HIGHLIGHTS OF THIS ISSUE

The general impression is that industrial production was none too good in 1958.

This view is, as it were, confirmed by figures relating to the index of industrial production.

What is forgotten is that the fall in textile output tends to be all-obscuring.

Thus, there are a number of redeeming features in regard to output in 1958.

See the Leading Articles section for a statistically-based, interpretive assessment.

FOR THE INVESTOR

Prospect: Steady to Brighter Yet

Investment Gossip:

THE bear phase seems to be nearing its end. The question that is now being asked is whether the recovery just discernible will prove to be the harbinger of a strident bull market.

This column not being designed as a market forecast, I cannot indulge in any prophecies. The purpose of this column is to give an appraisal of the investment situation from week to week and an indication of the future trend based on an analysis of the various relevent developments.

In my view, the investment situation as it obtains at the present juncture is of a variety that should instil optimism. I have no doubt that most investors will agree with me now that some of the dark clouds which have been obscuring the vision have waited away. The picture that is slowly unfolding itself is indeed quite pleasant to behold.

Let me be explicit. There has been many a gain For the Investor during the past week.

Firstly, the Bombay Shareholders Association got a convincing explanation from Tatas for the seemingly low dividend of TISCO. It has been shown that the distribution to the holders of the new shares has actually been higher than promised. The Association has said that it is satisfied with the clarification.

Secondly, Government have accorded sanction to TISCO for the issue of fresh capital at par. How good this news is, is evident from the immediate spurt in Tata Steel. The prospect of an issue at par for such an important scrip as TISCO has far reaching significance. For, it is to be taken as a reiteration of the welcome change noticeable for some time now in the attitude of Authority toward new capital issues. Rightly or wrongly, it was apprehended, in recent earlier weeks, that current official thinking favours a premium. Such a reversal would have cut a big slice of the ground from under the revived confidence in equities. It is now crystal clear that Authority has no intention of putting the clock back in regard to new capital issues.

Thirdly, the Finance Minister has come out with an unambiguous declaration that the policy of the Life Insurance Corporation in regard to investment in equities will continue unchanged. Though it is idle to hope to get an account of proceedings at this week's meeting of the LIC Investment Committe in Calcutta, some useful indications can be gleaned from market gossip. It would appear that, apart from the purchase of some preference shares and debentures, the LIC has bought, during the past day or two, a sizable block of an engineering share (not Indian Iron). Be that as it may, the inference cannot be considered far fetched that the LIC's interest in equities remains undiminished.

Thus far for recent developments. What is, however, of paramount significance to the investor is to be sought in the general economic situation. Most industries in the private sector have now reached a stage, or fast reaching the stage, when they can reap the benefits of their expansion programme embarked upon in the two plan periods. Detailed analyses of industrial production have shown that, even in the last year, many an industry made considerable headway. The decline in the rate of increase in the index of industrial production for that year is largely accounted for by the sizable fall in production of cotton textiles.

The current year holds out the promise of a decidedly better performance. An instance in point is the automobile industry, which is expected to record a new high in production. The maiden dividend from Hindustan Motors is convincing proof. The fact that this scrip continues to be eagerly sought after, even after the dividend announcement, is indicative of great expectations with regard to the future of this scrip. There are several other industries in an equally happy position.

The Engineering industry in general seems to be waiting for an adequate supply of steel to steam into full production. Engineering goods exports during the first half of the current year have recorded a sizable increase over those of the corresponding period of last year. Given the needed facilities, exports can be stepped up to Rs 6 crores by the end of the year.

The jute industry seems to be emerging into prosperity thanks to widespread demand even for the erstwhile slow-moving sacking goods. Even the textile industry is considerably less anxious now regarding unsold stocks as both internal offtake and exports have shown marked improvement in recent weeks.

Inference: Steady to brighter conditions in the stock market.

£ R$

Investment Notes:

THE Controller of Capital Issues has permitted the TISCO to issue right shares at par. The new issue will be 618,372 Ordinary shares of Rs 75 each and 375,000 "A" 7½ per cent Preference shares of Rs 100 each, subject to tax.

RECORD OF ACHIEVEMENT
Sound underwriting and outstanding service to Policy-holders are reflected in the rapid progress made by the ORIENTAL FIRE. Transacting Fire, Marine, Motor, Accident and all other classes of non-life business ORIENTAL FIRE also offers specialized cover against Machinery Erection and Breakdown and Boiler Explosion risks.
ORIENTAL FIRE AND GENERAL INSURANCE CO., LTD.
Head Office: Oriental Buildings, BOMBAY-1

Meanwhile, the TISCO has shown an all-round improvement in production last month. Production of saleable steel has improved to 98,500 tons from 88,100 tons in June; semi-finished steel to 41,600 tons from 31,700 tons; finished steel to 56,900 tons from 56,400 tons; pig iron to 125,000 tons from 115,700 tons and steel ingots to 121,100 tons from 114,300 tons.

According to the official figures released by the Indian Iron and Steel Company Limited, saleable steel production has recorded a rise of 6,607 tons in July as compared to the previous month. Production of steel is shown at 55,903 tons (comprising 25,051 tons of semis and 30,852 tons of finished steel) as against 49,296 tons. Production of pig iron has risen by 18,287 tons to 97,082 tons, while that of steel ingots has increased to 71,411 tons from 62,510 tons. Despatches of saleable steel are higher at 53,507 tons against 46,670 tons.

It is learnt that the India Jute Company Limited has decided to buy Sree Radheshyam Cotton Mill —which has been shut down for some time—for over Rs 31 lakhs. The equipment of the cotton mill, which is situated in Howrah, will be shifted to the premises of one of the mills in India Jute. Arrangements are also being made to manufacture carpet-bagging in one of the mills under the Megna Mills Company Limited.

In order to comply with the provisions of Section 23A of the Indian Income-Tax Act, the Clive Row Investment holding Company has decided to declare a further dividend of 9 nP per share in respect of the year ended 31st March 1955 and 37 nP in respect of the year ended 31st March 1956. The company has also decided that the payment of these further dividends will be taken into account when considering the amount of the final dividend to be recommended to the shareholders in respect of the year ended 31st March, 1959.

The Orissa Cement Company Limited has decided to increase the capital of the company by the issue of one new share, at par, for every two shares held. This is subject to the sanction of the Controller of Capital Issues as well as the Investment Finance Corporation.

The work on the establishment of a rayon plant by the Kesoram Cotton Mills Limited is making a rapid progress. The factory, it is now learnt, will be going into production within the next few months, say, in October this year.

It is understood that the management of the Digvijay Spinning and Weaving Company Limited, Bombay, has changed hands. Messrs Kilachand Devchand has acquired the controlling interest in the concern.

The Mettur Chemicals & Industrial Corporation will be issuing 195,000 equity shares of Rs 10 each, at par, to both equity and preference shareholders, as on the 29th August 1959, in proportion to their existing holdings.

Kil Kotagiri has decided to issue Bonus Equity shares in the proportion of one bonus equity share for every equity share held to holders as on November 16, 1959. The Share transfer books will be closed from November 2 to 16, 1959, both days inclusive. Government sanction has been obtained. Bonus shares will not be eligible for dividend for the year ending 31-10-1959.

£ R$

Investment Brief:

Alexandra Jute has maintained the dividend at 10 per cent for 1958.

Associated Rubber Industries have recommended a dividend of 7 per cent.

Textile Profits

Balance-Sheet Reviews:

THANKS to increased offtake, conditions in the cloth market have been ruling better during the past few months. Latest reports suggest that stocks, at the end of June, at 3.9 lakh bales, are barely equal to a month's production. In the yarn market, too, there has been a good demand for higher counts, especially those spun out of imported cotton. As a result, mills in the Coimbatore are are reported to be reserved sellers of yarns.

dend of 6 per cent on the capital increased by the issue of bonus shares as against 12 per cent paid in 1957.

The improvement in the general offtake may probably be due to a diversification of the lines of production to meet the consumer's taste. The question has now arisen whether the cotton textile industry has turned the corner completely and whether there will be a sustained increase in demand for cotton textiles henceforth. However, it will be reasonable to conclude that the level of consumption had tended to improve and it will be possible for the various units to utilise the available capacity more effectively.

£ R$

Lakshmi Mills

Of the mills in the Coimbatore area, the Lakshmi Mills Limited has done better during the year ended 31st March, 1959. The net profit, before providing for Depreciation and Taxation, amounts to Rs 49.21 lakhs as against Rs 40.07 lakhs in the previous year. The amount provided for Depreciation is slightly lower at Rs 12.97 lakhs against Rs 13.64 lakhs. The provision for Taxation is, however, higher, at Rs 12 lakhs against Rs 11 lakhs and for Development Rebate Reserve at Rs 9 lakhs against Rs 30,000. The transfer to Gratuity Reserve is maintained at Rs 75,000. The dividend on the ordinary shares is maintained at 12 per cent.

£ R$

Radhakrishna Mills

The Radhakrishna Mills Limited has reported a reduction in the net profit from Rs 10.91 lakhs to Rs 8.75 lakhs for 1958, mainly due to the larger expenditure that had to be incurred on the disposal of huge accumulated stocks through the opening of the company's own depots and the reduction in output on account of the power-cut. The Depreciation amount is lowered to Rs 3.88 lakhs from Rs 4.39 lakhs and the Contingency Reserve to Rs 1.76 lakhs from Rs 1.89 lakhs. The General Reserve got Rs 1.60 lakhs on the last occasion. The directors have recommended a divi-

S. E. RLY TENDERS

Sealed tenders are invited for (1) Tender No. CON|COS|57|GB10|59 for supply of 818 Cwts. Tar Coal Specn. IS Specn. 212-50. Earnest money is Rs 240/-. Tenders will be opened on 2-9-59 at 12 noon.

(ii) Tender No. CON|COS|58|D|59 for supply of 45 pairs wheels with axle for push trolley B.G. to CE's Drg. No. 17203 to be seen in the office of the undermentioned. Materials will be inspected and passed by the Director of Inspection. Unless clearly stated otherwise it will be assumed that the firm is agreeable to D.O.I. inspection. Earnest money is 360/-. Tenders will be opened on 2-9-59 at 12 noon.

Tender forms are obtainable from the office of the undermentioned (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs 2/- (not refundable) per copy per tender by money order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, S. E. Rly., Garden Reach, by local firms.

Tenders should accompany the receipt for depositing earnest money as stated above with this Rly's Chief Cashier without which the tenders are liable to be rejected. Approved contractors having a permanent deposit of Rs 1000/- with the under-mentioned are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

Balarama Varma Textiles

The Balarama Varma Textiles Limited has reported a net profit of Rs 3.70 lakhs for 1958 as against Rs 3.17 lakhs in the previous year. The provision toward depreciation is Rs 2.33 lakhs against Rs 2.24 lakhs and Development Rebate Reserve Rs 78,600 against nil. The dividend is maintained at 7½ per cent.

The mill worked for 307 days in multiple shifts with an installed capacity of 14.880 spindles with an average of 13,690 spindles. Under the expansion programme, all the machinery, except six ring frames due from indigenous suppliers, have been received and commissioned to work. The remaining ring frames are expected to be delivered during the course of this year.

Tirupati Cotton Mills

With fuller working of the newly-installed plant and machinery, the Tirupati Cotton Mills Limited has been able to report a rise in sales from Rs 15.03 lakhs to Rs 49.15 lakhs for the year ended 31st March, 1959. The net profit amounts to Rs 3.51 lakhs against the nominal amount of Rs 1,000 for the previous year. After providing for Depreciation in part at Rs 2.12 lakhs against nil, a further amount of Rs 1.38 lakhs has been set aside on this account in respect of 1957-58. A further sum of Rs 1.00 lakh is to be provided.

The mill is now reported to be working with the full complement of 12,000 spindles. The results for the current year are, therefore, expected to be much better. As the company effected exports of yarn for Rs 9 lakhs in 1958-59, it is entitled for allotments of foreign cotton under the export promotion scheme. Some shipments of foreign cotton have already been received and the spinning of 60s yarn has also been undertaken.

£ R$

Surat Textile Mills

The Surat Textile Mills Limited has fared well last year and the dividend is maintained at Rs 10 per ordinary share. Sales of cotton and staple-fibre yarn have risen to Rs 66.54 lakhs from Rs 50.16 lakhs. After providing for Depreciation at Rs 1.13 lakhs (Rs 1.20 lakhs), the profit amounts to Rs 5.88 lakhs against Rs 2.33 lakhs in the previous year. Out of this, the directors have provided Rs 3.82 lakhs (Rs 1.67 lakhs) for Taxation and Rs 9,500 (Rs 3,000) for Development Rebate.

Following the steady expansion in the company's activities, the paid-up capital of the company will be increased to Rs 25 lakhs from Rs 20 lakhs by the issue of 5,000 new ordinary shares, to be offered at par, in the proportion of one new share for every two shares held, to those shareholders whose names are registered in the books of the company as on the 20th August.

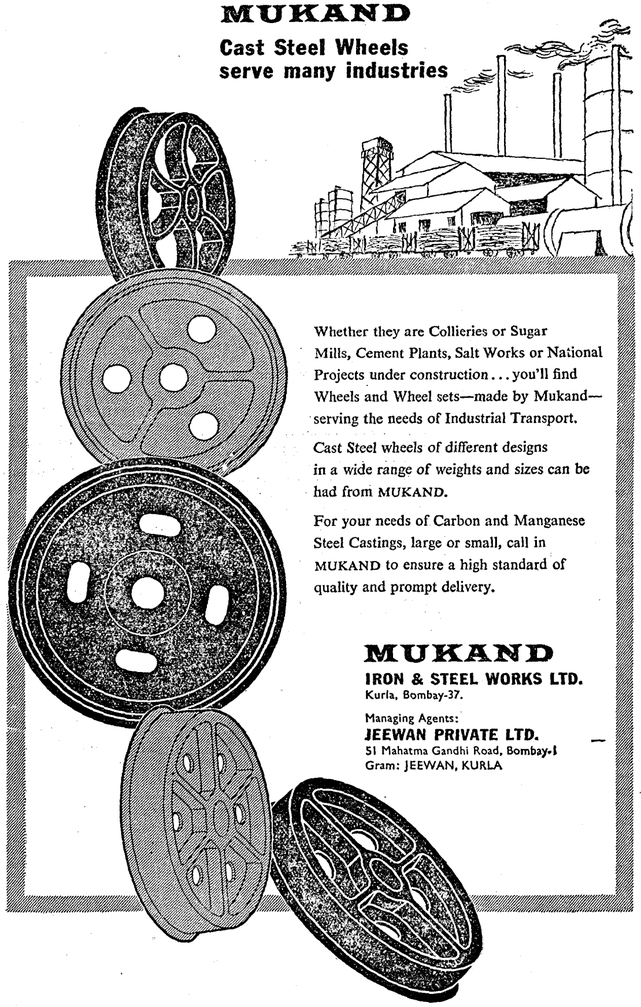
£ R$

Cochin Malabar

The Cochin Malabar Estates Limited has earned a much higher level of profit during the year ended 28th February, 1959, thanks to lower costs of production. The net profit, before providing for Depreciation and Taxation, is as much as Rs 16.03 lakhs against Rs 10.71 lakhs in the previous year. The net earnings, however, include Rs 1.29 lakhs being the profit realised on the sale of Eddivanna Estate.

The charge on account of Depreciation is lower at Rs 1.35 lakhs against Rs 1.48 lakhs, while the provision for Taxation is much higher at Rs 7.70 lakhs against Rs 5.45 lakhs. The transfer to General Reserve is Rs 3.25 lakhs against Rs 1.47 lakhs. With the final dividend of 10 per cent, the total for the year amounts to 15 per cent against 10 per cent previously.

The rubber crop is slightly lower at 899,559 kilograms against 906,828 kilograms. The proceeds from the sale of Eddivanna Estate amounted to Rs 8 lakhs and the profit of Rs 1.29 lakhs has been included in the transfer to the General Reserve.



The balance-sheet, as at 28th February 1959, shows a paid-up capital of Rs 28.04 lakhs (Rs 26.91 lakhs in ordinary shares of Rs 3 each and Rs 1.13 lakhs in preference shares of Rs 50 each) against which Reserves stand at Rs 20.25 lakhs. The gross block at Rs 50.56 lakhs is depreciated by Rs 6.98 lakhs to show a net block of Rs 43.58 lakhs. Liquid assets have totalled Rs 20.01 lakhs against sundry liabilities of Rs 15.14 lakhs.

£ R$

Emerald Valley Estates

The Emerald Valley Estates Limited has done much better in 1958 than in 1957. The net profit is higher at Rs 75,442 against Rs 1,970 in the previous year. The Depreciation amount claims Rs 3,723 (Rs 4,049) and Taxation as much as Rs 38.000 (Rs 5,600). After transferring a sum of Rs 10,014 (nil) to General Reserve, the directors have recommended a dividend of 6 per cent on the equity shares.

MUKAND
Cast Steel Wheels serve many industries

Whether they are Collieries or Sugar Mills, Cement Plants, Salt Works or National Projects under construction . . . you'll find Wheels and Wheel sets—made by Mukand—serving the needs of Industrial Transport.

Cast Steel wheels of different designs in a wide range of weights and sizes can be had from MUKAND.

For your needs of Carbon and Manganese Steel Castings, large or small, call in MUKAND to ensure a high standard of quality and prompt delivery.

Karikode

The Karikode Rubbers (1945) Limited has reported a slight increase in the net profit before Taxation, to Rs 53,767 for 1958 from Rs 38,163 for the previous year. The provision for Taxation is Rs 22,000 against Rs 14,800. The dividend on the Ordinary shares is maintained at 10 per cent.

The rubber crop shows an increase of 42,226 pounds to 150,726 pounds for the year.

£ R$

Travancore Chemicals

The Travancore Chemical and Manufacturing Company Limited has reported further progress during the year ended 31st March, 1959. With the sales being doubled to Rs 21.15 lakhs, the net profit has risen to Rs 3.15 lakhs from Rs 2.13 lakhs in 1957-58. The amount provided for Depreciation is higher at Rs 81,794 against Rs 70,003, while the provision for Development Rebate is lower at Rs 64,017 against Rs 1.07 lakhs. A sum of Rs 60,000 is provided for Taxation. The dividend is raised from 7 to 10 per cent.

According to the directors' report, steps have been taken to double the output of Chlorate of Potash at the Kundara factory for which a loan of Rs 2 lakhs has been granted by the Kerala Financial Corporation. The necessary buildings and installation of machinery have been nearly completed and production is expected to increase very shortly.

£ R$

South Madras Electric

The South Madras Electric Supply Corporation Limited has reported a decline in earnings for the year ended 31st March 1959, reflecting the effect of the power-cut in the summer months of 1958. But, the increase in the net profit, before providing for Depreciation and Taxation, over the previous accounting period to Rs 19.36 lakhs from Rs 17.35 lakhs is due partly to some exceptional receipts. The charge on account of Depreciation is higher at Rs 7.61 lakhs against Rs 6.77 lakhs, while the provision toward Taxation is much bigger at Rs 4.50 lakhs against Rs 1.85 lakhs. The transfer to Contingency Reserve is Rs 46,776 against Rs 44,222 and Development Rebate Rs 62,810 against Rs 1.25 lakhs. The final dividend of 4½ per cent makes a total of 9 per cent for the year. It has been, however, necessary to transfer from Reserve a sum of Rs 94,000 for maintaining the dividend.

The directors state that the company is greatly handicapped in carrying out its expansion plans due to lack of financial resources. As the efforts to get funds from the Government have not succeeded and as a larger number of applications for extensions are waiting, they have decided to utilise, during this year, the unutilised portion of the authorised capital amounting to Rs 14 lakhs.

£ R$

Bombay Suburban Electric

The Bombay Suburban Electric Supply Limited has reported better results for the year ended 31st March, 1959. The gross profit shows a rise from Rs 30.77 lakhs to Rs 34.81 lakhs, while the net profit work out to Rs 15.48 lakhs against Rs 18.56 lakhs after providing a sum of Rs 10.44 lakhs (Rs 9.09 lakhs) for Depreciation; Rs 2.61 lakhs (Rs 2.26 lakhs) for agents' remuneration and Rs 6.28 lakhs (Rs 85,000) for Taxation. The provision for Development Reserve is Rs 1.94 lakhs (Rs 5.27 lakhs) and Contingency Reserve Rs 91,727 (Rs 94,475). The Dividend Equlisation Reserve claims Rs 1.10 lakhs against Rs 1.73 lakhs. A sum of Rs 1.73 lakhs has been transferred from Tariffs and Dividends Control Reserve against Rs 22,187.

£ R$

Dehri Rohtas Railway

The gross earnings of the Dehri Rohtas Railway Company Limited has risen sharply to Rs 39.98 lakhs for the year ended 31st March, 1959 from Rs 28.21 lakhs for the previous year. The net profit, before providing for Depreciation and Taxation amounts to Rs 18.53 lakhs against Rs 9.56 lakhs. The Depreciation account claims Rs 2.31 lakhs against Rs 2.42 lakhs and Taxation Rs 8.45 lakhs against Rs 3.91 lakhs. After providing for Development Rebate and transferring to General Reserve Rs 2.50 lakhs (Rs 44,000), the dividend has been raised to Rs 1.70 per share from Re 1.00 previously.

£ R$

Straw Products

The Straw Products Limited has maintained the dividend at Rs 1.25 per share for 1958. The gross profit amounts to Rs 11.16 lakhs. Out of this, the directors have provided Rs 8.37 lakhs for Depreciation and Development Rebate and Rs 1.90 lakhs for Taxation. The transfer from General Reserve is Rs 1.00 lakh. The net profit for the year is lower at Rs 2.79 lakhs against Rs 3.96 lakhs for the previous year.

Industrial Production: "Disappointing"?

Indian Finance
Established 1928
August 8, 1959
'The Wise Man in his attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right'—The Analects of Confucius.

A PREFATORY Note to the Report on Currency and Finance vouchsafes the information that the Report "is intended to be mainly a factual review of the trends and developments in the Indian economy during the year to which it relates"; and the word "factual" has been italicised. This emphasis is owing, we presume, to what the Note describes as "inadequate appreciation of the scope of the Report." Such an explanatory preface, we believe, was hardly necessary, especially to those who know that the Report on Currency and Finance may be thought to be the successor to the Reports of the Controller of the Currency, which were published prior to the establishment of the Reserve Bank. But, taking the cue from the Preface, we confess to having tried to find some statement or other in the Report which might he considered comment rather than factual review. We are glad to state that, at any rate for our part, we were unable to prove the Prefatory Note to be wrong.

Normally, we should then have proceeded to review briefly what has been recorded in the Report in respect of 1958-59; but here, too, we seem to have been forestalled, since the Prefatory Note indicates pointedly that the Report "is intended to be primarily a reference document"; as such, was there, we asked ourselves, any need for what would be, as defined, a review of a factual review? There remained, therefore, what we believed to be only the cursory task of ensuring that the Report fulfilled its purpose of being factual. We are, again, glad to confirm that what are recorded are facts; but, to this, we are in a position to add our mite of constructive criticism, in the sense that, in an instance or two, not all the facts seem to have been given. What follows, then, is an attempt to supplement significant aspects of the Report, sometimes with facts that have, perhaps, been omitted and sometimes with plain and simple comment.

The first proposition that we may take up is the Report's assertion that "the growth of industrial production was disappointing"; this is because the rate of growth slowed down "in 1958 to 1.5 per cent from 3.5 per cent in 1957"; but the Report adds that, "in the closing months of the year there was evidence of an increased tempo of industrial activity." It is true, and therefore a fact, that the general index of industrial production, with 1951 as base, rose only from 137.3 to 139.4; but we are not sure that the growth itself was disappointing, or that improvement was discernible only toward the close of the year. It needs to be recognised, as the Report does acknowledge in the chapter on Industrial Production, that it is a decline in the output of cotton cloth and yarn that obscures the picture by suggesting a slowing down in the rate of growth. Thus, if regard is had for the fact that the index for cotton cloth fell by 7.2 per cent, and that for cotton yarn by 3.5 per cent; and if, moreover, it is realised that the weightage given to these two heads accounts for more than one-third the total weight of the index, it will be clear that, but for these two sectors, there has been appreciable industrial growth generally—though, of course, there were other relatively soft spots like sugar and automobiles. In broad terms, thefore, the growth of industrial production was surely not disappointing; output of cotton cloth and yarn fell, and the reasons therefore will presently be examined.

Then: did the improvement in industrial production take place only in the closing month of the year? It is true that, as the following table shows, the indices for six major heads, accounting for two-thirds of the total weightage, were rather lower in June 1958 than they were for the year as a whole:

Industry	Weight	1957	June 1958	1959
Cotton cloth ...	24.1	109.7	96.3	101.8
Cotton yarn ...	12.0	127.5	110.5	123.1
Jute textiles ...	11.9	120.5	114.9	123.9
Sugar ...	4.3	185·5	3·9	175.5
Coal ...	6.7	126.8	124.3	132.1
Iron and Steel ...	5.9	119.3	107.5	119.2

But how is this to be reconciled with the figures in respect of the seasonally adjusted general index of industrial production? The relevant figures are as follows:

	General Index	Cotton Textiles
January ...	147.7	114.4
February ...	137.9	103.2
March ...	138.1	107.5
April ...	137.8	106.7
May ...	138.8	110.6
June ...	131.1	101.1
July ...	137.3	111.7
August ...	135.7	108.7
September ...	140.3	110·2
October ...	144.3	113.4
November ...	138.0	101.5
December ...	145.8	117.5

The preceding figures show, on the contray, that, on the whole, industrial production has been steady throughout the year. In the early part of 1958, the steadiness in the general index would have been possible only if, in the heads other than the six shown in the first table, considerable expansion in production had taken place. By the same token, so considerable a rise in the six industries in the second half of 1958 must partly have been offset by declines in the other constituents of the general index, since, otherwise, the rise in the general index would have been steeper still.

The second important point on which we should like to dilate is in regard to the assessment of the position with respect to cotton cloth and yarn. Output fell sharply, and this was "due mainly to a fall in external demand". Secondly, however, "internal demand also flagged during the greater part of the year with the result that mills continued to be faced with the problem of stocks". Measures taken by the authorities to rehabilitate the industry included:

(1) substantial reduction in excise duty on cloth;
(2) the removal of piece-goods and manufactures generally from the export licensing system;
(3) a special export promotion scheme; and
(4) permission conditionally to instal additional automatic looms up to 3,000.

"As a result of these measures," the Report claims, "the situation improved somewhat, stocks with mills falling to 437 million yards at the end of March 1959 as against 517 million yards a year later." But figures relating to stocks of cotton cloth show that they had fallen to 462 million yards as early as May 1958, that they rose in the off-season to 537 million yards in October 1958 and that, thereafter, they have steadily declined. So, it might not be quite correct to say that, during the early part of the year, internal demand had flagged. While there can be no disputing the fact that the drop in exports would have been owing to a combination of world recessionary trends, intense competition and uneconomic working within this country, the reason for the pick-up which, it may be added, is a more emphatic trend since, October 1958, lies in rather more than the measures instituted by the authorities. After all, not long after the excise duties on cotton textiles were raised in September 1956, a measure of relief was given, but this did not result in any significant improvement in the offtake. It was, we suggest, coincidence in the latter half of 1958 that consumption, as reflected in a drop in mills' stocks, was better in point of time simultaneous with the measures taken by the authorities. We believe that a fact that has been overlooked is the link between agricultural production and cotton textile consumption. While the measures initiated by the authorities may have been contributory causes, the main reason for improved consumption could only have been that, with better crops, there was a larger purchasing power that could be spent on cotton textiles. It is important, in respect of cotton textiles at any rate, that this link with agricultural production may be recognised.

We may note, finally, that the chapter on Industrial Production recognises, moreover, that some of the new industries, not included in the index, "recorded sharp increases"; and also that, in 1958, there was production for the first time in this country of a variety of goods. It is, therefore, that we should like to stress that 1958 is not, from the point of view of industrial production, a disappointing year. How, indeed, there were a number of redeeming features, is discussed in the article that follows.

Some Redeeming Trends in Industrial Production

THE general index of industrial production with its base on 1951 shows, on the face of it, a disquieting state of affairs as far as 1958 is concerned, inasmuch as the increase in production in that year was just 1.5 per cent as compared to 3.5 per cent in 1957 and 6.2 per cent in 1956. In part, at least, this is a misleading picture. For, apart from the fact that this index does not take into account the production of newer industries which have been established after 1951 or have since come in for accelerated development, there is also the circumstance that the production decline in 1958 of two of the biggest long-established industries, namely, cotton textiles and sugar, with their proportionately big

weights in the general index, has distorted the picture of planned industrial development under way. The unsatisfactory performance of these two industries has been largely due to a certain structural imbalance which has nothing to do with the supposed inadequacy of foreign exchange or of industrial raw materials and intermediates. The recent meeting of the Central Advisory Council of Industries has, therefore, been rightly told that **if these two industries are excluded,** the index of industrial production shows an increase of 6.5 per cent in 1958 as against 6.5 per cent in 1957. Only this, it would appear, reflects more accurately the tempo of industrial development in recent years.

But even this does not reflect adequately the growth of production in a whole range of newer and younger industries which have been established or greatly developed only after 1951. An attempt is therefore made here to provide a broad statistical picture of 60 such industries selected from the list of important engineering, chemical and other basic industries for which the Union Ministry of Commerce and Industry has recently made available comparative production figures, in quantity and value, for the years 1951, 1956, 1957 and 1958. For the purposes of this article, only those industries, in which the value of output in 1958 was Rs One crore and more each and for which capacity figures were readily available elsewhere, have been selected. Since the total value, in 1958, of output of the selected sixty industries represents as much as 74 per cent of the total value (Rs 565 crores) of output of all the relevant industries listed by the Commerce and Industry Ministry, the picture presented by the two specially-constructed tables in this article broadly records the changes in industrial capacity, diversification and production achieved in recent years. It is a picture which reveals some redeeming trends in the structure of industrial production.

One redeeming trend is that the growth of production in a number of industries has been relatively faster than the growth of installed capacity in them since 1956. Such industries are sulphuric acid, superphosphates, ammonium sulphate, soaps, paints, zinc oxide, insecticides, leather cloth, auto tyres and tubes, bicycle tyres and tubes, paper and paperboards, newsprint, cement, refractories, ceramics, sheet glass, glasswares, aluminium (virgin metal), aluminium sheets and circles, copper (virgin metal), brass/copper sheets and circles, enamelware, bolts and nuts, typewriters, ballbearings, scooters, motor-cycles and auto-rickshaws, diesel engines (both vehicular and stationary types), power-driven pumps, machine tools, steel structurals, storage batteries, electric motors, power transformers, radios, house service meters, aluminium conductors and winding wires. Since the production increases in these industries appear to have been partly due to better utilisation of former capacity, it may be broadly inferred that there has been no excessive or indiscriminate expansion of capacity. Another noteworthy fact is that production has fallen rather steeply (that is, by more than 10 per cent) since 1956 only in a few industries, namely, dyes, hurricane lanterns, automobiles, railway wagons and bare copper conductors.

Another redeeming trend is in the direction of a better utilisation of installed capacities in respect of a majority of industries in 1958 as compared to 1956. This may be seen from Table 2 which gives figures of production as a percentage of installed capacity in recent years. The position in this regard has been rather unsatisfactory in 1958 as compared to 1956 only in some industries, namely, caustic soda, soda ash, liquid chlorine, refined glycerine, dyes, rayon yarns, razor blades, bicycles, automobiles, sewing machines, railway wagons, locomotives, air conditioners, dry batteries, bare copper conductors and conduit pipes. The extent of idle capacity in 1956 ranged from one per cent in the case of storage batteries and power transformers to 79 per cent in the case of superphosphates whereas, in 1958, is ranged from one per cent in the case of bicycles to 59 per cent in the case of bare copper conductors. Over-utilisation of capacity, probably by working more than one shift was significantly in evidence in 1958 in more industries—notably, bicycle tyres and tubes, aluminium (virgin metal), diesel engines (stationary type), staorage batteries, electric motors, power transformers, house service meters, aluminium conductors and winding wires—than in 1956.

The figures worked out in Table 2 would have to be interpreted with some caution in so far as any particular year is concerned because capacities (in annual terms) added by new units late in that year may have no corresponding relation to the production figures covering a few months only. But this is no bar to a comparison between any two years which may both be validly assumed to have ended up with some new capacities added in their last few months. Again, the picture of utilisation of capacity in 1958 with all its limitations points to a possible expansion of production in several lines in 1959 even if there are no addition to capacity. The scope for a fuller utilisation of existing industrial capacity would also appear to suggest a slowdown as much in the process of licensing new capacity by Government as in that of establishing additional capacity by entrepreneurs.

GROWTH OF CAPACITY AND PRODUCTION & EXTENT OF UTILISATION OF INSTALLED CAPACITY IN SELECTED INDUSTRIES.

The impressive growth of newer and younger industries no doubt disproves the unfair charge that free enterprise and initiative have been stifled by Government in recent years. While the expansion that has taken place thus reflects creditably on the Government's policy of encouragement in many ways, as also on the enterprise of businessmen, it is by no means clear that it has been preceded or accompanied in all cases by dependable appraisals of market potentialities. Creation of new capacities from now onwards without due regard to market trends or to practical difficulties in the way of their economic utilisation may well mean some misdirection of scarce physical and financial resources in spite of a certain element of planning implicit in the application of the Industries (Regulation and Development) Act.

Economic Growth and the Third Plan

THE Third Plan is in the making and there have been a large number of working groups, study teams, seminars and conferences discussing different lines of activity. It has been stated that the outline of the Third Plan will be published in December, 1959, and it may now be desirable to discuss the practicable pace of economic growth during the Third Plan period. Quite recently, the Deputy Chairman of the Planning Commission hinted at the general target by saying that the **per capita** income in India should be doubled between 1956 and 1976. During this period, a net addition to population may be expected of more than 160 million, raising the total population to nearly 600 million. This would mean that the national income would have to be increased threefold in order to double the **per capita** income by 1976. Sir V. T. Krishnamachari further observed that the Third Plan should be broad-based, mainly depending on domestic resources, and paving the way to automatic growth as Plans succeeded one another. Sectionally speaking, most of the study groups have recommended reaching the point of perfection by 1965. The Community Development Ministry wants Rs 400 crores to cover 65 million rural families by 1965. The Co-operative officials have proposed Rs 1,000 crores for short-term credit covering 45 million agricultural families. The Plant Protection programme wishes to cover an additional 37 crores of acres at the rate of six, seven, eight and 10 crores of acres during the respective five years of the Third Plan, the cost for the first year working out to Rs 18 crores. Educational authorities have planned to enforce universal primary education for children between six and eleven years of age throughout the country by 1965. The Minister for Steel has flattered himself at exports of pig iron while, internally, development projects are held up for want of iron and steel: even allotted quotas have not been supplied. In Andhra Pradesh, for example the allotment for 1956-58 was 9,970 tons but the actual supply stood at 2,917 tons. With regard to oil, even during the construction of two refineries, a surplus of 5.4 million barrels is anticipated. Agricultural targets have been calculated at the following figures:

Commodity	Target for 1960-61	Target for 1965-66
Foodgrains (million tons) ...	80.5	110.0
Cotton (lakh bales) ...	65.0	80.0
Jute (lakh bales)	55.0	65.0
Oil seeds (lakh tons) ...	75.5	90.0
Sugar Cane (gur in lakh tons)	79.0	90.0

With regard to road mileage, a twenty year plan (1951-71) has been prepared costing Rs 5,200 crores. Experience during the Second Plan period shows that while there have been shortfalls in resources, shortfalls in utilisation of available resources have been more conspicuous.

PLANNING IN THE USSR

It may be interesting here to point out that, even in the most advanced country in the world economically, the USA, a doubling of **per capita** income has been possible only in 50 years (1909-59), even though the national income rose four times, because the population doubled during the period. In the USSR, targets for 1965 are comparatively modest and show a sense of proportion and realism. The avowed object is to surpass the USA, but the 1965 targets fall far short of even present production in the United States. The figures stand thus:

Item	U.S.S.R. targets (1965)	U.S.A. current annual production
Steel (million metric tons)	83	125
Oil (million metric tons)	240	335.5
Electricity (million K.w. hours)	520,000	724,000
Automobiles (numbers)	1,760,000	6,000,000
Shoes (million pairs)	515	505 plus 78 (slippers)
Meat (million metric tons)	6.1	10.0

NATIONAL INCOME FIGURES

Growth (capital account) and income (current account) are not identical although there is close causal relation. The following figures reveal the wide disparity as among the USA, the UK and India with regard to average annual increase in the national income:

Year	U.S.A. (billion of dollars)	U.K. (million of pounds)	India (in thousands of crores of rupees)
1938 ...	67.6	4,816	...
1948 ...	223.5	9.507	86.5
1957 ...	364.0	17,604	110.8
1958 ...	360.5	...	...
Percentage of average annual increase ...	21	13	2.8

Average annual increase in national income works out to 21 per cent in the USA, 13 per cent in the UK and 2.8 per cent in India. These figures should enable any one to get an idea of the capacity for development among these three countries, relatively speaking, although mathematical equations cannot be taken too far. An analysis of the rise in US national income reveals that, among the contributing factors were:

1. Larger number of man-hours worked;
2. Fuller employment;
3. Increased output per man-hour worked;
4. Gains in technology;
5. Higher management skill;
6. A higher rate of capital formation including natural resource development; and
7. Constant advances in the education and skill of the workers.

BASIC PROBLEMS.

With a view to ensuring and enhancing economic growth, the President of the United States appointed a Cabinet Committee on Price Stability for economic growth in November, 1958. In its Interim Report, that Committee has laid stress on the following reforms:

(a) Balancing the budget;
(b) Reducing the national debt;
(c) Keeping a firm control over the money supply;
(d) Making it easier for the Treasury to sell long-term bonds; and
(e) Making the concept of a stable price leave as stated and integral goal of national policy.

What the Committee wants is steady economic growth without inflation. Price Stability is not considered as an end but a means to facilitate growth. While small fluctuations in prices are admissible, continuous price rises are discountenanced. Some of the long-range problems still to be delved into are:

1. The nation's tax structure;
2. Elimination of harmful concentrations of power in business and labour unions;
3. Re-examination of the US competitive position in foreign markets;
4. Appraisal of government regulations that may be impeding economic growth; and
5. Review of the nation's costly farm price support programmes.

We here in India have devoted practically no time and attention to such basic problems and reforms.

HASTEN SLOWLY

The moral of all this is quite clear. Sectional treatment and estimates tend to exaggerate capacity and resources, losing sight of the overall picture and priorities. What is required at the outset is a set of well-considered priorities both from the view point of resources and time. "Hasten slowly" appears to be a well-waranted suggestion because, as the earlier paragraphs show, leading countries like the USA, the USSR and the UK have been more levelheaded in their plans compared to their resources. Whatever rate of growth may be decided on, due regard should be paid to acceleration of the rate during succeeding plans. But, the most difficult obstacle in the way of scientific planning is the comparative absence of relevant statistics. In order to improve our data, nationals should be given advanced training in the USA in adequate numbers. Even in that country, statistics do not meet requirements. For example, while comparing **per capita** income with a span of say, 20 years in between, a margin would have to be provided for a rise in the standard of expectations during the period. Otherwise, the comparison would not be realistic. As already mentioned, between 1909 and 1959, **per capita** income has doubled in the United States, after allowing for price changes. But it is doubtful whether the standard of satisfaction nowadays is a 100 per cent more than in 1909, because the common man in that country has become accustomed to higher norms. An illustration may be given. Half a dozen unemployed workers went to a hotel in London and had their breakfast. When the bill was presented, they told the bearer "get it from the unemployment insurance office." In that office, it was stated that they had spent all their credits. They were then taken to the competent law court. After scrutinising the bill, the judge told the accused: "It is all right you had a breakfast. But why did you eat so much?" The calm reply was: "That is our standard of life." The USSR has had several five year plans, but, even in the latest Seven Year Plan, targets are much below 100 per cent. Our movements are much slower, and a generation is not at all too long a period. No one can claim the right of trying to achieve progress of the country to the optimum point during one's own life time. The problem of fairer distribution is very important, but the prime necessity is a commensurate addition to agricultural production, particularly foodgrains. An emphasis on social justice at the present stage should lead merely to a redistribution of poverty.

EDITORIAL NOTES

Points for Planners

The importance of maintaining a rapid rate of development of the national economy, and some of the principal obstacles which hamper accumulation of the resources required to sustain investment at the requisite level, are highlighted in the presidential address of Mr M. L. Shah at the quarterly meeting of the Indian Chamber of Commerce held in Calcutta last Friday. High levels of taxation have affected not only production and investment but also consumption. The fall in consumption has in turn reacted on production. Unless this vicious circle is broken by carefully devised measures, fulfilment of the investment targets will have no meaning, for, it will not be reflected in the standard of living of the people. As Mr Shah has pointed out, the ultimate objective of planning should be to make available to the people sufficient to consume in order to make their life worth living. This will require a diversified pattern of development in which each of the different sectors of the economy—large, medium, small industries, handicrafts, and the public and the private sectors—has an essential role.

The main danger about which the Planners should be wary is the temptation to confine the economy with an ideological straitjacket in the anxiety to present a logical pattern. The country is so vast and its problems are so variegated, that any practical programme of action is bound to reveal glaring inconsistencies in approach that will be despair of theoreticians of every hue. There are certain fields of development, and organisation, where there is no alternative to State initiative. Even the Swatantra Party has recognised this in its basic principles. At the same time it should be recognised that there is a vaster field of economic activities intertwined with the day-to-day life of the people where intervention of the State can only make for universal misery.

Spokesmen of business in the private sector, therefore, have their task cut out, in drawing attention to the practical problems they have to encounter from day-to-day as the direct result of Government policies. They could be more effective if they confine their attention to problems of which they have intimate personal knowledge, instead of ranging over the entire field of political and economic developments, as has now apparently become the fashion.

*

Food Production

Food is no doubt a problem in which everyone is intimately interested as a consumer; everyone, therefore, has the inherent right to ventilate his views on the subject. Industrialists have another valid reason for preoccupation with food, as food prices constitute an important element in the cost of production. But food production is a different matter altogether, and one wonders whether Mr Shah expects the views he has expressed on the subject at the Indian Chamber meeting to be taken seriously. The doubt becomes a certainty when Mr Shah goes on to assert that what is needed in this country is the mechanised way of farming.

Here there is an evident confusion between "scientific farming" and "mechanised farming." Mechanisation will be helpful to farmers to extend production in those countries where there is surplus of land and shortage of human labour. But mechanisation by itself cannot add to the volume of production in countries like India, where there is shortage of land and surplus of persons working on it.

The only result of mechanisation, under a policy of encouraging large individual holdings, which Mr Shah advocates, will be to deprive millions of people, who eke out a subsistence in agriculture, of their only means of living. Those who advocate the replacement of subsistence farming by capitalist methods of organisation of agricultural production, would do well to consider whether such a development would make for social stability. In this context, we might suggest that businessmen would be well advised to leave the hot controversial topics of land ceilings and co-operative farming to be handled by the Swatantra Party.

*

Trade with Pakistan

The President's addres to the last meeting of the Oriental Chamber of Commerce has drawn attention to the rapid decline in the volume of trade between India and Pakistan and, in this context, he has particularly stressed the need for increased trade between West Bengal and East Pakistan. In 1948-49, India's exports to Pakistan were valued at Rs 77 crores, while imports from Pakistan to India amounted to Rs 109.3 crores. By 1958, the figures had declined to Rs 7.12 crores for exports and Rs 6.28 crores for imports.

It is also relevant to mention in this context that the bulk of the trade even at this reduced level is with East Pakistan. Out of the total exports in 1958, exports to East Pakistan accounted for Rs 4.24 crores, nearly two-thirds. As regards imports, Rs 5.91 crores out of total imports of Rs 6.28 crores came from East Pakistan. Imports from West Pakistan were negligible.

The recent Indo-Pakistan trade talks concluded on July 27 with the expression of a pious hope for expansion of trade between the two countries. But it takes two to strike a bargain. The actions taken by the authorities in East Pakistan do not suggest that they attach much importance to the recovery of trade between the two countries. Perhaps the distribution of trade between the two parts of Pakistan may be one of the factors determining official policy.

A more important factor hampering trade is the prevalence of smuggling across the border. This suggests that it would not be realistic to look for any substantial increase in legitimate trade, unless the two countries are prepared to agree to a customs union; and that will involve the adoption of a common integrated programme of economic development. It will, therefore, be realistic to be conservative in our estimates of the expansion of trade between India and Pakistan that is likely to result from the conclusion of the trade talks.

*

State Transport

The eleventh anniversary of the State Transport organisation in Calcutta provided the opportunity for highlighting the difficulties that continue to deprive the city of an adequate transport system. Though the State Transport, which began with 25 buses in 1948, now deploys a fleet of over 590 vehicles, Mr J. N. Taluqdar, the Director-General of Transportation, saw no possibility in the foreseeable future of elimination of overcrowding. Expansion of the services, to the extent necessary to cope with the additional traffic, is hampered by various factors, including inadequate roads and uneconomic working at the present level of fares.

Increase in the number of vehicles may help lower the over head costs as suggested by Mr B. M. Birla, who presided over the function. But, before that can be done, roads have to be reconditioned to carry the additional traffic. Moreover, increases in taxes on fuels and in the cost of stores have inflated running costs. Increase in fares, even if justified by comparison with other cities, will not be practicable in view of the lakhs of people with low incomes for whom there is no alternative means of transport. Introduction of electric train services, which will enable the buses to carry higher-rated traffic, seems to offer the only solution of the chronic traffic problem of Calcutta.

While the State Transport in Calcutta has to cope with special problems, there is a strong case for rapid expansion of road transport in general, as Mr B. M. Birla took the opportunity to emphasise in his presidential address. Two points which strengthen the case for road transport are, first, its large employment potential, and, second, the higher rate of return on the investment. Even as it is, motor transport pays about Rs 100 crores a year to Government by way of taxes, compared with the sum of about Rs 44 crores contributed by the Railways. A policy of encouragement of motor transport will also enable the budding automobile industry to reach economic levels of working.

WORLD OF FINANCE

Thoughts Aloud on State Loans

ALL is set, for the opening of the subscription lists, in less than two weeks, for the 1959-60 State Loans. Day by day, the money market is getting easier. The Inter-bank Call money rate has of late declined considerably; the average rate of allotment in respect of public auction of Treasury Bills is also showing a fall; applications are for much larger amounts, and the amount on offer has been raised. Scheduled Banks have been persistent purchasers of giltedged through the Reserve Bank tap, what though less than a month has elapsed since the Centre's new loan. The Stock Exchanges are firm. The giltedged market is in very good form, and both the new loans issued by the Central Government are quoting at a satisfactory premium.

It is therefore clear that the State Loans cannot be other than resounding successes. We expect over-subscription in respect of most, if not all, of the issues. Kerala, the late entrant, may, however, be an exception.

We may anticipate that the extremely favourable terms on which, for example, the Orissa loan is being issued will attract particular and substantial interest. In the next week's issue, we expect to analyse some of the individual State Government loans from this viewpoint.

For the moment, we shall content ourselves with observing that conditions could not have been happier for the floatation of the State Government loans; and every loan should come on the market at a pleasing premium.

*

Deposits: Over Rs 1800 Crores

The continued progress of the 1959 slack season is borne impressive testimony to, in the returns of the Reserve Bank for the week ended July 31. Significantly, borrowings of Scheduled Banks against usance bills are shown at nil; and we don't believe that, except in 1952-53, there has, since the bill market scheme was put into operation, been a week during which a nil balance has in this regard been recorded.

There has been fresh contraction in active notes to the extent of Rs 14.30 crores, with the figure declining to Rs 1666.04 crores. Rupee Coin has returned from circulation for nearly Rs 1½ crores. Currency has been contracted against Rupee Securities by transfer of Rs 10 crores to the Banking Department. Consequently, the Reserve Bank's cash in the till has improved by Rs 6.07 crores to Rs 30.82 crores. Foreign Securities are unchanged.

Signs of the slack season in the return of the Banking Department are inferential in character. Investments are shown lower by Rs 17.62 crores at Rs 329.65 crores; and this is over and above the transfer of Rs 10 crores from the Issue Department. Hence, the net decline in the Rupee Securities held by the Reserve Bank in both Departments is of the order of Rs 28 crores. There is every reason to believe that this is the size of open market sales through the tap. Confirmation is already available that the State Bank alone figured as having purchased Rs 20 crores worth of securities during the week; and the balance of the decline in the Reserve Bank holdings doubtless relates to the purchases of other Scheduled Banks. It is the heavy tap sales of the Reserve Bank which suggest that the Scheduled Banks, suffering from a slack season plethora of resources, are being compelled to add to their giltedged portfolio.

For the rest, the Reserve Bank returns show that Deposits under the three main heads have declined: the Centre's balances are lower by Rs 4.35 crores at Rs 60.16 crores; those of State Governments, in addition to a small increase of Rs 0.64 crores in ways and means borrowings from the Reserve Bank, are lower by Rs 5.98 crores at Rs 22.32 crores; and the Reserve Balances of Scheduled Banks, mainly on account of the State Bank, have been run down by Rs 8.85 crores to Rs 81.80 crores. It may be noted that the drawings on the Reserve Balances have been for the purpose of purchase of giltedged from the Reserve Bank. Finally, the import surplus stands revealed in a decline of Rs 2.42 crores to Rs 9.83 crores in Balances Held Abroad.

*

The return of the State Bank for July 31 discloses another steep rise of Rs 20.53 crores to Rs 347.12 crores in giltedged investments. Thus, since the new loan week of the Central Government, the giltedged portfolio of the State Bank has expanded by Rs 53 crores; and, over this period, Deposits of the State Bank had arisen only by Rs 12 crores. We wonder whether, during the 1958-59 busy season, the State Bank might have deferred contra investment in respect of counterpart funds, owing to the severity of the demand for accommodation. Or it may be that the return of funds is assuming such vast proportions that the State Bank is considering it desirable to add to its giltedged holdings. In any case, the latest week's purchases of giltedged was "financed" in the following manner: by Rs 3.95 crores as representing an increase in Deposits, to Rs 547.02 crores; by Rs 8.25 crores being the size of the decline in cash in hand and with Reserve Bank, now placed at Rs 25.27 crores; by Rs 3.27 crores, constituting the contraction, to Rs 174.71 crores, in Advances; and by Rs 6.31 crores in respect of the fall in Other Assets, to Rs 14.67 crores.

*

The return of the Scheduled Banks for July 24 constitutes a landmark in that, with a rise of Rs 13.44 crores, Deposits have crossed the Rs 1800 crore level to be placed at Rs 1812.98 crores; and roughly Rs 4 crores of the rise in Deposits can be traced to the State Bank. Interestingly, for the first time in some weeks, the rise in Deposits is mainly under the head of Demand Liabilities. The accentuated slack season condtions are reflected in a drop of Rs 11.59 crores to Rs 965.41 crores in the total of Advances, with the State Bank's share being Rs 6 crores, in round figures. This is an embarrassde richesse which left banks with no choice other than to add to the giltedged portfolio. Purchases through the Reserve Bank tap amounted to over Rs 18 crores, Rs 11 crores of this being attributable to the State Bank. Borrowings from the Reserve Bank have been shaded to less than Rs 1 crore. In the result, cash balances have nevertheless, improved by Rs 2.41 crores to Rs 182.59 crores—despite the State Bank having figured in the relevant week as drawing down its cash balances by roughly Rs 4 crores.

During the week ended July 31, it is known that Scheduled Banks have further added to their giltedged portfolio by roughly Rs 30 crores; and this means that investments of Scheduled Banks will cross the Rs 700 crore mark. There is likely, we suggest, to be an insatiable—if we may use the word—demand for giltedged during the rest of the 1959 slack season on the part of Scheduled Banks.

Government Securities—Payment of Interest

Government Promissory Notes of the following loans (Central and State Governments) interest on which falls due for payment during the months of September and October 1959 will be accepted by the Public Debt Office, Reserve Bank of India, Calcutta for preparation of interest warrants from the 17th August and 16th September 1959 respectively.

Interest falling due in September 1959
2½% 1976
3% Con. 1946
4% 1960-70
2½% Madras 1961
2½% U. P. 1961
3% Madras 1960
3% M.P. 1964
3% U.P. 1960
3% U.P. 1961-66
3½% Bombay State Dev. 1962
3½% Madras 1962
3½% M.P. 1962
3½% U.P. 1962
3½% West Bengal 1962
4% Andhra 1967
4% Bihar 1967
4% Bombay 1967
4% Hyderabad 1967
4% Madras 1967
4% M.P. 1967
4% Mysore 1967
4% Saurashtra 1967
4% U.P. 1967

4% Saurashtra 1968
4% Trav.-Cochin 1968
4% U.P. 1968
4% West Bengal 1968
4% Bomaby 1970
4½% Bombay 1969
4½% Mysore 1969.

Interest falling due in October 1959
3% 1966-68
3% 1970-75
3% Mysore 1956-61
3½% N. P. Loan 1964
4% Hyderabad State Dev. 1963.

Holders of the loans are advised to lodge their securities well in advance of the due dates to facilitate delivery of the securities and interest warrants on the due dates. In view of the heavy work involved, the period for delivering securities tendered for payment of interest on the above loans may be extended to five clear working days.

Socialists and Sterling

By

Paul Einzig

NOW that it is highly probable that the general election will be held in the autumn many people are beginning to speculate about the possible effect of a labour victory on sterling. Although, at the moment a Conservative victory is considered more likely, the possibility of a victory of the Labour Party cannot be ruled out. In any case, the margin is bound to be narrow on either side, and the appearance of a large number or Liberal candidates greatly increase the uncertainty of the prospects.

For this reason it is not superfluous to attempt to examine the ways in which sterling would be affected if a Labour Government should assume office. A question that is frequently added in this connection is whether Labour Government is likely to devalue

sterling or to allow it to depreciate below the existing lower limit of $2.78 as a matter of policy.

Alternatively, is a Labour Government likely to be forced into a devaluation or depreciation of sterling against its policies by a flight of capital, British or foreign? Further, we have to make up our minds whether a Labour Government is likely to endeavour to defend sterling by restoring exchange restrictions and whether it would be prepared to defend sterling with the aid of disinflationary measures.

It is safe to take it for granted that it is not the present intention of the Labour Party to devalue sterling, or to allow it to depreciate. It is true, some years ago, Mr Gaitskell was toying with the idea of adjusting sterling from time to time by changing its parities. But he has long abandoned that idea. A Labour Government will not deliberately change the parities of sterling or widen the existing limits of its permitted fluctuations.

It is considerably less certain whether a Labour Government would be able to hold sterling at its present level in face of a sweeping flight of capital, even though it would want to do so. There is bound to be such a flight, not so much in anticipation of a devaluation as in anticipation of a tightening of exchange restrictions. It would take some time before the confidence of holders of sterling in the Labour Government's intentions to maintain convertibility is sufficiently established to bring the flight to a halt. Many holders would be inclined to get out while the going is good.

There is of course no convertibility for British residents, many of whom might wish to transfer capital abroad in anticipation of high taxes and other anti-Capitalist measures. As sterling is convertible for foreign holders, it is easier for British residents to circumvent the restrictions. Innumerable loopholes, similar to the "Kuwait gap" or the "Hong Kong gap" are certain to exist. Any outflow through such gaps barely amounts to a trickle at present, but in case of a Socialist victory, it might increase considerably.

In such a flight of capital should greatly reduce the gold reserve, the Government would have to envisage the possibility of a devaluation. Yet a devaluation might not be the right remedy in the situation. For, those who transfer their capital abroad for fear of anti-Capitalist measures are not likely to stop the operations as a result of a devaluation. Admittedly, since sterling would attract foreign funds at its devalued level, the outflow might be offset to some degree.

It seems probable that a Labour Government would consider it one of its most urgent tasks to defend sterling by means of exchange restrictions. But a great deal of capital is bound to find its way abroad before effective measures could be introduced. The administrative organisation created by the Bank of England since 1939 to operate the highly involved exchange regulations has been greatly reduced in recent years. As and when the restrictions have been gradually relaxed many clerks have been dismissed or absorbed by other departments. The Bank of England has therefore no longer the staff capable of dealing with extensive exchange control.

It would become necessary to reconstruct the administrative organisation, and this would necessarily take time. If it should only take a few weeks, a great deal of capital can find its way abroad during that period. A solution would be to suspend exchange operations pending the reconstruction of the control. While this could be done for a day or two without inflicting undue hardship on business, a standstill of several weeks would be highly damaging.

In the long run, sterling's prospects under a Labour Government would depend on that Government's willingness to defend sterling with the aid of disinflationary credit squeeze. Exchange control and various other physical control measures might suppress the effects of a moderate inflation, but they could not possibly suppress the effects of a substantial inflation even if it takes place gradually over a period. Of course, if inflation should proceed at the same rate abroad as in Britain, the balance of payments would not suffer and sterling might hold its own after the end of the initial flight. The suspicion against the dollar would also help a Socialist Government to hold sterling.

Everything would depend on whether, under a Labour Government, the wage-cost spiral would tend to be mitigated or accentuated compared with its present pace of progress. According to a favourite Socialist argument, under the egalitarian policy of a Labour Government, the trade unions would be willing to be content with more moderate increases than they are at present. But this was not the experience during the Labour Government of 1945-51. In fact, trade unionist Members of Parliament are worried about the prospects of being exposed to an increased pressure by their members who would naturally expect to benefit by the advent of a Labour Government. So, the possibility of steeper inflation must be envisaged, if the Socialists should win.

WORLD OF BUSINESS

Uptrend in Engineering Goods Export

PERHAPS the most prominent development so far as foreign trade in post-independence India is concerned is the country's emergence as an exporter of manufactured articles. With the sizable progress in industrialisation during the past decade, the manufactured items on our export list have steadily increased in number while quite a few of them have found favourable reception even in such an industrially advanced country as the United States of America. This new trend has engendered the hope that India can, given the necessary national effort, soon join the ranks of countries which figure prominently as exporters of finished goods.

Among this new class of exports, engineering goods have shown good promise in recent years. Indian Engineering goods have found their way into markets in many a foreign country. The very fact that some of these items are being bought by consumers in Western countries shows that they are of a comparable quality with similar articles produced by the major exporting countries. This is a gain of no small magnitude because the confidence among consumers that Indian Engineering goods are of a high quality will pave the way for their acceptance in quantity also, provided other conditions like price are also equal to, if not more attractive than, those of goods of other origin.

The problems that confront us in the promotion of export of engineering goods are, therefore, the relatively high cost of our products and the lack of adequate facilities to impress on the consumers about the comparable quality of our products with those of others in world markets. The first problem no doubt offers no easy solution, considering the fact that our competitors have the advantage of long experience in the export trade and improved technology in regard to mass production. The second problem is less difficult than the first in that it only involves wide scale publicity and personal contacts.

It is evident that, if our export production is to pay rich dividends, our products have to satisfy the twin-requirement of a competitive price and a high quality. To achieve this, concerted efforts from Government, the manufacturers and labour are needed.

It is also to be borne in mind that the problem of export has been difficult even for those countries who have long experience in the field on account of the return of a buyer's market in the world. Intense competition for the custom of consumers and the resultant adoption of various techniques, such as subsidies and export incentives designed to expand export trade, have become the order of the day. It is in this context of intense cofmpetition among seller countries that our export promotion activities are to be juxtaposed in order to make an assessment of the requisites for our success.

It is, however, gratifying to note that, in spite of severe handicaps, engineering goods export is recording a steady uptrend. The results for the first six months of the current year are quite encouraging. According to a press communique issued by the Engineering Export Promotion Council, exports during the period January-June 1959 have registered an overall increase of Rs 40 lakhs over the corresponding period of last year. Export to all the principal countries shows an uptrend. The communique says that the increase "indicates that Indian Engineering goods are beginning to establish themselves in many countries by virtue of their quality and that there are promises of further expansion, provided exporters are given the necessary support in the initial stages to enable them to compete with other exporting countries."

Exports in the first six months of the current year have been of the order of Rs 2.34 crores as against Rs 1.93 crores during January-June 1958. To this improvement, all the zones West Asia, South East Asia, North and Central America, Africa Europe, Oceanic Islands and West Indies—have contributed. Our Engineering industry can feel justifiably proud of the fact that our engineering goods exports to countries like the USA, the UK and the continent have been substantially higher during the first half of the current year than during the corresponding period of 1958.

It would appear that, but for the non-implementation of the agreements with Egypt, Iraq and Burma, the results might have been far better than they are. One of these agreements, the Indo-Iraqi Agreement, has, however, been ratified now. The Council is confident that the target of Rs 6 crores fixed for export of engineering goods during 1959 can be attained, provided the remaining Agreements are implemented and provided there is at least a partial elimination of other problems facing the exporters.

Market surveys have shown that there is great scope for our engineering goods in the Middle Eastern countries. Though Western countries are firmly established in this region, indications are that Indian Engineering goods can also establish themselves in these markets. It would appear that consumers in these countries prize quality more than anything else. It is said that, if we are able to supply goods of uniformly good quality, we may be able to secure sizable business even though our costs are higher than other comparable goods. There is a growing demand for light engineering goods in Iraq and other Middle East countries where, due to their oil wealth, the standard of living of the people has risen considerably in recent years. A recent survey conducted by the Engineering Export Promotion Council has also revealed the existence of unsatisfied demand in engineering goods in several regions in Near and far East Asia.

*

Provident Fund Contribution

THE Government of India are considering an amendment of the Employees Provident Fund Act 1952 with a view to providing for the payment of Provident Fund contribution both by the employer and by the employee on the total earnings of the employee. The total earnings will include the following types of allowances:

(1) Retaining allowance.
(2) Holiday with pay allowance.
(3) Festival or paid holiday allowance.
(4) Incentive pay.
(5) Incentive bonus.
(6) Retainers allowance paid in the sugar and other seasonal industries.
(7) Night duty allowance.
(8) Overtime allowance.
(9) Shoe allowance.
(10) Servant allowance in plantations.
(11) Production bonus.

The proposed amendment should be viewed in the light of other similar measures currently engaging the attention of Government. The possibilities of enhancing the rate of contribution payable by employers under the Employees State Insurance scheme to the maximum provided by the Act, i.e., 4¾ per cent, is being studied by Government with a view to its implementation. (At present, the employers in the implemented areas pay 1¼ per cent of the total wage bill and those in the non-implemented areas pay ¾ per cent of the total wage bill as contribution under the ESIS). Then, there are also the recommendations of the Study Group on Social Security. This group has, inter alia, recommended the introduction of a scheme whereby workers would be given a small sum as gratuity at retirement in addition to pension. In order to achieve this, the group has suggested an increase in the rate of contribution payable under the Employees Provident Fund Act from 6¼ per cent to 8 1/3 per cent.

Before we proceed further to discuss in greater detail the proposal to deduct Provident Fund contribution on total earnings, it is necessary to note the present position. Under Para 29 of the scheme, contributions are payable both by the employers and by the employees at the rate of 6¼ per cent on basic wages plus dearness allowance (including the value of food concessions). Dearness allowance has been defined in the Act as all cash payments by whatever name called paid to an employee on account of a rise in the cost of living.

In an establishment where incentive pay and incentive bonus schemes are in vogue, it is quite possible that they might apply to some sections alone. In such cases, in respect of the employees who get incentive pay, etc., the employer will be called upon to pay more toward Provident Fund contributions. As between two employees drawing the same salary, if one were employed in the section where incentive pay is payable, his over all salary would go up. The man who has no scope to earn more under any incentive scheme will be poorer through no fault of his. This is certain to create unrest. It is probable that the employer may be compelled to pay equal contribution in respect of all. Thus, an employer who introduces Incentive Pay schemes in order to increase production, which is also the aim of Government, will be so much the worse for it.

So is the case with Production bonus. In an establishment which has an office and a factory, it is likely that a scheme of production bonus may be applicable to the factory alone. Those who are in the factory will earn more by reason of the increased contribution payable by the employer. This is likely to create dissatisfaction among the office staff. Moreover, transfers from office to factory and vice versa may also present a problem. A person working in the factory will be reluctant to be transferred to the office because, to the extent of the production bonus, he will loose the employer's share of the contribution. This may be construed as a change in the service conditions to the detriment of the person concerned.

Overtime allowance stands on a different footing altogether. Those who come within the purview of the Factories Act are governed by Section 59 of the Act as regards overtime pay. This section lays down that wages for overtime shall be twice the ordinary wages. In most of the other establishments also, wages for overtime are no less favourable. A worker who works overtime stands to gain in two ways. For working overtime, he will get twice his normal wages for that period. On this increased amount, the employer will have to pay Provident Fund contributions. This may make the workers slacken during normal working hours so that they could put in overtime. This will affect morale.

Finally, the 'take-home pay' will be reduced to the extent of the increase in the quantum of contribution.

WORLD OF JUTE

Jute Loomage: To Unseal or not

AS early as June last, when the decision to unseal 1½ per cent of the looms, thereby bringing the sealed looms back again to 12½ per cent, was announced, a case was made out in this column for increasing the percentage of the looms to be unsealed. This view was prompted by the depleted state of stocks and the increasing tempo of offtake. It was pointed out that, though the situation obtaining at that time might not seem to warrant a sizable increase in production, the longterm interests of the industry demanded the trade be provided with adequate stocks, nothwithstanding the possibility of mills being left with a load of unsold stocks, rather than allow a squeeze in jute manufactures to develop. That view was considered to be based on too much of optimism with regard to foreign offtake of jute goods.

The weeks that followed having more than fulfilled expectations as regard foreign offtake, the need for increasing production has come to be more widely recognised. Marketmen have since been in no mood to ignore the possibility of the IJMA announcing a further unsealing of looms. There have been periodical rumours about impending announcements of further unsealing. And such rumours have been treated with due respect. It will be no exaggeration to say that it is these rumours that have largely helped keep prices at sober levels.

But, in the past week, even this has not proved strong enough to hold down the upward pressure; and prices, especially in the sacking section, have shot up to new highs. B Twills ready are today quoting above the Rs 100 mark. The present trend is in marked contrast to the depressed state of the heavy goods section this time last year, when the IJMA tried its best to check the downtrend in sacking prices by means of a voluntary agreement among member mills not to sell B Twills below Rs 100. The attempt, however, met with little success, and the IJMA was obliged to scrap the agreement toward the last quarter of the year. The main reason why the IJMA position became untenable was that overseas consumers generally considered the floor price unrealistic. But the removal of the restriction did not improve matters because, anyway, demand for sacking goods continued to be at a meagre level. In order to reduce the embarrassing accumulation of sacking stocks, the industry was obliged to embark upon a programme of transferring sacking looms to the production of hessian. Thanks to the steady demand for hessian goods, the adjustment proved quite beneficial.

The situation in the past four, five months has distinctly taken a turn for the better. While hessian has continued to meet with good demand, sacking goods have also begun to move faster than during the early part of the year. Total stocks with mills have been showing a declining trend for the consecutive six months to June, and indications are that stocks as at the end of July will show a further diminution. The decline in sacking stocks has been continuous, having come down steadily from 82,700 tons at the end of January to 57,900 tons at the end of June.

In recent weeks, the sacking section has been continuously in the limelight, having been the receipient of attention from a number of consuming countries. It has already been pointed out in this column that Chinese offtake should have been sizable. That country is again at the head of the queue of buyers. The attention of our readers has also been drawn to the reports about a bumper crop in Australia. This country has not figured in the market as a buyer of any quantity till recently. The delay is to be attributed to the lateness of the harvest caused by adverse weather early in this year. However, indications are that substantial orders from Australia will be forthcoming in coming weeks. The hessian situation continues to be good in view of the fact that the period of high consumption for burlap in the USA has just started. The Argentine demand may also materialise any moment.

There is thus a clear case for increasing production if only to obviate a steep rise in prices. And such a tendency may be said to be prevailing already in the sacking section. Though hessian is subdued, it will not remain so when some indication is available of a substantial enquiry. It is of course true that the industry has a right to use any given situation to its best advantage. Latterly, consumers in a number of countries seem to have developed a preference for sacking and, consequently, it is quite in order to leave the pattern of demand and supply undisturbed. A higher price is any day welcome. But the paramount questions are whether sudden jumps in prices are good for the long term interests of the industry and whether it is prudent to tell intending purchasers that a higher price is inevitable because goods are in short supply. Recent past experience has shown that overseas consumers of packaging materials are no longer at the mercy of jute goods producers but have made alternate arrangements, some of them irrevocable as in the case of bulk handling. For one reason or another, substitute packaging materials are making headway in almost all consuming countries. There is also no lack of recognition of the fact that, if the jute industry has to survive, it has to address itself increasingly to a diversification of production. It is in this context of consumer resistance and of the headway that is being made by substitute packaging materials, etc., that the present supply position of goods has to be considered.

*

Prices of Jute Goods have shown a mixed trend during the week under review. Thanks to the continued flow of overseas orders, the sacking section, particularly, has been more lively than of late, while hessians are comparatively neglected in the absence of any enquiry, either from the USA or Argentina.

Dealings in the market, during the past few weeks, reveal that, coupled with substantial enquiries, both foreign and domestic, for heavy goods, there has been a shortage of a number of constructions, especially for near deliveries.

In fact, with the exception of business done with Australia to the extent of 6,000 bales of cornsacks for September delivery, no transaction has taken place with any other foreign buyers. Even buyers from the USA have not shown any interest despite the fact that consumption in that country is reported to be running at a higher level.

But, the two main factors, which have contributed to the sustained firmness in the market, are the strong statistical position of the industry and oversold position of the mills.

Compared with the level at this time last year, the price of raw jute is Rs 80 per ton lower, while the price of heavy goods is only slightly reduced. Hessians have, however, fallen by over Rs 105 a ton. There is, therefore, greater profit in sackings than in hessians so far as mills are concerned.

Although hesians are relatively inactive, the fact that the average monthly consumption in the USA is currently running at a high level of 75.5 million yards against 68 million yards last year has strengthened the belief that the long-term prospects for this category of goods are bright. Since the second half of the year is usually a period of larger consumption, it is firmly believed that US consumption this year may show a substantial rise.

On the whole, it is clear that the Indian jute industry will find little difficulty in disposing of its increased production. It may even be possible for the industry to reduce rates in order to boost exports, as it is now making good profits at the ruling prices.

Meanwhile, rumours about the possibility of further unsealing of looms still persist in the market. But, the IJMA seems to be very cautious about taking any step in this regard, so that the recent unhappy experience of reversing the decision on unsealing of looms within a short period is avoided. Market circles are, however, inclined to await a final decision in the matter, before extending their commitments. The outcome of the IJMA meeting, scheduled to be held on the 11th August, is therefore keenly awaited.

Though sentiment in the Raw Jute section has improved in sympathy with the manufactured goods section, business done is only in small lots. This is mainly due to limited interest shown by the mills in the belief that India has now reached near self-sufficiency in the supply of the golden fibre. This consideration aside, mills are reported to have ample stocks to run them for some more months. They can, therefore, well afford to buy slowly, especially when reports from the jute-growing areas are encouraging and the crop is making satisfactory progress though rain is urgently needed in some areas. Meanwhile, Assam Bottoms are quoted at Rs 22.00 and Rs 23.25 per maund for the old and new crops respectively.

Following were the price trends during the week:—

	July 29th	Aug. 3rd	Aug. 5th
	Rs	Rs	Rs
Hessian:			
40″ × 10 ozs Ready ..	40.45	40.55	40.30
40″ × 10 ozs September ..	40.30	40.45	40.30
40″ × 10 ozs Octr.-Decr. ..	39.80	40.00	40.00
40″ × 8 ozs	33.75	33.25	33.20
40″ × 7½ ozs	30.95	31.00	30.80
Sackings:			
B. Twills Ready ..	98.20	100.80	101.40
B. Twills September ..	97.95	100.25	101.75

WORLD OF TEA

Discriminative Buying Policy

IN the Tea auctions, buyers have continued to follow quality and are paying attractive prices for the best qualities. Where quality is on the decline, there have been some withdrawals. While this is very much the off-season for the London tea trade, dealers there are quite convinced that Common tea is in for another mediocre year. Attention is being drawn particularly to the growing competion from British East Africa.

In the Export Sale held in Calcutta this week, offerings were 40,717 packages. Although the sale opened with a strong general demand, buyers turned more selective toward the close, particular attention being paid to bright liquoring teas and those with clean black leaf appearance. Plain Broken grades were sold at slightly dearer rates, which similar Fannings were keenly competed for and could be quoted upto 15 nP per pound dearer. Any bright liquoring teas of orthodox manufacture met with good support and were generally sold above valuations. BOPs, however, ruled easy with quality.

Bright liquoring CTC teas were sold well; but plainer descriptions in this category, particularly where fibre was present, were sold at easier rates. Black well-made Whole Leaf grades were sold readily around valuations. Darjeeling teas showed an easier tendency, particularly where quality was on the decline and there were some withdrawals. Tippy teas were again well supported. Following rates were quoted per pound:—Clean Black Pekoe Rs 1.96; Plain BP Rs 1.74 to Rs 1.80; Plain Fannings Rs 1.86 to Rs 1.96; Medium BP Rs 2.00 to Rs 2.10; Medium Fannings Rs 2.10 to Rs 2.20; Best Assam CTC BP Rs 3.50 to Rs 3.50 and Best Assam CTC Fannings Rs 3.90 to Rs 4.30.

In the Internal Sale, offerings were 13,921 packages of Dusts. There was a strong general demand, particularly for black exportable types which generally realised prices which were upto 10 nP per pound and sometimes more above last rates. Legg-cut Dooars followed the trend of the market and were generally dearer. The few Darjeeling Dusts, on offer, realised satisfactory prices.

Medium CTC dusts were irregular except for some exportable types which came to a good market and were firm and often dearer. The few very best CTC dusts, on offer, were generally easier. The only exception were the powdery types, which met with keen competition. Following rates were quoted:—Medium Dooars Dust Rs 1.90 to Rs 1.96; Medium Assam Dust Rs 1.86 to Rs 1.94; Medium Assam CTC Dust Rs 2.05 to Rs 2.20 and Best Assam CTC Dust Rs 2.70 to Rs 3.00. A total of 267 packages of Leaf grades was offered and these met with a good demand.

In the Export Quota section, no business was reported done. There were, however, buyers at 2¼ nP with sellers at 2½ nP per pound.

In the Cochin market, offerings were 825,000 pounds. The quality of tea offered showed a further improvement and there were some useful high-growns on offer. The demand was maintained throughout the sale. There was useful enquiry for Low Medium and Medium Brokens and these were steady at last week's rates. Similar Fannings were, however, occasionally easier. High-growns were well supported and prices for these remained steady.

Whole Leaf grades were firm to dearer following quality. Tippy teas met with a useful demand. Low Medium was quoted at Rs 1.48 to Rs 1.65; Medium at Rs 1.60 to Rs 1.75; Good Medium at Rs 1.85 to Rs 2.10 and Quality at Rs 2.05 to Rs 3.00.

According to planting opinion, year-end production in South India may show an overall shortfall by about 10 million pounds. The incessant rains have not done much to help better production. But, exports from South India have not fallen to the same extent as production.

Shipments of tea from South India have declined to only 10.37 million pounds in June as compared to 13.12 million pounds in the corresponding month of last year. Exports to the UK have fallen sharply from 8.99 million pounds to 7.4 million pounds as did those to Australia from 1.14 million pounds to 515,700 pounds. Canada has also reduced its offtake from 623,610 pounds to 301,610 pounds. Exports to the USA are, however, higher at 597,130 pounds against 317,750 pounds in the corresponding month of last year. In the first half of the current year, total shipments of South Indian tea are lower at 40.81 million pounds in the corresponding period of last year. Of this, exports have accounted for 36.07 million pounds against 44.78 million pounds in January-June 1958.

The sale, originally scheduled to be held in Colombo on July 20, consisted of 6,992,271 pounds. Of this, large breaks were eventually sold on July 24 and offgrades and small breaks were sold on July 27. There was a strong demand for all improved quality teas at dearer rates. There was little change in the quality of Nuwara Eliya teas and there was less demand with prices generally lower for both broken and leaf grades.

The quality of high-grown teas from Uva districts was generally improved and demand was very strong and prices were correspondingly higher for all grades. A small selection of the best quality broken grades from western districts were sold well at about last rates; but there was distinctly less demand for other sorts at substantially lower rates.

There was an active demand for medium-grown teas with prices advancing by about 15 cents per pound for better liquoring medium brokens and 10 cents for plainer sorts. There was also a strong demand for low-grown teas, the Middle Eastern types being 5 to 10 cents per pound dearer. Fannings grades with improved quality were taken up at dearer rates. Off-grades were generally dearer, particularly bright liquoring Uva sorts.

In Djakarta, the quantity of tea on offer totalled 2,700 packages. Quality was maintained. Selective buying was evident and prices were irregular. Some selected invoices maintained their previous levels. But, on the whole, the market showed an easier tendency. In particular, teas lacking quality and attractive appearance changed hands at lower prices. Dusts were still in good demand. Offerings of leaf grades remained scarce.

In London, tea stocks, as on July 24, totalled 112.19 million pounds as against 114.28 million pounds in the previous week. Total amount to be landed on the same date was 11.66 million pounds. Total afloat was 14.75 million pounds including 11.27 million pounds from Calcutta; 78,900 pounds from Chittagong; 1.77 million pounds from Cochin and 158,100 pounds from other Ports. Average prices realised, during the week ended July 27, were 45.62d per pound as against 46.75d in the previous week and 49.57d a year ago.

How do your costs compare?

How does your performance rate?

Is there wasteful or avoidable expenditure on your plant?

Let us do the worrying for questions like these...and help you find the answers. It's not just enough, if you compare current costs and performance with what these have been in the past or with what are accepted as normal. *Do costs and performance compare with what these should really be?* That's the acid test ... and we conduct it.

acbi *diagnoses* and *prescribes*... you are not only told why wasteful expenditure occurs, but precisely what-remedial action you should take.

acbi is currently assisting industries in both public and private sectors. If you have problems relating to cost control, labour-management relations, job evaluation, work study, production control, quality control, material handling, office reorganisation etc., you'll do well to.

WORLD OVERSEAS

Britain

British awareness of the need for capital to finance international development was emphasized by the United Kingdom representative—Mr A. A. Dudley, adviser on economic and social affairs to the permanent British delegation at the United Nations—at the 28th session of the United Nations Economic and Social Council meeting at Geneva.

Mr Dudley observed that a great deal of capital from public sources was provided directly between governments. The United Kingdom had made grants in the last five years of £245,000,000 and loans of £75,000,000—"virtually the whole of it to governments in underdeveloped countries".

Much public capital was provided through international institutions, and the United Kingdom Government was convinced that such bodies had a vital role to play.

Mr Dudley said the United Kingdom regarded that an increased flow of private capital was essential for the acceleration of economic development everywhere. The United Kingdom was second only to the United States as an exporter of private capital. "In the last five years alone . . . the total outflow of private capital from the United Kingdom was more than £1,000 million".

"VITAL CONTRIBUTION"

It was not possible to state exactly what this outflow went to underdeveloped countries, but it was certain that more than half of it did so. "We believe that it has made, and will continue to make, a vital contribution to solving the economic problems of the recipient countries. We also welcome, for that reason, the measures which a number of countries have taken to ensure that foreign capital is attracted to investment in their industries".

Of the flow of private and Government capital, Mr Dudley said that when one considered the two "it is evident that the latter is, and will be, increasingly weighted in favour of those areas and those forms of investment which are at present insufficiently attractive to the private investor.

"This is what has happened, and is happening, in United Kingdom assistance to underdeveloped parts of the Commonwealth. This trend will undoubtedly continue, and it is within the province of this Council to encourage it in the wider field of international assistance".

British production of passenger cars maintained its high level in June, with 123,059 units—an increase of about 20 per cent on the same period a year ago. Exports were also higher, at 47,586 units.

In the first half of this year, exports of cars were 18 per cent higher than a year ago.

Increased exports of cars and commercial vehicles accounted for the greater part of the 39 per cent increase in total exports to the United States in the first half of this year over the first half of 1958.

FURTHER RISE IN STERLING AREA RESERVES.

Net Gain of £54,000,000 This Year.

THE gold and convertible currency reserves of the Sterling Area rose by £17,000,000 in July and stood at £1,150 million on the last day of the month, the Treasury announced in London on August 5.

It was stated in London that July was another favourable month for the reserves, and reflected the continued strength of the demand for sterling. But for the payment of £7,000,000 during the month in respect of the United Kingdom's bilateral debts with the European Payments Union, the rise in the reserves in July would have totalled £24,000,000.

The increase in the reserves is the largest in July since the year 1953, and compares with a rise of £2,000,000 a year ago, a fall of £4,000,000 in 1957, and a rise of £7,000,000 in 1956.

The net gain in the reserves in the first seven months of ths year adds upto £54,000,000. With the exception of two months, when repayments were made on the North American and International Monetary Fund loans, the reserves have risen every month since September 1957.

FAVOURABLE TRENDS.

Commenting on the increase in the reserves, the *Daily Telegraph* (August 6) says: "Ths rise took place not only against the normal seasonal trend, but also in spite of some withdrawals of money from London during the month. There seems, no doubt, in other words, that the Sterling Area's dollar balance of payments is running well on the right side.

"The United Kingdom's own exports to the dollar area are still rising; sales of commodities from other sterling countries are increasing, at slightly higher prices; and the flow of capital for development, partly from the World Bank, continues to build up. All these favourable trends are likely to persist into the autumn.

"The importance of this is not merely financial. Compared with two years ago, the reserves are now just over £300,000,000 up. Our debts are more than £200,000,000 down. By subscribing to increase the resources of the International Monetary Fund, we have opened for ourselves a potential overdraft with that institution of £290,000,000. As a result, there is really no conceivable possibility that the movement against sterling which must be expected when the general election actually approaches could embarrass the Treasury".

The *Financial Times* (August 6), elaborates the same encouraging theme, finding the United Kingdom's position this year "perfectly sound".

IN PARLIAMENT

PUBLICITY MATERIAL IN HINDI AND REGIONAL LANGUAGES

In written reply to a question by Shri Prakash Vir Shastri as to the total number of posters, folders, pamphlets, etc. printed by Government during 1958-59 in connection with the publicity of National Savings Scheme, Five Year Plan and Grow More Food campaign, the Union Minister for Information and Broadcasting, Dr. B. V. Keskar, stated in the Lok Sabha on August 3, 1959 that publicity literature is published not only in English and Hindi but in various other Indian languages depending upon the nature of the poster or pamphlet etc. Government also attach special importance to publication in Hindi and other regional languages.

The total number of posters, folders, pamphlets, etc. printed by the Directorate of Advertising and Visual Publicity and Publications Division of the Ministry of Information and Broadcasting during 1958-59 in connection with the publicity of National Savings Scheme, Five Year Plan and Grow More Food campaign and the number out of these printed in Hindi and English and other languages are: 246 for National Savings Scheme, out of which 18 are in Hindi, 19 in English 209 in other languages; Five Year Plan 399 out of which 30 in Hindi, 44 in English and 325 in other languages, and Grow More Food Campaign 53, out of which 10 are in Hindi, seven in English and 36 in other languages.

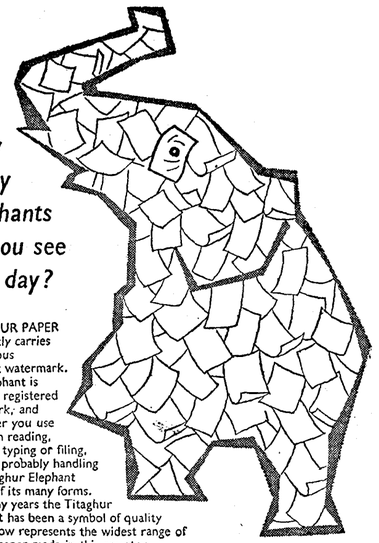
STATE AWARDS FOR PUBLIC UNDERTAKINGS

The Government of India have decided to give some awards every year to public undertakings. This information was given by the Minister for Industry, Shri Manubhai Shah, in the Lok Sabha on August 3, 1959 in reply to a question by Shri Pahadia.



Shri Shah said that in considering the performance of any units, weight would be given to a number of factors including, among others, significant increase in production over the programmed target; profits; labour relations and any special contribution which the unit might have made to the economy, through research, discovery of new process, design, method etc., of production.

Shri Shah added that the scheme at present is confined to public undertakings run by the Central Government.

*

PLANT FOR CAUSTIC SODA.

The Government of India have approved a scheme of an Audhra firm to establish a plant for the manufacture of caustic soda. This was stated by Shri Manubhai Shah, Minister for Industry, in reply to a question in the Lok Sabha.

How many elephants do you see in a day?

TITAGHUR PAPER frequently carries the famous Elephant watermark. The Elephant is also our registered trademark, and whenever you use paper, in reading, writing, typing or filing, you are probably handling the Titaghur Elephant in one of its many forms. For many years the Titaghur Elephant has been a symbol of quality and it now represents the widest range of quality paper made in this country. Today, the Titaghur Mills produce more bamboo pulp and paper than any other mills in the world.

To blow on whom I please"
—As You Like It.

READERS may have remarked that, though the situation in Kerala took an ominous turn long before the last week's denouement, I have been scrupuously avoiding giving my reaction in the matter. I confess that it was a deliberate decision on my part thus to eschew Kerala as a topic. My excuse had always been that it is a political subject and, hence, not something that I should feel compelled to write about. But, I am afraid that, at best, it was a contrived excuse, because, basically, communism itself is as much an economic as a political issue. Why, then, my reluctance? I think, because I had always realised that the turn of events in Kerala was such that, very unfairly, the Central Government were placed in a position wherein whatever they did would be wrong. Moreover, the Communists in Kerala were playing such a deviously clever game that, it appeared to me at one time, their cause would be helped by whatever the end result. Frankly, I did not have any helpful suggestion that could, as it were, rescue the Central Government from an embarrassing, delicate and unenviable position. But now that the furore is dying down, though the Lok Sabha has been the scene of frenetic displays of frustration by Communist party members, it would perhaps be helpful if we could assess as best as we may the gambits and counterploys that were employed in the Kerala affair.

*

I should think that, with the very election of the Communist Government in Kerala, the prospect was already there of a set of disturbances or of a show down calculated to oust the Communists from the first government to which, anywhere in the world, they had been democratically elected. For, it was a minority that elected the Namboodiripad Ministry to power; and whatever it might have done, the Communist Ministry could scarcely have avoided offending one or the other of the opposition minorities. Thus was the stage already set, early in 1957, for the exciting events that were to follow two years later. Indeed, on the face of it, it is paradoxical that, in a democratic country, the Communist party could have got elected to a State Government. I suppose it is ironic that, in a manner of speaking, although the action taken by the Central Government is constitutionally based, the ousting of the Communist Government has been through non-democratic processes. We may, I think, call it poetic justice.

*

What surprises me in that respect is that the Communist Government should have so conducted their affairs that they aroused the animosity of every opposition group, and served, therefore, to unite these diverse groups in the demand for the overthrow of the Namboodiripad Ministry. I should have thought that the Communists would have been better versed in diplomacy, in setting one party against another, in dividing and continuing to rule. But, quite certainly, the Communist Government can be charged, if not quite with misrule, at any rate with having provoked, by deed as well as by inaction, the ire of the general populace in Kerala. As such, it was proper that the Communist Government, in recognition of the united opposition against them, should have laid down office. That they did not do so, was the first gambit that the Communists tried.

*

That gambit almost came off better than it should have, thanks to the four winds, and the skies opposition parties. Moderate and dignified picketing, dignified and resolute opposition, resolute and insistent demand for the resignation of the Kerala Ministry would surely have been enough and would surely have been successful. Discretion, I am afraid, was thrown to the four winds, and the skies raged in storm, as a consequence, over Kerala.

*

The second gambit on the part of the Communists was to question the propriety of perhaps the illegal demonstrations on the part of the Congress party, as also the propriety of the Congress joining up with what undoubtedly were communal parties of every hue. The second gambit failed—though through no fault of the opposition party leadership in Kerala. It was not sufficiently stressed, as it should have been, that the opposition was commonly united only for the limited purpose of ousting the Communist Government, because that Government had lost their right to continue to rule. Instead, matters were made no better by continued picketing of a sometimes violent nature, despite Mr Nehru's wise counsel that moderation would ensure that justice would prevail.

*

It was here that the Communist party tried its next machination. Ostensibly because opposition to law was getting out of hand, Mr Nehru was asked by the Communist Government to intervene. The on the spot study conducted by Mr Nehru led him inescapably to advise that there had best be fresh elections in the State.

*

By this time, the situation in Kerala was such as to arouse a country-wide insistence that the Namboodiripad Ministry should resign. Charge sheets were framed. The erstwhile Chief Minister of Kerala flew up to Delhi. Confabulations were held, and Mr Namboodiripad announced that his ministry would not lay down office.

*

I rather feel that Mr Nehru was right, when he said that the Kerala Government themselves would have felt Central intervention as being desirable. Indeed, the Namboodiripad Ministry must at one time, in spite of outward appearances, have anxiously been awaiting the fact of intervention. For, it must have been clear beyond all doubt to them, that they could not continue to remain in office. Government by them was impossible. But it would be infra dig to resign. Next gambit, therefore: Compel the Centre to sack the Ministry, so that the Communists could then charge that they had not been given a fair trial in office, and that such action by the Centre was undemocratic.

*

It is in this wise that the Communists, even in the inevitable process of being run out of office, thought they could emerge as net gainers. But, for reason which I shall set out later, this gambit, too, proved to be as unavailing as a misfired missile from Cape Canaveral.

*

Pity the poor Centre. Here was a State Government, ruled by a party in the opposition. Here was that opposition, with every scope for misdeeds of every sort which, if unchecked, might make democracy difficult in future Kerala. That opposition refused to bow out like a gentleman; and waited instead for the bouncer to throw him out. The Centre, if it performed the function of a bouncer in a bar-room, would immediately be labeled a bully; and if it did not, a bar-room brawl of ugly proportions was threatening to develop. The Communist taunt, clearly, was: Be called a bully—or leave us alone.

*

The Communists, I think, hoped to be looked upon as the hapless under-dogs. Except that Mr Nehru had been invited to Kerala, such a picture might indeed have been allowed to prevail. But, once Mr Nehru had suggested the inevitability of fresh elections as solution, the sympathy was transferred to the Central Government for the difficult position in which they were lodged. The question now is, did the Centre really have any alternative to intervention?

*

I am not for the moment interested in the specific acts of the Communist Government that irked the opposition parties in Kerala; but one charge that has, I think, been universally made is that there has been tampering with the

4 Per Cent
ORISSA
GOVERNMENT LOAN 1971

Issue Price Rs. 99.00 per cent.

Opens on the 19th August, 1959

The loan will be closed as soon as a total of approximately Rs. 350 lakhs has been subscribed and in any case not later than the close of business on the 25th August, 1959.

The applications will be received at the Offices of the Reserve Bank of India, Bombay, Calcutta, Delhi, Madras and Bangalore at the branches of the State Bank of India in Orissa and at the Treasuries and Sub-Treasuries in the State of Orissa.

Full particulars can be obtained at any of the Offices of the Reserve Bank of India or branches of the State Bank of India or at any treasury or sub-treasury in the State of Orissa.

GOVERNMENT OF ORISSA

Finance Department

BUDGET

PRESS NOTE

Bhubaneswar, the 29th July 1959

FOUR PER CENT ORISSA GOVERNMENT LOAN, 1971

The Government of Orissa is raising a loan of Rs. 3·5 crores. The loan will be utilised to meet the expenditure required during the current financial year for execution of the following Five-Year Plan Schemes and other schemes of developmental nature, viz., (i) Electrical Schemes, (ii) Mineral and Industrial Development, (iii) Development of State Transport, (iv) Development of Forests, (v) Development of Roads (P. W. D.), (vi) Delta and Medium Irrigation, (vii) Development of Ports, etc. All the schemes except Development of State Roads are directly productive. Against the Road Development Schemes a considerable revenue is expected from Motor Vehicle taxes and Motor Spirit sales tax which provides a complete basis of repayment.

2. Large investments have already been made on many of these schemes out of the resources of the State Government and are represented by valuable assets.

3. Subscriptions will be received at the branches and treasury pay offices of the State Bank of India located in the State of Orissa, in the treasuries and sub-treasuries in Orissa where there is no branch of the State Bank of India and at the offices of the Reserve Bank of India in Calcutta, Bombay, Madras, Delhi and Bangalore. Full details of the terms of the loan are contained in the Finance Department notification No. 25588-F., dated the 29th July 1959, a copy of which with the application form of the loan is obtainable at the receiving offices mentioned above.

4. The State of Orissa started functioning from the 1st April 1936, being separated from the old province of Bihar and Orissa with meagre sources of revenue. Twenty-four princely States merged with Orissa in January 1948. The princely State of Mayurbhanj joined in January 1949. These developments led to certain financial difficulties but vigorous attempts were made to develop the resources of the State. As the following table will show the revenues of the State have been on the increase:—

(In lakhs of rupees)

	Revenue receipt	Revenue expenditure	Surplus (+) Deficit (—) on revenue account
1946-47 (Actuals) ...	4,60.41	4,48·93	(+) 11.48
1947-48 Do. ...	6,04.34	5,84.45	(+) 19.89
1948-49 Do. ...	6,43.64	7,57.82	(—) 1,14.18
1949-50 Do. ...	10,31.73	11,70.89	(—) 89.16
1950-51 Do. ...	10,31.11	12,00.99	(—) 1,69.88
1951-52 Do. ...	11,96.43	10,85.79	(+) 1,10.64
1952-53 Do. ...	12,62.09	11,51.56	(+) 1,10.53
1953-54 Do. ...	12,26.98	13,20.67	(—) 93.69
1954-55 Do. ...	13,99.04	15·48.27	(—) 1·49.23
1955-56 Do. ...	15,60.24	22,99.06	(—) 7,38.82*
1956-57 Do. ...	16,55.61	22,73.82	(—) 6,18.21*
1957-58 Do. ...	22,03.48	23,47.55	(—) 1,44.07
1958-59 (Revised) ...	27,17.81	26,37.85	(+) 79.96
1959-60 (Budget) ...	30,64.69	30.58.39	(+) 6.30

*Note—The deficit is mainly due to the unprecedented manner in which drought and flood followed each other in quick succession.

5. It is well-known that the two projects of Hirakud and Machkund have opened up vast vistas of development and have provided opportunities for a fuller exploitation in the nation's interest of the nature's wealth in which the area bounds. Hence the State Government have undertaken many development schemes. The more important of them are mentioned below:—

	(In lakhs of rupees) 1957-58 Actuals	1958-59 Revised	1959-60 Budget
1. Electrical Schemes ...	1,87.04	1,45.52	1,18.98
2. Mineral and Industrial Development ...	16.81	30.47	14.17
3. Development of Ports ...	19·72	42.48	26.75
4. Delta and Medium Irrigation	1,29.85	2,18.74	4,15.27
5. Development of Roads	92.36	93.43	68.68
6. Forest (Products) Schemes ...	5.89	16.75	15.90
Total ...	4,51.67	5,47.39	6,59.75

6. The Government of Orissa have an outstanding debt of Rs. 1,08,67 lakhs to the Union Government up to the 31st March 1958. This consists of Rs. 1·67 lakhs taken for Intensive Cultivation Schemes, Rs. 3,02 lakhs for Machkund Hydro-Electric Scheme and other Electrical Schemes, Rs. 73,50 lakhs for Hirakud Dam Project, Rs. 75 lakhs for rehabilitation of displaced personnel from East Bengal, Rs. 21 lakhs for Industrial Housing Scheme, Rs. 93 lakhs for Community Development Projects, Rs. 40 lakhs for National Extension Service Programme, Rs. 1,07 lakhs for Expenditure on Development Schemes of power projects, Roads, Road Transport and Industries, etc., Rs. 9 lakhs for Delta Irrigation, Rs. 1,25 lakhs for flood control and Rs. 16,78 lakhs for other Miscellaneous Development Schemes.

7. Against the total outstanding debt of Rs. 1,08,67 lakhs there are assets in the form of investments on productive schemes like Hirakud Multi-purpose River Valley Project, Machkund Hydro-Electric Schemes and other development schemes. About Rs. 8,20 lakhs is due to the Government from Local Bodies, Agriculturists, etc., on account of principal of loans advanced to them. Government also own extensive and valuable assets in the State Transport System, Lands, Buildings, Roads, Forests, Mines, etc.

8. The Government's Budget documents for 1959-60 (printed publications of which are available at the Government Press) give full detailed information regarding the financial position of the State.

electoral rolls in Kerala. Given a continuance of the Communist Government, there can be hardly any doubt that ways would have been found by those in power to perpetuate themselves. It would not be unfair to suggest that the Communists in Kerala were given an opportunity to show that they would respect democracy (this is again a contradiction, but there it is). If half of the charges levelled at them are untrue, even then the other half would be enough to damn the Kerala Government. If only to ensure that the Communists were not given enough time to "infiltrate" the various repositories of power in the State, once the charge of unfair practice had been levelled and proved, the Centre had no choice but to intervene.

*

So, on the part of the Communists, it was a good try to win the sympathy of the people—but it wasn't good enough. The Congress as party has not come off well. But the action of the Central Government has been irreproachable. It is against this background that we have to examine Rajaji's assertion that a bad precedent has been set up in Kerala.

*

Rajaji was, of course, referring to the fact of Central intervention. Though, on many major issues, I have found myself heartily echoing our elder statesman's views, I cannot agree in this particular respect. Unfortunate precedent it undoubtedly was, but only so far as it concerned the attitude of the erstwhile State Government in Kerala and also in respect of the action taken by the opposition, particularly Congress. In bald terms, the Kerala Government sought to blackmail the Centre: and it is this that constituted an awkward and unhappy precedent. In equally bald terms, the Congress party agitation was anything but seemly; and this, too, forebodes nothing good.

*

What of the future? I suggest, certainly, that there should be no hurry about fresh elections. Lists of registered voters have to be carefully scrutinised. It must be ensured that, during their brief term in office, the Communist Government did nothing that might prejudicially affect the holding of free and fair, democratic elections. Then, and only then, and not till then, should the Centre decide upon fresh elections in Kerala. No harm will come of it if stray cries of the end of state autonomy are raised; it is much more important that elections, when held, are democratic. If, at such fresh elections, the Communists should perchance be returned to power, why, good luck to them; but the Centre must beware of handing back Kerala on a silver platter—which is what might happen if, in the name of democracy, elections are too hurriedly and too soon held.

DEPUTY SECRETARY TO G... 11 AUG 1959 PUBLIC DEPARTMENT

GATEWAY GOSSIP

Swatantra Party

BOMBAY REVIEW

LAST week, one more political party has been added to an already long list in our country. But the Swatantra party claims the distinction of being a party whose fundamental principles are clearly distinguishable from those of the other political parties. Mr C. Rajagopalachari, the founder of the Swatantra Party, has pointed out that, between the programmes and policies of the various parties and the Congress, there is little difference and that explains the inability of the parties now in opposition to the ruling party to capture the imagination of the people. As for the Congress, it is fast losing its identity as its programmes and policies increasingly reflect those of Communism.

The two-day convention in Bombay, at the beginning of which Mr Rajagopalachari formally inaugurated the new Party, concluded on Sunday with the adoption of a 21 point statement of principles. In his speech, Rajaji has given a completely fresh explanation for the launching of the Swatantra Party which, he has pointed out, is more a movement comparable to the Indian movement of Freedom against the British rule than a mere party to capture power. The aim of the new movement is the liberation of the individual from the clutches of the State. The Congress, according to Rajaji, is now actively engaged in destroying the freedom of the individual in the name of progress. The immediate goal of the Swatantra Party will, therefore, be "to restore a sense of stability and incentive for individual efforts" and this is attainable only by "strict adherence to the fundamestal rights and guarantees specified in the Constitution as originally adopted in respect of freedom of property, trade, and occupation and that if any property is to be compulsorily acquired by the State for public purposes, just compensation should be given."

In Industry the Party believes in incentives for higher production and expansion inherent in competitive enterprise is accepted. At the same time adequate safeguards are to be provided for the protection of labour, and against unreasonable profits, prices, and dividends where there is no competition or where it does not secure these ends. The State has no doubt a place in the expansion of industries but it is to function within a well defined sphere. Heavy industries such national services as Railways, and those pioneer enterprises which are difficult for private initiative should comprise this sphere.

The agricultural policy of the Party lays the emphasis on the need to preserve private ownership of land. It avers that increased food production is best attained through the self-employed peasant-proprietor who is interested in obtaining the highest yield from his lands. An intensive programme of agricultural improvement is of course advocated but the efforts in this direction should be such as not to disturb the harmony of rural life.

The Congress Party, according to Mr Rajagopalachari, stands condemned not only because it has become totalitarian in its dealings with the people but also because it has come to imagine that it has the undisputed right to make basic changes in the structure of society. Other objectionable features are the increasing dominance of a party materialist philosophy and the tendency to banish religion from Indian life. In order to obviate the serious defect of a steady slide toward totalitarianism, in a party system, the Swatantra party will give its members complete freedom to hold their own views on any matter not covered by the principles laid down. In this connection, Rajaji has recommended the adoption of such a principle by political parties elsewhere in the world. This will ensure the functioning of democracy in all its glory. In the present party system, it is not always the majority view of parliament that prevails. More often than not, it is the minority dominion which masquerades as majority opinion of the ruling party.

It is quite understandable that a party which bases its title to recognition on the winning of maximum freedom to the individual extends the same amount of freedom of action to its members. This characteristic may be expected to bring within its fold a large number of people who, by virtue of the high value they place on individual freedom, are outside politics but who are otherwise taking keen interest in their environment. What the types are of people who may join the party, is indicated by Rajaji's statement that "princes and peasants, captains of industry and the toilers in the factories, small shopkeepers as well as wholesalers, all who prize the liberty of the individual and in particular the poor who are losing their occupation, all those who wish to resist the inroads of the state and its machinery on liberty" are welcome into the Swatantra party.

As far as the headway that has so far been made and future prospects, it would appear that the party has already got sizable strength in the Madras Legislature where, by virtue of the merger of the erstwhile National Democratic Party, the Swatantra party will get an immediate place among the opposition parties. It is likely that it will be able to attain a similar position in Bihar when the landholders' party headed by the Raja of Ramgarh formally merges with it. In other States, there are interesting possibilities as there are a number of groups already showing willingness to merge their identity in the new party.

Though the Swatantra Party may be said to have postulated a positive ideal when it holds the freedom of the individual supreme, it would appear that, upto now, the two day preparatory convention notwithstanding, its claim to recognition is based on negative factors. The 21 point statement of principles cannot be expected to appeal to the masses without whose support the Swatantra Party cannot hope to get into power. However, the manifesto that is yet to come may contain more specific details about how the party hopes to satisfy the felt needs of the common man without at the same time trampling on his freedom. As things stand at present, the hypnotism of Mr Nehru is as powerful as ever, and it is extremely unlikely that his popularity can be reduced a wee bit in the near future. The dubbing of the Congress and Mr Nehru as Communist will only confirm to the people at large that the Nehru Government has the good of the common man at heart. Even among the intelligentsia, it will be indeed very difficult to sow the seeds of disruption when it comes to a question of substituting the Congress rule.

But Rajaji's forthright impeachment of the Congress and its present high command is bound to sink to the depths of the minds of the man in the street in course of time. For, most of the charges levelled against the Congress Government are incontrovertible. The deterioration in the standard of the administration in the country since the attainment of independence is too patent to remain unnoticed by the common man also. The intelligentsia see the decline quite clearly, but may perhaps take it as a sign of the times. Inroads into individual freedom there definitely have been in the past one decade, and life has been made more miserable than before by the multiplicity of rules and regulations in every walk of life; but, as yet, these are considered as the just price one has to pay for the progress of one's country toward a Welfare State. The encroachment of the State into industry and the consequent expansion of the public sector are matters that do not ordinarily concern the masses or even the middle class people who, if not exactly enthused by a sense of patriotism, are at least concerned about their chances of getting employment in the matter of which the difference between public and private sectors has little meaning.

It is true that, latterly, even the generality of the people has come to feel somewhat nervous about Congress policies. The various measures ostensibly to better the lot of the tiller of the soil, like ceiling on land holdings and the latest move to introduce cooperative farming, have brought about widespread apprehension among the rural people about what the Congress has been popularly conceived to stand for. It is significant to note that it is on the question of cooperative farming that Rajaji has finally decided to cut away from the great organisation toward the building of which his own contribution has been of no mean measure. There is a consensus of opinion, both among agriculturists and able administrators in the country, that cooperative farming will, without in any way helping to increase food production, result in destroying the good things in our rural life. In this regard, it is emphasised that the small owner cultivators in our country are so passionately attached to their lands that they cannot bear the idea of their holdings being merged with others and themselves working as wage earners on a cooperative farm.

Likewise, the State's interference in the life of the people as, for instance, the taking over of the wholesale trade in foodgrains appears to be now tolerated as inevitable because of the supposedly unsocial activities of a section of people. But Government have yet to prove that the high price of foodgrains is the direct outcome of the non-cooperation of wholesalers or the traders. After all these regulations and restrictions, the only result so far has been the loss of employment to thousands of people who have been engaged in particular type of business for generations; and for a sample of the widespread maladministration in the country, one need not go very far from one's doorstep. It is the experience of the common man that he gets pretty little help from Government officials and his helplessness has increased with the expansion of the public sector. These and innumerable other principles in the public life of our country today are bound to make some impression on the people in course of time. The process of realisation of the progressive curtailment of personal freedom without any improvement of the public good may be quickened by the Swatantra party, which has now laid bare the working of the ruling party. As Rajaji has himself said, the success of the Swatantra Party depends on whether or not the people think that, under Congress rule, their freedom is being curtailed.

GATEWAY NOTES

Co-operative Health?

Among the tasks that Governments have to address themselves in underdeveloped countries, the problem of public health is perhaps the hardest. For, any sizable improvement in the health of a nation as a whole has for its prerequisite improvements in a number of directions. In the first place, there should be adequate resources to provide the various amenities which help raise the standard of public health. In the second place, it is necessary that what may be called health-consciousness is widespread among the populace. The second factor is also partly dependent on the first, because adequate resources are again needed to impart a minimum level of education, which alone can bring about health-consciousness. But no Government can afford to leave the problem of public health to resolve itself on the plea that concerted efforts are being made to effect an improvement in the standard of living of the people. It has been found that, even in highly developed economies, the responsibility of public health will in some considerable measure have to be shouldered by the State. It needs hardly to be emphasised that the State has to play a vital role in the matter of the promotion of health in underdeveloped countries.

In India, the problem is receiving the active attention of Government, as will be evident from the sizable provision made under this head in the five year plans. The Employees' State Insurance Scheme is designed to provide organised labour with adequate medical facilities. The scheme may be described as a cooperative endeavour with the State, the employer and the employee contributing to the cost of the medical facilities. Though the scheme has been found lacking in some respects, it has on the whole been considered to have fulfilled its expectations.

But, considering the magnitude of the problem of public health in our country, it has been generally realised that, without non-official effort, it will take quite a long time for the State to bring about a sizable improvement in this field. Perhaps, the latest experiment in the direction of bringing about an improvement in public health by non-official efforts is now being tried at Malad in Bombay State. The scheme goes by the name of Middle Class Medical Benefit Insurance scheme and is sponsored by the Kailas Seva Sadan. According to Dr N. N. Kailas, Bombay's Deputy Minister for Health, the scheme is the first of its kind in Asia. It is claimed that the scheme, which is based on cooperative principles, will be much cheaper than the Employees' State Insurance Scheme, because the cost works out to only Rs 42 a year for a family of four.

Though the scheme no doubt looks quite attractive, one has to await the results of its working for a sufficient period to draw any valid conclusions. Dr Kailas has also said that Government may be persuaded to include this type of medical benefit in the Third Five Year Plan if the results of its working can be made available to them. But, in view of the emphasis that is being laid on Cooperation, the new scheme stands a good chance of being accepted for implementation—provided the results are found satisfactory.

For the purpose of registration under the scheme, families are divided into three groups on the basis of the income of the families. The first group will include incomes upto Rs 100, the second from Rs 101 to Rs 250, the third from Rs 251 to Rs 500. For the purpose of contributions, middle class families are divided into four groups. Families with an income upto Rs 100 will pay a monthly contribution of Rs 3.50 (with one rupee extra for each additional member); families with income between Rs 101 and Rs 250 will pay Rs 4.50 (Rs 1.25 for each additional member); families with income between Rs 251 and Rs 350 Rs 5.50 (Rs 1.50 for each additional member); and families with income between Rs 351 and Rs 500 Rs 6.50 (Rs 1.75 for each additional member). Under the scheme, each doctor will attend 200 families or 800 persons. Under the ESI scheme, each doctor has to look after 2,000 persons.

*

Battle of the Border

The Samyukta Maharashtra Samity seems to have won the first round in the battle of the Border in view of the adjournment for the day of the Bombay Legislative Assembly within an hour of its opening for the monsoon session on Monday. In adjourning the Assembly, the Speaker, Mr S. L. Silam, said that it had become impossible to conduct business because of the continuous slogan shouting indulged in by State Assembly members of the Samity. They had been supported by a large number of Samiti demonstrators who were, however, stopped by the police some 300 yards away from the Council Hall.

It may be recalled that the Samity-dominated Municipal Corporations of Bombay and Poona had some time back passed resolutions demanding the resignation of the Chief Minister, Mr Y. B. Chavan, for what is described as his failure to settle Bombay's claim over Mysore in the matter of readjustment of the border between the two States. Mr Chavan, however, has all along been contending that, since the Bombay Government and the Samiti are one in demanding that the border be re-drawn in favour of Bombay, there is no point in rigging up demonstrations in support of the State's claim. It is his view that the matter is best left to the care of the State Government, who are already doing their utmost to come to an amicable settlement. Moreover, there is very little that the State Government can do except, in the first instance, to persuade the Mysore State to come to an amicable settlement and failing which, secondly, to enter a fervent appeal to the Centre to use its good offices in this regard.

A few days ago, the Chief of the Bombay Regional Congress Committee gave a sporting offer to the Samiti and other opposition parties in the State Assembly to the effect that if these parties could come to an agreement on the dispute with the opposition parties in the Mysore Assembly, the Congress party would try to get the agreement confirmed by both the State Governments. The offer has not found favour, presumably because the two groups of the opposition parties, even though they owe allegiance to one parent body, are vehemently opposed to each other on the border question.

It would appear that Mr Chavan's stand has somewhat been weakened by his own admitted failure in persuading his counterpart in the Mysore State to consider the matter. The Bombay Chief Minister has now revealed that the Mysore Government have refused even to admit that there is a dispute over the border between the two States. It is evident from his statement that the only alternative left for Mr Chavan is to ask the Centre to come to his help. The fact that he has taken such a long time to find out that the Mysore Government do not consider the border between the two states as admitting of any dispute will afford another talking point for the opposition. But a sober consideration of this vexed question will, however, show that Mr Chavan's only fault is that he refused to take the matter to the Centre until he had explored all possible avenues for bringing about a direct settlement with the Mysore Government.

*

Surat Productivity Council

The concept of productivity, though its full significance has only recently been realised, has already gained widespread acceptance in our country. Perhaps, the incentive for giving productivity a high place has issued from the rapid changes that are taking place in our economy. India no longer figures as an exporter of primary commodities and an importer of manufactured articles. Export promotion has become a national objective with a high priority. In our new role of a seller of more and more manufactured articles in world markets, we are confronted with difficulties with which we are not familiar. But the obstacles have to be overcome if we are to become successful exporters. It is here that productivity will be of great assistance because, we in India are only getting a poor return from the resources we employ. Of course, productivity has significance for our endeavours in almost every field. The enormous scope for increasing productivity in India will justify special and concerted efforts in this regard.

There are now the National Productivity Council at the national level and local Productivity Councils at the level of industrial centres. Already, there are 20 productivity councils functioning in various centres and more are being organised. The councils provide a common platform for the workers, employers and Government to devise ways and means to increase productivity, maximise production and eliminate waste of resources employed

With the establishment of the Surat Productivity Council, the industrial units in the area, which are mostly of the small scale variety, will be enabled to work efficiently and therefore more profitably than hitherto.

THE PUNJAB NATIONAL BANK LIMITED

Head Office, Parliament Street,
NEW DELHI

Dated: **1st August,** 1959.
PRESS COMMUNIQUE

The working of the Punjab National Bank Ltd. for the half year ended 30th June, 1959 shows that the Bank has made satisfactory progress. Deposits of the Bank as on 30th June, 1959 exceed Rs. 135 Crores as against Rs. 129 Crores on 31-12-1958.

Subject to audit, the net profit of the Bank for the half year ended 30th June, 1959 after providing a sum of Rs. 5.92 lacs for payment to the Gratuity Fund Trust amounts to Rs. 47.25 lacs including Rs. 4.49 lacs brought forward from the previous year's account as against Rs. 46.19 lacs (which included Rs. 4.52 lacs brought forward) for the corresponding half year in 1958.

The Bank had 374 offices in India, Burma and Pakistan as on 30-6-59 as against 356 offices on 30-6-58 and offers all types of banking and foreign exchange facilities.

WORLD OF COTTON

Fresh Import Quota

COTTON circles in Bombay are looking forward to an early announcement regarding the revised payment procedure to be followed in regard to Egyptian cotton imports into the country. The market feels that the Government should forthwith announce the balance of the import allocation, viz., 1.40 lakh bales due for this season. About 80,000 bales will be earmarked for long-staple growths with staple length above 1 3|16" and the balance for growths between 1 1|16" and 1 3|16" in staple length. The shipment period will expire on 31st December 1959. This means that the mills will be able to buy new crop Egyptian and American cotton. Some of them have already put through business in new crop Egyptian growths on the basis of a 30 per cent discount.

The quantity of foreign cotton licensed for import into India, from the beginning of the season till the 18th July 1959, aggregates 498,480 bales, while arrivals, during the same period, totalled 384,173 bales. East African cotton claims the a lion's share of this quantity with Sudan showing a very impressive performance during the present season. The Unted States and Egypt account for a fair share.

