the Hapur market. Prospects are, that the Wheat crop, during the coming "rabi" harvest, will be appreciably higher than last year and may even be of the order of 10 million tons—an all-time record.

The first estimate of "rabi" cereals (wheat and barley) has shown an increase of 1.2 million acres during the current year as compared to the previous year. The increase in area has taken place mainly in Bihar, Madhya Pradesh, the Punjab and Rajasthan. In the Punjab, wheat acreage is expected to be of the order of 5.2 million tons as compared with 4.9 million tons last year. The figures for Madhya Pradesh are 6.9 million this year as against 6.7 million tons last year.

Under the lead of Gram which has registered a fall of about Rs 2.25 per maund, prices of all other foodgrains have drifted to lower levels. Wheat has recorded a fall of about Rs 2 per maund. However, the market for Rice has continued to rule steady as supplies are rather restricted due to ban on exports from the surplus districts. Despite good consumer demand, Maize prices have declined, as stockists are eager to liquidate their holdings before the new crop arrivals. Jowar prices have eased on advices from the South where prices have gone down appreciably. The fall in the price of this commodity is attributed to the good effect that timely winter rains are expected to have on the forthcoming gram crop.

*

Shellac

Thanks to the decision to continue minimum export prices, at least up to the end of August 1959, prices in the Calcutta Shellac market have developed a firmer tendency with Pure Tn quality having buyers upto Rs 72 per maund as against Rs 68 quoted during the past few weeks. Moreover, shipments, during the current month up to the 19th, are substantially higher at 24,988 packages as against only 19,072 packages in the corresponding month of January, reflecting an increase in the demand from foreign buyers.

There is, however, a general feeling that there will not be any spectacular rise in demand in the near future. This belief is based on three facts. First, the supply in the pipeline is adequate. Secondly, the supply prospects are quite promising. The Bysakhi crop, which is expected to arrive in a month's time, is likely to be bigger than in 1958. Thirdly, there has been a considerable increase in the Slamese crop. It will be interesting to watch further developments in the coming weeks when stocks are expected to accumulate due to storage difficulties.

MADRAS REVIEW

THE budget presented by the Andhra Pradesh Finance Minister Mr K. Brahmananda Reddi, bears the impact of the improvements that had been witnessed, since the formation of the Visala Andhra Pradesh, in the State's finances. Though, when born, the State was heir to chronic deficits and modest revenues, consequent on the recommendations of the Second Finance Commission and the tax reforms effected by the State Government, the State had attained a fair measure of financial stability so that it has, now, become possible to think in terms of implementing the State's Second Plan in full without leaving a shortfall. The State has already incurred an outlay of about Rs 90 crores in the first three years of the Plan, against the targeted outlay of Rs 175.74 crores. This works out to more than 50 per cent of the total outlay, which is a fair measure of success in implementing the State's Plan, considering that some of the States in the South are lagging behind with a proportion which does not even approach 50 per cent of the total targeted outlay.

The fact, that in the new budget no new tax measures have been announced or incorporated, is itself a measure of the improved financial conditions of the State. This is further borne out by the revenue surpluses for 1957-58 and 1958-59. For 1957-58, the revenue surplus was of the order of Rs 7.22 crores while the revised estimates of the surplus put it at Rs 3.12 crores. The increase in the surplus, Mr Brahmananda Reddi explained, was the result of the rise of Rs 1.24 crores in receipts and a shortfall of Rs 2.86 crores in the expenditure. Similarly against the budget estimate of Rs 79 lakhs as revenue surplus for 1958-59, the revenue

Andhra Pradesh Budget

surplus for the year had been placed at Rs 3.44 crores according to revised estimates.

In the budget for 1959-60, the revenue receipts are placed at Rs 71.29 crores, against actual receipts at Rs 62.33 crores for 1957-58 and revised estimates of receipts at Rs 68.23 crores for 1958-59. The increase is made up of anticipated increase in receipts from multiple sources such as State's share of income tax, Land Revenue, Registration, Irrigation, Central aid for expenditure on dearness allowance etc.

In tune with higher anticipated revenue receipts, revenue expenditure has also been proportionately increased to Rs 71.66 crores against actual expenditure at Rs 55.11 crores, in 1957-58 and revised estimates of expenditure at Rs 64.79 crores for 1958-59. This increase in revenue expenditure is the result of the increasing outlay that is being provided for schemes in connection with the Second Plan, though, part of the rise is accounted for by the increase in the provision for standing charges under ordinary heads. Plan expenditure has, for example, risen from Rs 8.81 crores in the Revised Estimates for 1958-59 to Rs 13.75 crores in the budget for 1959-60.

The budget is thus conceived and oriented towards implementing the State's Second Plan in respect of which there is a balance of expenditure to the tune of about Rs 86 crores to be incurred in the last two years of the Plan, if the targeted outlay of Rs 175.74 crores is to be covered. Though at one time a shortfall in expenditure was considered inevitable, due to the growing contribution of the State towards the resources for implementing the Plan, there has occurred a change for the better in the outlook for the State's

Second Plan. The resources of the State which at the time of the formulation of the Second Plan was calculated at Rs 51.10 crores has now been revised upward at Rs 68.50 crores. To that extent the responsibility of the Centre towards the State's Plan has been lessened. Praise could not be denied to the State Government in raising the provision for the third year of the Plan from the Planning Commission's allotment of Rs 31.16 crores to Rs 35 crores and in seeing that this was met from the current resources of the State without touching the reserves. Concern felt by the Government in implementing the Second Plan has worked in similar way in raising the provision for the fourth year of the Plan from Rs 37.66 crores as fixed by the Planning Commission to Rs 42.03 crores, which would leave a balance for a similar sum for the last year of the Plan. Thus at least, in hope the State's Second Plan stands practically covered.

The resources position though not unsatisfactory is not altogether bright, and, there is a gap of about Rs 3.61 crores in the resources for Plan expenditure for 1959-60. Against the outlay of Rs 42.03 crores, the total resources are placed only at Rs 38.42 crores. Similarly the ways and means position is also expected to turn worse in the years ahead. From the opening balance of Rs 4.91 crores as on March 1959, consequent on deficits on both revenue and capital accounts, the ways and means position is expected to reveal a minus figure of Rs 3.50 crores at the end of March 1960. Mr Brahmananda Reddi has stressed the need to wipe out this minus balance during the coming financial year so that it would not affect the resources position during

the last year of the Second Plan. But he has not indicated how this could be done. Additional taxation has not been included in the budget and perhaps, this points to the absence of scope for fresh taxation. The public debt liability is expected to rise by Rs 18.26 crores from Rs 169.57 at the end of March 1959, to Rs 187.85 crores at the end of March 1960. The mounting burden of public debt is also confessed to be a source of strain on the State's finances and relief that would be afforded by Centre's acceptance of the Finance Commission's recommendation for consolidation of State loans, is yet an elusive hope.

However, Mr Brahmananda Reddi has stated that the Telengana securities, forming Telengana's share of the investments of the Hyderabad State which accrued to the Andhra Pradesh Government, are intact. In this the Government have a source of money if only they could sell it off, as it had struck them at one time. Sentiments oblige the Finance Minister to utilise the Telengana money for the development of Telengana only. But, then, money from the common resources could be diverted for the development of the other areas of the States while utilising the Telengana money for its own exclusive purposes.

In the outlay on the Second Plan, for the fourth year, the major emphasis is on the development of irrigation and power. Out of a total outlay of Rs 28.30 crores under capital expenditure, irrigation and power alone account for about Rs 18.35 crores. The Nagarjunasagar Project alone claims about Rs 7.0 crores.

Provision of Rs 25 crores for the establishment of a fertilizer factory, is one of the important features of the capital budget. There has been some strong feeling in the State about the absence of a fertilizer factory and, on this score, the central Government has been made the target of attack at the hands of some people in the State. A fertilizer factory, for the State, in view of the position of the State as a major producer of foodgrains is a major need and should not be grudged whatever be the cost of the project. The Rs 25 crores now provided for in the budget is according to Mr Brahmananda Reddi, only a token provision, but, he is not much worried about the rupee capital that would be required to get the project going. This he says could be collected from the agriculturists who had evinced a keen interest in the starting of such a factory and who would stand to gain by the opening of such a factory in the State. The uncertainties about the project concern the foreign exchange part of it. And it is the shortage of foreign exchange that had made the Centre rather glum about starting such a factory even earlier.

THE PENINSULA

February 28, 1959

SOUTH INDIAN NOTES

Governor's Address

In his inaugural address to the Kerala State Legislative Assembly, Dr B. Ramakrishna Rao, the Governor indicated the lines of policy the Government have in view in various fields such as agricultural and foodgrain production, power generation, industrialisation etc. This policy is necessarily cast in the background of the various problems which press upon the economy of the State.

Of these problems, that of ensuring adequate supplies of foodgrains, especially rice to the population, in view of the chronic deficits in the State, necessarily occupies the foreground. It is little surprising that the State Government should wholeheartedly welcome the decision of the Centre to socialise wholesale trading in foodgrains. Dr Ramakrishna Rao, referring to this decision of the Centre, stated that the State Government are taking the necessary steps to license wholesale dealers, and fix wholesale prices for rice in the State.

The food problem is viewed as needing long term measures and hence the need for adequate supplies from the Centre to ward off short term scarcity, has been stressed by the Governor. On the existing arrangement for supplies to Kerala, the State Government and the Centre seem to have dissimilar views. For a final and permanent riddance from this chronic problem, a trebling of the present production of rice is envisaged.

No less severe than food deficits, is the problem of unemployment which is more widespread in Kerala than in any other State. The potentialities for popular discontent on this score are greater in this State than elsewhere for the reason that the State has of all the States in India, the largest percentage of educated and literate people. Industries have, therefore, been given importance among the measures for fighting this problem. The record of the State in this field is, however, not very flattering. and, in recent times, only one large-scale cooperative spinning mill at Cannanore has been set up. This factory, is expected to start production in the coming year.

In the solution of the unemployment problem the importance of small-scale and cottage industries has also been stressed. In this connection Dr Ramakrishna Rao referred to the need for stabilising the employment potential in such industries as handloom cloth, etc. The principle of organising cooperatives for running these industries has also been accepted.

Dr Ramakrishna Rao also referred to the Master Plan prepared by the Kerala Government for exploiting the water resources of the State both for purposes of irriga-

tion as well as for the generation of power. It is the implementation of this master plan that holds the key to the future development of the State.

Coffee Industry

An increase in exports over the years, has been one of the significant features of the coffee industry. From a level of 2,647 tons in 1948, exports of coffee had, in 1957 increased to about 14,000 tons. The improvement in the conditions of the industry, consequent on this increased exports has, however, not been substantial and a continuously rising internal production has set the need for further exploration of foreign markets. The need for increasing exports of coffee is further reinforced by the current shortage of foreign exchange. The urgent need therefore for stepping up exports of coffee was stressed by Mr Lal Bahadur Shastri, Union Minister for Commerce and Industry, while addressing the Coffee Board at Bangalore this week.

Considered from the point of Indian exports, conditions in the international market, are by no means favourable. An overstocked position, together with increase in production planned by other coffee producing countries threaten the international coffee market with slump conditions in the near future unless timely steps are taken to avert these effects. It is a consoling feature so far as Indian exports are concerned that these are mainly of recognised quality and should therefore fare better in international competition than coffee of inferior varieties. The export committee which has been constituted for studying techniques of marketing should also be able to do something in this matter.

Another problem with which the industry is at present concerned, is the impact of taxation at State and Central levels. There is at present a single-point sales tax of 5 per cent on coffee in the States of Mysore, Madras and Kerala. Since July 1957, the Centre has also been levying sales tax of 1 per cent on coffee. As Mr Lal Bahadur Shastri pointed it out the single point levies in the States, in the fact of their incidence on consumers, really amount to a multi-point levy as it travels from one State to another. As a way out of the hardship which such a multi-point levy involves to the consumers, it has been suggested that either the Coffee Board, should add a surcharge to the excise duty at the point of sale to cover the element of sales tax and distribute the proceeds to the States or in the alternative, the Centre should be responsible for the collection of the sales tax and its distribution among the States. Since the present Central Excise Duty on cloth, sugar and tobacco is the result of such an integration, there is no reason why similar facilities should not be extended to coffee also.

Mr Lal Bahadur Shastri has stated that the matter has been brought to the attention of the Finance Ministry.

SOUTH INDIAN MARKETS

Pepper Soft under Liquidation

PEPPER prices have developed a reactionary tendency from the recent high levels following the announcement of the imposition of a special margin in futures dealings. Weakness in other commodity markets is also a contributory factor. The Forward Markets Commission, with a view to curbing speculative excesses in this commodity, has imposed, with immediate effect, a margin deposit of Rs 15 and Rs 30 per cwt whenever the futures prices of the February, March or May 1959 delivery traded in the India Pepper and Spice Trade Association, Cochin, rise above Rs 125 and Rs 135 per cwt respectively. The margin deposits are payable by the members in respect of the long position held by them on their own account as well as on account of the clients. However, as the present crop of Malabar black pepper being less, growers do not show any anxiety to press sales.

Meanwhile, trade circles in Alleppy have urged that Alleppy should also be granted recognition by the FMC and permitted to have an independent "ring" for conducting the forward trading just as in the case of Cochin. The recent reduction in the freight on pepper exports is considered a good augury by the trading circles generally. While the year's poor crop owing to adverse climatic conditions is mostly responsible for the thin inflow of the commodity into the market, traders have regarded that these so-called manipulations of the big exporters also have a vital say in the acute scarcity of floating stocks now being experienced.

The scramble for stocks was so acute that, earlier in the season, the exporters were forced to buy about 250 tons from the Singapore market for the fulfilment of their American commitments. Last year's Russian purchases had totalled 4,000 tons and a like quantity was expected to be bought this year also. Out of this, 1,500 tons have already been taken up and the chances for their buying the balance of their requirements also from the Indian market itself are all the greater in that the Indonesian and Singapore crops will be only available by June/July. But, these sources have expressed pessimism about India's capacity to cope with these enquiries in the face of the persisting dearth of stocks being experienced now. In the matter of prices, best quality garbled pepper is now placed at Rs 127.50 per cwt as against Rs 85 quoted at this time last year.

In the New York market, Malabar spot is quoted around 25 cents per pound and scattered grinder demand is being noted. It is felt that, if Singapore exporters remain

firm, New York may soon be forced to pay full price demanded by the sellers, as India is unwilling to sell at the present prices. The future of the pepper market, on the whole, appears constructive in view of the good inland demand coupled with the prospect of fair-sized buying by Russia and the Continent despite poor New York buying.

Groundnut

A halt has been cried to the downward tendency in prices noticed in the Madras Groundnut market till the end of the previous week, although bigger buyers have been adopting a wait-and-see attitude. Superior oil qualities are being taken up around Rs 170 per candy, showing an improvement of Rs 3 over last week. Arrivals are, however, small and averaged about 25 tons per day.

In the Groundnut Oil section, sizable quantities are reported to have been taken up by Calcutta interests in ready and nearby deliveries. The rate for the ready position is quoted now at Rs 330 against Rs 223 per candy.

Hides and Skins

In the Madras Tanned Hides market, arrivals of cow hides are fair and there has been a steady clearance. Arrivals of Buff hides are normal and the market is unchanged with supporting clearance.

On the export front, there is a slight setback in the trading conditions, as UK buyers are bidding 1d per pound lower. Demand is confined to fifths. Some business is reported done at lower levels in light weights. In premium class Kips, light weights are steady; but other weights are difficult to sell at current asking levels.

In the Tanned Skins section, arrivals of both goat and sheep are fair and there has been a steady clearance of sheep at unchanged levels.

In the export section, there is some activity in prime class goat skins and business is done in 5 1/8 lbs at prices varying from 15sh 6d to 15sh 9d for runs. In market middle class sheep skins, support from the purchasing countries is weakening.

The market for Raw Hides and Raw Skins remain steady in all centres.

Bangalore Silk

Hesitancy in buying, evidently due to prevailing high prices, was observed on the part of the Weaving industry. This is noticeable in the slight reduction of rates in Charka silk for the week ended 19-2-1959. The supply position of raw silk, however, continued to be reported as meagre on account of dry weather.

Prices of reeling and seed cocoons in general did not reflect any noticeable change.

In view of the absence of any transaction in Silk waste, their prices have not been quoted.

Equilibrium on Budget-EVE

Watch-Dog Writes:

SENTIMENT in stock markets has remained distinctly cheerful during the week, although there is a general desire amongst the operators to keep commitments within reasonable limits of their capacity on the eve of the Budget. There is a general feeling that the Budget may not be as bad as was feared at one time.

Cheerful conditions were witnessed on the Calcutta Stock Exchange where the recovery in prices was more marked in the speculative and tea than in other scrips.

Although equities on the Bombay Stock Exchange attempted at rally,

operators were inclined to book profits at bulges, pending the outcome of the Budget.

The London Stock Exchange finished the week on a quiet note.

Prices on Wall Street showed an irregularly higher tendency, extending mostly to two dollars.

★

Calcutta

Friday Evening.

APART from Tea shares which changed hands at enhanced levels and a marked recovery in the speculative issues, conditions in other sections on the local Stock Exchange remained generally quiet. Although the uncertainty about the ensuing Budget continued to weigh on operators' minds, a few speculative elements continued to support the market, being encouraged by the persistent firmness in the preference shares and debentures. Moreover, the absence of fresh imposts in the Railway and State Budgets led to a feeling that nothing strictly bearish would happen.

Though mingled feelings prevail, yet one cannot say that the market is quite pessimistic about the

coming Budget. Judged from conditions prevailing now in the market, it appears that the stage has been set in for resumption of the upward march in values. If the Budget proposals do not contain any additional or fresh levy, equities are likely to start the movement for advance with all the possible strength. The snag is, of course, there. The Central Budget may or may not correspond to the trend revealed in the State or Railway Budgets.

Apart from State Loans which continued to be in good demand, the Gilt-edged market passed an unevenful week. With the money market tight, there was little enquiry. After opening at Rs 73.50, 3 per cent 1936 Conversion Loan improved at one time to Rs 74.50, to recede again at the close to Rs 74.20.

Bank shares were quietly steady with United Commercial changing hands at Rs 67.50 and Bank of Bikaner at Rs 27.87 to Rs 28.50.

The unexpected fall in hessian prices which had so far been ruling firm and the increase in stocks of jute goods despite a lower output, introduced a note of caution in the Jute section. Buying enquiry was confined to only a few selected scrips and prominent amongst these were Anglo-India quoting Rs 205; Alliance at Rs 119; Budge-Budge at Rs 130; India at Rs 15; Lawrence at Rs 112 and Nuddea at Rs 57. National were, however, offered further lower at Rs 25.25 against Rs 25.50; Howrah at Rs 18.69 against Rs 19.06 and Kinnison at Rs 181 against Rs 186.50.

Thanks to the reports of a rise in both raisings and despatches at various collieries, Coals ruled fairly steady. Hopes were also held that the recommendations of the Price Revision Committee would be realistic. Amalgamated were taken upto Rs 22.19 from Rs 22; Equitables upto Rs 30.31 from Rs 30.19; Central India upto Rs 7.47 from Rs 7.37; South Karanpura upto Rs 12.62 from Rs 12.25 and Western Bengal upto Rs 5.94 from Rs 5.87. Burrakar turned ex-dividend and changed hands at Rs 18.87 to Rs 17.31 xd (37 nP final).

Some selective support was in evidence in the Textiles section where Jayshree met with sustained enquiry upto Rs 8.65 from Rs 8.50 and Cawnpore upto Rs 4.37 from Rs 4.25. New Victoria were unchanged at Rs 1.25 with Kesoram a shade easier at Rs 11.87 against Rs 12.25 on lack of fresh support.

In the week's dealings, activity was prominent in the Tea section where scrips, especially of the Assam and Dooars gardens, changed hands at enhanced levels. Apart from the sustained demand for tea at the recent auctions and the anticipation of an improvement in the working results of companies for last year, it was believed that, in framing the Budget proposals, the Finance Minister might reduce the fiscal burden on Common grades. Baghmari changed hands at Rs 21.25 to Rs 21.75 (Rs 21.37); Bhatkawa at Rs 23.12 to Rs 23.37 (Rs 19.87); Bishnauth at Rs 19.62

to Rs 20 (Rs 19.87); Dhunseri at Rs 16.94 to Rs 17.25 (Rs 15.25) Hasimara at Rs 22.75 to Rs 23.21 (Rs 21.62); Jayshree at Rs 12.31 to Rs 12.50 (Rs 12.25); Sungma at Rs 17.69 to Rs 18 (Rs 18) and Tespori at Rs 15.94 to Rs 17 (Rs 15.75). Fl

BRAITHWAITE & CO (INDIA) LIMITED.

NOTICE is hereby given that the twenty-ninth Ordinary General Meeting of Braithwaite & Co (India) Limited will be held at the Registered Office, 4, Clive Row Calcutta—1, on Monday, the thirtieth day of March, 1959, at 12.00 noon to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December 1958.
2. To declare a Dividend.
3. To elect Directors.
4. To re-appoint Auditors and fix their remuneration.

The Transfer Books of the Company will be closed from the 16th March, 1959 to the 30th March 1959, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and the proxy need not be a member.

Payment of Dividend as may be declared will be made to those members whose names are on the Company's Register on the 30th March, 1959.

By Order of the Board,

Y. S. TAYAL,
Secretary.

MARTIN BURN LIMITED.

NOTICE.

At a meeting of the Board of Directors of Martin Burn Ltd. held on the 20th February, 1959, the Directors have recommended the payment of a dividend at the rate of Rs. 1.75 nP. and a cash bonus of 37 nP. per share both without deduction of Income Tax payable by the Company, on the Ordinary Shares of the Company ranking for dividend for the year ended 30th September, 1958. These recommendations await sanction by the shareholders at the Annual General Meeting of the Company to be held on Thursday, the 26th March, 1959.

The Ordinary Share Register of the Company will be closed from the 19th to 26th March, 1959, both days inclusive, and the dividend and cash bonus, if sanctioned, will be paid on or after the 20th April 1959.

By Order of the Board,
MARTIN BURN LIMITED,
A. G. GIDLEY,
Secretary

12, Mission Row,
Calcutta,
20th February, 1959.

figures shown within brackets are the closing rates for the previous week.

Sugar shares continued to be a neglected counter although one or two scrips emerged with minor gains on balance. There was a general reluctance to enter into commitments, pending a decisive turn in the sugar situation. Carew were on offer at Rs 8.44 to Rs 8.62; Cawnpore at Rs 10.12; Ramnugger at Rs 18.75 to Rs 19.06 and SKG at Rs 9.24 to Rs 10.06.

Engineering shares were generally active under the lead of Indian Irons which, in turn, recorded fresh higher levels on renewed speculative support. Despite settlement considerations, Indian Irons steadily advanced from the opening level of Rs 25.99 to Rs 26.20 on Wednesday when the settlement rate was fixed at that level. From Thursday, dealings started on an ex-right basis and the scrip changed hands at 22.06 to Rs 22.20, to finish the week at Rs 22.14. The new shares changed hands at Rs 20.75 to Rs 21.10. TEXMACO closed at Rs 20.90 after touching a low of Rs

MARTIN BURN LIMITED.

NOTICE.

The Annual General Meeting (being the Thirteenth Ordinary General Meeting) of the Shareholders of Martin Burn Limited, will be held on Thursday, 26th March, 1959, at 12 noon at the Registered Office of the Company, 12, Mission Row, Calcutta, to transact the following business:

1. To receive and adopt the Audited Accounts for the year ended 30th September, 1958, and the Directors' and Auditors' Reports thereon.
2. To declare a Dividend and Cash Bonus.
3. To appoint a Director in place of the retiring Director.
4. To appoint Auditors and to fix their remuneration.

The Ordinary Share Registers of the Company will be closed from 19th to 26th March, 1959, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

By Order of the Board,

A. G. GIDLEY,
Secretary.

Calcutta,
28th February, 1959.

NOTE—The Dividend and Cash Bonus, if sanctioned, will be paid on or after 26th April, 1959, to those Shareholders so entitled whose names appear in the Company's books on the 26th March, 1959, or to their mandatees. No application for dividend warrants will be necessary.

20.75 and a high of Rs 20.95, while G. K. Williams were done at Rs 37.12 to Rs 37.44; Jessop at Rs 25.31 to Rs 25.50 and Kumardhubi at Rs 8.81 to Rs 8.87.

Miscellaneous issues were generally firm due to scattered investment support at the recent low levels. Dealings were active in BIC which touched a fresh higher level of Rs 5.75 from Rs 4.25 in anticipation of better working results for the current year following rumours of the management being taken over by a Government official. Orient Paper were taken upto Rs 31.45 from Rs 31.20 (Rs 31.40); Tittagur upto Rs 42.25 from Rs 42.12 (Rs 42.12); Shree Gopal upto Rs 15.81 from Rs 15.56 (Rs 15.81); Silpur upto Rs 13.19 from Rs 12.50 following the increase in dividend (Rs 13.19); India Steamship upto Rs 14.25 from Rs 14.06 (Rs 14.19); Indian Cable upto Rs 28.34 from Rs 28.87 (Rs 28.94); Indian Aluminium upto Rs 17 from Rs 16.81 (Rs 17.00); Indian Oxygen upto Rs 24.62 from Rs 23.62 (Rs 24.62); Hindustan Motors upto Rs 7.87 from Rs 7.50 (Rs 7.87); Indian Copper upto Rs 3.62 from Rs 3.55 (Rs 3.60); Alkali Chemicals upto Rs 19.12 from Rs 18.87 (Rs 18.87); Karanpura Development upto Rs 12.75 from Rs 10.94 (Rs 12.25); Dunlop upto Rs 29.75 from Rs 29.44 (Rs 29.50); Rohtas upto Rs 18.81 from Rs 18.75 (Rs 18.75) and Sone Valley upto Rs 5.19 from Rs 5.00 (Rs 5.12). Figures shown within brackets were the week's closing rates.

★

Bombay

THE stock market displayed an irregular trend as trading was influenced by various rumours about the Central Budget due to be presented on the last day of the week. The undertone was quietly steady reflecting the general belief that the budget would not disclose any increase in direct taxation. The possibility of an increase in indirect taxation was not ruled out and in this regard market gossip put rayon as an item that might attract the attention of the Finance Minister. Optimists among marketmen seemed to expect even some minor relief under direct taxation. The Prime Minister's reiteration that a ceiling on income was not feasible was considered a favourable factor. The support for Indian Irons from Calcutta in mid-week aided sentiment in Dalal Street also but toward close prices shed part of their earlier gains on profit-taking.

In the Steel section Tata Steel closed on Monday lower on balance at Rs 173.00 against week-end closing of Rs 173.50. The rate was further down by close of Tuesday at Rs 172.75 due to lack support. The scrip gained 75 nP in the course of the next day's trading in sympathy with Indian Irons to be finally placed at Rs 173.50. Profit-taking however reduced the rate on Thursday to Rs 172.50. After remaining quiet in earlier dealings Indian Irons steadied up to close on Thursday at Rs 26.20 on higher advices from Calcutta.

In the textile section selected shares were in request in earlier dealings but the close was rather quiet. Bombay Dyeing was initially quietly steady at Rs 57.10 but in later dealings moved both ways to close easier on balance at Rs 56.90. Century met with some inquiry but finished easier on balance at Rs 435. Kohinoor moved in a similar fashion to turn quiet by close at Rs 236.50.

In the Miscellaneous section automobile shares met with some speculative support. Hindustan Motors finished at Rs 7.84 as against previous week's closing of Rs 7.64. Premier Automobiles was a bright spot moving up to Rs 93 from Rs 89.50. Telco advanced to Rs 167.75 from Rs 165. National

Rayon was easier at Rs 239.50 on rumours of excise duty on the commodity.

★

Madras

CAUTION was the keynote of trading on the Madras Stock Exchange. Selective buying was noticed in the Planting and Miscellaneous sections.

TEXTILES: This section continued to remain steady with small business. Cambodias were bid higher at Rs 8, while Maduras met with better enquiry at Rs 25.20. Loyals were done at Rs 24.70; Anglo-French at Rs 70.50 and Venkatasa at Rs 116.25. Travancore Rayons were quiet and fluctuated narrowly between Rs 16.60 and Rs 16.70.

THE UNITED COMMERCIAL BANK, LIMITED

Registered Office: 2, India Exchange Place,
CALCUTTA—1.

NOTICE

NOTICE IS HEREBY GIVEN that the SIXTEENTH ANNUAL GENERAL MEETING of the Members of THE UNITED COMMERCIAL BANK, LIMITED, will be held at the Registered Office of the Bank at 2, India Exchange Place, Calcutta, on Thursday, the 2nd day of April, 1959, at 4 P.M. to transact the following business:

1. To receive and adopt the Report of the Directors and the Audited Balance Sheet as on 31st December, 1958 and Profit & Loss Account for the year ended 31st December, 1958;
2. To declare a dividend;
3. To appoint two Directors in place of Mr. T. S. Rajam and Mr. G. L. Bangur who retire under Article 92 of the Articles of Association of the Bank and, being eligible, offer themselves for re-appointment;
4. To appoint a Director in place of Mr. M. L. Dahanukar who retires under Article 92 of the Articles of Association of the Bank, and to consider and, if thought fit, to pass the following resolution, of which special notice, as required by Section 281 of the Companies Act, 1956, and in accordance with Section 190 thereof, has been received by the Bank:

"Resolved that Mr. M. L. Dahanukar, who has attained the age of 69 years, be and is hereby re-appointed a Director of the Bank and that the age limit, prescribed under Section 280 of the Companies Act, 1956, shall not apply to him";

5. To appoint a Director in place of Mr. P. D. Himatsingka who retires under Article 92 of the Articles of Association of the Bank, and

to consider and, if thought fit, to pass the following resolution, of which special notice, as required by Section 281 of the Companies Act, 1956, and in accordance with Section 190 thereof, has been received by the Bank:

"Resolved that Mr. P. D. Himatsingka, who has attained the age of 69 years, be and is hereby re-appointed a Director of the Bank and that the age limit, prescribed under Section 280 of the Companies Act, 1956, shall not apply to him"; and

6. To appoint auditors for the current year and to fix their remuneration.

NOTE:—

1. A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a Member.
2. (a) The transfer books of the Bank will be closed from Monday, the 16th day of March, 1959 to Thursday, the 2nd day of April, 1959, both days inclusive.
- (b) The dividend, if sanctioned, will be payable on and after the 3rd April, 1959, to those Shareholders whose names appear in the Register of Members on Thursday, the 2nd day of April, 1959.
- (c) Dividend Warrants will be posted to Members at their registered addresses or in accordance with their mandates. Members are requested to advise change in their addresses, if any.

By Order of the Board,
S. T. SADASIVAN,
General Manager.

Calcutta,
6th February, 1959.

RESERVE BANK OF INDIA

Applications are invited for the posts of Research Officers in the Bank's Department of Research and Statistics at Bombay.

SCALE OF PAY: Rs. 375-55-815 E.B. 55-925-60-1045. In addition to pay, the selected candidates will be eligible to draw Local Pay, House Allowance and Dearness Allowance at the rates prescribed by the Bank from time to time.

Candidates possessing exceptionally good qualifications and experience of value to the Bank may be given a higher starting pay in the prescribed scale.

Appointments to the above posts will be made on a temporary basis in the first instance but are likely to be made permanent.

Candidates should not ordinarily be over 30 years of age as on 1st March 1959. The age limit may be extended upto 35 years in the case of candidates with exceptionally good qualifications and/or research experience of value to the Bank.

QUALIFICATIONS: (i) First or high second class M.A./M.Sc. in Statistics/Mathematics of an Indian or foreign university or an equivalent qualification. (ii) Experience in the application of statistical methods to economic problems. (iii) Research experience in one or more branches of applied statistics like sampling econometrics, etc. A doctorate in statistics, experience in handling of official statistics etc. will be considered as additional qualifications.

Applications should be in a special form obtainable from any office of the Reserve Bank of India. All the applications should be

accompanied by copies of certificates regarding age and educational qualifications and two testimonials (originals should not be sent, the Bank does NOT accept responsibility for returning the originals if sent through oversight) and should be forwarded to the Secretary, Central Recruitment Board, Reserve Bank of India, Central Office, Post Box 406, Bombay, so as to reach him on or before Saturday the 14th March 1959. Candidates already in service must submit their applications through their employers. Candidates belonging to the Scheduled Castes/Scheduled Tribes should mention this fact prominently on their applications and also enclose a copy of certificate to that effect from a competent authority.

Applicants must remit along with their applications an application fee of Rs. 7.50 (Rs. 1.75 in the case of Scheduled Castes/Scheduled Tribes candidates) by Postal Order, Cheque or Bank Draft on a Scheduled Bank payable at Bombay. The application fee is in no case refundable. Bonafide unemployed Refugee candidates applying through any of the Government Employment Exchanges are exempted from payment of the application fee.

Appointments will be subject to candidates being found medically fit for service in the Bank by the Bank's Medical Officer.

Apart from those who may be specially called, interviews will not be granted to candidates nor will the Bank enter into correspondence with them.

Canvassing in any form will be regarded as a disqualification.

PLANTINGS: In this section, Tea shares came in for good support following the better prices obtained at the Cochín auction. United Nilgiris moved up further to Rs 18 due to sustained interest, while Halleyburlas were in request at Rs 17. Kalasas were done at Rs 3.55 and Chembras at Rs 3.50.

Sentiment in the Rubber section remained subdued, particularly in Cochín Malabar and Travancore, which were marked down to Rs 5.80 and Rs 7.60 respectively. Be Bes came in for some selling at the market rate with Trumbadis quoting around Rs 1.85 c.d.

Among Coffee shares, Coffee Lands were done higher at Rs 21.62, while Ouchterlony maintained some interest at the market rate. Consolidated met with business at Rs 19.70 and Pullangodes at Rs 1.90.

MISCELLANEOUS: This section provided a few firm spots. Most prominent were Aluminium Industries, which maintained the rate at Rs 18.50 and so also FACTS at Rs 7.50. Good enquiry was noticed in Orissa Cement upto Rs 13.24. Ruby Rubbers were done at Rs 9.70. Travancore Cements at Rs 8.90; Andhra Cements at Rs 9.70; Mettur Chemicals at Rs 11.90 c.d. and Parry's Confectionery at Rs 3.90.

London

THE London Stock Exchange displayed an irregular appearance; but the undertone remained firm, being helped by the advance in prices on Wall Street.

Industrials were generally irregular; but a number of individual features reflected investment comment. Oil shares were quiet, while there was very little interest in Rubber and Tea shares. There was, however, a renewed demand for Platinum shares in response to the fresh rise in the price of the metal. Gilt-edged securities lost their recent better tone and were distinctly easier following a sharp rise in the week's Treasury Bill rate.

New York

PRICES on Wall Street showed an irregular higher tendency, extending mostly to two dollars last week. Trading was active in Steels, Chemicals, Coppers and Rubbers. However, profit-taking curtailed the market from advancing higher. Some technicians said, that the tendency of Rails to hesitate might prevent further gains in the market until Rails were able to follow the move of industrials. Anaconda Copper was quoted at \$7.18; General Motors at \$48½ and U. S. Steel Common at \$94½.

INDUSTRIAL INFORMATION

INDEX NUMBER OF WHOLESALE PRICES IN INDIA (REVISED SERIES)

Review for the week ended Magh 18, 1880 (February 7, 1959).

The official wholesale price index (with the year ended March 1953 as 100) rose by 0.7 per cent to 114.5 during the week ended February 7, 1959 as against 113.7 for the previous week. The index was higher by 2.4 and 10.0 per cent respectively when compared with the corresponding weeks of the previous month and of a year ago.

The index for 'Food Articles' advanced by 1.0 per cent to 117.4 due to a rise in the prices of Pepper Black and Turmeric (+18% each), Ghee at Bombay (+10%), Masur and Betelnuts (Calcutta) (+8%), at Raipur and Balasore (+7% each) and at Ranchi, Jamshedpur, Chipian and Trivandrum (+5% each), Ragi at Ghoti (+8%). Gram at Patna, Arhar, Urad and Bananas both at Bombay, Cashewnuts (Indian) at Quilon and Gur at Muzaffarnagar (+7% each), Wheat at Moga and Chandausi and Potatoes (+5% each), Jowar, Maize and Mustard oil (+4% each), Mung (+3%), Groundnut oil (+2%) and Gingelly oil and Cardamoms (+1% each), although the prices of Rice at Nellore (newcrop) (-16%) and at Jey-pore (-11%), Onions (-13%), Bananas as Nagpur (-9%) Urad at Patna (-8%), Bajra at Jodhpur and Chillies at Calcutta (-6% each), Wheat at Rewa (-5%), Tea for internal consumption (-2%) and Barley, Coconut oil, Eggs and Salt (-1% each) showed declines.

The index for 'Tobacco' receded by 0.3 per cent to 104.9 as compared with 105.2 (revised) for the earlier week as a result of a fall in the prices of Tobacco raw.

An increase in the prices of Diesel oil (+5%) and Castor oil (+1%) was responsible for a rise in the index for the 'Fuel, Power, Light and Lubricants' group by 0.3 per cent to 115.2 during the week.

Higher prices of Tanning Materials—Avaram Bark (+11%), Rapeseed at Delhi (+9%), Hides raw-wet salted (Cow) at Kanpur (+6%), Gingelly seed (+4%), Castorseed (+3%) and Cotton raw, Silk raw and Groundnuts (+1% each) raised the index for 'Industrial Raw Materials' by 0.6 per cent to 116.9 as compared with 116.2 (revised) for the previous week. The prices of Jute raw at Barpeta Road (-6%) and Wool raw (-1%), however, moved down.

The index for 'Intermediate Products' stood at 110.5 as against 110.4 for the earlier week. The prices of Coir Yarn-Superior Aratory at Alleppy (+6%), Zinc (+4%), Tin (+3%), Rayon yarn (+1%), Brass (-2%) and Linseed oil (-1%) showed variations.

The index for Finished Products worked out to 108.3 as compared with 108.4 for the previous week. The

prices of Aluminium Utensils (+3%), Oil cakes (+1%) and Jute manufactures and Bricks and Tiles (-2% each) indicated variations.

INDEX NUMBER OF WHOLESALE PRICES BY GROUP AND SUB-GROUP OF COMMODITIES.

LAC PRODUCTION IN INDIA TARGET FIXED AT RANCHI MEETING.

The target of production of lac in India has been tentatively fixed at 17 lakh maunds at the end of the Third Plan period. This decision was taken by the Governing Body of the Indian Lac Cess Committee which concluded its sitting at Namkum, about five miles from Ranchi, yesterday. Dr B. N. Uppal, Agricultural Commissioner to the Government of India, presided over the meeting which was attended by the representatives of lac cultivators, manufacturers and State Governments. The Committee set up a seven-man sub-committee to prepare a blueprint of research and development projects of lac for inclusion in the Third Plan. The Committee felt that greater attention should be given to produce better quality lac in order to step up exports and also to counter growing competition from abroad.

It was proposed to intensify research on constitution of shellac by establishing centres of research in national and university laboratories. The Committee approved the setting up of a production unit for the manufacture of bleached shellac, photo mounting tissue paper and autoclave shellac. This unit would demonstrate commercial possibilities of manufacturing these articles and would be self-financing.

With a view to stepping up internal consumption of lac three publicity units for french polish would be established. Immediately a centre would be set up at

Delhi as an experimental measure for one year at an estimated cost of about Rs 18,000/-.

In order to encourage research on lac production and utilisation a prize scheme was accepted in principle by the Committee.

The Committee endorsed the proposal to set up a museum of lac products at the Indian Lac Research Institute. It also decided to set up a pavilion showing various phases of production and uses of shellac at the proposed International Agricultural Fair to be held at Delhi sometime in January-February 1960. For this purpose the Committee approved an expenditure of Rs 25,000.

SHELLAC PRICES.

A report of the difficulties of manufacturers and consumers of lac in India prepared by the Shellac Utilisation Officer, Indian Lac Research Institute, placed before the Committee, recommended that prices of shellac should be stabilised at about Rs 85-100 at Calcutta. This would ensure fair prices to producers and also avert rapid fluctuations of prices in the market. "This may be brought about by statutory fixation or better still by establishment of a central purchasing organisation like what was done for foodgrains. There should be quality control and no lac should be permitted to be exported out of the country if it is below a declared specification", the report added.

It was also suggested that central testing laboratories be established in Calcutta with regional testing laboratories in various manufacturing centres for easier testing and facilitating the trade.

In order to improve the system of forecasting of lac, a sub-committee was set up.

It was pointed out at the meeting that cultivators were not getting fair prices for their produce though the minimum export price for shellac had been fixed by the Indian Lac Exporters' Association. A member urged that several factories be set up for utilization of by-products like Kiri and Molamma and other refuse lac.

A new Executive of the Indian Lac Cess Committee was set up with Dr B. N. Uppal as Chairman.

SEVEN HUNDRED SMALL UNITS RECEIVE LOANS FROM STATE BANK OVER 50 INDUSTRIES COVERED.

Nearly 700 small industrial units, engaged in over 50 different lines of manufacture, have secured loans under the State Bank of India Scheme for providing credit facilities to small industries.

By the end of December 1958 the Bank had sanctioned advances of about Rs 2.38 crores to these units. The scheme was first put into operation in April 1956 in nine selected centres and was gradually extended. Recently, it has been extended to all the branches of the State Bank throughout India.

Credit facilities are extended under the scheme to small units—these with a capital of less than Rs 5 lakhs and employing less than 500 workers—if power is used or less than 100 workers if power

s not used. The advances are made for working capital against the pledge of raw materials and/or finished or semi-finished goods.

The largest single group of industries which have taken advantage of this scheme are machinery and engineering units. In the Madras circle of the State Bank of India, 89 minor engineering units have availed of this facility. In the Bombay circle 36 engineering, cutlery and automobile units benefited by this scheme, while 26 units making hand-tools and machines and machinery parts took advantage of the scheme in the Bengal circle. As many as 60 foundry and engineering works in the Delhi circle have benefited.

The range of industries to which the loan facilities have been extended is very wide and covers practically all items of everyday use as well as machinery and machine parts. From units manufacturing aluminium utensils and umbrellas ribs to these making chemical plants and electrical furnaces, are covered by the scheme. There are also manufacturers of card board boxes, bread and biscuits, preserved foods, soap, matches, boot polish, textile articles and carpets.

Circlewise, 252 units engaged in 36 different types of industries were advanced Rs 83.1 lakh in Delhi circle. In the Madras circle 238 units covering 25 different industries received nearly Rs 68 lakhs. In the Bombay circle 105 units spread over 17 different industries or group of industries were advanced Rs 55,85,400. In the Bengal circle 101 units received Rs 30.44 lakhs and the industries covered were 33.

HOW INDIAN ARE "MADE-IN-INDIA" MACHINES.

How Indian are "Made-in-India" machines and engineering products of everyday use?

A study made by the technical officers of the Ministry of Commerce and Industry has shown that a high degree of indigenous content has been achieved in their manufacture. The percentage of imported components used in these products is being gradually eliminated.

The manufacture of these articles involves complicated technical process and calls for special technical skill.

A substantial number of machinery items are now 100 per cent Indian. Among these are tea machinery, electric transmission towers, electric motors, electric fans and lamps, cables, batteries, switches and conductor.

Among other products, which are now cent per cent swadeshi, are clocks, sewing machines and hardware.

A large number of machines and engineering items have reached almost complete indigenous development, the imported components being less than 10 per cent. Among these are railway wagons and coaches (95 per cent), boilers, water softeners, water purification plants (92-98 per cent), fluorescent tubes (95 per cent), bicycles (95-98 per cent), zip fasteners and snap fasteners (99 per cent), pressure stoves, ball-bearings and fountain pens

Imported machine tools, like lathes, shaping machines, presses as well as items of cotton textile machinery like carding engines, spindles and draw frames have also reached an indigenous content of over 90 per cent. Most of these items will be 100 per cent Indian in the next two years with the elimination of the remaining imported components.

Several other machinery items have more than 75 per cent indigenous contents. Among these are alcohol distilleries (80 per cent), sugar manufacturing machinery, diesel engines (80 per cent), pumps (90 per cent), transformers (80 per cent), switch gear (80 per cent), heavy transformers (75 per cent), radial drills (80 per cent), bolting house machinery (80 per cent) and ring frames (80 per cent).

The wide variety of articles of everyday use are becoming increasingly more indigenous. Thus radio sets have 60 per cent Indian components, electrical household articles 75 per cent, typewriters 78 per cent, water meters 75 per cent, electrical house service meters 80 per cent and instruments 80 per cent.

The indigenous content of automobiles has also been increasing. In the case of cars it varies from 36 to 64 per cent and the average content for trucks is about 50 per cent. Jeeps are now 64 per cent Indian. Motor-cycles and scooters are made in India to the extent of 40 per cent. In the next two years, the indigenous content of all these vehicles will increase to 80 per cent or more.

The progressive "Indianisation" of different machinery and engineering products is being achieved through phased programmes of developing indigenous contents. No industrial scheme is approved by Government without the entrepreneur agreeing to adhere to a phased programme so that the article becomes completely Indian in a period of three or four years.

The implementation of the programme is checked periodically to ensure compliance with it. At the same time technical officers of the Ministry of Commerce and Industry guide and help the industrialists in achieving indigenous production.

It is estimated that the production of heavy industrial machinery, including many of the items referred to above, will be of the order of Rs 80 crores during 1959. Of this the indigenous content will be 80 per cent.

Some of the basic raw materials, which are not yet manufactured in India and have, therefore, to be imported, are not taken into account in determining the indigenous content.

GREEN MANURE FOR INCREASED AGRICULTURAL PRODUCTION.

A report received by the Planning Commission from the Agricultural Research Station, Pattambi, Kerala, confirms the efficacy of green manure in stepping up grain production.

At the Agricultural Research Station, Pattambi, a little over a lakh of plants were planted in 1954. Before the introduction of these plants, leaves used to be cut from

miscellaneous trees on the farm or purchased. In the case of purchase, the cost came to 62 naye paise per hundred pounds and when cut from big trees, the labour charges worked out to 25 naye paise per hundred pounds. The successful establishment of two plants (Glyricidia and Indigofera) has altered the situation. The yield of leaves in the 1954-55 season was 33,500 pounds. In 1956-57, the production went up to 3,68,628 pounds, while the cost of gathering was reduced to 16 naye paise per hundred pounds. To-day about three times this quantity are being obtained.

Before the year 1954-55, green leaf was supplied to fields at 2,000 to 4,000 pounds per acre, the rest of the nitrogen going in as ammonium sulphate. Each acre required 75 to 100 pounds of sulphate. To-day, the application of green manure has been stepped up to 5,000 to 7,000 pounds per acre and this has enabled a reduction of the required ammonium sulphate to fifty pounds per acre.

With the application of green manure, the average annual per acre production of paddy went up from 1,479 pounds in 1953-54 to 2,247 pounds in 1956-57.

The Planning Commission has been paying special attention to the development of organic manure resources and is constantly in touch with the State Governments on this matter. Several States all over India are actively pursuing the programme for increased production of green manure. In Kerala, the target for 1958-59 was one crore plantings of Glyricidia. Though the campaign was launched only in June 1958, the whole year's target has already been exceeded by two million plantings so far.

EXPLOITATION OF OIL RESERVES IN UPPER ASSAM.

Oil India, a partnership between the Government of India and Burmah Oil Company, was incorporated today in Shillong as a Rupee Company. The new Company will take over the operations in the areas of Nahorkatiya, Hoogrija and Moran in Upper Assam.

With proved resources the Company will open a new chapter in the development of the mineral wealth of the country.

The Oil India Private Ltd. will be owned by the Government of India (1/3rd of the total share) and the Burmah Oil Company/Assam Oil Company (2/3rds of the share).

Mr W. P. G. MacLachlan of the Assam Oil Company will be the Chairman of the Board of Directors. Among other members are: Mr K. K. Sahni, Joint Secretary, Ministry of Steel, Mines & Fuel, Rana K. D. Singh, Mr K. B. Kanungo, Mr R. W. Wachter and Mr G. N. S. Robertson.

An agreement between the Government of India and the Burmah Oil Company on the formation of the Rupee Company was signed on January 14, 1958.

The new Company will produce oil and deliver it to the two refinery terminals. The two refineries which will process the crude oil produced by Oil India are to be owned by the Government of India. One will be located in Assam and the other will be at Barauni, Bihar.

The new Company will operate at Nahorkatiya, Hoogrija and Moran in Upper Assam, where 48 wells have already been drilled. All the wells excepting 8 are oil producing. The proved and probable reserves of Nahorkatiya and Moran are sufficient to produce 25 lakh tons of oil per year after completion of the pipeline and the refining facilities.

INDIAN RAILWAYS' "SHOPPING" BILL LAST YEAR.

The "Shopping" bill of the railways went up to Rs 60 lakhs daily in 1957-58, compared to Rs 47 lakhs per day in the previous year, and Rs 19 lakhs in the first year of the First Plan, according to official statistics now released.

The railways are the nation's biggest single buyers of materials produced within the country. During 1957-58, they purchased from indigenous sources a vast variety of stores, valued at Rs 158.48 crores, compared to only Rs 68.34 crores in 1951-52.

Out of every Rs 100 spent by them on stores purchase, as much as Rs 71 were spent on indigenous products. The total stores bill during 1957-58 increased by 29 per cent compared to the previous year, to Rs 221 crores.

Purchases of khadi, too, went up by 15 per cent, to Rs 62 lakhs. Those of cottage and small scale industry products increased to Rs 3.58 crores.

ASSESSMENT OF SURPLUS MACHINERY

The Government of India has appointed a Special Officer to assess the availability of capital equipment and spare parts, which are surplus with the irrigation and power projects, and to suggest ways of ensuring their optimum utilisation for the benefit of the country.

This is specially important in the context of shortage of foreign exchange and consequent restrictions in the import of machinery from abroad.

Shri S. D. Khungar, retired General Manager, Bhakra Nangal Project, has been appointed Consultant for this purpose in the Union Ministry of Irrigation and Power.

Shri Khungar will make a quick appraisal of availability of surplus machinery and spare parts on the more important projects, such as Bhakra Nangal, DVC, Hirakud, Tungabhadra, Mayurakshi, Kansabati, Chambal, Kosi, Nagarjuna Sagar and others.

He will also indicate how best surplus machinery and equipment could be transferred to other projects undertaken by the Government.

EXPANDED TECHNICAL ASSISTANCE PROGRAMME

Proposals embodying details of technical assistance required during 1960 in executing agricultural development schemes have been called for from the States by the Union Ministry of Food and Agriculture.

The proposals to be eventually incorporated in a comprehensive schedule of technical assistance required under the FAO expanded technical assistance programme, have to be prepared in two broad categories. Under Category One projects which are assigned highest priority are to be included and under Category Two those projects are to be listed which are of considerable importance but their implementation would be subject to availability of funds after schemes under Category One have been put through.

Under the programme, FAO provides technical assistance to the country in the field of food, agriculture, animal husbandry, fisheries, nutrition and allied subjects. The assistance is in the form of assignment of experts, training of personnel abroad and supply of equipment, either ancillary to the requirements of experts assigned to India or for experimental and research purposes.

CEILING PRICES OF INDIGENEOUS SODA ASH

The Government of India have decided that the ceiling prices of indigenous soda ash should be Rs 18.50 nP per cwt. if purchased at the factories and Rs 19.00 per cwt. if purchased at the ports. These prices come into force from today.

Consumers will be free to buy soda ash according to their choice, either ex-ports, as at present.

These prices also have the approval of the Tariff Commission.

The selling prices of soda ash until recently were Rs 19.00 per cwt. ex-works and Rs 19.50 nP ex-ports in the case of one of the manufacturers and Rs 18.75 to Rs 18.88 ex-works and Rs 19.00 ex-ports in the case of the other factory.

The ceiling prices of indigenous soda ash now fixed have been settled after discussion with representatives of the two manufacturers.

The State Trading Corporation recently reduced the selling price of imported soda ash from Rs 19.50 nP per cwt. to Rs 19.00 per cwt. ex-ports. The price came into effect from February 9.

PRODUCTION OF LEAD AND ZINC ORES IN INDIA IN 1958.

The production of lead and zinc ores in India during 1958 was 119,556 tons as against 95,462 tons in 1957, according to the figures available from the Indian Bureau of Mines. This represents an increase of about 25 per cent over the previous year.

The entire production was reported from the Zawar mines of Udaipur district, Rajasthan.

The recovery of lead and zinc concentrates during 1958 amounted to 5,257 tons and 7,245 tons respectively as compared to 4,850 tons and 7,469 tons during 1957.

The lead concentrates are sent to the smelting plant at Tundoo in Bihar. In the absence of a zinc smelter in India, zinc concentrates are sent to Japan for smelting.

RELEASE OF SUGAR STOCKS FOR SALE.

The Government of India have released a further quantity of 1,65,000 tons of sugar for sale in the market. In the case of the factories situated in UP, North Bihar and the Punjab, the sales are to be effected at prices not higher than the ex-factory price fixed in the Government of India Notification dated December 22, 1958.

PERMANENT FOUNTAIN PEN INK DRAFT STANDARD ISSUED.

The Indian Standards Institution has issued, for eliciting comments, a draft specification for fountain pen ink, permanent.

The draft standard prescribes the requirements and the methods of sampling and tests for fountain pen ink for permanent records.

It may be recalled that a draft Indian standard specification for ferro-gallo tannate fountain pen ink, colour as required, was issued in October 1958. That draft covers fountain pen inks, required for producing semi-permanent records which are not likely to be required after about ten years.

For records which are expected to be of more permanent nature, ink of higher iron content is necessary. With that idea in view and on the suggestion of the National Archives of India, the Indian Standards Institution has issued this draft standard. Writings, written with ink conforming to this specification, are expected to last for about 50 years, under normal conditions.

Comments on the draft standard may be sent before April 12, 1959 to the Indian Standards Institution, New Delhi.

OLEIC AND STEARIC ACIDS, TECHNICAL DRAFT STANDARDS ISSUED.

The Indian Standards Institution has issued a draft specification for oleic acid, technical.

The standard prescribes the requirements and methods of test for oleic acid, technical. In the standard due consideration has been given to the different grades of oleic acid used for different purposes.

Oleic acid is used in India in the manufacture of various products, such as lubricants, carbon paper, stencil paper, paints, cosmetics, liquid soaps, disinfectants, textile finishing preparations, printing inks, pharmaceuticals, metal polishes, etc.

Although there are many commercial specifications drawn up by individual manufacturers, which relate to different grades of oleic acid, these have no official recognition and no standard has yet been formulated for this material by any country other than Britain.

The Institution has also issued a draft specification for stearic acid, technical. This prescribes the requirements and methods of sampling and test for stearic acid, technical.

Presently, stearic acid is used in the country in the manufacture of various products, such as rubber, lubricating greases, textile auxilia-

ries, cosmetics, metallic stearates, and plastic and leather goods.

Various individual manufacturers have drawn up many commercial specifications relating to different grades of stearic acid, but these have no official recommendations. So far no standard has been formulated for this material by any country other than France.

In preparing this standard the Institution has given due consideration to the different grades of stearic acid, technical, being used at present for different purposes.

Comments on the first draft standard may be sent before April 19, 1959 and on the second before April 7, 1959 to the Indian Standards Institution, New Delhi.

FOUNDRY MOULDING BOXES: INDIAN STANDARD ISSUED.

The Indian Standards Institution has published an Indian standard specification for foundry moulding boxes (IS : 1280-1958).

Moulding boxes constitute an important item of expense for foundries which can be reduced by standardizing the essential dimensions of moulding boxes and their main components. This also leads to increased interchangeability, reduction in number of types and sizes of moulding boxes to be stocked and will aid designing, work planning and costing.

The standard specifies dimensions and materials of two-pin foundry moulding boxes ranging in size from 32×320×80 mm. to 2,000×2,000×500 mm. and their main components, such as pins, lugs and bushes.

The standard covers a majority of moulding boxes most commonly used by foundries in every day practice. No attempt is made to cover the special purpose boxes, which may be required by jobbing foundries; in their case if necessary, use can be made of the components, such as pins, bushes, etc., specified in this standard.

Copies of the standard, can be had from the offices of the Indian Standards Institution at New Delhi, Bombay, Calcutta and Madras.

INDIAN STANDARD PUBLISHED.

The Indian standards Institution has published a specification for determination of fat in whole milk, evaporated (unsweetened) milk, separated milk, skim milk, butter-milk and cream by the Gerber method (IS : 1224-1958).

The Gerber method is widely used in India for the rapid determination of fat in milk and milk products, when a large number of samples are to be analysed at a time. The method depends on the liberation of the fat by the action of sulphuric acid on milk or milk products in especially shaped, calibrated glass containers, called butyrometers, which are then centrifuged to aid separation of fat, the volume of which is finally read off against the percentage scale etched on the butyrometer.

With the increasing application of the Gerber method for determination of fat in the milk and milk products for commercial need in India, it had become necessary to prescribe a uniform method, using standard

apparatus designed to meet the Indian conditions, so that, the results, obtained in different laboratories and by different workers, are comparable.

Copies of the standard, published in English, are available from the offices of the Indian Standards Institution at New Delhi, Bombay, Calcutta and Madras.

INDIAN STANDARD FOR STRUCTURAL STEEL.

The Indian Standards Institution has published an Indian standard specification for structural steel (IS : 226-1958).

This is the second revision of the standard IS : 226, which was first issued in 1950, following the representation made by steel manufacturers to the Steel Advisory Committee of the Government of India that the practice of ordering steel to rigid specifications was often not justified on the basis of service requirements. The first revision of the standard was issued in 1955.

The revised standard prescribes requirements for steel sections, plates and bars (round, square, flat, hexagonal, etc.), of three categories for use in structural work. The three categories are A for use in structures subject to dynamic loading and other special cases, B for use in structures not subject to dynamic loading and ASW for use in structures subject to dynamic loading and when special welding jobs are involved.

Copies of the standard, published in English, can be had from the offices of the Indian Standards Institution at New Delhi, Bombay, Calcutta and Madras.

AUTOMOTIVE HYDRAULIC BRAKE FLUID DRAFT INDIAN STANDARD ISSUED.

The Indian Standards Institution has issued a specification for automotive hydraulic brake fluid.

This standard was first issued in 1951. Since then the industry has developed considerably. In order to keep pace with recent developments and also to remove certain ambiguities in test methods, such as drying and thickness, water tolerance and corrosion, the Institution has now issued a draft revision of the standard.

The standard prescribes the requirements and methods of test for automotive hydraulic brake fluid, intended for use in hydraulic brake systems of motor vehicles, including cars, heavy and light trucks, etc where the brake fluid is not subjected to extreme operating conditions or atmospheric temperature outside the range of minus 23°C to plus 60°C (or minus 20°F to plus 140°F).

It is hoped that the revised standard will assist the production of moderate duty automotive hydraulic brake fluid within the country and also facilitate the supply to large and small scale consumers of a material of quality suitable for use under Indian climatic conditions.

Comments on the draft standard may be sent before April 23, 1959 to the Indian Standards Institution, New Delhi.

FOR THE INVESTOR

Came the Prices Down: Then, Up

Investment Gossip:

If nothing else, the Stock Exchanges have, during the week that has passed since Mr Morarji Desai announced his Budget proposals for 1959-60, shown a great deal of resiliency. But there should never have been the need for this attribute to be in evidence.

For, as is their wont, the Stock Exchanges swung from extreme to extreme. Exaggeration of trends is still their forte.

The initial response to the Budget was electrifying. Where, brokers tell me, they had expected a small rise to be consolidated if, with their anticipations materialising, the Budget did not contain much by way of new taxation, the spurt in prices on Saturday was of boom-like proportions.

This was because, after many years, the Stock Exchanges for the first time heard of taxes—and not reliefs!—being abolished.

Going, the Wealth Tax on Companies. Going, the Excess Dividends Tax. Gone, the companies' reserve deposit requirements.

Stock Exchanges paused to look no further. Buy way the cry, and the Budget session was predominated by bullish fervour.

Came the second thoughts. Came the realisation that the Finance Minister had so contrived his concessions that the Central Government's revenues did not show a drop. Came the dawning knowledge that the "present" of grossing up of dividends was rudely being snatched back. Came the prices down.

Second thoughts brought rumours, they brought grouses, they brought an outcry against an alleged deprivation of the shareholder.

Fortunately, there have been third thoughts as well; and it is in this respect that the markets have shown resiliency.

It is true, unless companies utilise their larger disposable profits in raising their dividend, the shareholder stands to lose. But it is being increasingly realised, and recognised, that the effective quantum of profits left with a company is, under the new tax rates, likely to be larger. Since the profits "belong" to the shareholders, whether or not they are distributed, we have had a much more hopeful view being taken of the Budget.

It remains to see whether that brighter assessment of the Budget will continue to influence trends in the Stock Exchanges.

Investment Notes:

The Indian Steel & Wire Products Limited has proposed to issue bonus shares by capitalising a sum of Rs 64,53,160 from the General Reserve account and issuing 6,45,316 Ordinary shares of Rs 10 each to those Ordinary shareholders whose names are registered as on the 30th March, 1959. The bonus shares will be issued in the ratio of two shares for every one of the existing Ordinary share of Rs 10 each fully paid and one bonus share for every five existing ordinary shares of Rs 10 each, Re 1 paid-up. The bonus shares are to rank pari passu in all respects with the existing ordinary shares. The consent of the Controller of Capital Issues had already been accorded; but it is now necessary to obtain the consent of the Reserve Bank to the issue to non-resident members of the company.

The Indian Iron & Steel Company has reported an around increase in production last month. Pig Iron production has risen to 83,715 tons from 73,728 tons in January. Steel ingots to 61,987 tons from 43,569 tons and saleable steel to 50,202 tons from 45,698 tons.

The Simplex Mills Company, Bombay, has proposed to raise capital from Rs 50 lakhs to Rs 1 crore by the creation of 40,000 Cumulative Redeemable Preference shares, both of Rs 100 each. The Preference shares will be redeemed at the end of 10 years and the rate of dividend will be 6½ per cent. The shares will be offered to the existing equity shareholders in the ratio of one share for every three shares held. The full amount is payable on application. The Investment Corporation of India; an associate of the managing agents of the company, will underwrite half the amount of this issue.

Scindia Steams have been a very firm feature at Rs 18.72 x.d. The Industrial Credit & Investment Corporation of India is reported to have sanctioned a loan in foreign currency of about Rs 70 lakhs to the company for the purchase of ships to augment its fleet. Certain other Indian shipping companies are also said to be negotiating with the ICIC for similar loans.

In Madras, Kil Kotagiri Estates have proposed to issue bonus shares at one share for every share held, subject to the Government sanction. The company has, in the meanwhile, maintained the dividend at 15 per cent for the year ended 31st October, 1958.

Mysore Chemical Manufacturers have obtained the Government sanction for the proposed issue of 20,000 equity shares of Rs 10 each as bonus.

₹₹

Investment Briefs:

Jayshree Tea has maintained the dividend at 10 per cent for 1958.

In Madras, Devashola Tea has announced an interim dividend of 10 per cent for 1958.

Cochin Malabar Rubber has recommended an interim dividend of 5 per cent for the year ended 28th February, 1959.

Ochterlony Valley has reduced the dividend from 30 to 10 per cent for the year ended 31st October, 1958.

East India Distilleries have declared a second interim dividend of 10 per cent and 5 per cent additional, making 20 per cent for the year ended 30th September, 1953.

₹₹

Excellent Results of Indian Oxygen

Balance-Sheet Reviews:

IT would be recalled that the British Oxygen Company Limited was converted into a public company on the 15th January 1958 and its name was altered into "Indian Oxygen Limited" on the 20th January, 1958. In terms of an offer for sale by the British Oxygen Company Limited on the 4th February 1958, six lakhs Ordinary shares in the company were purchased by members of the public in India. The issue was heavily over-subscribed.

The Indian Oxygen Limited has now produced excellent results for the year ended 30th September, 1958. Sales for the year are substantially higher at Rs 4.86 crores against Rs 4.18 crores, while the net profit, after providing for Depreciation and Taxation, amounts to as much as Rs 37.97 lakhs as against only Rs 15.35 lakhs in the

previous year. Apart from providing Rs 13.20 lakhs for Development Rebate Reserve, the Depreciation amount is raised to Rs 24.93 lakhs from Rs 21.36 lakhs. Taxation provision is reduced to Rs 28.90 lakhs from Rs 41.36 lakhs and Wealth Tax to Rs 1.40 lakhs from Rs 2.66 lakhs. No provision is made for General Reserve against Rs 10.50 lakhs. The directors have recommended a dividend of 10 per cent on the Ordinary shares.

According to the directors' report, the industrial development plans, initiated by the Government of India and in particular the expansion in steel production envisaged by the Second Five-Year Plan, are expected to give rise to a further very substantial increase in the demand for the company's products. With this in mind, they have drawn up a replacement and expansion programme, which is planned to be completed in 1960.

₹₹

Burrakur Coal

The Burrakur Coal Company Limited, in Bird group, has raised the Ordinary dividend from 69 p to 87 p per share for the year ended 30th June, 1958, thanks to an increase in earnings. Ralsings have risen to 10.37 lakh tons from 9.50 lakh tons and despatches to 10.19 lakh tons from 9.63 lakh tons. Sales are higher at Rs 2.56 crores against Rs 2.20 crores, while the net profit, after providing for Depreciation and Taxation, amounts to Rs 14.52 lakhs against Rs 12.50 lakhs in the previous year. The directors have provided Rs 10.52 lakhs (Rs 11.08 lakhs) for Depre-

London and Overseas Representatives: Keith & Slater Ltd, Napier House, 24/7 High Holborn, London W.C. 1. Telephone: Holborn 5022.

ciation; Rs 15.26 lakhs (Rs 13.55 lakhs) for Taxation; Rs 1.47 lakhs (Rs 2.80 lakhs) for Wealth Tax; Rs 50,000 (same) for Debenture Redemption Fund; Rs 44,400 (Rs 83,000) for Development Rebate Reserve and Rs 1.32 lakhs (nil) for Statutory Development Rebate Reserve and Rs 1.00 lakh (nil) for General Reserve. No provisions are, however, made for Tax Contingency Reserve and Aerial Rope Reserve against Rs 1.22 lakhs and Rs 70,000 respectively made in the previous year.

The company has proposed to increase its annual raisings to 19.50 lakh tons by the end of the Plan period. This will, however, involve capital expenditure of about Rs 1.5 crores and the success of this programme is, therefore, largely dependent on increases in the price of coal and in the sand stowing subsidy being approved by the Government of India, thus permitting the company to retain from its profits adequate sums to cater for the capital expenditure.

McLeod & Company

Thanks to higher dividend income and considerably improved results from the Agency department which is largely attributed to the steel imports that were handled on behalf of the Government of India, McLeod & Company Limited has reported a satisfactory increase in earnings for the year ended 31st December, 1957. Sales have gone up to Rs 5.91 crores from Rs 1.75 crores, while the net profit amounts to as much as Rs 12.95 lakhs against only Rs 7.78 lakhs in the previous year. The profit would have been still higher, but for the revenue from the Tea department being adversely affected by the revised managing agency arrangements with the tea companies and the recession in world prices of common and medium teas.

Apart from a sum of Rs 5.00 lakhs written off against Goodwill, the Depreciation amount is raised to Rs 1.21 lakhs from Rs 95,195. Taxation provision is, however, reduced to Rs 9.30 lakhs from Rs 10 lakhs. "Agency Commission and allowances" are shown at Rs 28.23 lakhs against Rs 23.63 lakhs and "Dividends and interest on income" at Rs 13.45 lakhs against Rs 9.36 lakhs. As the directors have not recommended any final dividends, the interim dividends of 12½ per cent and 7½ per cent on the Ordinary shares, paid on the 18th December 1958, compare with the total dividends of 8 per cent and 3 per cent respectively paid in 1956.

Central India Spinning

The Central India Spinning, Weaving & Manufacturing Company Limited has incurred a heavy trading loss of Rs 46.77 lakhs for the year ended 30th June 1958, the loss in the previous year being Rs 20.79 lakhs which has been set off from the General Reserve. The present loss of Rs 46.77 lakhs has been adjusted against the surplus of Rs 4.16 lakhs on the sale of fixed assets for previous as well as current years. This leaves a loss of Rs 42.60 lakhs, which is again adjusted against General Reserve of Rs 14.06 lakhs. With the result, the balance of loss of Rs 28.54 lakhs has been carried forward. The General Reserve is now completely wiped off. Sales of cloth are, however, higher at Rs 2.63 crores against Rs 2.39 crores and yarn sales at Rs 47 lakhs against Rs 33 lakhs.

For the second year in succession, no dividend has been declared on the Preference shares, while, for the third year, there is no dividend on the Ordinary shares. The last dividend distributed on the Ordinary shares, as on the 10th November 1955 for the year 1954-55, was Rs 3.

Kesar Sugar

The Kesar Sugar Works Limited has earned a lower profit of Rs 2.05 lakhs for the year ended 31st July 1958 as against Rs 7.70 lakhs in the preceding year. The profit has been arrived at after providing Rs 2.49 lakhs for Depreciation against Rs 2.46 lakhs; Rs 50,000 for Development Rebate against nil and Rs 3.50 lakhs for Taxation against Rs 9.75 lakhs. The provision for General Reserve, which claimed Rs 3 lakhs in the previous year, has been skipped.

The quantity of cane crushed amounted to 47.17 lakh maunds against 64.14 lakh maunds, while the output of sugar amounts to 4.67 lakh maunds against 6.17 lakh maunds, the recovery being 9.89 per cent against 9.62 per cent.

W. H. Brady

W. H. Brady & Company Limited has earned a profit of Rs 8.49 lakhs for the year 1958 as against Rs 9.24 lakhs in the previous year after providing Rs 12.50 lakhs for Taxation against Rs 16.50 lakhs. The directors have proposed to maintain the dividend of Rs 25 per share.

There has been a sizable decline in turnover and gross trading profits in the trading section of the company's operations, mainly due to the Government's import restrictions. The future outlook for this important side of the company's business continues to be uncertain, although the management is making all possible endeavour to increase and expand the company's activities in the marketing of indigenous products.

1959-60 Budget

CIRCUMSTANCES helped Mr Morarji Desai, the Finance Minister, to present a Budget for 1959-60 which could be in startling contrast with the Budgetary efforts that the country has experienced since the beginning of the Second Plan; and it lies to Mr Desai's credit that he fully seized the initiative. We hesitate to qualify the statement, although, for our part, there is one important aspect of the Budget that affords us much less than satisfaction. For, the reservation, important though it is, should not be allowed to detract from the general soundness of the Budget and from the particular merits of the approach of Mr Desai. To a certain extent, it is true, that approach was inevitable, in the sense that the Indian Finance Minister of the day, whoever he may be, will necessarily have had as the primary consideration the fortunes or otherwise of the Second Plan. But then, even if the data are, as it were, fixed, there still remained considerable scope for Mr Desai to show imagination, initiative and daring in the conclusions he drew from them. The first conclusion or axiom is, in our view, a certain deliberate attempt by the Finance Minister to avail, both in his phraseology and in the content of his proposals, anything that might tend to disrupt confidence. The second consideration, has been the need to streamline the tax system, to continue the process that was initiated by Mr T. T. Krishnamachari in 1957-58. The third task, which Mr Desai took upon himself, and which has resulted in a set of surprise proposals, is the tidying up of the tax structure in the corporate sphere. Lastly, Mr Desai has deemed it to be his particular responsibility, as the steward of India's finances, to paint a picture which, while avoiding complacency, nevertheless emphasised the brighter aspects in the economy. All this the Finance Minister has done, and done consummately well.

It is not surprising, therefore, that, aside from the initial dizzy reactions, the reception to the Budget has been a balanced one. Mr Desai has obviously taken particular pains to eschew anything that might have adversely affected the morale. Even the one proposal of his that is sought to be made out as being detrimental to the investment climate is found, on closer examination, not to be so inimical to the investors' interest. But Mr Desai is a lucky man; not for him was the herculean task of finding the bulk of the revenue requirements for putting the Second Plan through. His predecessors had already done the "dirty" work; and, in effect, his has been mainly a job of tidying up and tying the loose ends together.

In tying up the loose ends, Mr Desai has shown himself to be free of predilections and of doctrinaire dogmatism. Two of the taxes in the Indian corporate scene have in practice been discovered to be harassing. One is the Excess Dividends Tax; it has been known for some time that it would some day disappear from the statute books, since Mr Krishnamachari, who drew up the "integrated" tax structure, did not consider it to be an essential part of it. When first the Excess Dividends Tax was imposed, its raison d'être was explained as being due to Government's solicitude for companies to build up internal resources; the "penalty" of the Excess Dividends Tax, it was

thought, would provide incentive for a company to retain a larger quantum of profits. Its inequitous incidence on companies attracting Section 23A of the Income-tax Act was later recognised when the rates in respect of such companies were brought down. But it was never expected that its abolition would come quite so soon. As for the Wealth Tax made applicable to companies, this journal has been maintaining, ever since it was instituted, that it was retrograde. But, again, there was in no quarter the expectation that the Wealth Tax, too, would be abolished. Mr Desai must have satisfied himself that, both in order to remove a source of harassment and to streamline the tax structure, he should set about the abolition of the two taxes.

But Government's revenues could not be allowed to suffer; also, there is a Parliament which will want to know why, if the taxes had been removed unconditionally, partially was being shown to an alleged section of "haves". Here was where Mr Desai's ingenuity and resourcefulness and acumen, political no less than economic, were called for. The Finance Minister discovered that, in the current procedure in regard to dividends declared free of tax, a part of the income-tax derived from companies was being returned to the shareholder as credit on his dividend. For various technical reasons, into which we need not go here, the system of "grossing up" of dividends has today become most complicated. There are even cases where the "refund" is not claimed by the shareholder. Mr Desai thought up the bright idea of doing away with this system. He arrived at a simple formula: the present revenue from corporate taxes plus the realisations from the Excess Dividends Tax and the Wealth Tax minus the quantum of income-tax claimed as credit or refund by shareholders is equal to 45 per cent of corporate profits. Since Mr Desai did not intend to secure an increase in revenue from corporate taxes, he was in a position to say: the new rate of corporate taxation is 45 per cent; the two taxes are abolished, and so too the grossing up.

At the moment, there is a good deal of discussion as to whether the reorganisation of the corporate tax structure will not result in a serious deprivation of the shareholder. That grossing up did amount to a considerable benefit, there can be no doubt. But, of late, for reasons we have just mentioned, it is possible that, in practice, the usefulness of the benefit was far less. In that case, there should not be too much of a shocked reaction at this abolition of grossing up. On the other hand, the simplification made possible in the assessment of both companies and shareholders should be welcomed. Then, as far as the return to the shareholder is concerned, we can see that, in the long run, he will not lose. If the company is such that it seeks immediately to make good the loss resulting from the new tax procedure, then an increase in the rate of dividend is on the cards. If, on the other hand, the company considers that it will be advantageous to utilise the larger available profit for ploughing back into the business, this too will benefit the shareholder in the sense that his company's productive capacity, and

consequently earning capacity, will improve. The fact that the Excess Dividends Tax has been removed means that no penal tax will have to be borne by the company in respect of any higher dividend that it might choose to declare. For all these reasons, while there is the prospect of loss for the shareholder, we must recognise there is also the prospect of a longer-range advantageous position.

Mr Desai's final task was to stress the need for confidence. He could, as he did, point to the current year as having witnessed the finding of solutions for the problems that have recurrently been facing the country since the Second Plan began. Whether in regard to agriculture or industrial production, the price situation or the money market, Mr Desai was in the happy position of being able to record an improvement having taken place during 1958-59. On the whole, says the Finance Minister, "the economic situation is somewhat better than it was a few months ago".

This sentence appears in the opening paragraphs of Part A of the Finance Minister's speech. By the time he had broadly reviewed the economy, and presented his Budget proposals, Mr Desai was much less reserved and conservative about prospects. These are his concluding words:

"In recent months, we have been passing through a difficult period and as the Prime Minister summed it up so aptly when he presented the budget last year, our crisis is a crisis of development, a crisis of resources. I feel we have passed through the most difficult phase and that there is no reason for taking a pessimistic view of the situation. Many of the major development schemes will be completed in the course of the remaining period of the Plan and will start yielding results. The country's foreign exchange difficulties are being steadily surmounted and the overall budgetary deficits have started moving down significantly. Although the price situation is still a matter of some concern, there is no reason to doubt the inherent soundness of the country's economy and its ability to weather the current difficulties."

Such, then, is Mr Desai's Budget and hymn of confidence. So long as it is the revenue budget with which the Finance Minister deals, his approach is impeccable. But, in respect of the capital budget, and it is here that we must make the reservation we have alluded to at the beginning of this article, the Finance Minister, we are afraid, has not learnt the lessons to be drawn from the state of the gilded market during 1958-59. Surely, Mr Desai has pitched his expectations far too low, when he anticipates borrowings from the market to bring in less new cash than in the current year. What is likely to happen is, we believe, a recurrence in the Budget year of the experience during the current year: market loans will fetch rather more, and will go to cover any shortfall in other heads of resources for the capital budget.

The capital budget apart, there can be no doubt that Mr Morarji Desai's Budget for 1959-60 is the most cheerful one we have had since the Second Plan began.

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right"—The Analects of Confucius.

'Staff' and 'Line' Functions in Industry

By M. SUR

THOSE who write about industrial organization have borrowed from the Army the words 'staff' and 'line' to describe certain functions in a modern industrial set-up. 'Line' officers, they say, are those with direct executive authority and control over the work of others, while 'staff' officers are those who act in a functional or advisory capacity to management and do not come into the line of direct production. The growth of large-scale industry and the rapid technological changes of recent years have brought into industry a whole host of specialists, such as the cost accountant, the production engineer, the industrial engineer, the personnel officer and the planning expert. Each new entrant in the specialist field is regarded with suspicion by the ordinary executive. Often highly qualified and similarly paid, the newcomers are looked upon as interlopers who will interfere with the work of those on the line and upset their authority and their relationships with their subordinates. This is not without justification, for only too often companies fail to advise the newcomer properly of his position, or to lay down demarcations between one department and another. The specialist is brought in and told to get on with the job, without any explanation of how he stands in relation to existing officers. Thus while his introduction may help to solve technical problems, at the same time it may introduce new problems, and since these are problems of relationship they are fundamental and must be squarely tackled from the start if trouble is to be avoided.

At the recent ninth annual conference of the Indian Institute of Personnel Management in Kanpur, the role of these specialist or 'staff' agencies in industry was discussed with particular reference to the problem of human relationships, and a most interesting session it proved to be. After a thoughtful paper analysing the 'staff' function and the proper place of 'staff' officers in any industrial organization, one of the delegates strongly queried the assumption that all jobs in an organization can be nicely classified into 'staff' and 'line' jobs. He pointed out that many jobs did not fit into these neat categories. For instance a labour officer advising the head of a department on some problem of discipline would clearly be acting in the manner of a 'staff' officer. It was not his business to take disciplinary action, but to advise on the proper handling of cases. However this same labour officer on returning to his own office after his discussion with the departmental manager, may settle down to some canteen problem which is within his direct responsibility. He may be giving instructions to the canteen supervisor, or appointing new canteen staff. If so, he is acting with direct authority over the staff concerned, and his function is therefore a 'line' function. Next, in drawing up statistics on wages required by his director in connection with a demand from labour, he may have to visit the accounts department and ask the accountant to advise and assist him in the preparation of the figures. In such a situation it is the accountant who is in the position of a 'staff' officer advising the labour officer. At this point who is to say which officer is really 'staff' and which is 'line'? Finally the labour officer may be called upon to meet and negotiate with the union, and in this position he is acting as the representative of the management, dealing direct with the union, though within certain defined limits laid down in prior dis-

cussions with top management. What is his function at this point?

If in the case of the labour officer, and other officers also, there is this apparent confusion of function, is there any point, one may ask, in labelling the distinction between 'staff' and 'line' functions? A case study discussed in an extremely lively manner at this conference session brought home vividly the reason why managements should bear this distinction in mind. The background of the case study was briefly this. An engineer built up his own business from nothing by hard work and careful judgment until he was able to turn it into a limited company with himself as the manager. He now employed over 200 workers and had successively brought into the business, as need arose, such specialists as a salesman, a cost accountant, an efficiency engineer and a personnel manager, but things did not go too smoothly with these experts. There was friction between the foremen in charge of the two main departments into which the factory was divided and the accountant when he tried to introduce cost control. The efficiency engineer did not see eye to eye with the accountant over quality control. The salesman was beginning to receive complaints from customers, and the workers had just formed a trade union and were putting forward demands. At this point the manager fell ill and was advised by his doctor to take a long holiday, and was faced with the problem of how to run the business in his absence and whom to leave in charge.

To the question—what would you do in the manager's place?—the conference had a surprising variety of answers. In fact the more the case was studied the more apparent it became that the manager had a really knotty problem to tackle, just because he had never given any thought to co-ordinating the various functions in the business. The first speaker advocated that the personnel officer should be put in charge in the manager's absence because there had been no complaints against him, whereas there had been complaints against the accountant and the efficiency engineer. The second speaker was in favour of putting the salesman in charge because he was the senior-most and would be concerned to see that the quality of the goods was maintained in order to ensure their sale. The next speaker, however, pointed out that a production man should be left in charge and so recommended the senior of the two foremen. The speaker who followed advocated a wholesale re-organization of the business, and it looked as if the poor manager would have succumbed to his illness before this was achieved! Another speaker wanted the cost accountant to be made the deputy, because he would keep an eye on the financial side of the business, and it was suggested that he should hold weekly meetings of the other officers to advise him.

It was left to the discussion leader to point out one fundamental weakness in the organizational structure of the company in the case study, namely that with the introduction of each specialist the status of the regular 'line' management had been adversely affected. The new specialists were drawing higher salaries; they were expecting the foremen to produce facts and figures for them. Meanwhile, though the work and the number of workers had increased, there had been no corresponding increase in the status of the foremen who were directly responsible for production. If their

status had been built up by making them departmental managers, one could easily have been nominated as deputy. There were obvious arguments against making any of the specialists the deputy, just because they were specialists and not directly connected with production. The case study had served admirably to underline the differences of function and the problems that arise where these differences are not appreciated.

EDITORIAL NOTES

Accent on Austerity

Despite the favourable trend indicated by the narrowing of the trade gap towards the end of last year, there is continuing need for maintaining import curbs at their present level of intensity. This was the principal point that emerged out of the discussions at the latest meeting of the Import Advisory Council. For one thing, while exports have shown a welcome upward trend in the closing months of last year, we cannot depend on their maintaining the same level during the slack season. The emergence of the European Common Market introduced a new factor which was likely to have an adverse effect on India's exports. Moreover, the improvement in the trading position mentioned above, was more the result of drastic import restrictions than of any substantial expansion of exports; as a matter of fact, the total exports in 1958 are expected to be lower than in the previous year, though not to the extent feared during the first half of 1958. The country is not yet out of the woods as far as the foreign exchange situation is concerned. The foreign assistance already extended after the World Bank Conference, and more in the offing, will help to tide over a difficult situation in respect of implementation of 'core projects' of the Second Plan. But foreign aid has not substantially altered the capacity of

country to run up a large import bill. The problem of repayments underline the continued need for austerity.

Industries depending on imported materials and components, as well as consumers, can seek to minimise hardship by adjusting themselves to the pattern which appears to be set for a number of years to come. There is little prospect of any relaxation in respect of licencing of import of capital goods. As hitherto, this will be governed by potentialities of import substitution or export earnings. An exception will be made in cases where the cost in foreign exchange is covered by foreign aid or participation. One consequence of this exception will be that indigenous concerns will be at a disadvantage in the matter of renewals or expansion as compared with industries started with participation of foreign capital. Industrial consumers will however note with relief the indication given by the Minister of measures to end the uncertainty in respect of availability of raw materials.

While the difficulties of industries as regards supplies have been recognised and sought to be met, little attention has been paid to the plight of the import trade which used in the past to supply the needs of industry and has now lost its function in the wake of the imposition of import restrictions. As a result of import controls, many import firms have been compelled to restrict their activities, or close their business entirely, leading to retrenchment on large scale. This problem was considered by the West Bengal Business Convention which adopted a resolution suggesting that indigenous industries should engage existing import houses for distribution of their production in increasing measure. Government can also help in bringing about this change in the pattern of distribution of indigenous manufacturers.

Compulsory Exports

The analysis given by the Minister for Commerce and Industry of the trend of exports of major commodities hardly helps to make out a case for adoption of a policy of compulsory exports to which Mr Shastri made a vague reference in his address to the Export Advisory Council. While agreement is wide spread on the need to step up exports by 10 or 15 per cent, it is not clear that the introduction of an element of compulsion will help Indian products to capture a larger share of the foreign market.

Compulsion can only be applied to one end of the transaction. But it can lead to adverse reactions at the other. The principal industries like, tea, jute, mineral ores figuring in the foreign trade of the country are export oriented and have been built up in the past on the basis of exports. A substantial increase in the volume of exports at the present stage of development of the national economy will depend on the contribu-

tion that these industries are able to make to total exports. The export potential of newer industries is yet only nominal and, in many cases, their earnings of foreign exchange constitute only a negligible fraction of the foreign exchange that they consume in the shape of equipment or material. The pattern of development that has been adopted in regard to many of these industries may be responsible in part for this unsatisfactory state of affairs, and should be a warning for the future.

In regard to the traditional export commodities, which still account for the bulk of the foreign trade, it is difficult to see how compulsion will help them to expand their markets abroad. Certainly it cannot be suggested that they are holding back their production for sale in the domestic market at higher prices. In fact, as has been pointed out, compulsory exports might react against Indian goods in foreign markets by inviting charges of dumping.

The case for compulsion might have been better appreciated if the Minister for Commerce and Industry has mentioned the 'one or two commodities' he had in view for trying out compulsory measures. In regard to most of the goods for which the country has to find export markets, what is needed is organisation supplemented by market surveys and information, rather than compulsion. Many small industries are not in a position to set up the costly and elaborate organisation necessary for building up exports. Established export houses have different interests and are not likely to be of help. If an export organization, say the STC, undertake to take over part of the output at agreed prices many manufacturing industries will be glad to avail of the opportunity of stabilising production with the help of a sizable standing order, without any need for compulsion.

Fruitful Reconnaissance

Mr MACMILLAN'S visit to Russia has ended on a note which sounds more hopeful than one was led to expect by the tone of earlier despatches from Moscow. From the beginning it appeared that serious negotiations would be smothered by lavish Soviet hospitality. The original programme drawn up for the entertainment of the British Prime Minister included a bear hunt, apart from a strenuous round of banquets, parades and theatricals with visits to Stalingrad, Leningrad and Kiev thrown in to add full measure. This hardly left two days for serious talks. Later, the bear hunt and trip to Stalingrad were cut out of the itinerary. Then came reports that the talks were caught in a pocket of chilly weather. Mr Khrushchev's speech at a party meeting when he brandished an offer of a non-aggression pact, while dismissing the Western suggestion for a Foreign Ministers' conference, was regarded as a hint

that Mr Macmillan might as well return home. Mr Khrushchev's tooth-ache, which prevented him from accompanying his guest to Kiev, loomed large in despatches, until an enterprising diplomat put an end to all speculation by asking Mr Khrushchev pointblank what was wrong with his teeth.

Apart from the fact that the visit itself was an indication of relaxation in East West tension, not much was expected to come out of Mr Macmillan's visit. The visit was a delayed response to an invitation extended two years ago when the Bulganin-Khrushchev team visited Britain. Mr Macmillan himself described it as a trip of reconnaissance and not for negotiations, though he was accompanied by a numerous foreign office team which could, if necessary, set up specialist committees on all topics that were likely to come up in the course of the discussions. Nor was there any inclination to over-rate the importance of likely improvements in Anglo-Soviet trade. The scope for expansion is strictly limited by the rigid pattern of Soviet foreign trade which aims at bilateral balance with individual trading partners.

The joint communique issued at the end of the ten-day visit however suggests that the reconnaissance was not wholly unfruitful. The Berlin issue and the future of Germany must have loomed large in the discussions and it is not surprising that Mr Khrushchev and Mr Macmillan have agreed to differ on these. In fact the talks could not have proceeded very far in the absence of a coordinated Western Policy. Unfortunately, just at the critical juncture, the master coordinator of Western diplomatic strategy was disabled by serious illness from effective participation.

Market Loans to Yield Less?

AS anticipated by this journal, Mr Morarji Desai, the Finance Minister, in largely eschewing any considerable tax proposals, has concentrated on market loans, foreign assistance and deficit financing for balancing his capital budget and meeting the overall deficit. The summary of capital transactions indicates that disbursements are to rise from Rs 863 crores, being the revised estimates for 1958-59, to Rs 1105.44 crores. This rise is mainly due to a much larger provision (Rs 98.63 crores against Rs 3.58 crores) for capital outlay on currency and coinage; an increase of nearly Rs 100 crores for the discharge of permanent debt; and a rise of Rs 90 crores in the allocation for other loans and advances. On the receipts side, new loans are expected to fetch Rs 524.77 crores against the revised figure of Rs 740.77 crores; but the rather high figure for 1958-59 was due to the funding of Rs 300 crores of Treasury Bills by the creation and sale of a 4 per cent 1973 Loan in that amount to the Reserve Bank in cancellation of Treasury Bills held by the central banking institutions. Viewed in this light, the new loan expectations are really marked Rs 84 crores higher during the budget year. The notes

on capital transactions vouchsafe the information that anticipations of foreign loans are just under Rs 300 crores, while Rs 225 crores are expected from market loans. Then, as a result of funding operations, what was expected to be a net receipt of Rs 205 crores from Treasury Bills in the Budget for 1958-59 is now revised to show a discharge of Rs 20 crores. This means, in effect, that the receipts from Treasury Bills during the current year will be Rs 75 crores higher. Of this, Rs 25 crores represent the realisations from public auction of Treasury Bills. Nevertheless, the size of the overall deficit met from Treasury Bills has effectively risen by Rs 75 crores.

For the budget year, the net receipts from Treasury Bills have been placed at Rs 260 crores. This was without taking into account the effect of the tax proposals, which reduced the revenue deficit from Rs 81.88 crores to Rs 58.32 crores. We may expect a corresponding reduction in the expectation from Treasury Bills; and, in round figures, this may be placed at Rs 240 crores. From this, we have again to deduct Rs 15 crores expected to be realised from an increase in the outstandings of Treasury Bills sold through public auctions. Thus, deficit financing in the fourth year of the Plan would work out to Rs 225 crores. This is credit-worthy enough, in the sense that it is the lowest quantum since the Second Plan began. But we regret to find that the Government continue to be chicken hearted in planning their borrowing programme. For, the budget expects only Rs 225 crores gross to be realised from market borrowings, whereas during the current year net borrowings alone approximated to this figure. In the budget year, discharge of debt

in respect of market borrowings is for the considerable amount of Rs 110 crores. In effect, therefore, the Central Government are proceeding on the assumption that the new loan will fetch in no more than Rs 115 crores of new cash.

It is at this stage that we may draw attention to one aspect of the budget which appears generally to have been overlooked and which may have the effect of spoiling the gilt-edged market. We refer to the tax deductible on Government securities, an amendment in regard to which stipulates that, from the budget year, both income-tax and super-tax shall be deducted. Consequently, it would appear, from the Finance Bill, that deductions hereafter will be at the rate of 45 per cent as against 31.5 per cent at the present time; this relates to companies. Although the institutional investor will get credit for the tax deducted, there has usually been considerable delay in this matter and the result of a larger deduction may well be to reduce the popularity of gilt-edged. This is a provision in the Finance Bill on which second thoughts are necessary, especially in the interests of the Government's borrowing programme.

We wish to reiterate the necessity for the Finance Minister to think in terms of a vigorous and virile borrowing policy. With all the recurrent talk of further deficit financing leading to inflationary pressures, we should have thought that the Finance Minister would have been keener about market loans. But, except for passing references to the improved gilt-edged situation during the current year, in deed, Mr Desai has not seen fit to set his sights higher. This is an aspect of the budget to which we shall refer in the coming weeks.

For the moment, we shall sum up comment on the capital budget by suggesting that there is an unequal emphasis on foreign loans and deficit financing at the neglect of market borrowings. The least that can be done and should be done is to reverse the roles allotted to created money and gilt-edged securities.

Sharp Rise in Bank Deposits

A further "punctuation" of the busy season is discernible in the latest banking returns. The Reserve Bank figures for February 27 disclose that, for the third week in succession, there has been a contraction in active note circulation. Notes in circulation have been marked lower by Rs 4.86 crores at Rs 1654.64 crores. Rupee Coin has returned from circulation for Rs 0.37 crores. In the result, the cash in the till has risen by Rs 5.23 crores to Rs 25.24 crores. Both Rupee Securities and Foreign Securities in the Issue Department are unchanged.

Inter-governmental transactions are suggested in the return of the

Banking Department. Sans benefit of deficit financing, the Central Government's balances have been marked down by Rs 4.66 crores. On the other hand, the Deposits of State Governments are higher by Rs 5.11 crores, their indebtedness showing a rise of half a crore at the same time.

The Reserve Balances of member banks have risen by Rs 5.13 crores to Rs 76.55 crores. However, the Other Loans and Advances of the Reserve Bank have also gone up, though only by Rs 1.74 crores. So, the improvement in this regard may be said to bear testimony to the diminished strain being experienced by the banking system in respect of the current busy season.

Finally, Balances Held Abroad are lower, but only by a little over half a crore. It looks as if the "export peak" season is drawing to its close, and hence it is possible that the months of the slack season in the money market may also witness a return of the import surplus; however, with steady receipts of foreign assistance, the impact may not be discernibly heavy on the Reserve Bank returns.

The return of the State Bank for February 27 shows a further rise of Rs 5.28 crores to Rs 493.12 crores in Deposits; and the Rs 500 crore mark may be crossed by the middle of next month. There is a rise of Rs 3.02 crores in Advances, and the impression that we get here of continued busy season pressure runs counter to the trends suggested by and in the Reserve Bank returns. Investments in gilt-edged are slightly lower at Rs 262.97 crores against Rs 263.40 crores. In the result, the State Bank's cash in hand and with the Reserve Bank is higher by Rs 6.48 crores at Rs 33.25 crores. So, the rise in the Reserve Balances of the Scheduled Banks, which was discernible in the Reserve Bank returns, is clearly and wholly traceable to the State Bank.

The statement of Scheduled Banks for February 20 also presents a picture of continuing busy season pressures. The total of Advances, in rising by Rs 6.19 crores to Rs 952.63 crores is now in sight of the peak touched during the 1957-58 busy season. Fortunately for the banks, there was a welcome rise of nearly Rs 17 crores to Rs 1649.50 crores in Deposits. Hence, the additional demand could easily be met. Indeed, the member banks have found it possible to reduce indebtedness to the Reserve Bank from Rs 42.47 crores to Rs 28.57 crores. However, there was disinvestment in gilt-edged for Rs 2½ crores. In the end result, cash balances are practically unchanged at Rs 159.73 crores against Rs 159.92 crores.

Bank Balance-sheets

During the past week, a number of bank balance-sheets have been received. They show the general

March 7, 1959

trend of static or a slightly lower level of Advances, combined with an increase in gilt-edged investments. Bank profits are, as we have already seen at the beginning of the year, generally lower.

The pressure on space owing to the Budget prevents an analysis being undertaken of banking accounts in the current week's issue. It is proposed to devote a special section, in the next issue of Indian Finance, to the consideration and assessment of such banking figures as have been received for 1958.

The Manager, The Chartered Bank, Calcutta, has received the following cabled information from his Head Office in London:—

"At the Annual General Meeting of Stockholders 1st April Directors will recommend final dividend 7½ per cent actual subject Income Tax (stop) In the consolidated accounts of The Chartered Bank and its subsidiaries the following appropriations have been made:—

£125,000—Pension Fund; £20,000—Widows and Orphans Fund; £250,000—Written off Bank Premises; £150,000—Contingencies leaving £481,673—to be carried forward Net profit £993,590—"

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, the 3rd March 1959. Total amount offered was Rs 2,10,00,000. Tenders at Rs 99.345 were accepted in full and those at Rs 99.340 were allotted approximately 83 per cent. Total amount accepted was Rs 2,00,00,000 the average rate of accepted tenders being Rs 2.625 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur, and New Delhi) up to the close of business on Monday, the 9th March 1959. Successful tenderers should make payment on Friday, the 13th March 1959. Other conditions are as usual.

During the week ended the 27th February 1959 Government of India Treasury Bills for Rs 1,34,50,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 4th March to 7th March 1959 at Rs 99.361 per cent. Sales can be stopped at any time without notice if Government think it necessary.

There were no sales of 91 days' Intermediate Treasury Bills during the period 25th February to 28th February 1959.

British Investors' Dilemma

By Paul Einzig

THE sharp decline on the Stock Exchange during January and the first half of February was followed during the past fortnight by a spell of uneasy equilibrium. Both equities and the Gilt-edged market recovered some of the earlier losses, but movements are inclined to be undecided. The Financial Times index is still well under its previous maximum. Uncertainty prevails among investors about the outlook. A few weeks ago there was a definite trend. The increase in the chances of a Socialist victory at the general election caused widespread uneasiness. Hence the wave of selling by investors who felt that they ought to be out of the market until after the General Election. But at the time of writing the markets are distinctly hesitant.

Until recently it was widely assumed that there would be a General Election not later than May. Even now a Spring Election can not be ruled out. But most people now consider it much more probable that the Election would take place in the early Autumn. Its postponement till the Autumn would be a bull point for the Stock Exchange, because a trade recovery is likely to take place during the Spring. The effect of such a recovery on the markets would be offset by Election fears if the Election were to take place in May. Should it not take place till October it would appear to be reasonably safe to hold on to investments till the early Summer in order to benefit by the effect of the business recovery.

A curious situation developed after the publication of unfavourable unemployment figures for January. Instead of depressing equities it caused a noteworthy recovery, because the unfavourable unemployment situation further reduced the possibility of a Spring Election.

The figures of public opinion surveys no longer produce a decisive influence on Stock Exchange tendencies. Until recently even intelligent or informed anticipation of these figures affected the tendency. In January a weaker tendency developed some days before the publication of figures indicating a decline in the Government's popularity in the country. This gave rise to some suspicion that there must have been some leak in advance of the publication of the figures. Most people would now hesitate to rely to such extent on public opinion surveys in deciding whether to buy or sell. These figures now may cut both ways. An improvement of the Government's popularity might induce Mr Macmillan to decide in favour of a May Election, in which case many investors would play for safety and get out of the market. A decline in the Government's popularity would make it certain that the Election would be postponed to the Autumn and this would reassure many investors to get into the market and remain in it for some months.

There are, of course, other factors at work. Wall Street remains one of the major factors. The opening prices in London are usually affected by Wall Street's closing prices on the previous day. This influence is no longer purely or even mainly psychological. The yield on first class British equities is much higher than that of the corresponding class of American equities. A rise in Wall Street by widening the difference, usually stimulates American demand. Conversely, a decline in Wall Street by reducing the difference makes British equities appear less attractive to Americans.

In the absence of a Socialist victory at the Election this factor is likely to play an important part during the next year or two. A difference in the yield was until recently justified partly on the ground that sterling was a soft currency

and dollar was a hard currency. As a result of the restoration of sterling's convertibility on the one hand, and of the development of some degree of uneasiness about the dollar on the other, the difference between the relative hardness of the two currencies is now decidedly smaller. Accordingly many people take the view that the spread between yields in London and in Wall Street is no longer fully justified and is likely to decline.

There is, of course, always a possibility of an unfavourable change from the point of view of sterling as a result of a flight of funds from London in anticipation of a Socialist victory. Although the British gold reserve has increased, it is not large enough to enable the British authorities to meet such a flight without raising the bank rate. Once the General Election is out of the way, however, and should a Conservative Government be returned, sterling is likely to be less exposed to withdrawals than the dollar, at any rate for some time to come.

There is of course also the international political factor. The crisis over Berlin is likely to come to a climax during the Spring and war scares are liable to affect both the London Stock Exchange and Wall Street. Nobody can foretell the extent and duration of such a crisis. The likelihood of some trouble tends to keep investors out of the market, regardless of Election prospects, trade prospects and Wall Street tendencies, until a settlement is reached.

These various cross-currents make it rather difficult for the investors and their advisers to take a clear cut view. It is difficult enough to make up one's mind on the simple question whether or not there is likely to be a Spring Election and if so whether or not a Conservative or Socialist Government is likely to emerge from it. But when in addition to this consideration potential buyers and sellers on the Stock Exchange have to take a view on the international political prospects, and the prospects and timing of a trade revival and on Wall Street prospects, many investors are inclined to play for safety.

WORLD OF JUTE

Prices and Production

A slightly improved tone has been noticeable in the jute goods markets though conditions in the raw jute section have continued to be listless. The main topic of discussions in the world of jute is the prospects for raw jute in the current season and more particularly in the next. It is fairly clear now that the various measures taken by Government to arrest the rather disastrous decline in raw jute prices have not yielded the desired result. It would appear that the main impediment in the way of an upward revision of raw jute prices is the knowledge that the 1958-59 crop will be sizably bigger than that of the previous season. But in view of the adverse repercussions that an uneconomic price level will have on jute production in the coming years it has become incumbent on all concerned with the jute industry to ensure equitable prices for the jute grower. This has been sought to be achieved by taking simultaneous steps on a number of fronts. The jute mills have extended their cooperation both by augmenting their stocks of raw jute and by maintaining voluntary floor prices for their manufacturers. The latter however has proved untenable and has now been abandoned. On their part Government have taken steps to stabilise prices through STC purchases of raw jute at the primary markets. In order further to arrest the reactionary tendency it has been decided to allow the export of small quantity of raw jute. This measure has been generally welcomed as this will enable our country to reestablish contacts with the world raw jute trade and thus pave the way for larger exports when we come to have bigger surpluses. But the enthusiasm has however proved shortlived as traders now find that there is an export duty payable on raw jute exports. Probably because exports are being allowed after a long time it has been taken for granted that they will not attract the export duty. When it has been realised that the duty is still applicable the consensus seems to be that no worthwhile business is practicable with the duty on. The proximity of the Central Budget has somewhat revived spirits because it has been confidently expected that the opportunity would be availed of to announce the removal of the duty. This hope has been belied and the duty continues to be applicable as before.

The continuance of the duty is said to constitute a big handicap in the way of concluding business

with overseas buyers and balers are now showing no interest at all in the raw jute market. Thus the market seems to be entirely dependent again on domestic consumption and even though the State Trading Corporation has announced completion of export business with North Korea sentiment has continued to be depressed. It would appear that unless sizable exports take place sentiment may not show much improvement. Meanwhile thoughts are turning to prospects of jute production next season. The admittedly uneconomic price of raw jute so far this season will, it is rightly believed, have its effect on the jute acreage. Secondly the keen interest evinced in mesta this year by mills has also to be taken note of. Both these factors seem to point to a decline in the acreage of jute next season, a position which cannot be beneficial to any section in the Indian world of jute.

The main feature of trading in the jute goods market this week has been the steadiness of sacking. There have been rumours that enquiries for sacking have been received from various quarters. In earlier dealings sentiment has been helped by reports of a tender from the Government of India. This report was followed later by the news that the quantity involved is 5000 bales of B Twills—1500 bales for ready delivery and 3,500 bales for delivery during March-April. In between, reports have indicated that Burma has shown interest in sacking. Another rumour is that the West Bengal Government have placed an order for this category of goods. The cumulative effect of all these rumours has been a sizable increase in the rate of B Twills. Hessian has been comparatively dull though in earlier dealings this section has met with some enquiries.

The market opened last Thursday somewhat steady round sackings and the day's closing rate are Hessian 40" x 10 oz Ready Rs 38.80 and B Twills Rs 38.25. Rumours of a Central Government tender for B Twills aided sentiment on Friday and prices were well maintained. By Monday prices have moved up further all along the line on fresh rumours of an order from the West Bengal Government and prices at close on that day showed considerable improvement. Hessian Ready moved up to Rs 39.25 while B Twills recorded a gain of nearly one point over previous closing at Rs 39.50. Though yet another fresh incentive in the shape of a rumour of a tender for B Twills from Burma was available on Tuesday the days closing price levels did not show much change. With further reports about details of the Government of India tender for B Twills, prices firmed up on Wednesday especially in the sacking section and B Twills Ready advanced smartly to cross the Rs 90 mark to be finally placed at Rs 90.25. Hessian however continued steady at Rs 39.50.

The raw jute section ruled quietly steady during the past week with Assam Bottoms quoting at Rs 20.00 per maund.

WORLD OF TEA

World Crop up in 1958

ACCORDING to trade sources, the tea crop in the major producing countries has increased by more than 60 million pounds last year. Total crop is placed at 1,364 million pounds as against 1,300 million pounds in 1957 and 1,261 million pounds in 1956. India has accounted for almost half of the increase in the world production, with outturn in Northern India and South India rising from 528.4 million pounds and 150.5 million pounds in 1957 to the new record level of 551.1 million pounds and 157.7 million pounds respectively.

Ceylon has harvested a record crop of 413.2 million pounds as compared to 397.8 million pounds in 1957. Production in Pakistan has increased by 7.6 million pounds to 54.1 million pounds from 46.5 million pounds. A substantial increase is also reported from East Africa where the total crop is estimated at 85 million pounds against 76 million pounds. The Indonesian crop is estimated at 103 million pounds against the same in 1957.