The following table shows the quantity of foreign cotton licensed and actual arrivals during the period mentioned above (figures in bales of 400 lbs each):—

	Qty. Licensed	Actual Arrivals
Sterling Area:		
Egyptian ..	68,896	55,774
East African ..	201,514	174,202
Sudan ..	123,974	80,234
Peru & Others	7,579	3,276
	401,963	313,486
Dollar Area:		
USA ..	96,517	70,687
Total ..	498,480	384,173

From the trend of discussions at the Cotton Textile Consultative Board, which met last week, it appears that release of the above import quota is imminent. The Board has fixed the quantity for import of cotton at 6 lakh bales annually for the next three years. This will facilitate the industry to operate on long-term basis in view of the bad experience with regard to cotton import quota this year. It is hoped that the Government will accept this recommendation without any hesitation.

An export quota for Bengal Deshi, for old as well as new crop, is also expected soon, as this will greatly help this country to meet the present brisk export demand. The ceiling for shippers has already been completed, and there is thus a need for a fresh quota. As a matter of fact, it is officially announced that the ceiling, fixed for shippers out of the export quota of one lakh bales of Bengal Deshi and released on the 19th November 1958, has been completed. This performance is indeed encouraging, particularly when one takes into account the severe competition from other rival countries pursuing their exports with aggressive selling methods.

It is important to note that cotton exports from this country are not provided with any export incentive. There is a strong feeling that, given timely quota and liberal encouragement at official levels, shippers will be able to effect more sales of Indian cotton and earn more foreign exchange for the country.

×

FORWARD MARKET:

Sentiment in the cotton futures market remained subdued. Though the tending differences for the maturing August contract were construed bullishly, it had very little effect on the market as some of the bulls were inclined to liquidate. As for the new crop contract, there was a general inclination to purchase at setbacks in view of the feeling that the crop will be late while, in view of the very heavy rains in some of the producing areas, the trade was unable to assess the crop prospects. Jharilla August delivery remained firm at Rs 710 and March delivery at Rs 677.50.

×

SPOT MARKET:

In the Spot section, there was increased buying enquiry in quality lots like Luxmi, Jaydhar, Porbunder, Virangam and Digvijay. The main inspiration for the sustained firmness in this section was derived from the unfavourable weather news from many cotton areas, although a clearer picture of the progress of the new crop was eagerly awaited.

The target of cotton production, under the second Plan, was fixed at 65 lakh bales. The achievement of this target was as expected to make India self-sufficient in regard to its requirements for short, medium and long-staple cottons. However, the textile mills will have to continue to import extra long-staple cotton for the manufacture of fine and superfine cloth.

It is encouraging to note that mills are going in for indigenous manufactures in an increasing measure. While production of Indo-American and Madras Cambodia has increased markedly from 1.22 lakh bales in 1953/54 to 3.38 lakh bales in 1957-58, mill consumption, during the same period, has risen sharply from 41,000 bales to 2.90 lakh bales. It is, therefore, clear that the country has to speed up the production of extra long-staple cotton, irrespective of other considerations, if we are serious about achieving self-sufficiency and saving the enormous foreign exchange now spent on imports of cotton.

×

NEW YORK COTTON MARKET:

Price movements on the New York cotton futures market were confined to a narrow range, mainly due to lack of interest and uncertainties over the new Government sales programme starting with the new season on the 1st August.

Total cotton exports, during the season just ended up to the middle of July 15, amounted to 2,683,000 bales as against 5,490,000 bales during the corresponding period of last year.

Weather and crop news remain generally favourable. Middling spot is quoted around 33.75 cents per pound.

×

LIVERPOOL COTTON MARKET:

Trading on the Liverpool cotton futures was slow and price movements were narrow. Renewed American buying in distant positions took in mill hedging and the market closed steady. The Sudan contract remained unchanged.

×

CLOTH AND PIECEGOODS:

Prices in the Bombay Piecegoods market continued to display a firmer tendency, thanks to the broadening demand from several overseas countries. It is reported that substantial business has been concluded and business with Sudan alone is of the order of 25,000 bales. The marked improvement in the trade with the Sudan is attributed to the liberal licensing policy adopted by that country.

Inquiries are also being received from Burma. There are indications that exports to this country will pick up substantially in the near future. Regular business is reported with the UK, while Australia has also evinced interest in usual qualities.

The revival of demand from foreign countries has naturally imparted a healthy tone to the domestic market. Making allowance for the customary dull spell during the monsoon, the offtake by the upcountry centres should be considered satisfactory. In fact, a group of the mills is reported to have sold 1,500 bales of grey cloth at 8 nP higher per yard.

Mills have now adopted a reserved attitude in executing new sales. With the result, the general trend of cloth prices has shown an upward tendency. There have been fairly good enquiries from Calcutta due to the approaching Puja festival; but the goods, which are required, are not available in adequate quantities. Mills are also trying to sell more and more goods in export markets with a view to earning the benefit from the export incentive scheme. The need of the hour is to increase production as far as possible.

GATEWAY MARKETS

Mixed Tendency in Oilseeds

PRICES on the Bombay Oilseeds Exchange have shown a mixed trend during the week under review. While the Castorseed section displayed a weak tone with prices seeking lower levels, other sections remained generally steady.

In the Castorseed section, the maturing September contract has declined to Rs 152.87 from a high of Rs 156. The new crop contract has also followed suit; but it commands a premium of about a rupee over the September contract, reflecting the tendency on the part of the bull operators to switch over to the distant position.

The present downward tendency in prices is attributed mainly to the growing uneasiness over the impact of floating supplies. The feeling of unrest is aggravated by the continued absence of export business in castor oil. UK prices have declined by £2 to £3 per ton to £110½ for the BSS quality and to £104½ to £105 for the commercial quality. The US rate for commercial oil has eased by a quarter cent to 13¾ cents per pound. There has hardly been any business with these countries during the past fortnight, while enquiries from the Communist countries have also been absent.

A section of the trade fears that the export situation will worsen in the weeks to come and that Brazil may offer keen competition in order to market its output, which will be ready toward the end of September. The intensity of competition will, however, depend on Brazil's production of castorseed. Although there are rumours of US purchases of commercial oil at 13.50 cents per pound, the market is not much impressed in view of the fact that these prices entailed a loss in business. Meanwhile, the rate for the ready position is quoted at Rs 30.75 and Castor Oil, commercial quality, at Rs 15.69.

Trading in the Linseed section was featured by a fair improvement, caused by higher overseas advices regarding linseed and linseed oil. The reported deal in linseed cakes with Communist countries is also a contributory factor toward the firmness in prices. The third factor relates the reports of suspension of the imminent sale of linseed oil by the US Commercial Credit Corporation.

The recent optimism regarding exports of linseed oilcake has been justified with the shippers reporting business for about 1,000 tons in the past few days. The bulk of the business has materialised at prices ranging from £33¾ to £34¼ per ton for August-September delivery. Belgium and Germany have figured as good buyers, while the UK has also made modest purchases. It is, therefore, hoped that mill business will be put through in the near future.

The US Commercial Credit Corporation, which is said to be holding

a stock of about 140,000 tons of linseed oil, was earlier expected to offer supplies next month. Observers, however, believe that these reports may turn out to be incorrect in view of the sharp decline in the US output of linseed as revealed by the official estimates. The fall of 12 to 13 per cent in the Canadian acreage under linseed and reports of a smaller production in Argentina may also induce the Corporation to adopt a cautious sales policy.

Meanwhile, the production of linseed in India is estimated at 430,000 tons in 1958-59—the highest on record since 1948-49, representing an increase of 181,000 tons or 72.7 per cent over the 1957-58 figure. The area under linseed has risen by 18.5 per cent from the previous year's figure of 3,129,000 acres to 3,708,000 acres this year. Ready linseed is quoted at Rs 32.62 and linseed oil at Rs 16.12.

The Groundnut section, ruled quiet with prices showing an easier tendency on liquidation by weak holders. The market is obsessed by fears that the sizable stock of groundnut in Saurashtra along with the pressure of stocks lying in Bombay might result in huge delveries. Lower advices from Calcutta, Rajasthan and Adoni have also aided the easy sentiment. Ready bold is quoted at Rs 39.75 and Groundnut Oil at Rs 20.25.

*

Yarn

Uncertain conditions prevailed in the Bombay Yarn market. Rumours were current that the Government of India would soon issue advance import licences for raw materials to the silk and art silk mills under the export promotion scheme. These rumours caused a stir in the market and prices of some yarns, particularly of nylon, came down heavily.

In the case of Staple-Fibre Yarns, prices have remained very steady and, in some cases, they have improved to some extent although constant fears are entertained that the mills may be inclined to sell at higher levels.

As regards nylon yarns, prices have fluctuated on a wider scale due to reports of grant of advance import licences.

In the case of Cotton yarns, price movements were confined to a narrow range. After some improvement in the prices of coarse counts as well as of medium, fine and superfine counts during the past few days, there has been some slight reaction in prices.

*

Gold & Silver

With more receipts in both the metals, bullion prices have finished the week with small losses on balance.

In the Gold section, bull operators have liquidated their holdings due to poor spot demand, although lower levels attracted some replacement buying. Receipts totalled 3,000 tolas against an offtake of 2,000 tolas. Spot rates moved between Rs 118.22 and Rs 118.60, to finish at Rs 118.31. Sovereign was quiet at Rs 77.50.

Silver arrivals amounted to 10 bars against an offtake of 8 bars. Unrefined metal receipts totalled 10 bars. Spot rates moved narrowly between Rs 197.12 and Rs 197.44 to close finally at Rs 197.37.

*

Non-Ferrous Metals

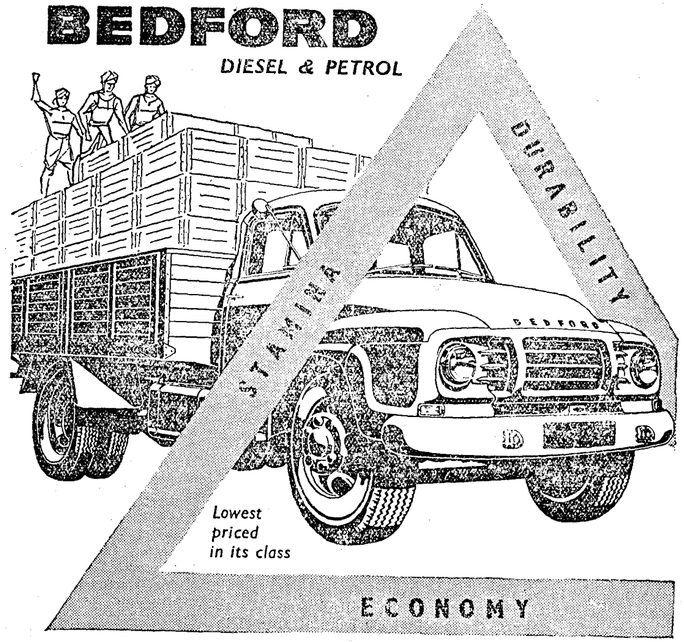
The Non-Ferrous Metal market remained practically unchanged. Copper Scrap continues to be in good demand. There has been a sudden rise in the price of Brass Cuttings Cuttings from Rs 186 to Rs 192 per cwt on reported buying by some parties to get it converted into sheets on rolling charge of Rs 28 per cwt.

The market continues to experience a shortage in brass sheets. Though, for the last six months, only a small percentage of the actual requirements have been received, July proved to be a crucial month. This, coupled with the reported closure of the Indian Smelting and Refining Company, Limited, has affected sentiment.

Among other non-ferrous metals, Zinc remains steady at Rs 105 per cwt; Lead at Rs 81 and Tin at Rs 144 per quarter.

MANUFACTURE OF PRINTING MACHINERY.

In a written reply to a question by Shri Ram Krishan Gupta, Shri Manubhai Shah, Minister for Industry, said in the Lok Sabha on August 6, that negotiations by an Indian firm for setting up a factory with foreign collaboration to manufacture printing machinery at Titaghur had been finalised. The Minister added that under the agreement the foreign firm, would grant the Indian firm the patent rights and also supply technical data, for the manufacture assembly, test and selling in India of flat bed presses and components and spare parts against payment of royalty for a period of seven years.



The foreign firm would also make available to the Indian company the services of one or more technical personnel for guidance in the manufacture of the articles.

OLYMPUS

Congress Opinion on Swatantra Leaders

THERE is no disposition in some Congress circles here to underestimate the forces assailing the party from the Left as well as from the Right now. But the solidity of the Congress can still be discerned in a certain expectation that, between the Communist Party on the defensive and the new Swatantra Party on the offensive, the Nehru Government's policies will stand vindicated. Whether this expectation is likely to be fulfilled would need to be assessed in a more leisurely and careful manner than is possible for me at the moment, when the psychological impact on the Congress leadership of Kerala developments, on the one hand, and the appearance of the Swatantra Party on the political firmament, on the other, is too powerful to spend itself out overnight. I would therefore reserve such an assessment of political possibilities for a later occasion.

In the eyes of the Congress, the Communist Party is a known enemy; whereas the Swatantra Party is a dark horse. It is, therefore, in regard to the latter that the initial reactions in some Congress circles are pretty sharp. These reactions are against the present strange stand of some leaders of the Swatantra Party, notably Rajaji and Mr N. G. Ranga. Rajaji, it is pointed out, was scarcely distinguishable from a radical in his approach, while in power, to agrarian problems. The customary or contractual obligations by which he now swears did not worry him too much when he put through, during his tenure of leadership of the Madras Government from 1952 to 1954, some agrarian legislation which undoubtedly had a radical impact or effect. But, in fairness to Rajaji, it is also recalled that he then fancied himself in the role of, or desired to be described as, a 'liberal conservative' dedicated to the proposition that necessary reforms would have to be carried out, in the interests of social stability and conservation of the established order, to correct the imbalance periodically arising in the structure of private property relations.

Rajaji's approach then was thus one of "dynamic conservatism." That he now appears to have discarded even that "conservative reform" approach is inferred from the following passages in the Swatantra Party's Statement of principles, in the drafting of which his Roman hand is clearly visible:

"The party holds that there should be no disturbance of ownership, management and cultivation of land....."

"The party holds that the policies of Government should be founded on faith in the people and not on State compulsion and the encouragement of hatred and conflict between class and class, expropriation, repudiation of obligations, and the conferment of more and more powers on the officials of Government at the expense of the freedom of the citizens."

The Congress reaction to these "principles" is that Rajaji's regulatory legislative output while he was in power did involve, in some form or other, the very things he now so vehemently decries.

As for Mr N. G. Ranga, the Prime Minister himself is understood to have referred, at a meeting of the Congress Parliamentary Party, to that peasant leader's former approach to cooperative farming. The reference was to a minute of dissent by N. G. Ranga and Mr O. P. Ramaswamy Reddiar to the report of the Congress Agrarian Reforms Committee (otherwise known as the Kumarappa Committee). In Congress circles, the following passages are quoted from that minute of dissent:

"We also favour the State and the public giving every possible encouragement to the development of Cooperative organisations among our peasants. But we are unable to agree to making the actual cultivation of land a cooperative process through compulsion, as is being suggested.....

"Any compulsion upon peasants can come to be justified only when the overwhelming majority of them agree upon its inevitability, and utility and also urgency.....On the other hand, we are all in favour of Cooperative Better Farming because it has been proved to be an unqualified success in all the Scandinavian countries and also in Canada and the USA....

"Therefore, we recommend to our Government to take the risk of making Cooperative Better Farming compulsory upon all farmers, provided 75 per cent of them in any area or region vote in favour of it.....

"We are in favour of obliging all the farmers in particular regions to go into Cooperative Better Farming as a matter of experiment so that if such compulsory Cooperative Better Farming were to prove most acceptable, democratic and successful, such compulsion might be resorted to in other areas also.

"It is our firm belief that the future progress and prosperity of our peasantry will mostly depend upon the degree of success achieved in our attempts to persuade our peasants to join agricultural cooperatives whether they be Joint Cooperative Farms, Better Farming Cooperative Societies or Multi-purpose Cooperatives".

In his minute of dissent, Mr Ranga further suggested that the co-operative of his conception should be concerned not only with "better farming" but with "crop planning" as well. According to him, "the members who join such a society would continue to own their lands; but they would be willing to implement the crop plan decided upon by their society, treating the total extent of their land as one whole bloc and settling the areas to be placed under different crops in accordance with the suitability of each field for a particular crop or crops so that the best possible use of every field within the total holding of the cooperative can be achieved." Further, "the society will also be prepared to maintain and provide services of cattle, better seed and manures, implements, grain stores, hay and straw and other cattle feed and credit and also the marketing of peasants' produce and supply of consumers' goods." For the rest, in the cooperative farming society of Mr Ranga's conception, "the members would be free (sic.) to settle the manner in which they cultivate their lands," that is, in respect of such physical operations as ploughing, manuring, watering, planting, weeding and harvesting.

If this plan of compulsory cooperative farming then proposed by Mr Ranga had, by any chance, been put into effect, it is pointed out in Congress circles, it would have logically and imperceptibly slid into compulsory cooperative joint farming. It is further pointed out, rather humorously, that there is just as much difference between Mr Ranga's conception of cooperative crop planning and better farming and Mr Nehru's conception of joint farming as there is between Tweedledum and Tweedledee. The latter at least has the merit of not being based on compulsion even for experimental purposes in just 500 villages to be selected.

The point is further clinched that the Congress has firmly set its face against any element of compulsion in the matter of organising cooperative joint farms even after the experimental stage. But the experiment itself may have to be carried on for at least three successive agricultural years if it is to be of any practical significance either for the furtherance or for the abandonment of the idea of voluntary cooperative joint farming. If the principles of voluntariness and persuasion by example should fail to work, it is emphasised, compulsion would have still less chance of delivering the goods. Mr Ranga and Rajaji, in the opinion of some Congressmen, are thus either conjuring up a hallucination or tilting at a windmill.

The Union Ministry of Food & Agriculture, it is learnt, favours a provision of Rs 1,000 crores for agriculture, animal husbandry, fisheries and forestry together in the Third Plan. It is further learnt that a high level meeting under the Chairmanship of Mr K. R. Damle, Agriculture Secretary, has recommended that, of that amount, Rs 610 crores be allocated for agriculture, Rs 205 crores for animal husbandry, dairying and fisheries and Rs 185 crores for forestry and soil conservation. It is thought that, with the recommended provision, agriculture will have received a higher priority in the Third Plan than it had in the first two Plans.

Incidentally, it is not to be supposed that a provision of about Rs 700 crores for agriculture and soil conservation schemes to be evolved by the Union and State Agriculture Ministries would be sufficient to reach the provisionally-suggested Third Plan targets of 100-102 million tons of foodgrains, 8 million bales of cotton, 6.5 million bales of jute, 9 million tons of sugarcane (in terms of gur) and 9 million tons of oilseeds. Without taking into account the possible provisions for irrigation, power for agriculture, agriculture part of the CD & NES Programme, fertiliser projects, etc., it is not possible to figure out if the rather high physical targets for Agriculture under the Third Plan can be achieved.

DELHI REVIEW

AGRA ELECTRIC SUPPLY COMPANY LIMITED.

NOTICE

Notice is hereby given that the Annual General Meeting of the Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Friday the 4th September, 1959 at 11 a.m. for the following purposes:—

1. To receive and adopt the audited Accounts for the year ended 31st March, 1959, and the Reports of the Directors and the Auditors thereon.
2. To declare a Dividend.
3. To appoint Directors in place of those retiring.
4. To appoint Auditors and fix their remuneration.

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 29th August, 1959 to the 4th September, 1959 both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy, who need not be a member, to attend, and on a poll, to vote instead of himself.

By Order of the Board,
MARTIN BURN LIMITED,
A. G. GIDLEY
Secretary,
Managing Agents.
12, Mission Row,
Calcutta—1.
8th August, 1959.

DELHI REVIEW

Secondary Education

The reconstituted All-India Council of Secondary Education assembled for its first meeting at New Delhi last week, and considered proposals for expansion of educational facilities at the secondary stage. The main problem confroning the Council is that of orienting the pattern of secondary education in line with the recommendations of the Secondary Education Commission which envisage the upgrading of High Schools to Higher Secondary Schools, and the conversion of High Schools into multi-purpose schools. The Council has set the target of upgrading 50 per cent of the High Schools existing in 1960-61 to higher secondary schools during the Third Five Year Plan period, and has suggested both emergency and long-term measures for implementing the scheme.

Secondary education under the new pattern is not only preparatory to the university stage, but is a terminal stage for a large number of students. This necessarily raises the problem of equipping the students, by proper vocational training, for various types of jobs after the completion of the secondary high school stage. The Council recognised the need for modifying the technical stream in the multi-purpose schools, and appointed a technical committee to go into the question. Along with modifying the technical content, there is the allied question of relating education to the employment pattern.

An important part of the discussions, at the meeting, related to the question of the present heavy failures and the resulting wastage at the matriculation stage. The causes for this were traced to defective syllabii, antiquated methods of examination, poor performance in English, large number of private candidates, wide variations in the abilities of those who appear at the examinations and evaluation of students according to a defective yardstick. The Council has made various suggestions calculated to yield better results in examinations, the most important of which is the reform of the present system of examination. A two-level examination to suit the different goals pursued by the students has been recommended.

The Council also considered the present rush for admission into universities, and, with a view to reducing such pressure suggested that it should be on a selective basis with consideration being given only to students who pass meritoriously.

In respect of the requirements of teachers, the Council has recommended that a region-wise estimate of teachers required in each subject, particularly in science, for the next five years should be worked out and the data made available to the University Grand Commission who should take responsibility for supplying the required number of teachers. The emergency requirements could, according to the Council, be met by the giving concentrated courses to teachers in order to qualify them for teaching upto the 11th Class. The experiment conducted in Madras to give telescoped course of one year's duration to experienced teachers was also approved as a suitable method for improving the qualifications of the teaching staff. The Council has formed a subcommittee to study the question of in-service training for teachers.

S. E. RLY TENDERS

Sealed tenders are invited for (1) Tender No. CON|GM|43|H|59 for supply of Porcelain connectors 5 Amps 3 way G.E.C. No. C7042 or similar, T.W. Junction Boxes 6″ x 4″ x 1¾″ with cover and Teak wood Battens ⅜″x½″x6 ft. etc. Details to be obtained from the tender schedule. Earnest money is Rs 1000|-. Tenders will be opened on 2-9-59 at 3 P.M.

(ii) Tender No. CON|GM|44|GB1|59 for supply of (a) 333 Cwt. Bolts Hex: Head M.S. Black 2½″ x ¾″ with nuts as per specn. B.S.S. 916|53; (b) 2352 Gross Bolts Mush room I.G. ¼″ x 1½″ with Sq. Nuts as per specn. I.S. 730-1956. Earnest money is Rs 1000|-. Tenders will be opened on 4-9-59 at 3 P.M.

Tender forms are obtainable from the office of the Controller of Stores (Construction Section), Garden Reach, Calcutta-23, on remittance of Rs 5|- (not refundable) per copy per tender by money order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, S.E. Railway, Garden Reach, Calcutta by local firms.

Tenders should accompany the receipt for depositing earnest money as stated above with this Rly's Chief Cashier without which the tenders are liable to be rejected. Approved contractors having a permanent deposit of Rs 1000|- with the Controller of Stores are exempted. Firms not on this Rly's list of approved Contractors must enclose a valid Income Tax Clearance Certificate with the tender.

S49 GENERAL MANAGER

NORTH INDIAN NOTES

Rihand Project

The decision of the UP Government to make available power from the Rihand Project to the proposed aluminium factory near the Rihand Dam site was the subject of a heated discussion in the UP Vidhan Sabha. The Opposition members criticised the Government's decision for a score of reasons. It was maintained that power was being given to a private party at less than the production cost and that the contract to supply power to the aluminium plant was done at the expense of the claims of the eastern districts of the State. Some of the critics went to the length of questioning the very propriety of the Government going to the help of an industry in the private sector.

Dr Sampurnanand, the Chief Minister of the State, made very light business of answering the charges levelled by the opposition members. First of all, it was pointed out that the contract would involve no loss in view of the fact that the power would be supplied at the rate of Rs 150 per k.w., while, the cost of generation worked out to Rs 148 k.w. For another thing, this rate was applicable only to power that would be used to extract bauxite, while power for other purposes would be charged at higher rates. Moreover, the contract had no element of permanence and was subject to revision of rates at the expiry of eight years. It was also pointed out that there was scope for reduction of cost of generation in view of the decision of the Bihar Government to pay Rs 3 crores for the irrigation benefits accruing to it from Rihand Project.

The allegation, that the Eastern districts of the State stood to lose consequent on the decision to supply power to the aluminium plant, it was pointed out, was misconceived. On the contrary, the prospects for the Eastern districts indicated an additional supply of power to the tune of 45,000 k.w. over and above the benefits that would accrue from the setting up of the aluminium plant. Moreover, the Government had in mind taking up a giant thermal station at Moghul Sarai, with a capacity of 180,000 k.w. and, therefore, there was no need for apprehension about any possible short supplies.

Dr Sampurnanand also made it clear that it was not because of any definite advantages conferred on the company that the plant was being set up in UP. On the contrary, the company had overlooked lower rates for power quoted in such other States as Kerala and Orissa, to comply with the request of the UP Government to set up the plant in the State.

Working of P. & T. Department

The annual report of the P & T Department for 1957-58 shows a record of continued expansion of services in almost all directions. The number of posts offices increased from 58,871 on March 31, 1957 to 61,886 on March 31, 1958, while the number of telegraph offices increased from 10,052 to 10,723. The increase in the number of telephone exchanges was from 6,202 to 6,472, while the increase in the number of telephones was from 309,000 to 335,000.

Other directions in which increase in services was recorded related to underground cables,—from 1,236,340 miles to 1,365,236 miles—postal articles,—from 3,262 million to 3,356 million—and telephone trunkc calls—from 20.8 million to 23.1 million.

The financial review of the working of the Department discloses an increase from Rs 56.8 crores to Rs 61.6 crores in the revenue. Total expenditure on revenue account is also shown to have increased by Rs 7.40 crores, mainly on account of larger payments to railways, conveyance of mails, increased allowances and increased contributions to renewals reserve fund. The total surplus of the Department in 1957-58 is shown at Rs 3.71 crores against Rs 6.32 crores in 1956-57 and Rs 3.47 crores in 1955-56.

Excepting the postal branch, which has shown a loss of Rs 2 crores against a surplus of Rs 1.33 crores in the previous year, the other branches, namely, the telephone and telegraph branches, have yielded surpluses of the order of Rs 5.38 crores and Rs 42 lakhs respectively.

On the side of capital expenditure, the net outlay on fixed assets in 1957-58 is estimated at Rs 9.38 crores, the bulk of which amounting to Rs 6.80 crores represents expenditure on telephone projects. Other heads of capital expenditure were telegraph projects, post office buildings and radio projects.

In the expansion of its services, the needs of rural areas had been given due consideration. For example, 92 per cent of the new post offices opened during the year were in the rural areas. The Department had also appointed a committee on postal development to indicate what changes, if any, should be made to meet the needs of additional postal facilities to the public and to suggest measures for consolidating the expansion of the postal network with the object of achieving maximum efficiency and economy.

NORTH INDIAN MARKETS

Sugar Supply Prospects

APPREHENSIONS are now entertained in certain quarters that there may be an acute shortage of sugar supply unless the new season's crushing goes into full swing by about the end of this year. There are, however, indications that the season will start about a month earlier than usual. Reports from North India show that many mills are eager to start production early in October itself, to take advantage of the increased demand for the commodity before Diwali.

The carry-over for the next season is expected to be in the neighbourhood of only 50,000 tons—the lowest for many years. The recent release was of the order of 1.3 lakh tons, which is about 20,000 tons more than what the trade had expected. Although this higher release has helped the Government of India to bring down sugar prices at many centres, fears are still entertained that the commodity will again become scarce in November and December. Mills can start crushing a month earlier only if there is an adequate and regular supply of cane.

As cane supplies are not likely to be available in adequate quantities at the beginning of the season, the earlier start, it is felt, may not produce startling results. In this respect, another disquieting feature is that cane yields have dropped from 14.55 tons per acre in 1954-55 to 12.73 tons in 1957-58. Though the figures for 1958-59 are not available, the yields are expected to be on the lower side. Moreover, cane area under plantation has also registered a decline as compared to the previous season.

In the midst of these factors, consumption of sugar has been increasing at an annual rate of about 4 to 5 per cent. This year, consumption may reach about 21.25 lakh tons as against production of 19.04 lakh tons. Allowing for an export of about 29,000 tons for the current year, the country will hardly be left with about 80,000 tons carry-over, which will be insufficient to cater for a fortnight's consumption requirements.

To tide over the present crisis, the Chairman of the Deccan Sugar Factories Association has called for a fundamental approach for augmenting sugar production and improving cane yields. He has expressed the view that the Government should give incentives, as a short-term measure, in the shape of rebate in excise duty and cane cess for higher production prior to the 15th November. He feels that, even then, production may not cross much beyond 21 lakh tons, while consumption may amount to about 22 lakh tons, leaving the country with a serious shortage during the next season also.

Another suggestion made to raise the output is an increase in the price of sugarcane. Such a measure, it is felt, will divert the supply of cane from gur and khandsari to the sugar mills. Moreover, due to a constant price for cane during the past few years, there has been diversion from sugarcane acreage. It is, therefore, essential that, in order to compete in the world sugar market, the price of cane should be reduced. This can be done only by reducing the cost of its production by better yields.

Till such a stage is reached, it is of utmost importance that sugarcane area is not diverted. For, if diversion is allowed, crisis in sugar production is bound to continue for years to come. To be given incentive for higher production, factories should be able to offer higher cane prices; but control on the price of sugar needs to be removed in Northern India.

Some circles have also suggested that steps have to be taken to import sugar for relieving the domestic shortage. As large supplies are available in world markets, india can easily buy the commodity from abroad at low rates without sacrificing foreign exchange. It may even be possible to obtain some sugar on a barter basis.

In West Bengal, the current rise in sugar prices is expected to be arrested shortly, thanks to various measures taken by the State Government. These measures include the imposition of a ban on the export of the commodity from the State; grant of permits to a larger number of dealers, instead of a few as hitherto, for lifting sugar from the mills and the allocation of a quota of 17,000 tons of sugar a month for the State over the distribution of which the Government will have complete control. The State Government are now working a scheme for the distribution of sugar through fair-price shops, But, before the scheme is introduced, they want to see how the present arrangements will work. As the sugar allotted to the State is now under the full control of the Government, the tendency to raise the prices by the speculators will be curbed to a large extent.

Meanwhile, sugar prices in the Hapur market have come down sharply following the Government's decision to ban inter-State movement of the commodity in order to ensure that allotments made to each State are available for local consumption. Further, there will be no free sale releases from factories in the Punjab, Uttar Pradesh and North Bihar and sugar will be allotted in accordance with special arrangements made by the State Government or through licensed dealers. The full implications of the latest Government policy on sugar are still being studied by the trade.

In the Muzaffarnagar market, prices have eased by 25 nP to 50 nP per maund. The spot delivery prices for bold crystal sugar, after dropping down to Rs 117 per bag, have now recovered to Rs 120.

In Delhi, quiet conditions have prevailed in the wake of poor local support coupled with a comfortable supply position. Daurala (C-29) quality is quoted at Rs 39.06 per maund.

*

GUR:

Conditions in the Hapur Gur market have remained steady, as stocks have run down by 4,000 maunds to 34,000 maunds now estimated. Rainfall for cane crops has been very deficient, while pest injury is reported from some areas.

In the Muzaffarnagar market, Chakku variety has advanced by 25 nP to 50 nP per maund following demand from Gujerat. Stocks are also reported to have dwindled further to 65,000 maunds, the figure for the corresponding period of last year being 12,000 maunds.

In the Delhi market, ready gur remains unchanged at Rs 23.00 per maund due to poor stocks position.

*

FOODGRAINS:

Reports of drought conditions in some districts of western Uttar Pradesh have imparted a steadier tendency to Foodgrains prices in the Hapur market. The Uttar Pradesh Government procurement operations for wheat and rice are being continued. While there has been success in the case of rice, the quantity of wheat procured is reported to be poor, at about 25,000 tons. The State Government are, however, in a position to tide over any crisis due to the comfortable stock position.

Wheat prices are quoted at Rs 18.25 to Rs 19.50 per maund, according to quality, against the Government's purchasing price of Rs 13 to Rs 15. Wheat is available in the open market; but consumer's demand is met out of stocks put forward in the market privately. The market for rice rules steady on reports that the early-sown paddy crop is suffering for want of rains.

Gram prices have eased fractionally, thanks to good stock position following continued arrivals from the Punjab and slack demand. Barley price remains unchanged. Some early-sown maize crop is being harvested; but arrivals are not yet reported in the market. The prices of Pulses have recorded an easy trend in the absence of outside support.

In Delhi, the grains market presented divergent trends. Arrivals from the producing madis are restricted, while despatches are poor due to transport difficulties. Demand from the consuming centres is also poor. Wheat prices have improved by 50 nP per maund, while rice dara quality has declined from Rs 27 to Rs 23 per maund in the light of good stock position.

DELHI REVIEW

S. E. RLY TENDERS

Sealed tenders are invited for (1) Tender No. CON|COS|59|F1|59 for supply of 3,978 Rft C.I.R.W Pipe 6″ dia x 6' long to BSS specification 460 and 1205 (Medium Grade) N.B:—Materials will be inspected and passed by the Director of Inspection unless clearly stated otherwise it will be assumed that the firm is agreeable to D.O.I. Inspection. Earnest money is Rs. 250|-. Tenders will be opened on 3-9-59 at 12 noon. (ii) Tender No. CON|COS|60|F1|59 for supply of 11,130 Rft. B.R.C. fabric for roofing 7' x 10' SWG x 240' -0″ long in roll. N.B.:—No. 10 (HTS) BRC of M|s. Graham or similar "BRC" Fabric to be made from hard drawn steel wire complying with B.S.S. specification 785-1938, working stress of 25,000 lbs per sq. inch. Earnest money is Rs. 420|-. Tenders will be opened on 3-9-59 at 12 noon.

(iii) Tender No. CON|COS|61|GB5|59 for supply of 50 cwts paint outside white oil paste. Specification IS-97|1950. Earnest money is Rs. 220|-. Tenders will be opened on 4-9-59 at 12 noon.

Tender forms are obtainable from the office of the undermentioned (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs. 2|- (not refundable) per copy per tender by money order to him direct in the case of outside firms and on production of cash receipts from this Rly's Chief Cashier, Garden Reach, Calcutta-23 by local firms.

Tender forms should accompany the receipts for depositing the earnest money as stated above with this Rly's Chief Cashier, without which the tenders are liable to be rejected. Approved contractors having a permanent deposit of Rs. 1,000|- with the undermentioned are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

THE PENINSULA

Food Technology

INAUGURATING the Regional Seminar on food technology for Asia and the Far East, at Mysore, Mr A. P. Jain, Union Minister for Food, made a plea for setting up a regional centre of food technology with adequate resources to conduct scientific and other studies on the subject. Food technology is an entirely new field of endeavour for the countries of the region, being one aspect of the technological backwardness which sets them apart from the more developed economies of the West.

As in many other things, in the field of food technology also, India is only beginning to make progress; and a vast ground remains to be covered to reach the stage of development attained by, say, New Zealand and Australia, which have outpaced even such countries as the USA and UK in food processing and preservation. The fact that we, in our country, have not been producing enough foodgrains to feed the population may have obscured the importance of food technology and hindered its development. For, when foodgrain production is inadequate, there is no call to other lines of activity just concentration on increasing the production to meet the demand of the people.

Whatever might have been the causes for the relatively little progress in food technology and in the development of food processing industries, a country faced with a food problem of the dimensions and character as India's, could hardly afford to under-rate the importance of food technology. The hypothetical self-sufficiency that the country would have attained in respect of food production, had enough attention been paid to food technology, is no statement of exaggeration. While the quantitative aspect of food problem should have its importance, the need for balancing the diet of the people is equally great. The problem of food technology is to evolve suitable ways of food processing as also to prepare new products to serve the needs of a proper diet with the right proportion of protein, vitamins, minerals, etc. Imitation of Western lines of development would not be suitable to India in view of the high cost involved. Simplicity and cheapness should be the main considerations in food technology in India.

Dr A. G. Van Veen, Chief of the Food Processing and Preparation Branch, Nutrition Division, FAO, Rome, pointed out that, for countries like India, it would be more profitable to concentrate on small units in the development of food processing industries. He also stressed the need for community or cooperative processing which, he observed, did not receive sufficient attention. The merit of community processing in small-scale units was not only that it gave more scope for employment but also that it would enable processing to be fitted to the particular needs and resources of the village or area covered. Further, they would also contribute to the development of larger commercial food processing plants and acquainting people with the use of preserved foods.

Dr Veen listed the important conditions for the growth of food processing industries as availability of starting materials in sufficient quantities and the uniformly good quality of the starting materials. The surplus should represent the excess over what is locally consumed, though it was possible that such surplus could be obtained through artificial manipulation of the market. Dr Veen also underlined the importance of research in the development of food processing industries.

Dr V. Subramaniam, Director of the Central Food Technological Research Institute, and co-Director of the Seminar, dealt with the problem of research from the point of view of avoiding the present time-lag in the application of the results of research. This time-lag considerably reduces the contribution research could make in solving economic problems. Unless attempts are made to expedite the application of the findings of research, research would itself become valueless and barren.

Dr Subramaniam has, in this connection, complained about the heavy load of work thrust on the shoulders of scientists in the country. Besides carrying on their normal pursuit in connection with research, scientists and scientific workers are being called upon to do demonstration work in the fields. This could not but affect the quality of the scientific work they could do. The separation of research from extension work is therefore necessary and has to be done by the creation of a separate extension cadre. Dr Subramaniam also contrasted the interest evinced by industries in foreign countries in the development of research with the indifference of Indian industries. In the circumstances, the Government are being called upon to take up the entire burden. However, so far as food processing is concerned, Government have to show the way, since they are one of the biggest purchasers of food. When once the commercial possibilities are demonstrated, private industries would not be behind-hand in taking up the line.

Mr Jain contrasted the abundant production of certain categories of food products with the relative under-development of food processing industries. The development of such industries alone would go a long way in making available to the people food articles essential from the point of view of a balanced diet. In this connection, Mr Jain gave the instance of the gigantic mango crop of the current season having gone to waste for want of proper packing and transport. Lack of transport and improper packing and storage are the chief hindrances to the free movement of perishable food articles and ultimately go to aggravate the dietary imbalance for which India is noted. Mr Jain also pointed out that a considerable part of the fruits and vegetables, specially from the sub-Himalayan tracts and also from Assam, could not reach the consumers in other parts of the country, for reasons of inadequate transport and storage facilities. It is these conditions of adequate transport and packing according to grades, that have to be ensured for the development of food processing industries. They also strengthen the case for the development of food processing industries on a decentralised and small-scale basis. Packing and storage are important in themselves and not merely as requisites for the development of food processing industries. As Mr Jain pointed out, if the modern methods of storage that are applied in the Government stores and warehouses could be extended to the holdings with the farmer merchants and private citizens the country could wipe out a substantial part, if not the entire, foodgrain deficit it now has. Mr Jain indicated the extent of the ground to be covered in respect of fruits and vegetables preservation, when he pointed out that ten times the present number of cold storages would be required.

Mr Jain also indicated some useful lines of work for food processing and pointed to the scope for processing of oilseeds meal and the production of odourless fish flour which were valuable sources of protein. Though the country was producing oilseeds meal in abundance, no edible use could be found for them in the absence of processing facilities. There are also several other untapped resources, which could be usefully exploited for meeting the requirements of the people. Research has, however, to precede such ventures into new lines.

Such research into food processing is not entirely new to India, and the Indian Cultural Food Technological Research at Bangalore had been doing some valuable work during the past ten years. The Institute had, for example, evolved an improved technique of parboiling of rice which is considered as deserving of application in the whole world. The Institute is also credited with the evolution of a product which is capable of supplying all the ingredients of a properly balanced adult diet. However, the fact cannot be evaded that the results of the work done at the Institute have received very little publicity. Further, one institute cannot meet the needs of the whole country, and regional institutes have to be developed for taking care of the particular problems of particular regions. The proposal to start ten regional stations under the Institute is, thus, commendable.

In view of the similarity of the problem of nutrition in these countries, a Central Institute for studying food technology with particular reference to the resources and needs of the region is important. The Centre as Mr Jain pointed out should have adequate means to set up small production units in different countries so that quick results could be achieved.

MADRAS REVIEW

KYANG TEA SEED COMPANY, LIMITED

NOTICE is hereby given that a General Meeting of the Members of the Company will be held at the Registered Office, No. 4, Bankshall Street, Calcutta, on Thursday, the 27th of August, 1959 at 3-00 P.M. to consider and if thought fit to pass with or without modification the following resolution which will be proposed as an Ordinary Resolution, namely:

"That the proposed re-appointment and the draft Agreement submitted to this meeting setting forth the terms and conditions on which it is proposed that Shaw Wallace & Company Limited be re-appointed the Managing Agents of the Company for a period of 10 years from the 15th August, 1960, (which has for the purpose of identification been subscribed by the Chairman of the Board of Directors) be and is hereby approved and application to the Central Government for its approval to this proposal under Section 326 of the Companies Act, 1956, be and is hereby directed to be made."

The Transfer Register will be closed from 20th August, 1959 to 27th August, 1959, both days inclusive.

By Order of the Board,
SHAW WALLACE & COMPANY LIMITED
Managing Agents.

Calcutta,
Dated 31st July, 1959.

NOTE: A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

SOUTH INDIAN NOTES

Third Plan Schemes

THE quarterly meeting of the Hindustan Chamber of Commerce, Madras, which was inaugurated by Mr G. L. Nanda, Union Minister for Labour, provided the opportunity for the South Indian business representatives to express their opinion on the problems constituted by the formulation of the Third Five-Year Plan. Mr H. C. Kothari, in the course of his presidential address, expressed the fears of the business community about the additional burdens on the private sector envisaged under the Third Plan, the encroachments being committed by the State into the spheres of the private sector and growing State controls.

Mr Kothari particularly urged the need for a restatement of the industrial policy of the Government because, in actual implementation, the policy had suffered distortion consequent on the attempts made by the Government to take over the channels of trade built up by private enterprise. Mr Kothari cited the instance of Government taking over control of steel and insurance and cement distribution.

Mr Kothari was also for less dependence on foreign assistance which, he points out, is also the considered verdict of economics. The objection to such excessive dependence lies in the fact that, instead of solving the problem of resources, it only postpones it to a future date. This objection does not, however, apply to foreign private capital and, therefore, Mr Kothari points out, measures should be taken to attract foreign private capital.

The lack of a national wages policy has been the source of considerable irritation to the management and is the cause of extravagant demands put up by labour in the face of which employers are helpless, especially when they have no answer in the nature of any set standard. At present, different industrial establishments fixed different standards, and there was disparity even between scales of wages between the Centre and the States. Mr Kotahri stressed the urgent need for evolving a national wages policy which would be universally applicable.

Mr Kothari also sought to build up the case for Governmental participation in providing benefits to the workers out of the proceeds derived from tax impositions on the private sector. In this connection, he suggested that a life policy should be worked out involving joint contribution by the employers, employees and the Government for helping workers.

*

Co-operative Credit

One of the subjects discussed at the National Conference on Community Development related to the stepping up of credit needed by cultivators for increasing agricultural production. In this connection, pilot projects linking up credit with agricultural production programmes received further support and endorsement. The view was expressed that the pilot project should be tried in about 20 villages in each of the 200 community developoment blocs in each State. The question of finding out ways and means for the additional credit requirements for the expanded programme of the co-operative movement in the country is to be investigated by an expert committee which is to be set up with representatives of the Government, the Reserve Bank, and other agencies.

If expansion of agricultural credit is to lead to a substantial rise in production, it is clearly necessary to see that such credit reaches the small farmers who have little access to the funds of the co-operatives, whose strictness about sureties makes it possible for the larger landholders to dominate the show put up by the co-operatives. It is high time that ways are devised to enable the small farmers also to participate in the benefits of the credit available from co-operative credit societies. The difficulty in this arises from the need to keep co-operatives working as business institutions which, while they are under necessity to liberalise credit, halve also to have adequate safeguards against losses. The experiments with pilot projects linking credit with production should point a way out. A slight divergence of views was in evidence at the conference with one section of opinion pressing the rights and privileges of the small holders, while another, representing the Reserve Bank opinion, was equally particular about appropriate guarantees against losses at the primary society level and against default at the Central co-operative bank level.

While expansion of co-operative credit, with particular reference to the needs of the small farmers, is essential, the possibility of such credit being granted to excess is a danger that is equally to be avoided, but which has become very real in the current context of enthusiasm for expansion of co-operative credit. In this connection, Mr H. V. R. Iengar, Governor of Reserve Bank, very properly warned against any ill-considered schemes which would, by deluging the countryside with redundant credit, land the country in a runaway inflation. This was made the ground for turning down the suggestion for the institution of supplementary lines of credit for the farmers.

*

Institute of Technology

The inauguration of the Indian Institute of Technology at Guindy early this week represented an important step toward the expansion of facilities for engineering education. The Institute, which is the third in the chain of four higher technological institutes being established in the country, is intended to cater to the needs of the four States in the Southern region. German co-operation in the form of scientific and workshop equipment was a material factor in the setting up of the Institute. Professor Humayun Kabir, Union Minister for Scientific Research and Cultural Affairs, who inaugurated the Institute, described the project as one of the finest examples of co-operation among the nations of the world in the pursuit of science and technology.

In the course of his speech, Professor Kabir dealt with the imbalances between degree and diploma holders and between graduate and under-graduate teaching in engineering education in the country. The problem of engineering education is to correct this imbalance by providing for progressive expansion of facilities at all levels. At present, the ratio between students entering degree courses in engineering and students entering diploma courses is almost 1:1. It is the objective of Government to raise it to 1:2, providing, at the same time, for the progressive expansion of education in degree courses. Similarly, the number of students in the post-graduate courses is not considerable at present, being only about 500. Provision of post-graduate facilities has also to receive consideration. In respect of research and post-graduate education, Mr Kabir stressed the role which industries could play. Mutual collaboration between industry and Government in the matter of technical education would benefit both industries and the country.

Mr C. Subramaniam, in the course of his speech, underlined the role the Institute could play in catering to the growing demand in the country for technical personnel, and expressed the hope that the Institute would not merely be a teaching institution, but would grow into a research centre.

Herr Von Heydon, West German charge de affairs at New Delhi, laid stress on the integrated development of individual and the importance of keeping a balance between the two aspects of human mind, namely, the irrational matrix from which arts sprang forth, and the rational layer on which science grew. He expressed the hope that the Institute would not be only technological in character, but that it would combine technological studies, humanities and social sciences.

*

Gur and Khandsari Industry

The Third All-India Gur and Khandsari Conference was held at Kakinada last week, when the problem of development of these industries with particular reference to raising efficiency in production came up for consideration. Mr B. S. Murthi, Union Deputy Minister for Community Development, who inaugurated the conference, regretted that, in spite of the best efforts of the Khadi and Village Industries Commission and of the State Governments, much progress could not be made.

MADRAS REVIEW

The development scheme for these industries as envisaged by the All-India Khadi and Village Industries Commission, and initiated in 1955, was aimed at improving the technique of production by replacing outdated methods and inefficient tools, as also at rationalisation of the marketing arrangement which was defective at various points such as storage, packing and standardisation of quality. Though the Second Plan allotted nearly Rs 8 crores for the development programmes touching these industries, it does not appear that the allocation of funds to the various States had been either sufficient or prompt enough to ensure the scheduled implementation of programmes.

It has been disclosed by Mr A. Bhagawantha Rao, Minister for Endowments and Industries in Andhra Pradesh, that, out of a total allocation for the Second Plan period of the order of Rs 30 lakhs for the development of gur and khandsari industries, only about Rs 9.74 lakhs had been received so far. Similarly, against an application for about Rs 6 lakhs for the current financial year, only about Rs 2.68 lakhs had been received. The reason for such shortfall in allocation is traced to similar shortfalls in receipts by the Khadi and Village Industries Commission against original allocation by the Planning Commission. Such delays in the making over of allocations originally made by the Planning Commission runs contrary to the policy of the Government to encourage the development of small-scale and cottage industries by the rendering of prompt financial help.

Being an important sugarcane producing State, Andhra Pradesh has a particular stake in the implementation of the development schemes for gur and khandsari. The State has a total area of 1.76 lakh acres under sugarcane, of which about 44,000 acres are reserved for vacuum pan sugar factories. Out of the remaining 1.32 lakhs acres, only about 30,000 acres had been so far brought under the development scheme. The covering of the entire sugarcane acreage by the development programme at an early date would thus call for a considerable stepping up of the financial outlay.

Mr Bhagavantha Rao also pleaded for financial assistance to the gur and khandsari industry to install powerdriven centrifugals. This was necessary to enable the sugarcane cultivators to handle larger volume of sugarcane. In Andhra Pradesh, where the per acre yield of sugarcane is near about 30 tons, the quantity of sugarcane available with a grower for manufacture into khandsari is larger than in the main sugarcane producing belt in the North. However, the present restriction of financial assistance only to the purchase of hand-driven centrifugals militates against the widespread use of power-driven centrifugal machinery.

SOUTH INDIAN MARKETS

Groundnuts Weak

Madras, Wednesday.

Price declines in groundnut oil and nuts steadied today with fair demand and with fair arrivals from upcountry centres. Wednesday opening price of groundnut oil was Rs 353/354 ready, Rs 351/352 August and Rs. 309.50/310 December. Groundnut price was quoted at Rs 185/186.

Last week-end, kernels were marketed in South Arcot at an average of about 450/500 tons daily, that is, from a hundred-mile radius of Madras city. But today's telegraphic reports to the local Association indicated larger absorption at over 500 tons.

Calcutta interests showed interest todays with wider inquiries. When short coverings emerged in August and December *vaidas*, the prices began to move up. Today's prices were quoted after a recovery by about Rs 45 per ton in ground nut and Rs 55/60 per ton in groundnut oil over last week's closing quotations.

For the last three days, the arrivals from nearby areas had been in the region of 40/45 tons of groundnut of superior qualities. Absorption at Rs 190 per ton of this variety on Monday was only temporary and both on Tuesday and today the prices, which were lowered, recovered with good business done at Rs 183 level.

About 1,600/1,700 tons of oil were offered from Monday onwards and all of the quantity was taken up for August first week delivery. Spot goods price ranged in price between Rs 357/8 and Rs 358 Monday, but declined Tuesday rallying to Rs 353/354 today.

In forward positions, while August deliveries witnessed fair recoveries around Rs 352, towards today afternoon improvement was noticeable by either steadiness at the same price or by an advance of a rupee or so per ton.

December deliveries opened at Rs 311 on Monday, declined to Rs 308 per candy, but Wednesday business began with quotation improving to Rs 309/8 and later on improving to Rs 310. About five hundred candies were transacted.

Groundnut oil Cake: The market turned out to be easier due to larger production locally and limited demand. Sellers offered 160 lb bag at Rs 24/4 to Rs 24/8, exmill, new gunny.

Upcountry Markets: Villipuram, Panruti, Cuddalore and Tindivanam have reported fairly decent arrivals of the summer crop. These were closely followed by similar reports at Vriddhachalam, Tirukoilur and other centres. On an average, about 450/500 tons of kernels were received daily from Monday. Buyers interest in this was at Rs 188/190 per candy. Around pucca parity, goods were available at Rs 182/183 and some of these centres reported offer at Rs 185 even on better quality in the transaction. A large volume, therefore, of offerings in oil and considerable activity in all centres are reported.

Sowing operations are delayed in arts of South Arcot and North Arcot districts due to inadequate rainfall. In other parts of the districts, sowings had been completed. Standing crops in Pollachi had good sunshine while the Salem harvest is expected to be fair by December next. It is also expected that good crops from Pollachi/Coimbatore will be arriving here by August second fortnight. It is expected that the Salem season, commencing September next, will be brisk.

Gingelly oil and seeds turned out to be easier due to larger arrivals than last week. Latest ruling rates today:

	per bag. Rs
Gingelly seed:	
Chanda/Warora quality ...	68/69
Tuni/Raj ahmundry ...	62/63
Cuddappah quality ...	62/63
Salem	60/61

Gingelly Oil:

(Wholesale) Rs 20/4 to Rs 20/8 per maund.

Retail Rs 20/12 per maund.

There was no large scale activity in castor oil or seeds. Small quantities were sold at Rs 323 per candy.

Coconut oil: The West Coast market continued to be somewhat steady. Latest levels are under:

At Cochin: Ready Rs 612: August Rs 615; September 619 per candy.

At Quilon: Rs 35/8 per ton and Rs 38/4 per tin in Madras.

Foreign Markets. Price of groundnut oil overseas is reported to have declined appreciably. It is reported that British West African sellers offer around Rs 105/106 per ton c.i.f. Burma is reported to be indicating a level around Rs 1,580/1,585 per ton c.i.f.

AGRA ELECTRIC SUPPLY COMPANY LIMITED.

NOTICE is hereby given that an Extraordinary General Meeting of the Members of the abovenamed Company will be held at the Registered Office of the Company, No. 12 Mission Row, Calcutta—1, on Friday, the 4th September, 1959, immediately following the termination of the Annual General Meeting to be held on that day at 11-0 a.m. to consider and, if thought fit, to pass, with or without modification, the following subjoined resolution, namely:—

"That approval be and is hereby accorded to the re-appointment of Martin Burn Limited as Managing Agents of the Company for a further period of 10 years with effect on and from the 16th August 1960, on the terms and conditions contained in the draft Agreement submitted to the Meeting and, if the purpose of identification, signed by the Chairman thereof."

By Order of the Board,
MARTIN BURN LIMITED,
A. G. GIDLEY
Secretary,
Managing Agents.

12, Mission Row,
Calcutta—1.
Dated, 8th August, 1959.

Note: (i) A member entitled to attend and vote is entitled to appoint a Proxy to attend and, on a poll, to vote instead of himself. Such Proxy need not be a member of the Company.

(ii) An Explanatory Statement is annexed to the Convening Notice issued to Members of the Company.

STOCK EXCHANGES

Recovery from Recent Shock

Watch-Dog Writes:

AFTER the recent sharp recession in equity prices, there was a marked revival of buying interest in stock markets although activity is confined to a few selected scrip. Prices have moved up on fair all-round support, indicating a gradual return of confidence.

With the speculative issues encountering sustained support, steady to firm conditions developed on the Calcutta Stock Exchange.

Small business with wide fluctuations characterised trading on the Bombay Stock Exchange.

Steady conditions prevailed on the Madras Stock Exchange where Planting issues were in good form.

On the London Stock Exchange, prices made good headway, election hopes being the main reason for the renewed buoyancy.

Wall Street closed barely steady.

*

Calcutta

Friday Evening.

AFTER the lapse of a few weeks, trading on the local Stock Exchange presented a distinctly improved appearance and, encouraged by firmer advices from Bombay, prces recovered on a broad front.

Various factors contributed to the sudden change in market sentiment. First, the news of the Government of India having permitted TISCO to make its right issue at par gave rise to a feeling that the Government approach to corporate problems was becoming more realistic. Secondly, it was reported that the Bombay Shareholders' Association had obtained a reasonably satisfactory explanation from the directors for declaring a reduced dividend. Thirdly, hopes were entertained that IISCO would maintain its dividend for 1958-59. Fourthly, the firm stand taken by the Government against the movement for the nationalisation of banks was welcomed. Fifthly, it was felt that there would be a further increase in foreign aid in view of the expected improvement in the climate for investment. Finally, there were expectations of a satisfactory settlement of the financial disputes between India and Pakistan.

Although operators are found to be rather cautious in following the rise in prices and are inclined to book profits at bulges, the closing rates for the week disclosed signs of returning confidence. Technically, the market is in a healthy state and it appears that the market will rally further, especially since the payment position against the last settlement is not expected to present any difficulty.

Steady conditions prevailed in the Giltedged section. The Central issues evoked good institutional enquiry, demand being concentrated on the short-dated issues. Demand for the State Loans continued to persist. The move by the authorities to put up the selling rates of some loans provided further impetus to the rise in prices. 3 per cent 1986 Conversion Loan moved between Rs 73.30 and Rs 73.85, to finish the week at Rs 73.60.

Despite the firm stand taken by the Government against the movement for the nationalisation of banks, Bank shares remained quiet following the disappointment over the cut in the net dividends and ideas that banks' profits would not be able to show any rise due to difficulty of employment of funds profitably. Punjab National eased off to Rs 21.87 from Rs 22.06, while United Commercial were neglected around Rs 61.

Jute shares enjoyed good support, mainly due to the belief that the mills might be making good profits on the manufacture of sackings in view of the low level of prices ruling for the raw commodity and the persistent demand for this category of goods from various countries during the past many weeks. The strong statistical position of the industry and the diversification of activity by certain mill salso contributed to the sustained support for a few selected scrip. Anglo-India were taken upto Rs 262 from Rs 252.50: Birlas upto Rs 24.50 from Rs 22.62: Howrah upto Rs 24.12 from Rs 23.12; New Central upto Rs 18 from Rs 17.50 and Union upto Rs 236 from Rs 226. National closed steady at Rs 23 after touching a high of Rs 23.25 and a low of Rs 22.94 on speculative activity.

Coal shares were generally devoid of interest, as operators were inclined to await the outcome of the discussions between the Government representatives and industrial interests. The only steady features were Amalgamated having buyers upto Rs 25.75; Bengal upto Rs 310; Central India upto Rs 8.12 and Western Bengal upto Rs 6.62 from Rs 25.25; Rs 306; Rs 8.06 and Rs 6.44 respectively. Burrakur moved rather irregularly between Rs 17.31 and Rs 17.62 on alternate buying and selling, to finish the week at Rs 17.44.

In the week's dealings, Textile scrip were more active than other sections. Almost all the scrp participated in the general rise in prices following reports that cloth was fetching remunerative prices, while floating stocks were going down. Kesoram touched at one time a high of Rs 17.19 from a low of Rs 15.37; Jayshree Rs 10.44 from Rs 9.69 and Elgins Rs 15.72 from Rs 13.62 to ease off at the close to Rs 17.25; Rs 10.37 and Rs 15.25 respectively. Now Victoria were better at Rs 1.22 against Rs 1.12, while Bowreah and Dunbar were marked upto Rs 130 and Rs 179 from Rs 107 and Rs 165 respectively.

Except for a few shares of the Assam gardens, which met with sustained demand following the announcement of satsfactory dividends by certain companies, trading in the Tea section remained generally restricted in view of the obscure outlook for Common teas. Dealings were, therefore, few and far between. Banarhat were on offer at Rs 295 against Rs 306; Basmatia at Rs 26 against Rs 27.25; Eastern Cachar at Rs 1.94 against Rs 2.50; Hattikhira at Rs 12 against Rs 13 and Methoni at Rs 24 against Rs 24.44. The scrip which maintained a steadier tendency were Brooke Bond quoting at Rs 20; Hasimara at Rs 23.62; Hantapara at Rs 120; Jayshree at Rs 13.94 and Patrakola at Rs 145.

Sugar shares were practically neglected due to easier advices from the commodity market and a general disposition to await further developments on the commodity front. The only relieving feature of trading was the scattered support still lent to the scrip of those companies manufacturing distillery products. Cawnpore were enquired upto Rs 13.62 from Rs 13.56; Champarun upto Rs 18.31 from Rs 17.87 and SKG upto Rs 10.75 from Rs 10.62. Carew were, however, on offer at as low as Rs 11.81 against Rs 12.19 with Belsund nearly maintained at Rs 13.37.

In the Engineering shares, price movements were mostly influenced by the speculative activity in Indian Irons which, in turn, were subjected to a good deal of buying on encouraging Bombay advices. Against the week-end closing of Rs 24.04, Indian Irons opened substantially higher at Rs 24.49 and gradually advanced further to Rs 25.12, to finish the week at Rs 24.94. In sympathy, TEXMACO were pushed upto Rs 24.45 from a low of Rs 23.40; Guest, Keen, Williams upto Rs 39.25 from Rs 38.62 and Indian Galvanizing upto Rs 21.62 from Rs 20.19, to finish the week at Rs 24.40; Rs 39.00 and Rs 21.44 respectively. Britannia changed hands at Rs 12.50 to Rs 13; Jessop at Rs 28.50 to Rs 29.12 and Marshalls at Rs 6.19 to Rs 6.37. Kumardhubi were, however, offered at Rs 6.25 against Rs 7.15 following the reduced dividend from 45 nP to 30 nP per share for last year.

With a few exceptions, Miscellaneous issues were generally dull on lack of fresh support. Clive Row Investments were enquired upto Rs 10.62 from Rs 10.06 following the announcement of further dividends for the years 1955 and 1956 respectively. Hindustan Motors continued to be keenly sought after, the rate having hardened further to Rs 11.37 from Rs 11.19. Indian Copper were in demand upto Rs 4.19 from Rs 4.09 on better advices from the metal market. Orient Paper changed hands at Rs 36 to Rs 37.05 (Rs 37.05); Indian Cable at Rs 31.94 to Rs 32.56 (Rs 32.50); Indian Aluminium at Rs 22.31 to Rs 22.81 (Rs 22.62); India Steamship at Rs 14.19 to Rs 14.37 (Rs 14.37); National Carbon at Rs 34 to Rs 35 (Rs 35.00); Sirpur Paper at Rs 12.56 to Rs 13.06 (Rs 12.75); Sone Valley at Rs 6.00 to Rs 6.25 (Rs 6.19); Rohtas at Rs 21.31 to Rs 21.75 (Rs 21.50); Dunlop Rubber at Rs 33.75 to Rs 34.12 (Rs 34.12) and Rallis India at Rs 75.50 to Rs 78.50 (Rs 77.25). Figures shown within brackets were the week's closing rates.

*

Bombay

THE Bombay Stock Exchange witnessed a revival of interest in equities during the week ending Wednesday. Though the undercurrents continued to be somewhat uncertain in earlier dealings, sentiment distinctly brightened up later. Settlement considerations, continued apprehension about the liquidation of a part of its holdings by the Life Insurance Corporation and the uncertainty about the size of the Indian Iron dividend were the main deterrents to expansion of activity. But these had been largely offset by the good news about Tata Steel. In the first place, the company has given a convincing explanation for its decision to pay a lower dividend this year. It has been pointed out to the Bombay shareholders' Association, which had earlier made a representation to the company on the matter, that the dividend is in accordance with the assurances given as regards distribution of dividend on old and new shares. Secondly, Government have broken their silence at long last on the question of the new issue of Tata Steel. The announcement that the issue will be allowed to be made at par has been received with joy and much relief. Sentiment has also been helped considerably by the encouraging news from the Textile industry which has reported a sizable depletion in stocks and the continuance of a downtrend in this regard. These reports have resulted in renewed attention being bestowed on Textile section with several shares recording handsome gains.

In the Steel section, Tata Steel, after a quiet opening, met with modest support on Friday last in sympathy with Indian Iron, which improved on hopes of maintenance of dividend. The next two sessions were marked by narrow fluctuations but Wednesday witnessed a spurt in the rate to Rs 182.25 beore closing at Rs 181.00. Incentive for the smart rally has been provided by the news about Government sanction for a par issue. Indian Iron ruled steady to close at Rs 24.80.

Textile shares attracted attention from the beginning following encouraging reports about offtake from the cloth markets both with regard to internal consumption and exports. An idea as to the improvement made during the week may be had from the following table:

	Last Friday's Opening Rs	Wednesday's Closing Rs
B. Dyeing ...	65.80	66.60
Century ...	544.00	571.50
Kohinoor ...	295.00	308.50
Svadeshi ...	242.00	247.00

Elsewhere, selected shares continued to change hands at improved levels. Bombay Burmah was a bright feature in late dealings and was taken upto Rs 553 before closing at Rs 550. National Rayon was in persistent demand and closed at Rs 353.75 as against its last Friday's opening level of Rs 343.50. Premier Construction advanced smartly to be finally placed at Rs 372. ACC was slightly better on balance at Rs 152.50. Scindias had buyers upto Rs 18.

*

Madras

STOCK Exchange today was quiet, almost bordering on sort of dullness. As such, turnover was limited. Activity was seen, round lower levels, in plantation scrip. Banks, Textiles and Miscellaneous were not supported much, but steadiness characterised today's business.

GOVERNMENT SECURITIES: 4 per cent 1963 and 1964 Government of Madras securities were better at Rs 100.20 each improving from Rs 100.12 early this week. 4 per cent 1967 were offered at Rs 100.33. 4 per cent 1968 remained steady at Rs 100.27 and 4½ per cent 1970 did not move away from Rs 101.95. Mysore Government loans 1967 and 1968 remained also at Rs 100.15 each and 4½ per cent 1969 and 1970 were quoted steadily at Rs 101.60 and Rs 101.80 respectively. Both Kerala and Andhra Government securities did not alter much and remained at the same previous levels.

BANKS: This section was dull with Mysore remaining at Rs 312. Indian 7½ per cent it cd Rs 100 paid was quiet at Rs 187 and the Rs 80 paid were quoted at Rs 151 Rs 100 paid Indian Overseas and Rs 75 paid were offered at Rs 165.30 and Rs 136 respectively. Travancore Bank did not move beyond Rs 23.25, and the Pandyan Bank were quoted at Rs 36.50. Indo-Commercial continued dull.

ELECTRICALS: Not much business was done. South Madras 4½ per cent ft cd had a small number buyers at Rs 12.35, while West Coast has been steady Rs 14.60. Kumbawonam 9 per cent tf cd were available at Rs 11.88 and Negapatam 7½ tf cd remained at Rs 10.37.

SUGARS & BEWERIES: Deccan were lower today at Rs 12.05 having shed 20 nP from last day's price, Cauvery remained at Rs 112.50. and East India Distilleries were offered at Rs 39.50. Transactions were done in Kirlampudi at Rs 77.00, that is, Rs 2.00 lower, Mysore did not gain much from Rs 49.50 and United Breweries remained stationary at Rs 459.00.

PLANTINGS: The general dullness was also reflected in this section also. Most of these shares were offered at lower levels and taken at such due to lack of inquiries today. Athimattam were lower at Rs 1.12, but Blue Mountains at Rs 3.50 advanced its price by 10 nP as also Chandramalai at Rs 3.07. Cochin Malabars were lower at Rs 6.93 having receded by 13 nP from previous level. Cons. Coffee were also in the same condition, transactions being done at Rs 22.25, lower by 15 nP. Cowcoody were quoted at Rs 607, Gokul Rs 20.75, Kalpeta advancing to Rs 11.00. Kil Kotagiri slid to Rs 8.60, but Midlands advanced to Rs 11.95 from Rs 11.07. Neelimalai was among the gainers today at Rs 4.20 as also Ossoor at Rs 3.75. Nelliampathy had some business at lower levels around Rs 2.75. Outcherlony remained steady at Rs 5.55 and Periakaramalais also kept up its rate at Rs 4.00. Pullangode lost slightly at Rs 1.83 and, so also, Savamalai at Rs 3.83. Other scrip gaining at today's transactions were United Nilgiris at Rs 20.75, Wartyhully at Rs 3.65 and Waterfalls at Rs 3.98.

TEXTILES: There was not much to report in this section also, enquiries being next to nothing except in stray cases. Rise in quotations were few and far between like Bangalore Woollens at Rs 180.25. Pankaja at Rs 172. While the rest of the shares remained steady Buckingham changed hands at the lower level of Rs 188.00. Madura at Rs 30.40 and Travancore Rayons were offered and taken at Rs 23.40. Coimbatore Cotton remained steady at Rs 142.00. Lakshmi at Rs 121.00. Radhakrishna at Rs 119.00. Venkatesa at Rs 121.00 and Virudhunagar at Rs 42.00.

MISCELLANEOUS: Aluminium Industries were invited at Rs 22.00, lower by 48 nP. Ashoke Leyland advanced to Rs 7.90. Orissa Cements were offered at Rs 16.00. Parrys Confectionery were done at Rs 4.15. Rallis at an increased quotation of Rs 75.50. Ruby (Madras) were in demand at Rs 18.00, which had increased from overnight's level of Rs 16.40.

*

London

THE London Stock Exchange presented a cheerful appearance with a long list of gains being recorded. Virtually, all sections participated in the fresh advance, the only exception being Giltedged securities, following a further rise of £17 million in the gold and convertible current figures for last month.

Election hopes were the main reason for the renewed buoyancy of the market; but good business news and the satisfactory gold reserve figures were further helpful factors. Sentiment was also helped by the continued advance on Wall Street.

In Motors, British Motor Corporation were a good market on news of high sales in the USA. Fords, however, reacted on profit-taking. Many of the Miscellaneous issues went further ahead with reported Continental buying in Imperial Chemical Industries.

*

New York

PRICES on Wall Street, after ruling initially firm, displayed a slightly easier tendency toward the close due to profit-taking. Earlier, values advanced well on hopes of good year-end dividends as the result of excellent first-half results. The news about the Eisenhower-Krushchev exchange of visits was also an encouraging factor. The tendency to book profits was, however, apparent at the close.

Aluminium were again sharply lower, led by Reynolds Metals. Oils lost ground after leading the market upward for the past few days. Also responding to pressure were assorted Motors, Chemicals, Steels and Aluminiums. On the other hand, Copper shares were in demand on expectations of postponement of the threatened strike. Anaconda Copper was quoted at $63¾; General Motors at $56-7/8 and US Steel at $103¼.

FOR THE INVESTOR

Temporary Setback

Investment Gossip:

THREE reasons are advanced to explain the present dull trading in the stock markets. They are: renewed anxiety about the role of LIC, disappointment over TISCO accounts and continued payment difficulties.

It is now more or less confirmed that the LIC has figured as a seller recently. It is to be inferred, therefore, that, in the opinion of the expert body which advises the LIC, equity prices have been rather too high some time in recent weeks. Moreover, LIC in the role of a seller is not a new idea. During last year's debate on the investment policy of the LIC, the Union Finance Minister has categorically stated that the LIC will figure both as buyer and seller of equities.

It is perhaps suggested that this organisation by virtue of its being the largest single holder of equities should not behave like an ordinary holder who is always interested in cashing his profit. But it would appear that the LIC has followed a policy of selling at the high levels and buying when levels are attractive. Critics of the LIC's policy seem to have forgotten that it will not devolve to the private sector's interest if the LIC continued only as a buyer.

If the bears are thinking of placing much reliance on the so called disappointment over the TISCO results for 1958-59, they are in for disappointment themselves. Difficulties notwithstanding, the company is bound to reap soon the benefits of its expansion programme.

The third factor seems to be the villian of the piece. There are whispers about payment difficulties for some time. Indications are that difficulties have not yet been satisfactorily resolved.

There has been at least one powerful contributory factor for the market's listleness. Though the Kerala situation seems to have brought little disturbance to the market, its echo elsewhere promises to be more troublesome. The setback to the Congress in UP and the agitation in Bombay over the State's border with Mysore coupled with the ever present demand for unilingual States do not augur well for normality at least in parts of the country.

The State Loans also might have slightly come in the way of market sentiment. Though there is absolutely no reason to doubt that the money market will be able to absorb the loans quite easily, it is generally thought prudent to defer further commitments till the State Loans are out of the way.

However, none of the reasons listed above, except payment difficulties, seems to have been really responsible for the present subdued tendency. In this view, the setback, if it can be termed so, can only be temporary.

£R$

Investment Notes:

THE Board of Directors of the Indian Iron & Steel Company Limited has declared an interim dividend of Re 1 for the year ended 31st March, 1959. This decision has been taken is order that the shareholders will not be kept waiting for their dividend in view of the closing of accounts for the year being delayed, pending modification by the Government of revised sales retention prices of steel and pig iron. The directors have, however, made it clear that this dividend termed as "interim" will be the final for the year and no final distribution in respect of the year will be recommended for consideration at the meeting to be convened in due course.

Bharat Nidhi Limited has proposed to pay dividend for 1958 on the Ordinary shares of the value of Rs 10 each of the Punjab National Bank at the rate of one share for every 20 fully-paid or 80 partly-paid shares held. The dividend works out to 6 per cent, free of income-tax.

The Controller of Capital Issues has asked the Century Spinning & Weaving Company to issue the proposed new capital at a premium of 100 per cent. The company had made an application to the Controller for the issue of 25,000 new shares of Rs 100 each, at par, in the ratio of one share for every five shares held.

The Sassoon Spinning & Weaving Company has proposed to raise the authorised capital from Rs 40 lakhs to Rs 80 lakhs by the creation of four lakh new equity shares of Rs 10 each. Out of this, 377,010 equity shares are to be offered, at par, to the existing shareholders in the ratio of one for one. The new shares will rank pari passu with the existing equity shares except that they will not be entitled to any dividend for 1959. They will, however, rank for dividend for the year commencing from January 1, 1960.

Podar Mills Limited has decided to raise its issued capital by Rs 5 lakhs by the issue of 5,000 Ordinary shares of Rs 100 each, at par, in the ratio of one for every eight shares held. The additional funds are to be used for the modernisation and rehabilitation programme undertaken by the company. Transfer Books of the company will be closed from the 6th to the 12th September, 1959.

The Bombay-Burmah Trading Corporation has again postponed the decision by another fortnight for the consideration of the interim dividend.

New Central Jute has received consent from the Controller of Capital Issues for increase of capital and issue of right shares at par in the proportion of one ordinary share for every three existing ordinary shares.

Investment Briefs:

Imperial Tobacco has recommended a final dividend of 2 per cent making a total of 6 per cent (with two interim dividends of 2 per cent each) for the year ended 31st March, 1959 as against a total of 7 per cent in the previous year.

Estrela Batteries have raised the dividend from 6 to 7 per cent (including a bonus of 1 per cent) for the year ended 31st March, 1959.

The Tata group of Hydro-Electric companies has proposed to maintain the dividends for the year ended 31st March, 1959. Andhra Valley and Tata Power have declared final dividends of Rs 45 each plus a bonus of Rs 5 each. Tata Hydro has recommended a final dividend of Rs 4.50 plus bonus of Rs 0.50. The total dividends, for the year, work out to Rs 80; Rs 80 and Rs 8 per share respectively.

India Cement has maintained the dividend at Rs 2·50 per share for 1958-59.

Among Coffee companies, Badra has repeated the dividend at 17½ per cent and Kadur at 7½ per cent, both for the year ended 31-3-59.

Cottanad Plantations have maintained the dividend for the same year.

Nilambur Rubber has raised the dividend from 15 to 20 per cent.

Kalasa Tea has raised the dividend from 12½ to 15 per cent.

Periakaramalai Tea has raised the dividend from 10 to 12½ per cent for the year ended 31-3-1959.

Chembra Peak Tea has raised the dividend from 10 to 15 per cent for the same year.

Cambodia Mills have passed over the dividend for 1958 as against 5 per cent paid for 1957.

Indian Steel Rolling Mills have reduced the dividend from 10 to 7 per cent for last year.

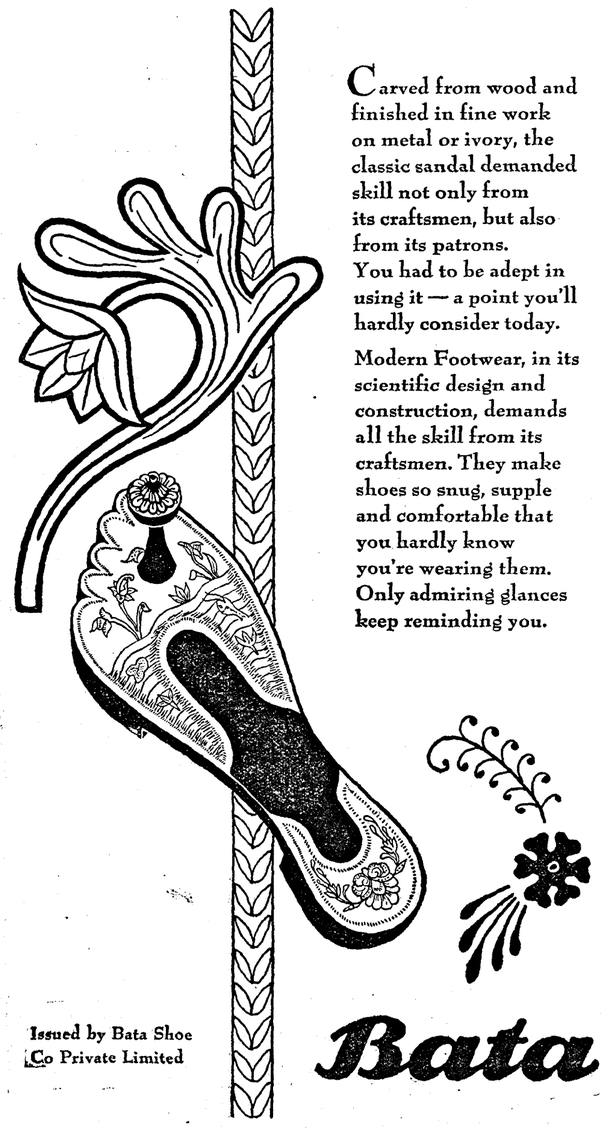
Hercules Insurance

Insurance Review:

The Hercules Insurance Company Limited has produced an excellent set of accounts for 1958. In the Fire Department, for example, the premium income has increased from Rs 35.17 lakhs to Rs 39.82 lakhs. The Claims experience has been satisfactory, but the fire insurance fund, which customarily is kept at 50 per cent of the premium income, has necessarily been marked up by Rs 2.33 lakhs to Rs 19.91 lakhs. In the result the amount transferred to the profit and loss account has been shaded to Rs 3.56 lakhs from Rs 3.63 lakhs. But the main point to note in the fire revenue account is the fact that the bulk of premiums has emanated outside India; in broad terms, business effected in India accounts only for 1/6th of the total premium income in the fire revenue account. The inference is clear that the reciprocal arrangements of the company are such as to be extremely favourable; and the large premium income outside India is, it is clear, an index of the foreign exchange earned by the company for the country.

The Accident revenue account also shows an increase in the premium income from Rs 7.95 lakhs to Rs 8.38 lakhs; and the rise in premium income of business effected outside India is larger than the increase in the premium income in India. Claims paid in India are lower, but this is more than offset by a higher charge in claims paid outside. The reserve for unexpired risks is higher at Rs 4.19 lakhs against Rs 3.97 lakhs. In the result, however, the surplus transferred to the profit and loss account stands reduced at Rs 1.55 lakhs against Rs 2.39 lakhs.



The experience in the Marine Department has been remarkably good. Premium income showed an increase of almost exactly Rs 1 lakh to Rs 16.17 lakhs; and here, again, the improvement in premium emanating from business outside India is higher. Claims paid in India are sharply reduced at Rs 5.93 lakhs against Rs 10.46 lakhs. In the result, although the reserve for unexpired risks, at 100 per cent of premium income, was higher by Rs 1 lakh, and although claims paid to claimants outside India showed a rise of Rs 1.18 lakhs, the surplus transferred is more than doubled from Rs 1.05 lakhs to Rs 2.17 lakhs.

The profit and loss account shows that the income by interest and dividends is fractionally higher, and the profit transferred from the departments is also marked up by Rs 0·21 lakhs to Rs 7.27 lakhs. Depreciation in investments claims the much smaller sum of Rs 0.63 lakhs against Rs 3.11 lakhs. But the provision for taxation is sharply higher at Rs 5.38 lakhs against Rs 3.40 lakhs. The balance carried down, consequently, has moved up from Rs 4.35 lakhs to Rs 4.90 lakhs. The dividend has been maintained at 20 per cent absorbing Rs 4·80 lakhs and leaving Rs 3.51 lakhs to be carried forward against Rs 3.41 lakhs brought in.

The balance sheet of Hercules Insurance shows that, against capital of Rs 24 lakhs, the reserves and surplus amount to Rs 29.69 lakhs; in addition, there are the three specific funds at an amount of Rs 40.27 lakhs. On the asset side of the ledger, the investments portfolio shows a rise of Rs 2.05 lakhs to Rs 91.95 lakhs. The market value of quoted investments exceeds book value by nearly Rs 7½ lakhs; and this is by way of being an additional hidden reserve.

The classified summary of assets indicates that the market value of investments in every case exceeds the book value; and, particularly in the case of ordinary share holdings, the surplus exceeds Rs 5 lakhs.

In a word, the accounts of Hercules Insurance show that, whether in under-writing, or whether in reciprocal business arranged, or whether in the manner in which the investments portfolio has been managed, Hercules Insurance figures as one of the best of the Indian companies.

Carved from wood and finished in fine work on metal or ivory, the classic sandal demanded skill not only from its craftsmen, but also from its patrons. You had to be adept in using it — a point you'll hardly consider today.

Modern Footwear, in its scientific design and construction, demands all the skill from its craftsmen. They make shoes so snug, supple and comfortable that you hardly know you're wearing them. Only admiring glances keep reminding you.

National Tobacco Raises Dividend

Balance-Sheet Reviews:

THE upward trend in cigarette consumption India is fully reflected in the working results of the National Tobacco Company Limited for the year ended 31st December, 1958. Sales have risen to Rs 8.35 crores from Rs 6.54 crores, while the net profit, after providing for Depreciation and Taxation, amounts to a high Rs 23.21 lakhs against Rs 15.93 lakhs in the previous year. The Depreciation amount is raised to Rs 6.49 lakhs from Rs 5.06 lakhs and Taxation provision to Rs 27.83 lakhs from Rs 18.84 lakhs, while Development Rebate Reserve is reduced to Rs 53,810 from Rs 87,971. After transferring Rs 24 lakhs from provision for taxation no longer required, the directors have provided Rs 9·00 lakhs (Rs 6.00 lakhs) for Capital Expenditure Reserve and Rs 2.00 lakhs (Rs 23.86 lakhs) for General Reserve. The dividend on the Ordinary shares is raised to 11 from 9 per cent.

The directors have, in their report, stated that, while it is difficult to forecast the future particularly in view of rising costs, the sales volume, during the first few months of this year, have been satisfactory.

The balance-sheet, as at 31st December 1958, shows a paid-up capital at Rs 1,24,95,000 out of which the ordinary capital is Rs 78.97 lakhs. Reserves and Surplus are shown at Rs 90.11 lakhs. The gross block at Rs 1.30 crores is depreciated by Rs 71.43 lakhs to show a net block value of Rs 58·95 lakhs.

£R$

Kumardhubi Engineering

The Kumardhubi Engineering Works Limited has reported a small decline in earnings for the year ended 30th November, 1958, reflecting the shortage of Steel supplies to the Structural Shop and the continued change in the pattern of demand for the Steel Foundry products. Sales have declined to Rs 1.33 crores from Rs 1.39 crores, while the net profit is lower at Rs 5.15 lakhs against Rs 5.59 lakhs in the previous year. The directors have set apart Rs 3.05 lakhs (Rs 2.86 lakhs) for Depreciation; Rs 4.35 lakhs (Rs 7.22 lakhs) for Taxation; Rs 48 000 (Rs 92,266) for Wealth Tax; Rs 6,427 (Rs 8,327) for General Reserve and Rs 1.87 lakhs (nil) for Statutory Development Reserve. No provisions are possible for Plant Renovation Reserve, Tax Contingency Reserve and Development Rebate Reserve against Rs 1.25 lakhs, Rs 80,000 and Rs 11,000 respectively made in the previous year. The dividend is pruned from 45 nP to 30 nP per share.

The directors feel that less satisfactory results than hitherto will continue until Steel becomes more readily available and the steel foundry expansion and modernisation is completed.

Against a total paid-up capital of Rs 30.43 lakhs, the ordinary capital stands at Rs 18.43 lakhs. Reserves and surplus are shown at Rs 51.24 lakhs. The gross block amounts to Rs 87.22 lakhs and this is depreciated by Rs 29.47 lakhs to show a net block value of Rs 57·75 lakhs.

Birla Jute

The Birla Jute Manufacturing Company Limited has done exceptionally well in the year ended 31st March 1959, thanks to better working of the staple-fibre plant. Earnings for the year have risen to Rs 74.36 lakhs from Rs 41.52 lakhs. The amount set aside to Depreciation is higher at Rs 17.69 lakhs against Rs 13.57 lakhs, while the transfer to the Development Rebate Reserve is as much as Rs 33.28 lakhs against Rs 63,705. General Reserve gets Rs 2.5 lakhs (nil) and provision for Taxation Rs 5·00 lakhs (Rs 8.02 lakhs). The Dividend Equalisation Reserve got Rs 6 lakhs on the former occasion. The dividend on the Ordinary shares is maintained at 20 per cent.

The jute mill worked more profitably, as raw material supplies were available more easily and there was also a larger demand for gunnies. The arrangements for modernisation of spinning machinery have been completed and it is expected that the entire modernisation scheme will be implemented by the middle of next year. A loan has been secured from the National Industrial Development Corporation. The staple-fibre plant would have worked even more profitably, but for the difficulty in securing raw material supplies.

The capacity of the Calcium Carbide plant is to be increased to 25 tons from 10 tons a day. The new furnace is expected to be commissioned in November this year. The cement plant at Satna has been completed and was commissioned in February. The teething troubles have not been got over, but full production is expected to be obtained shortly. The rated capacity of the plant is 750 tons of cement a day.

THE ENTERPRISE OF

DURGAPUR

Those friends thou hast, and their adoption tried,
Grapple them to thy soul with hoops of steel
—SHAKESPEARE

Steel, for more than a generation, has grappled Simon-Carves to Indian industry in ever closer friendship. In many contracts for coke ovens and other steelworks construction at Jamshedpur and Burnpur—and now at Durgapur—Simon-Carves have contributed to India's industrial growth and have been rewarded with many friends and much experience.

The vast enterpirse of Durgapur is an outstanding example of Indo-British friendship and co-operation—an enterprise which British engineers, British banks and the British Government have united to help India to bring to reality.

Simon-Carves, as a member of the British consortium ISCON, are proud to be responsible for the coal preparation plant, coke ovens, by-products plant and power station, and for the training of many Indian engineers to build and to operate this great steelworks.

Bally Jute

The more profitable trading conditions in the jute and gunny markets have enabled the Bally Jute Company Limited also to report better earnings in the year ended 31st March, 1959. The net profit, before providing for Depreciation and Taxation, has risen to Rs 17.06 lakhs from Rs 12.58 lakhs in 1957-58. The charge on account of Depreciation is higher at Rs 3.50 lakhs (Rs 1.18 lakhs) and Taxation Rs 7.31 lakhs (Rs 6.75 lakhs). The transfer to General Reserve is Rs 2 lakhs (Rs 1.50 lakhs) and Development Rebate Reserve Rs 1.99 lakhs (Rs 2,715). The dividend on the Ordinary shares is raised to 10 per cent from 6 per cent.

£R$

Katras Jherria Coal

Despite a decline in the net profit from Rs 4.29 lakhs to Rs 2.66 lakhs, the Katras Jherria Coal Company Limited has maintained the dividend at Rs 6.50 per share for the year ended 31st January, 1959. Sales are shown at Rs 73.68 lakhs against Rs 73.04 lakhs. The Depreciation amount is reduced to Rs 1.03 lakhs from Rs 1.35 lakhs. The directors have, after transferring Rs 42,500 from sundry items, provided Rs 7.00 lakhs (Rs 7.55 lakhs) for Taxation; Rs 15,300 (Rs 27,000) for Wealth Tax and Rs 25,147 (nil) for Development Rebate Reserve.

Raisings or the year are 344,864 tons against 348,085 tons and despatches 354,154 tons against 368,730 tons.

In January 1959, permission was received from the Controller of Capital Issues to capitalise Rs 7.50 lakhs from Reserves. In view of tax implications, however, the directors have, after consideration, decided not to recommend any further action being taken at present. The consent of the Controller of Capital Issues is, in any case, valid until January 1961. The position will be reviewed by the directors from time to time.

£R$

Kalapahari Coal

The Kalapahari Coal Company has again passed over the dividend for the year ended 28th February 1959 despite a rise in the net profit from Rs 1.37 lakhs to Rs 1.55 lakhs and in sales from Rs 14.32 lakhs to Rs 16.34 lakhs. The Depreciation amount is slightly higher at Rs 24,000 against Rs 23,000. After transferring a sum of Rs 2,500 from Capital Reserve, the directors have provided Rs 2,500 (Rs 1,500) for Wealth Tax and Rs 3,540 (nil) for Development Rebate Reserve. There is still a debit balance of Rs 29,934, which is carried forward to next year.

Raisings amount to 92,617 tons against 85,907 tons, while despatches are shown at 85,203 tons against 78,602 tons.

£R$

Port Shipping

The Port Shipping Company Limited has incurred a loss of Rs 2.10 lakhs for the year 1958 as against a net profit of Rs 3.54 lakhs in the previous year. The dividend is passed over against 12 per cent in the previous year.

In connection with the loss incurred by the company, the directors state that, although earnings from the carriage of jute and gunnies were slightly higher than in 1957, the demand in the Port of Calcutta for lighters for general import cargo was very poor throughout the year. Freight from import cargo dropped from Rs 19.96 lakhs to Rs 5.54 lakhs —a decrease of nearly Rs 14.5 lakhs. The disappointing results are largely due to the decrease in income under this head, lighterage for this type of work having hitherto formed a most important part of the company's business.

The Depreciation amount is slightly higher at Rs 1.78 lakhs against Rs 1.69 lakhs. A debit balance of Rs 3.68 lakhs is carried forward.

£R$

Standard Motors

Shareholders of Standard Motors have been intimated of the Company's programme to issue additional capital in preference and ordinary shares. The whole of the unissued portion of the authorised capital is proposed to be utilised. Rs 22 lakhs being offered in ordinary shares of Rs 10 each and Rs 20 lakhs in 20,000 preference shares of Rs 100 each. Out of the 220,000 ordinary shares proposed to be offered to ordinary and deferred shareholders, 25,898 ordinary shares will be offered to Standard Motor Company Ltd., UK, over and above 65,720 ordinary shares which they will be entitled to claim of their own right. Thus, the Standard Motor Company, UK, has agreed to provide upto 68,000 pounds sterling or Rs 9.10 lakhs in order to enable the import of the required plant and machinery. The preference capital of Rs 20 lakhs will be offered to all the existing shareholders at par. The interest payable will be 6½% tax-free. The ordinary shares, now issued will not be entitled to participate in any dividend that may be declared for 1958.

Priority Target for Shipping

A MONUMENT to private enterprise in its most daring form, Indian shipping may be normally expected to attain the Second Plan target of 900,000 gross registered tons. Unfortunately, however, the pace of achievement to-date is not quite reassuring on this score. For one thing, in the first three years of the current Plan, the net addition has been to the tune of 150,000 GRT only to the total tonnage of 500,000 at the close of the First Plan. For another, with the additional tonnage now in an advanced stage of construction being held just sufficient to replace some 125,000 tons of obsolescent shipping due to be scrapped before 1960-61, as much as 250,000 tons will have to be added in the last two years of the Second Plan to reach the target. It is, of course, roughly figured out that about a fifth of the required additional tonnage will be acquired from Japan with the help of the 5-billion yen credit already assured. There will thus be a gap of 200,000 tons which, on present indications, may not be covered at all.

It is against this background of inadequate achievement in the Second Plan period that the desirability of a Third Plan target of 1.6 million tons of shipping just suggested by the National Shipping Board would have to be judged. In effect, this target would involve an addition of one million tons (including probably 100,000 tons of replacement) on the assumption that the shortfall under the Second Plan would be made good during the Third Plan period. In which case, the foreign exchange expenditure would have to be Rs 190 crores instead of the estimated Rs 133 crores for 700,000 tons of additional shipping. On the face of it, the target proposed by the Board looks ambitious, but it is not really so, because the Union Transport Ministry itself is understood to have favoured a target of as much as two million tons. Even that high a target (1.6 million tons) which can commit only a million tons or so to overseas trade will not enable the Indian merchant fleet to carry, by the end of the Third Plan, anything more than 20-25 per cent of the country's foreign trade (both exports and imports) estimated, as of 1958, to be of 20 million tons by volume. The proposed target is also not ambitious for the added reason that it is the legitimate aim of any maritime country to carry as much as half of its foreign trade in its own ships.

Nor does the foreign exchange requirement seem to be formidable because, even now, the tonnage of 400,000 GRT committed to overseas trade (covering both imports and exports) earns foreign exchange by way of freight at an annual rate of just under Rs 24 crores as against Rs 13 crores in 1955-56, and a possible tonnage of one million tons GRT similarly committed to overseas trade (on the basis that 600,000 tons would be the share of coastal trade in the overall target) may be estimated to earn foreign exchange at an annual rate of Rs 60 crores by the end of the Third Plan. Further calculations, which take into account the possible staggered additions to shipping from year to year during the Third Plan period, would show that not less than Rs 95 crores in all by way of additional foreign exchange will have been earned upto the end of that Plan. That would mean that the balance of the foreign exchange outlay (including interest, if any) may be fully covered by additional freight earnings in three years' time from 1966. There is no comparable export industry which can be depended upon to earn back the foreign exchange outlay on it in quicker time.

If the proposed Third Plan target for shipping is thus not ambitious and the estimated foreign exchange requirement not excessive, there is a good case for doing something here and now, so that the progress toward the target may be easily staggered over a seven-year period, including the last two years of the Second Plan. As the provision of about Rs 35 crores for foreign exchange expenditure on shipping under the current plan is by now fully utilised, the Government seem to be all but resigned to the prospect of a shortfall to the tune of 200,000 tons. This attitude of resignation on the part of Government is probably responsible for their present lack of enthusiasm for the self-financing scheme under which it was originally intended that 20 per cent of the prospective foreign exchange earnings of new ships could be initially released by Government for their acquisition and the entire foreign exchange commitment of the relevant shipping companies financed in a few years' time by the freight earnings of the ships concerned.

That this practical scheme has not been rendered fully operative has, however, not stood in the way of an enterprising Indian tramp shipping company like the Great Eastern Shipping Co taking advantage of it by securing, on its own responsibility, the initial 20 per cent credit from some foreign banks for acquiring secondhand ships in good condition. This tramp shipping company (which is the only one of its kind in India) has acquired in this manner six vessels in the last year or so on the condition that the net freight earnings of those ships are automatically utilised for paying their cost in the course of two or three years. What has been possible for this particular company may not be possible for all other shipping companies. To leave every company to its own devices in the matter of securing initial foreign credit and contracting for ships on pay-as-you-earn basis would be patently unworkable. It is therefore rightly expected of the Government to operate the self-financing scheme in its original form or, in the alternative, to create a foreign exchange pool as a counterpart of the Shipping Development Fund (which is all in rupees) by initially allocating to it some free foreign exchange resources and augmenting it in due course with the earnings of ships to be acquired. If something is done on these lines here and now, there is yet a chance that the estimated gap in shipping under the Second Plan may be covered by new tonnage.

At the same time, the foreign exchange difficulty would also appear to suggest the need for an early revision of certain administrative policies and procedures in the matter of shipping import and export cargoes on Government as well as on STC account, with a view to enabling the Indian shipping companies to handle more of such cargoes. Incidentally, some light on the present deplorable state of affairs in this regard and some suggestions made to the authorities to remedy it are to be found in the "Olympus" page of this issue. That the effort to enable Indian shipping to earn more foreign exchange through a greater share of Government-controlled cargoes would not be sufficient may be seen from the National Shipping Board's latest recommendation to the effect that the freight rates to be allowed for such cargoes to Indian Conference lines should be 10 per cent above the normal freight rate and 5 per cent above the rate for Indian tramp ships so long as the rates in the world freight market continue to be highly competitive and thus rather uneconomic for Indian shipping companies. Since the possible attainment of the shipping target will be inextricably bound up with the potentialities of Indian shipping for earning foreign exchange, the need for follow-up action at the administrative level to increase such potentialities should be obvious. There is here a happy harmony of interests between the private sector and the public sector shipping companies, for the country's merchant navy belongs, in the fullest sense, to the national sector.

Programme of Coal Production in India

By Sardar Swaran Singh

INDIA embarked upon a planned development after independence to give economic content to her political freedom. In an endeavour to bring about speedy industrialization high priority was given to the development of coal and steel. A coal production target of 60 million tons was fixed to be achieved by the end of the Second Five-Year Plan, i.e., 1960-61.

The known reserves of coal in India are estimated to be of the order of 44,000 million tons, extending over an area of 35,000 sq miles. The reserves are believed to be fifth in the extent of world's deposits and three times larger than the estimated area under coal in Great Britain.

Coal mining has not been new to this country. Published reference dates as far back as the year 1774, when shallow mines are reported to have been developed in the Raniganj field. It was only 40 years later, however, that a fresh beginning was made and by the middle of the 19th century, a number of seams were opened in the Raniganj field. This advance was facilitated by the systematic geological survey of the field which was undertaken in 1858 to 1860. By 1860 nearly 50 collieries were working producing about 282,000 tons of coal per annum in the Raniganj area.

At the beginning of the present century, coal production in India reached a total of 6 million tons of which nearly 5 million tons were obtained from Raniganj, Jharia and Giridih fields in Bihar-Bengal. The years pre-

ceding the first world war saw further progress and a number of new fields—Bokaro, Pench and Chanda Valley—were opened. By 1914, India's total output rose to 16.5 million tons per annum.

The second world war brought a considerable increase in industrial activity in India with a consequent rise in coal production. Yet there was not enough coal to meet the needs of war time industry. Concrete steps were taken by 1944 to step up the production and to introduce controlled prices to encourage the industry. In 1955, when the Second Five-Year Plan began, the production of coal was 38 million tons. The target of 60 million tons thus represented an increase of 22 million tons.

Of the additional production of 22 million tons. 10 million tons would be raised from the privately-owned mines and 12 million tons from the public sector, i.e., the Government-controlled mines.

PROGRESS OF PRODUCTION

The collieries in the private sector have shown steady progress in the production of coal. In 1958 their production was about 39.50 million tons. The production trend in this sector of industry has been encouraging.

The Government are giving increasing attention to provide adequate transport facilities, such as railway sidings and pilot and depot capacity to the coal industry. Steps are also taken to ensure necessary supplies of raw materials such as pig iron, steel and cement to the industry.

PUBLIC SECTOR

The production in the public sector had to be raised from 4.5 million tons, including 1.5 million tons from the Singareni Collieries, to 16.5 million tons, i.e., an increase of 12 million tons. With the exception of 0.5 million tons expected from the existing 11 Old State Collieries and a further 1.5 million tons from Singareni, the additional production has to come largely from virgin areas to be exploited for the first time. Planning for such production is a difficult and complex problem and it involves a number of factors. By far the most important element is the acquisition of land and mining rights so that initial prospecting and mapping of acreas can be done. Initial prospecting has to be followed by detailed prospecting before actual mine plans can be drawn up. Other factors are the procurement of necessary machinery and equipment including spares and provision for maintenance arrangements, availability of electric power, recruitment of requisite personnel, construction of service buildings and residential houses including miners' quarters and availability of railways facilities such as new railway lines and bridges in some cases and of siding in all cases. Yet another factor which bears on the fulfilment of the target is the availability of necessary foreign exchange for the purchase of machinery and equipment.

The public sector is engaged in proving new coal seams in virgin areas and opening new mines and developing them rapidly by highly mechanised methods, as well as in expanding production from existing collieries. Intensive drilling, totalling over 2,22,000 metres, has been done, as a result of which new coal reserves to the extent of approximately 1900 million metric tons have already been proved in different coalfields. Further drillings which are going on will no doubt add to these reserves.

Necessary steps have already been taken to increase production with a view to accomplishing the additional target of 12 million tons by 1960-61. New mines now being developed by the National Coal Development Corporation are Kathara in the East Bokaro Coalfield, Gidi, Sayal 'D', Saunda and Bachra in the Karanpura Coalfields and Korea (Block II) in Madhya Pradesh. In addition, two new coal mines have been opened up in the existing collieries at Bhurkunda in Bihar and Kurasia in Madhya Pradesh. Other projects in the offing are Chordhrara, Sayal, Gidi 'D', Balanda, Kotma and Bisranpur-Jhilimili, which are in the prospecting stage, and where intensive drilling is going on. Considerable reserves have been proved in these areas.

The method employed is either mechanised open-cast working or underground working.

MECHANISED OPENCAST WORKING

There are a number of thick coal seams in India either outcropping or occurring under a shallow cover which can be profitably worked by the opencast method. This method is very popular with owners of small leaseholds as it affords them a chance of obtaining capital for subsequent underground mining and almost all the quarries are hand-got. Mechanised opencast working requires a large capital and only the State-owned collieries have recently started mechanised opencast working.

The economic limit of depth for mechanised opencast mining varies with local conditions, and at present it is considered to be up to four feet of overburden per foot of coal in this country.

Opencast method consists of the following two major operations:

i) Removal of overburden and disposal of the same.

ii) Winning of coal comprising (a) breaking of coal, and (b) loading and transportation of the same.

Various types of excavating machines to suit varying conditions are used in this method. Excavation of comparatively soft soils to a maximum depth of 10-15 feet is taken up by means of power shovels, which may be either diesel or electrically operated. Where the overburden is very thick workings are laid out in benches about 30-35 feet in height and 30 feet minimum width depending upon the strata and local conditions. In deep excavation, the overburden is usually hard and is composed of rock, such as sandstone and shale, which is broken by blasting. Holes for blasting are usually very deep, depending upon the dimensions of stripping and are normally 6" in diameter and drilled either by Percussion or Rotary drills. The overburden is disposed by Rear Dumpers which are usually of 15 cu. yd. capacity.

Once the overburden is removed, the workings are laid in benches, the number and height of benches depending on the thickness of the seam. The coal is cut by picks, or, for rapid winning, blasted by explosives. Shortholes in coal are usually vertical and vertical type Auger drills are most common. Gunpowder and Gelignite are commonly used for blasting coal.

The coal thus obtained contained big lumps. A scheme is in hand to instal crushers, either of the Jaw or the Giratory type, for crushing the coal and then bringing it to suruface screening plant by means of Belt Conveyors.

It may be mentioned here that mechanization needs huge initial expenditure which in the long run proves cheaper for high production and the success depends mainly on proper maintenance of the machinery.

The main object in any system of working is to obtain the maximum quantity of coal with the utmost economy and safety. The method of working mostly depends on local conditions, and generally varies according to the thickness of coal. Dip of the seam, depth from surface, nature of coal and geological disturbances in the seam are other factors taken into consideration in deciding the mode of working.

UNDERGROUND METHOD

The most common method in practice in underground mining is to develop on Board and Pillar system and to extract the pillars with or without stowing. The horizon of development is usually the bottom section of the seam. After the seam has been opened out, the workings are laid out in sections or panels, and as soon as one section is formed into pillars these are extracted. The main roads are set out at full dip or rise, with branch roads at right angles to them.

Holes in coal are then drilled and blasted systematically. The blasted coal will be loaded by mechanical loaders usually of the gathering-arm type, on to a scraper-chain conveyor, which in turn loads to a gate belt conveyor. The coal from the gate belt conveyor will be brought up to the surface screening plant. As most of the coal in the NCDC collieries outcrops near the surface the difficulty of transporting the coal through a shaft has not so far arisen in the new miles.

DEPILLARING

After coal has been taken out begins the depillaring. It is the most important and dangerous part of work in mining. The aim is to get the maximum quantity of coal economically as quickly as possible, with minimum danger to workmen. Though extraction of pillars in thick seams by the caving system was practised before, it is not favoured at present due to difficulties associated with it, i.e., heavy bumps, loss of coal due to premature collapse, fire in consequence of the latter etc. To avoid the difficulties mentioned above, the pillars are extracted nowadays with hydraulic sand-stowing. Though various methods are employed, the most common practice is to extract pillars in the bottom section with the help of stowing, maintaining a diagonal line of extraction to even out the weight and systematic timbering is also adopted for securing the exposed roof. The second section 8 to 10 feet is developed immediately above the pack. In this sectional development, the floor will be the sand-pack. The extraction of pillars is started in the same way as in the case of bottom sections.

In some of our mines, the long-wall method is adopted in which a strip of coal 200 to 300 feet wide is taken out at a time and stowed hydraulically with sand, the stowing and cutting of coal going on simultaneously.

The stowing arrangements consist of a sand gathering plant such as sand slushers at the river-bed, transporting same by haulage or by aerial ropeway to the storage bunker near the borehole or shaft site and a reservoir of water for flushing sand. The sand is flushed down the shaft/borehole in pipes to the required position of stowing. The water is allowed to be percolated through by erecting bamboo mattings on vertical props which retain sand and the water is pumped to the surface, which is used up again for flushing. The sand thus deposited gets tightened by its own weight. A telephone communication is maintained between the surface and bunker (sand supply point) and the delivery-end underground, and between the sand bunker and sand collection point at the surface to exercise better control. This method has the advantage that higher percentage of extraction is achieved with greater safety and with little damage to the surface, and less timber is used. Chances of underground fire due to spontaneous combustion are minimised.

As a result of introduction of higher wages to workers in the coal industry, mechanisation in big collieries has become a necessity for maintaining large output at economic level.

Investment and Third Plan

By Professor S. KESAVA IYENGAR

IN ECONOMIES in which the population is huge (as in China and India), there is a tendency to employ less capital per unit of labour while, in advanced economies like the USA, USSR and Britain, capital investment per unit of labour is not only high but goes on increasing at an accelerating rate. But low capital intensity necessarily involves technological stagnation, high costs and low productivity. There is a segment like rural industrialisation, but the scope is narrow, and even here, there is a persistent upgrading of capital intensity. It is for this reason that planners in India have laid special emphasis on heavy industrialisation involving the utilisation of steel, coal, oil and electricity to the maximum possible extent. We have in India plenty of natural resources, but utilising them involves not only a high level enterprise (of which we have a fairly good supply), but also producer goods and technical skill (in which we are very poor compared to our requirements).

TWO DIFFICULTIES

Experience during the plan periods shows that we have two difficulties, one of finding adequate resources, the other of utilising such resources according to schedule. For example, during the first three years of the Second Plan, the Government of India secured foreign loans amounting to Rs 1,216 crores but were not able to utilise more than Rs 519 crores out of that amount. This must have been due to non-availability of capital goods and technical skill.

BIGGER OPPORTUNITIES

There is a provisional allotment of Rs 3,900 crores for the private sector in the Third Plan. But the scope for private investment exceeds Rs 10,000 crores provided resources and technical man-power can be had. It is common knowledge that the scope for additional taxation, borrowing and deficit spending is not much on account of the **per capita** income being very low (Rs 310). Further more of taxation and borrowing must mean so much less of resources available to private enterprise. Even then, capital issue in 1957-58 were larger in the private sector than in the public sector. It is also widely known that, in the matter of securing foreign capital goods, private enterprise made a better show than public concerns. During 1958-59, the level of private investment was definitely lower on account of uncertain industrial policy and a severe cut in imports. The index of industrial production, which rose by 7 to 8 per cent in 1956-57 and by 3.5 per cent in 1957-58, was higher only by 1:5 per cent in 1958-59. Imports of private capital were quite small, although gradually increasing: the figures stood at Rs 9.2 crores average (1954-55), Rs 11.6 crores in 1956 and Rs 16.3 in 1957. At Government level, in addition to Rs 1,216 crores of foreign loans during the first three years of the Second Plan, $ 950 million have been promised by friendly Powers up to the end of the Second Plan period. The latest is the USSR loan of Rs 180 crores. But, judging from debates in the Foreign Affairs Committee (USA) and the reduction from $ 3,900 million asked by the President to $ 3,030, accompanied by a declaration of preference to loans over grants, to economic over military aid, and the general American opinion hardening against the foreign aid programme of the Government, the prospects of foreign long-term loans at Government level are not very bright. In the words of the **Wall Street Journal:** "A gift as well as a loan oft loses both itself and friend." Even at home, Government resources do not show much promise: collections under small savings were only Rs 206 crores during the first three years of the Second Plan.

PROMISING AUSPICES

The old order of colonial investment has ended, but, thanks to more accurate information and closer touch provided by the United Nations and the numerous subsidiary organisations, the vast scope for private investment in under-developed countries is being realised now-a-days among the big Powers and international organisations. In addition to the World Bank, we have the special United Nations Fund for Economic Development, the International Development Association, the Development Loan Fund and the proposed Inter-American Development Bank and Loan Fund. A **New York Times** estimate is that $ 10 billion capital per annum would be required to raise under-developed countries to modern standards in a reasonable time. The recent World Bank Conference at New Delhi gave opportunities for top-ranking financiers and businessmen to get firsthand knowledge of Indian conditions, and the Finance Ministers of West Germany, Canada and Japan practically committed their nationals to a forward policy of investment in India by capitalists in their respective countries. A businessmen's deputation under the leadership of Mr Paul Brent, and another Study Team from Columbia University, further confirmed the excellent prospects of US investment of capital on private account in India. The Government there are considering the grant of tax deferrals as a bigger attraction than reduction in tax rates on profits earned abroad, with a view to facilitating reinvestment abroad. The US Bureau of Foreign Commerce has issued four questions to businessmen on the eve of another US Trade Mission visiting Madras at present. The questions are:

(1) Whether you would consider a joint venture with a qualified Indian company to produce your products in India?

(2) Whether you would consider extending long-term credits on production equipment for Indian firms of good credit rating but which are unable to obtain dollar exchange at the present time?

(3) Whether you are interested in locating sources of products, materials or services either for direct import or to act as agent for such purchases?

(4) Whether you can arrange to use local Indian currency in payment for US export?

The excellent scope for importing American capital has already been appreciated by some of our industrial magnates. Mr G. D. Birla has bargained with Kaiser Aluminiums (USA) for establishing an aluminium plant near about the Rihand Project in UP. Mr Kailachand has entered into an agreement with Firestone for putting up a synthetic rubber plant in Bihar.

NEGLECT OF THE PRIVATE SECTOR

The burden of the song is that planning in India has not yet provided its due place to the private sector. It is true that we have somewhat of a skeleton to promote capital outlay in the private sector: there are the Industrial Finance Corporation (Central), The Industrial Credit and Investment Corporation of India (Central), State Industrial Finance Corporations, The Small Industrial Board, and Commercial Banks which of late have started the new policy of investing some funds in industrial finance. But all this amounts to the setting up stage. It requires huge quantities of foreign capital goods and technical personnel to enable these organisations to function satisfactorily. Mr G. L. Mehta, Chairman of the ICICI has made a timely start by negotiating a loan of $ 10 million from the World Bank and Rs 20 crores from US Rupee balances under Public Law 480 (wheat sales to India) in favour of the IFC and ICICI, but an institution like the Development Loan Fund, meant primarily for financing private enterprise, has been practically monopolised by the Government of India: that Fund has already lent $ 195 million and is about to advance another $ 100 million to the Government of India.

THE UNEMPLOYMENT PROBLEM

The Planning Commission estimate new entrants at 15 million during the Third Plan period, the backlog of unemployed standing at 13 million, making a total of 28 million. The problem of finding employment for 28 million additional persons is looked upon with great diffidence. It looks as though the Planning Commission take it as an axiom that all employment should be found by or under the auspices of the Commission. If only the private sector is allowed free play, the scope for training and employment should expand enormously on account of the import of foreign capital on private account. There have been already more than 500 cases of foreign co-operation in training local workers, but even this number is quite nominal compared to the needs. To set the ball rolling, the first kick comprises:

(1) No tax discrimination;

(2) Compensation at market rates for nationalisation (if and when);

(3) facilities for repatriation; and

(4) Import of technical personnel.

In a recent publication, the Planning Commission estimated the need for technicians at 100,000, but if the resources of the country should be exploited on the basis of foreign co-operation, we would require several lakhs of them. A clear-cut long-range policy should be decided on and announced by the Government almost immediately so that the ground may be cleared for the Third Plan.

NO POLITICAL THREAD

It is of course patriotic to prefer local capital for investment, but everybody knows that the saving margin is just not there. Countries like Canada, West Germany and Japan have profited a great deal by importing private capital, and that has not resulted in any political problems. While countries like the USA and the USSR are having millions of television sets, the Government of India announced very recently that they had no plans for television arrangements during the Second Plan period, except for a proposed education set under the UNESCO programme. Fabricated houses, automobiles, television and radio sets, washing machines—these and such other common things in advanced countries are hardly known to the masses in India, and if we are serious about developing the country, and raising the Indian standard of life quickly and sufficiently, there is no escape from importing private capital in required dimensions. In steel plants and oil refineries, in technical training and irrigation works, the Government of India have been importing technical skill and deputing Indians for training abroad, but all this amounts to an oasis: a fairly complete list of industries and units that can be developed in India with the help of foreign capital must first be drawn up and expounded in countries which can deliver the goods. In this respect, the level of co-operation between the Government and the private sector should be much higher than at present.

EDITORIAL NOTES

Hopeful Trend

The most encouraging feature of the statement made by President Ayub Khan at his Press Conference last Monday is the friendly and hopeful tone in which he has referred to the possibility of settlement of the disputes which have steadfastly bedevilled Indo-Pakistan relations. The President has reciprocated the sentiments expressed by India's Finance Minister on the conclusion of the preliminary talks held in New Delhi on the settlement of outstanding financial problems.

The feeling that the hopeful trend in the relations between the two countries should continue will be echoed on both sides of the border. It is not surprising that President Ayub Khan has reiterated the familiar Pakistani position on Kashmir. His reference in this connexion to the security of Pakistan requires further clarification. Regarding border firings, President Ayub Khan surely does not expect that his claim, that Pakistani troops fire only in self-defence, will be accepted in India.

On the same day that the Pakistani President was holding his press conference in Karachi, the Rajya Sabha was informed, by the Deputy Minister for External Affairs, that Pakistani forces had resorted to firing on 36 occasions in violation of the cease-fire agreement entered into on April 2, 1959. A few days earlier, Prime Minister Nehru stated categorically that the firings by Pakistan in the Dawki and other areas in Assam were "totally unjustified and without the slightest provocation". It is the continuance of these firings, in spite of repeated agreements, that makes the public in India sceptical of any talk of friendly relations between India and Pakistan. As President Ayub Khan has stated, it is not very difficult to end the border incidents. It is in his hands.

*

Sugar Prices

The recent trend toward higher sugar prices finds the Government and the industry engaged in a game of mutual recrimination. The Food Minister told the Lok Sabha last week that the sugar industry and trade were responsible for pushing up sugar prices, taking advantage of the drop in production and expectation of a smaller carry forward of stocks at the end of the current year. The industry and trade on the other hand hold the Government primarily responsible for bringing about shortage with their policy of compulsory exports. The rise in retail prices they attribute to the pressure of consumer demand on the inadequate supplies with the retailers.

Government have tried to meet the situation by piecemeal action. By the end of June, allotments were restricted to licensed dealers. Price control was introduced by a notification dated July 16, 1959, which empowered District Magistrates to fix the prices at which sugar can be sold by the allottees. According to this notification, every dealer who is allotted sugar by Government is required to sell at a price not exceeding the aggregate sum of the fixed ex-factory price; the transport charges incurred by him; any octroi or other tax paid by him; and a sum not exceeding Re 1 per maund for his profit and any incidental charges.