Meanwhile, in the Export Sale held in Calcutta this week, offerings were 65,574 packages. There was a good but not very general demand, which weakened towards the close of the sale with prices often showing an easier tendency. "Teas for price" opened about 4 nP easier; but later declined by from 6 to 10 nP. Low and Medium Broken and Fannings were an irregular 4 to 10 nP easier. The few bright liquoring orthodox BOPs and OFs were sold well, but the plainer sorts were up to 10 nP easier with some BOPs being withdrawn.

Useful liquoring CTC types were again sold well at often appreciably dearer rates. The poorer kinds were an irregular feature and often easier, particularly towards the close. Legg-cut teas were up to 6 nP easier apart from the best which were often dearer. Stylish Whole Leaf grades were sold well, other kinds being generally up to 10 nP easier. Darjeelings were irregularly easier apart from the few with autumnal flavour which were well supported. Following rates were quoted:—Clean Black Pekoe Rs 1.92 to Rs 1.96; Plain BP Rs 1.60 to Rs 1.66; Plain Fannings Rs 1.70 to Rs 1.76; Medium BP Rs 1.58 to Rs 1.62; Medium Fannings Rs 1.68 to Rs 1.74; Best CTC Assam BP Rs 2.30 to Rs 2.40 and Best Assam CTC Fannings Rs 2.60 to Rs 2.80.

In the Internal Sale, offerings consisted of 20,903 packages of

Dusts and 2,626 packages of Leaf grades. The demand for Dusts was more general than has been seen in recent weeks and, although price levels were generally lower, there was good enquiry. Orthodox descriptions were sold readily at rate 2 nP per pound below last with premium sometimes being paid for powdery descriptions. Grainy Legg-cut teas could be quoted fully 4 nP easier, but where the leaf was small and powdery, there was more demand and these types were sold at or around valuations. The few Darjeeling teas were sold at rates which were irregular with quality. Following rates were quoted:—Medium Dooars Dust Rs 1.78 to Rs 1.80; Medium Assam Grainy Dust at Rs 1.74 to Rs 1.76; Medium Assam CTC Dust Rs 2.40 to Rs 2.60 and Best Assam CTC Dust Rs 2.40 to Rs 2.90 (nominal). Among Leaf grades, orthodox and CTC kind were sold at easier rates, while the few lines of Green Tea, on offer, were sold at around valuation.

In the Cochin market, offerings amounted to 636,950 packages. High-grown teas showed a very useful seasonal improvement in quality with a number of very flavoury teas on offer. The sale opened to a strong general demand, particularly for the best liquoring high-grown, which advanced in prices following quality. Others were fully firm and occasionally up to 5 nP per pound dearer, although Plain teas were fully steady. Whole Leaf teas were the weakest feature of the sale and were difficult to sell. A few lines of Tippy teas were sold at easier rates. Following rates were quoted:—Low Medium Rs 1.60 to Rs 1.70; Medium Rs 1.85 to Rs 2.25; Good Medium Rs 2.40 to Rs 2.80 and Quality Rs 3.20 to Rs 5.45.

The final sale No. 18 was held in Chittagong where offerings consisted of 16,138 chests of Leaf grades and 5,540 chests of Dusts. Leaf offerings generally consisted of typically dull, unattractive end-of-season teas and it is difficult to give accurate rates. But, demand was fairly general except Commo-nest and poorly-made Whole Leaf grades, which met with their usual discrimination, sometimes being difficult to sell even at five to six annas per pound under valuation. Fannings and Broken grades were the strongest feature.

The few legg-cut teas, on offer, were fully firm. There were 834 chests of Green teas on offer and the polished grades were sold readily at between one to two annas under valuation, while the unpolished grades were quite keenly sought after anything from six ples to three annas over previous rates. Although the market for Dusts opened about five annas easier, prices steadily improved as the sale progressed and, at the close, Plain Sylhet Dust was quoted at Rs 2.90.

The heavy weight of tea still being put up for auction in Ming Lane has, in no way, blunted the edge of buying. Invoices were wanted throughout and were often dearer in price.

AMONG Mr Morarji Desai's accomplishments will now have to be added a canny sense of practical psychology. In nothing was this more interestingly demonstrated than in his unobtrusive slipping in of his proposals for doing away with the wealth tax on companies and the excess dividend tax. Though the announcement made headlines the next morning, Mr Desai mentioned it almost as an after thought at the end of a longish discussion of the complexities of the present levy of income and super tax on companies and the steps he was taking to tidy up the whole thing. Not till he actually mentioned his proposal for abolition could any one have guessed that he was leading up to it. In fact, earlier in his speech, he had dealt with wealth tax, but he did not mention anything about this. And when he did mention it, he coupled it with a seemingly preposterous claim. He said that he was going to levy a rate of 45 per cent of income and super tax on companies and added that this rate will secure the same revenue as is at present derived from the taxes on wealth and profits of the companies. To those not initiated into the mysteries of "grossing up" of dividends in the shareholders' hand, the claim must have sounded very odd, since the nominal current rates of tax on companies add up to a total of 51.5 per cent. And before the befuddled among his audience could figure this out, he had passed on to other things.

Practical idealism in a democracy needs a rather complicated willingness, in fact it needs it even more than does unscrupulous opportunism. And that is why one admires the rather involved calculation of opposing considerations that must have preceded the decision to slip in, in an off hand fashion, a proposal that every one considers is of great moment. Why were these proposals played down, as they so obviously were? One answer is: because they were sure to be played up the next morning or even the same evening. This is not so flippant an answer as it might seem at first sight. Mr Desai could not be unacquainted with what is known as budget psychology, the frenzied attempts to look for "bullish" and "bearish" features in the financial proposals for the coming year. So, the fact of abolition of wealth tax is sure to be ferreted out and emblazoned. And, in so far as it is bullish, Mr Desai can have no objection to the publicity gratuitously given it, even if such favourable reaction is based on an imperfect appreciation of all the implications of the proposal. Mr Desai will in particular have no qualms in this matter, since, on a sober appraisal, the initial reaction would seem entirely justified on other and more substantial grounds. On the other hand, when second

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

and third thoughts make the public "cool off" in some slight embarrassment of its own initial reaction, it will have only itself to blame since the Finance Minister had made no extravagant claims about its significance. And, finally, when these misgivings in their turn are shown to be as baseless as the initial immoderate enthusiasm, the Finance Minister will have shown himself to have been both modest and sensible from the beginning.

Of course, these calculations could not have been so cold-blooded as they seem when put down in this fashion. But it is not entirely without significance that these much talked of proposals are to be effective only from the assessment year 1960-61. Neither the new rates of taxes on companies nor the abolition of wealth tax are to affect the assessment for the year 1959-60. (Indeed, theoretically, the Finance Minister has not yet committed himself irrevocably to the automatic adoption of a rate of 45 per cent on companies. This is the rate at which companies will pay advance taxes for the profits that will ultimately be assessed for the year 1960-61. This is another example of the way in which the Finance Minister had contrived to eat the cake and have it too—or rather, not deny himself the possibility of having it! Almost the only practical justification for this early announcement of the projected changes in company taxation that I can think of at the moment is the need for bringing into operation in the course of the next few months the provisions regarding deduction of tax at source on dividends. (This will be necessary in cases where dividends are distributed in the next financial year out of profits made by any company whose accounting year ended on any day after 31st March 1959). For the rest, the entire purpose of the present announcement seems to be psychological.

The sense of timing shown by Mr Desai is indeed perfect, for various reasons. In the first place, owing to a variety of reasons, corporate activity has got into a slough of frustrated sullenness. Men who could not possibly be considered as mere adventurers had felt their initiative thwarted at every turn largely because the current rates of taxation were both heavy and

trialists to think and plan for longer terms than they have so far been able to do.

There is another very important reason why Mr Morarji Desai gave his proposals for abolition of wealth tax only the amount of importance he gave in his speech. This reason is partly political. Wealth tax on companies was decided upon in the teeth of the bitterest opposition. The opposition is sure to seize upon its abolition—as indeed Mr Bhupesh Gupta has already done—as a piece of recidivism. Mr Morarji Desai would have anticipated this and though he has solid and substantial grounds on which he can repudiate this suggestion, he would hardly have wanted to herald these changes with trumpeting. Both the hopes and fears of a snap of continuity with earlier fiscal policies will be, in my view, wholly misconceived. (It is interesting how extremes meet, even in errors). Therefore, abolition of wealth tax on companies can, neither for tactical nor for substantial reasons, be presented as an earth shaking fiscal measure. But what clinched Mr Morarji Desai's tactical victory over the opposition—at least for the moment—is the claim that the abolition of wealth tax on companies does not mean less revenue to Government. Apart from the need for figuring it out, the levy has now been shown to have been utterly unnecessary. Of course, when the opposition recovers from this blow, it may conceivably have the hardihood to say: "Very well, do away with grossing up but leave wealth tax". But it is doubtful whether it will be heard with respect at that stage.

The intrinsic merits of Mr Desai's new scheme of company

taxation are very great. Firstly, the claim for simplicity is not only justified but it is its chief virtue. No one acquainted with a whole series of fictions involved in current taxation of dividends, fictions that broke down at every point, can fail to see the good sense of the suggestion to do away with all this elaborate make-believe. All the administrative and other advantages claimed for the new scheme of deduction at source are real, and on that score alone these changes deserve welcome.

★

The second merit of the scheme is that it has abolished at one stroke two features of current company taxation that have caused much heart burn. These are the wealth tax and excess dividend tax, on the one hand, and the high level of income and corporation tax, on the other. Indeed, Mr Desai's proposals are interlinked and it is the failure to see the inter-connecting mechanism that has caused both the initial dizziness and the later nervousness. Mr Desai must have seen the force of the objection to wealth tax on companies but he could not have given it away without bringing on him a ton of political bricks. So he looked for an existing leak that has escaped the popular eye and, in the "glossing up" of dividends, he found what he was looking for. The Finance Ministry must have been able to give him both the figures of "loss" by glossing up and the "gain" from wealth tax on companies. From these figures, Mr

Desai should have hit upon this ingenious suggestion that did four things at once: simplified the system, plugged an existing leak, did away with an unpopular levy and effected a substantial reduction even in the current rate of taxes on the profits of companies. I wonder whether any fiscal suggestion in recent years has combined so many substantial virtues.

★

And as for the "snags" that every one has been looking for so industriously, they are, with one exception, unreal. Many of these are of one's own making. For instance, the application of these provisions only from 1960-61 is really not a snag. The possibility of the budget for 1960-61 having a different and higher rate than 45 per cent is there, but what is the point in crossing bridges before you reach the stream? Doubtless, the implications of these proposals will be different for different companies, but except in the most unlikely case of companies which have been distributing all their disposable profits, none will be worse off under the new dispensation. In fact, companies as companies will be better off. This is the fact that will have to be firmly fixed in mind. A hated levy is abolished and the net rate of taxation on companies is reduced substantially. This means more disposable profits enabling retention and ploughing back into business. Since, as many studies have shown, the chief source of finance will increasingly have to be retained

profits, the lesser net tax is a reform of great moment to companies. Assuming that, inclusive of all levies, the current taxation on companies is anything between 51 and 60 per cent of their taxable profits, the gain under the new dispensation will be anything between seven and fifteen per cent. If you take a typical balance sheet and work it all out, you will see how enormously significant are the proposed changes.

★

Of course, somebody will have to pay for all this felicity. And it is the shareholder, in the abstract. Again, the starkness of this assertion will need several modifications. One way to put it will be that companies with large wealth tax liability are being helped out not only by their own shareholders but also by the shareholders of companies with small wealth. This may be small consolation, but this shows that the hands of companies with large potentiality for production—reflected by their wealth—will be in a better position, and thus incentive for production is provided. Of course, companies with large wealth but little profits, will derive a wholly undeserved benefit. But such companies must be small in number, since they are unlikely to have large wealth unless they have earned large profits. Secondly, who will invest for long in a company that does not earn enough profit?

★

As I said, the shareholder is certainly apparently worse off than

before. Where he was getting effectively a rupee for every 75 or so naye paise of actual dividend he was receiving, he will now get only 75 naye paise. And even this he will get in two instalments. Of course, companies may be tempted to make good his loss by a larger dividend than before. That may not always be feasible or even desirable. But, as against all these, the shareholder will have three distinct advantages. First, he will be spared a great deal of harassment in assessment consequent on the dissociation of his assessment from that of the company. Secondly, the increased strength of the company by the increase in retained profits will make his shares appreciate in capital value. And, lastly, and most importantly, the impetus to production given by these changes will increase the absolute quantum of the profits made by the company so that the company will be able to give him a larger dividend than before, and thus neutralise his loss.

★

Experts are falling over backwards trying to spot snags in the new proposals. I must say that some of their dicta appear too much like looking the gift horse in the mouth. But then, I suppose that these wary folks would want to make sure that it is not a Trojan horse. But my own impression is that it is a winner and Mr Morarji Desai, despite his alleged views on racing, is a fine trainer.

GATEWAY BOSSIP

THE introduction of State Trading in foodgrains seems to be not far off though agreement is yet to be reached between the State and Central Governments. As far as the Bombay State is concerned the position is that a plan for trading in foodgrains has been drawn up and is awaiting the approval of the Central Government. Speaking to Pressmen in Ahmedabad early this week Mr S. G. Kazi State Minister for Supply and Housing, has revealed that the scheme is likely to be implemented after the National Development Council meeting this month. He has further pointed out that the State Government are convinced that the acceptance of State Trading in foodgrains is the only solution to the problem of maintaining price levels and ensuring the smooth distribution of foodgrains. This view would seem to indicate that the State Government have some undisclosed reasons to believe that existing channels of trade are incapable of discharging the responsibility of ensuring the efficient distribution of foodgrains at equitable prices. While it is true that there is urgent need for devising ways and

State Trading in Foodgrains

means of making available to the people all over the country foodgrains in sufficient quantities and at fair prices, one cannot accept the thesis that this objective can be achieved only by the active participation of the State in the trade. Apart from the serious repercussions which may ensue as a result of the dismantling of the normal channels it is doubtful if the Government can muster the huge resources in men and money required to man the wholesale trade in a primary commodity such as foodgrain. By the same token it is evident that Government should have overwhelming reasons to have decided to shoulder the big responsibility which State Trading in foodgrains undoubtedly is. Mr Kazi has indicated that the principal reason that has prompted Government in this regard is the realisation that it is one of their primary responsibilities to see that the people's demand for foodgrains is met in full and at prices that are correlated to the economic condition in the country. This is no doubt laudable but one would expect Government to show why and how the existing methods of distribution have failed. It is interesting to note that Government have not so far given convincing reasons for embarking upon the new venture of State Trading in foodgrains. There have been vague charges against wholesalers but when pressed to substantiate their statements Government spokesmen have been obliged to admit that the charge of hoarding or profiteering cannot be levelled against the majority of traders engaged in the wholesale trade in foodgrains. It is also equally left vague whether the new move will not result in the unemployment of a large number of people who are in the foodgrains trade from generations as it were. There are many such questions and no attempt seems to have been made to answer them and judging from the progress that has been made in regard to the implementation of the scheme of State Trading in foodgrains, it is idle to expect convincing arguments from Government. But in view of the fact that a final shape to the scheme is yet to be given it is still not too late for Authority to seek the cooperation of the business community in achieving the main objective of their scheme without seriously dislocating the existing channels of trade. So long as Government have not established beyond doubt that the high price levels have directly stemmed from the profiteering propensity of the wholesalers, it will be only appropriate to fit the existing channels into the new pattern which for whatever reason Government may want to devise. In a statement on the proposed scheme of State Trading in Foodgrains, the Grain and Oilseeds Merchants' Association

Bombay has pointed out that the available facts and figures will show that the wholesalers are in no way responsible for the present foodgrains situation in the country. The familiar charge of hoarding will be found to be flimsy if one takes the trouble to list the advantages and disadvantages in such a procedure. The statement rightly points out that it is a common error to mistake storage for hoarding. In the first place largescale hoarding requires huge finance and considerable storage space and the latter in a city like Bombay is not only difficult to obtain but is pretty costly too.

If, however, it is established that there is hoarding, the Statement says that Government should examine the comparative stock position of agriculturists now and one two years ago rather than put the blame on the wholesalers. Thanks to the active interest taken by Government in rural development, the economic condition of the rural population is steadily improving and consequently the cultivator is able to hold on to his produce much longer than before. It is also to be noted that the consumption has increased in the countryside. The grain-dealers' contention that only when a thorough study into the foodgrains situation has been made and other causes for the shortage and high prices are ruled out, Government will be justified in apportioning the blame on the wholesaler and consequently debar him from remaining in his traditional business.

An important point is made by the Statement when it declares that Government's decision to nationalise the wholesale trade in foodgrains gives the erroneous impression that the decision represents the last weapon in the armoury of Government in their battle against the spiralling price levels in foodgrains. It should not be difficult for Government to take appropriate measures to maintain price levels at any desired level. The Statement rightly avers that to say that Government have not been able to regulate the foodgrains market is to admit that they have not tackled the problem in any systematic manner. It will be difficult for Government to escape such a charge because they have all the facilities that will be required effectively to control the trend in the markets. The basic determining factor in the foodgrains situation at any time and at any place is the size of the supply available. It needs no longwinded argument to prove that a plentiful supply will solve all problems and it is to be remembered that self-sufficiency in foodgrains is being given the top-most priority in national planning. The results of the current season are quite encouraging and with

BOMBAY REVIEW

the additional irrigational facilities that will be made available in coming years as a result of the progress of Plan schemes included in the current five year plan, the scope for increasing food production will also increase further. In this view the decision of Government to enter the wholesale trade in foodgrains does not seem to be in the larger interests of the nation as a whole. The Grain and Oilseeds Merchants Association has given an alternative plan which they claim will be able to fulfill the objectives of State Trading in foodgrains. It advocates the setting up of a special organisation for the purpose of organising the trade in foodgrains right from the field to the consumer. The organisation should be for the whole of the country and obtain the cooperation of the business community. This idea deserves the close attention of Government as the proposed organisation will be able to get the services of a large number of people who have specialised knowledge about the foodgrains trade.

S. E. RLY TENDERS

Sealed tenders are invited for (1) Tender No. CON/COS/23/P&M/112/EMP/59 for supply of oil seals of various types required for earth moving plant. Details to be obtained from the tender schedule. Earnest money is Rs. 200/-. Tenders will be opened on 30-3-59 at 12 noon.

(ii) Tenders No. CON/COS/24/P&M/107/EMP/59 for supply of clutch parts 17" roll way Lipe type. Details to be obtained from the tender schedule. Earnest money is Rs. 200/-. Tenders will be opened on 30-3-59 at 12 noon.

Tender forms are obtainable from the office of the under-mentioned (Construction Section), Garden Reach, Calcutta—23, on remittance of Rs 2/- (not refundable) per copy per tender by money order to him direct in the case of outside firms, and on production of cash receipts from this Rly's Chief Cashier by local firms.

Tender should accompany the receipts for depositing earnest money as stated above with this Rly's Chief Cashier without which the tenders are liable to be rejected. Approved contractors having a permanent deposit of Rs 1000/- with the undermentioned are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

THE CENTRAL BANK OF INDIA LIMITED

NOTICE is hereby given that the Forty-eighth Annual General Meeting of the Shareholders of The Central Bank of India, Limited, will be held at the Registered Office of the Company, in the Central Bank Building, Mahatma Gandhi Road, Fort, Bombay, on Monday, the 30th day of March, 1959, at 4 P.M. (S.T.) to transact the following business:—

- To receive, consider and adopt the Report of the Directors and the Audited Accounts for the period ended 31st December, 1958.
- To declare a dividend.
- To appoint a Director in place of Sir Homi Mody who retires by rotation under Article 92 of the Articles of Association read with Section 256 of the Companies Act, 1956, and is eligible and offers himself for re-appointment and for that purpose to consider, and if thought fit, to pass the following resolution of which special notice as required by Section 281 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which is annexed hereto as required by Section 173 of the said Act:—
“RESOLVED that Sir Homi Mody who has attained the age of 77 years and who retires by rotation, be and he is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the Companies Act, 1956, shall not apply to him”.
- To appoint a Director in place of Mr. C. P. Wadia who retires by rotation under Article 92 of the Articles of Association read with Section 256 of the Companies Act, 1956, and is eligible and offers himself for re-appointment and for that purpose to consider, and if thought fit, to pass the following resolution of which special notice as required by Section 281 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which is annexed hereto as required by Section 173 of the said Act:—
“RESOLVED that Mr. C. P. Wadia who has attained the age of 78 years and who retires by rotation, be and he is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the Companies Act, 1956, shall not apply to him”.
- To appoint a Director in place of Sir Jamsetjee Jejeebhoy,

Bart., who retires by rotation under Article 92 of the Articles of Association read with Section 256 of the Companies Act, 1956, and who is eligible and offers himself for re-appointment.

- To appoint Auditors and to fix their remuneration.
- To consider and, if thought fit, to pass the following resolutions as special business:—
(a) “THAT the 338 Ordinary Shares represented by the 676 fractional certificates issued by the Company in 1923 to Shareholders of the Tata Industrial Bank, Ltd. (in liquidation) which have not yet been presented to the Company for conversion into shares be allotted by the Directors to such person or persons and on such terms as the Directors may think fit, and that the sum of Rs. 25 representing the paid-up capital on each of the said 338 Ordinary Shares having been received by the Company otherwise than in cash, by reason of transfer of assets of the Tata Industrial Bank in 1923, the sum to be received as consideration for allotment of each of the said 338 Ordinary Shares be treated as premium and be transferred in accordance with Section 78 of the Companies Act to an account to be called ‘the Share Premium Account’.”
(b) “THAT it is hereby confirmed that the Directors have power to dispose of the 1525 Ordinary Shares forming part of the capital issued by the Company in 1944 and which still remain unallotted, as the Directors may think fit, and that out of the sum to be received as consideration on such disposal of each of the said 1525 Ordinary Shares the sum of Rs. 25/- be credited as partly paid thereon to the Company's Capital Account and the balance of the sum be treated as premium and be transferred to ‘the Share Premium Account’.”
(c) “THAT it is hereby confirmed that the Board of Directors have power to dispose of the 29 Ordinary Shares represented by the 58 coupons issued in 1944 and which have not yet been presented to be converted into shares, as the Directors may think fit, and that the sum of Rs. 25/- having been paid on each of the said 58 coupons to the Company at the time of issue thereof, the whole amount to be received as consideration on such disposal be treated as premium and be credited to ‘the Share Premium Account’.”
(d) “THAT the 774 Ordinary ‘A’ Bonus Shares of the face value of Rs. 25/- each that have remained unallotted

out of the 2,10,000 Ordinary ‘A’ Shares issued as fully paid-up shares in 1947 be allotted by the Directors to such person or persons and on such terms as the Directors may think fit, and that the amount to be received as consideration on allotment of the said 774 Ordinary ‘A’ Shares be treated as premium and be transferred to ‘the Share Premium Account’.”

The Resolutions numbered 7(a) to (d) above being special business, an Explanatory Statement with regard to them is annexed hereto.

By Order of the Board,
N. K. KARANJIA,
General Manager.

Bombay, 28th February, 1959.

NOTE:—

A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

- The Transfer Books of the Bank will be closed from Monday, the 9th day of March, 1959, to Monday, the 30th day of March, 1959, (both days inclusive).
- Dividend Warrants for the half-year ended 31st December, 1958, will be posted to the Shareholders at their registered address on and after the 31st day of March, 1959. Shareholders are requested to intimate to the Bank their change of address, if any, immediately.

ANNEXURE TO THE NOTICE.
Explanatory Statement as required by Section 173 of the Companies Act, 1956.

To,
The Shareholders of
The Central Bank of India,
Limited.

Dear Sir/Madam,

In conformity with the Companies Act, 1956, which came into force on 1st April, 1956, the following Explanatory Statement, as required by Section 173 of the aforesaid Act, sets out all material facts relating to Item Nos. 3, 4 and 7 mentioned in the accompanying Notice dated the 28th February, 1959.

2. In respect of Item No. 3, it is notified that Sir Homi Mody who retires by rotation and is eligible for re-appointment, has attained the age of 77 years and hence he cannot be re-appointed a Director of the Company except by a resolution in respect of which special notice has been given in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. The Company has received such a special notice from some members notifying their intention to move the resolution as set out in the said Item No. 3. Sir Homi Mody joined the Board of Directors of the Company in 1927. He is a banker, industrialist and businessman of considerable experience and has played a notable part in public

and civic life. During the long period of his association with the Company, he has rendered valuable services to the Company. It is considered in the interest of the Company that he be re-appointed a Director.

3. In respect of Item No. 4, it is notified that Mr. C. P. Wadia who retires by rotation and is eligible for re-appointment, has attained the age of 78 years and hence he cannot be re-appointed a Director of the Company except by a resolution in respect of which special notice has been given in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. The Company has received such a special notice from some members notifying their intention to move the resolution as set out in the said Item No. 4. Mr. Wadia has been a Director on the Board of the Company since 1949. As a businessman of wide experience, he has proved himself very useful to the Board and it is in the interest of the Company that the Board should continue to receive the benefit of his services.

Re: Item No. 7 (a) to (d).

(1) When the assets of the Tata Industrial Bank, Ltd. (in liquidation) were transferred to the Company in 1923, the Company agreed as part of the consideration for the transfer to allot to Shareholders of the Tata Bank on partly paid-up share of the Company for every two shares of the said Tata Bank held by them an issue to each shareholder of the said Tata Bank who became entitled to a half share in the Company a fractional certificate the presentation of two such certificates by any person to the Company entitling him to receive on share of the Company. Out of the certificates issued by the Company 676 certificates, representing 338 shares, have not yet been presented to the Company for conversion into shares, and Counsel has advised the Company to allot the 338 Ordinary Shares to persons other than the holders of the said 676 certificates and that the holders having failed for over 35 years to present the certificates for conversion into shares, they would not now be entitled to claim allotment of the shares. Counsel has further advised that allotment of the said 338 Ordinary Shares to person other than the holders of the 676 certificates will amount to an issue of new shares within the meaning of Section 81 of the Companies Act so that the 338 Ordinary Shares in question must be offered to the existing shareholders of the Company in proportion to the share held by them, unless the Company in General Meeting gives direction to the contrary. As the Company's Subscribed Capital consists of more than 12,55,000 shares, it would be quite impracticable to offer such 338 Ordinary Shares to the existing shareholders in proportion to the shares held by them, and the Directors, therefore, seek a direction from the General Meeting that these 338 Ordinary Shares be

March 7, 1959

allotted to such person or persons and on such terms as the Directors think fit. The paid-up capital of Rs. 25/- per share in respect of such 338 Ordinary Shares having been received by the Company in the shape of assets of the said Tata Bank, the consideration to be received on such allotment of the 338 Ordinary Shares will have to be treated as premium and transferred to the Share Premium Account, as required by Section 78 of the Companies Act.

2. Pursuant to the Resolutions passed at the Extraordinary General Meeting of the Company held on 29th March, 1944, 3,36,264 new shares of the Company were offered to the then existing shareholders in the proportion of one new share for every two existing shares and a coupon was issued to each shareholder who became entitled to one half of a share, the presentation of two coupons entitling the person presenting them to one new share. Persons entitled to receive 1525 of the new shares have not yet applied for their allotment or paid the sum of Rs. 25/- per share which was payable on account of capital on each of these shares, or the further sum of Rs. 25/- which was payable as premium on each new share. Counsel has advised that under the resolutions passed on 29th March, 1944 the Directors have now the power to allot the said 1525 Ordinary Shares to any persons and the proposed Resolution number (b) confirms that the Directors have the power to dispose of such 1525 Ordinary Shares as they may think fit, as had been provided in the aforesaid Resolutions of 29th March, 1944. Out of the amount to be received as consideration for allotment of the said 1525 Ordinary Shares, Rs. 25/- per share will be received on account of the paid-up capital of the shares and the balance as premium, which will be credited to the Share Premium Account in accordance with Section 78.

3. Of the coupons issued in 1944, 58 representing 29 Ordinary Shares have not yet been presented to the Company for conversion into shares. One of the resolutions passed at the aforesaid Meeting of 29th March, 1944 provided that in case any sets of coupons required to be presented to the Company for the allotment of full shares were not presented by 15th October, 1944, the Directors should have the right to dispose of such shares representing such coupons in any manner they might think fit. The Directors in exercise of this power propose to dispose of the said 29 Ordinary Shares represented by the 58 coupons as they think fit and the proposed Resolution number (c) confirms that the Directors have such power. The sum of Rs. 25/- payable on account of the capital value of each of the said 29 Ordinary Shares was received by the Company at the time of issue of the said coupons, since each coupon was issued on payment of Rs. 12-8-0 on account of capital and Rs. 12-8-0 on account

of premium. Hence the whole amount now to be received on such disposal of the 29 Ordinary Shares will be treated as premium and credited in the Share Premium Account.

4. By the Resolutions passed by the Company in General Meeting on 31st March, 1947, 2,10,000 Ordinary ‘A’ Shares of Rs. 25/- each were resolved to be allotted as fully paid-up shares free of cost to the Company's shareholders in the proportion of one new share to five existing shares and one coupon was directed to be issued to any member becoming entitled to one-fifth of a share on the footing that five coupons would be convertible into one Ordinary ‘A’ Share. The sum of Rs. 52,50,000 representing the capital amount of the 2,10,000 shares was directed to be transferred from the Reserve Fund to the Capital Account, which was done. The 2,10,000 Ordinary ‘A’ Shares were issued on the assumption that the persons entitled to the aforesaid 338 Ordinary Shares of the 1923 issue and the aforesaid 29 Ordinary Shares of the 1944 issue, the paid-up capital in respect of which had been received by the Company, would take them up and on doing so would be entitled to receive one coupon for each Ordinary Share and that the persons entitled to take up the aforesaid 1525 Ordinary Shares of the 1944 issue, the paid-up capital and premium in respect of which have not yet been received by the Company, would also pay for these shares and then become entitled to 305 Ordinary ‘A’ Shares. Of the coupons issued in 1947 to shareholders who did not hold shares in multiples of five, 2345 coupons representing 469 Ordinary ‘A’ Shares have not yet been submitted to the Company for conversion into shares and hence 469 Ordinary ‘A’ Shares remain unallotted in addition to the 305 Ordinary ‘A’ Shares mentioned above.

5. Counsel has advised that the said 305 and 469 Ordinary ‘A’ Shares amounting in all to 774 Ordinary ‘A’ Shares should now be allotted to persons other than those to whom they were originally intended to be allotted and that as their allotment will amount to an issue of new shares within the meaning of Section 81 and as it would not be practicable to offer them to the existing shareholders, in view of the smallness of the number of shares involved, the Directors should obtain the Shareholders' sanction for allotting the shares for a consideration. The Directors seek power to allot them to such person or persons and on such terms as they think fit. The whole consideration to be received on allotment of the said 774 Ordinary ‘A’ Shares will have to be treated as premium and be credited to the Share Premium Account.

By Order of the Board,
N. K. KARANJIA,
General Manager.

Bombay, 28th February, 1959.

GATEWAY NOTES

Needs of Vidarbha

With the inclusion of Vidarbha, the Bombay State bids fair to become self-sufficient in some of the basic materials which the old State lacked. Perhaps the most important gain is the vast scope for rice production in the new areas that have now become part of the Bombay State. The Vidarbha region also is rich in many minerals including coal. It is not surprising therefore that the State Government are taking steps toward full utilisation of the natural wealth in the region.

Speaking at the fifteenth annual general meeting of the Nag-Vidarbha Chamber of Commerce, Nagpur, Mr. Durgaprasad Saraf has however pointed out that concerted measures will be necessary to make the region yield full benefits. Among the essential prerequisites to transform it into a busy industrial region, according to Mr. Saraf, is a major irrigation and power project. Apart from the urgent need for cheap electricity without which there is persistent demand for water for irrigation and other purposes. It is believed that the Wain ganga project will be able to ensure both these requirements. There is also need for exploring the possibilities of smaller irrigation schemes based on a number of other rivers which flow in the region. Mr. Saraf's plea for the inclusion of the project in the Third Plan deserves the special attention of the State Government as self-sufficiency in food is to be given top priority particularly in this State.

It is rather unfortunate that Vidarbha is not happily placed with regard to existing industries also. Though the serious threat of wholesale closure of mills has been averted, the textile industry as a whole continues to be in a bad plight. It is now clear that the relief in excise duty on cloth given last year has not materially altered the financial position of mills in this region as the load of unsold stocks is as heavy as before. Similarly the manganese industry is depressed because of lack of demand from abroad. Mr. Saraf has pointed out that while the fall in demand from USA has been the main militating influence the high freight rates obtaining in the country are making it impossible for the industry to compete effectively with other producers in the foreign markets. In this regard he draws attention to the fact that because of low freight rates Brazil has been able to increase its sales from 8 per cent to 32 per cent in the American market. It is to be hoped that the question of the freight rate for manganese will be sympathetically viewed by the committee that has

been set up by the Railway Ministry to study the question of concessional rates for export goods.

*

LIC Business in 1958

The progress of the nationalised life insurance in India is being watched with special interest because there is no consensus that life insurance after nationalisation will be as popular with the public as under private enterprise. The results of the working of the LIC during last year are of a variety which should set at rest doubts as to the future of life insurance under state auspices in our country. A record business of Rs. 344.68 crores has been written by the LIC during 1958. This is an unprecedented record for new life business and represents 22 per cent increase over the figure for 1957. Last year's total is made up of Rs. 5.62 crores written outside India, and Rs. 339 crores within India. The latter figure includes Rs. 1.68 crores under the Janata policy scheme. The number of policies issued during 1958 total over 9,60,000 as against 8,00,000 policies issued during the previous year.

Speaking at a press conference last week in Bombay Mr. P. A. Gopalakrishnan, Chairman of the LIC, has pointed out that though the foreign business of the Corporation is still insignificant, there are indications that an improvement in this regard in the current year may take place as a result of his tour last year to East Africa and other places. Such signs are particularly noticeable in East Africa which is one of the principal regions in which business is being done now. The other regions in which business is done are Singapore, Hongkong, Malaya, and Fiji Islands. The fact that the Corporation has formulated a five year plan with a business target of Rs. 1000 crores is an indication of the immense prospects before life insurance in this country.

Much disparity continues in the value of the average policy sold in the different zones. In the Northern Zone the average policy is for over Rs. 4,600, in the Central and Western zones a little over Rs. 4,000, in the Eastern Zone Rs. 2,600 and in the Southern Zone Rs. 2,700. The average policy sold outside India is for over Rs. 10,000.

A new feature in the working of the Corporation is the formation of a research division to assist its investment activities. By virtue of the large funds available for profitable employment, the LIC is now the biggest single investor in the country. Its holdings in industrial equities have also increased considerably in the past one year. Investments now total Rs. 414.02 crores made up as follows: About Rs. 201 crores in Government of India securities, Rs. 55 crores in State Government securities, Rs. 39 crores in other appropriate securities, Rs. 75 crores in debentures, preference and ordinary shares, Rs. 13 crores loans on mortgaged properties, Rs. 21 crores as loans on housing properties and Rs. 10 crores miscellaneous investments.

REPORT OF THE AUDITORS

TO THE PRESIDENT OF INDIA,
We, the undersigned Auditors of the State Bank of India, appointed under Section 41(1) of the State Bank of India Act, 1955, do hereby report to the Central Government upon the Balance Sheet and Accounts of the Bank as at the 31st December, 1958.
We have examined the above Balance Sheet and the Profit and Loss Account and the Accounts relating thereto of the Central Office and the Local Head Offices at Bombay and Calcutta and the Returns submitted and certified by the Secretaries and Treasurers of the Local Head Offices at Madras and New Delhi, by the Manager, Pakistan Branches and by Branch Secretaries, which Returns have been incorporated in the above Balance Sheet and Accounts, and report (i) that, in our opinion, the Balance Sheet is a full and true statement of the assets and liabilities of the Bank as at the 31st December, 1958, and (ii) that the Accounts are in accordance with the explanations given and as shown by the Books of the Bank; (iii) that where we have found any discrepancy or inconsistency in the Accounts, we have brought it to the notice of the Bank and the same has been corrected; (iv) that the information received from the Local Head Offices at Madras and New Delhi and from the Branches of the Bank have been found adequate for the purpose of our audit; (v) that the Profit and Loss Account shows a true balance of profit for the period covered by such account; (vi) that, in our opinion, the Balance Sheet and Profit and Loss Account are drawn up in conformity with the law; and (vii) that, in our opinion, Books of Account have been kept by the Bank as required by law.

The audit of the Books and Accounts of the Central Office has been carried out jointly by Messrs. S. P. Billimoria & Co. and Messrs. Ray and Ray, the audit of the Books and Accounts of the Local Head Offices has been carried out at Bombay by Messrs. S. P. Billimoria & Co. and at Calcutta by Messrs. Ray and Ray.

Appropriation of Profits

The Directors report that, the usual and necessary provisions having been made, the net profit of the Bank for the year ended the 31st December 1958 amounted to Rs. 1,90,14,183.02 which, with Rs. 55,99,170.54 brought forward from last year, makes a total of Rs. 2,46,13,353.56. This sum the Directors of the Bank have disposed of as follows:—

	Rs.	nP.
Dividend to the Shareholders at the rate of Rs. 16 per share ...	90,00,000	00
(made up of Interim Dividend at the rate of Rs. 8/- per share Rs. 45,00,000 and Final Dividend at the rate of Rs. 8/- per share Rs. 45,00,000).		
2. Transferred to Reserve Fund ...	37,50,000	00
3. Transferred to Pension Funds ...	6,90,200	00
4. Bonus to Staff ...	36,00,000	00
5. Transferred to Staff Welfare Fund ...	5,00,000	00
6. Transferred to Staff Co-operative Housing Fund ...	15,00,000	00
7. Balance carried forward to the Profit and Loss Account ...	55,73,153	56
Total	2,46,13,353	56

Small Recovery After a Sharp Decline

AFTER witnessing a steady rise in prices for nearly three months, prices in the Cotton futures market developed an easy trend during the past few days due to sustained selling pressure following the fixation of "room" rates. Although the actual room rates were fair, the feeling in the market was that the room rates, particularly for Kalyan and Jaydhar "B" grade, Buri American and Gaorani, etc., were such as to encourage large tenders against the maturing contract. It was this realisation that had weakened the sentiment and provoked all-round selling pressure. Moreover, arrivals have been on the increase, particularly in the Eroach area. Again, with the delivery period of the maturing contract to commence this week, there was a distinct inclination to switch-over operations from this contract to the May contract. Consequently, it managed to remain steady at close.

Above all, the demand from the mills is subdued. The mills are obviously keeping off the market on account of the announcement of an import quota for foreign cotton and the issue of allotment letters to the exporting mills under the "export incentive scheme". With the result, the CO/2 came down by about Rs 80 per candy in view of the fact that equivalent varieties from Sudan and East Africa were cheaper by about Rs 100 per candy, while Vijay lost about Rs 30 per candy.

Listless conditions continued to prevail on the export front. There was hardly any demand from shippers for exportable varieties. Barring Bengal Deshi, all short-staple growths eased by about Rs 15 per candy. The overseas demand for Zoda and Yellow Pickings was also very poor.

In the foreign section, export mills have received their allotment letters for import of cotton against their export performance in July/December 1958 period. The absence of import duty on foreign cotton in the Union Budget was also welcomed by the fine and super-fine count mills. This is understandable since it will conflict with the "export incentive scheme". In fact, this is responsible for the small recovery in prices towards the close of the week.

Some spinners were reported to have bought AR/Bushoga and, to some extent, AR/BP/52 for March/April delivery. There were some enquiries for the higher grades of Gezira/S new crop based on the reduced levels obtained at the auction on February 24. Reports from East Africa have indicated that the crop in Uganda/Kenya has been revised downward by 45,000 bales to 3.85 lakh bales.

Indian Finance

KARACHI COTTON MARKET:

Prices in the Karachi Cotton futures market showed small gains over last levels, thanks to the prevailing low levels which attracted some buying. Slackness of export demand and pressure of the new crop arrivals, however, discouraged follow-up support.

X

ALEXANDRIA COTTON MARKET:

Prices in the Alexandria Cotton futures market showed a mixed trend. The long-staple Karnak contracts encountered selling, while medium-staple Ashmouni received some support. There were rumours in the market that the present export duty of 3.45d per lb on Karnak and Menoufi and 2.05d on other growths might be reduced or even abolished, so as to meet competition from Sudan cotton.

X

LIVERPOOL COTTON MARKET:

Easy conditions prevailed in the Liverpool cotton futures market, thanks to hedge pressure and liquidation induced by bearish outlook for raw cotton and lower prices quoted by US shippers. Both the American and Sudan contracts were neglected by US shippers. Both the American and Sudan contracts were neglected and values remained unchanged.

X

NEW YORK COTTON MARKET:

Conditions in the New York cotton futures market remained fully steady. Trade and commission house buying was good, while spot house also lent support. The main influencing factors were expectations of large exports in the next season and prospects of a tightening of free supplies later in the current season. Spot cotton was, however, a shade easy.

X

CLOTH AND PIECEGOODS:

Activity in the Cloth market was rather restricted last week. The only redeeming feature was the movement of the seasonal goods in the domestic sector. It is stated that some mills producing quality goods were able to precipitate business at slightly higher prices. On the other hand, the demand from Uttar Pradesh had tapered off.

On the export front, trading conditions were more or less the same. Inquiries were received from Hong Kong. The UK maintained more or less their usual offtake in medium greys, drillings and furnishing fabrics at slightly reduced prices. Although there were enquiries from East Africa, no business was reported to have materialised. All other destinations were dull.

Meanwhile, the outlook for Indian cloth in world market appears very uncertain despite the export incentives announced by the Government. Exporters complain that the benefit is confined only to "exporting mills", while they account for about 80 per cent of the export trade. Incentives like import licences for raw cotton for exporting mills do not seem to have been caught up well with the mills; because the response to this has been very cold.

THE BANK OF INDIA LIMITED
ANNUAL REPORT

To be submitted to the Shareholders at the Fifty-Third Annual General Meeting to be held at the Registered Office of the Company at Mahatma Gandhi Road, Fort, Bombay, on Thursday, the 12th day of March, 1959, at 4 o'clock in the afternoon.

Directors' Report for the year ended 31st December, 1958

The Directors submit to the Shareholders the BALANCE-SHEET AND PROFIT AND LOSS ACCOUNT for the year ended 31st December, 1958. The Auditors' Report is also annexed.

The transactions for the past year, including the balance brought forward from the previous year, Rs. 16,02,381.34, have resulted in a profit of ...	Rs. 1,01,79,476	54
An interim dividend was paid for the half-year ended 30th June, 1958, at the rate of 6 per cent. free of Income-tax on the Paid-up Capital of Rs. 3,00,00,000, which absorbed ...	Rs. 18,00,000	00
Provision made for Income-tax and Super-tax for the year ...	25,00,000	00
Bonus to Staff ...	16,00,000	00
The Directors now propose:— To pay a final dividend for the half-year ended 31st December, 1958, at the rate of 10 per cent free of Income-tax, making 16 per cent for the year, on the Paid-up Capital of Rs. 3,00,00,000, which will absorb ...	30,00,000	00
To carry forward to the next account ...	12,79,476	54
Total Rs. ...	1,01,79,476	54

The Company's business continued to function satisfactorily.

The Bank Rate remained stationary at 4%.

Branches were opened during the year at Churchgate, Fort and Sion in Bombay, at Navrangpura in Ahmedabad and at Baroda, Kanpur and Visakhapatnam.

The Directors report with deep regret the death on 1st October, 1958, of their esteemed colleague, Sir Joseph Kay, K.B.E., who was a Director of the Company for over 37 years; they desire to place on record their high appreciation of the valuable services rendered by him to the Company.

Under the provisions of Section 256 of the Companies Act, 1956, the following Directors of the Company retire by rotation, but are eligible and offer themselves for re-election:—

Mr. Ambalal Sarabhai,
Mr. Bhagvandas C. Mehta,
Mr. A. D. Shroff.

During the year Mr. Jugmohan Prasad Goenka, at the invitation of the Board of Directors accepted a seat on the Board. Under the provisions of Section 260 of the Companies Act, 1956, and of Article 85 of the Company's Articles of Association he will hold office up to the date of the Annual General Meeting, namely, up to 12th March, 1959. He stands for election in the manner provided by the Act and the Articles of Association.

The Shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration.

COWASJEE JEHLANGIR, ... Chairman.

AMBALAL SARABHAI,
RAMNARAYAN RAMNARAIN,
BHAGVANDAS C. MEHTA,
K. M. D. THACKERSEY,

REPORT OF THE AUDITORS TO THE SHAREHOLDERS.

We have audited the foregoing Balance-Sheet of The Bank of India Limited as at 31st December, 1958, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated unaudited returns from all the Branches in India not visited by us for the purposes of this Report and the audited returns of all Branches outside India audited by other Auditors.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisions to sub-sections (1) and (2) of Section 211 and sub-sections (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance-Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956; they are, therefore, drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that:—

- we have obtained all the information and explanations which, to the best of knowledge and belief, were necessary for the purpose of our audit have found them to be satisfactory;
- the transactions of the Bank which have come to our notice have been within the powers of the Bank;
- in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank;
- the Bank's Balance-Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;
- in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance-Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1958, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

Statement Pursuant to Section 212 of the Companies Act, 1956

The Profit and Loss Account of the Bank of India Limited for the year ended 31st December, 1958, does not include any profit or loss of its subsidiary. The Bank of India (U. K.) Nominees Limited (a nominee company incorporated and operating in the United Kingdom), as no profit was made and no loss was sustained by that subsidiary. All expenses incurred were borne and paid by The Bank of India Limited. The shares of the subsidiary are wholly owned by the Bank.

Having regard to the fact that no Profit and Loss Account of the said subsidiary is prepared in the circumstances aforesaid and that its Balance-Sheet and the Reports of its Board of Directors and Auditors are drawn up in accordance with the law in force in the United Kingdom, an application was made to the Central Government under sub-section (8) of Section 212 of the Companies Act, 1956, and, in exercise of the powers conferred by the said sub-section (8) of Section 212 of the Companies Act, 1956, the Central Government, being satisfied that it is necessary so to do, have directed that, in relation to The Bank of India (U. K.) Nominees Limited, a subsidiary of the Bank, the provisions of Section 212 of the said Act shall apply only to the extent that The Bank of India Limited shall be required to attach to its Balance-Sheets copies of the Balance-Sheets and of the Reports of the Board of Directors and of the Auditor of the said subsidiary made out in accordance with the provisions of the English Companies Act for the time being in force in the United Kingdom and that The Bank of India Limited is exempted from attaching to its Balance-Sheets a copy of the Profit and Loss Account of the said subsidiary.

GATEWAY MARKETS

Mixed Trend in Oilseeds

PRICES on the Bombay Oilseeds Exchange showed a mixed trend in the midst of narrow two-sided fluctuations. Groundnut kept steady, while Castorseed failed to maintain the improvement in prices noticed till recently. Trading in Linseed was featured by a substantial business in linseed oil with Australia. Cottonseed prices recorded an impressive rise in prices on speculative support.

Despite the increase in the excise duty on vegetable oils, steady conditions persisted in the Groundnut section as a result of fair demand from crushers and vanaspathi manufacturers. Advices from Saut were also fairly quoted.

at Rs 35.50 and Groundnut Oil at Rs 18.50.

Conditions in the Castorseed section were generally quiet in the absence of fresh developments. Although there was an initial rise in prices on rumours of business done to the extent of 700 tons in castor oil with Czechoslovakia, continued weakness in the spot section caused a sharp fall in prices towards the close. Castor ready was done at Rs 29.75 and Castor Oil, commercial quality at Rs 15.25.

Prices in the Linseed section developed a firmer tendency on reports of business done in Linseed Oil to the extent of 985 tons with Australian paint manufacturers. The bulk of this business was reported done at prices ranging from £113 to £114 per ton. A small quantity was reported to have fetched even £116 per ton. The entire quantity is to be shipped by the end of April; but nearly half of the total commitments will be executed before the end of this month.

This Australian order has proved timely from the Indian angle, especially when the new crop has already

started moving on a limited scale in the Moglal and Rajasthan areas during the last few days. The arrivals are expected to commence in Madhya Pradesh and Uttar Pradesh in about a fortnight. This year's crop is placed at the normal quantity of about 3.5 lakh tons.

While the periodical Australian demand has helped the market in recent months, the overall export outlook does not inspire much confidence, since the current prices in the UK, placed at about £97 per ton, make business improbable. Canada and the Argentine have been prominent rivals and hence conditions in the near future can hardly be expected to favour India. It is, however, significant that linseed oil has a good domestic market, which has been a stabilising factor for the commodity in relation to rapeseed oil and mustard oil.

Yarn

It is learnt that the Rayon textiles industry will shortly represent to the Union Government that the actual users should be allowed to utilise their import licences for art

silk yarn to obtain their requirements from abroad, without any restrictions in respect of their source of supplies.

The industry's plea is a sequel to the recent Government directive that not more than 76 per cent of the value of the import licences should be utilised for direct imports and that the balance quantity should be obtained through the State Trading Corporation from the countries with which the Corporation has rupee payment arrangements.

Gold & Silver

Sentiment on the Bullion Exchange, after remaining depressed early in the week, improved towards the close. The initial easiness was mainly due to selling pressure following rumours that the authorities would do away with the import duty on bullion. However, in the absence of any such relief and the Finance Minister's proposal to increase Wealth Tax on individuals and Hindu undivided families, values improved.

OLYMPUS

FIRST reactions to Mr Morarji Desai's financial proposals for the coming year have been exhilaratingly paradoxical. All pre-budget speculations had emphasised the comparative lack of room for manoeuvre that the Finance Minister was afflicted with, and no major departure from the tax structure erected by his predecessors was hoped for. Therefore, when Mr Morarji Desai unfolded what appears to be the beginning of a rational system of corporate taxation, he literally took the breath of his audience away. The major fact to which everyone clung was the proposed abolition of the Wealth Tax on companies and the excess dividends tax. While a number of minor excise levies have been fairly freely (and as it turned out, accurately) predicted, none, even in his extravagant moments, had dared hope for the repeal of two contentious levies to which Government had so tenaciously been holding on so long. Indeed, when Professor Kaldor, who had originally opposed Wealth Tax on Companies recently gave it his blessing—in fact he suggested raising the rates—one's worst forebodings seemed likely to come true. So, when Mr Morarji Desai almost casually slipped in the bit of information about its abolition (as also of the excess dividend tax) at the end of the explanation of his scheme for simplifying corporate taxation, the impact was tremendous. It was not surprising to read that stock markets reacted bullishly, for a similar buoyancy was visible even among those with no immediate stakes.

But the paradox comes in because of second thoughts. Even as one was listening to the rest of the Finance Minister's proposals, one's mind was becoming bothered by the possible "snags". The first was the implications of a proposal that seems simultaneously to reduce the current rate of income-tax and super-tax, on the one hand, and do away with Wealth Tax and Excess Dividends Tax, on the other. On the face of it, this collocation of good fortune seems too good to be true. Such generosity from Finance Ministers at the best of times is suspect, and it is even more so, when the need for resources is so great. So, wariness seemed to be called for. And when a Finance Minister makes the further claim that this apparent improvidence does not leave him any the worse off, you begin to think that he is either a magician or, what is more likely, there is something illusory about all the grand throwing away! And if you knew the intricacies of "grossing-up"—or if you were enlightened by the Finance Minister's explanation of this complicated process—you may dimly perceive that in some way this process has been effectively reducing all along the yield from the nominally high

A Well Thought Out Budget

level of company taxation and that the abolition of this process from now on—that is to say, from the assessment year 1960-61—will make it possible for the Finance Minister to do away with the Wealth Tax on companies. But even when one perceived this immediately—and it is hardly likely that one will, unless one were an expert—one will still have to work out the full implications of this new structure of company taxation from the point of view of the company, on the one hand, and the shareholder, on the other. As I shall indicate presently, a closer examination of the proposals will go to prove the essential soundness of the change and its multilateral potentiality for favourable impact on the economy in general and industry in particular. But even so, the original "hurrah" that greeted the proposals were more of a reflex than anything else. Almost the only thing that seemed to matter was the abolition of the Wealth Tax on companies and the Excess Dividends Tax. It is almost certain that the Finance Minister calculated on this as much as on the essential acceptability of the reforms. In the event, his calculations, as proved by general public reaction, have been abundantly vindicated.

It is not surprising that a good deal of comment has been attracted by Mr Desai's proposals over company taxation. In the first place, it marks a radical departure from much that one has come to accept fatalistically as the characteristic complexity of corporate taxation. Whatever one may say about Mr Desai's proposals in this regard, his claim that they will considerably simplify the tax structure of corporate bodies would be readily conceded. There is no importation, under the new system, of a whole series of fictions and the consequent harking back to the factual position in order to vary the fiction for each particular case. Thus, it is no longer relevant in the assessment of the individual shareholder to discover if the company itself has paid any taxes on the profits from which the dividends have been declared and if so at what rate. Two kinds of anomalies used to arise. Owing to liberal depreciation and other allowances in the Act, it often happened that the company had sizable "book profits" whereas its "total income" for income-tax purposes was nil or even less than nil. If dividends were declared out of these "book profits", the shareholder was not entitled to any notional credit for tax supposedly paid by the company, for the cogent reason that no tax had been paid on this profit. This meant, in practice, a constantly harking back to the company's own assessment, which may or may not have been completed. And when the share-

holders are all over the country, the administrative delays caused by a nexus between company's assessment and the shareholder's assessment can be very vexatious. Not unoften, it led to loss of revenue because of improper coordination of information.

The second kind of difficulty used to be declarations of dividends out of 'reserves'. There, the legal position was ambiguous, and from time to time the relevant provisions were somewhat fitfully and ineffectively amended. Whether the relevant rate for "grossing up" was the rate applicable to all companies in the year in which the declaration of dividend was made, or to that particular company (which may have paid no tax in that particular year) was one bone of contention. Another difficulty arose from the fact that it is quite conceivable that dividends may be declared out of earlier profits which had suffered a certain rate of tax, but in the year in which it was declared the company may not have had any taxable income. In that case, the fiction seemed to break down, since legally the shareholder will not apparently get any credit for tax deemed to have been paid by the company, since the relevant rate was that of the year of declaration. Lawyers have been having a happy time bandying words and arguments on all these provisions, whose sole justification was an exaggerated identification of the company with its shareholders. Though there are companies which are in reality "individuals" or "families" in this country (as there are perhaps elsewhere), this rather inconvenient identification of the company with the shareholders was both unrelated to the legal and factual position regarding identity of corporate bodies.

In parentheses, it may perhaps be mentioned that in contexts where the myth of a separate identity should be exposed, as in the case of private companies avoiding supertax by non-distribution, there has been no readiness to do so. Complicated fictions are erected in the opposite direction. A simple provision like a legal sanction for treating private limited companies as firms will do away with the need for insisting on distribution of dividends on pain of penal supertax. If, on the analogy of firms, taxes will be payable on private profits, where distributed or not, Section 23-A can be done away with, with relief to everybody except perhaps to income-tax experts. The unprogressive feature of putting a discount on thrift and plough-back implicit in the present structure of Section 23-A will also disappear. Since Mr Desai has shown himself capable of getting out of the usual rut of thinking, he should devote some attention to tidying up Sec-

tion 23-A of the Income-Tax Act in the same way he has done with the rest of company taxation.

The second virtue of Mr Desai's proposals has been the low level of taxation for companies he has proposed. As I said earlier one outstanding fact is that an Indian company will not from now on—that is, from 1960-61—pay more than 45 per cent of its total income as direct tax, unless it is affected by the provisions of 23-A or the tax on bonus shares. There is, thus, as far as the company is concerned, an immediate gain of over seven per cent gain in the rate of income-tax and corporation tax, plus Wealth Tax and Excess Dividends Tax. It is true that the shareholder will be making good the loss to the exchequer involved in this, or so Mr Morarji Desai calculates. The implications of these proposals will be carefully worked out by everybody concerned. But it can hardly be denied that companies will now have to make good their assertion that they had been prevented from ploughing back enough into business because taxation took it all away. If, either because of the removal of excess dividends tax or because of a desire to make good the loss to the shareholder by the new procedure by giving larger dividends quantitatively, the greater available surplus is disposed of improvidently, earlier professions would be shown up to have been hypocritical. Whatever may be one's judgment on Mr Desai's budget, he deserves to be congratulated on responding to insistent demand—from this journal, among others—for easing the pressure on corporate taxation. What is more, he has done this without loss to the exchequer. He has also, in the process, succeeded in clearing to some extent the jungle of corporate taxation. A remarkable achievement, in any manner of reckoning.

I have confined myself to what appeared to be an unusual and interesting feature of this year's budget. (It is really the feature of taxation for the year after the one for which the budget has been presented). I shall have occasion to comment on the rest of the budget in the coming weeks when Parliament debates it. More immediately, the various aspects of this year's budget will be, as usual, subjects of detailed special study by Indian Finance. For the present, my summing up of the budget, without going into details, is that it is well thought out.

REVIEWNORTH INDIAN
NOTESUniversity
Education

The importance of English in University education, stressed in the report of the University Grants Commission, received new emphasis at the hands of Dr K. L. Shrimali, Education Minister in the course of the debate, in the Rajya Sabha, on the report of the University Grants Commission. Referring to this, Dr Shrimali pointed out, that high standard in English in the universities were indispensable for progress of scientific and technical education. The case of English found other champions, in Dr H. N. Kunzru, who is also a member of the University Grants Commission, and also a few other members of different political colour. However, Mr T. S. Avana-shlingam Chettiar, the educationist and spokesman from the South was unmoved by these arguments, and pleaded for the introduction of regional languages as the medium of instruction in the universities. This however, drew out arguments from Dr H. N. Kunzru in defence of the English language and its utility for preserving the country's unity.

The three-year degree course was another matter in respect of which strong divergences of views emerged in the course of the debate. Prof A. R. Wadia, opposed the introduction of the three-year degree course on the ground that the effectiveness and worth of the new course remained yet to be demonstrated. Prof Wadia sought to disprove the merit of the new scheme by referring to the introduction of the scheme in the Mysore University long ago and the subsequent reversion to the original arrangement. Dr P. V. Kane another Nominated member of the Rajya Sabha was also for proceeding slowly with the introduction of the three-year degree course.

The work put in by the University Grants Commission for expanding and improving university education in the country was also variously interpreted by the members depending upon their political colour. Mr Bhupesh Gupta, the Communist spokesman had nothing to spare by way of praise for the work done by the University Grants Commission and he characterised the report of the Commission as uninspiring and as lacking vision and a sense of reality. However, the Education Ministries at the Centre and the State, are in the eyes of Mr Gupta worse sinners in the matter of university education. He particularly charged the Government with lack of a proper educational policy, a criticism which drew effective reply from the Education Minister who reminded Mr Gupta of the educational policy set out by the Secondary Education Commission

and the University Education Commission.

Pay-Scales of Govt. Servants

The pay scale structure of the Central Government servants was one of the subjects that came up for discussion in the Lok Sabha, last week. Mr Nath Pal, who took up the cause of the Central Government servants pointed to the rising trend of prices in the country which had inflated the cost of living and urged the need for giving interim relief to the employees. This refrain was taken up by the other opposition members also who in their individual speeches sought to strengthen the case made out by Mr Nath Pal.

The main ground for considering the question of giving interim relief is, according to Mr Nath Pal, the delay that is now considered inevitable in the submission of their report by the Second Pay Commission. The debate at one time, lapsed into a controversy into the legitimacy of such a long time being taken up by the Commission to prepare and finalise their report. The arguments advanced by Mr Nath Pal, who was the main critic of the Commission in this respect were met by Mr Morarji Desai, Union Finance Minister who pointed to the complexity and time consuming nature of the job entrusted to the Pay Commission.

In advancing the case for giving interim relief, the members were not worried about the adequacy of resources or the impact of such measure on the total resources position. Refusing to accept the plea of inadequate resources Mr Nath Pal, said that two firms in the private sector alone owed the Government nearly Rs 17 crores, the Government losing even the interest on these dues which would work to about Rs 1 crore.

Mr Morarji Desai, who was called upon to defend the policy of the Government and answer the points raised by the opposition members in the matter of giving interim relief to the Government employees, smashed the case for giving interim relief made out by the opposition, by pointing out that this itself was a matter resting with the Pay Commission and could be taken up only at its recommendation. The grant of relief on an interim basis on the Government's own initiative was therefore unwarranted. In the course of his reply to the opposition members' speeches Mr Desai also had a fling at the opposition for the apparent inconsistency involved in their present stand for increasing the emoluments to the Government which, as he pointed out, was at odds with the criticisms they had indulged in on the rising expenditure on the civil account.

The existence of mass poverty in the rural areas and the continuing low level of earning of some sections of urban labour force was used by Mr Desai to parry the opposition's argument for interim relief.

NORTH INDIAN
MARKETSKhandsari Spurts:
Sugar Prices React

THE bullish fervour in the pre-Budget trading in commodity markets on fears of fresh taxation was smothered after the announcement of the Budget proposals. The trend turned bearish except in commodities which were affected by increased excise duties.

Khandsari prices have shot up by Rs 2.50 a maund following the imposition of excise duty. But, sugar prices receded sharply by 50 nP to Re 1 per maund on hopes that the supply of sugarcane to the sugar mills would improve insofar as sugarcane is diverted from Khandsari to sugar production.

Meanwhile, the Punjab Sugarcane (Prohibition of use for Manufacture of Gur) Order 1959, issued by the Central Government, has been greeted by the sugar industry in the region. It is felt that this measure will remove unfair competition from khandsari units to which sugar mills have been exposed. The general view is, however, that the Central directive has come rather late in the day to be of any effective help to the sugar mills during the current season. The crushing season is at its fag-end. It also remains to be seen whether the order will be extended to Uttar Pradesh. In any case, it looks as though the mills can expect some tangible relief from the imposition of an excise duty on khandsari.

Sugar production is reported to be lower at 4.46 lakh tons in January as against 4.31 lakh tons in January 1958. Thus, total production, during the current season up to the end of January, amounts to only 9.21 lakh tons as compared to 9.24 lakh tons in the corresponding period of the previous season. Total despatches from factories, in the first three months of the current season, are reported to be 4.95 lakh tons as against 4.41 lakh tons in the corresponding period of 1957-58. Closing stocks with the factories, as on the 31st January 1959, were 7.59 lakh tons as against 9.18 lakh tons on the corresponding date of last year.

India is not known to have joined the International Sugar Agreement so far. But, with world prices depressed and London quoting about £25.10 per ton for March delivery, it will be difficult for the Indian Sugar Mills' Association to utilise the remaining part of the export quota without incurring a loss, far bigger than originally anticipated. It appears that no export business has been done during the past few weeks, probably because prices have been on the decline as compared to the £33 per ton realised for the last sale.

Gur

Although the Punjab Sugarcane Order was welcomed by the sugar industry in the region, prices of Gur have spurred sharply in the main producing mandies of the Punjab and Uttar Pradesh. The stockists are reported to be unwilling to part with their stocks and prices have risen by about Re 1 per maund.

*

Foodgrains

Sentiment in the Foodgrains market continued to remain depressed. A steady improvement in the arrivals of the new and old crop produce accounted for a substantial reduction in spot prices. The increase in stocks also exercised pressure on the ruling prices. Above all, the decision by the Government of India to ban forward trading in coarse grains and pulses with immediate effect, also aided sentiment bearishly.

According to the latest notification, the Government of India have banned, with immediate effect, all forward contracts as well as non-transferable specific delivery contracts for the sale or purchase of rice and paddy. Outstanding contracts entered into on or before March 2, 1959 will be cleared at the rates prevailing at the close of business on March 2.

Naturally, prices have tended to fall, not to speak of the fact that stockists are anxious to liquidate their stocks in view of good crop prospects. In the Delhi grains market, Wheat was marked down further by Rs 2 per maund, while the average and inferior qualities of Rice could not maintain their previous levels. Trading in Gram was practically at a standstill, as buyers were unwilling to transact business even at a low level in view of the new crop arrivals. Jowar, however, steadied up by 50 nP per maund on heavy purchases by local stockists coupled with large despatches made to Uttar Pradesh. Pulses softened a little due to resistance on the part of buyers.

*

Shellac

Under a trade arrangement concluded by the State Trading Corporation of India, Shellac will shortly be exported to North Korea for the first time. As a result of negotiations between the State Trading Corporations of North Korea and the STC, a link transaction has been concluded covering a substantial quantity of shellac from India.

This may probably be the reason that shellac prices in the Calcutta market have developed a firmer tendency. The rate for Pure TN quality is quoted higher at Rs 74 as against Rs 70 per maund in the previous week. Also, shipments, during the last month up to the 24th, were substantially higher at 32,035 packages as against only 21,791 packages in the corresponding period of January.

MADRAS REVIEW

IN common with Finance Ministers in most other States, Mr C. Subramaniam, the Madras Finance Minister has presented a surplus budget without any surprises for any section of the community. Additional taxation that has been a frequent feature of State budgets in recent years is conspicuously absent and this is a further point of similarity of the Madras budget with the budgets of the other States. The similarity embraces the whole financial field and there is a marked improvement in the revenue resources of the State, an improvement in which almost all the States had shared.

The revenue receipts for the State had registered a progressive increase from Rs 62.56 lakhs in 1957-58 to Rs 69.49 lakhs in 1958-59 and are estimated to increase further to Rs 73.08 lakhs in the coming financial year. The rise in revenue is the result of increased accruals from the sales tax which remains even today the most elastic source of revenue, new tax efforts to realise more revenue and higher share from the Central tax pool. The increase has been of a more than anticipated order for, while the receipts for 1957-58 were Rs 62.56 lakhs, the budget estimates of revenue was for Rs 60.41 lakhs. Similarly against an estimated revenue of Rs 63.90 lakhs for 1958-59, the revised estimates now place the revenue at Rs 69.49 lakhs.

The surplus budget for the 1959-60 though surplus only in name,—for the surplus of Rs 1.39 crores accruing after providing for an expenditure of Rs 71.69 lakhs is more than wiped off by the enhanced increase in dearness allowance to NGOs and teachers leaving a small deficit—thus carries forward the trend that had set in from 1958-59, when for the first time after several years, the State produced its surplus budget. In the background of the chronic deficits that had characterised the State budgets in the post-independence years, the surpluses for 1958-59 and 1959-60, signalise a welcome turn in the finances of the States, which needs further careful preserving in the interest of implementing the development plans.

There is less of that fortuitousness or extraneity which marks the improvement in the financial affairs in the other States, in the changed picture of Madras finances. Referring to this, Mr Subramaniam, said that the improvements that were witnessed in the finances of most of the States were the result of higher Central grants rather than a measure of internal efforts put in. On the contrary, the Madras finances, reflect to a greater degree than elsewhere, the progress the State had made under the First Plan and the first three years of the Second Plan in various fields. Mr Subramaniam's

speech, was, for the most part of it, devoted to a survey of this progress, and in the course he also indicated the steps intended to be taken by the Government to implement the Second Plan in full.

In respect of the Second Plan, the Madras State is better placed than others both in point of achievement and as concerns the prospects for implementing the Plan in full. The State, has, out of total targeted outlay of Rs 152.26 crores for the entire Second Plan period, in the course of the first three years, incurred a total of Rs 93.48 crores, which works out to more than 60 per cent of the total. By virtue of this achievement, the State leads the others in the scheduled implementation of the Plan schemes. For the fourth year of the Plan the allotment has been fixed at Rs 36.64 crores and this would leave a balance of outlay of about Rs 22 crores for the final year of the Plan. While most other States are groping in the dark in seeing their Plans through, the Madras State is in sight of its Second Plan destination. Mr Subramaniam has, in this connection, hinted at the possibility of raising the targeted outlay, and this could be done to the extent to which the States resources permit. Considering that the Plan outlay in the first four years has been progressively increased from Rs 28.46 in the first year, to Rs 36.64 crores for 1959-60, there could be no reason for the State remaining content with merely the balance of expenditure of Rs 22.14 crores, which is less than the first year's outlay instead of raising it at least to the 1959-60 level.

The result of the schemes initiated by the Government are best borne out by the trend in agricultural production. By virtue of an increase achieved in foodgrain production, the State has turned the corner in the food front, and is happily free from worries of deficits or dependence on outside supplies to supplement internal production. However, complacency is being guarded against by enforcing procurement of paddy and rice as recommended by the National Development Council for ensuring equitable distribution at fair prices. Production of commercial crops has followed almost the same pattern as foodgrain production. This increase in agricultural production has been achieved for the most part by incurring heavy investment for extending irrigation facilities in the State. So far about 2.2 lakh acres of land in the State has been brought under irrigation by means of major irrigation projects and major irrigation schemes form one of the important heads of outlay in the budget for 1959-60 claiming about Rs 2.10 lakhs. Minor irrigation has contributed another 1.8 lakh acres of land to the irrigated areas in the

State. However, erratic rainfall continues its havoc and in the last year, had brought down agricultural production from what it otherwise would have been.

The Neyveli Lignite Project and the Integral Coach Factory at Perambore are top names in the list of industries that have grown in the State. These two have filled up a vacuum which was pricking the eyes of the misled in the State. Further the aluminium plant at Salem that at one time was a doubtful case as a new heavy industry, had its merits and possibilities sufficiently investigated and recognised to become a project for serious consideration. A raw film factory in the Nilgiri district is another project that has attracted the attention of the Government.

Progress in the development of power has been no less remarkable and in fact has even eclipsed the achievements in other fields. It is a measure of the marked rise in power newly generated that industrial consumption has increased from 228 units in 1953-54, to 421 units in 1957-58.

As a result of the progress made in the generation of power, restrictions that were in force in the use of electricity by industrial firms, have been removed. The State has nearly reached the point of exhaustion in its potentials of hydro and thermal power, and to avert the prospect of a return to the days of power rationing, the Government would be put to the necessity of exploring other sources for augmenting power supply in the State.

Rural electrification has also made considerable headway and about 10,000 villages would have been electrified when the schemes drawn for the coming financial year are successfully implemented. It is a measure of the concern evinced by the State Government that a large outlay amounting to Rs 11.08 lakhs has been set apart for power development.

Mr Subramaniam, also referred with pride to the completion of the first stage of the Guindy Industrial Estate. This signalises the first major success achieved in the development of small-scale industries on modern lines. The care bestowed in developing this estate corresponds to the emphasis that official policy lays on the development of small-scale industries in the country. The development of this Estate in which both the private sector as well as the State Government had participated, is a lesson in the mutual co-existence and cooperation of the two sectors. Besides the employment that has been offered consequent on the starting of the Estate to many workers, the saving in foreign exchange on the goods that were previously imported which however, have now begun to be produced in the

Estate itself, is an additional benefit that the Estate has bestowed. Colonies of small-scale industries, are also springing in others important centres of the State, some of them nearing the stage of completion. While the benefits that such centres would confer on the State and the people could by no means be exaggerated, it would only be fitting, that private sector, throws some more of its weight in the development of small-scale industries.

The economic factors would thus seem to favour a Third Plan with larger outlay and on a more ambitious scale than the Second Plan for the State. The Government have already turned their thoughts towards this and have shown a welcome awareness of the big task that the Third Plan would involve. A techno-economic survey of the State to be conducted by the National Council for Applied Economic Research on lines similar to the one which the Council conducted in Bihar has been ordered. This would ensure better coordination between resources and development under the Third Plan.

S. E. RLY TENDERS

Sealed tenders are invited for (1) Tender No. CON/COS/21/P&M/110/EMP/59 for supply of (a) 14,000 Rft. wire rope 3" dia.; (b) 8,000 Rft. wire rope 3" dia. and (c) 5,000 Rft. wire rope 1" dia. Earnest money is Rs 500/-. Tenders will be opened on 23-3-59 at 12 noon.

(2) Tender No. CON/COS/22/P&M/111/EMP/59 for supply of Bearings of various types for earth moving plants. Details to be obtained from the tender schedule. Earnest money is Rs 500/-. Tenders will be opened on 25-3-59 at 12 noon.

Tender forms are obtainable from the office of the under-mentioned (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs 2/- (not refundable) per copy per tender by money order to him direct in the case of outside firms and on production of cash receipt from this Rly's Chief Cashier by local firms.

Tenders should accompany the receipts for depositing earnest money as stated above from this Rly's Chief Cashier without which the tenders are liable to be rejected. Approved contractors having a permanent deposit of Rs 1000/- with the undermentioned are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

THE PENINSULA

SOUTH INDIAN NOTES

Progress of Andhra

Inaugurating the Andhra Pradesh Businessmen's Conference, at Hyderabad, Mr M. G. Lakshminarasu, President of the Federation of the Chambers of Commerce and Industry, Andhra Pradesh, went at length on the structural deficiencies of the State and stressed the need to take measures or the balanced development of the State.

Mr Lakshminarasu notes with satisfaction the fact that the State is free from the food problem with which many other States in the country are pre-occupied. However, he has stressed the need to step up foodgrain production so as to keep pace with the rising trend in population growth. In dealing with the food problem, Mr Lakshminarasu has referred to the Nagpur resolution of the Congress for the introduction of co-operative farming as well as the decision of the National Development Council for the socialisation of the whole-sale trade in foodgrains. These two, as he sees them, are hardly the measures that would offer a lasting solution to the food problem. The result that attended the introduction of rationing during the war-time, and the failure of co-operative farming wherever it had been introduced are advanced as arguments for giving second thoughts to these decisions.

Mr Lakshminarasu draws particular attention to the meagre outlay provided for development of industries in the State under the Second Plan, and this, as he says, is rather inconsistent with the central aim of the Second Plan of the country which is oriented largely towards laying the foundations of the basic structure for the future development of industries in the country. The provision made for industrial development works out to only 5 per cent of the total Plan outlay of Rs 175 crores. The need for a fertilizer plant is particularly stressed, though, in regard to this the need has been anticipated and provided for in the budget of the State for the coming financial year. Other industries deserving of the attention of the Government are, according to Mr Lakshminarasu, iron and steel, textiles, sugar, cement, diesel engine factory, structural steel, soda ash, heavy chemicals and pharmaceutical etc.

Power development is another sphere in respect of which the gap between potential and utilisation is great. Against an estimated power potential of about 2.5 million k.w. the present generating capacity both hydro and thermal is only about 1.7 lakh k.w. Mr Lakshminarasu has, in this connection, laid particular stress on the need to harness the rivers of the

Godavari, only 5 per cent of the water of which is now utilised.

★

Mysore's Progress

Addressing the joint session of the Mysore Legislative Assembly, Mr Jayachamaraja Wadiyar, the Governor of the State, reviewed the progress of the State in the course of the Second Plan. The story of the State's development under the Second Plan, is a mixture of failure in some sectors, redeemed by significant success in other fields. The Governor naturally referred to both these aspects in the course of his speech.

The implementation of the Second Plan in the first three years was a process which was marked by delays in execution of particular projects and inability to cover expenditure proportionately over the years. In the first three years of the Plan only 50 per cent of the total outlay of Rs 136 crores, has been incurred, so that the task of finding the resources to finance the carry-over in the last two years of the Plan, has assumed the proportions of a major problem for the State. In this connection the Government referred to the attempts being made by the State Government, seeking the sanction of the Centre to raise the outlay for the fourth year of the Plan from Rs 32.5 crores as at present fixed by the Planning Commission to about Rs 35 crores, with the contingent need for the Centre to increase its own share of the cost from Rs 14.5 crores by Rs 2.5 crores bringing the figure to Rs 17 crores. Hopes about implementing the State's Plan in full, thus, hinge on more money being available as Centre's contribution.

The food problem has kept the State Government alert about taking measures for preventing any possible untoward turn. The Governor, in this connection, explained the significance of some of the measures taken at all-India levels by the Centre for improving and stabilising the food situation throughout the whole country.

As regards industries also, success in respect of some, is marred by financial instability that had overcome others. The Governor pointed to several industries and mills in the State which had shown signs of financial weakness during the year. The rehabilitation of these factories is one of the major problems that has to be solved to keep industrial production on the upward.

A picture of contrast is presented by the Mysore Iron and Steel Works, which according to the Governor, is making good progress with its programmes of commercial production of cast iron pipe. This company has now been given the status of an autonomous corporation along with the Kolar Gold Mining Company and the new set-up is likely to favour a more rapid development of the project. Other important successes in the field of industry, are the completion of the Government Soap factory, as well as the Government Porcelain factory.

SOUTH INDIAN MARKETS

Hides and Skins Firm

THANKS to a steady clearance, prices of both tanned Hides and Skins ruled generally firm in the Madras market. Arrivals of Cow and Buff hides were moderate and there were good clearances. Prices of Cow Calf were firm due to quick absorption of arrivals by local ship-pers.

On the export front, business with the UK was small, as buyers were trying to reduce their limits for even fifties. As there was no alteration in the price structure in Madras, only a small volume of business was possible at acceptable prices. In general, UK buyers were adopting a "wait and see" policy on the hope that the supply position would ease with the beginning of summer. There was, however, a steady call for Buff Calf premium qualities, while premium mark Cow Calf was in short supply.

In the Tanned Skins section, there was a decline in the arrivals. With the result, prices developed a firmer tendency by 13 nP per pound.

In the export section, prime class Goat skins ruled steady and a small volume of business was reported done at current levels. Business in light weights was patchy due to the high prices ruling here. In Sheep skins, there was no change.

The London auction in tanned Skins is scheduled to begin on the 9th March when 1,80,000 goat skins and 3,30,000 sheep skins will be offered. In view of the small quantity on offer, hopes are entertained that there will be a fair price realisation. But, UK interests state that the small catalogue, which comprises mostly lower classes of unsaleable descriptions, will not attract a full complement of the trade. No interesting bids are, therefore, expected.

★

Groundnut

Conditions in the Madras Groundnut market remained firm on reports of smaller arrivals. Arrivals averaged only 20 to 25 tons per day and these were taken up by small crushers from Rs 172 to Rs 174 per candy for superior oil qualities and at Rs 166 to Rs 168 for the bold qualities.

In the Groundnut Oil section, business was somewhat restricted, as both buyers and sellers were reserved. The rates for the ready moved narrowly around Rs 328 per candy.

★

Yarn

Following the announcement of an excise duty on nylon yarn, the Art Silk Yarn market in Salem depicts showing a rise of Rs 2 to Rs 3 per pound.

With the advancing summer, cotton yarns 60s were stated to snap in weaving. The gap in price between these varieties and foreign yarns of even medium quality has widened to Rs 6 to Rs 7 a bundle, while the difference used to be only Rs 3 to Rs 4. Hundred counts are in plentiful supply and lost Rs 2 a bundle. Forties are steady and brisk demand is maintained.

★

Coffee

The move on the part of the Government of India to revise downward the rates for drawbacks of duty on French coffee exports is viewed with dismay by exporters. At present, the drawback on export of coffee allowed is Rs 23 on 100 pounds of pure coffee and Rs 20 on 100 pound of chicory. The Government's proposal is to raise the rate of pure coffee to Rs 3.40 and to reduce that on chicory to Rs 12.75. The trade feels that this revision will affect the export of French coffee adversely, since exporters will be compelled to enhance their sale prices. As it is, the export of Indian coffee is becoming increasingly difficult, because of the common market arrangements in Europe. The Coffee Board will have to find an export market this year for about 20,000 tons of the new crop.

The need for raising the prices, as a sequel to the change in the rate of drawback, arises also from the fact the chicory exporting countries have not made any reduction in their rates recently. At the prevailing rate of import duty of 50 per cent on the c.i.f. value, the importer of chicory has to pay Rs 20.11 towards import duty on every 100 pounds of chicory imported. In the circumstances, the trade feels that it is only fair that drawback to exporters should also be allowed more or less on the same basis.

★

Bangalore Silk

There has been no change in the prevailing high prices for Filature Raw Silk in the Bangalore Silk market, during the week ended 26-2-1959. In fact, even Charka prices, which tended to decline in the previous week, have moved up by one to two points. The supply position of raw silk was reported to be meagre owing to dry weather.

The prices of Reeling Cocoons of different areas in the State indicated only slight variations.

There has been no change in respect of Silkwate, with hardly any transaction taking place. In the meanwhile, reports from Japanese market indicate that Silkwate prices have followed the uptrend noticed in raw silk prices. It is also to be noted that imports of Silkwate into Japan from China and Korea have been considerably reduced. In view of this and by reason of the shortage of cocoons, the supply of Silkwate in Japan cannot be considered to be sufficient. In effect, a favourable climate for more activity in Spinning Mills in Japan would appear to have manifested itself.

THE INDIAN STEEL & WIRE PRODUCTS LTD.

NOTICE

NOTICE is hereby given that an Extraordinary General Meeting of the members of the Company will be held at the Registered Office of the Company No. 7, Wellesley Place, Calcutta-1, on Monday the 30th day of March 1959, at 11-30 a.m. to consider and, if thought fit, to pass with or without modification, the following resolutions, namely:—

As an Ordinary Resolution:

That it is desirable to capitalise the sum of Rs. 64,53,160/- out of the amount standing to the credit of the General Reserve Account as at the 31st March, 1958, and that such sum be capitalised accordingly and distributed amongst the members on the footing that they become entitled thereto as capital in pursuance of article 179 of the articles of association of the Company and that such sum be applied on behalf of the persons who on the 30th March 1959 shall be holders of ordinary shares in the Company, in paying up in full at par 6,45,316 Ordinary shares of Rs. 10/- each, (hereinafter referred to as new shares) and that such new shares be distributed amongst and allotted as fully paid up to the said holders of Ordinary shares in the Company whose names appeared on the Company's Register of Members on the said 30th March 1959, in the proportion of two such new shares for every one of the existing fully paid up Ordinary shares held by such holders respectively on that date and in the proportion of one such new share for every five of the existing partly paid up Ordinary shares held by such holders respectively on that date and that the said 6,45,316 new shares shall rank in all respects pari passu

Consent of the Central Government (of India) has been obtained to this issue by an order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Central Government do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

Consent of the Reserve Bank of India to the issue to Non-Residents of India is to be obtained under Section 13 (1) (d) of the Foreign Exchange Regulations Act, 1947.

THE INDIAN STEEL & WIRE PRODUCTS LIMITED

Issue of 6,45,316 Bonus Ordinary Shares of Rs. 10/- Each

To Ordinary Shareholders,
EXPLANATORY STATEMENT
U/S 173 OF THE ACT, 1956.

Dear Sir(s)/Madam,

The Directors of your Company have had under their consideration the desirability of bringing the Company's Capital into harmony with the value of its net assets. The Company has built up reserves and it is therefore thought necessary to capitalise a part of it by issue of bonus shares in order to maintain the correct relationship between the net assets and the Share Capital of the Company.

The directors have accordingly considered the proposal to issue bonus shares by capitalisation of Rs. 64,53,160/- out of the sum of

with the existing Ordinary shares of Rs. 10/- each.

That for the purpose of giving effect to the aforesaid resolution the directors be and are hereby authorised to settle any difficulty that may arise in regard to distribution of new shares either by the issue of fractional certificates or by vesting such new shares as represent fractions if any to such trustee as they may appoint upon trust for the persons entitled to fractional shares with such powers to him to sell such new shares and to distribute the sale proceeds among the said persons entitled to the fractions in proportion to their respective fractions, and to appoint any person to enter, on behalf of all the members of the Company as on the said 30th March 1959, into an agreement with the Company for the purpose.

By Order of the Board,
For INDRA SINGH & SONS
PRIVATE LIMITED
AJAIB SINGH
Director
Managing Agents
7, Wellesley Place,
Calcutta-1.
27 February 1959.

NOTE:—

- (1) A member who is entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member.
- (2) The share registers and transfer books of the Company will remain closed from the 17th March 1959 to the 30th March 1959 both days inclusive for the purpose of proposed issue of bonus shares.

The Ordinary Share Registers and Transfer Books of the Company would be closed from 17th March, 1959 to 30th March, 1959, both days inclusive, for the purpose of Bonus Issue.

The directors therefore propose to make an issue of fully paid bonus shares to the ordinary shareholders of the company in the ratio of (1) two new fully paid bonus shares of Rs. 10/- each for every one of the existing Ordinary shares of Rs. 10/- each, fully paid up and (2) of one new fully paid bonus share of Rs. 10/- each for every five of the existing Ordinary shares of Rs. 10/- each, paid up Re. 1/- per share of the Company. In order to carry out this scheme it is proposed that an amount of Rs. 64,53,160/- be capitalised out of the amount standing to the credit of General Reserve Fund Account and that such amount be transferred to Share Capital Account. The Bonus shares are to rank pari passu in all respects with the existing Ordinary shares.

In case the bonus issue results in certain members becoming entitled to fractions of shares and for the sake of administrative convenience it is proposed to allot such bonus shares as will represent the total of such fractional entitlements if any to a nominee of the Company so that such bonus shares may be sold and the net sale proceeds distributed amongst those entitled to fractions of shares. Such bonus shares shall be allotted to the Ordinary shareholders whose names appeared on the Register of Members on the 30th March 1959, in satisfaction of their respective rights in the sum to be capitalised and for the allotment to such trustee as the board may appoint of so many of such bonus shares as represent fractions, if any, with power to him to sell and to distribute the sale proceeds to the Ordinary Shareholders in proportion to the number of fractions of the shares to which they would otherwise respectively be entitled.

The Directors are placing before the shareholders for their consideration resolutions required for carrying into effect the scheme for the issue of bonus shares as aforesaid, for which a notice convening a General Meeting of the Company to be held on 30th March, 1959 is annexed hereto.

The Managing Agents as well as the Directors of the Company by virtue of their shareholdings in the Company are interested in the above resolution inasmuch as they would be entitled to an allotment of the proposed bonus shares to the extent of their respective holdings of shares in the Company.

By Order of the Board,
For INDRA SINGH & SONS
PRIVATE LIMITED
AJAIB SINGH
Director
Managing Agents
7, Wellesley Place,

Two-sided Hectic Fluctuations

Watch-Dog Writes:

TWO-SIDED hectic fluctuations in prices have characterised the week's trading in stock markets. This was mainly due to the fact that, although it has become clear that the new pattern of company taxation will adversely affect shareholders in general, opinion in financial circles about the outlook for equities continues to be divided. However, the general tone of the markets remains firm on reports that the Finance Minister has agreed to examine the position about payments of dividends to the shareholders.

Equities on the Calcutta Stock Exchange, after suffering a sharp setback from levels touched in the special Budget session, staged a remarkable recovery towards the close.

On the Bombay Stock Exchange, selected scrips scored handsome gains on balance. The higher production figures released by the TISCO as well as the IISCO and the clarification of the taxation proposals by the Finance Minister aided sentiment.

The absence of any new taxation measures in the Madras Budget and the relief given to tea in the Central Budget led to larger enquiries for Tea shares on the Madras Stock Exchange. Selected scrips in other sections scored small gains.

Wall Street closed very steady.

KAMARHATTY COMPANY, LIMITED.

The Directors at their Meeting held to-day have declared the dividends payable on the 6% Cumulative Preference Shares for the years ended 31st December, 1956 and 31st December, 1957. Such dividends will be paid without any deduction for Income-tax to those shareholders whose names are registered in the books of the Company on the 30th March, 1959.

The Transfer Books of the Preference Shares of the Company will be closed from the 23rd March to the 30th March, 1959, both days inclusive.

By Order of the Board,
JARDINE HENDERSON, LTD.
D. FORDWOOD,
Secretary,
Managing Agents.

Calcutta

Friday Evening.

PRICE movements on the local Stock Exchange were erratic last week. The immediate reaction to the Budget proposals was a flare-up in the speculative scrips which recorded gains ranging from Rs. 1.50 to Rs. 3.00, while a few shares in other sections moved up by more than a point in the absence of any excise duties on certain commodities as was originally feared. The main inspiration was derived from the removal of Wealth Tax on companies and Excess Dividend Tax and the absence of any change in personal taxation, which were in tune with market expectations. Even the increase in the rates of tax on individual wealth was totally ignored in the enthusiasm created by the removal of such tax on companies.

But, the sharp reaction that followed the veritable boom during the Budget session on Saturday indicated that, on second thoughts, the market had taken a bearish view of the Budget proposals. The main points of confusion were about the "grossing" of dividends and the deduction of tax at the source. A section of the operators felt that, by the above changes, the position of the shareholders would not be materially affected. They thought that, if even they lost a little more in tax, they might be compensated by an increased dividend.

It was, however, encouraging to note that, despite intermittent profit-taking, prices staged a remarkable recovery due to considerable bear-covering and fresh support, being influenced by the reports of the LIC having entered the market for making purchases of selected scrips. The recovery in prices was also assisted by the reports of the assurance given by the Finance Minister to examine the position about payments of dividends to shareholders and his confirmation that the double depreciation scheme would be withdrawn from 1st April, 1959.

Conditions in the Gilt-edged section remained more or less unchanged. Institutional support was not much in evidence due to stringent money conditions. With the banks almost out of the market, the medium-dated issues found sellers at the quoted rates. On the other hand, the long-dated issues and State Loans continued to be in good demand. 3 per cent 1986 Conversion Loan opened at Rs. 74.20 and, after touching a low of Rs. 74, improved to Rs. 74.35, to finish at Rs. 74.30.

Bank shares remained steady with price movements confined to a narrow range. Punjab National changed hands at Rs. 23.31 to Rs. 23.62 and Hindustan Commercial at Rs. 10.50 to Rs. 11.00.

Jute shares continued to remain dull. The hardening tendency, of late, in raw jute prices induced buyers to keep away from the market for the time being.

Although concern was expressed over the delay in the publication of the Price Revision Committee's report, sentiment in the Coal section was well maintained, thanks to the announcement of satisfactory dividends by Bengal Coal and Burrakur Coal companies.

The outstanding feature of the week's trading was the renewed activity in the Tea section where a number of scrips changed hands at fresh higher levels. Operators were enthused over two main factors—the announcement of the reduction in the export duty on tea and the increase in the average export prices obtained last year.

Despite the imposition of an excise duty on khandsari, Sugar shares met with little doing. It was felt that that it would take a long time to repair the damage already done to the sugar industry by competition from khandsari units.

Although trading in the Textiles was rather disappointing following the publication of adverse results by some companies, a few selected companies scored small gains on balance in sympathy with the general trend of the market.

In the Engineering section, price movements were mostly influenced

by the speculative activity in Indian Irons which, in turn, showed a marked recovery from the low levels touched on Monday. The main contributory factor was the hope that the company's earnings would improve steadily as a big portion of the expansion scheme had been completed. It was also hoped that the directors would defend the shareholders' claim for obtaining at least the same amount of cash dividend.

The Miscellaneous section provided several firm features on various considerations. Alkali Chemicals met with sustained demand in view of the maintenance of the dividend on the increased capital and on the belief that earnings might improve further after the completion of the expansion scheme. Paper shares were keenly sought after in the absence of any excise duty as was originally feared. Sirpur had good buyers at the quoted rates following the increase in dividend and the rumours of the amalgamation of this company with a silk manufacturing concern. Karanpura Development touched a fresh higher level for the week on sustained support from influential quarters. Hindustan Motors met with good business on reports that the company was doing well. The following table shows the price

BHARAT COLLIERIES LIMITED

NOTICE

Explanatory Note:

The Fourteenth Annual General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company at Dalmianagar on Tuesday, the 31st March, 1959, at 12 noon, to transact the following business:—

- (1) To receive and adopt the Directors' Report and the Audited Accounts for the year ended 30th June, 1953.
- (2) To declare Dividends on Preference and Ordinary Shares.
- (3) To elect a Director in place of the retiring Director Shri B. P. Jain who being eligible offers himself for re-election.
- (4) To appoint Auditors for the current year and to fix their remuneration. The retiring Auditors M/s. K. N. Gutgutia & Co. being eligible offer themselves for re-appointment.

As Special Business:

To consider and, if thought fit, pass with or without modification the following resolutions, which would be proposed as ordinary Resolutions and for which special notice has been received by the Company:

"Resolved and declared that the age limit shall not apply to Shri Balabux Poddar, a Director of the Company."

"Further resolved that the appointment of Shri Balabux Poddar as a Director of the Company be and is hereby approved."

The Share Transfer Books of the Company will be closed from 23rd March, 1959 to 31st March, 1959, both days inclusive.

By Order of the Board of Directors
For SAHU JAIN LTD.,
A. K. JAIN,
Managing Director,
Managing Agents.
Dalmianagar, 28.2.59.

N.B. A member entitled to attend and vote, is entitled to appoint a proxy to attend and vote instead of himself. Such a proxy need not be a member of the Company. Such a proxy, in order to be effective, must be received by the Company not less than 48 hours before the Meeting.

THE CALCUTTA STEAM NAVIGATION CO., LTD.

NOTICE

NOTICE is hereby given that the One hundred and fifty-first Annual General Meeting of the Members of the abovenamed Company will be held at the Registered Office, No. 5, Fairlie Place, Calcutta, on Tuesday, the 31st March, 1959, at 11-30 a.m. to transact the following business:—

- To consider and adopt the Profit and Loss Account for the year ended 30th June, 1958, together with the Balance Sheet as at that date and the Reports of the Board of Directors and the Auditors.
- To declare a dividend.
- To appoint Auditors for the year ending 30th June, 1959, and to fix their remuneration.
- To elect a Director in place of Mr. M. C. Rampuria who retires by rotation and who being eligible, offers himself for re-election and, in this connection, to consider and if thought fit to pass the following resolution which will be proposed as a Special Resolution, namely:—

"That Mr. M. C. Rampuria, an 'associate' within the meaning of the Companies Act, 1956, of Hoare Miller & Company Limited the Managing Agents of the Company be and he is hereby re-elected a Director of the Company whose period of office is liable to determination by retirement of the Directors by rotation."

(Special Notice dated the 7th January, 1959, of the intention to propose the foregoing Resolution as a Special Resolution has been received by the Company wherein it is stated that the Notice is given to satisfy the requirements of Section 190 and sub-sections (1) (f), (2) and (3) of Section 261 of the Companies Act, 1956, for the reason that Mr. M. C. Rampuria, being a relative of Mr. R. L. Rampuria, a Director of Hoare Miller and Company Limited who are the Managing Agents of the Company, is, therefore, an associate of the Managing Agents within the meaning of Section 2(3) of the Companies Act, 1956.)

Special Business

- To consider and, if thought fit, to pass, with or without modification the following resolution, which will be proposed as an Ordinary Resolution, namely:—

"That the Company do hereby approve of the appointment of Mr. C. T. Moore, who has attained the age of sixty-five years, as a Director of the Company and declare that the age limit of sixty-five years specified in Section 280 of the Companies Act, 1956, shall not apply to him."

NOTICE is further given that the Share Transfer Books of the Company will be closed from the 18th March to the 31st March, 1959, both days inclusive.

By Order of the Board
HOARE MILLER & CO., LTD.
Managing Agents.

5, Fairlie Place,
Calcutta.

Dated 28th February, 1959.

Notes:—

- (1) A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a members of the Company.
- (2) Special Notice has been received by the Company of the intention to propose the resolution specified in item 5 above.

EXPLANATORY STATEMENT TO THE "SPECIAL BUSINESS" SPECIFIED IN THE FOREGOING CONVENING NOTICE

Section 280 of the Companies Act, 1956, provides, inter alia, that where a director of a public company attains the age of 65 years he shall vacate his office at the conclusion of the annual general meeting commencing next after he attains that age. Section 281, however, empowers the company in general meeting to appoint or approve of the appointment of a director who has attained the age of 65 years and to declare specifically that the age limit shall not apply to him.

Mr. C. T. Moore, a Director of the Company, attained the age of 65 years on 9th December, 1958, and special notice pursuant to Sections 190 and 281(2) of the Act has been received by the Company specifying the intention to propose the resolution set out in item 5 in the foregoing convening notice to approve the appointment of Mr. Moore and to declare that the prescribed age limit shall not apply to him.

The Directors recommend the passing of the resolution as being in the interest of the Company.

Mr. Moore may be deemed to be interested in the proposed resolution to the extent of his directorship in the Company.

Madras

THANKS to the absence of any new taxation measure in the Madras State Budget and the announcement by the Centre with regard to the reduction in the export duty on tea, the Madras Stock Exchange was in good form.

TEXTILES There was small enquiry in this section and business was confined to only a few scrips. Adonis were enquired upto Rs 8.40 from Rs 8.20 and Cambodias upto Rs 9.70 from Rs 9.50. Maduras and Premiers came in for attention at the quoted rates. Travancore Rayons, though steady, found some sellers at the market rate of Rs 17.

PLANTINGS Plantation shares were active and several scrips registered sharp increases. With high-grown teas in strong demand at higher prices, these estates attracted considerable attention. Devasholas moved up smartly to Rs 25.50, while United Nilgiris were lifted upto Rs 19 and Nonsuch upto Rs 16. Hileyburlas improved to Rs 18.75.

In the Rubber group, Cochin Malabars came in for heavy trading and the rate was pushed up to Rs 6.05. There was a sharp rise in Valkundams to Rs 25 with Thrumbadis coming in for some business at higher levels.

Among Coffee shares, Consolidated Coffees received better support, closing higher. Outcherlonys declined to Rs 5.03 from Rs 5.18 following the announcement of a lower dividend.

Economy Measures by Government

The Prime Minister gave the following written reply Feb. 26, to an unstarred question by Shri D. C. Sharma with regard to measures taken by Ministries for greater efficiency and economy in administrative processes:—

As already stated in reply to Unstarred Question No. 838 on the 3rd December, 1958, Prime Minister has frequently addressed various Departments of Government, in regard to greater efficiency and economy in the administrative processes. It is, therefore, difficult to state in precise terms the results achieved in response to a particular circular letter.

In three starred questions answered during 1957-58 (No. 742 on the 9th August, 1957, 1081 on the 13th December, 1957, 2036 on the 7th May, 1958), and one Unstarred Question No. 722 on the 23rd February, 1959, detailed information has already been given regarding the monetary effect of the various economy measures adopted by the Central Government, such as abandonment or reduction in scope of projects and schemes, restrictions on creation and filling of posts including a ban on the filling of certain class III and class IV posts, economy in contingent and other expenditure such as purchase of stores, travelling allowances etc. It will also be seen from these replies that in addition to the saving of about Rs 24 crores, effected during the financial year 1957-58, a further economy of Rs 2.61 crores is estimated to have been effected through the measures taken during the first 6 months of the current financial year.

With a view to eliminatnig delays in administrative matters, the

MISCELLANEOUS Sugar shares were active in this section. EIDs, after touching a high of Rs 33.25 from Rs 31 finished at a slightly lower rate on profit-taking. Deccans were enquired upto Rs 10.15 from Rs 9.67. Among other shares, Ashok Leylands met with some selling enquiry at the quoted rate. Textools met with demand upto Rs 164, while Spencer Ordinaries moved upto Rs 19.25. T. Stanes were quoted higher at Rs 24.

New York

ALTHOUGH prices on Wall Street gave slight ground in initial dealings, a selective rally developed towards the close. Featuring the market were some Specialities, which attracted attention and were still running ahead of the market. Anaconda Copper was quoted at \$71½; General Motors at \$46½ and US Steel Common at \$92½.

March 7, 1959

More Foreign Exchange for Import of Car Components

Government had recently released additional foreign exchange of Rs 50 lakhs to the three car manufacturers in the country for the import of car components. Shri Manubhai Shah, Minister for Industry, stated in the Lok Sabha on Feb. 26.

Replying to a question by Shri Harish Chandra Mathur and three other members, he said that while difficulties were being experienced by the public in purchasing cars, Government had received no complaints about trucks, Mercedes or others. The primary reason for these difficulties was the shortage of foreign exchange for the import of components.

Government were releasing as much foreign exchange for the import of components of cars and trucks as was possible under the existing circumstances. The Minister said that in order to ensure as equitable a distribution of the available supplies of cars as possible, Government had also issued instructions to the automobile manufacturers to see that their dealers maintained an "order register" in which all orders would be entered and fulfilled strictly serially. To relieve the situation, additional foreign exchange of Rs 50 lakhs had been released to the three car manufacturers. The situation was being kept under constant watch.

It will be some time before the results of these and other reforms can be fully assessed and their adoption on a wider scale decided upon.

India's Participation in International Geophysical Year

Shri Humayun Kabir, Union Minister of Scientific Research and Cultural Affairs, in a statement laid on the table of the Lok Sabha on March 2, gave details of India's participation in the International Geophysical Year. The Minister was replying to a question by Shri Supakar.

The statement reads as follows:— India has been participating in all the geophysical disciplines included under the International Geophysical Year programme. These are: Meteorology, Geomagnetism, Ionosphere, Solar Activity, Aurora and Airglow, Seismology, Cosmic Rays, Latitudes and Longitudes, Glaciology, Oceanography, Satellites and Gravity Measurements.

During the International Geophysical Year India maintained, in addition to the large number of meteorological stations, about 60 other stations scattered all over the country, some of which have been specifically established for the International Geophysical Year. Of special significance are the stations at Kodakanal, Trivandrum, Chidambaram and Tiruchirappalli, which form a chain near the geomagnetic equator which passes through the South of India.

The Indian National Committee issues, from time to time, (i) Instruction Bulletins, and (ii) IGY Newsletters. It also occasionally sponsors special publications dealing with results of IGY observations.

The Committee has, so far, issued 6 Instruction Bulletins, 17 Newsletters, a number of articles on the IGY programme, and has sponsored a special number of the Journal of Scientific and Industrial Research detailing some of the work carried out under the auspices of the Indian National Committee.

Foreign Exchange for Communist delegation to Moscow

No foreign exchange was released to any member of the 7-man delegation of the Communist Party of India, which went to Moscow to participate in the Congress of the Soviet Communist Party. In fact, none of the members of the delegation approached either the Reserve Bank of India or the Government for foreign exchange.

This information was given in the Lok Sabha on March 2 by the Finance Minister, Shri Morarji Desai, in a written reply to a question by Sarvaswari V. C. Shukla and Kishtaya.

Irrigation Schemes for Nepal

The Finance Minister, Shri Morarji Desai, told Shri Bibhuti Mishra in the Lok Sabha on March 2 that a sum of Rs 32.62 lakhs had been given upto the end of January this year to the Government of Nepal, for minor irrigation schemes. The latest information furnished by the Government of Nepal showed an expenditure of Rs 31.72 lakh upto about the end of this period.

Asked whether it was a fact that a very small portion of money allocated had been spent so far, the Finance Minister replied in the negative.

Industrial Management Pool

About 76 officers selected for the Industrial Management Pool were expected to be offered appointments very shortly stated Shri Govind Ballabh Pant, Union Home Minister, in reply to a question by Sarvaswari Hem Raj, Harish Chandra Mathur and Iqbal Singh.

When asked how many of the selected candidates would be absorbed and how many kept on the waiting list Shri Pant stated that this would depend on the demands made by participating Ministries.

In all 18,971 candidates applied for recruitment and results were announced on February 26 this year.

State Bank of India

The Deputy Minister for Finance, Shrimati Tarkeshwari Sinha, stated in the Lok Sabha on March 2 that it has been decided to extend the scheme for granting advances to small scale industrial units to all the branches of the State Bank of India. She was replying to a question by Shri Raghu-nath Singh.

The Deputy Minister added that the State Bank had granted upto December 31, 1958, advances to 696 small-scale industrial units. The procedure for the grant of advances to small-scale industrial units, the Deputy Minister further said, had already been liberalized to a considerable extent.

Indian Statistical Institute

One electronic computer of Russian make has been supplied by the United Nations to the Government of India and it has been installed at the Indian Statistical Institute, Calcutta. This computer is the property of the United Nations and will remain so until its title is formally transferred to the Government of India. This information was given in the Lok Sabha on March 2 by the Deputy Minister of Finance, Shri B. R. Bhagat. He was replying to a question by Shri Osman Ali Khan.

Intensive Search for Base Metals

With a view to intensifying and accelerating the search for base metals in the country, a Base Metals Wing has been set up in the Geological Survey of India. A senior officer of the Geological Survey has been placed as overall in-charge of this unit. He is working out organisational and other details on a priority basis. The unit is expected to start intensive operations very shortly.

This was stated by the Union Minister for Mines and Oil, Shri K. D. Malaviya, in a written reply to a question by Shri Ram Krishan, Shri Bishwanath Roy and Shri Siddananjappa in Lok Sabha on March 2, 1959.

Cloth Stocks with Mills

The unsold stock of cloth held by the cotton textile mills is about one month's average production which is 2,70,000 bales. This information was given by the Minister for Commerce, Shri Nityanand Kanungo, while replying to a question by Maulana M. Faruqi in the Rajya Sabha on March 2.

The Minister said that the unsold stock with mills on February 7, 1959, was 2,83,400 bales. He added that as compared with the figures at the end of December 1957 when the unsold stock had reached

the peak figure of 4,50,639 bales, there had been a substantial decline of 1,67,300 bales.

Exports of Textiles to UK

The Minister for Commerce, Shri Nityanand Kanungo, stated in the Lok Sabha on Feb. 26 that no agreement had been reached so far in the negotiations which were going on between the British and Indian textile interests about fixation of a ceiling on Indian textile exports to Britain.

Replying to a question by Shri Bimal Ghose, Shri Kanungo said that Government were not directly a party to the negotiations. It would neither be advisable nor helpful to disclose any information they might have at this stage, he added.

Verification of Membership of Trade Unions

The membership of All India Trade Union Congress, Indian National Trade Union Congress, Hind Mazdoor Sabha and United Trade Union Congress, as on March 31, 1958, has not been verified.

This was stated by the Union Deputy Minister for Labour, Shri Abid Ali, in a written reply to a question by Shri S. M. Banerjee in Lok Sabha on Feb. 26.

Coal Mines in Assam and West Bengal

As a result of exploration by the Geological Survey of India in the Garo Hills of Assam, reserves of the order of 65 million tons fairly good quality coal have been assessed in this area.

Extension of the Raniganj coal seams to Ondal area of West Bengal has also been recently established. Reserves of the order of 5.25 million tons of coal have already been established in Ondal, but the probable reserves, besides this, are expected to be much more.

This was stated by the Minister for Mines and Oil, Shri K. D. Malaviya, in a written reply to a question by Shri Aurobindo Ghosal in Lok Sabha on March 2.

Settlement of Pensions

The Deputy Minister of Finance, Shrimati Tarkeshwari Sinha, confirmed in the Lok Sabha today that the 3-member committee, appointed to inquire into the question of delay in the settlement of pension claims of retired Central Government employees, had submitted its report. The Deputy Minister said that the Committee had recommended (i) certain procedural improvements to reduce delays in the sanction and payment of pension, and (ii) introduction of certain changes of a basic character in the existing pension rules. Necessary orders, implementing the first recommendation, were expected to be issued shortly, while consideration of the second recommendation had been deferred in view of the impending report of the Pay Commission. Accordingly, the recommendations of the committee in this regard had been made available to the Pay Commission for their consideration.

Men and Oil . . . 5

The Refinery Engineer

Crude oil from the earth is a mixture of hydrocarbons (compounds of carbon and hydrogen) which may be gases, liquids, or solids at ordinary temperatures. Refining separates and re-assembles the various useful "fractions" in the crude oil and purifies them to the required degree.

The construction and maintenance of the plant in which these processes are carried out are in the hands of Refinery Engineers. Highly skilled key men, they are responsible for the efficient working of all the heat exchangers, pumps, compressors, refrigeration machinery and other equipment needed in a modern refinery. And when components of the refinery are shut down for overhaul it is the Refinery Engineer who has to examine the units and repair

parts weakened by corrosion, heat, pressure and friction so that breakdowns will not dislocate the operation of the complex plant.

This is a job which calls for a high degree of training, wide engineering knowledge, experience and initiative. The Assam Oil Company places great trust in its Refinery Engineers, many of whom are Indians — all working in an industry of great importance to the nation.

ASSAM OIL

INVESTOR'S SUPPLEMENT

Spectacular Advance in Prices in February

count. Apart from a general feeling that the commissioning of Government steel plants into production might increase supplies and lower prices, the news of a likely reduction in subsidy on imported steel and of the fall in the world price of steel led to fears that the profits of the steel companies in the private sector might be eaten into. Moreover, those operators, who were also dealing in various commodities, were reported to have liquidated some of the holdings in order to square up their outstanding forward contracts following the strict measures taken by the Forward Markets Commission. But

in the prices of commodities following the series of measures taken by the Government also induced caution in their minds.

Nevertheless, the absence of selling pressure was insignificant which suggested a general belief that nothing strictly bearish would happen and this belief was based on the indications provided by the State Budgets. It was also hoped that the Government might pursue their taxation policy, which would inspire confidence among the creditor countries as well as creating favourable investment climate to attract foreign as well as domestic capital. It was, however, clear

for some bear-covering at lower levels following the correct interpretation of the proposed reduction in subsidy on imported steel and the brighter prospects for the Indian steel industry, the market would have finished at the lowest levels for the second week.

During the third week of the month, conditions ruled generally steady. Although there was an inclination to buy at the prevailing low levels in view of the growth prospects of industries, operators were a bit cautious and preferred to mark time. The falling trend

that there was a general desire amongst the operators to keep commitments within reasonable limits of their capacity on the eve of the Budget.

During the pre-Budget week, conditions continued to remain cheerful. Attention was, however, mostly confined to the Tea section with the speculative issues encountering renewed support. This was mainly due to the fact that the general mood was one of confidence that the Central Budget would contain little surprise for the market, either as a stimulant or a de-

terrent. The majority of the operators entertained the hope that, except for a few minor adjustments in direct taxes, the possibility of an increase in excise duties on certain commodities and the higher import duties on rayon and raw cotton, the Budget might be likely to be of the pedestrian type.

The immediate reaction to the Budget proposals was a flare-up in the speculative issues which recorded gains, ranging from Rs 1.50 to Rs 3.00, while a few shares in other counters moved up by more than a point in the absence of any excise duties on certain commodities as was originally feared. The main inspiration was derived from the removal of wealth tax on companies and excess dividend tax and the absence of any change in personal taxation, which were in tune with market expectations. The increase in the rates of tax on individual wealth was totally ignored in the enthusiasm created by the removal of such tax on companies. There was, however, maximum confusion when the market became aware that the wealth tax on companies and excess dividend tax would be abolished only from 1961 and this was reflected in the gains partially erased towards the close of the month.

In the phase of heightened activity, Indian Irons naturally led the movement for recovery and the rate soared at one time to Rs 23.43 in the special Budget session against the pre-Budget closing of Rs 22.20. TEXMACO were taken up to Rs 21.90 from Rs 21. Next to these scrips, the Miscellaneous section provided several bright features, the demand for Paper shares being very strong in the absence of any excise duty as was originally apprehended. Orient Paper was pushed up to Rs 34.10 from Rs 31.25; Sirpur to Rs 14 from Rs 13.06; Shree Gopal to Rs 16.42 from Rs 15.81; Indian Cable to Rs 30.87 from Rs 28.94; Indian Aluminium to Rs 18 from Rs 17 and Indian Copper to Rs 3.82 from Rs 3.62. The small relief in the export duty on tea grown in certain areas aided sentiment in the Tea section where those shares, which were neglected for long, scored handsome gains over the pre-Budget levels.

As a matter of fact, the most outstanding feature in the month's trading was the renewed activity in the Tea section, where a number of scrips of the Assam and Dooars gardens changed hands at fresh higher levels every week. The main inspiration was derived from the announcement of satisfactory interim dividends by certain companies for last year. Operators were also encouraged by two other factors—the increase in the average export prices obtained last year and the anticipation of relief in the fiscal burden for making Common tea production remunerative.

M A D R A S

	(a) After writing back Rs 30,000 being provision for taxes made in previous years not required.	(b) After transferring Rs 230,000 from Stock Reserve and writing back Rs 432,743 from provision for taxation.
	(c) Includes Rs 1,50,000 being excess provision for sales tax made in previous years.	(d) Includes Rs 61,673 being unclaimed dividend Rs 23,445 being refund of E.P.T.
	(e) After writing back Rs 7,00,000 being Sales Tax excess provision made in previous years.	(f) An additional dividend at 5.5/14 per cent has been paid for the year ended 31-12-54 under Section 23(A).
	(g) Includes Rs 20,714,912 transferred from General Reserve No. 1.	(h) After transferring Rs 4,185,000 from General Reserve.
	(i) After writing back Rs 7,53,894 being excess provision no longer required.	(j) After transferring Rs 1,33,079 from Investment Reserve; Rs 1,77,397 from Taxation Reserve and Rs 1,06,876 from Income-tax liability
	(m) After transferring Rs 2,50,000 from General Reserve.	(n) Dividend for the year ended 31-10-1953.
	(o) After writing back Rs 2,12,900 being provision for taxes in previous years not required.	

(a) After writing back Rs 30,000 being provision for taxes made in previous years not required. (b) After transferring Rs 230,000 from Stock Reserve and writing back Rs 4,92,743 from provision for taxation. (c) Includes Rs 1,50,000 being excess provision for sales tax made in previous years. (d) Includes Rs 61,679 being unclaimed dividend and Rs 22,465 being refund of M.P.T. (e) After writing back Rs 7,00,000 being Sales Tax excess provision made in previous years. (f) An additional dividend at 5 5/4 per cent has been paid for the year ended 31-12-54 under Section 23(A). (g) Includes Rs 20,714,912 transferred from General Reserve No. 1. (h) After transferring Rs 4,185,000 from General Reserve. (i) After writing back Rs 7,53,894 being excess provision no longer required. (j) After writing back Rs 1,35,079 from Investment Reserve; Rs 1,77,897 from Taxation Reserve and Rs 1,06,876 from Income-tax liability from 1947-48 to 1949-50. (m) After transferring Rs 2,50,000 from General Reserve. (n) Dividend for the year ended 31-10-1958.

General Manager

Splitting the atom is not the only source of chain reaction, India's immediate target for steel has a chain reaction too.

Six million tons of steel mean 7,200,000 tons of coking coal, 15,000,000 tons of iron ore, three new works and industrial townships, a new mining region, over 700 miles of railway tracks linking the steel belt,

80,000 tons of nitrogenous fertiliser, and immense saving of foreign exchange. This is the starting point of new industries, more employment, lower prices, exports, and expanding markets, hence more industries, more steel... and it starts all over again.

The Indian Iron & Steel Co. Ltd. form a vital link in this mighty chain.

STEEL IS THE STARTING POINT.

INDIAN **ISCO** STEEL

If ever there was a man who guarded jealously the rights and interests of the Indian shareholder, he was C. S. Rangaswami; he was not afraid to wage a crusade—whenever the need arose, he quickly donned his battle armour. In his role of Watch-dog, he wrote with a fiery and knowledgeable pen; and so powerful was his impact that the Stock Exchanges, on notable occasions, have been known to be profoundly influenced. One such instance may be mentioned. When Sir Chintaman Deshmukh introduced the concession of Development Rebate, the market did not understand and therefore did not realise the full purport of the measure. In an emergency supplement the bountiful implications of Development Rebate were explained in full, and it was then, then only, and not before then, that prices showed perceptible, and even considerable, cheer. C. S. Rangaswami could gauge the investment climate as few in India could. But he wrote with a fierce integrity, and he insisted that Watch-dog of Indian Finance should always be an objective observer of, but never an active participant in, the Stock Exchanges. His ruling holds true, as ever, though death last week claimed him for victim. In him, the Indian investor has lost a true, solicitous, unselfish friend.

FOR THE INVESTOR

Mounting Tide of Confidence

Investment Gossip:

STOCK markets have, at long last, settled down on a note of cheerfulness after passing through fluctuating moods of buoyancy immediately after the receipt of the Budget proposals and of gloom subsequently when the implications of the changes in company taxation were being bearishly interpreted.

By the manner in which Lyons Range and Dalal Street have been behaving during the past two weeks, it must be said that the Central Budget proposals have ceased to have any upsetting effect. Curiously enough, equities are now being freely talked of as providing a convenient hedge against inflation. Besides, with the scope for earning larger profits, any slight increase in the tax burden will be easily absorbed.

The effect of the taxation changes will vary according to companies in

relation to their earnings, ploughing back profits and their dividend paying capacity. In some cases, savings by way of reduced taxation will be larger and, in a few, they may be smaller. But the average position may show an improved trend.

As for dividends to be paid out of reserves, the Finance Minister has already promised to look into the problem of double taxation. In a developing economy, when the need for larger revenues is so demanding, he has sought to remove the pinches, and this, in itself, should be welcomed and the markets have actually welcomed it by an advance in equities.

The fact that the exemption from bonus tax of companies utilising share premium accounts for such purposes before 1st April 1960 may induce many companies to make such issues during the next twelve months. In this respect, the Indian Steel & Wire Products Limited and the Kelvin Jute Mill Company have already come out with their proposals of issuing bonus shares. These will certainly have their bullish implication for the market.

Above all, the main reason for the sustained strength of the market is the soundness of the technical position. The market is bare of scrip in the investment counters and, with the expectations that the LIC will step in whenever there is a setback in prices, bull operators have been very active in their dealings.

Even with a smart rise in values, there has not been much realising on account of genuine investors. The attention of these investors should now be directed to the selection of companies whose dividend distributions are likely to be unaffected in future.

Thus, the general sentiment appears to be constructive, judged by the lengthening list of transactions recorded in almost all the counters. Though setbacks by way of a technical nature may come, the outlook, on the whole, appears to be good, favouring a further rise in general.

£ R\$
Investment Notes:

Probably, the first jute mill to take advantage of the recent Central Budget is the Kelvin Jute Company in McLeod group. This company has proposed to issue bonus shares in the ratio of one to three shares held by capitalising the Share Premium Account. The shares have risen to Rs 260 from Rs 230.

The directors of the Imperial Tobacco Company have struck rather pessimistic note about the outlook for the company for the year ended 31st March, 1959. From the information now available, it is clear that the profits for the year will be lower than in the previous year. In these circumstances, the company is unlikely to recommend a final dividend in excess of 2 per cent. Meanwhile, the company has decided to declare a second interim dividend of 2 per cent (first interim of 2 per cent declared on the 6th August 1958). The shares are presently quoted around Rs 11.69.

RECORD OF ACHIEVEMENT

Sound underwriting and outstanding service to Policyholders are reflected in the rapid progress made by the **ORIENTAL FIRE**. Transacting Fire, Marine, Motor, Accident and all other classes of non-life business **ORIENTAL FIRE** also offers specialized cover against Machinery Erection and Breakdown and Boiler Explosion risks.

ORIENTAL FIRE AND GENERAL INSURANCE CO., LTD.

Head Office: Oriental Buildings, BOMBAY-1

In Bombay, the Indian Manufacturing Company (of the Thackersey mill group) has proposed to issue bonus shares in the ratio of one ordinary for every share held, subject to the consent of the Controller of Capital Issues, by capitalising a sum of Rs 9 lakhs.

In Madras, the K.C.P. Limited has proposed to raise the authorised capital to Rs 3 crores by the creation of 18.40 lakh equity shares of Rs 10 each and 96,713 Preference shares of Rs 100 each, after cancelling the 2,713-5 per cent tax-free Cumulative Redeemable Preference shares not taken up. Meanwhile, the company has proposed to maintain the distribution at 7½ per cent for the year ended 30th June 1958, subject to the permission from the Industrial Finance Corporation.

£ R\$
Investment Briets:

For the second year in succession, Osmanshahi Mills Limited has passed over the dividend for the year ended 30th September, 1958.

In Madras, Mysore Sugar has, in addition to maintaining the dividend at 20 per cent, announced a silver jubilee bonus of 10 per cent for the year ended 30th June, 1958.

Jay Shree and Ambica Fare Well
Balance-Sheet Reviews:

OF the textile mills whose reports and accounts have been released

so far, Jayshree Textiles Limited and Shree Ambica Mills Limited have done much better in the year ended 31st December, 1958. The former has raised the dividend from 5 to 6½ per cent and the later from Rs 25 to Rs 30 (including a bonus of Rs 5) per share.

£ R\$

Jay Shree Textiles

The Jay Shree Textiles Limited has reported a net profit, before providing for Depreciation and Taxation, of as much as Rs 19.06 lakhs as against only Rs 11.54 lakhs in the previous year. The amounts provided for Depreciation is Rs 8.35 lakhs (Rs 6.94 lakhs) and Development Rebate Rs 28,830 (Rs 85,968). The provision for Wealth Tax is lower at Rs 28,500 against Rs 45,000. After writing off Rs 32,083 towards Debenture Issue expenses, the Renovation and Renewals Reserve gets Rs 6 lakhs.

The new tax proposals have not much significance from the point of view of this company or shareholders, if only the ultimate incidence is taken into consideration, pay any taxes for some time until the arrears of depreciation amounting to Rs 25 lakhs have been provided. Nevertheless, the company will be under obligation from 1960-61 to deduct tax at source on the dividends paid. The shareholders will, therefore, have to get their second instalment of the dividend, if any, after the necessary adjustments from the tax authorities.

Ambica Mill

The Shri Ambica Mills Limited has also reported encouraging results for 1958. The gross profit has increased by Rs 32.25 lakhs to Rs 1.1 crores and sales have gone up from Rs 4.73 crores to Rs 4.90 crores. Depreciation absorbs Rs 14.65 lakhs against Rs 12.33 lakhs. The allocation to the Development Rebate Reserve has been maintained at Rs 6.50 lakhs. The provision for Taxation is raised to Rs 51 lakhs from Rs 40.50 lakhs, while Rehabilitation Reserve has claimed Rs 2 lakhs against nil. Allocation to General Reserve and Staff Gratuity Reserve amount to Rs 10 lakhs and 2 lakhs respectively against nil.

₹₹₹

Coimbatore Cotton

Despite the difficult trading conditions, the Coimbatore Cotton Mills Limited has reported a net profit of Rs 6.96 lakhs against Rs 11.12 lakhs in 1957. The amount provided for Depreciation is higher at Rs 4.50 lakhs against Rs 1.35 lakhs, while a sum of Rs 1.25 lakhs is set apart for Development Rebate against nil. The Gratuity Reserve gets Rs 30,000 (Rs 25,000). The payment of an Ordinary dividend of 6 per cent has been enabled by a transfer of Rs 1.85 lakhs from the Dividend Equalisation Reserve.

The point to note in the case of this company is the distribution of the dividend on a tax-free basis out of past taxed reserves. This facility will not be available from 1960-61 and additionally about Rs 91,000 will have to be found if the equivalent gross dividend is to be paid. Thus, it will be admitted there will be a needless drain on the company's resources.

₹₹₹

National Carbon

The directors of the National Carbon Company (India) Limited have announced that the 1958 earnings of the company, before tax and after Development Rebate, amounted to Rs 82.85 lakhs on gross sales of Rs 6.05 crores as compared to the earning of Rs 75.92 lakhs on gross sales of Rs 5.35 crores in 1957. Development Rebate amounts to Rs 4.50 lakhs as compared to Rs 5.40 lakhs. Tax provision for the year absorbs Rs 45.37 lakhs against Rs 40.69 lakhs. Depreciation is higher at Rs 18.18 lakhs against Rs 12.05 lakhs.

Improved results are attributed primarily to an increase in the demand for the company's zinc and battery products and to income arising from the sale of flashlights manufactured at the new Lucknow factory from the middle of the year. The directors have maintained the total dividend at 14 per cent for the year.

₹₹₹

Martin Burn

Martin Burn Limited has reported satisfactory results for the year ended 30th September, 1958. Sales have risen to Rs 9.04 crores from Rs 7.67 crores, while the net profit, after provision for Depreciation

and Taxation, amounts to Rs 39.29 lakhs against Rs 38.44 lakhs in the previous year. The Depreciation amount is reduced to Rs 1.36 lakhs from Rs 2.05 lakhs, while the Taxation provision is raised to Rs 53 lakhs from Rs 50.50 lakhs. After transferring a sum of Rs 23.15 lakhs from various provisions made in previous years and now no longer required, the directors have raised General Reserve to Rs 28.50 lakhs from Rs 3.00 lakhs. No provisions are, however, made for Contingency Reserve and Capital Redemption Fund against Rs 1.00 lakh and Rs 2.00 lakhs respectively in the previous year. The dividend on the Ordinary shares is just maintained at Rs 2.12 nP per share (including bonus).

₹₹₹

Walchandnagar Industries

The working of the Walchandnagar Industries Limited has resulted in a drop of Rs 11.39 lakhs in the gross profit to Rs 60.57 lakhs for the year ended 30th September 1958. After providing Rs 11.90 lakhs for Depreciation against Rs 8 lakhs; Rs 4.84 lakhs for Development Rebate Reserve against nil; Rs 4.87 lakhs for managing agents' remuneration against Rs 6.24 lakhs and Rs 11 lakhs for Taxation against Rs 18.75 lakhs, the net profit amounts to Rs 27.96 lakhs against Rs 38.97 lakhs in the previous year. The Special Depreciation Reserve absorbs Rs 5.90 lakhs against Rs 4.80 lakhs. The dividend is maintained at Rs 21 per share.

The company has formed a consortium with the TEXMACO and the Indian Sugar & General Engineering Corporation Limited, in the name and style of Wallstex Private Limited, to procure orders for the supply of complete sugar mill machinery to the co-operative sugar factories through the Government.

₹₹₹

Jeypore Sugar

The Jeypore Sugar Company has earned a profit of Rs 3.17 lakhs for the year ended 30th September 1958 after providing Rs 3.48 lakhs for Depreciation. Total sales have amounted to Rs 58.56 lakhs. The directors have recommended a dividend of 6 per cent. They have, under consideration, a proposal to pay an interim dividend for the current year at an early date.

C. S. Rangaswami

March 12, 1959

BY THURSDAY AFTERNOON, C. S. RANGASWAMI had conquered the pain and the discomfort and the nausea that followed in the wake of a fissure that afflicted him, of abscesses that drained his energy and of antibiotic medicines that made it impossible for him to take even the bare food necessary for sustenance. He was free of disease. He asked for something to eat because he was hungry. As evening approached, he felt melancholy and bade his children be about him. Night came, and he told me it was imperative for him to be given a sedative, that he might sleep. He did not think that he could persuade the doctor in this respect, and wished that I interceded in his behalf. I sent for the doctor; a senior was consulted; an injection was agreed to. And so I intervened. He thanked me and blessed me and had a bite to eat and cleansed himself and had his injection and thanked the doctor for all three children gathered around him and thanked the doctor for looking after him as a son and bade his wife and other relations good night. I told father that I was sure the injection would give him satisfying sleep, that he would wake up a new man. He blessed me yet again, and thanked me, and went to sleep. He slept an hour. We heard a cough then, that frightened us. Somebody switched on the light, and there, for us all to see, was father breathing deeply thrice: he did not breathe again.

Comal Swaminatha Rangaswami was born nearly sixty-five years ago, in a small town called Dindigul, in South India. His father was a vakil, the most respected man in that region. The family was not rich, if by wealth you meant money. There were a brother and a sister, and both were dear to him. The three children were reared in an atmosphere that was, while not puritanic, imbued with a high sense of what was ethical. The father was iron-willed and a man of principle: he never handled money, and C. S. Rangaswami was ever thereafter, as a result, never to place an undue importance on money. He grew up in that town. His higher studies were in Madras, and then started, at so young an age,—his father died when he was seventeen—a life that was dedicated to responsibilities which he never shirked. He "worked" his way through college: and he was already a journalist of sorts. The hell he passed through may be imagined if I were to recall that he was half-blind or worse in his college days. How he studied, how he amassed the learning that sweetened his writings of later years, how he avoided the pitfall of a sense of self-pity or bitterness, I frankly do not know. He got his break in life, when the Maharaja of Darbhanga visited Madras for the purpose of delivering some lectures, for, father was asked to "ghost" write those speeches. These so impressed the Maharaja, that he invited father to become his secretary. And so came about C. S. Rangaswami's emigration to the North.

There was the Darbhanga phase, which was to last hardly two years. The life was not satisfying, and father gratefully accepted an invitation to join the Bombay broking firm of Batliwala and Karani. His sojourn in the Gateway city was frenzied. But, one day, both the size of his earnings and the magnitude of his expenditures appalled him: and he fled the city. He reached Calcutta with nothing but three rupees in his pocket. He ensconced himself at the Continental Hotel. There he was to stay for a while, and he was thankful that the management did not have the impertinence to present his bill for three months. Slowly he set about earning a livelihood. His stock-broking experience and his fondness of writing pointed to his specialising in financial journalism: at one time, he was the financial correspondent of the leading daily newspapers in the country. Then, a friend wondered why father allowed his brains to be "picked". That was the inspiration for the start of Indian Finance. With Rs 200 as capital, and this collected as advance subscription from a small group of friends,

C. S. Rangaswami had the temerity to set himself as competitor to the only two financial weeklies then in existence, and both of them were British-owned. Indian Finance had no reason to succeed. It had no right to survive. It was against all logic that it should one day become an institution. C. S. Rangaswami, in a working partnership with his nephew, P. R. Srinivas, did the impossible by hard work and by a revolutionary approach to what was constituted by financial journalism. In those far-off days, it was heresy even to think that a staid weekly devoted to commerce and trade and industry could have a column that proclaimed itself to be Gossip. But father got away with it, got away with his supreme impertinence of challenging the established—and entrenched—weeklies, got away with the foolhardiness of trying to do all this on a meagre capital of Rs 200.

And shall I now set down his achievements? I should, but I cannot, for, I do not know them all. But it is a fact that, when the Central Bank in Calcutta had a run, father worked heroically by the side of Sir Sohrab Pochkhanawala to meet the demands; it is a fact that, when the Punjab National Bank stood in need of assistance, father arranged a "cash-credit" from the Imperial Bank; it is a fact that father trained the Indian politicians to pay attention to economics, too; it is a fact that father alone foresaw a strong gilded market during the tenure of the Second World War; it is a fact that father's efforts culminated in the amalgamation and strengthening of four Bengal banks; it is a fact that it was he who saw the challenge and opportunity inherent in Pakistan's non-devaluation of its currency in 1949; and it is a fact that, when Government have felt depressed, father it was who could find and pinpoint and stress that which were the brighter aspects of the economy.

But these are not the yardsticks of his worth, this was not the sum of his life. He lived to see that his relatives did not want, he provided them with a job or secured a job for them or equipped them to fend for themselves. Nobody who came to his house was turned away. His philanthropy was far beyond his means. Will those thousands forget him, who found sanctuary in his house, after a nightmare of a journey from Burma, in 1942? And those tens of thousands who ate his salt in the Bengal famine of 1943—are they not here to remember him in their prayers? These are his true achievements, and the people who earn and live today—they are the monument to my father.

And should I speak of him as father, and how he trained me, and how he was my father and friend, guru and adviser? No; not this week, at any rate. In a future Gossip, perhaps, when my heart needs must be unburdened. For, there is no room for sorrow here, no need of solace. I cannot mourn the passing away of a man who knew and felt and said that he was at peace with the world, because all that he needed to do had been done.

So I thank my father, for having been my father, for giving me the pride that I am his son. Those readers, his friends, deserve my gratitude, for they made him an apostle of cheer by enabling Indian Finance to live. I thank the evacuees from Burma and the refugees from Midnapore, for, it was they who made possible father's extravagant philanthropy.

The care that Dr R. N. Ghosh lavished on him, the attention that Dr H. K. Roy paid to him, the love with which his servant, Satrugnan, and my relations looked after him, the patience and courage with which my mother was steadfast by my father's side—these, too, require to be said. That done, my job is done, except perhaps again to express my high sense of pride in being the son of

C. S. Rangaswami

Co-operative Approach

THE most heartening feature of this year's annual session of the Federation of Indian Chambers of Commerce of Industry is the indication it has given of brighter prospects of friendly co-existence between the public and the private sectors of the national economy. Both the presidential address and the inaugural speech of the Prime Minister light up the wide area of common ground between Government and Business in their thinking on economic problems. The common ground was always there, in the past as at present. But, unfortunately, it was obscured by the suffocating smog of irrelevant controversies which had been allowed to continue far too long. The country owes it to the tact and wisdom of Sir Bejoy Prasad Singh Roy that the smog has lifted, so that it is now possible to appraise the problems of the national economy in their historical setting. Sir Bejoy has extended the hand of cooperation which has been warmly grasped by the Prime Minister. The understanding thus established can be the beginning of fruitful cooperation between the two sectors and more effective coordination of their resources for the attainment of common objectives. For it is adherence to common objectives that makes cooperation possible. These add up to an economic Panch Shila for internal application, not merely for the Government and Big Business, but for all sectors of the population. It comprises the following points, one arising out of the other:

1. Primacy of the Welfare of the masses.
 2. Elimination of obstacles to the advancement of the common man and removal of the burdens on his back.
 3. Maintenance of a rapid rate of economic and industrial development. Economic programmes, whether, of the public or the private sector, should be judged by how rapidly they help to build up enterprise.
 5. Mutual respect and readiness to consult in the formulation of economic policies.
- Within this framework there can be differences of approach and interpretation, sometimes sharp difference, but these will not lead to conflict, if there is readiness on all hands to be guided by the facts of economic life. As the Prime Minister said, "unless the policies belong to the realm of Utopian dreams, they have to keep company with the facts of life. Otherwise they fade away." The differences of approach or interpretation will facilitate a more complete understanding of these basic facts than will be possible through a single-pointed attack.

The President of the Federation has indicated, what the Prime Minister has underlined, the objectives listed above though not in the same terminology. Both agree that the central, dominant factor in the country is the recognition that the era of pathetic contentment of the masses has come to an end. The people are restive under the burden of poverty and are impatient for improved conditions of living. It is in this context that the sights have to be set for policies of economic development. Whether the incentive to progress in this direction comes from the passion for social justice or hardheaded appreciation of the economic and demographic situation in the country, there cannot be any rational opposition to applying the Gandhian test to the economic and social policies and institutions. As the Prime Minister put it, there should be a common understanding that if something comes in the way of the development of the millions of India, and is a burden to them, it must go. But there is room for legitimate difference of opinion regarding what constitute the principal obstacles to progress, and the order of priority according to which they should be eliminated

or shifted out of the way. Some would assign priority to the outmoded pattern of land ownership and cultivation, while others may consider that taxes on enterprise, or the import policy, qualify for that honour.

The common ground, it is satisfactory to note, extends beyond the formulation of the general aims of economic policy to the details of the practical programme for their implementation. There is first of all agreement on according priority to increasing agricultural output and on the desirability of the adoption of a cooperative approach for the achievement of such increase. Sir Bejoy has viewed this problem from a new angle and drawn attention to the fact that increased agricultural output is essential, not only to feed the growing population, but also to provide the sinews of industrial development. About 70 per cent of the export earnings of the country are contributed directly or indirectly by agriculture. In the long run, the foreign exchange gap created by the needs of industrialisation can only be bridged by increased export earnings.

Sir Bejoy also recognises that the agricultural policy should take note of the land hunger of the masses if it is to achieve lasting success. He is also not averse to the adoption of a cooperative approach to the problem of land reform, which currently has given rise to some furious controversies, and talk of civil war and bloodshed by some opponents of the reforms envisaged in the Nagpur Congress resolutions. What is of immediate significance in the Congress programme, as the Prime Minister has repeated times out of number, is the setting up of 'service cooperatives'. Other steps mentioned in the resolution will come in the fullness of time, with the free consent of the cultivators. Sir Bejoy has conceded that there is scope for 'service cooperatives' and, for that very reason, the conditions he has suggested for ensuring the success of the co-operative experiment should command the respectful attention of those who are impatient to hustle the pace of reform.

Equally helpful is the endorsement by the President, and later by the Federation, of the idea that the Third Plan should be of adequate size. The bold proposal put forward by Mr B. M. Birla for laying down a target for doubling the national income in ten years, instead of in 25 years as suggested by the Planning Commission, will induce many others besides businessmen assembled in New Delhi for the Federation's annual meeting to sit up and take notice. That is exactly the sort of approach which will make planning a live and lively issue for the masses and help to harness their energies for creating the resources necessary to maintain the required level of investment. If the business leaders of the country can also draw up a feasible and integrated programme for the achievement of the goal, the Planning Commission with its army of economic advisers and statistical mentors should not be too proud to take lessons at their feet.

Sir Bejoy has drawn attention to one aspect of the industrial situation that gives room for concern, namely the slowing down last year, of the rate of increase of industrial production. This has been reflected in the decline in the growth of railway traffic. The fall is particularly noticeable in the case of certain industries like textiles, cement and some engineering goods. For the fall in overall rate the difficulties of the textile industry are mainly responsible. If the demand for cloth picks up after the good harvests forecast for the kharif and rabi seasons, this cause will cease to operate. Recovery of the demand for cement will depend on how soon steel for construction will be freely available. The indications are hopeful of increased availability from indigenous sources.

Discussing the causes of the slackening of the tempo of development, Sir Bejoy has identified import control as the principal cause for the decreased output in a number of industries. The import cuts have been made necessary by the tight foreign exchange position. The foreign exchange crisis that caught the country unawares two years ago should lead to a reexamination of the pattern of industrial development that has been encouraged in recent years in both public and private sectors. In many cases industries have been set up which depend for maintenance of their rate of production on a substantial quantum of imported components and materials. The net result is that, while the index of industrial production shows a gratifying rise, it is accompanied by a steep rise in the import bill. Agricultural output, it is obvious, has not increased to the extent necessary to sustain a level of exports sufficient to pay for the largely increased volume of imports. And on any reasonable computation of possibilities in this direction, it is not likely to do so. Export of manufactured goods are not of much help, for as Mr Lal Bahadur Shastri, pointed out at the last meeting of the Export Advisory Council the foreign exchange they earn is only a minute fraction of the amounts they consume. Foreign aid cannot be of more than temporary assistance. Even foreign investment will not materially alter the position, unless there is change in the pattern of development of new industries. The Planning Commission, as well as the business leaders, should devote more attention than they have hitherto done to the burden imposed by the cumulative growth of the import bill inherent in the programme of industrialisation. It surely is time to take stock of the situation and gear the development programme in future towards utilisation of indigenous resources and materials. Her is ample scope for cooperation between the public and private sectors and for the coordination of their resources at every level.

How to Approach the US Market

By PAUL H. BRENT

MUCH has been said about the size of the United States market, comprising some 170 million persons with an ever-increasing purchasing power. There is no need to go into extensive statistical analysis of the American economy at this time—it has been on a steady upward trend with literally a unsatisfied consumer demand. All too often there is a fear of the size of our market because of its vastness geographically and its population. It is difficult for those who have not been in the United States to realise that it takes three days and nights of train riding to cross the country, or twelve hours by air and over a week to drive it by motor car.

However, herein lies the opportunity for the overseas manufacturer or exporter seeking an outlet for his product in the United States. The United States is comprised of many markets of widely varying consumer preferences, buying power, and economic backgrounds. There are 47 separate primary trading areas in the United States, scattered throughout the country. These are of course the larger cities and their suburban environments. These are the major wholesale distribution centers, but in no sense does it represent a complete summation of the possible distribution outlets for imported goods. There are many lesser markets which offer ideal conditions for introduction of imported products, in the agricultural areas of the mid-west as well as in the larger metropolitan centers around our sea coasts.

Comprehensive data are available on the

characteristics of these markets through many sources in the United States. The overseas manufacturer or exporter can make a selection based on these economic indicators of the market where he could test his product. Certainly at the outset his beginning might be small, as in fact also many United States firms were small at one time. Too often, exporters abroad think in terms of a single distributor to cover the entire market in the United States. As a result there has been a high concentration of import agents handling foreign products along the Eastern seaboard of the United States. True, these are the heavy centers of population but these are also, by the same token, the areas of greatest competition. Would it not be better to test some other area where a more balanced reaction could be obtained for a particular product?

How then should an interested manufacturer or exporter go about this? First, talk with our trade mission, at the Trade Information Center at the United States Small Industries Exhibit, opening in Calcutta March 15th. The mission comprises men qualified in the fields of marketing on the manufacturing, wholesale, and retail levels. These men by their experience can give you guidance in whether your product is competitive, how it should be presented most effectively to the American buyer, how it should be packaged, advertised, and so on. The American buyer has been accustomed to being sold merchandise—he doesn't just buy it. It must be attractively presented. It must have a unique quality.

Higher US Bank Rates

By Paul Einzig

IN London the increase of the New York Bank rate by $\frac{1}{2}$ per cent, and similar increase in several other Federal Reserve districts, came as a complete surprise. Although there has been some progress towards recovery from the business recession in the United States, there have been no sign of marked boomlike or inflationary developments that would call for correction by disinflationary monetary measures. Admittedly, in the United States as in Britain the wage spiral continues in an upward direction. Britons have learnt by bitter experience, however, that even a 7 per cent Bank rate is unable to check excessive wage claims, it is doubtful, therefore, whether from this point of view a 3 per cent Bank rate in the United States could be really effective. In as far as the object of the change has to check wage inflation, the United States authorities are likely to learn a lesson at their own expense instead of having learnt it at Britain's expense.

Possibly the reason for the move which is bound to hinder the business recovery in the United States is that the United States authorities want to check the outflow of gold even at the cost of slowing down the recovery. Since Britain appears to be reluctant to lower the Bank rate to $\frac{3}{4}$ per cent, the interest differential between the two money markets was narrowed by an increase in the New York Bank rate.

The increase of the American Bank rates tends to influence the movement of funds indirectly, through its effect on American buying of British equities. It certainly halted the rising trend on Wall Street. In the old days this would have produced an adverse

effect on the dollar, because it would have discouraged the inflow of foreign capital for investment, or speculation in American equities. At present, however, there is relatively little foreign interest in Wall Street, partly because prices are considered to be too high and partly because of the feeling of uncertainty about the dollar. On the other hand there is considerable American interest in British equities. After each rise in Wall Street there is fresh demand for high-class British equities which offer a much higher yield than the corresponding class of American equities. A move which tends to check the rise in Wall Street also tends therefore to discourage the flow of American funds to London. To the extent to which this effect is produced the higher Bank rate in New York does in fact help in safeguarding the American gold reserve against an outflow through the investment of American capital in Britain.

Such American operations on the London Stock Exchange have become a very important factor and are liable to affect the trend of the London Stock Exchange and the tendency of sterling. The increase in the New York Bank rate was followed by a fall in the prices of American favourites such as Electrical and Musical Industries, Courtauld, &c, and the whole market tended to be affected by the weakness of these equities. The favourable effect of Mr Khrushchev's statement that there was no ultimatum, and that the deadline date of May 27 concerning the Berlin dispute was no longer rigidly upheld, was more than wiped out by the effect of the temporary cessation of American demand on the London Stock Exchange.

The effect of the higher Bank rate on Wall Street does not in itself provide sufficient justification for the cessation of American

These are things on which our mission can advise you.

The trade mission has as one of its working tools a most comprehensive commercial library, comprising trade and industrial magazines of all types—twelve hundred pounds of them. Here you will find information on products presently sold in the United States, how they are marketed, packaged, and advertised. From this source and our counseling service you may learn about the competitive factors on any product.

This activity of the trade mission, however, is a highly concentrated version of the day-to-day trade promotion activities of the American Foreign Service. Through the American Embassy in Delhi and the American Consulates in Calcutta, Madras, and Bombay, Indian businessmen have at hand a trade promotion service which is sincerely interested in offering guidance on import-export trade matters, investment matters, and tourism development. Backing up our people in the Embassy and the Consulates is an extensive trade promotion organization in the United States Government through which your interests in trade, import and export, investment or travel promotion may be made known to American businesses. This is a unique service; it is free. Here you may file your trade or investment opportunities, requests for agency representation or direct sales outlets. This information is distributed throughout the United States through published media and through a network of field offices in 33 major cities and 600 cooperative offices

located in chambers of commerce and trade organizations.

Your own Government interests itself also in this field, as evidenced by the activities of your Commercial Counselors in the Embassy at Washington and your Consulates in United States cities. The United States Department of Commerce has close working relationship with these offices since we have mutual interests in the development of a larger two-way trade between your country and ours.

There are innumerable trade associations for particular commodities which can be sources of information on marketing and market characteristics. The United States is a market which has been intensely cultivated, not only by American producers but also by producers abroad. Market analysis is a highly developed science in the United States and there are many firms that can perform a comprehensive job in appraising marketing prospects for a particular commodity. Names of these organizations are available through the American Consulate and also by contacting our trade mission.

These are only some of the major channels that can be used in approaching the American market. If one caution is most appropriate, it would be this: Do not be frightened by the size of the United States market. Select a likely trading area out of the many regional markets in the United States. It is better to cultivate one such regional market properly than to approach the entire United States market in an indifferent manner.

buying of first-rate British equities. Although that change tends to hold up trade recovery in the United States it does not affect the progress of trade recovery in Britain. It now seems to be certain that Britain will witness a noteworthy expansion of production during the next three months or so. The recent deflationary measures are at last beginning to produce their effect.

Moreover, the Budget statement on April 7 is certain to administer a considerable additional dose of deflation, much of which is likely to produce an immediate effect. It is now considered certain that the standard rate of Income Tax will be reduced from 8s. 6d. in the pound to 7s. 6d. A reduction by a full shilling in the rate is bound to encourage both production and consumption. Under the British "pay as you earn" system wage earners and salary earners stand to benefit immediately by the cut, for the amount reduced from their weekly earnings for Income Tax would become smaller. There would be more available for consumer spending. Even though business firms would not derive immediate benefit from the tax cut, the anticipation of the eventual increase of their net profit margins as a result of lower taxation would encourage them to expand their production and to step up their capital expenditure.

Moreover, the Chancellor of the Exchequer is also expected to announce the Government's decision to speed up the repayment of post-war credits. The outstanding amount of these post-war credits is about £430 million, and the Chancellor is expected to repay ahead of schedule at least £100 million soon after the Budget statement. Most recipients of these payments are likely to regard the amounts received as a windfall and

will spend most of it without much delay. Together with the increases in the pay packets as a result of smaller reductions for Income Tax, this will result in a considerable increase in demand for consumer goods.

A trade revival resulting from these fiscal measures would not have greatly benefited the London Stock Exchange so long as the "ultimatum" of May 27 was in force. For many people would have preferred to be out of the market in anticipation of war scares that would be due to occur some time before the May deadline. But now that the time limit has been made elastic the war scares are liable to occur much later, possibly not before June or July. This would give investors time to benefit by the effect of the business recovery on Stock Exchange prices, without risking being caught in a slump due to a war scare before they had time to liquidate their commitments.

In any case, Mr Macmillan's Moscow visit created a favourable impression in Britain, and it is expected that this will find expression in the result of public opinion surveys in the near future. The apparent improvement of the chances of the Conservative Party to win the general election will also tend to help the Stock Exchange.

There is of course always a risk of a marked deterioration of the international political outlook as a result of some aggressive statement or action by Mr Khrushchev, long before the conference over Berlin has reached a deadlock. Such a setback would of course affect the Stock Exchange, and it is entirely unpredictable. But barring such event, the improvement of the business outlook in Britain and the prospects of tax cuts point towards a rise in the Stock Exchange.

EDITORIAL NOTES

Tea on Top

The Chairman's speech at the Indian Tea Association strikes a more cheerful note than we have been accustomed to hear, for some time past, from the spokesmen of the tea industry. One of the developments, which promise financial benefit to the industry, is the success of the engineering section of the Association in making available an improved type of machine for tea-making. This machine, it is confidently expected, would help production of a better standard of tea and, it is hoped, at lower cost. The widespread use of the machine should also help Indian tea to maintain its position in foreign markets. In this connexion Mr L. T. Carmichael also welcomed the signs of the revival of the International Tea Agreement which, he said, would stabilise tea prices in world markets.

The major development which is responsible in improving the prospects of the industry is the reduction of taxes announced towards the end of the last year, which has been further sealed down by the reduction of export duties announced in the 1959 budget. The total benefit to the industry from these two instalments of tax reduction is estimated at about Rs 3.5 crores; but these benefits accrue only when tea is exported and may not in all cases reach the producer. Mr Carmichael

has drawn attention to the feeling in some quarters that the financial problem of the tea estates would have been lessened, had the producer been the sole beneficiary from the Government's consideration.

While acknowledging the benefits to the industry from these tax concessions, Mr Carmichael has also drawn attention to the multiplicity of taxes which magnify the impact of the tax burden. There is certainly a strong case for simplification of the tax system, even if it is conceded that scope for further reduction is limited. The psychological effect of an unnecessarily vexatious system of taxation is to inhibit further investment, with serious consequences for the future of the industry. In this connexion Mr Carmichael has also referred with concern to the decline of the British investment in the tea industry and its possible effect on the sales of Indian tea in the British market. As Mr Carmichael himself has pointed out, British Capital does not find the climate inclement for further investment in India. And, if it chooses to give a wide berth to tea, the reasons deserve to be looked into closely. It is possible that British capital which was invested in the Indian tea industry is now seeking fresh outlets in areas where it could expect the same advantages that it enjoyed when tea plantations were first developed in this country. Since these conditions cannot be revived in this country, it will be advisable for the maintenance of tea exports, to explore alternative outlets, in order to reduce helpless dependence on a single market. The domestic market itself can absorb a much larger proportion of the production, once the country is able to get over the period of stringency of foreign exchange. In the meantime Indian tea should not be allowed to slide back from the top place in the list of Indian exporters.

Problem of Paint

The Indian paint industry, as the Chairman of the Paint Federation told its annual meeting is affected at more than one stage by Import Control. Some of the raw materials it directly consumes are subjected to drastic control and have to be imported against "actual users' licences. The industry is also affected by the shortages experienced by the manufacturers of intermediate products. For instance, lead and zinc oxides are important constituents of paints for which there is a large and growing market. These paints are indispensable for protecting metal work against corrosive action of the weather. But the manufacturers of these oxides are finding it increasingly difficult to get adequate supplies of the metals for which the country is mostly dependent on imports. The quotas for lead and zinc have been so drastically cut, that the paint industry is

faced with great difficulty in getting the needed material.

The case for larger allocations of import quotas for the paint industry would have been irresistible, if the industry had been able to show a significant improvement in its export performance. But the industry is handicapped by high cost of production. While the extension of the system of drawback of customs duties to cover paint industry is urgently necessary, it cannot be of more than limited assistance in stimulating exports. It is a point for consideration whether dependence on costly imported material is not also partly responsible for the high cost of the final product. The shortage of foreign exchange and consequent import restrictions afford sufficient incentive for development of indigenous substitutes. The Indian standards Institute can also help by adopting a more flexible policy in drawing up standards, instead of sticking to traditional specifications. The late Dr George Washington Carver made a wide range of paints and pigments from the clays of Alabama. Indian clays will also yield their secrets to patient questioning. Has the Paint Federation, or its Research Wing, yet devoted adequate attention to this aspect of paint manufacture?

Dr. M. R. Jayakar

The death of Dr Jayakar breaks another link with the past—a past to which many of the present generation will be inclined to look back with nostalgic feelings. It was the time when the country was developing the idea of nationhood, and produced sturdy personalities who helped the process. None among them was sturdier than Dr M. R. Jayakar, whose contribution to national life was not confined to a single field of activity. Starting his career as a lawyer, his career covered a wide gamut, law, politics, social service and education. In each field he achieved rare distinction in an age when a conscious effort was made to maintain standards at a high level. These did not exhaust the range of his activities. He was a connoisseur of music and himself a musician of no mean order. Dr Jayakar belonged to the age of national upheaval and conflicts with authority. Living in revolutionary times, Dr Jayakar conserved his influence and capacity to act as bridge between opposite camps and intervened along with Sir Tej Bahadur Sapru, with whose name his own was inseparably linked for many years, at critical moments to prevent an irreparable breach. His last notable intervention in politics was as a member of the Constituent Assembly when he made a memorable speech advocating retention of the link with the Commonwealth. Though the actual proposal he put forward was bound to be rejected, he could have the satisfaction that the substance of his proposal has been realised in the continued association with

Indian Finance

the Commonwealth. His last years were spent in building up the University of Poona and writing his memoirs which affords a valuable insight into the politics of his times.

Timely Concession

The Chief Minister of West Bengal spliked the Opposition guns most effectively by announcing the withdrawal of Sales Tax on books last Tuesday. Most of the Opposition members had come prepared for leading a frontal attack on this issue. But the quiet announcement at the introductory stage caught them unawares and many of them were not able to switch on to other topics. Only one or two members kept up the tradition of trenchant criticism. The others congratulated the Chief Minister on the timely concession. The question of Sales Tax had been agitating the book trade for a long time and, recently, the publishers and book-sellers in the State observed one day's hartal to draw attention to their case for withdrawal of this levy on knowledge. All States do not levy Sales Tax on books and this placed publishers in Calcutta at a serious disadvantage as against publishers elsewhere. At present 10 out of 14 States and almost all the union territories had exempted books from Sales Tax. The recent withdrawal of Sales Tax on books and periodicals in Bombay lent renewed urgency to the issue. That the State Government has been able to withdraw the tax, in spite of pressing need for funds to finance development plans, is certainly matter for gratification for the reading public, who hope that the remaining four States—Assam, Andhra, Bihar and Orissa—where Sales Tax is still levied on books will also fall in line.

March 14, 1959

IF, thirty-five years ago, there was a World of Finance, nobody knew about it. In an India whose preoccupations were all political, economics—the money market—was all but neglected. It was C. S. Rangaswami, with intuitive genius, who discovered the lost World of Finance, explored it with the tender care of an archaeologist digging up the relics of some city lost ages before, decoded and explained the hieroglyphics of a "language" which, if it at all had lived, had died long ago. At a time when Indian statistics were as inadequate and puzzling as they are plethoric and unhelpful today, he learnt to compile figures that meant something and, by precept, to cause an ever-increasing interest in the "tabular statements". He held it as axiomatic that study of a country's economy can best be made with what he called a money market approach. That he was not wrong in this emphasis that he placed on the World of Finance was amply proved in his lifetime. During the eventful 'thirties, his was a lone, calm voice that saw the future clear. When the Second World War broke out, his was the lone prediction that it would be a "three per cent" war, that "giltedged" would never be a casualty. When Partition of India came about, it was he who recognised and reiterated the notion that, with the non-devaluation of the Pakistani rupee, India was being given an opportunity which it could usefully seize. In the debates over the Second Plan, C. S. Rangaswami insisted that the problem of resources would depend on Government's borrowing policy, and its success or failure. C. S. Rangaswami, like all geniuses, was a painstaking man; but death does not spare even a genius, and last week it claimed him.

Slow-down in New Deposits

WE may draw attention to the fact that, in recent months, there has seemed to be an interruption of the stridently upward trend in the Deposits of Scheduled Banks since 1956. However, during the course of February, there has been a slight improvement, but, nevertheless, except in so far as the return of Scheduled Banks for February 27 records the passing of Rs 1650 crore mark in Deposits,

the fact remains that, for reasons which we hope to divine in the course of the next few weeks, the relationship between Government disbursements and accretion to Scheduled Banks Deposits appears to have become somewhat obscure. In any case, while it is proper that we should take cognisance of this fact at this juncture, it may be unwise to reach any firm conclusions until after heavy governmental disbursements take place during the course of March.

At the other extreme, Advances, which long remained stagnant or were indeed showing a declining trend, have, since around the beginning of December, expanded at a very considerable pace. This, too, is a question that needs to be examined.

Lastly, in recent weeks, some element of disinvestment in giltedged by Scheduled Banks has been discerned. Why this was necessary and whether this forebodes a much less spectacular year for Government borrowings will be a topic to which we have to address ourselves.

For the present, we are content to draw attention to these three phenomena; the post mortem can be held, say, a month ahead.

Spectacular Rise in Active Notes

BRISK demand for money, owing to beginning of the month disbursements and end of fiscal year payments by Government and busy season needs, is borne testimony to in the return of the Reserve Bank for March 6, according to which Active Note circulation has expanded by the spectacular amount of Rs 33.95 crores to Rs 1688.55 crores. Moreover, there was outflow of Rupee Coin for nearly Rs 3 crores. Currency has been expanded against Rupee Securities for Rs 20 crores, of which, in round figures, Rs 15 crores can be attributed to transfer from the Banking Department. The balance, obviously, is an index of the deficit financing taken recourse to by Government during the week under review.

In the Banking Department, the month early pressure is emphasised by declines in the Deposits of the Central Government, State Governments and Scheduled Banks. The Central Government's Deposits are lower by Rs 4.74 crores at Rs 52.04 crores; the Deposits of the State Governments have declined by Rs 6.10 crores to Rs 18.32 crores; and the Reserve Balances of member banks are sharply lower by nearly Rs 11 crores at Rs 65.60 crores. Moreover, the State Governments have increased their borrowings from the Reserve Bank, and the central banking institution's Other Loans and Advances are also higher by Rs 3.92 crores at Rs 90.05 crores.

Lastly, Balances Held Abroad have declined by the fractional

amount of Rs 9 lakhs to Rs 32.85 crores.

The return of the State Bank for March 6 possibly registers the first of a fresh tranche of counter-part funds, although the State Government's Deposits, as on March 6, are higher only by Rs 0.67 crores at Rs 493.80 crores. Our suspicion in this regard is based on the fact that the State Bank's investments are higher by nearly Rs 10 crores at Rs 272.74 crores. Since the State Bank is experiencing an insistent demand for money, it would not have increased its investments in giltedged, unless such investments were of a special or contra nature. It would follow that, as against a presumed accrual of Rs 10 crores on special deposit account, month early disbursements and busy season demand have been responsible for an off-setting drain of Rs 10 crores, so that Deposits as such appear to be unchanged. Meantime, as reflecting the busy season pressure, the total of Advances has moved up by Rs 2.70 crores to Rs 199.15 crores. The need to invest freshly in giltedged, coupled with an increase in Advances, has wrought a decline of Rs 11.44 crores to Rs 21.81 crores in Cash in Hand and with the Reserve Bank, even after the State Bank had borrowed from the Reserve Bank to the tune of Rs 3.00 crores.

The return of Scheduled Banks for February 27 again bears testimony to the onward march of the busy season. The total of Advances has risen by Rs 5.46 crores to Rs 958.09 crores and, at this level, Advances are within striking distance of the peak touched in the 1957-58 busy season. Deposits are higher by Rs 0.75 crores at Rs 1650.25 crores. There has been disinvestment in giltedged for about Rs 1½ crores. Borrowings from the Reserve Bank are higher.

at Rs 31.23 crores. In the end result, Cash Balances are higher by Rs 0.30 crores at Rs 160.03 crores.

Allahabad Bank Limited

Among the major Indian Joint Stock Banks, Allahabad Bank Limited is the only institution so far to have announced an improvement in its balance of profit in respect of the performance in 1958. (The State Bank, it is true, has also reported an increase in its earnings, but it is not, strictly, a joint stock bank; and the two major banks whose results have yet to be received are those of the Indian Bank and the United Bank of India). It is pertinent and useful for us to examine why and how Allahabad Bank Limited, in a year during which banking results generally have been poor, was able not only to maintain but even improve upon its results for 1957.

It is not as if Allahabad Bank was, if we may say so, "fortunate" enough not to have experienced an increase in unutilisable resources. But where the bank has been fortunate is that, firstly, it has long been an institution whose Deposit resources consisted predominantly of higher interest bearing Deposits. As such, the "system" to be adopted in the utilisation of free resources in a profitable manner has necessarily been worked out in some detail. Secondly, Allahabad Bank has experienced a small rise in its Advances, which is again a phenomenon that is counter to the general trends among banks in 1958. Having said this, we may now proceed to analyse the accounts of Allahabad Bank Limited for 1958.

The Indian Bank Limited

H. O. First Line Beach, Madras-1

In consonance with its policy of inculcating the banking habit amongst the community, the Bank has been opening a number of branches in the recent past.

There are now no fewer than 112 branches of the Bank functioning not only in India but also in Ceylon and Malaya.

In addition, the 23 Local offices of the Bank serve the entire Madras City and Suburbs.

Foreign Exchange Facilities Also Available.

Westminster Bank Limited.

New York Agents:
First National City Bank of New York.

D. P. PARTHASARATHY
Secretary.

18/3/59

Deposits rose from Rs 40.76 crores to Rs 45.32 crores; the increase is mainly under Fixed Deposits, which are nearly Rs 5 crores higher at Rs 29.51 crores; Savings Bank Deposits have also been marked up, but current accounts have registered a fall of Rs 0.73 crores to Rs 10.39 crores. While, of course, during the period when there seemed to be a competition for attracting deposits, Allahabad Bank could not afford to be an idle spectator, it wisely recognised that an increase in higher interest bearing deposits had immediately to be offset by an increase in its "earning" assets. As such, on the other side of the ledger, gilt-edged in-

S. E. RLY TENDERS

Sealed tenders are invited for Tender No. CON/GM[9]P & M/105/EMP/59 for supply of spare parts for G.M. Engine Model 6-71. Details to be obtained from the tender Schedule. Tenders will be opened on 26.3.59 at 3 P.M.

Tender forms are obtainable from the office of the Controller of Stores, (Construction Section), Garden Reach, Calcutta-23, on remittance of Rs. 5/- (not refundable) per copy by Money order to him direct in the case of outside firms and on production of cash receipt from this Rly's Chief Cashier by local firms.

Tender should accompany the receipt for depositing of Rs. 1000/- as earnest money with this Rly's Chief Cashier without which the tender is liable to be rejected. Approved contractors having a permanent deposit of Rs. 1000/- with the Controller of Stores are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

S196 GENERAL MANAGER

vestments are seen to have risen sharply from Rs 8.72 crores to Rs 14.62 crores. As already stated, Advances rose from Rs 23.12 crores to Rs 25.06 crores. While Cash Balances are largely unchanged, it became necessary for the Allahabad Bank to have recourse to borrowings to the tune of Rs 2.32 crores.

What seems to be the prompt "contra" investment of accruing high cost deposits has made its impress felt on the profit and loss account. There is a substantial rise of just under Rs 0.40 crores to Rs 2.16 crores in the income by interest and discount; and commission, exchange and brokerage have fetched roughly Rs 4 lakhs more. It was, therefore, well within the capacity of the bank to bear an increase of Rs 0.34 crores to Rs 1.24 crores in the interest paid on deposits, etc. Then, with a rise of Rs 8.69 lakhs to Rs 83.31 lakhs under the head of Salaries and Allowances, the balance of profit marks a slight rise—but the rise is nevertheless significant—from Rs 13.68 lakhs to Rs 13.71 lakhs.

The dividends have, of course, been maintained; the provision for bonus to staff claims a higher figure at Rs 7.32 lakhs against Rs 6.88 lakhs.

In a year of relatively poor banking results, the performance of Allahabad Bank Limited in 1958 may be said outstanding.

Bank of India

The accounts of the Bank of India Limited for 1958 may be said to be representative of the experience of banking institutions during a year in which the fresh accretions of Deposit resources, and higher cost Deposits at that, was an embarrassment because there was by no means a corresponding expansion in the demand for advances.

According to the balance sheet of the Bank of India Limited as at December 31, 1958, Deposits and

other accounts registered a small increase from Rs 82.60 crores to Rs 88.27 crores; what is significant is that Fixed Deposits should have risen by nearly a third from Rs 30.94 crores to Rs 39.58 crores, the while that current accounts, etc., showed a fall from Rs 41.48 crores to Rs 36.83 crores. We may call it an accretion of new resources in the form of Time Liabilities, and we may also interpret this as a switch from Demand to Time Liabilities because of the attractive rates being offered on Time Deposits.

The bank took the precautionary step of increasing substantially its investment portfolio. Gilt-edged holdings have risen from Rs 18.61 crores to Rs 21.91 crores; and investments in debentures or bonds are also considerably higher at Rs 1.44 crores against Rs 0.61 crores. The total of Advances, in bearing testimony to the low level of demand, shows a fractional decline from Rs 59.38 crores to Rs 58.99 crores.

The Bank of India was in a position to liquidate borrowings, which had been placed in the 1957 balance sheet at Rs 1.50 crores. In the result, Cash Balances have been somewhat drawn on.

The steps taken by the Bank of India to improve the volume of its earning assets, apart from advances, have resulted in a substantial rise of over half a crore to Rs 3.88 crores in the income by interest and discount. On the other hand, the income by way of commission, exchange and brokerage is lower by Rs 15 lakhs. Not surprisingly, interest paid on deposits has shot up from Rs 1.66 crores to Rs 1.95 crores. Salaries and Allowances also absorb Rs 10 lakhs more at Rs 1.21 crores. Consequently, the balance of profit has declined from Rs 93.47 lakhs to Rs 85.77 lakhs.

The provision for tax stands reduced by Rs 5 lakhs at Rs 25 lakhs. The interim and final dividends have been maintained. Bonus

to staff absorbs Rs 1 lakh more at Rs 16 lakhs. They carry forward, at Rs 12.79 lakhs, is much lower than the Rs 16.02 lakhs brought in.

There can hardly be any doubt, as the Directors' Report points out, that, in a difficult year for banking, "the Company's business continued to function satisfactorily."

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

NOTICE IS HEREBY GIVEN that the Directors have decided to declare a second Interim Dividend on 30th March 1959 (additional to the Interim Dividend of 2%, free of income tax, declared on 6th August 1958) in respect of the Company's financial year ending 31st March 1959, of 2%, free of income tax, payable on or after 14th April 1959 to registered shareholders whose names appear in the Register on 30th March 1959 or to their mandatees.

Transfers received at the Company's Registered Office before close of business on 25th March 1959 will, if in order, be registered in time for the transferees to receive the Dividend.

Although the final results for the year to 31st March 1959, will not be known for some time, it is clear from the information at present available that the profit for the year will be lower than for the year to 31st March 1958, and in these circumstances the Directors are unlikely to be able to recommend a Final Dividend in excess of 2%.

By Order of the Board
B. GRANGER PEARSON
Assistant Secretary

Virginia House,

Indian Finance

March 14, 1959

Fall in Production and Stocks

THANKS to the development of a number of favourable factors, the outstanding feature of the week's trading in the Jute Goods market has been a steady rise in the prices of sackings, which have remained neglected for long. Apart from the numerous enquiries and the rumours of orders from various quarters, hopes are entertained that stocks of this category of goods will be reduced with the curtailment of production from the 2nd March and an improvement in the internal demand.

As a matter of fact, total stocks have shown a drop of 2,700 tons at the end of February as compared to the January-end figure. Hessians have accounted for a fall of 1,300 tons and sackings for 2,500 tons, while other varieties are higher by 1,100 tons. As far as production is concerned, there is a decline of as much as 8,500 tons in the same month, reflecting a fall in the number of working hours from 206 to 192. But the decline in the production of sackings is more pronounced than that of Hessians, mainly due to the gradual switch-over of looms during the past many months in view of the shortage of Hessians and the fall

in demand for sackings. The following figures (in tons) show the trends of production and stocks during the past three months:—

	Hessian Sackings	*Total
Production:		
February	36,900	39,500
January	40,100	45,200
December	40,100	49,200

Stocks:			
Jany-end	15,500	80,200	111,100
Feb-y-end	16,800	82,700	113,800
Decr-end	15,800	80,200	109,700

*Includes also Other Varieties.

From the above figures, it is very clear that the statistical position is becoming more healthier than in the recent past and, with the closure of a further 1½ per cent looms from the 2nd March, stocks especially of sackings will be brought to manageable figures in the near future. This factor has naturally imparted a bullish sentiment to the market. Again, large-scale coverings on the part of shippers are still taking place in near-by positions even in non-standard constructions. This should be interpreted as a sign of revival of overseas enquiry for Indian jute goods.

Although foreign buyers are neglecting the forward positions, preferring to work out in spot and affloat lots, the anticipation of early orders from various destinations have kept prices firm. In this respect, it is encouraging to note that the demand for jute goods is expanding in Egypt, which is expected to take about 30,000 tons of jute manufactures per year from this country. There are also reports that the representatives of the Argentine Government will hold discussions with the shippers to formulate plans for future business. This interest, shown by Argentina, has raised the hope that she may take large quantities this year in view of her poor off-

take in the past due to foreign exchange difficulties. Above all, the prospects of an increased demand from the South-East Asian countries, following the recent visit of the IJMA delegation, have infused confidence in the market.

Marketwise, prices of heavy goods have been showing a steady rise under the lead of B. Twills, being influenced by the persistent rumours of the possibility of the export duty on raw jute being removed at an early date. Although business in Hessians has been comparatively small, this category of goods is expected to resist lower levels due to the shortage of ready stocks. Mills, taking advantage of the rise in prices, are reported to have sold fair quantities in the forward positions of both Hessians and sackings. Following were the price trends:

	March 5th	March 7th	March 11th
--	-----------	-----------	------------

Hessians:			
40" x 10 ozs. Ready	39.55	39.70	39.45
40" x 10 ozs. April-June	38.20	38.65	38.85

40" x 10 ozs. July-September	38.30	38.70	38.80
40" x 8 ozs.	32.30	32.40	32.25
40" x 7½ ozs.	30.00	30.00	29.85

Sackings:			
B. Twills Ready	90.00	91.30	92.60
B. Twills Apl.-June	90.70	91.80	93.00
B. Twills July-Sept.	91.75	92.80	93.90
Hy. Coes (Green)	88.75	90.50	92.00
Cornacks	90.50	91.25	93.00
Cubans	110.50	111.00	112.00
A. Twills	106.00	106.50	109.00
L. Twills	102.00	102.50	103.50
D. W. Flours	109.50	110.00	110.50
Sugar Twills	101.50	102.50	103.75

Futures:			
Hessian-May	37.88	37.94	38.52
Sacking-May	90.40	90.35	92.55
Raw Jute-March	20.36	20.38	20.88
Raw Jute-June	21.52	21.44	22.20

RAW JUTE:
In sympathy with the manufactured goods section, conditions in

the Raw Jute section are ruling generally steady. Although the mills have continued to show only limited interest in their purchases, sellers remain reserved in view of the possibility of the abolition of the export duty. The limited buying on the part of mills is mainly due to the uncertainty with regard to the extent of financial assistance that they may get from the Government to build up large stocks.

S. E. RLY TENDERS

Sealed tenders are invited for Tender No. CON/COS[23] F2/59 for supply of 15000 yds wire P.B. J. No. 12 S.W.G. Tenders will be opened on 8.4.59 at 12 noon.

Tender forms are obtainable from the office of the under-mentioned (Construction Section), Garden Reach, Calcutta-23, on remittance of Rs. 2/- (not refundable) per copy by Money order to him direct in the case of outside firms and on production of Cash receipt from this Rly's Chief Cashier by local firms.

Tender should accompany the receipt for depositing of Rs. 200/- as earnest money with this Rly's Chief Cashier without which the tender is liable to be rejected. Approved contractors having a permanent deposit of Rs. 1000/- with the undermentioned are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax clearance certificate with the tender.

WORLD OF TEA

Demand Fair, But Not General

THE demand for Tea is now less pressing than recently, though it is described as still quite good. In the Calcutta market, "Teas for price" have been receiving only a fair enquiry, while the leg-cut teas are often dearer. Darjeeling teas are meeting with much less demand and there are appreciable withdrawals.

In Mincing Lane, the best liquoring invoices are dearer, while teas for price are also wanted, the lower end of the price range gaining a penny at 34d per pound. The unrest in Africa has inevitably drawn attention on the trouble spots, such as Nyasaland, which produces tea. But obviously, it is far too early to foresee whether the unrest, if it continues, will have any adverse effect on tea production.

Most of the African tea-producing countries have increased their production enormously over the past two or three decades. In 1934, Nyasaland production was only 5 million pounds. By 1958, it grew to over 23 million pounds—the highest figure yet achieved.

Meanwhile, the Tea Association of India has welcomed the relief granted to the industry in the 1959-60 Budget by the reduction of 2 nP per pound in the export duty. The Association has, however, viewed with some misgivings the increase of 2 nP in the excise duty payable by gardens in Zone III-B and pointed out that these gardens are mainly producing quality teas, which are mostly exported to foreign markets. The increased excise duty on such teas, it is pointed out, will add to their cost and thereby impair their competitive position and the foreign exchange earnings, which these quality teas bring into the country, may thus be adversely affected. It is also stated that the revenue

that this increased duty may bring to Government may not be large; but the amount of foreign exchange that may be lost by the weakening of the competitive position of these teas may be significant in the present context.

In the Export Sale held in Calcutta this week, offerings were 68,171 packages. There was a fair, but not very general demand. "Tea for price" together with plain and medium Broken declined by 4 to 8 nP per pound. The poorer Fannings were an irregular 4 nP easier; but the cleanly-sorted types were sold well at often dearer rates. The few orthodox BOPs and OFs with bright liquors were sold readily. The plainer BOPs were up to 10 nP easier and often difficult to sell, while similar OFs were irregular and on occasions dearer.

Useful liquoring CTC types were sold well although at often easier prices. The poorer CTC descriptions were well supported at irregular and sometimes dearer rates. The brighter leg-cut teas were often dearer, others selling readily at about 4 to 6 nP easier. Whole Leaf grades met with a fair demand, stylish kinds tending dearer. Darjeelings met with much less demand and there were appreciable withdrawals. Following rates were quoted:—Clean Black Pekoe Rs 1.90 to Rs 1.94; Plain BP Rs 1.54 to Rs 1.58; Plain Fannings Rs 1.70 to Rs 1.76; Medium BP Rs 1.52 to Rs 1.56; Medium Fannings Rs 1.68 to Rs 1.74; Best Assam CTC BP Rs 2.30 to Rs 2.40 and Best Assam CTC Fannings Rs 2.55 to Rs 2.75.

In the Internal Sale, offerings consisted of 21,458 packages of Dusts and 3,756 packages of Leaf grades. There was a good general demand for Dusts. Orthodox descriptions ruled fully 2 nP per pound easier although, where leaf was powdery, there was some competition and selected types in this category were sold at a small premium. Leg-cut teas were somewhat irregular. There was no demand for the best Darjeeling teas, which resulted in some withdrawals. CTC teas were rather irregular and demand was selective. Following rates were quoted:—Medium Doors Dust Rs 1.78 to Rs 1.80; Medium Assam Grainy Dust Rs 1.72 to Rs 1.76; Medium Assam CTC Dust Rs 1.95 to Rs 2.10 and Best CTC Assam Dust Rs 2.60 to Rs 3.00. There was, however, less demand for the Leaf grades. The few lines of Green Tea, on offer, were sold readily at prices around valuation.

In the Cochin market, approximately 700,000 pounds of Leaf tea were offered for exports. Quality remained unchanged and there were a number of flavoury high-grown on offer. There was a good demand for best liquoring high-grown Broken; but prices were barely steady. Similar Fannings were sold at easier rates. Whole Leaf grades met with slightly better support and prices were occasionally dearer. Low Medium was quoted at Rs 1.55 to Rs 1.70; Medium at Rs 1.80 to Rs 2.25; Good Medium at Rs 2.35 to Rs 2.80 and Quality at Rs 3.00 to Rs 5.05.

The imposition of excise duty on tea is among the measures contemplated by the Pakistan Government to boost the exports of tea, which had been dwindling year by year. Excise duty may result in an increase in the domestic price of tea; but the Government expect a fall in internal consumption and greater efforts to export on the part of the plantation owners. Though Pakistan is entitled to export 45 million pounds annually under the International Tea Agreement last year, total exports were of the order of only 7 million pounds. In contrast, both India and Ceylon exceeded their quotas with exports of 460 million pounds and 361 million pounds respectively.

In Mincing Lane, offerings were 29,032 packages including 26,14 packages of Northern India tea. There was a fair general demand with interest centred on the better liquoring teas which were about steady. Low Medium and Plain thin teas, however, rule irregular and easier. Good plain tea was a strong market and prices were fully firm. Rates remained unchanged.

Indian Finance and C. S. Rangaswami were used synonymously, and C. S. Rangaswami, in his role as Eavesdropper, was known to have reported, and sometimes "created", Clive Street Gossip. Well, my father is dead, and there remains an Eavesdropper to weep for him. Am I to weep in public? to confess my sense of irreparable loss that he will not be there to chide me for a bloomer, and praise me for something else? Or am I, as Eavesdropper, to keep aloof as a pseudonymous person should? Should I write of his conquests, riches, spoils? or tell of where he failed, if he failed? or open out my heart, and write as a son in anguish will? Gentle reader, Eavesdropper, as Mark Antony once did, needs must take pause: his heart is still heavy, and he is still benumbed. He weeps—I weep—for him who is gone.

I THINK that Dr Roy has taken the wind out of the sails of the opposition by announcing the abolition of the sales tax on books. Those who have been following the arguments over the issue in the press would be warm in their congratulations. Apart from the economics of it and the adverse effect it was having on the book trade of the States, I have always considered it a barbarous levy. Even for an insatiably tax-hungry government, it must be taboo as a species of fiscal cannibalism. In its way, it was as inhibiting as the notorious taxes on knowledge in Great Britain in the mid-nineteenth century. It is a matter of history how the abolition, between 1853 and 1861, of the Advertisement Tax, stamp duty on newspapers and the duty on paper and the subsequent Education Act of 1870 were something of an intellectual and educational land-mark. "Of all decades in history," said a British historian, "a wise man would choose the 1850's to be young in." A hundred years from now, the second decade since independence may be looked back with similar nostalgia. Old hearts other than Mr Nehru's have rejoiced at the sight of young boys and girls run in and out of schools swinging their satchels with jaunty abandon. Not all these schools are as good as one would desire them to be and some of them are as near Dotheboys as makes no difference. But the tremendous upsurge for learning that is evident all around is both exhilarating and frightening.

"Why," you ask, "should it frighten you?" It is rather an involved question to answer. Books are books and the values they represent are subject to many different assaults these days that I am reluctant to seem to imply that one can ex-

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

aggerate their importance. Some of these assaults are, like the Sales Tax, brazen; others are more subtle and insidious, like the cinema and—this, mercifully, not our misfortune yet—television. But there are some very obvious risks in this passion for book learning, though, on the whole, I am prepared to take them rather than deny the opportunity to indulge in the passion.

But it will not be honest if one were to shut one's eyes to what is happening at home and elsewhere. One need not be very old to have seen with one's eyes the steady corrosion of the truly magnificent oral traditions of our country. Children no longer listen wide-eyed to Sita's tribulations or Bhima's exploits from their mothers but read of them in brightly printed books. Rajaji's services in rendering the epic in readable Tamil are certainly invaluable; but they also represent his canny recognition of a predicament and coming characteristically to terms with it. Children these days seem to know so little by heart and their elocution is shocking. It will be foolish to pretend that books are entirely responsible for this state of affairs. though, to judge by the increase in the number and variety of books of references, concordances and encyclopaedias, one would imagine that there is a conspiracy to make memory as unnecessary as the appendix (and as troublesome). Professor Raleigh once said that a man should be judged by the book he wrote the day after his library was burnt down. How few of us will pass creditably a test of such severity!

While we can legitimately feel happy at the number of books that are being printed in our languages, the thought that so many of them do duty for what our parents absorbed unconsciously must disconcert us. There is involved in this displacement a multiplicity of tragedies: a way of life has passed away, a whole scheme of values inextricably bound up with the pleasures of the home and the community has disappeared. The grandmother is twiddling the knobs of the radio to listen to a horribly potted version of a Harikatha Kalakshepam put over by All India Radio!—thirty years ago, she would have sneered at a discourse that took less than three hours. The steady impoverishment of the spiritual and imaginative life of the child is something that is too tra-

gic for words. When, in the semi-dark on a wintry night, you lay wide awake listening to the stories of heroes who strove greatly or heroines who suffered unmeritedly, the tremor in the heart was cancelled by the warmth and security of the rug and the proximity of your mother. Rather, they coexisted in paradoxical amity, as though they agreed to alternate their thrills. Apart from the poetry and passion in the tales related, the act of listening constituted in itself a rich experience. A sensibility nourished thus was vivid and vivacious and was precisely the kind that should be brought to the study of the great literature of the world. All this is on its way out. If not already over and done with. At least part of the reason for this is that parents of the young these days have practically had no education outside the schools and colleges. This would not have mattered, if it had not bred in them a superciliousness about other modes of learning, or, alternatively, if the colleges and schools had been real seats of wisdom. These they were very far from being, with disastrous results.

It is not only memory that books have corroded but thought, and this it has done by the simple encouragement of the notion that it is superfluous. This has been the consequence of the economics of its production. Though this particu-

lar criticism is more applicable to newspapers, the enormous quantities of writing that subtly or brazenly flatter our sloppy thinking or slovenly feeling are really the result of publishers' and authors' having to keep the wolf from the door. Mr Arthur Moore, reporting for The Statesman on the London Scene, quoted a noted publisher implying that the book trade made by the sheer inanity of much of its production. "Publishers must face the fact that too many ephemeral books last too long. The clutter up the available English language shelf space the worse and if anyone sensibly attempts to burn them, they are pilloried. At least half of all production is perishable within three years. It should be able to classify all new books as either permanent, perishable and damn the consequences." It is not only the frank escapist literature that is the trouble. There are, at various levels, intellectual sophistication, quantities of lumber that need clearing. A general poverty of ideas is sought to be covered by a plethora of notions, digested and pre-digested.

In a sense, its own prolificacy has been the book's chief enemy. Or yesterday I read in the papers about the National Library's embarrassment over dealing with a flood of books that threaten to overwhelm it. This has been the consequence of the rather odd definition of a book in the Public Libraries (Delivery of Books) Act. This definition apparently includes things like telephone directories, race guides, trade catalogues and publicity pamphlets. I agree that it is rather difficult to define a book but surely the above could easily have been excluded. The British Museum, with the British definition of a book based on price (minimum price of six pence), is having even greater difficulties. The UNES-

definition, "a non-periodical" literary publication containing 49 or more pages, is workmanlike, but is unlikely either to end arguments or to stop the flood. Charles Lamb's somewhat drastic definition will evoke a warm response in many hearts: "I can read anything which I call a book. There are things in that shape that I cannot allow as such. In this catalogue of books which are not books—bubla a-bibila—I reckon court calendars, directories...the works of Hume, Gibbon, Robertson, Beattie, Saomes Jeys, and generally, all those volumes which 'no gentleman's library should be without.'" Lamb's instinct is proved to have been sound since: except for Hume and Gibbons, all the names in his list, mercifully forgotten today. And I do not believe that anyone reads Hume or Gibbon today, certainly not for pleasure. In fairness, however, I must add that Earl Attlee in his recent television interview (in which he sized up Mr Jinnah pretty accurately) made the claim that, when he was Prime Minister, he read the whole of Gibbon—just

in a week-end he was at Chequers. I am bound to say that I would have disbelieved such a claim from anyone else.

Lamb's reference to the books that no gentleman's library should be without puts the finger on the nub of the matter. A rather paradoxical concomitant of the impoverishment of the sources that nourish the sensibility has been a widespread desire for "Culture". There is a certain amount of snobishness in this, but a good deal of it is genuine. Commerce has characteristically tried to cash in on this by such devices as "the condensed books", and, less objectionably, "the hundred best books of the world" and Eliot's "Five-Foot library" and so fourth. The trouble about such ideas is that the possessor of such a library can hardly be human. A man who distributes his favours equally between Dante and Jane Austen or between Nietzsche and Mark Twain is beyond my ken. "A gentleman's library" can conceivably make, as Sidney Smith said of books, excel-

lent furniture. But I doubt if it will ever mould a personality.

But still the most serious problem is over-production of books. It has reluctantly to be admitted that, when all the rubbish that is printed is jettisoned, we shall still be left with a quite an unmanageable proportion of well-written books. And that is what makes the whole thing so heart breaking. It breeds the most despicable kind of snobbery and a whole host of subterfuges. A professor of English I knew used the Times Literary Supplement to such good purposes that he passed for an oracle on every subject listed in the Dewey Decimal System. Years ago I read a most amusing essay by Gilbert Norwood. He made the point that "only a creature possessing Macaulay's reading power and the leisure of St. Simon Stylite can keep his head above contemporary literature." Such a state of affairs suits admirably a certain type of charlatan. Norwood mentions the kind of critic who begins his essay with an airy, "everyone remembers the tou-

ching scene in Richardson's Pamela," implying thereby that the ninety-nine per cent of his readers who do nothing of the kind are a specially low order of literateurs. Norwood's solution for this is not unlike that suggested by Mr Robert Lusty, Chairman of Hutchinsons, whom I quoted earlier. He suggests wholesale destruction of nine-tenths of them. He also recommends an absolute prohibition of all novels for the next ten years. And even when they are published later, they ought not to deal with "the war" over-worked subjects like "the war" and "bright young things". Then the other extant books should be destroyed at the rate of ten thousand a year. In a matter of years we should have reduced the problem to manageable proportions. Norwood has worked out a fairly detailed programme which many oppressed with the thought of so much to read will find most interesting.

A similar drastic treatment with specialisation should bring other areas of knowledge under some control. Expertise is becoming so ridiculously narrow that we shall never again have among us a Bacon who aspired successfully to have all knowledge for his province. A couple of years ago, J. B. Priestley gave a devastating, and not entirely fair, pen portrait of an imaginary atom scientist: he presented him as the bright boy from the slums who graduated from a redbrick university working off his other inadequacies in fierce but narrow veneration. One cannot help feeling that the world will be less cockeyed if some of its brilliant minds had the wider and livelier curiosity of some of the great thinkers of the past.

GATEWAY GOSSIP

FOLLOWING the budget presented to the State Legislative Assembly, it was only natural that discussion both within the Legislature as well as outside it, should centre round the budget, its general content and specific proposals. The reaction outside has, for the most part, been a sense of relief at the absence of fresh taxation which is viewed with fearful prospect by many before the budget time. There is also general satisfaction at the progress the State has made in the implementation of the Second Plan.

Discussions within the Legislature provided a mixed fare, the debate on matters relating to the budget tending to become rather dull and tame. The opposition for the most part failed to strike any bright patch or score any points over the Ministerial spokesmen. Much of the criticism directed against the budget and the speech of the Finance Minister was wide of the mark. In fact, on the basis of the group or party a person belongs, it would have been possible to take the words out of his mouth even before giving the chance of speak. Such criticisms as capitalist budget, etc could only have been expected in the light of the familiar pattern of attitude and behaviour of the opposition parties. Similarly sense of discrimination against particular areas expressed by members belonging to those areas is a familiar grievance against almost every State Government in the Indian Union.

The absence of any constructive criticisms from the opposition left Dr Jivaraj Mehta, the State's Finance Minister in almost complete mastery over his opponents in regard to matters concerning the budget and the State of the economy. Of course, the absence of fresh taxation in the new budget would itself have forfeited many an attack from the opposition; for always it is new tax measures that provide the best fighting ground for the opposition. Even without such new tax measures there were complaints about heavy burden of indirect taxation and increase considered to be surreptitiously made by means of the tax unification law included in the budget.

For almost every points raised by the Opposition members Dr Jivaraj Mehta had appropriate replies. He reacted to the description of the budget as a capitalist budget by one member by saying that it was a travesty of truth. The State's economy has on the contrary turned the corner and was safe on the road to the socialist pattern of society. There was evidence of improvement in agricultural production. Production of cereals had, in 1957-58, registered an increase of 34 per cent. Larger outlay working to about 50 per cent of the total outlay on the fourth year of the Plan has been provided for agriculture and irri-

gation alone. The needs of backward classes as well of backward areas had received special attention, and therefore criticisms suggesting discrimination against Vidarbha, and Marathawada were made to appear out of place. About high indirect taxation, Dr Jivaraj Mehta expressed his helplessness when he was left with no alternative all the direct taxes being strictly the Centre's concern. Rise in administrative expenditure was, according to Dr Jivaraj Mehta to some extent inevitable in an expanding and developing economy. He, further, justified the tax unification law in terms of its value for preventing evasion and for equitable distribution of the burden of taxation throughout the State.

Cooperative farming was the one subject which provided a common meeting point for the opposition and the Government. Even in respect of this, the tendency was to cast doubts on the policy of the Government. However, Dr Jivaraj Mehta made the position clear when he said that the Government was by no means timid about implementing the policy, but only that it had to be preceded by legislation regarding ceilings on individual holdings. At present, there are about 400 cooperative farming societies and Dr Jivaraj Mehta said that the Government's aim would be to develop them on sound basis.

A sensational digression to the budget debate was caused when Mr Brijlal Biyani, a Congress member from Vidarbha, called in question the viability of the bi-lingual setup on the ground that it was too unwieldy to permit of efficient administration and demanded its dismantlement. Instead of the bi-lingual State, Mr Biyani would have not two but three States, namely Maharashtra, Mahagujarat and Vidarbha. In his scheme for the separation of the Gujarati speaking areas which would go to constitute the Mahagujarat State, Bombay city for which there had been contending claims from the Gujarati speaking people and the Maharashtrians, would remain a separate Bombay State. This Mr Biyani believes would prevent the city from being a drain on the rural areas of Maharashtra.

As the spokesman for a separate Vidarbha State, Mr Biyani is not so much concerned about the continuance of the bi-lingual set up if it meets with popular acceptance, as that there should be a separate State for the people of Vidarbha. He is firm on this point and has suggested that the people of Marathawada could be given the choice either to join Maharashtra or Vidarbha.

The Congress members in the Bombay Legislature including some

of the Ministers reacted sharply and even rudely at the deviation of Mr Biyani from the party-line which would not brook any tampering with the present set up until and unless the Parliament on whose decision the bi-lingual State has been created decides otherwise. By violating the party discipline to respect and honour its decisions, Mr Biyani had whipped up the fury of his colleagues and the criticism of his erstwhile colleagues in the Congress camp verged on the vitriolic. Ulterior motives were attributed to the sudden and unexpected change of front, and Mr M. S. Kannamwar, the State's Health Minister who joined issue with Mr Biyani on the bi-lingual setup reminded Mr Biyani of his disciplined days during the previous session of the Legislature.

An X-ray of Mr Biyani's mind as sarcastically demanded by the Minister would perhaps not be of much use in either helping or hindering the cause of Vidarbha State so long as there are other equally vehement champions among Congress men themselves. It is to be recalled in this connection that the same demand for a separate Vidarbha State was pressed by Mr M. S. Aney newly elected Congress member of Parliament in his maiden speech. And, the election

which brought victory to Mr Aney was contested in the spirit of a prestige fight between Congressmen and the other opposition parties on the very question of the continuance of the present set up. His challenge of the Party stand has cost this him his seat in the Assembly; for he has resigned his membership of the Assembly, for which there was some demand from Congressmen themselves. While Mr Biyani's change of front represents a victory for the opposition, who are united in a loose way on the basis of the unilingual formula, at least the Maharashtra Samiti bloc would not have Mr Biyani amongst them as his suggestion for the constitution of Bombay city into a separate State is repugnant to them. Whether the stir caused by Mr Biyani would develop into a storm remains to be seen.

The end of the week's discussion saw some bare outlines of the next year's budget emerge from the Finance Minister's speech. Dr Jivaraj Mehta has indicated that on present calculations of revenue, there is not likely to be fresh taxation for 1960-61 also. Considering contingencies that might arise to upset present calculations, the Minister's statement could be taken as only an expression of hope rather than a definite commitment.

Third Plan

The performance of the economy in the third year of the Second Plan, has left many in doubts about the outcome of the present trend at the end of the Plan period. The setback to the economy was in evidence in all major sectors of activity. Failure in foodgrain production aggravated the foreign exchange shortage which in its turn reacted on the rate of industrial production. In such a context, discussions on the Third Five Year Plan which have already started, have been cast in the background of the difficulties that had developed to detract from the performance of the Second Plan, so that their recurrence could be guarded against, with suitable measures taken in time.

In his speech at the 19th conference of the All-India Manufacturers' Organisation, Mr N. D. Sahukar Chairman of the Organisation, has given such a list of "dos" and "don'ts" in relation to the Third Plan. The fundamental need of the country is conceded to be a sizable increase in foodgrain production. The malady that afflicts the economy is diagnosed as having its origin in the increased purchasing power in the hands of the people and the resulting rise in the per capita of consumption of foodgrains. Expansion of domestic consumption was according to Mr Sahukar a confederate factor, with increased momentum of internal investment in the drain on the foreign exchange reserves of the country. Industrial imbalance arising out of the absence of heavy industries and the resulting need to divert resources for their erection had also had its part in producing last year's foreign exchange situation. Relief from exports was even less than the usual scale.

This sets the task of the problem at least in respect of approach clearly simplified. As Mr Sahukar has pointed out, while increase in foodgrain production should have absolute pre-eminence there are also gaps in the industrial structure which should be filled if regard is to be had for maintaining a faster rate of growth of the national economy. A well developed machine tool building industry, development of non-ferrous ores etc. are fields which Mr Sahukar says, should engage the serious attention of the Government.

Mr Sahukar also warns against inflationary conditions inherent in a developing economy symptoms of which have been in evidence in the country in the last year following the huge deficit financing resorted to by the Government and the failure of foodgrain production. As a measure to reduce the size of deficit financing Mr Sahukar has urged the introduction of steeper taxes on higher rural incomes especially derived from agriculture. The pre-

sent rate of taxation on the higher levels of rural incomes appears to him to be too low relatively to rates on industrial income. In view of the ceilings on land holdings contemplated by all State Governments it is arguable whether there would be any place for such steeper taxation on rural incomes.

Mr Sahukar also views with alarm the growing volume of foreign aid which he says amounts to postponing to the future, the problem of finding resources for repayment of the loans received. On the other hand, foreign aid by equity participation of foreign capital while it solves the problem of foreign exchange also does not raise the question of repayment in the way in which it is presented by outright loans.

*

Food Production

The shortage in the production of foodgrains in the country in the last year, has found most of the States strenuous about measures to achieve a sizable increase in production. Everywhere foodgrain production is in the priority list, largescale provision being made for extending irrigation both major and minor, multiplication of seed farms, distribution of fertilizers etc. The Bombay State which is deficient in its own production especially of rice, has not been behindhand either in emphasising the importance of a rapid increase in foodgrain production or in taking measures to bring about the result. The campaign to step up production is conducted on diverse lines and bids fair to equal expectations. Such optimism does not appear to be completely premature if reports of the working of the programmes in some areas in the State are to be believed.

The Poona Division in the State which comprises about six districts has a plan to achieve an increase of over 50,000 tons in foodgrain production by the end of the Second Plan. Programmes for achieving this reveal a bias towards the extension of minor irrigation works and according to Mr V. M. Joshi, Divisional Commissioner, minor irrigation works have made considerable headway. During the Second Plan period, it is pointed out, twenty new works have been undertaken with a total investment of Rs 574 lakhs, bringing an additional area of about one lakh acres under irrigation. This compares with about 20,000 acres of land brought under irrigation with Rs 16 lakhs and embracing nearly 55 minor irrigation works. This is remarkable progress considering that before independence there were only 20 minor irrigation works capable of irrigating about 70,000 acres.

Formation of farmers' unions at all levels, including taluka, district, and the State is being encouraged with a view to arousing the enthusiasm amongst farmers for agricultural improvement and promote group thinking and action. The Nagpur resolution on cooperative farming has added another weapon

in the armoury of the State Government. There are already about 400 cooperative farming societies in the State and an acceleration of the programme would involve time and resources. However, Dr Jivraj Mehta State's Finance Minister has indicated that ceilings on individual holdings which is to precede the introduction of cooperative farming societies would not be slow in coming.

GATEWAY MARKETS

Bullish Fervour in Oilseeds

THE markets for both Oils and Oilseeds are, once again, in a bullish frame of mind with prices recovering substantially from the recent low levels, thanks to nervous short-covering and renewed bull support.

The Groundnut section provided a consistent lead in the upward movement of the market. While arrivals tended to decline, vanaspathi manufacturers were keen buyers on most days. With the withdrawal of the free slab of 75 tons in respect of excise duty on vegetable oils, the competition from "baby expellers" had begun to disappear and this encouraged crushing and consequently the demand for ready groundnut from the bigger units. Above all, the revival in the overseas demand for groundnut oilcake accentuated the bullish tendency. Also, rumours, that a sizable business in groundnut meal was likely to materialise with the Communist countries through the State Trading Corporation, aided the upward tendency. In the ready section, the rate for the bold quality was quoted at Rs 37 and Groundnut Oil at Rs 19.00.

In contrast, trading in the Castor seed section remained rather subdued in the absence of fresh developments although there were rumours that a substantial business with the Communist countries was imminent. This is mainly due to the fact that the spot position continued to be discouraging. This factor along with the steady inflow of the new crop from Hyderabad and Gujarat, induced increased selling pressure. But, the market was in no mood to depress prices as North Indian operators were lending support at every setback. Castor ready was quoted at Rs 32.25 and Castor Oil, commercial quality, at Rs 15.37.

Although there were no new developments in the Linseed section, prices developed a firmer tendency on renewed speculative support, inspired by the rise in the prices of other oilseeds, particularly rapeseed. Ready was quoted at Rs 32.50 and Linseed Oil at Rs 16.31.

Particulars of shipments of oilseeds, oils and cakes for the month of February from Bombay as compared to the previous month are as follows (figures in tons):—

	Feb.	Jan.
OILSEEDS		
Groundnut HPS	1,476	1,590
Seasame	20	17
Rape & Mustard	1	19
Niger	239	NH
OILS		
Groundnut	356	493
Linseed	72	74
Castor	127	1,377
Seasame	6	68
Kardi	30	29
	Feb.	Jan.
CAKES		
Groundnut	7,440	8,796
Groundnut Meal	11,354	11,744
Linseed	805	494
Cotton	3,386	3,206
Niger	330	28
Kardi	NH	100

*

Gold & Silver

Prices on the Bombay Bullion Exchange displayed a firmer tendency. The marked strength was inspired by the encouraging spot outlook. With the movement of the "rabl" and cash crops gathering momentum, the demand for both the metals broadened noticeably; and this exercised a bullish impact on the market in view of the depleted supplies.

The improvement in prices was more pronounced in the Gold section where spot touched a high of Rs 119.75 and a low of Rs 118.97, to finish at Rs 119.75. Sovereign was quoted higher at Rs 74.75. Arrivals amounted to 5,000 tolas against an offtake of 4,000 tolas. Unrefined metal receipts totalled 4,000 tolas.

Silver arrivals amounted to 8 bars against an offtake of 23 bars. Unrefined metal receipts totalled 14 bars. Ready rates moved between Rs 196.12 and Rs 197.27, to finish at Rs 197.31.

*

Yarn

The Government of India's decision to suspend the operation of the export promotion scheme for indigenous Art Silk fabrics gave a jolt to exports and industry. This decision pushed up the premium commanded by import licences for art silk yarn. Exporters were, therefore, inclined to await the drastic changes in the export promotion scheme in the future. It learnt that the applications for the import of yarn pending before the Government, which are valued at Rs 3 to Rs 4 crores, will be scrutinised strictly and this is likely to lead to reduced imports.

The outlook for Staple-Fibre Yarn has undergone a change as a sequel to the Government's decision to raise the excise duty by about 8 nP to 20 nP per pound. Textile mills are finding it extremely difficult to pass on the increase in the duty to consumers, because of poor demand. Some of the units are, therefore, contemplating to revert to the production of cotton yarn, the prices of which have comparatively been steady in recent months.

Indian Finance

March 14, 1959

WORLD OF COTTON

THE Cotton futures market in Bombay staged a smart recovery from the recent low levels. With the Budget uncertainty being over, the investment and mill buying have re-started at many upcountry centres this week. Fresh rumours of abolition of the export duty, low arrivals and expectations of higher consumption by mills in the coming months have also aided the bullish trend.

Tenders issued on Monday against the maturing contract were only for 100 bales of Burl American. The market belief that the total tenders against the contract would not be heavy, were also additional factors for the sharp rise in Jharilla March delivery, which was lifted upto Rs 678 against Rs 668 in the previous week. Jharilla May closed at Rs 678.50 against Rs 673.50.

The Spot section witnessed cheerful conditions with prices rising by about Rs 15 per candy in all varieties. Short-staple varieties also ruled firm except Bengals. Imported varieties were, however, neglected in the absence of support.

On the export front, conditions remained listless. Overseas enquiries were negligible. With the result, no new fresh business was reported done. Reports from Karachi indicated that the UK agreed to increase its cotton offtake from Pakistan provided continuity of cotton supplies at competitive prices was maintained by the supplying country. It was thought that the UK would lift about 15,000 bales of cotton from Pakistan this year. Although mills were reported to have received import licences for cotton under the "export incentive scheme", many of them are reported to be reluctant to put in fresh business with Sudan and Egypt on fears of a fresh fall in prices. The general tendency is to wait and watch further developments in the international situation.

Sudan is reported to have rejected India's offer of entering into a special rupee agreement for her

cotton. Sudanese cotton is the cheapest in the world at present. With the result, shippers feel no need of entering into a special agreement with India for the disposal of cotton.

Meanwhile, reports from Alexandria have indicated that Egypt had already announced a 30 per cent discount to Indian mills. Import houses and mills are, therefore, anxiously awaiting a similar announcement from the Government of India. It is, however, pointed out that, despite a 30 per cent discount, Egyptian cotton will be costlier than equivalent Sudanese cotton by about Rs 100 per candy.

x

COTTON CONSUMPTION:

The consumption of Indian cotton, in January, is provisionally placed at 413,498 bales—nearly 6,000 bales less than that for the previous month. Nevertheless, it is considered to be fairly on the high side, particularly when it is compared with the consumption of 392,007 bales in January last year. The consumption of foreign cotton, at 34,177 bales, on the other hand, is lowest since the beginning of the current season. This may perhaps

x

KARACHI COTTON MARKET:

Prices in the Karachi cotton futures displayed a distinctly easy trend. Large arrival of the new crop and weakness of foreign demand exerted a downward pressure in prices. Even the news, that the UK would buy 50,000 bales of cotton during the remaining six months of the current season and another 100,000 bales next year as a result of the recent visit of the UK cotton delegation to Pakistan, failed to enthuse the market.

x

ALEXANDRIA COTTON MARKET:

Prices on the Alexandria cotton futures market showed a decline, reflecting the slackness of export demand. Favourable news, competition from Sudan, increased pressure of new crop and weak spot advices, adversely affected the price trend.

How banking serves the SPICES INDUSTRY

There is tremendous demand throughout the world for pepper and cardamoms, and South India produces the bulk of these spices. One-third of the entire world demand for pepper is grown between Karwar and Cape Comorin; and in 1951-52, India's exports earned more than Rs. 27 crores.

Within the last ten years there has been a remarkable increase in cardamom growing, particularly in the South Indian states of Mysore and Coorg, and the districts of Madras, Tinnevely, Malabar and Coimbatore.

The Indian spices industry has a happy future, and banking will naturally help to expand and improve it. The facilities and guidance of a good bank, such as the availability of ready funds when needed and the collection of dues from any part of the country, have become part of efficient organisation in every industry.

We at Palai are proud that many spice growers of South India employ the complete banking service we offer:

Current Accounts—Demand Drafts—
Telegraphic Transfers—Investments—
Letters of Credit—Bill Collection—
Deposits—Loans & Overdrafts—
Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 25 branches are strategically located, 23 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office. Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns & have the amounts credited to their accounts at any of our branches.

PALAI CENTRAL BANK LTD.

Head Office: PALAI, KERALA STATE,
Branches at: Madras, Cochin, Quilon,
Trivandrum, Alleppey, Mangalore, Bangalore, etc. Also at: Delhi & New Delhi.

A LEADING BANK IN SOUTH INDIA

BOMBAY REVIEW

CLOTH AND PIECEGOODS:

Activity in the Bombay Cloth market continue to be restricted. Hopes of seasonal brisk business have not materialised so far. Although stringent money conditions hamper the movement of textiles, the trade expects better performance in the next two or three weeks since the Budget uncertainties are now over.

On the export, trading conditions remain unchanged. While Hong Kong is practically quiet, Singapore has booked some business in the usual varieties. Ceylon continues to be quiet without any inclination for a revival of trade in the near future. Satisfactory enquiries are being received from Burma. But, according to indications, it will take some time before business under PL/480 takes place. It is reported that Japanese textiles are now placed under OGL. This may result in further competition for Indian textiles. Although the demand from East Africa continues, it is found to be slightly reduced. Sudan is also quiet in the absence of fresh import licences. Unless big consumers like Sudan and Burma do not enter the market, it is feared that some conditions of restricted activity will continue to prevail in the export front.

M. J. Maclaren,
W. Smith,
Jagat Narain,

Directors.

We have audited the foregoing Balance Sheet as at 31st December, 1958, of the Allahabad Bank Nominees Private Limited. We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account as required by the law in force have been kept by the Company so far as appears from our examination of those books. The Company's Balance Sheet is in agreement with the books of account and in our opinion and to the best of our information and explanations given to us the said Balance Sheet gives the information required by the Companies Act, 1956, in the manner so required and gives a true and fair view of the state of the Company's affairs as on 31st December, 1958.

No Profit and Loss Account has been prepared as the Company has no income and the expenses are paid by the Holding Company.

CALCUTTA:
The 27th February, 1959.

AUDITORS' REPORT TO THE SHAREHOLDERS

We have audited the foregoing Balance Sheet of the Allahabad Bank, Ltd., as at 31st December, 1958, and also the foregoing Profit and Loss Account of the Bank, for the year ended upon that date, in which are incorporated the audited returns of Calcutta and Bombay Branches and the unaudited returns of all other branches which have not been visited by us.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with provisos to sub-sections (1) and (2) of Section 211 and sub-section (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956; they are, therefore, drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that:

- We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;
- the transactions of the Bank which have come to our notice have been within the powers of the Bank;
- in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank;
- the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;
- in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1958, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

CALCUTTA:
Dated 27th February, 1959.

March 14, 1959

OLYMPUS

AT the thirty second annual session of the Federation of Indian Chambers of Commerce last week, there was much expression of mutual goodwill between Government and businessmen. What was even more important, a large area of agreement than was generally supposed was found to exist. For instance, Sir B. P. Singh Roy said in his Presidential address that, "having regard to the imperative need to develop resources and improve the low standard of living of the people at a measurable rate, the country could not afford to go slow". And then, later, in the context of the Third Plan, "The Federation and its constituents are firmly convinced that India must move quickly in the march toward industrialisation which alone can meet the aspirations of the people to higher living standards. We strongly feel that the fact that the Second Five Year Plan has run into some difficulties with regard to agricultural production, as well as shortage of foreign exchange, should not deter us from learning from experience and drawing up an adequate sized-Plan". Mr Nehru, in his reply, referred to Sir Bejoy Prasad Singh Roy's address as "friendly and cooperative in its approach" and said that, in a troubled world, mutual condemnation will only lead to disaster. He said that there was nothing surprising in the fact that men in public life came to have fairly set views on things or in such views differing from one another. And when "these firm opinions collide, there may be sparks. But that does not matter if we are determined to face these matters firmly but always cooperatively".

Let all this mutual expressions of goodwill should be considered merely platitudinous, it is necessary to find out precisely what was the area of agreement. It is also necessary to consider why, in such circumstances, there is such a lot of bandying of angry words. Thirdly, it is necessary to isolate discrepancies that rise between words and acts or even between words of different contexts.

First, about the area of agreement: I have already indicated how Sir Bejoy Prasad definitely ruled out the possibility of going slow. I also quoted him as approving of an "adequate size" for the Third Plan. There are other indications in his well-reasoned speech that he has been at some pains to understand the motivations behind Authority's policies and that he has felt a certain amount of sympathy with such motivations and policies. For instance, he conceded the importance of planning and the crucial role of Government in the direction of economic policy in underdeveloped countries. He admirably summed up the matter by saying: "The Federation is fully cognisant

of the fact that the most central and dominant factor in our country today is the marked awakening of the consciousness of poverty and the demand for higher standards of material well being and that it is in that context that plans for economic development have been conceived by our Government.... We feel that our economic planning, more specially because it is democratic, is not inconsistent with the continued existence of the private sector, nor is the extension of the public sector at certain points incompatible with the health of the private sector". And a little later, he says: "There can be no scope for argument which might question either the wider role of State in an under-developed economy or the essentiality of private enterprise to ensure the growth of the economy at the various points, the basic purpose being increased production, increased consumption and standards of living together with increased and diversified employment". If this is the basic approach of entrepreneurs in the country, there can hardly be a serious clash of interests between authority and the private sector. Why, then, should there be such a lot of shouting and slanging?

The reasons are various and I can indicate only some. Firstly, there is undoubted difference in emphasis. The FICC President says that "the crucial test of whether or not Government intervention, directly or indirectly, in the economic field is in the interests of the nation or not is not merely how rapidly it increases employment or production, but how rapidly it builds up enterprise in the economic and commercial sense". Now, there is a sense in which this proposition is unassailable even by professing socialists, since the motive power behind any economic betterment is always initiative and enterprise. But there is another sense in which production, employment and consequent rise in living standards are more important than the creation of a general spirit of entrepreneurship, especially when entrepreneurship is associated, rightly or wrongly, with exclusive preoccupation with personal gain.

Out of such differences in emphasis flow a whole series of secondary differences, which are really the subject matter of controversy. The controversy as to whether ordinance factories should produce trucks, or whether the private enterprise should, is an instance in point. Indeed, the question of the extension of public sector is, in every individual case, capable of being assailed or supported on the differences flowing from this difference in emphasis.

Secondly, even on the assumption that it is productive potentiality that should decide the issue,

controversies arise. Entrepreneurs in the private sector base their argument not on the wider question mentioned by Sir Bejoy Prasad, but on the narrower criterion of increased production and employment. The argument is that, even from this point of view, the large scale invasion of the private sector by the public sector is inexpedient and even harmful. This is a more manageable argument, because it is a proposition that is capable of verification. In other words, there can be what is called performance audit, including examination of the cost structure. Professing socialists should have, in strict logic, no objection to this evaluation, but in practice they alas, do have. Their argument is based on wider considerations like "public good", which is hardly capable of measurement in tangible terms.

Thus, even on avowed matters of logic, there is considerable mental reservation. Not that this is something unique to the economic argument. In public affairs, there is hardly any stance which is capable of standing a pitiless Socratic inquisition. That is why there is considerable scope for co-operation and compromise in practice. That is why it is possible for phrases like "vested interests" and "doctrinaire socialism" to be bandied without hurting the other particularly.

But there are other discrepancies that are more glaring. Authority does not always speak with one voice and there can be no doubt that, often, prior doctrinaire affiliations distort vision. Again, unlike businessmen, Government are all the time to reckon with political as well as economic facts. (Indeed, even businessmen are increasingly obliged to take note of political facts in their decisions, though they are not to do so as continually as the Government). Therefore, a good many decisions that do not appear to make economic sense will make excellent political sense.

On the part of the businessmen, too, there is some interesting lack of correspondence between professions at different places. For instance, we hear often of the Government's fatal succumbing to the fascination of steel, of authority having bitten more than it can chew and so forth. These criticisms come from, among others, businessmen. How is this to be squared with the admission that rapid industrialisation of the country is essential for the country's progress, that going slow will be disastrous; and that the Third Plan will have to be of adequate size? Does the word "industrialisation" mean different things to different members of the business community? Is the business community agreed on the size of the

Third Plan? An attempt to clarify the matter will lead to the discovery of interesting reservations in different quarters, and the reasons will also be of considerable interest. But all this seeming divided counsel need not be really so alarming in practice, as it may seem in argument. As I said, co-operation in practical tasks is and should be given, because of a mutual appreciation of the involved motivation behind each other's public positions. Therefore, if both sides were less stringent in their public postures, these discrepancies will seem less blatant.

The truth is, as Sir Bejoy Prasad put it, the private sector has done well by itself and by the country under the First and the Second Five Year Plans. Industrial production has been steadily going up, even though, latterly, foreign exchange difficulties have been partially responsible for the slowing down of the rate of the increase. And he quoted the verdict of objective evaluators like the Tariff Commission and the Reserve Bank to prove his case that the private sector has been making its due contribution to the nation's progress. A mutually beneficial relationship like this is worthy of continuance. In this context, Mr Nehru's ready acquiescence to the suggestion of associating businessmen with the formulation of the Third Plan is most welcome. Sir A. Ramaswami Mudaliar also made the same suggestion in his characteristically forthright fashion. In an endeavour in which there is as much basic agreement as in Indian planning, commonsense requires the pooling of all available wisdom and idealism. And that, despite appearances, both are available in an abundant measure in the private sector, can be denied only by the purblind.