The Food Minister claimed in the statement he made in the Lok Sabha that the measures taken to counteract the rise in prices had already produced beneficial effects. But price control cannot be more than a temporary and not very effective palliative. The up-trend in prices will persist, unless effective action is taken to step up production to keep pace with the growing demand.

The increase in consumption seems to have caught both the Government and the industry unawares. Perhaps the impact of development expenditure on the demand for sugar was not taken into account when targets of capacity and production were set for the Second Plan period. In this connection, there is ground for satisfaction in the indication that this mistake is not likely to be repeated in the Third Plan. The Government of India, according to a recent announcement, have decided to license additional capacity in the sugar industry, both for expansion of existing units and for the establishment of new factories.

*

Soviet Seven-Year Plan

In his talk to Delhi Rotarians last week, Mr I. A. Benediktov, the Soviet Ambassador, gave an indication of the sweep and magnitude of the current seven-year plan of his country. While heavy industry continues to enjoy top priority, output of consumer goods and house construction are to be stepped up to a substantial extent. The 21st Congress of the Communist Party of the Soviet Union, in its resolution endorsing the report of Mr Khrushchev on "Target figures for the Economic Development of the USSR," defined the principal economic tasks to be accomplished in the next seven years as the "all round development of the productive force in the country and, on the basis of priority expansion of heavy industry, the achievement of a level of production in all branches of the economy, which would allow taking a decisive step towards the establishment of a material and technical base for communism and ensuring the Soviet Union's triumph in the peaceful economic competition with capitalist countries."

The fundamental problem of the coming seven years, according to the same resolution is to "make the most of the time factor in socialism's peaceful economic competition with capitalism." The targets drawn up with this end in view provide for a rapid rate of growth of the national economy. In industry as a whole, the mean annual increment in gross output during the seven years is to amount approximately to 8.6 per cent; the rate of increase in capital goods industries will be 9.3 per cent and in consumer goods industries 7.3 per cent.

Apart from sizeable increase in the targets for ferrous and non-ferrous metals, the plan lays special emphasis on accelerated expansion of the chemical industry, especially the output of artificial and synthetic fibres, plastics and other synthetic materials and fertilisers. The plan aims at a four-fold increase in artificial fibres, seven fold increase in the production of synthetic resins and increase in fertiliser output by about three times. The target for electricity has been fixed at about 500,000 to 520,000 million units, about double the level of output in 1958. The target for agriculture has been set at 70 per cent increase in gross agricultural production. The plan aims at an increase of 62-65 per cent in national income, and a rise of 40 per cent in the rural income of factory and office workers as well as of the collective farmers.

The Soviet plan envisages a capital investment of 1,970 billion roubles and Mr Benediktov stated that, in the last year, the Soviet Union would advance to the first place in the world in the production of goods in absolute volume. The successful completion of the plan should place the Soviet Union in a stronger position to compete with the United States in the matter of aid to under-developed countries.

Respite to Hotels

The recommendation of the Hotel Standards and Rate Structure Committee that "the hotel industry should by and large be left to private enterprise" will be received with as much satisfaction by the patrons of hotels as by their proprietors. The hotel industry is one which runs almost entirely on the quality of its service. And service, as those who hold life insurance policies have reason to know from the experience of the last three years, is often the first casualty of nationalisation. The life insurance industry has escaped serious damage as the policy holders, once they are hooked by some plausible agent, have no escape except at the cost of the premiums they have already paid in. But the hotel industry is different. The satisfaction at the recommendation of the Hotel Committee will, however, be tempered by the news that the Government are considering setting up a **Janata** Hotel in Delhi. Is this a compensatory move to make up for the losses toted up by Ashoka?

WORLD OF FINANCE

Further Thoughts on State Loans

TWO weeks ago, when we greeted the new loan announcement of the State Governments, we indicated our belief that almost every one of the State Government loans can be expected to be over-subscribed, and that, too, well within the prescribed period during which the lists are to be kept open. For obvious reasons, the West Bengal and Bombay issues are sure to evoke a satisfactory and considerable response. We should like this week to draw attention to two other State Government loans which, for reasons that we shall set out, may be expected to attract subscriptions in a very heartening manner.

First of all, we have the Orissa loan, to be issued at Rs 99. On the face of it, the fact that Orissa has seen fit to offer its loan at a discount of one rupee would suggest that the State Government are, quite clearly, not borrowing from strength. But there are reasons why we can appreciate the decision of the Orissa Government to offer such a discount. First of all, this is only the third time that the State Government have, since Orissa was constituted as a separate province in 1936, approached the market. It is this more than any other factor which would have influenced the State Government to make the terms of the loan more favourable as far as the investor is concerned. For, the 4½ per cent 1970, issued at Rs 99, is today quoting at a premium at Rs 101.45. Thus, there was no need on the part of the Orissa Government to have offered a discount of a rupee. But the terms are so favourable and the record of the State from the point of view of its budgetary position so satisfactory that there is further inducement and attraction for the investor. If note is taken of the considerable development potential that there is in Orissa, with its rich reserves of minerals and its ambitious multipurpose projects, there would be one more reason why the Orissa loan may be expected to be oversubscribed.

Secondly, the UP Government loan, issued at a discount of 50 nP, is also bound to attract powerful and substantial response. It is an intriguing fact that, since 1945-46, the UP State Government have not had a single year in which there was a revenue deficit. In 1957-58, the revenue surplus was as much as Rs 5.51 crores. The surpluses have been credited to various reserve funds, the total of which amounts to the considerable figure of Rs 48.26 crores. As against the debt of the UP Government as at the end of March 1959 of Rs 211.63 crores, investments by the State in irrigation work and other schemes amount to Rs 196.69 crores; and, in addition, balances due to the State Government under loans and advances are placed at Rs 44.51 crores. It is thus that the UP Government can be said to be in a position to borrow from strength, and to be confident that their issue, too, will be over-subscribed.

Finally, we come to the late-comer in the field, the Rs 4 crore loan floated by Kerala at a discount of one rupee. Before Central intervention, the State Government had decided that the time was not propitious for raising a loan. After Central intervention, certain support has been assured from banking circles in Kerala, which seems to suggest that the Kerala loan, too, will not be allowed to be a failure. But it seems likely now, unless there is public confidence that the next elections in Kerala will produce a non-Communist Government, that Kerala alone of the State Governments may not have its loan over-subscribed.

+

Bank Investments: over Rs 700 crores

BEGINNING of the month disbursements in August have, as indicated in the returns of the Reserve Bank for August 7, interrupted the even tenor and smooth progress of the 1959 slack season. There has, apparently owing mainly to governmental disbursements, been a sharp increase of Rs 22.87 crores to Rs 1688.91 crores in Active Note circulation. Besides, there has been outflow of Rupee Coin for Rs 1.67 crores. In order to replenish Balances Held Abroad, there has been a transfer of Rs 5 crores from Foreign Securities in the Issue Department. Currency has been expanded against Rupee Securities by transfer of Rs 10 crores from Investments in the Banking Department. In the end result, the Reserve Bank's Cash in the till is lower by Rs 19.50 crores at Rs 11.31 crores.

Investments in the Banking Department are Rs 10.34 crores lower at Rs 319.31 crores, and this is due, as we have seen, to transfer to the Issue Department. Hence, there may not have been deficit financing during the week under review. It is known that the State Bank did not purchase any securities from the Reserve Bank; but, if the other Scheduled Banks should have purchased through the Reserve Bank tap, then, there might have been some small element of deficit financing.

The beginning of the month disbursements of the Central Government are reflected in a decline of Rs 6.79 crores to Rs 53.37 crores in the Centre's Deposits. That month early disbursements have also been heavy in the case of the State Governments is suggested by a decline of Rs 9.12 crores to Rs 13.20 crores in their balances. Moreover, the State Governments increased their Ways and Means borrowings from the Reserve Bank by nearly Rs 5 crores from Rs 22.75 crores to Rs 27.40 crores.

It does not appear as if the month early pressure for money has greatly strained the banking system, although there has occurred a decline of Rs 4.50 crores to Rs 76.60 crores in their Reserve Balances; for, the State Bank figures in the relevant week as having suffered a depletion of nearly Rs 5 crores in Cash in Hand and with the Reserve Bank. Similarly, the Other Loans and Advances of the Reserve Bank have moved up by Rs 3.81 crores to Rs 70.07 crores, but Rs 2 crores of this being attributable to the State Bank. Finally, Balances Held Abroad have been marked up by Rs 3.61 crores at Rs 13.44 crores, indicating, therefore, that the import surplus was reflected in a drop in Foreign Balances of Rs 1.39 crores, since there had been a transfer of Rs 5 crores from the Issue Department.

+

The return of the State Bank for August 7 is important for showing the institution to be a borrower from the Reserve Bank, for Rs 2 crores, for the first time since May 15. The State Bank was thus compelled to have recourse to Reserve Bank credit, not owing to the pressure of month early disbursements, but for quite another reason. For, the total of Advances is actually lower by Rs 1.42 crores at Rs 173.29 crores; and there has occurred a small decline of Rs 2.04 crores to Rs 545.97 crores in Deposits. Giltedged holdings are largely unchanged. Hence, borrowings from the Reserve Bank and decline in Cash Balances and in Advances have obviously gone to an increase of Rs 6.64 crores to Rs 21.31 crores in Other Assets—and this may presage further purchase of giltedged from the Reserve Bank.

The return of the Scheduled Banks for July 31 records giltedged holdings passing the Rs 700 crore mark. The two-fold increase in resources due to slack season influences is obviously compelling Scheduled Banks to show an increased interest in Government securities. During the week under review, wholly on account of the State Bank, Deposits have risen by Rs 3.36 crores to Rs 1816.34 crores. At the same time, the total of Advances, this time mainly in respect of the other Scheduled Banks, has moved down by a further Rs 9.29 crores to Rs 956.12 crores. Besides, Cash Balances have been drawn down by Rs 11.09 crores to Rs 171.50 crores. Investments in giltedged have moved up sharply, in confirming the view expressed in this column last week, by Rs 26 crores to Rs 714.43 crores and the State Bank's share is, in round figures, Rs 20½ crores.

+

Tenders for Rs 3,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, the 11th Aug. 1959. Total amount offered was Rs 3,00,00,000 Tenders at Rs 99.365 and above were accepted in full. Total amount accepted was Rs 3,00,00,000, the average rate of accepted tenders being Rs 2.530 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on Monday, the 24th Aug. 1959. Successful tenders should make payment on Friday, the 28th Aug. 1959. Other conditions are as usual.

During the week ended the 7th Aug. 1959 Government of India Treasury Bills for Rs 74,40,75,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 12th Aug to 22nd Aug 1959 at Rs 99.381 per cent. Sales can be stopped at any time without notice if Government think it necessary.

There were no sales of 91 day's Intermediate Treasury Bills during the period 5th August to 8th August 1959.

Pre-Election Boom in London

By Paul Einzig

A few weeks ago, the probability of an autumn election was acting as a most important bear point, restraining the boom on the London Stock Exchange. Today, the certainty of an autumn general election constitutes a bull point for equities. The nervous feeling seems to have disappeared. Rightly or wrongly, the public now anticipates a Conservative victory at the polls. This is because Mr Mac-

116, LOWER CIRCULAR ROAD, CALCUTTA

GOVERNMENT OF UTTAR PRADESH

FINANCE DEPARTMENT

Dated Lucknow, July 29, 1959

PRESS NOTE

4 Per cent Uttar Pradesh State Development Loan, 1971

THE Government of Uttar Pradesh are floating a loan of Rs. 8 crores in order to finance their irrigation works, electricity projects and other State development schemes. The loan will open for subscriptions on 19th August, 1959 and will close on 25th August, 1959 unless closed earlier. The main terms of the loan are that the issue price will be Rs. 99.50 for every Rs. 100 of the loan applied for; the loan will have a currency of 12 years from 19th August, 1959 and will be repaid at par on 19th August, 1971; the loan will carry interest at the rate of 4 per cent per annum from 19th August, 1959, payable half-yearly on 19th August and 19th February, the payments being subject to tax under the Indian Income Tax Act, 1922. Subscriptions for the loan can be made in the form of cash or cheque and will be received at the branches of the State Bank of India in Uttar Pradesh, the Government treasuries and sub-treasuries in the State of Uttar Pradesh where there is no branch of the State Bank of India and at the offices of the Reserve Bank of India at Bombay, Calcutta, New Delhi, Madras and Bangalore.

Full details of the terms of the loan are contained in Finance Department notification No. B-5541/X—88-59, dated July 29, 1959, copies of which, along with the application form are obtainable at the receiving offices mentioned above

2. Financial position of the Government of Uttar Pradesh—

Revenue Position.—The revenue receipts and expenditure and the surpluses for the last fourteen years are as follows:

(Figures are in lakhs of rupees)

	Revenue receipts	Revenue expenditure	Surplus(+)
1945-46 ...	2,995	2,551	+444
1946-47 ...	3,265	3,061	+204
1947-48 ...	3,876	3,771	+105
1948-49 ..	4,920	4,729	+191
1949-50 ...	5,626	5,626	...
1950-51 ...	5,189	5,184	+ 5
1951-52 ...	5,556	5,550	+ 6
1952-53 ...	6,483	6,483	...
1953-54 ...	7,564	7,281	+283
1954-55 ...	7,819	7,713	+106
1955-56 ...	8,553	8,423	+130
1956-57 ...	8,996	8,984	+ 12
1957-58 ...	10493	9,942	+551
1958-59 ...	11,593	11,484	+109

The major portion of the revenue surpluses was out into various reserve funds. During 1949-50 and 1952-53 revenue expenditure exceeded revenue receipts because of large expenditure on Development schemes and the gap in those years was covered by withdrawals from the Revenue Reserve Fund.

Balances in the Reserve Funds.—The balances at the credit of the various reserve funds at the end of 1958-59 were 215 lakhs in the U. P. Road Fund, 16 lakhs in the Hospital Fund, 77 lakhs in the Famine Relief Fund, 1,306 lakhs in the Revenue Reserve Fund, 2,410 lakhs in Zamindari Abolition Fund, 78 lakhs in the Depreciation Reserve Fund—Irrigation, 159 lakhs in the Depreciation Reserve Fund—Government Bus Services, 419 lakhs in the Depreciation Reserve Fund—Electricity, 21 lakhs in the Contingency Reserve Fund—Electricity and 125 lakhs in the Depreciation Reserve Fund—Cement Factory. Some of these are invested in Government of India Securities. The total balance in these Reserve Funds amounts to 4,826 lakhs.

Debt Position.—On March 31, 1959, the debt of the Uttar Pradesh Government amounted to 21,163 lakhs consisting of 979 lakhs representing the consolidated debt due to the Central Government and 14,852 lakhs taken from that Government for development purposes and 493, lakhs for Relief and Rehabilitation Schemes plus 4,460 lakhs representing the amount of public loans floated by this Government from time to time plus 150 lakhs as Uttar Pradesh Encumbered Estates Act Bonds, 183 lakhs from the Reserve Bank of India and 16 lakhs from the National Co-operative Development and Warehousing Board for expansion of Co-operative Institutions and Marketing Societies and 30 lakhs from the Khadi and Village Industries Commission. Apart from this the State Government have also issued Zamindari Abolition Compensation Bonds of the face value of Rs. 4,539 lakhs and Rehabilitation Grant Bonds of the value of Rs. 1,764 lakhs, the liability on account of which will be met, by annual instalments, from the extra revenue from Zamindari Abolition over a period of 40 years and 25 years respectively. Sinking Funds have been constituted for all the public loans and the balances at the credit of these funds are invested in Government of India Securities.

Assets of the Government.—Against the outstanding debt of 21,163 lakhs there are assets in form of the Ganga, Yamuna and Sarda Canals, various other small canals, and the State Tubewells, Cement Factory, Government Bus Services and Electricity Schemes, in which about 19,669 lakhs have been invested. Another asset is the balance due to Uttar Pradesh Government on account of loans and advances amounting to Rs. 4,451 lakhs. Besides these, there are a large number of buildings and roads for which no separate capital accounts are maintained.

Foot Notes—(1) The accounts for 1958-59 have not yet been closed finally. The figures for 1958-59 mentioned in the Press Note are based on the March (Final) 1959 Accounts.

(2) Adjustments have yet to be carried out in the accounts in respect of the capital assets relating to the Electricity Schemes transferred to the U. P. Electricity Board recently constituted. The cost of such assets will be deemed as loans advanced by the State Government to the Board.

millan's popularity has greatly increased recently. The revival of business has not been accompanied this time by a revival of the rise in the cost of living. And credit is given to him for the arrangement of the meeting between President Eisenhower and Mr Khrushchev while arrangement is viewed with much optimism. The anticipation of the confirmation of the Government in office by the election is inducing investors and speculators alike to take a hand. The holiday season, so far from acting as a deterrent to buying, stimulates them, because many people want to be in the market before leaving for their holidays.

Needless to say, between now and the election date, the market's view of election prospects may change, and the possibility of a return of pre-election nerves on the Stock Exchange must be borne in mind. But there are also other factors working in favour of a further rise in equities. Foremost amongst them at the moment is the optimism generated by the Eisenhower-Khrushchev meeting. Even if the arrangement should produce no other result, it has certainly reduced the chances of a war scare—at any rate in Europe and the Middle East—in the near future. The outlook in the Far East is not so reassuring, but Khrushchev is not likely to spoil his chances of increasing his popularity in the USSR by proving that he could succeed where Gromyko has failed. The Stock Exchange is not likely to be affected by any war scare over Berlin for some time to come.

Moreover, the economic outlook, is distinctly favourable. Unemployment is on the decline. Admittedly, so far, the capital goods industries have not participated in the revival. But that is an additional reason for expecting an improvement, because, if the revival has gone so far even in the absence of real improvement in the capital goods industries, how much further is it likely to proceed once those industries too will begin to feel the benefit of the changed trend? The spreading of prosperity over those industries is obviously a mere question of time. Already many firms producing consumer goods are reviving their investment programme, to cope with rising demand.

The firmness of the London Stock Exchange—which was all the more remarkable as it coincided with the hesitant tone of Wall Street during the early days of August—appears to be justified to a large degree. But there are some adverse factors which should be remembered. The possibility of a setback in Wall Street holds back many British investors from buying equities in London. It is certain that any setback in Wall Street would more than offset all factors making for a rise on the London Stock Exchange.

Strangely enough, the absence of a rise in the price level may operate against the rise in equities. The stability of the price level may mean that British industries would have to cut their profit margins in order to be able to sell their increasing output. Already keen competition in some industries is developing. The firms in such industries cheerfully raised their prices until recently at the slightest excuse, and indeed at times even in the absence of any justification whatever. But, during recent months, there has been a certain amount of price cutting in competition for the expanding markets. In the absence of a resumption of the inflationary spiral there will have to be a great deal more of price cutting. Nobody can predict in which industries it will prove to be possible to make up for lower prices and narrower profit margins by an increase in the output and in the sales of the output. Until it becomes clear how each industry—and, within each industry, each firm stands to be affected by a downward movement of prices, investors prefer to await developments.

On the other hand, it stands to reason that, in the absence of a rise in prices, there is no need to fear a return of the much-dreaded credit squeeze and high Bank rate. According to a favourite Socialist argument, which is certain to be voiced a great deal during the election that the Tory Government is only waiting for its confirmation in office by the electorate to revert to the deflationary drive reversed last year. No doubt, if there should be a widespread and substantial increase of wages without corresponding increase in productivity then, any Government, Tory or Socialist, would have to take disinflationary measures. As things are at the moment, the steadiness of the price level makes a deflationary drive appear unneccessary.

Indeed, it seems probable that even a resumption of some degree of inflation would not induce the Government to revert to deflation after the election. Sterling is strong and is likely to remain so. If the Government win the election, the last thing they would do would be to confirm Socialist taunts about their alleged deflationary intentions. They may, of course, be forced to deflate by a strong pressure on sterling. But the chances of a strong pressure on sterling—apart from possible scares during the election—are very remote. A conservative victory would certainly mean a firm sterling.

It now seems that the possibility of a continued rise in equities in London in spite of the election cannot be ruled out. Of course, there may be temporary setback, but, unless the prospects of the Conservative Party should materially deteriorate, it seems possible that the level of equities will be higher on polling day than it is today. Once the Tories are confirmed in power, there is bound to be a further sharp rise in equities.

WORLD OF JUTE

2½ per cent Looms to be Unsealed

TUESDAY'S decision of the Committee of the Indian Jute Mills Association to recommend to member mills that 2½ per cent of the looms be unsealed for a period commencing from August 24, 1959 and up to January 2, 1960 will be welcomed both by the trade in our country and consumers abroad. If Tuesday's hectic trading, in which B Twills were taken to a new high level (Ready B Twills were done upto Rs 105) is any guide, the squeeze is already on. Though it may be partly true that the sudden spurt in prices has been brought about by the fact that the percentage of the loomage proposed to be unsealed is much below market expectations, it cannot be gainsaid that heavy goods, especially of near delivery positions, are in short supply.

A further order for about 15,000 bales of B Twills from China has coincided with the IJMA announcement. China has been a big buyer this year and the continued interest evinced by this country in sacking seems to confirm the theory that the Chinese have had a bumper crop in foodgrains. In this view, there may be still a large unsatisfied demand in this region. Australia also seems to have entered the market for its requirements which, it is generally believed, will be much more than last year's in view of the improved harvest. Domestic consumption of sacking is steadily going up and the industry can ill afford to starve it because of its vital role in times of a steep decline in foreign demand. Despatches of gunnies for internal consumption have been steadily rising during the past few years. From 179,000 tons in 1956-57 internal offtake has increased to 220,000 tons in 1958-59. The bulk of the increase has taken place in sackings, the offtake of which has increased from 134,900 tons in 1956-57 to 168,600 tons in 1958-59. There is every reason to believe that this rising trend will continue in coming years in view of the concerted efforts made in the country to increase foodgrains production. This year, production of cereals has been at a high level and consequently there will be increased demand for sacking goods.

With Tuesday's decision, the percentage of sealed looms with IJMA mills will stand reduced at 10 with effect from August 24. Thus, in the course of the past two months, 4 per cent of the sealed looms have been brought back to production. The 2½ per cent of looms proposed to be unsealed from August 24 will increase production by about 2,500 tons a month. It may be expected that the entire additional loomage will be utilised for the production of sacking.

It is significant that the IJMA have decided to increase production despite only a modest decline in mill stocks as at the end of July. Presumably, the marked improvement in sacking offtake recently noticeable is expected to be reflected only in the stock figures for the current month.

At the end of July 1959, total stocks at 92,800 tons show a decline of 2,600 tons as compared with the previous month. The decline is, however, not shared by all the categories of goods. While sacking has come down by 3,200 tons and other varieties by 1,700 tons, Hessian shows a rise of 2,300 tons. Thus, hessian stocks are placed at 26,000 tons, sacking stocks at 54,200 tons and stocks of other varieties at 12,600 tons, bringing the total to 92,800 tons. At the corresponding date of last year, total stocks were 121,900 tons made up of 19,900 tons hessian, 89,600 tons sacking and 12,400 tons other varieties.

A partial explanation for the smaller than expected decline in stocks may be found in the production figures for the month. Total production in July 1959 has amounted to 89,600 tons, or a little less than 7,000 tons above the production in June. The increase is to be attributed to the fact that mills in July have worked for 209 hours whereas they had worked only 200.5 hours in June. Of the total production, hessian has accounted for 40,500 tons as against 37,800 tons in June, sacking for 39,900 tons as against 35,800 tons, and other varieties for 9,200 tons against 9,100 tons. A year ago, that is, in July 1958, total production was almost the same at 89,800 tons and mills had worked the same number of hours. But the production pattern was quite different with hessian at 35,300 tons and sacking at 49,000 tons. Output of other varieties was quite low at 5,500 tons.

The rise in Hessian stocks at the end of July shows that despatches of this category of goods have been below the level of production during the month. But this does not seriously alter the outlook for hessian, because, as compared with June, hessian despatches during the past month should have been higher around 38,000 tons. Despatches in June totalled 35,500 tons. In the case of sacking, despatches are running higher than production. The outgo during July should have been in the environs of 43,000 tons as against 40,100 tons in June. It may be noted that, during the past six months, contrary trends have come to prevail in the two principal sections. Whereas hessian stocks have been rising steadily from 15,500 tons in February to stand at 26,000 at the end of July, Sacking stocks have been declining from 79,900 tons in February to stand at 54,200 tons at the end of July.

*

A sharp rise in near delivery B Twills prices has been the feature of trading in the jute goods market. On Tuesday, when the spurt occurred, the market opened steady in sacking and unchanged in hessian. Lack of fresh overseas interest kept hessians prices rather subdued. The continued absence of any definite indication from Argentina and the rising level of hessian stocks with mills have resulted in slowing down North American interest. The fact that burlap stocks in US are at a comfortable level is also helping the consumers' position.

The Calcutta market, however, is concentrating its attention on sacking. Tuesday's spurt in B Twills prices has followed the IJMA announcement regarding unsealing of a further quota of looms and the report that China has placed a fresh order for about 15,000 bales of B Twills. Currently demand for sacking goods is exceptionally strong; and, should aggressive buying from Australia come to pass in the coming weeks, there are interesting possibilities of a squeeze.

Following were the price trends:

S. E. Rly. Tenders

Sealed tenders are invited for (i) Tender No. Con/COS/62/D/59 for supply of 25,343 Nos Handle wooden for shovel 24" long with "T" Handle as per fig. 1a of I. S. specification 274/51. Firms to state the Botanical name of wood from which they will manufacture the handle. Earnest Money is Rs. 340/-. Tenders will be opened on 7-9-59 at 12 noon.

ii) Tender No. Con/COS/63/HC /59 for supply of 7900 lbs Hard drawn bare copper wire 6 S. W. G. to B. S. S. 125/1954. Earnest Money is Rs. 340/-. Tenders will be opened on 8-9-59 at 12 noon.

iii) Tender No. Con/COS/64/H(e)/59 for supply of 2,373 nos. cells Dry inert No. 55 or inert cells leclanch types 2½"x2½"x5½" to specification IS-267. Earnest Money is Rs. 210/-. Tenders will be opened on 9-9-59 at 12 noon.

Tender forms are obtainable from the office of the undermentioned (construction section) 11, Garden Reach, Calcutta-23 on remittance of Rs. 2/- (not refundable) per copy per tender by money order to him direct in the case of outside firms and on production of cash receipt from this Rly's Chief Cashier by local firms.

Tender should accompany the receipts for depositing the earnest money as stated above with this Rly's Chief Casheir, 11, Garden Reach, Calcutta-23 without which the tenders are liable to be rejected. Approved contractors having a permanent deposit of Rs. 1000/- with the undermentioned are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

CONTROLLER OF STORES

S 52

WORLD OF TEA

Good General Demand

THANKS to good general demand, prcies obtained in the auctions have been better during the past two weeks. In Calcutta, Plain Brokens are quoting from 2 nP to 6 nP per pound dearer, while Fannings grades are keenly competed for. Leaf grades have been in good demand, although price movements are rather irregular. The only weak feature of the sale were Darjeeling teas and there were some withdrawals of this type.

In London, brokers have been busy sampling the early arrivals of North Indian second flush tea. This has reached here unusually early, because of the speed-up in transport in India, with more and more Assam Gardens flying their tea down to Calcutta and with a tightening of river chedules. Already, some Assam second flush teas have been auctioned in London. Opinion varies on their quality, but prices have been about one shilling a pound lower than at the comparable time last year.

It is, of course, too early to talk about price trends yet; and this week's auctions are awaited with interest, as the first of the Dooars second flush teas will be on offer. Good prices are hoped for, particularly as the early Dooars met with a rather poor response. Large quantities of tea have been reaching London from Ceylon. The plain ones have been fetching low prices; but quality teas have continued to sell well.

Meanwhile, it is learnt that the Government of India proposed to constitute a wage board for the tea industry. As a preliminary step, a wage board is being set up for the two major tea-producing States of West Bengal and Assam. This proposal has come in the face of a strike threatened by workers in the tea gardens of North Bengal. The strike, which was to start from August 10, has been postponed by ten days at the request of the State Labour Minister.

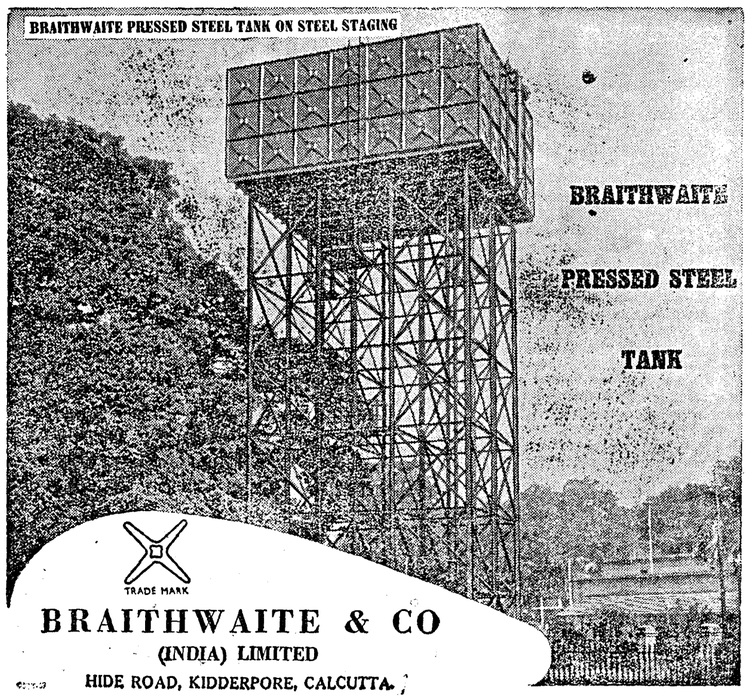
In the Export Sale held in Calcutta this week, offerings were 59,344 packages. Bright liquoring Dooars and Assam BOPs met with restricted enquiry and were sold at prices which were from 20 to 30 nP per pound below last rates. Legg-cut teas met with less demand and there were some withdrawals.

There was fair enquiry for CTC teas and prices, except for a few of the very best, were from 20 to 30 nP below last rates. Tippy teas were again quite well supported. Following rates were quoted:—Clean Black Pekoe Rs 2.00; Plain BP Rs 1.80 to Rs 1.84; Plain Fannings Rs 1.92 to Rs 1.98; Medium BP Rs 1.96 to 2.06; Medium Fannings Rs 2.10 to Rs 2.20; Best Assam CTC BP Rs 3.10 to Rs 3.40 and Best Assam CTC Fannings Rs 3.80 to Rs 4.30.

In the Internal Sale, offerings were 21,756 packages of Dusts and 643 packages of Leaf grades. There was a good general demand. Orthodox types declined in price by up to 10 nP, while Legg-cut Dooars were also easier. Darjeeling Dusts were sold at about last rates and were sometimes dearer. Medium CTC Dusts were generally sold at prices which were 10 to 15 nP and sometimes more below last rates. The only exception were a few lines of grainy exportable types and powdery dusts, which were often dearer. The very best CTC dusts, on offer, were generally well supported. Following rates were quoted:—Medium Dust Rs 1.84 to Rs 1.88; Medium Assam Dust Rs 1.80 to Rs 1.88; Medium Assam CTC Dust Rs 2.05 to Rs 2.20 and Best Assam CTC Dust Rs 2.80 to Rs 3.00. Leaf grades met with a good general demand.

In the Colombo market, offerings totalled 6,985,630 pounds. There was strong demand for the few best quality high-grown brokens at substantially dearer rates. Teas showing an improved quality were also dearer. There was, however, distinctly less demand for other sorts, particularly poorer liquoring kinds and prices for these were irregularly lower. Low-grown teas were slightly dearer, particularly leafy kinds suitable for the Middle Eastern market.

In the Cochin market, 730,000 pounds of Dusts were offered. Against strong general demand, prices advanced for all offerings by about 30 nP per pound except for best liquoring high-grown teas, which were barely steady. The strongest feature of the sale was the demand for Black Leaf Dusts.



The sales average, up to the end of July, shows an improvement over the average for the corresponding period of last year; but the net realisation from the sale of a smaller crop leaves the industry at a disadvantage this year. The average price of all tea sold upto July 23 this year at the Cochin auctions was Rs 1.76 as compared with Rs 1.49 per pound last year. In other words. there is a rise of 18 per cent in the price realised as against a fall of 21 per cent in the volume of tea sold.

In the Export Sale held at Chittagong, offerings were 10,996 chests. There was fair demand and offerings were readily disposed of, although prices were often up to one anna per pound easier. Best liquoring sorts were keenly competed for and were sometimes two to three annas dearer as also were the few Whole Leaf grades on offer. Legg-cut Fannings were fairly steady at around Rs 1/9/6 per pound. BOP was quoted at Rs 1/7/9; BP at Rs 1/2/0; BPS at Rs 1/3/0; OF at Rs 1/9/6 and BF at Rs 1 5 0.

The President of Pakistan has fixed minimum quota for tea exports on a compulsory basis. The Presidential Order replaces the Pakistan Tea Act of 1950 and ensures greater export of tea for earning more foreign exchange. The order also provides for setting up of a Tea Board, establishment of new tea gardens and rehabilitation of derelict plantations.

In the sale to be held this week in London, offerings will be 72,000 packages. Of this, around 41,000 packages will be Ceylon and Southern India growths. Of interest to the trade is the inclusion of tea as one of the items recently exempted from import licensing by the Australian Government. Australia is quite a useful importer of tea, with net imports during the post-war years sometimes exceeding 60 million pounds yearly. Australia buys most of its tea from Ceylon.

Stocks in London, as on the 31st July, amounted to 111.93 million pounds as against 112.19 million pounds in the previous week. Total amount to be landed on the same date was 8.71 million pounds. Total afloat was 17.16 million pounds including, from Calcutta, 10.41 million pounds; from Chittagong, 78,000; from Cochin, 2.94 million pounds; from Ceylon, 3.27 million pounds; and from other Ports, 456,000 pounds.

GLEANINGS

IN America, the giltedged market has lately been witnessing conditions so difficult that managing the debt has presented a very serious problem to the US Treasury. An important debate at a high level is being conducted in America, in respect of the solution that can or should be found for lending strength to the giltedged market. Business Week, an American journal, indicated, in its issue of June 27, one of the factors contributory to the US Treasury's difficulties:

One reason for the Treasury's recent difficulties in selling government bonds is some tough competition it encounters right within the federal family—from the little-known securities of various federal agencies and from the much better-known government - guaranteed mortgages.

Even though the return on Treasury bonds is, in some cases, the highest in nearly 40 years, these other government issues offer even fatter yields, and sophisticated investors are finding it out in increasing numbers.

It didn't take that, of course, to put the US government bond in disfavour. Investors hungry for profits have been turning to the stock market or real estate instead. In the high incometax brackets, they have been savoring the tax-free interest payments available from state and local government bonds. Some institutional investors have been reaping rich harvests from medium-grade corporate bonds. But investors seeking a "giltedged" look in their portfolios used to prefer Treasury issues; now, however, more and more are examining insured mortgages and the securities of federal agencies.

*

But it is not only in America that high giltedged yields are a problem. In its issue of June 20, Business Week pointed to Canadian experience.

The big question is whether high interest rates and scarcity of credit will impede Canada's remarkable growth rate, which, up until 1957, outpaced the US. But the 1957-58 recession hit harder and lasted longer in Canada, and now, despite the fact that unemployment is over 5 per cent, money is not only expensive but increasingly scarce.

*

The difficulties experienced by the US Treasury impelled comment by Nicholas Davenport in The Spectator, London, in its issue of June 19. Mr Davenport, who appears to favour cheap money policies, had this to say about the unenviable position in which Mr Anderson, Secretary of the US Treasury, finds himself:

The Treasury is having grave trouble in the management of its debt, which is mainly short-term. It is not allowed by law to issue stock with a yield of over 4¼ per cent, but the bond market has fallen so heavily that most government bonds yield 4½ per cent or more. Mr Anderson had difficulty recently in selling even a one-year issue with a coupon of 4.05 per cent. So he has to ask Congress to alter the law, first to allow the issue of government bonds with a yield of over 4½ per cent and then to raise the debt ceiling. This has only made the inflation phobia worse.

There is a growing feeling in America in the inevitability of inflation. It stems from the public obsession with the cold war and its heavy defence spending, the pressures for higher wages and taxes, and the growth in general of the 'full employment' Welfare State. This inflation psychosis is expressed in the feverish scramble for equities on Wall Street and the flight from governmental bonds. The difficult wage negotiation in the steel industry goes on and an inflationary settlement would upset the retail price index almost overnight. Some four million workers now have 'escalator' clauses in their wage contracts to cover rises in the cost of living. It is not surprising that some businessmen have been urging the Treasury to issue inflation-proof bonds with interest payments tied, like the wage contracts, to the cost of living. And, of course, some leftist economists have been calling for unemployment and other social security payments to be fitted with the same kind of escalator clauses. I pity Mr Anderson having to steer a course between these fanatics and the other sort whispering in the President's ear that money must be made so dear and so tight as to bring the boom to a halt and stop the loss of gold.

*

Meantime, The Economist, London, was, in its issue of August 8, reporting on a post mortem that had been conducted in America as to the reason why the giltedged market, which had been so firm from around the middle of 1957, came suddenly to crash in the middle of last year. In this context, The Economist writes:

For the last five months the government bond market has been under close scrutiny by a joint study group drawn from the staffs of the Treasury and the central bank. While the full report is not yet generally available, its principal findings are now known. The investigators have concerned themselves, not with the current difficulties in the government's financing, but with last year's speculative boom in government securities which ended abruptly in a summer break from which the market has never recovered. When the Federal Reserve Board reversed its tight credit policy at the end of 1957 to combat the recession, speculators rushed into the bond market in the expectation of still easier money to come, only to unload in haste when the Fed again reversed its course.

*

That the problem is very difficult to resolve is indicated by Edwin L. Dale Jr., writing in The New York Times of July 12, wherein he describes the reason why President Eisenhower sought to have the ceilings on interest rates on government bonds abolished by the Congress.

First, then, why did the President make the request?

The answer is not that he wants high interest rates. It is that a combination of anti-inflation Government policies and the resurgence of the economy have pushed interest rates to a point where the Treasury cannot sell a bond at the present ceiling of 4¼ per cent.

The ceiling applies only to issues running five years or more to maturity. The Treasury believes it is essential in the fight against inflation that some of the huge national debt be in such longer term issues.

However, the bill may never reach the President. A group of Democrats in the Senate is determined to fight it. Majority Leader Lyndon Johnson of Texas, while not committing himself, has given the President no encouragement.

In private, the top officials of the Treasury have the gravest fears of the consequences if they are barred indefinitely from selling any long-term bonds. These range from inflation to a "run" by foreigners on the United States gold reserves.

But they have not yet persuaded a body of opponents that may be a majority of Congress. What is more, the Treasury is up against a set of convictions about interest rates that run deep in the conscience of a large part of America.

*

For a description of the monetary developments in the USA over the recent past, we may turn to the Report on Currency and Finance for 1958-59, recently published by the Reserve Bank of India. The following extracts, taken from the chapter on Economic Developments Abroad, are illuminating:

The most outstanding development in the world economic scene in 1958 was the vigorous revival of the US economy from out of the short-lived but sharp recession of 1957. The developments during the year dispelled the fears entertained earlier that the US recession would lead to a general international liquidity crisis.

....In the USA, where a vigorous recovery got under way in the second half of 1958, renewed fears of a recrudescence of inflation and the emergence of an unprecedented boom on the stock exchange led the authorities to reimpose credit restraints as a precautionary measure.

In the USA, the discount rate was reduced by several steps from 3½ per cent in November 1957 to 1¾ per cent in April 1958; however, beginning from September 1958, the rate was again raised until it touched 3½ per cent by May 1959.

The Man of Destiny

Nehru: A Political Biography. By Michael Brecher. Oxford University Press. Price Rs 25.

TWELVE years after the Nehru age in Indian history began, his apotheosis goes on apace. even to the literal extent of some simple folks in a Bombay village raising, much to his annoyance, a temple for him. Even on his political opponents, his spell is still potent. Dr Brecher quotes a leader of the communist party of India (who understandably wishes to remain anonymous) as saying that Nehru is "the only romantic figure thrown up by the nationalist movement, a sensitive idealist with a broad vision, a politician with deep insight into national and international problems, a man with a fine aesthetic sense, a whole man in the renaissance conception". In the last two years, however, the Nehru myth has become somewhat ragged at the edges, and small wonder. For, there is, in this, as in all myths, a genuine core of truth and a lot of makbelieve, and when the makebelieve wears a little, the disenchantment is disproportionate. People who like their revolutionary angels with luminous but ineffectual wings feel disappointed because the wings are neither as bright nor as helpless as they had fancied. In a sense, all this is to the good, for, this kind of glamour boy build-up was obscuring some of Mr Nehru's other claims to greatness. These are not such as lend themselves easily to mythopoesis, but they are none the less important. Dr Brecher's book, which explores some of these, is in every way a major achievement. He has admirably organised an intimidating mass of material and his emphases are just right and show great literary tact. Though the book runs to over six hundred pages, there is no sense of padding. He has gone far and wide for his material and his curiousity about his subject has been insatiable. The number of people who have given him titbits about Mr Nehru is legion, though the passion for anonymity of most of them is a little intriguing, considering how trivial in most cases the information imparted is. The first half of his book is definitely better than the second half, where some of his judgments are somewhat erratic. The most notable example is that of his estimate of the importance of M.O. Mathai. (In fairness to Dr Brecher, it must be stated that this book was written before Mathai's inglorious exit and many seemed to share his importance, though Mr Nehru himself openly discounted it.) His peep into the future and speculation of "After Nehru—What?" is for obvious reasons somewhat inconclusive. His survey of the present Indian political scene is conventional and, though it may provide a few signposts for the foreign reader, has practically no new information for Indian readers. But, in his principal task of portraying his subject, he has achieved a truly amazing success. In tracing the evolution of Mr Nehru's personality through the maze of events and tangled motivation that preceded independence, he has shown his true flair as a biographer.

Dr Brecher calls his study a "political biography" and with good reason. Though he has explored in detail the manifold sources of his subject's greatness, his preoccupation has principally been political. Despite his complexity, Nehru's true vocation has always been politics—a fact that he realised early in his life, much to the enrichment of his and the nation's life. And what is more important, but not adequately realised, is that Mr Nehru's interest in politics was not confined to the spectacular and the dramatic or even the intellectual kind, which alone has entered in the Nehru myth. Nehru is intoxicated by the crowds, but he also has a passion for the politics of the backroom and committees.. Again and again, in the pages of Dr Brecher's book, he emerges as a skilful mediator of conflicting view points. The final picture, at least from the earlier chapters, is that of a man who combined a profound humanity with a profound political instinct. Deep down in him was an almost instinctive political canniness that surprised many (including himself) who saw him primarily as an intellectual and an idealist. The Nehru of the myth, a dashing hero, loftily disdainful of petty compromises, has little relation to the Nehru of reality, a person with an almost Anglo-Saxon instinct for practical politics.

And this instinct was also in a real sense an instinct of political self-preservation and saved him from many a blind alley and dead alley that seductively beckoned him from time to time. Though he was the real inductor of socialism into Congress politics, the same obscure political instinct kept him free from entanglements with socialist faction. Though his doctrinaire differences with his senior colleagues like Sardar Patel were real and led to behind-the-scene clashes, he realised that the real strength of the movement lay in the coming together of such diverse temperaments. Most often, he gave the impression to himself and to others of a man divided against himself, acutely unhappy at not being able wholly to fit his actions with his ideological prepossessions. This aspect of his character has not unnaturally been promptly absorbed in the myth. But, when it came to the sticking point, he had no hesitation in throwing out of the window ideological considerations, much to the chagrin of his younger admirers. The 1953 act was a "new charter of slavery to strengthen the bonds of imperialist domination and to intensify the exploitation of our masses". But we must contest the elections, to bring the Congress messages to the masses, but acceptance of office was out of the question. And yet when the time came, he acquiesced in it. He was an inveterate rationaliser and, thus, as in much else, a truer symbol of the national mood than his colleagues on the left and the right.

And yet, it is not as though it was all mere acquiescence. During this very period, he was providing the nation's politics with new dimensions, by setting it against the larger international background, and encouraging thinking on the economic problem. Many among his colleagues were inclined to indulge him in his internationalism, though they (quite wrongly) felt his strenuous urgencies about Fascism were somewhat hysterical. But, interestingly, his socialism was a different matter altogether, and led to a major revolt of the old guard. Characteristically, Gandhiji intervened and an open rupture was avoided.

Indeed, in subordinating his views to Gandhiji's time and again, Mr Nehru was obeying the same obscure political instinct that was guiding him along his real destiny. Mr Frank Moraes has rendered this trait of Mr Nehru, somewhat melodramatically, as a "calculating streak in Mr Nehru's character which even his colleagues do not appear to have suspected. Like Fabius, he was willing to wait and bide his time." All this sounds somewhat hole and corner—quite alien to Mr Nehru's temperament. But one has only to compare Nehru with Subhas Bose to see the point. It is rather difficult to speak hypothetically at this distance of time, but if Mr Nehru had resigned in June 1936, it is not unlikely that he, despite his enormous prestige, might have gone the way of Subhas Bose. On the fact of it, Subhas Bose's was more consistent conduct, whereas Mr Nehru's ambivalence on crucial occasions earned him the not wholly unattractive nickname of Hamlet of Indian politics. But, basically, this instinct has served him well, for the India that he is today shaping is more or less the India he had mapped out for himself in the thirties. In that sense, the current opposition of the Swatantra Party to his policies is no more than the opposition that he encountered then from some of his colleagues.

One way of describing the evolution of Mr Nehru's political personality is to consider him as an example of that rare thing—a successful revolutionary. Simon Bolivar remarked bitterly at the end of his life, that "he who serves a revolution ploughs the sea". Mr Nehru's own summing up of his life will testify to an infinitely greater sense of fulfilment. Lenin himself, in a speech in 1922 (made public only after the twentieth Congress), made the terrible confession, "I am, it seems, strongly guilty before the workers of Russia". But despite his failings, Mr Nehru need never be hagridden by any such sense of guilt. His has been a rich and variegated life and he has given of his best to his country. There are tangible symbols of this bounty, and these Dr Brecher conscientiously records. But more important have been the ineffable gifts—a deep compassion for the poor and hapless, a passionate urgency to improve their lot and an irrepressible rage against the forms of exploitation. Yet, the myth still endures, but it is the hard core of it that endures.

The Use of Agricultural Statistics

Studies in Indian Agricultural Economics: Edited by—J. P. Bhattacharjee, Published by the Indian Society of Agricultural Economics, 46-48, Esplanade Mansions, Mahatma Gandhi Road, Bombay-1. Pp vi+326. Price Rs 18.

The experiences of recent years have underlined the crucial importance of food policy for the success of a planned programme of economic development. It is now clearly recognised that agriculture forms the base of the national economy whose strength will determine the size of the industrial superstructure that can be erected on it. The plan for food and agriculture, therefore, is now attracting more attention than during the formulation of the Second Plan.

The appraisal of the adequacy or otherwise of the targets and the programmes for their attainment that are being suggested will be possible only on the basis of reliable factual information regarding the agricultural situation as it has developed over the years. Those who are interested in this crucial problem of the national economy, which often spills over into the field of political agitation, will find the relevant data as well as guidance from the valuable collection of research papers published by the Indian Society of Agricultural Economics, on the occasion of the Tenth International Conference of Agricultural Economists, held in Bangalore last year. The papers brought together in this volume throw light on most of the major aspects of the agricultural economy of the country.

The volume contains a collection of ten original papers which present studies of output, prices, trade and marketing, terms of trade, employment, food consumption, investment and finance in India's agriculture, changes in the institutional framework of the rural economy, together with an assessment of the progress of agricultural economic research in this country. The statistical data are presented through 108 tables and illustrative charts.

Leading centres of study and research in the country in the field of economics, have cooperated in the production of this publication which, though it does not claim to be exhaustive in its treatment, focusses attention on the principal topics against their historial background. This method is of particular value in the study of problems of agricultural economics, as a knowledge of the development of the present problems can reveal more about future trends than an analysis of the current situation. Readers will, there, greatly appreciate the method of treatment that has been adopted, which, in addition to discussion of present problems and the current situation, also outlines the course of development in the past. The papers brought together in this volume constitute a substantial addition to our knowledge and information about different significant aspects of agricultural economics of great relevance to the tasks of planning.

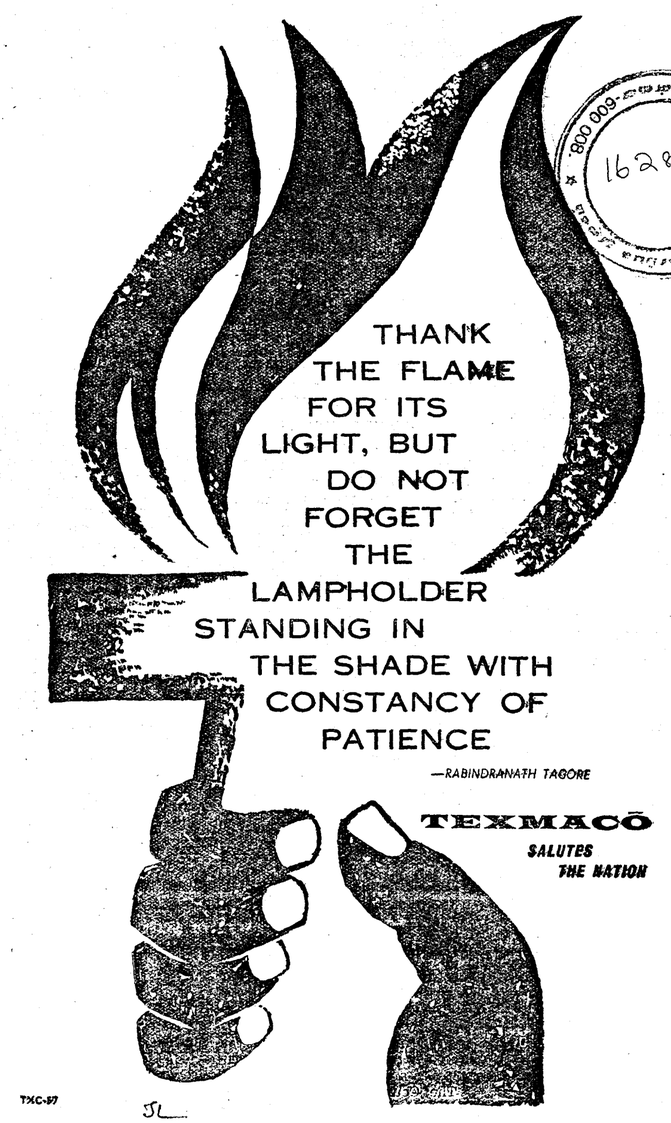
Indian Economy and Industrial Relations

Recent Developments In Certain Aspects of Indian Economy—Published by the International Labour Office, India Branch, Mandi House New Delhi-1, Price Rs 1.50.

THE importance of the evolution of industrial relations on satisfactory lines, and its bearing on the successful achievement of programmes for raising living standards, are now so widely recognised, that they have become special fields of study and research. Satisfactory industrial relations imply more than maintenance of industrial peace. Apart from the absence of conflict, conditions should be such as to evoke willing effort at all levels of management and the workers to achieve higher levels of productivity. It comprehends workers' education and labour welfare.



What is the position in India as regards industrial relations viewed from this broad standpoint? The answer may be found in an objective study of the industrial situation published by the ILO. This, the fourth in the series published by the ILO under the caption, "Recent Developments In Certain Aspects of Indian Economy", contains articles on Industrial Relations, Workers' Education and Labour Welfare, which bring together much valuable information scattered in numerous official and non-official publications that are not always easily accessible. The comprehensive and competent survey of industrial relations leads to the interesting conclusion that the most important need in India is training in managerial skills at all levels of management. As for the workers, education is the desideratum.

Charts, and How to Read Them

Charting Manual—Published by Central Statistical Organisation, Cabinet Secretariat, New Delhi.

Charts and diagrams have now become indispensable for effective presentation of statistical information. They are being increasingly utilised to make figures intelligible and interesting. And even where they do neither, they certainly serve to make the publication impressive and intimidating. The growing use of charts has brought in its train increasing variety and complexity, with the result that laymen, not initiated in their mysteries, may grow as allergic to charts as to mathematicall symbols. In any case, it is useful to know beforehand what the charts are trying to say. The details of the techniques of charting, different types of charts and how they are to be utilised are clearly explained in a manual published by the Central Statistical Organization of the Cabinet Secretaria. While furnishing a comprehensive introduction to the techniques of charting, it is at the same time a helpful guide to the layman through the maze of pictorial statistics.

WORLD OVERSEAS

Britain

A further strengthening and expansion of the British economy is shown by statistics published in London covering the month of July.

The main features of this period are the successful maintenance, on the home front, of price stability, and of a strong balance-of-payments position on the external front.

Industrial production, too, having moved up sharply in March, has since gone on rising—reaching record levels in April—and unemployment has been falling more than seasonally.

The Chief stimuli to expansion seem to have been consumer spending and the export drive and, to a lesser extent, housing and industrial building.

RISE IN RESERVES

On the external front, the monetary position has strengthened in the first half of this year, with an increase of £37,000,000 in the gold and foreign exchange reserves. In addition, the United Kingdom's second-line reserves with the International Monetary Fund have increased after the repayment of £71,000,000 in March and the additional subscription of £232,000,000 in May.

Trade figures for the second quarter show exports 7 per cent. higher than in the first quarter. The visible trade deficit was only a shade above that of the second quarter a year ago, so that, with the country's net earnings on invisible account, these figures suggest a substantial current surplus on the balance of payments.

The wage-rates index has stayed unchanged for the fourth month in succession, and the retail price index is now nearly one point lower than a year ago.

British exports of office machinery for the first half of this year reached the figure of £10,075,650, which beat last year's record for the same period by £189,000, the Office Appliance & Business Equipment Trades Association announces.

Shipments of accounting machinery rose in value from £2,600,000 to £2,900,000, and duplicators, cases and parts from £1,193,000 to £1,231,000.

Exports in June amounted to £1,648,608, compared with £1,362,216 in the same month last year. Australia was the leading customer, with imports worth £336,000, and the USA second with £145,000.

The third report of the United Kingdom Council on Prices, Productivity and Income—generally known as the Cohen Council, after its chairman, Lord Cohen—was published in London today (August 7).

In a statement issued with the report, it is stated that the report's main theme is the need to prolong still further the period of stable prices that has already lasted for 18 months. If this could be done, there were good prospects of going forward without alternating periods of inflation and recession. The present rise in output gave an opportunity for actually lowering prices. If this was seized, it would become apparent how the standard of living could be raised without having to raise money incomes—and costs with them.

The report puts forward a number of proposals for keeping money incomes (whether from pay or profits) within bounds. All these proposals have as their aim the prevention of inflation.

The Cohen Council was set up in August 1957 with the following terms of reference: "Having regard to the desirability of full employment and increasing standards of life based on expanding production and reasonable stability of prices, to keep under review changes in prices, productivity and the level of incomes (including wages, salaries and profits) and to report thereon from time to time". The Council has already produced two other reports—in February and August 1958.

MAIN FINDINGS

One of the main findings in the third report, now published, is that the British economy has escaped, for the present, from the inflationary spiral.

In contrast to the cautious attitude of the two earlier reports, the tone of the present report is markedly more optimistic in its comments on the prospects for both price stability and expansion.

On the prospects for expansion, the Council's view supports the estimates made in recent months which suggest that by the close of this year expenditure in the economy as a whole will be running at around four per cent above the level of a year ago.

The Council takes the view that personal consumption will probably go on rising, that Government expenditure will not alter markedly, and that total fixed capital expenditure will increase and stocks may rise somewhat. Voluntary savings are not expected to fall short of investment.

HIGHER OUTPUT POSSIBLE

With reference to the level of production, the Council observes that figures for capital investment since 1955, and recent estimates of unused capacity with the employment figures, suggest that output can be raised to match the increase in expenditure in the economy as a whole.

The Council also thinks, like other recent independent estimates, that the surplus in the United Kingdom's balance of payments on current account, although not likely to be as large as in 1958, will still be substantial.

The present rise in output at home means lower unit costs of production, and offers a valuable opportunity to reduce prices, the Council states. Real incomes would then be raised without pushing up money incomes, and the prospects of avoiding a renewal of the inflationary spiral would be improved. "We lay stress on the strategic importance of seizing the present opportunity", the Council comments. It is added that some firms have already been showing the way in reducing prices as a matter of good business.

*

Sweden

IN Sweden, the economic situation has improved in several respects, the Goteborgs Bank writes in the latest issue of its "Swedish Economic Survey". Industry's demand for manpower has increased so much that relief work has been largely wound up. In part this favourable development can be traced to the expanded markets for Sweden's chief industrial export products, even if prices have not risen substantially.

However, domestic factors have also contributed to expansion, the survey continues. Record-breaking residential building and intensive industrial investment, to a considerable extent financed through gradually released investment funds, have promoted employment. Although the surplus of Government expenditure in the past fiscal year turned out to be not as huge as had been forecast, it has nevertheless stimulated total demand and in this way helped the recovery of consumer industries as well.

Contrary to earlier apprehensions, Sweden's foreign exchange reserves have increased somewhat, since exports have been well maintained and import values kept at a moderate level, partly thanks to the lower cost of various imported primary products, including mineral oils.

This gratifying state of affairs may perhaps subsist for a time, but in the longer run there is an obvious danger that the balance will be disturbed, the Goteborgs Bank says. The need of the Government to borrow large sums would remain even if it became politically possible to introduce a general turnover tax and to make some economies. Such borrowing opens the road to inflationary development by increasing the liquidity of the banks and people in general. Further, continuing domestic progress will expand imports and, joined to the likely rise in the prices of essential import goods, this expansion may adversely affect Sweden's balance of trade.

Lastly, wage agreements for the next year are of special importance, the matter being complicated this time by the recently approved national super-annuation scheme and the proposed general turnover tax. This being so, a sterner credit policy is possible and, significantly, the Riksbank has already initiated talks with the commercial banks about raising liquidity ratios.

Quotations on the Stockholm Stock Exchange reached a new all-time peak of 166.70 points for industrials on July 27 after an almost uninterrupted climb during the month. However, the last few days of the month saw a minor set-back and July closed at 161.18. The gain over the month was 10.60 points.

Bank shares showed a similar though less pronounced development, starting the month at 133.20 and closing at 139.81, i.e. a gain of 6.61. A peak of 141.88 was reached on July 27.

The total stock turnover in July amounted to Kr 30,180,000. This compares with Kr 29,860,000 in June, Kr 45,930,000 in May and Kr 22,400,000 in July last year. Over the first seven months of this year the turnover was Kr 216,000,000, compared with Kr 153,000,000 for the January-July period 1958.

Since the beginning of this year average quotations on the Stockholm Stock Exchange have risen by 32.4 per cent. This compares with a rise of 16 per cent for New York and 5.9 per cent for London, according to a survey in the Stockholm daily Stockholms-Tidningen. The steepest rise on the Stockholm Exchange is noted for Match shares, 47.2 per cent, followed by forest industry shares, 40.5, engineering shares, 39.2, and home-market industries, 36.7 per cent. For other groups the gain has been less than the average rise, ranging from 32.2 for the Sugar Company to 16.0 per cent for the shipping companies.

The set-back during the last few days of July is seen by commentators more as a "technical reaction" after an almost uninterrupted boom than as the initiation of a general downward trend.

For the first time since 1952 Sweden's balance of payments in the first quarter showed a surplus this year, amounting to Kr 31,000,000, according to Svensk Export, organ of the General Export Association of Sweden. This compares with a deficit of Kr 837,000,000 in January-March 1958.

Following a heavy decline in imports and an appreciable rise in exports compared with last year the trade deficit declined from Kr 837,000,000 to Kr 264,000,000 in the first quarter of 1959. The net revenues of foreign shipping are estimated at an unchanged Kr 295,000,000, while capital transactions resulted in a net deficit of Kr 23,000,000.

The foreign exchange reserves went up by Kr 88,000,000 in the first three months. In the same time last year they decreased by Kr 181,000,000.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

IF the difficulties surrounding the choice of the official language were merely logical, they would have been resolved long ago. Since they are not, I am wondering how far Mr Nehru's admirably lucid analysis of the problem in Parliament last week would succeed in inducing a more reasonable frame of mind among the partisans. If the tone set by Mr Nehru's speech would only determine the nature and outcome of the forthcoming parliamentary debate on the recommendations of the official language committee, we shall be seeing the beginning of a rational attitude to the question. If experience outside Parliament is any indication, such a consummation seems remote. The attitude of an anti-Hindi friend with whom I discussed the speech is perhaps typical, and throws an oblique light on the incredible obstacles to a sane discussion of the question. He admitted that Mr Nehru's speech was very good but said that it was very unlikely to make any difference to the coming debate. In this connection, he made a complaint of what he considered as Mr Nehru's ostentatious reluctance to impose his views on anyone. Mr Nehru's desire that the vote on the question should be free, was, in his view, an open invitation to those gentlemen from Uttar Pradesh and Madhya Bharat to go on exactly as before. With a trace of bitterness, he said that it was not as though the party whip has lain idle over matters touching more fundamental convictions. It has cracked to cow down opposition to a hundred expropriatory legislations, and on countless occasions of diminution of liberties. If Mr Nehru was serious, he said, he could have said that his was the most sensible attitude—as indeed it was—and they had all better vote for it.

*

Of course, my friend was muddled. It is monstrous that he should make a grouse of what was unexceptionable conduct on the alleged ground that, elsewhere and at other times, the three line whip has gone round. If it had, it would not make its going round on this occasion any the more defensible. And it is an odd kind of democracy that asks for the unreasonable thrusting of a reasonable view on others. And when what is required to be thus imposed is something that deplores precisely such high-handed imposition in a different context, you have a Gilbertian situation of rare vintage.

*

But, unhappily, such reactions to Mr Nehru's speech are not unrepresentative. I am told that Hindi enthusiasts have an identical grouse: they feel that Mr Nehru has encouraged anti-Hindi partisans by making the debate free from party obligations. In fact, some of them are reported to be feeling as having been more than unfairly treated: for, Mr Nehru has made available to their opponents the weight of his enormous authority and prestige (on the eve of the debate)—an advantage that they will not be slow to exploit. As one Hindi partisan put it—unconsciously parodying the editorial manner of some Hindi papers—it is like Lord Krishna letting Duryodhana have his army and himself choosing to be Arjuna's charioteer. Only in this case, there is not even the excuse that it was what the parties asked for.

*

It is true that the debate will, unless better counsel prevails, underline the great divide. For, as I said, the more rabid partisans are, to all appearances, beyond the ministrations of reason. Mr Nehru's principal anxiety has been to avoid stirring those dark depths in which lie, only half asleep, the ugly passions that feed on linguistic exclusiveness. Some measure of the intensity of these passions was had in the vehemence with which Mr Anthony's resolution on inclusion of English among the languages in the eighth schedule was opposed. Mr Nehru saw the cogency of Mr Anthony's argument: at its lowest, it was a legitimate minority claim, on behalf of Anglo-Indians. At its highest, English has been spoken in this country for nearly three hundred years and if the people who speak it, more or less regularly, are to be reckoned as a class in themselves, it will qualify as a major language of India. And what is perhaps more important, a good deal of what is rather crudely described as "brain-work" is done even now in that language. Lastly, it has historical claims to be considered "national". I have never been able to understand the kind of mind which considers the British period in history as a kind of irrelevance in an otherwise meaningful whole. A careful inspection of such a mind will reveal an even odder inhabitant: the notion that even the Muslim period was a distraction. The persistence with which Urdu is identified, against the weight of evidence, with Muslims and the barely concealed hostility toward it, is typical of such an attitude.

Mr Nehru is well aware of all this but he rightly felt that the inclusion of English in the Eighth Schedule would be a Pyrrhic victory for Mr Anthony. And Mr Anthony withdrew his resolution; and, in this, he showed a greater sense of responsibility and generosity than those who, in the narrowness of their hearts and minds, opposed it. Personally, I cannot help feeling that the Indian Parliament lost a splendid opportunity of expressing in a unique way the "defeat" of Great Britain in the long Indo-British struggle. To have appropriated English as one of our national languages would have been as symbolic a gesture as choosing to remain within the Commonwealth of our own free will.

*

Mr Nehru's speech ranged far beyond the question of English as one of India's many national languages and touched on the question of the official language for the purposes of the Union. The distinction between a national language and an official language is important and its blurring has led to a lot of confusion. But such confusion is almost inevitable, granted that the impulses behind the clashes are at levels deeper than that of reasonable debate. To the Hindi enthusiast, Hindi's elevation to the status of an official language is no mere practical expedient: it is the recognition of his exclusive right to the status of successor to the former rulers whose language was English—and the opponent of Hindi contests this claim. There are other strands of irrationality, many of them with xenophobic, communal and, of course, linguistic overtones. All these have made anything like a rational discussion of the problem extremely difficult.

*

But if the necessary effort to keep the discussion free from irrelevances is made, then the problem of language will resolve itself into three strands. First is language as an instrument of creative literature. Like the wind, creativity bloweth whither it listeth, and for our purposes we had better leave this aspect of language alone. Secondly, there is the language of learning: and this must ordinarily be a purely educational problem and ought not to bother politicians. But, the language of instruction is in another sense the language of power and this explains why quarrels over the official language invade placid academic waters. As a purely pedagogic problem, the question of language of instruction is probably capable of only one answer: other things remaining equal, the best language for instruction is the student's mother tongue. Now, apart from the fact that other things in the above equation are not equal, the problem of instruction is not wholly pedagogic, for, your chances in life are determined by factors other than the excellence of your instruction.

*

Which takes me to the third aspect, and the real question that arises in the special context of parliamentary discussion. In the

4 Per Cent
ORISSA
GOVERNMENT LOAN 1971

Issue Price Rs. 99.00 per cent.

Opens on the 19th August, 1959

The loan will be closed as soon as a totalof approximately Rs. 350 lakhs has been subscribed and in any case not later than the close of business on the 25th August, 1959.

The applications will be received at the Offices of the Reserve Bank of India, Bombay, Calcutta, Delhi, Madras and Bangalore at the branches of the State Bank of India in Orissa and at the Treasuries and Sub-Treasuries in the State of Orissa.

Full particulars can be obtained at any of the Offices of the Reserve Bank of India or branches of the State Bank of India or at any treasury or sub-treasury in the State of Orissa.

GOVERNMENT OF ORISSA

Finance Department

BUDGET

PRESS NOTE

Bhubaneswar, the 29th July 1959

FOUR PER CENT ORISSA GOVERNMENT LOAN, 1971

The Government of Orissa is raising a loan of Rs. 3·5 crores. The loan will be utilised to meet the expenditure required during the current financial year for execution of the following Five-Year Plan Schemes and other schemes of developmental nature, viz., (i) Electrical Schemes, (ii) Mineral and Industrial Development, (iii) Development of State Transport, (iv) Development of Forests, (v) Development of Roads (P. W. D.), (vi) Delta and Medium Irrigation, (vii) Development of Ports, etc. All the schemes except Development of State Roads are directly productive. Against the Road Development Schemes a considerable revenue is expected from Motor Vehicle taxes and Motor Spirit sales tax which provides a complete basis of repayment.

2. Large investments have already been made on many of these schemes out of the resources of the State Government and are represented by valuable assets.

3. Subscriptions will be received at the branches and treasury pay offices of the State Bank of India located in the State of Orissa, in the treasuries and sub-treasuries in Orissa where there is no branch of the State Bank of India and at the offices of the Reserve Bank of India in Calcutta, Bombay, Madras, Delhi and Bangalore. Full details of the terms of the loan are contained in the Finance Department notification No. 25588-F., dated the 29th July 1959, a copy of which with the application form of the loan is obtainable at the receiving offices mentioned above.

4. The State of Orissa started functioning from the 1st April 1936, being separated from the old province of Bihar and Orissa with meagre sources of revenue. Twenty-four princely States merged with Orissa in January 1948. The princely State of Mayurbhanj joined in January 1949. These developments led to certain financial difficulties but vigorous attempts were made to develop the resources of the State. As the following table will show the revenues of the State have been on the increase:—

(In lakhs of rupees)

	Revenue receipt	Revenue expenditure	Surplus (+) Deficit (—) on revenue account
1946-47 (Actuals) ...	4,60.41	4,48.93	(+) 11.48
1947-48 Do. ...	6,04.34	5,84.45	(+) 19.89
1948-49 Do. ...	6,43.64	7,57.82	(—) 1,14.18
1949-50 Do. ...	10,81.73	11,70.89	(—) 89.16
1950-51 Do. ...	10,31.11	12,00.99	(—) 1,69.88
1951-52 Do. ...	11,96.43	10,85.79	(+) 1,10.64
1952-53 Do. ...	12,62.09	11,51.56	(+) 1,10.53
1953-54 Do. ...	12,26.98	13,20.67	(—) 93.69
1954-55 Do. ...	13,99.04	15.48.27	(—) 1.49.23
1955-56 Do. ...	15,60.24	22,99.06	(—) 7,38.82*
1956-57 Do. ...	16,55.61	22,73.82	(—) 6,18.21*
1957-58 Do. ...	22,03.48	23,47.55	(—) 1,44.07
1958-59 (Revised) ...	27,17.81	26,37.85	(+) 79·96
1959-60 (Budget) ...	30,64.69	30.58.39	(+) 6.30

*Note—*The deficit* is mainly due to the unprecedented manner in which drought and flood followed each other in quick succession.

5. It is well-known that the two projects of Hirakud and Machkund have opened up vast vistas of development and have provided opportunities for a fuller exploitation in the nation's interest of the nature's wealth in which the area bounds. Hence the State Government have undertaken many development schemes. The more important of them are mentioned below:—

	(In lakhs of rupees) 1957-58 Actuals	1958-59 Revised	1959-60 Budget
1. Electrical Schemes ...	1,87.04	1,45.52	1,18.98
2. Mineral and Industrial Development ...	16.81	30.47	14.17
3. Development of Ports ...	19·72	42.48	26.75
4. Delta and Medium Irrigation	1,29.85	2,18.74	4,15.27
5. Development of Roads	92.36	93.43	68.68
6. Forest (Products) Schemes ...	5.89	16.75	15.90
Total ...	4,51.67	5,47.39	6,59.75

6. The Government of Orissa have an outstanding debt of Rs. 1,08,67 lakhs to the Union Government up to the 31st *March 1958. This consists of Rs. 1·67* lakhs taken for Intensive Cultivation Schemes, Rs. 3,02 lakhs for Machkund Hydro-Electric Scheme and other Electrical Schemes, Rs. 73,50 lakhs for Hirakud Dam Project, Rs. 75 lakhs for rehabilitation of displaced personnel from East Bengal, Rs. 21 lakhs for Industrial Housing Scheme, Rs. 93 lakhs for Community Development Projects, Rs. 40 lakhs for National Extension Service Programme, Rs. 1,07 lakhs for Expenditure on Development Schemes of power projects, Roads, Road Transport and Industries, etc., Rs. 9 lakhs for Delta Irrigation, Rs. 1,25 lakhs for flood control and Rs. 16,78 lakhs for other Miscellaneous Development Schemes.

7. Against the total outstanding debt of Rs. 1,08,67 lakhs *there are assets in the form of investments on* productive schemes like Hirakud Multi-purpose River Valley Project, Machkund Hydro-Electric Schemes and other development schemes. About Rs. 8,20 lakhs is due to the Government from Local Bodies, Agriculturists, etc., on account of principal of loans advanced to them. Government also own extensive and valuable assets in the State Transport System, Lands, Buildings, Roads, Forests, Mines, etc.

8. The Government's Budget documents for 1959-60 (printed publications of which are available at the Government Press) give full detailed information regarding the financial position of the State.

ultimate analysis, it is simply a question of power. Thus, the clashes are at two levels—one at the deepest regions of collective unconscious and the other at the most immediate of conscious planes. It is quite simply that the linguistic minorities in India apprehend the slipping of power from their hands by the process of displacing English by Hindi as the language of power. Here, of course, it is necessary to isolate the problem by resolutely removing one of the common red herrings in discussion: the need to conduct the affairs of the nation in the language of the "masses". In the context of the official language for the Union, the masses hardly enter the picture except in so far as Hindi happens to be the language of a section of the Hindi masses. (And this, by the way, is what makes the argument, in the mouths of Hindi enthusiasts, both disingenuous and sinister in the eyes of the non-Hindi speaking people). In non-Hindi hearts, Hindi would strike no more responsive a chord than would English. Unctuous references to conducting the affairs of the nation in the language of the people had, therefore, better be abandoned if anything is to come out of the discussion. One suspects that the only reason for its invocation is to stir up a certain irrelevant animosity to English as the language of the erstwhile oppressor.

*

Shorn of these irrelevances, the question is merely one of opportunities in the sharing of political and economic power and, consequently, social power. At a lower level, it quite simply is a question of bread and butter. Though there was much that was admirable in Mr Nehru's speech, his reference to this aspect of the matter was somewhat perfunctory. He seems to think that it was merely a matter of letter writing. He referred to the fear that "certain doors of advances are closed to them because of their fears to correspond with the Government in Hindi". He added that as far as he was concerned, "they could correspond in English". This is to miss the whole point of the fear. It is not the language in which to petition the President that is bothering people, but the language in which Parliament will conduct its proceedings and the language that candidates for competitive examinations of the civil services will have to employ. Mr Nehru's general attitude that Hindi should not be imposed on unwilling people and that English will have to continue as additional official language as long as the non-Hindi people wish it, will doubtless hearten many people. But the problem is really one that needs solving on the level of details and on which Mr Nehru had little to say. It is in the tact, imagination and generosity that are brought to bear in dealing with them, that the real test of the good faith of the Hindi speaking majority will take place.

GATEWAY GOSSIP

Oil Industry

BOMBAY REVIEW

IT is doubtful if human civilisation would have progressed just as well as it has during the past one hundred years if there had been no oil on earth. The discovery of mineral oil a century ago has opened up new vistas for the play of human ingenuity as it provided a highly potent energy in an easily portable form along with innumerable other products and bye-products that enrich and enliven life. It is no wonder that such a versatile fluid has attained a prominent place in modern civilisation. The per capita consumption of oil is now considered a true yardstick to measure the level of economic development of a country.

Demand for oil and its products has already reached a very high level in some countries and the standard of living of the people in these countries is also quite high. Conversely, low oil consumption countries are those with an undeveloped or underdeveloped economy. We in India have embarked upon ambitious development schemes, a direct result of which will be to increase the consumption of oil. Our programmes of agriculture, transport and industrial development depend for their success on oil and oil products to a sizable extent. Oil consumption is already on an uptrend as a result of the progress made in the country through the implementation of schemes in the First and Second Five Year Plans. Though the increase as measured by the standards of the developed countries is quite insignificant, the fact remains that demand is rising; and, given conducive conditions, the rate of increase in future will be higher than is the case now.

The important question, however, is whether the nation has the needed resources to meet its growing demand for oil. The answer is both yes and no. There are hopeful indications that vast deposits of oil may be found within the country. But, first of all, such deposits have to be located. This is accepted to be both a costly thing and one requiring highly advanced technical know-how. Then arises the question of refining the crude to yield the usable petroleum products. The whole problem is now being tackled by a separate department of the Ministry of Power, Fuels and Mines. The position till recently has been that, barring the small quantity of crude indigenously available from Assam, the bulk of our needs has to be imported. The new discovery at Nahorkatia in Assam has brought about a sizable change in the position. It is estimated that a total of 3 million tons of crude oil will be available annually within the country on the basis of proved reserves.

The Oil and Natural Gas Commission are currently engaged in the exploration of oil and gas, and it is gratifying to find that their efforts so far have shown great promise. At Jwalamukhi in the North, the presence of gas has been confirmed. The recent oil strike in the Cambay region on the West Coast has heightened hopes in regard to the attainment of self sufficiency in crude oil. But the path is by no means easy to traverse. For, demand is increasing, and it is estimated that, even on the basis of a modest annual increase, our requirements will amount to about 12 million tons by the end of the Third Plan. In the meantime, the country will have progressed considerably and, consequently, there is bound to be a more rapid growth in the demand for oil and oil products. In the course of the next 25 years, the demand may rise to 75 million tons per annum. It is evident, therefore, that, if we are to achieve self sufficiency, there is need for more extensive exploration than is being attempted at present. Though it is undeniable that Government, through their Oil and Natural Gas Commission, have done commendable work in the short time since they started taking an active interest in this department of national activity, the task ahead is tremendous. There is no lack of realisation on the part of Government of the need for foreign assistance in this regard. The granting of licence to a foreign firm for the exploration of oil in a specified region in the eastern part of the country is an instance in point. But it would appear that a clear policy for oil is yet to emerge. As things stand at present, it is clear that the public sector (Mr K. D. Malaviya, Union Minister of Mines and Oil has recently hinted at the possibility of the State entering into the distribution trade in oil and oil products as well) will be increasingly entrusted with tasks pertaining to both the mining and the refining of oil. Such a development can be justified in view of the strategic importance of oil for the defence and other essential services in the country. But there is no reason why there should not be continued cooperation between foreign oil companies and Government. Collaboration with foreign interests is on the increase in our country. In other fields, Government have not hesitated to obtain collaboration. Even with regard to oil, refining is entirely in the hands of foreign interests as the first public sector refinery is yet to be built.

Thus, arduous and varied are the problems that we have to face in regard to meeting the demand for oil in coming years. The exploration stage is itself very costly. That this is no conjecture will be seen from the numberless barren wells that have been the lot of many an oil company to bore elsewhere in the world, and, in a smaller measure, in India, too. The preparatory survey and the actual drilling, sometimes in deserts, sometimes in thick forests and sometimes under the sea, are tasks that call not only for large monetary resources but also a great number of skilled men trained especially for the job. The resounding success that has been attained by official efforts in Cambay has demonstrated that we have already a nucleus of skilled workers who can confidently undertake the job. But it is not unoften that one hears about work in a particular region being delayed for lack of this or that equipment or adequate trained personnel. It is also rather difficult to believe that Government will have, in the near future, the monetary resources necessary to undertake large scale investigations and exploration, without which it is idle to hope to attain self sufficiency in oil in a reasonable period of time. The acute shortage of foreign exchange has given fresh urgency to the problem of conservation of foreign exchange. Considerable scope exists for saving of foreign exchange through the minimising of oil imports. This will of course require a corresponding increase in domestic production.

In the course of his statement at the Sixth Annual General Meeting of Burmah-Shell Refineries Ltd held in Bombay early this week Mr L. D. Mudie, Chairman, has brought into sharp focus the main problems confronting the oil industry in our country. Burmah-Shell, it may be noted, is a worldwide organisation, and the fact that the Burmah-Shell refinery in Trombay was completed one year ahead of schedule is an indication of its efficiency. Recently, the company has indicated to Government that it will forego the existing duty protection on furnace oil, light Diesel oil, High speed Diesel oil and Bitumen with effect from 1st July 1959. This duty protection, together with the 2 annas duty protection on Gasoline voluntarily surrendered on 1st October 1956, formed part of the Agreement with the Government of India which led to the construction of the Burmah-Shell refinery.

Mr Mudie's observations on the oil industry of the world and, in particular, of India merit the most careful notice. The first point about the oil industry in general, to which our attention is drawn, is the astronomical amounts of money already invested and likely to be invested in the future. The industry's gross fixed assets were valued in 1957, for the whole world, at Rs 37,900 crores. In the next ten years, the total outlay may amount to about Rs 67,000 crores with an increase at the rate of about Rs 5,300 crores per annum in the first five years and at the rate of Rs 7,300 crores per annum thereafter.

In India, the problem is primarily one of finding the crude oil required to meet the anticipated demand of 12 million tons of oil and oil products by the end of 1967 or, say, the end of the Third Plan. We have crude oil to the extent of 3 million tons annually, and so the problems is to find the balance of 9 million tons. The cost that will be involved in finding and producing the 9 million additional tons of petroleum products will be around Rs 270 crores and this estimate is based on world experience of the industry. The final cost will be considerably higher as the outlay on the additional refining capacity and marketing facilities will have to be added. The shape of things to come in regard to the demand for petroleum and its products in our country, when the developmental works in the first two plans begin to be reflected in a higher standard of living of the people, may be discerned from the following paragraph of Mr Mudie's statement:

> "These figures (pertaining to cost of mining the additional 9 million tons of oil) are impressive but constitute only the beginning of the story. For, it must be remembered that, despite the rate at which demand is growing, India's per capita consumption of petroleum products works out at 3.8 gallons per annum against a world average of 70 gallons, and compared with 40 gallons in Japan, 14 gallons in Ceylon, 122 gallons in Latin America, 7 in Indonesia and 300 gallons in the USA".

It is true that, so long as the stringency in foreign exchange lasts, the present tendency to arrest consumption of oil and oil products will continue. But it will be neither possible nor desirable to keep oil consumption at a low level. It follows, therefore, that future plans should take into account the possibility of a higher rate of demand than has been witnessed so far. We are sometimes told that we need not unduly worry ourselves about the present gap in the demand and supply of oil and oil products. The atomic age has dawned in India also; and, in a matter of years, we will be having our first nuclear power station. Many more will follow. Mr Mudie points out that the prospects from nuclear power are still too remote to form the basis of current planning. Furthermore, there are petroleum products which have important uses other than forming a source of power and heat.

BOMBAY REVIEW

Economic Development

SPEAKING at the inaugural luncheon of the Indo-German Social Centre in Bombay, Mr H. V. R. Iengar Governor of the Reserve Bank of India, has pointed out that the free market principles which have been successfully applied in West Germany are unsuitable for India at the present juncture. He has, however, not entirely ruled out their usefulness for us. There are certain essential pre-requisites which are now absent in India and once these are brought about, then, and then only, will the West German experience gain relevance.

India is even now far away from the position in which West Germany had found itself after the end of World War II. Though shattered beyond recognition, it had a nucleus of industrial potential which only required some initial levering up in the shape of foreign aid to come into its own once again. In marked contrast, after Independence, the Indian economy was grossly deficient in almost all the things that go to make a nation industrially strong. Even the seven or eight years of planned development have left these deficiencies practically unchanged. Mr Iengar has rightly said that the task is too much even for the free market principles. A much more potent force is required, and that is the State.

The idea of the State taking an active role in the development of a country should not be repugnant even to the most ardent advocates of laissez-faire. In many countries, which are now well developed, the respective Government have played an active role in the initial stages. In this regard, Mr Iengar says: "It is not generally known that, even in the United States, the State pursued a variety of activities with the object of initiating and stimulating economic development."

That the majority of the people in our country also agree that the State has an important role in industrialisation is evident from the fact that the newly formed Swatantra Party, with its especial emphasis on the freedom of the individual, also admits that certain types of enterprises have to be handled by the State.

The position at present in India is that the State is actively associated with industrial development. The Industrial policy has earmarked certain basic industries for development exclusively by the State. The public sector has come to stay, and it is expanding fast. But it has to be admitted that, despite the Industrial policy statement, there is considerable confusion as regards the respective spheres of operation of the two sectors. Apart from the assumption of the responsibility for the development of basic industries like steel and coal, the State has tended to appropriate to itself other functions generally expected to fall beyond its purview. State Trading and the taking over of the wholesale trade in foodgrains have raised fresh apprehensions in the public mind. Even so, there is no marked tendency on the part of the people to welcome the free market principles as obtaining in West Germany. So, when Mr Iengar says that the "question before us in India is not whether the State should not play an active role in initiating and carrying forward the process of development, the question is also not whether the State should not have powers of control and regulation," it is easily understood. Mr Iengar goes on to point out that the real question is the extent to which the State must interest itself in the process of industrial development. He says the answer depends a great deal on "the view taken regarding the future pattern of our economy." Proceeding, he says that, if, in the future pattern, there is room for vigorous private enterprise, then it will be quite appropriate to talk about the German experience of free market economy.

Mr Iengar also admits that, if private enterprise is to be given adequate scope for functioning efficiently, "it is clear that the extent of State enterprise and State control should not go beyond the point necessary to stimulate and sustain development." It is now generally taken for granted that, after the recent assurance given by the Prime Minister to the Federation of Indian Chambers of Commerce and Industry, there is no ambiguity about the future role of private enterprise in our country. According to Mr Iengar's maxim, therefore, private enterprise can draw the comforting conclusion that the public sector will loom large only until the Indian economy becomes self-sustaining.

*

Ceiling on Land Holdings

Judging by the reception accorded to similar bills in the States which have so far effected a ceiling on land holdings, the Bombay Land Reforms Bill published last week may not be expected to have a smooth sailing in the Legislature. Ideas about ceiling are not uniform all over the country. The variations are perhaps justified by difference in the climatic conditions. But it would appear that exigencies of politics too have had a hand in the matter.

The ceiling on land holdings has primarily stemmed from the need to provide land to landless agricultural labour. The fact that even if all cultivable land is taken over for distribution the share that every cultivator will get will be far short of an economic holding has been conveniently brushed aside. The ethics of limiting agricultural income where there is no limitation on urban income have also been thrown to the high winds. Government are now nurturing the fond hope of achieving the impossible through cooperative farming on the excess of land that will be left after ceiling.

The idea of cooperative farming has already had far reaching repercussions and if the Congress need not take the Swatantra party seriously yet, it has perforce to take note of the fact that a sizable section is opposed to some of its more important policies. Indicative of the growing opposition to cooperative farming is the renewed declaration on the part of Government spokesmen that there will be no compulsion in cooperative farming. But the real objection is with regard to the attempt to give concessional facilities to cooperative farmers.

The Bombay Bill seeks to limit holdings so as to yield a net income of Rs 3,600 per annum. The State Government will notify the ceiling for each local area. The provisions of the Bill are to be given retrospective effect in order to obviate moves to defeat the purpose of the law by transfers, partitions, etc. The Bill provides for imposing ceilings on existing holdings and on future acquisition of lands which will be applicable uniformly throughout the State. Concessions such as the freedom to select the lands one wants to constitute one's holdings allowable, under certain conditions, are given, while certain types of lands have been exempted from ceiling. The surplus lands which will vest with Government will be paid compensation equal to 100 times the assessment of the land plus the depreciated value of permanent structures and wells constructed by the holder on the land. Where the surplus land is held on lease from Government the compensation will be 12 times the full assessment of the land. The compensation will be payable either in cash or bonds or both.

In nearby Mysore, the Legislature is presently discussing the Mysore Land Reforms Bill which, also like the Bombay Bill, provides for an income ceiling of Rs 3,600 per annum. This limit does not find favour with all members of the Congress party. During the protracted debate on the Bill, some congressmen advocated a limit of Rs 5,400. Andhra, which has the distinction of being the first State to introduce ceilings on existing holdings, has fixed the figure at Rs 5,400. Elsewhere, except Kerala, the ceiling is higher than what is proposed for Bombay.

GATEWAY NOTES

Diesel Fuel Injection Equipment Industry

Contrary to popular belief, the progress of industrialisation in a country depends in a large measure on the widespread growth of ancillary industries which are generally medium scale units. The importance of these establishments will become evident if it is noted that, in the automobile industry, nearly 50 per cent of the components are supplied by the ancillary industry. India is only at the threshold of industrialisation, judged by the standards of the Western countries. In coming years, therefore, the demand for components and equipment that go to make up finished products is bound to increase quite sizably

The ancillary industry's success, however, depends on the excellence of the quality of its products. As these from part of the end product of manufacturers, there is no chance for acceptance of inferior articles. It is gratifying to note that the products of our ancillary industry have generally been said to come up to the required standard.

In the course of his speech at the recent public enquiry into the question of continuance of protection to the Diesel Fuel Injection Equipment industry, Mr C Ramasubban Chairman, Tariff Commission, has pointed out that the Development Wing has not received any complaints about the quality of indigenous products. Most of the consumers and importers have also expressed satisfaction with the quality of the domestic products. The industry is enjoying protection for the past four years and the period has witnessed considerable improvement being recorded by it. The current period of protection is due to lapse on 31st December 1959, and the industry has prayed for continuance of protection for another three to five years. The main ground for this request is the plea that the industry is still at a disadvantage as compared with foreign producers, especially in respect of prices of imported raw materials.

The industry at present comprise three units but the production of only two is available to the public. There has been a considerable increase in production during 1958 as compared with the previous year. As regards supply of raw materials, the industry is fortunately placed because, except for a few special types of steel, all other raw materials are available from indigenous sources. However, supplies do not seem to be quite adequate and the industry is of the view that arrangements should be made for adequate supplies of raw materials of requisite specification from indigenous sources at reasonable prices.

WORLD OF COTTON

Floor and Ceiling Prices Maintained

THE Government of India have decided that the "floor" and "ceiling" prices of Indian Cotton for 1959-60 season should be maintained at the same level as for the current cotton season 1958-59, except for a few modifications. The changes are more in the nature of allowances for better varieties and qualities rather than specifying increase for the existing standard varieties. The price schedule with necessary amendments, as approved, will be issued in due course in conformity with the above policy. The fixing of floor and ceiling prices for extra long-staple cotton are under consideration of the Government and a decision will be anounced shortly.

Meanwhile, sentiment in the cotton market seems to have improved considerably, thanks to better conditions prevailing on the cloth front and unfavourable weather reports from certain cotton-growing areas. Compared with the previous week-end rate of Rs 697, the August delivery showed a substantial rise at one time to Rs 710.50 before closing at the same rate. The issue of tenders has been fairly substantial, as operators are said to be absorbing deliveries. Thus, with scarcity of tenderable cotton, bears have been caught napping.

The Spot section has continued to witness active spinner demand for domestic growths, Kalyan and Wagad attracting principal attention and advancing further from the previous levels. Some mills are showing good interest in CO2 quality on reports that the new crop was badly damaged by the recent heavy rains. Upcountry mills are also reported to have bought a sizable quantity of all popular growths on fears that the cotton supply situation will be acute in October and November.

Operators are perturbed by the unsatisfactory progress of the new crop. Excessive rainfall in the Kalyan, Wagad, Kalagin, Vijay and Surti crop areas is reported to have inundated fields in several places and clear weather is found imperative for sowings. The monsoon is adequate in Khandesh, Vidarbha and Moglai areas; but growers fear that the quality of the crop will be affected if the rainfall continues for about a week more. Only the Punjab and Rajasthan have reported a satisfactory progress of the crop.

On the export front, shippers are eagerly awaiting the Government announcement of an additional quota for Bengal Deshi. They have already put through some sales to Japan for the November/December shipment, subject to export permission. There are no enquiries for other varieties of cotton.

In the import section, listless conditions have continued to prevail in the absence of fresh import quota. Hopes are entertained that the Government will shortly announce a quota of 80,000 bales for cotton stapling 1 3/16" and above and 60,000 bales for cotton stapling 1 1/16" and above, but below 1 3/16" for shipment to the end of the year. On this expectation, a fair volume of business has taken place with Sudans, subject to import licences.

Cotton buyers have welcomed the procedure announced by the State Bank of India, as this will set at rest the uncertainty and pave the way for increased imports from Egypt. However, since the shipment period for Egyptian cotton imports is due to expire by the end of the current month, an extension period will help the shippers. This is also essential in view of the fact that the shippers have barely a fortnight before which the shipment of cotton will have to be completed.

Cotton buyers say that, out of the 60,000 bales quota announced a couple of months ago, business with Egypt will account for 6,000 to 8,000 bales and the balance has since been concluded with the Sudan, which has emerged as the major supplier of cotton against this quota, because of the deadlock which developed over the payments agreement. In the circumstances, it is necessary that the Government of India should come out with a fresh quota, which will help the mills. Price-wise, Egyptian cottons are now cheaper by about Rs 80 per candy as compared with Sudan, taking into consideration the prevailing discount of 32.5 per cent on imports of Egyptian cotton.

Under the procedure announced by the State Bank of India, the rupee proceeds of the relative imports are to be credited to the National Bank of Egypt, Cairo (August 1959 agreement) Special Account with the State Bank of India. Bills handled under this arrangement will be subject to the standard scale of commission and other charges laid down in the rules of the Foreign Exchange Dealers Association of India.

Indian cotton consumption is provisionally placed at 368,232 bales in the month of June. This compares with 324,757 bales in May, 1959. It is true that the consumption in June is lower than in the immediately preceding month; but the overall consumption of Indian cotton at 3,859,808 bales in the first ten months of the current cotton season shows an increase of as much as 175,000 bales over that consumed in the same period last season.

The consumption of foreign cotton continues to be on a reduced scale as compared with the last season. The June consumption is slightly higher at 38,821 bales as compared to 38,058 bales in May; but the overall foreign cotton consumption is nearly a lakh of bales lower at 372,150 bales against 473,004 bales in the corresponding period of the last season.

×

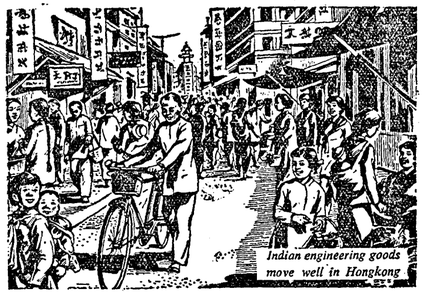
KARACHI COTTON MARKET

Prices on the Karachi cotton market displayed a firmer tendency following the reduction in the export duty on Pakistan Deshi cotton from Rs 50 to Rs 40 per bale and on staple varieties from Rs 115 to Rs 75. Operators felt that the export demand was likely to crop up in the coming weeks.

×

LIVERPOOL COTTON MARKET

The Liverpool cotton market continued to rule weak as the export demand remained very poor. The futures market also remained dull, the most noticeable feature being the relative weakness of American cotton for March delivery.



×

CLOTH AND PIECEGOODS

Cheerful conditions have continued to prevail in the Bombay Piecegoods market. In the domestic sector, the most significant feature is an appreciable rise in the prices of grey goods due to two main factors—mills having entered into bulk business with foreign buyers and the fast approaching season for grey goods. Although the volume of offtake is not reported to be large, substantial business has taken place in forward delivery. Superfine qualities are in good demand. The main consumers are Calcutta, Madhya Pradesh, Berar, Bihar and Assam. There are also enquiries from Kerala, although no appreciable business is now done with the destination due to lack of transport facilities. Optimistic expectations are entertained by the trade in general with regard to the future trend of the market.

On the export front, conditions have continued to be the same as in the previous week. Singapore and Bangkok have accounted for moderate business, while some business is done with Burma. Sudan purchases have abated a little, while business with the UK and USA has also dwindled due to the increase in the prices of grey goods. But expectations are that the UK will again come to the market for a substantial quantity with the end of summer holidays. Business with Aden is slack, due to keen competition from Pakistan.

BOMBAY REVIEW

Your goods have a ready market in South East Asia

EXPORT NOW

INDIA produces the very commodities which the South East Asian countries need—jute, textiles, tea, handlooms, handicrafts, cycles, sewing machines and many other manufactured goods. Export them now—they'll buy them.

THE INDIAN OVERSEAS BANK LIMITED has made a special study of this important, growing market. Our network of overseas branches, agents and correspondents are at your service for on-the-spot advice.

BOMBAY REVIEW

Firmness After Initial Setback in Oilseeds

PRICES on the Bombay Oilseeds Exchange, after suffering a sharp setback early in the week due to the pressure of floating stocks and encouraging weather reports, recovered sharply toward the close, thanks to support at lower levels.

The decision made by the Government to lift all quantitative restrictions on the export of several oilseeds, vegetable oils and oilcakes for a period of three years, as part of their new export policy for agricultural commodities, has been widely welcomed. The announcement has, however, had no material effect on prices, as exporters are studying its implications.

It is pointed out that several items, such as nigerseed, kardi-seed and their oils and cakes,are already enjoying facilities of free exports. Prospects of export business in groundnut oil still continue discouraging, while small business is being reported with Burma from time to time. Business in HPS groundnut kernels remains at a standstill. Vegetable product manufacturers are also keeping quiet.

It is also significant that, although the Government's export policy has been generally liberal, the results in the case of almost all items except castor oil, linseed, groundnut oil, groundnut oilcake and linseed cake have been far from satisfactory this year. The export trade has been handicapped mainly by India's substantially higher prices in relation to international levels. Unworkable domestic prices result mainly from the steady increase in the internal consumption in the face of an inadequate rise in output. Indeed, even in the case of major oilseeds, such as groundnut, castorseed and cottonseed, the production in recent years has been almost stagnant.

Exporters believe, however, that the new long-term policy will help considerably in stimulating production, as it will provide a measure of insurance against a possible fall in prices in the event of a larger output. So far as the trade is concerned, it will remove uncertainty and may result in improved business, especially during the peak movements of the crop.

In the Groundnut section, prices slowly improved in the absence of selling and some support, presumably induced by hopes of extension of shipment period for groundnut oil connected with groundnut oilcake. The possibility of business in groundnut oil with Burma and good business in ground extraction with the Communist countries last week aided sentiment. In the ready section, Groundnut Bold quality is quoted at Rs 38.25 and Groundnut Oil at Rs 19.81.

Castorseed was depressed earlier on persistent selling owing to fears of heavy tenders and increasing switch-over to distant delivery. Persistent rumours about business in commercial oil with the USA at a price below our parity also diheartened the market. Short-covering, however, induced a slight recovery toward the close. Ready Castor is quoted at Rs 30.50 and Castor Oil, commercial quality, at Rs 15.50.

Encouraged by the improving outlook for exports of linseed oil, the Linseed section resisted the general downward tendency. The improvement in linseed oilcake from £34½ to £35 per ton on the Continent also imparted strength to the market. Ready Linseed is quoted at Rs 32.37 and Linseed Oil at Rs 16.25.

Trading in the Cottonseed section was dull and featureless.

*

Gold & Silver

On the Bombay Bullion Exchange, both Gold and Silver soared to new heights due to frantic bear-covering and firm bull manipulations. The firmness in the yellow metal was caused by excellent spot demand from the South. Reports revealed that about 5,000 tolas of ready gold were bought by Bangalore and Andhra interests. Arrivals totalled 3,000 tolas as against offtake of 4,000 tolas. Ready rates moved between Rs 120.06 and Rs 121.06, to finish at Rs 121. Sovereign remained firm at Rs 78.

Although ready performance was mediocre, Silver spurted mainly on unbridled speculative support. There was a heavy bear rush to cover outstandings, while bulls pushed up prices. Ready rates moved between Rs 199.25 and Rs 200.19, to close finally at Rs 100.94.

*

Yarn

Quiet conditions prevailed in the Bombay Yarn market. Price movements were restricted as operators were reluctant to extend their commitments on account of discouraging advice from the cloth market. Rumours that the Government of India would soon issue advance import licences for raw material to silk and art silk mills also caused concern to traders. It was feared that a part of the import licences would be used for bringing nylon yarns into the country. As a result, prices of nylon yarns declined from the previous levels, while Rayon yarns moved down slightly in sympathy.

GATEWAY MARKETS

Years of experience have proved to this factory manager that he can rely on WHEEL BRAND Industrial Glycerine —because it is of an *unvarying* high quality.

It is guaranteed to contain not less than 98% glycerol. What's more, it is backed by the experience and reputation of its makers, HINDUSTAN LEVER LIMITED.

In textiles, dyeing and printing, paints, varnishes and lacquers, plastics, leather, rubber and glass...in these and other industries, WHEEL BRAND GLYCERINE is used, and has been used for *years*.

Remember, PYRAMID BRAND GLYCERIN B.P. also has many uses in the industry as well as medicinal and domestic uses! Write for a *free* leaflet about its various uses in the home to: HINDUSTAN LEVER LTD, P. O. Box No. 409, Bombay 1.

INDEX DEPARTMENT GOVT. OF INDIA 19 AUG 1959 PUBLIC DEPARTMENT

OLYMPUS

The Road-Rail Controversy

THE Lok Sabha discussed early this week the report of the Road Transport Reorganisation Committee which was headed by Mr M. R. Masani, M.P. The debate revealed a general consensus of opinion in favour of the report which has recommended a series of measures to remove all obstacles in the way of road transport development. Mr Masani was frankly gratified to find that his report had been discussed on its merits. No Congress member tried to tear it to tatters because it carried the impress of Mr Masani's personality and philosophy. One wondered if this would be taken note of by Mr Masani's own political comrades and publicist-friends who would never lose an opportunity to run down Congress personalities for the purpose of "killing" the policies with which they are identified or to subject their policies to some very scathing and unfair criticism for the purpose of impugning their personal integrity and popularity. That proposals, policies and programmes can be discussed objectively and on their merits, without any personal or subjective equation being brought into the picture, is, however, a lesson too hard to learn.

That is by the way. Reverting to the lead subject of this despatch, I must say that the Lok Sabha debate was by no means the last word on the subject of road-rail competition or road-rail coordination. The Government were frankly not in a position either to accept or to reject the major recommendations of the Masani Committee before receiving the report of the recently-appointed Neogy Committee on Rail-Road Coordination. They could not possibly be hustled in the matter because, as Mr S. R. Kalyanaraman has stated in his note of dissent to the Masani Committee's report, "road-rail co-ordination is a subject of major importance and of considerable complexity." In the light of the appointment of the Neogy Committee it was clear that the note of dissent by Mr Kalyanaraman, Additional Member (Commercial) of the Railway Board, had acquired greater significance as a pointer to the probable approach of the new Committee.

It would, therefore, be relevant to make a reference here to the findings, in Mr Kalyanaraman's note of dissent and in the main report of the Masani Committee regarding the comparative costs of road and rail transport. According to the dissenting member, estimates of cost of transport by road have varied widely from 8 annas to 2 annas per ton mile. Even compared to the lowest cost of 2 annas per ton mile by road ever mentioned so far, the average cost of haulage by rail under all conditions was 9.52 pies per ton mile, including interest charges, during the year 1957-58; and the cost of hauling **additional** traffic by rail would be substantially less than this figure.

Mr Kalyanaraman has, of course, recognised the point that in the case of rail traffic, in addition to the cost of haulage, the owner is put to the expense of carrying the goods from and to his godown at the two ends. Taking this into account, he has worked out the comparative costs for different distances. Here the terminal costs of movement between the godowns and the railway stations are taken to be generally about Rs 8-8-0 per ton for the two ends together. This figure has been adopted in the following table which compares the costs of haulage by rail and by road for different mileages:

Distance (miles)	Cost per ton by rail*	Cost per ton by road (a)	(b)
	Rs. a	Rs a	Rs a
50	11 0	6 4	9 6
75	12 4	9 6	14 1
100	13 7	12 8	18 12
150	15 15	18 12	28 2
200	18 7	25 0	37 8
300	23 6	37 8	56 4
400	28 5	50 0	75 0
500	33 5	62 8	93 12
700	43 3	87 8	131 4
1000	58 1	125 0	187 8
1500	82 14	187 8	281 4

*inclusive of terminal expenses between railway station and godown at both ends.
(a) At 2 annas per ton
(b) At 3 annas per ton

It is concluded from these figures that, whatever be the exact cost of transportation by road within the range of costs mentioned, for every ton of traffics carried by road instead of by rail for the longer distances, the nation has to spend for such transportation a substantially higher amount in terms of real costs. And it has also been calculated that even if only 20 per cent of the traffic in seven commodities—foodgrains, raw cotton, oilseeds, sugar, manufactured cotton, iron and steel and groundnut oil—now moving by rail for distances beyond 150 miles were diverted to road transport, the annual loss to the country, by way of unnecessary extra cost of haulage, would come to about Rs 13 crores. Mr Kalyanaraman, in this connection, has also referred to the following observations of Prof Galbraith:

> "In parts of the country, not now served by rail lines, there may be investment economies in developing long distance road haulage. With this exception, however, investment in this industry should be viewed with scepticism. India has a chance to avoid the mistake, which elsewhere is reasonably evident as such, of making duplicating investments in long distance road haulage which could be performed more economically by concentrating resources on the railroads alone".

The main report of the Masani Committee has, on the other hand, estimated that the average rate charged by the Railways would be around 6 nP per ton mile by 1960-61 and that if the incidence of terminal charges is added to this, the rate will range between 7.4 nP per ton mile over a lead of 1,000 miles and 19.5 nP per ton mile over a lead of 100 miles. The present road rate, according to the Committee, is around 19 nP on short distance and 13 nP on long distance and the indications are that the rates will go down to around 10 nP. But the main report, without going exhaustively into the question of comparative costs of road and rail transport, has placed greater emphasis on two other factors, namely, returns to the State and employment potential. The railways, according to the main report, return only 4 per cent on public investment while road transport returns, excluding revenue duties, contribution to the Central Road Fund and road maintenance, 8 per cent on the investment on roads and 10 to 12 per cent on the investment on vehicles and also pays income-tax which the Railways do not. As for the factor of employment, the railways employed 10.5 lakhs of persons in 1956-57 while road transport employed 26.8 lakhs. How difficult it would be for the Neogy Committee to evolve a compromise formula for rail-road co-ordination in the face of the conflicting facts and factors mentioned in the Masani Committee's report and in the note of dissent to it, may be easily imagined.

DELHI REVIEW

The road-rail controversy has always been with us like the one between cotton mill and handloom. It looks as though a new controversy is in the offing, this time between coastal shipping and railways. At its meeting over the week-end, the National Shipping Board has raised the question of carriage of coal and salt by coastal shipping and expressed its anxiety over the current or threatened diversion of those cargoes to the railways.

The question of securing for our overseas shipping more of the cargoes controlled by the Government of India and the State Trading Corporation has also been raised in shipping circles. It has been suggested in this connection that bulk purchases by Government departments of iron and steel, fertilisers, foodgrains and railway cargoes like wheel sets, sleepers, fishplates, etc., from foreign countries should, as a rule, be made on F.O.B. basis. The point is emphasised here that freight rates in the C. & F. quotations of foreign countries are deliberately pitched at a lower level for the purpose of encouraging their own shipping.

To invite C. & F. quotations for the ostensible purpose of taking advantage of lower freight rates would be to deny cargoes to Indian overseas shipping. It would also be a case of cutting the nose to spite the face inasmuch as C. & F. quotations involve expenditure of foreign exchange on freight paid to foreign shipping companies while F.O.B. purchases involve saving of foreign exchange through the possible handling of cargoes by Indian ships.

4 Per Cent

KERALA

STATE DEVELOPMENT LOAN 1971

Issued at Rs. 99.00 and Redeemable on 19th August 1971

The Government of Kerala announce the issue of their new loan for Rs. 400 lakhs bearing interest at 4 per cent. Government reserve the right to retain subscriptions upto ten per cent. in excess of the notified amount.

The loan will be repaid at par on 19th August 1971.—

THE LOAN WILL OPEN FOR SUBSCRIPTIONS ON 19th AUGUST 1959 AND CLOSE ON 25th AUGUST 1959 OR EARLIER WITHOUT NOTICE. THE LOAN WILL BEAR INTEREST FROM 19th AUGUST 1959.

Subscriptions may be in the form of cash/cheque.

Applications will be received at the offices of the Reserve Bank of India at bangalore, Bombay, Calcutta, Madras, New Delhi and at Branches of the State Bank of India and treasuries and sub treasuries in Kerala State.

Copies of Notification and Application Forms may be obtained at any Receiving Office.

DELHI REVIEW

Mica for Industry

Mica is one of the important minerals that is available in the country in sizable quantities. This, however, does not seem to have been taken advantage of to develop a mica industry in the country. The only use that has been found for mica is for exports in unprocessed condition to earn foreign exchange. Even in respect of this, it does not appear that the country is deriving the full value and a large quantity is estimated to be left to waste. The need for developing an internal industry utilising mica is therefore obvious. This was urged by Dr Sri Krishna Sinha, Chief Minister of Bihar, while inaugurating the All-India Mica Convention at Giridih.

Export of mica no doubt earns valuable foreign exchange. But, in the process, the country loses the benefit of employment potential, besides the full value of the processed material. There are also, in exports, the inherent risks of constant fluctuations in prices which have been only too common in the case of mica. It was only recently, that, after a fairly prolonged period of slump, Indian exports of mica recovered. However, conditions in the international market for mica have never been stable over a long period of time, and though Indian exports lately picked up, signs are by no means favourable for the continuance of the present trend. For one thing, the traditional uses of mica in the importing countries are getting shrunk. There is besides, a search going on for a substitute for mica. India will therefore have to take note of these developments and lose no time in developing internal outlets for consumption of mica by setting up processing plants in the country. There are prospects not only for setting up plants for processing mica but also plants for utilising the byproducts. In the initial stages, it may not be possible for the country to absorb the entire internal production as the present uses for mica may not give scope for the full utilisation of the internal production. Research into new uses of mica is, therefore, important. Dr Sinha's suggestion for the establishment of a Research Centre to explore new uses for mica should therefore be implemented early.

*

Shipping Industry

The National Shipping Board, which met in New Delhi early this week, urged priority for shipping under the Third Plan. The primary need in this field is more tonnage so that the country could participate, on an increasing scale, in the coastal as well as in the overseas trade of the country. Progress under the First and Second Plans had not been quick enough to make any significant contribution to the volume of trade handled or foreign exchange earned. Against the target of 900,000 tons fixed under the Second Plan, there is presently a shortfall of more than 100,000 tons. The target of 900,000 tons fixed under the Second Plan was itself a modest one compared to the requirements of the country's trade. Without a substantial addition to the shipping tonnage, it would not be possible for the Indian shipping industry to play any significant role in overseas and coastal trade. The target of 1,600,000 tons provisionally suggested by the sub-committee of the Shipping Board and involving an allocation of Rs 143 crores with a foreign exchange component of Rs 133 crores does not look ambitious or beyond the ability of the industry. If the total outlay on the whole plan schemes is, as is now expected, to be doubled, it is reasonable to expect that the target for the shipping industry would also be suitably raised.

Provision for more tanker services alone would enable the country to capture 25 per cent of the overseas trade, this being the proportion constituted by oil trade to total trade. The Board had urged special attention to the building up of tanker services, so that by the end of the Third Plan the entire coastal traffic and at least half of the overseas trade could be carried in Indian oil tankers.

The Board also stressed the need to build up and operate long distance passenger services, particularly with the Continent and the UK. Such services, according to the Board, could be operated in the public or private sector. A construction subsidy in the initial stages is considered necessary.

Alongside the expansion of tonnage, it is also essential to ensure sufficient cargo for the Indian vessels. The volume of trade that passes under Government account is sizable and, therefore, the diversion of such trade would itself provide Indian vessels with enough cargoes. When so much importance is laid on conserving foreign exchange resources, it is unthinkable that foreign exchange resources should be lost by keeping Indian vessels under-utilised.

*

Room at the Inn

The Hotel Standards and Rate Structure Committee appointed by the Government of India has made a number of suggestions for the development of the hotel industry on modern lines and in conformity with international standards. At present, the size and condition of the industry bear no relation to its importance in the context of the growing volume of tourist traffic that has been flowing into the country.

Inadequacy of accommodation and low standards of catering are the glaring defects of the hotel industry at present and point to the fact that the industry had not attracted large-scale investment to provide an improved system of services. The recognition by the Government of the hotel industry as being eligible for financial assistance in the form of loans from financial corporations is a significant step in the development of the hotel industry on modern lines. The Government's decision to open the gates of the industry to all financiers is also to be welcomed and will contribute to more rapid development of the industry than would have been the case were entry to be restricted to hoteliers alone. The recommendation to leave the industry to the private sector is also motivated by the desire to ensure the widest extension of hotel services.

Granted the need for large-scale investment for developing the industry on modern lines, import of equipment and provisions necessary for the maintenance of proper standards follows as a matter of course. The need for assistance and facilities for import of such equipment, recommended by the Committee, has been accepted by the Government.

Maintenance of proper standards also requires classification of hotels on the basis of the services provided as well as costs. The Committee has suggested five categories on the basis of the "Star" system.

One of the recommendations of the Committee relates to the opening of craft and management hotel training schools. Under this scheme a first-class hotel training school is expected to be opened as early as possible. Besides, encouragement has been assured to schools which are already in existence and are doing good work in the field.

NORTH INDIAN MARKETS

Foodgrains Quiet

QUIET conditions were witnessed in the Hapur Foodgrains market. While Wheat remains almost unchanged, coarse grains have sought lower levels, thanks to better "kharif" crop prospects. Although State trading was suspended in Bihar and West Bengal to ensure flow of adequate supplies into the open market, the Uttar Pradesh Government have continued their policy of procurement under the wheat levy scheme on hopes that arrivals of wheat will increase. A quantity of 25,000 tons of wheat is reported to have been purchased so far.

Arrivals in the open market are scarce; but the State Government hopes are concentrated on the fact that, with good "kharif" crop, the cultivator will be forced to bring his surplus wheat to the market sooner or later. At present, consumers' demand is being met out of stocks, which are being sold at Rs 18.25 per maund for the average quality and up to Rs 19.25 for the farm variety.

Rice prices have recorded small gains over the week due to tight supply position. East Punjab advices and comfortable stock position have accounted for a modest fall in Gram prices. Pulses displayed an easier tendency in the absence of demand and arrivals are also small.

In the Delhi grains market, wheat prices remain unchanged as arrivals and offtake are almost equally balanced. Reduced offtake coupled with discouraging advices from the assembling markets were responsible for a small setback in Gram rates. A fall of about Re 1 per maund in Jowar is attributed to decreased buying activity following timely rain in the producing areas. Other grains are ruling quiet.

A sizable decline in the price of indigenous rice and wheat has highlighted trading in the Bombay grains market. The setback is attributed to selling pressure, inspired by the better food outlook for the Bombay State as revealed by its Minister for Civil Supplies. His statement that the Centre had allocated 6 lakh tons of wheat and 230,000 tons of rice to the State has imparted a sobering influence to the market. It is felt that these liberal supplies, along with the expected arrivals of about one lakh tons of bajra from Uttar Pradesh, will reduce the pressure on the market.

But, from the market angle, the more important development is the State Minister's admission that much of the food trouble for the State has arisen from the "defective" zonal system adopted by the Centre. This statement has revived hopes in the market that the State authorities will press for the abolition of the present restrictions on the movement of foodgrains during the forthcoming discussions with the Union Food Minister. It is felt that the Government of India may be requested to annex Bombay State to one of the major food zones if the abolition of restriction on the movement is not feasible. Dealers fear that, in either event, local prices will go down.