MARTIN BURN LIMITED

NOTICE is hereby given that the Board of Directors of this Company has sanctioned payment of the Dividend on the Preference Share Capital of the Company at the rate of 5% per annum for the half-year ending 31st March, 1959. The Preference Share Registers will be closed from the 1st April to the 16th April, 1959, both days inclusive. Payment will be made on or after 16th April, 1959, to those Preference Shareholders whose names appear on the Company's Registers on the 31st March, 1959, or in accordance with their instructions.

By Order of the Board,
A. G. Gidley,
Secretary.

DELHI REVIEW

Government and Businessmen

NORTH INDIAN NOTES

Working of IAC

That the Indian Airlines Corporation, has not been doing as well in its business and aims, as would be desirable, is a fact which is fairly well known to people interested in the growth of airlines industry in the country and which even the Government could not but accept though with certain reservations. In the Rajya Sabha, last week, in the course of the debate on the working of the IAC initiated by Mr N. Prasad Rao, a Communist member, it was pointed out that things are going worse for the Corporation. In this connection, it was pointed out that the break-even-load factor, had tended to rise since 1952-53. Whereas, in 1953-54 the figure was 79.91 per cent and 82.0 per cent in 1954-55 this went up to 83.7 per cent in 1955-56 though subsequently in 1957-59 there was a fall to 81.0 per cent. This figure compares very unfavourably with 52-55 per cent for the US. The results of the working of the IAC, apart being out of comparison with its foreign counterparts, have further fallen short of the steps the Government had taken to ensure better working. Mr Prasad Rao in this connection drew attention to the rationalisation schemes introduced by the Government as well as the pooling of the resources of all the previous airlines which marked the birth of the IAC and brought it into being.

Another adverse feature in the working of the IAC was the recent fall in the freight carried by the Corporation. Following the increase in the freight carrying potential, this fall in freight carried is disturbing and would have undesirable effects on cost of working. Mr Prasad Rao could also point to other loop-holes in the working of the IAC especially in connection with the recruitment and training of pilots.

Since much of the criticisms turned on points which on the facts of the working of the IAC, could not have been easily denied, the Congress members who had to take up the role of defence against the opposition's attack, could only refer to the short period for which the IAC had been in existence, and the limited basis which this offered for a critical assessment of its performance. The IAC has to bear sales tax and customs from which airlines in other countries are free. While this would preclude a direct comparison of efficiency between the IAC and the foreign airlines, it cannot also be overlooked, that the IAC could justify its existence to the public only by commercial operation keeping in view the need to attract more traffic and increase its earnings. That there is considerable room for improvement is a fact admitted by even the Government spokesmen and, if the Government are business-like, they have to take prompt measures to

remedy the present defects and deficiencies. The announcement that a committee would be constituted to look into the working of the Corporation is in this light, reassuring.

Ills of the Economy

Presiding over the thirty-second annual session of the Federation of Indian Chamber of Commerce and Industry, held in New Delhi, Mr B. P. Singh Roy, President of the Federation, warned against the adverse trends that had set in, in 1958 in certain sectors of the economy. The decline in the rate of industrial production, the relative drop in railway traffic and earnings, and fall in foodgrain production are the symptoms of a slackening in the rate of growth of the economy that have been in unmistakable evidence during the last year. This fall in the rate of progress of economic activity is, as Mr Singh Roy says, inconsistent with the objective of improving the standard of living of the people at a reasonably fast rate.

Mr Singh Roy is particularly worried about the trend in industrial production which during 1958 had tended to sag, for reasons of foreign exchange shortage, insufficiency of internal demand, inadequacy of raw material supplies. Though the index of industrial production would disclose an increase in 1958 over 1957, it is the rate of increase that has been disappointing. For this decline in the rate of growth of industries, Mr Singh Roy holds the Government's policy of import cuts responsible. That the import cuts kept many of the industries short of vital raw material requirements as well as components generally imported from abroad would readily be agreed. But he seems to have overlooked the fact that larger imports were simply out of the question in the context of the severe shortage of foreign exchange that had engulfed the economy and were it not for the brake that was put on imports, perhaps, it would have gone hard with the country to maintain even the rate of growth that was possible with the fiscal and import measures that the Government took. Again, the connection between the fall in foodgrain production and the import restrictions could be but tenuous notwithstanding the fact that import of fertilisers did not escape the rules of import restrictions.

Mr Singh Roy has stressed the need for devising ways and means of improving the country's foreign exchange position, and this exactly is what has been figuring prominently in the speeches of the Union Ministers. The importance of increasing exports from the country has been time and again emphasised and the urgency of measures to stimulate such exports recognised and accepted. According to Mr Singh Roy, the tax element which bulks large in Indian exports is a deterrent to demand and he has therefore, urged tax concession for stimulating expansion in production.

NORTH INDIAN MARKETS

Modest Rise in Grains Prices

WITH the exception of Coarse grains which continued to be depressed due to arrivals of new crops in Uttar Pradesh markets, prices of other Foodgrains have developed a firmer tendency in the Hapur market following heavy demand and poor stocks with the trade. Wheat has registered an advance of Re 1 per maund due to tight supply position, while Gram has gained Re 1 on firmer advices from Calcutta and Madras. Maize attracts good consumer demand and prices have remained steady in the face of dwindling stocks. Bajra has, however, eased with the fall in seasonal demand with Guwar drifting to lower levels on advices from the South. The market for Pulses continues to rule quiet.

In the Delhi grains market, heavy demand and a fall in arrivals are responsible for a firmer trend in prices. Inquiries from the deficit areas has also aided the sentiment bullish. The rise in wheat prices is generally attributed to heavy purchases made by some local parties coupled with the fall in daily arrivals to the extent of 150 maunds. Gram is quoted slightly easier following new crop arrivals from Hyderabad and Hissar district. The market for Bajra continues to rule steady.

The Rice market, in both the centres, continues to rule steady.

According to the figures released by the Commonwealth Economic Committee in London, India imported 390,300 tons of rice last year—little more than half the quantity imported in the previous year. India's 1958-59 production is expected to reach 42.6 million tons as compared with 36.50 million tons in 1957-58 and 41.59 million tons in 1956-57. World production (excluding that of USSR) in 1957-58 was in the region of 205.60 million tons as compared with 219.90 million tons in the previous year.

In the general grain report of the Committee, India's expected wheat crop for 1958-59 is listed as 7.65 million tons as compared with 9.31 million tons in 1957-58 and 8.62 million tons in 1956-57. Barley production for the current year is listed as 2.18 million tons as compared with 2.83 million tons in the previous year and 2.77 million tons in 1956-57.

Sugar

Sugar markets have continued to rule steady due to good demand coupled with marriage season's requirements. The Kanpur market maintained a buoyant tendency. Apart from the revival of outside demand, another factor, that cheered the trading sentiment, was the curtailment of competition from the khandasari units. In certain deals, sellers were able to ob-

tain a premium of a rupee per maund over the controlled rates. Spot prices, on the other hand, quietened by As 4 to As 8 per bag due to heavy pressure of arrivals. Stocks with the trade are estimated at about 20,000 bags.

Another factor responsible for the uptrend in the mill delivery section is the prospect of early termination of the crushing season. About a dozen factories had already ceased crushing and those still running are likely to go out of production by the middle of the month. As against 19.72 lakhs tons produced in the previous year, the total output is not likely to exceed 19 lakh tons this season. Much of the shortfall stemmed from Uttar Pradesh, which has been experiencing paucity of sugarcane supplies in the mill areas.

Meanwhile, the Government of India have decided to release one lakh tons of sugar for export during the period ending 31st October, 1959. The Government have taken this decision after considering the estimated availability of sugar during 1958-59, the quantity of sugar reasonably required for internal consumption and the necessity for earning foreign exchange.

Khandasari

In the Hapur market, Khandasari prices have registered an advance of Rs 2 to Rs 3 per maund following the proposed excise duty. In this connection, the President of the Uttar Pradesh Gur and Khandasari Association has stated that the Government's proposed levy of Rs 5.60 per cwt with an additional duty of 70 NP in replacement of sales tax on khandasari sugar will ruin the industry. The industry, whose margin of profit now is about Rs 2.50 per maund, will not be able to bear this new tax burden of Rs 6.30 per cwt.

Gur

After an initial fall, Gur prices have again recorded a hardening trend due to good outside demand from East Uttar Pradesh and Gujarat. In the Hapur market, arrivals are slightly better than in the previous week at an average of 3,000 to 4,000 maunds daily. As most of the arrivals have been finding a ready market, stocks with the traders are unchanged at 66,000 maunds. Cane-crushers purchased cane crop upto Rs 1.50 per maund as against the price of Rs 1.44 paid by the factories at the mill gate.

In the Delhi market, prices have not shown any material change over last levels.

Shellac

Prices in the Calcutta Shellac market have been showing a firmer tendency during the past few weeks with Pure TN quality quoting Rs 74 per maund. In addition to the decision of the Indian Lac Cess Committee to continue the minimum export price scheme up to August this year, the firmness of the market is attributed to the strong statistical position. Exports have risen to 38,100 packages in February from 30 packages in January.

Indian Finance

March 14, 1959

THE PENINSULA

THE Kerala budget presented to the State Legislature by her Finance Minister, Mr C. Achutha Menon, has fallen out of the general run of State budgets for the year. For, while, most of the State budgets disclose a revenue surplus, there is a revenue deficit of the order of Rs 77.77 lakhs in the Kerala budget. Revenue receipts and expenditure for 1959-60 are estimated at Rs 38.47 crores and Rs 39.25 crores respectively. This marks the break in the trend of the budgets of the Communist Ministry since its assumption of office. The relationship between the financial position and the state of the budget also stands slightly reversed mainly because of mounting expenditure.

The financial position of the State has registered some improvement after the recommendations of the Finance Commission, and the revenue receipts which for the current year are estimated at Rs 35.52 crores are expected to be higher at Rs 38.47 crores for the coming financial year. The main source of increased accruals are sales tax and the Central pool of income tax. Share of the income tax for 1959-60 is estimated to be more than that of 1958-59 by about Rs 10.27 lakhs. Following the rise in the rate of taxation, the Motor Vehicles Tax is also expected to bring in more than its usual contribution.

In view of the fact that no new tax measures have been announced in the new budget, the revenue deficit, remains for the most part, uncovered, though, credit has been taken for a sum of Rs 6 lakhs on account of the removal of the exemption of toddy from sales tax and another Rs 2.81 crores by way of uncollected tax arrears. The absence of fresh taxation is perhaps the most satisfactory feature of the budget; for if anything has contributed to the slow industrial progress of the State under the Communist Ministry, it is the proneness of the Ministry to penal taxation of private enterprise.

The budget is however disappointing in that it indicates no trace of improvement in the economy of the State which was not what one would have expected from the Communist Ministry. The economic conditions obtaining in the State would, in fact, belie the promises made by the spokesmen of the party at the time of the general elections. Foodgrains production, continues, as Mr Achutha Menon himself admitted in the course of his budget speech, to be the chink in Kerala's armour of Economy, and it is noteworthy that the Ministry has brought itself into disrepute on this very problem. The enquiry into the Kerala Government's rice deal with the Madras firm, has found the Government guilty of violating the

Kerala Budget

elementary principles of administration. The rejection of the Commission's findings by the Communist Ministry is also not surprising.

The Ministry has tried to escape responsibility for the food problem by bringing the Centre as the scapegoat. The Communist Ministers not excluding the Chief Minister have been known to argue that if only the Centre would procure sufficient rice from the Andhra Pradesh for distribution to Kerala, things would have gone better with the Kerala Government. This has been a subject of some barren controversy between the Central spokesmen and the Communist representatives. What is however relevant is that the food problem has not yielded, in any substantial way, to the efforts the Government had taken in this direction. But, of course, the Communist Ministers could argue that this is true of the Central Food policy also.

The food problem is recognised as needing longterm measures for a final solution, and measures for the promotion of intensive cultivation are envisaged. When potentialities are greater and higher yields have been obtained in selected cases, low per acre yield should not be a deterrent to measures intended to raise the yield. Seed multiplication farms, distribution of fertilisers are all included in the campaign for more production. Mr Achutha Menon also testifies to the realisation on the part of the cultivators of the advantages of modern methods of cultivation. If therefore sufficient resources could be mustered, the food problem could not long retain its present intractability.

The emphasis on cooperative farming made by Mr Achutha Menon in the course of his speech is in tune with the support extended by the General Secretary

of the Communist Party recently. This is one of the programmes of the Congress which would seem to perfectly fit in with the Communist ideology. However, the results of the experiments conducted in the few cooperative farming societies, would, on Mr Achutha Menon's own admission, disfavour any rapid departure from the present system of individual ownership, and cultivation. Better farming societies forming a loose union for purposes of procuring the requisites of scientific agriculture is all that could be aspired for in the present circumstances of deep sentimental attachment to land by the cultivators. Mr Achutha Menon would seem to recognise the reality of this situation.

The implementation of the Second Plan also has failed to see the Communist Ministry rise to the occasion. Expenditure has tended to lag behind provisions made in the budgets. Only in 1958-59 the expenditure on the Plan is expected to equal the budget estimates. Against the budget estimates of 18.52 crores, expenditure is expected to be of the order of Rs 18.55 crores.

In the industrial field also, there is nothing to which the Ministry could lay claim, the record being a blank one. The starting of the rayon pulp plant is the solitary instance of success in the private sector, under three years of Communist regime. Industrial production, has, for the most part, remained stagnant and the employment situation would seem to need more strenuous efforts than what the Government have been able to put in so far. Mr Achutha Menon has tried to explain away the role of the State Government in stimulating industrial production by drawing analogies between conditions in the State and condi-

tions elsewhere in the country. That conditions in the whole country have generally been unfavourable to industries is a matter that would not admit any denial. Furthermore it is true that some of the industries in Kerala, operating on the Plantation system and depending on foreign markets, had a hard time facing unstable prices and fall in demand. However, it is also a fact that a good number of industries had been started in other States, particularly in Kerala's neighbouring State of Madras, whereas the Communist Government in the State has only talked more than it could do. The reason could not be mere lack of natural facilities and Mr Achutha Menon himself would not accept this. Kerala offers abundant scope for new industries. Evidently the private sector, has not felt itself attracted towards Kerala in its search for profitable fields of investment. Whatever might have been the reasons for this, Mr Achutha Menon strongly believes that a degree of compulsion on the private sector, would have sent some industrialists towards Kerala for rearing up new industries in the State, and he sees no objection to such compulsion being brought to bear on the business community if it could be related to natural advantages of raw material supplies etc. Here Mr Achutha Menon cannot exclude from the list of factors determining the comparative cost of production in different areas, the labour factor and the role of the Government in industrial relations. If a case could be made out for such compulsion in locating industries, Central interference, in a particular State's industrial and labour policy with a view to making it safe for industrial progress would also seem legitimate and justified.

CEYLON

In Ceylon all the events of the past year have been overshadowed by the widespread and destructive communal riots, the worst in the history of modern Ceylon, which occurred during the last week of May and had to be put down by military force. A state of emergency was declared by the Governor-General on May 27 and till continues, though in a modified form.

During April and May a strike of workers in the tea industry almost stopped the export of Ceylon's most valuable earner of foreign exchange. The tea crop for 1958 is estimated at 410 million lbs., a record. The Port of Colombo was nationalized during the year and, not unnaturally, met with considerable difficulty in the first months under new administration. Some 60 million lbs. of tea were shipped from Trinkomalee and the opening up of this old naval base may prove a useful alternative to Colombo.

The estimated Budget deficit for 1958-59 is no less than Rs. 528 million. The estimated expenditure is Rs. 1,834 million. Taxation is to be further enhanced by the introduction of a Wealth Tax, Gifts Tax, Expenditure Tax and Capital Gains Tax. The effect upon Ceylon's economic future of these additional burdens will become evident in due course.

The population is growing by 250,000 a year and unemployment is increasing. External assets have fallen from Rs. 942.9 million in December 1957 to Rs. 860.7 million in November 1958. Ceylon is a potentially wealthy country with a relatively small population and with good, firm and far-sighted Government should be a happy and prosperous island. It is to be hoped it will never see a repetition of May 1958.

BURMA

In April 1958 the Anti-Fascist People's Freedom League of which the Prime Minister, U Nu, was the Leader, split into two factions. Political instability increased from that time and in October U Nu retired from the Premiership of Burma, which, except for a short break in 1956-57 he had held for ten years. He was succeeded by General Ne Win.

The declared policy of General Ne Win's Military Government is to tighten up administration, stamp out crime and reduce the cost of living. A first move was to dissolve the Rangoon Municipality and clean up the City. The cost-of-living index showed a substantial reduction between July and December 1958 and it may be said that the actions of the new Government have received public approval. General Ne Win, doubtful whether conditions are ripe for new elections which, under the Constitution must be held within six months of his assumption of office, has tendered his resignation to the President. At the time of writing it is uncertain how the impasse will be solved.

Political uncertainty naturally resulted in business uncertainty. The volume of bank credit declined and deposits increased. Exports decreased and imports increased with a resulting drain on the country's foreign exchange resources. Altogether 1958 was a bad year for the private sector for which the further diversion of business to Government trading organizations is to some extent responsible.

Rice is, of course, Burma's principal export and accounts for three-quarters of her foreign exchange earnings. In 1958 the exportable surplus was 1.4 million tons, a substantial decrease from the 2 million tons of 1957, largely due to a late monsoon and lower acreage of sowings. Other crops also showed a decline, including sesamum, tobacco, pulses, millet, wheat and cotton, but groundnuts and sugarcane, the latter stimulated by the two new Sugar Factories in operation, showed a substantial increase. The production of teak logs also rose to 264,500 cubic tons—more than half of the prewar level—whilst crude oil showed an 11% increase and refined products from the Syriam refinery also increased, thus effecting a saving of foreign exchange.

FEDERATION OF MALAYA

The Federation's first anniversary of Independence was celebrated in August with great enthusiasm. In the same month the Federal Legislative Council decided to retain the Emergency Regulations Ordinance for a further year, but the pressure to suppress the Communist Terrorists has continued unrelentingly and it is now estimated that fewer than 1,000 remain of whom over half are along the Siamese border. Indeed, hopes run high that the Emergency will come to an end in 1959.

The Alliance Party continued in power throughout the period under the wise guidance of the Prime Minister, Tengku Abdul Rahman. The first General Election will take place during 1959, to elect to the House of Representatives 100 members from 100 constituencies. On February 9, it was announced that Tengku Abdul Rahman had resigned the Premiership so that he could devote more time to the affairs of the Party he represents. He has been succeeded by the Deputy Prime Minister and Minister for Defence, Dato Abdul Razak bin Dato Hussein.

The establishment of a Central Bank was approved by the Federal Legislative Council in October and the Bank commenced to operate in Kuala Lumpur on January 26, 1959. Expert opinion was consulted before setting up the Central Bank and there is no doubt it will function on a really sound basis.

Economically, the Federation, dependent upon the prosperity of rubber and tin, was adversely affected in 1958 by lower prices for both products. Average rubber values fell by 9.7% compared with 1957 for which the increase in

export tonnage of 7.7% could not compensate. The export of tin declined by no less than 35% largely due to the cessation of American stock-piling and the introduction of Russian dumping which upset the equilibrium of the market through the International Tin Agreement.

The population of Malaya, 6.5 million, is divided approximately into 3.1 million Malays, 2.5 million Chinese, 800,000 Indians and Pakistanis, and 100,000 others. The rate of increase, 3% per annum, must be amongst the highest in the world: 200,000 a year, so expansion of agriculture, industry and trade is of vital importance to the country. Some new factories were built in 1958 and it is understood that at least 40 will be built in the coming year for the manufacture of a wide variety of goods. The climate for investment appears to be favourable and foreign capital is welcomed. Although taxation on Company profits has been raised from 30% to 40%, it is understood that new foreign capital may benefit by relief from tax for upwards of five years, whilst repatriation of capital and remittance of dividends is assured.

Despite the adverse trading conditions Malaya has emerged from its first year of Independence basically sound, politically and economically, and with spirit undaunted. Regarding the prospects for 1959, the outlook for rubber is more favourable and there are also signs that the Tin Industry will enjoy better trading conditions than in 1958.

SINGAPORE

It is expected that the General Election under the new Constitution will take place in April or early May and may be preceded by a Bill to make voting compulsory. Under the new Constitution responsibility for foreign affairs and external defence will remain with Her Majesty's Government as also the right to suspend the Constitution should this become necessary. A special council will ensure British and Federation participation in Singapore's internal security.

Singapore's past prosperity has been founded on its entrepot trade, as a free port, and as the gateway to Malaya. Now Singapore is faced with a grave population problem, a population of 1½ million people on an island of 209 square miles, and an increase of 50,000 a year, for whom employment and living space is becoming increasingly necessary.

The recession in rubber prices and reduction in tin exports from the Federation of Malaya naturally affected Singapore's trade adversely, and the problem of encouraging new industries to provide employment for the increasing population by tariff or other protection without injuring Singapore's status as a free port is one which is giving Government concern. Singapore's economic prosperity is largely dependent on the prosperity

of the commodity producers Federation and it seems increasingly clear that close co-operation if not economic union, with the Federation must in due course about if Singapore maintain its position in trade.

Tun Lim Yew Hock, leader of the Singapore People's Alliance continued as Chief Minister. Outcome of the forthcoming General Election will be awaited with considerable interest. Upon it largely depend the outlook for island in the coming years.

THAILAND

General Thanom Kittikachai Government, after ten months uneasy office resigned on October 20 when Field-Marshal Sarit had returned from month-long medical treatment in the U.K. and in England, assumed power under Martial Law and dissolved the Constitution and Parliament.

Field-Marshal Sarit's new government made it clear that its main concerns is to better country's economic situation to this end set up an Economic Advisory Committee to advise reducing the cost of living, general economic development on medium and long-term planning. It is intended to make establishment of industries a priority to foreign capital and a Plan is to be considered by a Bank Survey Mission to Thailand.

In 1958 the steady expansion of Thailand's economy received a check. The exportable surplus amounted to 1,131,835 tons. Although only slightly low average, this figure compared unfavourably with the 1957 amount exported in 1957 which was high at 1,566,699 tons. Tin exports were also less by some 40% in 1958.

Thailand's potential resources bearing in mind existing plans for the improvement of communications, irrigation and power largely financed with American aid, give every reason to hope her economic progress will further strides forward in coming year.

HONGKONG

Hongkong has an estimated population of 3 million, an increase of 1½ million since 1947. Problem of feeding, clothing, housing and finding employment for such a rapidly expanding population is not easy. Government appointed a Committee to consider the advisability of forming an Industrial Bank for the purpose of financing new industries. The port of this Committee was awaited with interest.

The new runway of 8,350 feet comprising the first phase of a modern international airport at Kai Tak was officially opened by the Governor, Sir Robert Gordon Gurney on September 12, 1958. This provides the Colony with a safe and efficient port for a large number of ships.

Indian Fi

March 14, 1959

Government has decided to proceed with the construction of a large water reservoir on Lantau Island which it is hoped will augment water storage by more than 50%; but even this may not fully satisfy the steadily increasing demand.

In 1958 Hongkong trade showed increases of exports to the U.K., U.S.A., and China, and decreases to Japan and Indonesia. Imports rose from China but declined from all other main sources. Overall exports declined by H. K. \$27½ million (1.1%) and imports by H. K. \$555.72 million (9%).

During the year Hongkong's shipyards were busy and many new light industries for the manufacture of sundry goods were established. Most important of these developments may be the construction of a dyeing, printing and finishing works which should enable the textile industry to expand the range of its products. A voluntary agreement was entered into limiting exports of textile cloth to the U.K. to 115 million square yards for three years from February 1, 1959.

Competition from China in textiles, cement, coal, sugar, rice and canned goods as well as its traditional exports of tea, silk, wood, vegetable oils, fats, bristles, etc., is becoming an increasing factor in the Colony's trade with South East Asia. As a Free Port, Hongkong cannot take restrictive import measures to control this competition.

Budget estimates for the coming year are H.K.\$641 million expenditure and H.K.\$554 million revenue, but H.K.\$183 million of expenditure is non-recurrent work on the airport and water schemes.

Hongkong has enjoyed freedom from political problems.

MAURITIUS

As a result of the Report of the Eve Commission Mauritius will be divided into 40 single-member Constituencies and General Elections will be held in the spring of 1959. The Ministerial system introduced in 1957 appears to be working satisfactorily. There were practically no labour disputes of any importance throughout the period.

Population in the Island continues to expand and is now estimated at 600,000 an increase of 100,000 since 1952. In June 1958 the Legislative Council adopted a 5-year Plan Programme of Capital Expenditure to cover the period 1957/62 to cost Rs. 210 million to deal with Works and Communications, Agriculture, Health and Social Services, Labour and Housing and Central Administration.

After 12 years' freedom from cyclones, Mauritius was visited in late March and early April by two of moderate intensity. The damage done to the Sugar Cane crop, coupled with drought in the north during the earlier part of the season, resulted in a crop of 526,000 tons sugar compared with 561,800 in 1957. Claims upon the Cyclone and Drought Insurance Fund will thus be made, but it is understood that, after payment of these claims the Fund will stand at Rs. 125 million, and the Board of the Fund have re-insured their liabilities to an extent sufficient to provide cover against three major disasters such as the one that occurred in 1945.

The Commonwealth Sugar Producers met in London in December 1958 and the U.K. Ministry of Food has agreed to purchase 343,375 long tons of the 1959 Crop at £45 2s. 0d. per ton, compared

with 335,000 at £43 16s. 8d. per ton in 1958, whilst the Commonwealth Agreement has been extended by a further year up to and including 1966. The Export Quota for Mauritius under the terms of the International Sugar Agreement remains at 470,000 long tons and the surplus over the 343,375 sold to the Ministry of Food will be offered for sale in the Preferential markets of the U.K. and Canada.

Given reasonably good weather conditions in 1959 the outlook for Mauritius should be favourable.

JAPAN

Mr. Nobusuke Kishi, leader of the Liberal Democrat Party, continued as Prime Minister, his position reinforced by the General Election which took place in May 1958 and resulted in the Liberal Democrats obtaining a comfortable working majority.

During 1958 the remedial measures taken in 1957 to which I referred last year, became effective and overcame the recession in Japan's economy. As a result the reserves of foreign exchange recorded a very substantial improvement. This was almost entirely effected by reduction of imports, and the decline in import prices.

In the International Account Japan's Receipts at U.S. \$3,510 million showed a favourable balance of U.S. \$511 million over payments. In 1957 the balance was unfavourable by U.S. \$533 million.

A record rice crop of 382 million bushels was harvested in 1958.

Increase took place in the output of iron and steel, canned goods, machinery and automobiles. The export of cotton-yarn and cloth showed some decline due to dull and overstocked markets: also

because of competition from Communist China, more particularly in South East Asia.

Japan launched 2,056,000 tons of shipping during 1958 compared with Germany 1,459,000 and the U.K. 1,393,000; but as at 31st December, 1958, had 995,075 tons under construction compared with 2,234,158 tons in the U.K. It therefore remains to be seen whether Japan will retain its position as principal shipbuilding nation during the coming year. As far as 1958 was concerned this industry earned for the country the largest amount of foreign exchange.

It would seem that Japan is reaching or has reached the crossroads in that the period of feverish activity of post-war reconstruction and expansion has ended, while competition in overseas markets is becoming more severe. On the other hand there is a tremendous potential for hard work in the country and provided imports can be held at a level consistent with a planned expansion of the economy, and adverse balances of payments averted, the country should continue to prosper.

The recession in trade, political and financial difficulties in many countries, increasing pressure of population, higher taxation controls on credit, on imports and exports and increasing costs of maintenance all tended to affect the business of banking in the areas served by the Bank. Nevertheless, under the Chief Managership of Mr. C. R. Wardle, with Mr. C. F. Pow as Deputy and the loyal and efficient work of our Staff in London and at our offices throughout the East, the Bank continued to provide valuable assistance to the trade of the many countries we serve.

The Indian Sugar Mills Association

Sugar Industry's Problem

Statement of the President, Mr P. Hadfield

In his Presidential Address at 26th Annual General Meeting of the Indian Sugar Mills Association, held at New Delhi on the 9th March, 1959, Mr. P. Hadfield, President of the Association said—

The best way of creating the warmer atmosphere in which even a cold war cannot thrive, must surely be freedom from controls and interferences in the widest sense possible. Control came to this industry or rather to those units thereof situated in the U.P., Punjab, and North Bihar, in July last. Its introduction has, unfortunately, become linked with the idea of sugar exports and both attract to themselves unpopularity from the other. I, for one, do not believe that the announcement of Government's intention to export 50,000 tons of sugar could have had

any appreciable effect on prices. On the contrary, I believe that a higher figure was anticipated, so that the results of the announcement should have been to depress prices. Control was introduced following a voluntary agreement which failed to have the desired effects during a period when markets were upset by international events. It followed the up-heavals in Iraq. Sugar prices in India rose, but so did the prices in London and New York, and to greater measure, but, there they were allowed to find their own levels. It followed that delay in the usual monthly release which the market had expected during the first few days of July, which would have been in consonance with the previous pattern. The reasons for the delay of that release in July are not known to me, but the delay,

coupled with other factors, profoundly affected the price of sugar. Control was introduced in the sugar industry when prices had risen from Rs. 37.07 at the time of our agreement to Rs. 37.41 in the third week of July. By 30th July—the day when control was introduced—these prices had gone down considerably and were round about the agreed levels. Even wider fluctuations in the vanaspathi industry did not occasion control, and yet the similarity between the pattern of the two industries is apparent. The control as introduced suffers from a very serious defect. It fixes a maximum price on factories. It guarantees them no minimum price. It fixes the maximum price at which factories can sell, but it does little to ensure that the price to the public, to the

consumer, is allied to these factory prices.

Whatever may be said about the control prices fixed in July, and in due course the Tariff Commission will say it, there is the fact that, due to the shorter duration of the present season and the lower recovery, the cost of manufacture in West U.P. is Rs. 2 per maund higher than was the case last year. Control was brought in hastily, and why it should not be adjusted with equal despatch in order to relieve an apparent and damaging hardship, is something I do not understand.

Earlier, I mentioned progress, but it is with regret that I have to report a reverse in the output trend of sugar production. Compared with 20.26 lakh tons in 1956-57, the industry achieved only 19.75 lakh tons in 1957-58, despite

the commissioning of additional capacity to the extent of 1,40,000 tons due to the completion of expansion in certain established units and the setting up of 10 new factories. Increases were recorded in Bombay, Mysore, and the Punjab, but these were more than offset by decreases of 1,31,000 tons in West U.P. and 37,000 tons in Bihar. Production in the new units amounted to 72,000 tons, which means that the drop in production in those factories which were working in 1956-57 Season was from 20.26 lakhs to 19.03 lakhs. This is a significant and worrying drop. As regards this year's production, though the season has not finally closed, the latest estimates available with the Association show that production is likely to come down further to about 18.5 lakhs tons, and I must deal with the reasons which caused this at some length.

An industry dependent directly on an agricultural produce for its raw material must expect fluctuations from year to year. They are relatively unimportant so long as the general trend is towards development. Unfortunately, the set back in 1957-58 cannot be attributed solely to any such fluctuation. But for the loss of cane from reserve areas to khandsaris, the 1956-57 figure would have been equalled, if not exceeded. Few of us who heard Shri Balmokand Shah Sawhney's address last year could have realised how right he was to sound a note of warning. Our friends in the Press have accused us of complaining too early and too much. Here, surely, is rather a case of too little, too late.

Let us examine this development. During the six-year period between 1951-52 and 1956-57 the estimated production (there are no reliable figures) was under 100,000 tons. During the 1957-58 season its production rose to something of the order of 2½ lakh tons, and this year in the U.P. the number of crushers are estimated at fifty per cent more than last year. Not less than 3,75,000 tons and possibly 4,50,000 tons will be the final figure of its output for 1958-59.

At this level khandsari presents a two-pronged threat to the sugar industry. It takes away cane and reduces the amount of white sugar made. It offers a substitute product to white sugar, and in a year of surplus production could seriously affect prices obtainable in the home market. Government and the Association may well have divergent views on the pros and cons of such a situation, but it is a matter to which I shall revert when I speak about exports later. The difficulties encountered by the Textile industry as a result of the favourable circumstances artificially created for handloom products are well known. A similar situation must inevitably develop in the case of the sugar industry if timely and appropriate steps are not taken. I have said the industry is not opposed to the expansion of khandsari provided it leaves cane in the factory areas alone. I now say that we have no objection to

the expansion of khandsari if it is to be purely a cottage industry. True it is, however, that the tax exemption in the last two years has given rise to the open pan manufacture of sugar in a manner that could not be classified as a cottage industry. I quote Shri C. V. Subba Rao, Director, Gur and Khandsari, Khadi & Village Industries Commission, who drew attention to this development in the following words: "But in this context it will not be out of place to mention that private businessmen have set up a number of baby mills in order to obtain the advantage of exemption from excise duty which khandsari enjoys today. Adequate attention is to be paid to this aspect of the problem".

It is against this background that members of this Association view the new tax imposed on khandsari. In that it is what we have been pressing for, I welcome it unfeignedly, but, whether it goes far enough is something that has yet to be seen. Rather less than two years ago when excise duty on sugar was Rs. 4 As. 2 per Md., the differential was Rs. 4 As. 2, for there was no duty on khandsari. Today the difference is Rs. 6.07, nearly 50% more than was the case. I repeat that we are very grateful for this step that has been taken and we shall watch the future confident that our further recommendations, if made of necessity, will be received with sympathy. I believe that what has happened to the sugar industry vis a vis Khandsari will serve as a note of warning to State Governments particularly to those of Uttar Pradesh and Bihar, where the sugar industry was built up to serve the needs of the whole country. There was a time when it could be regimented and taxed without any particular ill effects. Today, its traditional markets in Bombay and South India are themselves self-sufficient, and, with the bringing into being of the twelve new factories—eleven of them in the co-operative sector, which will be manufactured by two sugar consortiums for delivery during the next two or three years—will become surplus. Where, then, will these States sell the surplus sugar?

The adverse effects of khandsari and gur manufacture on sugar production are not the only matters that require attention if we are to obtain the maximum production of sugar so necessary to the country's growing needs for home consumption and for export.

It is, however, the ever recurring problem of cane development which bedevils the attainment of the planned programme. The annual target fixed under the Second Plan is 7.8 crores tons, against which production last year was only 6.4 crores tons. The estimates for 1958-59 are not yet available, but can we expect much improvement so long as the tonnage per acre or the recovery in North India and the recovery in the Southern States remain so low? The position has not shown any substantial change over the last six years and

the yield throughout the country in terms of gur per acre has, in fact, dropped from 1.28 tons in 1953-54 to 1.26 tons in 1956-57. The position in the East U.P. and Bihar is particularly serious. 61 factories, against the All-India figure of 158 with an installed capacity of 60,800 tons, against the All-India figure of 1,72,000 tons, crushed 6 million tons of cane; not much better than 60% of their capacity.

Of the last 24 new units that have been commissioned in this country, not less than 16 have been co-operatives. In criticizing co-operatives in any way I realise that I am on very dangerous ground, but I would be failing in my duty to Joint Stock operators in the sugar industry who represent 94% of the membership of this Association, if I failed to draw attention to the inequalities that exist. A co-operative which can be brought into existence by the collection of as small a sum of Rs. 10 lakhs, the balance of the finance needed being available from the Industrial Finance Corporation, State Bank and Government loans, enjoy complete exemption from income tax and other corporate taxation. In this manner they enjoy 100% of the profits they earn, whereas a Joint Stock Company faces 51.5% income tax and Super tax, and a further sum which may well exceed 5% of any year's income goes to meet the demands of Wealth tax and Dividend tax. Here I would like to mention that in the United Kingdom, the home of co-operation, co-operative societies are exempt from tax only on that portion of the profits which they distribute as discount to their constituents. I submit for consideration that this is a fair method of assessment, and the prosperity of Co-operatives in the United Kingdom is evidence of the fact that it does not restrict them. So long as co-operative factories are repaying the loan capital that has been raised, they do not constitute any particular threat to the other units, but what will be the position in five or six years' time when these loans have been repaid? Are the co-operatives going to accumulate 10% to 12% of their profits each year as reserves? If this goes on, they will have enormous sums at their command. Are they going to sell on equal terms with Joint Stock owned factories, or are they going to undersell them, leaving them with an inadequate margin of profit to serve as their capital? Last year our President warned us of what to expect from competition from khandsaris and as I have mentioned elsewhere we now see how right he was. This year I warn members and I warn Government that the continued development of co-operatives must ultimately create similar problems, leaving the Joint Stock Companies with inadequate margins and the Government without the tax which they contribute out of normal profits. Bear in mind that the consortium of manufacturers of sugar plant is expected to produce as

many as 8 new units a year. I believe that the future programme of the consortium, once it has executed order for units currently licensed, will be more and more devoted to the fabrication of plant for co-operative ventures, but even without this, the capacity of co-operatives will represent 15% of the whole when the present programme is completed.

This time last year we were completing a programme of profitable exports which earned the country about 12 crores of foreign exchange. The gilt, even then, was off the gingerbread, and world prices had dropped to near the pre-Suez level. Indian Sugar could only be sold abroad at a loss of approximately Rs. 270 per ton. In June last the Association was asked to export sugar. Our advice was that 50,000 tons could be exported safely and without danger to the country's needs. 1,00,000 tons was a possible target but anything over 1,00,000 tons could be exported only if the country would submit to rationing. I am glad to say that the 50,000 tons target was accepted and fellow members will share in the satisfaction I feel in the fact that it has been shipped. For 1959 we are asked to ship 1,00,000 tons, out of which 50,000 tons has been released. The Association's views on exports are clear; in an expanding economy, supply and demand can hardly keep exactly in line; when there is surplus, export it, do not hoard it. Earn the exchange needed to buy other commodities. We do not have surplus sugar at the moment, but, since the general view is that there will be considerable surplus for disposal in a year or two or three, give us the advantage of keeping Indian sugar on world markets so that it is known and can be sold when it must. It is in respect of the necessity to cover the losses on export by slightly increasing the internal price that khandsari represents a serious problem. At the current rate of development, there will be so much khandsari in the future years that it, rather than white sugar, may well control internal prices and make it impossible to recover the losses made on export from sales within the country. Khandsari prices cannot be controlled by an Order as can sugar prices.

I believe that no one at all can benefit from such indulgences as cane strikes. Let us remember that firstly, Government has fixed and factories have paid a price which has over the years resulted in more and more cane being grown secondly, with effect from 1st November, 1958, Government declared its intention that grown should be given a share in sugar realisation. Details of this formula are not available, but the question has been referred to the Tariff Commission. Let me add only that the industry asks for a margin that will permit of the payment of a 6½% dividend and to have fund to set a sum equal to two-thirds of the dividend aside for general reserves as also to make provision

March 14, 1959

for a special fund from which may be found the cash to provide for the very necessary rehabilitation of plant and machinery. Surely these are not exorbitant demands?

Mention of reserves brings me to the industry's pressing need, namely, the modernization of plant and machinery, for much of that in use today is not only past its prime—it is almost past praying for. It has been written down or depreciated, but, having written off a plant costing Rs. 18,00,000/-, only is no where near having available the resources to replace

it at today's costs. Added to that, there is the highly inflated requirement of working capital. Twenty-eight years ago sugar cost about Rs. 8/- per maund, banks demanded 25% margin which required only Rs. 2/- per maund. A factory of an average capacity then could reasonably work with a working capital of Rs. 3 lakhs as calculated by the Tariff Board in 1931. Again, in 1938, the average working capital was calculated by the Tariff Board at Rs. 4.50 lakhs. At present sugar costs Rs. 25/- per maund, a margin of 25% is demanded, i.e. Rs. 6.25 per maund;

factories are required to carry minimum stock of 25% of the production. The working capital required is now-a-days Rs. 50 lakhs for a factory of 1,000 tons capacity, which represents an increase of 1000% over 1938 figures. Scheduled Banks could help by reducing the margin money. I hope this is a plea that will not fall on deaf ears. Regardless of this important relief, sugar factories in common with all industrial units in the country must have funds to put aside as reserves if the industry as a whole is to thrive, and let me remind you that a thriving indus-

try is the only industry that can attract capital from outside.

The Nagpur Resolution of the A.I.C.C. on the question of land ceilings has caused us some concern, and we hope that Parliament will bear in mind the value of well integrated farms run by industrial undertakings for the purpose of supply of raw material which serve as models of correct methods of husbandry to the large mass of cane growers. To lose what little has been achieved in this direction, to stifle all future possible developments on these lines, would be a great tragedy.

The Chartered Bank

Further Expansion of Business

Aid for Newly Independent Nations

Common Market Problems

Mr V. A. Grantham's Review of Activities

The 105th Annual General meeting of the Chartered Bank will be held on April 1, 1958 at 38, Bishopsgate, London, E.C. 2.

The following is an extract from the statement by the Chairman Mr V. A. Grantham, which has been circulated with the report and accounts for the Year 1958.

The accounts indicate a further expansion of the Bank's business. The total of our own balance sheet at £243,118,186 is some £11,500,000 up on last year's figure which was itself a record.

Current and Other Accounts show a slight reduction of £2,032,672 which is more than offset by a substantial increase in Fixed Deposits of £15,994,119. Our acceptances are lower by £2,778,353.

On the assets side Cash in Hand at Call and at Bankers, Government and Other Securities and Bills of Exchange show increases of £1,324,674, £10,402,781 and £5,848,798 respectively and evidence a strong degree of liquidity. The ratio of cash and call money to our demand and time liabilities, excluding the notes in circulation against which security has been lodged, is slightly lower at 22.1% against 22.9% last year. Advances to Customers and Other Accounts show a contraction of £3,975,323.

The increase in the net figure for Bank Premises and Furniture is due to our continued expansion and the modernisation of our properties in the East.

The Consolidated Balance Sheet includes the figures of all our wholly owned subsidiaries and the total at £285,430,502 is £13,532,487 higher than last year.

CONSOLIDATED PROFIT AND LOSS ACCOUNT

The continued upward trend of working costs, especially salaries

and wages, in conjunction with a lowering of interest rates during the period under review has resulted in a decrease in our net profits from £1,000,890 in 1957 to £993,590.

In October last the issued capital of the Bank was increased to £5,000,000 by the capitalisation of £600,000 out of the Reserve Fund and £400,000 was restored to the Reserve Fund by a transfer from Reserves for Contingencies Account.

The Bank paid an interim dividend of 7½% less income tax in September last on £4,400,000 capital, absorbing £189,750 and it is now proposed that out of the balance available a final dividend of 7½% be paid on the increased capital of £5,000,000 costing £215,625.

We have allocated £250,000 to Bank Premises and Furniture and £125,000 and £20,000 respectively to the Pension Fund and Widows' and Orphans' Fund. We have transferred £150,000 to Reserves for Contingencies and the balance carried forward is £481,673.

INTRODUCTION

During the months of October and November last year I travelled in India, Pakistan and Ceylon and it was helpful to me, as your Chairman, to be afforded the opportunity of seeing the Bank at work in one of the most important spheres of its overseas activities. On my way home I was able also

to visit our branches in Aden. It was evident to me that the business transacted at the branches I visited is sound and profitable and that it is conducted efficiently and economically. I was impressed, too, by the ability and loyalty manifested by the staff of every grade. At places where the branch organisations of The Chartered Bank and The Eastern Bank Ltd. overlap effective measures of co-ordination have already been brought into operation and the staffs of the two institutions are working happily side by side.

When I was in India I was glad also to have the opportunity of meeting and having discussions with the Chairman and the General Manager of our affiliate, Allahabad Bank Ltd.

THE COURT OF DIRECTORS

There have been no changes in the composition of the Court of Directors during the period to which the present report relates. In April last Mr. A. P. Cameron and Mr. N. S. Golder retired from the Board of The Eastern Bank Ltd. and at the end of the year Mr. W. G. Pullen took Mr. Morford's place as a Director of that institution.

THE GENERAL MANAGEMENT

On 31st December Mr. H. F. Morford retired after serving the Bank for forty-three years, four of them as Chief General Manager. The stock-holders will, I am sure, wish to be associated with the Court of Directors in acknowledging, with gratitude, the highly distinguished services he rendered. We congratulate him on the important appointments he has since received which will continue to keep him busy in the City.

The Court have appointed Mr. W. G. Pullen as Chief General Manager confident that he brings to the highest executive office all the qualities of leadership and professional competence that the position demands.

Mr. G. A. Leiper has been promoted from Assistant General Manager to Joint General Manager and Mr. A. T. Hobbs, who has served the Bank with distinction in a succession of executive posts in the East, has been appointed an Assistant General Manager.

THE IRANO BRITISH BANK

Our acquisition of the share capital of the Eastern Bank gave us a direct interest in the Middle East and our assessment of the political and economic situation there convinced us that our representation would be incomplete without an interest in Iran. We were pleased, therefore, to have an opportunity of joining with influential Persians in promoting a joint banking venture in their country. The authorised capital of the Irano British Bank is Rials 200 million, of which Rials 100 million have been subscribed and paid up. We have subscribed 8,000 shares of Rials 10,000 each and the Eastern Bank 1,800 shares of a similar denomination, which gives up 49 per cent. of the capital of a bank which has now been registered and granted a banking licence in the above name.

This Bank will have as its General Manager an officer seconded from our Eastern covenanted staff and it will open for business in Tehran on 10th March 1959 and later in Khorramshahr. It is pleasing to note that the return of British banking interests has been generally welcomed and we hope

that this new joint venture bank, by bringing experience and knowledge to the handling of imports and exports, will assist the country in its trade expansion programme.

REPRESENTATION IN BIRMINGHAM

We have felt for some time past that the revolution which has taken place in the United Kingdom export trade since the end of the war necessitated our establishing closer contact with the new exporting industries in the Midlands. It has been decided therefore to appoint a representative of the Bank and its subsidiaries and associates to reside in Birmingham and to set up there an organisation which will facilitate more extensive participation in the financing of exports of Midland manufactures to the Asian markets in which we, The Eastern Bank Ltd. and The Irano British Bank are established. Mr. A. M. R. Currie, until recently our Manager in Indonesia, has been appointed to the post and he will take up his duties during the month of April. It is not proposed, at present, to open a branch of the bank in Birmingham; the new office will be equipped to impart economic and credit information and to serve as a link between the export trade of the Midlands and Head Office.

OVERSEA SURVEY

Two recent events, the extension of sterling convertibility and the inauguration of the European Economic Community or Common Market, are of considerable significance to us in our business as an international bank.

For the first time since before the second world war sterling earned from commercial transactions by residents outside the sterling area is convertible, without restriction, into gold, U.S. dollars, or any other currency. Other European countries have taken parallel steps in dismantling the formidable array of exchange control regulations established in war-time. That it has proved possible in the case of sterling is a tribute to the efficiency of the stringent measures which were necessary as recently as September 1957, in order to restore confidence in sterling as an international currency and the medium of 40 per cent. of the world's visible trade and a large proportion of its invisible transactions.

The increased scope of convertibility, by inducing confidence, should encourage the wider use of sterling by countries which are outside the sterling area such as Japan and the Philippines, in our own sphere of operations, and there should be a greater readiness for those countries to accumulate and hold sterling. The Philippines, for example, are amending their monetary laws to allow currency reserves to be so held.

I have, on previous occasions, stated that it is still insufficiently appreciated that the City of London's overseas earnings in respect

of its banking, merchanting and other services comprise a substantial proportion of the United Kingdom's invisible income. Without that invisible income the country would be unable to afford the trade deficit which it habitually runs. Moreover, the City's overseas earnings involve very little expenditure of foreign exchange.

COMMON MARKET PROBLEMS

The second event which calls for comment is not so promising for the Chartered Bank and its associates, which engage primarily in the financing of overseas trade. I refer, of course, to the impasse which has been reached in the negotiations for the setting up of a wider free trade area to supplement the newly established Common Market and it is by no means clear that the European Economic Community (E.E.C.) will not detrimentally affect the trade position of a number of Asian countries in which we operate. In theory, the increased scale of industrial operations possible in a unified market of some 170 million people should lead to an increase of trade with the outside world, but many of the Asian countries fear that the establishment of E.E.C. may mean the creation of a new system of tariff preferences within Europe which will have the opposite effect.

In general, it is possible that these fears are exaggerated, for the agricultural exports of the South-East Asian countries differ generally from those of the French and Belgian African territories which receive preferential treatment, and for manufacturing countries like India and Hong Kong imperial preferences is still the most important factor in their trade. Nevertheless, it would be a very retrogressive step if South-East Asian countries had to resort to bilateral agreements with the Common Market, and it is to be hoped that for the sake of Asia as well as the United Kingdom a formula will be found to extend the present E.E.C. to the envisaged free trade area.

CYPRUS

Our newly acquired business in Cyprus was put to a severe test during the year and progress was made notwithstanding the effect of the terrorist activities of EOKA, a series of curfews and strikes, communal animosity and a boycott of British goods. This satisfactory outcome is in no small measure due to the efforts of our staff whose personal safety has from time to time been in some jeopardy, and they are to be commended for the efficient manner in which at all times they carried out their duties.

LEBANON

Lebanon's overseas trade fell by as much as thirty per cent. over the year with the result that merchants had difficulty in disposing of stocks and the banks had to allow extended credit. By the end of the year local conditions had improved but some time will be needed for a full recovery.

IRAQ

Iraq is still in a state of transition, and trade patterns may well change to conform to the foreign policy of the new government. In the meantime the banks generally have so far experienced little interruption in their ordinary routine. Since the revolution all imports have been subject to licence, the object being to restrict 'luxury' expenditure; but as markets generally were overstocked during the first half of the year and licences were freely given for essential goods, current business was not greatly affected.

Oil revenue was buoyant with a further increase in prospect during 1959.

PERSIAN GULF

Bahrain.—Bahrain had another quiet and prosperous year and imports were maintained at about the 1957 level.

Doha.—There is little to report from Doha, except that development continues and merchant business shows further improvement.

Sharjah.—After a slack period in the early months, there was some improvement in business but unfortunately this was not maintained.

HADHRAMAUT

The Eastern Bank has had a branch at Mukalla since 1955. Merchant business shows some improvement, while the volume of goods imported direct rather than through Aden is increasing.

ADEN

Owing to shortage of foreign exchange in neighbouring territories and to the disturbed political situation in the hinterland Aden's entrepot trade has been on a reduced scale. There has been difficulty in finding export markets for locally grown cotton and the output of refined oil has been lower. These factors have inevitably depressed local business activity, although fortunately more shipping has been using the port and its bunkering facilities.

INDIA

At one stage during the past year there seemed a grave danger that the import programme sanctioned soon after the inception of the plan in April 1956 had not only outstripped India's ability to finance it, but also the extent of the foreign aid that was likely to be forthcoming. Fortunately, following the Finance Minister's foreign tour last September, he was able to secure sufficient credits to meet India's shortage of foreign exchange until next March, and possibly to March 1961. Moreover it is generally understood that arrangements are in hand for the provision of enough foreign assistance to complete the essential features of the plan, which suggests that the worst of the crisis may be over. Unfortunately the extent to which the government has resorted to deferred payments has left a burden, to be shouldered in the years to come, which will leave

Indian Finance

little margin for additional foreign exchange expenditure during the third five-year plan, even allowing for possible savings on exchange which are likely to accrue when the new steel works and heavy industries, set up under the present plan, commence operations.

It seems to me that India has to accomplish two things in order to safeguard its future; firstly, and this applies equally to Pakistan, it has to improve its relations with its neighbour to an extent that the proportion of military and other service expenditure in its budget is so drastically reduced that a lowering of taxation is possible. Secondly that the gold in the hands of the people be made available to the government. This is a psychological problem depending on confidence but it might be possible to introduce a form of bearer loans against gold, or even free imports, and allow an economic rate to be found and confidence restored in that way. Success in this could go a long way towards solving India's foreign exchange problem.

The widespread publicity given to India's difficulties during the past year or more should not be allowed to obscure the extensive progress that has been achieved in carrying out the country's development programme. The task of improving the living standards of a population of some 400 million, which is increasing by about five million each year, is obviously immense and it is greatly to the credit of the Indian government that it has chosen to implement its five-year plans by democratic means.

PAKISTAN

The new regime has acted with energy to effect an improvement in the country's circumstances. Although at first there was some confusion in business circles because of the many regulations fixing prices and limiting profits and dividends, the authorities have shown a commendable spirit of compromise and a general soundness of judgment in the introduction of new measures.

It is pleasing to see that national effort is to be concentrated on the agricultural sector of the economy, on which the country's prosperity will depend for many years to come and when Pakistan can again feed its population and stop the large imports of food-grains which have entailed such heavy outlay of foreign exchange in the last few years, then a great step forward will have been taken towards restoring equilibrium to the national economy. It is fair to say that Pakistan enters 1959 in circumstances more hopeful than for some years past.

CEYLON

The major and disquieting feature which has dominated trade and industry in Ceylon during the past year has been the widespread and increasing state of unrest.

Fortunately, and because of the country's inherent agricultural wealth, the total volume of all exports was maintained at much

March 14, 1959

the same level last year as in 1957. The volume of imports on the other hand decreased, partly because strikes in the port of Colombo made it difficult to land cargoes. Because of this the external balance, which had shown a marked fall in 1957, were well maintained. Nevertheless one cannot look with any great optimism to the future until the government comes to grips with the unlawful elements in the island and puts labour on a realistic basis satisfactory to the government and private industry as employers and to the solid mass of decent, hard-working employees.

BURMA

The outstanding event in Burma last year was the appointment in October of General Ne Win as Prime Minister in succession to U Nu.

Considering the good work being accomplished in many directions it is disappointing that the administration seems still strongly wedded to State trading and barter, notwithstanding the unfortunate experiences of the past years, and it would be a pity if the opportunity were not taken now to allow that freedom of private enterprise and trading which might make a vital difference to the balance of payments and hence the standard of living.

The beneficial effects on the administration of a continuance of the recent stable government, together with the country's steadily increasing agricultural wealth, ensures that Burma enters the new year under more favourable auspices than for several years past.

SINGAPORE

The first elections under the new constitution, on which agreement with the British government was reached last year, are now due to be held in May of this year. In recent months there has appeared a growing awareness of the serious responsibilities to be shouldered by those entrusted with the government of the territory as a result of the elections. Now and in the future there is no guarantee that the living standards of Singapore's population, which at present are relatively high for South East Asia, can be maintained let alone improved if the goods and services available in Singapore are not fully competitive internationally. It is a matter for cautious optimism that the paramount importance of the free port to the life of Singapore is gradually being accepted by all political parties.

The most important event in Malaya and one which is of special significance to the Bank, has been the establishment of the Central Bank of Malaya (Bank Negara Tanah Melayu) which commenced business on 26th January, 1959. The new bank is in a position to exert considerable influence, not only on the banking system of the Federation but also on the territory's economy as a whole. It is in keeping with the practical attitude which has been shown by the authorities in the Federation in

setting up their Central Bank that, although the relevant legislation includes provisions under which the new institution can take over from the Board of Commissioners of Currency, Malaya and British Borneo, the issue of the Federation's currency, for the time being it has been decided to allow the existing arrangements to continue. So far there are no arrangements between the two governments concerned for any extension of the activities of the Central Bank of Malaya to Singapore. It must, therefore, be a matter for satisfaction that the continuance on the same parity basis, of the existing currency arrangements, to put it at the very least, postpones the fragmentation of the unified currency area comprising the Federation, Singapore and the British territories in Borneo, in which first the Straits dollar and subsequently the Malayan dollar have provided a stable and effective medium of exchange.

Last September the World Bank made a loan to the Federation in connexion with the Cameron Highlands hydro-electric scheme and this Bank participated therein.

NORTH BORNEO

The consistent rise in overseas trade turnover in recent years and the favourable trade balance achieved show that North Borneo is capable of standing on its own feet and it is clear too that the sums invested in developing the Colony's economic potentialities are producing encouraging results.

Arrangements are proceeding to extend our branch system in North Borneo to Tawau, where we hope to open an office within the next few months.

BRUNEI

In May our two new branches at Brunei Town and Kuala Belait commenced business. His Highness the Sultan of Brunei honoured us by performing the opening ceremony at our office in Brunei Town. Our business in Brunei has expanded steadily during the year.

SARAWAK

Lower commodity prices in particular for rubber, in international markets during the past year have had their effect on Sarawak's overseas trade, the total value of which after disregarding the oil transit trade, shows a reduction in comparison with 1957.

Although lower revenue and a reduction in surplus balances are necessarily limiting the financial resources which the government can allocate to development schemes, encouraging progress has been made during the past year in improving airfields and road communications and also the port facilities at Kuching.

INDONESIA

The past year has been one of great difficulty for the Republic. The rebellion and its aftermath have inevitably had the effect of reducing exports but somewhat surprisingly provisional figures for the first ten months of the year

show that Indonesia not only had a trading surplus but that the surplus itself was substantially higher than for the same period of 1957. Although there is still much leeway to be made up some progress has been made in restoring the country's trade position.

For the time being there remains a serious shortage of foreign exchange and because of this it is unlikely that the import of other than strictly essential goods will be permitted for some time to come.

In view of the restrictive policy being followed by the authorities in regard to profit remittances and with the difference between the internal and external value of the rupiah I see little prospect for the time being of any worthwhile reward being received for the extensive services which we offer and the business which we conduct in Indonesia.

THAILAND

It is probable that economic factors, no less than political, played their part in causing Field Marshal Sarit to effect an unexpected coup d'etat last October. Reduced export earnings had caused a deterioration in Thailand's balance of trade and the resultant reduction in the country's holding of foreign exchange together with a sharp rise in the cost of living brought about a situation in which it was evidently thought necessary to effect a change of government. Although the country had a rather unsatisfactory trading year in 1958, the prospects for the export of rice, rubber and tin for the coming year are probably better and, assuming that the new powers vested in the government departments do not stifle enterprise, Thailand can rely on its traders to find markets abroad notwithstanding the more competitive conditions foreshadowed.

VIETNAM

Politically the country still takes a very strong anti-communist line, which may be not entirely unconnected with its complete dependence on American aid, which finances more than three-quarters of its imports. Although direct aid is given in road construction, military equipment and technical assistance, imports consist largely of consumer goods which probably accounts for the air of prosperity in Saigon itself but effectively conceals the fact that the country is making very little progress towards self support.

A more friendly view is being taken towards foreign investment, particularly British, and in general although the future of the country cannot be said to hold a great deal of promise at the moment, it is clear that our bank can still play an important and helpful role in the economy.

CAMBODIA

Cambodia will finally benefit from the major development schemes that are being financed by foreign aid, but in spite of further aid which paid for substantial

imports of consumer goods the country, in contrast to the previous year, had an unfavourable trading balance. No doubt this has influenced the government in encouraging foreign investment for, with the possibility of the amount given in aid being considerably reduced in the next few years, a determined effort will have to be made to increase the ratio of export to imports.

THE PHILIPPINES

Good rice and grain crops in the Philippines and improved export earnings from coconut products, sugar and minerals should have helped the Republic to restore the extremely serious position created by the adverse trade balance of Pesos 400 million in 1957, but although it is estimated that the deficit in 1958 will be reduced to Pesos 100 million, a further fall in the external reserves to U.S. \$ 125 million in a comparatively favourable trade year was most disappointing.

The President has recently again affirmed the government's opposition to devaluation and its firm intention to maintain the present exchange value of the peso and has called for the support of all sections of the community to assist in stabilising the economic and fiscal situation. The controversial barter trade law is being repealed and a stabilisation programme consisting largely of disinflationary measures has been approved by the Monetary Board. The main necessity however, is that of a balanced budget for there can be little doubt that the excessive resort to deficit financing has been the major inflationary factor and thus the prime cause of the continued deterioration in the Republic's economy.

HONG KONG

Hong Kong's trade has been on a reduced scale during the past year mainly because of a sharp reduction in imports. In many respects this was a reflection of the world-wide recession in business which was a feature of 1958 and in the circumstances local industry has had a fairly satisfactory year. The colony is becoming increasingly dependent for its prosperity on imperial preference and the dangers of such dependence are illustrated by the case of the Hong Kong textile industry which has now under pressure given an undertaking to limit textile shipments to the United Kingdom. If they are to survive, the colony's new industries need access to an expanding range of international markets. The limitation which has now to be imposed on the exports of one of its principal industries is therefore a serious setback and one which has caused much anxiety locally, particularly as textiles are only among the first of a steadily expanding range of Hong Kong products which can be expected to compete in the British and other international markets in the future. Our new building is also nearing completion and it is hoped that it will be officially opened in August 1959.

CHINA

China's efforts to industrialise rapidly have received extensive publicity in recent months and substantial increases in industrial production have been made. In the agricultural sector bumper harvests may lead to China's emergence as a major rice exporter while if, as is claimed, the size of the cotton crop is double that of the previous year, China may be becoming one of the world's leading cotton growing countries. The transportation of steel and food-stuffs has however imposed a strain on the internal system of communications and in recent weeks this has evidenced itself in an unusual delay in fulfilling export contracts.

JAPAN

During the past year the Japanese economy has successfully adjusted itself to what at the outset were generally expected to be extremely difficult conditions.

Although over the whole of 1958 there was a reduction in the country's total exports, it was relatively small. Imports were considerably reduced in volume without adverse repercussions on industry by running down stocks of imported raw materials which had accumulated during 1957 when excessive imports had imposed a serious strain on the country's balance of payments. With imports lower in volume and cheaper in price and exports little reduced Japan, again aided by a bumper rice crop, achieved a substantial payments surplus for the year and greatly strengthened its foreign exchange reserves.

Now that American industry is replenishing its stocks and again beginning to increase production, trans-Pacific trade should improve. The business of our New York agency is likely to benefit accordingly.

HAMBURG

Germany is keenly interested in developing trade with Asia and our Hamburg agency is well situated to share in the expansion of banking business that is likely to accrue from an increased German demand for raw materials now that the E.E.C. is in being.

CONCLUSION

The overseas territories in which we operate are receiving increasing publicity and it is generally recognised that the developing of the natural resources of the South East Asian countries and the raising of the standard of living there is of vital importance to future peace and progress in the world. This challenge is being accepted by the Western Powers in a most understanding and generous manner and the extent to which aid and credit is given to the newly independent nations of the area is staggering.

Very few of the countries concerned would survive economically were it not for the tremendous infusion of assistance they receive and one can only hope that wise counsel and incorruptibility within these countries and a tolerant direction from the donors will

help attain the objective of self-supporting economies with ever increasing exports. This objective cannot be reconciled with a western fear of Asian competition and attempts to avoid that competition and, in this connexion, perhaps too little significance has been given to the attitude of the United Kingdom government in acquiescing in limitations on the textile shipments from Hong Kong to the United Kingdom.

AN IMPORTANT PRINCIPLE

This particular issue raises a principle of major importance in matters of international trade. The communique issued last October at the conclusion of the Commonwealth Trade and Economic Conference at Montreal "recognised how important it is that obstacles should not be placed in the way of the export of manufactured goods of the under-developed members of the Commonwealth and agreed that Commonwealth governments will give full weight to this consideration whenever decisions are necessary concerning the terms of access of such goods to their markets." The distinguished economists who compiled for G.A.T.T. the Haberler report on "Trends in International Trade", which was published the same month, consider that "it may be a natural and economic development that relatively poor countries with high population densities, like India and Hong Kong, should export cheap labour-intensive manufactures". They therefore suggest that "it is of great importance that the highly developed countries should refrain from protecting their domestic industries from such imports".

It seems regrettable, therefore, that many in this country who in theory are in favour of raising Asian living standards have not felt it inconsistent also to argue in favour of imposing such restrictions on the grounds that goods produced by what they term cheap labour compete unfairly with those manufactured at higher cost in the United Kingdom. This sort of reasoning strikes at the very root of international trade and if it were to gain wide acceptance, might well be invoked, to take an important example, to justify the virtual exclusion of British manufactures from the United States market. It cannot be too strongly emphasised that what is by standards in this country, relatively cheap labour, need not be exploited labour and that in the case of Hong Kong the government has taken already active steps to improve working conditions.

In this context it is perhaps ironical that in a recent announcement the United Kingdom government pledged itself to support Hong Kong fully in resisting the attempts of American manufacturers to force Hong Kong into voluntarily restricting its textile exports to the United States.

Copies of the full text of the statement will be sent on application to the Secretary of the Bank at 38, Bishopsgate, London, E.C.2.

SOUTH INDIAN NOTES

Mysore Budget

The Mysore budget presented to the State Legislative Assembly, last week, by her Finance Minister Mr T. Mariappa, discloses a surplus of Rs 48.40 lakhs. Revenue receipts and expenditure for 1959-60 are estimated at Rs 55,68.98 lakhs and Rs 55,20.58 lakhs respectively.

As compared with 1958-59, the revenue and expenditure for the coming financial year reveals an excess to the tune of Rs 433.41 lakhs and Rs 625.19 lakhs respectively. While the increase in revenue is explained as being part of the normal increase in the general revenue and larger anticipated grant from the Centre, the increase in expenditure is the result of larger provision being made for the Second Plan during the fourth year. Higher outlay has been provided for such items as Education, Medical and Public Health, Agriculture, Rural Development, Animal Husbandry, Cooperation, Industries and Supplies and Irrigation and Civil Works. While for 1958-59 the total outlay for these several items totalled about Rs 2,689.84 lakhs for 1959-60, the outlay for these has been raised to Rs 3,058.13 lakhs. Capital expenditure in the budget has been fixed at Rs 2,458.94 lakhs.

In the course of his speech on the budget, Mr Mariappa, referred to the various difficulties that beset the State consequent on the expansion of the State under the States' Reorganisation scheme. The problem of administrative and financial integration of the disparate areas that were joined to form the enlarged Mysore State had also had repercussions on the implementation of the State's Second Plan. By diverting the State Government's attention, the State reorganisation scheme, delayed the scheduled implementation of various schemes and as a result the State now finds itself trailing behind its neighbours on all sides, in expenditure on the Plan. The task of implementing the Plan in its original size is now a matter attended with doubts regarding the resources that would be available both from the State as well as from the Centre. Excepting for Mr Mariappa's optimism, there is nothing to support hopes about it.

As for new tax measures, Mr Mariappa, has included one i.e., a levy of a small percentage on passenger goods traffic on road transport services. This measure is expected to fetch about Rs 60 lakhs. This new tax measure which does not improve materially the resources position, seems to have been brought in to close a concession that such traffic was enjoying in Mysore. For, Mr Mariappa, has explained that such a tax measure was in operation in the neighbouring States of Bombay, Andhra Pradesh and Madras.

Mr Mariappa also said that some other minor measures are under active consideration. These relate to the unification of the duty or

surcharge on electricity, and the evolution of a common rate for various cesses such as local cess, education cess and health cess. The burden of public debt which has tended to increase in recent years is another problem for the State. Relief might be available if the Government of India accept the recommendations of the Finance Commission for the consolidation of State loans at reduced rates of interest.

*

Electricity in Madras

The budget of the Madras State Electricity Board, which was circulated to members of the Legislative Assembly, makes impressive reading and bears testimony to the rapid progress the State has been making in connection with schemes for raising the power supply in the State.

The budget shows the gross revenue of the Electricity Board for 1959-60, at Rs 13,80.78 lakhs which is higher than the anticipated revenue by about Rs 162 lakhs. The revenue expenses for the same year being estimated at Rs 13,79.63 lakhs, the budget shows a net surplus of Rs 1.09 lakhs. The gross revenue of the Electricity Board shows a rising trend for 1959-60, at Rs 13,80.78 lakhs. The improvement in the finances of the Electricity Board is attributed to the general expansion of the activities of the Board in distributing power. The improvement has in some respect even exceeded anticipations; while a revenue deficit of the order of Rs 62.12 lakhs was anticipated in the budget for 1958-59, in the event, consequent on increased accruals from diverse sources there was a surplus to the tune of Rs 0.71 lakhs.

The Board has also tuned its capital expenditure to meet the rising demand for electricity in the State. In 1958-59, capital expenditure was for a sum of Rs 14.1 lakhs the original provision of Rs 11,91.34 lakhs having been raised on the basis of revised requirements as well as additional funds that could be made available to the Board by the State Government. Estimated capital expenditure for 1958-59, are for an even larger sum being placed at Rs 18.55 lakhs. The balance in the capital receipt after meeting the capital expenditure of Rs 14.00 lakhs, which would be Rs 4.55 lakhs is, however, expected to be wiped out by the account on the overdraft of Rs 4,54.81 lakhs at the end of 1957-58 leaving a blank opening balance in the capital receipts for 1959-60.

The capital expenditure for 1959-60 has been fixed at Rs 11.6 lakhs while the estimated capital receipts is Rs 11,00.20 lakhs, the capital receipts being thus just adequate to cover capital expenditure.

In terms of physical achievement also, the record of the State Electricity Board is no less remarkable. As a result of the heavy investment incurred in connection with many major schemes, large reserves of power had been built up

March 14, 1959

SOUTH INDIAN MARKETS

Spices Markets React

ACTIVITY in various Spices markets has become subdued with prices developing a reactionary tendency following a drastic fall in overseas demand. While consumers and the overseas buyers are keeping away from the market in anticipation of a further fall in prices, weak holders and the stockists, who had bought at higher levels, are now anxious to liquidate their holdings.

For instance, the price of Pepper has come down to Rs 92 per Bengal maund as against Rs 110 quoted in the previous week. Similarly, Cinnamon is quoted lower at Rs 375 against Rs 410 and Cloves at Rs 775 against Rs 815. The absence of any increase in the import duty on cinnamon and cloves has been the main factor for the selling pressure in respect of these commodities.

According to the trade sources from Bombay, about 3,000 to 3,500 bundles of cloves have been imported into the State by the end of last week. With the result, there is a floating stock of about 8,500 bundles in the Bombay market. Stocks of cinnamon are estimated at 6,700 bundles. The fall in the prices of pepper and ginger has, however, raised hopes in a section of the traders that exports of these commodities will pick up in the coming weeks.

Groundnut

Conditions in the Madras Groundnut market remained generally firm, the rate for superior quality seeds rising by more than Rs 3 to Rs 175 per candy. Arrivals last week averaged 25 to 30 tons per day.

In the Groundnut Oil section, the rate for the ready position improved to Rs 335 from Rs 328 per candy. The main factors contributing to the present rise in prices were the removal of the exempted quantity under Central excise duty in the Union Budget and sustained buying interest shown by vanaspati

MARTIN BURN LIMITED

Convertible Notes.

NOTICE is hereby given that interest for the half-year ending 31st March, 1959, will be paid on or after that date to those holders of Convertible Notes whose names appear on the Company's Register on the 31st March, 1959, or in accordance with their instructions.

A. G. Gidley,
Secretary.

12, Mission Row,
Calcutta,
10th March, 1959.

manufacturers in Calcutta and local bazar interests, who were hitherto taking the duty-free oil from rotary crushers, being forced to draw their supplies from the expeller factories. Added to these were the reports of incentives being considered by the Central Government for the stepping up of exports.

*

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides were moderate and there was a steady clearance. Arrivals of Buff hides were as usual and were readily absorbed at firm prices. In the Calf section, arrivals continued to be restricted.

On the export front, trading was dull and sellers were reported to be finding it difficult to get small increase even on the lines in good call. Light weight Kips in common tannages were quoting 56d/52d/48d per pound, depending on the mark. In the Calf section, business was reported done in premium marks. In Buff Calf, there were further enquiries for premium qualities; but sellers seemed to have withdrawn from the market and were not willing to consider business even at slightly increased prices.

In the Tanned Skins section, arrivals were moderate and there was good clearance at unchanged to 12 NP per pound advance.

In the export section, there was fair business in both goat and sheep skins. Although enquiry was developing in certain lines, it was still selective. Light weight goat skins in prime qualities were unchanged with very little interest on the part of shippers. Extra heavies were steady. In Sheep skins, primes showed no change. Middle class sheep skins were stronger; but buying support at the prevail-

ing levels was restricted. Some important orders for middle-class sheep skins, at last month's prices, seemed to have been turned down. The trade is rather unwilling to sell till the London auction levels are known.

*

Bangalore Silk

In the Bangalore Silk market, there was no marked change in the prevailing high rates for flature raw silk. An interesting feature was the distinct decline in the prices of Charka types except superfine against the rising trend in the previous week. The range of the decline was between Rs 1 to Rs 2 per pound.

The supply position of raw silk was, however, reported to be meagre due to dry weather. The prices of Reeling Cocoons of different areas in the State showed only slight variations. The price of Mysore seed cocoons was quoted a rupee higher than in the previous week.

*

Yarn

The enhancement of duty on Art Silk Yarns in the Central Budget had been anticipated in the Salem market. Now that the exact position is known, there is selling pressure in foreign yarns and prices, after initial spurt, dropped to levels, only Rs 2 more than last week's rates. The sole agents and branch offices of Indian mills are reported to have suspended sales, waiting for the revised scheduled rates after the budget. In the open market, Indian yarns have been marked up to the full extent of the increase in the excise duty.

Due to low stocks in the market, there has been no perceptible reaction in the case of Staple-Fibre yarns to the increase in duty.

S. E. RLY TENDERS

Sealed tenders are invited for (1) Tender No. CON/GM/12/F2/59 for supply of 600 Nos. Lead Acid Accumulators 2V, 60A/H capacity 20 hrs. rate CZG-6 or similar. Earnest Money is Rs. 1,000/-. Tenders will be opened on 7.4.59 at 3 P.M. (II) Tender No. CON/GM/13/F2/59 for supply of (a) 10,000 Nos. Porcelain Insulator double shed 4" x 2 1/2" complete with stalk bolts nut and washer and (b) 150 Nos. Junction Box 16 way with cover as per Drg. No. 23967/1/SE. Earnest Money is Rs. 1000/-. Tenders will be opened on 9.4.59 at 3 P.M.

Tender forms are obtainable from the office of the Controller of Stores (Construction Section), Garden Reach, Calcutta-23, on remittance of Rs. 5/- (not refundable) per copy for tender by money order to him direct in the case of outside firms and on production of Cash Receipts from this Railway's Chief Cashier by local firms.

Tenders should accompany the receipts for depositing earnest money as stated above with this Rly's Chief Cashier without which the tenders are liable to be rejected. Approved contractors having a permanent deposit of 1000/- with the Controller of Stores are exempted. Firms not on this Rly's list of approved Contractors must enclose a valid Income Tax Clearance Certificate with the Tender.

Upward Movement Accelerated

Watch-Dog Writes:

SENTIMENT in stock markets has continued to remain buoyant. With the confused picture over the effects of company taxation under the new proposals slowly clearing up, the attention of the professional operators as well as investors is now diverted to the selection of companies whose dividend distributions are unlikely to be affected in future. Thus, the upward movement in prices is being accentuated despite profit-taking at bulges.

The Calcutta Stock Exchange, once again, presented a cheerful appearance and, under the lead of the speculative issues, fresh higher levels were recorded on a broad front.

On the Bombay Stock Exchange, buying fervour seemed to continue unabated and prices of some of the favourite scrips registered a further rise over last levels.

Trading on the Madras Stock Exchange was characterised by a marked rise in the bullish fervour noticed last week.

Unsettled conditions prevailed on the London Stock Exchange.

Price movements on Wall Street remained irregular.

Calcutta

Friday Evening.

ACTIVE and buoyant conditions were obtained on the local Stock Exchange last week when prices recorded fresh higher levels on a broad front. The main inspiration was derived from a more detailed consideration of the proposed company taxation changes. It was thought that, from the assessment year 1980/81, companies might not be obliged to bear a heavier tax burden than at present. This feeling was strengthened by the reported readiness of the Finance Minister to examine the position of payments of dividends to shareholders from dividend equalisation funds and other reserves which had already been taxed. Towards the close, however, operators were inclined to book profits, being induced by the reports of a possible cut in the US Development Loan Fund. Moreover, some of them were inclined to await the clarification with regard to the proposal to levy the bonus share tax on sums capitalised from the share premium account.

The Gifted market remained dull and the volume of business was restricted. Institutional investors were out of the market, due perhaps to the stringent con-

ditions prevailing in the money market. 3 per cent 1986 Conversion Loan opened at Rs 74.40 and, after improving at one time to Rs 74.60, receded at the close to Rs 74.30.

Bank shares, however, remained steady with price movements confined to a narrow range.

The firmer tendency in jute goods prices as a result of the reduction in stocks as well as production in February brought forth a revival of interest in jute shares, although higher levels attracted some profit-taking due to a steadier tendency in raw commodity price. An outstanding feature in this section was the sustained demand for Kelvin which spurred by Rs 30 to Rs 260 following the company's decision to issue bonus shares in the ratio of one for every three shares from the share premium account. Anglo India were taken up to Rs 236 from Rs 203 (Rs 230); Barnagore up to Rs 154 from Rs 123 (Rs 150.00); Dalhousie up to Rs 158 from Rs 146 (Rs 155); Howrah up to Rs 19.94 from Rs 18.44 (Rs 19.94); India up to Rs 16.12 from Rs 14.75 (Rs 16.00); Kamarhaty up to Rs 182 from Rs 162 (Rs 182); Megna up to Rs 15.69 from Rs 14.19 (Rs 15.62); New Central up to Rs 14.81 from Rs 12.94 (Rs 14.81) and Rellance up to Rs 8.14 from Rs 7.56 (Rs 8.12). The only exception to the general trend was National which lost another Rs 2 to quote Rs 23. The figures shown within brackets were the week's closing rates.

Coal shares were buoyant on the expectation that an increase in the price of the commodity could not be delayed long. A good feature was New Beerbhoom which was lifted up to Rs 21.56 from a low of Rs 19.81 on rumours of possible amalgamation with a large unit in the same managing agency group. Bengal were taken up to Rs 306 from Rs 289; East Indian up to Rs 24.25 from Rs 23.94 and South Karanpura up to Rs 13.19 from Rs 12.62, to finish the week at Rs 297; Rs 24.12 and Rs 13.12 respectively. Burrakur moved rather erratically between Rs 17.44 and Rs 17.94 on alternative buying and selling, to close finally at Rs 17.81. Central India were done at Rs 7.75 to Rs 8.06 and Western Bengal at Rs 6.12 to Rs 6.50.

Tea shares maintained their upward trend, although profit-taking erased some of the extreme gains at the close. The main inspiration was derived from a general feeling that the 1959/60 market season might start well, as there would be little carry-over from the previous season's crop. Baghmari changed hands at Rs 23.44 to Rs 23.75; Brooke Bond at Rs 17.75 to Rs 18.31; Dhalakhat at Rs 24.62 to Rs 25.25; Dhunseri at Rs 17.94 to Rs 19.37; Eastern Cachar at Rs 4.50 to Rs 4.94; Hasimara at Rs 23.25 to Rs 23.81; Hattikhira at Rs 12.62 to Rs 12.87; Methoni at Rs 22.75 to Rs 23.06; Sungma at Rs 18.75 to Rs 19.37 and Tezpor at Rs 16.75 to Rs 17.19.

Sugar shares came in for selective demand. Most prominent were Ramnugger Cane and SKG, which were enquired up to Rs 21.50 and Rs 10.81 from Rs 19.50 and Rs 10.12

respectively. Raza/Buland closed better at Rs 13.31 against Rs 13 and Carew at Rs 8.25 against Rs 8.03.

Textile scrips were no exception to the general trend of the market, although higher levels could not be retained till the close due to an inclination to book profits at bulges. Jayshree improved at one time to Rs 9.66 from Rs 8.59; Cawnpore to Rs 4.75 from Rs 4.37; Elgins to Rs 13.37 from Rs 13 and New Victoria to Rs 1.44 from Rs 1.25, to ease off at the close to Rs 9.12; Rs 4.69; Rs 13.12 and Rs 1.44 respectively. Kesoram changed hands at Rs 11.69 to Rs 11.87.

The lead to the general recovery in prices was naturally given by the speculative issues under the lead of Indian Irons which, in turn, forged ahead on renewed bull support, being influenced by the reports of the commissioning a new Carbo Generating set to raise the existing capacity of steel ingots from half a million to one million tons per annum. Against the last week-end closing of Rs 22.66, Indian Irons opened higher at Rs 22.34 and advanced further to Rs 23.78, to finish the week at Rs 23.75. In sympathy, TEXMACO were pushed up to Rs 22.40 from a low of Rs 21.35; Jessop to Rs 29.81 from Rs 28; Britannia to Rs 13.06 from Rs 11.65, to finish at Rs 22.30; 29.06 and Rs 12.75 respectively. Kumardhubi changed hands at Rs 9.50 to Rs 10.31 and Marshalls at Rs 9.50 to Rs 10.62. Indian Steel & Wire Products were a special feature this week and the scrip was pushed up further to Rs 110 from Rs 99.50 on reports of a bonus issue, to finish the week at Rs 106.50 on profit-taking.

Thanks to encouraging corporate news, the Miscellaneous section provided several firm features due to renewed demand although the closing levels were slightly below the best for the week. Orient Paper was pushed up at one time to Rs 36.60 from Rs 34.20 (Rs 36.50); Titagur up to Rs 44.50 from Rs 43.75 (Rs 44.37); Sirpur to Rs 13.87 from Rs 13.06 (Rs 13.75); Indian Oxygen up to Rs 27.44 from Rs 26 (Rs 27.37); Indian Cable up to Rs 32 from Rs 29.87 (Rs 31.75); Indian Aluminium up to Rs 18.87 from Rs 17.75 (Rs 18.75); Rohtas up to Rs 22.06 from Rs 19.12 (Rs 21.81); Dunlop up to Rs 32.81 from Rs 30.62 (Rs 32.62); Alkali Chemicals up to Rs 20.00 from Rs 18.81 (Rs 20.00); Indian Copper up to Rs 3.97 from Rs 3.81 (Rs 3.94); India Steamship up to Rs 15.06 from Rs 14.62 (Rs 14.81); NICCO up to Rs 33.62 from Rs 30.50 (Rs 33.12); Aluminium Corporation up to Rs 12.31 from Rs 11.94 (Rs 12.12) and National Carbon up to Rs 30.25 from Rs 29.06 (Rs 30.12). Figures shown within brackets were the closing rates for the week.

Bombay

BUYING fervour on the Bombay Stock Exchange continued unabated and prices of some of the favourite counters touched new high levels as a sequel to persistent speculative support. Improved levels, however, attracted profit-taking, which tapered off a part of the earlier gains.

TEXTILES: The moderating effect of Bombay Dyeings unchanged final dividend was largely neutralised by influential buying in Centurys and Kohinoors. Centurys were very active and had buyers up to Rs 465 from Rs 456. Kohinoor, after touching a high of Rs 257 from Rs 243 on rumours that the differences in the managing agency had been patched up, finished slightly lower at Rs 251.50 following the subsequent rumours that a last-minute hitch had arisen in the compromise talks. Bombay Dyeing finished at Rs 58.80 against Rs 57.60, while Central and Simplex ruled quietly steady at Rs 88 and Rs 169 respectively.

STEELS: Steel shares displayed fair strength. Tata Steel, after starting at Rs 180 and touching a high of Rs 181.75, receded at the close to Rs 181 on profit-taking. It is expected that, before the end of the month, the company will take a decision on the proposed new issue for about Rs 10 crores or more. There were rumours that this will take the form of rights shares in the ratio of two for five at Rs 75 each. Indian Irons opened at Rs 23.24 and, after touching Rs 23.60, finished the week at Rs 23.52.

MISCELLANEOUS: Rumours of higher dividend brought forth considerable speculative interest in National Rayon which touched a new high of Rs 270 from Rs 264.50. Premier Construction were benefitted from reports that the company's capital structure was to undergo some changes. The shares were taken up to Rs 263 from a low of Rs 241.50. Shivrampur were better at Rs 102.50 against Rs 99.50 on expectation of a higher dividend. Interest in Greaves Cotton and West Coast Paper continued unabated. Tata Loco were well maintained at Rs 183.25, while Belapur Sugar changed hands at Rs 291 to Rs 294.50; Tata Chemicals at Rs 16.40 to Rs 16.72 and ACC at Rs 146.25 to Rs 147.25.

Madras

ACTIVE conditions were again witnessed on the Madras Stock Exchange. Prices were mostly maintained at the improved levels, though some profit-taking was visible towards the close.

TEXTILES: Business in this section was confined to a few selected scrips. Coimbatore Spinnings met with better support up to Rs 45.50, while Travancore Rayons remained firm at Rs 17.75. Coimbatore Cottons and Coimbatore Pioneers met with demand at the market rates. Lakshmi were done at Rs 107.50; Maduras at Rs 25.40 and Metturs at Rs 362.

PLANTINGS: Hectic activity and sharp rises in prices were again seen in this section, although there was a small decline in towards the close due to profit-taking. This was induced by some doubts expressed whether planting companies paying agricultural income tax would be treated differently from other joint-stock companies. There was, therefore, a general tendency to await further clarification from the official quarters.

OUR
SHOPPING
BAG

TEXMACO

serves India's basic industries

Limestone and dolomite from the dusty quarries of Katni, steel and pig iron from the roaring furnaces in Asansol and Jamshedpur, coal from the dark depths of the earth in Bihar... each year, from all over this vast land a stream of materials worth about Rs. 3 crores, pours into our shopping bag. Out flows from Texmaco's production lines another stream, a stream of finished products manufactured to international standards—sugar, cotton and jute mill machinery, rolling stock, industrial and locomotive boilers, hydraulic dam equipment and other steel structurals. Thus playing its part in the complex pattern of India's developing economy, Texmaco is linked with a multitude of other enterprises, large and small. As Texmaco grows so too the other industries prosper.

March 21, 1959

FOR THE INVESTOR

Another Exciting Week

Investment Gossip:

MARKETS have had another exciting week. Prices of principal commodities have gone up further since last week and, in fact, virtual buoyancy prevails.

For instance, cotton futures are back again at their season's best; gold has shot into new space and the firm trend in oilseeds has flared up into a boom again. Even the imposition of margins on futures trading in oilseeds has had no effect, as bulls, it seems, are prepared to pay the margin rather than let go their lead.

Naturally, stock markets have drawn inspiration from the firmness in commodity markets. Gains are large and widespread, with several shares rising to fresh higher levels.

The rise in prices is not confined to the speculative counters alone. In fact, investment issues have made an even more impressive showing than the speculators' favourites, in view of a marked increase in outside interest. As a matter of fact, investment enquiry has broadened appreciably and popular-priced shares are difficult to obtain due to paucity of offerings. Around the present high levels, the Life Insurance Corporation cannot and did not enter the market. Thus, the bulls have even forced the LIC out of the market.

Looking back on these developments, it must be said that the return on equities has declined considerably and that, without the prospect of higher dividends and some concessions under the new proposals, a sustained rise may not be maintained. A stage has now been reached where there is need for more diversified and planned buying, so that undesirable speculation can be checked and the stock markets are made to benefit in a more equitable manner.

It is, however, interesting to note that the merits of particular investment counters, which have a greater dividend cover, are being better appreciated and that shares with assured growth prospects are in good favour.

In the above respect, the steady advance in the value of Indian Irons is maintained. At the present rate, the scrip provides a good medium of investment. It is anybody's guess how the company will benefit from the revised policy of taxation when the very large allowances for taxation, available

in connection with the expansion undertaken, will no longer be there.

In the case of the Tata Iron and Steel Company, it is expected that, before the end of the month, the company will take a decision on the proposed new issue for about Rs 10 crores or more. There are rumours that this will take the form of right shares in the ratio of two for five at Rs 75 each.

£ R\$

Investment Briets:

Among the Finlay group of mills, Finlay has reduced the dividend from Rs 20 to Rs 16 per share, while Gold Mohur and Swan have maintained their dividends at Rs 15 and Rs 25 per share respectively, all for 1958.

In Madras, Kothari Textiles have passed over the dividend for the 18 months ended 31-12-1958.

Adoni Spinning has also passed over the dividend for 1958.

£ R\$

Mysore Sugar Pays Jubilee Bonus

Balance-Sheet Reviews:

AS against the rather unfavourable experience of many sugar mills in the last crushing season, Mysore Sugar Company Limited has done remarkably well. The net profit, before providing for Depreciation and Taxation, is sharply higher at Rs 35.38 lakhs for the year ended 30th June 1958 as against only Rs 10.96 lakhs in the previous year. In this connection, it may be added that the profit for the previous year was arrived at after providing Rs 5.42 lakhs towards additional bonus in respect of earlier years. The amount provided for Depreciation is Rs 6.73 lakhs against Rs 6.63 lakhs and Taxation Rs 15 lakhs against nil. The Development Rebate gets Rs 43,065 (nil) and Reserve for Rehabilitation of Plant and Machinery Rs 6 lakhs (nil). The allocation towards arrears of Gratuity Fund is Rs 1.00 lakh against Rs 50,000. The dividend has been maintained at 20 per cent; but there is to be a Silver Jubilee Bonus of 10 per cent in addition.

The quantity of sugarcane crushed at 3,33,814 tons constitutes a record in the history of the company as well as the quantity of sugar manufactured at 39,520 tons. The distillery section has also worked satisfactorily with the output of 708,000 gallons of absolute alcohol also constituting a record.

£ R\$

Godavari Sugar

Despite a rise in sales from Rs 2.36 crores to Rs 2.98 crores, the Godavari Sugar Mills Limited has reported a setback in its gross earnings for the year ended 31st May 1958. This is explained by the late commencement of crushing, high cost of transportation, stores, etc., not to speak of the loss sustained on account of the exports of sugar applicable to all the sugar factories in general.

The net profit has thus been reduced to Rs 12.04 lakhs from Rs 25.70 lakhs in the previous year. This has been arrived at after providing Rs 1.91 lakhs for managing agents' remuneration (Rs 4.34 lakhs); Rs 9.71 lakhs for Depreciation (Rs 7.30 lakhs) and Rs 10 lakhs for Taxation (Rs 16 lakhs). The directors have recommended a dividend of Rs 12.50 per share.

£ R\$

K. C. P. Ltd.

K. C. P. Limited has reported a net profit of Rs 30.73 lakhs for the year ended 30th June 1958 as against Rs 32.97 lakhs in the previous year. The amount set aside to Depreciation is higher at Rs 9.97 lakhs (Rs 7.50 lakhs). The Development Rebate Reserve gets Rs 12.50 lakhs and General Reserve Rs 9 lakhs. The dividend on the Ordinary shares is 7½ per cent and that on Deferred shares 15 per cent. There is a scheme to convert the Deferred shares into ordinary shares and reconstruct the capital structure.

The quantity of cane crushed is 2,73,273 tons and sugar produced 24,960 tons.

£ R\$

Standard Jute

The Calcutta High Court has passed an order confirming reduction of capital of the Standard Jute Company Limited. It is the intention of the company to repay preference shares on the 31st March 1953 with dividend up to that date and Rs 30 per Ordinary share on the 25th March, provided the reduction of capital and the scheme of arrangements have become effective.

Registered holders of Ordinary shares, who have not sold their shares, are requested to lodge their

share certificates with the company on or before the 25th March, so that the repayment of Rs 30 per share may be endorsed on the share scrip and steps taken for the exchange of their shares in the Kinnison Jute Mills Company in the ratio of one Kinnison ordinary share of Rs 100 for two Standard Jute ordinary shares of Rs 70 each, fractional cases being dealt with in terms of the scheme of arrangement.

£ R\$

Sendra Coal

In a circular letter issued to the shareholders, the managing agents of the company have stated that, as the company will no longer be an active mining company, it will be in the interest of shareholders if the company were to be wholly director-controlled. They have, therefore, given notice of their resignation as from the 15th March.

With the sale of the colliery, the company is now virtually functioning as an investment company. Purchasers of the colliery owe the company one more instalment of Rs 1.3 lakhs, which is due for payment on the 31st December, 1959, when this amount has been paid, the company will have no other assets excepting cash and investments and its share of the Bhulanbarree Bungalow. Till the end of December, 1959, the company will function as an investment company with total resources of about Rs 16 lakhs against capital liability of Rs 8 lakhs.

£ R\$

Anapara Estate

The net profit of Anapara Estates Limited, before providing for Depreciation and Taxation, is lower at Rs 4.81 lakhs for the year ended 30th June 1958 as against Rs 6.21 lakhs in the previous year.

The Depreciation amount is Rs 28,178 (Rs 24,411). The charge on account of Taxation is Rs 1.45 lakhs (Rs 2.13 lakhs). The total distribution for the year is reduced to 35 per cent from 40 per cent.

The lower earnings are due to a lower coffee crop of 7,542 cwts against 8,637 cwts. The estimate for 1958-59 provides for a crop of 502 tons.

₹ ₹

Hindustan Lever

The reports and accounts, released by Hindustan Lever Limited for the year ended 1958, make encouraging reading. Net sales have increased to Rs 36.72 crores from Rs 33.19 crores. The gross profit, before providing for Depreciation, Development Rebate and Taxation, comes to Rs 3.41 crores against Rs 2.51 crores. After providing for these items, the net profit works out to Rs 1.28 crores against Rs 1 crore. The Depreciation amount is raised to Rs 34.96 lakhs from Rs 34.24 lakhs; Development Rebate to Rs 8.72 lakhs from Rs 7.83 lakhs and Taxation to Rs 177.75 lakhs from Rs 122.92 lakhs. Even after these increased allocations, the directors have found it possible to raise the dividend from Rs 1.40 to Rs 1.50 per share.

The major capital project, completed during the year, was the installation of the synthetic detergent plant at Bombay. The total estimated cost of new capital projects, approved during 1958, was Rs 119 lakhs. With the share capital of Rs 5.57 crores and Reserves of Rs 2.55 crores, capital employed amount to Rs 8.12 crores as against Rs 7.58 crores.

₹ ₹

Braithwaite & Company

The Braithwaite & Company (India) Limited has made gross profit of Rs 44.17 lakhs for 1958 as against Rs 45.85 lakhs in the preceding year. With a view to conserve the resources of the company to provide for an expansion of its activities, the directors have reduced the dividend from Rs 2 to Rs 1.25 per share for the year.

The directors have provided Rs 2.97 lakhs (Rs 4.30 lakhs) for Depreciation; Rs 1.18 lakhs (Rs 0.87 lakh) for Development Rebate Reserve; Rs 23.25 lakhs (Rs 25.55 lakhs) for Taxation and Rs 7.95 lakhs (Rs 2.00 lakhs) for General Reserve.

Output from the Structural Shop was successfully maintained throughout the year, even surpassing the previous record of 1957. But, the Wagon Shops were affected during the second half of the year due to the shortage of raw materials. Despite a satisfactory order book, some fall in production is expected, as shortage of raw materials will continue for some months.

₹ ₹

Alliance Jute

The Alliance Jute Mills Company Limited has reported a loss, after providing for Depreciation, of Rs 2.52 lakhs for the year ended 31st May 1959 as a loss of as much as Rs 5.68 lakhs incurred

for the eleven months ended 31st May, 1957. However, sales have risen to Rs 2.52 crores from Rs 2.37 crores. The Depreciation amount is raised to Rs 1.98 lakhs from Rs 1.33 lakhs. The dividend is naturally passed over. The debit balance carried over to next year is Rs 8.46 lakhs.

₹ ₹

Balrampur Sugar

The Balrampur Sugar Company has reported a slight decline in the net profit, after providing for Depreciation and Taxation, to Rs 2.02 lakhs for the year ended 30th June 1958 as against Rs 3.49 lakhs in the previous year. Sales have, however, risen to Rs 2.05 crores from Rs 1.49 crores. The directors have set apart Rs 1.24 lakhs (Rs 1.30 lakhs) for Depreciation; Rs 2.43 lakhs (Rs 2.90 lakhs) for Taxation; Rs 27,239 (nil) for Wealth Tax; Rs 30,000 (nil) for Development Rebate Reserve and Rs 1.00 lakh (Rs 1.70 lakhs) for Rehabilitation Reserve. They have not recommended any final dividend. With the result, the interim dividend of 5 per cent, recommended earlier, compares with the total of 5 per cent paid in the previous year.

The quantity of sugarcane crushed by the Balrampur factory is 26.43 lakh maunds against 29.98 lakh maunds and by the Tulsiapur factory 28.37 lakh maunds against 39.66 lakh maunds. In the current year, a still lower crushing of about 22 lakh maunds is expected at Balrampur and 19.00 lakh maunds at Tulsiapur due to the damage to the cane crop.

₹ ₹

Kamani Metals

Kamani Metals & Alloys Limited has shown excellent results for the year ended 30th June, 1958. Sales have increased to Rs 1.81 crores from Rs 1.65 crores. After providing Rs 4.38 lakhs (nil) for Depreciation, the net profit for the year works out to Rs 16.71 lakhs against Rs 4.37 lakhs in the previous year. Depreciation has been provided at Rs 11.39 lakhs upto December 1953 against nil. Wealth Tax has been provided at Rs 30,000; Development Rebate Reserve Rs 40,000 and General Reserve Rs 73,481. After paying the arrears of dividends on the 54 per cent Preference shares for the three years and for 1957-58, a dividend of 50 pP is recommended on the Ordinary shares.

Budget Debate

THE budget debate in both houses of Parliament has thrown lustre on the man behind the budget rather than light on the budget itself. From the outset, it was clear that Mr Morarji Desai was different from his predecessors who have piloted the country's finances with distinction. The budget he presented was itself a tribute to his acumen and understanding of the intricacies of the tax system. In circumstances which left little room for manoeuvre, he produced an exciting budget, which has confounded all the tax experts who have tried to work out its practical implications. In the process, he has also foiled all attempts to confine him to ideological pigeon-holes, either on the Right or the Left. If the budget has shown his grasp of the intricacies of public finance, the debate has shown him as a star of the first magnitude on the political firmament. Former Finance Ministers have leaned heavily on their senior colleagues, and especially on the Prime Minister, for political support in the House as well as outside. It is perhaps not without significance that the general discussion on the budget concluded without either the Prime Minister or other Cabinet Ministers participating in the debate. Mr Desai was left alone to hold the fort for the Government, though the debate ranged far and wide and the powerful attacks on the Congress policy of agrarian reform, the philosophy behind planning and the mounting civil expenditure merited the Prime Minister's intervention. And there can be no denying that Mr Desai has done his job with conspicuous success. The winding up speech has shown him as a skilful debater, quick at repartee and with the relevant facts at his finger tips. He did not attempt to dazzle with brilliant phraseology. Instead he tried to be persuasive while remaining implacable on the issue of new taxes.

Mr Desai has not chosen to follow the legendary tactics of camel drivers (and finance ministers). Evidently Mr Desai has not tackled on a few unnecessary taxes to have the pleasure of making a graceful concession to the critics at a later stage. Even his promise to look into the question of affording some measure of relief to agriculturists, on the tax on diesel oils, does not belong to this category of last minute concession. The tax proposals have been conceived as a whole, to meet the requirements of the policy of planning for economic development to which the Government as well as Parliament stand committed. Within the limits set by this commitment, the scope for relevant criticism is strictly limited. Acharya Kripalani was impressive when he questioned the philosophy of planning and invited a devastating counter attack from the Finance Minister. But not even the members of his own party were prepared to back up the crusade against planning. By contrast, the expositions of Mr Asoka Mehta and Mr B. C. Ghose, while emphasising the dark spots in the present economic situation, only served to lend strength to the Finance Minister's elbow. In fact, Mr Mehta praised the present tax structure as the right kind that the country needed and also expressed the hope that the Finance Minister would not permit it to be

altered in any major direction. He seems to be worried that changes in company taxation would result in far-reaching structural alterations. Apparently he had in mind the abolition of the Wealth Tax on Companies and of the Excess Dividend Tax when he spoke of structural changes.

Other critics of the Left had even less to advance against the tax proposals and Mr Desai had little difficulty in disposing of the criticism. It was left to independent members like Mr Masani and Dr A. Krishnaswamy, and Dr Kunzru in the Rajya Sabha, to make points which the Finance Minister was obliged to answer in detail. Mr Masani's frontal attack on land reforms evoked a very persuasive exposition of Congress policy from Mr Desai. Mr Desai was also able to place the problem of inflation in its proper perspective, as well as to allay the alarm that is felt about the scale of deficit financing and its impact on the price situation.

With growing taxes and large deficits and rising prices, the cost of administration becomes a live issue. The public are naturally interested to know whether all the money they are asked to put up is utilised for constructive purposes or it goes into the maw of an insatiable administrative Moloch. The manner in which the summaries of the receipts and expenditures, and this is all that most people scrutinize, are made out is also a fertile source of confusion and alarm. If only the total amounts of civil expenditure are taken into account, it gives the impression of a rake's progress. During the last dozen years, total civil expenditure has increased nearly seven-fold from a mere Rs 36 crores in 1948-49 to Rs 223 crores in the budget year. But civil expenditure does not merely mean administrative expenses. It also includes the vast increase in the expenditure on social and developmental services flowing out of the implementation of the Plan. The expenditure under these heads accounts for as much as Rs 163 crores out of the total provision of Rs 223 crores for civil expenditure in the budget. The corresponding figure in 1948-49, when total civil expenditure amounted to Rs 36 crores, was Rs 19 crores. Purely administrative expenditure, on the other hand, had increased from Rs 17 crores to Rs 55 crores during this period. A three-fold increase is less alarming, though it certainly indicates the need for stricter methods of control. It may also be pointed out in this connexion that expenditure on developmental and social services also includes a substantial measure of administrative expenses. While patiently awaiting the results, the public therefore will welcome the economy drive launched by the Finance Minister, starting with his own Ministry.

The main attack on the budget proposals was aimed at the indirect taxes. Khandasari interests had powerful sponsors while the tax on diesel oils imposes a severe handicap on Road Transport. The Finance Minister was on strong ground in rejecting the pleas for extending special consideration to the khandasari industry. The new taxes will not affect the product of the cottage industry as it applies only to the mechanised sector. Even after

payment of new taxes, khandasari will continue to have a price differential of Rs 8 as compared with crystal sugar. While taxation of crystal sugar has progressively increased, khandasari has remained free of taxes and there is no justification for continuing this unfair advantage which handicaps the sugar industry.

On the question of the imposts on diesel oils, the Finance Minister was less convincing. Apart from considerations of revenue, Government were also influenced by the need to correct the imbalance in the consumption of motor spirit and refined diesel oils resulting from the wide tax differentials between the two products. He also rejected the accusation that the duty on diesel oil was imposed to benefit the railways. The explanation does not, however, amount to a justification of the increased levy on road transport which will be passed on to the consumers, further adding to the cost of living especially in the cities where every worker has to use transport to reach his place of work. The increased transport costs by road will also have far-reaching effects on the cost of implementing the Plan. While it may divert more traffic to the railways, it may not enable the latter to carry all the freight that offers. If there is a surplus of petrol, the proper course to encourage its use will be to reduce the tax on petrol instead of adding to the cost of diesel oil which imposes on road operators not only higher running costs, but also additional capital expense in remodelling or changing their equipment by installing multi-fuel engines. But apparently revenue considerations stand in the way. Or, alternatively, it should be possible to seek export markets for the petrol refined in India at least in the case of new refineries. It will also be advisable to recast the pattern of production so as to reduce the output of petrol. More of the lighter fractions can be turned into high octane fuels for use in aircraft. The possibilities in this respect should be explored before adding to the cost of road transport by taxing diesel oil. While, on the one hand, Government are encouraging the use of diesel engines and their manufacture, it is not consistent, on the other, for them to discourage the use of diesel oil by heavy taxation. The Finance Minister also seems to have overlooked the possibility that one result of higher taxes on diesel oil might be to lead to its substitution, not by petrol as desired, but by kerosene. If this happens, it will only make matters worse, as Indian refineries produce even less of kerosine than diesel oil. Even the small cut of ten per cent on imports sent the prices rocketing, and more imports had to be sanctioned in a hurry.

The debate has not served to throw much light on the implications of the new changes in the structure of company taxation apart from theoretical considerations based on hypothetical cases. The Finance Minister conceded that the change in procedure might lead to certain anomalies and he said that these cases would be examined from time to time to see how redress could be given without sacrifice of revenue. This is a matter which can be advantageously dealt with in the Select Committee instead of being left to the discretion of the Executive.

"The Wise Man in His Attitude toward the World has neither Predilections nor Prejudices. He is on the side of what is Right"—The Analects of Confucius

EDITORIAL NOTES

Durgapur Coke Oven

The coke oven plant at Durgapur, which the President opened last week on his way to Cambodia, is not just another coke oven. There are several coke oven plants in the country, and bigger ones too, at the steel plants. Its real significance can be appreciated only if it is considered as part of an integrated project which is expected to give a fresh start for the industrialisation of West Bengal. The project, which is built round the coke oven plant, is to be completed in two phases with the establishment of chemical industries in the first and metallurgical industries in the second phase. The various component schemes are intended for the efficient and economic use of the by-products of coal carbonisation. These include a thermal plant, a coal tar distillation plant for manufacture of various chemical intermediates and a gas grid which will bring the surplus gas to consumers in Calcutta.

The programme of industrial development envisaged in the Durgapur project was drawn up after careful evaluation of the State's industrial potential and the demographic situation. With reduced area and a growing population, augmented by forced migration, industrialisation is a 'must' for West Bengal. The only natural resource that the State has in considerable quantities is coal. That

provides the rationale of the project which aims at the scientific utilisation of coal and its by-products so as to provide the basic materials for manufacture of a variety of chemicals, plastics, fuel for metallurgical industries, and gas for industrial and domestic consumption. When the scheme is in full operation, it will be practicable to take steps to eliminate the smoke nuisance in Calcutta which, as Dr Roy has estimated, results in a deposit of sixty tons of dust and soot every month over every square mile of the city's area. It is these social-economic overtones of this project that give it its distinct character and make the public impatient for its early completion.