Trading in Rice dull with the demand remaining subdued. Arrivals are relatively small on account of higher upcountry prices. Consumers are, however, inclined to prefer cheaper Government supplies. Arrivals of wheat are mainly from Gujerat and the demand for this commodity is fairly good. Among Pulses, Gram reflects a better trend with prices recovering from the previous week's decline by Rs 5 per candy. The improvement is attributed mainly to higher advices from the Punjab.

*

Sugar

Following the Government decision to ban inter-State movement of sugar and to stop free sale in the Punjab and North Bihar, Sugar prices have tended to move up during the week, as the free sale quota is reported to have been exhausted. In the Hapur market, prices, which had declined to Rs 115 per bag, have again improved, to quote presently at Rs 120.

Meanwhile, the Government of India have decided to license additional capacity in the sugar industry. This extra capacity will be for the expansion of existing units and for the establishment of new factories. The Government have taken this decision due to the foreseen increase of demand for sugar in the Third Plan period.

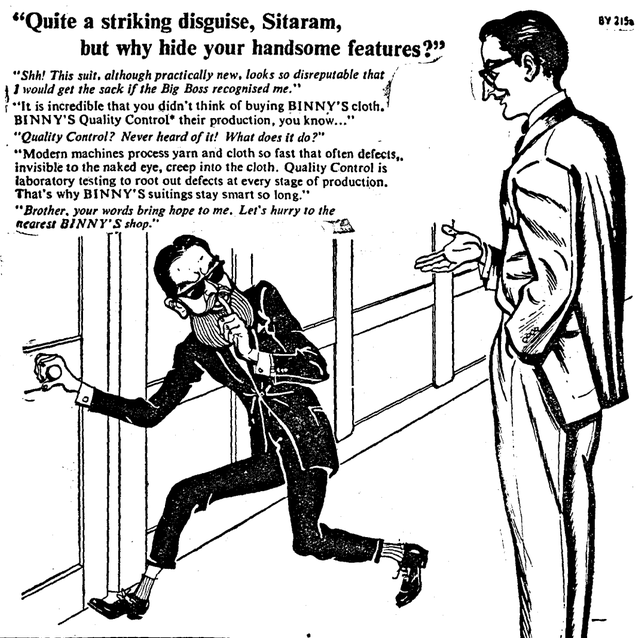
The executive committee of the International Sugar Council has announced that sugar requirements and supplies for this year are still "roughly in balance." It is the considered opinion of the Committee that price levels, which have recently been lower in the world market, cannot be explained by the overall statistical position. Commercial circles have reported that there is a very small over-supply of sugar; but this is considered to be not of an order which will explain the long-continued drop in prices to a level which is now the lowest for 17 years.

In London, market circles are discussing the possibility of Cuba and perhaps also Brazil withdrawing from the sugar agreemente. Cuba has a surplus of over one million tons and the future of the market lies very much in its hands. Dealers have recently been speculating on the possibility that the Cuban Government may try to ease their internal economic problems by stepping up sugar exports which will, of course, depress prices even more.

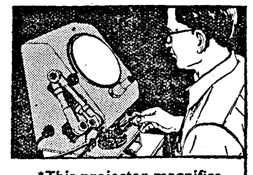
DELHI REVIEW

"Quite a striking disguise, Sitaram, but why hide your handsome features?"

"Shh! This suit, although practically new, looks so disreputable that I would get the sack if the Big Boss recognised me."



"It is incredible that you didn't think of buying BINNY'S cloth. BINNY'S Quality Control* their production, you know..."



"Quality Control? Never heard of it! What does it do?"

"Modern machines process yarn and cloth so fast that often defects, invisible to the naked eye, creep into the cloth. Quality Control is laboratory testing to root out defects at every stage of production. That's why BINNY'S suitings stay smart so long."

"Brother, your words bring hope to me. Let's hurry to the nearest BINNY'S shop."

BY 215a

*This projector magnifies 500 times—reveals every defect lurking in the cotton

The quality of cloth depends to a large extent on the cotton used. Only specially selected cotton goes into BINNY'S fabrics. That's why they last so long.

BINNY

—a great name in textiles

BINNY'S manufacture nearly 90 million yards of cloth every year. Here are some of the varieties they make:

Shirtings - Khaki Drills - Bleached & Dyed Drills - Towels - Anticrease Suitings - Tussores - Union Fabrics - Silk Sarees Rugs - etc etc

THE PENINSULA

Cheaper Cars

MADRAS REVIEW

HIGH cost of production in the automobile industry has been causing concern to the Government and the public alike and this has prompted the Government to set up an ad hoc Committee under the Chairmanship of Mr L. K. Jha, Additional Secretary, Ministry of Commerce and Industry to review the progress of the industry and to recommend measures to reduce the cost of different types of vehicles at present produced in the country. Even for the industrial interests, the high cost car is not a development that could be welcomed or desired, if they are to have regard to their long-term interests. Depending as it does on growth of demand for stability, a high cost of production could be the least favourable condition for the industry's progress toward stability.

While therefore, reduction of cost of production is a matter of extreme importance for the stability of the industry, it is not to be thought that cost of production is high because the automobile manufacturers wish it to be such. The need for such reduction has been acknowledged by the manufacturers and representatives of manufacturers present at the public hearing of the ad hoc Committee.

Tax reduction and supply of materials at reasonable prices are the important suggestions made at the conference. When the Government have recognised the need for reducing the cost of the automobile for the purchaser, it is only reasonable to expect that they would consider what scope exists for such tax reduction. However, under present circumstances, when the Government have to balance such tax reductions against their own revenue position, it is doubtful whether the industry could expect any worthwhile relief.

Another factor in the present high cost of production is the high prices that have to be paid for steel, which is the most important raw material in the production of automobile. Internal production of steel is as yet inadequate to meet the requirements of the automobile industry. Further, the automobile industry requires steel in different strength and quality, the production of which is not envisaged by the steel industry at present. The import duty that is now collected from steel secured from abroad is an inflationary element in the cost of production of automobiles, and Mr S. Anantharamakrishnan has pointed that if the Government could see their way to sacrificing these duties on the import of components and spare parts and other raw materials, the existing units could produce cars at considerably cheaper rates than at present.

A part of the high post of production was inevitable in the very manner of growth of the automobile industry. When the automobile industry was started, there was practically no ancillary industry to supply spare parts and the manufacturers were left no alternative but to manufacture everything that was required. The development of the ancillary industry itself came as an aftermath of the starting of automobile manufacture.

Mr Anantharamakrishnan put his finger on the crux of the problem when the pointed out that the cost of production could be brought down substantially only if the volume of production increased. The automobile industry involves large-scale investment on over-heads and cost of production varies depending upon whether the overheads could be spread over a smaller or larger volume of output. For production to be higher, demand for automobiles has to be stimulated and this could not be done without the support of a lower price for automobiles. It looks as if the whole problem is caught in a vicious circle of demand depending on lower price and reduction of price being contingent on the growth of demand. All talk about reducing the cost of production of automobiles thus comes to nothing. Mr Ananthanaramakrishnan put the position fairly clear when he said that the Government should take up the responsibility to advise the people that, if they wanted, for strategic reasons, an automobile industry to be established in the country they should be prepared to pay higher prices until the volume increased to a respectable level or, in the alternative, wind up the industry and allow them to be imported.

The terms of reference to the ad hoc committee include examining the feasibility of producing a low-cost passenger car within the price range of Rs 5,000 to Rs 7,000 and suggesting ways and means of manufacturing such a car in the country. If, on examination, the production of such a car is found feasible, it would be profitable to entrust the manufacture of such a car to one of the existing manufacturing firms instead of setting up a new unit for its production. Though the terms of reference of the ad hoc Committee, as clarified by Mr Jha, may not require it to give its suggestions in this matter, the entry of he Government in the automobile line has given room for genuine doubts about further competition. Besides some saving in overheads that would result from entrusting the project to one of the existing firms, there would be also a substantial saving in foreign exchange and this is a consideration that cannot be overlooked in the present conditions of foreign exchange shortage.

THE BANK OF INDIA LIMITED

BAGHMARI TEA COMPANY, LIMITED

Notice is hereby given that the Annual General Meeting of the Members of Baghmari Tea Company, Limited, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday the 10th September, 1959, at 3-00 P.M. for the following purposes:—

1. To receive and consider the Profit and Loss Account for the year ended 31st December, 1958, the Balance Sheet as at that date, and the Reports of the Directors and Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. G. T. Routledge, the Director retiring by rotation at the Meeting.

   And, in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956:—

   "That Mr. G. T. Routledge be and is hereby appointed a Director of the Company liable to retirement by rotation."

   Special Notice of the intention to propose the foregoing resolution as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, has been received by the Company wherein it is stated that Mr. G. T. Routledge is an "associate" of the Managing Agents within the meaning of the Act and that therefore he can only be appointed by a Special Resolution as a Director liable to retirement by rotation.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 1st September, 1959, to 10th September, 1959, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

By Order of the Board,
McLEOD & CO. LTD.
C. L. BAJORIA,
DIRECTOR,
MANAGING AGENTS.

3, Netaji Subhas Road,
Calcutta, 8th August, 1959.

NOTE:— Payment of the proposed Dividend, if declared, will be made on or after 21st September, 1959, only to those members whose names are registered in the Books of the Company on 10th September, 1959, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

SOUTH INDIAN NOTES

Diverted Food

MADRAS REVIEW

Foodgrain production in Madras, in recent years, had revealed a fluctuating trend, and a record production that was attained in 1957 was followed by a decline in 1958. Fluctuations in supplies and prices have been even more marked and pronounced. This had been attributed to the impact of large-scale diversion to neighbouring Kerala. Such large-scale diversion in the context of fall in production naturally aggravated the difficulties in meeting the internal demand and entailed the introduction of procurement and opening up of fair price shops.

The State's procurement policy could be considered a relative success comparing the effects that followed the introduction of procurement in West Bengal where the Government, not long after the introduction of price control and procurement, were forced to withdraw price control. Though prices had not been brought down in Madras, the rising trend had been checked and the opening of fair price shops had enabled the poorer sections of the population to get their supplies. There is little substance therefore in the condemnation by interested parties of the procurement policy of the Madras Government. If the Government had not reached two lakh tons, which is the main point of criticism directed against the Government, it was not because of the failure to implement the procurement policy, but because that was not necessary to bring the food situation under control. When all the fair price shops had been adequately supplied with foodgrains even without reaching the target of 2 lakh tons, there was obviously no need for extending procurement further.

The fact that prices in the fair price shops were lower than in the open market would vouch for the success of the Government's policy. Instances of rice from the fair price shops being sold at higher prices in subsequent deals were few and far between to affect the benefits accruing to the poorer sections of the people.

The State Government's view with respect to the continuance of the South Food Zone remains unchanged, and they are able to point to the continuing diversion of supplies of Tanjore rice to Kerala. While the Centre had all along been opposed to the abolition of the Zonal scheme, news that Andhra Pradesh would be constituted into a separate food zone has made the Madras Ministers also confident about a similar turn for Madras. Mr M. Bhaktavatsalam, Minister in charge of Food, had, in the course of a talk with Pressmen, expressed the view that the formation of Madras State into a separete food zone was bound to come sooner or later.

*

Prospective Industries

In view of the availability of good-quality china clay from Neyveli, and the occurrence in the nearby areas of raw materials like quartz, felspar, gypsum and fireclay, the possibilities of developing a first class ceramic industry have been outlined in a report by the State Industries Development Department sub-Committee of which Mr A. M. M. Murugappa Chettiar was the chairman.

The report to the Government says that with a capital of Rs 30.50 lakhs, one unit manufacturing approximately 100,000 pieces of sanitary ware yearly could be established. The profit-potential of this industry can be regarded as 20% on the invested capital. At present the large-scale manufacturers of these porcelain sanitary wares are Parrys at Ranipet, whose products are very much in demand because of the rising tempo of house building activities in the urban areas. This has also contributed to the industrial development of the State. Manufacturing units of these porcelain wares may also look out for the possibilities of opening up export demands in the nearby countries like Burma, Ceylon, Thailand and Malaya.

The report further says that a unit manufacturing glazed tiles at the rate o 18,000 tiles daily can oe set up with a capital investment of Rs 29.30 lakhs with an assured return of at least per cent. Glazed tile manufacture in this State would be a novel venture with considerable scope for development because there is always the demand from outside the State. Development of the existing refractories, and establishment of tiles manufacturing units, capable of producing 2.5 million tiles yearly from one unit on an investment of Rs 7/8 lakhs have also been reported by the Committee.

*

Mysore Land Reforms Bill

Discussion on the Mysore Land Reforms Bill, providing for ceilings on individual holdings on an income basis, elicited different views from even the members of the Congress party, while the leftist members of the opposition went to the extent of challenging the benefits that would result from its enforcement.

Differences in Congress viewpoints related to the limit fixed for income from agriculture, exemption of certain classes of lands from the provisions for ceilings, the provision for resumption of lands for personal cultivation. In respect of the ceiling of Rs 3,600, it was pointed out that this was too low and, besides, marked a departure from the Jatti Committee recommendations, which fixed ceilings at Rs 5,400 per annum. Mr M. P. Patil, former Revenue Minister, while welcoming the Bill, could not see the justification for the exemption of certain classes of lands from the ceilings clause and characterised it as a mischievous clause. He made out that the clauses relating to exemption were too liberal and would ultimately leave very little of surplus lands for distribution. The clause relating to resumption of lands for personal cultivation also came for criticism at the hands of a Congress member. This clause, according to the member, would result in about 40 lakh acres of land being withdrawan for personal cultivators by small holders, leading to the eviction of a large number of tenants. On the ground, therefore, that it would hit the tenants hard, he pleaded for keeping the clause in abeyance.

Criticisms of extreme types were also not wanting and were voiced by leftist members. It was pointed out by one member that no substantial benefit could be expected by implementation of the Bill since only about 3 per cent of the landlords would be affected. The land reforms conceived by the Congress party were "non-purposeful". At the other extreme, an Independent member deprecated the attempts of the Government to fix ceilings on land and expressed the view that this would only distribute poverty instead of improving the present conditions in villages.

The clause relating to cooperative farming also was not spared from criticism; and, on the ground that the provision made in this behalf in the bill envisaged compulsion, Mr Patil pleaded for the deletion of the clause itself. Another appeal to drop the idea of cooperative farming, for the time being, was made by a member belonging to the PSP.

SUNGMA TEA COMPANY, LIMITED

Notice is hereby given that the Annual General Meeting of the Members of SUNGMA TEA COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday the 10th September, 1959, at 3-10 P.M. for the following purposes:—

1. To receive and consider the Profit and Loss Account for the year ended 31st December, 1958, and the Balance Sheet as at that date, and the Reports of the Directors and Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. G. T. Routledge, the Director retiring by rotation at the Meeting.

   And, in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956:—

   "That Mr. G. T. Routledge be and is hereby appointed a Director of the Company liable to retirement by rotation."

   Special Notice of the intention to propose the foregoing resolution as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, has been received by the Company wherein it is stated that Mr. G. T. Routledge is an "associate" of the Managing Agents within the meaning of the Act and that therefore he can only be appointed by a Special Resolution as a Director liable to retirement by rotation.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 1st September, 1959, to 10th September, 1959, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

By Order of the Board,
McLEOD & CO., LTD.,
C. L. BAJORIA,
DIRECTOR,
MANAGING AGENTS.

3, NETAJI SUBHAS ROAD,
CALCUTTA, 10th August, 1959.

NOTE:— Payment of the proposed Dividend, if declared, will be made on or after 21st September, 1959, only to those members whose names are registered in the Books of the Company on 10th September, 1959, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

At a Meeting of the Directors held on the 7th August 1959, it was decided to recommend to the shareholders at the Annual General Meeting, which was fixed to be held on the 25th September 1959, the payment of a final dividend for the year ended 31st March 1959, of 2% (free of Income Tax) on the issued Ordinary shares, payable on the 28th September 1959.

The net profit for the year, after deducting all charges and expenses of management and providing for taxation, is Rs. 1,14,97,610.

Two interim dividends, each of 2% (free of Income Tax) amounting in total to Rs. 60,64,000 in respect of the year to 31st March 1959, were paid on the 27th September 1958 and the 14th April 1959 respectively.

After paying the final dividend amounting to Rs. 30,32,000 and allocating Rs. 79,036 to Capital Reserves, Rs. 5,13,103 to Development Rebate Reserve and Rs. 17,50,000 to Fixed Asset and Stock Replacement Reserve, the amount carried forward will be Rs. 24,64,029.

The Directors also declared a first interim dividend of 2½% (subject to Income Tax) in respect of the year to 31st March 1960, payable on the 28th September 1959.

Under the Finance Act, 1959, the system of grossing of dividends and paying them free of Income Tax was abolished, and instead Income Tax must be deducted at prescribed rates before payment of dividends, commencing with dividends declared in respect of the Company's financial year ending 31st March 1960. The interim dividend of 2½% is payable under this new system and is therefore taxable.

The final dividend, if approved, and the interim dividend will be paid to the shareholders whose names appear on the register on the 25th September 1959 and dividend warrants in respect thereof will be despatched to such shareholders or their mandatees on the 28th September 1959. The share transfer books of the Company will be closed from the 31st August to the 25th September 1959, both days inclusive, and transfers received in order at the registered office of the Company up to the 29th August 1959 will be in time to be passed for the payment of the dividends to the transferees.

By Order of the Board,
B. GRANGER PEARSON
Assistant Secretary.

Virginia House,
37 Chowringhee,
Calcutta.
8th August 1959.

SOUTH INDIAN MARKETS

Groundnuts Erratic

Madras, Wednesday.

It was an erratic feature that was witnessed in the groundnut oil and kernels market today. Prices kept up a most unsteady trend due to uncertain inquiries and spot offers were not always readily cleared up, at offered prices.

Naturally, today's opening and closing quotations had very little variance, though the market seemed to rally a bit very late in the day.

Groundnut oil was quoted at Rs 344 spot, August Rs 343, September Rs 338, and December Rs 309/310.

Kernels, however, remained steady at Rs 185/186.

Reduced arrivals from the early part of this week were responsible for a break in the easy trend. This delay in arrivals is ascribed to festival holidays. Groundnuts maintained a steady level throughout. Calcutta interests gave support to the oil. This week, shippers were indeed out of the picture. Local vanaspathi interests took in small quantities while bazar interests were able to obtain from chekku or rotary crushing units around Rs 8/10 lower per candy than expeller quality. Expectations about the supply improvement position by fag end of August due to new crop arrivals in Pollachi/Coimbatore area and also to some extent from Salem region, encouraged operators to a selling mood in August and September vaidas. Settlement of other positions were affected by these transactions.

Average arrivals per day in groundnuts in the local market were around 30/2 or even less tons. Superior oil had buyers mostly from chekku or rotary interests around Rs 194/185. Bold varieties were sold at Rs 179/180 per candy.

Absorption of about 1,000 to 1,100 candies of oil by Calcutta and local vanaspathi interests was reported today. Starting from week-beginning at Rs 342, the price rose to Rs 349 spot. Small quantities were taken up last week end on the basis of Rs 351, but buyers later on declined that price, which went lower to Rs 347/8 per candy. The morning session on Monday brought in some enquiries at Rs 342.50, but, in the afternoon, no business was transacted. Later on Tuesday, buyers indicated their position of negotiation only at Rs 342. Southern side vanaspathi interests took some quantities early around a pucca parity of Rs 348 per candy, ex-Pollachi/Coimbatore. A day later ie., on Tuesday, they were reported to have taken sizeable quantities at Rs 345 per candy.

In forward positions, fairly large business was put through both in August and September at Rs 343 and Rs 338 respectively.

Particularly in August vaidas, the opening rate of Rs 347/8 came down to Rs 343, improved for a while to Rs 352/353/8. The price went down quickly to Rs 345/344. A further decline was witnessed to-day to Rs 338. Some short-covering emerged when there was slight improvement in prices. The latest situation was that transactions were put through at Rs 349/8.

In September vaida, the opening quotations at Rs 345 last week-end declined to Rs 338. Monday and was further lowered Tuesday late evening to Rs 337. Transactions were put through at this rate when, late to-day, the position improved slightly from a still lower rate Rs 336/8 from Rs 333/334.

In the December, vaida, the bears were a bit afraid of the distant delivery positions. Some declines were noticeable in this position also. Opening around Rs 308/8 per candy, it improved to Rs 311/312 in line with the August vaida, but declined again to Rs 306. The market closed around Rs 307 to Rs 307/8.

Groundnut Oil Cake: The market maintained an easier undertone. There were sellers around Rs 24 or Rs 24.25 per bag ex-mill with new gunny. A few wagons from the North were also arriving daily.

Calcutta reports said that prospects of new crops in the Southern districts encouraged them to remain away rom the market for some time. The effect of this was that there was a decline in the price by about Rs 1/4 to Rs 1/8 per maund for various positions.

There was no change in groundnut; Bold were quoted at Rs 185/186.

Castorseeds prices were quoted as follows: September Rs 153.12 per candy. May 1960 Rs 154/12.

Upcountry Markets continued to command good arrivals of summer crop during the week under reference. The volume was, however, not large; due to the New Moon festival (Adi Amavasya). Due to keen buyings by small crushers in the South, price levels did not mark any decline. The rate remained around Rs 182/185 per candy but lowered late Wednesday morning to Rs 180/184 per candy.

There is not rainfall evenly in South and North Arcot districts. Sowings operations could not be begun in some parts as needed initial showers had not yet been received. The Salem new crop is reportedly in good condition. In some areas here, already, harvesting has begun of the peanut variety which have begun to arrive in quantities in the market. The price levels here are reported to be very high, in the region of Rs 190 on pucca basis per candy. Big digging operations would be taken up in Pollachi/Coimbatore only in the second fortnight of this month, and larger arrivals of kernels can be expected only by August end.

Gingelly seed and oil continued to rule somewhat easier this week also. New crop from nearby areas is reported to have been received in sizeable quantities. According to the Oilseeds Exchange, the latest levels are as under:

Gingelly Seed:

		Per bag
Chanda/Warora quality		Rs 66/67
Tuni/Rajahmundry	...	„ 62/63
Salem varieties	...	„ 61/62
Local varieties	...	„ 65/66

Gingelly Oil: Per mds.

On wholesale basis	...	Rs 20/4
On retail basis	...	„ 20/8

Castor Oil:—No change to report. Nominal indication is Rs 320 per candy, sellers, commercial grade.

Coconut Oil:—The Cochin market has declined further. The ruling levels are: Ready Rs 600, August Rs 608, September Rs 612 per candy. At Quilon, the prices are: Rs 35/4 per tin, Madras Rs 38/4 to Rs 38/8 per tin.

S. E. RLY. TENDERS

Sealed tenders are invited for (i) Tender No. Con/GM/45/D,GA/59 for supply of Blades, Hammer Spiking and Spanner etc. Details to be obtained from the tender schedule. Earnest money is Rs. 1000/-. Tenders will be opened on 7-9-59 at 3 P.M.

(ii) Tender No. CON/GM/46/H(d)/59 for supply of Electrical light fittings of different types as per list to be obtained from the tender schedule. Approximate total value is Rs. 90,000/-. Earnest money is Rs. 1000/-. Tenders will be opened on 10-9-59 at 3 P.M.

(iii) Tender No. Con/GM/47/H/59 for supply of wires and cables of different sizes as per list to be obtained from the tender schedule. Earnest money is Rs 1000/-. Tenders will be opened on 14-9-59 at 3 P.M.

(iv) Tender No. Con/GM/48/H/59 for supply of Electrical materials viz. insulators of different types, iron clad switches and conical shades as per list to be obtained from the tender schedule. Approximate total value is Rs. 1,00,000/-. Earnest money is Rs. 1000/-. Tenders will be opened on 15-9-59 at 3 P.M.

Tender forms are obtainable from the office of the Controller of Stores (Construction Section) 11 Garden Reach Road, Calcutta-23 on remittance of Rs. 5/- (not refundable) per copy per tender by money order to him direct in the case of outside firms and on production of cash receipt from this Railway's Chief Cashier, 11, Garden Reach, Calcutta-23. by local firms.

Tender should accompany the receipts for depositing the earnest money as stated above with this Rly's Chief Cashier without which the tenders are liable to be rejected. Approved contractors having a permanent deposit of Rs. 1000/- with the Controller of Stores are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax clearance certificate with the tender.

Textile Machinery Corporation Limited

*

Chairman, Shri K. K. Birla, Reviews Progress of Engineering Industries

Shri K. K. Birla, Chairman, Textile Machinery Corporation Ltd., addressing the 19th Annual General Meeting of the Company, held at Belgharia, West Bengal, on 7th July, 1959, said that inspite of difficulties the Engineering Industries of the country have maintained the leading position so far as development is concerned. Excerpts from Shri K. K. Birla's speech are published below:—

The year 1958 was a period of cautious adventure for commerce and industry. The recession in the West, though a mild one, had its echoes felt in this land too and affected our international trade adversely. Production also slowed down in certain industrial sectors and consumer resistance developed. A pruning of the Second Five Year Plan became unavoidable. With a view to retrieve the situation, the Finance Minister announced certain changes in taxation in this year's budget. But the increase in the incidence of Wealth Tax on individuals and the abolition of the system of 'grossing' in respect of dividend incomes are likely to have an adverse effect on the industrial progress of the country. The industrial edifice can only be built on increased demand which means an improved standard of living and additional employment. For all this a new investment climate is needed based on individual incentive and expectation of legitimate return. The importance of creating such an atmosphere is even greater today when the country is thinking of launching on an ambitious Third Five Year Plan with an investment outlay of Rs. 10,000 crores.

When we met last year I had referred to the shortage of foreign exchange as one of the main difficulties which stood in the way of a rapid industrial development of the country. Though on the surface the situation now seems a bit improved, we cannot discount the subterranean currents that still threaten to slow down the tempo of the Plan. The important point to note, however, is that even the earlier improvement had been due to a decline in import and not due to any increase in exports. Imports fell from Rs. 1,026 crores in 1957 to Rs. 864 crores in 1958 but at the same time the exports also declined from Rs. 636 crores to Rs. 571 crores. During the early part of 1959 also India's export performance continued to be disquieting. This indicates that in spite of our best efforts exports are declining. The situation could only be improved through a careful consideration of the problems of every industry individually. The engineering industry too has a great potentiality and, if properly handled, can play an important role in the Export Promotion drive.

The export of engineering goods during the past three years has been Rs. 4.4 crores in 1956, Rs. 4.4 crores in 1957 and Rs. 4.1 crores in 1958.

In the current year, too, the exports during the first quarter were about Rs. 1.1 crores. Thus the exports continue to remain roughly at Rs. 4 crores annually. They form 1.5% of the total value of engineering goods produced which stands at Rs. 270 crores to-day and they form only 0.7% of the total exports which are of the order of Rs. 600 crores. This is a poor performance indeed, specially in view of the fact that India is fortunate enough to have on her borders good potential markets. In order, however, to take full advantage of these markets and to compete successfully in them against other suppliers, we must be able to establish a reputation for our quality, to reduce our cost of production and to offer reasonable credit facilities to our customers. So far as the quality is concerned I am confident the Indian Engineering Industry is capable of getting over the shortcomings if any exist and would surely build up a reputation in course of time. But the question of the cost of production is a difficult one and not entirely within the control of the industry itself. There is first the problem of insufficiency of raw materials which affected production in many industrial sectors and resulted in a higher cost of production. The availability of steel, for example, has been continuously falling over the last three years whereas the requirements of the engineering industry for this main raw material have obviously been increasing. This shortage of steel has been an important factor in rendering idle a substantial portion of the installed capacity in the engineering industry.

Apart from the shortage of steel which made it impossible to maintain an economic level of production, the prices of this main raw material have also been increased several times during the past few years. The effect of these increases on the selling price of the more common categories of steel works out as shown below:—

Category of steel	Price in 1952 in rupees per ton	Increase from 1952 onwards in Rs. per ton	Present price in rupees per ton	Percentage increase in price
1. Bars & Rods	336	309	645	92%
2. Plates ...	424	309	733	73%
3. Structural ..	346	309	655	89%

In order to give an idea of how the price of steel in India compares with that in the other steel-producing countries of the world, a comparative table for a common category of steel, say plates, is given below:

Name of Country	Price of Steel Plates in rupees per ton On 31st March, 1958	On 31st March, 1959
1. U.K. ...	561	561
2. U.S.A. ...	544	565
3. Australia ...	602	602
4. Belgium ..	590	590
5. India ...	733	733

The above prices are all internal prices. Those for India are F.O.R. Destination prices while in other countries they are ex-factory prices. These figures would show that the prices of steel in India are roughly 22% to 30% higher than those in other countries of the world. Such high prices of steel naturally make the cost of production of our engineering goods unfavourable in comparison with that in other countries and consequently reduce our competitive capacity in foreign markets.

It is to be hoped, that the impediment of shorter availability of steel which the indigenous engineering industry is facing to-day will only be shortlived now. The total production of steel by the end of the Second Five Year Plan should reach something like 4.7 million tons as against the present level of 1.3 million tons only. With that much of production it is not unreasonable to hope that the engineering industries of the country would not feel shortage of steel and would receive their full requirements of this raw material. While concluding on this subject, I should like to point out that Indian Steel which used to be the cheapest a few years back is now unquestionably one of the dearest in the world. I hope, however, that after the Steel plants in the public and private sectors attain their rated capacity, they would find it possible to effect reduction in cost so that the engineering industry may be assured of supplies of steel at reasonable rates and its competitive capacity may not be impaired in any way.

The other important factor which, besides raw material, controls the cost of production is the productivity of labour. The per capita productivity of the Indian worker is unfortunately still very low as compared to the per capita productivity in other industrially advanced countries. If the present low level of productivity continues and if wages are increased to improve the standard of living as planned, the effect would be a further addition to the cost of production which is already high. I trust that this important aspect will not be lost sight of and that some sort of a relation would always be maintained between the rise in wages and a corresponding increase in productivity. Otherwise our capacity to compete in the export-markets would be further impaired.

Last year I had mentioned that enquiries from foreign countries for goods manufactured by your Company were being received and that there were fair prospects of sales for exports materialising in the near future. I am glad to inform you that a beginning has already been made. An order for 30 complete Ring Frames worth about Rs. 8 lacs has been received this year against which 19 Ring Frames have already been despatched. This is the first time in the history of the Textile Machinery industry in India that some exports of capital goods have been effected by the industry. I am glad to say that it is your Company who has had this proud privilege.

Gentlemen, it is a matter of satisfaction that in spite of difficulties, some of which I have pointed out above, the engineering industries of the country have maintained their leading position so far as development is concerned. This is a happy circumstance particularly in view of the fact that *it is the engineering industries of a country which, more than any other industry, reflect its general advancement.* The indices of production for the various industries would show that the index of production of engineering industries has been the highest during recent years.

In a few industries, namely, Transformers, Ring Frames and Automobiles, the production in 1958 showed a decline as compared with that in 1957 but the other industries have maintained their development. The most rapid development, as I stated last year, is mainly due to the excellent efforts made by the Hindustan Machine Tools Factory at Bangalore where not only have the targets fixed under the Second Plan been already exceeded but also the quality of production has been reported to be of a very-high standard. The development of the Machine Tool Industry is a most welcome sign because a higher production of machine tools gives promise of the establishment of further manufacturing capacity in the country.

Perhaps a better measure to judge the progress of an industry is its installed capacity. Although there are still two years to complete the period of the Second Five Year Plan, the targets of capacities fixed under the Plan have, in the case of a large number of engineering industries, been either already exceeded or are on

the point of being exceeded. Some of these inlustries are mentioned below:

Name of Industry	Unit	Target of capacity under the Second Five-Year Plan	Capacity already reached as on 31-12-1958
1. Bicycles	... 000 Nos.	895	925
2. Complete Spinning Ring Frames	.. Nos.	2810	2784
3. Dry batteries	Lac Nos.	2250	2244
4. Electric fans	000 Nos.	600	765
5. Grinding Wheels	.. 000 lbs.	4726	5533
6. Sewing Machines	... 000 Nos.	85	81
7. Storage batteries	... 000 Nos.	350	317

Gentlemen, the development of small scale industries side by side with that of the organised sector is also of major importance in the industrialisation of a country. Small industries play a very significant role in the industrially advanced countries of the world, their contribution to the national economy being quite substantial. In the U.S.A., for instance, it was recently estimated that the small industries contribute about 40% of the total private national income, and more than 33% of the national product. In the engineering sector, the development of small-scale industries is of special importance because they supply ancillary products to large scale industries at a lower cost and are, in a way, indispensable to them. Efforts are being made to find a satisfactory solution to all these difficulties. I have no doubt that with all these efforts, the ancillary industries will not take long to develop to a stage when they could be of real help in the progress of the engineering industries of the country.

Gentlemen, I would now deal briefly with the developments that have taken place in the different divisions of your Company during the year under review.

Cotton Textile Machinery Division

In my last year's address I had dealt with the factors responsible for lowering the tempo of production of cotton textile machinery. Cotton mills in India had not in the year under review recovered from the slump that started in 1957. Only those equipped with modern machinery—and they are few in number—are working without feeling the pinch while the vast majority are carrying on in a make-shift manner. Needless to say the impact of these adverse conditions on the machinery manufacturing industry has been severe. So far as we are concerned, our sales during the year under review were slightly better than in the previous year which, I must say, was a particularly bad year. But our production was much less. The reason for lower production was that whereas the carry-over of orders from 1956 to 1957 was very large, the carry-over from 1957 to 1958 was quite small and therefore the production had to be brought down to a lower level. We were also required to provide financial accommodation to several mills by offering medium term credit.

The Development Work in this Division during the year under review was satisfactory. By the beginning of 1959 we were able to make prototypes of the UD type of Ring Spinning Frame and an improved type of Drawing Frame. Development work on Simplex Fly Frame and Ring Doubling Frame is in progress. All the new items are made to the specifications of our collaborators, Messrs, Howa Machinery Ltd., Nagoya, Japan.

Carding Engine production progressed fairly satisfactorily during the year. We are now producing a higher proportion of components in our Works. A good deal of progress has been made on the manufacture of special Purpose Machine Tools which will help us in achieving production of almost all the component parts in our factory.

In the current calendar year, the Textile Machinery Division of your Company is expected to show better results because the textile industry appears to have turned round the corner and its condition is improving.

Boiler & Heavy Engineering Division

In this division the quantum of production during the year under review was substantially higher than in the preceding year. In fact it was one and a half times higher. Shop extensions undertaken during the previous year have been completed and we are now preparing to instal new plant and equipment for various items of manufacture.

Due to difficulties in importing the necessary equipment, we have not been able to make as much headway as we had intended in the manufacture of Water Tube Boilers and Sugar Machinery. Water Tube Boilers are, however, now in the process of production. Order for Lancashire, Vertical and Locomotive Boilers also continue to be received as before.

Manufacture of Sugar Machinery has progressed considerably. On the advice of the Government of India, machinery manufacturers including ourselves have formed Consortia to deal with the orders that would be forthcoming for Sugar Plants in this country. It is estimated that under the present scheme more than 75% of the equipment required by the Sugar Factories in India will be made indigenously. With a number of new sugar factories proposed to be set up in future and with a large number of the existing ones requiring replacement of their plants we and the other members of the Consortia expect to do quite a large volume of work in this field.

Our Structural Shops continued to do a big volume of work during the year under review. You will be pleased to hear that we have already finished the work of fabrication and erection of all the Radial Spillway Gates for the Panchet Hill Dam of the Damodar Valley Corporation. These Gates were of gigantic dimensions and due to difficulties of transportation they were despatched in sections and reassembled at site. We are getting orders for Dam Gates for other schemes as well. This, in fact, is one of the lines we intend to develop further. Among other, items of structural work upon which we were engaged during the year under review, I may mention completion of fabrication work on 2,100 tons of various items for the Bhilai Steel Plant. We still have, on hand, work on about 1,200 tons more for the same plant. This work is being done in stages.

Railway Rolling Stock production during the year has been satisfactory. In the current year we shall be changing over production to the BOX type Broad Gauge Wagons. We have also made fair progress on the production of Passenger Coaching Underframes.

Steel Foundry Division

In this division we have maintained the progress achieved during the previous years. We are making Alloy Steel Castings specially High Manganese and Nickel Chrome Castings for various industrial purposes. We have also developed capacity for making cast steel Gear Wheels for Sugar Machinery. Certain parts of Locomotives required by Chittaranjan Locomotive Works are also being made in our Foundry. We are making efforts to develop capacity for heavy castings too.

Machine Tool Division

The Government of India have approved the terms of our collaboration with Messrs. H. W. Ward & Co. Ltd., U.K., for the manufacture of Capstan and Turret Lathes. This scheme is being pushed through with all possible speed and necessary arrangements are being made for an early import of the requisite capital equipment.

PHILIPS INDIA LIMITED

NOTICE OF ANNUAL GENERAL MEETING TO BE HELD ON SEPTEMBER 12, 1959.

The twenty-ninth Annual General Meeting of the Shareholders of Philips India Limited will be held on September 12, 1959 at 11.00 a.m. at the Bengal Chamber of Commerce and Industry, Room No. 1, 6 Netaji Subhas Road, Calcutta 1, to transact the following business:

1. To receive the Directors' and Auditors' Reports and pass the Accounts for the year ended December 31, 1958.
2. To declare a Dividend.
3. To elect Directors.
4. To appoint Auditors and fix their remuneration.

The Share Register of the Company will be closed from August 24, 1959 to September 12, 1959, both days inclusive.

Dividend Warrants will be sent to registered shareholders or to their mandatees, registered in the books of the Company on September 12, 1959. Powers of attorney, etc. where necessary should be submitted with completed deeds for transfer registration before the transfer books are closed.

By Order of the Board
P. C. VINK
Chairman and Managing Director

August 12, 1959
7 Justice Chandra Madhab Road
Calcutta 20

Note: A member entitled to attend and vote is entitled to appoint a proxy to attend and, on a poll, to vote instead of himself. Such proxy need not be a member of the Company. Proxies in order to be effective must be received by the Company not less than 48 hours before the Meeting.

THE INDIAN IRON & STEEL COMPANY LIMITED

At a Meeting of the Board of Directors of The Indian Iron and Steel Company Limited, held on the 11th August 1959, the Directors have declared an interim dividend in respect of the year ended 31st March 1959, of One Rupee per share on the Ordinary Share Capital ranking for such dividend (that is to say exclusive of the bonus shares issued in February 1959) being at the rate of 10% per annum without deduction of Indian Income-tax. This action has been taken in order that shareholders shall not be kept waiting for their dividend in view of the closing of the accounts for the year being delayed pending notification by Government of the revised sales retention prices of steel and pig iron.

The Directors wish to make it clear in this connection that this dividend although termed "interim" will in fact be the final dividend for the year and that no further distribution in respect of the year ended 31st March 1959 will be recommended for consideration at the Annual General Meeting to be convened in due course.

As already notified, the Ordinary Share Register and the Transfer Books of the Company will be closed from the 20th August 1959, to the 3rd September 1959. Payment of this interim dividend will be made on or after the 21st September 1959, to those shareholders whose names appear on the Company's Register of Members for Ordinary Shares on the 3rd September 1959, or to their mandatees.

By Order of the Board,
MARTIN BURN LIMITED
F. G. LIVERSEDGE.
MANAGING DIRECTOR
Managing Agents.

12, Mission Row
Calcutta.
11th August, 1959.

Burmah-Shell Refineries Limited

*

Chairman Mr. L. D. Mudie Reviews Oil Industry's Role in India's Economic Development

The following is the full report of the statement made by the Chairman, Mr. L. D. Mudie, at the Sixth Annual General Meeting of the Burmah-Shell Refineries Ltd., held at Trombay on Monday, 10th August 1959:

The Directors' Report and Accounts for the year 1958 are before you and from these documents you will note that the profit for 1958 has dropped by some Rs. 114.2 lacs to Rs. 309.6 lacs as anticipated by the Chairman in his remarks to the Shareholders at the last Annual General Meeting. This decrease is due to the narrowing of the refiner's margin between refined product and crude oil prices and to the increased taxation liability.

A dividend of fifteen naye Paise per rupee (free of Income Tax) was declared and paid in April 1959 on the paid-up Ordinary share capital absorbing Rs. 207.3 lacs leaving a balance of Rs. 102.3 lacs, which, with the balance brought forward from 1957 of Rs. 41.7 lacs, leaves a balance of Rs. 144.0 lacs for further appropriation. From this balance your Board has recommended that Rs. 82.0 lacs and Rs. 8.0 lacs be appropriated to General Reserve and Tax Equalisation Reserve respectively, leaving a balance to be carried forward of Rs. 54.0 lacs.

I do not think further remarks are necessary on the detail of our 1958 Accounts which are set out fully in the documents already circulated to you; I should, instead draw your attention to the mass of comment, read and heard in recent months, on petroleum and its role in India's economic development. I welcome this as indicative of wide and growing public interest and would like to offer a few remarks that may help to set perspectives for the discussion on petroleum. In so doing, it shall be my endeavour to concentrate on points of general agreement and to supplement Indian experience with lessons learnt from the international operations of the petroleum industry.

The recession in the United States and the slackening of business activity in Western Europe, slowed down, but did not interrupt the expansion of world demand for petroleum products. Before the recession, world demand had been growing at an average rate of 7% per year; in 1958 the rate of expansion dropped to 5½% per annum. Looking into the future most forecasters predict an annual expansion of 6 per cent in world demand; in other words such demand is expected to double itself in the next ten years or so. It has been calculated that to finance this expansion the Petroleum Industry will need to invest about Rs. 67,000 crores representing capital expenditure in the region of Rs. 5,300 crores per year for the next five years, rising to approximately Rs. 7,300 crores per year, thereafter. That growth, in this magnitude, is continuous and not sudden, is illustrated by the fact that the Industry's gross investment in fixed assets rose from Rs. 11,800 crores at the end of 1946 to Rs. 37,900 crores at the end of 1957.

These are formidable figures and it is obvious that finance, in these magnitudes, is far beyond the capacity of the world's capital markets; the vast proportion of the funds needed to meet the growing demand for petroleum products must continue to be generated from within the Industry. To illustrate this point, I may mention that in 1958 the Royal Dutch/Shell Group of Companies raised £126 m. (Rs. 168 crores) through the mechanism of the largest single capital issue in European history; the money sufficed to cover the capital and exploration expenditure of the same Group, for a period of just about 4 months.

These facts of international experience have particular relevance at this moment in India's progress towards a self-sustaining economy.

Over the last ten years Indian demand for petroleum products has shown an even steeper rate of climb than the world trend; since 1948, consumption in India has increased nearly threefold to 6 m. tons which represents an average growth of 10.5% per annum. In 1958, the rate fell to 6.1% but this was due principally to restrictions, since removed, on Kerosine imports, imposed to conserve foreign exchange.

As for the future, it is expected that demand will advance at an annual rate not less than 7 per cent and that by 1967 the country's total consumption of all products including refinery fuels is likely to be not far short of 12 m. tons per year or just on twice the present level of consumption.

Finance will have to be found to meet this expansion; the Industry's experience, world-wide, indicates that an investment of Rs. 600 is required to locate and market every extra ton of oil. On this basis, the investment to meet the growth of Indian demand to 1967 would be in the region of Rs 360 crores, on the rather hopeful assumption that present day costs do not rise during the next ten years.

I may add that of the notional figure of Rs. 600 per ton, just quoted, a sizeable proportion represents expenditure in this exploration stage. It is now not necessary to demonstrate that expenditure on exploration is not only heavy but hazardous: indeed it is quite possible to spend crores of rupees on the best geological and geophysical advice and have at the end nothing more to show than a series of dry holes in desert or jungle and the advantage of experience, somewhat dearly bought. Indeed the gambler has, in essence, a better chance than the oil explorer: in the words of a leading journal "when throwing a dice one is at least sure that the number 6 exists, whereas if no oil is, in fact, present, an unlimited number of "goes" would never give a win".

Successful exploration, is however, but the start; oil found has to be proved, extracted, transported and refined before it can reach the market. It is not often realised that the development expenditure needed to bring an oilfield into commercial production, though less hazardous, is generally several times as expensive as the original exploration effort.

The problem can also be examined with the gap between demand and indigenous crude supply as the starting point. India's crude production now amounts to 0.4 m. tons from the Digboi field, to which may be added the 2.5 m. tons expected from the Assam Oil Company's discoveries in Nahorkatiya and Moran. With 1967 demand assessed at 12 m. tons and indigenous crude output at 3 m. tons, the gap—which is the measure of fresh investment needs—is seen to be 9 m. tons. The world experience of the Industry indicates a figure around Rs. 270 crores as the investment needed to find and produce this additional quantity to this must be added, however, a considerable sum to cover additional refining capacity (6.4 million tons) and distribution and marketing facilities (6 million tons).

These figures are impressive but constitute only the beginning of the story. For it must be remembered that, despite the rate at which demand is growing, India's per capita consumption of petroleum products works out at 3.8 gallons per annum against a world average of 70 gallons, and compared with 40 gallons in Japan, 14 in Ceylon, 122 in Latin America, 7 in Indonesia and 600 gallons in the U.S.A.

The same pattern emerges when the field of comparison is widened to include all forms of energy. Here the Indian figure is 0.12 tons per capita/annum against 1.08 tons for Japan and 3.85 tons in Australia.

The inter-relations between the use of energy, levels of productivity and living standards are now generally recognised and the comparisons I have just made point to the enormous scope for development of all forms of commercial energy in India.

Several attempts have been made, to forecast the likely shape of this development and a recent study indicates the following pattern for commercial energy consumption in India.

	Percentage Shares		
	1947	1952	1957
Coal	86	83	80
Hydro-electricity	6	6	6
Petroleum Fuels	8	11	14

Coal remains the major source of commercial energy but its dominance is a declining one. The hydro-electric contribution, relative to other sources of energy, is static over the ten-year period; oil alone shows a steady advance.

The prospects from nuclear power are interesting but the consensus of expert opinion seems to be that though this new source will make some contribution during the Third Plan period, its development is a matter of long-term significance.

It is not sufficient to examine petroleum only as a source of energy i.e. power and heat. To assess India's total demand it is necessary to include other petroleum products which are not used to produce energy such as Bitumen for roadmaking, and Lubricating Oils.

The pattern of India's petroleum consumption is dominated by the Middle Distillates (Kerosine, High Speed Diesel Oil, Light Diesel Oil and Aviation Turbine Fuels): the proportion of these to the total is at present about 45% and assuming no external checks on growth rates, the Middle Distillate share is likely to rise to roughly 50% in 1967, or, about 6 million tons.

The Gasoline (Aviation and Motor Spirit) share has, on the other hand, been contracting at a rate which suggests that by 1967 it may account for 8% (against 15% at present) of total demand.

The Residuals are likely to hold the same position in the consumption pattern, as at present, in the region of 30%.

To provide the 6 m. tons of Middle Distillates required by the Indian market, entirely from indigenous crude, would call for crude production at the level of 13.3 million tons per annum. The processing of such crude would throw up a surplus of about 3 m. tons in the Gasoline range; the disposal of this surplus through export may prove to be difficult.

It is obvious that to depend entirely on imports to cover the en-

larging Middle Distillate gap would be to correct the petroleum imbalance by creating an oppressive and continuing strain on India's foreign exchange reserves.

I shall not dwell further on this problem which has, of course, a number of facets; it may be necessary to adjust the present taxes on petroleum products, while technical developments, such as the multi-fuel engine and, the utilisation of petroleum products as raw material for other industrial processes hold promise, and above all, I would stress the proven ability of the international oil industry to meet challenges through worldwide adjustments of demand and supply as well as by internationally orientated research and development.

It would be relevant to mention that your Company has already made a contribution towards resolving the imbalance problem. Between 1956 and 1958 the yield of Gasoline has been reduced from 23% to 16.5% with an expansion of Middle Distillate production from 31.8% to 34.6%—a remarkable achievement bearing in mind the production pattern for which the plant was designed.

Your Company has continued to study this problem and recently informed Government of their ability to increase their Crude throughput from the existing level of approximately 2.3 million tons to 2.6 million tons per annum, thereby providing a further 250,000 tons of Middle Distillates per annum, representing an increase of 30% in Middle Distillates, together with an export market for 25,000 tons of gasoline. Furthermore, this development is estimated to save about Rs. 1.5 crores of foreign exchange in a full year.

At the same time, your Company have informed Government of an active investigation now in hand to expand Refinery capacity to the level of about 4 million tons per annum, together with plant for the manufacture of 50,000/100,000 tons HVI Lubricating Oil Basics per annum. If this examination leads to firm proposals, these will most certainly reflect substantial savings in foreign exchange and contribute materially towards resolving the product imbalance problem.

In conjunction with these proposals, Government have been pleased to accept an offer by your Company to forego the existing duty protection on Furnace Oil, Light Diesel Oil, High Speed Diesel Oil and Bitumen, with effect from 1st July 1959. This duty protection, together with the 2 annas duty protection on Gasoline voluntarily surrendered on 1st October 1956, formed part of the Agreement with Government which led to the construction of this Refinery.

As regards the current year it is, of course, impossible to forecast with accuracy the future course of Crude and refined product prices, influenced as these are, by a great variety of factors, quite outside the control of the Oil Companies and the scope of accurate prediction. If prices remain roughly in the same relationship as at present, and taking into account the Duty Protection voluntarily relinquished by your Company from the 1st July of this year, we can expect the income from refining for 1959 to be somewhat reduced compared with 1958, with a consequent reduction in net profits.

That we are able, so soon after our Refineries went on stream, to make such offers to the Government of India is due to the foresight, imagination and skill of those who planned our great plant and it gives me particular pleasure to record that efficiency and drive have distinguished the efforts of all employees who have worked in Burmah-Shell Refineries these past years. With them, we look, in confidence, to the future.

STOCK EXCHANGES

Selective Support

Watch-Dog Writes:

CAUTION has been the keynote of trading in stock markets during the week under report. Although the most popular scrip have shown good improvement, prices have tended to ease in the absence of support at higher levels. Even the long-awaited announcement of the dividend being maintained by the Indian Iron & Steel Company has failed to have any bullish effect. This indicates that operators are still guarded in their dealings and the market has not yet recovered from the hang-over of heavy deliveries which were recently made, especially in Dalal Street.

Trading on the Bombay Stock Exchange was dull and featureless and prices suffered a sharp setback from the recent high levels.

Activity was, however, well spread on the Madras Stock Exchange.

The London Stock Exchange finished the week with fairly wide-spread gains in equity shares.

Wall Street closed heavy, showing a broad front of losses ranging mostly to three points in its biggest setback of the year.

*

Calcutta

Calcutta, Thursday.

IN contrast to the impressive rise recorded in the general price level on the local Stock Exchange last week, trading was dull during the week under review in the absence of fresh support. The only relieving feature of trading was a slight revival of interest in selected Textile, Jute and Miscellaneous scrip.

In general, there was a general disposition to book profits at the recent high levels, before entering into fresh commitments. This was mainly due to the fact that, in view of the bitter experience in recent weeks' some operators were inclined to be rather cautious in following the rise in prices. Even the news of the maintenance of the dividend by the Indian Iron & Steel Company, Limited fell flat on the market and, with fresh bull liquidation, prices of almost all the speculative scrip were depressed to lower levels, indicating thereby that operators were still worried over the hang-over of the heavy deliveries which were recently made. Above all, anxiety was shown with regard to the siphoning of funds by the State Loans, which are now on the way. There is a general feeling that, unless the technical position improved, there is no prospect of any marked rise in prices in the immediate future.

Quiet conditions prevailed in the Giltedged section. The short-dated and some of the medium-dated issues, however, continued to be in some demand and further fractional rises were recorded. All the State Loans were expected to meet with good support from the LIC. 3 per cent 1986 Conversion Loan opened at Rs 73.55 and, after touching at one time a low of Rs 73.25, firmed up toward the close to Rs 74.

Bank shares were quiet and no dealings were recorded during this week.

Thanks to optimistic views expressed about the future outlook for the industry, dealings in Jute shares continued to be prominent with a few selected ones recording fresh higher levels for the week. The news of the decision made by the IJMA to unseal a further 2½ per cent looms with effect from the 24th August was also welcomed on the feeling that the resultant rise in production would not only check the present artificially high prices, but also increase the flow of foreign orders. Additional factors were the diversification of activity in certain mills and the steady rise in internal consumption of jute goods. It was felt that, if the present trend of performance could be maintained, the investors could be assured of handsome yield on the money to be invested in jute mill shares. Birlas had buyers up to Rs 24.31 from Rs 24; Howrah up to Rs 24.31 from Rs 23.94; Barnagore up to Rs 177 from Rs 171.50; Kamarhatty up to Rs 216 from Rs 213.50; Lawrence up to Rs 100 from Rs 97.50 and New Central up to Rs 17.69 from Rs 17.44. Anglo-India and National remained very firm at Rs 260 and Rs 23 respectively. Union were enquired up to Rs 242 from Rs 236.

Sentiment in the Coal section continued to remain depressed in view of the inordinate delay in the announcement of the price increase for the commodity, although a few scrip developed a hardening tendency in sympathy with jute shares. Burrakur firmed up to Rs 17.62 from Rs 17.37 and Central India to Rs 8.19 from Rs 8.06. Amalgamated changed hands at Rs 25.62 to Rs 25.75 and Western Bengal at Rs 6.50 to Rs 6.62.

Except for a few scrip of the Assam gardens which met with sustained support following satisfactory dividends for last year, trading in the Tea section remained generally restricted in view of the obscure outlook for Common grades. The news of the threatened strike in the tea gardens in North Bengal was also a contributory factor to the depressed sentiment in the section. Amongst the few dealings recorded, prominent were Bhatkawa moving narrowly between Rs 22.62 and Rs 23.37; Eastern Cachar between Rs 1.19 and Rs 1.37; Grob between Rs 19.62 and Rs 20.00; Hasimara between Rs 22.87 and Rs 23.25 and Tezpore between Rs 17.56 and Rs 17.75. The only exception to the general trend was Jayshree, which met with persistent support and recorded a new high of Rs 14.75 for the week against Rs 13.75 quoted in the previous week.

A significant feature of the week's trading was the exceptional interest shown in the Textiles section where almost all scrip changed hands at enhanced levels following the optimistic interpretations of the outlook for the industry in view of the encouraging performance on the export front and the steady decline in floating stocks. Higher levels could not, however, be maintained till the close due to profit-taking. Elgins forged ahead to Rs 15.56 from Rs 15.31; Cawnpore to Rs 5.62 from Rs 5.12 and Kesoram to Rs 17.37 from Rs 16.81 to finish the week slightly lower at Rs 15.30; Rs 5.62 and Rs 16.81 respectively. Jayshree moved narrowly between Rs 10.12 and Rs 10.28 with New Victoria ruling quiet at Rs 1.10 against Rs 1.22.

Sugar shares were practically neglected.. Apart from easier advices from the commodity front, there was a general inclination to await further developments in the sugar situation. Raza/Buland were on offer at Rs 13.37 to Rs 13.56; Ramnugger Cane at Rs 20.19 to Rs 20.25 and Belsund at Rs 12.94 to Rs 13.00. SKG were nearly maintained at Rs 10.69.

In the Engineering section, price movements were mostly influenced by

NEW CENTRAL JUTE MILLS CO. LTD.

Notice is hereby given that the Company has received consent from the Controller of Capital Issues for increase of capital and issue of right shares at par in the proportion of one ordinary share for every three existing ordinary shares. The Share Transfer Books of the Company for this purpose will remain closed from 1st September to 7th September, 1959 both days inclusive.

For NEW CENTRAL JUTE MILLS CO. LTD.
For SAHU JAIN LTD.
A. K. JAIN
Managing Director,
Managing Agents.

Calcutta,
12th August, 1959.

---

the speculative activity in Indian Irons which, in turn, were subjected to alternate buying and selling. The feeble response to the Indian Iron dividend, unlike in previous years was the more surprising. The initial reaction to the announcement was a slight marking up of the share scrip; but operators were not inclined to follow the rise in view of the fears still entertained with regard to payment position against last two settlements, not to speak of the heavy deliveries which were recently made. Against the week-end closing of Rs 24.92, Indian Irons opened lower at Rs 24.83. After improving at one time to Rs 24.98 following the divident anouncement, receded gradually to Rs 24.65 on selling pressure, to finish at Rs 24.92. In sympathy, TEXMACO were marked down at one time to Rs 24.05 from a high of Rs 24.40, to finish better at Rs 24.25. Britannia changed hands at Rs 12.94 to Rs 13.06 and Kumardhubi at Rs 7.00 to Rs 7.12. Indian Standard Wagon were a steady feature at Rs 92, while Burn turned quiet at Rs 450 against Rs 456 on lack of fresh support.

The Miscellaneous section provided a few firm spots. Most prominent were Orient Paper and Sirpur, which which were keenly sought after up to Rs 38.05 and Rs 14.06 from Rs 36.85 and Rs 13 respectively. The rise in prices was attributed to hopes that there would be no reduction in the selling price of paper and the possibility of a reduction in excise duty. India Paper Pulp had buyers up to Rs 24.75 from Rs 24.50 and Titaghur up to Rs 45.12 from Rs 44.87. India Steamship changed hands at Rs 14.22 to Rs 14.50; Indian Aluminium at Rs 22.19 to Rs 22.53; Indian Cable at Rs 32.12 to Rs 32.56; National Carbon at Rs 34.62 to Rs 35.12; NICCO at Rs 36.87 to Rs 37.12; Indian Oxygen at Rs 26.50 to Rs 27; Dunlop Rubber at Rs 34.00 to Rs 34.62; Rohtas at Rs 21.37 to Rs 21.62 and Indian Copper at Rs 4.14 to Rs 4.17. Hindustan Motor, after touching a new high of Rs 11.75 from Rs 11.44, finished at Rs 11.69.

UPPER GANGES VALLEY ELECTRICITY SUPPLY COMPANY, LIMITED.

NOTICE

Notice is hereby given that the Annual General Meeting of the Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Friday, the 4th September, 1959, at 11-25 a.m. for following purposes:—

1. To receive and adopt the audited Accounts for the year ended 31st March, 1959 and the Reports of the Directors and the Auditors thereon.
2. To declare a Dividend.
3. To appoint Directors in place of those retiring.
4. To appoint Auditors and fix their remuneration.

And also for the undermentioned Special Business:—

SPECIAL BUSINESS

Notice is also hereby given of the intention to propose the following resolution:—

"That consent be and is hereby accorded to the investment of any moneys which the Company has already received and may hereafter receive in or towards satisfaction of the amount payable in respect of the price or value of the Undertaking of the Company on or in connection with the acquisition thereof by the Uttar Pradesh State Electricity Board by placing such moneys on short term or fixed deposits with a Scheduled Bank."

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 29th August, 1959 to the 4th September, 1959 both days inclusive.

A member entitled to attend and Vote at the meeting is entitled to appoint a Proxy, who need not be a member, to attend and, on a poll, to vote instead of himself.

By Order of the Board,
MARTIN BURN LIMITED,
S. GUPTA
Managing Director,
Managing Agents.

12, Mission Row,
Calcutta—1.
8th August, 1959.

*

Bombay

CONDITIONS in the Bombay Stock Exchange were dull most of the time during the week ending Wednesday. In the absence of fresh incentives buyers were hesitant to extend commitments. It would appear that, though, earlier, shareholders had expressed satisfaction at the explanation given by the spokesmen of the Tata Iron and Steel Company Limited on the apparently lower level of dividend, renewed disappointment seemed to have overcome at least a sizable section of operators on the publication of the accounts of the company. Moreover, the enthusiasm latterly visible in regard to the textile industry on account of the reported pick-up of despatches both in respect of internal consumption and exports has given place to gloomy thoughts following reports of accumulation of cloth stocks at Ahmedabad. With the two principal sections thus in disfavour, the rest of the market also ruled dull.

In the Steel section, Tata Steel opened the week last Thursday quietly steady at Rs 180.75 as against the previous closing of Rs 181.00. In the course of the day's trading the scrip was subjected to pressure and closed lower at Rs 179.00. Opening lower at Rs 178.75 on Friday, the scrip was pushed down further to Rs 177.25 before it could recover to Rs 178.25. A similar pattern was noticeable on Saturday but the recovery movement was slow. The result is that the closing was lower on balance at Rs 177.25. Opening Rs 1½ lower at Rs 175.75 on Monday the scrip witnessed narrow fluctuations to close at Rs 175.50. Thanks to overnight improvement in sentiment, Tuesday's opening was slightly higher at Rs 176.00 but by close the gain was reduced to bring the rate to Rs 175.75. During Wednesday's trading a further loss of 75 nP was sustained with the result the scrip was finally placed at Rs 175. After earlier steadiness, Indian Irons also developed a sagging tendency despite the news that the company had maintained the dividend at one rupee.

Textile shares met with profit-taking after last week's sharp rise. In the absence of fresh interest, prices in later dealings lost further ground. Bombay Dyeing opened at Rs 66.50 but steadily declined to Rs 64.80 by close on Tuesday. Support at the lower levels on Wednesday helped the scrip close somewhat better at Rs 64.90. Century started the week at Rs 569.00 as against the previous close of Rs 571.50 and, after having been hammered down to Rs 535, recovered toward close to be placed at Rs 547.50. In Wednesday's trading, however, it again sagged to Rs 546.50. Kohinoor fluctuated within a compass of 10 to 12 points in both directions and closed at Rs 307.50 as against its opening rate of Rs 308.50. Svadeshi closed at Rs 246.50 as against previous week's closing of Rs 247.00.

In the miscellaneous section, even popular shares displayed a subdued trend. Bombay Burmah closed lower on balance at Rs 541.50 against the previous closing of Rs 550.00. National Rayon fluctuated rather widely before closing at Rs 344.50. Premier Contruction proved a weak feature as it declined from Rs 372 to Rs 354.50. Among shipping shares, Scindia was well maintained around Rs 17.88.

*

London

THE London Stock Exchange stood up quite well to the setback on Wall Street. Renewed heavy buying developed, particularly in Industrial equities which recorded widespread and appreciable gains in prices. Election hopes continued to be the main reason for the buoyancy of the market, other contributory factors being the good business news and the July gold reserve figures.

News of a proposed merger between Royal Exchange and Atlas Assurance took the market by surprise. On the terms and dividend forecast, Atlas was marked up substantially to 54sh 9d, while Royal Exchange were several shillings higher at 85sh 6d. Other insurance shares were firm. Dollar stocks reflected the overnight rally on Wall Street.

*

New York

PRICES on Wall Street suffered a sharp setback, losses ranging at most to three points. The major factor behind selling was the possibility that a lessening of world tension might result from the Eisenhower-Khruschev exchange. It was supposed that this exchange of visits would mean less US defence spending in the future. Accordingly, it was the Electronic and other defence issues which took the brunt of the pressure.

Televisions were occasionally singled out for special selling despite a sales spurt in the industry. On the whole, the ticker was behind floor transactions on two separate occasions, as the volume of 4,190,000 shares was over 1½ million more than on last Friday. Anaconda Copper was quoted at $63 5/8; Central Motor at $56 7/8 and US Steel at $103½.

The steelworks at Durgapur are helping to build a great new India Today in Durgapur, 120 miles from Calcutta, nearly thirty thousand Indian men and women and a number of Britain's most famous engineering companies are building the steelworks that will soon be the pride of India. From Durgapur, a million tons of pig iron and steel will pour out every year to be used in India's colossal industrial programme. It will create employment for many thousands of people all over the country. Durgapur will help to create a better life for everyone.

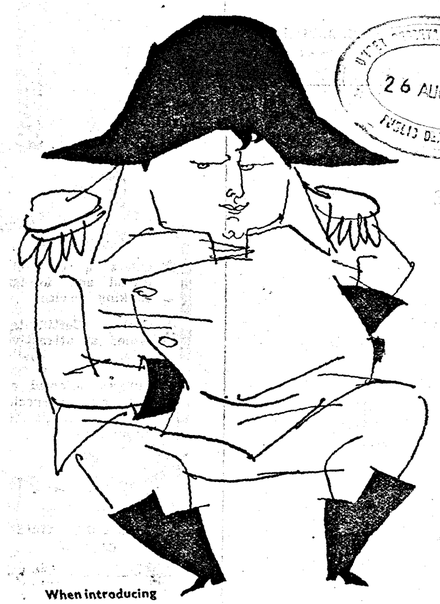
HIGHLIGHTS OF THIS ISSUE



Cash subscriptions for the State Government loans have exceeded cash subscriptions for the Central Government loan this year.

Of course, what is being retained will be a rather lower figure.

What is the significance of this over-subscription by more than FIFTY per cent?

When introducing the 'Legion of Honour' Napoleon was reported to have said that

MEN ARE LED BY TOYS

But honour and goodwill in business are no toys. They are real, they can make or mar your future and the country's too. It is more so in international trade.

Strict quality control, supplies according to approved samples, close adherence to delivery schedules—these are the foundations on which a lasting good name, and good business too, can be built. These conditions must be fulfilled while exporting your goods.

FOR THE INVESTOR

Revival of interest

Investment Gossip:

LAST week's subdued tendency has now yielded place to cheerful mood. Evidently, the setback had been caused by apprehension about payments difficulties. Another settlement has come and gone quite smoothly and with the obstacle thus proving a chimera, sentiment has promptly rallied.

The steady trend currently noticeable, however, cannot have been kept back for long. In a recent article in this column, I arrived at the conclusion that the outlook was steady to brighter. It would appear that the generality of investors is also veering around to this view.

Conditions may also be said to be much more conducive now to a consideration of the salient features of the investment situation in this country. For, the Central and the State Loans are now out of the way. Moreover, the steel dividends will not be in the way for another year. The vexed question of "premium or par" with regard to the new TISCO issue has been settled once for all in favour of "par". The political situation in the country, however, continues to cause some concern; but so far both the States and the Centre seem to have the situation well in hand.

Perhaps the major contribution toward active conditions in the stock market has been made by Government spokesmen and particularly by the Finance Minister. Mr Morarji Desai's outright dismissal of the demands for the nationalisation of banking, general insurance, etc, coupled with the earlier assurance of the Prime Minister to private enterprise, has helped banish lingering doubts in the minds of investors.

But more than anything else, the excellence of corporate news is something that cannot fail to arouse enthusiasm. The revival of hopes about improved export performance by cotton textile goods and the hectic activity in the jute goods market consequent on sizable foreign orders for sacking are quite significant because these two industries occupy preeminent positions in two of the country's big stock exchanges. The engineering industry, paper industry and a wide variety of miscellaneous industries are already well on the road to prosperity or poised to go into full production pending larger availability of raw materials.

Last but not least, money continues to be in plentiful supply notwithstanding a sizable outgo in the shape of subscriptions to the new State Government loans. Funds seeking investment will go wherever the yields are attractive. It cannot be gainsaid that return on equities is more profitable than in most other avenues open For the Investor.

£ R$

TISCO Accounts

Investment Special:

(The TISCO accounts for 1958-59 will be reviewed extensively in the next week's issue; what follows is a brief indication of the highlights).

During 1958-59, the most notable point about the TISCO accounts is the fact that the gross block has risen in value from Rs 84.69 crores to Rs 156.78 crores. This is a measure of erection being largely completed in respect of the company's expansion programme.

As a consequence, the company's borrowings have also increased tremendously. The drawings on the IBRD loan increased by almost exactly Rs 11 crores to Rs 47.69 crores; and secured loans from banks rose from Rs 10.94 crores to Rs 18.58 crores. Besides, the company figures as having obtained unsecured loans from banks to the tune of Rs 5 crores.

It is clear, thus, that the company was put to considerable strain during 1958-59, financially speaking. The high level of borrowings meant automatically that the charge of interest has more than doubled from Rs 1.42 crores to Rs 3.04 crores. It is this fact, together with the strike which interrupted working in the year under review, which has caused a diminution in the company's profit for 1958-59.

Now for a brief look at the profit and loss account. Sales rose from Rs 45.40 crores to Rs 53.45 crores. But the net profit, before tax and depreciation, has declined from Rs 12.03 crores (including Rs 2.33 crores transferred from funds) to Rs 8.01 crores (including Rs 2.27 crores transferred from General Reserve for payment of dividend).

The claim of taxation has been sharply reduced from Rs 90 lakhs to Rs 17 lakhs. On the other hand, the provision for depreciation has risen from Rs 3.91 crores to Rs 5.53 crores. This very sharp increase in the depreciation provision will have materially reduced the surplus available for distribution. The Directors' Report points out, in this context, that the mode of computing depreciation has now been changed to a calculation at a flat rate of 6¼ per cent on the gross block in use; and this follows the basis adopted by the Tariff Commission in their calculations. The difference is that, if depreciation is calculated in accordance with income tax rates, the gross block would, in 16 years, be written down by 93 per cent, whereas, by adopting the flat rate, the whole of the gross block could be written off in the same period. Incidentally, the whole of the provision for tax relates to Wealth Tax.

Finally, the rate of dividend on ordinary shares has come down from 11 per cent to 9.07 per cent; but the amount absorbed by the distribution has risen from Rs 1.67 crores to Rs 1.71 crores. The dividend recommended on ordinary shares, the Directors' Report points out, "is strictly in accordance with the principle adopted in previous years and fully carries out the assurance given to the shareholders in 1956...."

£ R$

Investment Notes:

Several capital issues are expected to be announced during the course of the next few weeks. So far as capital offers by new companies are concerned, the biggest issue is expected to be made by Birla's aluminium project—Hindustan Aluminium. Although the details have not yet been finalised, the general expectation is that the total capital will be of the order of Rs 8.5 crores. Of this, about half may be offered to the market in the form of ordinary and preference shares.

The second important issue will be that from TISCO for about Rs 8.3 crores, comprising equity and preference capital.

The Baroda Rayon Corporation is expected to offer about Rs 1.6 crores immediately after the Government sanction is obtained.

The Indian Dye Stuff Industries have announced plans for raising about Rs 1.35 crores by a right issue in the ratio of nine shares for every one share held.

Alembic Chemicals, Larsen & Toubro and Amar Dye-Chem are to raise about Rs 20 lakhs each.

Another substantial issue in prospect is that of the Assam Pulp Mills in which Balmer Lawrie, Tatas and a foreign company are to participate.

A comparatively small issue under way is for the manufacture of motor car wheels, sponsored by Messrs T. V. S. & Sons—a well-known transport firm in South India.

The Sassoon Spinning & Weaving Company has received sanction from the Controller of Capital Issues for issuing right shares of Rs 10 each, at par, in the proportion of one share for every share held. The issued capital will thus be raised from Rs 37.70 lakhs to Rs 75.40 lakhs. The new shares will rank pari passu with the existing equity shares except that they will not be entitled to any dividend for this year, but will rank for dividend for the year commencing from 1-1-1960.

It is understood that the management of the New India Assurance Company is examining the possibility of floating a subsidiary company to transact crop insurance business on the American model. If this proposal materialises, marketmen feel that the existing shareholders will receive some preferential treatment over others in allotment of shares in the new company. This factor coupled with the reported assurance of the Union Finance Minister against nationalisation of general insurance has imparted strength to the company's shares, which have now firmed up to Rs 61.50 from Rs 57.50 quoted only a few days ago.

The application of the Sirpur Paper Mills Limited, made to the Central Government for the approval of purchasing the entire equity share capital of Sirsilk Limited, has been rejected.

£ R$

Investment Briefs:

Nuddea Jute has declared a final dividend of Rs 2, making a total of Rs 3 per share for the year ended 31st March 1959 as against Rs 2.50 per share in the previous year.

Methoni Tea has recommended a final dividend of 12½ per cent, making a total of 22½ per cent for 1958 as against 15 per cent in 1957.

S. E. RLY TENDERS

Sealed tenders are invited for (i) Tender No. CON|GM|50|P&M|475|B|59 for supply of (a) 3 Nos. steam hoist 5 ton capacity etc.; (b) 3 Nos. Vertical boiler for above 120-150 lbs. working pressure as per details to be obtained from the tender schedule. Earnest money is Rs 1,000|-... Tenders will be opened on 21-9-59 at 3 P.M.

(ii) Tender No. CON|GM|51|P&M|C|59 for supply of "Murex" or similar are welder set and track work grinder as per details to be obtained from the tender schedule. Earnest money is Rs 620|-. Tender will be opened on 22-9-59 at 3 P.M.

Tender forms are obtainable from the office of the Controller of Stores (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs 5|- (not refundable) per copy per tender by money order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, S. E. Rly., Garden Reach, Calcutta by local firms.

Tenders should accompany the receipts for depositing earnest money as stated above with this Rly's Chief Cashier without which the tenders are liable to be rejected. Approved contractors having a permanent deposit of Rs 1,000|- with the Controller of Stores are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

Secretary

Transfer Books of Bombay Dyeing will be closed from the 8th to the 19th September 1959 for interim dividend.

Aluminium Industries, Kundara-Kerala, has announced a final dividend of 63 nP, making a total of Rs 1.25 per share for the year ended 31st March 1959, same as in the previous year.

Mysore Lamp Works Limited has raised the dividend from 15 to 16 per cent for the year ended 31st March, 1959.

The National and Grindlays Bank Ltd. announce that their Directors have declared an interim dividend for the year 1959 on the 15sh. fully paid share at the rate of 6¼ per cent less Income Tax at 7s. 9d. in £. This interim dividend, which is payable on the 25th September 1959, is equivalent to one of 7½ per cent on the former £1 share of which 12sh. 6d. was paid up.

Hindustan Motors' Maiden Dividend

Balance-Sheet Reviews:

THANKS to encouraging results Hindustan Motors Limited has recommended a maiden dividend of 50 nP per share for the year ended 31st March, 1959. Although sales are lower at Rs 8.69 crores against Rs 10.46 crores, the net profit, after providing for Depreciation and Wealth Tax, amounts to over Rs 42.98 lakhs against Rs 12.97 lakhs in the previous year. The Depreciation amount is raised to Rs 69.63 lakhs from Rs 63.60 lakhs, while a sum of Rs 4.25 lakhs is provided for Wealth Tax against Rs 6.97 lakhs (the latter figure includes Rs 3.23 lakhs provided for 1956-57) and Rs 8.10 lakhs (Rs 1.41 lakhs) for Development Rebate Reserve. Initial Depreciation and Development Rebate amounting to Rs 97 lakhs still remain to be provided for, while all normal depreciation has been provided.

According to the directors' report, the production of cars and trucks continues to remain disturbed and irregular for lack of timely and adequate availability of imported components, resulting from the inadequacy of licences received. It is, however, hoped that, with the Government liberalising, to some extent, import licencing policy for the manufacture of cars, production of cars and trucks, this year, will be maintained at a higher level.

The company, in pursuance of its agreement with the General Motor Corporation of the USA, started assembly of Chevrolet and Bedford trucks. The company is now making necessary arrangement for the implementation of the approved programme for their manufacture. It is hoped that, by the end of the current financial year, the chassis frame of the truck will be manufactured in India. The gear box and the axle are also expected to be taken up for progressive manufacture by then. Import licences for the machinery still required have already been applied for to ensure that the manufacture proceeds according to the programmes submitted to the Government.

The Company is now awaiting sanction for the manufacture of engine or the Bedford truck. The company has also made a representation to the Government for the issue of licence for the import of Baby Hindusthan cars the manufacture of which was originally sanctioned in 1953 and restored by the Government early in 1958.

£R$

Howrah Mills

The Howrah Mills Company Limited has announced a final dividend of 50 nP, making a total of Re 1 per share for the year ended 31st March 1959 as against nil in the previous year, thanks to the continued improvement in the trend of profits. The more satisfactory results for the year are attributable primarily to the greatly improved position regarding the availability of raw jute of the right qualities at prices which enabled the company's manufacture to be disposed of at a profit; but they also reflect a sustained effort to improve manufacturing efficiency and to reduce working costs.

Sales have declined to Rs 3.77 crores from Rs 4.02 crores; but the net profit is substantially higher at Rs 17.43 lakhs against Rs 9.01 lakhs in the previous year. The Depreciation amount is reduced to Rs 12.34 lakhs from Rs 14.10 lakhs. After transferring Rs 4.20 lakhs from General Reserve, the directors have provided Rs 12.20 lakhs (Rs 14.24 lakhs) for General Reserve; Rs 69,500 (Rs 60,385) for Wealth Tax and Rs 8,008 (nil) for Development Rebate Reserve.

The company worked additional loomage through the purchase, in terms of the Working Time Agreement, of 12,960 loom-hours a week from the Reliance Jute Mills Company Ltd. This arrangement was renewed for further periods of six months to 8th March 1959 and 8th September, 1959 respectively.

As a result of modernisation of mill machinery and the concentration of the company's production in Nos 1 and 2 Mills, No 3 Mill has been lying idle since its closure in February, 1957. The directors have had in mind, for some time, the problem of its being turned to some useful purpose, either by means of the installation of some new manufacturing process or its disposal by sale or lease. Negotiations have been in progress, for some time, for a twenty-year lease to Remington Rand of India Limited with break clauses after ten years and fifteen years, on reasonable terms. If negotiations are successfully concluded, the lease will take effect from 1st September, 1959.

The balance-sheet, as at 31st March 1959, shows a paid-up capital of Rs 91,87,500 of which the Ordinary capital amounts to Rs 65,62,500. Reserves and surplus are shown at Rs 36.66 lakhs. The gross block at Rs 2.35 crores is depreciated by Rs 1.36 crores to show a net block value of Rs 98.83 lakhs.

£R$

Reliance Jute

The Reliance Jute Mills Company Ltd, in the same managing agency group, has, however, passed over the dividend again for the year ended 31st Marh, 1959. The net profit is more or less maintained at Rs 7.31 lakhs. The Depreciation amount is substantially reduced to Rs 9,811 from Rs 2.03 lakhs. A sum of Rs 17,000 (nil) is provided for Wealth Tax. The present profit is adjusted against the debit balance brought forward from the previous year, leaving a net debit balance of Rs 38.96 lakhs to be carried forward.

The company's quota of current loom-hours was again sold for a period of six months from 9th September 1958 and the arrangement has been further continued for the six months to the 9th September, 1959.

The directors continue to keep before them the feasibility of a resumption of manufacture in the company's own mill. Meantime, they prefer to continue with the present working arrangements whereby loom-hours are sold to other mill companies under the managing agency of Jardine Henderson Limited until the debit balance on Profit and Loss Account has been reduced and the capital of the company reconstructed on a basis which will enable a machinery modernisation programme to be embarked upon.

£R$

Great Eastern Hotel

Despite the decline in the net profit from Rs 2.15 lakhs to Rs 1.88 lakhs, the Great Eastern Hotel Limited has maintained the dividend at 6 per cent for the year ended 31st March, 1959. The Depreciation amount is reduced to Rs 2.40 lakhs from Rs 2.50 lakhs, while the Improvement Reserve Fund is maintained at Rs 50,000.

£R$

General Investment and Trust

The considerable increase in the prices of jute shares is fully reflected in the working results of the General Investment & Trust Company Limited for the year ended 28th February, 1959. The item "Dividends and Interest on Investments" is shown higher at Rs 52,309 against Rs 51,983, while the net profit, after providing for Taxation, amounts to Rs 22,839 against Rs 9,591 in the previous year. A sum of Rs 17,681 (Rs 11,886) is provided for Taxation. The dividend on the Ordinary shares is raised to 3½ per cent from 2½ per cent.

Investments with a book value of Rs 5.44 lakhs have a market value of Rs 6.45 lakhs. Out of a total paid-up capital of Rs 4.25 lakhs, the ordinary capital is shown at Rs 2.25 lakhs. General Reserve stands at Rs 17,982 and Revaluation of Investment Reserve at Rs 30,000.

£R$

Investment and Finance

The Investment & Finance Company Limited has reported a slight decline in the profit from Rs 51,803 to Rs 43,598 for the same year. "Dividends and Interest on Investments" are higher at Rs 1.23 lakhs against Rs 1.21 lakhs. The amount provided for Taxation is raised to Rs 46,121 from Rs 37,680. The dividend on the Ordinary shares is increased by 1 per cent to 5 per cent.

Investments are shown at Rs 13.14 lakhs, while their market value stands at Rs 16.49 lakhs. Against a total paid-up capital of Rs 9 lakhs, the ordinary capital stands at Rs 2.50 lakhs. General Reserve is shown at Rs 1.49 lakhs and Revaluation of Investment Reserve at Rs 77,500.

£R$

Bharat Nidhi

The working of this company has resulted in a net surplus of Rs 27.32 lakhs for 1958 as against Rs 18.57 lakhs in the preceding year. After providing Rs 16 lakhs for Taxation, including arrears, and taking into account Rs 10,911 being the balance brought forward, transfer from General Reserve and dividend provision written back, the amount available for distribution is Rs 11.43 lakhs against Rs 9.67 lakhs. Investments of the company stand at Rs 1.67 crores against Rs 1.55 crores. The dividend is raised to six per cent from five per cent.

The directors propose payment of the dividend to the ordinary shareholders in the form of shares in the face value of Rs 10 each of the Punjab National Bank Limited for every 20 fully-paid or 80 partly-paid shares of the company, valuing the Punjab National Bank shares at Rs 12 per share. On the basis of the current market quotation of Rs 22 for the shares of Punjab National, the dividend in specie works out at 11 per cent, free of tax, against the dividend rate of 6 per cent, free of tax.

£R$

Dawn Mills

The Dawn Mills Company Ltd has earned a higher net profit of Rs 5.06 lakhs for the year ended 31st March 1959 as against Rs 3.21 lakhs in the preceding year, after providing Rs 5.36 lakhs for Depreciation and Development Rebate against Rs 7.74 lakhs; Rs 9.80 lakhs for Taxation against Rs 3.25 lakhs and Rs 1.83 lakhs for agents' commission against Rs 1.14 lakh. The dividend is doubled to Rs 10 per share.

Phoenix Mills

The net profit of the Phoenix Mills Limited has dropped from Rs 4.33 lakhs to Rs 1.56 lakhs after providing Rs 9.08 lakhs for Depreciation and Development Rebate (Rs 7.74 lakhs); Rs 1.35 lakhs for managing agents' commission (Rs 1.53 lakhs) and Rs 6.75 lakhs for Taxation (Rs 6 lakhs). Sales have gone up from Rs 2.90 crores to Rs 2.99 crores. The dividend is maintained at Rs 10 per share.

£R$

Bradbury Mills

The accounts of the Bradbury Mills Limited again show a loss of Rs 6.54 lakhs as against Rs 6.55 lakhs in the preceding year, after providing Rs 6.01 lakhs for Depreciation against Rs 3.76 lakhs and maintaining the agents' commission at Rs 25,000. Sales of cloth, yarn and waste have declined from Rs 1.35 crores, Rs 9.59 lakhs and Rs 2.89 lakhs to Rs 1.21 crores, Rs 4.86 lakhs and Rs 2.60 lakhs respectively. After transferring Rs 2 lakhs from the Dividend Equalisation Reserve and Rs 7 lakhs from General Reserve, the directors have recommended a dividend of Rs 5 per share for the year.

£R$

Nilambur Rubber

This company has reported an increase in the net profit to Rs 96,005 for 1958 from Rs 80,152 in the previous year. The rubber crop exceeded by 32,482 lbs. The charge on account of Depreciation is Rs 8,034, (Rs 7,486) and Taxation is at Rs 15,000 (16,000) and the Debenture Redembtion Reserve allocation is Rs20,000 (Rs 15,000) and leasehold Redemption Reserve Rs 1,500, the same in the previous year. The ordinary dividend has been raised to 20 per cent from 15 per cent.

£R$

Twyford Tea

For the year ended December 31, 1958, the Twyford Tea has reported a net profit of Rs 1.06 lakhs after providing Rs 52,143 for depreciation, Rs 25,500 for Development Rebate and Rs 80,000 for Taxation.

With Rs 31,923 brought in, the total amount available is Rs 1.38 lakhs. The provision for tax is supplemented by a surplus of about Rs 18,000 of earlier years. The distributable profit stands reduced by Rs 25,500 by the creation of Development Rebate Reserve. The director have recommended a dividend declaration of 15 per cent absorbing Rs 1.58 lakhs by taking Rs 32,000 from the Dividend Equalisation Fund.

A crop of 12.13 lakh lbs of tea was produced, fetching an average rise of 178.98 cents against 189.63 cents in the previous year. Current year estimates are at 11 lakh lb.

£R$

Virudhunagar Textile Mills

The profit of this company for the year 1958 amounted to Rs 109,236 after providing for Depreciation and Development Rebate amounting to Rs 166,124, Wealth Tax of Rs 5,105 and arrears of Initial Depreciation for the years 1951 to 1956 amounting to Rs 312,859. Previous year's profits were Rs 312,949 after making depreciation and development rebate provisions.

The Directors have recommended a dividend of 6 per cent on the equity and deferred shares apart from the 5 per cent preference dividend amounting in all to Rs 85,547. The balance of profit of Rs 23,779 is set off against previous year's loss. The dividend on equity shares in the previous year was 4½ per cent.

£R$

Lingia Tea

The Lingia Tea Company—in Williamson Magor group—has earned a net profit of Rs 1.74 lakhs against Rs 90,182 for 1957. The Depreciation amount is raised to Rs 30,501 from Rs 25,585 and the Taxation provision to Rs 1.51 lakhs from Rs 60 000. After transferring a sum of Rs 50,000 from Reserve, the directors have recommended a final dividend of 7½ per cent, making a total of 17½ per cent for the year against 20 per cent in the previous year.

£R$

Soom Tea

The Soom Tea Company—the second in the group—has raised the dividend from 35 to 50 per cent, thanks to a net profit of Rs 1.66 lakhs against Rs 1.40 lakhs in 1957. A sum of Rs 9,492 (Rs 9,393) is set apart for Depreciation and Rs 1.58 lakhs (Rs 1.30 lakhs) for Taxation. The crop outturn is higher at 312,398 pounds against 301,467 pounds and the average price realised at Rs 1.66 against Rs 1.40 per pound.

£R$

Sri Balasubramania Mills

The report of the Sri Balasubramania Mills for the year ending December 1958 shows profits of over Rs 3.09 lakhs from which over Rs 1.93 lakhs is allocated for depreciation and Rs 34 714 for development rebate. The payment for workers' bonus is respect of 1956 has been provided for. The company has appropriated Rs 1.70 lakhs for taxation and has raised the dividend on equity shares to 10% after providing Rs 45,000 for contingency reserve, leaving Rs 2,262.34 to be carried forward. The directors record that, despite powercut and higher price of cotton, profits earned in 1958 have been satisfactory. The company's capital is shown in the balance sheet at Rs 12,81,280 and the gross block at Rs 39.53 lakhs. So far, nearly Rs 24.69 lakhs have been provided for depreciation. This makes the Rs 40 paid shares, quoting at Rs 52, decidedly attractive for careful investors.

£R$

Cannanore Spinning

The report of the Cannanore Spinning and Weaving Mills Ltd., has disclosed a profit of Rs 5.08 lakhs for the latest year. After providing Rs 3 lakhs for taxation, the directors

have been able to pay 15% including 6% interim, on the capital. Usual appropriations for taxation and employees' bonus have been made in spite of the increase in dearness allowances paid to workers owing to higher cost of living. The company is getting Blow Room equipment at a cost of Rs 2.48 lakhs. It is also going to instal 4,000 additional spindles so that the total capacity will be 24,000 spindles. Working in three shifts, the directors say that the mill had done well for its thirteen years of existence. Sales of yarn and waste have been higher during the year and the stocks showed a fall as compared with the previous year. The company's ordinary capital is Rs 15 lakhs and general reserve stands at Rs 5.11 lakhs. The Rs 100 paid share quoting at Rs 152 offers a high yield. The depreciation already provided has reduced the book value of plant and machinery to Rs 10.61 lakhs.

£ R$

Rajgarh Tea

The Rajgarh Tea Company, in the Andrew Yule group, has maintained the dividend at Rs 2.50 per share for 1958, although the net profit after providing for depreciation and Taxation, is slightly lower at Rs 82,859 against Rs 92,455 in 1957. A sum of Rs 26,877 (Rs 36,925) is provided for Depreciation; Rs 34,000 (Rs 42,000) for Taxation; Rs 2,000 (Rs 6,008) for Wealth Tax and Rs 1,547 (nil) for Development Rebate Reserve. The crop outturn is higher at 5,755 maunds against 5,597 maunds and the average price realised at Rs 2.19 against Rs 2.16 per pound.

The company received permission from the Controller of Capital Issues to capitalise a sum of Rs 4.00 lakhs from General Reserve. This permission will lapse in October, 1959. But the directors have decided not to issue bonus shares in the absence of the removal of the tax on bonus issues.

£ R$

Pullangode Rubber

The report of the Pullangode Rubber & Produce Co., Ltd., shows a moderate rise in profit so that the dividend is better at 5% and the crop was higher and the all-in-cost per lb. was lower. Labour charges are expected to go up, but some relief might come from an early revision of rubber price under government's direction. From the year's profit of Rs 94,603-88, Rs 31,500 is provided for rehabilitation reserve. The dividend of 5% requires Rs 82,000.

Dufflaghur Tea

In the Williamson Magor group, the Dufflaghur Tea Company has raised the dividend from 30 to 45 per cent for 1958. The net profit amounts to Rs 3.27 lakhs against Rs 3.84 lakhs. The directors have raised the Depreciation amount to Rs 63,801 from Rs 50,282 and Taxation provision to Rs 3.05 lakhs from Rs 3.00 lakhs.

The crop outturn is higher at 1.06 million pounds against 980,116 pounds, while the average price realised is lower at Rs 2.52 against Rs 1.76 per pound.

Against a paid-up capital of Rs 7,00,600, General Reserve is shown at Rs 9.00 lakhs and Other Funds at Rs 75,000. The gross block at Rs 25.41 lakhs is depreciated by Rs 14.18 lakhs to show a net block value of Rs 11.23 lakhs.

£ R$

Dimakusi Tea

In the same managing agency group, the Dimakusi Tea Company Limited has reduced the dividend from 30 to 25 per cent following a decline in the net profit to Rs 1.72 lakhs from Rs 2.64 lakhs. A sum of Rs 60,690 (Rs 47,329) is provided for Depreciation; Rs 1.35 lakhs (Rs 1.92 lakhs) for Taxation and Rs 25,000 (same) for Repairs & Renewals Reserve. No provisions are made for General Reserve and Building Reserve against Rs 50,000 and Rs 50,000 respectively in the previous year. The crop outturn is lower at 682,908 pounds against 685,188 pounds and the average price realised at Rs 2.63 against Rs 2.82 per pound.

Against a total paid-up capital of Rs 5 43,500, the ordinary capital stands at Rs 4,73,400. Against this, General Reserve is shown at Rs 5.00 lakhs; Repairs & Renewals Reserve at Rs 50,000 and Building Reserve at Rs 50,000.

The balance-sheet shows a gross block of Rs 16.02 lakhs and net block at Rs 8.96 lakhs.

£ R$

Chamong Tea

The Chamong Tea Company—also in the same group—has reported a net loss of Rs 11,342 against a loss of Rs 13,694 in the previous year. The Depreciation amount is raised to Rs 22,595 from Rs 7,593. The dividend is passed over.

The crop outturn is lower at 145,561 pounds against 157,514 pounds, while the average price realised is higher at Rs 3.51 against Rs 3.30 per pound. cribed.

"The Wise Man in his attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right"—The Analects of Confucius.

Perspective

DESPITE formal, almost stylised official enthusiasm, the national mood on the thirteenth anniversary of Independence was one of profound weariness. The contributory causes are many, not the least important of which is the national habit of complacent despair. Frustration on a national scale has not been unknown to us during the days of struggle, but it was possible then to find in the alien Government a satisfactory scapegoat for our failings. No such easy way out of the growing-up pains is now available. The temptation in such circumstances for "the grand gesture of giving in" is difficult to resist, but a mature people can ill afford the luxury of easy despair.

Two developments during the last year have dramatised some of our current confusions. One of them constituted a severe test of our foreign policy and the other an equally exacting measure of our internal strength. India's profession of Pancha Shila has never been as facile as some of its Western critics have made it appear, but it is true that the five principles faced their most crucial test during the last twelve months. It will be idle to pretend that the experience has not been instructive. It will also be useless to think that a return to normalcy in Indo-Chinese relations has been achieved. The recent revelations in the Lok Sabha about the conditions of Indians in Tibet have been far from reassuring. But, viewed as a whole, India's stand on the whole unhappy episode has been exemplary in every way. Such a stern and unsparing critic of the Government as Rajaji has testified to this with characteristic fairness. In its humane concern for the tribulations of the Tibetan people, in its clear indication of its sympathy for Tibetan aspirations, in its desire to avoid anything that will make a peaceful settlement impossible and, above all, in its determination to place India's security and territorial integrity first in any policy making in this regard, India has shown political maturity of rare vintage. Panch Shila has certainly acquired new dimensions in that it has ceased to be merely platitudinous and in that it has not crumbled at the first contact with political reality. India's imperturbable political sanity was again underscored when, despite grave provocation and much international frowning and head-shakes, it took the initiative in trying to bring China into the United Nations.

It is rather far fetched to see anything more than mere coincidence in the fact that the internal crisis was also one that was caused by the difficulties in the way of coexisting with Communism. The Kerala episode was in many ways a depressing affair in our political life. When the Communists came to power in Kerala, there were many in the country who hailed the event as of historical significance. It was hoped that the way the Communist party came to power and the restraints imposed by a federal and democratic constitution would slowly transform the very nature of Communism. The history of the last two and a half years has, whatever else it has or has not done, clearly shown that such hopes were premature. In many ways, this is a great pity. The rights and wrongs of the quarrel as it was locally fought need not be rehashed now, but it will be difficult to withhold assent to Central intervention at the time it did take place. What is perhaps even more important is the fact that the Centre refused to be stampeded into this course of action till all the other alternatives to it were tried.

Thus, both crucial crisis have, despite their depressing aspects, proved the essential soundness of our political health. The Tibetan episode has no doubt its portentous lessons for the future. It is going to require all our resources in goodwill, patience, calm courage and determination in the face of totalitarian unimaginativeness to deal with any further complications that might only too conceivably arise. Likewise, the Kerala episode has in every way been a major operation on our body politic which has left it much the weaker for it. But, the fact that they were dealt with in the way they were shows that the nation is politically equal to its tasks. This is a matter from which we ought to derive some cheer.

But, for some reason, the national mood does not seem to see events in this way. On the other hand, there is an edge of hysteria in some of the manifestations of desperation. One form this takes is the wholly unfounded rumour assiduously circulated by some thoughtless people about Mr Nehru's health. More is being read into Mr Nehru's recent illness at Simla than would at all seem to be warranted. Much circumstantial embroidery about Mr Nehru's sickness at heart is being peddled. All this shows not only a lack of a sense of balance on the part of the propagators of such stories, but a complete misunderstanding of Mr Nehru's moral and physical toughness. In any event, with the evidence of so much done and so much yet to be done, Mr Nehru is unlikely to allow any single event to get him down. He has a far greater sense of perspective than that. It is something that some of his fellow countrymen may usefully learn from him.

Bihar's Industrial Potential

IN its techno-economic survey of Bihar*, the first of its kind to be carried out by any specialised agency in the country, the National Council of Applied Economic Research has demonstrably broken new ground. Thanks to the combined expertise of economists, engineers and industrial specialists, it has unmistakably acquired its distinctive character as "a technological audit of the natural resources and industrial potentialities" of Bihar. What is more, the practical utility of this unique survey technique has found instantaneous recognition in ten other States which have drawn on the competent services of the National Council. With the expected early completion of all these surveys, the Planning Commission, too, will have, for the first time, a dependable and integrated picture, covering most of the country, of resources and their utilisation and of growth potentials. And that will be no mean acquisition for the Commission's Perspective Planning Division.

How useful such surveys can be to planners and policy-makers is amply borne out by the main findings of the economic report of the survey. These findings, based largely on the existing data and partly on supplemental data obtained from the survey team's own opinion and fact-finding studies on specific problems, add up to a dismal and disconcerting picture of Bihar's economy. The more relevant findings—relevant from the point of view of the felt need for greater industrialisation on a sounder agricultural base—are gleaned from the report and highlighted in terms of figures below:

	Bihar.	All-India.
Average size of landholdings (acres) ...	3.0	7.0
Per capita cultivated area (acres) ...	0.5	0.8
Irrigated area as per cent of net area sown	24	...
Deficit in foodgrain supplies (in million tons)	3	...
Total labour force (in million) ...	19	..
Unemployed section of labour force (per cent)	23	...
Rural component of labour force (per cent)	95	...
Agricultural labour families as per cent of all rural families ...	40	30
Duration of agricultural employment to male workers (days in the year)	167	189
Annual average earnings of worker in agriculture (in Rs)	210	...
Population supported by production other than cultivation (per cent) ..	4.0	10.4
Proportion of total labour force employed in registered factories (per cent) ...	1.0	...
Annual average earnings of lowest paid unskilled worker in industry (in Rs)	445	...
Level of literacy (per cent) ...	11.5	16.6
National Income, 1953-(in Rs crores) ...	850	10,480
Share of agricultural sector in national income (per cent)	56	49
Per capita annual income, 1953 (in Rs)	207	284
Bihar's proportion of India's population (per cent)	11	...
Bihar's contribution to India's national income (per cent)	9	...
Capital formation as a per cent of national income	3.5	7.0
Rise or fall in income assessed to tax between 1949 and 1956 (per cent) ...	—12	+25
Increase in paid-up capital of joint stock companies between 1952 and 1957 (per cent)	7	18

These figures, which speak for themselves, broadly reflect the extraordinary backwardness of Bihar's economy, particularly in its agricultural sector. It is, therefore, appropriate that the Economic Report has suggested for the Third Plan a target of 5.1 million tons by way of additional foodgrains production, as against the Second Plan's target of 1.7 million tons, to transform Bihar from a deficit food economy to a surplus one and to increase per capita foodgrains availability to 22.7 ounces per day, that is, by 50 per cent as compared to 1955-56. An appropriate development programme, covering both agriculture and irrigation, would call for a total development outlay of about Rs 260 crores during the Third Plan period. With a possible outlay of this magnitude, it is calculated that "the value of the additional foodgrains produced in one year alone would be about Rs 230 crores, not to speak of the value of additional output of commercial crops from 5 million acres, which would be even larger". While the pragmatic desirability of so augmenting the agricultural

*The field survey was carried out in the period September 1957—February 1958 by a team consisting of Dr B. Natarajan (Project-Director), five Indian economists and five foreign and two Indian technical consultants, under the general direction of Dr P. S. Lokanathan.

production potential as a sound and prosperous base for industrialisation is not in doubt, present indications regarding the likely share of agriculture and irrigation in all-India under the Third Plan are positively discouraging. It looks as though Bihar's share under the two related heads may be of the order of Rs 130-150 crores only. In which case, only about half the additional agricultural potential visualised by the Economic Report may come to be actually created.

Even that much agricultural development should be manifestly sufficient to support the comparatively modest programme outlined in the Bihar report for power, industries and minerals. This programme would call for a total development outlay of about Rs 130 crores during the Third Plan period, of which the investment outlay proper may come to nearly Rs 100 crores in the public and private sectors together. If the share of power generation in the suggested investment outlay is excluded, the share of industries and minerals would be no more than Rs 55 crores—a figure well within the means of Bihar. It is in this context that the feasibility of the programme outlined in the Bihar report for the expansion of a number of existing industries and for the establishment of 27 new industries becomes apparent. The recommended expansion programme, involving a fresh investment outlay of Rs 25 crores over a period of six years, covers 17 industries—iron and steel, heavy chemicals, aluminium, cement, asbestos, tinplate, foundry, insulated wires and cables, ceramics, glass and glassware, radio and radiograms, distilleries, sugar, cotton, cold storage, concrete and Hume pipes and bicycle parts—on large-scale basis; 4 industries—printing, aluminium utensils, bricks and tiles and fine chemicals and pharmaceuticals—on large and small-scale basis; and fifteen other industries—buttons, cutlery, hand tools, padlocks, tea chests, etc.—on small-scale basis. That these industries have been carefully selected in the light of market potentialities is seen from the exhaustive section devoted to industrial expansion in the survey report.

Even greater care appears to have gone into the selection of 27 new industries for which project reports giving details of raw material availability, investment capital needed, possible and advantageous location, rate of expected profit, etc., are to be separately published by the National Council. These candidate industries, involving an initial investment of about Rs 22 crores with a 65 per cent foreign exchange component, "show promise of successful establishment" and will, if established, diversify the industrial structure of Bihar. Some details bearing on the proposed industries are given in the table at the end of this article.

In the list of candidate industries, four industries, namely, alloy steel low temperature carbonisation of coal, pulp from bagasse and high-grade paper from linseed straw, alone would together require Rs 17 crores. These, according to the Economic Report, would necessarily depend on Government financial assistance. It would also be advantageous, it is stated, to enlist foreign participation in these four industries, as in two other industries, namely, Silicon Carbide and Artificial Graphite. It is worthy of note that most of the candidate industries could be easily financed and projected by the private sector. Since these industries have been recommended for establishment in the light of local raw material availability and market potentialities, enterprising businessmen in Bihar may well look forward to the early publication of the relevant project reports by the National Council which, by any standard, has provided wise and practical guidance to the Government as well as the private industrial sector in Bihar.

Why are Exports Static?

By WARAN

INDIA'S export performance, despite several incentives, continues to be disappointing. The earnings from exports in 1958-59 were Rs 576 crores, which was Rs 19 crores less than in the preceding year and nearly Rs 60 crores less than in 1956-57. It is necessary to analyse carefully the reasons for this situation because, unless we succeed in stepping up our exports, it will not be possible to solve the problem of foreign exchange.

There appears to be some amount of confusion in tracing the causes of the steady fall in exports. For instance, it is argued in certain circles that the inability to increase exports is due to higher levels of domestic consumption. It is pointed out that, on account of inflation, there is more money in the hands of the people which is being spent on consumption and that, as a result, the availability of supplies for export has become limited.

According to Professor B. R. Shenoy, India's exports have stagnated at about 72% of the pre-war level and he says that this can be "directly related to our policy of inflationary finance". He observes: "Inflation puts into the pockets of people moneys to which no physical output corresponds.. When they proceed to expend these moneys on consumption or investment, more of the national product gets diverted into domestic uses than would be the case otherwise and less is available for export. This is the phenomenon we are witnessing today. If exports must move, the load of inflationary demand must be taken off the home market, so that goods and resources get released for exports or for export production."

Professor Shenoy's explanation is true only to a very limited extent. It cannot be argued that the steady decline in our exports is due to increased domestic consumption because the commodities which figure prominently in our export trade are those which are not consumed in sizeable quantities within the country. For example, jute goods, tea and manganese ore, which account for the bulk of our export earnings, are consumed within the country only in relatively negligible quantities. And, so far as tea is concerned, there was actually an increase in export from Rs 113.65 crores in 1957-58 to Rs 129 crores in 1958-59. The export of jute goods, however, fell from Rs 107 crores to Rs 100 crores and manganese ore from Rs 29 crores to Rs 13 crores but the decline was due to other causes.

One major factor was, of course, the recession in the United States. Industrial production in the United States fell sharply in 1958 as compared with the preceding year. The index of industrial production in the USA. (with 1947-49=100) fell from 143 in 1957 to 134 in 1958 and steel output declined from 139 in 1957 to 105 in 1958. This was one of the important reasons for the sharp decline in our export of manganese ore by Rs 16 crores. It is estimated that roughly half the fall in the export of maganese ore was due to the recession in the USA.

Another important factor contributing to the decline in our export trade was the growing competition from the low cost producers such as Japan and China. This was particularly true in regard to cotton textiles. Besides, the growth of the cotton textile industry in our traditional markets also has affected our export of cloth, which declined from Rs 58 crores in 1957-58 to Rs 45 crores.

Apart from factors beyond our control, such as those described above, the difficulties experienced by industries in India in regard to various matters like taxation, freight rates, scarcity of steel and other raw materials, are also responsible for the poor performance on our export front. Tea export could have been much higher if only some of the fiscal burdens imposed could be removed or reduced. Manganese ore export could be increased if the freight charges are suitably adjusted and the State Trading Corporation could adopt a more helpful policy. Export of cotton textiles could have been more if only the Government had been prompt in enabling the industry to introduce automatic looms. In the jute industry also, the process of rationalisation could have been expedited. These measures should receive greater attention on the part of the authorities.

At the same time, vigorous attempts should be made to increase the export of engineering goods and other non-traditional items. Our export of engineering goods has been of the order of Rs 4 crores a year, which relatively is insignificant in the context of our total trade. Shortage of steel and other raw materials may be a handicap; but, even so, with more vigorous measures on the part of trade and industry, it should not be difficult for the engineering industry to render a better account of itself in the matter of exports.

EXPORTS OF PRINCIPAL COMMODITIES

Commodities	(Lakhs of Rupees) April '57- March '58	April '58- March '59
Tea	113,65	129,69
Jute manufactures ..	107,72	100,04
Cotton piecegoods ..	58,27	45,47
Manganese ore ..	29,70	13,61
Iron ore and concentrates	11,86	9,72
Leather and leather manufactures	21,09	18,92
Oils, vegetable, non-essential	10,60	6,37
Cashew Kernels ..	15,16	15,85
Cotton raw & waste ..	14,54	22,63
Tobacco, unmanufactured	14,63	14,68
Spices	8,01	8,01
Mica & manufactures thereof	9,57	10,41

Co-operation and the Third Plan

THE Co-operative Movement was started in 1904, but even by 1959 the measure of success achieved is insignificant. During the last 10 years, with the Rural Credit Survey organised by the Reserve Bank of India, Co-operative policy has been receiving more attention, but, unfortunately, Co-operative statistics are highly unreliable and very little attention has been devoted to improving their quality. The misfortune has been the absence of independant appraisals: here and there, there have been criticisms but they have been drowned by a great deal of propaganda based on paper figures which in turn were often manipulated. In this situation, first priority should be given to fact-finding. Sample surveys should be organised in every State in order to ascertain the truth behind the data put forward by Co-operative Departments and non-official agencies. In order to expound the extent of deliberate window-dressing, an attempt is made here to show the weightage of facts, fancies and fallacies.

NUMERICAL STRENGTH

The official number of co-operatives is directly based on registration. There are societies registered but which have not yet started business, there are others which after some activity have ceased to function (but not yet cancelled), still others there are in which the only function is the preparation and issue of arbitration awards, and last come liquidated societies (whose registration is not cancelled). What is the extent to which the number of societies in each State is affected by one or the other four factors mentioned above, no one knows, and yet the **statistical statements relating to the Co-operative Movement in India** are issued by the Reserve Bank of India every year, working out the number of societies per lakh of population, etc. With regard to the number of members, the published figures are even more misleading. Some members are nominal, without a single transaction after having paid a small admission fee plus an equally small share instalment. Many are "dead" members, having no transactions with the concerned co-operative continuously for three years. There are no all-India figures, but a Sample Survey in the erstwhile Hyderabad State showed that 55.53 per cent of members on the rolls were "active" while 44.47 per cent were "dead." And yet, we pat ourselves on the back by showing percentages of increase in membership year after year, and declaring that a rising percentage of the population is "covered" by the Movement. In the Reserve Bank Publication, there are calculations like "average loan advanced per member". "average repayment by member" and "working capital per member." It is given out that the Movement covers 10 million cultivators, but actually it may be 8 million if not 6 million, and this makes very great difference indeed. The relevant Study Team proposed that, by the end of the Third Plan period, the entire agricultural population of the country comprising 45 million families should be covered.

FINANCE

The financial problem includes seasonal credit, medium and long-term credit, the burden of prior debt, the persistence of divided loyalties, and the security for loans. Policy-makers are nowadays busy with mathematical equations about the credit needed by the average cultivator for seasonal purposes, with little thought for the rest. A demand has been put forward for Rs 1,000 crores (revolving) at Rs 200 per member, membership to be raised to 45 or 50 million by 1965. There is hardly any thinking about the vast sums required for development work like conversion of dry to wet land, chemical manures and intensive cultivation. We have absolutely no figures as to how much of the cultivator's debts are due to money-lenders, how much to friends and relatives, how much to Government (taccavi loans) and how much to co-operatives. The Hyderabad Survey showed that 23.79 per cent of debts due by members of co-operative societies was due to the concerned societies, the balance of 76.21 per cent due to others, mostly to money-lenders. While, in the past, property was the backing against loans, the latest plan is to determine the size of the advance, not in relation to the individual's property or the owned funds of the society, but in view of village production plans. At the recent Mysore Conference, the Governor of the Reserve Bank of India definitely opposed this and said: "A mere plan for agricultural production did not automatically ensure the repayment of a loan." While the Rural Credit Survey blessed State participation in co-operatives, and the formation of large societies, the Prime Minister of India has been recently stressing self-help and the importance of small village societies. Some data were given out in support of increasing the number of large-sized societies, but when it is remembered that membership and repayment figures are really quite different from actuals, such figures carry little conviction. A few figures are given below:

Table showing the comparative success of large-sized co-operatives:

Item		U.P.	West Bengal	Andhra
1. Number of large societies formed (lakh rupees) ..		685	398	351
2. Number of members (lakh rupees)				
Before	...	3.67	18,000	1.34
After	...	5.34	81,000	2.29
3. Share capital (lakh rupees)				
Before	..	82.00	1.20	...
After	..	142.89	10.85	...
4. Loans advanced (lakh rupees)				
Before	...	195	..	114
After	...	479	...	476
5. Size of the average loan (rupees)				
Before	...	43	38	..
After	...	90	80	...
6. Percentage of default (lakh rupees)				
Before	...	21.4	...	14
After	..	7.2	...	8
7. Deposits (lakh rupees)				
Before	..	...	...	20
After	..	...	...	66

EDUCATION.

The authorities are nowadays imagining that the cultivator in India will do whatever they want: understanding and willingness are taken for granted. Perhaps, this is one of the biggest fallacies in present-day policymaking in India. While the average raiyat is ignorant, formalities in co-operatives are very complex and laborious. One of the first things to be done is to simplify procedure and to reduce the number of signatures or thumb impressions. For this purpose, an All-India Committee should be appointed immediately. The same Committee may be entrusted with the task of reviewing and co-ordinating Fact-Finding Enquiry Reports, one from each State. While, in some advanced areas, cultivators are intelligent and able to understand and manage co-operatives, the bulk of the members are quite ignorant. Even now, they believe that a co-operative loan is a Government loan. The right end to begin with was co-operative education, training and publicity, but this task has so far been seriously neglected. Half a dozen Journals and a score of Unions can by no means be expected to shoulder the task. The training programme adopted by the Reserve Bank of India is much too halting: at the present rate, one wonders if the country will possess a sufficient number of trained co-operative officers even in 25 years to come. Rather, the task of co-operative education should be decentralised and de-officialised, of course with liberal Government grants.

BOGUS TRANSACTIONS.

While averages and percentages published in blue books and journals look bright and promising, the co-operative worker knows the irregularities which usually occur in the course of transactions.. Cases are not isolated in which repayments and fresh loans are entered in the books without any actual monetary transactions. There are many societies in which there are no dealings whatever, but the annual inspector's note and auditor's report go on, with Receipts and Disbursements, the Balance-Sheet and Profit and Loss Statement. Many of them are classed as 'B' or 'C' societies by the auditors, because there are no dues to the central banks, and no over-dues by members. In numerous cases, members borrow one year from the co-operative and pay the money-lender, and borrow next year from the latter to pay the former. Quite a good number deliberately keep small loans outstanding so that their respective lands and crops may not be proceeded against by money-lenders in law courts. Cases are not a few in which raiyats are members of two societies, borrowing and repaying from one to the other in alternate years.. In thousands of cases, lands under dispute are shown in the property registers, and one of the enterprising brothers mortgages the whole paternal property, the other brothers not knowing anything about it. Unless such malpractices and book adjustments are completely done away with, the chances of the Co-operative Movement making a better show in the Third Plan period are small.

URBAN-RURAL AXIS.

A major lacuna in current co-operative policy is the exclusion of the Urban Movement from Government and Reserve Bank attention. Even a hurried glance at co-operative statistics must impress the reader about the comparatively greater success achieved by Urban Co-operatives compared to Rural, in the matter of public deposits and efficient non-official management. The room for co-operative effort is as wide in urban areas as in rural, and it would be more fruitful to devote more attention to urban co-operation because, thereby, the surrounding rural areas would benefit immensely through audio-visual instruction. In conclusion, a point deserves special notice. The Co-operative Movement has not had much of a success in any part of the world on account of competition by private enterprise, lack of personal incentive, low scales of remuneration, and lack of technical training and experience. As such, it would be more realistic to remember the inherent limitations of the Co-operative Movement and chalk out programmes which are workable. From this viewpoint, the deliberations and decisions of Study Teams and Conferences appear to belong to the order of high school debating societies, not even of academic chairs.

26 AUG 1959

EDITORIAL NOTES

Straightening the Record

A report appeared a few days ago that a team of textile specialists from India sponsored by the US Technical Cooperation Mission, was refused admission to some cotton textile mills in the USA. This might have created the impression in this country that the team's itinerary was badly organised and that, on the whole, it had an unpleasant and unprofitable time. This impression was also strengthened by the explanation provided by the US Government authorities, that many industrial concerns in the United States are not willing to admit strangers within their precincts. In that case, such concerns should have been dropped out of the itinerary and the tour should have been cancelled or curtailed if the number of such inhospitable undertakings was large. But it seems that the actual experience of the team of textile specialists in the USA was not as bad as the earlier report would suggest. And as this report has received wide publicity, it is only fair to put the record straight with the account given by the leader of the Mission, Mr Prabhudas V. Mehta, of their actual experiences in the United States.

In an interview on the eve of the Mission's departure for further study in Europe after a four weeks tour in the US, Mr Mehta has spoken with enthusiastic appreciation of the generous welcome that the Mission received in the United States. In the course of the tour, the specialists visited twelve cities, where they were the guests of Government, private industry, educational institutions and farm co-operatives. What is more to the point, the majority of mill managers and directors were very hospitable and "turned over all their facilities for inspection". They also showed interest in the special problems of India's textile industry, and "offered on-the-spot suggestions to be followed with more studied counsel". The members of the Mission were guests at American homes and honoured at several receptions, and were deeply impressed by the kindliness of the people in general and their readiness to help. Mr Mehta mentioned in particular their experience at Raleigh, North Carolina, where the staff members of the North Carolina State College "were at our service every minute."

One institution which engaged their particular attention was the College's School for Textile Education. The close liaison which they noted between this research facility and the cotton mills in the area should be of interest to those who have a stake in the continued progress of the Indian textile industry. This cooperation between industry research, Mr Mehta has noted, hastens the solution of problems and implementation of methods to improve production.