Peddalling Up

Mr Manubhai Shah, Union Minister for Industry, had some good news for cycle manufacturers when he inaugurated their annual meeting in Madras last week. The presidential address of Mr A. M. M. Murugappa Chettiar had drawn attention to the need for simplification of the licensing procedure for imports. As at present operated, the licensing procedure leads to lack of balance in the availability of imported materials required by the industry. Mr Chettiar suggested the replacement of the present system of licensing of individual items by fixing a foreign exchange quota for the industry, to be divided among manufacturers on the basis of past performance, each unit being free to import the permissible items within the overall ceiling. The Minister for Industry indicated that Government thinking on the subject was proceeding on similar lines and held out the promise that by the next licensing period the new system, under which item-wise allocations will be replaced by ad hoc allotments will be in operation.

On the basis of its performance to date and its potentialities, the bi-cycle industry deserves special consideration. The importance of bi-cycles to industrialisation of the country is not confined to its use as a cheap means of transport. It is perhaps even more important in conditioning the human factor to respond efficiently to the demands of industry. The bicycle provides the rural populace with their first opportunity of handling machines. The repair shops that will be set up in increasing numbers in the countryside will be the nurseries for the growth of mechanical talent and inventive ability. Some of the most successful automobile manufacturers started as cycle mechanics. When viewed in this light, the statistics which both Mr Shah and Mr Chettiar gave to illustrate the rapid progress of the industry are doubly gratifying. From an output of less than 50,000 twelve years ago, production has soared to over one million in 1958. Equally satisfactory is the progressive reduction in the percentage of

imported components which now account for between two and five per cent of the value of the complete bicycle. The industry has now to turn its attention to replacement, as far as practicable, of imported materials by indigenous products, as for instance, electroplating chemicals. The manufacture and utilisation of indigenous components can be stepped up if there is a coordinated programme for division of labour and pooling of resources among the different units engaged in manufacture. The industry has also made a beginning with exports, though exports are not likely to be of more than marginal significance, so long as established 'makes' are selling at prices considerably below the level at which Indian manufacturers can afford to sell. Nevertheless it is a point gained that the territorial restriction in respect of manufacturers who had foreign collaboration had been relaxed to some extent.

The present stage reached by the industry, with the establishment of a large number of units in the small-scale sector, suggests that the time is opportune for major units to make a start with the manufacture of the machinery required by the industry. There is clearly a divergence in the approach of the Government and of the organised sector regarding the future pattern of expansion. While practical considerations of economy in manufacturing costs would limit grant of licences to existing units, Government policy in this respect has also to take note of considerations like regional distribution, encouragement of small industries etc. which cannot be dismissed as of little account. It will, therefore, be advisable for the major units to take the initiative in achieving closer integration with the activities of the small scale sector, by distributing custom and helping to maintain standards.

U.S. Small Industries Exhibit

The dome of the U.S. Small Industries Exhibit which was declared open last Sunday by Ambassador Bunker, is as striking as anything it covers. The novel method of construction adopted in keeping it in place should give useful tips to Indian engineers who are searching for the formula for the ideal house for Indian conditions. Another feature of great significance for India is the display of gadgets operated by the power of the Sun. These include cookers, waterheaters, stills for turning brine into potable water, solar furnaces, radios and motors operated by solar energy. The blade used by the West Bengal Governor to cut the ribbon opening the exhibition was operated by the sun's rays. The most plentiful resource available in India is the heat of the Sun, and our intractable problems will be solved if an economic way can be devised to put it to work. The gadgets show

what is technically possible and we may hope that in course of time it will also be economically feasible.

The agricultural display is another interesting section and it is dominated by the Soya Bean and its progeny. The display would have been of greater practical significance to India, if it had also included some exhibits showing the wide variety of ways in which the humble groundnut is used in the United States. Soya Bean, despite its merits, suffers from the handicap that its cultivation in this country is still in an experimental stage, though Mahatma Gandhi had drawn attention to its uses several years ago. The groundnut, on the other hand, is one of the principal commercial crops of the country. A display of the products made from it in the United States would have helped to dispel the prejudice which stands in the way of its effective utilisation to make up the deficiencies of the average Indian diet.

In his opening speech, Mr Bunker underlined the important role of small units in American industry. The facts he cited, about the link-up between small units and the giant corporations, should dispel any notion that small industries belong to the primitive stage of industrialisation. As a matter of fact, it is the small units that are responsible for the strength and resilience of American industry and its unique ability to strike out along new lines of manufacture. As the President of the United States observed in his message of greetings, the creative ideas which originate in such enterprises contribute significantly to the economic life of the nation and provide the base for a broad and dynamic economy.

Agreement on PL 480 Funds

THE signing of the agreement between the US and Indian Governments as regards the disbursement of moneys lying to the credit of counterpart funds on special deposit with the State Bank has an important significance for the money market. What the implications of this agreement are may now be studied.

In the first place, it is to be presumed that, with recent negotiations fructifying in an agreement, the US Government through its Embassy will make over to the Indian Government the relevant amount out of its balances now lying with the State Bank.

This means that the State Bank figures to experience a drain in its deposit resources equivalent to the slightly more than Rs 100 crores envisaged in the agreements on aid to the river valley projects.

Automatically, the State Bank would have to disinvest in gilt-edged for corresponding amount. For, it is known that the State Bank has been considering its special Deposits as a transaction out of the ordinary, that, in such view, it has rigorously and immediately invested in gilt-edged its accruing resources of such character. Thus, if a drawing is made on the special Deposits, the State Bank would necessarily have to sell gilt-edged correspondingly. But, of course, there would be no difficulty about such a transaction; the arrangement with the Reserve Bank, whereby gilt-edged was in the first instance purchased, also made provision for resale to the central banking institution.

Then, with the Central Government receiving moneys in an amount of Rs 100 crores, it would appear on surface that this is a "windfall" which will have the effect of reducing the Government's overall deficit for the year. But we must remember that Government have for long been having the use of such counterpart funds, in the sense that the State Bank had already invested in gilt-edged such amounts as accrued. Therefore, the Central Government may get new cash, but will also have to make provision for disinvestment in gilt-edged for similar amount. Since it is to be presumed that the Central Government will "cancel" ad hoc Treasury Bills held by the Reserve Bank with the Rs 100 crores that they receive, the ultimate result may be that the outstandings of Treasury Bills will move down by Rs 100 crores—but the Reserve Bank's holdings of gilt-edged secu-

rities of a marketable nature will rise by Rs 100 crores.

With the disposal of Rs 100 crores of securities by the State Bank, one aspect of its windfall profits will be affected. The State Bank has been having an adventurous earning equivalent to roughly half the difference between interest earned on government securities and the interest paid on these special Deposits; and, on Rs 100 crores, such additional earning power will disappear. On the other hand, there has been considerable appreciation in gilt-edged values since the time they were purchased by the State Bank; and these profits, on the sale of the gilt-edged, will be "booked".

For the Reserve Bank's part, this set of transactions will mean that its own earnings will increase by the difference between the interest now being earned on Treasury Bills and the interest it stands to get on the Rs 100 crores of securities to be purchased from the State Bank.

But, for Government, it will mean a saving of the interest payable on the ad hoc Treasury Bills now to be cancelled. So, ultimately, it is Government which gain, and in two ways, namely, higher Reserve Bank profits, and reduction in the interest payable on Treasury Bills.

We had anticipated that negotiations pertaining to the counterpart funds would soon be completed. Nevertheless, we had not expected that agreements covering what may perhaps be two-thirds of the total amount lying with the State Bank would be so quickly signed. But, as against the disposal and disbursement of funds that have accrued so far, we have seen last week that the State Bank appears to have started receiving special Deposits on a new tranche of Public Law 480 money. Therefore, further Deposits accruing with the State Bank and further purchases of gilt-edged by that institution may be witnessed in the coming weeks and months.

Lastly, it is probable that the set of transactions will be reflected in the returns of the Reserve Bank and the State Bank for March 20, though there would be nothing to prevent Government from carrying over the transactions into the next fiscal year. But, in fact, it happens that the returns for March 20, will incorporate these changes, analysis of the relevant figures is likely to be rendered difficult by the simultaneity of the heavy end of fiscal year disbursements of the Central Government.

SBI Deposits: Over Rs 500 crores

The maintenance of the economy at a quickened tempo is suggested in the Reserve Bank returns for March 13, according to which Active Note circulation has risen further by Rs 7.19 crores to Rs 1695.78 crores. Rupee Coin also went out into circulation, though for a fractional amount. Currency

has been expanded against Rupee Securities by transfer from the Banking Department for Rs 10 crores. In the result, the Reserve Bank's cash in the till has improved by Rs 2.63 crores to be placed at Rs 10.97 crores.

In the Banking Department, it is intriguing to find that, notwithstanding that it is the end of the fiscal year, the Central Government's balances have risen by Rs 14.19 crores to Rs 66.23 crores. The fact that the Deposits of the State Governments are lower by Rs 1.25 crores at Rs 17.07 crores, despite an increase of Rs 2.89 crores in their Ways and Means borrowings from the Reserve Bank, indicates clearly that no payment has been made by State Governments to the Central Government. Moreover, with Investments in the Banking Department lower by Rs 10.22 crores at Rs 245.49 crores—this being due to transfer to the Issue Department—there does not appear to be any deficit financing. There is, however, reason to believe that the Central Government may have benefited to the extent of Rs 20 crores during the week, Rs 10 crores by way of proceeds from deficit financing and Rs 10 crores by way of payment against counterpart funds by the State Bank. This, however, is a point which can be confirmed only next week. As far as the Scheduled Banks are concerned, although there is a small rise of Rs 2.37 crores to Rs 67.97 crores in their Reserve Balances, the pressure of demand for money must have been fairly acute, since the Reserve Bank's Other Loans and Advances are sizably higher by Rs 10.24 crores, to cross the Rs 100 crore mark, in being placed at Rs 100.30 crores.

Finally, Balances Held Abroad have registered a small rise of Rs 0.40 crores to Rs 33.26 crores.

The State Bank, during the week ended March 13, has apparently received Rs 10 crores against the fresh tranche of counterpart funds, since its Deposits have risen by Rs 7.50 crores to Rs 501.50 crores. Meantime, however, the continued busy season pressure has pushed Advances to Rs 201.91 crores from Rs 199.15 crores. While the latest instalment in the fresh tranche of special Deposits has not been invested in gilt-edged, it is pertinent to note that Other Assets are unusually higher by Rs 7.17 crores at Rs 12.57 crores. In the next week's return, presumably, Other Assets will return to a normal level with an increase being registered under the head of gilt-edged investments. It is owing to, apparently, the higher level of Other Assets that the State Bank has been compelled to increase its borrowings by Rs 4.50 crores to Rs 7.50 crores. As a result, Cash in hand and with the Reserve Bank is higher by Rs 2.48 crores at Rs 24.29 crores.

The return of Scheduled Banks for March 6 shows the continued impress of the busy season, with the total of Advances rising by Rs 11.69 crores to Rs 969.78 crores. Deposits are slightly lower at Rs 1648.43 crores against Rs 1650.25 crores. Cash balances have declined by Rs 9.41 crores to Rs 150.62 crores, solely on account of the State Bank. Cash balances were thus drawn down by the State Bank in order to add to its investment portfolio, and this, too, is reflected in the Scheduled Banks' return, with investments rising by Rs 8.76 crores to Rs 622.05 crores.

The Indian Bank Limited

H.O. First Line Beach, Madras-1

In consonance with its policy of inculcating the banking habit amongst the community, the Bank has been opening a number of branches in the recent past.

There are now no fewer than 112 branches of the Bank functioning not only in India but also in Ceylon and Malaya.

In addition, the 23 Local offices of the Bank serve the entire Madras City and Suburbs.

State Bank of India

The State Bank has, owing to its continued receipts of special Deposits, been able to present a set of accounts for 1958 which is in sharp contrast to the general experience of banking institutions during 1958.

Deposit resources rose from Rs 366.52 crores to Rs 477.86 crores. Of this increase, Rs 84.52 crores are under the head of Fixed Deposits. But, again in contrast with the banking trends, the State Bank also reports a rise of Rs 15.28 crores to Rs 219.47 crores in current accounts, etc. As this journal has been pointing out for some time, and as the Chairman of the State Bank recently

pointed out, it has been the policy of the State Bank to make a contra investment in respect of accruing special Deposits. As such, gilt-edged securities are sharply higher by nearly Rs 100 crores at Rs 269.58 crores against Rs 171.39 crores. The total of advances is lower at Rs 172.06 crores. Nevertheless, in order to improve its cash position—cash in hand and with Reserve Bank is higher by Rs 16.21 crores at Rs 52.74 crores—the State Bank has been compelled to show its borrowings at Rs 20.85 crores against Rs 16.50 crores.

The income by interest and discount has shot up from Rs 8.25 crores to Rs 12.21 crores. The income from commission, exchange and brokerage is practically unchanged at Rs 3.53 crores. The higher price paid for Deposits is brought out by the fact that the interest paid has risen sharply from Rs 3.40 crores to Rs 6.25 crores. Salaries and Allowances also absorb more at Rs 6.06 crores against Rs 5.15 crores. In the result, the State Bank is the only major institution which has reported any sizable increase in its balance of profit, which rose from Rs 1.87 crores to Rs 1.90 crores. Dividends have been maintained. The transfer to Reserve Fund rose from Rs 25 lakhs to Rs 37.50 lakhs. Bonus to staff absorbs Rs 4 lakhs more at Rs 36 lakhs. While the amount transferred to staff Welfare Fund is lower by Rs 5 lakhs, the provision for

staff co-operative Fund is higher by like amount. The carry forward of Rs 55.79 lakhs is practically unchanged, in comparison with the amount brought in of Rs 55.99 lakhs.

A point that we need to note is that the State Bank has during the last two years made transfers to Reserves. We may interpret this policy as indicating the intention to strengthen the bank's balance sheet, in view both of its branch expansion programme and the provision of rural finance.

Indian Overseas Bank

In its accounts for 1958, the Indian Overseas Bank Limited is in the happy position of reporting that, in regard to Deposits, it has crossed the Rs 25 crore barrier in recording an increase of Rs 8.69 crores to Rs 27.94 crores. It is interesting to find that this increase in Deposits has been almost equally shared by Fixed and Time Deposits, on the one hand, and by Current Accounts, on the other. Also in contrast to the experience of banks generally, Indian Overseas has been able to expand its Advances from Rs 11.30 crores to Rs 15.53 crores. Even so, the strident increase in Deposits, after part of it has been utilised in the higher volume of Advances, enabled the investment portfolio to be raised from Rs 6.63 crores to Rs 10.78 crores.

According to the profit and loss account, the income by interest and discount is marked higher by Rs 0.27 crores at Rs 1.12 crores; and commission, exchange and brokerage have fetched Rs 6 lakhs more at Rs 52.84 lakhs. But the amount absorbed by interest paid on Deposits rose rather sharply by Rs 25.24 lakhs to Rs 65.89 lakhs and the charge of salaries and allowances also went up by Rs 6½ lakhs to Rs 49.06 lakhs. In the result, the balance of profit is Rs 3.90 lakhs lower at Rs 28.60 lakhs.

From the year's profit, the provision for tax absorbed rather less at Rs 12.50 lakhs against Rs 16 lakhs. The transfer to Reserve has been pruned from Rs 7.32 lakhs to Rs 6 lakhs. However, the provision for bonus to staff has been raised from Rs 3.75 lakhs to Rs 4.50 lakhs. The dividend payment has been maintained at 10 per cent. The carry forward is slightly lower at Rs 2.03 lakhs against Rs 2.32 lakhs brought in.

Pandyan Bank

It has now become customary, it appears, for the Pandyan Bank to maintain its record of progress year by year. While eschewing the spectacular, it would appear as if the management have taken particular pains to ensure that the bank marks an orderly, and we can almost call it planned, progress. Thus, Deposits of Pandyan Bank at the end of 1958 rose to Rs 3.89 crores from Rs 2.74 crores. Advances have gone up to Rs 1.94 crores from Rs 1.72 crores. Investments, in rising by Rs 26 lakhs, are knocking at the Rs 1 crore mark.

The profit and loss account discloses that the income by interest and discount has risen from Rs 15.83 lakhs to Rs 19.22 lakhs; commission, exchange and brokerage have garnered in Rs 4.26 lakhs against Rs 3.48 lakhs. On the other side of the ledger, it is true that interest paid is up from Rs 7.81 lakhs to Rs 10.46 lakhs and that salaries and allowances have absorbed Rs 7.22 lakhs against Rs 5.84 lakhs. Nevertheless, the balance of profit has gone up from Rs 3.50 lakhs to Rs 4.19 lakhs.

Taxation absorbs Rs 2.22 lakhs. The transfer to contingency account is Rs 75,000, while the general reserves, in receiving a transfer of Rs 25,000, rise to Rs 10.50 lakhs against the paid-up capital of Rs 10 lakhs. The dividend payment is at the rate of 10 per cent and marks an increase of 2½ per cent over 1957.

The New American Protectionism

By Paul Einzig

CERTAIN commercial measures were taken or are about to be taken in the United States in recent months, aiming at restricting British exports to the United States. This was at a moment when business conditions in Britain leave much to be desired, and when British opinion is obsessed with fears of a further increase in unemployment. Yet during recent years British policy has made considerable progress towards non-discrimination against American goods.

American measures of protectionism and economic nationalism included the rejection of the Greers Ferry contract; the methods used in Montreal for getting an adverse vote against the Decca air control system; the lead and zinc quotas which affected vital interests of Canada and Australia; and various other instances pointing in the same direction. There is growing pressure on the Administration to reinforce existing legislation in order to exclude British goods.

Sooner or later there is bound to be irresistible pressure on the British Government to retaliate against such measures by a reversal of its policy of liberalisation of import trade from the United States. Feeling in political circles in London is particularly strong against the rejection of British tenders which are considerably lower than the lowest of American tenders. Pressure is brought to bear on the Government to imitate the American example by discouraging the purchase of American goods by Government departments and other official bodies. The War Office is subject to some criticism for having placed an order for an American electronic computer, at a moment when American public bodies discriminate against British tenders.

American resistance to the admission of British goods weakens the hands of those of us in Britain who are opposed to an expansion of British trade with the Soviet

March 21, 1959

Union. It now seems highly probable that, in order to facilitate the increase of British exports to the USSR, very substantial credits will be arranged under the official Export Credits Guarantee scheme. Arguments against such a move—which would be most untimely during a period of growing tension over Berlin—lose much of their force in face of evidence of American resistance to the import of British goods. After all, it is said, if the United States refuse to buy British and Commonwealth goods, those goods have to be sold to some other country.

It would be deplorable if this new wave of American protectionism were to cause disunity in the camp of freedom-loving peoples. It should be viewed with understanding, as being due to a weakening of the economic strength of the United States through the increase in unemployment and the outflow of gold. Only absolutely strong countries which are quite sure of themselves can afford to be free-traders. During the 19th century Britain could easily afford to liberalise foreign trade. Having been conscious of her economic strength, she did not feel the need for taking artificial steps to secure the domestic market for British producers. But between the two world wars Britain could no longer afford the luxury of unfettered free trade. During the post-war period, too, there was a growing feeling that Britain was going too fast and too far in the direction of liberalisation, beyond what the country could afford in conditions prevailing in the post-war world.

The complete reversal of the attitude of Lancashire Britain's textile district indicated the extent of the influence of changed conditions on economic doctrines. Manchester was the birthplace of the 19th century free trade movement. The Free Trade Hall was the scene of many important free trade meetings. It was suggested recently that this building should be re-named "Protection Hall" because of the complete change of attitude of Lancashire towards commercial policy. In 1919 the textile industry of Lancashire stood to gain by Free Trade. In 1959 it stands to lose by it. It can no longer afford to champion the old doctrine.

Beyond doubt, the revival of protectionism in the United States is an indication of lack of self-confidence. During the early post-war years the United States assumed the leadership of the Free Trade movement, leadership that was reluctantly relinquished by Britain. Evidently, however, in the United States the crusading spirit for free trade was not deeply rooted. A relatively slight decline from the post-war peak of economic power—slight in comparison with Britain's decline from its 19th Century peak of economic power—seems to have been sufficient to reverse American commercial policy. Britain on the other hand, in spite of her many difficulties, has been trying hard to

revert to free trade within the limits of her reduced means, indeed even beyond them. For this reason British opinion may find it difficult to view with understanding the present change of American policy. It is felt in Britain that the American reversion to protectionism is not warranted by the known facts of the change in American economic power. There is an uneasy feeling that the decline, actual or prospective, must be much more substantial than would appear from the known facts. What those who hold such views overlook is that exaggeration

is a basic American characteristic and that a relatively moderate decline is liable to produce a much more pronounced change of attitude in the United States than in Britain or other countries less inclined to exaggerate.

If the decline were really so pronounced as to justify a basic change in economic policy this would be a matter for regret from the point of view of the free world. Should there be a real danger of a fundamental weakening of American economic power than it would be the duty of Britain and of all other democratic

countries to put up with the consequences of American protectionism in the hope that in doing so they would assist the United States in recovering their lost economic power. The visible signs of decline would have to be much more evident, however before such an attitude could be made to prevail. But even in the absence of any spectacular indications, Britain and other countries should abstain from retaliatory action, in the hope that the relapse into economic nationalism is but a passing phase.

Further Advance in Prices

THE Jute Goods market has continued to present a very firm front and prices have recorded a further rise over last levels, particularly in the case of heavy goods. There has been heavy speculative buying of this category of goods by a prominent operator in the futures market due to the approach of the shipping date and this has helped to push up the prices. Despite the fact that the mills are coming out as sellers at every rise in prices and have sold substantial quantities for forward deliveries, the upward trend in prices is being maintained.

No doubt, the recent news of the decline in stocks has imparted considerable strength to the market. But the decline in stocks is the result of a shortfall in output rather than an improvement in offtake; but this point seems to have been ignored by the operators who, as a matter of fact, are looking forward to early restoration of the balance of stocks with the sealing of looms on the one hand and the transfer of looms from sacking to hessian production on the other.

With the present sealing, the percentage of the sealed looms has now been raised to 14. There is every possibility that a further 1 per cent will also be sealed. The mills will probably like to study the effect of the present sealing on stocks at the end of this month. If there is any rise in stocks at the end of this month, that will hasten the day for sealing another 1 per cent of the looms. Some quarters feel that the present loss of output of sackings is insignificant. They wonder why production cannot be increased for a few months at the cost of heavy goods.

It is true that a more balanced output is essential. But, in the light of the report recently issued by the IMA-sponsored mission to the South-East Asian countries, trade circles are optimistic that exports of sacking goods can be increased in which event the mills' problems, arising from mounting stocks, will prove a passing affair only. However, in order to introduce the necessary demand factor, market circles consider that it will be prudent for mills to curtail production of heavy goods to the extent possible if not needed.

In the midst of these factors, it is encouraging to note that shippers have been very active in their covering of heavy goods on reports of enquiry from various quarters. Apart from buying interest shown

in cornsacks and woolpacks by Australia, the trend of gunny shipments has been quite satisfactory. In this respect, preliminary figures for February have shown that shipments of both hessians and sackings have been well maintained despite its being a shorter-working month.

As a matter of fact, gunny shipments to Australia have improved and both mid-March Australian leaders have been declared full. Also, it is reported that North American and UK buyers have slightly increased their hessian purchases and it is to be hoped that vessels in these trades will have slightly improved cargoes in the near future.

All the above factors indicate that steps to reduce the overall level of sacking stocks by cutting production are beginning to show the effect. An encouraging feature, as mentioned earlier, is that many mills have been able to take advantage of the present rise in prices by selling good quantities for ready and forward positions. Following were the price trends:—

	March 12th	March 14th	March 17th
40" x 10 Ozs Ready	39.30	38.90	39.85
40" x 10 Ozs Apl/June	38.65	38.45	39.35
40" x 10 Ozs July/Sep	38.10	38.45	39.10
40" x 8 Ozs	32.00	31.85	32.00
40" x 7 1/2 Ozs	29.55	29.55	29.55
Sackings:

L. Twills	103.75	105.00	107.00
D. W. Flours	111.00	112.00	113.50
Sugar Twills	103.75	104.25	105.00
Futures:			
Hessian—May	38.46	38.34	38.72
Sacking—May	92.55	94.05	95.15
Raw Jute—June	22.14	22.50	22.84

RAW JUTE:

In sympathy with manufactured goods, conditions in the Raw Jute section have been ruling steady. With the rising demand for jute goods, mills have been showing good interest in their purchases of raw commodity even at rising prices. Not only is Mesta in demand, but fibres of other grades are also sought after.

Meanwhile, the export outlook for Indian jute does not appear to be bright; because most spinners in Dundee are reported to have bought all they need for the current season. It is also known that the Pakistani crop is likely to yield more than enough to meet world needs and any news regarding the extent of the next crop is in favour of a slight increase in sowings over the present one. It

Easier Trend in Prices

ALTHOUGH there has been a good demand at the auctions held during the past few weeks, prices have been showing an easier tendency, mainly due to the usual deterioration in quality in view of the end-of-season supplies. The next crop is expected to arrive in the market in June and it is likely to meet with a good demand. It is also possible that buying from outmarkets, especially the UK, Egypt and Russia, will be maintained. But, no big improvement in prices is expected, as adequate stocks have already been built up in the UK, partly because of easier credit facilities.

The only encouraging feature is that the entire output of Northern India, during the 1958-59 season, will be sold before the arrival of the new season's crop. Leaf sales are expected to be completed by the middle of next month, although the Dust sales will continue a little longer. Meanwhile, there will be no sales next week due to the "Holi" festival.

There are indications that a number of countries, such as Africa, Indonesia and Pakistan, can increase their output considerably, while exports from China are unpredictable. It is, therefore, evident that, if supplies are to be matched with demand in order to maintain economic prices, the sooner an international agreement for regulating exports is renewed, the better.

There is a general feeling that, although the Central Government have announced a reduction of 2 NP per pound in the export duty, it may not do much to strengthen the competitive power of Indian tea in the foreign markets. This feeling is based on three factors.

First, the cut in the export duty does not offset the fiscal advantage which other countries enjoy. Secondly, there is no net relief in the case of Assam gardens, as they are obliged to pay an increased excise duty of 12 NP a pound instead of 10 NP. Thus, in the case of the Assam tea, a substantial portion of which is sold abroad, the net incidence of the export duty and the excise duty has not changed during the past couple of years or so. Above all, frequent changes in duties have caused uncertainties in foreign markets.

Meanwhile, in the Export Sale held in Calcutta this week, offerings were 65,422 packages. There was a good general demand, but at irregular and sometimes easier rates. "Teas for price" and Plain Broken were sold readily, but were irregular and often 3 NP to 6 NP per pound easier. Clean Black Broken and Medium BPS with bright liquors were about 4 NP dearer. Fannings were sold well and bright kinds being 4 NP to 8 NP dearer, others tending easier. BOPs and OFs which were brought in cup, advanced by about 1 NP and sometimes more, the poorer kinds being irregularly easier. Best CTCs were well supported, medium kinds being irregular and on occasions appreciably dearer. The poorer CTCs were sold well but at generally easier rates. Bright leg-cut teas were again dearer, others declining by about 2 to 6 NP per pound.

Whole Leaf grades met with good enquiry, stylish sorts ruling dearer. Darjeeling were an irregular feature and generally easier. Following rates were quoted: Clean Black Pekoe Rs 1.92 to 1.98; Plain BP Rs 1.56; Plain Fannings Rs 1.74 to Rs 1.78; Medium BP Rs 1.54 to Rs 1.58; Medium Fannings Rs 1.68 to Rs 1.72; Best CTC Assam BP Rs 2.30 to Rs 2.35, and Best CTC Assam Fannings 2.60 to Rs 2.75. The rates are on tea value exclusive of zonal rate of excise duty.

In the Internal Sale, offerings were 22,337 packages of Dusts at 3,075 packages of Leaf grade. There was a good general demand for Dusts. Grainy orthodox teas were fully firm and occasional dearer, while the powdery kind in this category were also firm and sometimes dearer. Leg-cut Dooars shared in the demand with the powdery types often selling above valuations. Darjeeling Dusts were, however, neglected and withdrawals were frequent.

CTC teas were rather irregular fibrous types being up to 8 NP per pound easier. Clean grainy teas were sold fairly well with interest being shown in the super powdery kinds. The best teas in this category were quite well supported, but were rather irregular. Medium Dooars Dust was quoted at Rs 1.78 to Rs 1.82; Medium Assam Grainy Dust at Rs 1.72 to Rs 1.78; Medium Assam CTC Dust at Rs 2.60 to Rs 3.00 and Best Assam CTC Dust at Rs 2.60 to Rs 3.00. There was an irregular demand for Leaf grades.

March 21, 1959

ON Saturday, the 28th January 1928, Indian Finance was born and on the same day was born Clive Street Gossip. Since then, we have all delightedly watched in these columns the spectacle of a lively intelligence frisking about ideas, personalities and events, exploring inaccessible regions of thought, illumining odd quirks of character and pitilessly turning the searchlight on dubious behaviour. Modestly making his bow, Eavesdropper indicated in the first issue the purpose of the column and his own role: "Clive Street Gossip—this section is thus yept less for its pliancy of the phrase than for its vagueness and the consequent comprehensiveness of interpretation and elasticity of use which it permits." Another consideration weighed with him: "in the bustling world there are burra sahibs" and the "subtantawallas" whose "are duly chronicled in the journals of the day". But the "poetry and pathos of the humbler folks are hardly noticed". Characteristically, the first gossip is entitled "Every Working Girl A Heroine" and Eavesdropper pays his tribute to the "courage and self-possession of which she is the embodiment". He also comments on the humble "jamadar and his gang of Chaprassis" who handle crores of rupees in course of "collections", and yet whose "honesty is well-nigh a world record". He also remarks on "another type of honesty, not less remarkable, presented by the Marwarie speculator". He is referring to the "debts of honour" in the fatka market which are "scrupulously honoured the next Monday". As a tall-piece there is a slightly off-colour "fairly story", about a stenographer who, on her marriage, notified her employers that she was married but "wished to carry on as before".

It is not merely as an act of piety that I have brought up the first "Gossip". (In the back rooms of Indian Finance, Gossip is always Clive Street Gossip). In the course of thirty odd years, there have been changes in its personality. It tended to be less patchy and more sustained, dealing with one or, at the most, two topics at a time. But the essential characteristics foreshadowed in the first issue, the comprehensive concern, the generosity and the humour of its first chronicler were all there. So, when, subsequently, the delightful quotation from As You Like It that adorns the head column was brought over here from the cover page, all that the change implied was the recognition of a fait accompli.

At some distance from the actual blow that rendered us all orphans, it is possible and indeed obligatory to reckon the sum of Eavesdropper's achievements. For, he is entitled to more than the tribute of a sigh or even of a good cry. His greatest achievement was, of course, his own personality, none the less great because of its comparative impermanence. I say comparative impermanence, because, it is not wholly gone with his physical disappearance. It has, in its time, quickened other sensibilities, warmed other hearts to generosity and stirred sluggish intellects to thought. And these others are the better for these gifts. How many countless evenings has one seen him sitting in the verandah in earnest but relaxed conversation, saying in his emphatic way, "You understand me?" (The stress used to fall on the syllable "stand" like a ton of bricks!) No one who has spoken with him could have missed the versatility of his endowments. Charm is a dangerous word, evocative of frivolity at best and decay at worst. It reminds you of Fanny by Gaslight or Belinda with her Max Factor and hair pins. None who knew CSR could have failed to be struck by the robustness and energy of his personality, but charming he was, if by that word you mean the manifestation of a certain inner generosity of spirit. I have seen him livid with anger, but never at anything that was not mean. He was not one of those persons who prided themselves "at not giving themselves away". As Hilaire Belloc once retorted to one such, one can say to these people: "Come, come, be generous in little things". CSR gave himself away continuously, even in the idiomatic sense of the term. The practical consequences of this recklessness of spirit were sometimes disastrous to him personally, but this is neither the occasion nor the forum for speaking of them. But, even in practical terms, his giving himself away had more often than not happier results than "careful" people might imagine. For, giving away out of his abundance was a temperament that he turned into a philosophy of life.

This inner generosity was really the result of profound humility. Unlike certain English liberals and humanists, Eavesdropper had no theories about personal relationship. His was a profound instinct for reaching out to the other man. Forster's injunction—"Only Connect"—was something that Eavesdropper did without even knowing that he was doing it. It was an unintellectualised and unrationallised instinct. He certainly had his share of troubles that arise out of

se, his own personality, none the less great because of its comparative impermanence. I say comparative impermanence, because, it is not wholly gone with his physical disappearance. It has, in its time, quickened other sensibilities, warmed other hearts to generosity and stirred sluggish intellects to thought. And these others are the better for these gifts. How many countless evenings has one seen him sitting in the verandah in earnest but relaxed conversation, saying in his emphatic way, "You understand me?" (The stress used to fall on the syllable "stand" like a ton of bricks!) No one who has spoken with him could have missed the versatility of his endowments. Charm is a dangerous word, evocative of frivolity at best and decay at worst. It reminds you of Fanny by Gaslight or Belinda with her Max Factor and hair pins. None who knew CSR could have failed to be struck by the robustness and energy of his personality, but charming he was, if by that word you mean the manifestation of a certain inner generosity of spirit. I have seen him livid with anger, but never at anything that was not mean. He was not one of those persons who prided themselves "at not giving themselves away". As Hilaire Belloc once retorted to one such, one can say to these people: "Come, come, be generous in little things". CSR gave himself away continuously, even in the idiomatic sense of the term. The practical consequences of this recklessness of spirit were sometimes disastrous to him personally, but this is neither the occasion nor the forum for speaking of them. But, even in practical terms, his giving himself away had more often than not happier results than "careful" people might imagine. For, giving away out of his abundance was a temperament that he turned into a philosophy of life.

mutual misunderstanding. But all such misunderstanding left him depressed until he cleared them up, if necessary, "by giving himself away". But with those with whom he was en rapport, he radiated an affection and warmth that were almost stifling in their generosity. How often have I seen him extravagantly praise efforts—and these included mine—in terms that left the authors squirming with embarrassment! Not that he did not have a sharp eye for the bogus. No charlatan could get past him. But if he recognised some merit, he did not stop to evaluate it too strictly.

To Clive Street Gossip, he brought an alert intelligence and energy of mind that have enlivened its columns for well over three decades. The distinctiveness about this feature was CSR's anxiety to see things in larger contexts, to see life steadily and see it whole. Financial journalism has, by its very nature, an odd slant on life. It is an esoterism even in days like these when every one glibly talks of deficit finance and perspective planning. And one can so easily be a dupe of one's own profession. It is, therefore, necessary to see life "comprehensively", as the first Gossip put it. The Chaprasi and the working girl are human, and both statistics and cash nexus can make us forget that fact. In another sense, Clive

Street Gossip was placed by Eavesdropper in a wider context. It is not only necessary to see finance and commerce as part of larger life, but it is also necessary to evaluate them continually in terms of certain first principles. Every economic act has to make sense as a human act. Readers of this column know how often he used to invoke Switzer's phrase, "Reverence for Life". He approached life, not pietistically, but with a profound sense of the mystery of the human spirit. Therefore, anything that did violence to man's humanity was an indecent act. What offended him about financial skulduggery was the obscenity of it, and his fastidious spirit was revolted by it. There are some basic values—the most basic of which is the inviolability of the human spirit—in terms of which every act chronicled in the other pages of the journal were to be evaluated in Clive Street Gossip. If they "made sense" in such an evaluation, they had the warmest support of Eavesdropper. People who are puzzled by what they consider his latter-day zeal for the economic policies of the Nehru Government are puzzled only because they stop short of making this particular evaluation.

Stylistically, the "Gossip" was vintage talk, the art of which is slowly dying away. Some people imagine that polite conversation should not be "heavy" and must avoid anything that smacks of serious discussion. This is a characteristically modern stupidity, and, in a sense, the result of its own poverty of spirit and mind. Since so many people have little to talk about other than their own insignificant and frivolous worries, and since getting together is to "forget them", to talk about serious things is to be "tiresome". Eavesdropper had nothing but contempt

CSR rather than those of Eavesdropper. Indian Finance, of course, is his most abiding gift to the nation. I will not speak of it in terms of a "success story"—the fact that he started with two hundred rupees as capital in the form of subscription and brought it to its present position. Though remarkable, it is in no way unique, since others might do it. What makes Indian Finance what it is, is the fact that it was a response to a half-articulate call. CSR knew what he was doing. For, he saw that a whole area of relevant human activity was being neglected.

ted by too exclusive preoccupation with the Congress with political issues. And the very first issue drew attention to this top-sidedness by pointing out that the Simon Commission did not have a financial expert. It stressed what now sounds a truism, but did not then, that the Indian problem was "no less financial than political". It also made the interesting (though arguable) point that "the Montford reforms got wrecked on the rocks of unscientific finance". And, since then, Indian Finance has been steadily insisting on the relevance of our problems of financial and economic issues. The thirties were a period of momentous economic significance to the whole world, with the blizzard of American depression leaving in ruins the economies of the rest of the world. Through this, as through the war years that succeeded it, Indian Finance has been spelling out the economic and financial implications of events at home and abroad.

Of CSR's other achievements, I do not want to talk at length. But, about one rather interesting aspect of his personality, I should speak. Those who have known him personally must have sensed in him a certain preoccupation with social changes. He did not care for sociology, certainly not of the academic kind. Of course, he realised mass observation and similar devices were helpful in enabling us to assess the effects of social changes, but he had a certain distrust of the statistical method. But he had an intuitive perception of social changes. I am not referring to spectacular changes that have taken place, but those imperceptible transformations that are not noticed until well after they crystallise. Let me take an example. The predicament of the Madras middle class in Calcutta is something of which he spoke often to me. Characteristically, he did not theorise about it, as I, equally characteristically, did. "The problem is part of the larger problem of urbanisation and the erosion of roots and so forth". That was how I posed it to him when he mentioned it. I said, "These people who bring a little of Tirunelveli and Tanjore with them and try manfully to keep traditional rituals and rites are fighting a losing battle." These things did not bother him over much and I rather fear he thought me a little bit highfalutin. He then asked me what I thought of a scheme for a catering service that will relieve the housewife of morning cooking. "You see," he said, "the poor thing has to do a hundred things before half past eight in the morning. The morning coffee, the meal, preparing the children for school and her husband for his office—he is always losing his buttons—and only after she bundles them off can she have a moment to herself. Don't you think, that the South India Club can supply everything to her, except for rice, which she can cook herself? And, mind you, this will work out cheaper and that is not an unimportant consideration."

This was entirely characteristic of the man. I know a hundred others—mainly men—who, not sensing the profound changes beneath the surface, would raise footing objections about “homely means,” and it not feeling like a home and so on. The whole point is that not many feel that the one and a half rooms they occupy is their home. The social change that has destroyed the notion of a home is not even perceived by these objectors. But CSR has sensed it and suggested a practical solution for the problems created by it. I do not believe that any woman would fail to see the good sense of the suggestion.

CSR was full of such practical suggestions. In fact, he was "scheming" all the time. His preoccupation with "dietics" and exotic food from homely vegetables was something of a joke among his friends. But he saw it as a solution to the pressure on rice and rare vegetables, and he was right. A hundred other things crowd on my mind but I must cry halt now.

Cry halt, that is, to a son's eye view of his father, with that son being a journalist. I have tried to put down what an objective spectator will have noticed, and deliberately eschewed realms that are personal. And yet, it will not be out of place, it may be very necessary, to include among father's accomplishments such training as he was able to impart to me. Pothan Joseph, whose moving tribute to father has been published in Swarajya, mentions that, but for a quirk of fate, C. S. Rangaswami would have been a teacher or professor. My experience as his student proves that, had such vocation been his, he would equally have been a success: he had a wealth of patience, and he could imbue anything that he taught with a fascinating appeal. He had even that virtue that most of our teachers lack, an ability to inspire the student. I am what I am, in short, because father made me so.

To many who knew him, he gave abundantly of a rich intimacy which they will dearly cherish. As Hamlet said of his father:

Hamlet said of his father:
"He was a man, take him for all
in all,
I shall not look upon his like again."
EAVESDROPPER

Last week's issue of Indian Finance was delayed for obvious reasons. This issue and the next will be in slightly attenuated form, because of the religious ceremonies that have to be completed. I owe it a duty to crave the indulgence of readers for taking such liberty, and to thank them for bearing with me in this hour of grief.

C. S. Rangaswami Jr.

GATEWAY GOSSIP

THE Gateway city was the scene of some uncommon enthusiasm the occasion being provided by Mr Nehru's arrival. What exactly drew Mr Nehru to the city is not clear; for, in the city Mr Nehru had a busy time visiting the Aarey Milk Colony, the Atomic Energy Establishment at Trombay, laying foundation stones for a children's theatre and museum, as well as of the Indian Institute of Technology at Powai, addressing a workers' meeting and the annual general meeting of the All-India Manufacturers' Organisation. In this hectic spell of activity, the Prime Minister could snatch time for attending the all-India premiere of Charlie Chaplin's picture "Limelight". For Nehru personally, it was a highly satisfying visit, and in his own words he goes back with a "heartening sensation seeing the good work done in various fields". What he had seen in Bombay had fortified his faith in the future of the country, and in his speeches at the various places, Mr Nehru expressed this faith in the country's future.

Mr. Nehru touched on old topics as well as new, and nothing relevant to success of planning escaped his emphasis. Steel, power, machines and personnel constituted the four most important needs of the country, and there was also need to check the high rate of population growth. Above all there was need for hard work on the part of everybody.

part of everybody. Mr. Nehru lashed at critics of the cooperative farming as adumbrated by the Nagpur resolution of the Congress and dismissed them as "puerile persons" who had learned their lessons long ago and whose learning therefore could be of no use in helping solve the agricultural problems. As he sees it, only cooperatives could enable farmers to produce more and at less cost. And therefore, there must be a cooperative society in every village. The cooperative principle would be extended to industries also and in the socialist pattern of society envisaged by the Congress, workers would have an increasing say in the management of industries. This, Mr. Nehru pointed out, would be assisted by the Government sponsoring big industries, leaving only small industries to the private sector.

Mr Nehru did not mince words in condemning frequent and unprovoked resort to strikes by workers which interfered with production. At the same time, employers also had to practise restraint and not think in terms of suppressing workers.

The annual general meeting of the All-India Manufacturers' Organisation provided Mr Nehru with the occasion for opening his mind to the business community on matters relating to planning. The meeting of the Federation of Indian Chamber of Commerce and

Industry at New Delhi which Mr Nehru addressed prior to his arrival to the Gateway city, had of course charted a broad area of agreement between the Government and the business community on planning for future prosperity. Mr Nehru had therefore not to cover the same ground as at the Delhi meeting of the Federation.

The AIMO Chairman, Mr Sahukar had a number of suggestions to make in regard to problems of priority in relation to the Third Plan which has begun to engage the attention of the Government. These suggestions together with Mr Nehru's own attitude towards planning set the note of his speech at the meeting of the AIMO. At the outset Mr Nehru stressed the importance of perspective planning. This concept had been popularised by the Planning Commission and defined as implying absence of rigidity and involving a long-term approach. Naturally it is this concept that underlies the approach to planning in our own country, the First and Second Five Year Plans being cast in that mould.

There was complete agreement from Mr Nehru on matters indicated by Mr Sahukar as deserving primacy of place in the third Plan. This broad list of priorities included agricultural production, machine-building industry and technical education. These are such important matters that it would not have been possible for anyone to disagree in according priority of treatment. Failure of foodgrain production had held up progress in many sectors, and had been a big drain on the foreign exchange resources of the country. Import of machine tools arising from the absence of a well developed had aggravated the foreign exchange situation. Similarly progress in the application of technological methods to industry had been held up by the bottleneck in the supply of technical personnel.

While agreeing with the views expressed by the AIMO chairman, on the need to rectify pressing deficiencies in the economic system, he was far from taking an alarmistic view of the present difficulties. Also, he would not accept that Government was slow in taking steps in tackling them seriously and effectively and therefore it would not be true to suggest that there had been no progress in some of these fields.

Referring to the food situation in the country, Mr. Nehru pointed out that it was not true that it had remained stagnant since there had been rise in production in the last few years. While conceding room for further improvement especially in per acre yield on the basis of the present yield and potentialities, Mr. Nehru was of the view that there had been progress even in respect of this. GATEWAY NOTES

Bombay Port Budget

The budget of the Bombay Port, for 1959-60, submitted by the Port Trustees, to the Government of India, discloses a surplus of Rs 77.41 lakhs. This compares with the figure of Rs 39.61 lakhs estimated as surplus for the current year. While revenue receipts on general account for 1959-60 are estimated at Rs 10.37 crores, the expenditure is estimated at Rs 9.60 crores. Revenue receipts have recorded an improvement over the current year's figure by about Rs 36 lakhs.

The decline in earnings in the current year is attributed to the fall in traffic in the wet docks, the fall in earnings being of the order of Rs 25.78 lakhs. Total receipts for 1958-59 which are now placed at Rs 9.99 crores represents a decline of Rs 43.39 lakhs from the original estimates. Against this expenditure is estimated to have exceeded original estimates by about Rs 73 lakhs, the increase being mainly attributed to commitments in connection with increased dearth allowance to Port Trust employees, payment to Ibcn's and so on.

Though revenue receipts have disclosed an increase for 1959-60, the erratic trend in traffic is a matter causing some worry and concern to the port trust authorities. It is to be noted in this connection that the total imports and exports in the Bombay port during the nine months April-December 1958 were 6.1 million tons and 2.1 million tons respectively against 6.9 million tons and 2.6 million tons for the corresponding period of the previous year. The chairman of the port trust is therefore not inclined to take an optimistic view of the port traffic during the remaining three months mainly of the year.

The foreign exchange shortage was mainly responsible for the reduced volume of traffic in the port. A favourable turn may be set in with the partial lifting of the recession in the US and the anticipated rise in the absorption of raw materials by the European economies.

The capital expenditure of the Port for the current year is placed at Rs 2.27 crores while for 1959-60 capital expenditure is estimated at Rs 3.19 crores. While development schemes account for Rs 1.14 crores in the current year, the outlay for such schemes in 1959-60 is put down at Rs 1.19 crores.

In a statement issued with the budget estimates, the chairman of the Bombay Port Trust, Mr L. T. Ghoshal also announced that the existing surcharge of 33 1/3 per cent at present leviable under the docks and bunders scales of rates and the 20 per cent leviable under fort and pilotage fees will remain.

Crisis in Textiles

The near crisis conditions of the cotton textile industry, and the effect of the adverse developments on the workers formed the subject of debate in the Bombay legislative Assembly. The opposition as a whole were ranged against the Government in regard to the causes that resulted in the present developments and the measures that would provide a solution to the problem. Since the opposition were inclined to trace the difficulties of the textile industry to mismanagement by industrialists it was necessary that this should be set right by the Government assuming control of the units which had already closed down and those which are lingering on the verge of similar closure.

However, Mr Shantilal Shah, the State's Labour Minister was able to impress upon the opposition the futility of the measures they had pressed forward, in seeing the industry out of the present impasse. The suggestion for setting up Textile Industry Corporation made by the opposition, was one which had been disfavoured by the Central Government when they announced their decisions on the recommendations of the Textile Enquiry Commission. A re-examination of this measure was therefore out of place. Mr Shantilal Shah also explained the difficulties attendant on Government's taking over management of closed mills. He pointed out that to take over a closed textile mill, the Government had to approach the High court after liquidation of the mill or to request the Union Government to hold an inquiry into the affairs of the mill.

Mr Shantilal Shah also did not agree with the opposition members about the causes leading to the crisis in the industry, and mismanagement was not the sole or predominant cause though he agreed that some mills were in difficulties mainly for reasons of mismanagement. According to him a variety of factors including high price of cotton, change in tastes competition in foreign markets together with mismanagement in a few cases made up for the difficulties of the textile industry. In view of tangle of causes the situation was neither within the control of the State Government nor of the management of the mill. At the same time he assured that the Government was keeping a close watch.

Mr Shantilal Shah also expressed disapproval of the immoral and illegal practices followed by some mills owners who were not paying the contributions to the provident fund and the State Health Insurance Scheme. At the same time he made it clear that attachment of cloth or cotton stocks or the machinery of the mills was not a very effective method to bring the defaulting mills to book because of the probable adverse impact of such a step on the workers. Mr Shah diagnosed the problem before the industry as being economical rather than technological which therefore needed capable men who knew the economics of the industry to solve it effectively.

GATEWAY MARKETS

Seeds Touch New High Levels

PRICES on the Bombay Oilseeds Exchange displayed a firmer tendency on nervous short-covering and consistent bull support. Led by groundnut, all oilseeds touched new high levels for the week.

Restricted inflow of the new crop from the terminal centres due to hoarding activity continues to provide filip to speculative dealings in the Groundnut section. Spot supplies are scarce, as stockists prefer to unload bit by bit. Even the operation of new margin rules, which are vary in nature, have failed to check the buoyancy of the market. According to section of the trade, even heavier margin than the present one may not be able to check the rising trend of groundnut and groundnut oil. Groundnut Bold is quoted at Rs 36.75 and Groundnut Oil at Rs 18.87.

The marked strength in groundnut imparted a bullish tendency to Castor despite the absence of any new factors. With a view to curbing the speculative rise in this seed, the FMC directed the Oilseeds Exchange to impose graded margins on open long positions in future. Although the forward contract reacted to a small extent on this account, prices ruled generally higher. Moreover, claims of business in castor oil with the Communist countries aided the strength, although few could give any authentic details of the deals. Ready was done at Rs 30.37 and Castor Oil, commercial quality, at Rs 15.56.

There was little of outstanding interest in trading in Linseed and Cottonseed. The overall tendency in these sections was, however, bullish in line with the spurt in castorseed and groundnut. Linseed ready was quoted at Rs 32.37 and Linseed Oil at Rs 16.31.

The Government of India have decided to release a fresh quota of 10,000 tons of undecorticated cottonseed oilcake for export by all shippers without any restrictions of maximum shipment by an individual shipper for the period March/September 1959. The licensing will be done on shipping bills supported by documentary evidence of firm sale contract up to the end of September 1959 or till the ceiling was reached.

Gold & Silver

Sentiment on the Bombay Bullion Exchange was bullish during the major part of the week and both the metals were again lifted to peak levels. Near the close, however, following increased receipts and poor demand, early gains were erased.

Reports of excellent spot demand and hopes that it would increase further with the progress of the season were additional stimulants to the steady rise in Gold prices. Although there were reports of smuggled arrivals which affected the spot position, the rates did not slip back far. Arrivals amounted to 3,600 tolas against an offtake of only 1,500 tolas. Unrefined metal receipts totalled 4,000 tolas. Spot rates moved between Rs 118.81 and Rs 119.12, while Sovereign remained firm at Rs 75.50.

The Silver section remained exceptionally strong with prices showing a spectacular rise, reflecting the increasing uses being found for this precious metal in the modern industry. Demand has been running ahead of actual production. Arrivals amounted to 15 bars against an offtake of 9 bars. Spot rates (.916) moved between Rs 199 and Rs 199.25.

Non-Ferrous Metals

Prices in the Non-Ferrous Metal market showed a mixed trend. While the price of Copper remained firm, price movements in other metals were confined to a narrow range. Copper Scrap is quoted at Rs 216 per cwt; Zinc at Rs 90.50; Lead at Rs 77 per cwt and Tin at Rs 148 (per quarter). On the London Metal Exchange, Copper is quoted at £257½; Zinc at £75½; Lead at £69½ and Tin at £782, all per ton.

Although the price of copper in London has been rising in line with New York, relatively little metal has been bought by consumers. This is because the British cable industry, the main consumer, is at a very low state of activity, while exports are also poor this year. Only the smaller group of copper consumers, the domestic appliance producers who use copper plate, have been buying well.

Lead and Zinc prices are moving quietly within narrow limits. Metal traders in London do not appear to have strong feelings about their immediate prospects. There is a world surplus of both metals and there is ample production capacity unused. Lead, in particular is conscious of this position with demand still low. Consumption of zinc, on the other hand, has risen appreciably. This increase, together with earlier output reductions is responsible for a premium or nearby supply position.

Yarn

According to the figures released this week, imports of Art Silk Yarn, in Bombay, have amounted to 3,214,197 pounds in February against 3,411,347 pounds in January, and 1,961,028 pounds in the corresponding month of February last year. Staple-Fibre Yarn imports have come to 5,038 pounds against 5,370 pounds in January. Cotton Yarn imports amount to 73,06 pounds against 95,077 pounds.

March 21, 1959

WORLD OF COTTON

ALTHOUGH buoyant conditions prevailed in the Bombay Cotton futures market, operators were inclined to book profits at bulges. The statement made by the Bombay Labour Minister, that the Government were keeping a close watch over the situation, was interpreted bearishly as meaning possible intervention by the Forward Markets Commission to check any further rise in prices. Moreover, the series of measures taken by the FMC to checking the rising trend in oilseeds prices unnerved operators.

The initial firmness in prices was mainly due to a revision of the crop estimate. From firm ideas of a bumper crop, the trade sobered down to an expectation of a crop more or less equal to the last one. According to present indications, the carry-over of Indian cotton, at the end of the season, will be lower by about 50,000 bales at 19.95 lakh bales as against the opening balance of 20.45 lakh bales. Foreign cotton opening stock, as on the 1st September 1958, was 1.56 lakh bales. Imports, during the first six months of the season, have amounted to 1.27 lakh bales and expectations are that imports for the next six months may come to 2.73 lakh bales.

Thus, the total supply of cotton, during the current season, is placed at 74.51 lakh bales. With estimated consumption of 45.50 lakh bales of Indian cotton and 4.80 lakh bales of foreign cotton and exports of 3.50 lakh bales, total distribution may come to 53.80 lakh bales, leaving a carry-over of 19.95 lakh bales of Indian cotton and 76,000 bales of foreign cotton. The total carry-over will thus be in the vicinity of 20.71 lakh bales as against 22.01 lakh bales brought in.

In the Spot section, prices continued to rule firm with mills as eager buyers. Reports of scanty arrivals in the interior aided sentiment. There is a growing feeling that the agriculturists are holding on to their crop in expectation of higher prices, thanks to the extensive co-operative credit now available to the rural sector.

On the export front, buying interest was confined to only Bengal Deshi variety. There is a proposal that a cotton delegation from India should visit export markets to explore possibilities of selling more of our cotton. It is also suggested that some incentives should be given to exporters. One incentive, that has been proposed, is that a part of export earnings should be utilised for importing foreign growths.

In the foreign cotton section, business done was small. The Government of India have decided to allow a special import quota of 30,000 bales of Egyptian cotton to the textile mills direct. The mills are supposed to complete their purchases on or before March 31. This quantity will be imported on a net discount basis of 2½ per cent and payments will be in rupees under

Prices React to Crop Estimate

the existing special rupee payments agreement with Egypt. It appears that some mills have already undertaken to absorb the quantity and those, who have given such an undertaking, have been told that they will be given 50 per cent more than the original quantity agreed to.

The news of this special import allocation has, however, raised a controversy in the Bombay cotton trade, as comparable growths of Sudanese cotton are available at a price much cheaper than Egyptians, the price advantage per candy being anything between Rs 200 and Rs 300. Sudan has surplus of 7 lakh bales of cotton to dispose of and her terms are quite attractive. Although she is not in favour of a barter deal for the reason that she is already having an adverse balance of trade with India to the

extent of £3 million, it is definitely more advantageous for us to conclude a deal with Sudan in preference to Egypt, who is also having an adverse balance of trade to the extent of £2 million.

KARACHI COTTON MARKET:

In the Karachi cotton futures market, increased switch-over of purchases from the maturing March contract to May resulted in a sharp fall in rates for the former, while the latter ruled firm on buying support.

ALEXANDRIA COTTON MARKET:

Quiet conditions prevailed in the Alexandria cotton market. In the absence of any new development, trading interest was low and turn-over limited.

LIVERPOOL COTTON MARKET:

Prices in the Liverpool cotton futures market showed a mixed trend. While the near deliveries ruled firm on good support, the distant contracts met with selling and declined. Sudan contracts lacked buyers; but values remained unchanged.

NEW YORK COTTON MARKET:

After a sharp reaction in prices, the New York cotton futures market witnessed a gradual recovery towards the close, thanks to commission house buying and trade support. The demand was attributed to increased activity in the allied markets. Expectations of good demand for early new crop cotton also imparted strength to the market.

World Champions choose.. Firestone ..so should you

In major racing events around the world, Firestone tyres prove their safety year after year. Again, last year, in the Indianapolis and the Monza 500 mile races, where tyres are subjected to terrific punishment, Firestone tyres carried the winners safely to victory without a single tyre failure. You, too, can have this same safety and dependability because the Firestone tyres for your car are built with the same safety construction features as racing tyres. Firestone tyres are Safety-Proved by Performance.

This statement forms part of the Balance Sheet

THE CENTRAL BANK OF INDIA, LIMITED

Sixty-Fourth Report of the Board of Directors

Gentlemen,

The Directors beg to place before the Shareholders the Balance Sheet and Profit and Loss Account for the year ended 31st December, 1958.

The Net Profit for the year, including the sum of Rs. 18,44,046.05 brought forward from the previous year's account, amounts to

The following appropriations have been made:—	
An ad-interim Dividend was paid for the half-year ended 30th June 1958 at the rate of 6% free of income-tax, i.e. Rs. 1.50 per share on 12,58,170 shares	Rs. 18,87,255 00
Amount provided for Taxation	16,50,000 00
Amount transferred to Staff Gratuity Fund	10,00,000 00
Amount provided for Bonus to Staff	32,00,000 00
	Rs. 77,37,255 00

The balance of Rs. 42,48,855.29 the Directors propose to recommend to the Shareholders to dispose of as follows:—

To pay a final Dividend for the half-year ended 31st December 1958 at the rate of 8% free of income-tax, i.e. Rs. 2.00 per share on 12,58,170 shares (making in all 14% per annum for the whole year)	Rs. 25,16,340 00
To carry forward to next year's account	17,32,515 29
	Rs. 1,19,86,110 29

The Bank's business during the year under review showed satisfactory progress. During the year, a Branch was opened at Kiderpore (Calcutta) and seven Sub-Branches and eight Pay Offices were opened at other centres. During the same period, three Pay Offices had to be closed down as they were found to be unremunerative.

The Directors record with deep regret the death which took place on the 31st October, 1958 of their colleague, Mr. Manmohandas M. Amersey. They desire to place on record their appreciation of the very valuable services he rendered to the Bank.

Three of your Directors, Sir Homi Mody, Mr. C. P. Wadia and Sir Jamsetjee Jejeebhoy, Bart., retire under Article 92 of the Articles of Association, read with Section 256 of the Companies Act, 1956, and are eligible and offer themselves for re-appointment.

Shareholders are requested to appoint the Auditors for the ensuing year and to fix their remuneration.

The attention of the Shareholders is drawn to Item No. 7 of the Notice convening the Meeting and they are requested to consider and, if thought fit, to pass the necessary resolutions, proposed as special business, for the disposal of the various un-allotted shares and coupons shown in the Balance Sheet under the heading "Subscribed Capital".

The attention of the Shareholders is also drawn to the Directors' Report of the previous year regarding the dissolution of the Bank's Subsidiary, The Depositors' Benefit Insurance Co., Ltd. As the tax liabilities of the aforesaid Subsidiary have not yet been finalised, it has not been found possible to obtain the necessary certificate from the Ministry of Finance, Government of India, allowing the dissolution of the Subsidiary Company.

H. P. MODY
Chairman.

Bombay, 28th February, 1959.

Statement pursuant to Section 212 of the Companies Act, 1956.

(a) The Bank's interest in its Subsidiary, The Central Bank Executor & Trustee Company Private Limited as at 31st December 1958 comprised 1998 shares of the face value of Rs. 1,000/- on each of which Rs. 500/- per share has been paid up.

(b) The profits of the Subsidiary Company for the year ended 31st December 1957 have been included in the item "By interest etc." in the Bank's Profit and Loss Account as at 31st December 1958 to the extent of the dividends amounting to Rs. 39,960/- declared and paid by the Subsidiary for the year ended 31st December 1957 in respect of the Bank's share-holding. The undistributed balance of profit of the Subsidiary amounting to Rs. 23,612.58 has been carried forward in the accounts of the Subsidiary.

(c) The net aggregate amount of Rs. 11,36,362.50 received as dividends from the Subsidiary Company for its previous financial years, since its inception as a Subsidiary Company, have been dealt with in the Profit and Loss Account of the Bank in the relevant years.

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of The Central Bank of India, Ltd., as at 31st December, 1958 and also the foregoing Profit and Loss Account of the Bank for the year ended on that date in which are incorporated the returns of 51 branches audited by us, 21 branches audited by other auditors and the unaudited returns from 102 other branches and 124 Pay Offices not visited by us.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisos to sub-sections (1) and (2) of Section 211 and sub-section (5) of section 211 and section 227(5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The accounts are therefore, drawn up in conformity with Forms A & B of the Third Schedule to the Banking Companies Act, 1949.

We report that:—

- We have obtained all the information and explanations which, to best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;
- the transactions of the Bank which have come to our notice have been within the powers of the Bank;
- in our opinion, proper books of account as required by law have been kept by the Bank and the returns adequate for the purpose of our audit have been received from the Branches of the Bank;
- the Bank's Balance-Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;
- in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet, read along with the notes appearing thereon, give a true and fair view of the state of the affairs of the Bank as at 31st December, 1958, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

OLYMPIUS

INGS will doubtless sort themselves out in course of time, but at moment there is much confusion in the political atmosphere. The Congress party is in most continuous throes of making up its mind about its future arian programme. In the Punjab, atmosphere is tense with agitation and some of it has invaded capital. In Parliament itself, there is deep misgiving about the -Pak military agreement. Much said by people who have no particular responsibility, and others, ply exercised themselves, are igned to be muted in expressing ir fears. Meantime, in the eral imbroglio over relations h Pakistan, particular grievances, like West Bengal's over ubari, are making matters difficult for authority. And Pakistan ms determined to keep us all edge, if not to push us over into exasperated false move, by daily senting of border incidents. To general atmosphere of every- ing being at sixes and sevens, contribution made by those ing to unravel the snags in the ent budget proposals is not onsiderable.

A certain kind of temperament es to this sort of chronic ten- as ducks to water. And if chooses to be a man of affairs, had better have this tempera- nt. Otherwise, he will develop anxiety neurosis or a gastric er. It may be that Congressmen ating the virtues of joint farm- will come out of it all fairly scathed. It may also be that seemingly fundamental schism the party over the virtues of peration in farming is no more ous than such schisms in the t and the Party may emerge of all this controversy without ous damage to its organisational ality. But, at the moment, it ms that the cataclysm that the spur resolutions have engende- is more serious than those that e shaken the organisation in past. It is true that it has not wn up anything in a spectacular ution as happened when the ty quarrelled over Subhas Bose. far, except for Mr N. G. Ranga, re has been no serious casualty. e reason for this is two-fold. the past, convulsions were dra- ic because personalities rather n principles were involved. Sed- nly, unlike in the past, confor- y has a greater inhibiting in- ence now. It would be rash to l this a misfortune, because the k of economic reconstruction is ething in which we cannot ord to have too colourful diffe- ices of opinion. It cannot also denied that the personality of Prime Minister is so over- ivering today that not many do dare speak out with the com- ely abandon that characterised -independence confabulations. we are in a curious situation. is quite on the cards that the

number of Congressmen genuinely convinced of the inevitability or excellence of cooperative farming is far less than one would be led to imagine from the adoption of the Nagpur resolutions. There is considerable mental reservation even among the knowledgeable in the party and some of these are guardedly brought into the open. But it cannot be denied that there is a lot of hypocrisy—the price conformity has always to pay—in the attitudes of many Congressmen.

There is some reason to fear that Mr Nehru is not aware of the real dangers of the situation. Mr Nehru's espousal of cooperative farming has recently reached unprecedented heights of passionate fervour. He is, as ever, anxious to take the country with him, and qua arguments, some of his statements are reasonable—at any rate, arguable. But, one cannot help feeling that, in the passion he imports into the discussion and in the uncharacteristic violence of his criticisms of those who oppose the idea, there is involved a psychological factor. In a person less intellectually fastidious, the violence can be attributed to his own doubts about his panaceas. In Mr Nehru's case, I think it is due not to his personal, but his party's, unavowed doubts about his policies. Mr Nehru cannot be unaware that a considerable number of his followers are not convinced of the idea of joint farming. And though he stridently asserts that he is glad that the matter has been brought into the open, the fact is that it has not been brought into the open. He says that he is not afraid of a split in the party. But the real danger is not that there will be a split but that there won't be. And the recent party mandate that prohibits expression of views against the Nagpur resolutions may be justified on the grounds of discipline and on the more important ground that a step taken after deliberation should not be almost immediately abandoned. But the effect of this mandate will be to drive the differences underground. So far from split splintering the Congress, the danger is a Guerilla warfare inside the party. Uncious homage to the principle will be accompanied by a cynical disregard of it in practice. What is even worse, and what is happening is that nothing is said in Mr Nehru's presence or earshot, but when he is not about, grumbling and doubts are freely expressed. This is the point at which hypocrisy ceases to be social convenience and becomes duplicity.

So the real danger is not a split. Considering the advantages to be gained by being Mr Nehru's followers, it is unlikely that even those who doubt the virtues of joint farming will readily quit the party. Others, less self-regarding, may be obliged to acquiesce by reasons of personal loyalty to their

leader and by what they conceive to be the larger interests of the country. They may swallow their doubts and try to work the idea, but half-heartedly. A situation like this cannot be very satisfactory to anyone, least of all to Mr Nehru.

There is truth in Mr Nehru's assertion that opposition to joint farming proceeds from the break with tradition it involves. There is also no doubt that at least part of the opposition to it proceeds from vested interests. It is also true that the political and economic compulsions behind reorganising agricultural patterns are, in a sense, unevadable. But, it is clear also that tasks of such revolutionary importance can be carried out only if the party is not riven with divided counsel. One solution may be to force a split so that the genuinely faithful can act effectively. But, as I said, such a split may not occur. And, for other reasons, it may be unwise to force it.

Congress leadership is dimly aware of all these complexities. In fact, the one positive thing that has emerged from the recent party discussions in Delhi is that the immediate energies of the party are to be devoted to the popularisation of service cooperatives within the next three years. This is a shrewd move than may appear at first sight. In a detailed note embodying the results of its recent deliberations, the Working Committee of the Congress says that the opponents of the Nagpur resolutions are queering the pitch by fastening only on the idea of joint farming; that is admittedly to come only three years from now. They are ignoring that part of the Congress programme which is immediate—the creation of service cooperatives. Congressmen have, therefore, been asked to concentrate on the creation of a network of service cooperatives all over the country. By implication, they are to forge for the moment the arguments about joint farming. This is an excellent move, for, even those who oppose joint farming profess themselves as not opposed to cooperation in principle and as actually attracted by the idea of service cooperatives that do not touch property rights. The strategy should be to enlist the cooperation of these people in creating these agencies. And whether cooperation will find a ready soil in this country or not will be amply demonstrated by the success or failure of these experiments. If they so succeed, the opponents of cooperation will find their position weakened and will have to accede to the idea of further cooperation.

If, on the other hand, these service cooperatives fail, then, in strict logic, it will be incumbent on the Congress party to abandon further cooperation for the time being. If the Congress cannot make a success of service cooperatives, it can hardly make a suc-

cess of cooperative farming with property rights kept in abeyance.

It is here that the wiliness of the idealism of the Congressmen will be put to test. It is not unlikely that the so-called vested interests will try to discredit service cooperatives so that the whole idea of cooperation may be dropped once and for all. Here, then, is challenge for Congressmen to prove their mettle. If they make service cooperatives succeed, they would have proved their point, their idealism and their practical ability to carry through a reform of fundamental importance. The wind out of the sails of those who oppose cooperation will have been completely emptied. The cooperative principle, even in farming, will then not have to be forced down any body's throat, as it is now alleged to be done.

S. E. RLY TENDERS

Sealed tenders are invited for Tender No. PA/GM/6/35/GB10 for supply of 3,06,200, sq. ft. Chicks made of round seasoned bamboo sticks newar boarded and diagonally bound lined with blue cloth and leather bound at the corners complete with ropes, pulleys and eyelets for hanging. The closing date of the tender is 9-4-59 at 3 P.M.

Tender forms are obtainable from the office of the Controller of Stores (PA Section), Garden Reach, Calcutta-23 on remittance of Rs 5/- (not refundable) per copy by money order to him direct in the case of outside firms and on production of cash receipts from this Rly's Chief Cashier by local firms. Earnest money is Rs 4,000/-.

Firms not on the Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

Oil Distribution

Initiating a discussion on the oil distribution trade, Mr Bhupesh Gupta, the Communist leader in the Rajya Sabha, exposed the price anomalies lurking in the oil distribution trade which is in the monopolistic control of foreign companies and the huge profits appropriated by them at the expense of the consumers. Whereas the price quoted by the foreign oil companies was, according to Mr Gupta, Rs 469 per ton, the price paid by the consumer came to about Rs 560 per ton. Similarly against the price of Rs 6/- paid by the consumer per tin of four gallons of kerosine, the C.I.F. price was only about Rs 2.8 the difference going to swell the profits of the oil distributing companies. Mr Gupta in this connection said that on this business of oil distribution, the foreign companies are amassing nearly Rs 60 crores per annum. These anomalies could therefore be rectified if the monopolistic distribution by foreign companies is replaced by Government participation, and until such time as this could be implemented, there should be price control on the products of petroleum.

Accepting the existence of such anomalies Mr K. D. Malaviya Minister for Mines and Oil, agreed to the suggestion made by Mr Gupta for ending the present system of distribution and said that Government was considering a scheme for participating in the oil distribution trade with a view to sharing in the profits as well as bringing down the price for the consumer. However, Mr Malaviya, warned against precipitate action in view of the decades old control by the foreign companies, the lack of experience on the part of the Government, and the possibility of relations between the foreign oil companies and the Government getting strained in the event of any ill-advised move which would adversely affect the foreign companies. There were also other factors, such as finance, technical know-how etc which would favour a cautious policy regarding Government taking over distribution of oil in the country. It would obviate any ill-will if a scheme to enable the Government to share in the oil business was prepared in consultation with the foreign oil companies themselves.

That a reduction of the price for petroleum products if there should be scope for it, is not contingent on Government taking responsibility for distribution has also been indicated by Mr Malaviya. In this connection he pointed to the inquiry of the cost structure of the various petroleum products initiated by the Government in collaboration with the industry. A substantial reduction in the price of petroleum products is anticipated.

Industrial Production

The Annual Report of the Ministry of Commerce and Industry for 1958-59 reveals a rise both in industrial output as well as in industrial production capacity. The index of industrial production excluding cotton and sugar is recorded to have increased from 146.9 in the first nine months 1957 to 155.9 in the corresponding period of 1958. This testifies to commendable progress in production, considering that many industries were up against formidable obstacles and were hard put to it to find even the necessary raw materials which went into short supply consequent on scarcity of foreign exchange. Cement, machines, tools, sewing machines, power-driven pumps, diesel engines, electric motors electric fans, bicycles, sulphuric acid, caustic soda, paper and tyres had all shared in this increase in production.

Notwithstanding this increase, it remains a fact that the rate of increase has not been of the same order as for the previous year, fall in the production of textiles, and the difficulties of the engineering industries having brought about a fall in the rate of increase. Against an output of 5,317 million yards in 1957, output in textile industry went down in 1958 to 4,900 million yards, fall in consumer off-take being the main factor behind this decline. Similarly the automobile industry reacted to the pinch in the foreign exchange situation by a fall in production, which was further aggravated by outbreak of labour troubles. It is therefore the availability of foreign exchange that holds the key to further and renewed impetus to industrial production.

The foreign exchange difficulty which sent many industries to languish in stagnant waters, also marked the birth pangs of some new industries both in public sector as well as in the private sector. The year saw the formation, in the public sector, of the Heavy Engineering Corporation, with responsibility for setting up a heavy foundry forge, a heavy machine building shop and a mining machinery works. Another significant instance of success was the beginning made in the construction of heavy electrical plant at Bhopal with British collaboration. The expansion of antibiotic production at Pimpri, the setting up of a new plant at Nangal and the expansion of Sindri to augment fertilizer supplies were the other schemes that benefited from the friendly aid given by foreign countries.

The industries which achieved expansion in capacity were, cement, caustic soda, soda ash, sulphuric acid, super-phosphate, oxygen gas, road rollers and refractories. Industrial goods produced for the first time, in 1958, included electro-plating salts, activated carbon, heavy industrial sewing machines, mercury vapour lamps PV insulated aluminium cables, and mica insulating bricks for steel projects.

NORTH INDIAN MARKETS

Sugar Export Quota

SUGAR markets have continued to rule steady due to good outside demand and expectations of early termination of the season. The overall production is also expected to be lower than last year.

In this connection, it is learnt that the Indian Sugar Mills Association has represented to the Government of India to reduce the export quota of sugar from 50,000 tons to 25,000 tons, to be shipped by May. It has further suggested that the export quota for October/December period should be fixed later.

The production of sugar, during the 1958-59 season, is lower at 18.60 lakh tons against 19.76 lakh tons in the previous year. The shortfall is mainly due to a shorter crushing season, and only six out of 14 new factories have gone into production. This has reduced the expected production by 60,000 tons.

The number of factories worked during the season is 161 against 153 and the fall is expected to be little less than 8 per cent over the 1957-58 production. Some of the factories in west Uttar Pradesh have terminated their season and most of the factories are transacting their business at higher rates than fixed by the Government.

Several factories in east Uttar Pradesh have already closed down the crushing operations for the season on account of shortage of cane supplies. The Iqbalpur factory in the Moradabad division has also closed crushing since February 28. Most of the factories are expected to stop the crushing operations for the season by the end of this month.

Gur

The Gur market rules quiet. In the Muzaffarnagar market, arrivals amounted to 52,500 tons. Arrivals from the start of the season till today amounted to 11.96 lakh maunds as against 7.79 lakh maunds during the corresponding period of the previous year. Present stocks of gur are estimated at 2 lakh maunds, the corresponding figure for last year being 2.75 lakh maunds.

Foodgrains

Quietly steady conditions prevailed in the Hapur Foodgrains market. The Government of India have imposed restrictions on transport of foodgrains to, from or within a five-mile belt all along the border of Uttar Pradesh with adjoining States except under a permit. The foodgrains affected are wheat and its products, rice and paddy, maize, jowar and bajra and their products.

Wheat and Gram prices have

recorded fractional gains due to paucity of stocks and harvesting of new crop will still take about a month's time. The market for rice continues to be steady and export from other surplus districts of the State has been banned in order to facilitate Government procurement operations. Gram prices have registered an advance of Re 1 per maund on firmer advices from the consuming areas following better demand in the face of dwindling stocks. Arrivals of the new crop have, however, begun in some States of the South. Barley and Bejher prices have also sought higher levels in sympathy, although standing crops are reported to be fairly good and harvesting is likely to begin in a fortnight's time. Harvesting of early-sown peas is in full swing and new grain arrivals have also begun in east and west Uttar Pradesh. The markets for Arhar, Urad and Moong are ruling quiet.

In the Delhi grains market, wheat prices have registered a small decline due to restricted buying. Stockists of Coarse grains are reported to be anxious to sell their stocks before the arrival of the new crop in the market. Rice prices have been ruling steady, as supplies are restricted following the ban on exports from the surplus States. The slack demand for Barley and Bajra is reflected in the lower prices for their commodities. Despite brisk consumer demand, Maize prices have shown a downward trend due to heavy local stocks.

Shellac

The Shellac market in Calcutta has continued to display a firmer tendency, being attributed to the trade arrangement between the State Trading Corporation and North Korea under which a substantial quantity of Indian shellac will be exported to that country, not to speak of the recent decision of the Indian Lac Cess Committee to extend the minimum export price scheme at least up to the end of August.

While there is no sign of improvement in foreign demand, the present supply position appears to be helpful to the market. Lac production, during last year, is estimated at 9 lakh maunds as compared with an average crop of slightly over 10 lakh maunds. The new Bysakhi crop is likely to be better than in 1958; but it is not expected to arrive in the market before the middle of April and the arrivals will grow in volume only in May.

The movement of lac crop in Thailand—India's only rival in this field—is also not likely to start before August. However, from the longer-term point of view, with promising supply prospects and no hope of a spectacular rise in demand, the trade is worried over the possibility of the foreign demand being diverted to Thai lac. A continuous watch over the demand-supply position in the intervening period is, therefore, necessary before the present scheme is extended for a further period.

March 21, 1959

Indian Finance

The Bank of India Limited

Satisfactory Measure of Success

Keen Competition for Deposits

Chairman, Sir Cowasjee Jehangir Baronet, on Govt's Tax Policy

Extracts from the Speech of the Chairman, Sir Cowasjee Jehangir, Baronet, G.B.E., K.C.I.E., at the Fifty-Third Annual General Meeting of the Shareholders of The Bank of India Limited, at Bombay, Thursday, the 12th March, 1959.

Ladies and Gentlemen,

With your permission the balance-sheet may be taken as read.

At the time of our Annual General Meeting in 1958 the currency in circulation was Rs. 1,546 crores, whilst at the corresponding date in 1957 it was Rs. 1,515 crores. This year it is Rs. 1,659 crores. The increase on last year's figure is Rs. 113 crores. This increase is not surprising having regard to the progress and magnitude of the Second Five-year Plan.

The year 1958 has been a year of some adventure for commerce and industry. Many of the events of the year have caused considerable anxiety but the year has not been one of unrelieved gloom. For many countries, it has been a year of economic recession, the impact of which could not be avoided in this country. Indeed, our share of the recession has been comparatively greater than that of some other countries. We are industrially under-developed and have been affected in two opposite directions. Our exports have earned less and the high cost of imports has continued, so that our foreign assets have been reduced. Our plans for economic development have had to be pruned. To a great extent this has been unavoidable. We could not have escaped some of the ill-effects of a recession affecting a large part of the world. Nature, too, has been unkind regarding food-grains and the food position and food prices at the moment cause anxiety. The country has been assisted by timely help from outside. The outlook is not entirely dark. Agricultural production has, latterly, shown improvement and the food situation is expected to get better in coming months. When additional factories in course of erection start production the supply of basic materials, such as steel and cement, can be counted upon to increase substantially.

The year has seen enhancement in the burden of taxation. The Expenditure-tax Act, 1957, and the Gift-tax Act, 1958, have brought additional levies into force from 1st April, 1958. These two enactments chiefly affect the well-to-do classes. The Finance Act, 1953,

brought no material tax relief to any section of the community. It substantially continued the levies enacted by the Finance (No. 2) Act, 1957, which had increased taxation, particularly in the case of companies, to an onerous degree. I think the high level of personal and corporate taxation affects capability or, at least, willingness to work, save and invest. High taxation can be conducive to extravagance in business. The collection by the Government of the various additional direct taxes with which we have lately been saddled cannot, I think, be other than costly.

For the few who pay direct taxes India continues to be the heaviest taxed country in the world, which results in people having to live on their capital while millions of the population continue to pay very little or have no capacity to pay any direct taxes at all. When we are already the heaviest taxed country in the world the proposals in the Central Government budget just presented seek to impose an additional burden by increasing by ½ per cent. the levy on every slab of wealth subject to tax under the Wealth-tax Act. This will mean a further drain on the already attenuated resources left in the hands of the private sector and cannot but prove a serious disincentive to further enterprise in the country. This is the result of the Government having followed the advice of so-called experts who are not well-known in their own country and whose advice, when given, has been rejected. It is most regrettable that the Government could not find better advisers when there are so many well-known economists in foreign countries if they did not wish to take the advice of real economists in their own country.

The year 1958 has been a period of concern over the foreign exchange situation. The pronounced restrictions on imports continue. The conditions upon which licences for imports are granted upon a deferred payment basis have become tighter. To carry through deferred payment schemes of any size the assistance of banks abroad is usually necessary. Such banks have not always taken an optimistic view of the foreign exchange future of the country and it has, generally, not been easy to put through schemes providing for the deferred payment of large sums. The country's securities and balances held abroad have continued to fall during 1958, although the rate of reduction slowed up towards the end of the year. Accretion to our

exchange resources must be brought about by additional export earnings. The cases of Japan, West Germany and the United Kingdom are examples of how a determined national effort to export can build up the economy of a country. The will to export must come. This should be induced by incentives. The Union Minister for Commerce and Industry is reported to have pointed out since the end of the year that resort may be had to compulsory exports. Foreign aid is being given to this country to meet the foreign exchange needs of the Second Five-year Plan. I do not know if we fully realise our future liabilities for interest and repayment instalments on the loan portion of the aid we receive. In any event, foreign aid and the artificial restriction of imports are negative measures. What we need so badly is an early and significant increase in our exports.

The Reserve Bank of India Rate, which had been raised from 3½ per cent. to 4 per cent. on 16th May, 1957, continued at 4 per cent. throughout 1958. The tightness of money of recent years was apparent at the beginning of 1958, but the situation changed during the year. By July, 1958, money with banks had become decidedly easy. The curtailment of imports left substantial unemployed funds in the hands of traders. During the year the total deposits with scheduled banks rose steadily and appreciably. There was a material rise in the investments of scheduled banks in Government Securities from about half way through the year. The total advances of scheduled banks increased up to about April, 1958, and then fell off during the remainder of the year.

The pattern of bank deposits has changed during recent years by a pronounced shift from current deposits at small interest to time deposits bearing high rates of interest. The keen competition amongst banks for deposits in tight money conditions has raised the rates of interest on time deposits, increasing materially the cost to banks of money lodged. Banks must keep a working margin between their deposit rates and their lending rates. Higher deposit rates ordinarily mean higher lending rates. These increase the cost of borrowing for trade and industry and this, in turn, must tend to lead to higher prices for goods and services. Much thought has been given to means to reduce the intense competition between banks.

The result is an inter-bank agreement on maximum rates of interest on deposits on an all-India basis. The Agreement, which came into force from 1st October 1958, lays down regulations and stipulates maximum rates of interest for deposits. It is expected to eliminate undesirable competition amongst the larger banks for deposits.

The Bank's business has functioned during 1958 with a satisfactory measure of success but in a lower key than in the previous two years. We are not, I think, alone in this experience. Banks these days do not find it easy to earn an adequate net profit. Establishment charges and operating expenses continue on their upward way. Our profits for 1958 have been affected by paying high rates of interest for money lodged without receiving correspondingly increased interest on money lent. The heavy taxation on companies is a pronounced difficulty. It adds to the magnitude of our task of keeping up the profit after tax. We need to obtain more deposits and we have, in 1958, adopted measures to bring this about. From 1st July, 1958, we introduced a system of withdrawals by cheques from Savings Bank accounts at all our branches in India and at some overseas branches. From the same date we began to issue 3-year and 5-year Cash Certificates. The response to these measures has been satisfactory.

We have opened new branches during 1958. Three branches have been opened within Greater Bombay and four branches at other places in India, namely, at Navrangpura in Ahmedabad and at Baroda, Kanpur and Visakhapatnam. Since the year ended we have opened a branch at Santa Cruz on 31st January, 1959. New branches mean laying out funds. They do not bring added profits immediately. We have to bear the appreciable expenses inseparable from their establishment and it is usually some considerable time before they become self-supporting. When that stage is reached, with the acquisition of increasing deposits, we look to new branches to become satisfactory revenue-earning units in our organisation.

I would now refer you, ladies and gentlemen, to the balance-sheet and accounts.

The total at foot of the balance-sheet is almost Rs. 102 crores. This is an increase approaching Rs. 4 crores over the figure of Rs. 98 crores of the previous year.

The profit figure for 1958 at over Rs. 85½ lakhs shows a decrease of about Rs. 8 lakhs as compared with

the previous year's profit of about Rs. 93½ lakhs. The decrease, though appreciable, is not surprising in the face of rising costs and for a year of difficult trading. Before the profit figure has been arrived at, usual appropriate and prudent provisions have been made.

The provision for taxation absorbs Rs. 25 lakhs against Rs. 30 lakhs for the previous year.

A final dividend of 10 per cent., free of income-tax, is proposed, absorbing Rs. 30 lakhs. This, with the interim dividend of 6 per cent. paid last August, makes the total distribution 16 per cent. per annum, or Rs. 48 lakhs for the year, free of income-tax. The proposed carry forward is nearly Rs. 13 lakhs against Rs. 16 lakhs the previous year.

I will now touch upon a topic which I consider is most important for all classes of people in this country. In the course of the Azad Memorial Lectures the Prime Minister is reported to have said "It is only power with wisdom that is good". I may respectfully point out that this is most important when applied to the adminis-

tration by the Central Government of this country. The country is borrowing hundreds of crores of rupees from foreign countries but I have not read anything in the speeches of the Prime Minister which suggests that measures are being taken to see that the country gets full value for money spent. We only hear of schemes running into crores of rupees where the estimates in many cases are exceeded by large percentages but I do not read about any steps being taken to see that the country gets value for the crores spent on beneficial objects. The only way that the Five-year Plan can really succeed and be of benefit to the country is to see that every humanly possible effort is made not to have any unnecessary waste or extravagance and also to see that there is no corruption. If that is not done the Five-year Plan will be the greatest disaster to the country instead of being of ultimate benefit to the millions of its population. At a time when India will continue to need foreign assistance to a considerable extent, it is to be hoped that the Government will so formulate their policy

as to remove any misgivings abroad and to inspire greater confidence amongst India's creditors. One sure way of creating this confidence is to see that the crores of rupees which have been borrowed will be wisely spent and that India gets full value for its money.

I regret to have to tell you that Sir Joseph Kay, K.B.E., who had been a Director of the Bank for 37 years, died on 1st October, 1953. Sir Joseph was an experienced man of business. He rendered valuable service to the Bank over a long period. Since the close of the year, we also have to mourn the death on 23rd January last of another Director, Sir Vithal Chandavarkar. Sir Vithal joined our Board only on 12th October, 1956, but he brought to our deliberations a mature experience of industry and banking.

During the year 1958, at the invitation of the Board of Directors, Mr. Jugmohan Prasad Goenka accepted a seat on the Board. Mr. Jugmohan Prasad Goenka is an active partner of the old-established firm in Calcutta of

Messrs. Ramdutt Ramkissendass. He is no stranger to the Bank. From 1930 until he joined the Board recently he was a member of our Calcutta Branch Local Committee. At all times, he has been most helpful to us with advice and assistance. We consider that he would be able to confer upon the direction of the Bank's business a considerable breadth of experience. Under the law and the Bank's Articles of Association he holds office up to the date of this meeting and his election is before you on the agenda to-day.

I record with pleasure our appreciation of the help rendered during 1958 by our Local Committees at various centres. I would also express our thanks to our General Manager, Mr. T. R. Lalwani, for his able management of our affairs. I would extend our thanks to the staff who assisted Mr. Lalwani in dealing with the Bank's business during the year.

NOTE:—THIS DOES NOT PURPORT TO BE A REPORT OF THE PROCEEDINGS OF THE ANNUAL GENERAL MEETING.

The Industrial Credit and Investment Corporation of India Limited

New Line of Credit Initiated

Over Rs 1337 Lakhs in Local & Foreign Currency Assistance

Chairman Sri G. L. Mehta's Survey

The Annual General Meeting of the Shareholders of the Company will be held at the Registered Office of the Corporation, Union Bank Building, Apollo Street, Fort, Bombay 1, on 13th April 1959 at 4 P.M. The following is the Statement by the Chairman, Mr. G. L. Mehta, circulated to the Shareholders with the Directors' Report and Accounts for the year ended December 31, 1958.

Before I turn to the Directors' Report, I should mention that I assumed Chairmanship of this Corporation just when 1958 was coming to a close. For almost the whole of that year, Sir Ramaswami Mudaliar was the Chairman, which office he has held with rare distinction since the inception of your Company. I wish to take this opportunity of paying our tribute to Sir Ramaswami for the invaluable part he has played in the formation of this Corporation and in piloting its affairs till the time of his retirement as Chairman. I am, however, glad that he has graciously agreed to remain on the Board of Directors and continue to give to the Board the benefit of his wide experience and his keen understanding of financial and industrial problems.

It will be seen from the Directors' Report that by the end of 1958, your Company had agreed to give total financial assistance for Rs. 1337 lacs, excluding applications sanctioned but subsequently withdrawn by the applicants. Of this amount, Rupee assistance amounted to Rs. 1021 lacs for 37 projects and Foreign Currency loans to Rs. 316 lacs for 9 projects. Out of the total of 44 companies 18 were new enterprises.

The results for 1958 show that operating profits subject to taxation were Rs. 51 lacs as compared to Rs. 48 lacs in the previous year. Tax liability will, however, be correspondingly higher with the result that disposable profits will be Rs. 25 lacs. This makes it necessary to maintain the same rate of dividend of 4% as was paid last year.

What is, moreover, a matter of concern is our inability to build up adequate reserves, due to present taxation, which are vital to strengthen this Corporation in order that it may be able to undertake greater risks in the future. Sir Ramaswami Mudaliar, my predecessor, referred at length in his Chairman's Statement last year to this aspect and I do not propose to go over the same ground except to

stress the importance of this matter for the development of this Corporation.

It will be apparent from the information given in the Directors' Report that the pattern of total assistance sanctioned continued to be similar to that of last year. Financial assistance was provided more or less equally as between loan operations in Rupees and Foreign Exchange, on the one hand, and underwriting operations and investment in shares or debentures, on the other. It is of interest to note that in regard to loan operations, Rupee loans have not recorded progress but Foreign Currency loans continue to make satisfactory advance. To a certain extent, such a pattern is explicable in view of the existence in the country of several institutional agencies which specialise in the grant of Rupee loans.

Your Company being the only institution which is in a position to disburse Foreign Currency loans in view of its close association with the World Bank, has made progress in this direction. Consequently, the present line of credit of U.S. Dollars 10 million from the World Bank is likely to be exhausted soon. Negotiations for a new line

of credit have been initiated with the World Bank and I am glad to state that the attitude of the Bank is encouraging and helpful.

In the direction of providing risk capital, your Company continues to make satisfactory progress which is indicated by the fact that to date, we have completed 16 underwriting operations amounting to Rs. 500 lacs. This includes issues of Equity as well as Preference Capital and Debentures, some of which were Public Issues by means of Prospectus and others "Right Issues to Company's Shareholders or their nominees. It is a matter of some satisfaction that your Company is able to play a significant role in this field because Equity Capital particularly for new ventures is difficult to raise and constitutes the bedrock on which the financial structure of an industrial undertaking is based.

The results of completed underwriting operations show that your Company was required to take Rs. 178 lacs in Shares and Debentures against the total underwriting liability of Rs. 500 lacs, the balance having been subscribed by the investing public. In judging activity of your Company, therefore, not only the size of invest-

March 21, 1959

ments made, as disclosed in the Balance Sheet, should be considered but it should also be recognised that in its operations, substantial amount of capital is publicly subscribed so that it is unnecessary for your Company to make investment to that extent. By this means, we are able to achieve the objective of making capital available for development without having to invest the entire amount. I should also make it clear that our underwriting activity takes into account the fact that the investment market in India is often unable initially to fully take up capital which is publicly offered; and the object of this Corporation is to fill the gap by absorbing the unsubscribed capital. Operations are undertaken with the full knowledge of the possible results so that there is no question of the Corporation being compelled to take up unwanted capital. Through the policy of gradually and prudently selling its investments, the Corporation will be able to help in the process of broadening the investment market and cooperate in the building up of an active stock market which ultimately promote the growth of a capital market.

In line with our efforts to raise funds in Foreign Currency through the World Bank, we are endeavouring to increase our Rupee resources since our existing funds may prove adequate only till the end of the current year. We have requested the Government of India to make available to this Corporation an additional Rupee advance which may carry us through the next two or three years. This may be made possible through Rupee funds accumulated out of sale of U.S. surplus agricultural commodities and made available with the concurrence of the U.S. Government. I am glad to state that both the Government of India and the U.S. authorities view our needs with sympathy and understanding and I hope that we shall be able shortly to conclude the necessary formalities.

I wish, however, to make it clear that it is not our intention to depend indefinitely on Government for additional funds as and when required. You will, no doubt, appreciate that your Company is not even five years old and it is not yet possible for it to borrow in the open market in adequate volume or at a reasonable rate of interest nor is it practicable at this stage to raise additional equity capital.

Our efforts to obtain new resources assume particular importance because we foresee increasing demands upon us. In this connection, I would like to state that we invite and welcome discussions concerning the promotion of new industries and the expansion of existing ones. While we do not wish to expend our energies on speculative or ill-conceived schemes, our doors are always open to any entrepreneur who has a considered proposal, worked out sufficiently to permit detailed technical

and financial discussion. It is not necessary to present a formal application. On the contrary, we would welcome informal discussions with responsible entrepreneurs and industrialists before formal submissions; so that we can give such advice and assistance as we usefully can at an early stage, thereby saving time and effort both for our clients and ourselves and avoiding delays in subsequent consideration of investment proposals.

I should also like to emphasise that we desire to work closely with other institutions in financing industrial enterprises. We have already joined other financial institutions in underwriting operations and in the granting of loans and we propose discussing the possibilities of further combined operations with finance corporations, credit institutions and the Life Insurance Corporation, as well as with foreign institutions such as the International Finance Corporation and the Commonwealth Development Finance Company. We can visualize various forms of co-operation in the financing of enterprises, large or small, involving Rupee assistance or Foreign Currency, whether for loans or for equity, and are prepared to join any or all such institutions in exploring fresh avenues of co-operation. The private sector is sufficiently large and is growing rapidly enough to require this kind of collective effort if the country is to make the most of its still meagre resources.

I would now draw the attention of the Shareholders to one encouraging development of 1958 which has a bearing on the activities of your Company. The climate for investment took a turn for the better during the year as is evident from improved conditions in the stock market and a welcome revival in the capital market.

The investment market is not so unfavourable for raising of new capital in reasonable amounts as is sometimes contended. This, of course, does not mean that there is no room for further improvement. Stock prices have moved significantly upward during the year and there is a distinct revival in investors' confidence. It is noteworthy that stock markets all over the world were buoyant during 1958 which is reflected in a marked rise in stock prices both in London and New York. In India, improved conditions have been evident both in the gilt-edged market as well as in the share market resulting in a significant decline in yields of government securities, debentures, preference and ordinary shares.

While it is not possible to examine at length the factors responsible for this improvement, I may refer to some salient features. In the field of economic and financial policy, the year witnessed a certain measure of stability which has imparted a sense of confidence even under the ruling conditions of high corporate taxation. Moreover, easy money conditions prevailed during

the year consequent on a substantial rise in money supply at a time when demand for credit had declined owing to severe restrictions on imports. Thirdly, several of the principal industries such as jute, coal, steel, engineering, chemicals, pharmaceuticals, paper, sugar, etc., have been able to increase production and attain higher profitability, which have conduced to strengthening investors' confidence in the prospects of industrial development. I realise that against this should be set the unsatisfactory working in several other important industries such as cotton textiles and cement as well as several disincentives which impede capital accumulation. But by and large, it would be true to say that while the prevailing acute shortage of Foreign Exchange is making difficult the establishment of new industries or expansion of existing ones, it also affords a measure of indirect protection to a number of industrial concerns.

In this context, I would like to stress that the activities of your Company are inextricably related not only to the general environment for investment but also to Government policy which is itself an important determinant of that environment. Let me cite an example. Transport plays an important part in the development of this country and at one time, it was apprehended that the progress of the Second Five Year Plan might be impeded by inadequacy of transport facilities. It is a measure of the progress of the Plan that the shortages have not been as acute as was feared and it is significant that an unexpectedly important contribution in this respect has been made by highway transport which, in turn, has contributed to

relieving the burden on the railway system. The automobile industry while still in an incipient stage has been developed to an appreciable extent in many parts of the country and is carrying an increasingly larger portion of goods and passengers.

I am glad to say that recognising the significance of the automobile industry, your Company is playing an important part in its development. It has made substantial investments in seven enterprises for the production of vehicles, components and accessories. Those operations amount to Rs. 216 lacs, more than 16 per cent of the total commitments of your Company. This sum has been a catalyst for bringing to productive work a much larger amount of capital. We expect to do more in this field despite the fact that the development of this industry is now hampered by severe restrictions on import of components which cannot yet be manufactured in India.

I have made a mention of the transport industry because it is essential to recognise that your Company desires to make a specific contribution to national development. It is no less important that we make available to those responsible for determining such plans, the results of our experience which, with that of similar other institutions, could be taken into consideration in such revision of governmental policies as might become necessary owing to changing conditions both at home and abroad. The private sector has a large and important part to play in a "mixed" and planned economy and I trust that this Corporation will assist it in doing so in an increasing manner.

Chairman's Speech

The Alkali & Chemical Corporation of India Limited

Another Record Year

Mr. J. M. Lal on Cost and Productivity Relationship

Speech delivered by the Chairman, Mr. J. M. Lal, at the twenty-second Ordinary General Meeting at Calcutta, on Monday, the 16th March, 1959.

Gentlemen,

The Audited Accounts and Directors' Reports have been in your hands for some time and, with your permission, I shall take them as read.

On the whole your Company has had a good year. Sales were 17% higher than in the previous year but the higher cost of raw materials and wages has resulted in a lower net profit.

You will have seen from the Directors' Report that we had to transfer from the Dividend Equalisation Reserve only Rs 11 lakhs of the Rs 24.8 lakhs required for an 8% dividend on the Ordinary Capital, including the last issue of Rs 248 lakhs for the Polythene Project, which has not yet begun to earn any profits. This is very satisfactory.

PRODUCTION:

Once again we had a record year. Every unit registered an increase. The only factor limiting our production was the shortage of certain essential raw materials which could not be imported. This was felt particularly in the manufacture of our paints products.

Production of Metal Pre-treatment Products for which there was a growing demand increased greatly.

In the insecticidal field, our output of all types of "Gammexane" formulations was higher than in the previous year, and we were able to meet the growing demands of Government and of other users. Competition in these products is increasing but your Selling Agents are maintaining their position in the market.

Our Chlorine/Caustic plant again registered a record output for which we found a ready market. Our output of Hydrochloric Acid was higher than in the previous year and was disposed of without difficulty.

A public enquiry into the Caustic/Chlorine industry was held by the Tariff Commission and the Company's Works were visited by the Commission's staff. The Company provided extremely detailed data which took our staff several months to prepare. I am glad to say that the Government have agreed to continue the

existing rate of protective duty on Caustic Soda. The Commission's Report on "fair prices" for locally produced Caustic Soda/Chlorine and Hydrochloric Acid has not yet been made available.

EXPANSION PROGRAMMES:

An increase in our licensed capacity for Benzene Hexachloride was approved by Government. Work on the extensions to our Chlorine/Caustic Soda Plant has commenced, and is expected to be completed during the current year.

Construction of the plant for the manufacture of 'Alfloc' water treatment products is now well advanced and the plant will go into production shortly.

The new factory for making polythene is now complete and trials have commenced. We hope to have a formal opening at the beginning of May. We had our share of difficulties and set backs in the construction of this plant but, with the help of our Technical Consultants, Imperial Chemical Industries Limited, London and our construction contractors, we have been able to keep to the schedule.

FUTURE PLANS:

The chemical and plastic industry in India is yet in its infancy and the field which is open for development is vast. Your Board and their technical advisers, Imperial Chemical Industries Ltd., are fully alive to this and are investigating new lines of manufacture.

Chemical projects usually involve high capital cost and a complete and thorough investigation is necessary before any recommendations can be made. I am not in a position to say whether any new schemes will mature in the current year.

PRODUCTIVITY AND LABOUR RELATIONS:

Looking at the economic trends in the country and the acute shortage of capital one is led to the inescapable conclusion that our prosperity depends upon making the maximum use of the capital, plant and equipment at our disposal. It has been amply demonstrated that this can be achieved through rationalisation in industry, changes in layout of machinery, reorganisation of work by application of work study techniques and so on. This optimum use of plant and machinery will, in addition to

increasing production, bring down the unit cost of such production and make the country's manufactures more competitive in the export market. Experience in other countries has shown that higher productivity has gone hand in hand with higher levels of employment and that wages are highest where productivity is greatest.

I would like to emphasise the importance to our country of a consciousness in labour of the responsibilities which their jobs carry. A great deal is heard about the rights of labour, the rising cost of living and the need for additional amenities such as housing. I am sure that all progressive employers accept that wages and amenities cannot remain static in a developing economy; but rising wages without a corresponding rise in productivity can only result in inflationary pressures with serious consequences to our economy.

According to a recent study, there has been a doubling of receipts in average salaries and wages, and the value of fringe benefits over all the industries has multiplied a little over three times between 1946 and 1956, while productivity has not risen by more than 10-12%.

I appeal to our workmen and the labour leaders, who guide them, to bear in mind the needs of the country and to put their best into the jobs they are doing. Trade Unionism has everything to commend it provided it does not allow political influences to deflect it from its basic objective of advancing the well being of the worker and of the industry in which he works. The success of all our five-year plans depends on every member of the society doing his bit in increasing the country's production. We cannot afford destructive trade unionism resulting in 'go slow' movements, stoppage of work, and indiscipline in industry.

I am glad to say that our relations with labour and staff have been good throughout. Any differences, and differences there must be in any large family, have been discussed in a spirit of co-operation and keenness to understand each other's point of view.

The Work Study Section, to which reference was made last year, continues to provide a valuable service to management. It has been working on a wide range of problems during the past year and has contributed to savings in

capital expenditure and running costs.

Management is at present discussing with the Unions concerned the introduction of "Work Reward Schemes" based on Work Study data. The purpose of these schemes is to enable the participants to earn greater rewards for greater effort and thereby further to encourage worker's co-operation in the company's objectives.

We attach the greatest importance to the efficient recruitment and training of our young engineers and technicians. Your Directors have recruited a considerable number of young Indian technicians, many of whom have been sent to the U.K. and Australia for practical training in I.C.I. factories.

I would like again to pay a tribute to your Selling Agents, Imperial Chemical Industries (India) Private Limited for the excellent services, both commercial and technical, that they have given us.

I would like to refer to the special business included in the Agenda. Sir Bijoy needs no introduction to you. He has been a director of your company for 10 years, and is a well-known figure in the business community of this country. Only recently he relinquished the Presidency of the Federation of Indian Chambers of Commerce & Industry. He has been a very valuable colleague to me and to my predecessors and I commend to you the resolution exempting him from the age limit prescribed by the Company's Act.

The other items of special business are adequately explained in the note.

The Directors retiring by rotation are: Dr. S. B. Cornack, Dr. E. C. Fairhead and Mr. F. C. Lamont, and they are recommended for re-election.

Messrs. Lovelock & Lewis, the Auditors seek re-election and have asked us to increase their fee from Rs. 7,500 to Rs. 10,000/- for the year they will be called upon to do additional work in connection with the Polythene Plant, and in the opinion of the Board, this increase is reasonable and justified.

Before I close my address I invite questions from members. I want to thank all of you who have found time to attend the meeting.

(This does not purport to be record of the proceedings)

March 21, 1959

THE PENINSULA

In the slow economic transformation of the country that is being assisted by many projects and schemes initiated by the Government, the developments in the transport sector, have been of momentous significance. Progress in the production of automobiles, construction of new roads, extension of railway lines, expansion in the production of locomotives have all changed the transport scene, where before the invasion of the automaton, the bullock-cart held sway as the only means of transport. Under the impact of these changes the country has long outgrown the bullock-cart stage and the stagnancy of economic activity that it signified.

Thus, as far as means of personal transport are concerned, the bullock cart has gone into insignificance, with the improvement of roads and the extension of bus transport even in the remotest villages. As regards transport for personal convenience, and comfort, automaton, remains, in view of the economic distance that divides the higher income groups from the middle and lower income groups, and the comparatively high cost of motor cars, the privilege of the few. However, for the man in the middle-income group, the modern bicycle has provided a means of transport, which if due allowance is made for the comparative cost of the two, would stand comparison with it in point of convenience and speed.

The growing use of bicycles, is one of the important developments that mark the scene of personal transport in the country at present, and this has been assisted by the indigenous bicycles industry which though it has not yet reached the point of complete self-sufficiency in regard to items manufactured or raw materials required, has grown to great dimensions, in the course of a short period. From about 49,000 bicycles, manufactured in 1947, and valued at Rs 60 lakhs, production had now crossed the million mark level while value of production had in turn risen to Rs 13.8 crores. Parallel with the rise in production, import of components became a diminishing feature of the industry. Whereas in 1947, there was hardly a bicycles industry worth the name manufacturing the major part of components, the industry has today reached a position, where, dependence on imports for parts, has dwindled to two per cent to five per cent of the value of a complete bicycle.

Inaugurating the annual general meeting of the Cycle Manufacturers' Association of India, at Madras this week, Mr Manubhai Shah, Union Minister for Industry suggested that some leading manufacturers of the cycle industry should now make an immediate beginning to establish factories for the manufacture of machinery

required by the industry. It indicates tremendous progress that it has become possible to talk in terms of establishing factories for manufacturing machinery required by the industry. Besides, it reflects the importance based on the emphasis on the interests of the common man, attached by the Government to the promotion of bicycle production.

However primacy among programmes for the bicycles industry should go to the component section in view of the fact that import under this head is a continuing feature, and is a drain on the foreign exchange resources of country. Here, the immediate pinch in foreign exchange has to be balanced against the longrun benefits of complete self-sufficiency and the potential saving in foreign exchange. Mr A. M. M. Murugesu Chettiar, the President of the Association has in the course of his speech expressed the view that allocation of foreign exchange for import of machinery for production of components and raw materials would confer on the industry complete self-sufficiency in component production. He also explained the uneven pace of component production in terms of the peculiarities that marked the bicycles industry at its very birth. While in foreign countries, the industry operates in two sectors, the manufacture of components being separated from assembling, in India, the issue of licences on the undertaking to manufacture all the components needed. This effectively precluded firms with less capital from entering the component side of the industry.

The industry has in recent times, set up an expanding pattern of production which has gone to meet a large part of the internal demand. Production in 1958 was more than 9 lakhs, against 7.9 lakhs in 1957, 6.6 lakhs in 1956, 4.91 lakhs in 1955 and 3.72 lakhs in 1954. In the course of four years, production has nearly trebled, production for 1959 being estimated to be more than a million. However, need for stepping up production is great considering that the industry is able to meet only about half of the internal demand. Demand for bicycles is expected to reach 2 million in a few years and this would receive further stimulus from the development schemes intended to improve the lot of the common man. The prospect of a demand that would continue to expand confronts the country with the need for setting up more capacity to meet the anticipated increase. Alive to this need, the Government of India, have already approved about 19 schemes for setting up small-scale factories for the manufacture of bicycles during the current financial year. The total manufacturing capacity of these

Cycle Industry

units estimated at 84,500 bicycles, is to be distributed among small factories in the States of Madras, Andhra Pradesh, Mysore, Elhar, Uttar Pradesh, Kerala, Orissa and Rajasthan.

The allocation of the new units thus reveals a bias in favour of small scale units scattered throughout the country and is, as pointed out by Mr Manubhai Shah, intended to ensure regional balance in the development of the industry which is at present localised in a few States having advantages of entrepreneurial talent, raw material resources, and proximity of markets. In view of the fact that the industry would lend itself to development on the lines of medium, small-scale, or ancillary basis without making drastic difference to cost structure in the different regions, it should not be a matter of much concern if the claim of the existing units for expansion of capacity had been glossed over on considerations of balanced development.

The Government seem to have also realised the advantages of giving a decentralised basis to the working of the industry, and Mr Manubhai Shah has spoken of the need for the present big manufacturers to encourage such a growth by farming out parts and components for manufacture by the small-scale sector. This, however is in the interest of the industry as a whole and potentialities for bringing down the cost for parts and components are enhanced by such a development. Errors in quality or standards in the products of the small-scale sector, could be obviated and corrected with the technical guidance which, Mr Shah pointed out, it should be the moral responsibility of the large-scale units to give. Government would lend a helping

hand by setting up testing centres as well as technical laboratories to check and certify standards.

It would have been too flattering to the industry to expect significant success in the field of exports. All the same it remains a fact that exports of bicycles, remains a subject to which the Government as well as the industry are keenly alive and to this interest in stimulating exports, all the speakers at the meeting testified. Mr Murugesu Chettiar, referred to the scheme for setting up an export pool at the Association level to assist members to export bicycles. However export so far, had not been appreciable but could be promoted by conscious efforts directed towards that end. Mr Murugesu Chettiar has in this connection drawn attention to the many factors that adversely influence exports from the country. Competition from foreign countries, who enjoy the advantage of lower cost for their products derived from mass production, and prejudice in favour of established maras are according to Mr Murugesu Chettiar, the two most formidable obstacles in the way of Indian exports. Success in such competition could be assisted by Government by means of raw material supplies as well as freight concessions.

In the interests of exports, it is also necessary that manufacturers pay more attention to quality which seems to have suffered from inadequate appreciation of its importance by the manufacturers. To deny scope for such improvement is not to be practical about achieving increase in exports. This, necessarily calls for the personal attention of the industrialists engaged in the manufacture of cycles themselves instead of being left to be dealt with in a dilatory way by others.

SOUTH INDIAN NOTES

Food Policy

The budget discussion in the Madras Legislature saw the Government under fire from the opposition for alleged acts of omission and commission in all fields of economic and social activity. That food situation in the State should be a subject matter for the opposition's criticism was only to be expected in view of the general rising trend of prices for foodgrains in the whole country.

Mr M. Bhaktavatsalam, the Minister for Agriculture who was called upon to explain the food policy of the Government and meet the criticisms of the opposition made pretty light task of it. Sharing the concern at the tendency of prices of foodgrains to go up, Mr Bhaktavatsalam pointed to the decision of the Government to have some control on the price of foodgrains and the attempt made by them to fix ceiling prices. While this would prevent further rise in the price of foodgrains, the interests of producers would be held to safety in terms of the commitment of the Government to a policy of price support in the event of prices falling below the economic level. Further safety would be provided against high prices by the mechanism of the buffer stock which Mr Bhaktavatsalam said would be brought into operation to meet any contingency. According to this policy regarding the buffer stock, the State Government have already decided to procure nearly two lakh tons of rice.

Mr Bhaktavatsalam also sought to defend land ceilings and state trading in foodgrains. These two are programmes which are being implemented at all India level at the suggestion of the Planning Commission as well as of the Central Government. Defending the principle of ceilings on land holdings, Mr Bhaktavatsalam pointed out that the large land holders could not be expected to devote their best attention to every inch of land under their ownership. Since small holdings would have more attention being bestowed on them, there should be no difficulty in stepping up agricultural production under a system of peasant farming. Further the defects of being small holdings could be rectified by pooling resources for purposes of joint farming. About state trading in foodgrains, Mr Bhaktavatsalam said that such a measure was inevitable in the circumstances surrounding the food situation in the country as a whole.

About the Southern food zone Mr Bhaktavatsalam was not sure that it was working satisfactorily and even admitted that it was a failure. However he sought to defend the continuance of the arrangement in terms of the heavy outflow of foodgrains from the State to other States outside the Southern food zone in the event of its break-up.

Industrial Disputes

At the end of last week, the Madras Legislative Assembly was taken up with discussion on industrial disputes, in the State, their recent trend, and measures taken by the Government to settle such disputes in the best interests of both the employers and the employees. The survey of the situation concerning industrial disputes as given by Mr R. Venkataraman, Minister for Industries and Labour does not reveal any marked improvement by way of reduction in the number of such disputes. For the number of mandays lost had increased from 722,771 in 1957 to 792,723 in 1958. Industrial production should have suffered considerable disruption as a result of frequent resort to strikes by labour. It has been pointed out by Mr Venkataraman, that in 1958 there were 261 strikes, including six strikes pending at the beginning of the year.

There was however little concern from the side of the opposition at this increasing incidence of labour disputes and it was the employers' role as the exploiting class that the opposition was taken on exposing. There was even a tendency to bring the Government into this scene under charge of wooing private sector too much, giving wider ground for exploiting labour.

However, Mr Venkataraman would not accept that there has been any pronounced deterioration in the labour relation in the State in spite of the occurrence of more disputes between employers and employees. And he would prefer to call most of the cases in point involving loss of working days as labour demand rather than dispute. By whatever name it is called the effect on the industrial production could not have been different if it results either in closure or abstention from work.

Giving the cause for the widespread outbreak of labour troubles, Mr Venkataraman points out that in very many cases the matter involved is the dismissal of individual workers. There is therefore, need for a law which would settle this point to the satisfaction of the affected parties. Mr Venkataraman has stated that legislation providing for right of appeal to an officer appointed by the Government against such dismissal would smoothen out matters. This would, of course, not see the end of such disputes but reduce their incidence and create public opinion for the peaceful settlement of disputes arising out of such causes.

Non-implementation of labour awards is another source of grave labour troubles. Here however the armour which labour laws provide against the management is weak against the right of the latter to go to the court to obtain a "steady order". This problem offers itself to a solution only on the basis of mutual negotiations between the employers and the employees.

However settlement of disputes achieved through mutual negotiations, offers more lasting advantages and creates a better atmosphere for industrial production than settlement arrived at through resort to law courts. It is a mat-

SOUTH INDIAN MARKETS

Coffee Statistics

ACCORDING to the coffee Board, the revised Coffee crop estimate for 1958-59 has been placed at 43,400 tons of Robusta variety. While the Robusta estimate shows an improvement of over 500 tons over the earlier estimates, that for Arabica records a sizable drop from the September 1958 estimate of 27,895 tons, marked damage being caused to the latter by the untimely December rains.

Crop receipts up to the end of February amounted to 23,621 tons which is about 600 tons more than the receipts for the previous year. Internal offtake in February last amounted to 2,430 tons, which is slightly less than that for January.

The Coffee Board have sold to the German Democratic Republic 860 tons of Plantation coffee during February and the coffee will be shipped shortly. During the said month, 1,233 tons of new season plantation coffee were sold for export. The average prices fetched for Plantation at the two sales held amounted to Rs 231.98 and Rs 235.71 for 50 Kilos respectively. Under the quality control programme, 40 tons of coffee were shipped to London for knowing market reactions. Another 50 tons will be shipped shortly.

Copra & Coconut Oil

In contrast to the recent bullish trend in olseeds and oils, the overall tendency to Copra and Coconut Oil has been noticeably bearish. The subdued conditions in the market have been attributed to the selling pressure, induced by the recent improvement in the supply position. Imports of copra have been relatively large of late, and the availability of indigenous qualities has improved following the increased inflow of the new crop at the terminal markets in South India.

Dealers, however, believe that the present easy spell will prove to be only temporary, since the basic conditions have remained more or less unchanged. Imports of copra are allowed only by the actual users and there appears little possibility of any liberalisation during the next period. Foreign markets have continued to be steady. Hence, the likelihood of a substantial decline in the landed cost is ruled out. On the other hand, the current strength in groundnut and its oil is expected to aid the sentiment sooner or later.

Groundnut

Conditions in the Madras Groundnut market remained ge-

ter for gratification that number of disputes settled through conciliation in the State has tended to increase in recent times.

Indian Finance

nerally firm. Arrivals were about 200 tons last week. Local crusher were operating moderately and business was done upto Rs 180 a against Rs 175 per candy in the previous week.

In the Groundnut Oil section the rate for the ready position shot up to Rs 350 from Rs 344 per candy. This was mainly due to a fall volume of business done in March position. While it is not known what action the Forward Market Commission will take in respect of the steady rise in groundnut oil prices, it is felt that a ban on forward trading in essential commodities may produce the desired effect.

Hides and Skins

In the Madras Tanned Hide market, arrivals of Cow hides continued to be small and prices to these remained firm. Arrivals of Buff hides were moderate and supplies were easily absorbed at unchanged levels. There was a change to report in the Calf section.

On the export front, trading showed some signs of slowing as U.K. buyers were unwilling to pay current-asking prices. Madras sellers were, however, firm in the asking prices and were also demanding a premium when it concerned a contract for lower selections alone. In the Calf section there was very little fresh supply of prime quality Buff Calf as patchy business in Cow Calf.

In the Tanned Skins section, arrivals of Sheep skins were slightly less than the previous week. This was due to the fact that tanners were holding back supplies in anticipation of higher prices at the London auction. There were practically no arrivals of Goat skins.

In the export section, prices showed signs of firming up. Although business was mostly in an exploratory stage in view of sellers demanding pro rata increase vis-a-vis auction prices, it is believed that at least the pre-auction level of prices will come to stay for the next few weeks. In Sheep skin activity was rather restricted. However, a fair amount of business was reported done in mid-class marks at unchanged to per pound advance as compared to the previous week.

In London auction, only 1,201 goat skins were reported to have been sold out of a total catalogue of 2,00,000 skins and offerings 1,92,000 skins.

Bangalore Silk

In the Bangalore Silk market there was a marked decline in prices of all silk and silk products excepting filatures last week. Charka silk second and third qualities declined by about Rs 4. C stage basin eased from Rs 37 to 36.

Silk waste prices were not quoted. Meanwhile, reports from Pan suggest a further improvement in the prices of silk-waste there following keen demand from spun-silk manufacturers.

March 21, 1959

STOCK EXCHANGES

Sustained Buoyancy

Watch-Dog Writes:

STOCK markets are still in a buoyant mood with the speculative counters climbing to new peak levels. With general feeling remaining bullish in the face of inflationary psychology, it looks as if the bulls are in no mood to lighten their holdings, although higher levels have attracted some profit-taking.

Strong support for the speculative and jute scrips at enhanced levels imparted a cheerful note to trading in almost all other sections on the Calcutta Stock Exchange. The Bombay Stock Exchange closed quietly steady following irregular price movements.

Price trends on the Madras Stock Exchange were steady and buying was selective.

Wall Street closed irregularly higher with price movements ranging mostly to a dollar or more.

THE TITAGHUR JUTE FACTORY COMPANY LIMITED

The Directors of this Company have declared:—

- (1) On the ordinary shares a dividend of 3% for the year ended 31st December, 1958; and
- (2) On the preference shares the dividend at the rate of 6% per annum for the half-year ended 31st December, 1958.

These dividends will be paid on 2nd April, 1959, less Income Tax at 8/6d per £ and the Transfer Books will be closed from 19th March to 2nd April, 1959, both days inclusive.

At the Annual General Meeting the Directors will not recommend payment of any further dividend for the year ended 31st December, 1958.

Preliminary figures for the year ended 31st December, 1958 show Trading Profit £34,416 (loss £29,559), Income from Investments £30,998 (£31,867), net Profit after Taxation £37,204 (loss £42,141), Depreciation written off £10,000 (£10,000), Transferred from General Reserve nil (£60,000), net interim dividend on preference shares already paid £2,587, net dividends now declared £13,238 and estimated carry forward £29,248 (£17,569).

P. WILLIAMS,

Secretary.

JUNDEE, 16th March, 1959.

Calcutta

Friday Evening.

ONCE again, the local Stock Exchange presented a cheerful appearance during the week and prices made further headway amidst active dealings. Higher levels could not, however, be maintained till the close due to profit-taking.

A significant change in the pattern of trading was the shift of interest from the speculative counters to those of several well-known investment scrips. Investors felt that companies might not be obliged to bear a heavier tax burden from the assessment year 1960/61 than they did at present. The bullish feeling in the market was also strengthened by the Finance Minister's statement that he was prepared to examine proposed new system of company taxation and remove the anomalies, if any. The market drew also inspiration from the firmness in commodity markets. Although profit-taking was noticed at higher levels, it was easily absorbed, as general sentiment remained bullish due to fears of inflationary psychology.

Conditions in the Gilt-edged market remained dull. Banks generally kept out of the market on account of monetary stringency, while interest from other institutional quarters was limited. 3 per cent 1986 Conversion Loan opened at Rs 73.95 and, after improving at one time to Rs 74.25, receded at the close to Rs 74.20.

Bank shares were quietly steady with price movements confined to a narrow range. Punjab National changed hands at Rs 23.75 to Rs 24.12; Bank of Bikaner at Rs 31.37 to Rs 31.75 and Hindustan Commercial at Rs 13.75 to Rs 14.00.

Thanks to firmer advices from the jute goods market, jute shares met with a revival of buying interest although operators were inclined to book profits at bulges in view of the steadier tendency, of late, in raw commodity prices. Anglo-India changed hands at Rs 231 to Rs 234 (Rs 234); Bangalore at Rs 148 to Rs 155 (Rs 149); Delta at Rs 163 to Rs 171 (Rs 171); Gan-ges at Rs 75 to Rs 79 (Rs 78); Howrah at Rs 20.12 to Rs 20.37 (Rs 20.06); India at Rs 15.75 to Rs 16.12 (Rs 15.94); Kamarhatti at Rs 184 to Rs 194 (Rs 194); Kelvin at Rs 260 to Rs 273 (Rs 273); National at Rs 23 to Rs 24.50 (Rs 24.00); Nuddea at Rs 60.25 to Rs 62 (Rs 60.75) and New Central at Rs 14.69 to Rs 15 (Rs 14.75). Figures shown within brackets were the closing rates for the week.

Coal shares came in for good demand on the belief that an increase in the price of the commodity could not be delayed long. Bengal had buyers at Rs 294 to Rs 297; Central India at Rs 7.94 to Rs 8.06; Western Bengal at Rs 6.31 to Rs 6.53 and East Indian at Rs 23.87 to Rs 24.25. Burrakur, however, fluctuated erratically between Rs 17.69 and Rs 18.25 due to speculative activity, to finish at Rs 17.81. Amalgamated hardened further to Rs 23.75 from Rs 23.44.

Tea shares were less active than in recent week. Operators were inclined to book profits at the recent high levels on the feeling that no big improvement in auction prices could be expected in the coming weeks. Dealings were, therefore, few. Basmatia were done at Rs 27.12 to Rs 27.37; Brooke Bond at Rs 17.87 to Rs 18.06; Dhunseri at Rs 18.62 to Rs 18.75; Hasl-mara at Rs 23.37 to Rs 23.50; Sungma at Rs 19.37 to Rs 19.56 and Tezpora at Rs 16.94 to Rs 17.06.

Sugar shares came in for selective buying, as operators were inclined to restrict commitments pending further developments on the commodity front. Dealings were prominent in Raza/Buland moving between Rs 13.37 and Rs 13.47; Carew between Rs 8.31 and Rs 8.56; Ramnugger between Rs 21 and Rs 21.25 and SKG between Rs 10.50 and Rs 10.75.

Textile scrips were no exception to the general trend. Cawnpore were pushed upto Rs 4.94 from Rs 4.69 and Jayshree upto Rs 9.37 from Rs 9.12, to finish at Rs 4.94 and Rs 9.25 respectively. Elgins had buyers at Rs 13.06 to Rs 13.19; Kesoram at Rs 11.62 to Rs 11.75 and New Victoria at Rs 1.25 to Rs 1.37.

The lead to the general rise in prices was given by the speculative scrips under the lead of Indian Irons which, in turn, were subjected to heavy speculative buying. Against the week-end closing of Rs 23.75, Indian Irons opened higher at Rs 23.93 and advanced further to Rs 24.19 before finishing the week at Rs 23.95. In sympathy,

TEXMACO were taken upto Rs 23.45 from Rs 22.30 and G. K. Williams upto Rs 38 from Rs 37.50, to close finally at Rs 23.25 and Rs 38 respectively on profit-taking. Britannia and Jessop remained very firm at Rs 13 and Rs 29.12 respectively, while Marshalls changed hands at Rs 6.37 to Rs 6.56 and Kumardhubi at Rs 10.12 to Rs 10.37.

Thanks to encouraging corporate news, the Miscellaneous section continued to provide several firm features on sustained investment demand, though profit-taking erased some of the extreme gains towards the close. Orient Paper forged ahead to Rs 38 from Rs 36.50 in the previous week (Rs 37.40); Titaghur to Rs 44.50 from Rs 44.37 (Rs 44.50); Sirpur to Rs 14.06 from Rs 13.75 (Rs 13.87); Indian Cable to Rs 32.25 from Rs 31.12 (Rs 31.69); Indian Aluminium to Rs 19.56 from Rs 18.56 (Rs 19.56); Indian Steamship to Rs 15.12 from Rs 14.84 (Rs 14.84); Indian Copper to Rs 4.07 from Rs 3.94 (Rs 4.01); Rohtas to Rs 23 from Rs 21.75 (Rs 22.75); Railis to Rs 64 from Rs 61.50 (Rs 63.25); Aluminium Corporation to Rs 13.25 from Rs 12 (Rs 12.94); Clive Row to Rs 12.31 from Rs 11.62 (Rs 12.06); Phillips to Rs 19.37 from Rs 18.81 (Rs 19); National Carbon to Rs 30.69 from Rs 30.25 (Rs 30.12) and NICCO to Rs 33.56 from Rs 33.12 (Rs 33.12). Dunlop, however, turned quiet at Rs 32.19 against Rs 32.25 on lack of fresh support and so also BIC at Rs 5.25 against Rs 5.44. Alkali Chemicals turned ex-dividend at Rs 19.25, while Metal Box were a firm feature at Rs 34.56 and Martin Burn at Rs 30.75.

THE CENTRAL BANK OF INDIA LIMITED

THE BENGAL FLOUR MILLS CO. LTD.

The Board of Directors has decided to recommend to the forthcoming Annual General Meeting of the Company a final dividend of 12½ per cent for the year ended 31st December, 1958.

By Order of the Board,

BALMER LAWRIE & CO. LTD.
D. MANSON.

Secretary,
Managing Agents.

21, Netaji Subhas Road,
Calcutta.
13th March, 1959.

THE ALKALI & CHEMICAL CORPORATION OF INDIA LTD.

NOTICE

The Preference Share Registers of the Company will be closed from the 1st April 1959 to the 9th April '59, both days inclusive.

By Order of the Board,

IMPERIAL CHEMICAL
INDUSTRIES (INDIA)
PRIVATE LIMITED.
Secretaries.

Calcutta.
16th March 1959.

THE VICTORIA JUTE COMPANY LIMITED

The Directors of this Company have declared:—

- (1) On the ordinary shares a dividend of 5% for the year ended 31st December, 1958; and
- (2) On the preference shares the dividend at the rate of 6% per annum for the half-year ended 31st December, 1958.

These dividends will be paid on 2nd April, 1959, less Income Tax at 8/6d per £ and the Transfer Books will be closed from 19th March to 2nd April, 1959, both days inclusive.

At the Annual General Meeting the Directors will not recommend payment of any further dividend for the year ended 31st December, 1958.

Preliminary figures for the year ended 31st December, 1958 show Trading Profit £58,737 (loss £20,630), Income from Investments £15,765 (£15,844), net Profit after Taxation £48,451 (loss £44,788). Depreciation written off £10,000 (£10,000), net interim dividend on preference shares already paid £2,587, net dividends now declared £14,088 and estimated carry forward £35,104 (£13,328).

P. WILLIAMS,

Secretary.

DUNDEE, 16th March, 1959.

Bombay

CONDITIONS on the Bombay Stock Exchange ruled fairly steady last week. Though fresh speculative support was small, scattered bull liquidation was well absorbed. The fall-end of the week, however, saw prices registering small declines.

TEXTILES: This section was fairly active, although buying enquiry was confined to only a few selected scrips. Century displayed fair strength on rumours of improved profits and the shares, after being taken up to Rs 477.50 from Rs 470, finished at Rs 472 on profit-taking. Kohinoor, after touching a high of Rs 256 and low of Rs 246.25, closed at Rs 255. Bombay Dyeing were neglected on technical grounds and the rates moved between Rs 58.50 and Rs 59.20, to finish at Rs 59.60. Svadeshi changed hands at Rs 212 to Rs 218.

STEELS: Steel shares were fairly supported at the state; but lack of support coupled with scattered realising caused prices to move down a little at the close. Tata Ordinary opened at Rs 181 and, after touching a high of Rs 184.25 and a low of Rs 182.75, finished at Rs 183.25.

MISCELLANEOUS: This section provided several bright spots. Activity in Premier Construction was prominent and the shares met with good demand upto Rs 267.50 from Rs 262 following the announcement of a dividend of Rs 12 instead of Rs 11 declared earlier. Shipping shares were steady with Scindia Steam changing hands at Rs 18.52 to Rs 18.84. Automobile shares made further headway with Premier closing firm at Rs 109. In the Engineering group, TELCO were enquired upto Rs 188.50 from Rs 184.50.

Sugar shares were rather quiet with Belapur hovering idly around Rs 292 and Phalton quoting Rs 158. In the Cement group, ACC changed hands at Rs 145 to Rs 147.50 and Digvijay at Rs 138.75 to Rs 141. Among others, Bombay Burmah created a minor two-sided flutter, moving between Rs 503 and Rs 514, to close finally at Rs 510. National Rayon met with business at Rs 276 to Rs 280.

Madras

BULLISH conditions were seen on the Madras Stock Exchange, although there was some profit-taking in a few scrips, resulting in a small decline in rates at the close. The undertone was, however, healthy.

TEXTILES: The only firm feature in this section continued to be Travancore Rayons which were in demand upto Rs 18.15. Loyals were supported at the improved rate of Rs 28, while Bangalore Woollens were enquired at the market rate. Madras, however, showed a small decline to Rs 25.35.

PLANTINGS: Hectic trading was noticed in this section. Tea shares, especially of high-grown estates, came in for good demand on the hope that the Government might take all possible steps to keep the competitive character of Indian tea in foreign markets. Halleyburly, Devons and Peermades had good buyers at the quoted rates. Nonsuch were done at Rs 27.85 c.d.;

Talavars at Rs 1.75 and Neelamalais at Rs 4.83.

Rubber shares were also in demand on expectation of an early increase in the price of the commodity. Midlands were favoured upto Rs 12.80 and Cochín Malabars upto Rs 6.24 c.d.

In the Coffee group, Rajenderas were in demand upto Rs 13.75, while Consolidated Coffees were steady at Rs 22.15 and Ouchterlony at Rs 5.38 c.d.

MISCELLANEOUS: In this section, Ashok Leylands were a bright feature, having remained firm at Rs 7.03 with buyers at this level. Aluminium Industries met with some profit-taking and closed lower at Rs 19.44. FACTS turned seller at the market rate. Mettur Chemicals met with business at Rs 11.90 x.d; Andhra Cement at Rs 10.10 and Mysore Chemical Fertilizers at Rs 8.65.

*

Investment Notes:

According to a circular issued by the Hongkong and Shanghai Banking Corporation, Calcutta, the expiry date of its offer to the shareholders of Mercantile Bank Limited was extended to 6th March and, at that date, the Banking Corporation held together 97.5 per cent of the total issued capital. This has necessitated the Banking Corporation issuing 95,101 of its own shares, which increases the paid-up capital of the Corporation to £61,887,625. There still remain 72,519 shares of the Mercantile Bank Limited in other hands and steps will be taken to acquire these under the procedure laid down in Section 209 of the United Kingdom Companies Act. This may take some months and the paid-up capital of the Bank will be subject to a small increase as a result of the issue of shares in respect of late acceptances and of allotments made in the pursuance of proceedings under Section 209 of the United Kingdom Companies Act.

IT might be recalled that the controversy over the price of boilers meant for the Ahmedabad Electricity Company led to a chain of unhappy developments, culminating in an open rift among the directors of the managing agency company—Killick Industries Limited. It is now learnt that a "complete and amicable" settlement has been reached on all points.

In Madras, Mysore Chemical Manufacturers Limited has decided to capitalise Rs 2 lakhs for the issue of bonus shares in the ratio of one for every three Ordinary shares held.

Ashok Leylands have proposed, subject to the sanction of the Controller of Capital Issues, to issue 25 lakh equity shares of Rs 5 each, at par—Rs 2.50 payable on application and the balance to be paid after allotment when called for. Of this, 12.25 lakh shares of Rs 5 each are to be reserved for and offered to Leyland Motors, England. The balance is offered for public subscription.

IN the Jute group, Samnugger has announced a dividend of 5 per cent; Titagur 3 per cent and Vic-

toria 5 per cent, all on the Ordinary shares for 1958 as against 2 in the previous year. The dividends are payable on or after the 2nd April, less income-tax at 8s 6d per £.

THE SAMNUGGER JUTE FACTORY COMPANY LIMITED

The Directors of this Company have declared:—

- (1) On the ordinary shares dividend of 5% for the year ended 31st December, 1958; and
- (2) On the preference shares the dividend at the rate of 6% per annum for the half-year ended 31st December 1958.

These dividends will be paid on 2nd April, 1959, less Income Tax at 8/6d per £ and the Transfer Books will be closed from 19th March to 2nd April, 1959, both days inclusive.

At the Annual General Meeting the Directors will not recommend payment of any further dividend for the year ended 31st December 1958.

Preliminary figures for the year ended 31st December, 1958 show Trading Profit £110,034 (loss £46,082), Income from Investments £20,994 (£21,421), net Profit after Taxation £97,86 (loss £66,364). Depreciation written off £10,000 (£10,000) Transferred to General Reserve £40,000 (from General Reserve £40,000), net interim dividend preference shares already paid £2,587, net dividends now declared £19,838 and estimated carry forward £41,968 (£16,532).

P. WILLIAMS,

Secretary.

DUNDEE, 16th March, 1959.

S. E. RLY TENDERS

Sealed tenders are invited for tender No. PC/COS/159/8712R/C of 57 for supply of Air Compressor plant stationary complete as per schedule.

Tender forms are obtainable from the office of the under-mentioned (PC Section), South Eastern Railway, Garden Reach, Calcutta-23 on remittance of Rs 2/- (not refundable per copy per tender by money order).

Against the tender is Rs 250/- Closing date of the tender is 14-4-59 at 12 noon. The Installation Engineer

A vital point in oil's long journey from the well to the consumer is the petroleum installation. From here the finished products of the oil industry are distributed to distant depots and markets by road, rail and river.

A main installation (such as that at Tinsukia, in Upper Assam) comprises storage tanks, pumps and pipe lines, machinery for making and filling tins and drums, and equipment for the bulk loading of road and rail tank vehicles. The Installation Engineer is responsible for the setting up, operation and maintenance of the plant (excluding the tin factory, which has its own engineering staff) from which the products go to agencies, dealers and consumers.

Oil is nearly always on the move, and an Installation Engineer's skill helps to ensure that it makes only a brief halt at the installation before being despatched to places where it is needed by the public. Indian engineers have taken over many vital roles in the Assam Oil Company. And they are fulfilling them well.

This expert has won
the trust of millions
in the label 'Sanforized'

Meet our American-trained expert who makes sure that any fabric marked 'Sanforized' won't shrink. Every day, all through the year, he tests fabrics bearing this international label; so that your clothes won't shrink out of fit—even after many, many washings!

This is how
he does it:

Travelling from mill to mill, he advises and helps them with their technical problems; and makes on-the-spot tests that ensure value in the cloth you buy labelled 'Sanforized'.

Whenever he visits the mills, he takes at random several samples from their godowns as well as off the processing machine. These samples are first measured, and then given a standard wash test.

And then, the samples are re-measured. This is the first stage of ensuring quality. All fabric must meet the Company's strict anti-shrinkage specifications before it can use the label 'Sanforized'.

These tested samples are sent to the New York office for re-checking, and with them goes the expert's detailed report. These documents record the progress and prosperity of each individual mill.

The New York office checks thousands of samples from all over the world. This is your assurance that fabric labelled 'Sanforized' is of a uniformly high standard, and is welcomed everywhere in the world!

Look for

on the label

and your clothes will never shrink out of fit!

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

For information: 'Sanforized' Service, 95, Marine Drive, Bombay-2

FOR THE
INVESTOR

Share Yields to Fall Further?

Investment Gossip:

THE market continues to be respectably firm. Indian Irons have been well maintained around Rs 24, indeed above that mark, which itself had been considered a sort of barrier. That barrier has been broken through, and while thoughts are turning on the possibility of the market barometer seeking to pierce the new "mark" of Rs 25, there is in certain circles an increasing preoccupation with the notion that the recent price improvements on the stock exchanges have so brought down the yield pattern as now to induce caution in any fresh purchases at present levels. I think it desirable that we should consider this question of yields and prospects.

I shall make the present assessment a somewhat brief one, intending on a future occasion to expand the thesis that is being propounded here. Prices have lately improved because of the relief at a none-too-harsh Budget. That is one reason. But, in the blue-chip section, the trend to appreciating levels had much earlier become noticeable; and that improvement was, simply, in response to better corporate earnings. By an over-simplification, such higher company profits have been taken to have stemmed from so-called inflationary tendencies. In inflationary times, money is cheap, profits are inflated, there are prospects of stepped up dividends—and share prices are pushed up. Yields go down, partly because of anticipatory buying. But this is true only of the past; today, even the threat of inflation is cause for a tight and dear money policy, and this reverses the trend of declining trends. Aside from all this, we have to reason whether the better corporate earnings in India are inflation inspired.

Such would indeed be the case if profit margins had increased; but it is clear that the rise has occurred in turnover, and that the higher profits are to be attributed to greater production. In this sense, the higher earnings—and the higher anticipated dividends—are to be traced to a genuine increase in the activity of particular companies. Not, therefore, inflation. Then, in a developing economy, there is a steady increase in wants to be satisfied, there is a waiting market for the upsurge in production. With prices on the whole steady, consequently, with a broadening and intensification of

industrial activity, there is a higher level of corporate earnings.

Moreover, it has long been a theory mooted by this journal that a low bank rate is called for during an inflationary period. There would, thus, in India, be no contra influence of "orthodox" anti inflationary weapons; for, it now seems to be accepted by authority that, in Indian conditions, dearer money will not be desirable.

So, so long as the outlook is for increased production, the particular companies must be more "popular"—and the yields offered on the scrip thereof must go down.

In short, in respect of the growth scrip, no investor need worry unduly about whether the yield 's low; after all low itself is relative.

Finally, with the busy season drawing to its close, the prospect is of the money market, tight these past two months, becoming distinctly easier. An easier money market should be providing a further fillip to the stock exchanges.

On the cards: a further decline in share yields.

£ R S

Investment Notes:

AUTOMOBILE shares have been in the limelight during the past few days, thanks to a steady investment demand. In Calcutta, Hindustan Motors have risen to Rs 9.12. In Bombay, Premier Automobiles have advanced to Rs 113 from Rs 104. In Madras, both Ashok Leylands and Standard Motors have continued to remain active with buyers at enhanced levels. The main inspiration for the sustained demand for these shares is derived from the report that the output of trucks and cars will be higher this year. Rumours are also current that the Government of India are inclined to consider favourably the industry's demand for an increase in the import quota for raw materials.

Atul Products have shot up to Rs 258 from Rs 238. The company has proposed to raise the dividend

for the third year in succession. The latest increase hoists the dividend up from Rs 8 to Rs 10 per share.

The Bombay State Co-operative Land Mortgage Bank Limited has proposed to issue 4½ per cent Debentures of the face value of Rs 1 crore. The issue price is Rs 99.25 and the Debentures are repayable in 1971. The issue has been underwritten by the Bombay State Co-operative Bank. The Debentures are Trustee securities. The subscription list will be open on the 1st April and will be closed as soon as the amount offered is subscribed, but not later than 7th April.

Investment Briefs:

IN Ahmedabad, Ashok, Saraspur and New Cotton mills have proposed to maintain their dividends at Rs 20 per share, for 1958.

Arun Mills have maintained the dividend at Rs 25 per share for the same year.

"Quite a striking disguise, Sitaram, but why hide your handsome features?"

"Shh! This suit, although practically new, looks so disreputable that I would get the sack if the Big Boss recognised me."
"It is incredible that you didn't think of buying BINNY'S cloth. BINNY'S Quality Control* their production, you know..."
"Quality Control? Never heard of it! What does it do?"
"Modern machines process yarn and cloth so fast that often defects, invisible to the naked eye, creep into the cloth. Quality Control is laboratory testing to root out defects at every stage of production. That's why BINNY'S suitings stay smart so long."
"Brother, your words bring hope to me. Let's hurry to the nearest BINNY'S shop."

*This projector magnifies 500 times—reveals every defect lurking in the cotton

The quality of cloth depends to a large extent on the cotton used. Only specially selected cotton goes into BINNY'S fabrics. That's why they last so long.

BINNY

—a great name in textiles

BINNY'S manufacture nearly 90 million yards of cloth every year. Here are some of the varieties they make:

Shirtings - Khaki Drills - Bleached & Dyed Drills - Towels - Anticrease Suitings - Tussorees - Union Fabrics - Silk Saris - Rugs - etc etc

Textile Results

Balance-Sheet Reviews:

Bombay Dyeing

THE Bombay Dyeing & Manufacturing Company Limited has shown excellent results on the export front last year, although the gross profit figure has suffered a setback from Rs 1.10 crores to Rs 90.69 lakhs. The percentage share of the company in the total exports recorded a substantial improvement along with a rise in the value per linear yard owing to the export of more finished goods.

Of the gross profit of Rs 90.69 lakhs, managing agents' remuneration accounts for Rs 5.03 lakhs against Rs 8.18 lakhs; Depreciation Rs 51.42 lakhs against Rs 48.11 lakhs; Development Rebate Reserve Rs 20 lakhs against Rs 45.8 lakhs; Taxation Rs 3.5 lakhs against Rs 3 lakhs and Wealth Tax Rs 3 lakhs against Rs 3.4 lakhs. The dividend is proposed to be paid after transferring Rs 17 lakhs from the Dividend Equalisation Reserve against Rs 23 lakhs.

Net sales have shown a substantial rise from Rs 8.02 crores to Rs 9.05 crores. The directors hope that the results of the year's working will be considered satisfactory, particularly in view of the very difficult times through which the cotton textile industry is passing.

₹ ₹

Kasturbhai Mill Group Results

The preliminary working results of the Kasturbhai Lalbhai group of textiles, Ahmedabad, show an encouraging performance for 1958. The Arvind Mills have earned a gross profit of Rs 92 lakhs as compared with Rs 78.08 lakhs in the previous year. A sum of Rs 7.79 lakhs is provided for managing agents' commission; Rs 14 lakhs for Depreciation; Rs 3.5 lakhs for Development Rebate and Rs 47 lacs for Taxation. The directors have recommended a fixed dividend of Rs 15.5, making a total of Rs 28 for the year. It may be recalled that the company's capital was increased from Rs 40 lakhs to Rs 60 lakhs.

The Nutan Mills have earned a gross profit of Rs 14.25 lakhs. The directors have recommended a dividend of Rs 15 plus a bonus of Rs 5 per share on the Ordinary shares.

The Raipur Mills have shown a gross profit of Rs 24 lakhs. An Ordinary dividend of Rs 25 per share is recommended.

₹ ₹

I. I. Trust

The Industrial Investment Trust Limited has reported satisfactory results for 1958. The net profit is higher at Rs 6.39 lakhs against Rs 5.92 lakhs in the previous year. The income on dividends and interest amount to Rs 7.39 lakhs against Rs 7.37 lakhs. The directors have provided a sum of Rs 8,647 for Capital Reserve; Rs 9,128 to additional income-tax for the

assessment years 1954-55 and 1957-58 and Rs 3,226 to Wealth Tax. The dividend is raised to Rs 6.00 from Rs 5.50 per share.

₹ ₹

Premier Construction

The sustained strength shown by Premier Construction around Rs 267.50 has been justified by the satisfactory results announced by the company for 1958. The net profit for the year amounts to Rs 17.29 lakhs against Rs 15.21 lakhs after providing Rs 9.96 lakhs for Taxation against Rs 9.92 lakhs. General Reserve gets Rs 1.76 lakhs against Rs 1.54 lakhs.

The directors have stated that, due to the high incidence of the bonus tax, they could not go ahead with the scheme of conversion of promoters' shares into ordinary shares and also capitalisation of the reserves.

₹ ₹

Ouchterlony Valley

A sharp decline in net earnings has been recorded by Ouchterlony Valley Estates Limited for the 31st October, 1958. Apart from the reduced coffee crop of 10,478 cwts against 19,555 cwts, working expenses were also higher. The net profit, before providing for Depreciation is Rs 1.01 lakhs against Rs 97,303. The provision for Taxation is naturally much lower at Rs 85,000 (Rs 6.30 lakhs). There is no transfer to General Reserve against Rs 2.50 lakhs previously. The Development Rebate Reserve gets Rs 3,890 (nil). The dividend is reduced from 30 to 10 per cent.

₹ ₹

Kil Kotagiri

The Kil Kotagiri & Coffee Estates Company Limited, has, on the other hand, been able to report a slightly level of profits in the same accounting period, the profit being Rs 7.80 lakhs against Rs 7.32 lakhs. Working expenses have been higher and the adverse effect could be overcome only because of a larger coffee crop and a bigger outturn of tea.

The amount provided for Depreciation is Rs 62,779 (Rs 53,208) and for Taxation Rs 3.55 lakhs (Rs 3.32 lakhs). The allocation to Development Reserve is Rs 7,604. General Reserve gets Rs 2 lakhs (Rs 3 lakhs) and Dividend Equalisation Reserve Rs 1 lakh (nil). The Ordinary dividend has been maintained at 15 per cent.

Banker's Eye View

THE year 1958 was, on the whole, a difficult one for the British Exchange Banks operating in this part of the world. The chairmen's statements that have so far appeared report reduced net profits, though there are individual variations in the volume of business transacted. The movement towards amalgamations and mergers has made further progress. The mergers completed last year have been followed up with the finalisation of proposals for an association of ownership between the Mercantile Bank and the Hongkong & Shanghai Banking Corporation. Against this background of developments, the suggestion put forward by the Chairman of the Indian Banks Association at its annual meeting, for a tie-up between Indian Banks and foreign banks gains added interest. Such mergers in the internal and international fields, it has been suggested, will strengthen resources and provide opportunity for adoption of the progressive measures made necessary by the growing integration of economic systems.

The effect of the US recession has been world-wide in its impact. By 1958 it had spread to most countries outside the Soviet orbit. The underdeveloped countries which depend on the export of primary commodities were the hardest hit. By contrast, the industrialised countries of Western Europe were better able to resist the recessionary trends, though the effects were seen in lower inventories which reduced the market for raw materials. The direct results were a shrinkage in foreign trade, fall in the world demand and the prices of primary commodities, leading to foreign exchange difficulties for the countries depending upon such exports. The measures adopted by these countries to meet the shortage of foreign exchange led to further decline in the volume of foreign trade. As Sir Kenneth W. Mealing succinctly put it in his annual statement, the recession in trade, political and financial difficulties in many countries, increasing pressure of population, higher taxation and controls on credit, on imports and exports and increasing costs of maintenance, all tended to affect the business of banking in these areas.

To the economic conditions in this region, the chairmen's statements provide, as usual, competent and comprehensive guidance. The overall picture that emerges is a sombre one, though there are also indications that the outlook will be better in the current year. One of the major developments of great consequence to British Exchange Banks was the extension of sterling convertibility which, as Mr V. A. Grantham has pointed out, should encourage the wider use of sterling by countries which are outside the sterling area such as Japan and the Philippines. Another development which is not so encouraging is the establishment of the European Common Market.

The preceding year saw the debacle of democratic governments in more than one country in our neighbourhood, and internal troubles, both political and economic, in others. While the emergence of military governments has been welcomed by the spokesmen of the Banks as holding the promise of firm and efficient administration, it also highlights the unsatis-

factory state of affairs which led to this outcome which by itself does not put an end to the state of uncertainty in economic affairs. Pakistan, which was surplus in food when it was formed, has in the course of dozen years reached a state when it is obliged to import half a million tons of foodgrains a year. While a programme of industrialisation has been drawn up, the high level of taxation on foreign companies, which reaches 75 per cent, cannot be regarded as an encouragement to foreign investors. Burma has been reaping the fruits of political uncertainty, aggravated by a substantial decline in the export surplus of rice which accounts for three-quarters of the country's foreign exchange earnings. The Government of General Ne Win has not given any indication that its policy in the matter of State trading will be different from that of its predecessor.

Though Ceylon has been able to stick to the parliamentary system of government, it had its full quota of man-made disasters. The riots of May last year led to the proclamation of a State of Emergency which lasted throughout the year. Labour unrest has worsened the outlook for external trade. The Government has also decided to step up the level of taxation with the adoption of an integrated system of taxes which includes the Wealth Tax, the Gifts Tax, Expenditure Tax and Tax on Capital Issues.

In contrast to Pakistan and Burma, Malaya and Singapore have made satisfactory progress with the democratic experiment. The first General Elections are due to take place this year. But the economic outlook was darkened by the sharp fall in the prices of tin and rubber. There are also doubts whether Singapore will be able to maintain its entrepot trade as a Free Port and at the same time, develop the industries necessary to provide employment to its growing population. Mauritius has also been making satisfactory progress towards representative Government. The Government has drawn up a five-year programme of economic development and the island was free from labour trouble throughout the year. But against these favourable factors must be set the cyclones which hit the island after an interval of twelve years and damaged the sugar cane crop considerably.

The rapid growth of population which is a common feature of all countries in the region is highest in Hongkong, where the present estimated population is 3 million against 1.5 million in 1947. The doubling of the population during a period of twelve years is certainly a tribute to the merits of good government which has its attractions for people tired of ideological fervour. But it also presents a problem of finding food, raiment and work for the expanding population, while the exports have been affected by severe competition and voluntary restrictions. The petition and the cotton textile industry which is the principal one in the Island has agreed to limit its exports to the U.K. and is under pressure from U.S. manufacturers to restrict its exports to the United States as well. While Imperial Preference, on which the Island depends, has proved an unreliable support, the local industries have to face severe competition from

China, which Hongkong as a free port cannot control by import restrictions. Japan, which stands apart from other countries in this region, has been able to correct its adverse trade balance at the cost of reduction of imports. The indications are that the period of post-war reconstruction and expansion has come to an end, while Japanese exports, especially textiles, have to face severe competition from China in the South East Asian markets.

Difficulties on the economic front are shared by all the countries in this region which have managed to avoid radical political changes. These fall into a common pattern characterised by reduced export earnings, foreign exchange difficulties, import restrictions and higher taxation. India can be regarded as a typical example. During the year India had to meet a bunch of Plan commitments. Though timely assistance has enabled the country to get over the hump, it has been necessary to step up the level of taxes and to maintain drastic restrictions of imports which have reduced normal trade to a trickle.

The general outlook, however, is not one of unrelieved gloom. The Persian Gulf countries report improvement in business. Unsettled conditions in Iraq have not affected oil revenue, which remained buoyant. Even in the other countries whose difficulties have been indicated above, there are signs of better prospects in the coming year. In India the heavy investment in industrial development has reached the stage of yielding a dividend, while agricultural prospects are better than in the previous year. In Burma both oil and timber industries report increases; production of sugar cane and groundnut has also increased. Malaya and Singapore have passed through the difficult first year of independence and can look forward to better times, as the outlook for rubber is more favourable and trading conditions for the tin industry are also likely to be better.

Throughout the region foreign assistance has played the crucial role of underpinning the programmes of economic development. The recognition of the importance to world peace and progress of development of resources of the underdeveloped countries is not, however, matched by the adoption of policies in the realm of trade by the industrially advanced nations which will help the former to reach the stage of self-supporting economies with increased exports. As Mr Grantham has pointed out, this objective cannot be reconciled with a Western fear of Asian competition and attempts to avoid that competition by restrictive measures.

The formation of the European Common Market, together with the deadlock over the setting up of the larger free trade area, is also likely to have adverse effects of the foreign trade of Asian countries. Discussing the effects of the European Common Market, Mr Grantham has expressed the hope that for the sake of Asia as well as of the United Kingdom, a formula will be found to extend the present E.E.C. to the envisaged free trade zone.

'The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right'—The Analects of Confucius.

Tributes to C. S. Rangaswami

Pothan Joseph writes in "Swarajya"

EARLY appreciation of his talent by the late Sir S. Subramanya Iyer gave a turn to the career of C. S. Rangaswami which might otherwise have been limited to Madras either as an outstanding professor of English or a prominent evangelist of the Theosophical Society. He was recommended to the Maharajah of Dharbhanga by his senior kinsman and generous patron to serve as personal secretary during the ferment of the Montford era. His arresting personality and quick intelligence won him influential friends in Calcutta without any of the arts of guile and toadyism that might have shortened his course to solid fortune at the cost of his soul, but Rangaswami could never be obsequious. He it was who introduced me to Pat Lovett the famous editor of 'Capital' as assistant editor, severing my connection with the 'Bombay Chronicle' in 1920, while he for his part exchanged venue as junior partner of a big firm of brokers in Bombay. A votary both of Lakshmi and Saraswathi, Rangaswami was bound to make his mark combining his gifts of business acumen with literary qualities of a refined type. When Rangaswami stepped into a room, it was as if the chairman had arrived to take up the agenda with a cail to order, so sparking was his personality. He could mix with equal ease amongst Puritans and Bohemians, making allowance for their deviation from the norms of life.

After a blazing career in Bombay, he switched back to Calcutta, for Rangaswami was essentially a Calcutta man, with Bombay as his school of juvenile experiences. The innate ambition to found a weekly journal like 'Indian Finance' was always there, and it was a heroic venture when with scanty capital he launched the journal. I, as a friend who owed much to him, shuddered; but he had superb confidence in his power of winning friends and influencing people. More, he created a journal to fill a vacuum that he had recognised as existing after years of observation. Rangaswami was too much of a patrician to start from the lower rungs of the ladder. We had all taken him for a life-celibate fond of de luxe surroundings in hotel suites, but he turned it all into a course of education for himself and all others who thronged round him. I have seldom come across a mind so absorbent as C. S. Rangaswami's. If he talked with Norcott Warren for an hour and later held a session with S. R. Bomanji on the amalgamation of the Presidency Banks, well he could present the situation in nutshell to Sorabji Pochkanawala or to Sir Basil Blackett, and abridge differences. In his London visits, he preferred the dapper bearing of a city celebrity. He could be grave and gay as the humour seized him. I never could imagine in the thirties that statistics would grip him, but his capacity for assimilation whilst he appeared glancing at pages proved enormous in the development of his reflective apparatus. In his first impressions, he could be mercurial, but C. S. Rangaswami's final summing up was based on sound judgment. All his flair for politics faded with the death of C. R. Das who was his sole hero. About Gandhiji he had his mental reservations; anyway, what had to be said about the dangers of imposture traceable to the company kept by the Mahatma was left to 'Indian Affairs' to discuss, a remarkable weekly published by Rangaswami in the days of Schuster, Grigg and Raisman. Politics was not his 'milieu' and I could never figure Rangaswami (as he was known amongst his friends) soliciting the favour of a vote for himself in any forthcoming elections. He was incapable of

rubbing shoulders with the sweating masses, but he could keep an assembly of the 'elite' spell-bound. Solitude bored him: wherever C. S. Rangaswami dwelt, there was something of a caravansarai, all welcome at meal time in a row. Success was his hallmark whether the test called the spirit of a sprinter or the stamina of a stayer. Rangaswami had certain phraseological mannerisms like the use of "puissant" and "by the same token", but his even diction was a model of apt expression without the clutter of repetitive adjectives to ruin the essential sense of nouns.

And remember the number of people he influenced, of his perception of other people's difficulties and his own willingness to lend a hand. Memory holds the door—but I can see a gallery of faces: Dr. K. Sankaran, Natarajan, Pochkanawala, S. T. Sadasivan, Khasa Subba Rau, N. S. T. Chari, A. R. Davar, Shirin Fozdar, Manu Subedar, R. D. Tata, Saklatvala, Dewan Chamanlal, T. C. Goswami, N. R. Sarkar, Matheson, P. R. Srinivas, K. Ramasubbier, and the promoters of the Travancore Quilon Bank amalgamation with its sequel. And many more I cannot count who felt the dynamism of C. S. Rangaswami.

As for me, I confess I feel the most beholden of all. As I pause musing, I get the image of another funeral; Mahadev Desai's, at which Gandhiji officiated. (No presumptuous comparison). As he smeared the body with sandalwood paste, Mahatma said: "Mahadeo, I thought that you would live to do this for me." I had always cherished the hope that C. S. Rangaswami would outlive me to write a generous obituary of his dear friend.

S. Narayanaswami writes in the Hindu

WITH the passing of Mr C. S. Rangaswami, we shall miss a picturesque and patriarchal figure in the world of Indian financial journalism. Those who knew him only through the medium of the printed word in the columns of the "Indian Finance", missed meeting one of India's most scintillating conversationalists. His rare personal charm imparted to his ready wit a magnetism all its own. Many may not know that Mr Rangaswami was a gifted and lucid speaker and the press button command over the apt phrase so well-known to the readers of "Clive Street Gossip" did not desert him when he mounted a rostrum. His range of general knowledge was considerable and till eye-sight failed him, he was reading voraciously, with books held within a few inches of his face.

Mr Rangaswami was a great humanitarian and his sterling emotional qualities were brought into full play when Burma Indians arrived in Calcutta after an excruciating trek through waterless jungles. His capacity for leadership in that great national emergency was also fully brought out. He organised refugee kitchens and offered assistance to displaced persons and showed rare courage in the strenuous days of Calcutta's communal disturbances. Outside of these emergencies, he helped numerous deserving young men who drifted to Calcutta from the South in search of careers to secure positions and settle down there. Mr Rangaswami was one of the clearest headed of financial writers and he was held in high esteem by the London financial column writers and the Editorial Board of the London Financial Times, with whom he used to be in close touch. Maybe his own latter day philosophy about low money rates might not have

Indian Finance

found wide acceptance in a world of mounting money rates. But he based his views on experience garnered over decades of close study of our gilded markets and our lending rates. His suggestions for amendments to Company Law were very valuable and pragmatic.

He gave often an unusual and fresh slant to popular thinking on current problems, political and economic, which was in refreshing contrast to the routine bric-a-brac with which our mental feeding troughs are often filled. One always came back after a conversation with him mentally braced up and feeling richer for the experience.

His latter day support for the economic policies of the Nehru Government, has somewhat intrigued even his close friends. He believed that Nehru Government because of its excellent intentions and its planning enthusiasms deserved friendlier counsel than what the business community was disposed to offer and in what he conceived to be his patriotic duty defended some of their economic measures with customary generosity. This new attitude of his was to an extent based on his reaction to what he felt were reprehensible business practices of some of the business houses he knew.

Mr Rangaswami put up a hard battle against failing health for five years—during which period whatever was left of his energies was consecrated to the columns of the "Indian Finance." The voice of the first Clive Street Gossiper has been hushed for ever. May his soul rest in peace!

*

"Ditcher" writes in "Capital"

IT IS ALL TOO OFTEN MY MISFORTUNE TO FIND myself writing obituaries of people who do not belong to my profession; the task is infinitely worse when the subject is a fellow journalist. Mr C. S. Rangaswami, with whose death the Indian Financial Press has indeed lost an able and gifted member, was the founder-editor of 'Capital' Calcutta and contemporary, INDIAN FINANCE, and will be remembered as the "Eavesdropper", whose gossip on the Clive Street scene always made interesting reading. But that was not his sole distinction. He was an expert on India's monetary matters and his advice and comment on these were widely listened to. He was a fluent and persuasive speaker and was well known as possessing a scintillating manner of conversation which won him many friends and influenced important people. He was an intimate of innumerable prominent ditchers, including Pat Lovett and Geoffrey Tyson, both of whom wrote under that name in 'Capital'. Mr Rangaswami, I am told, was always determined to succeed in life in a big way. I naturally refused to accept defeat in all things. That perhaps explains some of his actions which might have seemed extraordinary to people of lesser calibre. For instance, he said to have arrived in Calcutta early in his working life, after a not particularly successful start in broking business in Bombay, stayed in one of the more expensive hotels with only Rs 3 in his pocket. It was quite some time before he could earn enough to sustain a beginning like that. During the period, I am told, he started Indian Finance in collaboration with a relative, Mr P. R. Srinivas—who edited the paper for many years and now works with a chain of newspapers in Madras—with a capital of only Rs 200. Rangaswami's interests extended beyond professional field, and he was a good friend to a number of educational and charitable institutions. His was a life lived worthily and

March 28, 1959

Nehru's Hindi

Mr Nehru's failure to recognize and acknowledge the appositeness of "Kritrima Nabhomandal" as Hindi equivalent for "Artificial Planetarium" has given Seth Govind Das an excellent opportunity for a shrewd dig at his leader. The Seth, who next to Shri Tandonji is the Grand Apostle of the Hindi cult, refused, as he is perfectly entitled to do, to accept Mr Nehru as an authority on simple Hindi. Mr Nehru, he said, had never passed any examination in Hindi and would fall if he now appeared for primary examination in the Rashtra Bhasha.

In his enthusiasm to defend Hindi, Sethji has overlooked that his criticism of Nehru amounts to a condemnation of the language. If Mr Nehru who was born and bred up in Allahabad is incapable of passing a primary examination in Hindi, with what justification can this language, which is foreign to the majority of the inhabitants of this country, be foisted on them as the official language?

But Nehru's puzzlement over 'Kritrima Nabhomandal' itself is a puzzle, and it is difficult to understand why he prefers 'Artificial Planetarium' to the illiterate in either language, both are equally incomprehensible. The Hindi equivalent at least is simpler, in that it consists of seven syllables, against ten of the 'Artificial Planetarium.' 'Kritrima Nabho-mandal' has also the advantage that its meaning

will be clear to speakers of all the Indian languages derived from Sanskrit or with a large Sanskrit admixture. But the word 'kritrima,' in addition to the meaning 'artificial' is also used in some Indian languages to mean 'mischievous.' That perhaps, is responsible for the mischief.

Coke oven & Gas Grid

The reference made by the Chief Minister of West Bengal to the smoke menace in Calcutta, and the hopes of economic regeneration of the State held out by the completion of the coke oven at Durgapur, have whetted the eagerness of the public for early completion of the remaining stages of the project. One of the most important by-products of the coke oven is gas, of which 15 million cubic feet will be available every day for a daily output of 1000 tons of hard coke. This quantity is double the present estimated requirement of Calcutta, but the problem is to bring it to the city. This will involve laying of a pipe line from Durgapur to Calcutta. The total cost, according to figures recently given in the State Assembly by Dr B. C. Roy, is estimated at Rs 2.5 crores with a foreign exchange component of Rs 1.5 crores.

Though the gas grid forms part of the integrated project, and should have been ready simultaneously with the completion of the coke oven in order to ensure maximum economy of operation, it is evident that the time table has been thrown out of gear by shortage of foreign exchange which possibly accounts for the delay in securing the Central Government's approval of the gas grid scheme. Dr Roy stated that the scheme had been sent to the Government of India and he expected that their approval will be received by May next. Completion of the project would take another six months from that date.

The delays in taking up further stages of the project highlight the achievement of completing the central piece, the coke oven, without overstepping the schedule. It is relevant to mention in this connection that, for the first time in India, metallurgical coke will be produced out of coals which had been so long considered unsuitable for the purpose. The Durgapur Coke oven, as Mr A. B. Ganguly, Administrator of the Project, indicated, has thus shown the way for more efficient utilisation of the country's coal resources and the conservation of high grade metallurgical coals of which India has only limited deposits.

The construction was taken up in 1956 and its completion in two and a half years is regarded as a record for this type of work. Full credit for the achievement goes to the West German firm of Messrs Carl Still Export (GmbH) who were entrusted with the construction and to the engineers and technicians engaged on the job. Mr K. F. Still, who had specially come down to be present at the inauguration, described the completion of the project in time as the result of the joint effort of the

German engineers and their Indian counterparts which demonstrated what such co-operation could achieve in the field of industrialisation. The happy precedent set up in the construction of the coke oven plant should have fruitful field of application in the remaining stages of the project, which envisages the establishment of an industrial complex of chemical and metallurgical industries. In both fields, German equipment and 'know-how' will be of invaluable assistance.

*

Speaker's Code

No-confidence motions against presiding officers of legislative bodies tend to drag down the dignity of the high office and thus undermine the basis of orderly discussion which is the essence of the parliamentary system. There is clearly need for an understanding on the part of all concerned to avoid the creation of situations which lead to the adoption of such unfortunate expedients. The no-confidence motion against the Speaker of the West Bengal Assembly, which fortunately was not pressed to a division has, however, led to one good result and established a desirable precedent. The Speaker has announced his decision to resign his directorship of a company which led to the motion. The debate has also forcibly underlined the need for setting up sound conventions regarding the position of the Speaker and to draw up a code of conduct by which he should order his actions. This is a point which is best tackled on an all-India basis by the Speakers' Conference.

In parliamentary matters India has generally chosen to follow British precedents. But it has not always been possible to do so, on account of differing conditions in the two countries. There are also significant departures regarding conventions governing the Speaker. If the Speakers in India are not required to give up their party affiliations, nor are they assured of uncontested returns in subsequent elections.

In the U.K., the practice, as Mr Sankar Das Banerjee reminded the House, is that the Speaker withdrew from politics as also from the Boards of State-managed concerns. As regards private concerns, it depended on the nature of the company. But it is an accepted principle that the Speaker should not be connected with any concern whose affairs are likely to come under parliamentary scrutiny. The adoption of this principle in India would practically cover all companies, in view of the comprehensive scope of company legislation and the Industries Regulation Act.

If the principle, "Once a Speaker always a Speaker" is to be followed, there is need for review of the question of the Speaker's salary and privileges. One interesting feature of the debate was the anxiety displayed by the Communist members for upholding British precedents in parliamentary matters. Will they agree to abide by the same precedents as regards their conduct as a party inside and outside the legislatures?

Elementary Education

Speaking in the Lok Sabha, Dr K. L. Shrimali, Union Minister for Education, made a review of the progress of primary education in the country and referred to the measures the Government have in view for expediting the attainment of the objective of free and compulsory primary education to children between the ages of six and eleven.

There has been general dissatisfaction at the poor pace of primary education and the failure to achieve the original objective of free and compulsory primary education by the end of the Second Plan, with the objective being set for realisation by the end of the Third Plan, has naturally caused concern to educationalists and the public.

Dr Shrimali listed two factors as having held up progress. While in almost every State girls' education has tended to lag behind boys' education, general progress is far from satisfactory in areas which are economically backward. Progress in the different States is also marked by pronounced variations. While Punjab, Jammu and Kashmir, Uttar Pradesh, Bihar etc have a percentage of school going children which is lower than even 40 per cent, at the other end there are States like, Punjab, Bombay Madras Bengal, Kerala etc which have succeeded in providing elementary education to more than 60 per cent of the school going children. Kerala leads the other States with a percentage of 99.8 per cent which indicates near attainment of the target. Outlay on elementary education will therefore have to be concentrated in those States which are now trailing behind if the objective is to be realised by the end of the Third Plan period.

More on Rs 100 Crore Agreement

NONE of the changes appertaining to the agreement in regard to the Rs 100 crores under Public Law 480 counterpart funds has yet manifested itself in the latest week's banking returns. This was, of course, partly anticipated in this column, since we had thought it possible that the Central Government might, for reasons of their own, defer the completion of the transactions as such, whereunder they would receive Rs 100 crores from the State Bank's special Deposits, to the next fiscal year. There may be another reason responsible for the failure to materialise of this special set of transactions, and since we had last week made no mention of this factor, it would be useful if we were to take cognisance of this other aspect.

Some few weeks ago, the information was vouchsafed to us that the procedure to be adopted in the making over of monies by US Embassy authorities to the Central Government would be that such payment would be in the nature of reimbursement of expenditures already incurred by the country. That is to say, if, for example, Rs 26 crores have been set apart for the Refinance Corporation, and if the Central Government had dur-

ing the last two years been making provision in the Revenue Budget for allocation to the Refinance Corporation, the fact remains that physical payment to the Central Government is made only after physical payment is made by the Central Government. This procedure is, as we see, known to be in force. It is possible—but not, we fancy probable—that the same procedure is adopted in regard to the current loan agreements covering Rs 100 crores. For, on the one hand, it may be that some element of the work to be done on the River Valley Projects as envisaged in the agreements has already been completed, and, in such a case, the Central Government would stand to get immediate recompense; but there would be great difficulty in determining the quantum constituted by such completed work against which the Central Government could be deemed to be fit to be recompensed. On the other hand, the very nature of River Valley Projects is that their execution takes considerable time. Does this mean, as it would so mean if the procedure were to apply, that the funds be indefinitely—may be for some years—on deposit with the State Bank? We rather fancy, on the contrary, that quite a different system would have to be adopted in respect of this Rs 100 crores. We imagine that the receipts under this head would be credited to the special development fund, which is one of the budgetary heads. The explanatory memorandum indeed points out that the head, Transfer of Development Assistance from the Government of USA, "accommodates the transactions relating to the assistance received from the USA under Development Assistance Programme and Public Law 480". Unfortunately, the explanatory paragraphs thereafter confuse rather than clarify. For, the

loan assistance under Public Law 480 for which credit has been taken in the Budget year is only Rs 6 crores, and, in the current year, the relevant figure was Rs 68 crores. The only possible inference is that, at the time the budget was drawn up, the negotiations in respect of this Rs 100 crores had been rather uncertain in what they indicated of prospects. Thus, it will be seen that the transactions relating to the re-disbursement of Public Law 480 counterpart funds are confusing in the extreme. Since it seems possible that they should be available for helping out the Government's Ways and Means position, a clarification from authority would be helpful.

Special Receipt in Foreign Balances?

There has been a break in the expansion of currency circulation with Active Notes, during the week ended March 20, declining by Rs 3.17 crores to Rs 1692.60 crores. Rupee Coin also returned from circulation for Rs 0.61 crores. Consequently, the Reserve Bank's cash in the till improved by Rs 3.72 crores to Rs 14.70 crores.

In the Banking Department of the Reserve Bank, a noteworthy feature was the rise of Rs 5.49 crores to Rs 38.75 crores in Balances Held Abroad. That this was due to some special receipts is suggested by the fact that, on the other side of the ledger, Other Deposits are also seen to be higher by a similar amount, in being marked up by Rs 5.32 crores at Rs 120.65 crores.

The Central Government's balances are substantially lower by Rs 15.06 crores at Rs 51.17 crores. This is seen to be mainly owing to payment by the Central Government of monthly instalments to the State Governments, whose balances have more than doubled from Rs 17.07 crores to Rs 36.01 crores; and this has been accomplished after the indebtedness of State Governments has been reduced by Rs 5.60 crores. It would appear that the Central Government have had recourse to deficit financing, as Investments are marked up by Rs 15.19 crores at Rs 259.68 crores. There is also this interesting fact, that Bills Payable are higher by nearly Rs 13 crores. This would mean that drafts on the Reserve Bank issued by Government have not yet been presented for payment. Such a rise would also indicate the higher tempo of Government disbursements as the fiscal year-end approaches.

The balances of member banks have improved by Rs 6.25 crores to Rs 74.22 crores, with the State Bank accounting for rather more than half of this. However, it would appear that Scheduled Banks found it necessary to increase their borrowings, since the Other Loans and Advances of the Reserve Bank have risen by nearly

Indian Finance

Rs 13 crores from Rs 100.30 crores to Rs 113.03 crores; and the advances against usance bills account for Rs 4.13 crores of this rise.

Finally, as already pointed out, Balances Held Abroad improved by Rs 5.49 crores to Rs 38.75 crores.

According to the return of the State Bank for March 20, Deposits have risen further by Rs 5.61 crores to Rs 506.91 crores. There has been no fresh investment in gilt-edged, but other Assets are higher again by Rs 14 crores at Rs 14.02 crores. The total of Advances is marked up by Rs 0.90 crores at Rs 202.80 crores. Borrowings have been shaded by Rs 1 crore to Rs 6.50 crores. In the result, cash in hand and with the Reserve Bank has gone up by Rs 4.22 crores to Rs 28.51 crores.

Thanks mainly, but by no means solely, to the State Bank, Deposits of Scheduled Banks rose during the week ended March 13 by Rs 13.64 crores to Rs 1662.07 crores. But, owing to the busy season pressure, the expansion in Advances caused another rise of Rs 9.26 crores to Rs 979.04 crores. It, therefore, became necessary for the Scheduled Banks, even after disinvesting in gilt-edged for Rs 3.30 crores, to increase their borrowings from the Reserve Bank by Rs 10.50 crores to Rs 46.42 crores. In the result, Cash Balances were practically unchanged at Rs 150.70 crores.

Economic aspects of British election prospects

By Paul Einzig

THERE is a growing interest in business circles in the prospects of the general election. Seldom has there been such close inter-relationship between economic developments and election prospects in Britain as there is at the present time. This relationship is mutual and reciprocal. The probable date chosen by the Prime Minister for the general election and the views taken about its probable result strongly influence business prospects and the Stock Exchange. On the other hand, Mr Macmillan's choice of a date and the prospects of a Conservative victory depend in turn on the trend of business activity.

It is no wonder every investor, stockbroker, banker and industrialist follows very closely the fluctuating prospects of an early General Election and the fluctuating prospects of a Conservative victory. Election date and election prospects are the favourite topics of conversation wherever business men meet. They receive a more than usual degree of attention in the financial press. Public opinion surveys are awaited with keen interest on the Stock Exchange. At least one recent instance that appeared to be indications that in some quarters there was unusual intelligent anticipation of the re-

March 28, 1959

sult of such a survey before it appeared in print.

Until recently sentiment in business circles was strongly against an early election. It was feared that owing to the unemployment position the Government's chances of being confirmed in office would not be too high and for this reason it was considered expedient to wait till the autumn in anticipation of a further substantial decline in unemployment. There was, however, recently a marked improvement in the unemployment situation and for this reason the number of those politicians and businessmen who think that Mr Macmillan will, or at any rate should, decide in favour of a spring election, has increased considerably.

An argument in favour of early election is that up to the present business recovery has not been accompanied by any noteworthy increase in the cost of living. The cost of living is about 2½ per cent higher than it was 12 months ago, against an average increase of about 5 per cent a year during the previous 10 years. There is reason to fear, however, that even though the employment position is likely to continue to improve between now and October this improvement would be accompanied by a rise in the cost of living. This would mean that on balance the Government would win a number of working class votes influenced by the employment position but it would lose a number of middle class votes influenced by the cost of living position. Whether on balance there would be a net gain or a net loss is anybody's guess.

The apparent improvement of the international political outlook also favours an early Election. It is true, assuming that the Foreign Ministers' Conference will begin on May 11th a spring election would presumably take place in the middle of that Conference. This is no reason, however, for a postponement of the election. It would be otherwise if the Summit Meeting were to begin in May. The Prime Minister's presence in the country during the electoral campaign would be indispensable. On the other hand, there is no reason why the Foreign Secretary should not stay in Geneva and pay only one or two flying visits to his constituents. Since there is no likelihood of a Summit Meeting until the early summer a spring general election would not clash with it. Indeed, it would be a powerful argument that Mr Macmillan's mandate should be confirmed at the general election to enable him to represent his country at the Summit Meeting with an enhanced prestige derived from winning the election.

Considerations of Labour relations, too, appear to favour an early Election. During recent months the number and extent of wage increases has not been unduly excessive even though most increases have been unjustified, having regard to the stability of the cost of living and the persistence of the business recession. But quite recently the unions representing the employees of the nationalised Bri-

tish Railways came forward with a demand for a substantial wage increase. There is not a shadow of justification for this claim. The railways are running at a loss and the wage increase would either mean an inflationary increase of transport charges or an inflationary subsidy in some form or other. Nor is this all, if an increase is granted to transport workers it would initiate another round of wage increases. The rise in the cost of living would become accentuated and inflation would resume the course at which it was proceeding before it was slowed down by Mr Thorneycroft's disinflationary measures.

The Government may feel tempted to concede some increase in order to accelerate the recovery from the business recession. Should it do so it would inevitably antagonise the middle class voters whose attitude is largely determined by the cost of living. On the other hand, should the Government categorically reject the wage demand it would antagonise its supporters among the working classes. Since it is bound to take several months before the wage dispute will develop to a decisive stage the Government would have time to get over the general election without having to commit itself in either direction. Should the general election be postponed, however, to the autumn by that time the Government would have to show its hand.

Notwithstanding the above powerful array of arguments in favour of an early election it is by no means certain that Mr Macmillan will decide in that sense. The results of recent by-elections are inconclusive; those of recent public surveys are not sufficiently encouraging to make an early Election appear reasonably safe. Fortunately for Mr Macmillan, he need not make up his mind until after the Budget by which time business recovery may have made further progress. The Budget concessions too, are liable to influence many people who would be inclined to vote Conservative, not indeed out of gratitude for the tax concessions but for fear that a Labour Government would restore high taxation.

A consideration that may conceivably play a decisive part in favour of deferring the Election to the Autumn is that Mr Macmillan having succeeded in persuading President Eisenhower to agree to a Summit Meeting will want to attend that Meeting and would be most reluctant to risk having to relinquish office before it takes place. For this reason, as for many others, the prospects of a Conservative victory would have to improve quite considerably during the next few weeks in order to induce Mr Macmillan to take the risk of an early Election. Should unemployment continue to decline at an even higher rate than during the past month, and should the cost of living remain stable, he might conceivably decide that the risk is a reasonable one.

—Copyright.

US Notes

THE steepness of the climb of labour productivity (output per man-hour) in American industry during the last five months has far exceeded expectations. Business analysts had anticipated a considerable increase but not one of such sharpness.

Government economists, just as surprised as everyone else, are now confident that US industrial productivity jumped to a record-breaking high in the last quarter of 1958 and that it is continuing to grow at a swift rate.

Where does this spectacular development, which enables American companies to turn out more goods with a smaller work force, stem from?

Part of the explanation is that company officials became cost-conscious during the recession and that workers have been more efficient. But productivity has mounted chiefly because of the huge sums corporations have spent in the last few years for research and development of products and processes, and for more efficient plant and equipment.

Investment by American industry in research and development during 1958 totalled an estimated \$8,300 million. Outlays for this purpose have shot up precipitously in recent years and are expected to continue to rise. By 1961, it is estimated industry will be spending close to \$10,000 million on research and development.

Similarly, expenditures for new plant and equipment have been on a sharply rising scale in the period from early 1955 to mid-1957 when declining business activity resulted in lower capital expenditures. The total capital outlays for these years were as follows: 1955—\$28,700 million; 1956—\$35,080 million; and 1957—\$36,960 million. Although the 1958 total of \$30,530 million was considerably lower, it was still a sizeable investment in the future.

All of these developments, it now turns out, have contributed more than had been anticipated to higher industrial efficiency.

This upsurge in efficiency has had another effect: it enabled corporations to attain a sharp recovery of profits in the last quarter of 1958 without a proportionate increase in sales. The preliminary estimate of the annual rate of corporate profits in the last quarter of 1958 is \$44,000 million, up \$4,100 million, or 10 per cent, from the annual rate in the fourth quarter of 1957.

But government economists now believe that the final figure for the fourth-quarter annual rate of corporate profits will be even bigger. They suspect that corporate profits

this year will be nearer \$50,000 million, rather than \$47,000 million, the amount forecast by President Eisenhower in his budget message to Congress in early January.

However, government economists also expect as production continues to rise, the rate of productivity will level off later this year as older and less efficient productive facilities, now in reserve, are placed in operation.

The best guess of these exports now is that productivity in 1959 will be about 3 per cent higher than it was in 1958.

If such a 3 per cent productivity increase over the 1958 rate is realised during this year, it would be double the increase that occurred in the peak business year of 1957.

The significance of such a productivity increase can be enormous. Over the past two-thirds of a century the annual increase in productivity has accounted for nine-tenths of the increase in real income. Hence, productivity holds the key to sustained economic growth and higher living standards without dangerous inflation.

S. E. RLY TENDERS

Sealed tenders are invited for (1) Tender No. CON/GM/14/P&M/104/EMP/59 for supply of spare parts for Tournapul Model 'C'—Serial No. CW Machine Nos. GW (70062) to 70092) CW-D. Quantity and other details to be obtained from Tender Schedule. Earnest money is Rs 1000/-. Tenders will be opened on 20-4-59 at 3 P.M.

(ii) Tender No. CON/GM/15/P&M/103/EMP/59 for supply of spare parts for Tournapul Model 'C' Scraper—Tournapul—GP 40129—40160 CPF—E, Scraper—S (60161—60191, 40132—40184)—CM-A. Quantity and other details to be obtained from Tender Schedule. Earnest money is Rs 1000/-. Tenders will be opened on 20-4-59 at 3 P.M.

Tender forms are obtainable from the office of the Controller of Stores (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs 5/- (not refundable) per copy per tender by money order to him direct in the case of outside firms and on production of cash receipts from this Rly's Chief Cashier by local firms.

Tenders should accompany the receipts for depositing earnest money as stated above with this Rly's Chief Cashier without which the tenders are liable to be rejected. Approved contractors having a permanent deposit of Rs 1000/- with the Controller of Stores are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

CALCUTTA BOMBAY MADRAS NEW DELHI

to be—for, after all, these changes are also relevant to the discussion of the economy—his acutely perceptive chapter on some Factors of Economic Change which deals with the effect of technology and human relationships in industry touches upon some relevant social considerations.

★

The inevitability of the kind of changes we are seeking to effect has been related by Mr Venkatasubbiah to our immediate past, the kind of politics we had, the kind of administrative legacy we inherited and the structural changes effected in our social and economic life by the Second World War. Of the purely economic changes themselves, Mr Venkatasubbiah's theorem

is that India is in the throes of a transition from a colonial to modern industrial economy with all the attendant pains of wanting to skip historical processes. And these efforts did not start on the fifteenth of August 1947. Indeed, in certain important senses, the theoretician's conceptualised 'underdeveloped economy' is hardly applicable to India. Though it would be wrong to consider Indian economy at this stage as anything but under developed for all practical purposes, it is not hopelessly so as is often assumed in certain theoretical abstractions of under-development. Thus the theory of the vicious circle that perpetuates under-development is not entirely applicable to India. This is so, because, at the point of time when momentum was sought to be im-

parted to it by planned endeavour, it was not in a state of complete inertia. Indigenous entrepreneurship has made its impact on it and the Second World War had helped to diversify it. Administratively and organisationally, India was adequately, if not abundantly, provided. Institutional adaptability and experimentation, which is one of the most notable features of Indian development efforts were made possible because, the country had a sufficient degree of administrative 'sophistication'. This is also the reason why India was able to absorb (and absorb without waste) large quantities of foreign assistance. The multiplier effect of such investment is striking because of the comparative maturity of the economic social and administrative framework available in the country.

Of the *raison d'être*, in purely economic terms, of the current tendencies in the Indian economy, Mr Venkatasubbiah is equally cogent. Indian plans are nothing but a conscious effort at co-ordinating factors that make a rapid development possible. Here our resemblance to the theoretical construction of an undeveloped economy is closer. In his chapter on planning, he discusses sympathetically, the claims of the present planning to be socialistic and the extent of the inevitability of such socialism in it. And he makes the shrewd point that in important formal contexts, accredited representatives of private enterprise have themselves accepted and even urged its inevitability. He quotes the stand taken by the Indian Delegation to the International Business Conference in New York in 1944. It was argued there that the question of 'government interference would be determined by the needs of planning, especially of the economically under-developed countries'. Of course, the issue was then mixed up with mental reservations about 'alien government' and so on, but the reluctance to go along with US ideological zeal for free enterprise had solid economic reasons. In fact, Indian enterprise has never had, until quite recently, any objections in principle to government interference. Part of the reason for this may well be the fact that it has itself grown to manhood under the paternal concern of a government that made good use of protective tariff in important cases. In any case, the economic reasons for government's taking on significant economic tasks at this stage of under-development are too substantial to be dislodged easily.

★

But, what is important is that by accepting mixed economy for the means of economic development, the Government of India accepted socialist planning; but what is more significant, it accepted capitalism as a permanent institution. There can hardly be any doubt, that both for reasons of feasibility and for reasons flowing from the logic of 'mixed economy,' India is unlikely to want to destroy capitalism.

★

In so far as planning implies changes, it implies not only increase in wealth but a displacement of a whole series of 'unsatisfactory, out-dated or inert factors in our economy.' These factors are not only economic, like chronic under-development and low capital formation, but socio-political attitudes stratified by social attitudes and conventions. These changes are taking place rapidly in some directions and heart-breakingly slowly in others. But that the face of India is being visibly changed can hardly be doubted. If anyone wants a convenient summary of the evidence in this regard, I would recommend to him Mr Venkatasubbiah's book.

GATEWAY GOSSIP

THE Industrial Credit and Investment Corporation is one of an adequate number and range of specialised financial institutions that exist in the country for rendering assistance in industrial development. It is not for me to delineate the differences in the functions of these institutions. So far as the ICIC is concerned, it helps industrial development in three ways. First of all, it undertakes underwriting operations for new capital issues in the private sector, and flowing from this the ICIC is under obligation to take up investments to the extent to which the capital called up may remain unsubscribed. Even apart from this, the ICIC has made it its function to invest in industrial undertakings on its own initiative and this aspect of the working of the ICIC has tended to become more important in recent times. Thirdly the ICIC also grants loans in both rupee currency as well as in foreign currency. Thus it could be seen that the ICIC is mainly an investor unlike the Industrial Finance Corporation which is a financier. It is also to be noted that the ICIC allows its funds to be used not only for the starting of new industries but also for the expansion and rehabilitation of old industries.

After the early arduous days when it would not have been possible for any institution and especially of the kind which the ICIC represents, to look towards the future with any degree of optimism or certainty, the ICIC could now be said to have planted its feet firm on the ground. It was the dynamic leadership provided by Dr A. Ramaswami Mudaliar, its chairman at the time of its birth, which stood the ICIC against the difficulties of its early days. Now at a critical stage of its growth, the institution is unfortunate to lose Dr Ramaswami Mudaliar who has resigned his chairmanship. However, the ICIC could consider itself fortunate that Dr Ramaswami Mudaliar continues in the Board of Directors, which will therefore place his wise counsel at the disposal of the institution. It is even more fortunate that the ICIC has found an equally efficient and versatile chairman in Mr G. L. Mehta who during his ambassadorial days in Washington, has acquired a host of friends not only among official circles in New York but also in the ranks of private businessmen and who could utilise this foreign influence to the benefit of the ICIC.

The report of the Directors for 1958 bears impressive testimony to the important role the ICIC has been playing in the development of industries in the country, by means of assistance rendered to industries both new and old. By the end of 1958, the company had agreed to give financial assistance for Rs 1337 lakhs excluding applications sanctioned but subsequently withdrawn by the applicants. This

total was made up of two parts, one part comprising rupee assistance which was given for an amount of Rs 1021 lakhs, and the other in Foreign Currency loans. Referring to the Foreign Currency loans granted by the ICIC, Mr G. L. Mehta pointed out that this item has tended to increase over the last year. I may recall, in this connection, the ungenerous criticisms that were levelled against the ICIC about two years ago for what was considered to be its inability to grant loans in Foreign Currency in spite of the 10 million dollars of foreign credit made available to it by the World Bank. It was at that time pointed out in these columns that such criticisms against the ICIC were rather premature for the reason that it was not the fault of the ICIC that it could not grant loans in foreign currency if it received no applications for such credit. The situation, had since then, changed and the foreign exchange shortage that became such a general feature of the country's economy in the last year had provided the ICIC with the opportunity to rectify the impression that had been formed out of impatience at its working.

It is the influence which the ICIC exerts by providing risk capital which more than its other functions, justifies the existence of such an institution. In this field, the role of the company has grown in importance while its business has also risen in volume. The Chairman Mr G. L. Mehta points with satisfaction at the progress, the ICIC has made in the provision of such capital which is indicated by the fact that till date, the company has completed 16 underwriting operations involving an amount of Rs 500 lakhs. This included issues of Equity as well as Preference Capital and Debentures some of which were Public Issues by means of Prospectus and others "Rights" Issues to Company's shareholders or their nominees. In this connection Mr G. L. Mehta, points out that out of this sum of Rs 500 lakhs in respect of which the ICIC undertook underwriting operations, it was necessary for the Company to take up only Rs 178 lakhs in shares and debentures, the balance being subscribed by the investing public. Now this makes it necessary that the achievements of the ICIC should be judged not by the volume of its own investments alone, but by the volume and size of capital it had helped to raise. Under conditions of investment markets in India, when there is a marked initial reluctance on the part of investors to take up newly offered capital, the importance of the services rendered by the ICIC to create confidence in investors could not be exaggerated. In the process the ICIC could also broaden the investment market if it sets out to sell its investments prudently and gradually. This Mr Mehta points out is the policy of the institution.

ICIC Forges Ahead

In its direct investments the ICIC, Mr Mehta explains, has been guided by strategic considerations of the country's economy and he illustrates this by the investments undertaken by the company in about seven automobile enterprises for an amount of Rs 216 lakhs. If the ICIC has thus thrown its weight on the side of the automobile industry it was because of the key role of road transport in the economic development of the country. The way in which road transport had relieved the shortage in transport facilities that at one time threatened to take serious proportions, would vindicate the operations of the ICIC in the automobile industry.

However, Mr Mehta has indicated that the ICIC, in its general operations, is not allergic to any particular venture if it is not an ill-conceived or a speculative scheme. He has in this connection pointed out that he would welcome informal discussions with responsible industrialists and entrepreneurs even before the submission of formal applications for the help of the ICIC. This as he says, would obviate much delay in considering applications by the ICIC after their formal submission by intending entrepreneurs and save the ICIC from criticisms of being dilatory in its dealings and the sponsoring industrialists from misunderstandings and misgivings

about the objects and aims of the ICIC.

Thus, the ICIC has in the course of a short period grown to great stature as an institution specialising in the provision of longterm finance to industries in the private sector. But a stage has now been reached when, in view of the increasing demand upon the funds of the institution, deriving from the gathering momentum of industrialisation in the country, the ICIC would have to set out to strengthen its own resources so as to be in a position to meet all its demands upon it. The capital of the company at present exceeds a little over Rs 12 crores. The commitments by way of assistance to industrial concerns and other items, account for more than Rs 6 crores, leaving a balance in cash and by way of bank balances of a little over Rs 6 crores. Though this is by no means an unhappy situation, the funds of the ICIC may well turn out to be inadequate in the face of future demands upon it. Mr G. L. Mehta has himself pointed out that the rupee resources of the Company would be adequate only till the end of the current year. It is to be hoped that the ICIC would succeed in persuading the Government of the imperativeness of the need for giving Rupee advance for which a request has been made to the Government by the institution.

This is your Heritage

As you approach the ancient town of Gwalior, you cannot fail to see the lofty towers of the world-famous Gwalior Fort. This magnificent edifice takes you back through the turbulent history of India. Within the fort are many examples of architectural beauty such as the 'Painted Palace' built by Man Singh in 1490. Throughout India, there are many wonderful monuments that speak of the past, set in a countryside that is full of exciting interest to the tourist. And wherever you motor in this vast land, your trip will be more pleasant, and free from 'car troubles', when you drive on Caltex petroleum products.

10,000 tons of life!

At Hapur, mighty mechanised silos—erected by
LARSEN & TOUBRO LIMITED—store and safeguard vital food grains

INDIA'S annual losses of vital food grains run into lakhs of tons—making the cry 'save more food' as urgent as the cry 'grow more food'. And just completed at Hapur, the biggest wholesale wheat market in India, stand huge grain silos of the Central Government—giant granaries that keep 10,000 tons of precious food grains safe from the losses caused by dampness, insects and rodents.

These silos were made from pre-fabricated steel sections supplied by Butler International Company under United States Government aid, and erected by Larsen & Toubro Limited. Facilities provided in this modern installation include equipment for loading, weighing, cleaning, drying, fumigating, packing and discharging grains. Three CATERPILLAR

generating sets provide the necessary power for these operations.

Public and private sector alike

India needs many more grain silos...and Larsen & Toubro Limited are now in a position to build silos of RCC construction. This will reduce imported material by about 90%, an important consideration in these days of foreign exchange shortage. Such silos will meet the vital needs of the small private operators as well as big Government projects!

Established in Bombay many years ago, Larsen & Toubro Limited are thus helping to complete the Five Year Plans...to make the country more self-sufficient, the people progressively more prosperous.

LARSEN & TOUBRO LIMITED

The first of their kind in India, these silos can store 10,000 tons of food grains at a time!

OLYMPUS

second statutory report of the Ministry of Commerce and Industries Act, 1956 was presented to the Lok Sabha last Thursday by Mr. Satish Chandra, the Deputy Minister for Commerce and Industries. The report covers the period 1957-58 in many ways, an interesting period in the history of the Ministry. Requirements of the new Act had, by the beginning of this year, lost some of their novelty and readjustment had been made easy by the co-operative and helpful attitude of administration. This was also a year in which the Mundhra case exploded, strewing all over the place some unlovely examples of company practice. Unfortunately, the report under review has been asked to avoid comment on the merits of the investigation into the case, because a good deal of the sub judice. But enough has been said to make the case for a company law administration more unassailable than ever.

But, first, about the positive and encouraging aspects of its activities. 1957-58 saw the registration of a substantially larger number of companies than 1956-57. In all, 848 companies were registered in the immediately preceding year. Of these 961 were public and 896 were private companies. The majority of these companies were comparatively small, with an authorised capital of less than five lakhs. Only 28 were "giants" with authorised capital of more than a crore rupees. But the giants of this year were of smaller stature than those of the preceding year, since the average authorised capital for these has come down to Rs 2.1 crores compared to the Rs 6.1 crores of the immediately preceding year.

The report claims, with some justice, that the improvement in the number of companies registered during this year shows that the fall in the number of registrations in the first year was not due to the supposed obstacles to corporate activity inherent in the Act itself. With better understanding of the provisions of the Act, this particular superstition has disappeared. Moreover, helpful attitude of the department has been of a little responsible for the removal of doubts and misgivings. Timely advice on the interpretation of the various provisions has been readily available to company managements. Thus, a "better understanding of the Act and wider appreciation of the constructive attitude of the administration" has led to a more satisfactory state of affairs and the Act itself is no longer regarded "as a deterrent to new company formations".

A rather interesting development during the year under review

has been the increase in the number of companies in which Government was a shareholder. As the scope of direct economic activity of Government increases, the institutional framework of such activity is a matter of much experimentation. Departmental execution has been found inadequate for the complex needs of modern industrial entrepreneurship. Public corporations of an autonomous and semi-autonomous type are also being tried as one alternative. These have their obvious advantages, but they have also their equally obvious disadvantages. A third kind of institutional framework that has been tried by Government is that of a limited company with major and even minor shareholding by Government. This has the obvious attraction of approximating Government economic activity to that of a private entrepreneur and the consequential requirement to meet the private sector on its own ground. In other words, the enterprise is run on so-called "business principles" and the claims of (and doubts about) Government's ability to run efficiently modern enterprises get some chance of being verified. Indeed, even avowed socialists (like the right wing of the British labour party) think that this, rather than outright nationalisation, should be the principal institutional framework of the future socialist pattern. The idea has obvious advantages, since one of its features will be the blurring of the distinction between private and public sector. Supposing the Government is a 49 or 51 per cent holder in a company and allows the rest of the shares to be held by the public, then we shall be having a mixed economy in the strictest sense of the term. How far will this idea work is to be seen, but it is obviously worth trying.

Meantime, such Government companies as have already been created, need expert advice and one of the company law administrator's chief preoccupations this year has been the giving of such advice. By the very nature of its work, the company law administration has wide experience of the internal structure and organisation of corporate enterprise, of the administrative and accounting techniques and even methods of sales promotion. This experience, no less than the detailed knowledge of the provisions of the law (over which a general administrator may conceivably slip up only too often) is sure to be invaluable to Government enterprises.

One tendency that the report has noted with mixed feelings is the conversion of public companies into private companies. Of course, compared to the immediately pre-

ceding year, the number of such conversions has fallen precipitously—from 2272 to 54. So, as a tendency, it is arguable that the practice is on the wane. But the situation is not as simple as the figures would seem to indicate. In the first place, the conversion was merely a formal recognition of a de facto situation. In so far as private companies have ceased to be masquerading as public companies, it is all to the good. And "de jure" status as a private company has its disadvantages, especially in tax contexts. The report assures that Government do not necessarily look askance at such conversions, but where such conversion is resorted to "as a device or subterfuge" to evade the requirements of the Companies Act, the Government have to take action.

In a sense, our corporate sector is comparatively primitive and not so tightly organised as in the West. This has its redeeming features and the problems of the company law administration are to that extent simplified. For instance, nothing like the furore over the tortuous deals of British Alluminium that created such a furore in England recently has arisen in this country. Obtaining group control, cornering and other practices are not unknown here. We do not have the "legal brinkmanship" in which American and to some extent British entrepreneurs seem to delight. On the whole, the kind of skulduggery that we have to deal with is cruder. The spurious scrip, for instance, is plain cheating and that it is one of the problems of our administration is a measure of the comparative primitiveness of our corporate enterprise. I am not implying that man who corners shares within the letter of the law is necessarily a more refined individual than the man who simply forges them, though the point is perhaps arguable. Nor am I saying that our entire corporate structure is to be judged by some spectacular instances that have been dragged into limelight. But I do say that the nature of these malpractices throws a rather more lurid light on our corporate enterprise than do practices elsewhere on similar enterprise there.

Plainly, there is need for legal safeguards against the forging of scrips as also against negotiating credit against such scrips. There is also, again need for more effective control "over inter-company loans granted on the basis of guarantee given by persons connected with company management". Again, the obvious reference is to some of the revelations made by investigation into Mr. Mundhra's activities. It is to be seen what form such safeguards will take.

Other practices of doubtful propriety mentioned in the report are:

resignation of managing agents to become sole selling agents, taking of commission on bank overdrafts by directors and managing agents to increase their remuneration indirectly, contracts with associates of managing agents, irregular expenditure incurred by companies and employment of relatives of directors and managing agents. These are by no means new discoveries and there are others that are only too well known. Legal and other remedies will certainly have to be devised against these practices, but it is doubtful whether they will wholly succeed in curing the basic malady, which is a certain cynical disregard of business ethics.

One of the heartening features of the report is its revelation of the increasing awareness on the part "of the Judiciary of its far reaching powers" in the regulation of corporate enterprise. It cites the judgment of Mr. Justice P. B. Mukharji of the Calcutta High Court in the case of Richardson Cruddas Ltd., as one in which "the court for the first time in the legal history of the country, realised the 'far reaching character of the powers conferred on the courts to intervene in the management of joint stock companies'." The report, however, goes on to plead for expedition in the disposal of cases by the courts. In its own words: "If these provisions of the judicial supervision and review of business administration in cases of mismanagement and oppression are to achieve its objects,—it is essential for judicial processes to be adjusted not only to the pace and tempo of industrial life but also to its highly specialised needs and requirements so that business may not be hampered or held up due to the proverbial law's delays....." Behind this polysyllabic period is a gentle prod to the judiciary to get on with disposing the cases.

Another point of interest in the report is the indication of preferences in the modes of management of companies. Recent studies by the company law administration itself have shown that the strident assumption that the managing agency system had its tentacles firmly over a wide area of enterprise may need several qualifications. The figures given by this report too confirm that finding in way. Of the 1809 companies newly registered companies during 1956-57, only 31 were to be managed by managing agents or secretaries, treasurers, the others being managed by board of directors (1351) or managing directors (424). It would thus seem that managing agents: a form of management obtained less than 31 cases. Of course, the reason for this may be that the managing agency system is itself political disfavour and its future uncertain. Still, it is a fact of some interest.

THE PENINSULA

INDUSTRIALISATION of the State and the measures taken by the Government to give momentum to it figured prominently in the discussions on the budget in the Madras Legislature. The opportunity for such a discussion was presented by Mr Venkataraman, the Minister for Industries and Labour when he moved the demands under the head of "Industries." Mr Venkataraman utilised the opportunity for explaining the Government's industrial policy and to recount the achievements in the field, while for the opposition it was an opportunity to be seized to discredit the Government for what is imagined to be the failure of the latter to push up the pace of industrialisation and for conjuring comparisons with more advanced States in the country so as to imbue their arguments with more appeal.

Criticisms from the opposition parties and especially from the Communal parties, followed lines that have now become only too familiar from repetitions at every discussion on the subject. Always there is an appeal to the sense of mortification at the continuing backwardness especially in respect of heavy industries in the midst of greater progress elsewhere. Charges of slavishness towards the Centre and discrimination by the latter in the matter of allocating heavy industries and more money for general industrial development are the usual stock-in-trade of the Dravida Munnetra Kahakam, in their propaganda against the Government both inside the Legislature as well as outside it. There are also other speakers who occasionally betray an emotional fervour born out of local patriotism. Naturally the Government have a hard time when the subject of industrialisation is being discussed facing the opposition which cannot be persuaded or convinced with arguments however just and reasonable.

There was nothing to suggest that the DMK had changed their views on the subject, and along with the usual fare, failure to start heavy industries was prominently mentioned. As the DMK sees it there could not be any escape from responsibility and no excuse for failure in this matter since the State is not without reserves of iron ore, which are found in the Salem district as well as in Kotagiri in the Nilgiri district. There are also others who feel the absence of some heavy industries in the State and who would have the Government pay some more attention to this. While in view of the existence of iron ore deposits in some parts of the State, there could be no justification in the opinion of the opposition parties for the imbalance in the industrial structure of the State, Mr Venkataraman's approach was to preach patience, and to

indicate that there was also no immutability about the absence of heavy industries. In this connection he referred to some of the investigations being conducted at the National Metallurgy Laboratory at Jamshedpur on the reduction of low grade iron ore with non-coking and inferior coals. Whether the State could offer site for a large-scale steel plant utilising the iron ore of Salem district would depend on the success of the tests being at present carried on at Jamshedpur. However, Mr Venkataraman indicated the possibility of a low-shaft furnace at Salem. Mr Venkataraman also dismissed the charge of discrimination levelled against the Centre for what is considered to be the neglect of the needs of the Madras State in regard to more funds for industrial development. The Neyveli Lignite project erected by the Centre at a cost of Rs 75 crores would expose the unreasonableness of such charges.

In respect of the operations in the private sector, there were divergences in views expressed by opposition members. There was criticism against the Government by the ultra-left, of wooing the private sector too much which opened the gates to exploitation of labour while the DMK member would not admit that there was much of participation from local businessmen which he would explain in terms of competition from North Indian businessmen. The North Indian businessmen could be kept out if the Government could undertake to establish industries themselves.

The substance of these criticism was to call in question the very propriety of the approach of the Government to the question of industrialisation which in terms of the policy resolution as passed by the Centre involves the co-existence of the private sector and the public sector in fields demarcated though not exclusively for each and which stresses the supplementary and co-operative roles of the two sectors for progress. But Mr Venkataraman had not had to seek an explanation in terms of this resolution and there was no need to be apologetic about the existence of the private sector or about giving aid to it in their activities of expansion in view of the very formidability and magnitude of the problem. were the Government to assume exclusive responsibility for it. A reiteration of the Government's policy of giving aid to the private sector, should in the context of the criticisms against the private sector by the opposition, dispel any lingering doubts that the private sector might be entertaining about the attitude of the State Government, and pave the way for more fruitful and active participation in the industrial development, by the private sector. The attempt to mix socialism with the obliteration of the private sector evoked a reply

from Mr Venkataraman that was charged with sarcasm at the folly it involved. Mr Venkataraman made it clear that a policy by which employment could be found to a larger number was better than the socialism which by killing the private sector would allow many to starve for want of employment. And this was the prime justification for the private sector, that it promise more opportunities for employment than the Government would have been able to ensure by their efforts alone.

It is to the private sector that State owes much of the increase in industrial activity that was witnessed recently. The Dunlop factory at Ambattore, the electrical machinery factory, that were opened only about a month ago represent attempts of the private sector to put to use the many advantages which the State offers in the industrial field. In view of these late instances of new industries that have sprung up in the State it would not be true to say that the State is lagging behind in starting new industries or that it presents a picture of neglect by the private sector. In fact compared to some of its own neighbours such as Andhra Pradesh, and Kerala, progress had been greater and there should be no reason for frustration or disappointment or for self-pity at greater activity in other parts of the country.

In Kerala, for instance there is no key industry worth the name while Andhra Pradesh also could not boast anything more than what Madras possesses. This is not to suggest that there is no scope in any of these States for further progress in the erection of more heavy industries, but only that in the context of the resources position of the country as a whole and especially in the face of the foreign exchange shortage that had become a serious bottleneck in the development of more industries in the country, complaints about a particular region being left to lag behind others, appear exaggerated and misconceived.

In respect of the need for dispersal of industries Mr Venkataraman said that an industry could not be set up in a haphazard way and at random in any place but would be guided in its location by

technological factors such as availability of raw materials, power, availability of skilled labour etc. However the development of an industry at a particular place, would after a stage, itself set in motion certain deglomeration factors, whereby there would be a tendency towards dispersal. For instance, after the original reserve of skilled labour has been used up, labour scarcity may stifle the further growth of the industry there. There is thus an element of inevitability in the development of a particular industry in a particular place and also an amount of automatism about the dispersal of such an industry. This dispersal could of course be assisted by the Government by supplying deficiencies whenever and wherever possible. But such dispersal itself has to follow certain lines as determined by natural factors and the scope for Governmental interference in rectifying deficiencies in other places.

There was much concern expressed by the members belonging even to the opposition parties for the development of small-scale and cottage industries in the State. There is scope for such development not only along lines in which such industries had grown in the country, but also along lines on which some of the highly technical industries operate in the foreign countries. The automobile industry in America, as pointed out by Mr Venkataraman functions on the basis of the assembling components and parts supplied by small ancillary units. This, while facilitating mass production at the finishing stage of production, enables automobiles to be produced at a cost not possible were all operations to be concentrated in one firm.

The development of industries in the country, had, however, followed lines, that could not be considered satisfactory, from the point of view of giving scope for the emergence of the small-scale sector as an ancillary wing to large-sized firms. The automobile industry for example is characterised by concentration of component production in the assembling firm itself. With rare and minor exceptions, this holds good of those other industries also, where there are possibilities for the organisation of production on a decentralised basis.

AUDITORS' REPORT.

TO THE SHAREHOLDERS, THE PUNJAB NATIONAL BANK LIMITED,
NEW DELHI.

We have audited the annexed Balance Sheet of the Punjab National Bank Limited, as at 31st December, 1958, and also the annexed Profit and Loss Account of the Bank for the year ended on that date, with the books and accounts kept at the Head Office in New Delhi, in which are incorporated the unaudited returns of the Bank's branches in Indian Union, Pakistan and Burma none of which were visited by us.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisions to Sub-sections (1) and (2) of Section 211 and Sub-section (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. (The accounts are, therefore, drawn up in conformity with forms 'A' and 'B' of the Third Schedule to the Banking Companies Act, 1949.)

We report that:

- We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory.
- The transactions of the Bank, which have come to our notice, have been within the powers of the Bank.
- In our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the Bank.
- The Bank's Balance Sheet and the Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns.
- In our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet, read along with the notes appearing thereon, gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1958, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

THE BOMBAY DYEING AND MANUFACTURING COMPANY, LIMITED

NOTICE

The Annual General Meeting of The Bombay Dyeing and Manufacturing Co., Ltd., will be held at the Registered Office of the Company, Neville House, Ballard Estate, Bombay, on Thursday, the 16th April 1959 at 4-30 P.M. to transact the following business:—

1. To adopt the Directors' Report, and the audited Balance Sheet and Profit and Loss Account for the year ended 31st December 1958.

2. To sanction the declaration of a Dividend.

3. To appoint a Director in the place of Mr. H. R. Batlivala who retires by rotation, and being eligible offers himself for re-appointment; and to consider and, if thought fit, to pass the following resolution as a Special Resolution in respect of which a Special Notice, as required by Sections 190 and 261 of the Companies Act, 1956, has been received by the Company:—

"RESOLVED that pursuant to the provisions of Section 261 and other applicable provisions (if any) of the Companies Act, 1956, Mr. H. R. Batlivala who retires by rotation and is eligible for re-appointment, and who is a

Director, Officer, Member and an Associate of Messrs. Nowrosjee Wadia and Sons (Private) Ltd., the Managing Agents of the Company, be and is hereby re-appointed a Director of the Company."

4. To appoint a Director in the place of Mr. N. M. Wagle who retires by rotation, and being eligible offers himself for re-appointment.

5. To appoint Auditors for the current year and to fix their remuneration.

6. And for the purpose of considering, and if thought fit, to pass (with or without amendment as may be permissible) the following Resolutions as Special Resolutions:—

SPECIAL RESOLUTIONS

I. RESOLVED that the Company hereby approves of a Contract being entered into between the Company and Messrs. Ghia Pallonji & Co., Bombay (who are or may be deemed to be Associates of the Managing Agents, and one of whose partners is a Director of the Company) in terms of the draft placed before the Meeting, and for the sake of identification initialled by the Chairman of the Company, to be operative till one month after the Annual General Meeting of the Company in the year 1962, in respect of purchases of chemicals and such goods in which they trade

or do business in or may trade or do business in as well as in respect of sales to them by the Company of goods produced, dealt in or owned by the Company and in respect of the supply or rendering of any service by either to the other.

II. RESOLVED that the Company hereby approves of a Contract being entered into between the Company and Messrs. Eastern Cotton Co. (who are or may be deemed to be Associates of the Managing Agents) in terms of the draft placed before the Meeting, and for the sake of identification initialled by the Chairman of the Company, to be operative till one month after the Annual General Meeting of the Company in the year 1962, in respect of purchases of cotton and/or kapas and such goods in which they trade or do business in or may trade or do business in as well as in respect of sales to them by the Company of goods produced, dealt in or owned by the Company and in respect of the supply or rendering of any service by either to the other.

III. RESOLVED that the Company hereby approves of a Contract being entered into between the Company and Messrs. Shapoorji Pallonji & Co. Private Ltd. (who are or may be deemed to be Associates of the Managing Agents, and one of whose directors is a Director of the Company) in terms of the draft placed before the Meeting, and for the sake of identification initialled by the Chairman of the Company, to be operative till one month after the Annual General Meeting of the Company in the year 1962, in respect of purchases of chemicals and such goods in which they trade

draft placed before the Meeting, and for the sake of identification initialled by the Chairman of the Company, to be operative till one month after the Annual General Meeting of the Company in the year 1962, in respect of any building, or construction work and/or any work of repairs and/or supply of building materials and such goods in which they trade or do business in or may trade or do business in as well as in respect of sales to them by the Company of goods produced, dealt in or owned by the Company and in respect of the supply or rendering of any service by either to the other.

Explanatory Statement under Section 173 annexed in respect of the above Resolutions.

The drafts of the Contracts referred to in Special Resolutions Nos. I, II and III are open for inspection by any Member at the Registered Office of the Company on all working days from 10-30 A.M. to 1 P.M.

By Order of the Board,
NOWROSJEE WADIA & SONS
(Private) LTD.,
NEVILLE N. WADIA
Director,
Managing Agents.
Bombay, 9th March, 1959.

NOTES:—

(a) A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A

March 28, 1959

PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

(b) The Share Transfer Books of the Company will remain closed from Monday the 23rd March 1959, to Thursday the 16th April 1959, both days inclusive.

(c) The Dividend when declared will be made payable at the National and Grindlays Bank Ltd., Bombay, on or after the 27th April 1959, to those members whose names stand on the Register of the Company on the 16th April 1959, and the Dividend Warrants will be duly posted to them.