*

Economic & Social Council

In his closing speech to the twenty-eigth session of the UN Economic and Social Council, the retiring President, Mr Cosio Villegas of Mexico, has drawn attention to some problems of organisation which prevent the effective functioning of the most important subsidiary of the United Nations. The Economic and Social Council owes its origin to the widespread feeling among the sponsors of the United Nations that the problem of the maintenance of peace could not be solved by a purely political approach. It was recognised that a genuinely stable and permanent peace would only be achieved when all the world's peoples attained at least a minimum level of economic and social well-being. This idea was enshrined in Chapter IX of the UN Charter. Article 60 vested the responsibility for discharge of the functions listed in this Chapter in the General Assembly, and, under the authority of the General Assembly, in the Economic and Social Council. The relations between the two bodies, therefore, is crucial to the successful discharge of its functions by the Economic and Social Council.

Mr Villegas has stressed, in this context, the decline in the representative character of the Economic and Social Council vis-a-vis the General Assembly. When the United Nations was formed with fifty-one members, the strength of the Economic and Social Council was fixed at eighteen. Though, subsequently, membership of the United Nations has increased to eighty-one, the Council has not more than eighteen members.

Another reason for the weakening of the representative character of the Council is the formation of regional and ideological groupings which has subjected the Council to strong pressures which are not helpful for the effective discharge of its functions. As a result, the Council has been practically edged out by the General Assembly which, though originally intended to be an advisory body, "now wishes to take the initiative and is barely prepared to entrust the Council with the detailed implementation of plans, projects or ideas that originate in the Assembly."

Many of the countries which have no representation in the Council prefer that the General Assembly should deal directly with all matters. This trend is not only damaging to the prestige and authority of the Council but also prejudices the attainment of the economic and social objectives, for, the initiative in solving basically technical problems increasingly passes over to a pre-eminently political organ.

The obvious remedy would be the enlargement of the membership of the Council, but many political hurdles have to be crossed before this can be done. In the meantime, as Mr Villegas has pointed out, the damage done will be irreparable. He has, therefore suggested a way of by-passing the political difficulties, by taking steps to ensure wider participation of member countries in the functional commissions.

Apart from a moderate enlargement of the membership of these commissions, wider participation can be ensured by the adoption of certain desirable conventions in the elections to these bodies, as for instance, limitation of re-election of retiring members. Mr Villegas has also suggested that the Great Powers should "seriously consider whether it is fitting for them, and above all, for the Council, that they should be permanent members of the commissions by a process of indefinite re-election." But, on the other hand, it may be noted that the work of these bodies is mostly technical, and the large number of countries which have become UN members in the course of the last few years, and are anxious to participate in the activities of the Council, cannot themselves provide the personnel to man these bodies.

*

UN-English

In addition to the problem of strengthening the representative character of the Economic and Social Council, Mr Villegas has also touched on certain administrative draw-backs. And, in this connexion, he has referred to the preparation of the agendas and the failure to solve the problem of distribution of documents in time which affects the quality of the discussion in the Council.

Documents are supposed to be available six weeks ahead of the scheduled date. But except for Governments which are near the head quarters, few of the others get sufficient time to study the documents, so that the discussions are mostly un-related to the basic material collated at such great cost by the Secretariat.

Perhaps, this problem could be solved by some administrative tightening. But the most interesting criticism advanced by Mr Villegas relates to the language in which the reports and other basic documents are drawn up. Their impact on the reader, not inured to such things, is that of a sackful of coal emptied on his head. Mr Villegas has kindly suggested that most of the documents are written in English and have to be translated into other official languages. About the Spanish translations, his comments are forthright; these translations "are not only done with no feeling for the riches, sonority and beauty of the Spanish language, but they are in many cases completely incomprehensible."

About the quality of the English original, only those whose mother tongue it is will be entitled to pronounce a similar verdict. But such persons when cornered may seek to evade a straight verdict by suggesting that the UN documents are written not in English but in UN-English.

Unprecedented Success

THE 1959-60 borrowing programme of the State Governments must be deemed to be an unprecedented success. Firstly, subscriptions for the thirteen loans taken together exceeded the amount on offer by nearly Rs 38 crores; we believe that such extent of over-subscription, working out to more than 60 per cent, has never before been experienced in giltedged history in India. In the second place, one day's subscriptions sufficed to evoke applications which enabled each one of the State Government loans to be fully subscribed and in most cases to be over-subscribed. In the third place, the subscriptions realised by the State Governments are such that, though the nominal amount of issue was Rs 61.5 crores, the total amount that could be retained, assuming that the Assam and Kerala loans would have attracted subscriptions equivalent to the amount on offer, will be in the environs of Rs 67 crores—and, thus, the net borrowing of the State Governments this year has exceeded the amount of Rs 63.53 crores realised by the State Governments in 1956-57. In the fourth place, intriguingly the total of cash subscriptions to the State Government loans at Rs 99.32 crores—presuming again, that the Assam and Kerala loans realised the amount on offer of Rs 6.5 crores, and no more—has exceeded the cash subscriptions to the Central Government's new loan floated in July this year, which were placed at Rs 94.43 crores. This is, certainly, the first time in India's giltedged history that the State Government loans induced larger cash subscriptions than did the Central Government loan. In the fifth place, except for Assam and Kerala, and excluding the almost 200 per cent over-subscription that greeted the Bombay Government's borrowing from strength, support was widely dispersed to each and every one of the State Government issues. Last of all, we have to take note of the fact that the over-subscription has been the greatest in the case of the only State which chose to offer its loan at no discount but at par. And, incidentally, we may take note of the fact that Central and State Government borrowings so far have amounted to Rs 250.84 crores during 1959-60.

It is, we suggest, no accident that the largest amount in subscriptions was attracted to that loan whose terms favoured the Government rather than the investor. This, indeed, is the essence of the axiom in giltedged policy which we have been seeking stead-fastly to underscore. It is only when the Government borrow from strength that their loan will be a success. Subscriptions to a loan will be in direct proportion to the strength displayed by the borrowing Government. We wonder whether the point has been noted that the 3½ per cent 1969 loan, issued by Government in July this year and offering now a redemption yield of 3.62 per cent, is comparable to the 4 per cent 1971 loan of the Bombay Government. Indeed, if it is reckoned that the 4 per cent Bombay 1970 loan is today offering a redemption yield of 3.96 per cent, it should be clear that the new loan now floated, 4 per cent 1971, will swiftly go at a premium and also induce a hardening of prices in all the existing Bombay issues.

The second lesson to be learnt from the success of the State Government issues, and the magnitude of that success, is that the demand for giltedged appears to be insatiable. In July this year, it may be recalled, the Central Government floated a loan which realised Rs 94 crores by way of cash subscriptions. Besides, in the period between March 27, 1959 and June 26, 1959, the Scheduled Banks, presumably by purchase through Reserve Bank tap and wholly as a result of State Bank purchases had added to their giltedged portfolios by Rs 18 crores. Then, after allowing for the new loan subscriptions of the Scheduled Banks, the banking system has besides freshly purchased, as at August 7, 1959, a further Rs 45 crores of giltedged, again, presumably, through the Reserve Bank tap. To this we have now to add the Rs 67 crores on account of the State Government borrowing programme for 1959-60. It will be seen that net absorption of giltedged, including purchases of securities through the Reserve Bank tap by the Scheduled Banks but excluding tap sales to any other institutional investors, already exceeds Rs 230 crores. (This figure excludes conversions). Undoubtedly there will be a second tranche of the Central Government loan. Obviously, there will be further sales of giltedged through the Reserve Bank tap. What is not quite so obvious, but which we now make bold to suggest, is that some of the State Governments should also choose to have a second tranche of their loans to be issued later in the slack season.

The third lesson to be drawn from the unprecedented success of the State Government loans is that it is no longer necessary—and it was never desirable—for pressure or influence tactics to be brought into play to assure subscriptions for the State Government loans. The State loans have built up a considerable clientele and the funds with this species of investors are snowballing in character. What is more, we understand that support from Scheduled Banks for the State loans has this year been considerable. This is not surprising, in view of the fact that, during the calendar year 1958, Scheduled Banks added to their holdings of State Government securities by the considerable amount of Rs 31 crores; and this figure compares with the total State Government borrowings during 1958-59 of Rs 46 crores net. This interest shown in State loans by Scheduled Banks has a lesson of its own to offer. That is, that the Scheduled Banks no longer look upon their investments in State loans as the patronage they confer upon particular states. It is because they are attractive investments with a relatively high interest coupon, relative that is, to the Central Government loan, that the Scheduled Banks are professing this considerable zeal for State Government loans. Finally, we believe that whatever extra interest the Scheduled Banks may have shown in the State Government loans must have stemmed, in part at least, from the fact that the Central Government borrowing programme of July this year did not offer anything particularly attractive for the banking system. Clearly, the 4 per cent 1979 loan was not intended to find sanctuary in the giltedged portfolios of Scheduled Banks. Equally clearly, the limited intention of the 3½ per cent 1969 Loan was to persuade the Scheduled Banks to convert their holdings in the maturing 3 per cent 1959-61 loan,—lest, later this year, something less suitable—that is, some loan with longer maturity—is alone available. Clearest of all is the fact that the Central Government have yet to issue a loan addressed particularly at the Scheduled Banks and intended specifically to extract new cash from them. We believe that, at this juncture and in this context, we should repeat our suggestion of the second tranche of the Central Government loan being a 3½ per cent 1966 issued at par. There is, we must emphasise, no need for the loan to be issued at a discount, so as to increase the redemption yield to say, 3.60 per cent. For, the fact of the matter is that the redemption yields on two existing Central Government issues maturing in 1967, 3½ per cent 1967 and 3¾ per cent 1967—there are no maturities in 1966, except for the 3 per cent 1966-68—are placed at 3.56 and 3.63 respectively. The 3½ per cent 1965, on the other hand, offers a redemption yield of just 3.48 per cent. In such circumstances, we would suggest either that a 3½ per cent loan should be issued at par or that a 3½ per cent loan be issued at a discount. Banks will require one inducement alone, and that inducement is that the maturity period should not exceed seven years. At it is, not including the borrowing programme during 1959-60, securities held by banks and maturing between 5 and 10 years have risen from 31.4 per cent of total investments to 38.8 per cent. If regard is had to the fact that Scheduled Banks' holdings in the 3½ per cent 1969—one of the two Central Government loans issued this year—are likely to be considerable both in respect of conversion effected against 3 per cent 1959-61 and in respect of the new cash subscriptions, then, it will be realised that it is not inconceivable that the giltedged holdings of Scheduled Banks with a maturity of 5 to 10 years may now be accounting for as much as 50 per cent of total investments. Indeed, this fact almost makes out a case for the second tranche of the Central Government loan, if it is intended for the Scheduled Banks, being a five-year loan. However, maturing liabilities during the Third Plan are in all conscience high enough. So, inescapably, and also since also 1966 is the earliest year when maturities are not too large, the loan addressed to the Scheduled Banks can at best be with a seven-year maturity.

In brief, we suggest that the 1959-60 borrowing programme of the Central and State Governments offers the fullest and most irrefutable proof that, if borrowing is from strength, market loans can yield as resources for planning much more than may at present be thought. We add: By the end of the Second Plan, the realisations from market loans should have considerably exceeded the target set of Rs 1130 crores gross for the Plan period as a whole. As it is, up to and including the State Government loans, the gross borrowings of the Centre and the States already exceed Rs 1075 crores. In other words, by the time the second tranche of the Central Government loan is completed, the original target of gross borrowings under the Plan will have been achieved. Whatever we get in the last year of the Plan will be a windfall.

Steep Bout of Deficit Financing

HEFTY deficit financing seems to have been incurred by the Central Government during the week ended August 14, as revealed in the latest returns of the Reserve Bank. Ad hocs were sold in favour of the Reserve Bank, presumably in order to meet liabilities arising from inter-governmental transactions.

The slack season continues and Active Note circulation has declined in the latest week by Rs 8.79 crores to Rs 1680.12 crores. Moreover, Rupee Coin has returned from circulation for Rs 0.91 crores. Both Rupee Securities and Foreign Securities being unchanged, the Reserve Bank's cash in the till has improved by Rs 9.70 crores to Rs 21.02 crores.

Investments in the Banking Department are steeply higher by Rs 44.58 crores at Rs 363.89 crores. In the relevant week, with investment institutions generally keeping their resources earmarked for the State Government loans, it is unlikely that the Reserve Bank will have effected sales through the tap in any worthwhile amount. Hence, the rise in Investments may be said to be an index of the deficit financing during the week.

However, the Central Government's Deposits are higher only by Rs 1.18 crores at Rs 54.55 crores. This would suggest that almost the whole of the proceeds against deficit financing has already been disbursed by Government. The bulk of the expenditure, clearly, will have related to payment of the monthly instalment of grants and other assistance to States. This is reflected in the fact that the balances of State Governments have risen substantially by Rs 28.85 crores to Rs 41.75 crores; and, simultaneously, the State Governments have also reduced their Ways and Means borrowings from the Reserve Bank by Rs 5.35 crores to Rs 22.05 crores.

However, deficit financing may also have been instituted by the Central Government to meet the outstanding liability on the 3 per cent 1959-61 Loan which matured on August 15. Since August 15 was a holiday, it may have become necessary for the Central Government to make the repayment on the 14th. But it should prove difficult, either in the next returns of the Reserve Bank or in the relative figures of the Scheduled Banks, to trace the transactions relating to repayment of the maturing 1959-61 Loan. This is, on the one hand, because the returns of the Reserve Bank for August 21 will bear the impress both of disposal of the Reserve Bank profits for 1958-59 and of the subscriptions relating to State Government loans and, on the other hand, because the return of the Scheduled Banks for August 21 will reflect the purchases in the State Government loans by the member banks.

Finally in the Reserve Bank returns, Balances Held Abroad continue to drop, the latest decline being one of Rs 1.78 crores to Rs 11.66 crores.

+

The return of the State Bank for August 14 is notable for the sharp rise of Rs 11.12 crores to Rs 556.10 crores in Deposits. Both this and the decline of Rs 3.83 crores to Rs 169.46 crores in Advances may merely be indices of the 1959 slack season. However, we cannot rule out the possibility of the new Deposits constituting a fresh tranche of counterpart funds against the Public Law 480 agreements with America. If such is the case, it is to be anticipated that there will be more or less a simultaneous investment of such funds in giltedged. Here, again, unfortunately, the picture is obscured by the fact that, in any case, in such slack conditions, the State Bank will be compelled to invest in giltedged against the accrual of normal Deposits. In any case, there has been no worthwhile investment in giltedged during the week, the portfolio showing a rise of Rs 1 crore to Rs 348.93 crores. Borrowings, which in the previous week had been placed at Rs 2 crores, have been liquidated. In the result, cash in hand and with the Reserve Bank has moved up by Rs 11.95 crores to Rs 32.34 crores, suggesting, thus, that the bulk of the increase of Rs 14.50 crores to Rs 95.09 crores in the Reserve Balances of member banks has been on account of the State Bank.

+

The return of the Scheduled Banks for August 7 discloses the impact of beginning of the month disbursements. Apparently, constituents have preferred to draw upon their Deposits rather than to increase their borrowings. Deposits are shown lower by Rs 6.75 crores at Rs 1809.59 crores—the State Bank's share was, in round figures, Rs 2 crores—and the bulk of the decline has occurred under net Demand liabilities, which are lower by Rs 6.27 crores. There is a fractional change in Investments. The total of Advances fell by Rs 2.44 crores to Rs 953.68 crores, and Rs 1½ crores is attributable to the State Bank. In the face of month early disbursements, the Scheduled Banks increased their borrowings from the Reserve Bank from Rs 1.07 crores to Rs 3.45 crores. As an end result, Cash Balances, almost wholly on account of the State Bank, have dropped by Rs 5.79 crores to Rs 165.71 crores.

✱

Steady Prices in Britain

By Paul Einzig

BROKERS and their clients, when reading in their morning papers on August 11 that there was Black Monday in Wall Street, all but generally expected that the London Stock Exchange would follow Wall Street. After all, until then, it was mainly the anticipation of precisely that contingency that prevented British equities from getting the full benefit of the improved economic situation and prospects and of the improved political situation, both in the domestic and foreign sphere. The view was widely held that a sharp setback in Wall Street was overdue and that, when it materialised, it would provoke a sympathetic slump on the London Stock Exchange. Some pessimists were beginning to think in terms of 1929 and all that.

Much to everybody's surprise, the Stock Exchange remained relatively stable and was able to resist the material and psychological effects of the Wall Street setback. The prices of most equities were marked down, but to a much smaller extent than the previous day's losses in Wall Street. And, after a weak opening, there was a partial recovery. The following day, when Wall Street became steadier, London staged a recovery and for the rest of the week most equities became steady to firm. The week ended with net gains.

Needless to say, dealers, investors and speculators are greatly relieved to know that the sharp drop in Wall Street on August 10 was not, after all, the beginning of a slump, and that the London markets were able to resist the adverse influence of a setback in Wall Street. Had it not been for the fact that the holiday season is well advanced, the realisation that the London Stock Exchange is not, after all, at the mercy of Wall Street trends might have resulted in a noteworthy rise now that the nightmare of a repetition of 1929 has virtually disappeared.

London's capacity to resist adverse influences from Wall Street is mainly due to the discrepancy between yields on British and American equities. Since American equities are overvalued compared with corresponding British equities, a fall in the former need not be followed by a fall in the latter. Since the discrepancy is considered unjustified, a fall in Wall Street without a corresponding fall in London merely tends to reduce the existing disequilibrium which is abnormal in prevailing conditions.

British opinion is not prepared to share Wall Street's expectations of the effect of an improvement in East-West relations on industrial activity. Anyhow, it is premature to assume that Mr Khrushchev's impending Washington visit would really produce a noteworthy relaxation of the international political tension and would pave the way for disarmament on a sufficient scale to affect the industrial situation. And even if this should happen, it is not likely to depress equities except temporarily. Industries directly concerned with armament would of course be affected in the long run, but the relief felt about the mitigation of the cold war would offset, and more than offset, that adverse effect.

The optimistic views about the prospects in general are not held unanimously in London. Many quarters hold the view that even a Conservative victory in the autumn election need not necessarily mean a further rise on the Stock Exchange. It is feared that, once the Government are confirmed in office, they would have to devote their attention to the evidence of the impending inflation which is gradually growing. Recently published figures of increased bank lending and instalment financing, together with the deterioration of the balance of payments, are regarded as symptoms which Government, Tory or Socialist, could afford to ignore only to their peril.

Even the absence of a rising trend in the cost of living is viewed with disfavour by professional pessimists. It is argued that rising wages in the absence of rising prices will mean an increase in consumer demand, which again will mean more imports and less exports, and an increase in the visible adverse trade balance. Recent agitation in favour of price cuts is subject to a certain amount of criticism in the Press. Until recently, it was the official view of the Treasury—and possibly it still is—that, in given circumstances, a rise in prices is apt to be disinflationary because it absorbs the surplus purchasing power. This view was first put forward in public, three years ago by a junior Treasury Minister, Sir Edward Boyle, and came to be known, therefore, as "Boyle's Law." It was the idea of the Treasury's chief economic advisor, Sir Robert Hall. Anyone who believes in it must also believe, in order to be consistent, that a decline in prices is inflationary because it releases additional purchasing power and increases consumer demand.

As a matter of fact, if investors had nothing worse to worry about than a paradoxical fear of inflation through a fall in prices, they could well afford to depart for their holidays and forget about their investments. If prices fall, British exports will tend to become more competitive. Thanks to the existence of considerable unused producing capacity in a great many industries, it would be possible to increase the output sufficiently to meet the increased domestic demand and at the same time to increase exports. There is no real danger of a deterioration of the balance of payments resulting from a fall in prices, and the authorities will be under no necessity to adopt disinflationary measures after the election in order to meet the situation. Admittedly, the visible balance of payments has grown worse during the last two months. But it would be premature to form any definite conclusion about the cause of the deterioration which may well prove to be temporary.

WORLD OF JUTE

Chinese Puzzle

SINO-INDIAN relations at the moment are not as they were some time ago. Chinese behaviour in Tibet has shocked public opinion in this country and doubts are coming to be expressed whether the powers that be in that country are sincere when they loudly proclaim their adherence to the doctrine of Panchsheel.

It is not only in the political sphere that China has been found to practice unusual methods. In trade and commerce also, it does not seem to worry very much about the means to attain the ends in view. The decline in our cotton textile exports in recent years is partly due to the price-cutting tactics followed by China in pushing the sales of its goods in world markets. It would appear that nothing matters to China except the maximisation of its sales overseas. Against these totalitarian methods in overseas trade, India with its firm foundation in democratic principles has been unable to compete successfully.

Latterly, China has entered the jute trade in a prominent way. This time, it is entirely to the advantage of our industry at least, for the time being. This country has been a consistent buyer of Indian sackings in the past few months, and it is no exaggeration to say that the improvement in the outlook for heavy goods, which were till recently a drag on the market, is not a little due to the Chinese purchases. The Chinese interest does not seem to have abated yet, and, as recently as two weeks ago, the market was the recipient of a sizable order which has been directly responsible for inspiring the present firm trend in the sacking section of the Calcutta jute market.

This year's large Chinese offtake has given rise to some interesting speculation. It has been calculated that, at the present rate of sacking purchases, China may become a major consumer of Indian sacking, even excelling Australia in this respect. No doubt, the bumper crops in China have been mainly responsible for the big offtake of sacking from India. But I for one do not think that this will be a regular feature hereafter. This year's offtake has been dictated by the exigencies of the situation. Further, China is not an importer of manufactured goods only. It is now known that the State Trading Corporation has sold 25,000 bales of raw jute to China.

The following two items, which are from the July issue of the Jute Bulletin, may serve to make my point clear:

The Jute Trade in Belgium is in poor shape at present due to its inability to compete on the home market with cheaper priced imports of Asian origin. The merchanding side of the industry is, therefore, agitating against Government's "open door" policy which is said to have resulted in a flooding of the local market with jute cloth and bags from India, Pakistan and latterly China. Imports of Chinese Jute bags in Belgium in the first two months of 1958 amounted to some 900 tons. If the present volume of importation is kept up, it is feared that the total for the whole year may go up to 16,000 tons.

China plans to raise 2,500 metric tons of wild jute this year in the barren are off Tarim basin in the Furmatakha Makan desert in Sinkiang autonomous region, according to the report published in the official weekly, "Peking Review".

The jute when harvested would be sent to other parts of the country for the manufacture of high-grade fabrics, fishing nets and ropes, the magazine said.

"Wild jute which grows in profusion on both banks of the upper and middle reaches of the Tarium river," the magazine added, "is now being cultivated in huge plantations along the upper reaches of the river while large areas along the lower reaches have also been reserved for it."

It will be seen that China is playing a many-sided role in the World of Jute. It is purchasing raw jute from India and Pakistan and is also growing its own variety of jute on a wide area within its borders. As for manufactured goods, it is at once competing with India and Pakistan in European markets, and is buying goods from India and perhaps from Pakistan, too. It all amounts to this: The Indian jute goods industry can never depend upon Chinese custom, whether in raw jute or manufactured goods. It may serve the Chinese right to make them pay a high price for Indian jute goods as they have shown themselves to have no scruples in international trade. But our industry can ill afford to impose high prices on other regular customers who, it may be noted, can make do without much reliance on jute goods once they are convinced that supplies will be irregular and prices unstable.

✱

Jute markets have been steady to firm during the past week ending Wednesday. While the continued demand for near delivery goods in sacking kept sentiment cheerful in the goods section, the news that the State Trading Corporation had concluded business for 25,000 bales of raw jute with China imparted a steadier trend to the raw jute section.

The steadiness of hessian is partly in sympathy with the heavy goods section and partly due to anticipations of improved offtake from the US. Not only was there no fresh incentive for hessian; there was actually some depressing news. US burlap consumption in July amounted to 68,600,000 yards. This is in comparison with 81,400,000 yards for June. Though it is some consolation that, as compared with the corresponding month of last year, that is July 1958, when consumption totalled only 67,800,000 yards, last month's performance is quite satisfactory, the fact remains that, compared with the previous month, the difference too wide to go without making some adverse impression on the generality of marketmen. However, the market does not seem to have taken the news to heart, probably because the stock position in US seems somewhat to compensate for the lower consumption. US burlap stocks at the end of July were placed at 271,100,000 yards comprised of 168,800,000 yards of spot stocks and 102,300,000 yards afloat. At the end of June, total stocks were 285,100,000 yards and at the end of July last year they were 228,700,000 yards. A decline of 14 million yards in stocks is an encouraging sign, indeed. As has been noted in these columns earlier, the fact remains that the Argentine is yet to take its requirements. The comparative dullness of hessian, coupled with the currently vigorous support for heavy goods, may divert the attention of mills toward increasing the production of sacking. Then, hessian stocks may not be found to show a rising trend.

That there has been some improvement in the despatches for export during the last month is shown by the figures of despatches of jute goods from mills in July. Total despatches were 91,397 tons as compared to June's 86,570 tons. During the corresponding month of the previous year, total despatches were, however, much higher at 102,087 tons. July's total comprises 76,220 tons on export account and 15,177 tons for internal consumption. The improvement in the total as compared with the previous month is due to higher exports.

During the 11 months ending May 1959, exports of hessian from India were considerably higher than during the same period last year. The total exports of 756,900 tons, is made up of 421,300 tons of hessian and 293,600 tons of sacking. In the corresponding period of the previous year total exports were 763,200 tons comprising 368,400 tons hessian and 360,900 tons sacking.

In the goods market, wide fluctuations in the price of B Twills were witnessed throughout the week. Price levels have been largely dictated by the futures section where, in alternate bouts of selling and buying, B Twills August last Thursday after opening at Rs 106.90 was done up to Rs 109.30 which level was reached twice during the period under review. On Wednesday, B Twills futures August closed at Rs 108.70. A subdued tendency was noticeable in hessian futures where hessian 40"×10 oz August fluctuated between Rs 40.16 and Rs 41.18 to close on Wednesday at Rs 40.88.

✱

The raw jute market seemed to have derived considerable encouragement from the news about STC's sale to China. Mills were also found taking good interest in earlier dealings. The continued firmness of the goods section had its own bullish influence. But, besides imparting some steadiness to the market, the favourable developments failed to bring about any sizable rise in the price level. Assam Bottoms new crop was done up to Rs 24.25 per maund but later declined to be placed at Rs 23.75 by close on Wednesday. The news of the second instalment of widespread rains in Assam does not seem to have made any impression on the market. This is presumably because of the fact that even the first instalment of very heavy rains has not adversely affected the crop. That raw jute supply is not a matter for uncertainty is also evident from the narrow fluctuations in futures Assam Bottoms September which moved around Rs 24 throughout the week to close on Wednesday at Rs 23.84.

Raw jute arrivals into Calcutta and mill stations during July have been on a higher level compared to both the previous month and the corresponding month of last year. Arrivals this July totalled 333,463 bales. Arrivals during July 1958 and June 1959 were respectively 319,474 bales and 305,713 bales. Last month's arrivals comprised 317,212 bales of jute of Indian origin and 16,251 bales of Pakistani. Arrivals during June this year comprised 293,362 bales of Indian jute and 12,351 bales Pakistani. Arrivals during the corresponding month of the previous year (July 1958) were made up of 271,337 of Indian origin jute and 48,137 bales from Pakistan.

CHANGE OF PREMISES

Consequent on increased business, our Calcutta Office has been shifted to more spacious premises at 3/1/2, (First Floor), Armenian Street and has been regularly functioning there since MONDAY, the 17th AUGUST, 1959.

All our constituents are requested to note this change.

H. O.: UDIPI, S. India, Date: 1-8-1959.

V. R. KAMATH, B.A., LL.B., General Manager.

WORLD OF TEA

Ceylon's Plans to Find New Market

CEYLON plans to establish its own brand of "unadulterated" Tea which it hopes eventually to introduce on to world markets. This was stated recently by the Ceylon's Minister of Commerce and Trade when answering opposition demands. The new packet is to be tried in Ceylon first before being exported.

Ceylon, anxious for new sources of income, has been giving a good deal of thought to its tea production. The latest plan, for a national tea of high quality, is attractive to Ceylon, both as a commercial proposition and as a prestige making production.

For Ceylon to produce a national high quality tea will mean a radical reorganisation of its tea gardens. Most of Ceylonese production is of poorer quality teas. The entry into the market of a national Ceylonese product will merely add one more to the various qualities already available on the London market.

If the Ceylon tea is to find a market, it will have to be in Britain; but the British taste in tea, although conservative, has settled down, since the war, to certain blends. These blends are made up of moderate quality teas with an admixture of super-quality varieties to give flavour.

The Ceylonese tea will have therefore, to compete on equal terms with those already available. It is the really high quality tea that is in demand and which is fetching the high prices. If Ceylon is able to offer a better tea than any other producer, it will certainly sell in London. But, it is believed in London that the British offtake will not be enough to justify any substantial expenditure by Ceylon in developing the new variety.

In general, over the past twelve months, the prices of the better teas moved ahead much faster than those of the moderate and poor quality varieties. Some super quality teas fetch up to 14sh a pound at the London auctions against 3sh for main ordinary quality teas. The tea trade in London expects this situation to endure this year. The demand for good quality teas is such that the producers in North India and Ceylon are flying samples into the London auctions in order to get there first. Supplies, which will normally be expected early next month, are already in London.

Meanwhile, in the Colombo market, there was a strong demand for the best liquoring Dimbula/Dickoya Brokens at firm to dearer rates. Poorer sorts were, however, quoted lower. Demand was active for improved Uva sorts at dearer rates. Mediums were firm, but other kinds were 10 to 15 cents per pound lower with low-grown teas about 5 cents easier. Following were the rates (in cents per pound):—Good Medium Broken Pekoe 330; Good Medium BOP 230; Medium Liquoring BOP 206; Medium Liquoring BP 154; Medium Liquoring PF 245; Medium Liquoring OP 240; Low Medium BOP 180; Low Medium PF 205; Low Medium OP 230 and Low Medium Pekoe 196.

In the Export Sale held in Calcutta this week, offerings consisted of 58,615 packages. There was a good general demand, buyers following quality closely. Plain brokens were fully firm, while similar Fannings were firm and sometimes dearer. Medium brokens and Fannings were, however, about 6 nP per pound below last rates. The brighter orthodox Assams and medium BOPs were well supported, but prices were easier with quality. The best CTCs were irregular and generally easier, some times by as much as 50 nP. The medium and more ordinary types showed a decline of 10 to 20 nP. Legg-cut teas met with fair support at easier rates.

Whole Leaf grades were well supported, but were a little easier. Darjeeling teas were a weak feature of the sale and there were some withdrawals. Tippy sorts were once again well supported. Following rates were quoted:—Clean Black Pekoe Rs 1.98; Plain BP Rs 1.80 to Rs 1.84; Plain Fannings Rs 1.94 to Rs 2.04; Medium BP Rs 1.92 to Rs 2.00; Medium Fannings Rs 2.04 to Rs 2.14; Best Assam CTC BP Rs 3.00 to Rs 3.40 and Best Assam CTC Fannings Rs 3.70 to Rs 4.20.

In the Internal Sale, offerings were 22,593 packages of Dusts and 702 packages of Leaf grades. There was a good general demand for Dusts at easier rates; but the market was slightly stronger toward the close. Orthodox kinds were irregular, but generally declined in price by up to 8 nP per pound. Legg-cut Dooars, at the opening, were from 6 to 8 nP easier; but strengthened as the sale progressed. Darjeeling Dusts were irregular, although the flavoury ones were sold well, the more ordinary kinds being easier.

Medium CTC dusts were irregular and generally sold up to about 25 nP below last rates. The very best CTC dusts, on offer, declined in price and, toward the close, they were virtually neglected. Following rates were quoted: Medium Dooars Dust Rs 1.80 to Rs 1.84; Medium Assam Dust Rs 1.76 to Rs 1.82; Medium Assam CTC Dust Rs 2.00 to Rs 2.15 and Best Assam CTC Dust Rs 2.70 to Rs 2.95. Leaf grades met with a good general demand.

In the Export Quota section, business was done at 2¼ nP per pound. At the close, there were buyers at only 2¼ nP with sellers at 2½ nP per pound.

In the Cochin market, 900,000 lbs of Leaf grades were offered. Against a good demand, low medium and medium teas were irregularly 10 nP per pound lower, while best liquoring teas advanced following quality. All black leaf Fannings were fuully firm to dearer.

In the London auction, offerings were 25,738 packages including 17,862 packages from Northern India. A strong market prevailed for all kinds. The best descriptions, which included a number of good liquoring invoices from Assam, were in very keen competition and realised prices above brokers' valuations. Coloury mediums were well sought after at dearer rates.

According to official sources from New York, tea imports into the USA, during June, improved to 10.08 million pounds as compared with 8.22 million pounds in the corresponding month of last year. The increase in imports was largely due to substantial improvement in supplies from Ceylon, from 2.68 million pounds to 4.37 million pounds. Imports from India, on the other hand, declined from 2.27 million pounds in June 1958 to 1.95 million pounds in June this year, as did those from Indonesia from 1.66 million pounds to 1.45 million pounds.

Are You a Small-scale Industrialist?

This will interest you

To help small scale industries fulfil their role in the country's developing economy, the State Bank, in collaboration with other interested institutions, put into operation in 1956 a Pilot Scheme at a few selected centres to make available to them co-ordinated credit facilities.

The scheme has worked well and the Bank is now in a position to offer, at all its branches, liberalised facilities which were originally made available only at the Pilot centres.

If you require financial assistance, why not talk things over with the Agent of our nearest Branch? He will welcome the opportunity of assisting you and will be glad to forward your application, if need be, to the appropriate Governmental and other authorities.

WORLD OF BUSINESS

Cashew Exports

Cashewnut exports from West Coast ports have been good, and it seems they will continue to be good till the next November season arrives East Germany has been a fairly moderate buyer. Recently, the United States of America has also been on the market. Both of them began to place their orders presumably on the indication that only 150,000 cases of 50 lbs each would be left for disposal from Kerala ports. There are satisfactory inquiries, and export houses do not think there will be any difficulty in the disposal of this stock to the traditional markets.

It is only the United States which comes off and on into the cashew market. Recently, about 25,00 to 30,000 cases were exported to the USA and 15,000 to 20,000 cases to East Germany at around 48 cents a pound. America increased its buying price to 49 cents, but shippers are agreeable only at 50 cents a pound for prompt shipping. Some quantities were transacted for January-March 1960 shipment.

In the coming season, East Africa raw cashew nuts imported into India for processing may shrink, according to export houses. Processing plants in India need at least 200,000 tons annually to maintain the cashew export rate, with only about 55,000 tons being the domestic production. Crop failure is said to be responsible for East African export to India. This year's arrivals are not expected to be over 90,000 tons as against 110,000 tons last year.

*

Pepper Exports

Pepper exports continue to decline, according to the latest reports. The shrinkage occurred in the offtake by traditional buyers. June shipments were placed at 3,457 cwts (last year June's export was 4,052 cwts). This is the lowest for the season, and brings the total for November to June to 134,579 cwts, lower by 52,443 cwts than the shipment in the same period. Due to substantial offtake by East European countries, the May off-take was good at 10,556 cwts. In June, the same countries did not come in. Italy imported 1,176 cwts, as against 928 cwts in May, and the United States took 1,200 cwts in June as against 400 cwts in May,.

It would appear that America waited to lift this shipment in June, for, in March it imported 2,350 cwts, in April it reduced its offtake to 2,313 cwts and, in May, only 400 cwts. Singapore shipments to United States in March was 1,891 tons declining to 969.82 tons in June.

Lampong's new crop is expected to be lower between 16,000 and 18,000 tons against last season's 24,000 tons. Apparently, the United States are to go in for Indian pepper. At any rate, pepper traders believe so.

*

Sea Island Cotton

There has been a poor response to the sea island cotton scheme in Kerala and Mysore areas. Dr B. L. Sethi, Secretary of the Indian Central Cotton Committee, and Dr S. L. Sikka, Chairman of the Special Sea Island Cotton Sub-Committee, had travelled over both these areas to find out the progress. Out of a target of 20,000 acres this year for sea island cotton cultivation in Kerala and Mysore, only 5,000 acres could be put under plough to grow this variety. Out of these 4,000 acres were in Kerala and the rest in Mysore.

Both of them feel that, though this year's acreage is five times that of last year, it was by no means sufficient to meet even a fractional percentage of the national demand, and they regretted to find that the farmers and cultivators had not understood the benefits of sea island cotton. They said sea island cotton cultivation was a national problem and both the Central Government and the Indian Central Cotton Committee were bestowing their fullest attention for propagating the scheme among the rural area. India was now importing 300,000 bales of this type of cotton from foreign sources for fine and superfine yarn, and effective cultivation of this cotton could put a stop to that import. Advances in the form of seeds, manure, etc., were given to cultivators, and these would be collected only after harvest.

Mr T. V. Joseph, Secretary, Kerala Sea Island Cotton Plantations, has told these experts that cultivators had to face difficulties in the cultivation of this variety. In respect of cotton marketing, his association felt that the job should be entrusted to free trade so that it would be able to make spot payment, which a Government monopoly could not do.

*

Business Briefs

The Andhra Pradesh Government have represented to the Government of India the need to take steps for promotion of export of turmeric to East European Countries. And the State Trading Corporation and the Cashewnut and Pepper Export Promotion Council are taking efforts to export these Commodities to the same countries. Tumeric is a principal surplus product of the Andhra State, and both East and middle Eastern countries used to import from India. The Scientific and Agricultural Research Council is also exploring other commercial uses of turmeric.

WORLD OVERSEAS

US Notes

New York, August 18, 1959.

IT is just one month since the work stoppage in the steel industry began, and the production rate is now down to about 12 per cent or less of the nation's current annual capacity of nearly 148 million short tons (one short ton equal to about 0.91 metric tons). The pre-strike production rate was at 90 per cent of capacity and better.

Yet, as many experts had anticipated, this one-month shutdown of the bulk of the nation's steel-making facilities has so far interfered but little with the record performance of the American economy. And the feeling in many quarters is that it would take another month or so before the gradual increase in the number of forced production cutbacks by steel-consuming industries (a result of growing shortage of individual steel mill products) would begin to have a serious effect on the national economy.

Thus far, according to nationwide spot surveys, only a small number of steel-consuming operations appear to have suffered. Chiefly, affected have been some construction jobs, railroad car builders, and a few small steel users in other fields, who were not able to build up their inventories. Otherwise, in one major industry after another—including automobiles, household appliances, tin cans and machinery—the story is much the same: Inventories are sufficient to cover requirements for another 30 days, and possibly longer in some cases.

The fact that steel users accumulated a tidy 24 million short tons of inventory before the work stoppage began on July 15, accounts in large part for the continued high level of industrial production and employment in the face of the steel shutdown. The inventory gain came to eleven million short tons over the January 1, 1959, level—at the very time when more steel than ever was going into the production of goods. Helping to make this possible, of course, was the record outpouring of steel during the first half of this year, abeted by a record rate of steel imports from abroad.

The shutdown has been pulling these inventories down, and they are now estimated at about 19 million short tons. They are expected to be down to about 14 million short tons in another month—a level regarded by many as too low to permit the nation's industries to operate smoothly and efficiency at their current high rate. This is largely because at that inventory level a noticeable imbalance could develop in the types, shapes and sizes of mill products on hand.

The nation's warehouses, which usually take care of the smaller steel consumers ordering in less than carload lots, also have had a good supply of steel on hand—about 7 million short tons as of July 15. This supply has been drawn down by only 4,000,000 tons or so, largely because some deliveries were made after the work stoppage began. From now on, however, the inventory depletion could be swifter and within a month warehouses may encounter problems in meeting customers' needs.

Helping to maintain the supply of some important steel mill products is the fact that a number of key plants have remained in operation. Several makers of stainless steel, tool steel and alloy steel tubing, for instance, have not been affected by the shutdown.

Summer vacation schedules also have helped steel consumers to weather the shutdown. As a matter of fact, steel usage could be expected to drop off in several industries during the vacation period, steel strike or not.

All in all, it appears to most observers that the shutdown would have to last beyond mid-September before it began to create serious bottlenecks and supply problems in the nation's huge industrial complex. Once the strike is settled, however, the steel industry can look forward to another surge in its operations, as it tries to rebuild the inventories now being depleted and to meet the economy's strong demand for producer and consumer goods of all kinds.

*

Britain

Since the end of World War II, 3,245,676 houses and flats have been built in Britain—928,583 by private builders. Considerable progress has been made in clearing slums, according to an official report.

More than a quarter-million unfit houses have been demolished or closed, and 861,620 people moved to new homes.

At the end of April, 255,000 workers were employed in building and preparing sites. Another 13,711 building and civil engineering workers were employed by local authorities, and 151,000 engaged in repairs and maintenance, including conversions, extensions and alterations.

In June this year, 24,266 permanent houses were completed in Britain, compared with 23,063 in June, 1958.

The British firm of Stewarts & Lloyds Ltd. has received an order worth £2,000,000 to supply about 270 miles of 16-inch-diameter steel pipe for the construction of an oil pipeline in Assam, it was announced in London on August 7.

The order has been placed by the Burmah Oil Co. (Pipelines) Ltd., London, on behalf of Oil India Private Ltd. and with the agreement of the Government of India. The pipeline will run from the oilfields at Nahorkatiya to a refinery to be erected near Gauhati, Assam.

The pipe, totalling 32,000 tons, will be manufactured at the Clydesdale works of Stewarts & Lloyds Ltd. Delivery will be made to Calcutta at the rate of 4,000 to 5,000 tons a month, between September, 1959 and March, 1960.

WORLD OF BOOKS

WORLD ECONOMIC SURVEY 1958: United Nations Department of Economic and Social Affairs, New York. 1959. Price $ 3.00. Copies may be purchased from UN Sales Agents.

The recession which started toward the end of 1957 and continued for the best part of the next year was different in some significant respects from the two earlier set-backs of the post-war period. In the earlier slumps, the down-turn in economic activity was limited to the United States, though the repercussions were world wide, and the causes responsible for the decline could be identified in both cases. The mild recession of 1948-49 could be said to mark the transition from the forced pace of post-war economic reconstruction to normal peacetime growth. The termination of Korean hostilities, and the consequent reduction in military expenditures, associated investment and inventories led to the slump of 1953-54. But the latest recession, which was the most disturbing of the three, cannot be attributed to any extraneous factor. The reasons have to be sought in the working of the world economy. And experts are sharply divided in their diagnosis. Some hold that the gap between effective demand and productive capacity was the result of the operation of ordinary market forces, while others consider that it was the creation of restrictive anti-inflationary Government policies. The factual situation during the relevant period is presented in the UN Economic Survey 1958, which provided the background for the discussion of the world economic situation at the twenty-eighth session of the UN Economic and Social Council.

The recession of 1958, as mentioned earlier, was worldwide in scope. Unlike in the two earlier slumps, the decline in US economic activity was accompanied by a similar downtrend in other industrial countries. The recession also had a severe impact on the markets for primary products. The Survey estimates that, as a result of the decline in primary product prices together with a slow rise in prices of industrial products, the primary producing countries sustained a loss of over two billion dollars in real income and capacity to import. The prices of a number of primary products began to show signs of recovery in the second half of 1958, according to the Survey, but prospective developments in demand and supply seemed unlikely to induce a rapid rise in the commodity price level in 1959. Consequently, no great increase in the international trade of the primary exporting countries could be expected.

International commodity problems are dealt within Part I of the Survey, while Part II analyses current developments in world economy and also gives the outlook for 1959. One chapter in each part is devoted to the study of trends in the centrally planned economies. The Survey notes that the rate of expansion in foreign trade of all the centrally planned economies, except mainland China, slackened considerably in 1958. In the Soviet Union and eastern Europe, industrial production continued to expand in 1958 at about the same rate as in the previous year, while the outstanding development of the year was the unusually high rate of expansion reported in mainland China. On the other hand, the Survey points out that the new longterm plans of economic development envisages a less rapid rate of increase in most of the centrally planned economies and attributes the slowing down of the pace of expansion to the increasing difficulty of maintaining the previous rate of expansion in the industrial labour supply. One of the characteristics of the new long-term plans is a very significant narrowing of the margin between the rates of growth planned for industry and agriculture.

As regards industrially advanced private enterprise economies, the Survey reports that, in spite of partial recovery in the second half of 1958, average production was slightly lower than in 1957.. While the recovery continued in 1959, available indications were that under-utilisation of both equipment and labour was likely to continue to persist for some time.

In the context of the debate started by the Swatantra party in India, it is of interest to note that the Survey underlines the important contribution made by expansion of the activities of the public sector in overcoming the recession in both Canada and the United States. The support received from the public sector in the United States was not confined to Governmental action taken with the deliberate intention of arresting the downturn and promoting a higher level of activity.

While the conditions in Western Europe and Japan were similar to those in North America, as far as basic slackening of fixed investment was concerned, there was no general decline in economic activity in the former group of countries on a scale comparable with that in the United States up to the end of 1958.

The Survey highlights one interesting development in the international trade and payments of the industrial countries during 1958, which runs counter to the earlier experiences of recession in North America. This time, United States imports did not fall significantly, but those of Western Europe did. Western European exports fell much less in value than those of North America so that, while the United States foreign exchange reserves were depleted, "those of other industrial countries increased at a rate which was almost unprecedented."

The Survey expects that the present upturn in economic activity in the industrially advanced countries will continue, and that the rate of economic expansion during the next year or so will be limited only by the level of demand, but also points out that it is likely to be well below the level which the available labour and equipment resources permit.

Widespread fears of inflation in the industrially advanced countries are responsible, to some extent, for the failure to make full use of productive resources. The implications of the "inflation complex" for economic growth is considered in an interesting introductory chapter, which also examines the significance of the trends in these countries for commodity trade and international balance. Automatic stabilisers, it is pointed out, that is to say, progressive tax systems, social security, farm support programmes, etc, can only slow down the rate of decline; they cannot of themselves initiate an upturn. Economic activity will continue to decline over a relatively long period and by significant amounts, unless market forces or Governmental policies are actively at work to reverse the downward trend. The Survey reports that, "in the absence of adequate effective demand making for a sustained and cumulative upturn, vigorous Government intervention may be necessary not only in the field of monetary and credit policies, but also in the fiscal area." In this connexion, it is pointed out that fears of inflation act as powerful forces inhibiting effective Government action. The Survey also draws attention to the current tendency to "fear the worst with respect to inflation but to hope for the best as regards deflation." Policies in restraint of demand, says the Survey, have been given greater and greater emphasis in recent years, and it makes the point that "crawling deflation has also its dangers, no less than does creeping inflation." Nor is there any certainty that a check on output and employment would in fact eliminate creeping inflation.. On the contrary, the conclusion is drawn that, "in so far as rising prices stem, not from a global excess of demand for goods and services over total available capacity, but from mutually incompatible demands of labour and business for higher earnings, or from temporary bottlenecks in specific basic industries that are subject to fluctuating demand, policies which check the long-term rate of growth may tend to aggravate rather than to alleviate long-term inflationary pressures."

Maintenance of the rate of growth in industrially advanced countries will also help to alleviate the difficulties of primary producing countries caused by instability of commodity prices. While development of the internal economies of these countries is the only long-term solution of the imbalance, this cannot be achieved overnight the Survey poses the question whether the time has not come to consider measures to mitigate the impact of commodity instability, through international arrangements to assist underdeveloped countries to strengthen their national liquidity reserves, or through some form of international commodity insurance to provide partial compensation for fluctuations in foreign exchange earnings. It is also suggested that, if this problem is viewed not in a narrow context of price haggling between producer and consumer interests, but in the perspective of the need to place economic development on a more stable footing, "solutions could be found for many of today's apparent insolubles."

*

Apropos the Brecher book on Nehru, which was reviewed in Indian Finance last week, British reaction, in the form of an assessment by Guy Wint in the Observer, London, is intriguing. Mr Wint ends his book review as follows:

It is useful to play the game of "might have been." Nehru was summoned to office in his capacity as Congress president, but the presidency in the crucial year 1946 might well have gone to Vallabhai Patel. Patel was the nominee of all the provincial Congress committees, and only Gandhi's initiative prevented him from being chosen. What would have been India's history under a Patel Government? Or what would have happened in 1947 if Congress had thrown up no pre-eminent leader, as seems at the moment likely to happen after Nehru's eventual departure?

This has been the age of Nehru in Indian history; probably in future it will be looked back on as a golden age, a lucid interval between troubles. Since the Punjab massacres in 1947, there have ween no major civil broils: the country has progressed economically. Mr Brecher describes how the self-conscious and histrionic young man became the elder statesman carrying successfully the great burden of a traditionally explosive India; how the enemy of Western imperialism became a paladin of Western liberalism in Asia.

The claims for Nehru can be pitched too high. He is sometimes credited with acclimatising parliament in India. That goes too far. Congress has an overwhelming majority in the Central Parliament, and as long as Nehru controls the party he controls Parliament and the State. True, he has respected parliamentary forms. But he has used Parliament like a Moghul emperor's durbar; it is a way of keeping in touch with public opinion and of building prestige.

Mr Brecher might have ended by saying that in action Nehru carried out the reverse of what was preached by Gandhi, who promoted his career. The master of a controlised State; the fosterer of heavy industry; the neglecter (until recently) of the peasantry; the wielder of a sizeable army; the user of police; the power politician in his dealings with Pakistan; the annexer of Kashmir—this is an odd disciple of the Mahatma. Yet Gandhi, if he had lived, would probably have forgiven him and been satisfied.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind,
To blow on whom I please"
—As You Like It.

THE twelfth year is the beginning of the awkward age, and this is true as much of a nation as of the individual. It was Rose Macaulay, I think, who once exposed the popular humbug about the wonderful times one had in one's boyhood. The teens are intensely unhappy years when one has to learn suddenly to cope with a variety of complex demands for adjustments: between a body that grows at too fast a rate for the mind to catch up, or, what is more of a torture, vice versa; between vague immortal longings and very mortal means of satisfaction and very concrete sources of frustration. Few except the blissfully uncomplicated emerge unscathed from it all. During the period itself, everything will go dark, and the bottom will fall out of things when the grey mood siezes you. This is the basic explanation of the almost universal sense of weariness that has siezed the country in the last two or three years. After the first fine careless rapture (somewhat marred though it was by communal riots and Gandhiji's assassination) we had settled to a placid sense of well-being. Much remained to be done, but what was done seemed impressive enough: the consolidation and integration of the former princely states into the Indian Union, the forging of a new and progressive Constitution, general elections, a largely successful modest economic plan and the winning of a stature of a nation that mattered in international counsels—the list is impressive enough, I repeat. But this very list sounds somewhat overworked to ears blase with much recent disenchantment in much the same way a boy of thirteen may squirm when the garrulous aunt boasts of his having won the scripture prize when he was seven. Plainly, the "growing-up pains" are evident on all sides.

*

The last year, however, has witnessed the crystallisation of frustration into a political party. This is all to the good. For, when discontent merely hangs over as a miasma, with no particular sense of direction, the atmosphere is oppressive with menace and foreboding. By the very process of clarification of our difficulties, and the need to define our attitudes to them, we are a step nearer their solution. With even the Ganatantra Parishad professing Socialism, it was becoming a little difficult to separate the sheep from the goats. That there was much discontent among the public was evident enough, but it was inarticulate, politically inchoate. . Some part of this has now found a political mould. There is nothing mealy-mouthed about the Swatantra Party's anti-socialism. Indeed, some of its leaders are falling over backwards in their profession of nineteenth century liberalism. Mr K. M. Munshi, for instance, came out the other day with an enthusiasm for laissez faire that must have embarrassed many a free enterpriser with its full bloodedness. Clearly, despite many first rate brains and extensive political experience among its leadership, the Swatantra Party has to shed a good deal of its gaucherie. But, whether you agree with its programme and principles or not, there can be little doubt that it is a political force to reckon with.

*

That is why I am finding that Mr Nehru's reported reactions from time to time to it somewhat curious. Some allowance has, of course, to be made for the rough and tumble of party political warfare, but, even so, it seems that many of Mr Nehru's reactions to the Swatantra Party are sadly uncharacteristic. In a rather heavily ironic vein, he suggested some time ago that he himself took the Swatantra Party seriously, and it was Rajaji who was treating it as a joke. A prank on that scale would be pure Chesterton, with whom I doubt if Rajaji is acquainted. In any case, it has become abundantly clear that, in the last two months Rajaji's sense of the humourous did not extend to the creation of an all-India party as an alternative to the Congress. More recently, Mr Nehru allowed himself to be very sarcastic about leader writers; what was worse, he hinted that editorial support for the Swatantra Party was inspired by factors that had nothing to do with political analysis. Now, there are leader writers and leader writers, some more pompous and oracular than others. But the more level-headed among them realise that they do not necessarily reflect accurately popular or majority or even minority viewpoints. In fact, in the ultimate analysis, a leader reflects only the leader writer's (or, in unworthy cases, his employer's) views. Indeed, he would be poor editor who conceives his duty to be merely to reflect somebody else's views, even when that somebody else happens to be the majority. But, to say that editorial support is necessarily tied up with extra-editorial considerations is a poor kind of jibe. One is entitled to ask whether much of the editorial support that the Congress received in pre-Independence days, or receives even today, is by the same logic to be attributed to a similar inspiration.

*

I am labouring the point at some length because I am finding that, in the last few months, there is disposition on both sides to discard the decencies of debate in public controversies. I am all for a robustness in political debate, but I do believe that a more decorous exposure of the logical weakness of each other's case would add much to the understanding of the issues involved.

*

Apart from the emergence of the Swatantra Party, the country was convulsed by two important events in the twelth year of freedom. Events in Tibet put our foreign policy to the most severe test it has encountered in its short life, and, if the recent disclosures in the Lok Sabha are any indication, we are in for a long period of uneasy and unsatisfactory relationship with Communist China. Though our preoccupation with affairs at home was pressing enough, for the first time since Independence, the nation became uncomfortably aware of geopolitical problems. The problem of our territorial integrity used to impinge on our consciousness only in the context of Pakistan's warlike postures. Of these, mercifully, we have seen progressively less and less during the last year, despite minor incidents along the border. But the Tibetan events sharpened our awareness of the existence of this problem in other contexts also. These, we had complacently tended to ignore, even to the extent of considering preoccupation in others as merely obsessional. To say this is not to give assent to the view sedulously propagated in some quarters, that the time has come for abandoning the five principles of co-existence. The argument is that Pancha shila, like war, takes two to make it, and when one side flouts it, it is reduced to a farce. Attractive as the argument is, it is fallacious. For Pancha shila's truest test comes precisely in moments like the Tibetan crisis, when we define the true limits of our obligations. The People's Republic of China has been told that the first consideration in our Tibetan policy is our own territorial integrity, and any infringement thereof will put an end to all the other obligations, real or imaginary, under Pancha shila. But this does not mean that we should, except for over-riding human considerations, embroil ourselves in an affair that is strictly not ours. We may feel very strongly about the rights and wrongs of it, and we may even give open expression to any such feelings, as indeed we have done. But, beyond that, we cannot and need not go. Mr Jayaprakash Narain's lobbying for taking the question to the UN was of a piece with his equivocal politics of recent years. (I think it is time that Mr Narain makes up his mind whether he has any political interests. This sort of jack-in-the-

. . . the synthesis of elegance and utility

CALCUTTA MADRAS NEW DELHI

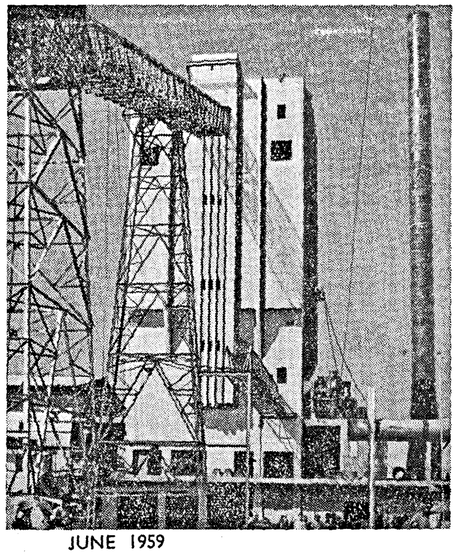
box act confuses everbody and makes a good deal of his utterances sound unctuous hypocrisy). In any case, that is a course of action that none with actual responsibilities of power can follow.

*

There can be little doubt that the Tibetan affair has profoundly affected our political attitude. It has given a severe jolt to our somewhat complacent profession of Pancha shila. But, far from showing it up as useless, it has in fact given it a new depth. Its geopolitical implications have gained a new dimension. It certainly is one aspect of our growing-up pains of which we have no reason to be ashamed. No adult nation could have dealt with it with greater competence.

*

The significance of the Kerala episode in our national life is, on the other hand, more difficult to assess. It is not so much the propriety of central intervention that is bothering me. As far as that is concerned. I have no doubt that it came neither a day too early nor a day too late; of the entire sorry business, none has come out better than the Central Government. But the actual events in Kerala have portentous significance for the rest of the country. Much that happened there ought not to have happened at all, and ought not to have been allowed to happen. One can only ask, as Mr Nehru did in perplexed wonder, how the Communists could have managed to isolate themselves so completely as they did in Kerala. For, they began well and with enormous goodwill even from people who were not Communists. Some at least of their earlier stances almost persuaded many to hope that Communism could after all adapt itself to a democratic climate. But something went wrong thereafter. Obviously, conventional solutions were quite unequal to the situation. I am far from suggesting that the conduct of the opposition in Kerala was blameless, or that disaffection was not exploited. But I do believe that, once the situation developed the way it did, no other solution, besides central intervention, was available



*

What is troubling me is that the episode has set precedents for a whole host of politically indefensible acts. Defiance of law, charge sheets and counter charge sheets, palpable waning of the influence of all-India leadership, and crucial surrender to local pressure, the most incredible temporary political alliances are the sort of thing that is only too likely to be imitated. Perceptive journal that it is, The New Statesman has already sensed what may prove to be an explosive precedent. A recent note in it says that, already, "the Communist leader of West Bengal is pointing the moral and asking why Communists all over India should not by similar agitation, turn out Congress governments which, in more than one state, are no more efficient, honest or popular than Mr Namboodiripad's." Ironically, almost the only defensible action has been one that is nominally an extreme democratic step, the abrogation of the Constitution.

*

As an explanation, the theory of "mass upsurge" may be acceptable. But it is necessary to realise that a democracy should control mass upsurge, and not allow itself to be overwhelmed by it. In other words, it is the duty of leadership to see that mass aspiration does not, either by undue thwarting or undue pandering, degenerate into anarchy. "The blunt monster with uncounted heads" is democracy without responsible leadership. In any event, it would be necessary for leaders of all parties to evolve a code of self-discipline. Such a code must include an obligation to lead and not be led. The present may not be the most suitable moment to evolve such a code, since the Communists are still smouldering with resentment. I also fear that the early elections promised in Kerala are not going to allow time for passions to cool. But, sooner or later, it must be attempted, and the initiative for this may, with propriety, come from the Congress.

BOMBAY REVIEW

Economics of Nuclear Power

THE Atomic Energy Commission have done well in removing the suspense regarding the siting of India's first atomic power station. The authoritative information is now vouchsafed that the plant will be located on the west coast somewhere between Ahmedabad and Bombay. In a press communique, the Commission have explained that the question of selecting a suitable location is a very complicated matter requiring the consideration of a number of related matters. "The present practice in the world is to locate large nuclear power stations in sparsely populated areas, and not in or near large cities. The Station will not, therefore, be located either in or near Ahmedabad or Bombay. The siting of an atomic plant is a very complicated matter and has to be determined on the basis of many technical criteria, which are much more stringent than for conventional stations."

This unambiguous statement should satisfy those who, the moment they have come to know that the first nuclear power plant would be located in the State of Bombay, had started staking the claim of this or any other city. It would appear that, having come to the erroneous conclusion that Bombay would knock away the honour of being the first city with an atomic power plant, a section of people in Ahmedabad had started agitating for the conferring of this rare honour on the city of Ahmedabad. One is reminded of the demands and counter-demands from different States in the north eastern part of the country when it was announced that an oil refinery based on the new oil discovery at Nahorkatia in Assam would be set in the public sector. As a matter of fact similar claims from the States have become a common feature in independent India ever since the public sector has come to take an active interest in industrialisation. This is nothing to be cavilled at. Though the public sector enterprises—and, for that matter, those in the private sector—also will benefit the country as a whole, the anxiety of the people to have adequate share for their regions as regards siting of new undertakings is understandable. Apart from increased employment opportunities for local people, the existence of a big enterprise is bound to be of immediate economic advantage to the region concerned. But such demands should be tempered with the knowledge that the siting of a plant or factory depends on certain essential prerequisites. In the case of the atomic power plants, at least in the present stage of development in our country, one of the essential prerequisites is the prior existence of a large grid into which the power from the atomic plant can be fed. Such a condition is available only in the Bombay State. Hence, the decision to site India's first atomic plant here.

The long press communique issued by the Commission last week, besides dispelling prevailing misconceptions as regards the location of an atomic power plant, explains the decision to put up a plant in the country. However, the decision to locate it in Bombay may not be received with enthusiasm in the other parts of the country which are also considered suitable for setting up atomic power stations. Some time ago, it was rumoured that the first plant would be set up in the southern region in view of its large deficiency in energy resources. The explanation now vouchsafed for the choice having fallen on Bombay will, however, be found quite satisfactory.

The detailed information contained in the communique will be of great help to the layman in getting a fairly intelligible idea about atomic power plants vis-a-vis conventional methods. The case for a beginning to be made in India in the direction of nuclear power production is set out in a lucid manner.

The need for advancing arguments in favour of the establishment of nuclear power stations in India may not be appreciated by such of those who believe that progress is synonymous with the adoption of the latest technological devices. But there are people who equally firmly believe that the economics of nuclear power production are not yet clear enough to commend the adoption of the new method by an underdeveloped country where external resources are scarce.

Coal, water power and oil are in extensive use all over the world for the production of electricity. The conventional methods are timetested and a wealth of information is available as to cost of production, etc. Protagonists of continuance of conventional methods for all times say that atomic power plants are not required in our country. India is rich in coal and water power. As regards oil also, though we are far from self sufficient, there are now encouraging signs that extensive deposits may be discovered sooner or later. Our resources of coal and hydropower will be sufficient to give us our requirements of electricity for all time. So, if the layman also goes away with such an impression, he can be hardly blamed. For, our coal reserves are estimated in astronomical figures and it is further noted that our total reserve of hydro electric power is between 35 and 40 million kilowatts.

The view that we in India soft-pedal the move to embark upon a programme of nuclear power production seems to be based on three main arguments. Firstly with our immense resources of coal and hydro power, there is no urgency to think about any alternative source of supply. Secondly, nuclear power plants are prohibitively costly. Lastly, the wastes that will be thrown out of the atomic plants will be dangerous to health.

The communique has shown that none of these can stand close scrutiny. In the first place, our resources are not plentiful considered from a long term view point. Compared to the UK or USA, the total availability of coal in India is quite small indeed. The position will become clear if it is noted that it has been estimated that, in case we depend on coal alone for the production of electricity,—our electricity requirements are estimated at 50 million kilowatts by 1986—we will be exhausting our entire coal supply in about 200 years or so. It is necessary, therefore, to make people realise the fact that our coal resources are really not adequate to meet our growing requirements for all time. There is also another point to consider. Even at as short a distance ahead as 1986, there is expected a sizable gap between demand and supply of electricity. Thermal power cannot account for more than 10 million kilowatts while something like 30 million kilowatts may be available from hydro power. This will leave a balance of 10 million kilowatts. Atomic power is the answer.

As for cost of production at the atomic power plant, it is pointed out that it will compare quite favourably with those of the conventional methods. The Atomic Energy Commission put the cost at around Rs 1,700 per kilowatt. This compares with the cost of Rs 1,600 per kilowatt in the thermal plant at a remote place. Compared to hydro electric power, atomic electric power will work out quite cheaply. According to the figures quoted by the Commission, the cost per kilowatt in some of our new hydro-electric projects is as high as Rs 3,579.

The popular fear that atomic power plants will throw out dangerous wastes that will endanger human health is also set at rest. "A nuclear power station does not directly produce nuclear waste, and no high level waste is discharged into the sea even from fuel processing plants. All discharge of radio activity into the sea or the air is very strictly controlled by international practice, and is so low as not to present a hazard either to man or marine life."

The atomic age is on and there is no going back. But the question still remains unanswered: whether man is going to use this tremendous power to destroy himself or utilise it to the good of mankind as a whole. The answer, as far as we in India are concerned, is quite clear. India will never figure as an atom bomb user. Its interest is solely confined to the use of atomic power for peaceful purposes. And, as the Atomic Energy Commission have put it, we are not going to miss the bus of progress a second time. Atomic power is going to be the key to new horizons. Even from a purely pragmatic point of view, the establishment of atomic power plants is a necessity in India. It is now clear that, in cost also, atomic power plants are not going to be dearer than conventional methods.

S. E. RLY TENDERS

Sealed tenders are invited for (1) Tender No. CON/COS/65/P&M/518/B|59 for supply of 2 Nos. pump capacity 15,000 G.P.H. with suitable diesel engine as per specification to be obtained from the tender schedule. Earnest money is Rs 480/-. Tender will be opened on 18-9-59 at 12 noon.

(ii) Tender No. CON/COS/66/F2/59 for supply of 16,000 Nos. pulley wire 1 way flat as per Drg. No. SA-3050. Earnest money is Rs 220/-. Tenders will be opened on 23-9-59 at 12 noon.

Tender forms are obtainable from the office of the undermentioned (Construction Section), Garden Reach Calcutta-23 on remittance of Rs 2/- (not refundable) per copy per tender by money order to him direct in the case of outside firms and on production of cash receipt from this Rly's Cheif Cashier, Garden Reach, Calcutta-23 by local firms.

Tenders should accompany the receipts for depositing earnest money as stated above with this Rly's Chief Casheir without which the tenders are liable to be rejected. Approved contractors having a permanent deposit of Rs 1000/- with the undermentioned are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

BOMBAY REVIEW

Cotton Textile Exports

Perhaps the difficulties which the cotton textile industry all over the world is encountering are inherent in the changed political situation, especially in the near and far eastern countries, after World War II. Apart from the fact that a buyer's market has come into being, the right of self determination of their affairs gained by many underdeveloped countries has evoked a strong desire in them for self-sufficiency in the basic necessities in the first instance. The result of the latter has been the establishment of cotton textile mills in regions which had been solely dependent on imports of cloth for meeting the requirements of their population. While the two factors noted above are common to all exporters of cotton textiles, the Indian industry has the additional handicap of being obliged to carry on with outmoded machinery. The cumulative effect of these adverse developments manifested itself in the declining trend in our cotton textile exports when the industry had further to bear the imposition of punitive taxation and a heavy excise duty.

Not before a crisis of no small magnitude threatened to overtake the industry did Government awake to the realities of the cotton textile situation. The sorry plight of the industry also served to remind the powers that be that all was not well with it. The expert probe that followed revealed that the long term prosperity of the industry depended on modernisation. In the meantime, assistance in a number of directions was found necessary.

The crisis in the cotton textile industry is of serious consequence to us because the success of our planned progress has come to be closely connected with increased export earnings. Cotton textiles are one of the major items in our export list and any sizable fall in their earnings cannot be expected to go unheeded by a foreign exchange hungry Government. Lessening of the financial burden in the shape a series of reductions in excise duty and several export incentive measures are the direct outcome of the realisation that the industry needs immediate help.

This special interest evinced by Government seems to have been richly repaid in a short time. The remarkable recovery recorded in exports from the close of last year has revived the hope that cotton textile exports may be able to contribute to our foreign exchange earnings in the current year much more than they did last year. Cotton textile exports have, in the first half of 1959, amounted to 309 million yards as against 278 million yards in the second half of last year. Speaking at the annual meeting of the Cotton Textile Export Promotion Council in Bombay last week, Mr Neville N. Wadia, Chairman, said that, since bookings have been heavier than during the first half, it is hoped that, in the second half of the year, exports may be able to reach a normal level of 400 million yards. It is anticipated that exports during 1959 may amount to about 750 million yards. This means that there will be a notable improvement during the current year. For, exports during 1958 amounted to only 587 million yards as compared to 840 million yards in 1957.

The rising trend noticeable now should not, however, make us complacent. Judging from the tremendous technological developments that are still being incorporated in the textile industries of the advanced countries of the West, there can be no respite for our cotton textile industry. Completion of modernisation will only be the first step toward its rehabilitation. But there is no reason why we should not try to maximise exports of cotton textiles. The experience on the export front during the past 10 or 12 months has shown that, even in the present stiff competitive world markets, our cotton textiles can push their way in. It would appear that exports still largely comprise coarse and medium goods. The export of fine and superfine goods is approximately four per cent only of the total exports. Moreover, nearly three quarters of the mills are yet to show active interest in exports. Statistics reveal that, out of about 470 cotton textile mills in the country, only 125 are taking interest in the export trade. There is, therefore, much scope for increasing our exports of fine and superfine cotton textiles. There are now new incentives for export of fine and superfine goods. One may not be far wrong if one says that the cotton textile industry as a whole is yet to become export minded. May be, some mills, by dint of unceasing effort over a long period are better placed in the export markets. But for those mills which have yet to make their debut in the export field, there is now Government's newfound interest in maximising exports to make up for their lack of experience. The improvement in exports currently noticeable coupled with the knowledge that a large section of the industry is not participating in the export drive, should serve to inspire the hope that the target of 1,000 million yards for export can still be attained.

SOUTH EASTERN RAILWAY.

CANCELLATION OF TENDER NOTICE.

The Tender No. CON/COS/61/GB5/59 for supply of 50 Cwts. Paint outside white oil paste, specification IS-97/1950, due to be opened on 4.9.59 at 12 noon a notice for which appeared in this paper recently, is hereby cancelled.

GATEWAY NOTES

Composite Sales Tax

The new Sales Tax Bill now before the Bombay Legislative Assembly will be welcomed by the generality of traders and businessmen in as much as it will obviate the necessity to conform to the different laws obtaining in this regard in the different parts of the State. States Reorganisation has added chunks of territories from a number of contiguous regions and, consequently, integration of the various laws into a unified system has been an urgent problem. The matter could brook no delay as the development works incorporated in the Five Year Plans could not efficiently be implemented with the administration being obliged to follow divergent laws. The unification of laws in the different spheres of administration in the component parts of the State had to be undertaken even though it meant a slowing down of the implementation of the Plan projects. The administration of Sales Tax has also similarly called for uniformity. For, there are now five sets of sales tax in the different regions of the State.

Under the new Sales Tax law, a composite sales tax will be levied throughout the State. It comprises a single point levy at the first stage of sale on 75 classes of goods, a similar levy but at a later stage of sale on 17 other categories of goods and a two-point levy on the rest of the goods barring 47 classes of goods the sales of which are altogether exempt from the tax.

Explaining the provisions of the Bill, Dr Jivaraj Mehta, Finance Minister, has pointed out that, though, by its very nature, sales tax will affect the consumer, the Bombay system of sales tax has been so devised that, by and large, the common necessities which the masses have to purchase are either exempted from the tax completely or the incidence of tax is kept at a low level. It would appear that the higher rates will mostly become applicable to articles and goods consumed by the high income groups. There are basic differences in the sales tax laws now in force. Vast differences are also to be seen in the matter of the minimum limits of turnover attracting liability to tax, the lists of exemption of goods from the tax and the rates of tax leviable on various classes of goods. Dr Mehta has pointed out that steps have been taken to see that the unified system ensures simplification in the administration of the law to the maximum extent feasible. As the new sales tax laws are based on the recommendations of the Sales Tax Enquiry Committee appointed by the Government in 1957, it may be assumed that familiar difficulties experienced by traders have been eliminated. But the new Bill as published does not appear to fulfil expectations in regard to simplicity. It would appear that even small traders will not be spared elaborate book-keeping as different rates and different levels of incidence are prescribed for articles generally sold under one roof.

*

Progress of Bombay's 2nd Plan

Judging from the accelerated implementation of plan schemes during the third year of the Second Five Year Plan, it appears to be a safe guess that Bombay will achieve the plan targets. Such confidence stems from the most significant fact that initial difficulties arising out of the reorganisation of States have been overcome. It may be recalled that, during the first two years of the current Plan period, the Administration was preoccupied with unification of the different laws obtaining in various regions of the State. Apart from this major drawback, the initial years were spent mostly in taking preparatory steps, and the planners in the Bombay State had also to face the formidable task of integrating the plans formulated by the various constituent units now forming part of the new Bombay State.

The fact that the Administration has, for the past one or two years, become more attuned to the implementation of plan projects is borne out by the increased budgetary provisions. As against the provision made for the first, second and third years of the Plan, namely, Rs 66.20 crores, Rs 73.43 crores and Rs 76.77 crores, the provision made for the year 1959-60 is Rs 90.13 crores. A salient feature of the programme for the remaining two years is the emphasis placed on the expeditious completion of the schemes which were in progress during the first three years. This is done with a view to deriving the full benefits of the schemes during the current plan period itself. Such a criterion can be applied with profit in regard to irrigation and power schemes. Hence priority is given in the programme for 1959-60 to the schemes for utilisation of the benefits of irrigation and power from completed works.

GATEWAY MARKETS

Bullion Market in Limelight

THE bullion market is once again in the limelight, with prices recording a sharp rise of about Rs 4 during the past fortnight. The market has been bullishly inclined on technical grounds as well as because floating stocks are on the low side.

In the case of Gold, the spurt is attributed to nervous short-covering and sustained support by spot interests, inspired by the recent improvement in the spot position. Bears, who had sold in anticipation of smuggled arrivals, are now forced to cover. Cessation of smuggled arrivals from the Persian Gulf, following the introduction of special Rupee Notes and the depleted stock position, have provided additional encouragement. The rise in prices has been accompanied by other signs of a tightening bull grip.

The latest bullish inspiration has been provided by a sizable demand for ready gold from South India; but operators are cautious at higher levels since the seasonal revival of buying interest on a countrywide scale is still to manifest itself. Arrivals last week amounted to 5,000 tolas against an offtake of 3,500 tolas. Ready rates moved between Rs 120.75 and Rs 121.25, to close finally at Rs 120.97. Sovereign remained firm at Rs 78.25.

The Silver section also staged a spectacular recovery after a steadier spell early in the week. Although the spot performance is far from satisfactory, bulls have managed to push up the levels, while bears have to cover, resulting in prices rising sharply. Buyers are, however, inclined to book profits at bulges in view of the discouraging spot position, as revealed by a discount over the Shravan contract. Arrivals amounted to 18 bars against an offtake of 11 bars. Ready rates moved between Rs 201.81 and Rs 202.56, to finish the week at Rs 202.19.

*

Oils & Oilseeds

A smart rise in Groundnut provided the main feature of trading in the Bombay Oilseeds market. The overall tendency in castorseed was steadier, while Linseed and Cottonseed hovered within a narrow range.

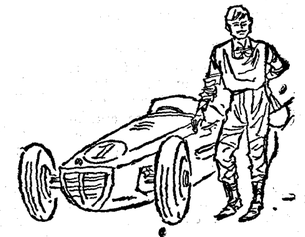
Trading in Groundnut reflected a marked revival of confidence after early hesitancy. Reports, that the production in certain districts of Saurashtra had suffered on account of the recent heavy downpour, accelerated the upward trend in prices. Sentiment was further aided by a sustained overseas demand for groundnut Oilcake and meal. Shippers reported a brisk business at progressively rising prices, the commitments in oilcake being placed at about 1,500 tons and those in meal at about 5,000 tons. Groundnut Bold is quoted at Rs 39.12 and Groundnut Oil a tRs 20.25.

The Castorseed section revealed a measure of hesitancy. The absence of demand from the USA induced some nervousness. But the market derived some encouragement from reports that the crushers had made substantial purchase of ready castorseed in order to meet their commitments in castor oil. Castor ready is quoted at Rs 30.94 and Castor Oil, commercial quality, at Rs 15.60.

In the Linseed section, price movements were confined to a narrow range as transactions were few and far between. The overall trend was, however, upward in view of the brisk overseas demand for linseed oilcake. Linseed Ready is quoted at Rs 32.75 and Linseed Oil at Rs 16.31.

BOMBAY REVIEW

Yarn



Conditions in the Yarn market remainer generally dull and quiet. The progress of the export trade in Rayon textiles, under the new export promotion scheme, has been far from satisfactory. The provision allowing export incentive only to the mills had acted as a major damper to fresh business. The insistence that the manufacturers should themselves utilise import licences for yarn instead of selling them, has also adversely affected the trade.

*

Non-Ferrous Metals

Export Zinc, which has shot up by about Rs 5 to Rs 109 per cwt, conditions in other sections of the Bombay Non-Ferrous Metal market remained generally steady. In the case of zinc, there has been a virtual squeeze, with floating stocks reported to have been cornered by interested parties. The Government's delay in the annuouncement of the distribution system for imported zinc has caused serious concern to traders. Many have received the imported material; but are unable to sell it in the absence of a directive from the Government of India.

Copper Scrap has been maintained at Rs 226 per cwt, although the Indian Copper Corporation's current month brass sheet allocations are much higher than the last month. There is nothing spectacular to report in Lead, which is maintained at Rs 82 per cwt. Tin is quiet at Rs 146 per quarter, thanks to a comfortable stock position.

BOMBAY REVIEW

Production of Cloth and Yarn

ACCORDING to the latest official estimates, the production of mill-made cotton textiles and cotton yarn has recorded a substantial improvement. The provisional figures of cloth output during July are placed higher at 424 million yards against the actual production of 405 million yards in the previous month. Cotton yarn output has also risen from 136 million pounds in June to 146 million pounds in July.

With the increase in output, the stock of cloth with the mills has also risen from 3.99 lakh bales at the end of June to 4.12 lakh bales at the end of last month. The increase has been mainly in the quantity of cloth sold but not lifted, which stood, at the end of July, at 2.05 lakh bales as compared with 1.95 lakh bales at the end of June. Stocks of unsold cloth with the mills have risen, during this period, by only 3,000 bales to 2.87 lakh bales. The increase in the stock is, however, considered seasonal. It is believed that the quantity of cloth sold but not lifted will decline in the next few weeks with the expected broadening in domestic demand.

Total production, during the first six months of the current year, amounts to 841 million pounds of yarn and 2,445 million yards of cloth. The corresponding figures for the first six months of 1957 and 1958 were 891 and 819 million pounds of yarn and 2,709 and 2,451 million yards of cloth respectively.

Meanwhile, conditions in the Bombay Cloth market continue to remain active. Though the offtake in the domestic section has not assumed any large proportions, it is widely felt in trade circles that substantial business with upcountry centres will be possible in the coming weeks.

On the export front, conditions are steady to firm. The usuual bookings have been done for Singapore and Bangkok. Burma has evinced interest in printed voiles and coatings according to requirements. The UK has accounted for grey shirtings of the usual widths; but no bulk business is possible with that country due to the wide disparity in prices. There has been a fairly good demand from Sudan for ready goods of the usual qualities and also for goods which can be shipped before 15th October.

×

FUTURES MARKET:

Prices in the Cotton futures market have continued to display a firmer tendency. Many operators in the maturing August contract are compelled to cover their sales as they are unable to give delivery of cotton. Consequently, the August contract shot up by Rs 14 to Rs 724 per candy. The March 1960 contract has also displayed fresh strength, to go up to Rs 683.50. Unfavourable weather reports and fears of damage to the new crop have induced the operators to lend fresh support to the market.

×

SPOT MARKET:

The Spot market has continued to be active with good spinner demand for domestic styles. Active conditions in the textile trade, anticipated delay in the arrivals of the new cotton crop and relative scarcity of desirable varieties are responsible for the sustained mill demand for cotton.

The noteworthy feature of the market is that the demand for short-staple varieties has broadened and their prices have gone up by about Rs 25 per candy. Wagad, Kala Gin and Kalyan are reported to have been bought at advancing prices by spinners in the South, as they have to fulfill large export orders of low count yarns and of coarse and medium varieties of cloth. They have found that the short-staple varieties of cotton will be most suitable to them for the production of lower counts of yarn and coarse cloth.

Active conditions have continued to prevail on the export front, as overseas enquiries for the new crop Bengal Deshi have been fast increasing. Shippers have put through fresh business for about 3,000 bales for the December shipment at around 17¼d per pound, subject to export licences. The total business in the new crop Bengal Deshi has, so far, exceeded 20,000 bales.

There are, however, indications that about 50 per cent of the cotton export quota for the current season will remain unutilised. The last date for shipment is August 31; but registered sales so far are reported to have not exceeded 1.5 lakh bales. The quota for Bengal Deshi has been fully utilised; but there has been practically no demand for cotton below 3/4" stapling. Rumours are current that the Government of India will announce an export quota of 75,000 bales of Bengal Deshi by the end of the month. There is, however, no demand for other exportable growths.

While the announcement of fresh import quota of 1.40 lakh bales is eagerly awaited, shippers have covered a good volume of Sudan cotton, particularly Gezira "S" grades, subject to licences. There is no interest in the current crop stocks of Egyptians, as Sudans have continued to be competitive price-wise. No interest is shown in other growths.

WORLD OF COTTON

NEW YORK MARKET:

Trading on the New York cotton futures market was dull and featureless. A slight strength in nearby October reflected a further reduction in the certificate cotton stocks.. Sales were estimated at 10,000 bales.

The Crop Reporting Board of the United States Department of Agriculture, in its second crop report, estimates production of the 1959 crop, as of August 1, at 15,815,000 bales (of 500 lbs each). This compares with last season's final output of 11,512,000 bales. Yield per acre is put at 474 pounds, which compares with last season's final yield of 466 lbs.. Ginnings, prior to August 1, are placed at 151,000 running bales as compared with 213,000 bales at this time last year. The next crop report will be issued on the 8th September.

Increased consumption of raw cotton is generally expected in view of the improvement in world trade in finished textiles during the past few months; but it is unlikely that the rise of 3 million bales in the anticipated output will be fully absorbed. Growers in many parts of the world are now producing raw cotton in direct competition with US. In the UK, on the other hand, visible supplies are at their lowest for nearly three years.

×

LIVERPOOL COTTON MARKET:

After a quiet start, prices of cotton futures on the Liverpool market developed a slightly hardening tendency on some trade support. Absence of afftake contributed to some easiness in later dealings, with the distant mixed contract coming under selling pressure. The Sudan contract ruled quiet and nominally unchanged in the absence of fresh developments.

Letter to the Editor

Mr V. B. Kulkarni, Publicity Officer, The Millowners' Association, Bombay, writes:

Sir,

Your editorial entitled "The Emerging Competitors to Mill Cloth", published in your esteemed weekly of 1st August, 1959, makes interesting reading. What, however, detracts somewhat from your comments is the assumption that the continued existence of the handlooms is not to the liking of the mill sector. There is indeed no basis for your arriving at this conclusion even by implication. To the best of our knowledge, no responsible organisation belonging to the mill industry has made the impracticable suggestion for the dissolution of the handloom sector. Apart from the fact that the Government's patronage to the handlooms claims the magnitude of State Policy, the need for their continued existence will remain until the problem of unemployment is effectively solved.

Your views that there is no need for improving the techniques of production by the handloom industry are most surprising. They are in ill accord with the investigations and conclusions reached by a number of expert bodies on the subject. The recommendations of the Ford Foundation's team of experts for rehabilitating the small-scale industries of India are well-known. Even more relevant to the present issue are the observations of the Textile Enquiry Committee, otherwise known as the Kanungo Committee, which reported in September, 1954. In para 81 of its report, the Committee observes:

"After very careful consideration, the Committee has come to what, in its opinion, is an irresistible conclusion, namely, that at a pace at which there will not be too drastic a disturbance of the economic and social fabric, the handloom industry has to be made technically more efficient by converting the handloom either into a semi-automatic loom and/or into a powerloom, as power becomes available more generally in the areas where the handloom industry is widely prevalent."

Again, it says in para 88:

"Now, in order to maintain employment and in order to save on our demands for capital, the Committee suggests that this extra production should be achieved through the decentralised form of the textile industry. Nevertheless, the Committee feels that, in the interests of general progress and in the interests of the consumer, the efficiency of the decentralised industry must also be raised to as high a level as possible. An improved type of the so-called semi-automatic handloom will produce 20 to 24 yards a day (of 8 hours) and a powerloom will produce 30 or more yards per shift. An extra 2.13 lac improved handloom/powerlooms working one shift a day (and producing an average of 25 yds. a day) for 300 days a year will be required to manufacture the extra 1,600 million yards."

In the light of these facts, your editorial has evidently barked up the wrong tree.

Yours faithfully,
V. B. Kulkarni,
PUBLICITY OFFICER.

26 AUG 1959 PUBLIC DEPARTMENT

OLYMPUS

The Economics of Atomic Power

THE Atomic Energy Commission's press communique, circulated by the Press Information Bureau over the week-end here, may or may not put an early end to the two-year old controversy over the comparative costs and advantages of electricity generation by thermal, hydel and atomic stations, more especially over the costs of thermal and atomic power. It must, however, be said to the credit of the Commission that they have made out, by and large, a convincing case for the priority development of a currently supplemental but not substitutional source of power. If it is recognised, as it can easily be, that, in the demographic and economic circumstances of this country, there is considerable scope for the coexistence of the traditional and the modern, the conventional and the new, the inefficient and the efficient, and the costlier and the cheaper, there is no reason why thermal and atomic stations should not co-exist and augment the power potential. The Commission have, therefore, done well to go beyond the immediate question of location of the projected first atomic power station of 250,000 kilowatts capacity between Ahmedabad and Bombay and to discuss the economics of atomic power as such. That, even in respect of the immediate question, the Commission have rightly sought to set at rest the fears entertained in some quarters is borne out by the following passage in the press communique:

"Due to the large size of atomic power stations, their economical operation requires them to be connected into a grid system, which is already fed by larger amounts of power from conventional sources, so that the capacity of the power station is only a fraction of the total capacity fed into the grid. This is required because the fuel costs of nuclear power stations are much lower than the fuel costs of conventional thermal stations at places remote from the coalfields, and such an arrangement would enable the most economic distribution of the load between the various sources of power.... It is anticipated that, by the time the nuclear power station comes into operation in 1964-65, the present Ahmedabad grid will have an installed capacity of 200,000 kilowatts of conventional power, while the Bombay grid will have a total installed capacity of about 900,000 kilowatts of conventional power."

It is clear from the above passage that atomic power is thought of, for the time being at any rate, only as a supplementary source. How good it may be as a supplemental source would, however, have to be discussed without having at the back of one's mind the vested interest of producers or distributors in thermal power or the vested interest of irrigation or electric engineers in hydel power. That neither Mr Nehru nor Mr H. J. Bhabha has acquired any vested interest in atomic power is obvious, for, they are merely fighting for the new, without fighting against the conventional, from the long-term national point of view.

That the national interests may be best served by laying the foundation even now, irrespective of the cost factor, for the seady development of what will only be a supplemental source of power for a pretty long time in the none-too-rosy state of the country's fuel resources, is well established by Mr Bhabha through the column of the latest number of **Bhagirath**, the official organ of the Central Water and Power Commission. The Planning Commission's estimates of 50 mill. kW by 1986, says Mr Bhabha, will correspond to an installed capacity of only 0.1 kW per head by that year as compared to the present per capita installed capacity of 0.7 kW in the United States. As against the requirement of 50 mill. kW, Mr Bhabha estimates that only 30 mill. kW of installed hydro-electric capacity (out of the country's total reserves of hydel power estimated at anything between 35 and 40 mill. kW) could be made available in a relatively less expensive manner by 1986, leaving a minimum of 20 mill. kW to be found from other sources.

It is further estimated that about 10 million kW of installed capacity in thermal stations can be made available by 1986, requring an annual consumption of about 36 million tons of coal out of the then total coal demand of 400 million tons for all purposes; but this can be done, if at all, only in a relatively more expensive manner which will be an inevitable concomitant of the expected greater cost of coal production from the 1970's onwards. In this situation, the estimated gap in power requirement will have to be covered by stepping up the installed capacity of nuclear power stations from one million kW in 1966 to about 10 mill. kW by 1986. Here, a rosier picture than in respect of coal unfolds itself, because the known reserves of uranium and thorium in India are equivalent in energy value to more than 30 times its proved coal reserves which, too, are only a fourth of those of the United Kingdom where a big and far-sighted atomic power programme is under way. Even the Soviet Union, whose coal reserves are 30 times those of India, is going in for atomic power development on a large scale.

The need for and the potential exploitation of a supplemental source in atomic power are thus not in doubt. What is equally necessary to have is a clearer picture of comparative costs of installed capacity in hydel, thermal and atomic stations. As the cost factor is not irrelevant from the point of view of larger national interests, the Atomic Energy Commission have done well to present a fair picture of comparative costs. The estimate of capital cost per kilowatt of atomic power is Rs 1,700 while it is around Rs 900 in the case of thermal power. But about Rs 500 would have to be added to the latter figure so as to take into account the additional investment on account of mining and transport if high grade coal is used and the thermal station is located at a distance of some 700 miles from the coalfields. Here, the Commission's contention is that, when a private party puts up a power station, it is only concerned with the cost of that station without taking into account the investments by other parties in the mining, the processing and the transporting of the additional coal required for the thermal station. It is calculated, in this connection, that a 250,000 kW thermal station would require the production of an additional 900,000 tons of high grade coal per annum and its transport from the coalfields to the site of that station, whereas it will only require the supply and transport of a hundred tons of uranium per annum to an atomic power station of the same capacity.

It may be broadly taken that the capital cost of new thermal stations in regions such as North-Western, Western and Southern India, which are remote from the coalfields, would be about Rs 1,400 per kilowatt as compared to Rs 1,700 per kilowatt in the case of atomic power. These figures of capital cost may be compared with the average capital cost (estimated by Mr Kanwar Sain of the Central Water and Power Commission) of Rs 2,000 per kilowatt of hydel power. Actually, in the case of hydel projects, namely, Rihand, Koyna, Kundah I Kundah II and Periyar I, the capital costs per kilowatt are respectively Rs 2,240, Rs 1,837, Rs 3,579, Rs 2,824 and Rs 2,006.

As regards the cost of electricity from the atomic power station, it is estimated at between 3.9 and 4.5 nP per unit which will be about the same as the cost of power from new thermal stations in Western and Southern India. While fuel and operating costs for the atomic power stations will be anything between 1.3 and 2 nP. per unit of electricity, the corresponding costs for a thermal station in an area remote from the coalfields are 2.6 nP per unit. Thus, while the capital cost per kilowatt of installed capacity may be somewhat more in the case of a nuclear power station, the cost of electricity to the consumer will be comparable in either case. Of course, thermal power will continue to be distinctly cheaper than atomic power in respect of both capital cost and cost to the consumer in regions nearer the coalfields.

LATEST AND UP-TO-DATE

THE LAW OF INCOME-TAX IN INDIA

BY

V. S. SUNDARAM

The eighth Edition of this comprehensive treatise on income-tax brings it up-to-date in the light of statutory changes and recent rulings of Court, of both of which there has been an abundance since the last Edition was brought out in 1954. The book has been thoroughly revised, several portions re-written and some condensed, while all matter now obsolete or superfluous or of little parctical importance has been excluded or referred to briefly. The Index has also been expanded. This Edition will therefore be found to be even more useful than its predecessor as a standard book of reference on this intricate and abstruse subject.

The Amendments of the Indian Finance Act 1959 have been incorporated in the book.

"On the whole this is a most exhaustive, most comprehensive, and most elaborate commentary on the Income-tax".

DELHI REVIEW

Coal Production

Speaking in the Lok Sabha during the discussion on the annual report of the National Coal Development Corporation for 1957-58, Sardar Swaran Singh, Minister of Steel, Mines and Fuel, expressed the view that there was a reasonable chance of the target of 60 million tons of coal production being achieved by the end of the Second Plan period. Unless it could be taken as the Minister's wish, there could hardly be any reasonable ground for such optimism. For, it has been of late becoming apparent that the coal economy has not been working satisfactorily. Production of coal, which is to reach 60 million tons by the end of the Second Plan, is still far behind the target. Unforeseen contingences had developed to affect production which had already suffered a setback. The foreign exchange shortage has, according to Sardar Swaran Singh, delayed the laying of railway sidings near the coal mines.

It is little satisfying that, in the last 18 months, there have been no complaints of short supply of coal for industrial requirements and it offers no valid criterion of progress; for, in the same period, the rate of industrial growth itself had suffered a slight setback, for reasons of foreign exchange shortage. More vigorous efforts are required to step up production of coal in both the private sector and the public sector. Though a comparison of the erstwhile performance of the private and public sectors in the coal industry is meaningless and could be turned in favour of either, it was the considered opinion of the members that there was vast scope for improvement in the public sector. There is for example, need for streamlining the National Coal Development Corporation which, on all opinion, is now suffering under the defects of a Government Department. The composition of the Corporation is marked by the absence of people drawn from the technical field. The civilian control of the corporation was considered its greatest handicap by a Communist member. The domination of departmental officials is bound to affect the efficiency of the Corporation If there are not enough technicians who could be recruited, it is the responsibility of the Government to train such numbers as are required.

The working of the Coal Development Corporation has left room for improvement on the financial side also. It has been pointed out, in this connection, that, against a total capital of Rs 9 crores invested in the Corporation, only a profit of Rs 22 lakhs had been realised. This works out to less than six per cent, which cannot be considered an encouraging return.

*

Oil and Natural Gas Commission

The Government-sponsored Bill for converting the Oil and Natural Gas Commission into a statutory body was favourably received by a majority of the members of the Lok Sabha, and though some points in the bill did not escape criticism, there was general agreement about the need to free the Commission from the apron strings of Government which hindered its working and to invest it with autonomous status. As a department of the Government it has been found that the Commission have not been able to work efficiently, economically and expeditiously, and the new status conferred on it is expected to set right these defects and deficiencies in its working.

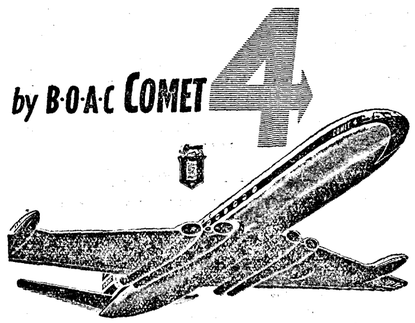
While, in terms of the Bill, the Commission have been given autonomous status, the reality of this autonomy was a point of some doubt with some members. The fact that the Committee has been left with no initial capital was urged as reason for doubting the nature of autonomy conferred on the Commission. What has been done in the Bill is only to allocate a sum of Rs 12 crores for expenditure likely to be incurred by the Commission in the next two years. This is a departure from general policy which invariably provides for a capital structure for newly created State Corporations.

The need for vesting the Corporation with responsibility for sale and distribution of oil was also urged by some members. This is not intended according to the present Bill, and whether Government are thinking in terms of creating separate bodies for this purpose is not evident. However, whether the Corporation could take up sale and distribution of oil without letting its work in connection with prospecting and refining of oil suffer, is open to doubt.

There was also a plea put by a Congress member to make the oil industry a monopoly of the public sector. The nationalisation of the Assam Oil Company was therefore urged as also the three oil refineries in the private sector. A clear statement of its policy by the Government was also considered necessary.

Mr N. C. Barucha, an Independent member, wanted the Commission to contribute to the general revenues in the same way as the railways, and said that the Commission should be treated as a utility concern so that the prices of its products could be fixed and controlled by the parliament.

*



NORTH INDIAN NOTES

Sugar Prices

Production of sugar, after a period of continuous increase from 1954, is reported to have registered a decline in 1958-59. The earlier estimates of production for 1958-59 at 21 lakh tons have now been revised, and a substantial fall is indicated. The drop in production naturally pushed up the prices for sugar in almost every State, and, besides, entailed whittling down the export quota for sugar from one lakh tons to 25,000 tons.

Mr A. P. Jain was at pains to explain the steps the Government had taken in the face of dwindling supplies for internal consumption. Besides fixing ex-factory prices for sugar produced in Uttar Pradesh, North Bihar and Punjab, the power to requisition 25 per cent of the production of individual factories was enlarged to enable the Government to take over any higher percentage or the entire production of the factories for direct allotment. Licensing of wholesalers in sugar was instituted and the percentage of sugar taken over from factories was gradually stepped up so that it went up to 70 per cent in the case of factories in UP and Bihar. In respect of factories in Punjab, their entire quota of production was taken over by the Government. It is evident, thus that prices would have gone up higher had not the Government kept a vigilant eye over the supplies position, and regulated the release of sugar from factories in a judicious manner.

According to Mr Jain, the fall in production was mostly confined to Western UP and was caused by diversion of sugarcane to gur and khandsari. Khandsari producers had been plying a profitable trade, taking advantage of the tax differential between vacuum pan sugar and khandsari sugar. The sugar industry had been crying hoarse over this large-scale diversion of sugarcane to the production of khandsari sugar. In the Budget for 1959-60, the Finance Minister made a gesture of relief to the sugar industry by including a duty on khandsari sugar. However, the effect was lost when, apparently, on second thoughts of the need to develop cottage and small-scale industries, the duty on khandsari was reduced. While development of the khandsari industry is not to be restricted in view of its employment potential, vacuum pan factories must be assured the conditions for achieving an increase in production which is necessary to meet the growing demand for sugar.

NORTH INDIAN MARKETS

Sugar Muddle

THE recent statement made by the Food Minister in the Lok Sabha blaming the sugar trade and industry has provoked a controversy. Traders have blamed the mills; the millowners both the traders and the Government; and the consumers all the three parties concerned. There is a section of opinion that holds Government releases responsible for the rising prices. It is the traders' charge that the mills are not releasing sufficient sugar.

Under the Sugar Dealers' Licensing Order, issued by the State Governments, no dealer was allowed to purchase or store more than 137 maunds of sugar. The issue of licences was delayed and many genuine dealers were even refused licences. Consequently, stocks at many consuming centres declined to a low level. The regular flow of sugar supplies to the consuming areas was dislocated, resulting in a sharp rise in sugar prices.

To curb the rise in prices, several mills opened fair-price shops through their distributors. This step proved successful and the rising trend in prices was checked to a substantial extent. There is a general feeling that, if the Government had not imposed restrictions on inter-State movement and if the mills had been allowed to sell sugar freely in the open market, prices would have come down to a much lower level.

As a matter of fact, the open market in sugar has been shrinking at a fast pace following the enforcement, last week, of a total ban on despatches by factories in Northern India. Whatever supplies remained of the material issued against the trade's previous tenders are fast going out. Confronted by brisk demand in a market of dwindling supplies, trade has again given an upward revision to price ideas. Thhe rate, which was quoted at Rs 117 per bag, has now moved up to Rs 121.

Meanwhile, there are indications that, in order to meet the domestic shortage, the Government of India are going to import 100,000 tons of raw sugar in the next few months. Although the authencity of this news cannot be confirmed, there are good grounds to believe that the problem of domestic shortage is likely to grow more acute in the months immediately preceding the commencement of the new season.

The problem of meeting the domestic requirements has acquired considerable urgency as, during the past few years, there has been a phenomenal rise in domestic consumption without its being accompanied by any appreciable increase in the national output. But, a relievlng feature in the situation is the fact that the stock position is not as bad as had been feared. Stocks, as on the 30th June, were estimated at 8.41 lakh tons.

Taking into account the consumption from July to October at the rate of 1.70 lakhs tons a month, the carryover should be around 1.61 lakh tons, which will be sufficient for November when the factories start crushing operations. Moreover, if the Government want the crushing season to start earlier, the recent offer by the Committee of the Indian Sugar Mills Association can be considered. The production of sugar, according to some sources, can easily be raised to between 22 and 23 lakh tons.

*

Gur

Conditions in the Hapur market remained steady. Although offtake is reported to be small, stocks now left are poor at about 24,000 maunds. Pansera quality is quoted at Rs 21.50 and dara at Rs 21 per maund.

In the Muzaffarnagar market, prices have gained about 25 nP per maund following good demand from Madhya Pradesh and Gujerat. The price is quoted at Rs 24.50 to Rs 24.75 per maund. Stocks of gur and shakkar are estimated at 55,000 maunds as compared with 10,000 maunds in the corresponding period of last year.

*

Foodgrains

Quiet conditions have prevailed in the Foodgrains market. In the Hapur market, arrivals of wheat and other "rabi" grains are still scarce; but new maize arrivals have begun in small quantities.

DELHI REVIEW

The Wheat Levy Scheme in Uttar Pradesh is being continued. Although the Government purchases have been very small, the State Government have been able to purchase about 11,000 maunds of gram at the controlled rate of Rs 12.50 per maund. More purchases are likely as gram prices continue depressed.

The main damper for the market is provided by fairly good rains and better prospects for the "khariff" crops. Wheat prices are quoted at Rs 18.25 per maund for the average quality and Rs 19.50 for the farm variety. Arrivals in the open market are sparse due to the rains and also due to the fear that half of the arrivals will be taken away by the Government at the controlled price of Rs 13 to 15 a maund.

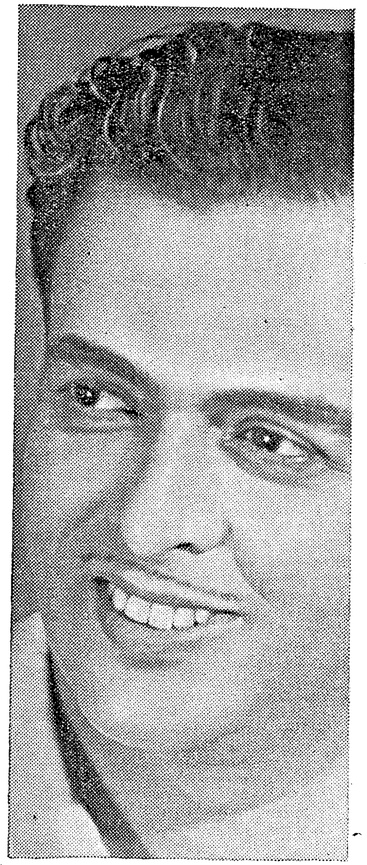
"To bring you the best, my friend, an expert tastes 600 types of tea every day !"

A friend calls on Bhai Sahib

Why, that's an incredibly large number, Bhai Sahib—and are all the types finally used?

No, and that's just the point ! For every type of tea that Brooke Bond select, there are many that their expert tea-tasters reject. And out of the selected types they create different combinations called 'blends'. Do you know, an average Brooke Bond blend is made up of some 30 types of tea ?



But why mix so many types of tea to get just one blend?

Good question ! You see, each type of tea has its own characteristics. One type may have excellent flavour and yet makes a weak liquor, another may have little flavour but gives the right colour. It's very much like the cooking your wife does. The recipe must be perfect in order to get your favourite dish just right !

But tell me, Bhai Sahib, how do Brooke Bond manage to make blends that have the identical strength and flavour all the time ?

Ah, that's where the tea-taster plays a vital role. Each tea-taster in Brooke Bond—and there are a number of them—has years of experience that helps him to select the types of tea which will make the exact blend you are looking for. This is one thing a machine can't do, my friend.

I agree, Bhai Sahib, there's no substitute for human skill and experience.

THE PENINSULA

Madras Forges Ahead

MADRAS REVIEW

WHILE at New Delhi, Mr C. Subramaniam, Madras Minister for Finance and Education, acquainted the members of Parliament from Madras with the steady progress made by the Madras State in the implementation of the Second Plan. This is a theme that frequently recurs in the speeches of the Madras Ministers almost everywhere. The main object is to keep the people correctly informed of the progress achieved in various spheres and to impress them with the efficiency with which developmental tasks have been undertaken and carried out. This is but pardonable pride; for, which other Governments have an achievement that could match that of Madras, particularly in respect of expenditure incurred under the Second Plan? While most of the State Governments with perhaps a few exceptions, are struggling under uncertain prospects to raise the required resources to implement their Second Plan in full, Madras is well poised to exceed its Second Plan outlay. Already, it leads the other States with the highest percentage of outlay incurred under the Second Plan.

The physical achievements are no less remarkable, and, particularly, in the field of power generation has not been excelled elsewhere. Such was the importance attached to generation of power, and such the expedition with which important and major schemes were undertaken, that the State has nearly exhausted its hydro-electric potential. A few schemes, with promise of large-scale additions of power, had been left out, and the State has now to turn to other sources, which, in the absence of large-scale deposits of coal for thermal power, mean only atomic power. In the wake of such generous implementation programmes, the villages have benefited to the maximum extent and nearly 8,5000 villages have been brought under the village electrification programme.

In foodgrain production, the Madras State has kept up a steadily expanding pattern. A yearly increase of 2 lakh tons had been a regular feature of foodgrain production reflecting, in the main, the additions made to the irrigated area. In the eleven years since Independence, the State has invested about Rs 61 crores on irrigation alone. It might be urged that the present supply position of foodgrains in the State does not picture such an achievement, the State Government having had to introduce procurement and open fair price shops. This tells the tale of large-scale diversion of rice to the Kerala State in respect of which regular complanits have been voiced by the Madras Government, and to counter which they have been urging the constitution of the Madras State into a separate food lone by itself. Foodgrain production is poised for another substantial increase in the context of the decision to harness the waters of the Parambikulam river.

Headway made in the community development programmes is reflected in the fact that the programme is now in operation in 193 blocks covering 9,300 villages and benefiting 15.5 million people in the rural areas. The target of covering 211 blocks by the end of the Second Plan period is well within sight. With the shift in emphasis toward implementation of the programmes, made at the recent meeting at Mysore, the effect on production and other activities connected with rural welfare should be greater. No doubt, as elsewhere, the community development programme has not produced benefits on the scale expected. For people therefore who had not been enthused by the idea or spirit underlying the movement, it has become a subject for derisive criticism as a standing example of extravagance in developmental expenditure. Such criticisms mostly derive from impatience for results, which, in the case of a novel programme such as the community development movement, are invariably slow to appear. The very novelty of the programme leaves wide room for mistakes to be committed in the laying down of programmes as also in their implementation. But there is a constant endeavour to relay the programmes in the light of the defects and deficiencies noted in its implementation, and to relate it to the realities of the rural situation. There can, however, be no doubt about the growing enthusiasm evinced by the rural people, as testified by the increasing willingness of the people to shoulder expenditure for local projects. Such voluntary cooperation has been a big factor in the progress made by the State in the field of education. With effect from the current year, the first five years of schooling will be free in all parts of the State, while compulsory education is being steadily extended according to a phased programme.

Welfare activities have gained in scale and momentum. The weavers, the most depressed and aggrieved class, are sought to be rehabilitated by organising them in cooperatives. A phased programme for bringing at least 50 per cent of the handloom weavers in the State into such cooperatives is being launched. Housing colonies to be set up by weavers' cooperatives are also envisaged.

Neyveli is a big name in the list of newly created industries. Lignite from the project is expected to be mined from next year. The scheme for the thermal power station for generation of 250 megawatts of electric power is expected to be taken up for implementation shortly, the fertiliser production scheme for the manufacture of urea, with a nitrogen content, to the tune of 70,000 tons per annum has been approved and will be taken up subject to the availability of foreign exchange.

Neyveli has of course, given the lie to cries of discrimination raised by interested persons and parties. But the industrial potentialities have not been exhausted by taking up this scheme. On the contrary, the project has thrown open prospects for a variety of new industries, including a few heavy industries, and other light engineering industries. An aluminiura plant based on the bauxite ores found near the Salem district is one of the prospective schemes in the heavy category. The viability of this scheme has been vouched by experts who had recommended the setting up of a 10,000 tons plant. Further, since the Central Government had begun to think in terms of small steel plants, the claims of Madras are being pressed for consideration. Mr Subramaniam has, in his discussions with the Madras members of Parliament, referred to such possibilities. The Central Government will, of course, be guided by considerations of resources at their disposal which is, ultimately, the limiting factor in development. However, considerations of regional balance should also a place in industrial development. On this score, the Centre could not ignore the claims of Madras for a few heavy industries. The same consideration applies to the allocation of atomic power plants. The Government have plans for installing about four such plants in the country in the course of the Third Plan. Madras, which is nearing the limiting point in respect of hydro electric potential, is hard put to it to raise power supplies from thermal sources, and atomic power is the only prospective alternative. The availability of thorium, one of the important raw materials, invests the project with a fair degree of success.

AMLUCKIE TEA COMPANY, LIMITED

NOTICE is hereby given that the Annual General Meeting of the Members of AMLUCKIE TEA COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday, the 17th September, 1959, at 3-10 P.M., for the following purposes:—

1. To receive and consider the Profit and Loss Account for the year ended 31st December, 1958, the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. P. Banyard, the Director retiring by rotation.

   And, in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956:—

   "That Mr. P. Banyard be and is hereby appointed a Director of the Company liable to retirement by rotation."

   Special Notice of the intention to propose the foregoing resolution as a Special Resolution in confirmity with the provisions of Sections 190 and 261 of the Companies Act, 1956, has been received by the Company wherein it is stated that Mr. P. Banyard is an "associate" of the Managing Agents within the meaning of the Act, and that therefore, he can only be appointed by a Special Resolution as a Director liable to retirement by rotation.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 7th September, 1959 to 17th September, 1959 both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

By Order of the Board,
McLEOD & CO. LTD.,
C. L. BAJORIA,
Director,
MANAGING AGENTS.

3, Netaji Subhas Road,
Calcutta,
14th August, 1959.

NOTE: Payment of the proposed Dividend, if declared, will be made on or after 30th September, 1959, only to those members whose names are registered in the Books of the Company on 17th September, 1959 or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

MADRAS REVIEW

Zilla Parishad Bill

DECENTRALISATION of administration and devolution of responsibility for development work to units in the lower rung of the administrative ladder have been the accepted policy of the Government and are designed to enlist the co-operation of the people in the villages in the developmental activities upon which the country is launched. Most of the State Governments have already brought in legislation for the reform of the administrative machinery at the village level incorporating provisions for decentralisation of power to village units. The Zilla Parishad Bill designed on such lines, and introduced in the Andhra Pradesh Legislature in the last session, has, after a five-day debate, been passed by the Legislative Assembly. Though it has to be considered by the legislative Council before entering the Statute book, in view of the generally favourable reception accorded to it in the Assembly, it could be said that the Bill would have little rough weather to face in the Council.

The Bill envisages the constitution of panchayat samities at block level and zilla parishads at districts level, to replace the present district boards. The panchayat samities would be responsible for execution of all the programmes under community development in association with panchayats, co-operatives, voluntary organisations and the people and will have charge of schemes for stepping up agricultural production, expansion of education and health services, development of village and cottage industries, etc. The general aim is to promote the spirit of self-help and initiative among the people and to harness their enthusiasm for raising the standard of living. The zilla parishads will have a place above the panchayat samities and will have to supervise the activities of panchayat samities and advise the Government on all matters relating to development activities in the district.

Such decentralisation of administration has been a long-looked-for reform, and, for this reason, the Bill met with the general assent of the members. Criticisms related to insignificant details such as the method of election to panchayat samities and zila parishads, method of financing the work of these units, and what was termed by the Communist leader of the Assembly, as the concentration of power with officials instead of with the elected representatives of the people.

Mr K. Brahmananda Reddi, Minister for Finance and Planning, who piloted the Bill, described the meaure as an experiment. Its successful implementation would depend on the co-operation extended by both officials and non-officials.

*

American Trade Mission

The visit of the six-man American Trade Mission to the Madras city has given an opportunity to the South Indian business community to have an exchange of ideas with the members of the Mission on problems connected with the country's development. Almost every visit of business teams from America opens up the question of the prospects American investment in the country, and the visiting team's impressions and opinions in the matter are assiduously canvassed. This question was also raised in the course of the discussions which the Indian business representatives had with the touring Trade Mission. The invariable reply to questions about the reluctance of American businessmen to invest in India is the deterrent effects of the tax structure. Mr Higbee, the leader of the Mission, was frank in the view that scope could be found for American private capital only in so far as there was inducement in the nature of profits. Further, India was not the only under-developed country with scope for participation of foreign private capital. However, the choice of countries for investment of capital would be determined on considerations of profit potentials.

The scope for expansion of trade with America was also touched upon in the course of the discussions. There is particular need for it in the context of the foreign exchange shortage that has developed. There was the usual assurance of adequate scope for expansion of Indian exports to America. In this connection, Mr Robert Hubbard gave some valuable tips to Indian businessmen about the particular tastes of the American purchasers and laid special stress on the need for quality and designs of the exported goods. The actual trend of trade with America is, however, contrary to the picture that is generally presented of American markets. Indian exports to America have, for example, declined from Rs 94 crores in 1957 to Rs 88 crores in 1958, and this is linked with the fall in American intake of manganese ore, jute, castor oil and cashewshell oil. This, however, does not reflect any restrictive policy on the part of America, and only points to the growing international competition in many of the goods in respect of which India had enjoyed a predominant position.

*

Coir Industry

Inaugurating the Mysore State Coir Board in Bangalore last week, Mr B. D. Jatti, Chief Minister of the State, stressed the importance of developing the coir industry in the State. The reorganisation of States has, by adding new coconut growing areas, thrown up immense potentialities for the development of the coir industry in the Mysore State. The State has now about 212,944 acres of land under coconut plantation. The yearly production of fibre is estimated at about 22,000 tons and is valued at Rs 2 crores. The development of the coir industry should give vast scope for additional employment to the people in the State.

With such favourable conditions for the development of the coir industry, the State Coir Board has not been set up too soon. It also augurs well for the growth of the industry that, toward this the Government of India had agreed to extend financial assistance to the State. It devolves upon the Board to find out ways and means to develop the coir industry in the State. There should be no technical difficulty in this field since Kerala, which is the home of the coir industry, has already shown the way in the organised development of the industry. As a precondition for the rapid development of the industry throughout the State, it is necessary to assure adequate water supply in the interior, where it is now planned to introduce the coir industry. The paucity of such water supplies in the interior areas, as admitted by the State's Minister for Co-operation, should be considered a temporary handicap.

The development of the industry also offers scope for the formation of co-operatives both at the production as well as the marketing level. This also seems to be the policy of the Government. The societies formed for this purpose would be granted financial assistance by the Government. During the current year, such financial assistance is to be given to seven societies, the size of such assistance being fixed at Rs 21,000 inclusive of grants and loans. In 1960-61, 20 additional societies are expected to be brought into the fold of the financial scheme. Moreover, three Central Marketing Societies at a total cost of Rs 8 lakhs so as to help primary societies are expected to be started during the Plan period. The installation of a mechanised unit for extraction of coir fibres has also geen decided upon.