(d) The Members are requested to notify immediately any change of address to the Company.

ANNEXURE TO THE NOTICE

Explanatory Statement as required by Section 173 of the Companies Act, 1956.

Item No. 3.—Mr. H. R. Batlivala is a Director of the Company, who retires by rotation and is eligible and offers himself for re-appointment. A Special Notice as required under Section 190 and Section 261 of the Companies Act, 1956, has been received from a member proposing the appointment of Mr. H. R. Batlivala as a Director in accordance with the provisions of Section 261. As set out in the Special Notice received by the Company, the reasons which make it necessary to pass a Special Resolution are inter alia as under:—

The Managing Agents of the Company, Messrs. Nowrosjee Wadia & Sons (Private) Ltd., are authorised by Articles 99 and 100 respectively of the Articles of Association of the Company to appoint its Governing Director as ex-Officio Director and another person as a Special Director on the Board. Since Mr. H. R. Batlivala is a Director, Officer, Member and an Associate of the Managing Agents, his appointment as a Director of the Company, who retires by rotation, can only be made by a Special Resolution of the Company in terms of Section 261 of the Companies Act, 1956. Mr. H. R. Batlivala joined the Board of the Company in June 1953 and has been a Director of the Company since then. Mr. Batlivala has been associated with the management of the affairs of the Company since July 1951 as a Director of the Managing Agents, Messrs. Nowrosjee Wadia & Sons (Private) Ltd., and has considerable administrative experience and technical knowledge having been actively connected with the textile industry for the last 26 years. As it is in the interests of the Company that the Board should continue to receive the benefit of his experience, advice and guidance, it is desirable that he be re-appointed a Director.

Item No. 6.—Special Resolutions Nos. I, II and III in Item No. 6 above, are for the purposes of approving Contracts being entered

into between the Company and Messrs. Ghia Pallonji & Co., Messrs. Eastern Cotton Co. and Messrs. Shapoorji Pallonji & Co. Private Ltd. respectively. Mr. Pallonji Shapoorji Mistry, one of the Directors of the Managing Agents, Messrs. Nowrosjee Wadia & Sons (Private) Ltd., as from 23rd July 1958 and also a member of the Company, who is also a Director of the Company, is a partner in the firm of Messrs. Ghia Pallonji & Co., Mr. Mistry is also a Director of Messrs. Shapoorji Pallonji & Co., Private Ltd. Messrs. Eastern Cotton Co. is "an Associate" of the Managing Agents as defined in Section 2(3) (d) of the Companies Act, 1956. Messrs. Ghia Pallonji & Co., have been the sole distributors of Messrs. Tata Chemicals Ltd. for several years, and as you may be aware the products of Messrs. Tata Chemicals Ltd. purchased from Messrs. Ghia Pallonji & Co., have been extensively used by the Company for the last many years. Messrs. Eastern Cotton Co. are dealers in cotton and the Company has made purchases of cotton and/or kapas from them in the past. Messrs. Shapoorji Pallonji & Co. Private Ltd. are reputed building contractors. The Company has purchased and will continue to purchase chemicals from Messrs. Ghia Pallonji & Co., and it may have occasion to purchase cotton and/or kapas from the Eastern Cotton Co., and it may have occasion to entrust building and construction and/or repair work or other similar work to Messrs. Shapoorji Pallonji & Co. Private Ltd. In these circumstances, as required by the Companies Act, 1956, (and in particular by Sections 314 and 360 thereof) the three Special Resolutions above-mentioned are commended for acceptance.

Mr. Neville N. Wadia, Mr. H. R. Batlivala and Mr. Pallonji Shapoorji Mistry are interested in the Contracts referred to in the Special Resolutions aforesaid, being directors and members of the Managing Agents, Messrs. Nowrosjee Wadia & Sons (Private) Ltd. Sir Jamsetjee Jejeebhoy, Bart. is interested in the said Resolutions in his capacity as Constituted Attorney of Messrs. Nowrosjee Wadia & Sons (Private) Ltd. In the three Resolutions regarding approval of Contracts with Messrs. Ghia Pallonji & Co., Messrs. Eastern Cotton Co., and Messrs. Shapoorji Pallonji & Co., Private Ltd., respectively, Mr. Pallonji Shapoorji Mistry is also interested in the manner aforesaid.

The drafts of the Contracts referred to in Special Resolutions Nos. I, II and III are open for inspection by any Member at the Registered Office of the Company on all working days from 10-30 A.M. to 1 P.M.

By Order of the Board,
NOWROSJEE WADIA & SONS
(Private) LTD.,
NEVILLE N. WADIA
Director,
Managing Agents.

THE BENGAL FLOUR MILLS CO. LTD.

NOTICE is hereby given to the members of the above-named Company that the Annual General Meeting (being the one hundred and twenty-fifth Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Friday, the 17th April, 1959, at noon, to consider the Accounts of the Company for the year ended 31st December, 1958, and to transact other ordinary business and the under-mentioned special business.

SPECIAL BUSINESS.

NOTICE is also hereby given of the following Resolution, which will be proposed as a Special Resolution, of which special notice dated 10th March, 1959, as required by Section 261 of the Companies Act, 1956, has been received:—

"That Mr. C. A. Hill, an employee of the Managing Agents, who retires by rotations, be and is hereby re-appointed a Director of the Company."

NOTICE is also hereby given of the following Resolution which will be proposed as a Special Resolution:—

"That the following contract between the Company and The Bengal Paper Mill Co. Ltd. an Associate of its Managing Agents, as defined by Section 2(4) of the Companies Act, 1956, a draft whereof has for the purpose of identification been subscribed by the Chairman of this Meeting be and the same is hereby approved and the Directors are hereby authorised to execute the said Agreement on behalf of the Company with all convenient despatch:

for sales of such flour and wheat products and other services in which the Company regularly trades or does business and which the Associate may require for the purpose of its business, payment for such sales being due within one month from the date of the supply of such goods or the supply or rendering of such services:

it being a term of the above contract that the prices at which transactions take place shall be at rates which are not less

favourable to the Company than the market rates or which are otherwise reasonable."

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 3rd April, 1959 to 17th April, 1959, both days inclusive.

By Order of the Board,
BALMER LAWRIE & CO. LTD.
D. MANSON
Secretary
Managing Agents.

21, Netaji Subhas Road,
CALCUTTA, 11th March, 1959.

Note: A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

THE TITAGHUR PAPER MILLS COMPANY LIMITED

NOTICE OF INTERIM DIVIDENDS

The Board of Directors of the above Company has sanctioned payment of the following Interim Dividends in respect of the Company's Financial year ending 31st March, 1959, without any deduction for Income Tax payable by the Company:—

On 8% 1st Cumulative Preference Shares—Rs. 4/- per share.
On 4½% 2nd Cumulative Preference Shares—Rs. 2/25nP per share.

On Preferred Ordinary Shares—12 nP per share.

On 'A' & 'B' Ordinary Shares—Dividend 88 nP per share, and Bonus 25 nP per share.

These Dividends will be payable on or after 8th May, 1959 to those Shareholders (or their mandatees) whose names appear in the Company's books on 24th April, 1959, as the Registered holders of the above Shares.

The Share Transfer Registers of the Company will be closed from 11th to 24th April, 1959, both days inclusive.

By Order of the Board

The Indian Mining Association

Present Achievement and Plan Target

The Difficult Problem of Stowing

Mr D. Hogg, the Chairman Suggests Appointment of Top Level Body

The following is the speech by Mr D. Hogg Chairman of The Indian Mining Association, at the Annual General Meeting of the Association, held on March 26, 1959 at the Bengal Chamber of Commerce and Industry.

Gentlemen,

On the occasion of the last Annual General Meeting held just over a year ago, I had the pleasure of saying that coal production had increased during 1957 by just over 4 million tons, of which 3.1 million tons was produced by the Private Sector. At that time, I ventured to say that a progressive expansion of output from the Private Sector could be expected for the Second Five Year Plan period, provided that we were given sufficient inducement and incentive and many of our handicaps were removed.

A year has passed and, from a study of the activities of this Association given in the Annual Report, you will be aware of the energetic efforts made by this Association to bring our difficulties to the notice of Government. It is tedious to recount them as they are so well known to you but it is disappointing, to say the least of it, that so few of our obstacles have been removed in spite of repeated representations.

The all-India total of coal production increased in 1958 to 45.3 million tons against a target of 60 million tons which has been set for the Industry for attainment by the end of the Second Five Year Plan period. The increase was only 1.8 million tons in 1958 or 4% compared with 10% increase achieved in 1957. Nevertheless, 75% of the 1958 increase in production was achieved by the Private Sector. To those outside the coal industry the increase of 1.8 million tons may appear to be insignificant. However, I feel that those of you within the coal industry will agree with me that it was a remarkable achievement in view of the many handicaps which stood in our way. As to whether our increase in production was adequate for the country's needs, it is sufficient here for me to pose a simple question on behalf of those of us who have to carry the financial burden of pithead stocks and ever increasing costs and ask what would have happened if an extra one million or an additional two million or a further three million tons had been raised in 1958. The fact which must be faced is that pithead stocks were higher during

9 months in 1958 than they were during the corresponding months of 1957. During the past year, the Railways is general, with certain exceptions to which I will refer later, have achieved remarkable results. It has been stated on innumerable occasions in the past that coal production can only keep pace with transport availability. However, with the expansion which has taken place on the Railways, it appears that on some occasions during their "slack" season there was, in certain directions, an availability of wagons for the movement of coal in excess of the demand which existed for coal on those routes. During the past year, the coal industry has felt that their production capacity has kept pace with industrial demand. It has been reported recently that the general index of industrial production registered an increase in 1958 but the rate of increase was lower than in 1957. This temporary slowing down in the tempo of industrial development in 1958 has been very noticeable not only to the Coal Industry whose duty it is to feed almost every industry but also to the Railways. But with the gigantic plans which have yet to materialise before the end of the Second Five Year Plan period, the industrial tempo can rapidly increase again. Will the Coal Industry be able to regain its momentum and meet all demands, not only for the Second Five Year Plan but also for the third

I do not question whether 60 million tons of coal is required under the Second Five Year Plan or whether 100 million or 110 million tons of coal should not be the target for the Third Five Year Plan—there is no doubt about these targets—such quantities must be planned for in order to achieve our Government's objectives but such targets cannot be attained unless effective steps are taken now to give remedial treatment where help to the industry is required. Also, planning must be more detailed than we have seen in the past so that collieries may know by whom their increased production is to be consumed and when it will be required. So far, the industry has been unable to obtain any indication of the targets which may be required to be achieved in the various coalfields and States in the Third Five Year Plan. Certain collieries mining coking coal have recently had the unfortunate experience of having almost their entire production diverted to the Steel Works, only to find that,

shortly after their other orders had been transferred to non-coking coal collieries, the demand from the Steel Works was reduced and a large percentage of their production has had to be put into stock. There is not only a limit to which collieries can afford to finance the holding of stocks but there is also a physical limitation to which a colliery can stock coal when production exceeds demand. For most of last year, pithead stocks averaged about 3.2 million tons, of which the Private Sector held about 95%.

Before proceeding further it is necessary to review the trend of coal production noticeable during the last year. It is apparent that the output of Selected "A" and "B" grades of both coking and non-coking coal showed little or no increase. Many of the collieries mining these grades are burdened with heavy stowing expenditure for which inadequate assistance is paid to them by the Coal Board. In addition, many stowing collieries incur additional expenditure on account of the fact that they are gassy mines.

Consideration of representations for increases in stowing assistance and the revision of coal prices, to which I will refer later, has been protracted. I would be failing in my duty if I did not ask Government to bear in mind that Coal Companies must balance income and expenditure and they cannot embark on an indefinite policy of deficit financing.

Collieries mining Grade I coking coal will be unable to increase their production substantially until the Central Washeries, which have been under discussion for so many years are put into operation. The delays which have occurred over the setting up of these Central Washeries are regrettable and it is now apparent that the three Central Washeries which were to be installed during the Second Five Year Plan will not materialise for some years yet. The tender for the first washery has been decided only recently.

The latest Annual Report of the Coal Board for the year ended March 1958 reveals some interesting information. Assistance towards voluntary stowing was sanctioned in 1957-58 for 110 collieries, of which only 81 collieries carried out stowing. The other 29 collieries had not completed their arrangements for stowing. There are many valid reasons why these collieries had not commenced stow-

ing; in many cases they are waiting for the Coal Board's Central Sandstowing Schemes to materialise. Others were waiting for the necessary import licences or for the arrival of plant and machinery from abroad. Despite this, a larger quantity of material was stowed underground, and 6.3 million tons of sand and other materials were stowed to produce 3.7 million tons of additional coal from the stowing area. In fact, almost one colliery in ten undertook stowing and as a result of their efforts about 10% of the country's production was raised which without stowing would otherwise have been lost. In the year 1958-59 the number of collieries carrying out voluntary sandstowing increased from 81 in the previous year to 95.

I apologise for enumerating so many statistics over stowing but I feel that the efforts made by the industry to attain safety in their mines and to conserve our mineral wealth are not sufficiently well publicised. There has been so much ill-informed criticism of the industry in the past over these matters and, unfortunately, this tendency of the general public in certain quarters to make little effort to understand our problem still persists. Only recently, I have noticed a statement made in the Lok Sabha by the Minister of Steel Mines & Fuel, Sardar Swaraj Singh, who, while defending the high costs of a certain colliery in the N.C.D.C., stated that the Corporation is unable to adopt the private owners' attitude of exploiting only those mines where the working conditions are easy. I would ask if such a remark is not unjustified when 90 collieries in the Private Sector, i.e. more than 10%, are undertaking stowing, in adequately compensated, and most of them at uneconomic cost and many other collieries in the Private Sector are running at a loss, in the same way as Giridih Colliery, due to their difficult working conditions. It is easy to criticise but we would prefer the criticism should be accompanied by constructive suggestions and help.

I appreciate the problems of the Coal Board and my criticisms of their efforts are made with the best of intentions and in an effort to underline their problems. It is now over a year since this Association placed a case before the Coal Board for increased assistance for sandstowing and while the Board appeared to appreciate the need for revision in view of substantial in-

creases in labour costs as a result of the Award of the All India Industrial Tribunal (Colliery Districts) and the Decision of the Labour Appellate Tribunal and other increases in costs, the change in the rate of assistance is still awaited. The industry continues to bear the burden of these heavy costs on stowing collieries and suffers delays in payment. A further reference to the last report of the Coal Board will show the delays which occur. Out of Rs. 81 crores paid in the year to stowing collieries, less than a quarter of this amount was on account of stowing charges incurred during the year and over Rs. 60 lacs were advanced assistance for stowing carried out in the previous three years. The Coal Board is, fortunately, well endowed financially and its income has always exceeded its expenditure. The total funds available now amount to nearly 4 crores of rupees. Any reluctance to increase the rate of assistance to stowing collieries is probably the Coal Board's fear that large sums will be required to be expended for the two proposed Central Sandstowing Schemes in the Ranigunge and Jharia Coalfields. Adequate funds are available to meet the industry's claim for increased assistance but, if there is any reluctance on the part of the Coal Board to face criticism in requesting for an increase in the Stowing Cess now being levied on consumers, I would humbly submit that the statistics which I have inflicted upon you earlier, amply bear out the industry's sincerity of purpose in carrying out voluntary stowing for safety and conservation of our mineral wealth. Such stowing has resulted in additional production for which the industry can rightly expect the Nation to bear an increased share of the cost as and when the occasion arises, particularly as this form of mining is being carried out more and more extensively.

Apart from stowing collieries, there is also the question of deep and gassy mines and the problem that the present price structures do not provide them with sufficient resources to enable them to increase production. By their very nature and working conditions, they are placed at a great disadvantage over shallow mines, inclines, open cast quarries and non-gassy mines which are not required to instal the expensive flame-proof equipment and employ the additional staff required under the Mines Regulations. Unfortunately, some of these mines, such as those working the Dishergarh Seam, whose coal will be required in larger quantities in the future, have not only to bear these increased costs because they are deep and gassy but have to bear heavy sandstowing costs also. Such mines have not been abandoned, as might be imagined from the recent statement in the Lok Sabha, and some of them continue to work at a loss, obviously in the hope that their case will receive active consideration eventually. It is hoped that the Coal Prices Revision Committee will find a solution to the problem of collieries whose mining conditions of necessity entail high costs.

Last year I stated that the fate of the Coal Industry then rested with the Coal Prices Revision Committee and although they submitted their report to Government in December 1958, their findings are not yet known to the industry but they can only be more out of date now than they were a year ago when I mentioned this point. As you are aware, this Committee was constituted in 1957 with instructions to submit their Report within two months. The complexity of the problem before them was known to us, and it is understandable that they could not complete their investigation in so short a time but the industry awaits with keen interest the report of this Committee and to hear what action Government intends to take on their report. It is difficult to appreciate the inordinate delays which have taken place over this matter but let us hope that the time has been well utilised and that such detailed consideration has been given to this matter that it will result in a clear-sighted and wise decision being taken by Government which will enable the industry to expand to meet its commitments in the future.

A major handicap which has prevented many collieries from increasing their production has been the Import Control Policy and the delays which have occurred over the granting of licences. While the grave shortage of foreign exchange is appreciated, it is felt that sufficient priority over the granting of import licences has not been given to the Coal Industry during the year. There is a continual demand for imported spares and items of plant and machinery used in the mining industry for which foreign exchange will continue to be required until the Government factory, to be located in Durgapur, is in production and other indigenous manufacture increases. Unfortunately, the Coal Industry has been unable to utilise the credits offered by the Export-Import Bank of the United States of America. As our mines have standardised largely on equipment from the Sterling area, it would not be practical, at this stage in view of the advent of increased indigenous manufacture, to change to American equipment as a wastage of foreign exchange would only result. Machinery already purchased must be provided with the necessary foreign exchange to keep it supplied with the spare parts required and less wastage occurs if the present standardisation of types of machinery is allowed to continue and is intensified rather than if new manufactures and types are introduced. It must be remembered also that the Coal Industry is working on the basis of controlled selling prices and cannot afford to purchase machinery which is more expensive than that available from the Sterling area.

While great credit is due to the Eastern Railway for the increased coal loading achieved during 1958, loading on the South Eastern Rail-

way showed a reduction in 1958, when compared with the previous year. In view of this, I would ask how collieries served by the South Eastern Railway could be expected to increase their production in 1959. Unfortunately, despite the strongest representations made, the Railway Board appear to be able to offer little hope for improvement during the Second Five Year Plan period and the collieries served by the South Eastern Railway in Bengal and Bihar have had no alternative but to defer their schemes for increased production. The South Eastern Railway have been engaged in major construction work in connection with the movement of ore and increased capacity for the Steel Works. In the meantime, there has been little or no progress by the South Eastern Railway over comparatively minor alterations to railway yards which require to be expanded to meet the increased demand for coal from the Steel Works.

While the Railways are to be congratulated upon their improved operational efficiency, I feel that some of the credit for their achievement should be passed on to the Coal Industry. Greater operational efficiency has been achieved as a result of the introduction of certain schemes, to which collieries have given their wholehearted support, in most cases at the expense of their personal interests and with considerable sacrifice to themselves. The Coal Industry offered their co-operation in the hope that the result might be a greater wagon availability for the movement of coal. To cite a few examples, these are Five Hour Loading, Block Rake Loading and rationalisation of movement. In some respects, as far as the collieries have been concerned, I feel that these schemes have proved to be double-edged and while improving wagon availability has acted to the detriment of the coal industry. These innovations have resulted in a financial strain being placed on Coal Companies. In addition, the Coal Industry has been burdened further financially over the provision of colliery sidings and weighbridges. Whereas it was possible previously for collieries to be provided with Assisted Sidings, in recent years they have been compelled to construct sidings on Private Siding terms at their own expense. They have even had no alternative but to make additions and alterations at their own expense to their old "Railway-assisted" Sidings.

I can only record grave concern over certain aspects of the rationalisation in the movement of coal and the further limitations which are likely to arise as production increases in the outlying coalfields and coal mining commences in new coalfields. As I see it, there is a danger that, in time, the outlet for the coal production of the States of Bihar and West Bengal may be confined to consumption within Eastern India and probably these States only. Already, we are bound by such rules that certain grades of coal can only be transported in

this or that direction and such rules appear to be a pointer to the fact that, if such planning continues, coal from the States of Bihar and West Bengal will be eventually given little opportunity to move to other States where consumption will increase due to industrialisation. As I have said before, the Coal Industry has no idea yet of the detailed plans which are being considered for the Third Five Year Plan but I feel that the future of collieries in Bihar and West Bengal should be considered carefully before plans are made for opening up further new coalfields. The economics of such proposals should also receive detailed consideration. The capital requirements of new coalfields exploited by the N.C.D.C. appear to be Rs. 60 for each ton of coal and I would ask whether it would not be better to give more opportunity to existing collieries in Bihar and West Bengal to mine their other seams and nearby areas during the Third Five Year Plan, resulting in less capital expenditure, rather than launching out into expensive schemes involving vast expenditure of foreign exchange to produce low grade coal in new coalfields. I appreciate the arguments which have been put forward in the past over dearer railway freight for long distance hauls but I feel, however, that as the railways are now removing their old bottlenecks such as Waltair, Moghalsarai, the Ganga Bridge, etc., they will soon be able to transport Bihar and West Bengal coal at cheaper cost to the consumer than if industries are compelled to accept inferior coal from a shorter distance. In addition, the latter coal can only become high priced eventually in view of the capital cost incurred and when deeper mining becomes necessary. I trust that this will be examined in great detail when finalising the Third Five Year Plan, as well as the economic distress which may result if existing collieries are not allowed to expand or replace their output from available coal reserves. Increased production from new coalfields should not be allowed at the expense of existing units and their potential, otherwise economic distress and unemployment will only result. It is usually cheaper to expand existing units than to start new ones. The Private Sector of the coal industry have expressed willingness in the past to enter into joint mining ventures with Government and I sincerely hope that this suggestion will be considered while formulating the policy for the Third Five Year Plan.

On the occasion of this meeting last year, I took the opportunity to give particulars taken from an analysis of the financial accounts of 19 Coal Companies of this Association to show the serious depletion of their resources which was taking place on account of capital expenditure incurred by them. These detailed particulars have been supplied to the Coal Prices Revision Committee. In support of our case, I would draw attention to the latest Reserve Bank of India Bulletin dated February 1959 which

shows some interesting information regarding the sources and uses of funds of selected industries during 1957. These statistics show that the Paid-up Capital of 39 Coal Companies increased by only 1.9% compared with the previous year, whereas, in the case of cement and iron and steel, increases of 21.5% and 27.3% respectively were recorded. New capital for coal mining is naturally shy in view of the treatment which the industry receives and our sources of funds for increasing output are, therefore, limited to current profits, where attainable.

In addition, these statistics show that the increases in Free Reserves and Surplus were 0.8% for coal and 14.9% and 29.9% respectively for the other two industries which are part of the core of the Second Five Year Plan and are further proof that the current controlled selling prices for coal are inadequate.

Again, to quote from another Reserve Bank Bulletin dated September, 1957, the average rate of dividend for the coal industry was shown as 7.1% on Paid-up Capital and to be lower than most other industries. More recent figures supplied to the Coal Prices Revision Committee showed the dividends paid to the shareholders of our 19 Coal Companies, which together raise about one third of the total production of the country, to be 6.3% on the Paid-up Capital involved but, on the capital employed, the average dividend represented 3.4% only. In view of the increase in costs which have occurred subsequently on account of the Coal Mines Regulations and other items, the return on capital employed is now even lower.

I would ask if this is a fair return to the shareholders who have invested in Companies mining coal which is a wasting asset. In order to attract money to the mining industry and keep it in a healthy state, there must be a more than average return on the sum invested. It is to be hoped that the Coal Prices Revision Committee have taken these points into account and that they have not based their findings entirely on past statistics but have looked ahead to the future requirements of the industry.

Apart from the question of inadequate earnings, another factor which is impeding progress in the coal industry is low productivity. Although the wages and emoluments of our workers have increased by about 75% during the last six years, output per man has risen only slightly, which in part is attributable to increased mechanisation, and absenteeism has increased. Unfortunately, the standard of living of miners remains static and as long as their known wants are met, they do not appear to show any desire to work harder to earn more.

Here, the problem appears to be one of changing the habits, outlook and attitude of the workers so that they may appreciate the value of a higher standard of living. Our industry is fortunate in having the Coal Mines Welfare Organisation

to help in this direction as one of their many functions. It is disappointing that some of the facilities offered by this Organisation are not being fully utilised but the activities of the Organisation are increasing. A new housing scheme was sanctioned last year to construct 30,000 houses during the next 5 years and this scheme is now well under way and over 7,000 houses are expected to be completed this year.

Earlier this year our Coal Controller and the Chairman of the Coal Board, Mr. P. M. Nayak, was transferred for service to his State Government and on your behalf, gentlemen, I wish Mr. Nayak every good wish for his future career. I have always felt that the Coal Board's Annual Reports read little differently from the reports of the old Coal Mines Stowing Board but I feel Mr. Nayak is to be congratulated over the increased activities of the Coal Board while under his care. You will note from their last report, the activities which the Coal Board have undertaken and the various sub-committees which were formed, supported by technical experts from the Private Sector, in addition to its normal advisory bodies. These include one to make detailed surveys and investigation regarding the winning, transportation and distribution of sand from the Damodar Valley Corporation river deltas and another two committees to work out Central Schemes for the supply of sand to collieries in the Jharia and Ranigunge Coalfields and so on. The widening activities of the Coal Board are apparent from their latest report. In welcoming on your behalf, gentlemen, the new Coal Controller and Chairman of the Coal Board, Mr. A. Zaman, I am sure you will join with me in extending to him our offer of continued help and assistance and that you will wish me to assure Mr. Zaman of our desire for even greater co-operation in the future. I have just mentioned certain sub-committees on which our representatives have joined in the deliberations. Their reports have been submitted and have been accepted but it is my painful duty to point out that action, which is long overdue, must now be taken on these reports. It appears to me that there is an urgent need for the Coal Board to be reconstituted, so that greater attention can be paid to its activities which have widened and become more extensive since it was first formed. I would ask if the time is not now opportune for the Coal Council and the Coal Board to be merged and for a larger executive committee to function under them than exists in the present Coal Board. There are so many problems to be tackled in order to achieve future coal production targets and I feel that success cannot be achieved unless one unified high-powered body consisting of both the Private Sector and Government is formed to coordinate all matters concerned with the Coal Industry. The Committee on Production and Preparation of the Coal Council have

assessed the Technical Personnel required for the Third Five Year Plan. They have estimated that by 1965-66 an additional 3750 Mine Managers, 2000 Electrical Engineers, 2000 Mechanical Engineers, 950 Surveyors, 7000 Overmen, 30,000 Sirdars and Shotfirers will be required for the Mining Industry. They have also predicted that, in view of the limited training facilities existing, this number of personnel may not be trained in time and, even in the lower technical categories, have estimated the shortfall to be 5150 Overmen, 300 Surveyors and 27,900 Sirdars and Shotfirers. Yet the latest Mines Regulations have laid down that a greater number of technical personnel must be employed in mines—they must be employed according to Statute and mine owners are faced with prosecution or the closing down of their mines unless the required number of technical personnel are provided. I would humbly submit that the time has now arrived when one high-powered body should be formed to coordinate requirements and look into the problems of the Coal Industry and that a strong executive committee should work under them to see that their policy is carried out. The Executive Committee should also be sufficiently strong in numbers to ensure that quick and effective action can be taken on the accepted recommendations of sub-committees and their reports should not be allowed to remain mere blue-prints for the future. This has been the tendency so far and it can only remain so until the Coal Board is reconstituted.

I would like to thank the outgoing Committee for the help and support which they have given me. It is with deep regret that I mention the sad death earlier this year of Mr. A. S. B. Yeoman who has served on your Committee for ten years and has been so highly respected in coal circles throughout his career. My grateful thanks are due to Mr. Maulik, your Vice-Chairman, who shouldered the responsibilities of the Association for six months during the year in my absence and, also, to your new Deputy Chairman, Mr. Lall, who has rendered such valuable assistance since his appointment. The need for a Deputy Chairman to give continuity to the activities of the Association has been felt for some time and I feel that we have been fortunate in obtaining the services of Mr. Lall for his appointment. I would also like to thank the Standing Coalfields Committee and their two hardworking Honorary Secretaries for the valuable contributions which they have given during the year and I wish to record my appreciation of the services rendered by the Secretariat of the Association and the Bengal Chamber of Commerce & Industry. In conclusion, I would like to thank the Indian Mining Federation and the Indian Colliery Owners' Association for the co-operation which this Association has received from them throughout the year.

INDUSTRIAL INFORMATION

BONE RESOURCES IN INDIA

India is rich in bone resources and nearly 3.6 lakh tons of raw bones valued at Rs 7 crores are annually available in the country according to a Report of the Directorate of Marketing and Inspection of the Union Ministry of Food and Agriculture on the Marketing of Bones and Bonemeal in India.

The Report, which deals with many aspects of the bone industry such as availability, collection, utilisation, exports and imports adds that at present about 1.36 lakh tons of bones or roughly one-third of the estimated available quantity are actually collected, the rest allowed to go waste for want of organised effort.

Important bone-producing States are Uttar Pradesh (15.4 per cent), Madhya Pradesh (12 per cent), Bombay (10.3 per cent), Andhra Pradesh (2.8 per cent), Rajasthan (9.3 per cent), Bihar (8.9 per cent), Punjab (8.3 per cent), Madras (5 per cent) and West Bengal (5.4 per cent). Only bones of larger animals such as cattle, buffaloes, horses, ponies and camels—these being of commercial importance—are collected. The major portion comes from dead or fallen animals, as unlike in Western countries, only an insignificant number of animals are slaughtered for meat.

VALUABLE AS MANURE:

Bones are a valuable source of phosphatic manure, and every year 1.35 lakh tons are utilised in 98 bone-crushing mills in the country which produce crude bones, bone sinews, bone grist and bonemeal. Bone-digestors set up at a cottage scale produce crushed bones and bonemeal and consume another 130 tons, while about 3 tons are utilised by cottage industries in making combs, button paper cutters, cigarette holders and toys.

The export of bones and bone meal is prohibited but there is fairly good trade in crushed bone bone grist and bone sinews. An average 74,000 tons of exportable by-products go to the United Kingdom, Belgium, the Netherlands, France, the U.S.A., Ceylon, Germany and other countries, earning nearly Rs 2.5 crores in foreign exchange.

The Report says that within the country, bone fertilisers, though not accepted by certain sections mainly on religious grounds, are a high cost of the product, are becoming increasingly popular in the States of Kerala, Madras, Mysore, Orissa, West Bengal and Assam. In South India, bonemeal is popular as an ingredient in ready-made fertiliser mixtures.

For popularising the use of bonemeal, efforts are being made to cut down prices. Some of the States have set apart funds in

March 28, 1959

Second Five-Year Plan for the production and sale of bonemeal. The Government of India and State Governments pay a subsidy of 25 per cent of the retail value when bonemeal is distributed by the latter.

STRESS ON COLLECTION:

The Report underlines various difficulties facing the bone industry and maintains that to develop the industry the collection of bones must be increased. This is all the more necessary because, unlike agricultural commodities, there is little scope for increasing production in as much as bones can be made available only as a result of mortality among or slaughter of livestock.

The Report suggests that full use should be made of the Community Projects organisations, village panchayats, flying centres and town municipalities for collecting raw bones.

It also suggests that better prices should be offered to the primary collectors, and purchasing depots should be set up in Community Project areas.

Demarcation of the country into four zones and restriction on inter-zonal movement of bones is still another recommendation aimed at increasing collection.

The Report is a period publication and can be had from the Manager of Publication, Government of India, Civil Lines, Delhi.

GROWTH OF GLASS AND CERAMIC INDUSTRY IN INDIA

From all accounts, the biggest attraction at the Science Pavilion of the "India-1958" Exhibition held in New Delhi early this winter was a chunk of crystal-clear optical glass, which dazzled away at visitors like an oversize diamond or a fallen star.

But, far more important than the dazzle is the solid worth of the new product for the manufacturers of optical instruments, and the fact that it is for the first time that optical glass of high quality has been made in India. The credit for this achievement goes to the Central Glass and Ceramic Research Institute, one of India's major national laboratories.

Set up in 1950 at Jadavpur, a suburb of Calcutta, CGCRI—this is how the Institute is known in scientific circles—has built itself up as a vital aid to the country's rapidly growing glass and ceramic industry. In recent years, the demand for glassware and ceramic products in India has been steadily on the increase. About Rs 3.5 crore worth of glassware and about Rs 1.3 crore worth of porcelain and chinaware are manufactured annually in the country. Even this is not enough to cope with the increasing demand. This fact alone constitutes a big incentive for the growth of the glass and ceramic industry. For this, the industry leans heavily on the researches carried out at the CGCRI.

Just how this relation between research and industry is maintained can be illustrated by taking two recent instances of the work done at the Institute.

The first instance relates to one of the oldest and biggest cottage bangle industry of Firozabad in UP industries in India, namely the red. This industry has an annual production worth from Rs three to four crores and provides employment to more than seventy thousand people. Until recently this industry was relying solely on selenium, an imported chemical commodity, as a source of red colour for bangles. At Firozabad alone, more than Rs 15 lakh worth of this colourant was consumed annually. This constituted a heavy strain not only on the red bangle industry, but also on the country's foreign exchange resources.

The problem was referred to the CGCRI, who looked around for a suitable substitute for use as a colourant. Investigations led to the discovery of a number of processes for colouring the bangles without using selenium. Not all the processes could give satisfactory results. However, one process, in which copper was used as the colouring agency, found ready reception with the red bangle industry, after it had been duly tried out both in the laboratory at Calcutta and in the factories at Firozabad.

The new process, in addition to limiting the use of foreign exchange-consuming selenium, has also meant considerable saving in the cost of production. Although the process is covered under Indian Patents, it has been made freely available to the entire glass industry including, besides the red bangle industry of Firozabad, manufacturers of signal glass, fancy goods and lamp bulbs.

It is not only in giving new life to an old industry that the Central Glass and Ceramic Research Institute has played its part, but it has also been, at last partly, responsible for the establishment of an entirely new industry in India. Only a few months ago, a factory was established at Bhilwara, in Rajasthan, for the production of heat-insulating mica bricks according to a process for the manufacture of such bricks developed at the Institute.

BRICKS FOR INDUSTRIAL GROWTH

These bricks are extensively used in industrial furnaces to conserve heat. Till now, a large portion of the requirement of insulating bricks was met by bricks made from vermiculite, imported from foreign countries. The immense value of this new development to the industrial growth of the country can be judged from the fact that the new steel plants that are being constructed would require large quantities of mica bricks during their construction and also for their maintenance.

Most current investigations at the CGCRI are similarly related to the requirements of industry. Mention in this connection must be made of the work being done at the Institute on the survey and evolution of Indian clays on finding ways and means for improvement in the quality of glass containers, firebricks, glass moulds, plaster of paris; on finding a suitable

substitute for Antimony in the manufacture of white enamel, and on the utilisation of mica in the manufacture of paints, titania glasses, etc. These researches are designed to improve the quality of glassware and ceramic products, for which there is a growing demand in the country. A large variety of these articles are needed for use at home for construction, transmission of electricity, illumination, electronics and optics. Moreover, soft, smooth and lustrous fabrics made of glass, through processes developed at the Institute, are finding uses as wall covers, curtains, lamp shades, neck ties, hand bags, women's hats and garments. Indeed, the forms in which glass finds application are of surprising variety. This is why the work being carried out at the Glass and Ceramic Research Institute has such amazing possibilities.

It is in the very nature of the work that is being done at the CGCRI that the Institute should maintain the closest liaison with the various industrial units working in the field. For this purpose, besides employing other means of inter-communication, the Institute publishes detailed reports of its activities through its quarterly bulletin. This bulletin, beside being of direct use to the industry, also serves the research workers engaged in various other institutions.

EXPORT OF TEXTILE MACHINERY REFUND OF EXCISE DUTY

Draft rules detailing the procedure for allowing debate of Customs and Central Excise duties paid on imported and excisable material used in the manufacture of textile machinery exported have been published in the Gazette of India.

The rate of rebate will be calculated on the basis of the particulars furnished by the manufacturers of such machinery who may be interested in this rebate. For further information they are advised to address the Officer on Special Duty, Ministry of Finance, Department of Revenue, Central Revenues Building, Mathura Road, New Delhi.

Any suggestions received regarding these draft rules before March 28, 1959, will be considered by the Government of India before they are finalised.

The output of coal in India increased from 3,557,600 tons in August, 1958, to 3,841,688 tons in September, 1958, according to official statistics released by the Chief Inspector of Mines in India.

Despatches of coal amounted to 3,462,442 tons in September, 1958, as against 3,479,068 tons in the preceding month.

Coal stocks at pitheads amounted to 2,900,082 tons at the close of the month, as against 2,963,235 tons at the beginning of the month.

During the month under review 839 collieries were reported to be working with an average daily em-

ployment of 363,493 workers. Output per man-shift was estimated at 1.14 tons for miners and loaders, 0.59 ton for all workers underground and in open-workings and 0.41 ton for all persons employed including surface workers.

The percentage of absenteeism was of the order of 12.44.

Nine coke plants at collieries and elsewhere produced 448,601 tons of hard, soft and other kinds of coke during the month and despatched 245,459 tons.

Service rules on joining demonstrations, strikes and associations, acquiring moveable and immovable property, contracting a second marriage, raising or accepting subscriptions and speculating in investments will not apply to the non-gazetted Government employees drawing Rs 500 or less per month and working in Government-owned or managed establishments, other than Railway.

One of the rules, which will not be applicable, says:

"No Government servant shall participate in any demonstration or resort to any form of strike in connection with any matter pertaining to his conditions of service." The other part of the same rule says:

"No Government servant shall join or continue to be a member of any service association of Government servants which has not, within a period of six months of its formation, obtained recognition of the Government under the rules prescribed in that behalf, or, the recognition in respect of which has been refused or withdrawn by the Government under the said rules."

Under the relaxed rules, the employees need not seek permission of Government to contract another marriage provided such a marriage is permissible under the law.

The employees have also been exempted from the purview of sections saying:

"No Government servant shall bring or attempt to bring any political or other outside influence to bear upon any superior authority to further his interests in respect of matters pertaining to his service under the Government," "No Government servant shall, except with the previous sanction of the Government, have recourse to any court or to the press for the vindication of any official act, which has been the subject matter of adverse criticism, or attack of defamatory character."

The amendments to the Central Civil Services (Conduct) Rules, 1955, have been made by the President in exercise of the powers conferred on him by the Proviso to Article 309 of the Constitution.

The personnel exempted include people working in ports; docks; defence installations, except training establishments; public works establishments, in so far as they relate to work-charged staff; irrigation and electric power establishments; mines, factories and field units of the Central Tractor Organisation employing workmen governed by labour laws.

Reorientation of Education

Shri Rajendra Singh asked Dr K. L. Shrimall, Union Minister of Education, in the Lok Sabha on March 2 to state whether Government had any proposal to reorient the approach and background of teaching in order to inculcate a sense of national cohesion and emotional integration in our schools and colleges; if so, its nature; and what steps had been taken in this direction so far, or are being contemplated in the matter. In reply to the question, Dr Shrimall laid the following statement on the table of the House:

"The Ministry of Education are aware of the need for inculcating a sense of national cohesion and emotional integration in schools and colleges, but feel that this is a long drawn-out process and can be achieved only by the gradual building of national character. For this purpose, the Ministry has taken general measures to reorient the approach and background in teaching. One of the major steps taken in this connection is the acceptance of basic system of education as the national pattern of education. Under this system, school children of all castes, creeds and classes are brought together without distinction of any kind. It is hoped that in the course of time this system of education will help establish a classless society based on co-operation and non-violence.

"In the new syllabus for the Higher Secondary schools, the old subjects of History, Geography, Civics, etc. have been combined under the general heading of "Social Studies", the aim of which course *Inter alia* is to prepare the students for an intelligent and effective participation in group and national life. The school is expected to provide for them real experiences and practice in social and democratic living and to serve as a laboratory for social democratic living. During the final year of the Higher Secondary course, the students have to study as one of the topics the problems of national reconstruction.

"Another major step taken in the furtherance of national cohesion and emotional integration is the holding of Youth Festivals every year in which all Universities participate. In this manner, college students of both the sexes from all parts of the country are brought together and get an opportunity of community living. These festivals have so far proved unqualified success in creating the sense of unity of India and the understanding of each other's ways and values of life.

"Yet another step in this direction was taken when the National Discipline Scheme was sanctioned

as a part of the educational development programme under the Second Five Year Plan. The scheme aims at infusing in the younger generation a sense of discipline and citizenship and inspiring them to moral and spiritual values which are the accepted common cultural heritage of this country.

"The National Bank Trust of India is also publishing certain books, the purpose of which is to inculcate the sense of national cohesion and emotional integration among students and the public.

"The matter is being considered by the University Grants Commission on the basis of the recommendations of a Seminar on National Integration held in April, 1958".

Indian Capital Investments

Abroad

The Finance Minister, Shri Morarji Desai, placed on the table of the Lok Sabha on March 5 details about the Indian capital investments abroad. He was giving a written reply to a question by Shri Shree Narayan Das: The following is the statement:—

The Reserve Bank of India conducts periodical surveys of India's foreign liabilities and assets abroad. The last survey was conducted by the Reserve Bank of India in 1955 in respect of the foreign liabilities and assets of Indian joint stock companies, and holdings of foreign securities, shares and debentures held by banking companies as nominees, agents or custodians on behalf of individuals and partnerships resident in India. This survey did not, however, cover assets held by individuals abroad. No survey has been conducted after 1955. Only partial information is, therefore, available from the exchange control statistics maintained by the Reserve Bank of India. Complete details can be available only when the next survey is undertaken.

The following table gives the position regarding changes in non-official Indian capital invested abroad during January-November, 1958, as collected from the exchange control statistics:—

U.K.	...	28.4
U.S.A.	...	1.5
Malaya	...	5.6
Other countries	...	5.8

Note:

— Means increase of Indian investments abroad
* Means disinvestment of Indian capital abroad

The data are subject to the following limitations:—

(1) No details are available in exchange control record for capital receipts in sterling area currencies in amounts below Rs 20,000/-.

(2) changes in the company balances during the period are not covered.

(3) It is possible that some of the payments and receipts included in this statement are in the nature of migrant transfer and are also inclusive of payments and receipts on account of foreign controlled companies.

As at the end of 1955, the non-official Indian capital invested in

long term assets abroad stood at Rs 32.69 crores, according to the survey of India's foreign liabilities and assets. During 1956, 1957 and January-November, 1958, it is estimated on the basis of exchange control statistics that there has been a net reduction of about Rs 50 lakhs. This later figure is subject to the same limitations mentioned above.

One application is pending with the Government. This seeks permission for exporting provisions and other goods worth about Rs 2,55,000 to the U.K. for setting up an Indian store in London.

Welfare of Scheduled Tribes

A sum of Rs 2265.7 lakhs was sanctioned by the Central Government for the uplift of Scheduled Tribes during the five year period, 1953-54 to 1957-58.

Out of this amount, Rs 177 lakhs were spent on such social institutions as Servants of India Society (Andhra Pradesh), Tata Institute of Social Sciences, Indian Council for Child Welfare and Bharatiya Lok Kala Mandir, engaged in the uplift of work of the Scheduled Tribes. The Central grant-in-aid was also given to the Bharatiya Adimjati Seva Sangh for the welfare of Backward Classes, including Scheduled Tribes.

Apart from this, the State Government has also given grants to local non-official organisations out of the grants placed at their disposal for the uplift of the Scheduled Tribes.

This information was given by Shrimati Violet Alva, Deputy Home Minister, in reply to a question by Shri Prakash V. Shastri in the Lok Sabha on March 5

Colombo Plan

The Government of India would, in 1959-60, continue to give technical assistance by way of providing training facilities in India and services of Indian experts to India's neighbours who are members of the Colombo Plan, said Shri Morarji Desai, Finance Minister, in a written reply to a question by Shri Ram Krishnan. In addition, economic assistance would be given to Nepal through the Indian Aid Mission for carrying out of development schemes, construction and maintenance of roads and conducting of surveys etc. The exact extent of India's aid, the Finance Minister said, would depend on the requests which might be received during the year. He added that the following Budget provisions had been proposed for the coming financial years:—

Technical assistance to neighbouring countries: Rs 16,25,000, Economic assistance to Nepal: Rs 1,90,000.

Draft Standards for Copper and Copper Alloys

The Indian Standards Institution has issued, for eliciting comments, three draft standards on copper and copper alloys.

The first draft standard, which is for copper sheet and strip for

the manufacture of utensils and for the general purposes, covers the requirements for two grades of copper sheets and strips suitable for the manufacture of household utensils for general purposes, such as roof coverings, flashings, weatherings, gutters and damp proof coursing in buildings, etc. The two grades are Grade I for pressing quality and Grade II for hand worked articles & general purposes.

The second draft, which is for railway bronze ingots and castings, covers the requirements of five classes of bronze ingots and castings. They are Class I phosphor bronze, Class II Gunmetal, Class III leaded bronze (78-15-7), Class IV leaded bronze (83-10-7) and Class V leaded bronze (85-5-5-5).

The third draft standards for copper rods for boiler stay bolts and rivets. This standard is the revision of IS: 288-1951, which was first issued as a tentative standard. It specifies the requirements for copper alloy suitable for the manufacture of stay bolts, rivets, etc of locomotive boilers, and for stay bolts of marine and land boilers, of both the fire-tube and water-tube types.

Comments on the draft standards may be sent before May 12, 1959 to the Indian Standards Institution New Delhi.

Test for Coal and Coke

Finalised

Six different Draft Indian Standard Methods of Test for Coal and Coke were finalised by the 50th Mineral Fuels Sectional Committee of the Indian Standards Institution which concluded its two-day sitting in Calcutta on March 4.

The following are the methods of test: (1) Proximate analysis, sulphur and calorific value, (2) ultimate analysis, (3) special impurities: Carbon and carbonate, ferric sulphur, chlorine, phosphorus and arsenic, (4) coal carbonization coking index, swelling properties and gray-king assay (L.T.) Coke Type, (5) special tests for coke and (6) ash of coal and coke.

Dr J. W. Whitaker, Director Central Mining Research Station Dhanbad, presided over the meeting. The Indian Standards Institution has issued, for eliciting comment three draft standards on copper and copper alloys.

Life Insurance Corporation

For some time during the last year, the investment activity of the Life Insurance Corporation consisted, in the main, of consideration of offers placed by the brokers themselves on their own initiative. As this was not in the best interests of the Corporation purchases are now being made by the Corporation on a moderate scale by placing, on its own initiative, orders with its brokers for purchase of specific scrips at specified prices. Offers made by brokers are also considered, as before, on merits.

This information was given in the Lok Sabha on March 5 by the Deputy Minister of Finance, Shri Tarkeshwari Sinha.

March 28, 1959

Indian Finan

up goes DURGAPUR COKE OVEN PLANT ...another *Gill* project in India!

With the opening of the Durgapur Coke Oven Plant, *Gill* complete their fourth project in India. *Gill* are indeed proud of the contribution they are making towards India's industrial progress.

Backed by their international resources, technical knowledge, experience and leadership, *Gill* build plants around the world for industrial projects of all sizes, specially

- Coke-Oven Plants with multi-stage heated compound coke ovens (any height of chambers upto 6 metres)
- Gas Works
- Coal By-Product Plants
- Tar Distillation Plants
- Crude Oil Processing Plants
- Plants for the Petro-Chemical Industry

Volume LXIII No 13

Price: Rs 1.50

HIGHLIGHTS OF THIS ISSUE

Banks are very much in the limelight. Balance-sheets are now "seasonal", and so, too, Chairman's speeches. To add to all this, there is the annual general meeting of the Indian Banks' Association.

This issue of Indian Finance deals with them all.

FOR THE INVESTOR

Prospects in the Slack Season

Investment Gossip:

IT was a week of fluctuating prices. Overall, the tendency is firm, but, somehow, the rumour was allowed to roam over the market that the shipping industry would be nationalised. It was thus that the activity in the Stock Exchanges was punctuated by a monetary weakness.

But the news is all to the good. Indian Iron production figures make bright and cheerful reading. Matlatal group results, as also Century Spinning results, were enthusiastically received. So, corporate news has been good.

There is, however, a measure of perceptible restraint. There are sections in the market which have begun to talk knowingly and academically about yields. Recent price rises—they say—have been such as drastically to bring down the yields available on shares. And share quotations are today at a level when the investor would be—or should be?—reluctant to extend his commitments—because the return is just not enough.

What is surely surprising is that, during a time when the money market, owing to the current busy season's pressure, has been tight, the Stock Exchanges have merrily gone ahead with a small bull session; and what is amusing is the

S. E. TENDERS

Sealed tenders are invited for Tender No. PA/1650/COS/GB6 for supply of 180 Sheets Ply Board Teak veneered light grain Synthetic Resin bonded size 7'x5'x½".

Tender forms are obtainable from the office of the under-mentioned (PA Section) South Eastern Railway, Garden Reach, Calcutta-23 on remittance of Rs. 2/- (not refundable) per copy by money order to him direct in the case of outside firms and on production of cash receipt from this Railway's Chief Cashier by local firms. Earnest money against the tender is Rs. 300/- Closing date of the tender is 30-4-59 at 12 noon.

Firms not on the Railway's list of approved contractors must enclose a valid income-tax clearance certificate along with the Earnest money deposit receipt with the tender.

CONTROLLER OF STORES
S205

fact that, just when the money market is about to ease, qualms are being felt about the "low" yields on shares.

For, there is already evidence to show that, with the end of the fiscal year, the busy season pressure is slackening. The call money rate in Calcutta has come down. Tax payments have virtually been completed. The substantial governmental disbursements relating to the end of the fiscal year would have been made. The Scheduled Banks should receive large new Deposits. The money market should ease. Giltedged prices should firm up. Interest rates should be declining. And it is in such a background that the Stock Exchanges fear current share yields as being too low?

I anticipate that the consolidation in share values that we have had over the last few weeks will soon be "completed." Thereafter, there should be another wave of ascending prices. At any rate over the tenure of the 1959 slack season, prospects are for firm to improving conditions in the share markets.

ER\$

Investment Notes:

I understand that the Nestle Company has decided to have their manufacturing counterpart in India. A new company under the name of Food Specialties (Private) Ltd, has been established with the registered office in the Punjab. The authorised capital of the Company is likely to be around Rs 60 lakhs. There is a possibility of Indian participants being invited to take up equity shares to the tune of 10 per cent of the total capital. The present manufacturing programme includes Milk and Milk Products, though in the course of a few years, it will be extended to cover the full range of Milk and Milk Products.

It is understood that the Government of India have not permitted the New India Industries to issue bonus shares out of the Share Premium Account.

The shares of Indian Dyestuff Industries have, of late, been very active, although the company is yet to declare a dividend on the equity shares and pay the arrears of dividends on the Preference shares. The steady demand for the shares is largely attributed to the sustained buying by knowledgeable quarters on the assessment of the future outlook for the company.

I understand the Directors of the Belsund Sugar Company Limited (Managing Agents: Bangur Brothers Ltd) have recommended a dividend of Re 1/- per share, free of Income Tax, for the year ended September 30, 1958.

ER\$

Investment Briefs:

Kohinoor Mills have declared a final dividend of Rs 6, making a total of Rs 10 per share for 1958 as against Rs 18 in the previous year.

In Madras, Binny & Company has recommended a final dividend of Rs 6, making a total of Rs 10 per share for 1958, same as in 1957.

Travancore Ogale Glass has announced a dividend of 4 per cent for 1958 against nil for 1957.

ER\$

Excellent Results of Indian Aluminium

Balance-Sheet Reviews:

THE Indian Aluminium Company Limited has produced excellent results for 1958, thanks to a strong demand for the company's products. Sales have risen to Rs 7.43 crores from Rs 5.44 crores, while the net profit, after providing for Depreciation and Taxation, amounts to as much as Rs 47,67,280 as against only Rs 26,38,317 in the previous year.

Apart from providing a sum of Rs 11.10 lakhs for Development Re-bate Reserve, the Taxation provision is raised to Rs 57.63 lakhs from Rs 34.47 lakhs. The Depreciation amount is slightly reduced to Rs 27.95 lakhs from Rs 26.30 lakhs. The Ordinary dividend is increased by 1 per cent to 7 per cent.

According to the directors' report, work on the construction of the company's new smelter at Hirakud in Orissa made considerable progress during the year and production operations commenced on the 6th January, 1959. Negotiations have proceeded with the Orissa Government for the supply of additional electric power to enable expansion of the smelter from its present installed capacity of 10,000 tons to 20,000 tons ingot production per annum.

In order to meet all of the alumina requirements of the Hirakud and Alupuram smelters from indigenous sources, the company will shortly undertake a further expansion of its alumina plant at Muri. Annual alumina capacity will be increased from its present level of 18,000 tons to 32,000 tons. To facilitate the expansion of the Hirakud smelter to 20,000 tons ingot capacity and the corresponding alumina and bauxite facilities, the company's Canadian shareholder, Aluminium Limited, has signified its willingness to offer a loan to the company of upto six million dollars, which is the estimated foreign exchange requirement for the expansion.

ER\$

Dunlop Rubber

The Dunlop Rubber Company (India) Limited has also reported an increase in the net profit, after providing for Depreciation and Taxation, to Rs 82.43 lakhs for 1958 from Rs 80.67 lakhs in the previous year. Sales have risen to Rs 22.28 crores from Rs 19.97 crores. The directors have, after providing a sum of Rs 31.48 lakhs (Rs 27.69 lakhs) for Depreciation; Rs 88.13 lakhs (Rs 86.52 lakhs) for Taxation and Rs 30.00 lakhs (nil) for Development Re-bate Reserve, maintained the Ordinary dividend at 16½ per cent. No provision is made for General Reserve against Rs 30.00 lakhs previously.

The company's Sahaganj factory expansion was successfully carried out and the new Ambattur factory was virtually completed by the end of last year.

ER\$

Singareni Collieries

The Central Government is to have equity shares of the value of Rs 120 lakhs, i.e. 40 per cent of the aggregate issued and paid-up capital of the Singareni Collieries Company in Andhra Pradesh, to be refixed at Rs 300 lakhs, under an agreement reached between the Union and the State Governments on the terms and conditions of Central assistance from the collieries during the current Plan period.

As per agreement, the authorised capital of the company will be fixed at Rs 4 crores for the present. The agreement estimates the total assistance required from the Centre by the company up to the

end of the current Plan period at Rs 415 lakhs. The actual drawals, however, may be between Rs 350 lakhs and Rs 400 lakhs, depending on the resources position of the company. The agreement provides that this assistance should be partly as equity and partly as loan to the company.

The Articles of Association of the company have been amended to provide for the revised capital structure and the Andhra Pradesh State Government's holding in the company is raised to the contemplated level of Rs 180 lakhs. Under the agreement, the Central Government will nominate three members on the Board of Directors and the Andhra Pradesh Government will appoint four directors including the chairman and the managing director in consultation with the Central Government.

₹ ₹

Bengal Flour Mills

Despite a decline in earnings, the Bengal Flour Mills Company Limited has maintained the total distribution at 25 per cent for 1958. Sales have risen to Rs 2.16 crores; but the net profit, after providing for Depreciation and Taxation, amounts to only Rs 5.48 lakhs against Rs 9.11 lakhs in the previous year, reflecting a reduction in the selling prices of most commodities, especially in the case of bran. A sum of Rs 1.43 lakhs (Rs 1.79 lakhs) is provided for Depreciation; Rs 7.73 lakhs (Rs 10.88 lakhs) for Taxation; Rs 4,081 (nil) for Development Rebate Reserve and Rs 2.27 lakhs (Rs 5.00) for General Reserve.

According to the director's report, the difficulty in obtaining foreign exchange has prevented the fulfilment of the company's programme of greater modernisation and improvement; but it is considered desirable to continue to build up funds for this purpose.

₹ ₹

Finlay Mills

The Finlay Mills Limited has reported satisfactory results for 1958. The gross profit is slightly higher at Rs 19.14 lakhs as against Rs 18.33 lakhs in the previous year; but the dividend is reduced from Rs 20 to Rs 16 per share. Sales of cloth, yarn and waste are slightly lower at Rs 1.94 crores against Rs 2.07 crores.

After providing Rs 1.34 lakhs for managing agents' remuneration (Rs 1.33 lakhs); Rs 6.78 lakhs for Depreciation (Rs 6.13 lakhs); Rs 193 lakhs for Development Rebate (nil) and Rs 5 lakhs for Taxation (nil), the net profit is lower at Rs 4.03 lakhs against Rs 7.57 lakhs.

₹ ₹

Swan Mill

The Swan Mills Limited has also reported satisfactory results. The gross profit has gone up by Rs 5.77 lakhs to Rs 24.51 lakhs. After providing Rs 6.40 lakhs for Depreciation (Rs 4.50 lakhs); Rs 8.22 lakhs for Taxation (Rs 6 lakhs); Rs 1.69 lakhs for Development Rebate (nil), the net profit works out to Rs 8.22 lakhs against Rs 8.24

lakhs in the previous year. The Ordinary dividend is maintained at Rs 25 per share.

₹ ₹

Atul Products

Despite prolonged strike at the factory and the resultant loss of production for more than two months, Atul Products Limited has fared well. The gross profit has gone up to Rs 57 lakhs from Rs 54.45 lakhs. Out of this, the managing agents' remuneration is provided at Rs 4 lakhs as against Rs 3.18 lakhs. Depreciation absorbs Rs 17 lakhs against Rs 16.76 lakhs and Special Depreciation Reserve Rs 7.50 lakhs (same). A sum of Rs 7 lakhs (Rs 3.50 lakhs) is provided for Development Rebate, while Rs 5.89 lakhs is provided towards arrears of Depreciation. Wealth Tax takes up Rs 1.25 lakhs against Rs 1.50 lakhs for 1956 and 1957. The dividend is raised to Rs 10 from Rs 8 per share.

₹ ₹

Adoni Spinning

The working of the Adoni Spinning & Weaving Company, for the year ended 31st December 1958, has resulted in a profit of Rs 3.74 lakhs. The directors have provided Rs 3.80 lakhs for Depreciation. Sales of yarn and waste are higher at Rs 43.80 lakhs against Rs 34.88 lakhs.

According to the directors' report, the installation of the balance of 12,000 spindles has been completed. The mill has now an installed capacity of 24,000 spindles.

₹ ₹

Kothari Textiles

The Kothari Textiles Limited, Madras, has reported disappointing results for the 18-month period ended 31st December, 1958. The company has earned a profit of Rs 2.42 lakhs. The directors have provided Rs 2.39 lakhs for Depreciation. After transferring a sum of Rs 1 lakh from the Dividend Equalisation Fund, they have proposed to pay the dividend on the Preference shares. The Ordinary dividend is passed over.

The Chairman hopes that, with the coming into production of 12,000 spindles in the new mill and the continuance of the present conditions in the yarn and cloth markets, the working of the mill, in the next year, should be able to show better results.

Indian Banks

SILENT and zealous are the two words that Mr C. H. Bhabha has used in describing the work done by the Indian Banks' Association, of which he is the Chairman. That such description has been richly earned is obvious when we consider developments in the sphere of banking during 1958 and the part that the Indian Banks' Association has played in fashioning or controlling the destinies of the banking system during an admittedly trying period. And yet, we believe the most important work that the Indian Banks' Association can carry out remains still to be done, although, during 1958, a beginning in this regard has already been made. We refer here to the aggravating phenomenon of a spectacular increase in high cost Deposits accompanied by stagnancy—the word here is used relatively—in Advances. This has meant that the margin of earnings of banks has been seriously corroded and, with the prospect that the Bank Award comes up for revision during the current year, there is the real and disquieting threat of a further corrosion of bank profit margins. It is heartening to find Mr Bhabha, in his address at the Twelfth Annual General Meeting of the Association, making a veiled reference to this all important problem and also hinting at steps to be taken to solve it.

There are, however, other points on which Mr Bhabha has touched which may be somewhat controversial. For example, the Chairman of the Indian Banks' Association is greatly perturbed about the destiny of funds accruing in terms of the Public Law 480 Agreement between India and the USA—the destiny, that is, in the interim between the delivery of the commodities and the conclusion of negotiations as regards the subsequent re-lending by the USA of such monies to the Indian Government. The complaint is that the monopoly as regards the utilisation of such funds during this interim has been given to the State Bank; the deposit of such counterpart funds with the State Bank leads, says Mr Bhabha, "in actual practice to the indirect subsidising of that great nationalised bank". Mr Bhabha seems to think that the least that could have been done should have been to parcel out Deposits to the other Indian Scheduled Banks as well, so that they, too, might participate in the benefit attendant upon the receipt of Deposits at a relatively lower rate of interest. The controversy arises because Mr P. C. Bhattacharya, Chairman of the State Bank, only recently stated categorically that the transactions relating to the counterpart funds were of a special character, and that the receipts under this head could not be used for commercial banking. In other words, it was incumbent upon the State Bank not to use any of these special Deposits for extending Advances; instead, as the State Bank has done, these resources had to be invested correspondingly in gilt-edged. Since, at the time when first the counterpart funds began to accrue, the state of the gilt-edged market was fairly uncertain, it may be argued that the risk inherent in giving out Deposits that had perforce to be invested in gilt-edged, might have been thought by Government to be grave enough so as to persuade the authorities not to foist such risks upon Scheduled

Banks generally. But, then, surely, when there is no more risk about such transactions, it is eminently correct to argue, as Mr Bhabha puts it, that the extra margin of profit, or the windfall earnings, constituted by counterpart fund transactions, should also be passed on to the other Scheduled Banks. In another context, Mr Bhabha has mentioned that the cardinal principle of banking business is to set aside sufficient inner reserves; and he adds that force of circumstances and the unhealthy trends prevailing have prevented such conservation. We suggest that, with a view to strengthening the Indian banking system generally, Government may seriously consider the desirability of passing on counterpart deposits, stipulating, however, that any profits earned thereon should be set aside to published reserves or be added to inner reserves.

As far as the high cost of Deposits is concerned, Mr Bhabha takes justifiable pride in the fact that the Indian Banks' Association initiated the idea of an agreement whereby rates of interest paid on Deposits have been controlled. He asserts that "the unhealthy feature of artificial high rates paid on short-

term money was thus brought to an end". There has, in this context, been criticism that the agreement really amounts to an attempt by the banks, working as a cartel, to ensure that a bigger margin of profits is provided. Mr Bhabha has taken pains to rebut this criticism. We entirely agree with him that a voluntary agreement providing fair and rational rates for bank deposits will ensure flexibility in the money market.

In referring to the decline in the profits of banks during 1958, Mr Bhabha has said that "this unhealthy feature needs to be corrected"; we are to infer that the principal unhealthy feature which needs to be eliminated is the continued high cost of Deposits. We, thus, anticipate that the Indian Banks' Association will take steps to reduce rates that, in terms of the voluntary agreement, may be paid on Deposits. If the Association, under Mr Bhabha's dynamic Chairmanship, succeeds in restoring an adequate margin of profits for banks, by means of a voluntary agreement on rates to be paid on Deposits, it will have served the country well.

The Coal Economy

THIS is the season of the year when the problems of the coal industry are prominently brought to the notice of the public from a number of authoritative platforms. The Indian Mining Association, the Indian Mining Federation, the Indian Colliery Owners' Association, Indian Coal Merchants' Association and the Mining, Geological and Metallurgical Institute have all held their annual meetings within a fortnight. The last provided the opportunity for the presentation of the official angle on certain aspects of the mining industry, while the presidential addresses at the other meetings afford a common pre-hensive view of the coal economy of the country from the standpoint of the private sector. To say that the maintenance of a healthy state of the coal economy is essential for the success of plans of industrial development is to underline the obvious. But it is not always readily recognised that the health of the coal economy, for a long time to come, will depend on the successful functioning of the private sector of the industry which accounted for 87 per cent of the total raisings in 1958.

The progressive increase in the output of mines in the public sector, existing or yet to be opened, that is envisaged in the programmes of planned development and the targets set for the third plan underline the need for careful coordination of plans for production and offtake and other measures to ensure continued progress of the private sector. In an industry which has to function under a multiplicity of Government regulations, the creation of such conditions depends primarily on the Government's readiness to take prompt remedial action to remove the disabilities to which spokesmen of the industry have repeatedly drawn attention. At the same time, more attention will have to be

devoted to the details of planning, so as to coordinate supply and demand at every stage and in the different regions. The Chairman of the Indian Mining Association has emphasised that planning should be more detailed than has been the case in the past, so that collieries may know by whom their increased production is to be consumed. Fixing of total targets of production without taking into consideration the likely consumption pattern can only lead to misdirection of effort. Mr Hogg cited the unfortunate experience of certain collieries mining coking coal, who lost their regular customers when their entire production was diverted to steel plants, and were subsequently left with large stocks on hand as the demand from the steel works was not sustained. Apart from this particular instance, pithead stocks, in general, have reached a level when they are likely to act as a drag on production. The effect of accumulation of stocks on the working of the collieries is twofold. Apart from the additional burden of having to finance stocks, there is also a physical limit to the extent to which a colliery can stock coal.

Formerly, accumulation of stocks resulted from inadequacy of transport. Last year the railways were able, on the whole, to improve their performance to a remarkable extent, except in certain regions. But the improvement in wagon availability coincided with a slackening of demand. The slowing down of the pace of industrial activity in the third year of the Plan has reacted on the demand for coal. From this the hasty conclusion has been drawn in some quarters that coal requirements under the Second Plan have been exaggerated and that the targets suggested for the Third are far from realistic. But the slackening of the tempo of industrial activity is a temporary phase brought about

Indian Finance

Established 1928

April 4, 1959

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right"—The Analects of Confucius.

mainly by the concentration of effort on the 'core projects'. When these projects are completed, there will be a renewed spurt of industrial activity and the demand for coal is bound to increase at a faster rate than is perhaps envisaged. When that happens will the coal industry be able to deliver the goods?

The total production of coal in 1958 was 45.3 million tons. While production has increased by 1.8 million tons, the rate of increase has slowed down as compared with the previous year when production increased by 4 million tons. The Second Plan has fixed a target of 60 million tons per annum to be reached by 1960-61. This means that an additional production of over 14 million tons will have to be achieved in the remaining two years of the Plan against the increase of 7.1 million tons in the first three years. The bulk of the increase that yet remains to be achieved will be in the public sector. According to the Government's review of the annual report of the National Coal Development Corporation, by the end of 1958, additional production from eleven collieries run by the Corporation was over half a million tons which was the target set for the year. And the Government appear to be confident that the Corporation would be able to give a good account of itself in attaining its target of production in the remaining period. But that confidence should not lead to minimising the importance of the contribution made by the private sector and of the need to maintain steady increase in output. Though privately owned collieries accounted for 75 per cent of the increase recorded last year, there is a remarkable fall in the rate of increase as compared with the previous year. The mining disasters of last year, as Mr Thapar stated in his presidential address to the Indian Mining Federation, 'have cast their long shadows on the industry.' That is not however the only factor responsible for holding back the rate of production.

Revision of the rate structure and improvement of transport facilities are of urgent importance in enabling the coal industry to maintain its production schedule. Though the need for revision was recognised as early as 1957, when the Coal Prices Revision Committee was set up, with instructions to report within two months, it was able to submit its report only towards the end of last year. Government's decision on the report is still awaited. As regards transport facilities, the progress has been uneven. While the performance on the whole has improved, loading on the South Eastern Railway was less than in the previous year. With heavy expansion schemes in hand, in connexion with transport of material to the Steel works, the Railway does not appear to be in a position to take up the improvement of facilities in the coalfields served by it. There are also allegations of unfair discrimination in favour of the NCDC mines at the expense of the mines in the private sector. Mr Thapar regretted that, in spite of assurances given by the Government on numerous occasions that no discrimination will be permitted either in the matter of the allotment of orders or wagons, it is found in actual practice that such discrimination continues to be made.

Apart from delay in introducing an economic price structure and eliminating the remaining transport bottlenecks, production has also been affected adversely by the operation of import restrictions which apparently have been imposed without adequate consideration of the requirements of industry. The Chairman of the Indian Mining Association gave expression to the feeling that is widespread in the industry, that sufficient priority had not been given to the coal industry in the grant of import licences. As the

industry has been standardised on equipment from the Sterling area, it has not been able to make use of dollar credits offered by the Export Import Bank of the United States of America. This is, perhaps, one of the reasons why the credits approved by the Bank remain unutilised. With plans for establishment of indigenous manufacture of mining equipment, it will not be economical to change over to American equipment at this stage. In the meantime, production is hampered by lack of spare parts, and it is only reasonable that requirements of the industry in this respect should be promptly met.

Import restrictions have also hampered production in another respect. Following the disasters of last year, the Mines Inspectorate has been tightening the essential safety regulations. But the equipment necessary for their observance is not made in India. Mr S. S. Grewal stated at the meeting of the Mining, Geological and Metallurgical Institute, that mine operators found it difficult to observe vital provisions of safety regulations because of lack of equipment. Until the complete range of safety equipment is manufactured in India and in adequate quantities the import of these items should be accorded the highest priority in the matter of grant of import licences and allocations of foreign exchange.

Higher US FRB Rates

LAST week, a high official of the U.S. Federal Reserve Board (FRB), which is chiefly responsible for the nation's monetary policies, took occasion to reemphasize that his agency wants to keep the current business rise from moving too fast, "so we can have stability" along with economic growth.

Just one day later, the FRB announced new increases in the discount (interest) rate charged by four of its most important regional banks, those at New York, Chicago, Philadelphia and Dallas. The other eight federal reserve bank regions are expected to follow suit shortly, in line with traditional practice.

The boost, from 2.5 to 3 per cent, is the first since last October and the third since last summer, when it became clear that the 1957-58 recession was over. The new 3 per cent rate restores the level of late 1957.

Actually, the discount rate is the interest charged by the reserve banks to member banks for their borrowing. The rates member banks pay in turn set the base for the interest rates they charge their customers.

The discount rate increase, therefore, probably will mean higher costs for loans to businesses, and thus could conceivably act as a break on overly exuberant economic expansion by discouraging some marginal or non-essential borrowing. Hence, the rise is being interpreted in most quarters as an anti-inflationary move.

This would accord with the oft-stated belief of FRB officials that the possibility of inflation remains the chief threat to economic stability. They have adhered to this belief despite the slowdown—at least partly seasonal—in the pace of the current business rise, and despite the fact that the general price index has changed little during the past 12 months.

There has, however, been a marked variation within that price index. Prices of farm products and foods have been declining, but those of industrial commodities have been edging up noticeably in recent months. It is no secret

While attention to these immediate problems will help to reach the target set for the Second Plan, the attainment of the targets set for the Third and subsequent Plans will depend on the pattern of development that is adopted. Evidently there are considerable misgivings about the position assigned to the private sector. It is a point for consideration at a time when it is of the utmost importance to conserve investible resources and especially foreign exchange, how far it will be economic to develop new coal fields curtailing the share of the existing developed areas. The fear expressed by Mr Hogg about unemployment in the Bihar and Bengal Coal mines, may not materialise. Considering the scale of demand that is envisaged and the targets that are discussed, the expansion of the public sector need not be at the expense of the private industry. The importance of conservation of national resources has not been ignored by the latter, as Mr Hogg pointed out with relevant statistics of the progress of voluntary sand stowing. Mr Hogg has also drawn attention to the fact that the private sector of the coal industry have been willing to enter into joint ventures with the Government. The adoption of this suggestion could make for economy in the cost development and as such deserves careful consideration in drawing up the programmes for the Third Plan.

that many government officials are watching the trends in industrial commodity prices rather closely as a measure of their possible inflationary impact on the total price structure

As for the economic picture, many officials here point out that economic activity already has surpassed the pre-recession levels of mid-1957, and in a number of important sectors activity is mounting monthly to new highs. The only significant lag has been in the employment sector, with the number of jobs at the last (January) count up to 4.7 million or 6 per cent of the labour force on a seasonally adjusted basis. As a matter of fact, one high FRB spokesman stated flatly early last week that the Board's monetary policies might have been more restrictive in recent months if it had not been for the employment situation.

The fact that the Board now has tightened up on its monetary policies by raising the discount rate may indicate a belief that the work of the unemployment is over, and the number of jobless will soon be declining with the usual spring pick-up in business activity.

Still another factor must be taken into account in assessing the discount rate increase. For seven months, since early last September short-term U.S. treasury bills had been yielding more than the central bank discount rate—a development considered "out of line" with usual practice. In part, then, the Board's approval of a 3 per cent discount rate, against the current 2.8 per cent on treasury bills, can be viewed as a long-awaited adjustment.

There is some expectation, moreover, that later this month the treasury department again will be entering capital markets for cash borrowing as it often does. While the FRB an independent agency and is not bound by treasury policies or needs, it usually likes to get its major monetary manoeuvres out of the way in advance of treasury operations, if only to give the money markets time to absorb the effects. For their part, treasury officials are said to consider the discount rate rise as consistent with sound monetary policy.

EDITORIAL NOTES

The Path to the Summit

In retrospect, it seems as if the conquest of Mount Everest was not half so difficult or arduous a climb as is the path to summit talks. It is difficult to make much sense of the frequent statements that have been issued, by the Western Powers and by USSR, on the feasibility of holding summit talks or the pre-conditions of such a conference. The last week's press conference did not elicit from President Eisenhower any clarification of what the future, diplomatically speaking, holds in store. The British Prime Minister and the American President have had talks, but the content of these has been shrouded by a cloak of secrecy which seems to be as impenetrable as Russia's vaunted Iron Curtain. Indeed, Mr Eisenhower bluntly refused to say anything at all about the discussion with Mr Macmillan because, as he put it, any attempt by him to give even partial information would lead to disclosing everything. It is a moot point, at this juncture, whether it would not be a good thing if, in fact, the Western stand were set out in unequivocal terms. Unfortunately, in Mr Macmillan's words, the problems dividing the USSR and the West are "certainly complex"; consequently, apart from a monotonous iteration of so-called pre-conditions, which have to be fulfilled before agreement can be reached on the holding of summit talks, there has been a good deal of loud and empty talk—but,

we regret to say, meaningless, too. Complex certainly the situation is, and the problem that confounds is the explicit threat that Russia has made as to the future of Germany. In particular, what would happen to Berlin, the western sector of Berlin, if the Russians make good their threat to withdraw their forces and hand over power to the East German Government, cannot at all be viewed with equanimity. Mr Eisenhower, we suppose, hates to be hurried or blackmailed into action, especially at a time when the chief architect of US foreign policy, Mr John Foster Dulles, has been sidelined by illness. The American President has, in fact, categorically stated that no one could be "pushed" into going to summit talks. But it is a sad state of affairs that the cold war should have heightened in intensity and that, by inaction, the threat looms large and, if not conflict, at least something far worse than the cold war might be upon us when the dead line given by Russia expires. It remains to be seen whether Mr Dulles, who is reported convalescing, will be able to recover quick enough so as to calm the troubled waters.

All India Bar

On the need for an All India Bar, the members of a profession, accustomed by training to espouse opposing points of view, have arrived at a degree of unanimity which ought to carry weight with the authorities responsible for initiating legislation on the subject. A categorical recommendation to Government to undertake legislation for the formation of an All India Bar was made by the Committee which was set up in 1951 to go into the question. The proposal has been endorsed by the Law Commission which has regretted the non-implementation of the Committee's recommendations. And now, the case for a Unified Bar has gained renewed support forward by the Chief Justice of India and by Mr K. M. Munshi at the All India Law Conference, held last week in New Delhi under the auspices of the Law Institute.

The inadequacies of the Supreme Court Advocates (Practice in High Courts) Act, 1951, have drawn attention to the need for comprehensive legislation for the creation of an All India Bar. Such an association, Mr Munshi pointed out, is necessary "to give shape and direction to professional activities, to unify and maintain the ethics of the profession, to strengthen the independence of the bar and the judiciary." Apart from these professional aspects, the Bar has also a larger role in the national life which Mr Munshi emphasised when he referred to the contribution it can make, as a group independent of Government, to the free life of democracy. The concept of democracy unfortunately is clouded by ideological prejudices, so that its basis in law is apt to be overlooked.

There is also another respect in which the beneficial influence of

a Unified Bar should have immediate recognition. A common system of law and jurisprudence has been one of the main forces making for national unity. At a time when the natural urge towards self expression of the different linguistic units which constitute the Federation tends to erect barriers to inter communication, even if it does not lead to disruption, a Unified Bar can be of real service in reinforcing the bonds of national unity.

Public Health

The public will be inclined to interpret the appointment of a high-power committee to assess progress of public health in the country as a sign that all is not well in this field of Government activity. And they will not be far wrong, for the Ministry of Public Health in India is cast for the role of Sisyphus. Progress in one field is accompanied by set-backs in several others. If India has made good progress as regards elimination of malaria, T. B. is ravaging the countryside with greater fury. Even more disturbing is the recurrence of epidemics like small pox and malaria which levy a steadily increasing toll, in spite of vaccination and inoculation. The stepping up of governmental effort for the control of leprosy has brought to light the uncomfortable fact that it prevails to an extent unsuspected in the past. And above all, the success of public health measures in death control, however limited, immediately increase the magnitude of the problem every succeeding year, by adding to the population.

Many water supply schemes under the Second Plan have to be held up because of the shortage of steel and improvement of environmental hygiene in urban areas depends on a comprehensive programme of slum clearance and town planning. By the very nature of its tasks the Ministry of Health has to range far and wide, encroaching on the jurisdictions of other ministries, though its adventures in the past, as for instance pre-fabricated housing, have not been attended with happy results. The Ministry has recently set up a town planning organisation for Delhi, and has "under contemplation" a Central Regional and Town Planning Organisation. If such organisations are to do anything more effective than holding seminars on regional and town planning, the programmes that are drawn up must be in close touch with economic realities. Shortage of resources imposes a severe limit to what is practicable. And effective utilisation of even the available resources depends on the co-ordination of the activities of a number of Ministries. Inter-ministerial coordination has not been one of the strong points of the Indian administration, as Mr S. K. Patil had reason to lament a few months ago, when he tried to explain the failure to make full

use of irrigation facilities created at such great expense.

Indigenous Medicine

The Lok Sabha debate on the demand for grants of the Ministry of Health was dominated by the concern expressed from all parts of the House for ensuring a fair deal for indigenous systems of medicine. The topic is heavily dosed with sentiment which has played its part in shaping Government policy. Since the adoption of the Chopra Commission's report, Government is committed to a policy of encouragement of indigenous systems, and the evolution of an integrated system of medicine. In the meantime, the students in colleges of integrated medicine do not seem to share the enthusiasm of their patrons for indigenous systems, if we are to judge by their demands, put forward to the accompaniment of strikes, for instruction in modern medicine of the same standard as in the regular medical schools and colleges.

There has been no dearth at any time of enthusiastic champions of indigenous medicine. One expects to find them among Congressmen Praja Socialists, Jan Sanghaites and the motley crowd of independents. But it is a surprise to find a Communist in their ranks, for, to date, no one has ferreted out evidence to show that Dhanvantari was a communist. Perhaps the Communist member who spoke up for Ayurveda derived inspiration from China, where the sick in the communes are dosed with Chinese nostrums, presumably to help the great leap forward. But there is also room for doubt whether the revival of indigenous system of medicine in China is to be regarded as a measure of public health or of population control.

Mr Birla on the Third Plan

MR G. D. BIRLA usually uses the forum available at the annual general meeting of the United Commercial Bank Ltd, of which he is the Chairman, to put his finger on the economic topic of the hour. We had anticipated, consequently, that we would be hearing from him a forceful depreciation of the events which led to the sharp decline in banking earnings during 1958; but Mr Birla, possibly because interest rates in the banking sphere were his main subject of the last two years, has, rightly we feel, thought fit to concentrate on the question of planning as such. The lead that he gives is his assertion that no plan "can be criticised as being too ambitious". The figure now being talked about for the Third Plan—Rs 10,000 crores—does not dismay him, as it has dismayed other circles. On the contrary, there is, he says, "a case for a big plan rightly conceived and implemented." But, of course, there are some qualifications.

First of all, Mr Birla, as it were, puts inflation in its place; we are gratified to find him taking the view that price rises in India are a thing apart from inflationary pressures as experienced in other parts of the world. The UCO Bank Chairman points out, "often

we adopt measures which are suitable to industrially advanced countries where over-investment and over-employment threaten to undermine the stability their economy." But, in India, we have the problem neither of over-investment nor of over-employment. In such a view, how can fiscal and monetary measures adopted elsewhere have a relevance for this country? Mr Birla adds:

"In an under-developed country with plenty of idle labour and undeveloped resources there can be no such thing as over-investment or inflation arising therefrom so long as investments are directed toward productive purposes. There may be a rise in price due to shortage of goods as has happened in respect of foodgrains but such 'scarcity inflation' can be met only by greater production."

We would go a step further, and urge that a dear or tough money policy would be hopelessly out of place in Indian conditions. A high Bank Rate will not be disinflationary, but, for reasons which we have mentioned often enough, inflationary in its results.

Mr Birla goes on to indicate that, while the need is greater savings, this cannot be vouchsafed "by under-consumption and austerity." Indeed, austerity is "the surest way to curb employment and production." But this flow of savings should not be compelled; in the long run, there can be no alternative to incentive for producing results.

It is this belief that the panacea for India is higher production which leads Mr Birla to conclude that larger investment is the goal we should aim at. He, therefore, supports a bigger plan for investment—"on condition that the flow

of foreign and internal resources into investment channels is assured."

Mr Birla holds the view that the Third Plan should eschew any attempt at solving unemployment through "intensive employment of manpower." Thus, it was necessary to think in terms of medium and small scale industry—but always run by power. As Mr Birla puts it, "muscle power is the costliest power in the world and we have heard of no country which has solved the problem of the poverty of the people through this power."

The final point made by Mr Birla is worth emphasising. He decries the controversy that has arisen as regards the roles of the public and private sectors. We fully agree with him when he says that those who believe that the public sector is treading on the toes of the private sector are taking a "short-sighted view." His assertion that the public sector is "going to act as a generator of the private enterprises" shows Mr Birla to be what he is—an astute and enlightened industrialist.

+

Advances Near Rs 1,000 Crore Mark

The returns of the Reserve Bank for March 27 are neither as mystifying nor as intriguing as we might have expected in regard to figures for the last week of the fiscal year. It is, therefore, safe to conclude that the year-end transactions will be spilling over into the next week, that is, the first week in April.

Nevertheless, it is significant that the Reserve Bank returns reveal an expansion in active note circulation, which has gone up from Rs 1692.60 crores to Rs 1701.53 crores. Rupee Coin has gone out into circulation for a fractional amount. Currency has been expanded against Rupee Securities for Rs 10 crores by transfer from Investments in the Banking Department. In the result, the Reserve Bank's cash is marked slightly higher at Rs 15.60 crores against Rs 14.70 crores.

In the Banking Department, it is to be noted that the Central Government have not experienced a great demand, since their Deposits are higher by Rs 2.65 crores at Rs 53.83 crores. On the other hand, the State Governments' Deposits are steeply lower at Rs 26.72 crores against Rs 36.01 crores, this in spite of an increase of over Rs 4 crores in their ways and means borrowings from the Reserve Bank. The Reserve Balances of member banks have also declined considerably from Rs 74.22 crores to Rs 67.57 crores. The Reserve Bank's Other Loans and Advances are practically unchanged. There is a decline of Rs 8 crores under Investments, reflecting the transfer to the Issue Department. Finally, Balances Held Abroad, for the first time in some weeks, show a fall of some magnitude, with a decline of Rs 3.70 crores to Rs 35.05 crores.

During the week ended March 27, the State Bank has experienced another rise of Rs 10.71 crore in Deposits, with the figure rising to Rs 517.62 crores. While it is fairly certain that the bulk of the rise of nearly Rs 25 crores in Deposits over the last four weeks should be due to special transactions, it is interesting to find that the investment portfolio has risen over the period only by Rs 1 crore. But, then, Other Assets in rising by another Rs 5.77 crore are unusually high at Rs 19.4 crores. It is probable that part of this element of Other Assets will be converted into gilt-edged. But season pressure has caused a further rise of Rs 5.29 crores in the total of Advances. But the improvement in Deposits has enabled borrowings to be reduced from Rs 6.50 crores to Rs 2.08 crore though, in the process, the State Bank's cash and with the Reserve Bank has declined from Rs 28.1 crores to Rs 22.63 crores. This would suggest, firstly, that Scheduled Banks other than the State Bank have had recourse to Reserve Bank credit during the week and, secondly, that the fall in the Reserve Balances of member banks is due entirely to the State Bank.

The return of Scheduled Banks for March 20 places the total Advances very near the Rs 100 crore mark, with a rise registered during the week of Rs 16.89 crore to Rs 995.93 crores. In this wise is busy season pressure being experienced by member banks. Thus with Deposits showing a small fall of Rs 4.25 crores to Rs 1657.6 crores, and despite disinvestment in gilt-edged for Rs 5.00 crores, became necessary for the Scheduled Banks sharply to increase the borrowings from the Reserve Bank by Rs 14.28 crores to Rs 60.7 crores. As an end result, cash balances have improved by Rs 1 crore to Rs 151.92 crores. The next week's return should also certainly witness the crossing of the Rs 1000 crore mark in Advances, and Deposits, too, should be showing a rise of respectable dimensions.

+

Balance-Sheets

The set of bank balance-sheets which we may take up for analysis this week gives a cross section of the experience of banks during 1958. This experience ranges from a situation wherein profits have been eaten into fairly substantially to another wherein profits have not suffered much. But, if there is one lesson to be learnt from the three balance-sheets which we shall now be assessing, it is that an increase in Deposits during 1958 has proved to be disadvantageous, because it bore so high a cost.

+

Central Bank of India

The Deposits of the Central Bank of India Limited have registered a modest increase during 1958 of Rs 7.11 crores to Rs 161.98 crores. Significantly, current accounts have been marked down by over Rs 12 crore

April 4, 1959

whereas Fixed Deposits and Cash Certificates are shown much higher by Rs 17.31 crores at Rs 75.33 crores. Meantime, bearing testimony to the static state of Advances, the accommodation extended by the Central Bank is found to be lower by Rs 1.62 crores at Rs 99.87 crores. Investments in gilt-edged have been marked up by Rs 2.69 crores at Rs 44.50 crores; and Central Bank, moreover, figures as an investor in Treasury Bills for Rs 1 crore. The buoyant state of the gilt-edged market during 1958 has proved beneficial to the Central Bank, which, it may be recalled, was adversely affected by the raising of Bank Rate in November, 1951, when a gap of considerable proportions developed as between the book and market values of the Central Bank's investments in gilt-edged. In the 1957 balance sheet, this shortfall was placed at Rs 2.54 crores; in the accounts for 1958, the market value is lower than the book value only by Rs 79 lakhs. Apart from the increase in investments, the Central Bank also found remunerative use for its increased resources by placing Rs 7.66 crores at call and short notice as against Rs 2.47 crores in the previous balance sheet.

According to the profit and loss account, the income by interest and discount went up from Rs 6.41 crores to Rs 7.06 crores, while commission, exchange and brokerage fetched practically the same at Rs 1.30 crores. On the other side of the ledger, interest paid on Deposits, borrowings, etc., has risen by Rs 0.43 crores to Rs 3.68 crores; and salaries and allowances also absorb Rs 0.30 crores more at Rs 3.07 crores. In the result, the balance of profit shows a small decline of Rs 7.32 lakhs to Rs 1.01 crores.

The provision for taxation has been raised—Central Bank is one of the few banks to do so—by Rs 3.50 lakhs to Rs 16.50 lakhs. The transfer to Staff Gratuity Fund is also higher by Rs 3.50 lakhs at Rs 10 lakhs. The dividend has been maintained, making 14 per cent for the year, and the amount provided for bonus to staff is Rs 2 lakhs higher at Rs 32 lakhs. The transfer to Bank's investments which was Rs 15 lakhs last year, has been skipped. The carry forward at Rs 17.32 lakhs compares with the amount brought in of Rs 18.44 lakhs.

+

Punjab National Bank

The Punjab National Bank Limited also reports a modest increase of Rs 4.58 crores to Rs 129.20 crores in Deposits and other accounts. Advances are shown lower by Rs 1.20 crores at Rs 66.76 crores. With Cash Balances showing no significant change, Punjab National has increased sharply its investments in gilt-edged and Trustee Securities the figure rising from Rs 37.57 crores to Rs 61.20 crores. As a consequence, Punjab National has also had recourse to borrowings for Rs 6.00 crores against Rs 0.16 crores.

The income by interest and discount improved by Rs 0.90 crores to Rs 6.08 crores. On the other hand, commission, exchange and brokerage brought in Rs 4 lakhs less at Rs 1.03

crores. But the improvement in earnings did not suffice to meet the rise of Rs 0.36 crores in interest paid and of Rs 0.48 crores in salaries and allowances. As a result, the balance of profit declined from Rs 1.11 crores to Rs 1.06 crores. Punjab National's profit would have been more greatly affected had it not been for a credit of Rs 23.89 lakhs as net profit on sale of investments, etc.

The taxation provision has been sharply pruned to Rs 33.50 lakhs from Rs 50 lakhs; bonus to staff gets Rs 12.75 lakhs more at Rs 30.75 lakhs. There is no transfer to charity account which received Rs 1 lakh last year. The Reserve Fund gets Rs 5.50 lakhs less at Rs 17.00 lakhs. The dividend payment is at 20 per cent per annum, and marks a rise over the previous year. The amount carried forward is Rs 4.49 lakhs against Rs 4.52 lakhs brought in.

+

United Commercial Bank

The United Commercial Bank Limited has registered a very satisfactory increase of Rs 17.21 crores to Rs 78.28 crores under Deposits and other accounts, the rise being mainly under the head of Fixed Deposits, which are higher by Rs 17.07 crores at Rs 46.55 crores. Contrary to the general experience of Scheduled Banks, the United Commercial was in a position to expand its advances by Rs 7.47 crores to Rs 45.16 crores. But the rise in Deposits was of such magnitude that its expansion in accommodation took up only a portion of it and, hence, investments in gilt-edged, shown at below market value, have risen by Rs 14.75 crores to Rs 32.62 crores. Presumably because the expansion in Advances took place late in the year, and since the United Commercial Bank may not have wished to dispose of its gilt-edged, the balance sheet shows borrowings at Rs 5.76 crores against Rs 0.34 crores.

That the rise in Advances occurred late in the year is suggested by the fact that income by interest and discount has improved only by Rs 0.51 crores at Rs 3.09 crores. The income by commission, exchange and brokerage is fractionally lower at Rs 1.07 crores. Interest paid has risen sharply by Rs 0.54 crores to Rs 2.17 crores, and salaries and allowances have absorbed Rs 0.13 crores more at Rs 1.10 crores. Consequently, the balance of profit of the United Commercial has fallen from Rs 59.70 lakhs to Rs 45.38 lakhs.

The provision for taxes is substantially lower at Rs 9.00 lakhs against Rs 18.50 lakhs. The transfer to Reserve has been reduced by Rs 5 lakhs to Rs 14 lakhs. Bonus to staff, however, absorbs slightly more at Rs 7.25 lakhs. The dividend payment has been maintained at 7½ per cent, and the carry forward is higher at Rs 62,098 against Rs 49,432 brought in.

It is to be noted that, had the United Commercial Bank experienced an increase in the demand for advances at an early stage of 1958, its balance of profits would have been better.

Soviet Government's Demand of Credits

By Paul Einzig

MOSCOW'S campaign in favour of granting credits to Soviet Russia is making appreciable progress. The remarks made to that effect by Mr Mikoyan when in the United States, and those made by Mr Khrushchev on the occasion of Mr Macmillan's visit in Moscow, were followed up by Mr S. A. Skachkov, chairman of the Soviet State Committee for Economic Relations with Foreign Countries, who came out into the open with a plea for British credits. In the course of a visit in London he missed no opportunity for pressing his claim.

At a lunch given by the so-called British Council for the Promotion of International Trade—an organisation, not to be confused with the official British Council, created for the purpose of increasing trade with the Communist bloc—he said that the USSR could double its trade with Britain in the next five years if Britain wanted it. "The Seven Year Plan is based on our own resources," he said. "But if the United Kingdom wants additional orders beyond those paid for by Soviet exports, we are willing to place orders on credit. If you give us credits we shall let you have the orders."

He also pressed for an increase of British imports from the Soviet Union. "If sales to the United Kingdom could be stepped up, Russian purchases would increase, leading to lower unemployment." The trouble is that Soviet Russia has a perennial adverse trade balance with Britain and the Sterling area. The Soviet Union is unable to produce goods which are marketable in Britain, beyond goods such as tin, aluminium, oil, bacon, etc., the import of which is not encouraged. So year after year Russia exports gold to pay for her trade deficit. But Soviet gold production is supposed to have increased very considerably, so that the Soviet Government could well afford to import more British goods without necessarily obtaining credits. The object of the plea for credit is to be able to import more without having to part with more gold. Now gold is the main weapon in the economic cold war. Yet Moscow seriously expects the British Government to go out of its way to enable Russia to accumulate more gold and thus to increase its financial power.

This optimism is not so foolish as it might appear. The moment for this campaign was well chosen. It takes advantage of the exaggerated fears of unemployment on the eve of the general election. Many people are inclined to forget that Russia is by no means the only country which would be able to import more British goods if Britain is prepared to grant credits to finance the additional imports. Many underdeveloped countries would be very keen on buying

more British capital equipment and also consumer goods, if only they could afford to do so. When should Britain's limited credit resources be given to the potential enemy instead of being given to friendly freedom-loving countries? And even if Russia were the only country capable of buying more British goods, it would be less foolish to reduce unemployment by digging holes in the ground and filling them again than by increasing the output for the sake of assisting in the Soviet Seven Year Plan.

Many quarters opposed to the granting of a long-term loan to Russia are in favour of financing British exports to Russia with the aid of official export credit guarantees. They are under the illusion that, since the credits have to be paid, Russia will have to part with gold eventually. What they overlook is that, even if the original credits are repaid, new credits would be granted under the maximum of official guarantees, so that an amount of credit corresponding to that maximum would be outstanding all the time, even if the actual transactions of finance change over and over again. The amount of facilities granted would enable the Soviet Union either to maintain its imports with the aid of smaller gold exports, or to increase imports without having to increase gold exports.

It is indeed very strange that this campaign for credits should coincide with the Soviet demand for the withdrawal of Western forces from Berlin. It is, to say the least, unusual for a Government to approach another country for financial assistance precisely at a moment when it threatens that country with aggressive action in the near future. But possible this is not sheer coincidence. Perhaps Mr Khrushchev hopes to be able to achieve a bargain under which the Western Powers would grant Russia large credits in return for adopting a less uncompromising attitude over Berlin. It is even conceivable that one of the main reasons why he put forward his demands for the change in the status of West Berlin is to strengthen his bargaining position, in order to be able to obtain large credits.

This may sound fantastic. But we must bear in mind that Mr Khrushchev's position depends on his ability of increasing the volume of consumer goods without neglecting either capital investment or the maintenance of superior armed forces. To be able to do so he needs large external credits. It might be well worth his while to make substantial concessions in the political field for the sake of getting financial aid. It would be very short-sighted on the part of the British Government if it were to yield to the temptation of securing political concessions at the cost of financial assistance. Any such assistance would further increase the power of the Soviet Government and the cost of further concessions would increase accordingly.

WORLD OF JUTE

Outlook for Exports

IN spite of the serious efforts made by the jute industry in this country, it has not been possible to earn larger savings in foreign exchange through a stepping up of exports. As a matter of fact, the position regarding exports of jute goods is considered to be serious, not because of any decline in consumption in world markets, but because of increased production in other countries, which are endeavouring to become independent and self-sufficient and reduce their requirements of foreign exchange.

One of the major developments is the emergence of East Pakistan as a serious competitor in world markets. East Pakistan is now in a position to export between 10,000 and 12,000 tons of jute manufactures per month and is making serious inroads into India's markets. Pakistan naturally concerned on the South African market for a number of years; but the price that South Africa had to pay for her jute goods became so unreasonable that that country has now started its own industry. South Africa's requirements from East Pakistan have accordingly been reduced and this surplus is now available for other markets.

It is, in fact, disturbing from an export point of view to note that, although quite a number of countries are enjoying an expanding economy which should result in a greater use of jute goods, India is not able to share in this expansion. In this connection, the Chairman of the Calcutta Jute Fabrics Shippers' Association has pointed out that, on account of the fluctuating prices for jute goods, world consumption has not increased in proportion to the higher level of economic activity.

Apart from East Pakistan and indigenous manufacture in the countries concerned, there are a number of other reasons why the export trade has not expanded. Firstly, a shortage of foreign exchange in the importing countries has forced users of bags to use these many times over, because they are unable to replace them with new ones. Secondly, there is bulk-handling, particularly of sugar, primarily in such places as Australia and Cuba. Thirdly, the use of substitutes such as paper and Polythene, which can be produced locally at prices which do not fluctuate to the same extent as the market in Calcutta and the manufacture of which, at the same time, supports a local industry. Lastly, and possibly one of the

most important reasons, is the lack of reciprocal trade between India and the countries to which India is endeavouring to export jute goods owing to her curtailed import policy.

Certain measures can be taken in an endeavour to rectify the present position. The first and most important is to improve quality, which has undoubtedly deteriorated throughout the industry in the last year or so. We are competing now with East Pakistan, which has ample jute of good quality available to its mills. Every endeavour must, therefore, be made by the Government and the IJMA to raise the standard of quality of the jute grown within our borders. India has now practically reached self-sufficiency in raw jute, which is, in itself, a magnificent achievement. But the production is not of the required quality and this must be improved with a minimum of delay. Apart from raising the standard of quality, a good deal can also be done to enhance the goodwill which exists in overseas markets for Indian jute products.

Commenting on the prospects for markets during the present year, Mr Jamieson, the Chairman of the Indian Jute Mills Association, has stated that the slightly improved trend in hessian offtake will continue in most consuming markets, especially the USA, while the demand from Argentina is not expected to fall. In regard to sackings, Mr Jamieson feels that the market for this category of goods should be better this year, especially when stocks of woolpacks in Australia are at a low level, and this should improve the prospects for sackings in that important market.

Marketwise, trading has been dull during the week under review and, except for comparative steadiness in hessians, price movements in the sacking section displayed an easier tendency. While overseas enquiries are lacking, operators are disappointed over India's negligible share in the Burmese tender. Above all, large stocks of heavy goods in hands of mills and dealers have some depressing effect on the market. Following were the price trends:

	Opening Rs	Closing Rs

WORLD OF TEA

Fall in Exports in February

ACCORDING to the trade sources, Tea exports from North-East India have fallen sharply to 17.77 million pounds in February from 30.08 million pounds in the corresponding month of last year. The UK has accounted for the bulk of the decline with an offtake of only 6.07 million pounds as compared to as much as 17.15 million pounds in February, 1958. Shipments to the Irish Republic and the USSR are also lower at 2.17 million and 518,950 pounds against 2.29 million and 318,760 pounds respectively. In the first two months of the current year, shipments are lower at 49.71 million pounds as against 63.86 million pounds in the corresponding period of 1958.

Tea exports from Ceylon have, however, risen sharply to 410.77 million pounds in 1958 from 367.73 million pounds in the previous year. Shipments to the UK have risen sharply from 132.65 million pounds to 164.55 million pounds and to the Continent from 12.82 million to 18.54 million pounds. Exports to Australia and New Zealand are also higher at 41.65 million and 15.05 million against 34.82 million and 13.73 million pounds respectively in 1957.

Meanwhile, in the Export Sale held in Calcutta this week, offerings consisted of 62,539 packages. There was a good general demand. "Teas for Price" were a strong feature and were often dearer. Any clean black Broken and Fannings were sold well, particularly those with bright liquors. Others were easier, particularly the poor Fannings descriptions. Medium Assam BOPs and OFs with any autumnal character were sold well at dearer rates, others being irregularly easier.

The few bright liquoring CTCs were so well; but the plainer and more fibrous kinds were irregularly easier. Stylsh Whole Leaf grades were sold readily, others being easier. Following rates were quoted:—Clean Black Pekoe Rs 1.92 to Rs 1.96; Plain BP Rs 1.58; Plain Fannings Rs 1.70 to 1.74; Medium Broken Pekoe Rs 1.56 to Rs 1.60; Medium Fannings Rs 1.64 to Rs 1.68; Best Assam CTC BP Rs 2.30 (nominal) and Best Assam CTC Fannings Rs 2.65 (nominal).

In the Internal Sale, offerings consisted of 21,641 packages of Dusts and 4,562 packages of Leaf grades. There was a good general demand for Dusts, orthodox types being fully firm and sometimes dearer. Darjeeling Dusts were irregular, demand being only for selected teas. Medium CTC teas

were irregular, brighter liquoring and smaller types being fully firm to dearer. The remainder were upto 6 nP per pound easier and sometimes more. There was a limited demand for the best CTC teas with a few lines of the very best being sometimes dearer. Following were the rates:—Medium Doars Dust Rs 1.80 to Rs 1.84; Medium Assam Grainy Dust Rs 1.74 to Rs 1.80; Medium Assam CTC Dust Rs 2.00 to Rs 2.15 and Best CTC Assam Dust Rs 2.60 to Rs 3.00.

Leaf grades met with a good demand, prices being irregularly dearer. The few chests of Green Teas, on offer, met with only restricted demand and prices were easier. In this connection, the Government of India have announced that export of Dust teas to all destinations will be allowed under licences without being required to be covered by export quota rights if applications for such licences are received in the Tea Board's Office in Calcutta or Cochin, as the case may be, before 31st March, 1960.

In the Export Quota section, business was done in the Special Export Licence at 1½ nP per pound. Shipping Licence Non-transferable is quoted at ¾ nP per pound.

A two-man Iranian tea delegation has arrived in Calcutta. Iran consumed about sixteen to eighteen thousand tons of Indian tea every year; and she imported, for her requirements, from India and Ceylon and less quantity from Java. The Indian tea is very much popular in Iran, because of its high quality. Hope is, therefore, expressed that India will export more tea to Iran in future.

In the Cochin market, offerings were 540,000 pounds. Prices for most descriptions were dearer except for highgrowns which were easier. Nilgiri descriptions met with limited demand at a drop of 15 to 20 nP per pound and some of them were withdrawn without bid. Good Medium sorts were in keen competition at 10 nP above last rates, while Mediums and Low Mediums from Travancore and Wynad were 5 to 10 nP dearer. Milled and Residual kinds were sold at fully firm to dearer rates. Black Leaf descriptions were firm.

Two tea sales were held in Chittagong last month. Total offerings amounted to 25,200 packages of Leaf tea and 7,748 packages of Dusts. Quality was typically end-of-season and the leaf was generally dull and unattractive. In the first sale, the few clean Leaf and better liquoring teas advanced and better liquoring teas advanced by As 2 to As 4 per pound. In the final sale, the few leg-cut teas were firm, but the remaining offerings declined by one to two annas per pound.

In London, tea stocks, as on the 13th March, were 169.13 million pounds as compared to 170.57 million pounds in the previous week. Total offtake was 16.46 million pounds including from Calcutta 8.22 million pounds; from Chittagong 63,720 pounds; from Cochin 1.05 million pounds; from Ceylon 5.07 million pounds and from other Ports 2.05 million pounds.

April 4, 1959

FATHER'S forte was the money market, and he never tired of emphasising and repeating that the key to the understanding of the Indian economy was to be found in the World of Finance and, more particularly, the gildedged market. (I have done, for the moment, with reminiscences about the original Eavesdropper, and I have meant what I have written mainly to serve as an introduction to the subject I would like to take up for discussion this week). In his life time, he was fortunate in witnessing the progress and expansion of money market activity and, during his last days, he derived great satisfaction from the fact that his views, especially on Government borrowings, appeared finally to be in process of being adopted by Government. What manner of money market do we possess today? How is it that it can be considered central to the study of the Indian economy? And in what way can we expect the money market to provide a solution for India's economic problems?

By far the most heartening factor today is that the Reserve Bank has, as I have reported before in a Gossip, interpreted its function as something both dynamic and catalytic. Gone are the days when the Reserve Bank from an olympian height was an interested spectator—but no more—of the scenes unfolding in the Indian economy. I recall Mr H.V.R. Iengar, the Reserve Bank Governor, saying that the research staff with India's central banking institution is of much greater numerical strength than we would find, for example, with the Bank of England. By this I imply that, although it is under Mr Iengar's virile direction that the Reserve Bank has come into its own, the preparation of the central banking authority for blossoming forth in this manner had been taken in hand, whether deliberately and consciously or not, very much earlier. I think it was Sir Chintaman Deshmukh who initiated this idea of a task force for research to be built up slowly. During Sir Rama Rau's regime, the task force was there, but, as yet, the Indian economy was not ready for calling upon or utilising the research facilities and services available so abundantly with the Reserve Bank. But by the time Mr Iengar took over, the identification between monetary policy as implemented through the Reserve Bank and the fortunes of the Second Plan began to be complete. Whether it was the building up of internal resources for companies or the trend in bank Deposits, both could be seen to have an immediate and discernible link with the Second Plan. Thus, the private sector projects could be completed only if the investment climate were conducive to the provision of

capital or if companies were in a position to plough back sufficiently into the business. The Reserve Bank Bulletins in the recent past have concentrated on the study of company finances, and I have no doubt that the ultimate intention of these assessments is to find out for official use whether the prosecution of private sector projects was in any way being adversely affected. Such studies are undoubtedly being carried on in the Reserve Bank, and a suggestion that I would like to throw out by the way is for an answer to be found to the question: Are the recent tax changes in the corporate sector such as will reduce the quantum of profits ploughed back for expansion and development? Again, as far as the study of the ownership of Deposits is concerned, we may recall that a recent finding, published in an article in the Reserve Bank Bulletin, was to the effect that money market activity had shown a much more than proportionate increase in the what I may call non-urban areas. The inference is clear enough that the disbursements of the Government on the Plan are being widely dispersed. The pattern of accretion to Deposits would also help the Reserve Bank in its decision to approve or reject applications from banks for opening up new branches in particular areas.

I can think of many more topics which could be usefully taken up by the research department of the Reserve Bank. One of them is gildedged, the behaviour of the gildedged market over the past thirty years, the pattern as between new loan realisations and the interest rate offered, the expanding capacity to absorb of the gildedged market and a somewhat more realistic assessment of what the Government can hope to secure from market borrowings. My plea that gildedged thus needs and deserves to be studied by the Reserve Bank is an iteration of the oft repeated view of this journal that, in planning the resources for the Second Plan, the planners have been woefully unaware of the crucial role that could be played by and allotted to market borrowings. The experience of 1958-59 alone should be an eye opener, but Mr Morarji Desai's Budget for 1959-60 has not duly taken into account this greatly improved scope for Government borrowings. I am hoping, that, by the time the new loan for 1959-60 comes up, we shall have an aware-

ness on the part of the monetary authorities of this immeasurably larger demand and capacity for gildedged.

But, to get back to the Reserve Bank as forming the hub of the Indian money market: it needs to be emphasised that, with its adoption of selective monetary control, the Reserve Bank has made itself both an active and catalytic agent. It is active in the sense that, continuously and alertly as it watches over the Indian economic scene, it is prompt in the measures that it takes to counter developments which hold the threat of taking an unfavourable turn. In a planned economy such as India's, balance between supply of and demand for goods tends all the time to be uneasy. Areas of the economy are often under duress. An untoward impetus to prices is often given, and the danger is that, if unchecked, such price rise will gather a fearful momentum. The Reserve Bank has shown that its alertness is like a watch-dog's and its action swift and sure. The restrictions that have been imposed time and again on bank credit against particular commodities is an index both of this watchfulness and its expeditiousness to act. Then, there is also the kindly "advice" given a few weeks ago, that, in view of the very much quicker pace of expansion in Scheduled Bank Advan-

ces during the current busy season, member banks had better scrutinise more carefully the demand for accommodation, lest any of it be camouflaged utilisation for the speculative withholding of stocks. Another facet to the Reserve Bank's duties will be to provide relief to such industries as might experience a surplus in production; after all, if, in a planned economy, areas of shortages are for a time inevitable, it is as certain, by the same token, that there may also be temporary areas of surpluses. I shall be an interested spectator of what the Reserve Bank does or does not do in tackling the problem of surpluses as it might emerge in the coming weeks and months.

Then there are the Scheduled Banks themselves. I should like to pay tribute to the magnificent way in which, in contributing to India's task of development, they have risen to the occasion. During a period when industry was unable to obtain its requirements of finance from the capital market for financing plans of expansion and development, the Scheduled Banks freely and wisely extended accommodation, so that there was even the phenomenon of a considerable volume of what appeared to be short-term commercial banking credit being utilised for medium term purposes. Indeed, it is my considered view that the completion well ahead of time of the private sector projects in behalf of the Second Plan—to which Mr Iengar recently referred—would have been impossible but for the helpful attitude shown by India's banking system. Of course, I have a grouse and that concerns the ruinous competition and scramble that there was for Deposits, but I am happy to find that this phase has mercifully ended. Today, Scheduled Banks are playing their part

in national development in yet another direction, by means of the considerable investments that they are making in gilt-edged. Alive to the need for mopping up the resources released by Government disbursements in rural areas, the Scheduled Banks have, again, zealously persevered with a programme of branch expansion. There is, in all this, an undoubted element of self-interest, but it does credit to India's banks that they were not found wanting when the time came for them to prove their mettle.

INDUSTRIALIST WITH A SECRET. For him the wider vision, the weighty decisions. And still, despite the tension and pace, he's always alert and active—with a secret store of vitality.

For the Secret of the successful Industrialist

Please see announcement opposite

Thirdly, there were the many insurance companies, some of them great, the life aspect of which has been nationalised to form the Life Insurance Corporation. Not only were the insurance companies then, and the LIC today, doing public good by fostering the habit of thrift and saving, but the premia thus gathered is a vast effort at mopping up resources for development. A recent communique affirms that new business done by the LIC during 1958 has touched a new record. Notwithstanding the Mundhra episode, the gather-

ing resources of the LIC have been available for keeping up the investment climate and morale. Here, too, a reservation that I need to make is that the LIC has so far done precious little about performing one of its functions, the underwriting of new issues. This apart, it can be seen readily that the LIC is an integral and valuable part of the Indian money market.

Next come the Industrial Finance Corporation and the State Financial Corporations. The IFC, particularly, has provided capital for the "cripples"; the IFC Act enjoins the institution to provide from its resources, especially in cases where a would-be borrower is unable to raise money for expansion through any other means. The IFC has been lending at a steadily increasing pace and tempo, and, what is more, if I remember right, there is also provision for the institution to make loans in foreign exchange. At the moment, it is experiencing an inadequacy of resources; but this, I am sure, is an ephemeral phase and it will not be long before the IFC increases its usefulness as a source of industrial finance.

Of the private agencies, the one that has achieved distinction is the Industrial Credit & Investment Corporation. First under the leadership provided by Sir A Ramaswami Mudaliar and now under the vigorous chairmanship of Mr G. L. Mehta, the ICIC is an indispensable money market institution. The ICIC has not hesitated to act as under-writers, and prospects are that, with available resources, the help that it will render, in rupee capital and in foreign exchange, to Indian industry, will soon reach considerable proportions. With Mr Mehta there, I fancy that a mighty effort will be made to funnel foreign exchange assistance through the ICIC.

Nor should we omit to mention the Stock Exchanges, which are active and which offer a ready market for the purchase and sale of scrip. The broking fraternity is taking its job seriously, and, since the Life Insurance Corporation started its system of calling for tenders, hustle is being shown in offering blue chips. Though there are periods when shares are unsaleable, it is by and large true that the Stock Exchanges help in considerable investment being made toward industrial development. I have my own fear that many of our brokers tend to be jobbers rather than brokers; and speculation has almost a fatal fascination for them, to the exclusion of their "legitimate" business. But, on the whole, cases where the investor has deliberately been misled by a broker are few and far between; and brokers have tried their best to foster the investment habit.

We have, finally, the bullion market, the forward markets in such commodities as cotton and oilseeds, jute goods and raw jute.

Indian Finance

These, too, are part and parcel of the money market, although they may not appear to be so. They serve as exchanges, where money enables hedging and secures an insurance against risk. This, then, is the range of money market activity in this country, and, by any reckoning, its range and coverage must be considered comprehensive.

There are public auction of Treasury Bills; hundis which are freely "accepted"; facilities for banks to replenish their resources by borrowing from the central banking institution; a bill market of sorts whereby usance bills can be rediscounted with the Reserve Bank; properly functioning clearing houses in all the major towns and cities. What more is needed to constitute a money market?

The centrality of the money market in India's economy should, I suggest, be clear. Industrial development, whether in the public or in the private sector, depends upon the money market institutions and their appendages. For, industrial credit is provided thereby, and Government's market borrowings are thus enabled. It would not be incorrect to assert that, had India not had the kind of money market it possesses, we would have been in no position to undertake planned endeavours.

What the money market can do in the future is enormous. We have just made a beginning of industrialisation, and the expansion in productive capacity that we must strive for will need the money market mechanism in greater, and not less, measure.

It is all a virtuous circle, and the centre of that circle is the money market. Father realised it thirty years ago and more; it is only now that the nation is beginning to realise that his preoccupation with the World of Finance was not just a fad, but something that stemmed from his instinctive realisation that Indian industrial development would necessarily keep pace with the development of the money market.

It looks as if modern banking has come to India. The new buildings that have come up in New Delhi, more particularly those of the United Commercial Bank and the Punjab National Bank, are magnificent edifices, artistically and aesthetically. Calcutta, I am glad to find, is not lagging behind. The new look that has been given to the Mercantile Bank has to be seen to be believed—and appreciated. Its great hallway is satisfyingly bright, what with the array of new illuminating fixtures. The hall is air-conditioned, and a constituent can now wait—as wait, in Indian banking, he must!—well away from Calcutta's torrid summer heat as the teller prepares to pay him the wherewithal against his cheque.

EAVESDROPPER

GATEWAY GOSSIP

RUMOUR has it that Sir Homi Mody is planning, on the completion of a quarter century of active association with the Tata Group, to retire and enter, perhaps, into the realm of politics. And I am merely doing my stint as a reporter in purveying this to my readers, and I have no means of ascertaining whether it is true or not. At any rate, I am hoping that, even if it is true that Sir Homi wishes thus to cut down one side of his activities, he will not choose to relinquish the chairmanship of the Central Bank of India, an office to which he does great honour and brings fine distinction. However, my immediate provocation for letting readers have the benefit of this bit of Gateway Gossip is the speech delivered by Sir Homi at the annual general meeting held last week of the Central Bank.

After a brief reference to the international situation, Sri Homi turned his attention to conditions in India. 1958, he says, "witnessed some disquieting trends". The rate of increase in production fell short of what one might expect in terms of an expanding economy. The lower volume of output in some instances reflected a plateau of consumption having been reached. The smaller availability of goods and commodities provided an upward impetus to the level of prices. Restrictions on imports notwithstanding, the balance of payment position was anything but satisfactory or healthy. Against this background, Sir Homi remarks that "the Second Five-Year Plan encountered heavy weather during the year". This is a view with which Indian Finance is not likely to find itself in agreement, for, if 1958 was a year of crises, it was also a year of solutions. But Sir Homi's perspective persuades him to be alarmed by the gap in resources for implementing even the core of the Second Plan.

It is here that I suspect Sir Homi of having fallen a prey to the lure of politics. He accuses the planners of cheerfully forgetting lessons of the last few years in that they are "now said to be busy framing a bigger and more spectacular Plan such as would constitute a significant socialistic advance". With a fine turn of phrase, Sir Homi insists that "what the country needs is not a bigger, but a better, plan". But, surely, just because a plan is bigger does not necessarily make it worse. I may go so far as to say that the Third Plan, in order to be better, has necessarily to be bigger. It is all very well to harp on the difficult resources prospect, but it is being forgotten far too often that even the problem of resources pales into insignificance as against the problem of poverty and of discontent which this country might have to deal with if it takes too

So Much from So Few

long in its task to improve living standards.

However, there can be no question of Sir Homi being right when he emphasises that "incentives to earn, save and invest must find their proper place in any such plans for national reconstruction". I am afraid that Government during the Second Plan have been almost too greedy—haphazard and unrealistic, to use two of Sir Homi's words—in their anxiety to find resources for the Second Plan. And the manner in which these resources have been vouchsafed does not redound to the credit of the Government. It is a fact that incentive of the individual has been virtually eliminated. It is equally true that the rich have been, as it were, "pauperised". Lastly, it is deplorable but true that life has been made immeasurably harder for both the lower and upper middle class groups.

Sir Homi then goes on to criticise the last Budget because, while there are some welcome features, a substantial addition to the revenues has been provided for. I do not know whether we ought to be thankful that the Indian Finance Minister was so merciful this year, since, in the last three or four years, each new Budget has sought to bring in much larger sums by way of new impositions. But Sir Homi is exercised about the fact that "there is no country where so much is sought to be taken from so few". His criticism in this context is tied in with the suggestion that the financing of unproductive expenditure makes it still more indefensible. I am afraid that Sir Homi's allegation of wasteful expenditure is all too true, but let me add something which he has not mentioned, that the high taxes are even more indefensible when we realise that there is so much evasion. In other words, the honest tax payer is being asked to subsidise the tax evader. I would like to put in a powerful plea for greater attention being paid to enforcement of the tax laws, since I am confident that by such means we should be able to gain so much revenue as to be in a position to restore that incentive which Sir Homi complains as having been eliminated.

I shall not deal with the Central Bank accounts, to which, in the last part of the speech, Sir Homi has referred. But there is one final point of a general nature which needs to be commented upon. Sir Homi says that "the rise of Rs 222 crores in Time Deposits was largely accounted for by the counterpart funds under P.L. 480 placed by Government with the State Bank of India". Sir Homi has erred in his choice of words, since the accretions to Deposits with the State Bank did not constitute the bulk of the rise in Deposits of the Scheduled Banks during 1958; hence, to say

that the rise in Deposits was largely due to counterpart funds is to disparage the dynamic conditions in the country, whereby a considerable increase has been registered in Deposits. Then, in giving reasons why banks were unable to use remuneratively their fresh resources, Sir Homi expresses the view that the ceilings

fixed on deposit rates under the inter-bank agreement of last October "may soon need to be reviewed in the light of prevailing trends in banking profits". Since the Vice-Chairman of the Central Bank is the President of the Indian Banks Association, we can take the hint from Sir Homi as being from the horse's mouth.

GATEWAY NOTES

Foreign Capital

Presiding over the annual meeting of the Bombay Chamber of Commerce and Industry, Mr L. D. Mudie, Vice-President of the Chamber stressed the need for creating an atmosphere in the country which would be inviting to foreign private capital to seek participation in the country's development. Such private participation of foreign capital would, he says, go a long way in solving the problem of foreign exchange which took alarming proportions last year and which is bound to become difficult in the process of further development envisaged under the Third Plan.

The existence of the foreign exchange problem offers in itself proof of the country's inability to provide attractive soil for participation of foreign private capital. There is a slight element of paradox in this situation in view of the fact that the country offers immense potentialities for development in which private foreign capital could have found plenty of scope and for which there is absolutely no overt deterrent in the form of restriction on the remitting of profit earned by foreign companies, or on the repatriation of capital. In respect of these requisites for foreign private capital, not even the least doubts have been expressed by foreigners even.

In such a situation, Mr Mudie, would attribute the relative minor role of foreign private capital to the policies of the Government towards the private sector, the complexities of the labour legislation and the tendency of the public sector to expand in fields that had been looked after by the private sector. Most of these points would apply not only against the Government's policy towards foreign private capital but also its policy towards private sector within the country and have been frequently made by businessmen in the country.

Whatever might be the effects of the Government's policy towards the private sector, or foreign private capital it would be ungenerous to view Government's policy as being deliberately conceived to restrict the role of the private sector in the country's development. The Government's industrial policy has evolved in the context of the socialistic pattern of society that has been adopted as the country's goal in its economic development, and it would be difficult to avoid points of conflict between the programmes which the socialistic pattern of society calls for and the interests of the private sector. However the private sector would only be exaggerating its fears if it considers the effects of some of these policies as being fatal to the health of the private sector in the country. In the same way while there should be additional scope for participation of

foreign private capital it is difficult to see how the climate for this could be made safer without going back from programmes and policies undertaken by the Government to further the socialistic pattern of society.

Shipping

A shipping industry self-sufficiency to the needs of the country and competing with foreign ships on equal footing is an ideal from which the country is at present far off, the industry being at the incipient stage of development. However, self-sufficiency in this field is such an important consideration to warrant concentrated attention and liberal allocation of funds for rapid development. Whether Government's shipping policy has conformed to this need could not admit of a positive answer especially when there are expert views to the contrary.

Presiding over the college day celebrations, of the Nautical and Engineering College, in the city, Dr A. Ramaswami Mudalliar Chairman of the India Steamship Company, has expressed the view that the Government are not doing enough to help Indian shipping. This, however, would not be accepted by the Government who could point to the provision made under the Second Plan. Against this Dr Ramaswami Mudalliar, could point to the absence of direct assistance to shipping companies who have to be content with mere loans instead of subsidies. The controversy at its roots would involve divergent views on priorities to be kept in the administration of Governmental assistance especially in the context of the competing claims from other sectors of development.

Dr Mudalliar has also warned against another development spelling the detriment of Indian shipping, that is on the road to further development. He has referred to the efforts of some of countries advanced in the shipping line, to keep out the new aspirants by the adoption of unfair means, and more particularly by allowing over-tonnage. Justice requires that such practices are voluntarily renounced so as give scope for the developing industry in backward countries to make headway. There should be some neutral agency to look into such unfair practices and for taking steps to see that the efforts of newly developing countries are not hindered by such practices.

Dr Ramaswami Mudalliar also emphasised the importance of developing shipping for success in the export promotion schemes upon which the Government have now launched. Such schemes would fail of their full value if there were not sufficient tonnage to transport the goods overseas and for establishing direct links between this country and other foreign countries. On his part he gave an assurance that national shipping companies would, despite many hurdles do their utmost to trade on new routes, and carry

the country's flag to as many international ports as possible.

Food Policy

With a deficit in the production of foodgrains of the order of about 10 lakh tons, the food problem in the Bombay State should be a matter of concern, for the State authorities and being one of the largest deficit States in the country, self-sufficiency in the Bombay State would, by itself, see the all-India problem of foodgrain self-sufficiency reduced to comparatively milder proportions. While success continues to be expressed in hope, it is encouraging that proper steps are also being taken to speed up the implementation of schemes consistent with the resources that could be spared for the object.

The policy of the Government reflects an emphasis on foodgrain production that could by no means be considered inadequate either in terms of resources allocated for raising production or even in a comparative sense in relation to the policy adopted in the other States of the Indian Union. The very fact that self-sufficiency is held out as more than certain by the end of the Second Plan period, is a vindication of this point. On present trends in the implementation of the various schemes forming part of the Second Plan it is even expected that results would exceed target fixed.

Bombay's Food Minister Mr V. P. Naik, who had to explain the food policy of the State at the time of moving the demand under Agriculture, detailed the various steps the Government had taken in improving the conditions of agriculture in the State and particularly for increasing foodgrain production. These belong to both the intensive and extensive categories, and include provision of irrigation facilities, distribution of better seeds and fertilizers, soil conservation measures etc. The headway made in the implementation of some of these schemes does not in anyway detract from the concern or capacity of the Government to solve this problem on a permanent and lasting basis.

Mr Naik claimed that soil conservation is being extended throughout the State, the original target of 11 lakh acres having been revised to 17 million acres. Well irrigation is another field which had considerable attention bestowed on it by the Government and it is as a result of the encouragement given to well irrigation that it covers nearly 50 per cent of the total irrigated areas in the State. Similarly the programme of distributing seeds is planned to be extended to all areas in the State by the end of the Second Plan period.

Mr Naik also dealt with the merit of cooperative farming and commended it as the only possible solution to the food problem that, in view of the erstwhile failure in tackling it effectively appears intractable.

GATEWAY MARKETS

Mixed Trends in Oilseeds Prices

PRICES on the Bombay Oilseed Exchange showed a mixed trend last week. Groundnut ruled steady due to tight supply position, while lower levels seemed to have attracted replacement buying and bear covering in Castorseed. Linseed presented a bearish appearance with Cottonseed ruling firm.

The Linseed section presented bearish appearance with forward and spots declining sharply. The setback in the market was caused mainly by selling pressure, induced by increasing arrivals of the crop in the major growing areas.

India has been virtually out of world markets for quite some time now, because of its higher price except for the periodical purchases by Australia. As things stand present, the country is not likely to fare better in the current season as judged by the persistent competition it has to face from Argentina.

A significant feature of the trade in linseed and linseed oil is, however, that the trend is usually influenced by the prices of rapeseed which fluctuated heavily according to speculative manipulations in North India. Besides, linseed goes into mixing with other edible oils on a considerable scale and hence the prices of both linseed and its oil tend to move in line with those of other oils.

The trading in Castorseed closed an easy feeling with buyers remaining cautious, because of the belief that the arrival of the new crop would pick up shortly in Gujarat, Uttar Pradesh and Bihar. Moreover, a section of the trade, which believed that the US should buy Indian castor came forward and supported the market towards the close of the week.

Trading in the Groundnut section was on a firm note. The official announcement that the shipment of groundnut oil will not be entitled to quotas for groundnut cake respect of shipments of the form made after the end of February has a bearish impact on the market. Business in the Spot section was at a slightly lower level.

Cottonseed crushers appear to be concerned over the high prices of Cottonseed despite the introduction of margin by the Forward Market Commission. In spite of the fact that arrivals from Gujarat are full swing and the southern section has just started, the situation seems to have deteriorated. The All-India Cottonseed Crushers' Association which has taken up the matter with the Government, feels that if the situation is not remedied immediately, the growth of cottonseed crushing industry will be seriously retarded and any expectation of saving foreign exchange

April 4, 1959

by lint and Cottonseed oil production will not be fulfilled. Apart from this, the imported machinery on which valuable foreign exchange has been spent will remain unproductive.

Gold & Silver

Bullion prices have, once again, shown strength this week. Both the sections have registered improvements and closed near the best levels for the week.

In the case of Silver, the recent upward trend has gathered momentum with prices shooting up to new high levels for a long time. This is attributed to strong speculative support, especially from Delhi operators. The support is inspired by the belief that the recent political events in Tibet will further impede the flow of Tibetan coins into the country.

Although the trend of spot demand has not been very inspiring, dealers believe that the busy spell will last till the end of May. There appears to be considerable optimism regarding the overall demand in the next two months in view of the recent boomlet in cotton and oilseeds. Arrivals amounted to 35 bars, while offtake amounted to 27 bars. Ready rates moved between Rs 119.81 and Rs 200.25, to finish at Rs 200.25.

The Gold section ruled firm, sentiment being favourably influenced by the reports regarding the continued check on smuggled arrivals and expectations that the demand would increase with the progress of the season. Expectations of bumper crops this season, the rising trend of silver and excellent advices from other markets provided further encouragement. Arrivals were 8,000 tolas, while offtake amounted to 3,000 tolas. Spot rates moved between Rs 119.06 and Rs 119.50, while Sovereign was firm at Rs 75.75.

Yarn

Listless conditions continued to prevail in the Yarn market and most of the varieties remained unchanged in the absence of support. Rayon yarn, however, showed some improvement on renewed buying at lower levels.

Exports of rayon manufactures from the country have registered a moderate rise during February with the value of the goods amounting to Rs 79.03 lakhs as against Rs 71.67 lakhs in January. But, the progress is not likely to be maintained in the coming months following the sudden suspension of the export promotion scheme. Shippers are not inclined to put in fresh business, pending a clearer picture of the new export promotion scheme, which is expected to be announced by April 15.

Imported Nylon Yarns remained practically neglected.

The market for Cotton Yarns remained quiet with price movements confined to a narrow range. Reports from upcountry centres have indicated that the demand for cloth is at a low ebb. Overseas enquiries are also poor.

WORLD OF COTTON

World Supply in 1958-59

DESPITE an increase of about 1.2 million bales in production, world supply of Cotton in the 1958-59 season is expected to be lower at 47.4 million bales as compared to 48.2 million bales in the previous season. The shortfall in total supplies is the result of lower carry-over, which was estimated at 18.4 million bales in the beginning of the current season against 20.4 million bales at the start of the 1957-58 season.

According to the revised estimates, total production in the free world outside the USA, in 1958-59, is placed at 17.5 million bales against 16.8 million bales in the previous season, showing an increase of 700,000 bales. Earlier estimates placed the increase at about 1.0 million bales. Production in the USA is placed at 11.5 million bales in 1958-59 against 11 million bales in the previous season.

Preliminary statistics showed that world consumption of cotton is running significantly behind that of a year ago and may aggregate 27.8 million bales in the free world in 1958-59 against 28.5 million bales in the previous season. A marked fall is expected in West Europe from 7.5 million bales in 1957-58 to 6.9 million bales in the current season. Offtake by Communist countries, it is expected, will be constant at 1.3 million bales.

Meanwhile, consumption of Indian cotton by textile mills is advancing, while trade estimates of the current crop are receding. The crop is now put at 49 lakh bales against the original figure of 57 lakh bales. Mill consumption of indigenous cotton, during the first five months of the current season, has improved to 19.73 lakh bales. Traders expect this rise to be sustained, a belief strengthened by the fall in the consumption of foreign cotton. In the first five months, mills have used only 1.93 lakh bales, which is about 59,000 bales less than usual. It is said that exports of cloth prepared from imported cotton are falling off, inducing the mills to switch over to Indian cotton.

FUTURES MARKET:

The exit of Jharilla March 1959 contract, after a remarkable career, was the outstanding feature in the Bombay Cotton futures market. The East India Cotton Association has permitted trading in August delivery cotton after the March contract went off the board. The new contract was commanding a premium of Rs 6.50 per candy. The opening of a fresh contract should help transfer of short positions from the current to the next delivery.

SPOT MARKET:

The Spot section ruled steady. Prices of Vijay, Digvijay and Surti were quoted above the ceiling levels. There was good mill buying. Advices from the upcountry centres were also encouraging.

The export front was as quiet as ever. Traders were perturbed by the Government decision not to extend the shipment period of ex-

port licences, which expired on the 31st March. This suggests that the export permission for about 1.70 lakh bales will remain practically unutilised. Shippers are worried over the decision, particularly as it comes in the eve of the departure of an export promotion delegation to Japan, US and other countries to explore prospects of stepping up exports of cotton, textiles, jute goods and other Indian products. Shippers feel that, though the overseas demand for Indian cotton has still not broadened, there is no justification for not allowing an extension in the shipment period. Meanwhile, rumours are current that extension will be granted in case of import licences for sterling area cottons.

The main bottleneck in the way of larger exports of Indian cotton stems from serious competition from low grade Americans, Mexicans and Pakistani cotton, the last being offered at 2d per pound below Indian prices. Another important factor is the prevailing high prices of Indian cotton as a result of lower crop and good internal demand.

On the import front, prices of Sudanese growths improved due to a rise in demand. The other sections were steady.

The trade has welcomed the Government decision to extend the shipping period in respect of the import quota of 55,000 bales of cottons stapling 1 3/16" and above, viz., Egyptian and Sudan, to May 31, for imports from Egypt to June 30. Demand for Egyptian cotton was at its best in view of the fact that purchases of this cotton, for which a special import quota was announced recently, will have to be completed before March 31. Similarly, the demand for Sudanese cotton was quite good.

How do your costs compare?

How does your performance rate?

Is there wasteful or avoidable expenditure on your plant?

Let us do the worrying for questions like these...and help you find the answers. It's not just enough, if you compare current costs and performance with what these have been in the past or with what are accepted as normal. *Do costs and performance compare with what these should really be?* That's the acid test...and we conduct it.

acbi diagnoses and prescribes...

you are not only told why wasteful expenditure occurs, but precisely what remedial action you should take.

acbi is currently assisting industries in both public and private sectors. If you have problems relating to cost control, labour-management relations, job evaluation, work study, production control, quality control, material handling, office reorganisation etc., you'll do well to.

DELHI REVIEW

THOUGH political circles in the capital (and indeed the general public, too, to an unprecedented degree) continue to be exercised about recent events in Tibet, such interest has become peripheral in the last few days. The reason for this is rather complicated. First, the excitement created by the events themselves has been overshadowed by the thrills provided by the discussion thereon in the Parliament. Secondly, by an incredible piece of ineptitude, the People's Republic of China has at once put the back up of such Indian opinion as was willing to temporise on the subject and the discussion of this piece of gaucherie (or worse) again distracted attention from the events themselves. Thirdly, discussion again shifted its ground to the consequences of the possible influx of refugees and asylum seekers. And, as I write, the Indian communist party's equivocation over Peking's assertion about Kailimpong being the headquarters of those stirring up trouble in Tibet, has set off such an uproar that it will be some time before everybody gets back to the horrible occurrences in Lhasa. Meantime, the rising itself has been ruthlessly put down by the superior Chinese might and the abode of peace left a shambles.

One wonders whether this rather ready distraction by subsidiary issues was not an escape mechanism. For, if there is one thing that even those who are most indignant with the Chinese recognise, it is the impossibility of our doing much in the matter. Of course, Mr Dange was being ridiculous in suggesting that the Indian Parliament's discussing the fighting in Tibet was like the Chinese discussing the arrest of Tara Singh. As observers have not been slow to point out, East Punjab's relation with the Union Government is, to say the least, not so nebulous as that of Tibet to the Peking Government. Moreover, Tibet has been the subject matter of an agreement between India and China and we are yet to hear that Master Tara Singh has been the subject matter of an international agreement. And, in any case, as Mr Nehru pointed out in reply to the Peking Government's rather ill-tempered assertion that it would be improper for the Indian Parliament to discuss the issue, we are not going to ask anybody's but the Speaker's leave to discuss anything in that forum. Mr Nehru mildly attributed this particular instance of Peking's bad manners to ignorance of Parliamentary methods. Doubtless, the snub would have gone home.

But, nevertheless, for historical reasons, it would be indefensible for India to do anything beyond making clear where our sympathies lay. Whether a particular event is an "internal matter" (within the meaning of the code of Pancha

Tibet

Sheela) would be difficult enough to decide when the political entity under discussion was clearly definable in modern political terms. Thus, for instance, in regard to the rising in Hungary two years ago, the question for determination was whether it was a national rising against an unpopular regime kept in power with foreign military support or whether it was a riot engineered by malcontents against constituted authority. In the latter case, it would be an "internal matter." (There is involved in this, as in much else in politics, a certain amount of sophistry, which was admirably hit off in the couplet of a sixteenth century wit: "Treason doth never prosper: What is the reason? For if it prosper, none dare call it treason.") But such distinctions are permitted under the rules according to which the game is played.

But, in the case of Tibet, the difficulty is in defining precisely its political status. In the case of Hungary, there was no doubt that, after the first world war, it was a modern state. In the case of Tibet, there never has been a time when any one was sure that it could be fitted into any of the definitions of known modern political entities. Its geography and history have both left matters very much in doubt. Up to the 9th century, Tibet itself was a great military power, and constantly at war with surrounding territories, including China. But, after Buddhism took root, these military powers were not considered a claim for greatness. For long, the area was subject to periodical military ravages by the Mongols, at first, and later, by Chinese. It was only in the early seventeenth century that effective Chinese control of Tibet was achieved. Since then, but with periods of de facto autonomy, depending upon the weakness of the central power in China, Tibet was, at any rate in Chinese estimate, part of the empire of China. But, in 1911, Tibet, partly instigated by the then Government of India, declared itself independent and the Chinese, busy with their own revolution, were in no position or hurry to assert their rights. Indeed, some degree of permanence of de facto autonomy had accreted in the course of the next twenty years, for, up to 1935, there were no Chinese in Lhasa and even thereafter the precise status of the Chinese officials in Lhasa was left deliberately vague. China itself has never allowed its claims of overlordship to lapse, and, when, in 1949, the Tibetans ejected the Kuomintang mission, the People's Republic saw this as an effort to end Tibet's relations with China and invade Tibet. This led to the eventual treaty of 1951 by which Tibet was conceded regional autonomy in exchange for Chinese control of communications, defence and foreign relations. About this

time, too, India deliberately allowed its historical but equivocal claims (largely engineered during the British regime) of some nebulous political vested interest in Tibet to lapse.

This brief survey does not clarify the issue beyond indicating that at all times considerable mental and physical reservations have accompanied claims about the status of Tibet. It is true that more recent history has given sanction to the notion of Tibet being part of China—a notion acquiesced in, to put it at the least, by China's neighbour most interested in it, India. But, since the basis for this accession is the treaty of 1951, it is open to the Tibetans to denounce it, especially in view of Chinese flouting in practice the promised autonomy.

Arising out of this nebulous situation, our answer to the question whether the rebellion is an internal matter or not depends upon our answer whether Tibet is part of China or not. If it is not, then the Chinese intervention is a clear piece of aggression. But it is not possible to answer the basic question, as my brief excursion into the past has shown, clearly against the Chinese. Hence the difficulty of the Government of India intervening in any form in the matter. We feel concerned about the wanton destruction of a way of life admirable in many ways that the Chinese are trying to bring about. But our legitimate—that is to say, politically legitimate—limit of concern would be the safety of our nationals and, of course, our security and the safety of the magnificent monasteries that house much that is historically and spiritually valuable. And, in practical terms, even such expression of our real feelings may do more harm than good to those with whom we sympathise. This is not, as some may loftily assume, a despicable consideration, for, when feelings are running as high as at the moment, much that is later regretted may be done by the Chinese themselves. And no humane man, considering the larger helplessness, can afford not to take note of it.

That is why one has a warm and sympathetic admiration for the way in which Mr Nehru has dealt with the issues arising out of this imbroglio. Over the question of asylum, too, Mr Nehru has shrewdly left his hands completely untied. Of course, I do not suppose that even Mr Masani, who wanted a sort of carte blanche for incoming refugees, seriously expected acceptance of his suggestion. That is precisely the kind of playing into the hands of the Chinese without any corresponding advantage. No government, even with compelling reasons for gestures, can so clumsily tie its hands in advance. And the present Indian Government rightly underestimate the value of mere gestures. Indeed, they are aware of

OLYMPUS

the dangers of these very gestures to those with whom we are supposed thus to express our solidarity. It is not beyond the pale of possibility that an assurance of this sort can make the Chinese intensify their efforts to capture the Dalai Lama before he gets beyond the Tibetan borders.

I need hardly say that the Chinese authorities have not, to put it mildly, come out very well out of this affair. It is no longer possible to pretend either that this is the localised activity of some malcontents resisting inexorable progress, or that the Dalai Lama is an unwilling prisoner of the rebels. The letters allegedly written by him to the Chinese authorities drip with such uncharacteristic sycophancy and are so much at variance with the known views of the Dalai Lama that they deceive none. And the Chinese have come out even worse in their references to the Indian Parliament and, worst of all, in their allegations of unfriendly activity in the Indian border. Mr Nehru categorically denied it the other day. Mrs Lakshmi Menon revealed, in the course of discussions that, as early as August last, the Chinese authorities had been informed after investigation that there was no substance in such allegations. That is why the Indian Communist party's demand for further inquiry came as an infuriating piece of impudence. Mr Kripalani did, no doubt, make capital out of this piece of folly on the part of Communist Party, but he did express widespread fears about the precise location of the Communist Party's Prime Minister's veracity and in such a context was simply asking for it.

It will be intriguing to see what the Indian Government will do if the Dalai Lama seeks refuge in India. It is inconceivable that India would refuse such a request. Then, relations between China and India may take a somewhat unfortunate, but not unexpected, turn.

NORTH INDIAN NOTES

Policy for Health

THE Government of India's health policy came under heavy fire at the hands of the opposition during the discussion on the demands of the Ministry of Health. Most of the criticisms against the Government's policy arose from the fact that performance had fallen woefully short of the expectations that were stimulated by the objective which the Government had set for itself in the sphere of public health. At its extreme such criticism took the form of charging the Government with a lack of a definite policy for national health and calling for clarifications of its policy. Mr V. P. Nair, the Communist member from Kerala, considered the performance of the Government as highly dissatisfying, characterising the report of the Health Ministry as "unimaginative, unimpressive and uninspiring". The shortfall in the expenditure on health schemes which the report disclosed, it is easy enough to imagine, would have given a ready handle to the opposition for their attack against the Government.

However there was one point in the opposition's criticism with which even some of the Congress members were inclined to agree. This related to what is considered to be neglected by the Government of the indigenous systems of medicine, such as the Ayurveda and the Unani. Referring to the step-motherly treatment meted out to the indigenous systems of medicines, Mr V. P. Nair pointed out that out of Rs 215 crores earmarked for health schemes under the Second Plan, only about Rs 4 to Rs 5 crores was meant for the indigenous systems. Mr Nair sought to impress upon the Government the need to sponsor institutes for developing research in the indigenous system of medicine. Some of these sentiments about the utility of the indigenous system were echoed by Congress members also and Pandit Thakurdas Bhargava, a Congress member from Punjab was one who pleaded for a revision of the Government's policy towards the indigenous medicine which he considered as wanting in appreciation of the importance or the merits of these systems. Similarly another Congress member from the Uttar Pradesh was critical of what he considered to be the discriminatory treatment meted out to the indigenous systems of medicine, and to prove his point the member referred to the recent notification issued by the Government seeking to prohibit practitioners of indigenous systems of medicine from prescribing certain medicines normally recommended by allopaths.

In the face of such criticisms which have been jointly voiced by the opposition as well as some Congress members, the Minister for

Health, Mr D. P. Karmarkar, could only refute them as being out of place in view of the Government's own awareness of the importance of the indigenous systems of medicine and the encouragement they had sought to give to them. Mr Karmarkar in this connection pointed to the Ayurvedic Research Institute set up at Jamnagar by the Government at the recommendation of the Chopra Committee.

★

Cooperative Farming

The controversy over cooperative farming that marked the debate in the Lok Sabha could now be said to be over by the adoption by the House of the resolution moved by a Congress member for implementing the proposal throughout the country. Dr Ram Subhag Singh's resolution which met with the approval of the majority, recommended to the Government that "during the next three years, every possible effort should be made to organise service cooperatives all over the country and to develop the spirit of cooperation in general so that cooperative farms may be set up voluntarily by the people concerned wherever conditions are mature".

The occasion was utilised by Mr Nehru to dispel the last lingering doubts entertained by some members about the merits of cooperative farming, and which had earlier been voiced in the course of the debate. Such criticisms were according to Mr Nehru out of place being based on vague fears about the effects of cooperative farming on total production. For Mr Nehru it was this very feature of cooperative farming that was important and which commended it for adoption in the country. And he had no doubt that only through cooperative farming, could production be increased.

Mr Nehru also discounted the talk in some circles that introduction of cooperative farming would be preparing the soil for authoritarianism and communism. At the same time, he deprecated the aversion to even the good things which communist governments had done in their countries, and which would, in view of their proven value and merit, deserve to be copied by countries faced with similar problems. And because cooperative farming had been introduced only in the communist countries it was not to be eschewed on this score alone, if it was suited to conditions in the country.

That Mr Nehru was only soberly enthusiastic about cooperative farming was evident when he said that it was necessary for the ground to be prepared carefully before cooperative farming could be introduced with prospects of success. And compulsion would only kill the movement. It is noteworthy that the resolution moved by Mr Ram Subhag Singh, is very clear on this aspect and states that the spirit of cooperation should be developed in general so that cooperative farms may be set up voluntarily by the people themselves without pressure from outside.

NORTH INDIAN MARKETS

Sugar Output and Release for Free Sale

THE Indian Sugar Mills Association has announced that Sugar production is lower at 4.10 lakh tons in February as compared to 4.14 lakh tons in the corresponding month of last year. Total production, up to the end of February, thus amounts to only 13.31 lakh tons as against 13.36 lakh tons in the corresponding period of last season.

The Government of India have released a further quantity of 1.59 lakh tons of sugar for free sale. In the case of the factories situated in Uttar Pradesh, North Bihar and the Punjab, the sales are to be effected at prices not higher than the ex-factory price fixed by the Government of India.

The reduction in the quantity of sugar released has been made with a view to augmenting the allotment of sugar to applicants, who apply for such allotments at prices fixed by the Government. Thus, the total availability of sugar for the market will, in no way, be smaller than in the past. The system of receiving applications for the allotment of sugar by hand in the Directorate of Sugar and Vanaspathi, New Delhi, has been discontinued with immediate effect and until further notice all such applications will be received only by registered post.

The Indian Central Sugarcane Committee has recommended a production target of 30 lakh tons of white sugar and 50 lakh tons of gur and khandasari, to be achieved during the third Five-Year Plan. The total production of sugarcane will have to be raised to 1,000 lakh tons during the third plan—900 lakh tons for the production of sugar, gur and khandasari and 100 lakh tons for seed, chewing and other purposes.

The Committee is of the view that the factories should prepare a suitable plan of development for the supply zones to achieve the production targets. The Committee has stated that the factory managements, cane co-operatives and growers must all become partners in the joint endeavour to raise the production level.

In the meanwhile, sugar markets have been ruling quiet due to selling pressure from the mills, which have to clear their released stocks before the 7th April. It is learnt that some of the factories in the Moradabad division have stopped crushing due to shortage of cane supplies, while some of the factories are also going to finish their season by the end of the current month.

Foodgrains

Quiet and easy conditions are witnessed in the Hapur Foodgrains market, being mostly influenced by the pressure of new crop arrivals. It is learnt that the Uttar Pradesh Government will start procurement purchases of wheat and some other coarse grains in the surplus areas. New Gram arrivals are increasing in some areas and prices have declined further by about Rs 2 per maund. Maize is losing the seasonal demand and prices have sought lower levels. As bumper crop of Peas is reported this year, prices have drifted to lower levels.

The 1958-59 Rice production has been a record, being 29.7 million tons as against the previous best of 28.3 million tons in 1956-57. The rise in production is stated to be more to a higher per-acre yield than increase in acreage, being 816 lbs against 702 lbs last year. The all-India final estimate of rice for the current year places the area at 31,590,000 acres and production at 29,721,000 tons. The supply and price position of foodgrains in the country is, therefore, expected to remain satisfactory and no special difficulty is likely to be experienced during the lean period of 1959.

In view of the expectation of bumper rice crops in both the surplus and deficit States, Government purchases are expected to be considerably larger in volume than in the previous year, while the need for distribution is likely to be comparatively less. "Rabi" crops, it is stated, also appear to be promising and it may be possible to procure certain quantities of rabi grains during the year.

★

Shellac

Prices in the Calcutta Shellac market have been ruling very steady during the past many weeks with Pure TN quality quoting Rs 73 per maund. As a result of the strength of the market in Calcutta, the level of sales on the London market has also been improving. It is felt that many consumers, who had run down their stocks, are now being forced to replenish.

Although a fluctuating levy on exports of seedlac are collected by the Indian Lac Exporters' Association for obtaining finance for a Buffer Stock, small amounts have only been collected so far. The reason is that the levy is not paid unless there is a gap between export and domestic prices. It looks as if the levy has helped improve prices here.

Meanwhile, growers have still complaining that the cess and the minimum export price scheme have done nothing to raise prices or improve the demand position. On the contrary, they are afraid that the price may be too high in a situation where there is no increase in demand in sight and while substitutes continue to overhang the market.

COMMERCIAL BANK LIMITED

cost of money and the difficulty of utilising funds advantageously, the profits of the bank showed a decrease as compared to the previous year.

The Bank's investments appear, in the balance sheet at below market value.

Barakar, Cochin, Sri Ganganagar, Pudukottai, Hyderabad, Trichurapalli, Kumbakonam, Bikaner, Visakhapatnam, Muzaffarpur and in New Delhi at Karol Bagh, Ajmeri Gate Extension, Patel Nagar and Parliament Street.

of the bank for their continued support. They also express their gratitude to the bank's Advisors and Advisory Committees for their able help and guidance.

The Directors retiring by rotation under Article 92 of the Bank's Articles of Association are Mr. T. S. Rajam, Mr. M. L. Dahanukar, Mr. P. D. Himatsingka and Mr. G. I. Bangur who offer themselves for re-election.

The Shareholders are requested to appoint auditors for the current year and to fix their remuneration.

Calcutta, 25th February, 1959.

[illegible]

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisos to sub-sections (1) and (2) of Section 211 and sub-sections (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance-Sheet and Profit and Loss Account are not required to be, and are not, drawn up in accordance with the Sixth Schedule to the Companies Act, 1956; they are, therefore, drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

(c) in our opinion, proper books of account as required by law, have been kept by the Bank so far as appears from our examination of those books, and proper returns adequate for the purpose of the Bank Act have been furnished within the time required by law;

Modest Seasonal Demand Easily Met

Mr G. D. Birla, the Chairman, Reviews Indian Economy

a large part of it in Government and other securities. This portfolio, therefore, showed an increase of Rs. 15.69 crores and its total stood at Rs. 35.63 crores. The cash balances and unencumbered investments together amounting to Rs. 38.34 crores give a ratio of 48.9% to total deposits.

ADVANCES & BILLS

Our advances at Rs. 29.89 crores were higher by Rs. 5.20 crores and were only 38.1% of our deposits. Bills discounted and purchased at the end of 1958 showed an increase of Rs. 2.27 crores and stood at Rs. 15.27 crores. This self liquidating asset forms nearly 19.5% of the deposits.

LIQUIDITY RATIO

The total of our liquid assets, cash on hand and with banks, money at call and short notice, unencumbered investments and bills amounted to Rs. 53.61 crores, and represented 68.4% of our deposit liability, which, I trust, you will consider is a highly satisfactory position.

PROFIT & LOSS ACCOUNT

The slowing down of industrial and commercial activity during the year created a tendency amongst the depositors to place their idle funds with banks in Call and Time deposit accounts rather than leave them in their Current accounts. This shift in the pattern of deposits, would, by itself have resulted in a largely increased payment of interest but added to this was the severe competition amongst the banks to secure deposits by paying high rates of interest. In our own case we had to pay as much as Rs. 2.17 crores by way of interest on deposits and borrowings as compared to Rs. 1.63 crores paid in the previous year. As mentioned before the bulk of the additional resources had to be invested in Government and other securities with low yields and notwithstanding this large investment, we had, for the greater part of the second half-year, considerable surplus funds earning an unremunerative rate of interest. The rise in our earnings, therefore, under the head 'Interest and Discount' was the

modest sum of Rs. 51.55 lacs which just sufficed to pay the additional interest on deposits. Working expenses under the head of salaries and allowances rose by nearly Rs. 13 lacs. By reason of the influences which affected the entire banking system, the profits of the Bank have come down from Rs. 59.70 lacs to Rs. 45.38 lacs. By pruning the allocation to Reserve Fund from Rs. 19 lacs to Rs. 1 lacs, we have been able to recommend to you payment of the same dividend as last year and also pay bonus to the staff on the same scale.

I take this opportunity of offering the thanks of myself and the Board of Directors to Mr. S. T. Sadasivan and his able assistants for the continued expansion of the Bank's business. I also wish to record our thanks to the other members of the staff for their contribution and look forward to greater co-operation amongst them in the years to come.

MONEY MARKET

The year 1958 was characterised by the almost complete absence of seasonal tightness of money. The expansion of bank credit during the first five months of the year which is usually the busy season was very much smaller than in 1957 when we had the crippling tightness of money which caused severe strain on the resources of the commercial banks. In 1958, by contrast, the banks were able

April 4, 1959

to meet the modest seasonal demand with the greatest ease without resorting to any large scale borrowing from the Reserve Bank against securities or under the Bill Market Scheme.

In spite, however, of the reduced demand for money the competition amongst banks for securing deposits was very great and the rate of interest offered on Call and Time deposit accounts was as high as 4½% per annum. Fortunately, all the leading banks got together in the second half of last year and succeeded in evolving an agreement, to limit, on an all-India basis, the maximum rates of interest payable on various types of deposits. I am glad to say that all the major banks in the country are parties to this Agreement. The rates of interest on advances came down slightly as a result of the easier tendency in the money market and it remains to be seen whether the benefit of the Inter-Bank Agreement would be felt during the current year.

Towards the close of the year the busy season set in with the customary demand for bank finance and the expansion of bank credit, so far, has been on a much larger scale than in 1958. Money conditions are tighter than a year ago but this is largely due to the banks' over-investment in Government and other securities during the last year. The Reserve Bank of India has called for restraint on the expansion of advances in order that the price line might be held and it is, therefore, expected that the Advances-Deposits ratio of the banking system this year will not go beyond the normally accepted standards.

DECLINE IN RATE OF GROWTH OF INDUSTRIAL PRODUCTION

Having reviewed the affairs of the Bank I now turn my attention to the general economic situation and, in doing so, I have inevitably to bring under review the progress achieved under the Second Five-Year Plan and visualise what has to be done during the Third Plan period. The targets assigned to the private sector have been fulfilled but the momentum which enabled this to be achieved has been somewhat lost during the course of last year and there is a noticeable decrease in the rate of growth. The index of industrial production which maintained a steady upward trend from 1951 onwards began to show a downward trend thereafter. The average index for the nine months January-September 1958 was 142.7 compared with 149.3 for the corresponding period of 1957. The index of agricultural production also declined from 123.8 in 1956-57 to 113.4 in 1957-58, the production of foodgrains in particular having gone down from 68.7 million tons to 62 million tons. These figures are a little disquieting and it would appear that economic progress cannot any longer be as satisfactory as in the past unless we pay particular attention to the treatment of the maladies that have caused this set-back.

While the growth in the national income has been small by reason of the disappointing performance mainly of the agricultural sector, the growth of employment has also not been as large as anticipated in the plan and such increase as has been achieved has not been enough to offset the addition to the labour population brought about by the rapidly rising population. The Second Plan has, therefore, fallen short of its target both with regard to the national income and employment and if we are unwise enough not to recognise this fact we might do irreparable harm to the Third Plan.

The reason for the set-back in the rate of growth of industrial production is to be found in the low national income of 1957-58 coupled with the effects of the fiscal measures adopted during the last three years. When the purchasing power of the public declined heavily at the end of 1957, timely action should have been taken and the gap between savings and investment should have been filled up by expansion of credit. Unfortunately, imposition of curbs on credit tended only to worsen the position. With the reduced purchasing power of the people a few industries seem to have already reached the saturation point and are experiencing difficulty in selling their products. Unless the purchasing power of the people is substantially improved there cannot be any hope of a noticeable rise in the industrial production. Obviously production cannot increase unless sales are made possible.

FEAR OF INFLATION

Fiscal and monetary measures must be suited to the particular conditions in the country. Often we adopt measures which are suitable to industrially advanced countries where over-investment and over-employment threaten to undermine the stability of their economy. Such countries adopt disinflationary measures to curb investment and discourage excess demand for goods caused by over-employment. Are such conditions obtaining in India? Do we desire to bring about a fall in investments and a reduction in consumer demand? Our problem is not one of over-employment but of under-employment and unemployment. We are suffering from under-investment and not from the consequences of over-investment. Our chronic state of unemployment we should encourage investment and aim at increased production and employment. Our objective should be larger and larger production. The fiscal measures taken by our Government have resulted in a set-back to our economy and the first impact has been felt by the textile industry followed by cement and engineering industries and it is probable that other industries will ultimately come to the same pass. On the monetary front we are obsessed by fear of inflation and of rising prices. How easily the bogey of inflation can give way

to the reality of recession was witnessed in the latter half of 1957 and the first half of 1958. In an under-developed country with plenty of idle labour and undeveloped resources there can be no such thing as over-investment or inflation arising therefrom so long as investments are directed towards productive purposes. There may be a rise in price due to shortage of goods as has happened in respect of foodgrains but such "scarcity of foodgrains but such "scarcity of foodgrains" can be met only by greater production. There is no other fiscal or monetary remedy for it.

SAVINGS THROUGH INCREASED PRODUCTION

To increase investment we need greater savings but savings cannot be increased by under-consumption and austerity. Austerity will bring down living standards and reduced consumption will slow down industrial production. Austerity is, therefore, the surest way to curb employment and production. In an under-developed country where savings are not adequate, credit should be expanded to bridge the gap between available savings and required investments. Savings can be generated upto a point by fiscal measures such as reduction of heavy burden of taxation and the pruning of unproductive expenditure. But basically savings can follow only increased production and so long as savings are inadequate they must be supplemented by bank credit so that the upward trend of production could be kept up to generate more employment, more earning and ultimately more savings. The notion that savings could be brought about through compulsion requires to be dispelled. Investments can be made attractive only through the assurance of reward whether the investor is Indian or foreign. It is only the incentive and not compulsion that, in the ultimate analysis, will produce results.

Larger investment is, therefore, the goal we should aim at through savings supplemented by organised credit. I, therefore, fully support a bigger plan for investment—of course in productive projects—on the condition that the flow of foreign and internal resources into investment channels is assured. We shall thereby increase the national income and create new employment.

THIRD FIVE-YEAR PLAN

By the same token I welcome the news that the Third Five-Year Plan envisages an investment of Rs. 10,000 crores. But in saying this I would emphasize that we should not forget that the main object of the plan should be not how much is to be invested or spent but how much additional income could be earned per unit of investment. From this point of view it is better to talk not in terms of the size of the Third Plan but in terms of additional national income aimed at in the Plan. I would, therefore, pose the question whether we can earn as much as an additional Rs. 3,000 crores per

annum through investment of Rs. 10,000 crores. I believe we can if the investments are made judiciously. The choice of investments is very important. Those who dream of solving unemployment problem through intensive employment of manpower rather than through intensive production per unit of capital are unrealistic in their outlook. If uneconomic production were the remedy then the bullock cart and not the railways is the metaphorical answer to our problem. It would be better if we think in terms of medium scale and even small scale industry run by power rather than cottage industries worked by hand. Muscle power is the costliest power in the world and we have heard of no country which has solved the problem of poverty of the people through this power.

I doubt whether even a plan involving Rs. 10,000 crores, invested carefully, will make any improvement in the per capita income of the people. Even if it succeeds in increasing our income by another Rs. 3,000 crores per annum it would bring about only a modest and not a significant increase in the per capita income in 1966, the end of the Third Plan. No plan can, therefore, be criticised as being too ambitious. There is a case for a big plan rightly conceived and implemented. The making of the plan is not so important as its implementation. The success of a bigger plan largely depends on one or two important factors. The securing of foreign capital to pay for purchases abroad is one of them. Ability to raise internal capital is another. If we succeed in both these it would be unjust to criticise the plan as an ambitious one. If, on the other hand, the external and internal capital could not be procured, then, whatever the size of the plan, it would remain a plan on paper only.

MORE FOREIGN INVESTMENTS—LESS FOREIGN LOANS

I shall take the question of foreign exchange first. I consider that on a plan of Rs. 10,000 crores we require an assured inflow of Rs. 3,000 crores in foreign currency. For this we should not depend too much on aids and loans. External loans have to be repaid in foreign currency some day and our liability for servicing and repaying the debt already incurred is great. We continue to borrow more than annual charges for repayment and principal and interest might conceivably increase beyond our capacity to pay in foreign currency. We must, therefore, plan for less of foreign loans and more of foreign investments. For attracting foreign investment we must create a proper climate.

I appreciate the uneasiness expressed by some of our credit abroad about the size of the Third Plan. But I am sure they are capable of taking a wider view and realising that the Indian Plan is not just a concern of India alone but of all the free democracies. India is a citadel of democracy and

freedom and, therefore, the democracies can ill afford to allow India to default and leave the field free for undemocratic forces to gather strength. Ultimately the success of democracy in India or any other Asian country is tied up with economic progress. A big plan with assured supply of foreign exchange is therefore, vital to India and democracy. The Free-World must, therefore, help.

INTERNAL RESOURCES

We too have a part to play in attracting investment. Can we manage to secure Rs. 7,000 crores in internal resources is the main problem and to me the fiscal policy we pursue would be the key to this problem. There is some capital within the country which is not coming out for investment. There is also money in some parts of rural areas where small capital formation has taken place due to high prices of cash crops which could be tapped. Perhaps some money in the hands of labourers too could be attracted for fruitful investment. But why should any one venture to invest if the investment be unattractive? No amount of slogans or appeal for austerity would attract capital. We must create favourable conditions for attracting such investments.

WORLD BANK I.M.F. MEETINGS

It is a matter of great satisfaction that the Annual General Meetings of the World Bank, the International Bank for Reconstruction and Development and the International Financial Corporation were held in New Delhi last October. We had, in our midst, the British Chancellor of Exchequer, the American Secretary of the Treasury, the Finance Ministers of various countries, Governors of Central Banks and other leading bankers and financiers of the world who got an opportunity of getting acquainted, at first hand, with the economic progress made in the country since independence and also became aware of the problems of development which we have to face in common with other countries trying to improve their economic conditions. Many of the speakers at the meeting showed awareness of the necessity of improving the standard of living in the areas which are less developed than the advanced countries of the world and as a result of the deliberations it was agreed, and the decision have since been given effect to, that the capital of the Bank and the resources of the Fund should be increased so as to enable the Bank to raise further funds in the capital markets of the world to meet the ever-growing demands for development loans and to enable the Fund to meet the situations arising from temporary imbalance of payments. The proposal to start an independent International Development Association was also a welcome move and I hope that concrete steps would be taken to bring soon this new Association into being. All these are helpful auguries for our future development. India owes a great deal to the assistance so ungrudgingly

extended to her by various international financial agencies and foreign governments and I hope the same measure of generous assistance would be forthcoming for the execution of our future plans.

PUBLIC AND PRIVATE SECTORS

Lastly, I turn to the question between the public and the private sectors in which connection an unnecessary controversy has recently arisen. Those circles which believe that the public sector is treading on the toes of the private sector are taking a short-sighted view. The position is that the public sector is, even now, helping to give a tremendous push to the private sector. A number of ancillary industries have already been set up in the private sector to cater for the requirements during the period of erection of the industries set up in the public sector. When the Steel Plants would go into full production many more small entrepreneurs will come into existence in the private sector to fabricate steel and steel goods. This applies equally well to several other public sector undertakings. The public sector is thus going to act as a generator of the private enterprises.

The main concern is not the controversy as to who does it—the public or the private sector but the task of obtaining of the resources both external and internal. We need Rs. 3,000 crores from abroad and Rs. 7,000 crores internally and a policy to get it.

Shall we succeed in raising Rs. 3,000 crores from abroad and Rs. 7,000 crores internally? Shall we invest them judiciously so as to create the highest return per unit of capital? Shall we succeed in checking the rapid growth of population?

These are vital questions, the significance of which must be realised and answers found by all those who are eager to seek rapid progress and the maintenance of a free and abundant way of life.

THE INDIAN IRON AND STEEL CO. LTD.

NOTICE is hereby given that the Board of Directors has sanctioned payment of dividend on the Preference Share Capital of the Company at the rate of 5% per annum for the Half-year ending 31st March, 1959.

The Preference Share Registers will be closed from the 16th April to the 18th April, 1959, both days inclusive. Payment will be made on or after the 1st May, 1959, to those Preference Shareholders whose names are on the Company's Register on the 18th April, 1959, or in accordance with their instructions.

By Order of the Board,
MARTIN BURN LIMITED,
F. G. Liversedge
Managing Director,
Managing Agents.

12, Mission Row,
Calcutta.
4th April, 1959.

PRESIDENCY JUTE MILLS COMPANY LIMITED

NOTICE is hereby given that the Annual General Meeting of the Members of PRESIDENCY JUTE MILLS COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday, the 30th day of April, 1959, at 3-15 O'clock in the afternoon, for the following purposes:—

1. To receive and consider the Profit and Loss Account for the year ended 31st July, 1958, the Balance Sheet as at that date and Reports of the Directors and Auditors.
2. To declare a Dividend.
3. To appoint Directors in place of Mr. N. B. Elias and Dr. S. C. Law, the Directors retiring by rotation at the Meeting.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 16th to 30th April, 1959, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

By Order of the Board,
MCLEOD & CO. LTD.,
C. L. BAJORIA,
Director,
Managing Agents.

3, Netaji Subhas Road,
Calcutta, 30th March, 1959.

NOTE:—

Payment of the proposed Dividend, if declared, will be made on or after 14th May, 1959, only to those members whose names are registered in the Books of the Company on 30th April, 1959, or to their Mandates.

Applications for warrants will not be necessary. Claims from or on behalf of holders of shares on blank transfer will not be entertained.

THE DUNLOP RUBBER COMPANY (INDIA) LIMITED

NOTICE IS HEREBY GIVEN that the 33rd Annual General Meeting of the Company will be held at the Registered Office, "Dunlop House", 57B, Free School Street, Calcutta, on Thursday, 23rd day of April, 1959 at 11 a.m. for the following purposes:—

1. To consider the Profit and Loss Account for the year ended 31st December, 1958, the Balance Sheet as at that date and the Reports of the Directors and Auditors of the Company.
2. To declare dividends.
3. To appoint Directors in place of those who retire by rotation.
4. To appoint Auditors and to fix their remuneration.

AS SPECIAL BUSINESS

To consider and if thought fit to pass with or without modification, the following resolutions:

5. "That Mr. James Alexander Moore, an executive officer in the whole-time employment of the Company, be and is hereby appointed a Director and Deputy Managing Director (Finance) of the Company upon the terms and conditions presently governing his employment and that he will continue to be entitled to the remuneration presently paid or authorised to be paid to him."
6. "That Mr. Kenneth Claud Ferguson, an executive officer in the whole-time employment of the Company, be and is hereby appointed a Director and Deputy Managing Director (Works) of the Company upon the terms and conditions presently governing his employment and that he will continue to be entitled to the remuneration presently paid or authorised to be paid to him."

By Order of the Board,
P. B. SEN GUPTA,
Secretary.

Dunlop House,
57B Free School Street,
Calcutta.
26th March, 1959.

NOTE:—

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

In terms of Article 4 of the Company's Articles of Association no Preference Shareholder as such is entitled to attend the meeting. A Debenture Stockholder as such is also not entitled to attend the meeting.

The Transfer Books and Registers of Members in respect of the Ordinary and Second Preference Shares of the Company will be closed from 10th April, 1959 to 30th April, 1959, both days inclusive. As any dividends that may be declared will be paid only to shareholders registered in the Company's Registers of Members, those holding shares on blank transfers are advised to register the transfers prior to 10th April, 1959.

THE AMALGAMATED ELECTRICITY CO. LTD.

Transfer Books of the Company will be closed from 11th to 21st April, 1959, both days inclusive, in connection with Ad-interim dividend for the half year ended 30th September, 1958, payable on or after 22nd April, 1959.

By Order of the Board
For N. C. JAVERI
N. C. JAVERI
Partner
Managing Agents.

30th March, 1959

THE PENINSULA

PUBLIC health is one of the important items of social welfare which the Government has set itself to further, as having an important bearing on the attainment of the socialistic pattern of society. The background to the problem with which the Government is faced in this field, is a picture of millions living in conditions marked by heavy incidence of diseases of all kinds with facilities for prevention and cure that are only in the process of being developed throughout the country. Criticisms of the Government on the score of inadequate attention and tardy progress of the health programmes, largely overlook this feature of the problem. It is a measure of the concern felt by the general public that there are constant appeals to Government expressed in the Parliament and State Legislatures for greater efforts than the Government have been able to spare. In the context of such countrywide concern, it was no mere coincidence that discussion in both the Lok Sabha as well as in the Madras Legislature turned upon this question.

Discussion in the Madras Legislature revealed general dissatisfaction at the tardy progress which was taken to be result of the inadequate attention bestowed by the Government towards improvement of public health. There were also a number of points which the opposition could muster to prove the inadequacy of the Government's efforts in respect of public health. There were other local complaints pertaining to the neglect of particular areas which the members including even those belonging to the Congress party found fit to air as calling for particular attention for a final solution.

The most effective part of the criticisms against the Government related to the lagging progress of health programmes in the rural areas. Though the health programmes are concentrated in the rural areas in terms of results the efforts of the Government could not be considered to have gone far enough for perceptible

improvement. In this connection one Congress member pointed to the continuance of appalling infant mortality rates in the rural areas and urged the need for more maternity and child welfare centres in the villages to bring some relief to the disease-stricken rural folk. There was also need for proper education of rural people who are steeped in superstition in respect of the minimum precautions to be taken against common diseases which make a regular visitation of the countryside at set intervals of seasons.

To seek comparisons between conditions at present and as they obtained some decades back, as Mr. Manickavelu Naicker, the Madras Minister for Public Health, had done, is hardly fair and is to lose the right perspective for a solution of the problem in its present setting. There is mighty more to be done against which the erstwhile performance or success appear shockingly meagre. Cholera small-pox etc are diseases which, though they should be amenable to control with sufficient measures taken jointly by the people and the Government, continue to take heavy tolls of human lives in the countryside.

Malaria is another dreadful disease that has been marked for permanent eradication but which continues with us in all its intensity and severity. Mr. Manickavelu Naicker has testified the determination of the Government to take steps against this disease and recalls the recommendations made at the Conference of the Asian nations held at New Delhi. Even in respect of this he had qualified the consolation he had offered by what he considers to be the possibility of the efforts of a country for riddance from malaria, getting neutralised by transmission of the germ from a neighbour. This underlines the need for evolving a regional approach for the countries which have a common enemy to fight.

Dearth of doctors to serve in the rural areas could perhaps be the least auspicious factor for rapid improvement of medical facilities in the rural areas. And the existence of villages not served by properly qualified doctor, was testified by some members and became a point of criticism of the Government. In this situation of absolute scarcity of medical men, there is another aggravating element in the reluctance of doctors to set up practice in the rural areas. While compulsion as advocated by one member might point a way out, it is not open to a Government seeking solution to all problems through democratic means, to have recourse to it for remedy. In this connection it has been suggested that what really deters doctors from going to rural areas, is the slender prospects which such areas offer and the

Public Health

unattractive terms which medical services under the Government present. The matter deserves to be looked into and appropriate action taken so that the rural areas are kept properly served by medical facilities.

As substitute measures for ensuring proper medical facilities in the villages, it has been suggested that encouragement should be given to the indigenous systems of medicine. It is a fact recognised by the Minister himself that adequate medical facilities could not be guaranteed to the rural areas by means of the allopathic system alone. Though there has been some criticisms of the treatment meted out to these systems by the Government, the latter would not accept these charges as being based on a correct assessment of the measures taken by the Government. In this connection Mr. Manickavelu Naicker, referred to the efforts made by the Government for integrating the indigenous systems and the modern allopathy. The lack of faith of the students in the indigenous systems as testified by the Minister could not but be disconcerting to the efforts of the Government to popularise indigenous systems. Then there is the siddha system which is peculiar to Madras State and which, as one member pointed out would offer cheap medical services to people and which, on this scope would seem deserving of the active encouragement of the Government. While sharing the opinion of the member for encouragement of this system, Mr. Manickavelu was for a cautious approach and for further development of the system before it could qualify for recognition of the Government.

The prevalence of shady practices in the admission of students into medical colleges was alleged by one Communist opposition member. He has warned against the dangers of deterioration in standards and inefficiency inevitable in such a situation. This however, is a com-

plaint that would stick not only to admission into medical colleges but also to education at higher levels in general. It is also noteworthy that this criticism has gone unrefuted by the Ministerial benches.

Family planning provided another subject in respect of which opposite views were expressed by some opposition members and the Governmental spokesmen. Mr. Manickavelu Naicker, the Health Minister was, however on solid ground in answering the criticism of Mr. P. S. Chinnadural, the PSP Leader in the House who characterised family planning as sinful. Replying to this criticism Mr. Manickavelu Naicker pointed out that family planning was not merely an aspect of the Government's approach to the food problem but that it had also an important bearing on health policy. He assured the member that the implementation of family planning was free from the taint of compulsion in respect of which vague fears had been entertained by some members.

Those who had evinced concern at the slow progress of public health schemes in the State would have some satisfaction at the increased outlay provided in 1959-60 against the expenditure incurred in the current year which according to Mr. Manickavelu Naicker, worked out to about 4 per cent. Expenditure on public health, has revealed a progressive pattern.

The public health policy of the Government, the Minister explained involved an emphasis on environmental hygiene without detracting from the importance of personal health services like maternity and child welfare. It is also gratifying that the expenditure on the plan provision for public health schemes is being progressively increased. Thus, against an expenditure of Rs 13.82 lakhs and Rs 15.37 lakhs incurred in the first two years of the Second Plan, expenditure is expected to be raised to Rs 29.04 crores in 1958-59 and Rs 38.42 lakhs in 1959-60.

SOUTH INDIAN NOTES

Foreign Exchange

Delivering the presidential address at the 123rd Annual General Meeting of the Madras Chamber of Commerce, Mr E. J. M. Leigh, Chairman, of the Chamber, stressed the vital importance of foreign private capital in the development of the economy. Mr Leigh sets this role of foreign private capital against the developments that characterised the economy of the country during the last year resulting in a severe shortage of foreign exchange which in turn reacted adversely on the very progress of the country in the economic front. Mr Leigh assigns, the American recession which spread its effects throughout the world, and the failure of foodgrain production as the major causes for the adverse turn in the foreign exchange front. And, in so far as such developments could be guarded against in the future, the country's foreign exchange could also be saved from depletion.

However, as Mr Leigh says, whatever might be the result of the Government's efforts in raising foodgrain production and in reducing the imports on that account, large sums of foreign exchange would continue to be required by the country for capital equipment, industrial stores, spares etc. There must therefore be a policy for foreign exchange which could keep in view the country's need for foreign exchange and devise schemes would leave the country in possession of the requisite foreign exchange without being dependent on what Mr Leigh calls the "willingness of friendly nations to pull her chestnut out of the fire".

It is in this connection that Mr Leigh recommends the provision of more incentives for the participation of foreign private capital. Whatever might be the factor that prevents such participation, it has never been known that Government have been hostile to the entry of foreign private capital unless it is that they seek sol in strategic fields which considerations other than mere economic development would reserve to the public sector. It is rather strange that Mr Leigh should suggest that foreign private capital is regarded in high places with so much suspicion. It is of course true that the Government have not gone out of their way in wooing foreign private capital.

About export promotion schemes, on which stress has been laid by the Government, Mr Leigh is not hopeful of spectacular success especially from new items. He is correct in saying that for some years to come, the old export items would remain the predominant source of foreign exchange for the country. He has also uttered a warning about the possible effects of forcing up the pace of contribution from new industries by means

of compulsion brought to bear on them. Such pressure would be unproductive of results in view of the high cost of production inevitable in industries which had been nurtured by means of fiscal protection granted by the Government.

State Trading

Speaking in the Legislative Assembly, Mr M. Bhaktavatsalam, Home and Food Minister of Madras justified the decision of the Government in favour of state trading in foodgrains. He countered the criticisms that were heard in the floor of the Assembly against the measure during the discussion on the budget, by pointing out that in the circumstances that were created by the tendency of private wholesale dealers to keep stocks of foodgrains in hoards, only state trading could meet the needs of the people for regular supply of foodgrains at reasonable prices. It was therefore necessary that some machinery could be found out to replace the speculative trading of the private dealers in a field that vitally affected the daily lives of the ordinary people. And, there was no alternative to state trading which would at least safeguard the public interest whatever might be found to be its failings in the process of its implementation by the Government.

The strength of the official view on this question is such that there can no longer be any going back on it. However, a complete picture of the framework of state trading in its total national setting is yet to emerge. However, Mr Bhaktavatsalam has indicated a pattern whereby ultimately, each State should constitute a zone by itself, having monopoly in the trade, the Central Government looking after the inter-State movement of foodgrains and imports.

In the State there would be an autonomous organisation called State Foodgrains Corporation with the Government guiding and directing its activities, and marketing cooperative societies doing the purchasing and distributing in the districts and village cooperative societies, in the villages.

The institution of such a machinery to take charge of trading in foodgrains, would result at least in a lowering of the prices of foodgrains since its working would be divorced from the profit motive which in the hands of private dealers is a source of speculation and instability from which only the dealer, and not the consumer or the producer stands to gain. State trading offered solution to the food problem in three ways. Firstly, with its institution there would be an end of the upward tendency in the prices of foodgrains. Secondly, there would be better incentive for the producer with the elimination of the private dealers, and thirdly, it gives Government control over the marketable surplus which could be used to maintain stability in prices.

Further, new industries would also be definitely at a disadvantage in the international markets

SOUTH INDIAN MARKETS

Drop in Pepper Exports

THE position regarding exports of Pepper is not so bright due to increasing competition from Indonesia and Sarawak, while exports of Cashew kernels have been showing an upward trend during the last few years. Exports of black pepper from India, in the first eleven months of 1958, declined to 12,699 tons from 14,121 tons in the corresponding period of the previous year. The decline is in contrast to the improvement in exports from Singapore which shipped 17,068 tons of black pepper and 8,174 tons of white pepper during the period under review as compared to 15,100 tons and 7,901 tons respectively in January/November, 1957. The decline in exports from India is mainly due to the poor offtake by the USA, which took only 3,268 tons against 4,916 tons in the first eleven months of 1957. Russia turned out to be the single largest buyer with an offtake of 4,359 tons against 4,200 tons.

Cashew

Exports of Cashew kernels have, however, increased from 30,800 tons in 1956-57 to 36,200 tons in 1957-58, the export value obtained for the two years being Rs 14.5 crores and Rs 15.2 crores respectively. Export figures, for the first eleven months, have revealed an improvement—36,526 tons of the value of Rs 14.38 crores being exported. Exports of cashewnut shell liquid have also increased in 1957-58. Besides, the USA, UK, Japan, Australia, Italy and Czechoslovakia have also imported small quantities.

In this connection, it is mentioned that the schemes for pre-shipment inspection of Cashew and pepper, which are under preparation in consultation with the Agricultural Marketing Adviser to the Government of India, will soon be finalised and put into operation. The introduction of these schemes will be an important step in promoting exports, particularly because it will increase the confidence of buyers in foreign countries regarding the quality of the commodities.

Coffee

The latest coffee estimate for 1958-59 is just 30 tons short of 43,000 tons. It is less than the 1957-58 crop by 730 tons, not a considerable amount which may be made up before season comes to a close.

The 1958-59 crop has been a poorer one in Mysore, including Bababuddins and Billigiris. Coor, however, made up for some of these

against the products from other countries if competitiveness is to be decided by quality of products.

Indian Finance

losses, but not as much as growers in that area had anticipated. Almost throughout Madras, the crop estimates have been cut down and are poorer than in the previous season although in Nilgiri-Wynaad there is a slight increase.

The total crop received into the Pool up to the end of February from the 1958-59 crop is slightly higher than what was received during the same period last year. In fact, it is a new record.

Groundnut

Trading in the Madras Groundnut market was rather restricted, as stockists were unwilling to part with their stocks at lower levels and crushers were not inclined to buy seeds at the current high levels in the absence of demand for ready oil. Arrivals averaged 35 to 40 tons per day and only small quantities were taken up at Rs 179 per candy.

In the Groundnut Oil section, transactions were mostly of a squaring-up nature in view of the increased sales tax on oil in the State from April 1. The rate for the ready position was quoted at Rs 340 per candy.

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides were very much restricted and all available stocks were cleared at unchanged to slightly higher prices. In the export section, there were good enquiries from the UK for all grades and weights. In Buff hides, there was fair clearance. In Cow Calf, available stocks were rapidly cleared and a further advance of 6 nP per lb was obtained.

In the Tanned Skins section, prices especially of Sheep skins were very firm.

In the export section, enquiries were received from the UK and the Continent at old prices; but Madras tanners were insisting on asking for advances.

Bangalore Silk

There was hardly any change in the price trend in respect of both Filatures and Charka Silk during the week ended 26-3-1959. Even though the supply position of raw silk continued to be poor on account of scarcity of cocoons, the demand for various types of silk was not encouraging. Hence it was that prices in general tended to be quote around the previous week's levels.

The only instance where there was a price rise during the week under review was in the case of Cottage Basin which moved from Rs 35.50 to Rs 36.50 per lb.

While there has been no transaction in silkwaste in this country, it has been reported from Japan that the silkwaste market there fell into a lull during the second week of March after a period of rising prices. Japanese market circles, however, anticipate an expansion of the demand for

April 4, 1959

The Central Bank of India Limited

Better Plan Not Bigger Plan Essential

Need for Increased Agricultural Production

Operating Conditions, not too Favourable

Chairman, Sir Homi Mody, on Taxation Policy

Speech delivered by the Chairman, Sir Homi Mody, at the Annual General Meeting of the Shareholders, on Monday the 30th March, 1959.

Ladies and Gentlemen,

I have pleasure in welcoming you to our Annual General Meeting. Before I deal with the affairs of the Bank, I would like to offer a few observations on the economic situation in India and abroad.

2. The year under review saw the peak of the Recession in the United States and its gradual tapering off until industrial production in December nearly reached the level from which it had started falling. A perplexing feature of the set-back in the economy was the behaviour of prices, which kept firm throughout particularly in consumer goods, and did not move up or down with the fluctuations in production. Wages also failed to decline, leaving industry no option but to cut down production costs by keeping the labour force to the minimum. Another effect of the Recession was the drastic reduction of the trade surplus of the U.S.A., due to the fact that export prices failed to fall markedly, in sympathy with internal domestic prices, thereby reducing world demand for American goods.

3. The under-developed countries of the world did not fare too well during this period. They were hit by the large inventory liquidations of raw materials effected in the United States. Nevertheless, the early upward turn in industrial production in the States in the latter half of 1958 prevented the situation from turning too difficult.

4. In the United Kingdom, the Pound strengthened and there was a sharp rise in gold and dollar reserves. This was due, apart from an improvement in the terms of trade, to the 7% Bank Rate, economy in Government expenditure and continuance of restrictions on Bank advances. These measures had their effect, and in the latter half of 1958, the Treasury found it possible to introduce a policy of "cautious reflation". The Bank Rate, which was gradually being reduced, came down to 4% in November. Restrictions on Bank advances were removed and qualitative controls were virtually suspended. In the result, Bank policies underwent a marked change.

Personal Loan Services were introduced and Banks entered the Hire Purchase field by large-scale investment in existing Hire Purchase Companies. To offset the possibility of an uncontrolled inflation, arising from these and other measures, the Bank of England acquired powers to call for Special Deposits from Banks.

5. Turning to the situation in India, 1958 witnessed some disquieting trends. Production was not maintained at the pace which might be expected in an expanding economy. Cotton textiles actually recorded a fall, as compared with the previous year, as also industries like automobiles, power transformers, finished steel, Vanaspati and sugar. In some cases, the decline in output reflected a slackening of demand. There was expansion, on the other hand, in industries such as Coal, Electricity, Machine Tools and Chemicals, but the over-all picture could not be called satisfactory and the number of unemployed rose substantially. The decline in production, particularly of agricultural commodities, was reflected in the level of prices and the wholesale price index rose by a few points. In spite of the restrictions on imports, the balance of payments position was none too healthy, and the drain on our foreign exchange resources continued.

6. The Second Five-Year Plan encountered heavy weather during the year. In spite of stringent controls on imports which bore heavily on a number of existing industries and also affected the "small man" in a number of ways—a gap of something like Rs. 280 Crores was anticipated between the requirements of even the hard core of the Plan and the resources available for its implementation. Had it not been for the generous and timely assistance proffered to us by some of the industrially advanced Nations, particularly the U.S.A. and the U.K., we would have found ourselves in serious difficulties. Even so, we cannot say with confidence that the modified targets, which we have now set before ourselves, will be achieved at the end of the period.

7. Cheerfully forgetting the lessons, taught by the events of the last few years, our Planners are now said to be busy framing a bigger and more spectacular Plan

such as would constitute a significant socialistic advance. That would be a disastrous approach. What the country needs is not a bigger, but a better Plan, such as would promote a harmonious development of agriculture and industry, make for larger and more gainful employment and succeed in holding the price line. Scientific, and not political, planning is required for such a balanced development of the country's resources. Incentives to earn, save and invest must find their proper place in any such Plans for national reconstruction. A process which virtually amounts to pauperising the rich and making life harder for the vast number of lower middle-class income groups cannot possibly usher in the millennium, nor conform to any canons of fairness in the rendering of social justice.

8. The Budget Proposals presented to Parliament by the Finance Minister must be regarded as a reflection of the position in which haphazard and unrealistic planning has landed us. While there are some welcome features, such as the abolition of the Wealth Tax on Companies, the system of compulsory deposits and the Excess Dividends Tax, not only has no tax relief been given, but a substantial addition to the revenues has been provided for. On the ground of rationalising the tax structure in relation to Companies and Shareholders, changes have been introduced involving a heavier burden, which will operate particularly unfairly in the case of Corporations which have pursued a prudent policy and built up substantial reserves. Even more unfair are the new provisions with regard to the Expenditure Tax and Excises on certain commodities. As I pointed out in my speech last year, so far as the range and incidence of taxation are concerned, there is no country in the world where so much is sought to be taken from so few, and where also the "common man" is being penalised in so many ways. All this in a country which is amongst the poorest in the world. That a large part of the burdens, which have been imposed in the last few years, should go to the financing of unproductive expenditure makes the position still more indefensible.

9. Turning to the working of Indian Banks during the year,

Time Deposits of Scheduled Banks again moved up sharply, while Demand Deposits showed no change at all. The rise of 222 crores in Time Deposits was largely accounted for by the Counterpart Funds under P. L. 480 placed by Government with the State Bank of India. In a sense, it may be argued that funds are moving from the Private to the Public Sector. The Counterpart Funds are built up out of the sale proceeds of foodgrains from the United States, and to the extent they have been utilised by the State Bank for investment in Government Securities, they can be said to have helped the Public Sector. It has often been urged that the benefit of these Funds be distributed evenly among the Scheduled Banks, and it is time the justice of that demand was conceded.

10. The rise in Deposits was not matched by any significant advance in the financing of trade and industry by Banks. There was an increase of only 8 crores in the figure of Advances and Bills. The demand for funds slackened during the second half of the year, owing largely to the restrictions on imports and a slowing down of activity in the Industrial sector. The Reserve Bank's restrictions on advances against foodgrains aggravated the stagnant conditions which prevailed. Bank profits were accordingly affected and recorded a substantial decline, as compared with the results of the previous year.

11. Before dealing with the business of the Meeting, I have to refer to the death, which took place in October last, of one of our colleagues, Mr. Manmohandas Amersey, who was a Member of the Board for a number of years. The Board deeply regretted his passing and have placed on record their appreciation of the very valuable services he rendered to the Bank.

12. I now pass on to the Balance Sheet and the Statement of Accounts presented to you. As will be seen from the comparative figures given in the Balance Sheet, our figures of working funds, general turnover of business and gross earnings progressively increased during the year. Operating conditions, however, were not too favourable. While the employment of funds continued at a fairly high level during the first

half of the year, the demand for money during the second half slackened off and the expanding resources of the Bank could not be utilised to the same advantage. Despite this feature, the scramble for deposits continued, and until the Inter-Bank Agreement on ceiling rates for deposits could be brought into force, rates as high as 1% above Bank rate had to be paid for short-term monies. This increased cost of working funds, without any compensating rise in the rates of interest charged on Advances, coupled with the abnormal rise in Establishment Charges, more than absorbed the increase in our earnings, thus reducing the actual working profit to a figure below that of the previous year. The set-back in net profit was of the order of Rs. 7.32 lakhs against which is to be set off the amount of Rs. 4.23 lakhs which was paid last year on account of gratuity to staff out of profits, instead of out of the fund provided for the purpose.

13. In view of the increased working funds and their higher cost, outgoings under Interest increased by over Rs. 43 lakhs, but the income under the same heading, after making the necessary provisions, increased by over Rs. 64 lakhs. This, together with the profit realised on the sale of investments and a small increase in earnings under other heads, accounted for an increase in the net income of nearly Rs. 28 lakhs over that of the previous year. However, with Establishment Charges recording a further rise of Rs. 30 lakhs, the increase in the income was more than wiped out.

14. This heavy rise in Establishment Charges was due to increases in Dearness Allowance, salaries and overtime, apart from an increase in staff, consequent on the expansion of business and the opening of 16 new Offices during the year. I may add that, since the commencement of the current year, there has had to be allowed a further addition to the Dearness Allowance due to a stepping up of the cost of living index.

15. Over and above these adverse factors, there is a growing resistance from borrowers to any increase in interest rates, and even to existing rates of interest. Moreover, the credit restrictions imposed by the Reserve Bank are being further extended. It appears doubtful, therefore, that Banks will be able to keep pace in the matter of their earnings with the ever-growing Establishment charges, unless either rates of interest allowed on deposits can be reduced, or those charged on Advances increased. The Indian Banks' Association, of which our Vice-Chairman, Mr. Bhabha, is President, has succeeded in bringing about from October last an Inter-Bank Agreement on rates of interest on deposits, but I feel the ceilings so fixed may soon need to be reviewed in the light of prevailing trends in Banking profits.

16. It will be noticed that, in addition to payments for gratuity made out of our profits for the

year, we have and this was at the instance of our Auditors—appropriated Rs. 10 lakhs for Staff Gratuity Fund, as the provision held in this account was considered inadequate in relation to our liability for gratuities. The provision in this account may now be considered to be fair, but it will require to be increased, from time to time, as and when profits permit. In view of all the loose talk on the subject of remuneration to the staff, it is important to note that the total amount accounted for by payment to the staff amounts to the very substantial figure of nearly Rs. 3.43 crores, which works out to as much as 70% of our net income, as against a little over 9% paid to Shareholders.

17. I gave expression last year to my disappointment that the heavy burden of Establishment Charges had not been compensated for by happier relations with the Staff and by more efficient working. I wish I could say the situation had since changed to any material extent. Slackness and indiscipline continued amongst sections of the Staff at certain Centres, and there is now a clamour for larger concessions. All I shall say with regard to that at the moment is that, if more has to be drawn out of the till, more has to be put in; there cannot be a one-way traffic in this matter. Increased salaries and other emoluments can only come out of better work-loads, greater discipline and happier understanding between Management and Staff. I would say to all engaged in the service of our Bank, let us work together for the common good and make the Institution to which we have the privilege to belong more stable, more prosperous and better able to serve the trade and industry of the country.

18. There was a progressive increase in our deposits which, at Rs. 162 crores, record a rise of Rs. 7 crores over the previous year. In accordance with the prevailing trend in Bank deposits, Time Deposits increased and Demand Deposits declined, thus increasing the cost of working funds. The fall in Demand Deposits was largely due to our discouraging Call Deposits at the prevailing high rates. It is a matter of satisfaction that our Savings Deposits, which had become somewhat stagnant over the previous two years, have again been moving forward, and our figure under this heading has, for the first time, crossed the Rs. 30 crores mark.

19. The rise in Deposits, without a corresponding increase in Advances, necessitated our increasing the portfolio of investments. Our figures under this heading accordingly record an increase of Rs. 3.46 crores. A particularly happy feature of our portfolio is that, owing to an appreciation in the values of Government and other Securities, the wide gap of Rs. 254 lakhs between the book and the market values, which appeared in our Balance Sheet for 1957, has narrowed down to about Rs. 78 lakhs, as at the close of

1958. It is for the first time in many years we can record such a substantial improvement in our position, and I am sure you will share my hope that the trend may be maintained. On account of this change in the situation, no appropriation has been made out of profits for the year for transfer to investments.

20. Our Advances in general throughout the year were actually higher than during the previous year, but not to an extent as would enable us to utilise our increased resources fully and remuneratively throughout. Seasonal requirements of finance accounted for a fairly good demand for advances during the first half of the year, and our figures at one time touched the high level of Rs. 120 crores; but during the second half, conditions ruled extremely easy and adequate utilisation of our resources became difficult. The curb on imports, the Reserve Bank's restrictions in the matter of Advances against foodgrains and the stagnation in the Piecegoods trade seriously affected our turnover in Bills, and figures at the close record a drop of nearly Rs. 2.43 crores under this heading. Due to this drop, the total figure of Advances at Rs. 99.87 crores, as appearing in the Balance Sheet, shows a decline of Rs. 1.62 crores over that of the previous year.

21. We have been continuing our policy of weeding out non-paying Offices, and three more of our Upcountry Pay Offices, two in India and one in Pakistan, which had been continuously working at a loss over the past few years, were closed down and 16 new Offices were opened at centres reported upon favourably. It may be stated in this connection that, since January 1955 we have closed down altogether 37 Offices; as against that we have opened 35 new Offices at different centres. Some of the new Offices opened during the past 3 years have already built up a fair amount of deposits and advances. The total number of offices including the Head Office and Local Branches, was at the close of the year 299.

22. I shall end by thanking our Vice Chairman, Mr. C. H. Bhabha, for the keenness and devotion with which he has been serving the interests of the Bank. The knowledge and experience he has brought to bear upon our working are of inestimable value to the Bank. Our thanks are also due to our General Manager, Mr. N. K. Karanjia, for the single-minded devotion with which he has been discharging his responsibilities and which have earned for him the regard and esteem of all who have to deal with him. We have likewise to acknowledge our appreciation of the services rendered by Mr. F. C. Cooper, the Deputy Manager, the members of the Staff at the Head Office and Branches and the Local Advisory Committees at the various centres. Let us hope the work done by one and all in the service of the Bank may yield richer and richer fruits as the years go by.

Indian Finance

A Corrective Reaction

Watch-Dog Writes:

AFTER the recent hectic activity and the general advance in prices, stocks markets have turned somewhat quieter during the week under review. There has been a sizable amount of profit-taking, as there is a feeling that values have risen too fast since the Budget and that the market should consolidate the ground that has been gained before advancing further.

In the absence of fresh support coupled with small offerings, quieter conditions were witnessed on the Calcutta Stock Exchange.

On the Bombay Stock Exchange prices moved irregularly before finishing on a mixed note with gains in a majority.

On the Madras Stock Exchange there was moderate activity, selective buying being continued in Planting and Textile issues.

The London Stock Exchange gave fairly a good account of itself despite a number of adverse factors.

Calcutta

Calcutta, Friday Evening.

AFTER the recent sharp rise in prices, the local stock market witnessed profit-taking in most sections during the week under review. This was induced by a general feeling amongst certain operators that the return on equities, at the present levels, had declined considerably following the sustained rise in values. Moreover, investors felt some anxiety over the reports that the applicants of a number of companies, which recently asked the Government for permission to make bonus issues by capitalising the share premium account, had been rejected. Rumours of the possibility of the Government nationalising the shipping companies were also a contributory factor. Nevertheless, sentiment remained generally constructive, as some operators felt that, after a readjustment of the technical position, equities might rise again.

Conditions in the Gilt-edged sector remained dull with more sellers than buyers in evidence, mainly due to stringent conditions prevailed in the money market. 3 per cent 1986 Conversion Loan opened at Rs 74.25 and after touching a high of Rs 74.50 receded towards the close to Rs 74.05. Bank shares were quietly steady with Punjab National changing hands at Rs 24 to Rs 24.25 and United Commercial at Rs 68 to Rs 68.50.

Once again, Jute shares took the lead by recording a bigger turnover

April 4, 1959

Although higher levels could not be attained till the close due to general profit-taking. Apart from the recent decision to enthrone Howrah Jute to be clearing list, the release of excellent working results by some more companies imparted strength to the section. Alliance were taken upto Rs 127 from Rs 117 (Rs 126); Bally upto Rs 213 from Rs 207 (Rs 212); Howrah upto Rs 24.75 from Rs 23.75 (Rs 24.62); National upto Rs 24.25 from Rs 24 (Rs 24); New Central upto Rs 15.00 from Rs 14.75 (Rs 14.69); Ganges upto Rs 86 from Rs 81 (Rs 82.50) and Chitavalsah upto Rs 16.12 from Rs 15.69 (Rs 16). Figures shown within brackets were the closing rates for the week.

Thanks to the belief that an increase in the price of the commodity could not be delayed longer if output was not to suffer, Coal shares came in for good enquiry. Equitable were taken upto Rs 31.12 from Rs 30.87; Bengal upto Rs 305 from Rs 302 and Central India upto Rs 8.25 from Rs 8.19. Western Bengal moved between Rs 6.25 and Rs 6.45, while Burrakur fluctuated rather irregularly between Rs 18.56 and Rs 19.25 on alternate buying and selling, to close finally at Rs 18.69.

Tea shares were dull and neglected and prices tended, in some cases, to lower levels. There was a general fear that there might not be much

AGRA ELECTRIC SUPPLY CO. LIMITED

NOTICE is hereby given that a General Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Thursday, the 30th April, 1959, at 11-00 a.m. to consider, and if thought fit, to pass, with or without modification, the following resolution:—

"Resolved that the consent of the Company be and is hereby accorded to the Board of Directors borrowing and continuing to borrow monies for and on behalf of the Company in excess of the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set aside for any specific purpose, and that such borrowing shall be exclusive of temporary loans obtained or from time to time to be obtained from the Company's Bankers in the ordinary course of business provided that the amount at any one time owing in respect of monies so borrowed shall not exceed Rs. 1 crore."

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy, who need not be a member, to attend, and on a poll, to vote instead of himself.

By Order of the Board,
MARTIN BURN LTD.
S. GUPTA
Managing Director,
Managing Agents.
12, Mission Row,
Calcutta 1.
31st March, 1959.

change in auction prices until the prospects for the new crop were assessed. Amongst the few dealings recorded, prominent were Brooke Bond changing hands at Rs 18 to Rs 18.06; Hattikhira at Rs 11.87 to Rs 12.06; Grob "A" at Rs 29.37 to Rs 29.69 x.d.; Jayshree at Rs 13.37 to Rs 13.50 c.d.; Sungma at Rs 17.62 to Rs 18.87 x.d. and Tezapore at Rs 16.87. Sugar shares were selectively firm. Raza/Buland had buyers at Rs 13.44 to Rs 13.69; Darbhanga at Rs 21.19 to Rs 21.50; Ramnugger at Rs 20.44 to Rs 21 and SKG at Rs 10.81 to Rs 11.03. Belsund remained unchanged at Rs 13.12 with Carew hovering narrowly around Rs 8.56.

Textile scrips, after a long time, behaved better in anticipation of the present improvement in the offtake of cloth being maintained in the coming months. Jayshree changed hands at Rs 9.50 to Rs 9.81; Elgins at Rs 13.06 to Rs 13.19 and Kesoram at Rs 12.87 to Rs 13.25, to close finally at Rs 9.62; Rs 13.12 and Rs 12.87 respectively on profit-taking. New Victoria were a narrow market around Rs 1.31.

Price movements in the Engineering section were mostly influenced by the speculative activity in Indian Irons which, in turn, were subjected some selling pressure, especially towards the close of the week, on quieter advices from Bombay. Against the previous week-end closing of Rs 24.06, Indian Irons opened higher at Rs 24.26 and, after advancing further to Rs 24.42, receded gradually to Rs 23.98 at which level some bear-covering caused the scrip to recover to Rs 24.26 at the close. TEXMACO touched a high of Rs 23.55 and a low of Rs 23.30, to finish at Rs 23.40. Jessop changed hands at Rs 10.09 to Rs 29.19; Kumardhubi at Rs 10.09 to Rs 10.25 and Marshalls at Rs 6.50 to Rs 6.75, to quote finally at Rs 29; Rs 10.31 and Rs 6.75 respectively. Britannia remained firm at Rs 13.31 and so also Braithwaite at Rs 30.25.

Although price movements were irregular, Miscellaneous issues ruled generally steady on sustained support at lower levels. Orient Paper met with business at Rs 36.10 to Rs 37.60 (Rs 36.55); Titagur at Rs 44.75 to Rs 45.25 (Rs 45.19); Sirpur at Rs 13.69 to Rs 14.25 (Rs 13.31 x.d.); Indian Cable at Rs 31.69 to Rs 32.37 (Rs 32.37); Indian Aluminium at Rs 20.19 to Rs 21.44 (Rs 20.94); India Steamship at Rs 14.19 to Rs 14.75 (Rs 14.25); Indian Copper at Rs 4.19 to Rs 4.38 (Rs 4.27); Dunlop at Rs 32.37 to Rs 34.31 (Rs 34.31); Rohtas at Rs 22.75 to Rs 23.31 (Rs 22.94); Aluminium Corporation at Rs 12.87 to Rs 14 (Rs 13.81); Hindustan Motors at Rs 8.87 to Rs 9.06 (Rs 8.94); Indian Oxygen at Rs 26.31 to Rs 27.37 (Rs 27.37); Alkali Chemicals at Rs 19.94 to Rs 20.37 (Rs 20.12) and Hindustan Lever at Rs 32.50 to Rs 33.12 (Rs 33.12). Figures shown within brackets were the week's closing rates.

Bombay

ACTIVITY on the Bombay Stock Exchange was selective and prices moved irregularly before finishing on a mixed note. Steel shares met with some selling pressure at bulges from a prominent operator. Although Textiles firmed up early on reports of

improved cloth offtake, higher levels attracted profit-taking towards the close.

Textiles: In this section, the more popular shares rose sharply on selective demand, but they succumbed to general influences in the later stages. The Mafatlal group of mills was in prominence by a spectacular improvement in prices and this presumably imparted impetus to trading in other shares. Century were conspicuously marked up to Rs 486 from Rs 473.50. Bombay Dyeing changed hands at Rs 59.50 to Rs 60.70; Kohinoor at Rs 245.50 to Rs 254 and Svadeshi at Rs 209 to Rs 217, to close finally at Rs 60; Rs 250 and Rs 216 respectively. Apollo were done at Rs 1.18; Finlay at Rs 271 and Swan at Rs 390.

Steels: Dealings in this section were less prominent than in the preceding weeks. Bull operators were inclined to restrict their commitments and prices, as a result, eased owing to lack of fresh support. The news of higher production by the Indian Iron & Steel Company had only a temporary effect on sentiment. Tata Steels, after touching a high of Rs 186.50 and a low of Rs 181, finished at Rs 181.75. Indian Irons, after firming up to Rs 24.48 from Rs 24.28, reacted to Rs 24.08 at the close.

Miscellaneous: Shares in this section showed a mixed Pattern. Cement shares displayed a steadier tendency with ACC and Digvijay closing at Rs 146.50. In the Automobile group, Premier improved to Rs 115.50 from a low of Rs 111.10 touched early in the week. Mining shares were more or less steady, Shivrajpur Syndicate quoting around Rs 97. Sugar shares were ruling steady with Belapur changing hands at Rs 290.50 to Rs 292. Elsewhere, National Rayon were marked up to Rs 293.25 from Rs 284, thanks to buying from special quarters. Scindia changed hands at Rs 18.28 to Rs 18.64. Premier Construction were done at Rs 259 to Rs 264; TELCO at Rs 180.50 to Rs 182.50 and Tata Chemicals at Rs 16.40 to Rs 16.68. Bombay Burmah touched a high of Rs 517 and a low of Rs 501.50, to finish at Rs 509.

Madras

THE Madras Stock Exchange remained fairly active with Planting issues accounting for a steady turnover. Cleared shares remained generally firm, while Textiles met with selective support.

Textiles: Selected scrips in this section came in for good support.

Coimbatore Spinnings were bid higher at Rs 49.50 and Lakshmi at Rs 110.50, while Maduras were maintained a steady trend at Rs 25.50. Travancore Rayons showed some fluctuations on the dividend news and closed lower at Rs 19.10 after touching Rs 20. Loyals were done at the improved rate of Rs 32 with Cambodias having some sellers at the market rate.

Plantings: In this section, several Tea shares were absorbed at rising prices. Chembras hardened to Rs 4.10 and Devasholas to Rs 27. Periakaramalais maintained good enquiry at Rs 4.29 and Blue Mountain at Rs 3.50.

Rubber shares displayed a quieter trend. Kalpettas had some support at the quoted rate, while Cochin Malabars maintained moderate interest at a steady rate.

In the Coffee group, Coffee Lands declined to Rs 23.25 with Ouchterlony's absorbed upto Rs 5.60 from Rs 5.52. Consolidated Coffees were weak at Rs 21.30.

Miscellaneous: Sugar shares in this section, came in for keen buying. Deccan spurred further to Rs 11.29 from Rs 11.05 on active support. Travancore, Cauverys and Kriampudis had buyers at the market rates. Among others, investment interest was maintained in Aluminium Industries at Rs 19.65. Singareni Collieries continued to rule firm on keen enquiry. Mysore Tobaccos improved to Rs 13 with buyers at this level.

London

DESPITE a number of adverse factors, the London Stock Exchange gave a fair performance. Among Industrials, Imperial Chemicals were depressed following the results, and some of the other leading issues were sympathetically lower. There was a renewed demand for Property shares with Motor shares selectively supported. Oil shares moved within a narrow range. Rubber shares were better where changed, while Tea shares held steady. Gold shares were a firm market, but there was no sustained demand.

We have received intimation from the Mercantile Bank Limited, London that at the 66th Annual General Meeting of the shareholders of the Bank held on 24th March at London Sir Arthur Morse, and Mr S. W. P. Perry-Aldworth have been elected directors to the Board.

Men and Oil ... 6

The Installation Engineer

A vital point in oil's long journey from the well to the consumer is the petroleum installation. From here the finished products of the oil industry are distributed to distant depots and markets by road, rail and river.

A main installation (such as that at Tinsukia, in Upper Assam) comprises storage tanks, pumps and pipe lines, machinery for making and filling tins and drums, and equipment for the bulk loading of road and rail tank vehicles. The Installation Engineer is responsible for the setting up, operation and maintenance of the plant (excluding the tin factory, which has its own engineering staff) from which the products go to agencies, dealers and consumers.

Oil is nearly always on the move, and an Installation Engineer's skill helps to ensure that it makes only a brief halt at the installation before being despatched to places where it is needed by the public. Indian engineers have taken over many vital roles in the Assam Oil Company. And they are fulfilling them well.

ASSAM OIL

a full-scale petroleum industry

a member of the Burmah Group of Oil Companies

STOCK markets had an exciting period during the month of March, when the gains in prices were large and widespread, resulting in many of the popular shares being difficult to obtain due to paucity of offerings. This state of buoyancy was attributed to various factors. The news from the industrial front was favourable, while operators were inclined to take the view that the pressure of business recovery would no longer be balked by changes in Government policy hereafter. Again, excellent company reports and company developments and anticipations of inflation provided further encouragement.

Although the enthusiasm, that was noticed during the special Budget session, almost dried on the opening day of the month and prices suffered a setback in response to the discovery that the wealth tax on companies and the Excess Dividend Tax would remain applicable during the coming year, a steady and gradual recovery in prices set in immediately later on a more detailed consideration of the proposed company taxation changes. It was thought that, by the tax changes, the position of the shareholders would not be materially affected and they might be compensated by an increased dividend even if they lost a little more in tax, as disposable profits would be bigger if the tax on corporate profits did not exceed 45 per cent. Above all, operators seemed to have been encouraged by the reports of the assurance given by the Finance Minister to examine the position about payments of dividends and the confirmation of the double depreciation scheme being withdrawn from 1st April, 1959.

Thus, with the confused picture over the effects of company taxation cleared up, even the attention of investors, who kept away from the market for long, was diverted to the selection of companies whose dividend distributions were unlikely to be affected in the future. They felt that companies might not be obliged to bear a heavier tax burden from the assessment year 1960/61 than they did at present. Moreover, the upward movement in prices was aided by the reported readiness of the Finance Minister to examine the position of payments of dividends to shareholders from dividend equalisation funds and other reserves which had already been taxed.

A significant change in the pattern of trading, during the third week of the month, was the shift of interest from the speculative counters to those of several well-known investment scrips. This state of buoyancy was attributed to various factors. First, operators drew inspiration from the firmness in commodity markets. Secondly, they were enthused over the announcement made by the World Bank that India would receive credits to the extent of \$300 million for her economic development plans. Thirdly, the news with regard to the new procedure for the import

March—an Exciting Month

of raw materials to 45 scheduled industries during the April/September, 1959 period was interpreted bullishly. It was felt that it might be possible to allow imports of producer or capital goods, which would strengthen further the base of the industrial economy. Fourthly, it was thought that, as deficit financing was to continue on a large scale, there would be more money seeking investment in equities as a hedge against inflation. Fifthly, the continued activity of the LIC gave rise to a feeling that the offers of good scrips might be on the short side. Sixthly, the corporate news had been good and these led to a belief that investment possibilities

at the then ruling levels, had declined considerably following the sustained rise in values in the previous three weeks.

Moreover, operators were inclined to square up their commitments and book profits due to the approach of a number of holidays in the last week of the month on account of "Holi" and Easter.

Reopening after the Easter holidays, equities experienced a mild boom and the gains in prices were extended further on renewed speculative support. But the market took a sudden turn towards the close of the month when there was a sizable amount of profit-taking, resulting in

were still in store. Finally, the Stock Exchange Committee's decision to include Howrah Jute—the ninth scrip—in the clearing list was greeted with a sharp rise in the share scrip which, in turn, had a favourable effect on the entire Jute section—the backbone of the local stock market.

There was, however, a technical setback towards the close of the month due to profit-taking. This was induced by a feeling amongst certain operators that the return on equities,

a slight reaction from the top levels established earlier. This was induced by some selling pressure on Bombay account on rumours of the possibility of the Government nationalising the shipping companies. Also, with the genuine investors showing only limited interest, speculative operators turned a bit cautious on the feeling that the market should consolidate the ground before advancing further. The happenings in Tibet were also a contributory factor.

Nevertheless, sentiment remained generally constructive, as others felt that quite a number of shares offered attractive yields even at the high level of prices. The outlook for foreign exchange requirements was also considered to be promising following the eagerness of the USA, UK, West Germany and Japan to help India out of her difficulties.

The lead to a steady and sharp rise in prices, during the month, was given by the forward scrips under the lead of Indian Irons which, in turn, were subjected to heavy speculative buying, being influenced by the view that the company would be well-placed under the proposed new corporate tax system and by the news of commissioning of a new steam cargo generating set at the company's power plant to raise the existing capacity from half a million to one million tons of steel ingots per annum at the Burnpur Works. These apart, earnings were expected to increase steadily, as a major portion of the expansion scheme had been completed. This was reflected in the higher production figures released for February and March.

Another feature of the month's trading was the revival of activity in the Jute section. Shares, which had been ruling firm on higher advices from the jute goods market and on the feeling that the mills might be making profits at the present level of raw jute prices, turned more active and attracted substantial support, thanks to the news of Howrah Jute being included in the forward list.

Coal shares came in for good demand on the belief that an increase in the price of the commodity could not be delayed long. The reports of the increase in output at various collieries were another contributory factor.

Tea shares, which met with good support at enhanced levels during the first week of the month, were neglected during the remaining part of the period. The initial firmness was attributed to the Budget announcement with regard to the reduction in the export duty which, it was felt, would benefit the Darjeeling gardens in particular. It was also hoped that the working results for almost all companies would be better in 1958 than in 1957 in view of the increase in the average export prices obtained last year. But, the steady setback in prices, noticed from the second week of the month, was mainly due to fears entertained in some quarters that world supplies would exceed demand unless an international agreement to restrict exports could be reached. Speculation was also rife with regard to the prospects for the new season's crop.

Sugar shares were selectively supported.

Textile scrips ruled better in anticipation of the present improvement in the offtake of cloth being maintained in the coming months.

Although price movements were irregular, Miscellaneous issues ruled generally steady on sustained support at lower levels.