SOUTH INDIAN NOTES

THE DIBRUGARH COMPANY, LIMITED

Notice is hereby given that the Annual General Meeting of the Members of The Dibrugarh Company, Limited, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday, the 17th September, 1959 at 3-00 P.M. for the following purposes:—

1. To receive and consider the Profit and Loss Account for the year ended 31st December, 1958, the Balance Sheet as at that date, and the Reports of the Directors and Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. A. P. Jain, the Director retiring by rotation at the Meeting.
4. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

5. To consider, and if thought fit, to pass the following Resolution which will be proposed as a Special Resolution of which Special Notice as required by Section 261 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which, as required by Section 173 of the said Act, is annexed hereto:—

"That Mr. B. D. Bagrodia be and is hereby appointed a Director of the Company liable to retirement by rotation".

The Share Transfer Books of the Company will be closed from 7th September, 1959 to 17th September, 1959, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

By Order of the Board,
McLEOD & CO. LTD.
C. L. BAJORIA,
DIRECTOR.
MANAGING AGENTS.

3, Netaji Subhas Road,
Calcutta,
14th August 1959.

NOTE:—Payment of the proposed Dividend, if declared, will be made on or after 30th September, 1959, only to those members whose names are registered in the Books of the Company on 17th September, 1959 or to their Mandatees. No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

EXPLANTORY STATEMENT

Mr. B. D. Bagrodia was appointed an Additional Director of the Company in February, 1959, and vacates Office at this Annual General Meeting. A Special Notice has been received from a member of the Company notifying his intention to propose a Special Resolution as set out in item 5 of the above Notice. In the said Special Notice, it has been pointed out that Mr. B. D. Bagrodia is an employee of the Managing Agents and that, in view thereof, it will be necessary for the members to pass a Special Resolution, in conformity with Section 261 of the Companies Act, 1956, if they desire to appoint him as a Director of the Company liable to retirement by rotation, since McLeod & Co. Ltd., the Managing Agents of the Company are authorised by the Articles to appoint a Director or Directors on the Board of the Company.

SOUTH INDIAN MARKETS

Seeds and Oils Erratic

Madras, Wednesday.

THE prices in groundnut oil continued to be erratic today also due to Bombay price fluctuations. Groundnut oil opened at Rs 355 for ready delivery, and remained the same with intermittent jumps and lowerings. It reached the price of Rs 360 by the end of the evening but receded to the opening level. The closing quotations were (Wednesday 3 p.m.) Rs 355 ready, Rs 352 August, Rs 346 September and Rs 316 for January, 1960.

Groundnut kernels also recorded a jump to Rs 194/195 from the closing level of Rs 190 on Monday. (Tuesday was a holiday for the Madras Markets due to Avani Avittam). Bold variety was quoted at Rs 180.

During the early part of the week, the rates continued steady at Rs 351/352 August, September Rs 342/345 and December Rs 313/316. A slight reduction in the volume of arrivals of the summer crop brought about by rainy weather or local election, imparted a bullish outlook and some of the crushers started hectic buying. This was in a way accentuated by the Bombay and Calcutta improved prices and also by groundnut futures in Bombay. On shippers' account, however, nothing was taken up because, in the absence of an extension of the incentive measure, nothing could be done after July 31, 1959. The effect of this was that the market gained about Rs 32/33 per ton in oil, and groundnuts gained about Rs 25/26 per ton over the opening levels.

In groundnuts, arrivals locally were small, though in the producing Arcot districts daily arrivals ranged up to time of writing between 400 and 500 tons. Locally, arrivals were in the neighbourhood of only 25 tons on average daily. Small scale crushers needed this and absorbed all the quantities.

Superior oil qualities were taken up early round Rs 185/188 per candy. Latterly, they had buyers at Rs 190/191 per candy. There were also stray deals at the higher level of Rs 192/193 to stress the erratic manner round which prices were fluctuating for the last two weeks. Bold varieties stood neglected and naturally rotary dealers bought these up at considerably lower prices than the oil qualities.

Reservation marked the sellers in groundnut oil. Spot offers were made in small quantities in anticipation of higher prices at Rs 358 or even more with August at Rs 354, September at Rs 348/350 and January at Rs 316/318. Total taken up will be about 500 tons. The small arrivals were also influenced by the keen interest shown by Calcutta and local vanaspathi interests. Monday closing price or spot was Rs 351.

In forward positions, the December vaida showed keen activity. only a Business of the squaring up nature in August was alone done. September witnessed a two-way move in line with the Bombay trend.

August opened at Rs 348, went upto Rs 351, touched Rs 352 and came down to Rs 351 at which it closed Wednesday.

In September, there were sellers at the lower rate of Rs 342. Only small quantities were taken up. Same trend continued today, too. Transactions were put through today at Rs 352.

There was considerable short-covering in evidence in December vaida. It opened at Rs 313, went upto Rs 315 on Monday, but today market opened at Rs 316. It remained at that level and latterly buyers could be found at this level.

Groundnut Oil Cake:—Due to improved price in groundnut and kernels, prices improved. Small quantities were taken up from local mills around Rs 24.50 to Rs 24.25 per bag of 160 lbs new gunny ex-mill.

Castor seeds maintained the same price at Rs 153.62 for September delivery and Rs 155.75 for may 1960 delivery.

Upcountry Markets:—Summer crop arrivals in South Arcot district were to the extent of 400/450 tons daily. Madras, Salem and extreme south crushers figured as buyers and all available stocks were absorbed. Goods were sold early in the week at Rs 183/185 per candy, but soon spurted to Rs 191 per candy. During the week, both South and North Arcot districts had rains. The unsowed region in this area may be sown within the next few days. Chittoor reports need of more rains for completion of the sowings. Plants are reported in good condition in other areas. Small arrivals had occurred in Pollachi/Salem new crop. September could report large marketings of the same crop.

Other Seeds and Oils:—The Madras Oils and Seed Association reports (Wednesday 3 p.m.) the condition of other seeds and oils in the market: *Gingelly Seed and Oils* maintained a steady level during the period under report. Good local arrivals imparted strength to the price levels which were reported as under:—

Gingelly Seed:		Per bag
Chanda-Warora quality		Rs 67/68
Tuni-Rajahmundry	...	„ 62/63
Salem variety	...	„ 60/61
Local variety	...	„ 65/66
Gingelly Oil:		Per maund
Wholesale basis	...	Rs 20.25
Retail basis	...	„ 20.50/20.75

Castor Oil:—Small quantities of castor oil of commercial grade were put through at Rs 310 per candy. The Tirupathur variety sold at Rs 325 Monday and it remained the same on Wednesday too.

Coconut Oil—At Cochin:

		Per candy
Ready	...	Rs 608
August	...	„ 612
September	...	„ 617

At Quilon: the price of a tin is around Rs 35.25.

At Madras: the price of a tin is around Rs 38.50 to Rs 40.

Foreign Markets:—The Oil and Seeds Association reports that on Wednesday, the overseas position continued more or less steady in groundnut oil. Groundnut cake continued to be in good demand in United Kingdom and the Continent. Expeller cake was taken in quantities by the Communist countries.

*

Hides and Skins

Prices in the Skins & Hides market advanced by 3 nP above last week's level. The section in which good enquiry was made was the 5/5½ lbs. The price increase was approximately 3d in this above last week's realisation.

Price remained unchanged in tanned buff hides section. Arrivals and clearance continued as in the last week. Smaller quantities of cow calf tanned leather arrived. The upward trend in prices continued as there was growing demand, with the market closing 20/25 nP higher.

About 5,000 skins were cleared from the market. Stock on hand remained the same, 5,000. Prices were maintained upon steady demand.

MADRAS REVIEW

In the tanned goat skin section, due to higher price, only 8,000 skins had been cleared, leavng a stock on hand of 30,000. In the cif section, good demand continued in the semi-prime and primes but buyers are not keen due to poor quality. In the Middle class also, there is hesitancy on the part of buyers to pay high prices. Already, there are overdues of goods committed to supply several months ahead.

Tanning materials recorded no changes in prices.

Raw Skins: (Last week's prices in brackets). Bangalore: Goat (Rs 560/600), Rs 555/630: White wool sheep (Rs 530/595), Rs 525/600: Black wool sheep (Rs 445/485) Rs 450/480: Bezwada: Goat (Rs 540/570) Rs 550/575; Sheep (he) (Rs 560/575) Rs 560; Sheep (she) ((Rs 380/390) Rs 385.

Demand for 20's in the market was strong and stock was inadequate. 40's maintained steady level. In 60's demand was more pronounced for yarn made out of Indian cotton. Little business turnover was reported in 80's and hundreds due to sentiment.

RANICHERRA TEA COMPANY, LIMITED

NOTICE is hereby given that the Annual General Meeting of the Members of RANICHERRA TEA COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Monday, the 21st September, 1959, at 3-00 P.M., for the following purposes:—

1. To receive and consider the Profit and Loss Account for the year ended 31st December, 1958, the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. G. T. Routledge, the Director retiring by rotation.

   And, in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956:—

   "That Mr. G. T. Routledge be and is hereby appointed a Director of the Company liable to retirement by rotation."

   Special Notice of the intention to propose the foregoing resolution as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, has been received by the Company wherein it is stated that Mr. G. T. Routledge is an "associate" of the Managing Agents within the meaning of the Act, and that therefore, he can only be appointed by a Special Resolution as a Director liable to retirement by rotation.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 11th September, 1959 to 21st September, 1959, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

By Order of the Board,
McLEOD & CO., LTD.,
C. L. BAJORIA,
Director,
MANAGING AGENTS.

3, Netaji Subhas Road,
Calcutta,
17th August, 1959.

NOTE: Payment of the proposed Dividend, if declared, will be made on or after 5th October, 1959, only to those members whose names are regirstered in the Books of the Company on 21st September, 1959; or to their Madatees.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

Tata Locomotive and Engineering Co. Ltd.

Chairman's Speech at the 14th Annual General Meeting

The following is the speech of the Chairman, Mr J. R. D. Tata delivered at the Fourteenth Annual General Meeting of the shareholders of the Tata Locomotive & Engineering Company, Limited, on Wednesday, August 19, 1959.

Ladies and Gentlemen,

The Year's Results

As you will have seen from the Report and Accounts before you, the Company continued to make good progress in its manufacturing operations during the year under review. Our total turnover was a little lower than in the previous year but only because the 1957-58 figure included the value of a substantial number of imported heavy trucks and other special vehicles. The output and sales of our own vehicles in fact increased substantially as compared with the previous year. We could have done even better in the Automobile Division had we not been limited, like everyone else in the Industry, by the amount of foreign exchange available for the import of essential components and raw materials.

Profits and Appropriations

2. The disposable profits were about the same as last year after providing for about Rs. 38 lakhs more for depreciation, taxation and development reserve. The large allocation of nearly Rs. 75 lakhs to this reserve is strictly in accordance with the requirements of the Finance Act and reflects the substantial increase in capital expenditure during the year. The appropriation of Rs. 10 lakhs to deferred taxation is self-explanatory, the intention being to even up the tax burden in later years, when reduced depreciation allowances will increase the ratio of tax to gross profits.

3. As disclosed in the Report, production in all divisions and departments showed an appreciable increase; in fact we exceeded most of our targets. What is perhaps even more gratifying is that efficiency and productivity have also shown a marked improvement.

4. We have continued to strengthen our position both in equipment and organisation and we now have solid foundations on which to build the further expansion and diversification of our activities in the years to come, for which we have a number of schemes under consideration.

Diesel and Steam Locomotives

5. Beginning with the Locomotive Division, we have offered to undertake the manufacture of diesel locomotives for the Indian Railways under an arrangement with our technical associates, Messrs. Krauss Maffei. Assuming that the conversion from steam to diesel traction in India is a gradual one, we are willing to continue manufacturing steam locomotives beyond the period of the present Agreement which expires on 31st May, 1961, if the Railway Board wishes us to do so. In actual fact, the orders at present in our books will not carry us beyond March 1961 when all the locomotives so far ordered from us will have been fully delivered. The advance planning, preparation and procurement of materials for the manufacture of locomotives takes at least twenty to twenty-four months and, in order to avoid a costly gap in production resulting in idle men and machinery, we have repeatedly, but so far unsuccessfully, pressed the Railway Board to place further orders on us pending a long-term decision on policy.

Locomotive Prices

6. I shall not discuss here the question of current and future locomotive prices as the matter is, so to speak, subjudice, except to say that, while we are willing to continue to serve the Indian Railways after the expiry of the present contract and do not expect more than a modest profit from such business, recognising as we do the encouragement they have given us in establishing this industry, we cannot in fairness to our shareholders and employees, agree to operate continuously at a loss. We appreciate the goodwill and courtesy we invariably receive from the Railway Ministry; we believe they recognise the high level of efficiency we have reached in our operations since full production was established. We must, however, deplore the fact that, perhaps because of certain uninformed criticism on the working of their Agreement with us, they seem to be unwilling to commit themselves to any basis or formula for fixing locomotive prices which would not result either in a loss to us or at least in the complete absence of any profit.

7. We have repeatedly pointed out that the criticism voiced in Parliament that the prices paid by the Railway Board for our locomotives were too high, referred to a period when the factory was still under construction, and full production had not been reached. In any industry, whether in the Public or the Private Sector, costs are high in the initial stages and fall rapidly as production and efficiency rise. Our own costs have come down steadily since 1954 and there now can be little doubt that our prices today compare favourably with those at which locomotives can be imported. In order to make things as easy as possible for the Railway Board we have expressed our willingness to being treated in future, in regard to locomotive orders, on exactly the same footing as any other bidder in India or elsewhere. While there would be no obligation on their part to place continuous orders with us, we would be free to bid in answer to tenders along with anyone else.

Diesel Engine Project

8. We have also under consideration a scheme for manufacturing Mercedes-Benz diesel engines for these locomotives and have submitted proposals to the Railway Board. The relatively high capital cost of the project in relation to the likely output, in view of the absence of standardisation in the Railway Board's requirements, makes it somewhat doubtful whether the scheme will materialise.

Pulp and Paper Machinery

9. Reference is made in the Report to the scheme for the manufacture of pulp and paper making machinery in collaboration with the well known Swedish firm of Messrs. A. Johnson & Company, Stockholm, through their associates, Messrs. Karlstad Mekaniska Werkstad. With over 70 years' experience in the line, they have attained a pre-eminent position as suppliers of paper and pulp plant throughout the world. The Government of India have authorised us to commence manufacture of equipment pending finalisation of certain details concerning the terms of collaboration. Preparations for this work are well in hand and manufacturing operations should begin by the end of this year.

Expansion of Auto Division

10. Coming to the Automobile Division, as mentioned in the Report, Government have sanctioned the expansion of our truck and bus chassis capacity to 12,000 a year and we have already placed orders for the necessary additional equipment. Production will rise by stages, but our ability to reach the rated output will depend on the availability of foreign exchange for essential components and raw materials. The raw material problem is, I hope, only a temporary one. As the new steel capacity which is being built up comes into operation and, in time, an adequate range of alloy steels is also made in the country, the need to import the bulk of raw materials for cars and trucks should largely disappear.

11. By October of this year we shall have fully discharged the obligation we had undertaken vis-a-vis Government and the country to establish in four years the full-fledged manufacture of a first-class commercial vehicle with maximum indigenous content. In fact, when the present expansion of our capacity to 12,000 vehicles per year has been completed in January 1961, we shall have achieved in less than six years a four-fold expansion of the original project which, as you will remember, was initially based on a planned output of 3,000 vehicles a year. We feel that the next expansion of our Automobile Division should now be in the direction of a new product, and we believe that the best opportunity for us to diversify our operations and at the same time to render maximum service to the country by meeting a great public need, would lie in the manufacture of a small, low-cost passenger car.

Light Car Project

12. In this connection, you may be aware that the Government of India recently appointed a high level Committee to examine the cost and prices of motor vehicles at present being made in the country, and also to submit recommendations for the manufacture of an economy car. In pursuance of the objective I have just mentioned, we submitted only a few days ago to this Committee a detailed project for the manufacture under licence of a small German car of advanced design. We are fortunate in that our partners Messrs. Daimler-Benz, have recently acquired a controlling interest in Messrs. Auto-Union G.m.b.H. an old and reputed firm of automobile manufacturers in Germany, and makers for over thirty years of the well-known DKW light car. A new model of this car is just going into production in Germany, combining outstanding technical features with comfort, performance, economy and long life. Messrs. Auto-Union have agreed to license our Company for the manufacture of this car at Jamshedpur and we are assured of their and Daimler-Benz's technical assistance. The project, which is based on an output of 12,000 vehicles per year, would involve a capital expenditure of about Rs. 14 crores including housing spread over a period of three to four years. The car would sell for about Rs. 6,950 ex-factory and from the enquiries we have made we are confident that at this price and for a car of such high quality, performance and sales appeal, there would be no difficulty in disposing of the entire output. In fact, we believe that, as in the case of trucks, the demand for cars will continue to exceed the supply.

13. If I am asked whether this project will be profitable, I would answer that we would not think of embarking on such a costly venture unless we believed it to be commercially sound. At the same time, I would request shareholders to view the project not as one aimed at quick financial returns, but as a long-term one. Whether from the point of view of the element of national and public service involved in the manufacture and supply of such an essential product to thousands of people of modest means, or from that of hard economic realities, it is clear that the ultimate financial success of such a project must come not from a large margin of profit on a small number of units, but from a very modest profit made on a large number of units. That, in fact, is the very essence of all modern industries concerned with the manufacture of articles destined for a mass market and has proved particularly to be the case with the low priced automobile ever since the days of Henry Ford. A large market can be developed, particularly in a poor country like ours, only if the price of the product is low. Low prices are possible only with low costs, which can themselves be achieved only on a large volume of production which, in turn, requires a large market to sustain it. The proper way to break this vicious circle is to keep prices at the lowest possible level from the very start. Even if, applying this principle to the present project; little or no profit is made in the initial stages, the venture would still be well worthwhile in the long run and it would be very much in our interests to go ahead with it for, in the process, our Company would be greatly strengthened by the enlargement of its plant and facilities, the spread of its overheads, the diversification of its products and the development of its organisation which is perhaps its greatest asset.

14. We realise that we are not the only ones in the field as a number of other firms have also put forward projects of their own. We can only hope that ours will be the one ultimately selected and approved by Government as being the most complete and realistic and embodying the largest initial degree of indigenous manufacture. In the meantime, however, I would caution shareholders against undue optimism.

Progress of Indian Automobile Industry

15. While on the subject of the automobile industry, I should like to say a few words about the criticism we hear from time to time that the Indian industry has failed to make adequate progress and that it charges far too high a price for its products. Both these criticisms are incorrect and misconceived. Taking into account the extraordinary difficulties and handicaps to be overcome in establishing new and complicated industries in our country under the conditions which have prevailed during the last five years, the automobile industry has by and large made excellent progress, thanks in good part to the sound and realistic approach to the industry's problems on the part of the Ministry of Commerce and Industry and particularly of their Development Wing. In our own case we shall, by the end of this year, be making at Jamshedpur a greater proportion of our trucks and bus chassis than Daimler-Benz make in their own factories.

Lack of Ancillary Industries

16. Perhaps in no country in the world where automobile manufacture has been established, is the industry so handicapped as it is in India by the lack of indigenous sources of supply of materials and components. Even in a country like Brazil, which can by no means be said to be more advanced industrially than India, automobile manufacturers can freely buy chassis frames, clutches, radiators, wheels, forgings, castings, electrics and the like from specialised ancillary manufacturers, while in the fully industrialised countries the automobile firms rarely buy from others less in value than half the material contents of their vehicles.

Prices of Indian Vehicles

17. As regards prices, it is a fact that the prices of the various vehicles made in this country are higher than they are in their countries of origin. That is inevitable in view of the very much smaller rate of output. But the point to note is that the prices in India are substantially lower than in other countries where the same vehicles are also made under license. For instance, the retail price of the Tata-Mercedes-Benz trucks is about 27% higher than that of the same vehicle in Germany. In the Argentine, however, where these trucks are also made in association with Daimler-Benz, the price is 87% above the price in Germany, while in Australia and Brazil the prices are respectively 48% and 59% above the German prices. Even in Belgium, where the trucks are merely assembled, the prices are higher than in India. The situation is not very different in the case of the various cars and trucks manufactured in India. Making allowance for the differences in the economic structures of the various countries, the high price we have to pay in India for plant and machinery and for raw materials and, particularly the small scale of production here, the prices charged by Indian manufacturers are, if anything, on the low side. In the case of our own Company we have actually reduced our prices in the past year by absorbing, instead of passing on to the purchaser, the recent increase in the excise duty on rubber tyres and also by a direct reduction in the selling price of our spare parts.

Housing

18. In the light of our expansion plans and of the capital expenditure they involve, one of our most troublesome problems is that of financing the construction of adequate housing for our staff. We are grateful to the Government of India and the Government of Bihar for the assistance we have received from them under their Subsidised Industrial Housing Schemes, but unfortunately such assistance is available only in regard to the lower paid categories of staff and not for supervisory staff even in the junior ranks. In our industry, the proportion of supervisory staff and highly paid skilled workers is exceptionally high. Such men are the backbone of an organisation like ours and it is clear that if we want them to work for us at Jamshedpur they must be adequately housed. We have, therefore, urged Government to liberalise the terms of their schemes so as to extend its scope to the housing of lower supervisory grades of employees.

19. While on this subject, and in the context of comparisons of manufacturing costs and selling prices as between India and other countries, it may not be realised how heavy the burden of housing is in India in the case of new industries built at a distance from cities. The problem here is aggravated by the larger number of workers employed per unit of production as compared to other countries, and also by the large size of families in our countries. Apart from the cost being heavier as a result, Industry has itself to bear the major part of the expense, whereas in more highly developed countries the burden is borne either by the State or the community including private builders.

20. Furthermore, the obligation to provide industrial housing is doubly burdensome for the Indian employer in that he not only has to raise the additional capital, but can earn no direct return on it, and the interest he has to pay on the money invested in housing is an additional charge on the business which leads to higher costs. In our own Company we have already spent nearly Rs. 3 crores in providing housing and town services at Jamshedpur. If and when all the schemes we have in view mature, we may in the coming years have to spend as much again on the colony, and also bear an additional net deficit in the cost of providing town services.

Labour

21. I am glad to report that our relations with our employees at Jamshedpur have improved further during the latter part of the year under review. The implementation of a rationalised wage and bonus structure, as approved by the Bihar Industrial Tribunal, has removed the disparities in earning and bonus payments which were a source of discontent and adversely affected employee morale. Our workmen have realised that the revised scheme is fairer than the previous one, while offering them adequate scope for improving their earnings through increased efficiency.

22. In conclusion, it is my privilege once again to express my thanks and those of my colleagues to all members of our staff, from the General Manager downwards, for their excellent work during the year, which is reflected in the Report and Accounts before you.

Note: This is not a report of the proceedings at the above Annual General Meeting.

BHARAT NIDHI LIMITED.

NOTICE

The Annual General Meeting of the Shareholders of Bharat Nidhi Ltd., will be held at the Punjab National Bank Building, 5, Parliament Street, New Delhi on Wednesday the 23rd September 1959, at 4 P.M. to trasact the following business:

1. To receive and adopt the Directors' Report and Audited Statements of Accounts for the year ended 31st December 1958.
2. To declare dividends on Preference and Ordinary Shares.
3. To elect a Director in place of Shri Gajraj Gangwal who retires by rotation and, being eligible, offers himself for re-election.
4. To elect a Director in place of Shri Shital Prasad Jain who retires by rotation and being eligible, offers himself for re-election.
5. To appoint Auditors for the current year and fix their remuneration. M/s. Sodhbans & Co., Chartered Accountants and M/s. V. Sankar Aiyar & Co., Chartered Accountants, retiring Auditors, being eligible, offer themselves for re-appointment.

Share Transfer Books of the Company shall be closed from 1st September 1959 to 23rd September 1959, both days inclusive.

A member entitled to attend and vote at the meeting of the Company is entitled to appoint another person as his proxy to attend and vote instead of himself and the proxy need not be a member of the Company.

By order of the Board,
J. B. Jaini,
Manager.

New Delhi,
18th August 1959.

N.B.: The Directors have recommended payment of dividend on ordinary shares at the rate of 6% (without deduction of income-tax) in the form of shares in The Punjab National Bank Ltd., of the face value of Rs. 10/- each, valued at Rs. 12/- per share with option to the Shareholders to receive payment in cash, provided such option is notified to the Company upto September 30, 1959. The dividend on being declared at the Annual General Meeting will be payable on and from 30th September 1959.

STOCK EXCHANGES

Rally on A Broad Front

Watch-Dog Writes:

TRADING in stock markets has been fairly active during the week and prices have registered significant all-round rise, thanks to replacement buying and renewed investment enquiry for some of the scrip at the recent low levels.

Operators are generally inclined to believe that bears cannot be aggresive any more, although there is a disposition to book profits at bulges. This is mainly due to a general anxiety to await the outcome of the Leftist Jehad against law and order, to commence from the 31st August in this State.

The improvement in equity prices, that was noticed on the Calcutta Stock Exchange toward the previous week-end, was carried a stage further during the week under review.

On the Bombay Stock Exchange, selected scrip attracted good enquiry at enhanced levels.

Buying enquiries on the Madras Stock Exchange were well spread.

The London Stock Exchange finished the week on a steady note.

Wall Street closed barely steady, a late selective rally enabling it to finish above the extreme lows.

*

Calcutta

Calcutta, Friday Evening.

AFTER starting on a promising note, equities on the local Stock Exchange recorded further gains over the previous week-end levels under the lead of speculative issues. The main contributory factor was that operators could not resist the pressure of encouraging corporate news as well as the substantial improvement in the working of most of the industries, not to speak of the encouragement derived from the news of the tremendous success of all the State Loans. The move on the part of banks to reduce the interest rate on Deposits gave rise to a feeling that there would be an influx of funds in stock markets. But for modest profit-taking being induced by fears of an unfavourable turn in the political situation in West Bengal, the market would have finished at the highest levels for the week.

By reason of the new State Loans, which were over-subscribed, activity in the Giltedged section remained subdued. Support from institutional investors was conspicuous by its absence. On the whole, price movements were small. 3 per cent 1986 Conversion Loan opened lower at Rs 73.45 and, after improving at one time to Rs 73.75, receded again at the close to Rs 73.25.

In sympathy, Bank shares were quiet with price movements confined to a narrow range. Punjab National changed hands at Rs 21.75 to Rs 22, while United Bank "D" was quoted at Rs 4.84.
(more tofollow in the afternoon)

Jute shares continued to remain active with selected ones recording fresh higher levels for the week in view of the optimistic views expressed with regard to the future outlook for the industry. It was felt that the mills might be making good profits on the current production of sackings due to the increasing demand for this category from overseas buyers. Bally were pushed up further to Rs 239 from Rs 229; Champdany to Rs 144 from Rs 136; Lawrence to Rs 108 from Rs 103 and Megna to Rs 15.31 from Rs 15.12. New Central were enquired up to Rs 18.62 from Rs 17.75 following the receipt of the Government sanction for the rights issue. Howrah moved between Rs 23.87 and Rs 24.37 and National between Rs 22.81 and Rs 23.25, to finish the week at Rs 23.87 and Rs 23.25 respectively. Reliance were rather quiet at Rs 8.44 against Rs 8.56 following the passing over of the dividend again for the year ended 31st March, 1959.

Coal shares were practically neglected in view of the inordinate delay in the announcement of the price increase for the commodity. Fears were also entertained that India's substantial exports to East Pakistan would be seriously threatened when the Pakistan Industrial Development Corporation's peat extraction project at Faridpur goes into production in November next. A few selected scrip, however, developed a hardening tendency in sympathy with the general trend of the market. Prominent amongst these were Bengal having buyers up to Rs 313 from Rs 310; Central India up to Rs 8.31 from Rs 8.19 and New Beerbhoom up to Rs 20.25 from Rs 20. Burrakur fluctuated erratically between Rs 17.37 and Rs 17.81, to finish at Rs 17.62. Amalgamated had buyers at Rs 26 to Rs 26.62 and Western Bengal at Rs 6.56 to Rs 6.75.

Textile shares continued to remain active and almost all scrip changed hands at enhanced levels following the optimistic interpretations of the outlook for the industry in view of the encouraging performance, both on the domestic and export fronts. Jayshree forged ahead to Rs 10.50 from Rs 10.25; Elgins to Rs 166.12 from Rs 15.56 and Kesoram to Rs 17.62 from Rs 17.37, to close finally at Rs 10.25; Rs 16.06 and Rs 17.50 respectively. Cawnpore moved between Rs 5.28 and Rs 5.56, to finish at Rs 5.31. New Victoria were slightly better at Rs 1.25 against Rs 1.16.

Except for a few selected scrip of the gardens producing quality teas which met with good support at steady levels, trading in the Tea section continued to remain restricted. Apart from the obscure outlook for Common grades, there were fears that the rise in wages and Port charges might price out Indian tea from the world market. Bishnauth changed hands at Rs 19.44 to Rs 20.06; Eastern Cachar at Rs 1.00 to Rs 1.25; Hasimara at Rs 22.06 to Rs 22.25; Jayshree at Rs 14.19 to Rs 14.62 and Bhatkawa at Rs 22.50 to Rs 22.56.

Sugar shares came in for selective support. Darbhanga were done at Rs 17.75 to Rs 18.00; Ramnugger Cane at Rs 19.96 to Rs 20.25 and SKG at Rs 10.75 to Rs 11.37. Raza/Buland and Balrampore were rather quiet at Rs 13.12 and Rs 7.12 against Rs 13.44 and Rs 7..19 respectively, while Carew recovered partially to Rs 13.50 from Rs 13.12. Dyer Meakin were a steady feature at Rs 19.

In the week's dealings, the lead to a further recovery in prices was naturally given by Indian Irons on higher Bombay advices. Despite settlement considerations, the scrip was gradually pushed up to fresh higher levels on sustained speculative support, being induced by the rumours of the possibility of a rights issue, at par, in the proportion of one share for five shares held. After opening better at Rs 25.31 against the week-end closing of Rs 25.24, the scrip changed hands on the cum-dividend basis up to Rs 25.33. From Thursday, dealings started on the ex-dividend basis in view of the closure of the company's Transfer Books from the 20th August. After moving irregularly between Rs 24.26 and Rs 24.48, the scrip finished the week at Rs 24.21. In sympathy, TEXMACO were at one time taken upto Rs 24.80 from a low of Rs 24.20, to finish at Rs 24.50 Indian Standard Wagon had buyers at Rs 89.75 to Rs 92; Jessop at Rs 29.12 to Rs 29.25 and Kumardhubi at Rs 7.00 to Rs 7.12. Marshalls were quoted at Rs 5.85 x.d. against Rs 6.19 c.d. Guest, Keen, Williams were a firm feature at Rs 39.

The Miscellaneous section provided several bright spots, Dealings were very prominent in Paper shares and prices touched fresh higher levels on the hope that the recommendations, to be made shortly by the Tariff Commission, might help the industry by encouraging modenisation and expansion. Orient were easily absorbed up to Rs 38.60 from Rs 38.10; Titaghur up to Rs 45.25 from Rs 45; Shree Gopal up to Rs 18.87 from Rs 18.37 and India Pulp up to Rs 25.50 from Rs 24.50, although the closing rates were slightly lower due to profit-taking. The news that the Government had not sanctioned the Sirpur Paper Mills to acquire the entire equity capital of the Sirsilk Limited, caused the former share to spurt at one time to Rs 15 from Rs 14.81, to close finally at Rs 14.56.

Thanks to the emergence of investment enquiry, Dunlop were pushed up to Rs 34.87 from Rs 34.50 (Rs 34.75); Indian Cable up to Rs 32.69 from Rs 32.37 (Rs 32.37); Indian Aluminium up to Rs 22.25 from Rs 21.94 (Rs 22.12); Rohtas up to Rs 23.75 from Rs 22.25 (Rs 23.25); Hindustan Motors up to Rs 12.37 from Rs 11.75 (Rs 12.56) and NICCO up to Rs 36.87 from Rs 36.75 (Rs 36.81). Indian copper, however, moved narrowly between Rs 4.10 and Rs 4.17 to finish at Rs 4.12, pending the release of the annual report for last year. Alkali Chemicals were firm at Rs 23.25 against Rs 23.12 and so also Karanpura Development at Rs 13.75 against Rs 13.44. Clive Row Investments were quiet at Rs 10.19 against Rs 10.25. Anglo Brothers were enquired up to Rs 19.56 against Rs 18.56 following the steady rise in shellac prices. India Steamship were on offer at Rs 14.37 against Rs 14.56 and Martin Burn at Rs 28.94 against Rs 29. Metal Box remained very firm at Rs 42.12. Figures shown within brackets were the week's closing rates.

*

Bombay

TRADING on the Bombay Stock exchange during the week ended Wednesday was on a more cheerful note than during the previous week. But, it would appear that the market has yet to find a stable foundation. For, the trend showed an irregular pattern with the higher levels attracting profit-taking. The disappointment over the report that Century Spinning and Weaving's capital issue may not be made at par proved short-lived, presumably due to the encouraging forecasts about the performance of cotton textiles. For some time past, the news from the cloth market has been indicating increased offtake. The Chairman of the Cotton Textile Export Promotion Council has struck an optimistic note at the Council's annual meeting. Expectations are that the current year will record cotton textile exports to the tune of 750 million yards. Moreover, hopes have revived that the target of 1,000 million yards may be attainable. The revival of support at the lower levels seems to indicate that the generality of marketmen is not unmindful of the improving prospects of equities in the context of the increase in the installed capacity of a larger number of enterprises.

In earlier dealings, prices staged a rally following investment buying and bear-covering at the lower levels. The fact that the anxiety about the settlement had considerably lessened also contributed toward the recovery. Around midweek, however, the higher levels attracted profit-taking; but, again, toward the close, sentiment improved with selected shares all along the list attracting renewed support at advancing price levels.

In the Steel section, Tata Steel, after a subdued opening, made sizable headway by Friday when it closed at Rs 179 as against an opening rate of Rs 177. Opening on a steady note, the scrip was done up to Rs 180 on Monday before coming back to close at Rs 178.75. Opening after Tuesday's holiday, the rate receded to Rs 177.75 on Wednesday. During the day's trading the scrip moved by one point both ways to be finally placed at Rs 177.50. Indian Iron was done up to Rs 25.40 before closing the week at Rs 25.25.

Textile shares were a steady market. Though earlier high levels could not be maintained, most shares closed the week with on balance gains. Bombay Dyeing closed at Rs 65.70 as against Rs 65.20, last Thursday's opening rate; Century at Rs 555.50 against Rs 550.00; and Svadeshi at Rs 254,00 against Rs 246,50. Kohinoor was a bright spot in earlier dealings on Wednesday, having been done up to Rs 322 and closing at Rs 329.50. This rate compares with its opening rate last Thursday of Rs 312.00.

National Rayon attracted considerable attention in the Miscellaneous section. The scrip was taken upto Rs 352.50 after opening at Rs 346.50 last Thursday. Thereafter, it was well maintained and closed steady at Rs 358.50. Though somewhat subdued, Bombay Burmah continued to meet with support in earlier dealings around Rs 550.00 but, following the announcement that the dividend had only been maintained, the scrip recorded a sharp setback to close on Wednesday at Rs 540. Premier Construction was rather easy in earlier dealings but met with some support at the lower levels to close at Rs 362.00. Hindusthan Motors at Rs 12.16 and Premier Automobiles at Rs 138.00 were slightly lower on balance.

*

Madras

Madras, Thursday.

MADRAS Stock Exchange today was quietly steady. The trend was mixed. Sellers were evident in several sections. Sugars were slightly better, and there were meagre transactons in plantings, the exceptions being rubber and coffee shares. In textiles, both Madura and Travancore Rayans were in good demand. FACTs proved a good counter in the miscellaneous group.

Government of Madras Securities: There were not any changes in the counters today. 4 per cent 1963 were available at Rs 100.25 and the 4 per 1964 were quoted at Rs 100.20. 4 per cent 1965 were steady at Rs 100.15 while 4½ per cent 1970 has buyers at Rs 101.95.

The Mysore Loans were also in much the same conditions with the 4½ per cent 1969 and 1970 scrip priced at Rs 101.60 and Rs 101.80 respectively. The Kerala Government state loan 4¼ 6er cent 1968 met with buyers at Rs 99.65 and the 4½ per cent 1970 scrips had some demand at Rs 100.95. The same period Andhra State loan had its price at Rs 101.70 and Orissa State was quoted at Rs 101.50.

Banks: Mysore Bank maintained its level at Rs 316, and the Andhra 3½ per cent it cd was steady at Rs 105.50. Indian Banks 7½ per cent it cd (100 paid) was available at Rs 187 while the Rs 80 paid up shares were sold at Rs 151.50. Indian Overseas (Rs 100 paid-up) remaned same at Rs 170, the Rs 75 paid-up had buyers at Rs 139, increasing by Rs 3 on yesterday's closing. Pandyan Bank's shares did not alter at Rs 36.50, but Travancore Bank had demand at Rs 25.12, an increase of 12 nP over the last closing. Punjab National Bank stood at Rs 22.10.

Sugars and Breweries: Sugars had an alround demand with Cauvery going upto Rs 116.00, higher by Rs 1.50 over the previous closing, Deccan likewise were quoted higher at Rs 12.15. Kirlampudi was in good demand at Rs 78.00, having spurted upto from Rs 70.00. E.I.D. could be had at Rs 39.25, K.C.P. were quiet at Rs 15.50 and United Breweries kept steady at Rs 459.

Planting: Anaparai had buyers at Rs 5.25 over the previous day's closing of Rs 5.15. Alageswar did not change its previous rate of Rs 2.93, Amalgamated kept level at Rs 15.00. Balanoor quoting at Rs 18.75 had few buyers, Be Be did not change at Rs 2.90. Blue Mountain likewise were offered at Rs 3.42. Chembra fractionally improved to Rs 4.27, with Chandramalai keeping quiet at Rs 3.05. Cochin Malabar were also stationery at Rs 6.95, Coffee Lands were marketed at Rs 23.75. Cons. Coffee followed other scrip in maintaining an unaltered price at Rs 22 20, Coonoor Teas improved slightly to Rs 29.62, and Cottanad shares were in demand higher at Rs 16 50. Emerald Valley likewise were higher at Rs 7.26. Kil Kotagiri had sellers lower at Rs 8.35, Haileyburia did not change at Rs 20.40. Kailas and Kalasa were bought at Rs 5.05 and Rs 4.22 respectively. Karikode rubbers selling at par value of Rs 10 attracted little attention, and Kumergode maintained its value at Rs 6.10, Malankara and Mercara were suoted respectively at Rs 19.50 and Rs 9.43. Mysore Coffee were unchanged at Rs 4.26 as also Midlands at Rs 11.70. Neelimalai was available at Rs 4.25, Nelliampathy at Rs 2.79, Savamalai at Rs 3.95, Sheveroy at Rs 1.82, Thirumbadi at Rs 1.93, Swinton at Rs 2.26, Periakaramalai at Rs 4.02, Sangameswar at Rs 2.67. Stanes Amalgamated had sellers at Rs 16.25, Teekoy at Rs 7.60, Travancore Rubber at Rs 14, and Travancore Rubber and Tea at Rs 7.05. Tropical was offered at Rs 20.00, Twyford at Rs 16.50, lower than the Rs 16.60 of yesterday's closing. United Nilgiris to had been steady with sellers at Rs 20.90, Wartyhully at Rs 3.85 and Waterfall at Rs 3.83.

Textiles: Sellers dominated this section. The exceptions were Madura which on good demand were sold at Rs 30.10, 30 nP more than the last closing, and Travancore Rayon at Rs 23.55, an increase of 15 nP over the last closing. Cambodia were lower at Rs 7.90, but Buckingham were in demand higher at Rs 189.00, Coimbatore Spinning had offers only at Rs 51.40, while Coimbatore Pioneer stood at Rs 280. Dhanalakshmi did not improve beyond Rs 197.50, and Janardhana was stuck at Rs 70.50. Kothari was neglected at Rs 10, Lakshmi were available at Rs 123.50 while Rs 25 paid shares of the same mills did not improve being available lower at Rs 60.00. Mettur declined to Rs 369.50, Premier was unchanged at Rs 172, Palani Andavar (Rs 50 paid) kept steady at Rs 124 and the Rs 75 paid was quoted at Rs 175. Pankaja was lower at Rs 59, but Radhakrishna kept quietly steady at Rs 112. Ranga Vilas remained at Rs 52, Vasanta at Rs 211, Venkatesa at Rs 121.

Miscellaneous: Aluminium Industries were bought at Rs 22.00, but Andhra Cement had higher offerings at Rs 9.50, Aspinwall likewise had buyers at Rs 7.25. Business was done in Ashok Leyland at Rs 7.85, Binny Engineering was quoted at Rs 158. Dalmia Cement improved to Rs 10.65; on enquiries, FACTs had buyers at Rs 9.45, India Cement increased to Rs 6.60. Mettur Chemicals appreciated to Rs 13.30. Mysore Lamps went upto Rs 22.12. Mysore Paper remaining at Rs 22.30. Parrys Confectionary had buyers at Rs 4.20, Rallis went upto Rs 77.00 on good offerings. Textool was rated upto Rs 180.50 on buying, Travancore Cements was quoted at Rs 9.90, and W I Plywoods had business at Rs 185, improving by Rs 5.

*

London

DESPITE a contraction of business, prices on the London Stock Exchange remained generally steady. A number of good features developed in the Industrial section and gains were well spread in the majority at the close. Among the leaders, Imperial Chemicals were prominent on investment comment. Steel shares, after opening dull, recovered in response to Continental and American buying. Brewery shares were firm on the good May output figures. Oil shares were higher on balance, while Rubber and Tea shares were narrowly irregular. Gold shares were a firm feature on selective Johannesburg buying. Copper shares were selectively better, while other base metal shares were irregular.

*

New York

PRICES on Wall Street, after suffering a steady decline till the middle of the week, staged a smart rally toward the close. The lead to the steady downward movement in prices was given by assorted Electronics, Steels, Chemicals, Rails and Motors. But, the late recovery was mainly influenced by short-covering and bargain-hunting.

MARGARET'S HOPE TEA COMPANY, LIMITED

NOTICE is hereby given that the Annual General Meeting of the Members of MARGARET'S HOPE TEA COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Monday, the 21st September, 1959, at 3-10 P..M., for the following purposes:—

1. To receive and consider the Profit and Loss Account for the year ended 31st December, 1958, the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. G. T. Routledge, the Director retiring by rotation at the Meeting.

   And, in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956:—

   "That Mr. G. T. Routledge be and is hereby appointed a Director of the Company liable to retirement by rotation."

   Special Notice of the intention to propose the foregoing resolution as a Special Resolution (in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, has been received by the Company wherein it is stated that Mr. G. T. Routledge is an "associate" of the Managing Agents within the meaning of the Act, and that therefore, he can only be appointed by a Special Resolution as a Director liable to retirement by rotation.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 11th September, 1959 to 21st September, 1959, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

By Order of the Board,
McLEOD & CO., LTD.,
C. L. BAJORIA,
Director,
Managing Agents.

3, Netaji Subhas Road,
Calcutta,

19th August 1959.

NOTE: Payment of the proposed Dividend, if declared, will be made on or after 5th October, 1959, only to those members whose names are regirstered in the Books of the Company on 21st September, 1959, or to their Madatees.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

INDUSTRIAL INFORMATION

EMPLOYMENT OPPORTUNITIES THROUGH SMALL INDUSTRIES

Rapid industrialisation, it is admitted on all hands, holds the key for solving the problem of unemployment in India. Of course, strong foundations have been laid for the industrialisation of the country. Some of the heavy industries like the Sindri and the Steel plants have already begun to yield fruitful results. Nevertheless this is not enough to solve the problem of unemployment.

In this context, the importance of small industries from the point of view of providing employment opportunities as well as from that of production to meet substantially the increasing demand for consumer goods cannot be over-emphasised. This as well as its social significance have been enunciated in the Industrial Policy Resolution of 1948 of the Government of India and reiterated in its Second Policy Resolution of 1956.

Small industries provide spread of technology, industrialisation, dispersal of industries and regional development besides providing employment on a very large scale. It can be safely asserted that the small industries provide far more employment than any other project with a comparable outlay.

True to the decentralisation policy, the development of small industries is primarily the concern of State Governments. But yet, realising the problems of development in this decentralised sector and the limited resources at the disposal of State Governments the Government of India have assumed certain responsibilities to assist them by way of evolving policies and programmes and by providing financial assistance.

Assistance is provided by Government to small industrial units almost at every stage beginning with the planning of its establishment followed by technical assistance in manufacturing processes, training of artisans, financial assistance for working capital and for buying machines and machine tools, provision of factory accommodation, marketing of products, etc.

To render technical guidance and assistance to small industries in setting up their units and in planning their production as well as in solving the problems of existing units, one full-fledged small industries institute has been set up by the Government of India in each State. There are now 15 such institutes in the country with technical and administrative staff.

Under these institutes, there are industrial extension centres to cater to the needs of a particular area and to render assistance in certain specified industries. Sixty-two such extension centres have been planned, of which 14 have started functioning. The remaining are expected to start functioning by the end of the year.

The services of these institutes and the extension centres are available for the planning of production, advice on selection of machinery and marketing problems, training of artisans in technical work, training of businessmen in management, marketing etc.

Model schemes for manufacture of different items have also been prepared and issued by the organisation of the Development Commissioner for Small Scale Industries for the benefit of small entrepreneurs. Nearly 340 different schemes were formulated during the past three years, besides a number of technical bulletins for improving the methods and techniques of production.

The technical staff also go out to small industrial units to render technical advice on the spot. At the extension centres, special emphasis is given or providing common facilities like casting, heat treatment, electroplating and enamelling.

These activities are also supplemented by demonstration and training arranged through a number of mobile vans all over the country which are equipped with improved machines and machine tools. Training is also imparted at the institutes to block level extension officers and district industries officers deputed by State Governments.

Next to planning of production and training personnel a small unit would require a suitable factory shed. For this purpose, industrial estates are being established all over the country. It seeks to remove small industrial units from crowded urban areas and to provide small units with factory sheds at concessional rates and common facilities for efficient working.

Thirty-six industrial estates with about 900 factory sheds have been completed so far. Construction work is progressing in another 24 estates. It will start such in 37 more industrial estates. The entire cost of these estates is given as loans by the Central Government to State Governments.

Supply of sufficient finance and easy credit is an another facilities needed most by the small industrial units. The Central Government and the State Governments are extending financial assistance to these industries under the State Aid to Industries Act. In addition, the State Financial Corporations also sanction loans from their own resources. The State Bank of India also advances working capital loans to small industrial units through all its branches in the country.

The National Small Industries Corporation, set up by the Government of India, is making special efforts to encourage promotion of small scale industries by supplying machines under its hire-purchase scheme in the backward regions and districts in every State.

Marketing assistance is also provided by the Corporation to small industries in making them participate in the Government stores purchase programme. The Corporation assists in the publicity as well as sale of small industries products to dealers and consumers through its wholesale depots. A number of items have also been selected by the Corporation for promoting their sales in overseas markets.

Within the limitations of foreign exchange, the Government of India have been giving larger allocation of foreign exchange to small scale industries for the import of raw materials, capital goods and equipment. The procedure for import licences has been simplified.

The Small Inventions Development Board has also been established to indicate the spirit of invention among small industrialists and technicians by providing financial assisance and research facilities.

COAL GRADING BOARD TO BE ABOLISHED

The Government of India have decided that the Coal Grading Board (Repeal) Act should come into force from August 14, 1959.

By this Act, passed in the last Session of Parliament, the Coal Grading Board has been dissolved.

The Grading Board was constituted in 1925 for purposes of grading of various categories of coal produced from the mines in India for export.

The assets and liabilities of the Board have now been transferred to the Coal Board.

The facility of certificate of shipment from the Coal Grading Board will, however, continue to collieries who will now obtain such certificates from the Coal Controller, Calcutta.

The following procedure will accordingly be introduced from August 14, 1959 in connection with the issue of certificates by the Coal Controller:

(i) On application by any graded colliery (i.e. a colliery of which the grade or grades of all or any seams, or section of a seam, has been determined by the Coal Board in pursuance of the provisions of the Coal Mines (Conservation and Safety Rules, 1954), desiring to export coal from India, the Coal Controller shall, if he is satisfied after such inspection as he may deem necessary with the quality and condition of the coal, grant a certificate of shipment in the form that has been prescribed by the Government for the purpose;

(ii) for the purpose of the issue of such certificates, the term 'export' shall be interpreted as meaning the shipment of coal as cargo from a port in the Indian Union to a port outside the Indian Union;

(iii) Every application for a certificate of shipment shall state the name of the colliery at which and the quantities in which the coal intended for export are to be loaded. The Coal Controller shall arrange for the coal to be inspected both at the colliery and at the docks where it is to be shipped, and a certificate of shipment in respect of such coal shall be granted by the Coal Controller provided he is satisfied with the quality and condition of coal and in particular that the coal has been loaded without being mixed—either underground or on the surface—with any other coals which are either not graded or are graded in an inferior class;

(iv) the inspection of coal at the colliery as well as at the docks shall be done by such officers of the Coal Controller's organisation, as may, from time to time, be specifically authorised in this behalf by the Coal Controller;

(v) each certificate of shipment shall be granted by the Coal Controller in quintuplicate, and shall be signed by such suitable officer as the Coal Controller may, from time to time, authorise in this behalf;

(vi) with a view to ensuring that the expenditure incurred by the Coal Controller's organisation in connection with the performance of services relating to the grant of certificates of shipment is realised by the Government, the Coal Controller will recover from the collieries applying to him for the grant of such certificates, an amount calculated at the rate of 3 nP. per ton of coal inspected at the port of shipment, calculated at the Surveyor's figures, or where the Surveyor's figures are not available, on the railway weighment figures. No certificate of shipment shall be granted by the Coal Controller unless the amount calculated in the manner indicated above, has actually been realised by him from the collieries concerned;

(vii) the amount, indicated in subpara (vi) above shall be deposited by the collieries concerned into a treasury, the remittance being creditable to the Central Government under the Receipt Head "XXXII-Industries and Supplies—Miscellaneous". The payment shall be made by means of a challan and the copy of the challan that is returned by the treasury to the colliery shall be transmitted by the colliery to the Coal Controller along with its application to the latter for the grant of a certificate of shipment.

IMPORT OF CARS BY TOURISTS

The Government of India have decided to exempt cars, jeeps and station wagons imported by tourists under the 'Triptyque' system from import trade control restrictions. This is subject to the condition that the vehicles shall be re-exported within the period stipulated in the 'Triptyque' or 'Carnet de passage'.

This decision follows representations that considerable difficulty had often been felt in securing customs clearance permits in advance for import of vehicles through the Automobile Associations.

Announcing the Government decision, an Import Trade Control Public Notice, published in a Gazette of India Extraordinary, says that the sale or retention of such vehicles in India in violation of the stipulated condition will entail penal action. Vehicles registered in the names of tourists will also not be allowed to be transferred to other parties in India.

SPECIFICATION FOR INFANT MILK FOOD.

The Indian Standards Institution has formulated a specification for infant milk food.

The draft standard prescribes the minimum requirements and the methods of test for infant milk foods intended for feeding normal infants as a substitute for mother's milk.

Human milk is universally regarded as the ideal food for feeding infants, particularly during their early months. Yet, owing to various causes, an infant may not derive sufficient nutrition rom the mother and artificial feeding of the infant may become necessary.

Fresh or dried milk is usually employed for this purpose, though for convenience, the use of dried milk is more common and popular.

Infant foods, at present in use in the country, can be divided into three categories, namely (a) infant milk foods, (b) infant foods without milk, and (c) specialised foods. These have so far been imported.

Efforts are now being made to manufacture these infant foods in this country and some manufacturing units are being put up. The draft standard has been issued with a view to helping the indigenous manufacturing units in the production of infant milk foods.

Comments on the draft standard, may be sent before October 5, 1959 to the Indian Standards Institution, 'Manak Bhavan', 9, Mathura Road, New Delhi.

NEED FOR ECONOMIC PRESERVATION OF MANGOES.

Over 177.9 million maunds of grafted and seedling varieties of mango—the king of fruits—are produced in India every year according to a report "Marketing of Mangoes in India", issued by the Directorate of Marketing and Inspection of the Union Ministry of Food and Agriculture.

The report, which deals with such aspects of marketing of mangoes as availability, demand, consumption, storage, preservation and research, adds that out of the total supplies 17.7 million maunds go waste, 1.1 million maunds are exported and 159 million maunds are consumed within the country in one form or the other.

The quantity of mango retained in the producing areas varies a great deal. On the whole, it is estimated, 6.9 per cent of grafted mangoes and 41.4 per cent of seedling mangoes are retained by the producers and the net available supplies for the market, after excluding 1.1 million maunds of exports, are 119 million maunds.

The report says efforts are made by all concerned to dispose of mangoes as soon as possible and they are not stored for a period longer than what is absolutely necessary. Stating this as the main reason for periodical gluts, the report urges the need for suitable arrangements for cold storage facilities at important assembling and distribution centres.

As regards the utilisation of mangoes for manufacturing various products, the report says that out of 159.1 million maunds of mangoes consumed in one form or the other, 36.1 million maunds are utilised in the manufacture of products such as pickles, chutney, jam, amchur, spices and syrup.

Stressing the importance of increased utilisation of mangoes in the food preservation industry, the report recommends intensification of research on their economic preservation.

The desirability of extending the season of mangoes by judicious selection and introduction of early and late varieties so that the fruit does not ripe simultaneously everywhere and is available throughout the year, has also been stressed.

The report points out that the systematic grading of mangoes is generally not practised in the country. However, with a view to provide a common basis for trading on standard quality, grade specifications for some of the varieties of mangoes such as Alphonso were drawn up under the Agricultural Produce (Grading and Marking) Act, 1937 and grading of mangoes under the Agmark was started in 1937. The report recommends that growers and packers should be encouraged to take up grading and marking of mangoes.

The report is a priced publication and can be had from the Manager Publications, Civil Lines, Delhi—8.

SPECIFICATION FOR CUT SIZES OF TIMBER.

An Indian standard specification for cut sizes of timber (IS: 1331-1958) has been published by the Indian Standards Institution.

The need for a standard for cut-sizes in general use, in the interests of both producers and stockists on the one hand and consumers on the other is apparent.

Every saw mill produces a certain amount of timber in odd sizes, by way of salvage from what would otherwise be wasted in the course of normal timber conversion.

While these odd sizes may find a use, this standard would refer only to those sizes which experience had shown to be in a general demand for use in building and other purposes.

The standard also covers sizes of converted timber for the guidance of stockists in the timber trade and the general users. The standard is expected to canalize the demand for timber, and thus help in timber being stocked in suitable sizes and in making it readily available to the consumer.

Copies of the standard, published in English are available from the office of the Indian Standards Institution, 'Manak Bhavan' 9, Mathura Road, New Delhi and from its branch offices at Bombay, Calcutta and Madras.

DRAWBACK OF CUSTOMS DUTY.

As a measure of export promotion, the Government of India have decided to allow drawback of customs duty paid on imported Lurex Yarn used in the manufacture of fabrics exported. Rebate of customs and central excise duty paid on materials used in the manufacture of electric power and distribution transformers has also been provided for.

Drawback has been provided for on the export of certain additional categories of steel products.

For further particulars and for advice regarding the procedure for obtaining these concessions, exporters are advised to consult the Customs House at the ports, from which the goods are to be exported.

IMPORT OF COLOURED RAW STOCK.

The policy for the import of unexposed coloured cinematograph films under the Export Promotion Scheme has been modified, states an Import Trade Control Public Notice.

Coloured raw stock was licensed till now under the Export Promotion Scheme in the proportion of 4:5 and this facility was given only to the extent to which coloured raw stock was required for completing the picture in question.

It has now been decided that coloured raw stock can be licensed under the Export Promotion Scheme even for starting a new picture provided acceptable contracts are entered into or guarantees for exports are produced to the satisfaction of the licensing authority.

UNDERGROUND HYDRANT, SLUICE-VALVE TYPE.

The Indian Standards Institution has published an Indian standard specification for underground hydrant, sluice-valve type (IS:909-1958).

The standard lays down the requirements regarding materials, shapes, dimensions and tests of underground hydrant, sluice-valve type.

The Institution has already published standards covering couplings, branch pipe, nozzles, nozzle spanner, suction collecting heads, delivery breechings, branch with revolving head, suction strainers, hydrants, washers for water fittings, fireman's axe, fire hooks, fire bell, etc.

It may be recalled that the work on the formulation of Indian standards for fire fighting equipment and appliances was undertaken by ISI at the instance of the Ministry of Home Affairs, Government of India who expressed urgency for standardizing fire fighting equipment on a nation-wide scale, so that a national fire fighting service, having similar equipment all over the country, could be organized.

Copies of the standard, published in English, are available from the office of the Indian Standards Institution 'Manak Bhavan', 9, Mathura Road, New Delhi and from its branch offices at Bombay, Calcutta and Madras.

TRAINING COURSES IN PRODUCTIVITY TECHNIQUES.

The National Productivity Council has organised a series of training courses on various productivity techniques throughout the country.

These training courses, which will be introduced in the different regions with the help of Local Productivity Councils and the National Productivity Council Regional Directorates, have been specially prepared, with the help of foreign experts attached to the National Productivity Council and its Specialists, to suit Indian conditions.

The courses in the training programme include work study, production control incentives in industry, quality control, materials handling, job evaluation and merit rating, and will be imparted to trainees drawn from industrial units including workers' representatives. These training courses are expected to result in increased manufacturing productivity at lower cost, more efficient industrial controls and better management.

The first course in the series on work study has been inaugurated under the auspices of the Delhi Productivity Council at the premises of the Delhi Polytechnic under the supervision of Prof. R. F. Bruckart—T.C.M. Productivity Specialist.

The course includes such subjects as techniques of waste reduction, human factor in work study, method study, analysing factory layout and machine operation, principles of motion economy and work measurement and rating the performance.

EXPORTS OF SOME AGRICULTURAL COMMODITIES.

The Government of India have reviewed the existing restrictions on the export of certain agricultural commodities. These restrictions have mostly been imposed in the interests of domestic consumption.

It is considered that instead of placing quantitative restrictions on exports, internal requirements should as far as possible be met by stimulating and augmenting production in the country.

It is proposed that as a first step the following commodities, the export of which is at present regulated within overall ceilings, should be licensed freely without any quantitative limit for a period of three years.

The commodities are niger seed, kardi seed, sesamum seed and their oils, salad oil, niger cake, kardi cake, maize oilcake and meal, undecorticated cottonseed oil cake, other oil cakes (excluding groundnut cake, linseed cake and coconut cake) and green coconuts.

It has also been decided that the export of fish meal should be licensed freely for a period of two years.

The trend of exports of these commodities will be reviewed from time to time so that such promotional steps as may be found to be necessary in the field of production and trade may be considered and taken by the authorities concerned.

METHODS OF SAMPLING AND TEST FOR GLYCERINE.

The Indian Standards Institution has issued a draft Indian standard on methods of sampling and test for crude and refined glycerine.

The draft standard prescribes the methods of sampling and test for crude and refined glycerine. The methods that apply to crude glycerine are glycerol content, ash non-volatile organic residue, arsenic and total free alkali.

These relating to refined glycerine are glycerol content, specific gravity, ash arsenic, copper, iron, lead, chlorides, sulphates, acraldehyde and glucose reducing substances, acidity or alkalinity, fatty acids and osters and colour.

Tests for determining volatile fatty acids and substances darkened by sulphuric acid are also described.

Comments on the draft standard may be sent before August 22, 1959 to the Indian Standards Institution, 'Manak Bhavan', 9, Mathura Road, New Delhi.

MERGER OF CUSTOMS AND EXCISE SERVICES.

The Government of India have decided that the two existing Class I Services, viz., the Indian Customs Service and the Central Excise Service should be merged into a single service with effect from August 15, 1959. The combined service will be designated as the Indian Customs and Central Excise Service, Class I.

The service will initially be formed from amongst all the existing Class I officers of the Customs and Central Excise Services who will henceforth be borne on a single combined cadre for all purposes. The members of the combined service will be liable to be posted to either of the two departments.

Rules regarding recruitment, training etc. of the combined service are expected to be notified in due course.

This expert has won the trust of millions in the label 'Sanforized'

Meet our American-trained expert who makes sure that any fabric marked 'Sanforized' won't shrink. Every day, all through the year, he tests fabrics bearing this international label; so that your clothes won't shrink out of fit—even after many, many washings!

This is how he does it:

Travelling from mill to mill, he advises and helps them with their technical problems; and makes on-the-spot tests that ensure value in the cloth you buy labelled 'Sanforized'.

Whenever he visits the mills, he takes at random several samples from their godowns as well as off the processing machine. These samples are first measured, and then given a standard wash test.

And then, the samples are re-measured. This is the first stage of ensuring quality. All fabric must meet the Company's strict anti-shrinkage specifications *before* it can use the label 'Sanforized'.

These tested samples are sent to the New York office for re-checking, and with them goes the expert's detailed report. These documents record the progress and prosperity of each individual mill.

The New York office checks thousands of samples from all over the world. This is your assurance that fabric labelled 'Sanforized' is of a uniformly high standard, and is welcomed *everywhere* in the world!

Look for SANFORIZED REGD TO MK on the label and your clothes will never shrink out of fit!

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

For information: 'Sanforized' Service, 95, Marine Drive, Bombay-2

FOR THE INVESTOR

Diverse Pulls

Investment Gossip: ONE

THE stock market has been rather listless these past few days, and at the time of writing (Friday afternoon) the trend is quiet with Indian Iron after a long interval quoting below the Rs 24 mark.

The cause or causes for the present depression are not easy to find. For, Mr Morarji Desai, who, it was generally expected, would be obliged to say something about taxation in his addresses to the UPASI at Coonoor and businessmen in Madras, has not only not administered any shock, but has actually said something quite favourable for the private sector. Corporate news also continues to be good.

The disappointing announcement regarding increase in coal prices is certainly an adverse factor as far as the smaller collieries are concerned. *It is remembered* that the spokesmen of the industry have been asking for a minimum increase of Rs 3.50 per ton, it can be imagined what effect the award of a Rs 0.50 per ton increase would have produced in the industry as a whole. The result is the declining tendency noticeable for the past few days in the coal section of the Calcutta Stock Exchange. It is, however, too far fetched an explanation to say that the coal price increase announcement has affected market sentiment as a whole.

In the same manner, the rethinking that is evident in the textile section now and the resultant decline in the price levels there cannot be made to account for the general listlessness in Dalal Street.

A *plausible theory* is that the political situation in and around the country has got the operators worrying. Besides the constant pin-pricks administered to us by China in Tibet, there is considerable apprehension that China may be spoiling for an imbroglio with India. Prime Minister Nehru's categorical statement regarding Bhutan that India was duty-bound to go to the aid of that country has engendered the feeling that Sino-Indian relations have further deteriorated in recent weeks. In the meantime, the situation within the country is far from happy. The exit of Mr Ajit Prasad Jain and the strong measures taken by the West Bengal Government to nip the food agitation in the bud emphasise the fact that, in the matter of meeting the most important of the basic needs of the population, Government have yet to meet with success. In the Western State of Bombay, common men and businessmen alike have the reported decision of the Congress Party to bifurcate the State into unilingual regions to divert their attention.

That quite a large number of new issues are in the offing might have also been responsible for the current lack of interest. Judging from the resounding success of the issues that were placed recently on the market, a general tendency on the part of investors to subscribe to new issues cannot be ruled out.

The unexpectedly thumping success of the State Loans, however, shows clearly that there is a plethora of funds seeking investment. A logical conclusion is that a sizable portion of these funds will find its way to the stock market sooner or later.

£R$

TISCO Accounts for 1958-59

Investment Gossip TWO

Although the gross block of the Tata Iron & Steel Co Ltd rose during 1958-59 by Rs 72.10 crores, the new plant thus installed did not materially contribute either to production or to sales during the year; and this was in part because of the interruption to work caused by the strike of May last year. Nevertheless, the trend in output was not entirely unsatisfactory, though the scheduled production for 1958-59 could not, for obvious reasons, be attained. Production of saleable steel rose by just under 100,000 tons to 885,000 tons, and this level compares with the previous best touched in 1941-42 of 839,000 tons. Similarly, sales should have risen more sharply than was the actual experience, one of a rise of Rs 8.05 crores to Rs 53.45 crores. There was some saving in respect of payments to and provisions for employees, an item that has been marked down by Rs 0.81 crores to Rs 12.99 crores. On the other hand, raw materials consumed are considerably higher at Rs 11.02 crores against Rs 9.89 crores. Every other head of expenses has gone up, rises in freight and handling charges and in repairs to machinery being particularly noteworthy. Then, the head of "other expenses" intriguingly includes a provision of Rs 50 lakhs for contingencies.

As a result of the large scale additions to block, the provision for depreciation has had to be increased by Rs 1.63 crores to Rs 5.53 crores; and even so high a provision is not on the basis of what is permissible under the Income-tax Act, but a rather lower figure on the basis of equated instalments of 6¼ per cent of the gross block. The Managing Agents' Commission has been skipped, presumably because the basis on which this is payable is after provision of depreciation at tax rates. A major increase in expenditure relates to interest, which has moved up steeply, in being more than doubled from Rs 1.42 crores to Rs 3.05 crores. The Plant Rehabilitation and Development Rebate Reserve receives Rs 2.84 crores against Rs 2.79 crores; the provision for taxes, limited this year to Wealth Tax, is rather lower at Rs 17 lakhs against Rs 90 lakhs; and the balance carried down to the appropriation account is this year a debit of Rs 13.84 lakhs against a credit last year of Rs 1.93 crores.

According to the appropriation account, the amount tranferred from General Reserves which have been built up of taxed profits is Rs 2.27 crores against Rs 2.07 crores. The increase in retention prices for 1956-57 and 1955-56 has, after transferring Rs 16 lakhs to Plant Rehabilitation and Development Rebate Reserve, been credited to Retention Prices Equalisation Reserve; the amount involved is Rs 97.56 lakhs.

The proposed dividends absorb a slightly higher figure at Rs 2.27 crores against Rs 2.24 crores. The carry forward is placed at Rs 8.47 lakhs against Rs 4.50 lakhs brought in.

The capital of the company has marked a small rise from Rs 30.66 crores to Rs 30.72 crores. Against this, Reserve and other funds are placed at Rs 26.15 crores, or Rs 1.65 crores higher than in the previous year. The break-down of Reserves is as follows:

	(Rs crores)
General Reserve No. 1 ...	10.27
General Reserve No. 2 ...	2.18
Plant Rehabilitation and Development Rebate Reserve	3.60
Debt Redemption Reserve	6.00
Retention Prices Equalisation Reserve ...	1.16
Mines and Collieries Reserve	1.96
Repairs and Renewals Reserve	0.59
Investments Depreciation Reserve	0.30
Profit and Loss Account surplus ...	0.08

A very sharp increase has been registered under borrowings, higher by Rs 23.59 crores; break-down as follows:

	(Rs crores)
From Bank	2.00
From IBRD ...	47.69
From banks on cash credit accounts ...	18.58
Special Advance from Government ...	10.00
Fixed Deposits from banks and others ...	5.51

The following are extracts from the Directors' Report, which throw light on the accounts for the year:

"The results....clearly reflect the transitional nature of the year under review, in which heavy capital expenditure produced only a small increase in output and greatly enhanced overheads on the enlarged block were therefore compensated by little increased revenues."

"The results were further affected by (a) the strike which took place during the year and which is estimated to have cost the Company, directly and indirectly, about Rs 1½ crores, (b) lower average realisations resulting from a greater proportion of semi-finished products made and (c) increases in costs which have not been reimbursed by Government through an increase in retention prices."

"The dividend recommended by the Directors....is strictly in accordance with the principle adopted in previous years and fully carries out the assurance given to the shareholders in 1956...."

"The Company's practice in recent years was to provide for depreciation at income tax rates. On this basis the provision for the year under report would have amounted to nearly Rs 9 crores.. your directors consider that the continued application of the existing basis....would not be realistic or fair and would distort the annual presentation of accounts. The depreciation provided would also bear no relation to the depreciation earned under the Government of India's price fixation scheme which provides for depreciation on a flat basis."

"A further representation has been made to Government for an increase in retention prices in respect of increases in costs which occurred during the year."

"In view of the wide disparity between the paid-up capital and the net block, and also in order to reduce the heavy load of the debt incurred to finance the expansion programmes, it has been decided subject to the approval of the shareholders and Government to increase the Company's share capital....The new issue will bring in a total amount of Rs 3.32 crores...."

£R$

Investment Notes:

THE full details of the 20,000-ton aluminium project, which is to be set up at Rihand in Uttar Pradesh in collaboration with Kaiser Aluminium and Chemical Corporation, are now available. The capital cost of the project will be about Rs 16 crores. The Kaiser group will subscribe 26 per cent of the Ordinary capital. Besides the ordinary capital of Rs 6 crores, the rest of the capital needed will be obtained through the issue of preference shares in India and by foreign loans from the US Export-Import Bank.

The Textile Machinery Corporation Limited has decided to issue very soon preference shares, which will be offered, in the first instance, to the existing equity and preference shareholders and then to the investing public. Probably, this new issue will rank *pari passu* with the existing preference shares.

The shares of Walchandnagar Industries have been ruling very firm at Rs 327 on an optimistic outlook for the company. There are expectations of a fresh issue of capital by the company in the near future to finance its expansion programme. It is reported that the company has made satisfactory progress in the manufacture of sugar machinery. It is believed that the company will raise new capital to the extent of Rs 50 lakhs for the present. A clearer picture is likely to emerge in the course of a few weeks.

The Central Cachar Tea Company will be offering 2,000 new shares of Rs 100 each, at par, to the existing shareholders in the ratio of one new share for every five shares held.

The Coon Tea Estates Company has proposed to issue 18,891 equity shares at par. The company has agreed to accept coupons presnted to them up to the 31st October, 1959.

A couple of months ago, Khandelwal Ferro-Alloys 7½ per cent tax-free

Preference issue was heavily oversubscribed. Khandelwals will shortly be quoted and whenever shares of these are available, they may be bought for investment since 7½ per cent tax-free is equivalent to 10.72 per cent taxable.

In the 7 per cent tax-free group, Jeypur Sugars are in demand around Rs 106. They look cheap at the current level. Purchases may be made as and when available.

It is learnt that KCP are shortly issuing 6½ per cent tax-free Preference shares. KCP Limited is an old sugar concern and has added recently a cement factory (1 lakh ton capacity) and has also been licensed to manufacture heavy industrial machinery required for cement and sugar plants. Purchases can be made for investment.

£R$

Investment Briefs:

The Punjab National Bank has decided to pay an ad-interim dividend for the current year at the rate of Re 1 gross per share. The net profit for the half-year ended 30th June, 1959, subject to audit, amounts to Rs 47.25 lakhs (including Rs 4.49 lakhs brought forward), leaving a carry-forward of Rs 34.75 lakhs, subject to taxation, etc.

Tide Water Oil Company has declared an interim-dividend of 70 nP per share on the Ordinary shares for the year ended 31st October, 1959. The provisions of the Finance Act apply to this dividend and, consequently, tax will be required to be deducted therefrom before payment. The dividend is payable on or after the 14th September, 1959.

The Bombay Burmah Trading Corporation has mainatined the interim-dividend of 6 per cent for the year ended 31st May, 1959.

Surat Electricity has recommended a final dividend of 4.50 per cent, making a total of 7 per cent for the year ended 31st March, 1959, the same as in the previous year.

Hind Cycles have passed over the dividend on the Ordinary shares for the year ended 31st March, 1959.

United Nilgiris Tea, Madras, has decided to pay a final dividend of 12 per cent, making a total of 19½ per cent for the year ended 31st March, 1959 as against a total of 16 per cent paid for the previous year.

The Madras Safe Deposit Company has maintained the dividend at 5 per cent for the year ended 30th June, 1959.

£R$

Indian Copper Results

Balance-Sheet Reviews:

DESPITE a decline in earnings, the Indian Copper Corporation Ltd., has maintained the dividend at 18 per cent for 1958. Net sales are lower at £2.94 million against £2.98 million, while the net profit, after providing for Depreciation and Taxation, amounts to £373,410 against £411,215 in the previous year. Except for a sum of £50,625 provided for Development Rebate Reserve, all other allocations have been reduced:—Depreciation from £175,000 to £150,000; Taxation provision from £522,534 to £467,282 and General Reserve from £175,000 to £125,000. The amount carried forward is lower at £71,312 against £120,361 brought in.

The total ore reserves for all mines show an estimated increase of 183,390 short tons at 4,034,147 short tons as compared to 3,850,757 short tons in the previous year. Sales of Kyanite have totalled 14,649 tons, being lower by 3,618 tons than in the previous year.

With regard to the two Civil Suits against the Bihar Government, the company has made an appeal to the Supreme Court. It is, however, expected that there will be some delay before the case comes up for hearing.

£R$

New Dooars Tea

Thanks to a record crop outturn and a higher average price realised, the New Dooars Tea Company Ltd., has been able to raise the Ordinary dividend from Rs 20 to Rs 25 per share for 1958. The net profit, providing for Depreciation and Taxation, is substantially higher at Rs 3.63 lakhs against Rs 1.53 lakhs in the previous year. Apart from providing a sum of Rs 5,267 for Development Rebate Reserve, the Depreciation amount is reduced to Rs 91,439 from Rs 1.25 lakhs and Wealth Tax provision to Rs 18,000 from Rs 29,440. Taxation amount is, however, raised to Rs 3.25 lakhs from Rs 2.15 lakhs. Crop outturn is shown at 22,413 maunds against 19,432 maunds and the average price realised at Rs 1.98 against Rs 1.84 per pound.

£R$

Philips India

The volume of business of Philips India Limited was adversely affected, during the year ended 31st December 1958, by the imposition of restrictions on imports. For obvious reasons, sales have declined to Rs 4.46 crores from Rs 4.74 crores. But, on account of the progress in regard to the manufacture of various items within the country and the conclusion of more remunerative lines of business, the net profit, before providing for Depreciation and Taxation, has increased to Rs 61.58 lakhs from Rs 55.03 lakhs in the previous year.

In respect of allocations, a sum of Rs 27.76 lakhs is provided for Taxation against Rs 28.35 lakhs; Rs 3 lakhs for General Reserve against Rs 13.50 lakhs and Rs 4.30 lakhs for Development Rebate Reserve against nil. After transferring Rs 3 lakhs from Contingency Reserve and making other adjustments, the directors have recommended a dividend of 8.5 per cent on the Ordinary shares, carrying forward Rs 35,818 to next year.

The directors have, in their report, stated that 1958 has been marked by a progressive expansion of the activities of the new factory at Poona and greater consolidation of the organisation as a whole. The factory in Calcutta has maintained a satisfactory level of production.

They add that the company's endeavours to utilise the country's resources to the maximum has resulted in the proportionately increased purchase of indigenous products. The demand for all categories of the company's products is sustained, and cannot be met in full due to the shortage of supplies. They, however, feel confident that the progressive realisation of the company's local manufacturing plans will solve the present problem of supplies, resulting in a gradual improvement in sales in future.

when tomorrow comes...

For him a spade is not yet a spade.
The telegraph wires hum a strange tune, the
distant drone of a plane means faraway places, mystery.
And imitating father is a new kind of play.

When tomorrow comes, play will turn to work.
Life will take on a different purpose. A spade
will be a spade, and care will be part of living.

Today's striving and effort is for the world
he will grow into, a world that offers a little more—
a little less of the care, a little more of the joy.

Today, as in the past, our products help to make homes cleaner, healthier, happier. But today we are also working for... Tomorrow, when the ever-growing urge for better living will demand still greater efforts. And we shall be ready with wider service, new ideas, new products...

Today and Tomorrow... Hindustan Lever serves the home...

Fort William Jute

The Fort William Jute Company Ltd, in Bangur Brothers group, has maintained the Ordinary dividend at Rs 1.50 per share despite a decline in earnings. Sales are lower at Rs 2.04 crores against Rs 2.18 crores, while the net profit, after providing for Depreciation and Taxation, amounts to only Rs 4.78 lakhs against Rs 7.61 lakhs in the previous year. A sum of Rs 5.30 lakhs (Rs 5.64 lakhs) is provided for Depreciation; Rs 4.13 lakhs (Rs 8,907) for Taxation; Rs 27,000 (Rs 47,700) for Wealth Tax; Rs 1.00 lakh (Rs 3.50 lakhs) for General Reserve and Rs 22,948 (nil) for Development Rebate Reserve.

The balance-sheet, as at 31st March 1959, shows a paid-up capital of Rs 31 lakhs divided into 2.10 lakh Ordinary shares of Rs 10 each and 10,000-7 per cent Cumulative Preference shares of Rs 100 each. General Reserve is shown at Rs 19 lakhs. The gross block at Rs 127.75 lakhs is depreciated by Rs 68.81 lakhs to show a net block value of Rs 58.94 lakhs.

£R$

Hastings Mill

The Hastings Mill Limited, in the same managing agency group, has, however, raised the Ordinary dividend from Rs 5 to Rs 6 per share for the year ended 31st March, 1959 despite a decline in earnings. Sales have declined to Rs 2.42 crores from Rs 2.55 crores, while the net profit is slightly lower at Rs 7.09 lakhs against Rs 8.69 lakhs in the previous year. The directors have set apart Rs 8.44 lakhs (Rs 9.12 lakhs) for Depreciation; Rs 8.80 lakhs (Rs 1.25 lakhs) for Taxation; Rs 54,000 (Rs. 50,000 for Wealth Tax; Rs 3.00 lakhs (Rs 5.00 lakhs) for General Reserve and Rs 40,000 (nil) for Development Rebate Reserve.

Against a paid-up capital of Rs 65 lakhs (Rs 40 lakhs in ordinary and Rs 25 lakhs in preference shares, both of Rs 100 each) Capital Reserve is shown at Rs 1.88 lakhs; General Reserve at Rs 29.50 lakhs and other Funds at Rs 36.46 lakhs. The gross block amounts to Rs 138.26 lakhs; depreciation to Rs 75.98 lakhs and the net block to Rs 62.27 lakhs.

£R$

Baghmari Tea

The Baghmari Tea Company Ltd, in McLeod group, has reported a slight decline in net profit, after providing for Depreciation and Taxation, to Rs 60,722 for 1958 as against Rs 1.40 lakhs in 1957. Apart from providing a sum of Rs 6,400 for Development Rebate Reserve, the Depreciation amount is raised to Rs 83,288 from Rs 72,289 and Wealth Tax to Rs 7,000 from Rs 6,000. Taxation provision is reduced to Rs 59,000 from Rs 70,000. The dividend is maintained at 15 per cent. Crop outturn is lower at 9,018 maunds against 10,153 maunds, while the average price realised is higher at Rs 2.29 against Rs 2.20 per pound.

The balance-sheet shows a paid-up capital of Rs 5.50 lakhs divided into 55,000 shares of Rs 10 each. General Reserve is shown at Rs 8.62 lakhs and other Funds at Rs 5.16 lakhs. The net block value is Rs 15.19 lakhs.

£R$

Sungma Tea

Thanks to a rise in earnings, the Sungma Tea Company, Ltd., in the same managing agency group, has doubled the dividend to 15 per cent for 1958. The net profit works out to Rs 2.77 lakhs against Rs 1.25 lakhs. A sum of Rs 48,482 (Rs 49,492) is provided for Depreciation; Rs 2.31 lakhs (Rs 69,500) for Taxation; Rs 4,500 (Rs 2,000) for Wealth Tax; Rs 2,400 (nil) for Development Rebate Reserve and Rs 1.75 lakhs (Rs 75,000) for General Reserve. Both crop outturn and the average price realised are higher at 4,580 maunds and Rs 4.29 against 4,418 maunds and Rs 3.49 per pound respectively in 1957.

£R$

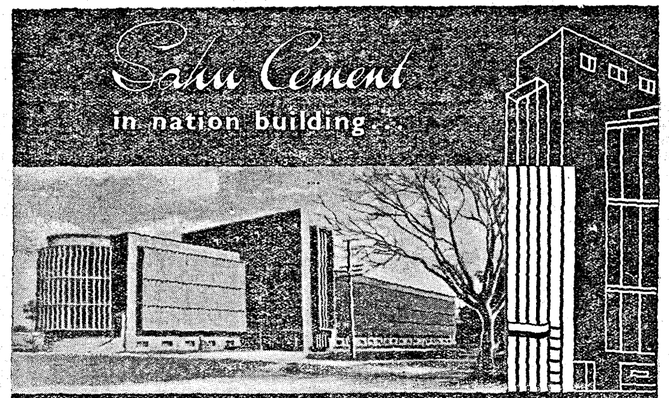
Choonabhutti Tea

The Choonabhutti Tea Company, Limited, in Andrew Yule group, has also raised the dividend from Rs 20 to Rs 22.50 per share in spite of a decline in the net profit from Rs 4.51 lakhs to Rs 2.65 lakhs. Apart from providing a sum of Rs 4,420 for Development Rebate Reserve and maintaining General Reserve at Rs 60,000, the Depreciation amount is lowered to Rs 61,987 from Rs 93,142; Taxation provision to Rs 2.15 lakhs from Rs 2.30 lakhs and Wealth Tax to Rs 11,000 from Rs 22,897. Crop outturn is lower at 14,667 maunds against 14,951 maunds; but the average price realised is higher at Rs 2.07 against Rs 1.91 per pound.

The balance-sheet shows a paid-up capital of Rs 11 lakhs of which Rs 9 lakhs is in ordinary shares and Rs 2 lakhs in preference shares, both of Rs 100 each. General Reserve is higher at Rs 13.2 lakhs. The gross block at Rs 22.77 lakhs is depreciated by Rs 9.44 lakhs to show a net block value of Rs 13.33 lakhs.

£R$

Churulia Coal



Despite a rise in sales from Rs 5.10 lakhs to Rs 7.32 lakhs, the Churulia Coal Company, Limited, in Heilgers group, has reported a decline in net profit to Rs 25,672 for 1958 from Rs 41,297 in the previous year. Taxation provision is raised to Rs 54,000 from Rs 1,600, while General Reserve is maintained at Rs 5,000. The sum provided for Wealth Tax is reduced to Rs 1,800 from Rs 3,300. The dividend is, however, maintained at 5 per cent.

According to the directors' report, the Karanpura Mining Syndicate raised 180,082 tons of coal and despatched 180,627 tons. The Managing Contractor continues to raise and sell coal from Religara Colliery and this arrangement continues to work satisfactorily.

Krishnarajendra Mills

The net profit of Sri Krishnarajendra Mills Limited for the year ended March 31, 1959, has recorded a decline Rs 10.07 lakhs from Rs 12.01 lakhs for 1956-57. This was despite the larger sales of Rs 1.34 crores against Rs 1.03 crores last year. Depreciation provision is Rs 5.02 lakhs (Rs 6.68 lakhs). Development Reserve Rebate gets Rs 1.03 lakhs (Rs 1.65 lakhs) and general reserve gets Rs 25,000 (nil). Wealth tax provision is Rs 60,122 (nil). The dividend on ordinary shares has been reduced to 8 per cent from 9 per cent. Out of the 96 automatic looms sanctioned under the expansion schemes only 48 Texmaco automatic for the rest of the machinery has not been received. With thirty-two mills going into production already, the rest of the looms are to be commissioned to work by this month.

Chembra Peak

The Chembra Peak had recorded a good increase in their earnings upto March 31, 1959. It had gone up to Rs 6.38 lakhs from Rs 3.68 lakhs in 1957-58. The increase was due to its larger coffee crop of 273.88 metric tons as against the previous harvest of 139.48 metric tons. Equally higher was the tea crop too at 16.87 lakh lbs. against the 16.19 lakh lbs. previously. Depreciation allocation is Rs 64,640 (Rs 62,625). Taxation provision is higher at Rs 2.74 lakhs Rs 1.47 lakhs). Development reserve rebate gets Rs 20,460 (Rs 9,262) and an amount of Rs 1.50 lakhs taken to general reserve as against Rs 1 lakh in the previous year. The ordinary dividend has been raised to 15% from 10%. The carried forward amount is Rs 75,553, not very much changed from the previous year.

The 1959-60 estimate is 15 lakh lbs. tea crop. Coffee crop is however expected to be lower at 76 metric tons.

Muddled Coal Policy

GOVERNMENT'S attitude to coal seems to suggest that they are none too serious about achieving the target of 60 million tons by the end of the Second Plan. For, it has been happening with monotonous regularity, every time a decision needs to be taken on one aspect of coal or another, that the announcement of the decision at issue is unduly delayed. Perhaps Government are convinced that demand for coal in 1960-61 will not rise to the original target of 60 million tons and that, therefore, there is no urgent need to provide the incentives or institute the measures which will enable such a level of output to be attained. This alone can explain, though it will not justify, the action taken by Government last week in regard to coal selling prices.

It was made known by Sardar Swaran Singh, Minister for Steel, Mines and Fuel, that Government, in accepting in their entirety the recommendations of the Coal Price Revision Committee, have announced that prices of coal, except for the two most inferior varieties, are to be raised by 50 nP per ton. While the coal industry may be thankful for this much relief, in that some price increase has been allowed, its reaction undoubtedly will be that the increase now sanctioned will be inadequate even to cover the rise in the cost of production since the study was conducted by the Coal Price Revision Committee. We may recall that this Committee was constituted over two years ago, and that the set of figures with which it concerned itself and on the basis of which, presumably, its recommendations have been made, related to the year 1957. The method by which the Coal Price Revision Committee has arrived at the new fair price is perhaps unexceptionable. For, the Committee is of the view that the cost of production, excluding stowing operations, works out to Rs 17.90 per ton. The Committee has suggested that a margin of profit of Rs 1.75 can be considered fair and reasonable; a margin of 10 per cent on the cost price is, we concede and the coal industry will admit, fair and reasonable. It is on such basis that the Committee found that an increase in the selling price to the extent of 50 nP would be necessary so as to ensure such a profit margin for the coal industry. Unfortunately, we repeat, the figures on the basis of which the Committee calculated the cost of production have been rendered sadly out of date, two years having since elapsed.

There has been an indication by the Minister that such a price increase will go a long way toward enabling the Second Plan target to be achieved. We are afraid this may turn out to be no more than wishful thinking. Coal production has, during the first three months of 1959, been running at a monthly average of 3.75 million tons. It is hard to believe that, within another 20 months, production can be stepped up by a further one-third.

However, there is a redeeming side to the governmental decision on coal of last week. It has been announced that the excise duty on coal and coke is to be raised by 25 nP and 37 nP respectively per ton, in order that the collieries may be recompensed the whole of the cost of stowing operations. Since, hitherto, the subsidy against stowing varied between 75 per cent and 85 per cent of the cost, the benefit to collieries, especially those which have been particular about safety, is apt to prove to be considerable. There can be no doubt that this announcement will make not merely for greater safety in the mines, but also for additional production being enabled.

It does not much matter, we suppose, that the Second Plan target for coal has, as it were, been scuttled; this is because Government presumably have knowledge that the demand for coal will not rise to 60 million tons. But we must remember that, with all steel plants undertaken during the Second Plan in full operation by the end of the current plan, and with the tempo of industrial activity generally on the increase, the demand for coal during the Third Plan is likely to be high and sustained. If the private sector in coal is to have any responsibility for producing even a moiety of the coal that will have to be additionally raised during the Third Plan period, it is important that, well in time, the necessary incentives are so provided as to persuade them to take on hand immediately the schemes of development and expansion that will be necessary if there is not to be a coal famine during the Third Plan.

A Happy Knack

MR H. V. R. IENGAR, Governor of the Reserve Bank, has the happy knack of being able to sense just what it is that, in the economic sphere, will be agitating the minds of thinking men. In August, for example, he found he had two for available at which he could conveniently bring attention to bear on subjects which are or should be uppermost in the minds of the students of Indian economy.

The first occasion was when he was the chief guest at a lunchon given by the Indo-German Social Centre. This was the apposite context in which he could refer to the oft repeated plea that we have had in India that this country could do no better than to follow the economic policies which have borne such spectacular fruit in Western Germany. Mr Iengar points out that the pace of recovery and growth in Germany was enabled by a number of factors, such as that it inherited 90 to 100 per cent of 1936 production capacity, despite war time bombing. Moreover, the steady stream of refugees that poured into West Germany were for the most part skilled workers and this influx helped, as Mr Iengar says, "in restricting undue increases in wages". Furthermore, with armament industry prohibited, as it were, Germany was able "to concentrate its resources on economic reconstruction". Finally, there was the fact of a significant modicum of foreign assistance, particularly from the USA. The Reserve Bank Governor goes on to say that it was the well conceived and courageous State economic policy, for which Professor Erhardt was to a great extent responsible, which ensured that the favourable factors could operate effectively. The Professor's basic philosophy is that the State does not participate in the game of productive capacity, but that the State is in the nature of a Supreme Judge who lays down the order and the rules of the game.

Mr Iengar then proceeds to point out the basic differences, as far as India is concerned, in the economic situation:.

"The predominantly rural nature of the Indian eonomy, the disintegrating pressures on that economy as a result of abject poverty aggravated by rising population, the scarcity of skilled labour force and also of managerial and technical talent at higher levels, the structural weaknesses in Indian industry, such as the low production of steel and the absence of facilities for manufacturing heavy machinery—which can only be remedied by massive investment and foreign aid".

So, Mr Iengar concludes that it would be wholly misconceived policy for India to apply the principles which succeeded in Germany. Nevertheless, Mr Iengar recognises that State economic policy is meant to foster economic growth by creating a favourable investment climate. It follows that, in India, the responsibility for development would rest mainly with Government, but it would also devolve upon the authorities so to create conditions in which there would be a side by side development of private enterprise. Mr Iengar goes to the length of asserting that, if "there is scope for vigorous private enterprise, it is clear that the extent of State enterprise and State control should not go beyond the point necessary to stimulate and sustain development". Indeed, when, as Mr Iengar says, the stage of self-sustaining growth is reached, which he hopes will come about in a few years, "the need for the State to take a direct part in economic enterprise will progressively diminish".

At the annual general meeting of the Indian Institute of Bankers, of which he is President, Mr Iengar dealt with the stability of the rupee. He conceded that, since independence, the Indian rupee has depreciated in value by 29 per cent. But, then, the decline in the purchasing power of the currency has been greater in the UK and in France, while in the USA, over the same period, the depreciation amounts to 19 per cent.. Mr Iengar repeated what he had said last year at the same forum, in pointing out that the experience in this country as to the price situation appears very favourable indeed as compared with most other countries. Nevertheless, "we cannot afford to allow the real worth of the rupee to go down further". Stability of the rupee depends not merely on what the Reserve Bank can do or does do.. Governmental policy, both at the Central and State level, has to be co-ordinated in keeping the currency stable. And the only effective answer to inflation is increased production, whether in industry or in agriculture. So, it is the Government's responsibility to keep a check from time to time so as to be in a position to discover whether every aspect of policy and administration stimulates the maximum increase of production; the inference is clear that if governmental policy has the effect of causing a decline in prodution, that policy will need to be reversed. It is a grim truth, as Mr Iengar has pointed out, that, "if, for whatever reason, production is not increased, the country is bound to suffer".

The Chinese Economy Since 1949

Part—I : Disorder and Rehabilitation

By YUAN-LI WU

(Professor of Economics and Director of the Institute for Asian Studies at Marquette University.)

THE Chinese Communists declared 1958 to be the year of the "Great Leap Forward" for the Chinese economy. Communist leaders and the entire party-controlled press and radio repeatedly exhorted peasants, workers, and officials to work harder and produce more. It was an attempt to speed up China's economic development through political methods.

During the first Five-year Plan, from 1953 to 1957, the Communists had added to China's heavy industrial plant. They also collectivized agriculture and put all private business under state control. But development was uneven, and agricultural prodrction was not growing rapidly enough to meet the demands of industrialization and an expanding population.

So the Communists decided to exploit China's major resource, its labor force, more intensively. Coercion, exhortation, and close political control were relied upon, rather than economic incentives. Collective farms were transformed into communes, a drastic reorganization which placed peasants under semi-military discipline. There was a new emphasis on small local industries.

The "Great Leap Forward," which is continuing in a somewhat more cautious form in 1959, has created new economic and political problems for the Communists. In order to understand the current situation it is necessary to consider some general principles and the course of economic development in China since 1949.

It is essential to bear in mind the general principles which govern economic activity in a centrally-planned underdeveloped economy dominated by a totalitarian political party. Once the general direction and overall plan are determined, implementation is of course conditioned by the state of technology, the availability of resources, and other external factors. The path of development is also affected by the need of the ruling party to consolidate its control over the people and develop a large number of politically reliable planners, administrators, and technicains.

Consequently, totalitarian economic planning inevitably involves a succession of twists and turns, an occasional relaxation in order later to increase tension more effectively, which would be inexplicable in a free economy. These general observations apply to the Chinese case.

In 1949 the Chinese Communists inherited a predominantly agricultural economy. Manchuria, China's principal industrial base, had been ravaged by Soviet removals of industrial plant after World War II, and by the Communists' war against the Nationalist government. Other industrial centers in the coastal cities and river ports were disrupted by extreme inflation, the breakdown of the transport system, and nearby fighting. Wartime and postwar inflation had left a deep imprint on the Chinese mind.

Economic disruption was most marked in the urban centers, but a sharp drop in production and a widespread impatience for change could also be found in China's predominantly agricultural interior. In the villages, the fundamental economic problem was the small size of peasant farms and the poor distribution of farm produce.

The Communists took advantage of this economic chaos, but they themselves were at least partly responsible for it. Their military operations had been instrumental in the disruption of internal transportation; their continuance of the civil war had been responsible for the large military expenditures of the Nationalist government, thus adding to the inflation; their propaganda and fifth column activities were an important cause of the rumours and speculation which sustained the black market. All these actions had aggravated the problem of the Nationalists in their attempts to prevent further economic deterioration.

Once in power, the Communists had to solve these problems which they had helped to create. The immediate task was to halt the runaway inflation and restore agricultural and industrial production. The first objective was largely accomplished during the first half of 1950. In order to do so, however, the Communists adopted drastic measures: compulsory loans, increased taxation, and fiscal reform. Propaganda and coercive measures, including the assessment of extravagant taxes and fines for alleged violations and profiteering, were used to liquidate business inventories, restrict "non-essential" public and private expenditures, and secure cash for the state's needs.

Land was taken from landlords and the richer peasants and given to poorer peasants. Land redistribution was a violent process, involving carefully-staged mass demonstrations at which landowners were accused of crimes and exploitation. Millions were killed after these "mass trials;" those who received land were implicitly required to share responsibility for the executions.

New strains were put on the Chinese economy by the Korean War, which threatened to renew inflationary pressures. But the Communist Party also took advantage of the war, building up an image of an external enemy. This was used to justify calls for greater exertions in production and provide an excuse for tighter controls and more rapid communization.

The first phase of the Chinese economy under Communism ended in 1952-53. By 1953 facilities of production had been rehabilitated, the Korean War had ended, and Communist control over the people had been established.

A new phase in China's economic development began in 1953, when the first Five-year Plan was proclaimed. Up to that time there had been little genuine planning: the economy was too disorganized; the Communists lacked statistical information, experienced personnel, and fully-formulated objectives. Peiping's economic authorities continued to be unsure of their ground, but by July 1955 basic requirements and methods had been worked out and the goals of the First Five-year Plan were published.

Public Enterprise and the Third Plan

By Professor S. KESAVA IYENGAR

PUBLIC enterprises are nowadays engaging the minds of policymakers and the press in India. Even before the Avadi Resolution on the socialistic pattern of society, the Railway Budget had been separated from the General Budget, and there is a growing net contribution by the railways to the Central Revenues every year. Indian Railways have their own accounts with regard to investments, interest, depreciation and labour welfare. The State Bank of India is a nationalised institution, having succeeded the Imperial Bank of India. We have Government Corporations dealing with steel and oil. The Life Insurance Corporation took over from private enterprise about three years ago. There are the Industrial Finance Corporation, The Industrial Credit and Investment Corporation of India, The Damodar Valley Corporation, Agricultural Development and Stabilisation Funds, and Employees' State Insurance and Provident Funds. We have also the State Trading Corporation, and the Small Industries Corporation. Due to the shift to the left, and huge funds required for development work, the policy of expanding the sphere of public enterprises is accelerating in pace. Some of the questions that are being discussed in connection with public enterprises are as follows: Should the managing directors of public enterprises be recruited from among retired civilians accustomed to red-tape and knowing little of business management, or from among top-ranking businessmen in the country? Should such enterprises be subject only to usual audits, or to close inspection and control by Parliament? On both these issues, the Krishna Menon Committee was definitely in favour of businessmen and Parliamentary control. There was a time when public enterprises were expected to be run on a no-profit-no-loss basis for the reason that they were public utilities catering to the welfare of the masses. Opinion is nowadays gaining strength that public enterprises should be run on a competitive basis and make the best profits, of course subject to controls which, for example, operate in the case of the Indian Railways. A fourth question with which planners are busy is whether profits from public enterprises should be diverted to the general pool of Government revenues, or whether such profits should be ploughed back in the concerned industry for re-inforcement and regeneration. Shriman Narayan holds the former opinion while Prof. J. K. Galbraith is definitely in favour of the latter policy.

GUARANTEED CORPORATIONS

While public enterprises are the rule in Communist countries, figures are not available with regard to assets, liabilities and profits. The United States is wedded to "People's Capitalism" and major interests like steel, oil, gold, silver and railways are run by private enterprise. In spite of this, President Roosevelt introduced in his New Deal an active policy of Guaranteed Corporations and Social Investment. By the end of 1958, US Government interest in Government Guaranteed public enterprises stood at $18,049 million, while privately owned interest in them was nil. The objectives of launching such public enterprises were to exploit natural resources unattended to by the private sector, to provide more employment, and to add to the national income and social welfare in general, even if individual concerns did not pay. Table I (see next page) shows the wide variety of problems which the US Government have been tackling by establishing such Guaranteed Corporations:

SOCIAL INVESTMENT

The importance attached to Social Investmen is clear from the figures in Table II.

Americans spent over $3.4 billion last year in Government welfare aid to help nearly seven million people adjudged in need of public charity. The total, more than 10 per cent higher than the year before, went for assisting the aged, the disabled, the blind, the unemployed, dependent children, unwed mothers, widows, veterans and veterans' survivors. It also went to alcoholics, juvenile delinquents, prostitutes and hobocs. The three-billion-plus national figure does not include the countless other areas that come under the broad heading of welfare—such things as low-rent and housing subsidies, social security payments, insured unemployment compensation, school lunch programles, veterans' administration benefits, federal employees' pensions, railwroad retirement and many others. Many of these arrangements are not heard of in India. Social investment as a variety of public enterprise is yet to be accepted by planners in India: it is higher finance to correlate social investment, a higher standard of life and a larger national income.

TABLE I

Title of Corporation	US Govt. interest (in million dollars)
Rural	
The Federal Farm Mortgage Corporation	8
The Agricultural Marketing Act Revolving Fund	186
The Tennessee Valley Authority ..	2,032
The Farmers' Home Administration	728

The Small Business Administration	341
The Federal Deposit Insurance Corporation	1,907
The Federal Home Loan Banks ..	809
The Federal Intermediate Credit Banks	134
The Atomic Energy Commission ..	9,200
International	
The Export-Import Bank ..	3,072
The International Co-operation Administration	2,481
The Development Loan Fund ..	700

FUTURE POLICY

Although comparison with the United States may not be useful beyond a point, it cannot be denied that Indian policy with regard to public enterprises has been more doctrinaire and less selective. Development work in India knows no bounds, but Government effort has only made a good beginning. For the future, further long-term Government borrowings from abroad must slacken because domestic technical personnel is lacking. Such of the business activities which hold out promise of good profits should be allotted to private enterprise, to be developed in co-operation with foreign private capital and technical know-how. Other lines, which may yield low profits or no profits in the long run, may be taken up by Government Corporations with a view to augmenting the national income and thereby social welfare. Particular fields in which a forward policy may be adopted by the Government of India are housing, rural electrification, commodity credit (State Trading is just the opposite) and social security. As a matter of fact, the numerous mammoth multi-purpose river valley projects taken up during the First and Second Plan periods, costing Rs 1,330 crores belong to this category.

TABLE II

	1955	1956	1957	1958
US Federal Government Expenditure on labour and welfare (in million dollars)	2,575	2,821	3,022	3,447
Expenditure on Social Insurance borne by the Federal & State Governments and the private sector (billion dollars)	11.0	12.3	14.2	14.2
National income (in billion dollars)	330.2	349.4	364.0	360.5

World Bank President Endorses Industrial Drive of Newly Developing Areas

PRESIDENT Eugene R. Black of the World Bank believes industrialization is vital to the world's less developed areas and that economically advanced countries should give generous assistance to well-laid industrialization plans in the developing countries.

His views were expressed in an article titled "The New Industrial Revolution" published in the summer, 1959, issue of the **Virginia Quarterly Review,** a national journal sponsored by the University of Virginia.

In the past, various areas of the globe specialized in certain types of production—and did it profitably. Some regions, like Britain and the United States, concentrated on manufacturing. Others were chiefly producers of minerals and agricultural raw materials—oil in the Middle East, rubber in Malaya, cocoa in West Africa, bananas in Central America, tin in Bolivia, and so on.

Mr Black says this natural wealth must continue to be used to provide the foundation of economic growth in many areas. But he says the old pattern of international specialization of production is being upset by a number of factors.

In particular, the pressure of expanding population in large less developed areas of the world makes it imperative to find new employment for millions of people. Industrialization, he believes, offers the major remedy for unemployment and low or declining living standards.

Mr Black notes some of the obstacles in the way of industrial development in many areas: for example, the difficulty of recruiting and training a labor force, and of providing management teams equipped not only with specialized manufacturing knowledge but also with the ability to make correct decisions on the complexities of successful commercial operation.

Nevertheless, Mr Black believes these and other obstacles can in time be overcome, that there is no ineradicable weakness in the aptitudes and organizational ability of the peoples in the newly developing areas.

In proof of this, Mr Black traces one successful venture in a newly developing country as an example of what can be done. Nine years ago, the Government of Pakistan set up a paper mill (Karnaphuli Paper Mills) in a remote area east of the city of Chittagong in an effort to develop a national paper industry and provide employment for overpopulated East Pakistan.

The location had plenty of bamboo nearby from which to make paper, but little else to recommend it as an industrial site. The country was wild and noted mainly for tiger and wild elephant hunts. There were no roads, railways, or airports in the area, and transportation was entirely by river.

Ten years ago this location contained only a mud-and-straw village of 250 fishermen and smallholders. Today it has two miles (3.2 kilometers) of well-planned buildings containing an integrated pulp and paper mill, modern offices, and a housing colony for the plant's 3,000 workers.

Workers had to be recruited from far and near—including West Pakistan and India. Most of them had no experience except in hunting and nomadic life. Recruitment of a management team was even more difficult. Pakistan had little experience in manufacturing. Production lagged at first, and the paper produced by the mill did not meet the desired standards. Then the World Bank, which had lent Pakistan about $4.3 million for the project, suggested bringing in a Canadian paper expert.

This was done, and on his advice, about 20 senior personnel from the United States and other countries with long paper-making experience were brought in to work with and train the Pakistanis. Production soon got into its stride. Eventually all but one of the foreign experts, a Swiss general manager, was replaced by the Pakistani they had trained.

The mill, reports Mr Black, is now producing 25,000 tons of writing and wrapping paper a year, meeting the entire needs of Pakistan and East Pakistan and allowing the country to dispense with paper imports previously costing nearly $5 million a year.

The Government has sold the majority of shares in the paper mill to the public. Its 28,000 shareholders include many persons of very modest means, some of whom have subscribed as little as Rs 10 ($2.10) for their holdings. And finally, the mill has begun to show a profit and to declare dividends at the rate of 7½ per cent on its shares of stocks.

Wages at the paper mill are enough to support a worker and his dependents and, as Mr Black points out, they constitute "an income immune from the hazards of famine and flood that have from time immemorial plagued the area," offering "perhaps the only escape from the cruel predicament of an ever-increasing population pressing upon the narrow base of village life."

The story of this paper mill, says the World Bank President is being repeated in other remote areas throughout less developed regions. "These ventures produce no headlines in the West," he writes, "but they show how, when the resources and determination are present, modern industry can be successfully grafted on to an ancient economic tree."

Mr Black strongly urges the more advanced nations to increase economic assistance to the newly developing areas, whose needs for external capital promise to become more urgent. This is because some of the raw materials on whose export many less developed countries depend are not likely to bring increased earnings of foreign exchange in the next few years. He says there are now indications their industrialization effort may be slowed down, probably with damaging internal effects, unless steps are taken to bring in more private and other capital from industrial countries.

In time, says Mr Black, the need for external reinforcements for this new industrial revolution will taper off. But until the growth becomes self-supporting, he says, "new resources and new ways of putting them to work must be sought out. in the interest not only of the countries entering the modern age but also of those whose responsibility it is to lead the way.

A Statistical Measure of Under-Employment

"In the present situation, unemployment is likely to be much worse socially at the end of the Second Five-Year Plan period, unless more intensified measures are taken."

This significant observation is contained in the fourteenth report, issued by the Cabinet Secretariat last month, of the National Sample Survey. Actually, it is more in the nature of a prediction which was made as early as in October 1956 when this report dealing with the economically active population was submitted to the Government of India, and the Second Plan had scarcely got under way. Now that the prediction has been unfortunately proved true by the latest authoritative, though approximate, estimate that the number of unemployed and under-employed at present is around 30 million, the publication of the report, after a regrettable delay of two years and more, is nevertheless timely. It is timely because current discussions on the Third Plan are reminiscent of the pre-Second Plan discussions which roused the expectation that the successors to the First Plan would be increasingly employment-oriented.

But the NSS Report in question has not produced any significant results bearing on unemployment as such because the sixth and the seventh rounds of the survey were not specially designed for measuring unemployment. That the total unemployed seeking employment constituted just 0.55 per cent (Table 1) of the population in all-India or 1.24 per cent of the total labour force in 1953-54 would have to be taken, as the Report itself cautions, with a good deal of reserve. In the circumstances, any general estimate to the effect that the number of unemployed as such in the entire country may now be of the order of 2.0-2.5 million only may or may not be correct. One estimate of unemployment may be as good or as bad as any other. In any case, as Professor Mahalanobis has stated, "the concept of 'unemployment' as adopted in the industrially advanced countries,—in the sense of either being without a job, or seeking one and willing and able to accept a job if offered—cannot always be used in India because there are many persons who are often fully occupied for a part of the time and partially or not at all for the rest of the period, and also because there are a large number of persons who work on their own account or as unpaid labour in household enterprises and cannot, therefore, lose their jobs." Thus, it is under-employment, rather than unemployment as such, that happens to be a formidable problem in India.

The great merit of the fourteenth NSS Report is that it has provided a statistical measure of this phenomenon of under-employment. This it has done in two ways—one, by a measurement of intensity of employment and the other, by an investigation of the days of work in a month. In the case of the first, the evaluation of intensity of employment is done in terms of six codes, namely, "no work", "less than quarter", "quarter', half , "three-quarter" and "full"; here, a person who thought that during the reference month he could not put in as much work as he was capable of, and wanted to, falls into the category of under-employed. The statistical results in this regard are brought out in Table 2 from which it will be seen that about 19 per cent of the gainfully employed rural population and about 14 per cent of the gainfully employed urban population work with intensity of less than three-quarter of the normal full working time. If, however, all those working with less than full intensity are treated strictly as under-employed, their number (as of 1953-54) is about 48 million in rural and urban areas together, constituting just under 30 per cent of the gainfully employed or 13 per cent of the total population.

The state of under-employment, as measured by the other indicator, namely, the days of work, may be seen from Table 3. The main findings here are that, for all gainfully employed, the average days of work are about 18 a month in the rural and 23 in the urban sector in so far as the primary occupations are concerned and about 4 and 1 a month respectively in so far as subsidiary occupations are concerned. It would thus appear that, if primary and secondary occupations are taken together, the extent of under-employment is more or less the same in both rural and urban areas. Under-employment is, therefore, not a peculiarly rural problem as it is generally thought to be. The obvious remedy, as Professor Mahalanobis himself has stated, is "to promote labour-intensive and capital-saving methods of production to the greatest possible extent." How the Third Plan is going to be formulated, keeping in view this desideratum, is by no means clear at the moment in spite of the familiar talk about employment-orientation to planning.

TABLE I

Percentage Distribution of Population in Activity Status Groups by Sex: All India (NSS 6th and 7th rounds combined).

Activity Status	Male	Female	Total
Employer	0.86	0.19	0.52
Employee	18.79	9.97	14.47
Own account worker ...	26.94	3.86	15.12
Unpaid household labour	11.90	15.61	13.72
Total employed ...	57.49	29.63	43.83
Unemployed seeking employment for the first time	0.63	0.03	0.34
Other unemployed seeking employment ...	0.35	0.05	0.21
Total labour force ...	58.47	29.71	44.33
Family members in domestic work ...	1.40	31.51	16.17
Rentiers, pensioners and remittance holders ...	0.60	0.55	0.57
Persons living on earnings from ungainful activity	0.47	0.49	0.48
Others outside labour force	39.06	37.74	38.40
Number of sample persons	40,667	38,885	79,552

EDITORIAL NOTES

Technical Terms

In his inaugural address to the Telugu Academy of Science and History at Hyderabad,, President Rajendra Prasad has expressed the hope that, once the regional languages become the official languages of the States, the way will be clear for the adoption of Hindi at the Centre. The replacement of English by the regional languages at the State level may weaken the opposition to Hindi, but it will not alter the fact that the adoption of Hindi at the Centre will place the non-Hindi speaking people at a permanent disadvantage and reduce them to the status of second class citizens of the Indian Union. Many may not find it possible to agree that replacement of English will be desirable or feasible.

While the logic of the arguments against the change is irrefutable, the pent-up force of sentiment for it cannot also be ignored by any party which hopes to influence the course of political events. Rajaji has taken particular care to dissociate his Swatantra Party from his campaign for indefinite retention of English as official language. The Prime Minister's assurance in this respect has also been noted with relief by people in non-Hindi speaking areas, but their anxiety will persist until the personal assurance of Mr. Nehru is followed up, and immediately, by calling a halt to the administrative measures which rankle and is also confirmed by suitable amendment of the Constitution.

Apart from the major consideration of preservation of national unity, the replacement of English as the language of administration is also beset by practical difficulties. The absence of a generally acceptable vocabulary of technical terms in Hindi and in the other regional languages is the most important of the handicaps which emphasise the need for caution. A number of Expert Committees under the Board of Scientific Terminology have been set up for the purpose of preparing glossaries of technical and scientific terms in Hindi. Besides these, the State Governments have also set up committees for regional languages. These committees have not remained idle. Up to the end of last June, they have evolved a total number of 164,238 terms in Hindi, of which 40,898 had been finalised. Nine revised lists containing 7,298 terms have been submitted to the Cabinet for final approval.

The coining of the words is the least part of the job. The difficulty is to bring them into common use. From the samples of the new terms issued from the language mint, it seems that the coiners have not devoted much thought to their impact on the eyes and ears of ordinary folk. And it should not cause any surprise if the public reject most of them as counterfeit.

The last meeting of the Board of Scientific Terminology held on August 21 had before it a note from the Prime Minister regarding the use of international terminology. He has on numerous occasions expressed his aversion for the artificial monstrosities that are being foisted on the Hindi language as technical terms. In his note to the Board, he is reported to have expressed the view that scientific and technical terms should, as far as practicable, not only be similar in all the languages of India, but should fit in with international usage. It is to be hoped that the love of the expert committees for their linguistic progeny will not impel them to side-track this eminently practical and sensible suggestion of the Prime Minister.

*

Trained Man-power

In his inaugural address to the Ooty Seminar, as well as on numerous other occasions, the Prime Minister has stressed the importance of trained man-power for rapid economic development. We are reminded every now and then of the "West German Miracle." With the formation of the Swatantra Party, the theory behind it has got a powerful sounding board. But all theories to be effective must be related to the facts of the economic situation which vary from country to country; and the theory must, therefore, be amended to suit individual circumstances.

What the enthusiasts for Dr Erhard's economic doctrines forget is the wide gulf separating India and West Germany in the matter of economic resources. When we speak of resources, we usually think in terms of rupees or dollars or, if we go a step further, of natural resources.. But the most important resource of all—trained man-power—is invariably ignored or taken too much for granted. And the Prime Minister, who views the problems of Planning in perspective has been obliged to stress the importance of trained man-power and its crucial role in the recovery of war-devastated countries.

At the same time, it is encouraging to find that the Administration is becoming training-conscious. While, on the one hand, the pace of industrial and technical progress has been slowed down by shortage of technical and scientific personnel, it has been the sorry experience of many who have undergone costly training abroad to find themselves at a loose end on returning to their homeland. The frustration this breeds has led the more far-sighted of our young scientists and technicians who go abroad for study and training to find suitable jobs for themselves in foreign countries. Steps are now being taken to conserve the country's limited resources of technical man-power and utilise them to best advantage. To help persons with distinguished academic record and specialised training to find suitable openings, and also to induce the persons now holding jobs in foreign countries to return to India and use their talents for building up the country, the Ministry of Scientific Research and Cultural Affairs has recently set up a Pool of Scientists and Technicians. Already, 123 persons have been selected to the Pool by the Public Service Commission. Those selected receive salaries ranging from Rs 350 to Rs 600, and it may be noted in this context that, apart from those trained abroad, those with Indian qualifications and outstanding academic records are also eligible for appointment to the Pool.

It is further stated that the selected scientists will be seconded to Government departments, State undertakings, National Laboratories, Universities, Scientific and Technical institutions, etc., including establishments in the private sector. It remains to be seen how far the Pool will be successful in dealing with the paradox of wastage of talent co-existing with shortage of technical and scientific personnel. The atmosphere in many of these establishments is not exactly favourable for the flowering of talent. It is not the job or the salary attached to it which, in many known instances, keeps young Indian scientists away from their country.

*

Training the "Trainers"

The Community Development Programme was launched in 1952 with expansive aims. It was expected to rouse the fatalistic masses of India out of their torpor, to light the spark of Divine Discontent in their hearts and so to energise them that they would climb to higher levels of living by their own efforts. In the course of the last seven years, the CD programme has achieved partial success.

A review of the working of the Programme has made the starry-eyed enthusiasts realise that the initiative continues to rest with the governmental agency. It is not impossible that the official entrusted with the implementation of the Programme like to keep it that way. Non-officials are of course associated with the Block Development Committees. But those selected for this privilege have been mostly content with the role of "principal beneficiary." Now, this idylic state of affairs is to be disturbed. The non-officials associated with the Block Committees will have to do something to justify the distinction conferred on them.

They are expected to acquire "a proper understanding" of the Community Development Programme. Then, they have to "interpret the programme to the people, mobilise people's participation and support for the programme, contribute effectively to the deliberations of the Block Development Committee meetings and ensure planning and systematic implementation of the programme in the field." Fortunately, the non-official members of the Block Development Committees are not to be left to their own devices in carrying out their onerous assignment. They will have expert assistance. Picked members the "Trainers", will be put through an intensive training course, lasting for sixteen days, in the philosophy of Community Development.

State Loans: Where Did the Money Come From?

THE unravelling of the mystery connected with the subscriptions to State Government loans, as reflected in the returns of the Reserve Bank for the week ended August 21, has been rendered an almost impossible task by the fact that, in the same week, other special transactions have served so to alter the relevant figures that a clear picture cannot be obtained of any one of the set of transactions. Briefly, we may first summarise the various changes that will have occurred as a result of special transactions and also the heads under which these would be reflected:

(1) Total cash subscriptions to the State Government loans, in round figures, are placed at Rs 100 crores. These would be reflected, to the extent of retained subscriptions, in the balances of State Governments as well as, possibly, in a reduction in their Ways and Means borrowings from the Reserve Bank. Moreover, the impact of the State loans on Scheduled Banks will be borne testimony to by a decline in the Reserve Balances of member banks and an increase in the Other Loans and Advances of the Reserve Bank. Then, as pertaining to the element of over-subscription, an increase would have been registered, presumably equivalent to the magnitude of over-subscription, under the head of "Other Deposits", pending the issuance of refund warrants to unsuccessful subscribers.

(2) Then, regard must be had for the fact that it would have been during the week ended August 21 that the relevant warrants issued in connection with repayment against the 3 per cent 1959-61 loan, which matured on August 15, would for the most part, have been encashed. The qualification is necessary because we gather that, in view of August 15 being a holiday, the Reserve Bank had issued the warrants on August 14, and some were presented for payment on August 14 itself. In any case, the necessity for meeting this maturing liability would or should have compelled the Central Government to replenish their resources; and the amount involved as to the maturing liability would have been in the environs of Rs 30 crores.

(3) It is in the third week of August that, customarily, the audit of the Reserve Bank accounts is completed; and hence, it is during this week that the accrued profit of the Reserve Bank, transferred to the head of "Other Deposits" in the first week of July, is made over to the Central Government. Such transaction would normally have resulted in an increase in the Central Government balances corresponding to a decline in Other Deposits; but, thereafter, offset by a decline in Investments owing to Central Government instituting reverse ad hocs.

(4) Finally, it is also in the third week of the month that, usually, the State Governments make repayment against loans and borrowings taken from the Central Government.

While these are the four considerations that we must have in mind, while attempting to study and interpret the Reserve Bank figures, we may now go on to summarise the changes as they have actually occurred:

(a) Balances of State Governments have risen by Rs 20.14 crores to Rs 61.89 crores.
(b) Ways and Means borrowings from the Reserve Bank stand reduced by Rs 4.07 crores at Rs 17.98 crores.
(c) Other Deposits have risen by Rs 16.69 crores to Rs 177.47 crores.
(d) The Reserve Balances of member banks are shown lower by Rs 16.15 crores at Rs 78.94 crores.
(e) The Other Loans and Advances of the Reserve Bank are marked higher by Rs 14.32 crores at Rs 83.52 crores.
(f) There is a rise of Rs 3.56 crores to Rs 58.11 crores in the Deposits of the Central Government.
(g) Investments in the Banking Department are higher by roughly Rs 15 crores, but this, it can be seen, is on account of transfer from Rupee Securities in the Issue Department.

At the outset, we may state that we believe that the transaction relating to the making over of Reserve Bank profit has not taken place in the relevant week and that, possibly, it has been deferred to the week ended August 28. For, the accrued profit of the Reserve Bank for 1958-59 was Rs 40 crores; and if, in fact, this profit had been transferred, the resultant decline in "Other Deposits" would have been of such magnitude as could not have possibly been offset by the element of over-subscription to the State Government loans. We may recall that the extent of over-subscription was Rs 32 crores. Hence, if the Reserve Bank profit had been paid to the Central Government, then, Other Deposits would have shown a decline—instead of, as has happened, rising by Rs 16 crores. So, what are both our first conclusion and first assumption is that the accrued Reserve Bank profit for 1958-59 continues to figure in Other Deposits.

We have seen that the rise in Other Deposits is only Rs 16 crores, whereas the magnitude of over-subscription was Rs 32 crores. It is also known that refund warrants were not ready before August 22. On the other hand, it is also known that the Reserve Bank, quite possibly, in respect of such accounts as were maintained with it and in respect of such subscriptions as emanated from such accounts, could easily have made the necessary book adjustments so as, on Friday itself, to complete the refund; it may be, therefore, that, by Friday, August 21, Rs 16 crores worth of over-subscription had been refunded. Hence, the fact that the rise in Other Deposits is only Rs 16 crores.

The State Governments, it is known, would have benefited as to their position vis-a-vis the Reserve Bank to the extent of Rs 68 crores. In fact, the rise in their Deposits and the decline in their borrowings aggregate something less than Rs 25 crores. Hence, we have now to discover what might have happened to the balance of Rs 43 crores which should have gone to swell the State Governments' Balances. It is, we suggest, reasonable to assume that some inter-governmental payments have been made, with the Centre as the beneficiary. Anything like Rs 20 crores may be the amount involved. As to the balance, it is possible that the State Governments, with a plethora of funds, chose to invest in Treasury Bills. In round figures, a further Rs 20 crores of their accruals against their new loan subscriptions might have been utilised by State Governments to purchase ad hoc Treasury Bills. The remnant balance of a few crores might be the size of the net disbursements of State Governments in the new loan week.

If the State Governments did purchase Treasury Bills for Rs 20 crores, such purchase could have been either from the Reserve Bank or from the Central Government direct. In either case, as the Reserve Bank's holdings of Rupee securities in both Departments are unchanged, the Central Government would have experienced an addition to their balances with the Reserve Bank by Rs 20 crores. So, we have to presume that the Central Government received Rs 20 crores by way of payments by State Governments in repayment of loans and another Rs 20 crores against the proceeds of deficit financing. This would have sufficed for the Central Government to meet their maturing liability against the 3 per cent 1959-61; and so heavy a commitment naturally resulted in the Centre's balances improving only by Rs 3.56 crores.

We come, then, to the impact of the State loans on the Scheduled Banks. As we shall later see, the State Bank figures in the relevant week as having experienced a rise of Rs 2.60 crores in its cash in hand and with the Reserve Bank.

So, in broad terms, there has occurred a net decline of something like Rs 20 crores in the Reserve Balances of Scheduled Banks other than the State Bank. To this, we have to add the figure of Rs 15 crores' rise, in round figures, in the borrowings from the Reserve Bank. Again, the State Bank return shows that there has occurred an increase of Rs 4 crores in its advances. Thus, in broad terms, we can see that Scheduled Banks other than the State Bank —which does not appear to have invested in State Government securities—felt the impact of State loan subscriptions as to Rs 20 crores in balances with the Reserve Bank and as to Rs 20 crores in borrowings from the Reserve Bank and the State Bank. But then, total cash subscriptions attracted by the State loans amounted to Rs 100 crores. Where did the balance of Rs 60 crores come from?

We suggest, in the first place, that, during the week, the money market, and so the Scheduled Banks, would have benefited to the tune of Rs 30 crores representing payment by the Central Government against the maturing 3 per cent 1959-61 loan. This accretion to resources to the extent of Rs 30 crores has been all but concealed, thanks to the occurrence of State loan subscriptions a little thereafter, but well before the end of the relevant week. Then, as we have seen, Rs 16 crores of over-subscription have already presumably been refunded by the Reserve Bank against book adjustments. Thus, from the figure of Rs 100 crores, we can deduct this element of Rs 46 crores. This leaves Rs 54 crores, against which Rs 40 crores have already been accounted for. The balance of Rs 14 crores will, presumably, in the return of Scheduled Banks for August 21, be further reflected in Deposits or in cash balances, or yet, again, in Advances. It may be that normal accruing Deposits during the week were offset by drawals on Deposits for subscription to the State loans. It may be that there was an element of expansion in the Advances of Scheduled Banks that was not needed to be covered by borrowings from the Reserve Bank and the State Bank. It may be that the rise in cash balances owing to a rise in Deposits will not now be reflected in the return of Scheduled Banks for August 21, because they have since, and before the end of the week under reveiw, been utilised for subscription to the State loans.

Now, as to the possible break up of subscriptions to the State Government loans. Clearly, the element of decline in Reserve Balances represents definitely the minimum subscriptions of the Scheduled Banks. Over and above this, we fancy that Scheduled Banks other than the State Bank could and did muster up something more. In broad terms, we fancy that the subscriptions of the Scheduled Banks, excepting the State

Bank, would have been placed between Rs 25 crores and Rs 30 crores. The balance would nevertheless have constituted a strain upon the banking system. Either Deposits would have been run down or Advances would have risen. But, while we may say that, as relating to retained subscriptions of Rs 68 crores, the net decline in Deposits and net increase in Advances would have added up to Rs 38 crores to Rs 43 crores, the impact, in fact, in the return for August 21, may be somewhat more severe. This will be because of the element of Rs 16 crores of over subscriptions. Thus, the total impact may be in the environs of Rs 50 crores to Rs 55 crores. But, even here, we have to make a further qualification. The magnitude of the impact will stand reduced by such normal accretions to Deposits as may have occurred and such contraction in Advances as will have taken place due to normal slack season conditions.

Such, then, are the hypotheses in regard to the State Government loans. More light should be thrown on the subject next week when the return of Scheduled Banks for August 21 is available. Meantime, we may state here that our indication last week that deficit financing on a vast scale had been incurred during the week ended August 14 has been borne out. It remains to be seen whether transactions relating to the disposal of Reserve Bank profit have been deferred to August 28, and whether, secondly, partly in consequence, thereafter, the Central Government, in order to meet the maturing liability on 3 per cent 1959-61, were compelled to have recourse to deficit financing for Rs 20 crores.

For the rest, slack season conditions are reflected in a decline of Rs 16.31 crores to Rs 1663.81 crores in Active Note circulation. There has been an inflow of Rupee Coin for Rs 1.32 crores. Contraction of currency has taken place against Rupee Securities for Rs 15 crores by transfer to the Banking Department. As an end result, the Reserve Bank's cash in the till is higher by Rs 2.65 crores at Rs 23.67 crores. Finally, heartening, presumably due to receipt of foreign assistance, but not impossibly as a result of an export surplus, Balances Held Abroad have been marked up by Rs 3.89 crores at Rs 15.55 crores. This is the first time since the week ended May 8 that the Foreign Securities held by the Reserve Bank in both Departments show a rise.

+

The return of the State Bank for August 21 suggests that this institution has not subscribed to the State Government loans. For, its Investments are lower by Rs 1.66 crores at Rs 347.28 crores. Its Deposits are higher by Rs 5.60 crores at Rs 561.70 crores. This may reflect the receipt by constituents of repayment in respect of 3 per cent 1959-61 loan held by them. At the same time, the State Bank has experienced a rise of Rs 3.90 crores to Rs 173.36 crores in Advances; we suggest that this is a measure of the increased recourse to State Bank credit by Scheduled Banks, consequent on the strain imposed on them by subscriptions to the State loans. As an end result, the State Bank's cash in hand and with the Reserve Bank is higher by Rs 2.60 crores at Rs 34.94 crores.

+

The return of the Scheduled Banks for August 14 bears testimony to the continuance of the slack season. Advances have been marked lower by Rs 7.60 crores at Rs 946.08 crores, though the State Bank accounts for about half of this. Similarly, of the rise of Rs 12.76 crores to Rs 1822.35 crores in Deposits, the State Bank has contributed mainly with an increase in Deposits in the relevant week of Rs 11 crores. There is a small decline of Rs 1.72 crores in Investments. Of course, the return for August 21 should reflect part at least of the acquisitions of State Government securities by Scheduled Banks, though this may partly be offset by a decline consequent to the maturing of the 3 per cent 1959-61 loan. Though the Scheduled Banks may not have figured as large holders of the maturing loan, we may recall that exchange banks are generally understood not to have exercised their option to convert when the Central Government loan was floated in July this year. Lastly, Cash Balances have improved by Rs 18.51 crores to Rs 184.22 crores, and two-thirds of this is on account of the State Bank.

+

US Capital in British Industries

By Paul Einzig

WHETHER American investment in British industries has assumes the form of the acquisition of British equities by individual American investors or the form of participation in British firms by American firms, it has been responsible to a noteworthy degree for the firmness of sterling and for the non-stop increase in the British gold and dollar reserve in 1959. This factor is likely to continue to operate. Many people welcome this as a source of strength for sterling and for the British economy as a whole. But people who are capable of seeing a little beyond their nose realise that, once the capital is invested, the payment of dividends on the American capital will constitute a considerable debit item on Britain's current balance of payments.

Few people realise the extent to which sterling is apt to become vulnerable as a result of the increase in American investment in Britain. Admittedly some of the British equities acquired by American investors are likely to be held more or less permanently. On the other hand a large proportion of it is likely to be realised as soon as a setback in Wall Street, or a rise in the London Stock Exchange unaccompanied by a corresponding rise in Wall Street, has reduced the existing abnormal differential between yields in London and New York. The increase in American holdings of British securities tends to accentuate fluctuations on the London Stock Exchange. What is even more important, it also exposes sterling to sudden withdrawals of American capital unconnected with the degree of confidence in sterling abroad.

Capital invested by American firms in Britain is meant to remain here more or less permanently, independently of temporary fluctuations on the two Stock Exchanges, and regardless of fluctuations of the sterling-dollar relationshio. US firms acquiring an interest in British firms, or establishing a subsidiary firm in Britain, can afford to disregard any such ups and downs, for the sake of benefiting from being established in the Sterling Area market and other lasting advantages.

The accumulation of this form of American investment in Britain represents nevertheless dangers to sterling. American firms may not sell out their investment the moment there is a sterling scare. But they can, and do, hedge against a depreciation of sterling by buying forward dollars whenever sterling is under suspicion. As residents in the United Kingdom, they cannot speculate against sterling, but they are entitled to cover legitimate risk, and the possession of sterling assets is regarded as legitimate interest which they are entitled to protect. Even if the affiliated firm in Britain could not buy forward dollars, there would be nothing to prevent the parent firm in the United States from selling forward sterling whenever a devaluation is anticipated.

In fact this is done on a considerable scale during periods of sterling scare. London banking circles consider forward buying of dollars by American affiliate as one of the familiar indications of a new flight from the pound.

Individual American investors are also in a position to safeguard themselves against a risk, real or imaginary, of a sterling depreciation, without having to realise their investments to that end, by selling forward sterling. If they do so, they stand to benefit by a further rise on the London Stock Exchange without exposing themselves to capital depreciation through a fall in the pound. During the sterling scare of 1957 this was done on an appreciable scale. Meanwhile American investment in sterling equities has greatly increased. It is true, at present sterling enjoys the confidence of overseas investors; but, sooner or later, another scare is bound to occur. When it does occur, the factor of hedging by American investors is likely to be much more important than it was in 1957 or on previous occasions of flights from the pound. This is a fact that calls for attention.

The chances are that the potential extent of such operations will continue to increase as a result of further increase in American investment in Britain. And the factor is not likely to remain purely American. Continental investment in British equities is also on the increase. Overseas holdings in general are likely to increase considerably as a result of a Conservative victory at the general election.

Should this process go very far then, on the occasion of the next sterling scare, the relative extent of forward selling of sterling due to hedging by investors will be higher. The relative extent of pure speculation, interest arbitrage, and commercial hedging will be correspondingly lower.

In itself, an increase in American investment in Britain is not necessarily a bad thing on balance. But the increase of its extent does tend to make sterling increasingly vulnerable. It is, therefore, expedient to reinforce the extent of sterling's defences in the form of maintaining a larger gold reserve. The recent increase of the gold reserve resulting largely from the inflow of American and other capital from outside the Sterling Area is apt to generate a false feeling of security. As a result, an unduly large proportion of the amount received is apt to be re-lent abroad. This is a danger against which the British authorities must guard themselves.

WORLD OF BUSINESS

Durgapur

TILL a few years ago an unnoticed village in West Bengal, Durgapur has now joined the august company of Rourkela, Bhilai, Jamshedpur and Burnpur. It is already a household name throughout the country. A giant steel works is now raising its stately head there and soon enough the precious metal will flow from its blast furnaces ultimately to find its way into the nations factories, shipyards, railways and homes. Durgapur is the last of the present series of steel works to be built in the public sector. Many more Durgapurs will be needed to meet our growing requirements of steel and more are bound to spring up in the coming years.

Durgapur is no longer a subject for the play of one's imagination. It is now a dream fulfilled and, from the 24th of this month it may be said to have come into being. For, on this memorable day, the first coke oven battery was formally lit. It is true that there is a long way to go from the lighting of the coke ovens to the production of pig iron. But it is equally true that without the coke ovens on commission the blast furnaces cannot begin to function.

The coke oven that was lit last Monday will be gradually heated up during the next two months by which time it will have gained the requisite temperature. Then it will be time for the blast furnace to come to life. The Durgapur coke ovens construction is in the hands of the well known firm of Simon-Carves who are experts in the line. Simon Carves have been building coke ovens in this country for the past 50 years and at Jamshedpur and Burnpur the coke ovens are those that have been put up by this company. At Durgapur, Simon-Carves have performed the rare feat of beating the contract date for the completion of the coke ovens by nearly 2½ months. The commissioning of the coke ovens ahead of schedule will automatically confer the benefit of the saved time on the steel works proper.

Simon-Carves is one of the 14 British Companies forming the consortium which goes by the name of Indian Steelworks Construction Company Limited. Simon-Carves are also in charge of the building of the coal preparation plant, bye product plant, power station and other essential equipments and services. The other thirteen companies are: Davy and United Engineering Company Ltd, Head Wrightson Iron and Steel Works Eng. Ltd, The Wellman Smith Owen Engineering Corporation Limited, British Thomson-Houston Ltd, English Electric Co. Ltd, General Electric Co., Ltd., Metropolitan-Vickers Electrical Export Co., Ltd, Sir William Arrol and Co. Ltd, Cleveland Bridge and Engineering Ltd, Dorman Long (Bridge & Engineering) Ltd., Joseph Parks and Son Ltd, The Cementation Company Ltd, ISCON Cable Group (Siemens Edison Swan Ltd, and Pirelli General Cable Works Ltd.) The basis of the contract is a "Turnkey" project or a package deal meaning that ISCON is to undertake the supply and erection of the complete works as a whole.

Durgapur is an integrated steel works with an initial capacity of one million ingot tons, together with provision for the production of approximately 35,000 tons of pig iron for sale and internal consumption. The plant is so designed as to produce wheels and axles as finished products. This is a special feature of Durgapur not shared by the other two public sector plants. Provision has also been made for additional soaking pits and finishing mills to be added at a later date to enable the full ingot steel making potential of 1.25 million ingot tons to be converted into rolled products. The layout of the works has been so arranged as to enable the plant to be expanded ultimately to produce 2½ million ingot tons. The estimated cost of Durgapur is Rs 138 crores with the foreign exchange content amounting to about £70 million.

If Rourkela is German, and Bhilai Russian, Durgapur is British. It is in the fitness of things that Great Britain should come to the aid of India in its great task of building up a strong economy and leave its indelible impress on the Indian soil—an impression that will stand as a symbol of Indo-British friendship. The mighty structure that is emerging at Durgapur bears eloquent testimony to the abundance of good-will which exists in Great Britain toward India. Government, Bankers and industrialists of the UK have combined to make Durgapur a reality.

The fact that the first battery of Simon-Carves coke ovens has been lit up nearly 10 weeks ahead of contract date may be an indication that the work in the plant as a whole is progressing in a similar fashion.

*

Outlook for Coffee

The news that a bumper crop of about 50,000 tons has been forecast for 1959-60 has aroused fond hopes about the growing prosperity of the Indian coffee industry.; In the increased production is seen a simultaneous reduction in internal prices and a higher overseas offtake. Such an expectation is not without some justifiable reason. Coffee production in India has been steadily going up during the past several years except for a set back during 1954-55 when output fell to 25,427 tons from the previous year's level of 30,029 tons. During the same period, exports have also been on the increase. The trend has, however, not been quite regular but the overall picture has been encouraging. During the past three years, exports have been quite good even though 1957-58 has recorded a slightly lower level at 14,281 tons as against 15,472 tons in 1956-57. The magnitude of the headway made in coffee exports will become evident when it is noted that, in 1950-51, exports were a paltry 305 tons.

A closer look at the conditions prevailing in the world coffee trade at the present juncture will, however, show that the prospects of any further sizable increase in the exports of Indian coffee, at least in the near future, are not quite bright. In the first place, world coffee production is increasing while the rate of increase in offtake is comparatively much smaller. According to the FAO's monthly Bulletin of Agricultural Economic Statistics for May, world coffee production in 1958-59 is provisionally estimated around 3.3 million tons (55 million bags) 9 per cent higher than in the previous year. The increase is due mainly to the large crop harvested in Brazil, which is likely to reach 1,680,000 tons. Among other producing countries, the African region is expected to raise its output by 7 per cent over 1957-58. The growing regions in Asia may also record a small rise of 4. per cent.

World imports, on the other hand, have been more or less stagnant during the past three years. As against 2,264,000 tons in 1956, world imports are placed at 2,259, 000 tons in 1957 and 2,270,000 tons in 1958. Two important consequences to the absence of any sizable improvement in offtake in the face of a 9 per cent increase in output in 1958 have been an increase in world stocks to about 28 million bags and a reduction in prices. Prices of all types of coffee receded further in the first quarter of the current year, continuing the downward trend which began early in 1957. Retail prices are now at their lowest level since 1950 in the US while, in some European countries, they have been reduced to levels obtaining before 1954. The reduction in retail prices has, however, brought some indirect benefit to coffee. For, it would appear that the importing countries have consumed in 1958 a quantity substantially larger than the total imports. This is the inference that is to be had from the size of coffee stocks at the end of last year in some of the principal consuming countries. For instance, in the United States, coffee stocks at the end of 1958 were placed at 126,800 tons as against 177,500 tons at the end of 1957. In the United Kingdom, they were 6,400 tons as against 11,400 tons; in France 6,500 tons against 11,300 tons; and in the Netherlands 3,900 tons against 7,600 tons. Consumption trends continue to be encouraging. In the United States, roastings last year touched the highest annual total since 1949. The up-trend has continued to manifest itself in the first quarter of the current year as roastings are estimated to have advanced by 3.5 per cent over the first quarter of 1958.

Referring to the probable situation that might obtain at the end of the 1959-60 crop year, the FAO Bulletin notes that closing stocks might disclose an increase of about 5,00,000 tons over 1958-59. In short, offtake might not keep pace with production as the yearly increase in consumption is not expected to absorb more than 10-20 per cent of the mounting coffee surplus.

It is in this context of acute competition from producing countries in world markets that one has to assess the immediate prospects of Indian coffee exports. Much of our exports goes to West Germany, though Indian coffees are finding their way steadily in other countries such as the US, Russia, East Germany and Japan. But it is apprehended that, with the coming into being of the European Common Market from the beginning of the current year, our exports to Europe may be confronted with very stiff competition, particularly from African coffees. It would appear, therefore, that one of the urgent tasks that we have to address ourselves to is to find new foreign markets. Our marketing methods seem to be rather inadequate to meet the requirements in the context of our increasing exports.

One may not be far wrong if one says that the position of our coffee industry is more or less similar to that of some of our major industries such as cotton textiles, jute goods, tea etc., in so far as its exports are concerned. It may even be said that it has additional disadvantages like lack of adequate and efficient overseas marketing organisations and the absence of what may be called established markets. So far, coffee exports have been rather irregular going to a number of countries without any definite programme as to quantity and regions. But the experience we have gained in the past few years has shown that, given sustained effort, our coffee can carve for itself a permanent place in world markets. The fact that yield in our country is below the world level gives the hope for a reduction in the cost of production. Another important point is quality. If we have to compete effectively in world markets, the coffees we send abroad should satisfy the twin conditions of a high quality and equitable price level. Even the bigger export industries like jute have found it necessary to foster the growth of internal consumption with a view to having a ready cushion to absorb the shocks of a decline in world demand. In the case of coffee, such a cushion is very important because it is yet to establish itself firmly in world markets.

GLEANINGS

British reaction to the Brecher book is intriguing. Writing in the Spectator, Christopher Sykes says:

Any reviewer of this learned book must state his credential, and I hasten to say that I can only write on Indian affairs from the point of view of a general reader. As such I am impressed. Dr. Brecher has written at great but not excessive length. His book is ambitious, aiming to present not a full picture of Jawaharlal Nehru's complex character, but also of modern Indian history. Though there are places in the book where the 'life' of the subject is temporarily submerged in the 'times', the balance is never lost.

In his careful and subtle indication of how British policy and a mistaken British state of mind turned Nehru into an opponent, not always a reasonable one, of the country he could still admire, in his astute application of personal and general matter, Dr. Brecher shows himself a writer in a high class. I cannot judge whether or not his detailed record of Congress politics, or of the movements of men and ideas in India, can stand up to inormed scrutiny, but, speaking for the general reader, I can say that what he says about the career of this singular man, and of the political actions in which he was involved, is entirely convincing.

Not that the book is written without bias. Seeing recent Indian history through the eyes of a passionate nationalist, Dr. Brecher has, unwittingly perhaps, written much of his general picture in a party spirit. The British Raj is a 'bad thing' throughout most of his story. He gives no sign of being aware of any British sincerity and sense of high purpose, or of the genuine British dread of committing a social crime in abandoning rule in India. The author's partiality shows especially in the way he insists on British guilt in any act of bloodshed committed on their authority, but is never backward with a defence when the authority is not British. He makes no mention at all of an important factor in the political events of 1945-1948, namely the magnificent military record of the Army of India in the Second World War.

But though Dr. Brecher has certainly weakened his book by going along too easily with fashionable anti-colonialism, he has not done essential damage: the man, the predicament, the amazing story are all there. The final emotion of a general reader on finishing this book must be one of thankfulness that Indian nationalism had such leaders as Jawaharlal Nehru and Gandhi. An impressive inscription in New Delhi declares the undeniable and disturbing fact that national independence can only result from national assertion, and cannot come simply as a gift from one nation to another. Nationalism cannot be other than an explosive force. Terrible as was the price in suffering paid by India in 1947 for a nationalist triumph, it was little to what might have been exacted from a densely populated subcontinent in convulsion. Jawaharlal Nehru probably saved India from years of destruction.

*

It is with Nehru the man that an Atlantic Report on India concerns itself. And the Report, as the following extracts from Atlantic Monthly show, are full of concern:

No one believes that Nehru himself is involved in corruption, but the Mathai case does disclose several chinks in his armor. He is a poor judge of men. He is also impatient of implied criticism and either tries to ignore it or loses his temper and says harsh things to those around him. As a result there are few independent men around him, and there are fewer every year as the old stalwarts of the independence struggle—the men who knew Nehru as a youth and who make allowances for his moods—die off. They are replaced by others, who are at best yes men and at worst sycophants or "characters like Mathai."

Nehru is still the Congress Party's greatest asset. He is literally worshiped by the vast, illiterate masses, who—by and large—will continue to vote for the party which is able to display Nehru's picture on its election posters. But the question is, what will the Congress Party do for election material after he is gone? When Nehru's daughter, Indira Gandhi (no relation to the Mahatma) was elected Congress president, she spoke of bringing younger elements to the fore and of instilling a new sense of discipline. A. S. Raju, a Congress general secretary, said her election would check a "drift toward the rightist trend of thought."

*

If both the preceding may be said to be Western reaction to Nehru, what follows is the review of book by an Indian recording his reactions to Britain. Christine Brooke-Rose has reviewed "A Passage to England", by Mr Nirad Chaudhuri, who achieved fame with his Autobiography of an Unknown Indian. Here are some extracts from that review:

Even the English weather has fostered a fine sensitivity to nuances, to small things and animals, to concrete details of interior, a sensitivity which vanishes in hot countries. "After experiencing the English weather," says Mr. Chaudhuri with ingenious charity, "I had no difficulty in understanding why Englishmen became so offensive in India."

The reader will find it hard not to identify himself partriotically with the England described, and even harder not to feel immensely flattered. No country advertises its ills so loudly and so effectively as England does, the author tells us. But far from being old, finished, unlikable and impossible to respect, we are apparently unique. young and amazing in every nook and tranny of our national existence. The Mother-Figure and her young admirer? Perhaps, but every mother-figure loves it, and is rejuvenated by it.

And Mr Chaudhuri does far more than flatter. He is extremely perceptive, particularly on our modern revolution and the consequent awareness that the only vital war is the war between civilisation and the new democratic culture. His book might well have been named less modestly, after Whitman rather than Forster, "Passage to more than England."

This is high praise indeed for Mr Chaudhuri. But the reaction of The New Statesman was not quite so kind. Nor, for that matter, is the review of the book published in this issue in the World of Books Section. But the reasons why the British review are favourable may be precisely the reasons why "Jason" has criticised the book. We refer readers to "World of Books."

*

Another British reaction to an Indian development: at the recently held annual general meeting of the British Bank of the Middle East, Sir Dallas Bernard, Bt., the chairman, had something to say about the "special" Indian currency notes for use in the Middle East:

As members are aware, we have a keen interest in the Persian Gulf Sheikhdoms. The currency circulating in that area has hitherto been the Indian Rupee. The same notes being legal tender in a country where it was necessary to conserve foreign exchange reserves and also in a zone that had a surplus of foreign exchange, there was an open invitation to those in India unable to obtain sterling to find ways and means of sending currency into the Gulf. The Indian Government decided to stop this by issuing a distinctive rupee note, legal tender in the Gulf Sheikhdoms, but not in India. Beginning the 11th May and for a period of six weeks, all existing notes circulating in the Persian Gulf are to be exchanged for Indian Rupee notes of a special issue which are easily recognisable. These special Rupee notes will be exchangeable in India for ordinary Rupee notes and the banks remitting such special notes to India will be able to exchange them for sterling on the same terms as they formerly purchased sterling with the ordinary Indian currency. After termination of the period fixed for the exchange of notes, the foreign exchange facilities hitherto attaching to ordinary issue notes will cease. Our seven branches in the Persian Gulf have been co-operating with the Reserve Bank of India in the rather arduous task of effecting the withdrawal of the old notes and their replacement by the new.

*

Finally, as lesson for India's bankers, the Svenska Handelsbanken monthly Economic Review describes new form of consumer credit now available in Sweden:

The relaxation of the monetary policy has resulted in an increase in consumer credits and the emergence of new forms of such loans. Last autumn the commercial banks introduced personal loans without security at an interest rate of 5 per cent on the original amount. It is probable that loans of this type to a total of more than Kr. 10 million have been issued. Most of the borrowers have used the money to pay for furniture or other home improvement, buy building plots or summer cottages. The savings banks, co-operating with the Association of Swedish Merchants, are issuing so-called purchase loans at an interest rate of 6.75 per cent plus a special fee of 2 per cent on the original amount which the retailer pays to the savings bank. These credits are intended for the purchase of durable consumer goods—but not motor cars.

The latest novelty in this field comes from the commercial banks. As from 1st July the banks have introduced a new variation of the earlier personal loans. These new loans can be used to finance the purchase of durable consumer goods from the members of the Association of Small Business and Handicrafts and also for repairs and installations carried out by members of this association. As is the case with the ordinary personal loans the amount of the credit is between Kr. 500 and 3,000; in exceptional cases up to Kr. 5,000. The interest rate is 3.75 per cent per annum based on the original amount of the loan. This corresponds to an effective interest rate of 6.75 per cent. In addition the seller pays to the bank a fee amounting to 2 per cent to cover the cost of collection etc. The repayments period may vary between 9 and 18 months and monthly payments are required, although excepting July and December if the borrower so wishes.

The purchase loans issued by the commercial banks differ in several respects from those available from the savings banks; the borrower need not be a depositor at the bank; the interest is added to the loan and need not, as in the case with savings banks' loans, be paid in advance when the loan is granted; the borrower's life is insured for the duration of the loan.

IN PARLIAMENT

CALCUTTA WATER SUPPLY

Ten schemes under the National Water Supply and Sanitation Programme have been approved for areas within greater Calcutta. The total cost of the scheme is Rs 258.26 lakhs.

The names of the schemes and their cost are as follows:—

Water supply to Calcutta Corporation, Rs 140 lakhs (Central scheme only.) Naihati Water Supply scheme, Rs 6.13 lakhs; Budge Budge Water Supply scheme, Rs 4.48 lakhs; Konnagar Water Supply scheme, Rs 7.38 lakhs; Bansberia Water Supply scheme, Rs 2.46 lakhs, Ranaghat Water Supply scheme, Rs 6.57 lakhs; Kamarhati Baranagar Water Supply scheme, Rs 50.09 lakhs; Champadany Water Supply scheme, Rs 9.66 lakhs; Bhadeshwar Water Supply scheme, Rs 10.49 lakhs; and Bally Water Supply scheme, Rs 21.00 lakhs.

The following four schemes are under consideration: Rishra Water Supply scheme, Rs 9.42 lakhs; Halisahar Water Supply scheme, Rs 9.345 lakhs; Bhatpara Water Supply scheme, Rs 18.465 lakhs; and Chandranagore Emergency Water Supply scheme, Rs 0.61 lakhs.

The information was given by the Union Health Minister, Mr D. P. Karmarkar, in a written reply to a question by Mr Subodh Hansda in the Lok Sabha. The Minister had been asked whether any interim measures were being taken for the improvement of water supply in Greater Calcutta pending the WHO team's formulation of plans.

AID TO MUNICIPALITIES OF WEST BENGAL

In a written reply to a question by Sarvashri Subiman Ghose and Tridib Kumar Chaudhuri, the Deputy Minister of Rehabilitation, Shri P. S. Naskar, laid the following statement on the table of the Lok Sabha on August 6.

The Government of India have agreed to provide financial assistance in the shape of loan to 12 municipalities in the border districts of West Bengal where there is a heavy influx of displaced persons from East Pakistan for development of municipal services. Ten municipalities have already been sanctioned necessary loans as indicated below: 1. Raigunj (Rs. 4.80 lakhs); 2. Balurghat (Rs. 2.25 lakhs); 3. Ranaghat (Rs. 4.23 lakhs); 4. Krishnagar (Rs 2.95 lakhs); 5. Birnagar (Rs. 1.48 lakhs); 6. Englishbazar (Rs 3.74 lakhs); 7. Bongaon (Rs 3.39 lakhs); 8. Santipur (Rs 6.58 lakhs); 9. Jalpaiguri (Rs 1.82 lakhs); and, 10. Siliguri (Rs 4.33 lakhs).

Loans have also been sanctioned to Barrackpore, Baraset and Chakdah municipalities amounting to Rs 1.86 lakh; Rs 51,000; and, Rs 2.02 lakhs, respectively.

The Deputy Minister added: "The development works for which financial assistance is given are, construction of roads, arrangements for water supply, sanitation and conservancy, construction of drains and culverts and street lighting."

DEVELOPMENT OF FISHERIES, ANIMAL HUSBANDRY AND DAIRYING

The Union Minister of Food & Agriculture, Mr A. P. Jain, in a statement placed on the table of the Rajya Sabha on August 11 informed that the Government of India had given the undermentioned amounts to the various maritime States during 1958-59 in respect of the Head of Development "Fisheries, Animal Husbandry and Dairying":

Grants/Loans sanctioned Amount given during 1958-59 for schemes of Fisheries. Animal Husbandry and Dairying:—

Name State	Grant (Rs in	Loan lakhs)
Andhra ..	27.95	8.56
Bombay ..	25.36	27.07
Kerala ..	11.72	4.14
Madras ..	12.91	22.62
Mysore ..	12.28	7.63
Orissa ..	11.77	13.66
West Bengal ..	21.47	26.15
Total ..	123.46	109.83

The Minister was replying to a question by Mr V. C. Kesava Rao asking for information on the amounts given to each State during the last year for the development of fisheries, both coastal and sea.

The Minister added that it was for the State Governments themselves to allocate the necessary funds on various Schemes included in the Group (Fisheries, Animal Husbandry and Dairying) according to their requirements, subject to ceilings for the Group. Separate figures of funds for development of Fisheries were, therefore, not available with the Central Government.

INDIA'S TRADE

The total value of India's exports during January-June 1959 was Rs 266.55 crores. The comparative figure for the first six months of 1958 was Rs 250.58 crores.

The value of imports in the first six months of 1959 was Rs 418.62 crores.

This information was given by Mr Satish Chandra, Deputy Minister for Commerce and Industry, in the Lok Sabha in reply to a question by Mr D. C. Sharma and seven other members.

LOAN FROM WEST GERMANY

Replying to a question of Mr R. C. Majhi and Mr Subodh Hansda on the utilisation of the West German loan of DM 168 million, the Deputy Minister, Mr B. R. Bhagat, said that a sum of DM 96 million had so far been drawn from the loan. Further sums would continue to be drawn in coming weeks.

Mr Bhagat added that the object of the loan was to enable the Government of India to obtain the funds for meeting the payments due on imports from West Germany. The actual imports from West Germany after the relevant date had been, in fact, more than the total value of the loan. Under the agreement, the loan, however, could be drawn upon only for reimbursement to the Government of India of 80 per cent of payments for Indian imports made to German suppliers after 31st August 1958 and that too, only of those payments that were under contracts covered by the German Federal Government guarantees of insurance. The rate of drawal of the loan was governed by these limitations in regard to its availability, principally by the condition that only imports covered by German Federal Government guarantees or insurance. The rate of drawal of the loan was governed by these limitations in regard to its availability, principally by the condition that only imports covered by German Federal Government guarantees were eligible to be considered.

RAIL LINE FROM ROURKELA TO BARSUA

The Railway line from Rourkela to Barsua iron mines is expected to be completed by the end of December this year, said Mr S. V. Ramaswamy, Deputy Minister for Railways, in a written reply to a question by Mr Supakar in the Lok Sabha on August 12.

The Deputy Minister added that an overall progress of 80 per cent in the construction of the line had been made up to the end of July, 1959.

RAILWAY LINES IN BACKWARD AREAS

The Deputy Minister for Railways, Mr S. V. Ramaswamy, said in a written answer to a question in the Lok Sabha on August 12 that while selecting new lines for construction, areas which were backward and which abounded in mineral wealth got due consideration. However, selection of new lines was conditioned by the financial ceiling, availability of materials and the overall traffic needs of the country.

The Deputy Minister replied in the negative to a question whether suggestions had been invited from State Governments and Members of Parliament in this regard.

Asked whether each State would receive proportionate route mileage according to population, Mr Ramaswamy said that Railway development was not planned on population basis of each State.

CENTRAL BOARD OF RAILWAY RESEARCH

The Deputy Minister for Railways, Mr S. V. Ramaswamy confirmed in the Lok Sabha during question hour that a high-powered Central Board of Railway Research was to be set up shortly. The functions of the Board, the Deputy Minister added, would be to direct and coordinate research on railways and secure cooperation of other institutions such as National Laboratories.

'CRACK' GOODS TRAINS

The scheme of running 'Crack' Goods Trains has been introduced on five zonal railways, said Mr S. V. Ramaswamy, Deputy Minister for Railways, in reply to a question by Mr M. P. Bhagava in the Rajya Sabha August 11. The Deputy Minister said that on the other Railways, fast goods services existed, though not under the nomenclature "Crack Goods Trains".

The main features of the scheme, the Deputy Minister added, were:

(1) Crack Goods Trains were fast trains run to scheduled paths like passenger trains to fixed timings.

(2) They were worked by selected engines, crews and guards,

(3) A special watch was kept by Divisional Officers on the running of these trains.

RAIL SURVEY FROM PATHARKANDI TO DHARMANAGAR

Mr S. V. Ramaswafy, Deputy Minister for Railways, stated in the Rajya Sabha on August 11 in reply to a question by Mr S. C. Deb that field work for final location survey of the proposed railway line from Patharkandi to Dharmanagar on the North East Frontier Railway would be taken up in hand after the rainy season this year.

TEN-YEAR PROGRAMME FOR RAIL BRIDGES AT LEVEL CROSSINGS

The Deputy Minister for Railways, Shri S. V. Ramaswamy, confirmed in the Lok Sabha during question hour on August 7 that Government contemplated drawing up a 10-year programme for the construction of road overbridges and underbridges at Railway crossings throughout the country.

In a written answer to a question, he said, "The State Governments have been recently requested to draw up programmes for provisions of road overbridges or underbridges considered necessary to replace existing level crossings, during the Third Five-Year Plan. It has been decided in consultation with the Planning Commission that all such schemes should form part of the State plans. The State Governments, after making necessary provision for funds to meet their share of the cost of such schemes, are to advise the Railway administrations

concerned, as well as the Ministry of Railways, about the details of such schemes, and the priority according to which they desire the works to be progressed.

"The State Governments may meet their share of the cost, after obtaining the prior approval of the Planning Commission, from the loans which the Government of India might grant to the State Governments for miscellaneous development schemes under the State Plans. The cost may also be met from the State Governments, share of the tax from Railway fares. On receipt of the information, the Railway administrations will prepare a co-ordinated programme for construction of the bridges".

Asked to state which State Governments had submitted their schemes so far, the Deputy Minister said that three State Governments had submitted their schemes. These were Himachal Praresh, Mysore and Madras. The requirements of the first were nil, while Mysore State had given their requirements only for the remaining two years of the Second Five-Year Plan. Madras State had given its requirements for 1959-60 only.

WORLD BANK LOAN FOR INDIAN RAILWAYS

Shri Shah Nawaz Khan, Deputy Minister for Railways, said in the Rajya Sabha on August 11 that an agreement had been signed with the World Bank whereby a loan of 50 million dollars had been made available to India for the development of Indian Railways. He was replying to a question put by Shri J. H. Joshi.

The Deputy Minister said that the loan was repayable in 20 years in 34 half-yearly instalments commencing from January 15, 1963. The rate of interest was six per cent.

The Deputy Minister added that the amount of loan was to be used for meeting the cost of purchases abroad of electric locomotives, overhead equipment for electrification, plant and machinery for workshops, and such other Railway materials and equipment as were essential for executing the Railways' Second Five-Year Plan and were not indigenously available.

MANUFACTURE OF TETRACYCLINE

The Hindustan Antibiotics Ltd, have decided to set up a pilot plant for the production of tetracycline to the extent of 1.5 tons per year.

This information was given in the Lok Sabha on August 11 by Mr Manubhai Shah, Minister for Industry, in reply to a question by Mr Subodh Hansda and Mr S. C. Samanta.

The Minister added that when the pilot project was successfully completed, it was proposed to step up the capacity.

MANUFACTURE OF SMALL CARS

Replying to a question by Mr S. R. Mehdi on the manufacture of small cars, Mr Manubhai Shah, Minister for Industry, said in the Lok Sabha on August 11 that 4,311 small cars were produced in the country during the first six months of 1959.

The Minister added that the production in the latter half of the year was expected to improve considerably as sufficient foreign exchange for the import of components and raw materials needed for indigenous manufacture had been released.

It was estimated that the production for the whole year might reach 12,000 nos, the Minister said.

ELECTRIC LOCOS.

The Deputy Minister for Railways, Mr S. V. Ramaswamy, said in a written answer to a question in the Rajya Sabha that orders for manufacture of ten 1,900 volts D.C. locomotives had been placed on the Chittaranjan Loco Works recently.

The Deputy Minister added that the global tenders had been invited for progressive manufacture of 42 A.C. freight type locomotives at Chittaranjan Locomotive Works. The last date for submission of the quotations was November 9, 1959.

WORLD OF TEA

Reaction to Wage Increase

DESPITE the fact that the Indian Tea Association and the Indian Tea Planters' Association had all along opposed any increase in wages, the Government of India have made a new interim proposal to increase the tea workers' wages by two annas a day for each worker. The two Associations feel that the only result that can follow from this measure is, that the industry will be forced to retrench and gardens compelled to close down, causing distress to workers and their families. Reasons against granting an increase are given below:

First, it is said that the cost of living of plantation workers in the Dooars and Terai had actually fallen since the minimum wage was fixed. Secondly, the industry is not in a position financially to stand the rise. It is pointed out that, in 1957, about 47 per cent of the Dooars and 77 per cent of the Terai gardens and, in 1958, about 30 per cent of the Terai gardens had sustained losses. The price for Dooars tea, since the beginning of this season, had been 29 nP per pound below last year's figure. If the wages are increased now and the price trend continues, it is estimated that 70 per cent of the gardens in those areas will incur losses in the 1959 season.

Again, the industry has been pressing the Government for some time for the withdrawal of the Entry Tax on the grounds of increasing labour and other charges. The Government's decision to raise the tea garden labour's minimum wages is stated to have strengthened the industry's case for reconsideration of the basis of the tax. Official indications are that the tax may be totally withdrawn or partially reduced for gardens with an area of less than 500 acres.

Meanwhile, it is learnt that the industry has submitted a scheme to the Tea Board for rehabilitation of 50,000 acres of Indian tea, especially of Common tea, in areas like Cachar, Dooars and Terai by uprooting, replanting and new planting during the Third Plan period with a Central loan of Rs 15 crores.

In the Export Sale held in Calcutta this week, offerings were 56,256 packages. The market opened with a fair demand at slightly irregular rates; but eased later, buyers being selective in their purchases. Plain BPs showed little change in price, while Plain Fannings were occasionally dearer. Medium Orthodox BOPs were irregular by 15 to 20 nP per pound, while Brokens and Fannings, in this category, showed little change, the latter being sometimes dearer. CTC teas were 20 nP to 40 nP down except for the poorer types, which declined by about 10 nP. Non-wither Dooars grades were sold at about 10 nP below last rates.

Whole Leaf grades tended to be easier and there were some withdrawals, while the demand for Darjeeling teas was very limited at prices 30 nP to 50 nP below valuations. Here again, withdrawals were frequent. Tippy sorts were a much weaker feature than of late. Following rates were quoted:—Clean Black Pekoe Rs 1.92 to Rs 1.94; Plain BP Rs 1.80 to Rs 1.84; Plain Fannings Rs 1.96 to Rs 2.04; Medium BP Rs 1.04 to Rs 2.04; Medium Fannings Rs 2.08 to Rs 2.18; Best Assam CTC BP Rs 2.70 to Rs 3.00 and Best Assam CTC Fannings Rs 3.30 to Rs 3.70.

In the Internal Sale, offerings were 18,691 packages of Dusts and 419 packages of Leaf grades. There was a good general demand for Dusts. Black leafy sorts, suitable for export, were the strongest feature of the sale and were dearer. Bright liquoring medium Assams were also in good demand; but the remaining orthodox descriptions came to an irregular market at the beginning of the sale and were up to 6 nP per pound easier. The demand for these, however, improved as the sale progressed. The Leggcut teas were generally firm and sometimes dearer.

CTC teas, on offer, were irregular, the more ordinary kinds in this category being up to 10 nP easier. The better kinds were sold at prices up to 25 nP below last rates. The very best kinds were, however, well supported. Darjeeling dusts met with only limited activity and were easier. Following rates were quoted:—Medium Dooars Dust Rs 1..78 to Rs 1.86; Medium Assam Grainy Dust Rs 1.78 to Rs 1.86; Medium Assam CTC Dust Rs 2.00 to Rs 2.10 and Best Assam CTC Dust Rs 2.65 to Rs 2.90.

In the Export Quota section, business was done at 2¼ nP to 2¾ nP per pound. Toward the close, there were sellers at 2¾ nP with buyers at 2½ nP per pound.

According to trade sources, tea exports of Northern India tea are higher at 27.88 million pounds in July as compared with 27.28 million pounds in the corresponding month of last year. The increase has occurred in spite of the lower offtake by two leading buyers, the UK and Russia, which have taken only 19.71 million and 235,150 pounds last month against 20.62 million pounds and 1.4 million pounds respectively in July 1958. There is, however, a marked increase in shipments to the Continental countries, which have imported 1.30 million pounds as against only 380,160 pounds in July last year. Shipments to the USA and Canada have also improved to 1.33 million pounds and 1.16 million pounds from 1.12 million pounds and 938,600 pounds respectively.

In the Chittagong market, offerings were 8,324 chests. There was a good demand with buyers following quality closely. Clean Orange Fannings with good liquors were the strongest feature and were 2 to 4 annas per pound dearer. BOPs, however, did not arouse so much competition and were generally easier. Legg-cut Fannings continued to attract buyers' attention and were quoted at around Rs 1-10-6 per pound. BOP was quoted at Rs 1-6-6; BP at Rs 1-3-0; OF at Rs 1-11-0 and PF at Rs 1-6-0.

In the Cochin market, altogether 740,000 pounds of Dusts were offered for internal consumption. Against a strong general demand, prices were irregularly 5 to 10 nP per pound lower for every sort.

In London auction, 19,704 packages of Ceylon teas were offered and these were strongly competed for at dearer prices, especially for improved quality invoices and teas with colour. Low-grown descriptions advanced by one to two pence per pound, while Broken Orange Pekoe Fannings were often 6d per pound dearer. Improved quality sorts, especially Uvas, showed considerable rise in prices. Also, 9,826 packages of South Indian teas were offered and these met with a good demand at fully steady to dearer rates.

Tea stocks, in London as on the 14th August, were lower at 106.90 million pounds as against 110.99 million pounds in the previous week. Total amount to be landed, on the same date, was 14.31 million pounds. Total afloat was 23.30 million pounds including 16.85 million pounds from Calcutta; 78,000 pounds from Chittagong; 1.54 million pounds from Cochin; 3.61 million pounds from Ceylon and 1.21 million pounds from other Ports.

WORLD OF JUTE

Raw Jute Prices

REPLYING to a question in the Lok Sabha last week, Mr Lal Bahadur Shastri, Union Minister for Commerce and Industry, said that there need be no anxiety about a fall in raw jute prices because there will be increased demand hereafter in view of the unsealing of an additional 2½ per cent of looms by the Indian Jute Mills Association.

The other extreme view comes from Mr P. D. Khaitan, Secretary, Bihar Jute Growers Association, and member Indian Central Jute Committee. He has recently submitted a memorandum to the President of India, demanding the banning of the import of raw jute from Pakistan, abolition of the export duty on Indian jute and a thorough review of the present jute policy which, according to the memorandum, favoured the manufacturers.

In brief, the memorandum said that jute growers last year had lost Rs 40 crores and in Bihar alone the 300,000 jute growing families lost over Rs 10 crores due to the severe depression in jute prices. A startling revelation is that as against the average cost of production of Rs 25.50 a maund, cultivators could not get more than Rs 15. The memorandum also alleged that manufacturers had created a buyers' market. The Bihar State Government's promise to help cultivators obtain a fair price for their produce has not brought any practical benefit. The main remedy suggested is the fixation of floor or fair prices for jute. The system of cooperative purchase of jute and the entrusting of the export trade to the State Trading Corporation have also come in for severe criticism.

Now, the raw jute situation would appear to be something in between these two extremes. It can by no means be considered to be as smooth as the Union Commerce and Industry Minister seems to think. For, the IJMA have made it clear that the unsealing of the 2½ per cent of looms is a temporary measure to last up to January next only. It is true that it is quite on the cards that the unsealing may continue beyond the stipulated date if demand for sacking goods continues to be as good then as now. But the fixation of the period during which the extra looms will remain open is indicative of the cautious optimism of the industry. It is rather surprising, therefore, to note that Mr Shastri is placing so much reliance on this temporary factor for stabilising raw jute prices.

As matters stand at the moment, stabilisation of raw jute prices is not one of the current topics of discussion in the Indian World of Jute. The reason presumably is that there has been a steady outgo of raw jute ever since the ban on export was removed. Indian raw jute seems to have been particularly in demand in recent months. Exports are said to be encouraging and latterly matters have taken a turn for the better with the recurrent Chinese purchases of raw jute. Some two weeks ago we were told that the State Trading Corporation had concluded business with China for the sale of 25,000 bales of raw jute. Latest information is that another tender from that country for a similar quantity has been received. Apart from the Chinese enquiries the market sentiment has been aided by moderate but sustained mill interest.

Even supposing that raw jute prices continue to remain steady, the main problem of ensuring an equitable return for the jute cultivator may remain unresolved. Apart from the possibility that the grower may get only a part of the price ultimately paid, any sizable decline in foreign interest in Indian jute goods will soon be reflected in a diminished return to the jute cultivator. It may be argued that the strengthening of the cooperative movement in the jute growing areas coupled with the increasing scope for the export of raw jute may offset the factors that militate against an equitable price for the grower. It cannot be gainsaid that these along with the other measures taken by Government to improve yield will go a long way toward rendering jute cultivation worthwhile for the cultivator. But it would appear that the problem of ensuring an equitable price for the grower is not being given the attention it deserves. In Pakistan a similar problem is also encountered but it is being given urgent attention. The problem is no doubt much more important for that country in that jute has a large share in determining the state of its economy. The assistance of research is increasingly being taken to tackle the problem and reports have it that already uses have been found for almost all parts of the jute plant. For a lasting solution of the problem in our country concerted action must first flow toward increasing the yield per acre as there is much scope for improvement in this direction. The reported success of the Pakistani effort toward a fuller utilisation of the jute plant is an indication that there may be other directions in which profitable endeavour can be made to help the cultivator reduce his cost of production of jute both directly and indirectly.

*

The dominating influence of speculative interests in the jute goods markets in recent weeks was clearly discernible during the past week. It is now clear that much of the effervescence in the goods section has been brought about by the speculative fraternity following increased interest in sacking goods evinced by a number of foreign countries at the head of whom is China which has shown an almost insatiable hunger for Indian heavy goods. While it is true that a smart rise in sacking prices is not entirely unwarranted there appears to be little justification for the giddy heights to which prices have recently been taken. The inevitable reaction has now come, the downtrend having been aided by the absence of any fresh orders. A contributory factor is the reopening of the 2½ per cent looms fom Monday coupled with the general belief that additional looms will be switched over to sacking output.

The same period has however witnessed a steadier trend in the hessian section. In America the burlap market is showing signs of increased activity though price levels are generally unchanged. It is however reported that traders anticipate a hardening price trend in coming weeks. The factors which are favouring a steadier burlap market in America are the uptrend in burlap consumption possibility of a decline in hessian production due to the better return on sacking and the firmness of raw jute. Any sizable improvement in the Argentine offtake—not at all improbable considering the fact that that country has still a large unsatisfied demand—may tip the scales in the direction of a squeeze in hessian and a consequent spurt in prices in this section also.

The raw jute section has ruled steady as mills have been showing sustained interest. The invitation of tenders for 25,000 bales by the State Trading Corporation for export has also some steadying influence. Meantime the crop reports, though quite encouraging, contain indications of a paucity of good quality supplies at least for the time being due to lack of rains in the growing areas. Evidently sellers are also influenced by the belief that mills' purchases should be larger hereafter in view of the reopening of an additional quota of looms with effect from the 24th of this month.

WORLD OF BOOKS

"Is It Habit Or Is It Disease?"

A Passage To England. By Nirad C. Chaudhuri. Macmillans. Price *Rs 10.00.*

When the last trumpet rends the air, and the English are decorously queuing up for their seats in heaven. Mr Chaudhuri is sure to be found on the side lines lustily shouting: "God for Harry, England and Saint George!" A Passage to England is a book of impressions and reflections occasioned by a five week visit to England made possible for Mr Chaudhuri by the good offices of the BBC and the British Council. After fifty seven years of intense adoration from afar, he was able to experience at first hand all that he had read and written and dreamed about. The result was all that and more than he had dared hope for: he seems to have gone about the place in a state of continuous spiritual inebriation looking mistily at the English scene and the English people, sampling their cultural life and even reluctantly taking a peek at their politics. He admired the English countryside, looked at all the famous pictures, puzzled over architectural and artistic teasers, saw plays and heard music to his heart's content and above all talked with all the best people, who, according to him were "amused at his loquacity". He enjoyed himself immensely and when he got home tried generously to share his exhileration with his countrymen. Characteristically, they were not interested. Some even humiliated him by calling him "Pro-British", which, according to him, "is the worst term of abuse in contemporary India". (Clearly, Mr Chaudhuri's is a very sheltered existence). On this evidence, he is able to inform the English people that "there is no greater myth than the much-talked-of Indo-British friendship since 1947".

It is all a little pathetic. If only Mr Chaudhuri was a little less of a nag! His is in many ways a very fine book, witty, agreeably informal, shrewd and observant within the limits he has set himself and larded with much curious learning. The whole thing is enlivened by a happy gift for generalisation which, though often egregiously wrong-headed, is engaging. It has that rare thing in modern writing—gusto. He is at his best when he is unselfconsciously enjoying himself. Then his style acquires a plangency and luminousness rarely to be found among contemporary writers. When he is watching a quiet country scene or a play of Shakespeare, or when he is waywardly pursuing a minor piece of research—like the link between Diwan-i-Am in Delhi and Penshurst Palace, or the possible inspiration of Shakespeare from an illustration in an Aldine Woodcut —he is entirely delightful. But once he starts riding his anti-Indian hobby-horse, he can be exceedingly tiresome. And when he falls over backwards with his Englishry, he is ridiculous.

The England that Mr Chaudhuri saw was the England of Mrs Hemans, the England of stately homes amidst tall ancestral trees, of smart people and parties in rooms hung with Gobelins tapestry, where he "sipped champagne and admired the decorations and the guests, particularly the ladies in their hats". The people he met were modest politicians, famous literary critics, knowledgeable diplomats and generally those whom the English working classes refer to as "them". Mr Chaudhuri is not a snob—cultural or of any other kind—in the sense in which Thackeray uses the term—a man who meanly admires mean things. There is nothing more generous than Mr Chaudhuri's enthusiasm for English things and most of the things he admires are magnificent things. But every now and then one gets the uncomfortable feeling that Mr Chaudhuri is a snob in the dictionary sense of the term—a person who has an exaggerated respect for social position and a disposition to be ashamed of socially inferior connection, especially in matters of culture. The monotonously recurring references to the famous men (whom, out of an odd shyness, he never names) and the talks he had with them (which were mostly one-sided) begin to pall after a while. One conversation he reports gives away, as no description can, the sort of people he mostly saw. In the beginning, "working women" appeared to him as the more "obviously chic". So, he asked the wife of a friend of his:- "How does it happen, Mrs M that in your country the chamber maids seem to be much more smart than mem-sahibs?" "Because the chamber maids have been getting richer and richer and the mem-sahibs poorer and poorer," was her prompt reply! Mr Chaudhuri's eyes ("O my poor eyes") were soon enough to learn about the social background of fashionably dressed women, but his reporting this typical mem-sahib imbecility shows that the expense account out of which he was entertained was discreetly kept out of his dazzled vision. On the whole, it is clear that Mr Chaudhuri not only saw what he wanted to see but, what is more important, managed not to see the things that he did not want to see.

If Mr Chaudhuri had talked less and listened more, he would have learnt more about English social classes than he actually did. It is not only that the Englishman's way of speaking, as Professor Higgins said, "absolutely classifies him". It is that so close a student of the U and Non-U nuances like Mr Chaudhuri—a friend once told me an apocryphal story about how Mr Chaudhuri reduced to near tears a blundering guest who did not know the difference between china and crockery—would have acquired a far greater insight into the English idea.

Mr Chaudhuri frankly admits that he saw everything as in a dream. Except persons whom he knew in India, everybody else "glided like wraiths". When he wrote about this sense of unreality, his son, it seems, commented on the fact that he "had lived too long in the world of books in regard to these places". Mr Chaudhuri does not consider this a profound remark on the alleged ground that a romantic fed on books will find reality too shatteringly drab. But this is to overlook the romantic's endless resources of self-deception. Mr Chaudhuri himself a little later says—quite rightly—that English literature is the best guide for foreigners to the English scene. But then, what one sees with one's mind full of English poetry is a Wildean phenomenon of nature imitating art. Looking at Bablock Hythe "in a trance-like state" as Mr Chaudhuri does, he is sure to see, as Arnold's own "Oxford riders blithe" did, the scholar gypsy "crossing the stripling Thames": and, like them, he will not find him when he lands.

An immoderate admiration for England, especially when one has had such an obviously good time as Mr Chaudhuri, is an emotion that I for one, am not going to grudge him. But what I find ridiculous is the contra-puntal sneer at India. If Mr Chaudhuri will only make for India the excuses he so readily makes for England, he would be more persuasive writer even on the English. When an Englishman tells him that the English weather is notoriously unpredictable, and that he is lucky in the fine weather he is having, Mr Choudhuri puts it down to the charming manners of the English. The English cat takes to him readily and that is another reason for admiring the English: in India, when he tries to make friends with cats, he receives no encouragement, another point against India. But Mr Chaudhuri does not seem to be aware of the implications of his own immediate inferences from this; for, he says that cats (not English cats, mark you) "are, however, very good judges of human character and every nation gets the cats they deserve". The first half of the sentence makes nonsense of the second half. There is no concession to chivalry when he blasts, quite rightly in my opinion, Indian women of fashion. But when he finds that he is not able to admire English women either, he coyly puts it down to an "oriental's insensitiveness to their furry and somewhat otter-like elegance". Determined to admire the English, he is delighted when he finds an English accountant practising in Hong Kong remembering—rather vaguely it seemed to me, by his tentative manner—his "Livy or at all events his **Lays of Ancient Rome**". But when he visits Canterbury and finds a party of English visitors who had to be told who Thomas a' Becket was, he does not connect the two. He is doubtless shocked but does not realise that this "decivilised state" is commoner in England—as elsewhere, too—than he realises. In other words, when he thinks of England, it is the English idea that comes before his mind's eye, exactly as it is the actuality of India that comes when he thinks of India. He is willing to condone the commercialisation of the cult of Shakespeare, on the specious ground that, in India, we commercialise religion. The disingenuousness of the argument is exposed the moment we ask him whether he accepts this commercialised religion. He does not care enough about the commercialised religion to have any strong views about it, but, if pressed, I rather think he will denounce it as a fraud. In other words, what makes him condone commercialisation of Shakespeare is the fact that it is being done by people whom he cannot bring himself to chide; whereas when an analogous use is made of Gandhiji by our politicians, he is shocked to the core.

One exercise in imagination I would suggest to Mr Chaudhuri. Let him put into Indian mouths all the charming things he admiringly quotes from his English friends. "Mr Chaudhuri, you must go now, for you have to go to Winchester early in the morning". Now, if an Indian hostess had said this to Mr Chaudhuri, I am not sure that he would not have thought it a rude reminder that he had outstayed his welcome. Mr Chaudhuri is touched by the fact that his hosts made a point of driving him back to his hotel. Off hand, I can give a dozen examples of Indians who would have done one better. They would have told him not to bother but go on talking: would have arranged to bring over his luggage and would have driven him straight to the station the next morning. My point is nothing so silly as our superior hospitality but the triter one that you meet such people all over the world.

The truth is, Mr Chaudhuri's anti-Indianism is fast becoming a mannerism. There is a delightful passage in the book, which seems to be of symbolic significance. "In the hot season I sometimes get an irritation at the back of my neck, especially because I wear a collar and tie even then and this makes me jerk my head and even perk like a bird. Last summer I had an attack of this and when travelling in the bus, I suddenly heard the gentleman sitting next to me asking me in English, 'Is this habit or disease?'....I asked in turn, 'What is habit or disease?' Then the gentleman mimicked me exactly and said, 'This'. I was bound in common politeness to reply, 'I suppose it is habit'. 'I thought so too', he rejoined, 'You *have done it too many* times and it has now become a habit and habit, as you know, is second nature'. 'So it is, so it is', I said, in an embarrassed manner."

We can only echo Mr Chaudhuri in an embarrassed manner.

Effects of Changes in Company Taxation and Treatment of Dividend Income: by C. L. Saraf. S. C. Sarkar & Sons Private Limited. 92 pp. Rs. 5.

Mr G. Basu, who was approached for writing a Foreword for this book, has asserted that the subject is "one of topical interest to many, as it has raised considerable controversy in the country'. But he has added that the new method "affects many companies both adversely as well as favourably". This was to have been expected, since what the new tax structure apparently does is to "average out" the burden of wealth tax on companies and of the excess dividends tax. But it is strange to find, in Mr Saraf's book, that, out of over 100 companies selected for analysis as between the old and new forms of company taxation, only thirteen emerge as benefiting under the new dispensation. In this sense, it is noteworthy that the beneficiary companies are mostly of the engineering genre. Mr Saraf will undoubtedly have taken great care about the accuracy of his figures and calculations; and so the studies he has made are instructive for the investor. But one or two blatant examples of the printer's devil—as for example in the review of of the Indian Iron accounts—detract from the value of the book, since they raise doubts about the accuracy of the figures.

(A Scheduled Bank)

CHANGE OF PREMISES

Consequent on increased business, our Calcutta Office has been shifted to more spacious premises at 3/1/2, (First Floor), Armenian Street and has been regularly functioning there since MONDAY, the 17th AUGUST, 1959.

All our constituents are requested to note this change,

H. O.: UDIPI, S. India, Date: 1-8-1959.

V. R. KAMATH, B.A., LL.B., General Manager.

WORLD OVERSEAS

Britain

The rise in British exports and imports which took place in the second quarter of this year continued in July, according to provisional figures issued by the Board of Trade in London on August 13.

United Kingdom exports in July were valued at £287,800,000—£36, 000,000 more than in June. Imports amounted to £353,000,000—£21,000,000 more than in June. Re-exports totalled £9,300,000—just below the June figure. The excess of imports (valued c.i.f.) over exports and re-exports (valued f.o.b was £55,900,000, which was £14,000,000 less than in June.

Exports have thus recovered in July to a point near the very high totals recorded in April and May (the May figure was an all-time record). Imports in July have risen to the highest level reached this year. This is seen as an indication that the strongly rising trend established in the second quarter, but which was interrupted in June, has been resumed.

* * *

BRITAIN'S MONETARY SYSTEM

A thorough and impartial examination of the working of Britain's monetary system and of the complex issues of monetary policy is made in a report issued in London today (August 19). It is the report of a committee, presided over by Lord Radcliffe, which has been taking evidence for almost two years. Evidence was obtained from the Treasury, the Bank of England, commercial banks, and a variety of other institutions. Economists and other experts were also interviewed.

The last authoritative exposition of this character was contained in the report presented in 1931 by the Committee of Finance and Industry, with Lord Macmillan as chairman.

Lord Radcliffe is a Law Lord and was chairman of the Royal Commission on Taxation of Profits and Income (1951-55). The other members of the committee were bankers, economists, trade union leaders, and industrialists.

The committee finds that the aims of economic policy are various and complex, but mainly they are a high and stable level of employment, stability of currency, economic growth, a contribution to oversea development, and improvement of international reserves. It considers that none of these aims has such pre-eminence that it can be pursued in isolation from others. There is, therefore, no single aim of policy by which all monetary policy can be conditioned, and a balance may have to be struck between them. Responsibility for striking that balance must lie, in the committee's view, with the government of the day.

The Government must also, for similar reasons, be responsible for the choice of the measures by which to pursue the aims of policy. These measures may be of three different kinds—direct controls, fiscal measures, and monetary measures. The committee has not considered an examination of direct controls and fiscal measures as being within its terms of reference, but it makes clear its view that all three kinds have their own advantages and disadvantages.

INTEREST RATES

In the monetary field, the committee thinks that the authorities must try to work primarily through the structure of interest rates rather than by quantitive controls, either of supply of money or of particular forms of credit. The main opportunity in this direction lies, the committee thinks, in the management of the national debt, which the committee sees as the chief domestic task of the central bank today.

Changes in interest rates do not, in the committee's view, have significant short-run effects on spenders and lenders and, particularly, on financial institutions. In the committee's own words, "the authorities should think of rates of interest—and particularly of long rates—as relevant to the domestic economic situation. The authorities should not aim at complete stability of interest rates...."

The committee adds, however, that now that the economy has returned to a more normal level of monetary supply, the general effect of interest rate changes may be greater in the 1960s than in the previous decade.

It goes on to say: "The authorities should be taking a view on long rates rather than short, and should be using their power as managers of the national debt deliberately to forward an interest rate policy".

The principle of debt management, in the committee's view, is to push the rate of interest to a level that is high enough to attract sufficient firm holders of the debt and is yet consistent with a balance between demand in the public and private sectors and available resources of the economy.

EXTERNAL FACTORS

As to the relations between external and home affairs, the committee recognizes that monetary policy in the 1950s has generally been dictated by the needs of the external situation. This points to the need to keep a surplus on current balance of payments sufficiently large to enable not only a higher rate of oversea investment but also an improvement of the reserve position. It should also be the aim of United Kingdom policy to strengthen the capacity of the International Monetary Fund to perform its task.

The committee believes it right that convertibility of the pound sterling should have been a main aim of post-war United Kingdom policy. On the functioning of the Sterling Area, the committee says: "....We are satisfied that it is the interest of this country to maintain the existing arrangements".

In reviewing the position of the Bank of England, the committee thinks that while the choice as to a balance among the aims of economic policy must rest with the government of the day, the advice of the Bank of England is entitled to very great weight. The committee believes this to be, in substance, the present position, but thinks it should be made explicit. It therefore recommends that Bank Rate changes should be announced in the name, and on the authority, of the Chancellor of the Exchequer.

OTHER RECOMMENDATIONS

The committee also recommends that the Chancellor should look for advice on monetary questions to a standing committee on monetary policy, on which the Treasury, the Bank of England, and the Board of Trade should be represented. And the committee sees advantage in retaining the office of part-time director of the Bank of England.

The committee also makes recommendations of a largely technical character on the working of the monetary system. Among the less technical are: that it should be an aim of policy to re-open the London Issue Market to subordinate authorities in the Commonwealth as well as to Commonwealth governments; that, in financing exports, the maximum period of cover of the Export Credits Guarantee Department should not be considered as unalterable; that the Government should consider setting up an industrial guarantee corporation to guarantee loans for the commercial development of technical innovations; and that there is no case for retaining a qualitative capital issue control of the kind operated in the 1950s.

* * *

The volume index of United Kingdom exports in the second quarter of this year increased by more than six per cent over the first quarter, according to the Board of Trade Journal published in London last week.

Taking 1954 as 100, the index reached 117.6 in the second quarter of this year—nine per cent higher than in the same period a year ago, which was however affected by the dock strike.

The volume of imports also reached a new high level of 123.1 in the second quarter of this year—a rise of nearly six per cent over the preceding quarter and of 12 per cent compared with the second quarter a year ago.

It is pointed out in London that the terms of trade—that is, the ratio of import prices to export prices—improved in the second quarter, moving down from 90 (1954=100) to 89.

France

FRENCH COLLABORATION IN WATCH MAKING

The government of India has approved of the project for the creation, in India with French collaboration, of the first watch making enterprise in this country, which will be jointly administered by Indian interests and a group of French watch making companies from the Savoie region as well as by other firms which will proffer their technical collaboration and which will set forth half of the initial investment.

In the beginning, production will be about 100,000 wrist watches per year. In five years, this output will increase to 350,000 watches.

This decision was the result of the negotiations which have been going on for the past few months between the Indian government and various watch making companies from France, Germany, Japan, the United States and other countries. The ultimate preference of the Savoie group was the result of the particular situation of this enterprise, which has absolutely no technical or financial engagements with any Swiss concerns.

Created during the last war at Annemasse, the Horlogerie de Savoie Company grew rapidly and took up its present position as one of the leading French watch makers.

* * *

EXPORTS SET A RECORD

According to the provisional figures for foreign trade, French exports to foreign countries came to the record total of 176 milliard francs in June.

This result indicates a spectacular rise in French foreign trade.

During the same month, imports from foreign countries totaled 165 milliard francs, which means that imports were covered by exports at the rate of 106 per cent.

Consequently, for the second time since the beginning of the year, the trade balance with foreign countries shows an excess in favour of exports. This was achieved despite the fact that imports rose considerably compared with the previous month. The excess in the trade balance was 11milliard francs in June compared with 20 milliard francs in May (when the imports were covered by the exports at the rate of 109 per cent).

With the countries in the franc zone, exports totaled 74 milliard francs in June, and imports came to 57 milliard francs. For all countries, French exports in June were 250 milliard francs, and imports came to 222 milliard francs.

This excess of 28 milliard francs means that imports were covered by exports at the rate of 112 per cent.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

THE Food Ministry's "hoodoo" reputation is perhaps second only to that of the Finance Ministry. In the course of the last thirteen years, it has been the graveyard of many a reputation, and the reported reluctance of many to take up Mr Ajit Prasad Jain's place may be superstitious but understandable. Except for Rafi Ahmed Kidwai and Dr Rajendra Prasad—who was not there long enough either to win kudos or to lose face—successive Food Ministers have come a cropper, for one reason or another. Democracy is harsh and summary and often enough an unfair judge, and is quite unsentimental about throwing overboard its erstwhile darlings, as the careers of Neville Chamberlain and Sir Anthony Eden demonstrate. Either a man delivers the goods or he goes to the wall. It is not the least bit of use saying that Kidwai was lucky in good and bumper crops whereas Daulatram, Munshi and Jain had an array of formidable problems which even Kidwai could not have overcome. The time for making excuses is when history is being written and not when it is being made.

*

Mr Jain came to the Central Cabinet with much well deserved reputation as an able young man of the Kidwai faction in the UP Congress. This particular affiliation was, in many eyes, an important recommendation. At one time, it was thought that the assignment of major responsibility to him was part of the much talked of training of the second line of leadership. His getting the food portfolio was partly due to the Kidwai association and partly to a recognition of his abilities. Unfortunately for him, during the four and a half years he was in office, there has been an almost continuous sense of near crisis in some part of the country or the other. Apart from the chronically problem-ridden States like West Bengal, there have been the monotonously regular upsets (caused by droughts and floods) in other parts of the country. Mr Jain says that 1957-58 was a bad year and that it has increased his problems, but even before, we have always had the impression of living from hand to mouth. Unfair though it is to him, the popular impression is that he has thrown away every advantage that Kidwai had secured for the country by his policies.

*

But Mr Jain's valedictory performance has brought to him considerable sympathy even from those who have been his most severe critics. Some at least of the sympathy was due to the rather irrelevant fact that he was going away. (He is the first Food Minister to have actually resigned). Another reason was the feeling that he was taking more on himself than he needed and was sparing the Government as a whole responsibility for the failure of the food policy. In other words, one has the impression that he was something of a willing sacrificial goat for a failure on a wider front. But the disposition in some quarters to sit back and relax as though Mr Jain's resignation has disposed of the business is silly. There can be no vicarious expiation or propitiation in these matters, for, problems do not disappear when Ministers resign. It is necessary to spell out the lessons from Mr Jain's failure for the future. If this is not done, Mr Jain might just as well not have resigned.

*

The first thing that strikes one about Mr Jain's speech is that he feels—rightly in my view—that, despite formal assumption of responsibility, his failure was due to causes over which he had little control. Indeed, he says in so many words that many policy decisions like the one on State Trading in foodgrains was taken by the Cabinet against his own judgment of their feasibility. He says that he felt that the machinery needed for working it simply did not exist and it should not have been taken on before adequate preparations had been made. It is rather hard on a Minister to have to carry out a policy that had been decided against his own views on the matter. But since the decision, as it now appears, was political—Mr Tyagi was quite right in saying that "we did not know that the State Trading was only a slogan and not a policy"—there was nothing that could be done. Since at least a good deal of the trouble over food prices during the last twelve months has been due to the psychological atmosphere created by uncertainties around State Trading, it seems, in retrospect, an extraordinarily inept thing to have forced a Minister against his better judgment to follow a policy for which he had no adequate machinery. You have the worst of both the worlds by frightening people with a thing you simply are in no position to work. This is but an example of the increasing tendency on the part of Government to depart from the salutary principle of eschewing a rigid doctrinaire approach to our problems. Ever since the Nagpur session, the same kind of shrill peddling of cooperative farming and other nostrums for our difficulties over the agricultural situation is going on. I have nothing against the progressive adoption of cooperation even for the purpose of farming, but one who runs may read the utter organisational and administrative inadequacy at the moment for these tasks. The obduracy over this is of a piece with the decision on State Trading.

*

From Mr Jain's speech, it is clear that there was, and probably is even now, no unanimity in the Cabinet over the various aspects of the Government's current agricultural policies. There is also some evidence of a good deal of mental reservation in seeming acquiescence to Mr Nehru's views. Such compromises as are in fact made are unsatisfactory and make the worst of both the worlds. As Mr Jain pointed out, it is time that Government make up their mind whether or not they are prepared to face all the implications of complete control of foodgrains procurement and distribution, whether they will work out the formidable apparatus needed for carrying out the policy and whether they will have the unified authority throughout the country to carry out their wishes. One of the serious difficulties that Mr Jain had was with State Governments, which had their own views on the subject and which were more concerned with the political implications of any decision than with the actual administrative problems immediately arising for solution. West Bengal, where there is an articulate and opportunist opposition, is a State about which Mr Jain would have let himself go, if only the decencies of debate had not prevented him. True enough, the reversal of the decision to have a levy system was due to the virtual failure of the Government to procure any grains that way, but it is clear that the original decision was due to local pressure. When Mr Jain tried to advise Kerala, he was told to mind his own business. The surplus States do not like their cultivators to lose on account of control in prices: zonal arrangements are irksome to States within the zone which are put at a disadvantage vis-a-vis another State which is willing to outbid the local Government in the matter of prices.

*

The only thing clear in an otherwise muddled situation is that prices have not been held despite record production during this year. Everyone is ready enough with a reason, but most of them cancel each other out. Mr Jain claimed that the survey teams appointed by him to investigate the reasons for rise in prices have come to the conclusion that stocks were being withheld by farmers in the expectation of higher prices. This was very rudely contested by some members. Since I do not have the reports of the experts, I am not in a position to say to what extent this finding is justified. It is true that, with the increasing impact of new and easier forms of credit on rural life, the cultivator is having greater staying power than be-

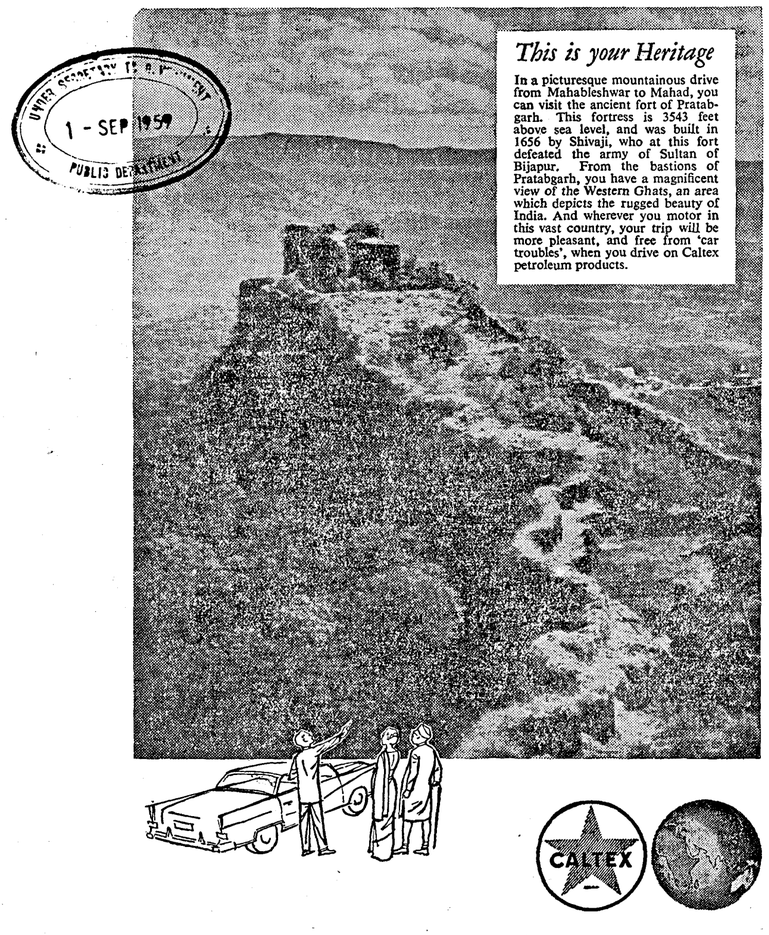
fore. It is also stated that many bigger landlords are extending their credit to cultivators and this again makes for grains to disappear into inaccessible hoards in the countryside. Others claim, with even greater plausibility, that the millers and the middle men with larger resources of finance and credit—especially bank credit—are able to put away quietly a large volume of stock. If directives and exhortations of the Reserve Bank to the Scheduled Banks to reduce the quantum of advances against foodgrains are any indication, this reason of the market-shyness of stocks seems only too plausible. There are others who believe that the total production is nowhere near what is statistically claimed and that the country simply does not have the food to go round. All these and other reasons may be true with varying degree of appositeness in the various parts of the country.

*

Apart from the reasons wholly within the sphere of responsibility of an agricultural minister, Mr Jain drew attention to the reasons that flow from the totality of the economic policies that are being presently pursued. In his letter to the Prime Minister, he says: "Some people seem to think that prices are a function of supply and demand. This is far from the truth. In the complex economy under which we are living, the prices of commodities are affected by the export and import policy, budgetary and monetary policies. In a developing economy, all these have an effect on prices". This is a true, though somewhat trite, observation that is certainly relevant to any appraisal of the situation.

*

But the basic failure is in the inability of Government to articulate a coordinated policy sincerely accepted by authority at all levels and worked for zealously. Too many paper solutions and slogans and too little practical effort have been the bane of all our efforts in the sphere of agriculture. A recent article in The Statesman detailed the difficulties of a farmer in getting fertilizers at the time he wants it. There is insufficient stock at the village cooperative and if the farmer makes the trip to the central cooperative in the town, he has to undergo endless humiliation —including the indignity of having to offer a bribe—before he gets what he wants. A friend told me of how he wanted a much advertised improved strain of groundnut from a seed farm and how he was put off time and again until, when the season had far advanced, he was finally informed that the farm did not have enough to spare him. These are stray instances, but are undoubtedly typical. I shall be told that these are matters of detail but, in agriculture, it is details like seeds and fertilizers in time that makes the difference between the bumper crop and a total failure, and no Minister can disown responsibility for it.



*

Mr S. K. Patil, who is taking over from Mr Jain, is known for his empiricism learnt from his hero and mentor, Sardar Patel. About a year or so ago, he came out with a scathing attack on the multiplicity of authorities that were impeding any kind of achievement on the agricultural front. He, if any one, can be expected to cut through the monumental doctrinaire irrelevances that are muddling clear thinking on agricultural problems. Considering that he is taking on a job that is both difficult and unpopular, it is only fair that he should be given as free a hand as possible. Mr Nehru must give him permission to reverse any policy—including those he has forced on the Government—if Mr Patil is to succeed. Otherwise, the "hoodoo" would get the better of even so robust a person as Mr Patil.

*

But, then, Mr Patil is widely acknowledged to be a trouble-shooter of no mean ability. Time and again, as for example some years ago in Andhra, it was on Mr Patil that the Congress party relied for getting out of an awkward situation. It is true, he then had a free hand. So, the success that might attend Mr Patil's efforts at resolving the food problems will undoubtedly depend on whether or no he is unfettered, relatively, that is. For, food, like finance, is these days a portfolio where there is collective responsibility on the part of the Cabinet. But, certainly, it can be made clear to the new incumbent in the Food Ministry that, though "decisions" will be emanating from the Cabinet, his say or opinion will count for a great deal. Which is why I have suggested that Mr Nehru should go so far as to agree to reversals of policy—if such alone can help to make the food picture brighter. In any case, Mr Patil will need luck; and it is luck combined with firmness and clarity in decisions which may conceivably change the prospect in food. And it is the next few years on the food front which will be crucial for all of India's planned endeavours.

Bombay Issue to be Reopened?

BOMBAY REVIEW

THE main topic of discussion currently in the Gateway city and elsewhere in the Bombay State is the report that top leaders of the Congress Party are considering afresh the demand for the bifurcation of the State. Mr Y. B. Chavan, Chief Minister, is reported to have discussed the issue with Prime Minister Nehru during his recent visit to the Capital. But the real excitement began when the Chief Minister told pressmen in Bombay that he had no comment to make on the reports about the Congress leaders' decision to bifurcate the State into Maharashtra and Gujerat. Reports emanating from New Delhi say that the Congress Party has at long last realised that the bilingual idea has failed to gain the unanimous support of the various sections and that the time has arrived for a painful reappraisal. The reopening of the issue is generally expected to result in a vote in favour of bifurcation.

It will, however, be recalled that a bilingual State for Bombay was not decided upon in a hurried manner. The problem was considered in all its aspects and ultimately Parliament approved the scheme. It is a tribute to the Congress Party that it steadfastly held on to a position which, according to its lights, was most proper considering the larger interest of the region in question. The objective was to bring into being a State which, while conforming to the spirit of State Reorganisation, could become economically strong. It was not as though local feeling in the constituent parts was ignored. The Congress sincerely believed that an emotional integration would follow once the economic advantages of cohesion were realised. The sincerity of the Congress leaders in voting for a bilingual Bombay State was prominently revealed when Mr Morarji Desai undertook a fast unto death toward the close of 1956 in Ahmedabad where widespread disturbances occurred following the announcement of the decision regarding a bilingual Bombay State. Mr Morarji Desai, who was Chief Minister of Bombay at that time, was shocked to find that the usually peace loving people of Gujerat could become violent over a decision of Parliament. He expressed his firm conviction that unilingual States in the Bombay region would not be economically viable and that it was to the advantage of everyone in the region concerned that a bilingual State should be accepted.

But protagonists of unilingual States have been warning from the very start that it would be a futile attempt to unify any two or more distinct communities. Their contention is that economic considerations will only subserve the emotional requirements. The violent disturbances that were unleashed time and again seemed to have indicated that the Congress Party might have been wrong in their calculation. The firm conviction that it was doing the right thing by the people of the Bombay region has evidently been responsible for the dogged perseverance of the Congress despite serious setbacks in diverse directions. The party has to deny itself in the bargain the services of an able person who has proved himself to be one of the most efficient Finance Ministers, but it did not swerve from the stand it had taken. In doing what it believed was right, the Congress has lost much in that a large section of the people who were erstwhile Congress sympathisers were lured away by parties upholding unilingual States.

Thus, the problem is so complicated that it is not easy to conclude who is right and who is wrong. The fact of the matter is that it is not by logic alone that the problem can be tackled. It is a matter for both the head and the heart. To state the facts briefly: The initial disappointment over the decision in favour of a bilingual State has continued undiminished all through the past three years. There are the two groups, the Maharashtra Samiti and the Mahagujerat Parishad, which have made no secret of their strong opposition to the bilingual Bombay State. On many an occasion, it has been demonstrated that these two parties have a large following. The grievance that these respective areas, Maharashtra and Gujerat, have not received their due recognition, has an even wider subscription.

Some would like the reported change in the Congress mood to be attributed to the success of the Samiti-Parishad agitation. Spokesmen of these bodies have recently held out the threat of direct action and so it is plausible theory that Government will be anxious to avoid any serious conflict. But it will be a sad commentary on the calibre of Governments both at the Centre and in Bombay to believe that they would buy peace at any cost.

There is, however, no gainsaying that bifurcation will entail a high price anyhow. For, the past three years have witnessed concerted steps being taken toward making the bilingual Bombay State into an economically strong unit. More than two valuable years have been spent in building up a unified administration, according only the second place to the implementation of the Second Plan schemes. This preoccupation has not been in vain because the State Government are now in a position to address themselves to the tasks of the Plan in right earnest.

Besides, much valuable work has been done by the State Government on the basis that the bilingual Bombay State has come to stay. In the field of industrialisation, a Master Plan is fast taking shape. Only the other day Mr S. K. Wankhede, Minister for Planning and Development, revealed that the Master Plan would be published sometime in October next. The divisional committees set up to collect data for and make suggestions about the Master Plan for the industrial development of their respective regions have completed their work. The State Industrial Advisory Committee is to draw up the final Master Plan in the light of the suggestions of the divisional Committees.

Indicative of the active interest taken by the Government in the industrialisation of the State is the establishment of a full-fledged directorate of mining and geology. The various geological surveys already conducted have indicated that the new State will be rich in mineral wealth. The State Government have initiated a scheme of departmental prospecting; and, in 1958-59, five schemes were undertaken which included prospecting for and drilling of coal near Kemptee and prospecting for iron ore in Chanda and Ratnagiri districts. As a result of these surveys, high hopes are entertained regarding finding of large deposits of quality coal in the Vidarbha area, bauxite ore in the Kolhapur region of Maharashtra, lignite ores in the Kutch area and possibility of mineral oil reserves in Gujerat region.

If the report about bifurcation comes true, the three year old controversy with its bitter memories and explosive possibilities will come to an end and certainly the ruling party will be the gainer. The samiti-Parishad axis will disintegrate and a leading spokesmen of one of the parties has already said that its members may be going back to their respective organisations to which they originally belonged. It is, however, anybody's guess whether the old controversy will not yield place to fresh ones. If the dispute over the Bobay-Mysore border is any guide, one cannot but feel diffident.

In the absence of an authoritative announcement, it is idle to speculate abut the shape of things to come. But the bifurcation, as and when it is decided upon, is not going to be an easy task.. In the first place, the old controversy over Bombay city will once again raise its head, Secondly, there is the demand of Vidarbha for separate Statehood. Thirdly, the development plans for the constituent regions have been incorporated into the Second Plan for the reconstituted Bombay State with alterations and modifications, and, even supposing a decision in favour of bifurcation is announced immediately, there can be no physical division for some considerable time to come unless the seceding units put partition above everything else.

LATEST AND UP-TO-DATE

THE LAW OF INCOME-TAX IN INDIA

BY

V. S. SUNDARAM

The eighth Edition of this comprehensive treatise on income-tax brings it up-to-date in the light of statutory changes and recent rulings of Court, of both of which there has been an abundance since the last Edition was brought out in 1954. The book has been thoroughly revised, several portions re-written and some condensed, while all matter now obsolete or superfluous or of little practical importance has been excluded or referred to briefly. The Index has also been expanded. This Edition will therefore be found to be even more useful than its predecessor as a standard book of reference on this intricate and abstruse subject.

The Amendments of the Indian Finance Act 1959 have been incorporated in the book.

"On the whole this is a most exhaustive, most comprehensive, and most elaborate commentary on the Income-tax".

BOMBAY REVIEW

Telco's Progress

That the Indian automobile industry is on the threshold of prosperous times is evident from the sustained interest that is being currently evinced in the equity shares of automobile companies. Certainly there is a large unsatisfied demand for power driven vehicles of all kinds and such demand will be on the increase with the development of road transport. Thanks to Government's decision to release adequate foreign exchange from the last licencing period for the import of essential raw material, equipment, etc., sorely needed by our automobile industry, production has already taken an upward trend and the current year is expected to record sizable increase in output.

The stringency of foreign exchange has been largely responsible for the lower production last year. Speaking at the Fourteenth Annual General meeting of the shareholders of Tata Locomotive and Engineering Company Limited, Mr J. R. D. Tata, Chairman, has pointed out that much better results than reported, would have been attained by the automobile division of the company, had it not been for the shortage of essential components and raw materials which are to be imported.

It is a tribute to the excellence of management that, despite serious drawbacks like shortage of raw materials, production in most of the divisions and departments of Telco last year exceeded targets. The company has various plans for expansion of its activities. Schemes for the manufacture of diesel locomotive and engines have been submitted to the Government. The automobile division is to embark on expansion of truck and bus chassis capacity to 12,000 a year. This compares with the original project which aimed at a planned output of 3000 vehicles a year. The vehicles manufactured by Telco already have a high proportion of Indian made components. "By October of this year we shall have fully discharged the obligation we had undertaken vis-a-vis Government and the country, to establish in four years the full-fledged manufacture of a first-class commercial vehicle with maximum indigenous content." Proof in this regard lies in the fact that, by the end of this year, Telco will be making a greater proportion of trucks and bus chassis than Daimer-Benz make in their own factories.

Small passenger car manufacture may well be the next expansion in the Automobile division. Perhaps, Telco is the first to submit a concrete scheme for the manufacture of a low cost passenger car to the Jha Committee which is currently engaged in examining the working of the automobile industry. Among other things, the committee is to make recommendations for the indigenous production of an economy car. Telco's scheme envisages the manufacture under licence of a new model of the well-known DKW light car of Messrs Auto-Union G.m.b.H of Germany. Telco's partner, Messrs Daimer-Benz, have recently acquired a controlling interest in Messrs Auto-Union. The proposed new project is based on an output of 12,000 vehicles per year and would involve a capital expenditure of Rs 14 crores including housing spread over a period of three to four years. This car will be priced Rs 6,950 ex-factory. Mr Tata is justifiably confident that, at this price, demand for the proposed new cars will exceed the supply.

Diversification of production is not to be confined to the automobile and locomotive divisions. A scheme for the manufacture of pulp and paper making machinery has already proceeded well beyond the stage of planning. The collaborators are the well-known Swedish firm of Messrs A. Johnson and company, Stockholm, through their associates, Messrs Karlstad Mekaniska Werkstad. The Government of India have authorised Telco to commence manufacture of equipment pending finalisation of certain details concerning the terms of collaboration.

The automobile industry has come for severe criticism recently mainly in regard to the prices it charges for its products. The pronouncements of some Government spokesmen and the fact that Government have embarked upon a project of their own in the Defence Department for the manufacture of trucks have engendered the feeling among the general public that the manufacturers are not doing their best to provide the country with suitable vehicles at equitable prices. Mr Tata avers that, considering the serious handicaps under which the industry is to function in India and more particularly in view of the small production, the prices charged by Indian manufacturers are "if anything, on the low side". He is able to prove his point conclusively in the case of Telco. He quotes figures to show that, though the price of Tata-Mercedes-Benz truck is no doubt higher than its price in Germany, it is much lower than those of their counterparts produced under licence in other countries. The retail price of Tata-Mercedes-Benz truck is about 27 per cent higher than that of the same vehicle in Germany but the price is 87 per cent higher in Argentina, 48 per cent higher in Australia and 59 per cent higher in Brazil. Even in Belgium, where the truck is only assembled, the price is higher than in India.

Production of Cameras

Photographic goods cannot be deemed to be a necessity, but they cannot be classified as luxury items either. In this view, the news that, in the near future, production of cameras and photographic papers will commence in our country is welcome. The enterprising concern is the New India Industries, which are well-known in this country as manufacturers of textile accessories. The foreign collaborator in this new venture is the German firm of A. G. Leverkusen. Plans for the setting up of a factory for the production of Agfa Box cameras and photographic papers have been completed and it is said that these products will be available for consumers within a few months. As photographic papers are needed in industry as elsewhere there will be a sizable saving of foreign exchange even under the present scheme of things where a drastic control on imports is in force.

*

Rihand Aluminium Plant

It was welcome news that Mr G. D. Birla gave the other day in Bombay about the proposed Aluminium plant at Rihand in Uttar Pradesh. The information vouchsafed is that preliminary plans have been completed. The plant is to have a production capacity of 20,000 tons and will be a joint venture of the Birlas and Kaiser Aluminium and Chemical Corporation of the US. The cost is estimated at Rs 16 crores. It may be recalled that, soon after the completion of their part of the work in connection with the Tata Iron and Steel Company's Two-Million ton project, Kaiser's representative indicated that his firm would embark upon some projects in India in collaboration with indigenous capital. The Rihand project was said to be one of those projects in which Kaiser were keenly interested. This famous American firm is already working in this country in collaboration with the Mahindras.

It has now been confirmed that the Export-Import Bank and US officials have agreed to entertain the application of the Hindustan Aluminium Corporation Limited, the sponsors of the Rihand project, subject to usual technical and financial examinations. Approximately $15 million will be required to cover the dollar part of the expenditure and this amount may be forthcoming from Exim Bank as loan. Out of the capital, the Kaiser group will subscribe to approximately 26 per cent. The balance of the rupee capital will be obtained in the form of subscriptions to preference shares of the company.

As pointed out by Mr Birla, the establishment of the new plant may well prove to be the harbinger of sizably increased American participation in Indian industry. Rihand, it is said, will be the first private sector project for which US private capital will be available in a large way.

The Rihand Aluminium project is assured of thumping success. Firstly, the joint sponsors are well known names in the industrial sphere in their respective countries. Kaiser is a name to be reckoned with in the American Aluminium and other industries. The Birlas have long and varied experience as they have a wide variety of industries under their management. Secondly, the aluminium industry has an expanding demand because of the versatility of the metal. Thirdly, the raw material, bauxite, is available in plenty within the country itself and this feature in the long run may be expected to act toward a reduction of the cost of production. *

LIC Goes to Villages

The Mobile Van Scheme of the Life Insurance Corporation of India inaugurated on 14th August by Mr P. A. Gopalakrishnan, Chairman, augurs well for a rapid expansion of business of the corporation. For, this will help spread the message of life insurance among the rural population who, in our country, far outnumber those who live in urban areas. Thanks to the emphasis on village rehabilitation in our planned progress, there is a new awakening in rural India toward better living preceded by an improvement in economic conditions. Life insurance is one of the most important innovations of civilised man and there can be no controversy whatsoever about its usefulness especially to those who have little in the shape of accumulated savings.

That nationalisation of life insurance was embarked upon for the sake of protecting the interests of policy holders or utilising the large funds for nation building purposes, is only partly correct. The real purpose is to bring the benefits of life insurance to the masses. Despite sizable progress in industrialisation, the bulk of the population in the country is still rural based and will continue to be so for many years to come. So it is to the village that the LIC should increasingly divert its attention.

This, the LIC has been doing ever since its inception. Though it is only about 3 years since it came into existence, it has already taken its message to the villages in Rajasthan. The LIC workers are also active in selected community project areas. The Mobile Van Scheme is the latest step in the direction of developing its activities in the rural areas. There is emphasis on language publicity for those who can read and on audio-visual publicity for the rest.

GATEWAY NOTES

WORLD OF COTTON

Considerable Activity in Ready Position

THE activity in the ready Cotton market in Bombay has considerably broadened. There has been a virtual scramble for the new cotton crop and many varieties are, at present, nearing the official ceiling levels. Various factors have contributed to the steady rise in prices.

First, the carryover of cotton for the next season is expected to be considerably smaller. Fears are, therefore, entertained that a large part of the carryover will be of little use to spinners. Secondly, the expected delay in the arrivals and the improved outlook for both cloth and yarn have inspired spinners to cover their requirements. Finally, mills from Ahmedabad and Coimbatore are reported to be strong buyers on fears of an acute shortage of good quality cotton between September and November. With the result, prices have shot by nearly Rs 25 per candy during the past few days.

The cotton crop in the Punjab is reported to be suffering from "jassid", which has appeared in many districts of the State. The affected districts, according to preliminary reports, are Ludhiana, Ferozepore, Bhatinda, Patiala and Sangrur. Cotton, a major crop of the Punjab, has been experiencing increased incidence by the pest for some years now. This is stated to be due to increase in the area under American cotton, which is susceptible to the pest.

The extent of damage, which the pest is inflicting on cotton crop, may be gauged from the fact that the overall loss in the yield is estimated at 15 to 20 per cent which, in terms of money, comes to about Rs 5.5 crores annually as against the total loss of over 21 crores suffered by all crops in the Punjab.

×

FUTURES MARKET:

Sentiment in the futures section is guided mainly by weather reports. The new crop contract March ruled steady in early deals on bear-covering and spot houses support on reports of unfavourable weather conditions in Madhya Pradesh and certain other producing areas. Thereafter, buying abated and this contract faced a steady flow of selling orders from upcountry and local bulls. Sentiment was also influenced by reports of bright weather in the Berar and Akola areas allaying fears of damage or delay in the crop. Top marks were consequently lost. August delivery was quoted at Rs 715 after touching a high of Rs 720, while the March contract moved between Rs 689 and Rs 694, to finish at Rs 690.25.

×

EXPORT FRONT:

Firm conditions have prevailed on the export front. Rumours of the Government releasing an export quota of 75,000 bales of the new crop inspired shippers to put through fresh business of about 3,000 bales with Japan at around 17½ cents per pound.

Meanwhile, the Cotton Buyers' Association has requested the Government to expedite the announcement of the export quota in view of mounting overseas enquiries for India's short-staple varieties.

Cotton shipments from India, in the first eleven months of the current season, totalled 342,821 bales against 264,719 bales in the shipping period of last season. Among the destinations, Japan tops the list with a very impressive offtake of 246,541 bales. This compares with its offtake of 184,791 bales in the same period last season. Hong Kong comes next with its offtake registering an increase of more than 100 per cent over that in the past season.

×

IMPORT FRONT:

The validity period for shipment of 60,000 bales of raw cotton stapling 1 3/16" and above from any area has been extended from 31st August to the 15th September, 1959. No cotton from the new crop will, however, be allowed to be imported under this announcement.

Arrivals of foreign cotton, in the first eleven months of the present season, aggregated 449,505 bales as against 392,200 bales in the corresponding period of 1957-58.

×

LIVERPOOL COTTON MARKET:

Trading was dull on the Liverpool cotton futures market. American support was reported for the May/June delivery, while the near position of the mixed contract improved as a result of inter-month switchings. The Sudan contract remained idle.

×

NEW YORK COTTON MARKET:

Reports of continued good crop conditions caused new crop deliveries to show some small losses last week; but a fair amount of buying by a leading southern spot house together with some local trade demand in the face of limited offerings brought prices higher toward the close. Middling Spot was quoted at 31.45 cents per pound.

×

ALEXANDRIA COTTON MARKET

Prices in the Alexandria cotton futures market ruled steady. In the spot market, demand was slow, reflecting the small export business. The export price discount continued unchanged at 30 per cent.

Exports, during the current season till the 5th August, were reported to be 917,242 bales as against 719,653 bales in the corresponding period of last year.

GATEWAY MARKETS

Non-Ferrous Metals Firm

ALTHOUGH activity is limited, prices in the Bombay Non-Ferrous Metal market have continued to rule firm on higher London advices. Copper Scrap is quoted at Rs 227 per cwt and the firmness in price is attributed to the shortage of stock and poor arrivals in the context of lower releases of sheets by the rollers. There is a general reeling that supplies will not improve till the rollers, who are under partial closure, resume normal production. This is expected only from early next month by which time alone they expect to receive supplies of copper against the April/September import licences issued to them recently.

Ready Zinc has maintained its level of Rs 109 per cwt despite reported release of some zinc to non-scheduled and scheduled industries by the Government. Lead is quiet at Rs 81 per cwt, while Tin remains firm at Rs 145 per quarter.

On the London Metal Exchange, prices, after being quoted higher at £238½ per ton on reports that the copper industry in the US was virtually paralysed, developed a slightly reactionary tendency toward the close to £231½ on rumours of a possibility of some settlement in regard to the steel strike.

According to the latest reports, the United States copper industry has become almost completely strikebound. There remains only the American Smelting and Refining Company of any major consequences still operating. Refined copper production, in July, has totalled 134,020 tons as compared with 138,403 tons in the previous month. Deliveries to fabricators have dropped down to 108,127 tons from 150,117 tons.

Ready Zinc maintained the last week's high level of £85§ a ton—the highest reached in London since May 1957 and compared to a low point of £71¾ in April. The steady recovery in prices is attributed to the production and export cutbacks agreed to at the United Nation's Conference on lead and zinc late in April. The surplus of production over consumption was then thought to have been reduced to an annual rate of 16,000 tons from an earlier anticipated surplus of some 120,000 tons.

Lead is quoted at £73 and Tin at £792½ a ton.

*

Gold & Silver

Although movements in prices were confined to a narrow range, the undertone continues to be bullish on the Bombay Bullion Exchange. Silver started higher and advanced further on Calcutta buying and bear-covering. Reports that control on silver exports has been lifted with effect from August 19 gave stimulus to the sentiment.

The outlook for the white metal has undergone change and hence the trade's psychology has veered round to the bullish side. During the past three years, India imported silver coins equivalent to more than 50,000 bars and these supplies have been well absorbed with the increase in the purchasing capacity of the farmers and the labour. Arrivals in the local market were only 7 bars as against an offtake of 13 bars. Ready rates moved between Rs 202.87 and Rs 203.50, to finish at the former level.

Meanwhile, the final annual figures, compiled by the United States Bureau of Mines, show that the rising trend in world silver production, since 1942, a continued in 1958 with an increase over 1957 of about 4 million ounces to 234 million ounces. Leading producer countries were Canada with 31,087,681 ounces; Mexico with 47,589,526 ounces; the USA with 34,11,000 ounces; the USSR with an estimated 25,000,000 ounces; Peru with 24,157,907 ounces and Australia with 16,249,649 ounces.

The Gold section, though less buoyant, has remained firm with prices showing a rising tendency. With silver hoisting new high levels, bulls in the yellow metal have also been trying to rig up prices. Arrivals amounted to 4,000 tolas; but the offtake was poor at 2,000 tolas. Ready rates moved between Rs 121.62 and Rs 121.87, to close finally at Rs 121.84. Sovereign was quoted at Rs 78.50.

*

Oils and Oilseeds

Conditions on the Bombay Oilseeds Exchange remained generally quiet, thanks to favourable weather conditions in the growing areas. Reports of favourable rains in Saurashtra induced the bulls to unload their holdings. The crushers and vanaspati manufacturers were also inclined to withdraw from the market in anticipation of lower prices. Groundnut ready bold was quoted at Rs 38.62 and Groundnut Oil at Rs 19.69.

In the Castorseed section, the trading enthusiasm was at a low ebb on reports that Brazil was offering oil at lower rates. Castorseed ready was quoted at Rs 30.25 and Castor Oil, commercial quality, at Rs 15.37.

Prices of Linseed followed the general trend of prices in other seeds. Ready was quoted at Rs 32.50 and Linseed Oil at Rs 16.00.

*

Yarn

Except for a moderate rally in Nylon yarns, there has been no important development in the Yarn market. The improvement in nylon yarns is attributed to better advices from the export trade.

Fluctuations in Art Silk yarn prices were confined to narrow limits.

DELHI REVIEW

Progress of Some Public Enterprises

OLYMPUS

A progress report—more uptodate than was available during the Budget session—of public sector projects and undertakings for which the Ministry of Commerce and Industry is responsible has just been circulated to members of Parliament. It is seen from this report that the State Trading Corporation has done, during the period April 1958-March 1959, business to the tune of Rs 22.4 crores on the export side and Rs 7.7 crores on the import side. In the field of exports, mineral ores have accounted for the major portion of the Corporation's business. During the reference period, firm contracts for the sale of 2.2 million tons of iron ore were concluded; virtually a new market has been developed in Europe by the contract of sale of 175,000 tons of iron ore to Italy. As for the business in indigenous cement, the Corporation has, during the same period, acquired 58.51 lakh tons and sold 58.48 lakh tons; total sale proceeds have amounted to Rs 69.46 crores and payments to producers and other expenses like freight, sales tax and selling agents' remuneration to Rs 66.58 crores, leaving a surplus of Rs 2.88 crores. The Cement Division has not entered into any fresh contract for the import of cement during the period under review. However, it has been authorised to export two lakh tons of Indian cement during the period January 1958 to June 1959; contracts for a total quantity of 1,55,550 tons for export to Ceylon, Saigon, Cambodia, Persian Gulf Ports, East Pakistan, East Africa, Madagascar, Afghanistan and Aden have been concluded up to the end of March 1959.

Incidentally, it is stated in the report that the departmental chartering carried out by the STC has played an important role in the price structure of freighted goods and that Indian shipping is also being helped by the use of Indian bottoms to the maximum available extent. But the grievance in shipping circles here is that the STC sometimes makes purchases on C.&F. basis and that, even where it makes purchases on F.O.B. basis, it sometimes charters foreign vessels to take advantage of the low competitive freight rates quoted by powerful foreign shipping interests. The Corporation's contention in this connection seems to be that, as an autonomous corporation, it is free to take its own decisions in regard to its day-to-day business operations.

The Sindri Fertilisers and Chemicals produced, during the year 1958-59, ammonium sulphate to the tune of 3,30,100 tons as against 3,32,000 tons in the preceding year. The total output of coke for the year was 2,28,600 tons as against 2,29,000 tons in 1957-58. The factory supplied, under the advice of the Central Fertiliser Pool of the Ministry of Agriculture, ammonium sulphate to the various State Governments to the tune of 3,32,000 tons during the year under review. Of this quantity, seven States received as much as 251,,000 tons in all; they are Uttar Pradesh (95,000), Andhra Pradesh (33,000), Bihar (31,000), Madras (26,000), Bombay (23,000), West Bengal (23,000) and Madhya Pradesh (20,000).

The output of the Hindustan Machine Tools factory during 1958-59 was 552 machines as against the target of 238 machines fixed for that year at the beginning of the Second Plan. Despatches during the year were 529 machines (lathes, milling machines and radial drills) and stocks as on 1st April, 1959 were 56 machines. The value of production during the year was Rs 2.1 crores. There has been a progressive reduction in the selling prices of machines during the period, with the result that they are now fixed well below the landed cost of West European and American machine tools of equivalent quality. According to the original programme for 1959-60, 540 machine tools are to be manufactured; but in view of the improved order position, production during the current year is to be increased by another Rs 30 lakhs in value.

The Hindustan Cables factory has produced during the year under review 655 miles of telephone cables valued at Rs 1.02 crores. In the current year (1959-60) the programme is to manufacture 800 miles of telephone cables. It is expected that production of coaxial cables, at an annual rate of 300 miles valued at Rs 71 lakhs, will commence in the middle of 1960.

The Hindustan Antibiotics factory produced, during 1958-59, as much as 29.03 million Mega units of finished penicillin as against the present rated capacity of 25 million Mega units. The net sales after deducting discount and commission were Rs 3.09 crores during the year. The present demand for penicillin in India is estimated at 60 to 65 million Mega units. The expansion programme of the Pimpri factory is just being completed and the rated capacity will soon go up to 40 million Mega units; two other factories in the private sector have also been licensed to produce penicillin. It is stated that the prices of penicillin in vials in India compare favourably with those in the home markets of exporting countries like the United Kingdom, the United States and Belgium. With regard to export prices, however, these countries have the tremendous advantage of larger indigenous production and consumption; moreover, they started production of penicillin nearly ten years before India and the prices ruling at that time were very high. They have, therefore, been able to write off the value of their plant and equipment several times over and to quote an extremely competitive price for exports. In this situation, the Pimpri factory is giving price reductions in such a way that the benefit is passed on to the consumer directly without, at the same time, prejudicing the ability of the company to build up sufficient reserves for financing its plans for production of other Antibiotics. Thanks to the increase in production, the company's profit for 1958-59 is estimated at well over Rs 100 lakhs out of which Rs 30 lakhs will have to be paid as income-tax. The associated project for the manufacture of 40,000 to 45,000 Kgs. of Streptomycin and Dihydrostreptomycin, at a capital cost of Rs 170 lakhs, is now under way and is likely to go into production early in 1961.

The Hindustan Insecticides Ltd has registered all-round progress during the year. The Delhi factory has doubled its production of both Technical and Formulated DDT; output of the former was 1,268 tons and that of the latter 1,100 tons. The sales effected during the year were Rs 55 lakhs for 1,513 tons of both kinds of DDT together from the Delhi factory. In the Alwaye factory, 812 tons of Technical DDT and 710 tons of Formulated DDT were produced during 1958-59, the first year of production for this factory. The expansion of production has enabled the Hindustan Insecticides company to reduce, with effect from 1st of April 1959, the price of Technical DDT from Rs 2.25 to Rs 1.81 per lb. and that of Formulated DDT from Rs 1.75 to Rs 1.54 per lb.

The National Small Industries Corporation has secured during the year for small-scale industries orders from the Director-General of Supplies and Disposals for supplies of stores worth Rs 2.56 crores as against Rs 0.62 crores in 1957-58. As many as 2,195 small-scale units have been newly enlisted by the Corporation for assistance in securing Government orders, bringing the total number of such enlisted units to 3,935 as at the end of 1958-59. The Corporation has supplied up to the end of that year 2,234 machines valued at Rs 1.84 crores under its hire-purchase scheme covering small-scale manufacturers. These figures are a measure of the growing impact of the small industries programme.

In the review so far given, such industrial undertakings as the Nangal Fertilisers and Chemicals, Heavy Electricals, Heavy Engineering Corporation, Hindustan Salt Company, Nahan Foundry and National Instruments have not come in for mention because some of them are still in the stage of construction or planning and some others have not registered any significant progress during the year. By and large, the impression produced by the Progress Report issued by the Commerce and Industry is that the commercial and industrial undertakings concerned are improving their production or expanding their activities, making more profits now and becoming more efficient. What is more, their pricing policy also appears to be increasingly oriented to benefiting the consumer and their balance sheets show that they are being strictly run on commercial lines like other private sector enterprises.

The Planning Commission have just apprised Parliament of the progress todate of the Second Plan. In the current year which is the fourth year of the Plan, the aggregate size of the State Plans will be Rs 472 crores and the outlay at the Centre Rs 620 crores. If these outlays come to be made as scheduled, the first four years will have accounted for a total outlay of Rs 3,550 crores. In the circumstances, it is now expected that the entire five-year outlay will reach the revised target of Rs 4,500 crores. As this financial target is at current prices, the conclusion one may reach is that roughly 85 per cent of the physical targets of the Second Plan as originally framed will have been attained. And that will be no mean achievement, considering the foreign exchange difficulties in recent years.

Some industrial, transport, irrigation and power projects have now to be held over for the Third Plan. Among the deferred projects, the more notable ones are the carbonised briquetting plant under the Neiveli lignite project, marine diesel engines project, Hindustan Shipyard dry dock project, heavy plate and vessel works, heavy machine tools project, heavy structural shop, synthetic rubber plant, project for newsprint from bagasse and projects for basic refractories, rayon grade pulp, carbon black, tungsten carbide and aluminium plant at Salem. It is stated that preliminary work on some of these projects will, however, be done in the last year of the current Plan.

This will mean that the Third Plan will, as the Second Plan did, start with a spillover of projects and plans, not to speak of foreign assistance. And this is as it should be. We need not, therefore, be unduly put out by some element of physical targets unattained by the end of particular Plans. It should be enough, from the point of view of perspective planning, that development and the effort are sustained.

NORTH INDIAN NOTES

Irregularities in Defence Accounts

DELHI REVIEW

The existence of irregularities in the working of Government departments is no unknown fact, and at any time a fair portion of them could be found in any one of these departments. But, the Defence Services would seem to top every other department in the number of such irregularities and the variety of forms they have assumed. This year's audit report on Defence Service Accounts has unearthed a crop of such irregularities, which, among other things, include infructuous purchases, extravagance in expenditure, fictitious financial adjustments, etc.

The report relates the instance of a contract entered into, without invitation of tenders and after direct negotiations with a foreign firm, for the supply of automobile spares, which has resulted in acquisition of surplus spares costing Rs 23 lakhs. Instances of infructuous purchases relate to ten milk cooling pans and pasteuring plants purchased between 1954 and 1958 costing about Rs 3.80 lakhs as also of naval equipment costing Rs 16.58 lakhs, procured from a foreign Government.

Deplorable store keeping and store accounting have been responsible for not a little of the losses and extravagance. The report points to instances of accumulation of unrequired components attributable to the lack of concern and attention to the calculation of the requirements at the time of ordering the purchase. What is even more shocking is, that no proper steps were taken to cancel the indents for the unrequired portion of goods after the requirements had been correctly established.

The Defence services could build up such a record of extravagance and losses only by departing from the general rules relating to the working of projects, which generally imply the prior administrative sanction, technical sanction and allotment of funds. The report vouches that such rules continue to be disregarded by the administrative authorities and has therefore stressed the need for special steps to prevent such persistent departures.

The instances listed in the report reflect a lack of purpose and plan in the working of the Department which is so contrary to the impression which the Government seek to create among the public about the working of Government departments and of undertakings in the public sector. Extravagance and such other irregularities are generally supposed to abound only in the private sector and are arguments generally advanced to debunk the private sector. In the light of the frequent criticisms indulged in by Government spokesmen against the private sector, it would have been expected that the mistakes of the private sector would not be reproduced in the working of the Government departments. The impression is obviously groundless.

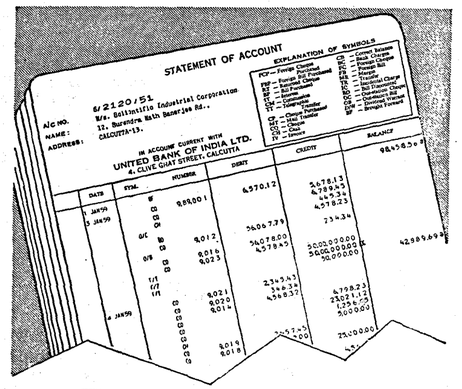
*

Road Transport

The setting up of the Masani Committee on road transport development and the subsequent publication of its report urging greater consideration being shown to road transport and appropriate steps taken to implement a policy of rapid development, was the prelude to a protracted discussion on the Government's road transport policy in the Parliament which is far from being ended. As was to be expected, the debate was marked by the sharpest criticism of the Government's policy which had tended to overlook the claims of road transport development. However, the discussions had indicated that the Government had been converted to accept the importance of rapid development of road transport. Mr S. K. Patil, Union Minister in charge of Transport and Communications, expressed general agreement with the Masani Committee's recommendations. Though the setting up of the Neogi Committee to evolve a national transport policy gave fresh material for doubts as to whether the Government would accept and implement the recommendations of the Masani Committee, Mr Patil dispelled them by pointing out that the Neogi Committee would be concerned only with evolving a national transport policy and that the recommendations of the Masani Committee would not be affected by the setting up of the Neogi Committee.

Mr Patil has also expressed agreement in respect of most of the suggestions made by members for the development of road transport. The conflict between railways and road transport was denied and the problem was defined as one of proper coordination of the two forms of transport. The need for a scientific policy toward taxation of motor vehicles was also recognised. Above all, assurance has been given that the interests of road transport would be fully safeguarded and that any attempt to place obstacles would be stoutly and successfully resisted.

Though it cannot be questioned that the fairly unanimous views expressed in Parliament both by the Minister and others augur well for the development of road transport, this could be only partially helpful in view of the fact that it is the State Governments which are responsible for implementing transport policy. So, it is only in the measure in which the cooperation of the State Governments is enlisted that road transport development could be expedited. Such cooperation is particularly necessary for the evolution of a uniform transport policy for all the States, the lack of which is a big hurdle in the way of the development of road transport.



*

Bicycle Exports

IN a talk with Pressmen at Calcutta, Mr S. Sen, Director, Sen-Raleigh Industries of India Ltd, who recently returned from a tour of Burma, pointed out that there were bright prospects for export of Indian bicycles to Burma. Burma has not so far figured as a large purchaser of Indian bicycles, as it was obtaining its requirements from England. But continuing sterling difficulties have forced Burma to look toward India as an alternative source of supply. Under the bilateral trade agreement signed recently between the two countries, bicycles of the value of Rs 8 lakhs are expected to be exported to Burma by December 1959.

This is the first ever opportunity that had been thrown open to the Indian bicycle industry to get a foothold in a foreign country in the status of an exporter of bicycles, and the Indian bicycle industry would do well to make the most of it. The fact that the Burmese purchasers have a predilection for certain UK models would seem to point to a limited period of usefulness of India as a supplier of bicycles. But the fact that these models are also being manufactured in the country under licence from the UK manufacturer should enable the industry to maintain and even increase its exports even in the event of trade liberalisation. This, no doubt, involves the need to maintain the price of Indian bicycles at a parity with those supplied directly from UK. This, however, calls for no special effort as Mr Sen has pointed out that Indian bicycles are already being quoted at a price equal to that of similar ones imported from the UK.

On the basis of a price of Rs 150 per bicycle, and making allowance for nearly Rs 50 by way of value of imported components and raw materials, Mr Sen has estimated the net earnings of foreign exchange from the export of each bicycle at Rs 100. Burma's yearly requirement of bicycles is 50,000. If the Indian bicycle industry could step up its exports to meet at least half the annual requirement of Burma, the net earning of foreign exchange will be about Rs 2.5 million.

They are so neat!

These mechanised Statement of Accounts! They save the customers so much time and bother.
The Bank's Head Office and some branches supply them regularly. More and more branches will be supplying them soon.

DELHI REVIEW

Statistical Position of Sugar

ACCORDING to the figures released by the Indian Sugar Mills' Association, the total Sugar production for the season 1958-59, as on the 31st July 1959, was 19.04 lakh tons as against 19.71 lakh tons by the same date last season. The offtake from factories, during July, was 1.75 lakh tons as against 1.70 lakh tons during the corresponding month last season. This brings the total despatches from factories, up to July 1959, to 15.76 lakh tons as against 15.21 lakh tons in the corresponding period of last season. The closing stock of sugar with the factories, as on the 31st July, was only 6.62 lakh tons as against 8.78 lakh tons on the corresponding date of last year.

It is clear that production, during the current season, has been a little less than it was in 1957-58. But, despatches from the factories, so far, have been somewhat larger than they were in the corresponding period of the past season. Consumption has probably been maintained at a level rather higher than the domestic output. As a result, the carry-over, at the end of the present season, will almost certainly be smaller than a year previously, a marginal contribution to the decline having been made by exports. The smaller carryover holds out the prospect of a shortage. Naturally, hoarding and profiteering are rampant and prices are unconscionably high.

As a matter of fact, sugar prices have continued to rule firm following tight supply position and the stoppage of sale through open shops. Free quota releases, made at the end of June, are also reported to have been exhausted. The whole question of production and distribution is now being reviewed comprehensively and the Government of India are likely to formulate a scheme to stabilise prices.

Some circles, therefore, fear that stricter Government controls might be imposed, while others argue that, as such controls have already proved ineffective, no measures will be taken in this respect. In any case, there is little likelihood that ex-mill prices of sugar will be reduced.

Meanwhile, the International Sugar Council has announced that exporting sugar countries will be permitted to carry forward into 1960 up to 10 per cent of their 1959 export tonnage, subject to certain conditions. This decision is designed to strengthen the marketing position of exporting countries by relieving them of the obligation to market the entire balance of their 1959 quotas before the end of the present quota year, not only by exempting them from penalties, but by allowing a carry-forward of quotas regardless of market conditions.

The reaction in the world market to the Sugar Council's move has been mild so far. Prices in New York have remained just below 2.90 cents a pound, the level reached last week following Russia's purchase from Cuba. They are, therefore, still a long way from 3.15 cents, the minimum at which the Council aims. The consensus of opinion in trade circles in London is that, while the new provision should be a steadying influence in the short-term, it does nothing to help sugar's long-term prospects.

*

Gur

In the Hapur market, Gur prices are ruling steady. Although despatches have been affected due to rains, stocks are slowly running down and are now put at 23,000 maunds. Arrivals of new gur have begun in the producing areas of the South; but prices improved there due to good demand.

Steady conditions obtained in the Muzaffarnagar market. Chakku dry quality is quoted at Rs 24.50 to Rs 24.75 per maund. Stocks of gur and shakkar are estimated at 50,000 maunds.

It is learnt that futures trading in gur has started in Meerut. This is the fourth centre where futures trading is being conducted. Other centres are Hapur, Agra and Muzaffarnagar.

*

Foodgrains

Quite conditions have continued to prevail in the Hapur Foodgrains market. Wheat prices are ruling steady at Rs 18.25 to Rs 19.50 per maund, according to quality. Arrivals in the open market are limited; but consumer's demand is being met from private sources where arrivals are put at about 75 to 100 maunds daily. The total purchases of wheat, so far, are nominal at 1,500 maunds and supplies from private sources are being diverted directly to consumers. The Uttar Pradesh Government, however, propose to continue the wheat levy scheme, expecting better arrivals later when "khariff" grains arrivals will multiply. The market for Rice is quiet, thanks to the steady progress of the paddy crop.

NORTH INDIAN MARKETS

The gram market remains depressed, as heavy quantity is still reaching the market from outside. Despite the State Government purchases 20,000 maunds at the controlled rate of Rs 12.50 a maund, stocks remain unchanged at about 65,000 tons. The State Government have stopped further purchases of this grain, expecting a further fall in prices. The markets for Barley and Bejher also remain quiet on expectations of bumper khariff crops. Prices of other coarse grains remain almost unchanged in the absence of demand.

*

Wool

Wool prices in the Indian market during the last fortnight have generally maintained at last month's level. Bikaner and Beawar whites, however, showed a decline of 3 to 5 nP but yellows were steady.

The yellow season has now started and arrivals are increasing in the market because the rains are not now so heavy as to hamper transport.

Holiday period will be over at the end of this month in the overseas market and a good demand is forecast for September.

Indian mills and the indigenous industries have lately shown great interest in good quality wools. Exporters have bought a considerable amount to cover their August-September shipments.

The following were the quotations in the Delhi market on 20th August:

1st White Rs 2.94 to Rs 3.12 per pound; Tinged white Rs 2.68 to Rs 2.81 per pound; Pale Yellow Rs 2.31 per pound; Yellow (Delhi, Beawar & Punjab) Rs 2.00 to Rs 2.06 per pound and Greys Rs 100 to Rs 105 per pound.

ANGLO-INDIA JUTE MILLS CO., LTD.

The Directors at their meeting held on 17th August, 1959 decided to recommend to the shareholders in the Annual General Meeting dividends for the year ended 31st March, 1959 as follows:—

On Preference Shares at the rate of 7% per annum (Rs 7.00 per share)

On Ordinary Shares at the rate of 12½% per annum (Rs 12.50 per share)

(both dividends without any deduction for income tax paid by the Company).

By Order of the Board,
Duncan Brothers & Co., Ld.
Managing Agents.

Calcutta,
18th August, 1959.

THE BORMAH JAN TEA COMPANY (1936), LIMITED

NOTICE is hereby given that the Annual General Meeting of the Members of THE BORMAH JAN TEA COMPANY (1936), LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Friday, the 25th September, 1959, at 3-10 P.M., for the following purposes:—

1. To receive and consider the Profit and Loss Account for the year ended 31st December, 1958, the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.
2. To declare Dividends.
3. To appoint a Director in place of Mr. G. T. Routledge, the Director retiring by rotation at the Meeting.

   And, in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956:—

   "That Mr. G. T. Routledge be and is hereby appointed a Director of the Company liable to retirement by rotation."

   Special Notice of the intention to propose the foregoing resolution as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, has been received by the Company wherein it is stated that Mr. G. T. Routledge is an "associate" of the Managing Agents within the meaning of the Act, and that therefore, he can only be appointed by a Special Resolution as a Director liable to retirement by rotation.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 15th September, 1959, to 25th September, 1959, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

By Order of the Board,
McLEOD & CO. LTD.,
C. L. BAJORIA,
Director,
Managing Agents.

3, Netaji Subhas Road,
Calcutta,
24th August, 1959.

Note: Payment of the proposed Dividends, if declared, will be made on or after 12th October, 1959, only to those members whose names are registered in the Books of the Company on 25th September, 1959, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

THE PENINSULA

The Finance Minister

MR MORARJI DESAI, India's Finance Minister, in his inaugural address at the 66th annual conference of the United Planters Association of Southern India, referred to the tax burdens, as reported by the president Mr M. M. Varghese, on the industry, and said that, if those complaints were for his benefit, certainly he had made a note of them. It did not mean, however, that he was obliged to satisfy them. As it was human nature to satisfy the needs of fellow beings, he would certainly try to do so, but he would ask them to place themselves in his position and take note of the larger difficulties he had to face as Finance Minister. Between the tax-payers and tax-gatherers, the problem was to find a method whereby the grievances could disappear. Was there any country in the world that had succeeded in this effort and was India likely to succeed in this? "At any rate, I will try to see that your capacity for paying taxes is not lessened," Mr Desai remarked amidst mild laughter.

Mr Desai said he had taken note of the warning against such heavy taxation with possible consequence of extinguishing the industry; but, after all, the Government, in carrying out their duty, had to see that the country's needs were more and more to be developed for which more and more taxes had to be levied. And the taxes levied by the Government should be such as to give increasing revenue to the Government. Mr Desai believed, therefore, that, as long as that condition was satisfied, one could see that the taxation policy of the Government was not regressive.

Here, Mr Desai said that each person should care more for others' good than for his own. That way he would say it was preferable to be the Anarchist without any government at all in the highest philosophical sense of the expression; but, then, none would desire that there should be such a state, as normally understood. Therefore, it was necessary for them to have Government to govern, to maintain their freedom to act, speak and think. But this freedom could not be restricted, and compromises were necessary, and the citizens in a democracy should keep the Government above want; the Government should also behave in such a manner that the citizens think more of their duties than of unrestricted freedom or privilege.

They could not afford to make the plantation industry suffer in any manner, Mr Desai said, and, therefore, it was in the interest of the Government that their capacity to pay was maintained. He said that the remedies sought should be in different shapes according to different attitudes and thinking. (Mr Desai did not elaborate as to how these different shapes and attitudes should be identified). He stressed on understanding between the people and the Government without allowing third parties to create deliberate misunderstandings.

As regards the threat of competition to Indian tea in the world market from East Africa, Mr Desai said that the Indian Plantation industry should increase its capacity for meeting it by straight and proper methods. India's natural advantage in the matter of tea-marketing outside should be taken hold of by keeping abreast of the times and making the industry more efficient and productive. Here, Mr Desai referred to human happiness attuned to less material possessions, and unhappiness though in possession of high material possessions. In this context, the Indian plantation industry could not complain of other exporters trying to take some part of the foreign market by unfair means to which Indian tradition and culture were both alien.

As regards the relations between plantation owner and labour, Mr Desai's advice was that the industry was run for the benefit of the entire society and not merely for the benefit of those who owned them. He, however, was careful to avow that there could be no uniform standard of living in the world of today when differences were created and bound to exist. He suggested a regulation of relations between labour and owners in such a manner as to make the employees unconscious of the lifting away of grievances by owners and thus feel grateful for the employers' benefits. The impression of the employees they could get redressal only through pressures was quite bad, and Government were trying to see that the third party intervention in the management-labour relations was done away with.

In a final repetition of his advice to the planters, Mr Desai asked the planters to think more of their duties and responsibilities than of their rights and privileges, and they should get their privileges by performing their duties rather than by demanding them or bringing pressure upon Government through associations like this.

*

The UPASI President

IN a general way, the plantation industry in the southern region represented by the United Planters Association of South India should have felt disappointed by Mr Morarji Desai's assurance (!) while making his brief address to the planters at Coonoor that he would see the "capacity of the industry to pay taxes is maintained." This came as a sort of reply to the list of difficulties and handicaps the industry has been forced to face since some time past as enumerated by the president, Mr M. M. Varghese.

Mr Varghese made an appeal to the Government to examine the whole position of fiscal burdens accumulating on the Tea Industry. His other point needing urgent Government attention was the marked rise of East Africa as a tea producer. A necessity for a World Tea agreement by which there could be restrictive production or restriction on exports to the level of demand by joint action of the world tea-producing countries was urged by him, and he felt the futility of India and Ceylon alone trying to regulate production or restrict exports which, he said, had to be looked at from the standpoint of too many tea producing countries in the world, being eager to obtain a foothold in the world market and enlarge their share.

Mr Desai's reply to the long presidential address was very short. As Finance Minister of India, it was expected of him to answer some of the points posed or at any rate to inform the planters assembled there about the possible line of Governments action on the listed difficulties of the industry. He said: "The slow decline of an industry may not be so perceptible as to cause immediate reaction and it is for that reason, we fear, our warnings may not be taken seriously until it is too late."

The contention of Mr Desai was that a Government had to govern as per the principles of democracy, being elected by majority votes. The planters should run the industry for the benefit of society and not for the benefit of a few. The world is competitive, of course, and Indian planters could not complain against that. But Mr Desai warned that, in this competition, there should be straightforwardness by competing with increasing production efficiency and not by resorting to any kind of initiative antagonistic to the traditional Indian culture. Every country had its own right to earn and prosper, he maintained, and India by its natural advantage—Mr Desai probably had in mind the advantage that India possessed in a reticence against "unfair means of competition"—should not be afraid of any foreign competition. He entered here into a philosophical disquisition on material possession devoid of happiness.

Mr Varghese's legitimate description of the labour problem elicited this reply from Mr Desai: The employer should, before the employees themselves become conscious of their difficulties, go forward to meet them and alleviate distress: comparison of today's conferment of benefits by employers with conditions existing years ago was not good, because no benefits existed as such in those days. If labour was allowed to feel that, through agitation alone, they could get their grievances redressed, that was bad enough for the employers. Mr Desai did not mention his views about the intransigence of the various Trade Unions which worked havoc with the properties of the plantations, let alone the deep dent already caused in their relations. Thus, Mr Desai's address was conspicuous either for a deliberate display of lack of understanding of the problems of this vital foreign-exchange earning agricultural industry or for his unwillingness to express himself about the condition prevalent today and how his Government would try to meet them squarely. It was also felt among the planters that, whatever might have been the then personal attitude towards Mr T. T. Krishnamachari, even though he might have earned unpopularity, he would not have minded doing so by uttering his thoughts on the subject openly to the planters assembled especially for this purpose. Having come all the way from New Delhi, Mr Desai could have said or indicated the methods by which the planters could expect the Government to help industry's further productivity without impairing efficiency or courting further labour discontent.

Mr Varghese prefaced his address by pointing out that the three major crops produced by the planters in the South, namely, Tea, Rubber and Coffee, are all centrally controlled, and it is only fitting that the Ministers directly concerned with them should give them of their busy time to know them more closely. Mr Desai's brief address, however, should have undoubtedly brought disappointment, in as much as he was more philosphically minded in his meanderings rather than to focus the attention of the planters' to some points which he might have considered weak in the industry. Even that would have been welcomed by the UPASI.

Mr Varghese observed that a little more than every fourth rupee earned from abroad is from the plantations. Yet, the Industry required for its maintenance and production only one in every two hundred and thirtyfive rupees spent by the country on the import of goods. Showing an example of how heavily the industry had been taxed, he pointed out that a tea Estate in the Nilgiris had paid Rs 1,270 per acre in taxes and duties last year. The plantations had blazed a trail of progress in the matter of scientific cultivation, agricultural management and marketing. Mr Varghese noted that, over the last ten years, the plantations had increased production of coffee by 110%, Tea by 77% and Rubber by 58%, with great prospects of future additional benefits to India's total economy. In the past decade, the concentration was more on increasing the yield per acre than on extending planted acreage. For the future, the hope was that they would do both to retain and expand world market and also meet internal demand.

It was in this context that Mr Varghese said that, in the search for finding increasing finances to build up their gigantic plans, the Government should not make the incidence

Planters' Special

THE PENINSULA

of tax heavy on the plantations. "The slow decline of an industry may not be so perceptible as to cause immediate reaction and it is for that reason, we fear, our warnings may not be taken seriously until it is too late," Mr Varghese appealed.

Mr Varghese contended that it was the primary function of an Association like theirs to help its members to obtain reasonable prospects of continuity in business, security for investment and a central forum where their multifarious problems might be discussed and ways and means found for satisfactory solution. In olden days, one part of the income which was given to the Government enabled to secure enjoyment of the other nine parts, but today the plantation industry paid more than 60% of their net income by way of taxes and "we are not by any means secure in the enjoyment of the remainder." Mr Varghese remarked, alluding again to the tax burden, that the Government should make a thorough examination of the whole position of fiscal burdens which had accumulated on the Tea industry. He pointed out that what was required was not a temporary palliative or an ad hoc relief but a relief sufficient to strengthen the resources of the Industry to face the challenge of India's export markets, and the future under the pressure of a developing economy. He asserted that the industry was entitled to plead for consideration when the burden was unduly heavy. He also referred to the innumerable representations to the Government on the almost penal levy of 5% of the value of the produce as sales tax by the States, and how infructuous they had all been though the incidence for a consumer article like coffee or tea was indeed extremely heavy. Fiscal burdens should not be such as to induce a sense of insecurity or instability for the worker, the management or the shareholder, and if they had to shoulder the responsibility for providing job security to their employees, it could not be done when the industry was teetering on the edge of loss, he said.

India continued to be the largest single producer and exporter of tea in the world, but they should not overlook the significance of the marked changes that are taking place with the rise of East Africa as a tea producer. Mr Varghese added that, with the advantage of the African producer being nearer the principal Western market, his labour had not yet proved to be difficult or costly, and he could produce quality teas too. The additional handicap from which the Indian producer suffered, Mr Varghese thought, was that he was not free to reorganise or rationalise his production methods or introduce mechanical equipment which would reduce the number of workers for a particular job. In other words, the planters had no means of ensuring that they get a price to cover their costs and the interest on capital. If the output was lower or if prices fall in the world market even by a few cents, their position became precarious.

In this context, Mr Varghese pointed to the necessity for a World Tea Agreement by all tea producing countries rather than to allow India and Ceylon alone to regulate production or restrict exports. This was necessary because only through joint action could adequate safeguard to the tea plantation be obtained. Today, there were too many tea-producers in the world anxious to obtain a share in the world market. Until such time comes when all units of tea producers in the world come together, Mr Varghese urged Indian industry to uphold its competitive position in the world markets. In this effort, he hoped the Indian Government would assist them in several ways. He also wanted a joint Tea Propaganda Board and called for the revival of the International Tea Market Expansion Board. Apart from the fact that Ceylon became the residuary legate to the goodwill and assets of the Board in some 13 countries, India had not a promotional machinery for Indian tea in several important markets, notably in the UK, since 1952.

Even though 64,000 acres went to Pakistan due to partition, India's production increased from 450 million pounds in 1939 to 710 million pounds in 1958, with the growth in internal consumption being even more striking. Internal consumption during the same period had risen from 90 million pounds to over 250 million pounds annually. He stressed the necessity for a growing internal market which alone, he asserted would lend strength to the export drive. The smaller the home market, the more they might have to fear from an uncertain world market, he soberly declared, expressing concern at the trend in official opinion that internal propaganda should be suspended in the belief that what we do not consume here would be available for export. He was emphatic that internal promotion be continued unimpaired by any short-term consideration. The real problem to solve and for which the revival of the International Agreement was contemplated, was that there was too much tea on offer in the world market.

For the capital grant of Rs 14 lakhs toward a Research Station, he was grateful to the Government of India and the Tea Board, and he hoped his successor would be able to report considerable progress in the implementation of the scheme both in the Anamallais and in Central Travancore by this time in 1960.

As regards Rubber, Mr. Varghese examined the position to tell the Government of India that it had been the manufacturers and not the rubber growers who had been the beneficiaries of protection during 1939 to 1959. The First Tariff Board in 1951 had recommended cost-plus price and added to it a rehabilitation allowance of Rs 6.82 per 100 pounds out of which about Rs 2.44 was for taxes. Since May 1951, there were two revisions to cover costs increase, but the basic principle of cost-plus was not altered. With increasing taxes and replanting cost, the rehabilitation element had been eroded considerably and the position has remained unaltered since 1951. As to the charge of neglect despite the provision of the rehabilitation allowance, Mr Varghese pointed out that UPASI members had replanted rubber at a rate slightly over 3% per annum on their total stand and at over 4½% on the overaged rubber trees. The slow progress was, therefore, Mr Varghese said, due to low subsidy. He wanted the Government to compare the Malaya and Ceylon rubber subsidies at the rate of Rs 1,000 per acre for small growers with the Rs 400 available in India. (In Malaya and Ceylon, rubber is the main prop of their economy, which Mr Varghese has omitted to mention. The *de novo* examination should have to be considered in terms whether the growers should be confined to a cost-plus basis or whether the Tariff Commission would recommend an incentive price.

If the Rubber Industry is to meet the full demand for natural rubber by 1980, Kerala's 200,000 acres should become available for planting, and Mr Varghese hoped the Government would support such a development scheme to be submitted by the Association's Working Group on Rubber for the Third Five Year Plan.

India had a record coffee crop, probably the highest since coffee was begun to be grown 300 years ago, and, despite not too favourable weather conditions, the production may reach over 50,000 tons. In the next five years, the harvest would exceed 80,000 tons. But there was the problem of marketing this huge quantity. He hoped the Association's Export Marketing Committee would have some constructive proposals on the subject. The subject was not new to India alone but also to the world coffee growing countries, but, in India itself, there was a vast field for expanding internal consumption.

As regards the plantation industry's requirements of fertilizers and other essential supplies, Mr Varghese requested a liberal attitude from the Central Government. (Mr Morarji Desai did not seem to have bestowed his attention on this special request, too),

S. E. RLY TENDERS

Sealed tenders are invited for (1) Tender No. CON|COS|77|F2|59 for supply of 300 Nos. Earth Plate with connection as per Drg. No. 23008|1|SE. Material—I.R.S. M5 Class II. Earnest money is Rs 360|-. Tenders will be opened on 1-10-59 at 12 noon.

(2) Tender No. CON|COS|78|WP|F1|59 for supply of 4 Nos. Pressed Steel Tank 16'-0" x 16'-0" x 8'-0" open top capacity 12,800 gallons etc. Earnest money is Rs 400|-. Tender will be opened on 18-9-59 at 12 noon.

(3) Tender No. CON|COS|79|GB4|59 for supply of 11 tons lead wool as per ISD Specification No. G|Misc-36|C. Earnest money is Rs 400|-. Tenders will be opened on 23-9-59 at 12 noon.

Tender forms are obtainable from the office of the undermentioned (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs 2|- (not refundable) per copy per tender by money order to him direct in the case of outside firms and on production of cash receipts from this Rly's Chief Cashier by local firms.

Tenders should accompany the receipts for depositing the earnest money as stated above with this Rly's Chief Cashier without which the tenders are liable to be rejected. Approved contractors having a permanent deposit of Rs 1000|- with the undermentioned are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

NEW DELHI.

Notice of Interim Dividend

The Directors of the Punjab National Bank Limited, New Delhi have decided to pay an Interim Dividend for the current year at the rate of Re. 1/- gross per share. The dividend will be payable at the Registered Office of the Bank at New Delhi on or after 22nd September, 1959 to the shareholders whose names stand on the register of members of the Bank as on 12th September, 1959.

The Transfer Books and Register of members of the Company will remain closed from 7th September, 1959 to 12th September, 1959 (both days inclusive).

By order of the General Board,
of Directors
A. M. Walker,
General Manager.

Dated 21-8-1959.

Note: Shareholders are requested to intimate change of addresses, if any, to the Bank immediately.

THE PENINSULA

Planters' Special

MADRAS REVIEW

Land reforms proposals were also the question of vexatious thoughts on the part of the planters; for, the State Governments, making the maximum exactions from the plantations by taxes, forgot that these constituted an industry and did not form part of rural agriculture, not was it based on the landlord-tenant relationship. The future of the industry was seriously threatened, and Mr Varghese apprehended that, by extending the proposals to plantations, the States were about to throttle the industry. Both Kerala and Mysore consider plantations as non-expanding. Sufficient scope existed in the Southern States for reasonable expansion for many years to come, and though several representations had been made to the State Governments to understand the peculiar problems of the industry so that they did not become a threat to stability, it still remained a central controlled subject. Mr Varghese hoped the provisions relating to plantations would be given careful consideration by the Centre before they were placed on the Statute Book. The ground on which a secure and expansive future could be based was destroyed by the land reforms proposals of Kerala and Mysore States and it was the speaker's hope that the Madras State would take a more progressive attitude to this Industry and encourage it to grow.

Analysing the future demand of these crops, Mr Varghese said rubber goods manufacturers have estimated internal demand for rubber to rise to over 150,000 tons within the next ten years; and tea expansion in production and consumption within the country for the last twenty years gave a basis that in the next two decades, the total requirement from the tea industry would be an output in the region of over 1,100 million pounds. Therefore, he pleaded for amendments in the bills of Kerala and Mysore on the subject.

It was the labour relations which consume almost the whole of the latter half of Mr Varghese's address. How labour unions in plantations had become handmaids of politics and how different political parties were readily willing to become pawns in the game rather than to subserve labour cause was argued by him. He also deplored the fact that young workers were being built up as "storm troopers" of the respective political parties. Political unionism, Governmental indulgence and novel theories on law and order to labour-managed relations had cumulatively been responsible for labour unrest in recent times. The 1958 October/November Munnar strike was a manifestation of the unhealthy trend in trade unionism and labour policy. He also alluded to the innumerable assaults, criminal trespasses, obstruction, intimidation, incitement to violence, riots and murder in the sparsely policed plantation areas. In 1958, man-days lost by plantations was 9½ lakhs according to the Labour Ministry. Of course, a large proportion occurred in Kerala, and the Munnar strike brought about a loss of 4 million pounds of tea.

In this connection, Mr Varghese pointed out that plantation managements were now compelled to work within a tight cost structure because the alternative is to lose our markets abroad, to hit our domestic consumers, to reduce the taxable surplus and to create in security for our employees. (A reference to this was made by Mr Morarji Desai in his reply as mentioned earlier in this dispatch). It was Mr Varghese's contention that the measures adopted towards labour improvement during the last ten years largely depleted their resources. Coupled with increased taxation, the industry was left with --- to undertake any marked expansion or development or even rehabilitation. The issue before the industry, Mr Varghese observed, and also before labour leadership, was whether today's comforts should be maximised even if it threatened tomorrow's security of employment in this industry. Major problems like wages, bonus and welfare measures needed to be dealt with differently, having regard to the special circumstances governing the industry. Mr Varghese felt that the employers were themselves somewhat responsible in that they had not so far made any attempt to keep our own workers fully informed of the facts about the industry. But he added that those who had direct experience of this industry knew the great strides made by it in the field of labour welfare.

It is somewhat strange that Mr Varghese, too, should have struck upon the same idea that Mr C. Rajagopalachari did, who asked for representation of the industrialists in various avocations of business in Parliament. Mr Rajagopalachari wanted at least that these trade bodies need to be nominated to the Rajya Sabha for better and saner counsels to the Government on the country's industrial, economic and agricultural questions. To Mr Varghese, it appealed more so, probably because of the political propaganda on the progressive restriction of private enterprise. Though the plantations could not be a political organisation, the propagated views were aimed at the destruction of this private sector, and Mr Varghese held the only course to be an appeal to responsible public opinion. And for this he clarified that, if a sufficiently vital and dynamic managerial society is to rise in India, it might be necessary to provide for functional representation in the Parliament and State legislatures.

Finally, Mr Varghese described how the UPASI had fulfilled its functions in the respective states in its 66 years of existence, when it had shown itself as possessing a remarkable capacity to adjust itself to the political and socio-economic changes within the country. Certainly, it could not live in isolation from the rest of the community and without reference to public opinion, and, for this, the structural aspects of the UPASI administration had been altered and extended to meet the new needs Mr Varghese had no doubt that future generations would be grateful to the foresight and leadership of their predecessors.

*

The UPASI Exhibition

As usual, there was an interesting exhibition at the United Planters Association of South India premises, "Glenview", where the planting industrialists were brought together with the suppliers of the industry's essential plants, pesticides etc. This exhibition is the 12th of the kind and was opened by Major General P. P. Kumaramangalam, DSO, Commandant, Defence Services Staff College, Wellington.

Both the lay public of the Nilgiris and the planters, particularly the small owners, had been educating themselves through these exhibits. This year's attraction was the airlines exhibitions, including Air-India International, BOAC, Middle-East Airways, Qantas with the BOAC jet airliner model decorating its stall. The Metal Box Co. of India had a fine array of general line tinplate containers, pilferproof and other closures.

Parrys were well represented as usual, the first entirely indigenously produced 6 kw AC diesel generating set being exhibited and demonstrated. Tea machinrey spares and supplies were by Peirce, Leslie & Co., Okabters Supplies Agency, Calcutta, Rallis India, and Shaw Wallace. Burmah Shell had their industrial lubricants, bitumen, shell copper fungicide, with illustrations, charts and displays. The Feroke Tile Works had their usual brick works, fancy mythological models finely wrought in burnt clay, aqua privy latrines for Estate Labour force. Harrisons and Crossfield had several stalls to exhibit Tata-Fison pesticides, insecticides and fungicides. The Imperial Chemical Industries had displayed their plant protection products, their alkathelene—ICI paints. Stanvac had finely exhibited a scenic landscape of a tea estate, tea factory, turn-table displaying articles. Stanes & Co. did not fail to attract with their cashew-kernel products, fertilizers and estate requirements. Sundarams Private had a self-closing tap which invited our attention. Tata Oil Mills was of particular attraction to the lady visitors with perfumes, colognes, cosmetics made by Lake Private Ltd. Messrs A. V. Thomas had high-grown Nilgiris teas, weighing machines, soaps, toilet, Ayurvedic compound tinctures and Arishtams, Fertilisers, and sole rubber crepe.

USASI Tea Scientific Department has exhibits of specimens of disease and pests, pictorial representation of the effects of manuring and display of equipment of interest. The UPASI Public Relations, ever ready at the visitor's elbow to answer doubts and questions, had a pictorial representation of production, consumption, export of tea, coffee and rubber; it also showed plantations' earnings, medical expenses in the plantations on workers, company ownership and index numbers of agricultural production. Voltas had their bottled and canned fruit products.

W. A. Beardsell & Co. had a decorated stall with Thermocole sheets, roofing, side boards, panels and bricks. The Concrete Association had its complete small dwelling house model. The Coffee Board and the Tea Board had their usual exhibition.

THE TELOIJAN TEA COMPANY, LIMITED.

NOTICE is hereby given that the Annual General Meeting of the Members of THE TELOIJAN TEA COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Friday, the 25th September, 1959, at 3-20 P.M. for the following purposes:—

1. To receive and consider the Profit and Loss Account for the year ended 31st December, 1958, the Balance Sheet as at that date, and the Reports of the Directors and Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. D. P. Kanoria, the Director retiring by rotation at the Meeting.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 15th September, 1959, to 25th September, 1959, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

By Order of the Board,
McLEOD & CO. LTD.,
C. L. BAJORIA,
Director,
Managing Agents.

3, Netaji Subhas Road,
Calcutta,
24th August, 1959.

Note: Payment of the proposed Dividend, if declared, will be made on or after 12th October, 1959, only to those members whose names are registered in the Books of the Company on 25th September, 1959, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

SOUTH INDIAN MARKETS

Easier Tendency in Groundnut Prices

Easier conditions prevailed in the seeds and oils market with expected arrivals of fresh stocks from producing centres. There was therefore no anxiety on the part of buyers to negotiate and sentiment was slightly easier. Ready Groundnut oil beginning at Rs 340-8 at the opening session in the exchange touched Rs 350 and remained steady thereafter. Intermediate fluctuations were in the region of Rs 346/349 but these were not continuing when the market closed by 2 p.m. today due to Sri Jayanthi. September remained quiet beginning with a low undertone of Rs 340/8, but when offerings were in the making the rates rallied round Rs 342/343. The middle quotations in the four-hour session remained at and around Rs 342. December did not witness much change, beginning at Rs 312 and ending with eight annas added to the opening quotations.

Kernels were firm and steady at Rs 193. Likewise Castor oil remained steady at Rs 194. Coconut oil of local variety was quoted at Rs 38/4.

The closing quotations today were Groundnut oil: August Rs 350, September Rs 342/8 to Rs 343, December Rs 312 to Rs 312/8. Kernels Rs 193/194. Coconut oil local Rs 38/4.

Steadiness obtained in the oil market after an erratic session during the earlier part of this week. Forward positions were indicative of frequent wide fluctuations, restricting the choice of both the buyers and sellers in their operations. Both consuming and vanaspathi interests were therefore obliged to go in for only small quantities. Summar-crop arrivals in the South have continued to be fairly steady, Mill offerings too were fair. Sellers did not commit themselves due to uncertain price variations. In this context shippers too did not fully operate and only very limited demand was forthcoming; however, one or two shorts were on enquiry to meet nearby shipments. The result was that oil marked a gain of Rs 42 to Rs 45 per ton and groundnuts by about Rs 10/12 per ton over last week's closing levels.

Till the end of last week, arrivals to the local market of groundnuts had been small. On an average, about 25 tons daily were received. This could not meet even local small-scale crushers. Superior oil qualities were taken around Rs 193 per candy early, but latterly around Rs 194/8. Medium varieties were on enquiry around Rs 185 to Rs 185/8.

Only small transactions were put through this week in groundnut oil. The taken-up quantities would have been in the neighbourhood of 500/550 candies by shipping concerns during the week. Early on sellers could be found around Rs 350 and even slightly less per candy. Calcutta rates remained firm.

In forward positions, no definite trend was visible during the week in forward market. August short covering helped push up prices, but in other Vaidas movements were governed by the fancies of operators.

Early interest shown in August at Rs 350 per candy was maintained. But still buyers are keeping aloof and the local anticipation is for a further decline.

September opened around Rs 340/8, and buyers were prepared to absorb only moderate quantities. The rate declined by only eight annas but on further enquiries the rates were pushed up to Rs 342. Final closing was at Rs 343 at which some business was put through.

December opening around Rs 311/8 did not show inclination for higher rates since operators were subdued. Therefore, improvement was only slight at Rs 312. But toward closing with a good bulk buying interest evincing inclination to buy the rate closed at Rs 312/8.

Groundnut oil cake: Slight improvement was seen in groundnut oil cake. Free sellers were absent and groundnut prices appreciating higher pushed up prices considerably. The deals closed were at Rs 25/8 to Rs 26 per 160 lbs. bag exmill with gunny. Small quantities, however were taken at this rate.

Upcountry Markets: Summer crop arrivals in the South continued to be steady. Only towards the midweek was there some decline, but latterly the tempo of arrivals was kept up. Abount 450 to 500 tons of daily average arrived in spot markets of South Arcot district. These are being taken up early around Rs 193 per candy. The position was thus a decline in view of the price of Rs 195 prevailing in the beginning of Monday last. Vanaspathi interests who began to deal early, had shown a cautious attitude which is likely to continue till the summer crop arrivals are over. But Sellers were willing in South Arcot to quote Rs 344/345 ex-mill.

Salem is now reported to be receiving better than the daily 25 tons in peanut varieties from the early sown areas. Coromandel variety is expected to arrive in the market later on, possibly in the next two or three weeks.

Digging operations are going on in the Pollachi area only on a small scale. Weather conditions are far from ideal for these harvests, and the forecast of bright sunshine will enable operations on a larger scale. But today the average arrival is about 50 tons, and this quantity has been maintained since Monday last. These stocks are being absorbed by local crushers and from the adjoining areas round the pucca parity price of Rs 180/185.

Gingelly seed noted improvement to a slight extent.

The rates are:

		(Rs. per bag)
GINGELLY SEED:		
Chanda/Warora	quality	68/69
Total/Rajahmundry	...	63/64
Salem Variety	..	61/62
Local variety	...	66/67
		(Rs. per maund)
GINGELLY OIL:		
Wholesale rate	...	20/08
On Retail basis	...	20/12

Coconut oil: Steady levels were maintained by the West Coast market. The prices are:

Cochin: Ready Rs 610, August Rs 615, September Rs 619 per candy.

Quilon: Ready Rs 35/8 per tin; at Madras: Rs 38/4 per tin.

DEJOO VALLEY COMPANY, LIMITED.

NOTICE is hereby given that the Annual General Meeting of the Members of DEJOO VALLEY COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Friday, the 25th September, 1959, at 3-30 P.M. for the following purposes:—

1. To receive and consider the Profit and Loss Account for the year ended 31st December, 1958, the Balance Sheet as at that date, and the Reports of the Directors and Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. O. N. Goenka, the Director retiring by rotation at the Meeting.
4. To appoint Auditors and fix their remuneration.

As Special Business

5. To consider and, if thought fit, to pass the following resolution:—

"That Mr. T. R. Jalan be and is hereby appointed a Director of the Company liable to retirement by rotation."

The Share Transfer Books of the Company will be closed from 15th September, 1959, to 25th September, 1959, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

By Order of the Board,
McLEOD & CO. LTD.,
C. L. BAJORIA,
Director,
Managing Agents.

3, Netaji Subhas Road,
Calcutta,
22nd August, 1959.

Note: Payment of the proposed Dividend, if declared, will be made on or after 12th October, 1959, only to those members whose names are registered in the Books of the Company on 25th September, 1959, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

Explanatory Statement

Mr. T. R. Jalan was appointed by the Board as an Additional Director in December, 1958 and vacates office at this Annual General Meeting under Article No. 111 of the Company's Articles of Association and Section 260 of the Companies Act, 1956. The resolution mentioned in Item No. 5 of the above Notice is intended to effect the appointment of Mr. T. R. Jalan as a Director of the Company liable to retirement by rotation.

STOCK EXCHANGES

Cautious Trading

Watch-Dog Writes:

IN the absence of any incentive, equities have been fluctuating aimlessly within a narrow range, although a few selected ones have displayed some activity before easing at the fag-end of the week on scattered bull liquidation.

Trading on the Calcutta Stock Exchange was dull and featureless. With buying interest at a minimum, prices showed little change.

Although the volume of business on the Bombay Stock Exchange was not large, operators distributed their favours on a selective basis.

With moderate turnover, the Madras Stock Exchange presented a steady front.

The London Stock Exchange finished another brilliant week on a buoyant note.

Wall Street closed very steady.

*

Calcutta

Calcutta, Friday Evening.

DULL but quietly steady conditions prevailed on the local Stock Exchange and, except for a few firm spots, prices elsewhere were held around last week's levels. In general, operators seemed to be cautious on the outlook for the immediate future, although their overall caution did not prevent buying interest in selected share groups like jute, paper mills and miscellaneous sections.

In general, certain adverse factors induced an element of hesitancy in the minds of the operators. The most important factor was the anxiety with regard to the political uncertainties following the proposal by the Leftist parties to start agitation on the 31st August and the general strike to be observed on the 3rd September. Another factor was the fear entertained in some quarters that the Government of India might come out with fresh impost in the form of a Supplementary Budget to meet their growing requirements following the release of the Pay Commission's report.

The third factor were the forthcoming new capital issues, which have also cast their shadows before. Finally, there was a general feeling that, with the abolition of grossing up of dividends and its replacement by the new system of deduction of tax, the shareholders would stand to suffer to some extent. Obviously, there was a general disposition to restrict commitments and liquidate a part of the holdings, resulting in an easier trend of prices.

With the expected immediate return of funds as a result of the partial allotment of the State Loans, prices in the Giltedged market developed a steadier tendency following the entry of institutional investors. Apart from the short-dated issues, some of the medium and long-dated issues came in for enquiry and their prices tended to harden. In the case of the recently-floated State Loans, there were buyers at a premium ranging from 15 nP to 50 nP over the issue prices. Meanwhile, 3 per cent 1986 Conversion Loan, after starting the week at as low as Rs 73.55, improved steadily to finish the week at Rs 74.10.

Bank shares were, however, quiet. Punjab National was marked down to Rs 20.50 from Rs 22 following the announcement of a lower dividend. United Commercial moved narrowly between Rs 62 and Rs 63.25, to finish at the former level.

Jute shares, which remained active till the end of last week, turned a shade quieter on lower advices from the Jute goods market in the absence of fresh enquiry from overseas buyers. Support was, however, lent to a few selected scrip on the feeling that the industry might be enjoying prosperity in view of their ability to do simultaneous business in raw jute and manufactured goods. The steady features were Barnagore at Rs 172; Alliance at Rs 133; Champdany at Rs 143; India at Rs 16 Kanknarrah at Rs 110 and National at Rs 22.87. Howrah, after being taken upto Rs 24.12 from Rs 23.87, receded at the close to Rs 23.62. Ganges changed hands at Rs 91 to Rs 93 and New Central at Rs 18.50 to Rs 18.94.

The news of the decision by the Government to increase the price of the commodity by only 50 nP per ton as against the general expctation of at least Re 1, had an adverse effect on sentiment in the Coal section. Operators were, therefore, discriminative in their buying, which was confined to the shares of only those companies making profits and paying modest dividends. There was a general fear that the marginal collieries would not be helped by the latest decision and that the collieries raising lower-grade coal were likely to be seriously affected. Bengal were on offer at Rs 314 against Rs 317; Central India at Rs 8.12 against Rs 8.44 and Western Bengal at Rs 6.37 against Rs 6.69. New Beerbhoom, however, improved to Rs 21.06 from Rs 20.87, while South Karanpura were taken upto Rs 12.69 from Rs 12.50. Burrakur fluctuated rather erratically between Rs 17.56 and Rs 17.94 till Thursday, to finish lower at Rs 17.12.

The uncertain outlook for the industry induced a quieter feeling in the Tea section, where transactions were few and far between. It was feared that the general increase in daily wages and the possible rise in Calcutta Port charges might price out Indian tea from the world market, especially when a fair proportion of Common tea was being sold below the cost of production. Bhatkawa changed hands at Rs 20.87 to Rs 21.06 as against Rs 22.56 in the previous week; Grob at Rs 17.31 to Rs 18.12 against Rs 18.94; Hattikhira at Rs 10.94 to Rs 11.44 against Rs 11.56. Jayshree at Rs 13.75 to Rs 14.19 against Rs 14.31 and Tezpore at Rs 16.62 to Rs 17.06 against Rs 16.75. Patrakola were on offer at Rs 145 against Rs 150, while Hantapara were maintained at Rs 113.

Sugar shares came in for selective enquiry on the belief that many mills might begin the crushing season earlier than usual. The news of the possibility of the export plan being scrapped also enthused the operators on the feeling that the mills would not incur any more loss on this account. Cawnpore were enquired upto Rs 13.62 from Rs 13.12. Champarun upto Rs 20.62 from Rs 19.19. Ramnugger Cane upto Rs 21.25 from Rs 20.25 and UP upto Rs 16.25 from Rs 15.25. Raza-Buland were, however, quiet at Rs 12.94 against Rs 13.12 and so also SKG at Rs 11.44 against Rs 11.75.

Textile scrips continued to attract buying interest on encouraging advices from the cloth front, although higher levels could not be retained till the close due to geneeral profit-taking. Jayshree changed hands at Rs 10.19 to Rs 10.37; Elgins at Rs 15.84 to Rs 16.12; Cawnpore at Rs 5.25 to Rs 5.44 and Kesoram at Rs 17.56 to Rs 17.94. New Victoria hardened further to Rs 1.31 from Rs

DUNCAN BROTHERS & COMPANY, LD.

NOTICE is hereby given that the Annual General Meeting being the Sixtieth Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No 31, Netaji Subhas Road, Calcutta on Friday, 25th September, 1959 at 10-30 A.M. for the following purposes:—

1. To receive and adopt the Directors' Report, and to pass the Audited Accounts for the year ended 31st December, 1958.
2. To declare dividends on the Preference and Ordinary Shares.
3. To elect a Director.
4. To appoint Auditors for the current year and to fix their remuneration.

AS SPECIAL BUSINESS.

To consider and, if thought fit, to pass with or without modification the following resolutions, which will be proposed as Ordinary Resolutions:—

5. "That Mr N. C. Lance be and is hereby re-appointed a Director of the Company, whose period of office would be liable to determination by retirement of Directors by rotation".
6. "That subject to the approval of the Central Government being received and with effect from the 1st November, 1959, Mr K. P. Goenka be and is hereby re-appointed a Managing Director of the Company upon the terms and conditions as to remuneration and otherwise to be specified in an agreement to be entered into between the Company and Mr Goenka, a draft whereof has been submitted to this Meeting and for the purposes of identification signed by the Chairman thereof and that, accordingly, the Directors be and are hereby authorised to enter into the agreement with Mr Goenka in terms of the said draft".
7. "That subject to the approval of the Central Government being received and with effect from the 1st November, 1959, Mr L. T. Carmichael be and is hereby appointed a Managing Director of the Company upon the terms and conditions as to remuneration and otherwise to be specified in an agreement to be entered into between the Company and Mr Carmichael, a draft whereof has been submitted to this Meeting and for the purposes of identification signed by the Chairman thereof and that, accordingly, the Directors be and are hereby authorised to enter into the agreement with Mr Carmichael in terms of the said draft".
8. "That consent be and is hereby accorded to the employment of Mr G. P. Goenka in the service of the Company from such date and on such terms as may be mutually agreed upon between the Directors and Mr G. P. Goenka".

To consider and, if thought fit, to pass with or without modification the following resolution, which will be proposed as a Special Resolution:—

The Share Transfer books of the Company will be closed from 15th to 25th September, 1959 both days inclusive.

Warrants for dividends, when declared, will be forwarded in accordance with registered instructions, or, if no such instructions have been received, to the registered addresses of all shareholders whose names appear on the Company's Register at the date of declaration. No application for payment is necessary and holders on blank transfer are therefore recommended to submit their shares for registration immediately.

By Order of the Board
DUNCAN BROTHERS & CO., LD.
J. A. DUNCAN
Director.

Calcutta,
29th August, 1959.

Note:—A member of the Company who is entitled to attend and vote at the above Meeting may appoint one or more proxies to attend and vote instead of himself. A proxy need not be a member of the Company.

A blank form of proxy is enclosed which should reach the Company not later than 22nd September, 1959.

1.25. Dunbar were a steady feature at Rs 194.

In the Engineering section, activity was rather restricted in the absence of any fresh incentive. Against the previous week-end closing of Rs 24.20, Indian Irons opened lower at Rs 24.16 and, after receding further to Rs 24.13, steadily improved to touch at one time Rs 24.40, to suffer a sharp set back at the close to Rs 23.93 on selling pressure. In sympathy, TEXMACO finished at Rs 24.10 after touching a high of Rs 24.70. G. K. Williams changed hands at Rs 38.37 to Rs 39.31; Marshalls at Rs 5.81 to Rs 6.05; Kumardhubi at Rs 7.00 to Rs 7.06 and Britannia at Rs 12.62 to Rs 12.81.

Miscellaneous issues, after ruling initially firm, displayed a reactionary tendency toward the close due to profit-taking. Dealings in Paper shares continued to be prominent, being influenced by the hope that the recommendations, to be made by the Tariff Commission, might be helpful to the industry in respect of the selling price as well as the scheme for modernisation and expansion. Orient Paper changed hands at Rs 38 to Rs 38.40 (Rs 38.15); Indian Cable at Rs 31.31 to Rs 32.25 (Rs 31.31); Indian Aluminium at Rs 21.50 to Rs 22.25 (Rs 21.62); Indian Copper at Rs 4.10 to Rs 4.14 (Rs 4.10); India Steamship at Rs 14.06 to Rs 14.50 (Rs 14.06); Dunlop Rubber at Rs 34.44 to Rs 34.75 (Rs 34.44); Rohtas at Rs 22.50 to Rs 23.25 (Rs 22.50); Hindustan Motor at Rs 12.06 to Rs 12.31 (Rs 12.06); Sirpur Paper at Rs 13.50 to Rs 14.56 (Rs 13.75); BIC at Rs 5.12 to Rs 5.41 (Rs 5.19) and Karanpura Development at Rs 13.62 to Rs 14.31 (Rs 13.87). Sone Valley were steady at Rs 6.12 following the dividend being maintained at 30 nP per share. Angelo Brothers hardened further to Rs 19.75 from Rs 19.50 following higher advices from the shellac market. NICCO were wanted up to Rs 37.12 from Rs 36.75 on reports of encouraging working.

*

Bombay

AFTER moving both ways within a narrow range, equities on the Bombay Stock Exchange closed on Tuesday on a quiet note. The intervention of holidays was perhaps one of the reasons for the cautious tendency noticeable among marketmen. Even so, it would appear that operators were not keen on extending their commitments just at the present juncture in view of the emergence of new developments affecting the investment climate.

Enthusiasm in the textile section was much more diminished than a few weeks before. There has no doubt been an improvement in the outlook for cotton textiles but the feeling is gaining ground that it would be too early to translate the high hopes into a vigorous push to the prices of cotton textile shares.

A spate of new issues from the private sector is in the offing. Now that the Government loan programmes are out of the way, it will be the turn of the private sector to tap the money market. The tremendous success of the State Loans has demonstrated that funds seeking investment are plentiful. It will not be unusual for operators to pause when a number of new issues are to come on the market.

The political situation in the country also seems to have contributed to the hesitancy. Though disturbances in Bombay may now be ruled out in view of the reported decision of the Congress to reopen the Bombay issue, the implications of bifurcation require close study. Elsewhere in the country, conditions are not quite happy largely because of the food situation.

STEEL:

But for some strong speculative support around midweek, steel shares were erratic and closed on an easier note. Tata Steel was steadier in earlier dealings but was pushed down to Rs 176.50 by close on Saturday. Monday witnessed a smart recovery to Rs 177.75. Bull liquidation in later dealings on Tuesday once again pushed down the price level to Rs 176.25 before it was finally placed at Rs 176.50. Indian Iron was done upto Rs 25.45 before closing on Tuesday at Rs 25.20.

TEXTILES:

In the textile section, Kohinoor was subjected to alternate bouts of buying and selling on rumours about a change in the company's management. From around Rs 320 earlier in the week the scrip was taken to Rs 328 on Monday only to react to Rs 317 by close on Tuesday. Other Textile shares were easier on balance. Bombay Dyeing was finally placed at Rs 63.70 against last Thursday's closing of Rs 65.80. Century came down to Rs 556 from Rs 562.50 and Svadeshi to Rs 246.50 from Rs 255.75.

MISCELLANEOUS:

A generally quiet tendency prevailed in the miscellaneous section. Killick Industries was, however, a bright spot on Monday on rumours about a large block of the shares of the company was changing hands. The scrip spurted to Rs 150.50 from previous day's closing rate of Rs 139. The rate, however, came down to Rs 145 on Tuesday. TELCO encountered selling pressure to decline to Rs 204. Premier Construction receded to Rs 348 from Rs 366 National Rayon was about 9 points lower on balance at Rs 350.75 while Bombay Burma was finally placed at Rs 528.50 against last Thursday's closing rate of Rs 544.

*

Madras

STOCK exchange was steady in Madras on Wednesday with Calcutta and Bombay being closed today. No change was observed in Banks. There was little business in sugars and breweries, but Deccan declined to Rs 12.20. There was a mixed trend in plantings, with Coffee shares coming in for enquiries at slightly higher quotations than early this week. In Textiles, the Coimbatore section gained in a few instances. In the miscellaneous too there was mixed sentiment, T. Stanes and Travancore Cements improving better than the last day's closing.

Securities: There was no change at all in Madras Government Securities, the 4% 1963 remaining at Rs 100.30, 40% 1963 and 1964 were available at market rates. 4½% 1970 was steady at Rs 101.95. 4% 1967 and 1968 Mysore Loan also remained steady at Rs 100.20 each. 4½% 1970 was quoted at Rs 101.80. The taxable 4% 1963 Kerala loan was lower today at Rs 99.82 from Rs 99.85 due to selling. The 4½% 1970 Andhra loan appreciated by 3 nP to Rs 101.75. Other scrip remained unchanged.

Banks: Mysore Bank remained at Rs 330 and no change materialised in the Indian Banks shares. Indian Overseas were quoted at higher level of Rs 177.00 (Rs 100 paid) while the Rs 75 paid remained the same at Rs 144. Pandyan Bank were lower today at Rs 34.50, with a reduction of 80 nP. Punjab National Bank were quoted at Rs 21.25.

Electrics: With no change seen in this section, business reported was dull today. Cochin was at Rs 10.20, Karaikal was steadily unchanged at Rs 10.75, West Coast had no demand at Rs 14.00 and Kumbakonam and Negapatam were quoted respectively at Rs 11.88 and Rs 10.37. South Madras had been fixed at Rs 12.10 today without any change.

Sugar and Breweries: Deccan declined to Rs 12.20 while United Breweries were available at Rs 459. Cauvery had not changed at Rs 117.00. EID at Rs 39.65. Mysore Sugars could be had at Rs 49.50 and Travancore at Rs 12.50.

Plantings: Amalgamated declined to Rs 14.50 on welling inclination. Balanoor did not alter at the same price of Rs 18.75, Be Be maintained itself around the unchanged quotation of Rs 2.90. Blue Mountain had buyers only at Rs 3.40, two nP lower than last day's closing. But Cochin Malabar fractionally improved to to Rs 6.93 and Chembra declined to Rs 4.25. Coffee Lands, however, appreciated to Rs 24.20. Coonoor Tea was lower at Rs 22.62, Coorg and Cottanad Teas remained unchanged at Rs 4.98 and Rs 16.50 respectively. Emerald ex-dividend were sold at Rs 7.25. Haileyburia was in demand at Rs 20.46 on its successful operations and its recent report, Highlands too went upto Rs 12.65 at which transactions were made; Rubber shares did not show up much, Kailas being downgraded at Rs 5.00, Kalpetta were sold at Rs 12.40, Kumargode remained at Rs 6.10. Kil Kotagiri deepreciated to Rs 8.32 also Mercara to Rs 9.35; but Midland gained to Rs 11.82. Neelamalai and Mysore Coffee were available at Rs 4.25 and Rs 4.26 respectively. Nilambur had been quoted at Rs 18.15. Nilgiri was available at Rs 7.80, while sellers in Nonsuch offered at Rs 28.75, Ossoor 15% cd too could be had lower at Rs 3.90 and Ouchterlony was lower slightly at Rs 5.47. Travancore Rubber and Tea likewise were available lower at Rs 6.95, Wartynully can be got lower at Rs 3.93. Periakaramalai was lower only by one nP at Rs 4.05 and Parkside by 15 nP at Rs 23.00.

Textiles: Some activity was witnessed in textiles, but the tone here was subdued. Coimbatore Pioneer were quoted at Rs 285 higher than the previous level by Rs 5. Dhanalakshmi too were higher at Rs 200.00 increasing by Rs 2.50. But Janardhana was lower today at Rs 69.50, declining by a rupee. Lashmi 12% t.f.cd. also declined to Rs 125 from Rs 125.50. Maduras remained steady at Rs 29.95, Cannanore at Rs 139.00. Buckingham kept its steadiness at Rs 189.00 and Bangalore Woollen 4% i.t.f. cd. at Rs 189.25. Mettur had not changed at Rs 370. Ranga Vilas continued at the same price of Rs 51.50. Travancore Rayons was down by 5 nP at Rs 23.40, but Cauvery Spinning had buyers at Rs 12.50. Vasanta was at Rs 211. Venkatesa and Virudhunagar remained at market prices.

Miscellaneous: This section did not note much activity with steady and quiet undertone. Aluminium Industries were down at Rs 21.30, Andhra Cement improved to Rs 9.25, Andhra Scientific moved upto Rs 8.25, a good buy for the day with an increase of 25 nP. Ashoke Leyland also was in much demand at Rs 8.05. FACTs had enquiries at the same level of Rs 9.55. Hindusthan Lever had offers at increased quotation of Rs 30.25, but India Cements were lower at Rs 6.60. Marikar went upto Rs 44.50, but Mettur Chemicals were available at Rs 13.35. While Mysore Papers appreciated to Rs 22.75, Mysore Chemical Fertilisers remained at Rs 10.40. Parrys Confectionaries were available at the price of Rs 4.23. Rallis remained at Rs 77, and Radio and Electricals were neglected at Rs 4.90. Spencer was down at Rs 20.40 and Standard Motors was steady at Rs 16.25. T. Stanes had buyers higher at Rs 25.00. Travancore Cements also had demand at Rs 10.10. West India Plywoods 10% cd remained steady at Rs 195.00.

*

London

THE London Stock Exchange presented a firm front. But, interest was mainly concentrated on the Industrial section where further good buying continued to reflect election hopes, resulting from the latest gallup poll figures and the announcement that industrial expansion was going ahead. An additional favourable influence was the excellent half-yearly statement from Unilever showing a sharp rise in profits.

Steel shares met with good favour, while Engineering and Motor shares forged ahead. Shipping shares were rather quiet. Radio scrips improved on good support, stimulated by the news of booming television sales. Tea shares were selectively firm, while Tin shares recorded fresh higher levels under the influence of Malayan election results. Price movements in Gold shares were irregular.

*

New York

PRICES on Wall Street touched a new high for the week under a burst of late buying, featuring selected Steels. Motors and Electronics. Among the laggards were Rails with the steel strike affecting July earnings. Anaconda Copper was quoted at $64¼; General Motors at $54-3/4 and US Steel at $102-7/8.

INDUSTRIAL INFORMATION

38 COMPANIES REGISTERED DURING APRIL—JUNE 1959

Fifty-eight companies—three public and 55 private—with a total authorised capital of about Rs 276.64 lakhs were registered under the Companies Act, 1956 during the three months April to June 1959.

The Northern Region comprises the States of Punjab and Himachal Pradesh, Delhi, Uttar Pradesh and Rajasthan.

During the same period 16 companies went into liquidation and the names of 55 companies were struck off the Register under section 560 of the Companies Act, 1956 in the Region.

In the Punjab and Himachal Pradesh, 10 private limited companies were registered and three companies went into liquidation. The names of nine companies were struck off the Register.

Eight fresh prosecutions were launched by the Registrar against the defaulting companies and its officers for non-compliance of various provisions of the Companies Act. Out of the cases decided during the quarter, 10 cases resulted in conviction and a total fine of Rs 6,900/- was imposed on the accused in these cases.

In Delhi, one public and 38 private limited companies were registered. Two companies went into liquidation. The names of 13 companies were struck off the Register.

Fortyseven fresh prosecutions were launched by the Registrar.

Of the cases decided during the quarter 65 cases resulted in conviction and a total fine of Rs 5,250/- was Imposed on the accused in these cases.

In Uttar Pradesh, one public and five private limited companies were registered. Five companies went into liquidation. The names of 32 companies were struck off the Register.

A hundred and thirty-five fresh prosecutions were launched by the Registrar against the defaulting companies and its officers under various sections of the Companies Act. Of the cases decided during the quarter four resulted in conviction and a total fine of Rs 830/- was also imposed on the accused.

In Rajasthan one public and two private limited companies were registered. Six companies went into liquidation. The name of one company was struck off the Register.

Twelve fresh prosecutions were launched by the State Registrar against the defaulting companies and its officers for not complying with the various provisions of the Companies Act. Out of the cases decided during the quarter, ten resulted in conviction and a total fine of Rs 3,700/- was imposed on the accused in these cases.

NEW RAIL LINE THROUGH SHRAMDAN LIKELY EXPERIMENT IN RAJASTHAN

Rajasthan may be the first State in India to witness the novel experiment of a new railway line being constructed with the help of voluntary labour contributed by the people likely to benefit from this line.

The **Railway Board** has asked the Northern Railway to undertake the final location survey for a 18-mile line from Hindumalkot to Sriganganagar, subject to the Rajasthan Government's assurance that voluntary labour will be available.

In regard to land required for the construction of the line, it is proposed to try to obtain voluntary offers from the local population.

The object of the new line is to provide broad gauge rail facilities for the movement of foodgrains, textiles and sugar from Sriganganagar, avoiding transhipment which is at present involved at Bhatinda.

HANDBOOK FOR STRUCTURAL ENGINEERS

The Indian Standards Institution has published a handbook for structural engineers. It relates to structural steel sections. The material contained in the handbook is arranged from the point of view of maximum convenience in using the handbook in the design office.

The contents have been grouped, under four sections. The section A is for structural shapes and other steel products (Table I-X), section B for beams, channels and compound sections used as girders (Table XI-XXIII), section C for angles, single and double, used as struts and ties (Table XXIV—XXXI), and section D for beams, channels and other compound sections used as columns (Table XXXII-XXXVIII).

The requirements laid down in IS : 800-1956 code of practice for use of structural steel in general building construction, have been taken note of in working out the properties contained in this handbook. Rererences to the appropriate clauses of IS : 800-1956 with the help of which the properties have been worked out, have been included in suitable footnotes.

The Institution under its Steel Economy Programme has brought out a number of standards with a view to conserving steel. The work included preparation of codes of practice for use of steel in general building construction, use of tubes in building construction and use of lightgauge sections in buildings.

Efficient metric sections have also been developed and included in the Indian standard specifications, (i) IS: 800—1957 for rolled steel beam, channel and anglo sections, (ii) IS : 1173-1957 for rolled steel sections, the bars, and (iii) IS : 1252-1958 for rolled steel sections, bulb angles.

Further, in order to reduce the work involved in design computations and use of Indian standard code of practice for use of structural steel in general building construction, the Instituton has undertaken to make available a number of design handbooks showing typical designs of different structures. The first in the series, is the handbook just published for structural engineers.

Copies of the handbook are available from the office of the Indian Standards Institution, Manak Bhavan, 9 Mathura Road, New Delhi or from its branch offices at Bombay, Calcutta and Madras.

CARBON STEEL BARS AND BILLETS FOR FORGINGS.

The Indian Standards Institution has issued a draft specification for carbon steel bars, billets, blooms and slabs for forgings.

The draft standard covers the requirements for six grades of carbon steel bars, billets, blooms and slabs for forgings.

Comments on the draft may be sent before September 30, 1959, to the Indian Standards Institution, "Manak Bhavan", 9, Mathura Road, New Delhi.

August 29, 1959

A great new India is growing at Durgapur thanks to this Indo British partnership

A number of Britain's most famous engineering companies and nearly thirty thousand Indian men and women are working at Durgapur (120 miles from Calcutta) to build a vast steelworks. When it is fully completed in 1961, it will produce a million tons of pig iron and steel which will feed India's new industries. Directly and indirectly, it will create employment for thousands of people. It will make life better for everyone.

FOR THE INVESTOR

An ominous week

Investment Gossip :

IT has been an ominous week for the entire nation: and the stock markets have simply reflected the prevailing mood of the people.

Closely following the news of the Chinese aggression on our borders came the news of the resignation of the Indian army chief. Rumour had it that the resignation of the Defence Minister was also imminent. Then there was the serious turn in the food agitation in West Bengal.

As far as the first development is concerned, although an armed conflict between the two countries may be deemed a very remote possibility, there is no gainsaying the serious deterioration in Sino-Indian relations. The Army affair has been patched up without any resignations but the fact remains that the matter requires expert handling still.

The return of normality in Calcutta in the sense that a quiet day has been reported in the affected areas, has helped people go about their usual business and the Calcutta Stock Exchange has also witnessed increasing activity.

Friday's improvement in sentiment in the Calcutta Stock Exchange stems from a feeling of reassurance that the affairs of the nation, as regards its defence against aggression from without and within, are in the able hands of a Government headed by Mr Jawaharlal Nehru.

It would, however, appear that both investors and operators might not evince any keen interest in equities for some time.

Firstly, the investment outlook is somewhat clouded by the Planning Commissions suggestions as regards the filling the gap in the internal resources.

Secondly, the absence of support to the market from institutional investors and more particularly theLIC, has engendered the feeling that most prices are still overvalued.

Thirdly, the recent price increase granted to the coal industry has been a great disappointment and it is felt that smaller collieries would not be able to function profitably.

Fourthly, the coming weeks are to witness the announcement of several new issues. Though new enterprises are by no means an uncommon occurrence in a rapidly growing economy, the offer for public subscription of a number of issues almost simultaneously is something to be given due attention to.

Satisfactory Jute Results

Balance-Sheet Reviews :

THE working results of most of the jute mills have shown an improvement over the previous year, thanks to their ability to do simultaneous business in raw jute and manufactured goods. In the case of the Gourepore Company, Limited, sales have shown a sharp rise to Rs 3.50 crores for the year ended 31st March, 1959 from Rs 3.17 crores in the previous year, while the net profit, after providing for Depreciation and Taxation, is higher at Rs 19.65 lakhs as against Rs 13.04 lakhs. All allocations have been raised: Depreciation from Rs 4.81 lakhs to Rs 5.97 lakhs, Wealth Tax provision from Rs 16,036 to Rs 18,737; General Reserve from Rs 4.50 lakhs to Rs 6.00 lakhs; Dividend Equalisation Reserve from Rs 4.50 lakhs to Rs 6.00 lakhs and Development Rebate Reserve from Rs 20,030 to Rs 52,920. Even after these increased allocations, the directors have found it possible to raise the dividend from Rs 20 to Rs 25 per share.

According to the directors' report, the full effect of the restriction on production from 2nd March, 1959 was partially offset at the mills by the use of accumulated loom-hours and the purchase of current loom-hours from outside sources. Combined, these permitted the working of an average of 78 looms, which would otherwise have been sealed.

With regard to the future, immediate trading conditions are favourable and it is anticipated that the mills will continue to earn reasonable profit during the current year.

£R$

Gondalpara Mill

The Gondalpara Jute Mill (the General Industrial Society Limited) has, however, reported a net profit of Rs 4.78 lakhs for 1958 as against Rs 6.44 lakhs in the previous year, reflecting a decrease in sales from Rs 2.41 crores to Rs 2.34 crores. Apart from providing Rs 1.50 lakhs for Development Rebate Reserve, the Depreciation amount is raised to Rs 2.64 lakhs from Rs 1.32 lakhs and Taxation provision to Rs 5.00 lakhs from Rs 1.59 lakhs. Wealth Tax amount is slightly lower at Rs 21,000 against Rs 25,000. The dividend on the Ordinary shares is, however, maintained at Rs 2 per share as the directors have thought it prudent not to recommend a higher dividend in view of the obligation to make regular payment of instalments of the loan taken from the National Industrial Development Corporation for modernising the mill machinery.

The scheme for modernisation of mill machinery up to the Spinning section is almost complete and the mill has alreeady started production with the new machinery, thereby improving its efficiency, which should help the industry to face the competition in the world markets.

£R$

Duncan Brothers

Duncan Brothers & Company, Limited, has reduced the Ordinary dividend from 11 to 10 per cent for 1958 following a decrease in earnings. Although sales are higher at Rs 2.12 crores against Rs 2.04 crores, the net profit, after providing for Depreciation and Taxation, amounts to only Rs 12.96 lakhs against Rs 17.73 lakhs in the previous year. The directors have provided Rs 1.16 lakhs (Rs 1.02 lakhs) for Depreciation; Rs 17,000 (Rs 19,000) for Taxation; Rs 2.50 lakhs (nil) for General Reserve; Rs 1.00 lakh (Rs 6.00 lakhs) for Investment Reserve and Rs 15,000 (nil) for Development Rebate Reserve.

Due to the necessity of providing for tax on bonus share issues, imposed this year by the Government of Pakistan with retrospective effect, the results of the company's subsidiary in that country, although once again profitable, have been almost entirely absorbed by taxation.

£R$

Kumardhubi Fireclay

The high level of production at the company's factory is fully reflected in sales, which have risen to Rs 1.60 crores for 1958 from Rs 1.40 crores in the previous year. The net profit is, however, slightly lower at Rs 7.78 lakhs against Rs 8.83 lakhs, mainly due to competition. Apart from setting aside Rs 2.50 lakhs for Plant Renovation Reserve, Rs 10,000 for Statutory Development Reserve and maintaining Debenture Redemption Reserve, the Depreciation amount is raised to Rs 5.73 lakhs from Rs 4.59 lakhs; Taxation to Rs 9.40 lakhs from Rs 5.72 lakhs and General Reserve to Rs 50,755 from Rs 756. Wealth Tax provision is reduced to Rs 64,100 from Rs 1.17 lakhs. The dividend on the Ordinary shares is maintained at Rs 1.25 per share.

£R$

Ramnugger Cane

The Ramnugger Cane and Sugar Company, Limited has reported a substantial decline in earnings for the year ended 31st August 1958. Sales of sugar are shown at Rs 68.95 lakhs against Rs 80.58 lakhs and molasses at Rs 79,518 against Rs 1.23 lakhs. The net profit is naturally lower at Rs 27,750 against Rs 2.69 lakhs in the previous year. The directors have provided Rs 2.01 lakhs (Rs 1.25 lakhs) for Depreciation; Rs 19,000 (Rs 2.50 lakhs) for Taxation and Rs 8,600 (nil) for Development Rebate Reserve. The dividend on the Ordinary shares is, however, maintained at 15 per cent.

£R$

Margaret's Hope Tea

The Margaret's Hope Tea Company Limited, in McLeod group, has raised the dividend from 7½ to 10 per cent for 1958 on a net profit of Rs 91,042 against Rs 23,256 in the previous year. Apart from providing a sum of Rs 5,100 for Development Rebate Reserve, the Taxation provision is raised to Rs 65,000 from Rs 24,000 and Wealth Tax to Rs 2,000 from Rs 1,300. The Depreciation amount is, however, reduced to Rs 27,504 from Rs 35,099. Both crop outturn and the average price realised are higher at 4,535 maunds and Rs 3.36 per pound against 4,283 maunds and Rs 3.06 respectively.

£R$

Ranicherra Tea

The Ranicherra Tea Company, Limited, in the same group, has also raised the dividend from 5 to 7½ per cent, thanks to a net profit of Rs 1.68 lakhs against Rs 41,681 in 1957. A sum of Rs 77,234 (Rs 94,566) is provided for Depreciation; Rs 84,500 (Rs 27,000) for Taxation; Rs 6,500 (Rs 8,400) for Wealth Tax and Rs 1.00 lakh (nil) for Building and Machinery Reserve. Crop outturn is higher at 12,748 maunds against 11,606 maunds and the average price realised at Rs 1.99 against Rs 1.91 per maund.

£R$

Birpara Tea

The Birpara Tea Company, Limited, in Duncan Brothers group, has raised the dividend from 7½ to 12 per cent on a net profit of Rs 1.7 lakhs against Rs 1.00 lakh. The Depreciation amount is raised to R 97,021 from Rs 91,354 and Taxatio provision to Rs 1.50 lakhs from R 1.12 lakhs. The directors have, afte transferring a sum of Rs 5.96 lakh from Depreciation Reserve, provide a sum of Rs 5.96 lakhs for Buildin and Machinery Reserve, maintaine General Reserve at Rs 10,000 and se apart Rs 10,000 for Development Re bate Reserve. Crop outturn shown at 1.27 million lbs against 1.1 million pounds and the avrage pric realised at Rs 2.06 against Rs 2.0 per pound.

£R$

Kotamullai Tea

The Kotamullai Tea Company, Limited, in the same group, has, however, incurred a net loss of Rs 5,214 against a loss of as much as Rs 2.07 lakhs in the previous year. The Depreciation amount is reduced to Rs 98,325 rom Rs 1.01 lakhs. The debit balance carried forward is Rs 2.32 lakhs. Crop outturn is higher at 1.38 million pounds against 1.33 million lbs and so also the average price at Rs 1.84 against Rs 1.72 per pound.

£R$

Amluckie Tea

The Amluckie Tea Company, Limited, in McLeod group, has reported a net profit of Rs 1.79 lakhs against Rs 1.64 lakhs for 1957. The directors have, after providing Rs 1.02 lakhs (Rs 81,006) for Depreciation; Rs 1.55 lakhs (Rs 40,000) for Taxation; Rs 4,500 (Rs 8,590) for Wealth Tax and Rs 80,759 (Rs 99,083) for Building and Machinery Reserve, raised the Ordinary dividend from 10 to 15 per cent. Crop outturn is higher 9,989 maunds against 9,106 maunds and the average price realised at Rs 2.48 against Rs 2.23 per pound.

£R$

Dibrugarh Tea

The Dibrugarh Tea Company, Limited, has also raised the dividend from 25 to 30 per cent following an increase in the net profit from Rs 2.14 lakhs to Rs 2.92 lakhs. Apart from providing a sum of Rs 4,580 for Development Rebate Reserve and maintaining General Reserve at Rs 25,000, the directors have raised the Depreciation amount to Rs 40,403 Rs 39,669; Taxation provision to Rs 2.74 lakhs from Rs 1.54 lakhs; Wealth Tax to Rs 6,000 from Rs 5,000 and Building and Machinery Reserve to Rs 1.00 lakh from Rs 74,000. Crop is substantially higher at 8,315 against 6,832 maunds and the average price is shown at Rs 2.80 against Rs 2.73 per lb.

Joonktolle Tea

The Joonktolle Tea Company, Limited, in Kettlewell Bullen group, has earned a net profit of Rs 1.20 lakhs against Rs 1.57 lakhs. The directors have provided Rs 75,811 (Rs 44,590) for Depreciation; Rs 1.70 lakhs (Rs 2.40 lakhs) for Taxation; Rs 10,750 (Rs 10,500) for Wealth Tax and Rs 47,805 (nil) for Development Rebate Reserve. They have recommended a final dividend of Rs 1.75, making a total of Rs 2.25 per share, same as in the previous year. Crop outturn is higher at 11,495 maunds against 10,715 maunds and the average price at Rs 2.06 against Rs 2.01 per lb.

£ R$

Mothola Tea

The Mothola Tea Company, Limited, in the same managing agency group, has reported a net profit, before providing for Depreciation and Taxation, of Rs 91,153 against Rs 41,896 lakhs for 1957. After transferring Rs 1.00 lakh from General Reserve, the directors have provided Rs 26,312 for Depreciation against Rs 27,055; Rs 1.15 lakhs for Taxation against Rs 23,700 and Rs 7,000 for Wealth Tax against Rs 3,300. The amount of Rs 6.41 lakhs, being excess realised on the sale of Fixed Assets, has been transferred to the Capital Reserve. The dividend is maintained at Rs 40 per share.

Imperial Tobacco

Despite a rise in earnings, the Imperial Tobacco Company of India Limited has reduced the total dividend from 7 to 6 per cent for the year ended 31st March, 1959. Sales are higher at Rs 34.20 crores against Rs 32.61 crores, while the net profit, after providing for Depreciation and Taxation, amounts to Rs 1.15 crores against Rs 1.32 crores in the previous year. In respect of allocations, a sum of Rs 46.16 lakhs (Rs 46.09 lakhs) is provided for Depreciation; Rs 1.59 crores (Rs 1.60 crores) for Taxation; Rs 12.75 lakhs (Rs 12.38 lakhs) for Wealth Tax; Rs 17.50 lakhs (Rs 20 lakhs) for Fixed Assets and Stock Replacement Reserve; Rs 5.13 lakhs (Rs 3.03 lakhs) for Development Rebate Reserve and Rs 79,036 (Rs 2.65 lakhs) for Capital Reserve. No provision is, however, made for General Reserve against Rs 1.32 lakhs.

The balance-sheet, as at 31st March 1959, shows a paid-up capital of Rs 15.16 crores divided into 1,51,60,000 shares of Rs 10 each. Against this, General Reserve is shown at Rs 4.65 tcrores; Capital Reserve at Rs 37.28 lakhs; Development Rebate Reserve at Rs 3.03 lakhs and Fixed Asset and Stock Replacement Reserve at Rs 3.70 crores. The gross block at Rs 10.94 crores is depreciated by Rs 2.47 crores to show a net block value of Rs 8.47 crores.

Trying Times

A SERIES of incidents, not entirely fortuitous, brought home last week to the nation problems of which it was but dimly conscious. Indo-Chinese relations have been, to put it mildly, uneasy ever since the trouble came to a boil earlier in the year. Only the week before last, the Prime Minister was obliged to indicate in firm language the obligations of this country to its two neighbours, Sikkim and Bhutan, in the event of aggression by China against them. Mr Nehru clearly stated that we are bound to go to their aid, should the Chinese so far forget themselves as to attack them. Last week brought the disturbing news of actual Chinese aggression against Indian territory at points as distant from each other as the North Eastern and North Western frontiners of India. A portion of Ladakh, well within the Indian border, as we understand it, was "occupied" by the Chinese some time toward the end of last July and, what was worse, an Indian reconnaissance party of six was apprehended by a "strong Chinese detachment". When Government learnt of this, they protested to the Chinese authorities who claimed that the territory in question was theirs. India then drew the attention of the Chinese Government to the exact delineation of the traditional international frontier and urged that the Chinese party should withdraw and our men should be released immediately. As usual with the Chinese on such occasions, there was no reply, but our men were released on the 18th August. It is interesting that this is not the first incident in that area. In 1957, the Chinese built a road from Gartok to Yarkand and a portion of this road passed through North Eastern Ladakh. Two Indian reconnaissance parties were sent to this area last year. One of them "was taken into custody" and the other returned bringing some news of what was going on there. The usual round of protests, claims and counter claims was gone through and the men who were arrested were later released but the claim regarding the territory itself was left undecided. All this happened in October-November 1958.

Shortly after the second incident in Ladakh in July last, there were more serious incidents in the North Eastern Frontier area. Two incidents of which Mr Nehru gave details in the Lok Sabha last week are particularly grave. One took place on 7th August when an armed Chinese partrol about 200 strong "violated our border" in the NEFA area. When they were asked to withdraw by the dozen policemen who were manning that outpost, they were "physically pushed back". The Chinese subsequently withdrew beyond the border and there was no further trouble. The other incident took place as recently as the 25th August in the Subarsiri frontier division. A strong Chinese detachment of "some hundreds" surrounded our forward pockets of a dozen men and apprehended them. Later, eight of them managed to escape and came back to our outpost the next day. The Chinese thereupon came back and fired at the out-post and our men, not unnaturally, returned the fire. In reply to our protests, the Chinese have come out with the story that they have no informaion about the first incident and, about the second, they claim that our people started the firing. On the face of it, it is ridiculous to say that a dozen men would invite their virtual annihilation by starting to fire at some hundreds of armed men. And we have sill no information about the men who are still in Chinese hands.

What could be the possible motive behind these wholly pointless exacerbation of feelings? Like Mr Nehru, we are obliged to confess to a sense of bafflement. An extreme explanation is that the People's Republic's leaders are trying to divert the attention of the Chinese people from the difficulties that the Chinese economic plans are facing. A more plausible explanation is that the Chinese authorities are smouldering with resentment at our sympathy for the Tibetans in their recent tribulations. Though border difficulties have, as it now appears, a history extending even before the Tibetan revolt, the more recent incidents are more sinister in that they have involved violence and present more unambiguous evidence of aggression. It is no longer a mere difference of opinion about maps. Taken in conjunction with the extensive troop movements along the border, these incidents assume a certain menacing air.

Another explanation is that these border incidents are intended to put fear in the hearts of the people on the other side of the border, who are thinking of making a home in India. The idea would appear to be to indicate that the Chinese would not think twice about chasing those whom they consider trouble makers even across Indian territory.

Whatever may be the explanation of these highly provocative acts, Indian policy has been indicated in no uncertain terms by the Prime Minister. In the first place, India considers these acts of the Chinese as clearly constituting an aggression. Secondly, India will take every step to defend its frontiers and any violation of our territorial integrity would be met with all our resources. Though there is every readiness on the part of India to discuss minor adjustments of the MacMohan Line, there is no question of recognising extravagant Chinese claims that cut deeply into Indian territory as determined by treaty, history, usage and tradition. At the moment, it would appear that the Chinese thoughts are farthest from conference tables, and we can only wait for better counsel to prevail. Meantime, the army will take over the manning of the frontiers and any disposition on the part of the Chinese to modify the MacMohan Line by the simple expedient of sending armed men across will be met firmly.

On the larger issues of policy, the Chinese will do well to ponder deeply before they further alienate Indian opinion. Indian policy has been consistently to break the isolation of People's Republic from the rest of the world, and we have pursued this policy even when it has been considered quixotic by some impatient people. It is not without significance that official policy has been to dissociate itself from the recent attempt of the Dalai Lama to bring up the Tibetan issue before the UN. Indeed, even in the formulation of principal reason against it, Mr Nehru has once again spoken up for admitting the People's Republic in the UN. The Chinese authorities will do well to recognise not only the logic but also the statesmanship and generosity invoved in this gesture. Otherwise, there is the danger that Red China may isolate itself even from its friends.

Bankers Get Back Their Individual Freedom

By W. T. C. King, Editor of "The Banker" (London)

BRITAIN'S bankers have been celebrating the first anniversary of the ending of the credit squeeze—the withdrawal of those "directive" controls that, with varying intensity, had, for 20 years, regulated the character, and latterly also the total extent, of their lendings. The new era was inaugurated, almost unobtrusively, by changes announced early in July 1958 in the official "requests" to the commercial banks and in the more formal control of capital issues.

These relaxations were made possible by the switching of the aims of official policy from disinflation to reflation, and the resultant boom in bank lending quickly became one of the major instruments in the new policy.

Fundamental Freedom:

The outstanding fact, from the standpoint of the banks and the monetary mechanism, is that bankers have had restored to them a fundamental freedom they have not enjoyed since before the war—the freedom to decide for themselves how best to employ their available resources, and to reach their decisions on the basis of banking and business criteria as distinct from arbitrarily prescribed principles and priorities.

This does not mean that the banks can now feel free (or would ever wish) to lend for purposes that might be generally regarded as contrary to the national interest; but it does mean that, within very wide limits indeed, they are free to follow their own business instincts and, where questions of national interest arise, to decide, each for himself, what is and what is not desirable.

This freeing of advances from direct control has brought with it, moreover, another and perhaps even more vital freedom. So long as the banks were expected to observe "requests" to keep the extent of their advances from rising beyond some predetermined amount, it was impossible for them to feel reasonably sure of their ability to comply with the request unless they suspended competition for advances business (and even for other types

of banking business too) as between themselves.

Especially as a result of the experience of the years 1955 to 1958, when the directive type of control was most clearly employed in a quantitative way, the view had come to be widely held that controls of this kind do much damage by sapping initiative in the banks, by causing injustices as between bank and bank, and, eventually, also as between customer and customer. The ending of direct controls over bank lending has thus restored to the banks, for the first time since the nineteen-thirties, the right to full-blooded competition among themselves, and likewise, with other purveyors of credit who in recent years have greatly profited from the constraints put upon the banks.

New Banking Vigour:

I need not recount here the details of the banks' response to this emancipation. Each of the principal new steps, notably the purchases of participations in the hire-purchase finance companies, the introduction of instalment-type "personal" loans, generally unsecured, and the offer (by the Midland Bank only) of a limited-service current account at clear-cut and cheap rates, was fully described in articles last year. These specific innovations are not, in any case, the most important part of the change that has taken place. The major fact is the new vigour, the sharp intensity of competition, the evident readiness to examine new ideas and to press on with technical improvements. This aliveness can be seen on all sides—no less from the banks that have decided against the introduction of the new-style "personal" loans, for example, than from those that take special pride in their specific innovations.

The upshot of this new attitude is that the public was quickly made aware of the opportunities made available by the reflationary aims of official policy and the eagerness of the commercial banks to lend. It was naturally impossible to guess how large a potential demand for credit had been frustrated and pent-up behind the physical control; and, equally, it was impossible to estimate how much demand, which would have preferred to come to the banks had that been permissible, had been diverted into other channels.

In the event, the aggregate of bank advances has risen at a pace that is without precedent in this century—except for the short and violent boom that followed the end of the first World War—and certainly much faster than most bankers envisaged at the outset. The way in which this growth has been shared between the different classes of borrowers cannot yet be traced for any later date than last May. The figures available since then relate to the clearing banks; these account for seven-eighths of all advances made within Britain, but the figures are not subdivided into types of borrower. These latest figures, relating to mid-July, are however of rather special interest.

Big Advances Increase:

In the ten months from July 1958, when the ending of the directive control was foreshadowed, to last May, the total advances of the clearing banks rose by £565,000,000 to £2,561,000,000, or by over 28 per cent. Towards the end of that period, it seemed that this extraordinary movement was losing its momentum. The average weekly rise in advances, excluding those made to the nationalised public utility industries (and also excluding certain extraneous items) had slackened from £27,000,000 at its peak to £11,000,000 during April-May and £9,500,000 in the four weeks to June 17. A substantial part of this decline was, however, due to seasonal influences; and it now appears that the full effects of the whole process of readjustment have still not been seen.

In the four weeks to mid-July the average weekly increase in the adjusted figures steepened to £17,500,000. Thus the aggregate increase in the two months from the May make-up amounted to nearly £115,000,000, in spite of repayments by the public utilities. This brought the increase on the twelve months up to no less than £679,000,000, or 34 per cent., and raised the ratio of total clearing bank advances (£2,675,000,000) to total deposits to 38.4 per cent. At this point the ratio is coming within sight of the level obtaining in the years just before the war. During the twenties the normal level had been rather over 50 per cent., with a rising trend towards 55 per cent. or more; but the slump of the early thirties forced it down to around 38 per cent., from which it slowly recovered in 1935-38 to around 43 per cent. Then, in World War II, it plunged to the unprecedented low of under 16 per cent., but after its postwar recovery it seemed to be settling at around 30 per cent., or a little above that in active years.

Tightening Of Liquidity:

The freeing of the banks from direct control over their advances does not mean, of course, that the monetary authorities no longer have the credit reins in their hands. Indeed, if there had been no remaining monetary discipline, the dramatic rise in bank advances would hardly have been accompanied by so striking a change in the advances ratio.. That latter movement has happened because the authorities have not been prepared to allow the total volume of credit to expand at anything remotely approaching the pace at which advances have risen. Up to last May, in fact, the aggregate net deposits of the clearing banks were actually showing a small decline, on balance, by comparison with their total for July 1958.

The fact that deposits were virtually unchanged over a period in which advances expanded by £565,000,000 is explained by the ability of the Government substantially to reduce its own borrowings from the banking system and by the ability of the banks to make very large sales of gilt-edged securities. Over the ten months, the banks' aggregate liquid assets, excluding their holdings of commercial bills, dropped by £213,000,000, to £2,080,000,000, chiefly in consequence of repayments of floating indebtedness by the public sector.

It was this tightening of liquidity, coming at a time of steeply rising demands for advances, that enforced the sales of investments: these amounted to nearly £380,000,000 (including some repayments of bonds at maturity), reducing the aggregate holdings of securities of £1,837,000,000.

Savings Flow:

A major factor in enabling the banks during this period to offset the rise in their advances by running down other assets was the strong flow of funds into "savings" securities, and also public purchases of marketable securities from the authorities. There was also a modest surplus, thanks to seasonal factors, on the Exchequer accounts, so that the Government sector had large resources available even after financing the major increase in the gold reserve. Allowing for seasonal factors, the stability of actual bank deposits in this period reflected only a very gentle rise in the underlying trend: the seasonally corrected index of net deposits compiled by Lloyds Bank rose from July 1958 to May 1959 by only 2.2 points, to 113.7.

In the latest two months, however, the upward trend has sharply steepened. Net deposits then rose by £279,000,000, to £6,645,000,000. This improvement was not, it is true, vastly greater than that in the corresponding period of either 1958 or 1957—but in both those years deposits also rose more than seasonally. This year's movement has raised the index by a further 2.7 points, to 116.4 (1948=100). The acceleration has been associated with a seasonal (indeed, more than seasonal) expansion of liquid assets as the reflationary aims of last April's budget begin to show themselves in the Exchequer accounts. These assets have expanded by £215,000,000 and thus have enabled the banks to accommodate their further rise in advances without any large additional sales of investments. Unless the gilt-edged market so far strengthens as to enable the authorities to make large net sales of securities, or unless the rise in advances markedly slackens, this tendency seems likely to persist for some months.

There is no sign that the authorities think there is yet need to apply the brakes—but the Treasury bill rate, virtually unchanged for eight weeks, has just edged up a little further, to almost 3½ per cent.

Calcutta Port: Proposal for Higher Charges Examined

By A Special Correspondent

THE Commissioners for the Port of Calcutta have announced their intention to increase the port charges with a view to augmenting their revenues. The Port requires more money to meet the interest and other charges on the World Bank loan of $29 million and also to finance what is known as the datum scheme which is designed to accelerate the pace of loading and unloading of cargo as well as the turn-round of ships. The datum scheme is expected to involve a recurring expenditure of Rs 150 lakhs per year.

The proposals formulated for higher port charges are expected to bring an additional revenue of nearly Rs 200 lakhs as follows:—

(i) affecting import trade	Rs	104	lakhs
(ii) affecting export trade	Rs	25.5	lakhs
(iii) marine charges	Rs	62.8	lakhs
Total ..	Rs	192.3	lakhs
Say ..	Rs	200	lakhs

Tables I and II show the particulars of the higher charges proposed to be levied on various commodities affecting the export and import trade.

For instance, India's requirement of imported machinery will continue to increase in the coming years and enhanced port charges will naturally result in higher prices for the imported machinery. Similarly, chemicals and non-ferrous metals are important raw materials for many of our industries and the cost of production may go up as a result of higher port charges.

In the case of export, the proposal to raise the charges on ores and tea seems particularly inopportune. India's export trade, despite many incentives, has not shown any significant improvement in recent years and, at this juncture, any measure which will have the effect of pushing up the cost of export is certainly not advisable.

Provision of more facilities in the Calcutta Port is, of course, quite important. But it is a matter for consideration whether, with the increasing volume of traffic which can be expected during the next phase of planning and with the more efficient utilisation of existing facilities, it is not possible to augment the revenues of the port. In any case, the proposals deserve very careful consideration from all angles before they are actually implemented.

TABLE I.

Effect of the Proposed Increase in Port Charges on Principal Commodities (Imports).

Serial No. (1)	Commodity (2)	Present rate per ton (3)	Proposed rate per ton (4)	Increase per ton (5)
		Rs.	Rs.	Rs.
1.	Cement	5.00	6.41-2/3	1.41-2/3
2.	Foodgrains	3.50	4.91-2/3	1.41-2/3
			0.53-1/3	0.53-1/3
			5.45	....
			16.50	2.50
3.	Heavy Lifts	14.00	20.50	6.50
			24.50	10.50
4.	Dangerous Petroleum	0.53-1/3 per gallon	0.09-1/2 per gallon	0.04-1/6 per gallon
5.	Non-dangerous Petroleum	6.00	7.83-1/3	1.83-1/3
6.	Iron and Steel	8.00	9.30	1.30
7.	Machinery	8.00	9.30	1.30
8.	Metals other than Iron and Steel	8.00	9.30	1.30
9.	Railway Plant and Machinery	8.00	9.30	1.30
10.	Timber	4.66-2/3	5.16-2/3	0.50
11.	Chemicals other than Soda	8.00	9.30	1.30
12.	Lubricating oil	6.00	6.50	0.50
13.	Manure	7.00	8.17-1/2	1.17-1/2
14.	Oilman Stores	8.00	9.30	1.30
15.	Paper including old newspapers	8.00	9.30	1.30
16.	Soda	8.00	9.30	1.30
17.	Salt	2.33-1/3	2.33-1/3	Nil

TABLE II.

Effect of the Proposed Increase in Port Charges on Principal Commodities (Exports).

Serial No. (1)	Commodity (2)	Present rate per ton (3)	Proposed rate per ton (4)	Increase per ton (5)
		Rs.	Rs.	Rs.
1.	Coal	2.34-3/8	2.90-5/8	0.56-2/8
2.	Ores-Shipped from No. 5 KGD	4.66-2/3	6.91-2/3	2.25
	Ores other berths	4.66-1/3	4.91-2/3	0.25
3.	Gunnies	8.13-1/3	8.13-1/3	....
4.	Manure	6.53-1/3	6.90-5/6	0.37-1/2
5.	Tea	13.33-1/3	14.16-2/3	0.83-1/3
6.	Sugar	4.03-1/3	4.98-1/3	0.75
7.	Scrap	5.33-1/3	5.83-1/3	0.50
8.	Bones and bone meal	7.53-1/3	8.03-1/3	0.50
9.	Lac	7.53-1/3	8.03-1/3	0.50

It will be seen that the proposed increases are rather high, particularly on the imports of iron and steel, machinery, chemicals and non-ferrous metals. On these items, the port charges are going to be increased from Rs 8 per ton to Rs 9.30 per ton. On the export side, the major commodities to be affected are tea and ores. The charges on tea are to be increased from Rs 13.33 to Rs 14.16 and those on ores from Rs 4.66 to Rs 6.91.

The port authorities have stated that the final decision to increase the charges will be taken only after ascertaining the views of trade and industry in West Bengal. But a glance at the above figures will show that the proposal will not be in the best interests of the country. There is little doubt that higher port charges will adversely affect the country's programme of economic development.

Strike Insurance: American Experience

THE token strike by workers in the Indian Airlines Corporation for less than one day, caused by some personal discourtesy, stranded 500 passengers and cost the management several lakhs of rupees. The American steel strike involves more than half a million workers who declare that $3.10 per hour is not sufficient: they cannot demand allowance under the escalator clause because the food index in that country is almost stationary. In India, over the last 5 years, there have been continual threats of strike by essential services like non-gazetted, bank, railway and postal workers. Although the recent Madras Labour Conference recommended mutual netotiation and settlement in preference to approaching tribunals and appellate tribunals, the Minister concerned has had to cajole the workers and squeeze out withdrawal of strike notices at the eleventh hour. The recent policy of encouraging labour-management participation by mutual agreement does not appear to have lessened to any appreciable extent the occurrence of strikes. Insurance like mercy is twice blest: it blesseth him that takes and him that gives. Unfortunately, insurance has made very little headway in India. **Per capita** insurance protection is much less than Rs 50, and schemes that are vitally important for economic stability are hardly known or discussed.

If only we had crop and livestock insurance on a nation-wide scale, the recent Assam and Kashmir floods should have caused much less misery to the afflicted, and much less headache to the ministers and engineers hurrying up inspection by air. We have had numerous railway accidents involving hundreds of fatalities, but relief has usually stopped with telegrams and expressions of sympathy by a Minister a Governor or the President. Many of these accidents have been due to inefficiency in maintaining the permanent way and in management, but little has been done so far in order to preclude such accidents. At Indian airports, insurance is available to the passenger just before embarking, but there is no sort of insurance, either general or special, protecting the railway passengers: goods are insured but not men! Minimising risk by spreading it through insurance ought to be an important component of any Plan, but a recent Government announcement said that there is no intention to nationalise non-life insurance; but, in non-life insurance in India, there is nothing like a plan for progress.

At this juncture, it is desirable to examine practical ways of extending the benefits of insurance to more avenues of economic activity in India. As in other lines, so in insurance, the US leads with 124 million citizens (out of 173 million) insured under some scheme or other, the face value of policies standing at $550,000 million. The size of the average policy works out to $11,000 (approximately equal to Rs 50,000). It is common knowledge that new suits of clothes are insured as also ankles of cinema stars. The Federal Government have set up Guaranteed Corporations like the Federal Savings and Loan Insurance Corporaion (Government interest: $290 million) and the Federal Deposit Insurance Corporation (Government interest: $1,907 million). Under the latter arrangement, all deposits in banks are insured up to $5,000. Some details of insurance against strikes in the USA should prove interesting and suggestive.

The Newspaper Publishers' Association is protected by an insurance scheme against strikes. Six airlines are under similar protection. The giant steel industry is considering the formulation of a suitable scheme. There are 113 class one railways in the USA covering 96 per cent of traffic and 99 per cent of railway service, with an annual gross income of $9.5 billion. . The current three year pact between managements and labour will expire on November 1, 1959. In February last, the managements notified workers about reduction in wages and in featherbedding. The latter is a major nuisance in industrial relations, costing the nation about $500 million per annum, the arrangement comprising the provision of a large number of sinecure berths for unwanted workers. For example, an engine changes from steam to diesel oil, but Unions insist on firemen continuing, without either coal or fire. The managements also approached the White House for the appointment of a Commission to scrutinise work rules. In the meanwhile, in order to protect themselves against spasmodic and wanton strikes, the rail-road managements have inprovised a new Service Interruption Agreement to take effect almost immediately. Ordinary insurance companies declined to take up the Agreement for insurance, but "Nassau" and "Imperial" have taken it up under certain conditions. At least 65 per cent of the managements should subscribe. The insurer's responsibility will cease if workers on 50 per cent or more of rail-roads strike. The protection offered is not to cover profits, but "fixed charges" like property taxes, pension and interest charges, payments toward sinking funds and equipment trust obligations, and all costs of "supervisory forces necessary to preserve the rail-roads' properties in a stand by position."

Here in India, in the event of general strikes, Government may take over or declare the strikes as illegal under the Essential Services Order, but all that would involve inevitable confusion, heavy depreciation and persistent deadlock.

The American scheme richly deserves examination with a view to adapting it to local conditions, but it looks as though the Planning Commission are not insurance-minded: we have no insurance of crops, livestock, savings, loans or deposits. The expert body is the Life Insurance Corporation. If for nothing else, at least to protect itself against strikes, the Corporation should study the Agreement carefully and evolve a suitable scheme which may gradually be extended to other industries and services. Private enterprise cannot possibly take up strike insurance in India on account of the huge funds required, and the right end to begin with would be for the Government of India to float a General Insurance Corporation which should begin with insurance against strikes in industry after industry. Otherwise, wild cat walkouts will continue to be a major nightmare for managements.

EDITORIAL NOTES

Oil Programme

SPEAKING in the debate on the Oil and Natural Gas Commission Bill in the Lok Sabha, the Minister for Mines & Oil referred briefly to certain fundamental aspects of Government's Oil Programme, a subject which has apparently led to apprehension and misapprehensions. Those who have carefully followed the statements made by Mr Malaviya will not accuse him of erratic enthusiasm regarding the achievement of the Commission. On the contrary, in all the statements he has made on the progress of oil exploration in Cambay and elsewhere, he has taken particular care to discourage exaggerated expectations and to stress the long period of experimental drilling necessary to prove the existence of reserves in commercial quantities. If anyone has pitched expectations too high and expected that taxis in Bombay would be running on oil from Cambay within one month of the strike, it certainly is not the fault of Mr Malaviya. And, in reason, it cannot be held against him that he is enthusiastic about his portfolio. It takes quite a lot of enthusiasm to prospect for oil. And the country will certainly share his satisfaction at the encouraging reports from Cambay, though he has made it clear that it will be some time before it is possible to get an idea of the possibilities of commercial exploitation. Equally encouraging is his statement that the programme is proceeding satisfactorily in other oil fields.

Mr Malviya has also taken the opportunity to clear misapprehensions regarding Government's programme for the development of oil. These misapprehensions are entertained by people who entertain diametrically opposed views on the role of private enterprise in the development of the oil industry in our country. He has made it clear that Government's approach is not determined by doctrinaire ideas. The terms in which he has defined Government's attitude will command general acceptance. The primary consideration is the safeguarding of the national interest. Government must have control of policy and must be in a position to retain the initiative. Subject to these conditions, there is room for participation by private concerns.

*

Help for Small Industries

At the Bangalore Seminar of Small Scale Industries last July, a figure of Rs 500 to Rs 600 crores was mentioned as the Third Plan allotment for the development of this sector of industry. This amount is nearly three times the allotment under the current Plan. In view of their large employment potential and flexibility, small-scale industries have been rightly allotted an important place in the programme of industrial development. But proper organisation and adoption of progressive techniques are the essential conditions for enduring success. In the field of organisation, it will be advantageous to coordinate the production of small units with the requirements of large scale undertakings. The beginning made in this respect by Hindusthan Machine Tools should be vigorously pursued both in the public and the private sectors. It is not usually realised that large industries stand to gain by this partnership with small units. It has been recently stated that the manufacture of automobiles in our country could have made more rapid progress if there had been small units in existence, specialising in the manufacture of components. Today, an automobile manufacturer has to manufacture all the components and this pushes up the costs. In the USA, General Motors has more than 20,000 sub-contractors. Perhaps, this is the basis for the slogan:What is Good for General Motors is good for America. Similarly, General Electric gets sub-assemblies and parts from 17,000 small businesses.

The scope for cooperation between large and small industries will grow with the improvement and diversification of production techniques. In this respect, small industries in our country have been handicapped in getting suitable equipment, on account of lack of adequate resources and, lately, by import restrictions. Entrepreneurs who are alert to their opportunities should derive considerable assistance from the recently announced liberalisation of the conditions of the scheme under which the Small Scale Industries Organisation of the Government of India supplied machinery and machine tools to small units. The scheme was originally introduced in 1956. During the last three years, the National Small Industries Corporation, which operates the scheme, has delivered 2,484 machines valued at Rs 2,10,08,881. The new scheme is designed to simplify procedure, eliminate delay in the supply of machines and offer favourable terms of repayment. The revised scheme also provides for special concessions to industrial cooperatives. Its most attractive feature from the point of view of prospective applicants is the promise held out of prompt processing of Hire Purchase applications.

Bhakra

While Government have made no attempt to minimise the gravity of the mishap at Bhakra, which in itself is of serious dimensions, it will be only proper to view it in proportion against the magnitude of the entire project. The most tragic part of the accident is the loss of precious lives, but this has to be left out in estimating the loss, for there is no means of placing a valuation on human lives. According to preliminary calculations, the loss has been estimated at Rs 55 lakhs which is less than one quarter per cent of the total cost of the project. According to authoritative opinion, the safety of the Main Dam has not in any way been jeopardised by the accident. There is also room for satisfaction in the assurance that the time schedule for the completion of the Dam will not be seriously upset. It was only a few days ago that Parliament was informed of the postponement of the scheduled date for completion of the Dam, involving a slight increase in the establishment charges. According to the revised schedule drawn up in 1954, concreting of the Dam was to be completed in February 1960 and other works in March 1960. While this schedule has been mostly maintained, revision has been necessitated on account of the increase in the scope of the project and also due to certain difficulties encountered in the course of the work.

According to the revised schedule, the Dam will be completed in 1961 intsead of 1960. But the delay in the completion of the Dam is not expected to affect the benefits as regards supply of water for irrigation, or power generation, to any material extent. The storage of water in 1960 will be as much as four million acre feet. It is pointed out that even if the dam had been completed according to the original schedule, the need for the gradual raising of the level of water in a Dam where the rock on either side has numerous sheer zones would, on practical considerations, have ruled out the filling of the reservoir to its full designed capacity. As regards power generation, two units were completed in 1959 according to the original schedule, and there will be no delay in the supply of power to the fertiliser factory. The statement, however, points out that, the actual date of completion of the Dam depends on unpredictable factors regarding the nature of the abutment rock which may necessitate increase or decrease of drilling and grouting operations.

*

Wealth from Waste

Our scientists and scientific institutions have come in so often for facetious comment, that it is real pleasure when their is an opportunity to hand out praise. The latest scientific newsletter conveys the glad tidings that the National Sugar Institute at Kanpur has achieved encouraging results in developing a new process for extracting furfural from bagasse. Furfural, it may be mentioned, is the starting material for the production of Nylon. Vey large quantities of bagasse, the fibrous material left after the extraction of sugar cane juice, accumulate in the sugar factories where they are used as fuel. There is also a proposal to utilise them for manufacturing newsprint at Shakkarnagar in Andhra Pradesh. The development of the new process for extraction of furfural will make for more profitable utilisation of bagasse. It is of good augury that the development of this cheaper process should coincide with the announcement that an American Syndicate is collaborating in setting up a Nylon Plant in Bombay.

WORLD OF FINANCE

State Loans' Impact on Banks' Returns

Confirmation of the analysis that we had made last week of the banking statements is largely available in the latest returns of the Reserve Bank and the Scheduled Banks. In the first place, it can now be confirmed that the accrued profit of the Reserve Bank was made over to the Central Government, not in the week ended August 21, but in the week ended August 28. In the second place, there was, in fact, deficit financing during the week ended August 21, though not to the extent that we had suggested. In the third place, negative reasoning suggests that the money market did, during the week ended August 21, received the monies representing payments by Government against the maturing 3 per cent 1959-61. We may now proceed to study the figures in some detail.

The most important change in the Reserve Bank returns for August 28 is a drop of exactly Rs 55 crores to Rs 122.48 crores in Other Deposits. It may be taken as certain that this decline relates as to Rs 40 crores on account of the Reserve Bank profit made over to the Central Government and as to Rs 15 crores in respect of over subscriptions to the State Government loans refunded during the week under review. Also noteworthy is a sharp drop of Rs 28.11 crores to Rs 33.78 crores in the Deposits of State Governments. This fall may be due to one of two reasons. On the one hand, the State Governments may have made some payments to the Central Government. On the other hand, the State Governments, deeming their balances to be rather more than their requirements. may have purchased securities from the Reserve Bank. In either case, it may be noted, the impact on the Reserve Bank returns is the same. For, in the former contingency, the Centre's Balances would have improved, during the week, by roughly Rs 68 crores; and, since the Centre's Deposits are higher only by Rs 5.38 crores, it would follow that the Central Government had instituted reverse ad hocs in a considerable amount. And, in this case, the decline of Rs 78.62 crores to Rs 300.22 crores in Investments would relate largely to such reverse of deficit financing. (We believe that open market sales to entities other than the State Governments would have been placed around Rs 13 crores). In the latter case, the Central Government could have instituted reverse ad hocs for Rs 40 crores against the receipt of Reserve Bank profit, while the State Governments could have purchased Rs 25 crores worth of securities from the Reserve Bank; and, in this case, too, excluding the extent of tap sales to entities other than the State Governments, the decline in Investments would have been of the order of Rs 65 crores. The next week's return of Treasury Bills outstandings should indicate which of the two hypotheses is correct.

Continued slack season conditions have been responsible for a drop of Rs 13.59 crores to Rs 1650.21 crores in Active Note circulation. Besides, there has been an inflow of Rupee Coin for Rs 1.25 crores. The whole of this is reflected in an improvement of Rs 14.88 crores to Rs 38.52 crores in the Reserve Bank's cash in the till.

Presumably owing mainly to continued accretion of slack season resources, the Scheduled Banks have completely got over the strain to which they were put during the new loan week of State Governments, for, the Reserve Balances of member banks have increased by Rs 7.08 crores, notwithstanding a considerable fall in their borrowings from the Reserve Bank; the Other Loans and Advances of the Reserve Bank have been marked down by Rs 10 crores at Rs 73.52 crores.

Finally, for the second week in succession, Balances Held Abroad have improved by Rs 4.70 crores to Rs 20.25 crores.

+

According to the return of the State Bank for August 28, Deposits have been marked up by Rs 1.21 crores at Rs 562.91 crores. Advances are lower by Rs 6.54 crores at Rs 166.33 crores, reflecting, we suggest, mainly the reduction in borrowings of other Scheduled Banks from the State Bank which, during the week ended August 21, had risen by over Rs 5 crores. The State Bank would appear to have purchased securities through the Reserve Bank tap for roughly Rs 8 crores, since the return for August 21 did not indicate any subscriptions to the State loans as such. In the end result, the State Bank's Cash in Hand and with the Reserve Bank is fractionally higher by Rs 0.33 crores at Rs 35.27 crores, thus indicating that the rise in the Reserve Balances of member banks, in the relevant week, as noted in the Reserve Bank returns, is almost wholly in respect of the other Scheduled Banks.

+

The return of Scheduled Banks for August 21 shows that Investments are higher only by Rs 11.79 crores at Rs 723.87 crores. But regard must be had for the fact that there would have been some element of decline in Investments owing to the maturing of 3 per cent 1959-61. In any case, we still believe that the subscriptions of Scheduled Banks would be placed between Rs 25 crores and Rs 30 crores. We had mentioned last week that the impact of the new loan subscriptions would be very difficult to trace in the Scheduled Bank returns. For, outside of Rs 16 crores of over subscriptions refunded by the Reserve Bank during the week ended August 21, we had to trace out a total of Rs 84 crores, since the total subscriptions realised by the State loans were around that figure. But the net Deposits of Scheduled Banks have marked a rise of Rs 7 crores. Cash Balances are lower only by Rs 18 crores. Borrowings from the Reserve Bank and the State Government have moved up by another Rs 18 crores. This adds up only to Rs 36 crores, so there is a balance of Rs 48 crores to be accounted for. We suggest that Rs 30 crores of this, in round figures, would represent the receipt by the money market of the repayments against the maturing 3 per cent 1959-61. The balance of Rs 18 crores would have been the normal slack season accrual to Deposits which, owing to the State loan transactions, has been camouflaged. In any case, it is noteworthy that total subscriptions of the order of Rs 84 crores have made an impact on the Scheduled Bank return for August 21 only in the following respects: (a) Cash Balances lower by Rs 17.81 crores at Rs 166.41 crores; (b) borrowings from the State Bank higher by Rs 5.34 crores at Rs 8.77 crores; (c) Borrowings from the Reserve Bank higher by Rs 12.55 crores at Rs 14.10 crores; and (d) the total of Advances moving up by Rs 3.81 crores to Rs 949.89 crores.

S. E. RLY TENDERS

Sealed tenders are invited for Tender No. PC|COS|4|59|1654|B|F2| of 59 for supply of switch and lock movement to Drg. No. 1RS (S) SA-3300 (Alt. No. 1) to IRS Specification S-10=100 Nos. Earnest money is Rs 360/-. Closing date of tender is 29-9-59 at 12 noon.

Tender forms are obtainable from the office of the undermentioned, South Eastern Railway, Garden Reach, Calcutta-23 (PC Section) on remittance of Rs 2/- (not refundable) per copy by money order to him direct in the case of outside firms and on production of cash receipt from this Rly's Chief Cashier, by local firms.

Firms not on the Rly's list of approved contractors must enclose a valid income tax clearance certificate along with the earnest money deposit receipt with the tender.

UNITED NATIONS

YEARBOOK OF NATIONAL ACCOUNTS STATISTICS, 1958

Detailed estimates of national income and related measures for the years 1951-1957 for about 80 countries. Contains for the first time a special International Summary of the principal national accounts aggregates for 83 countries. Data arranged to facilitate country comparisons; tables well documented with explanatory notes and source information. 283 pp. (Rs. 11.88)

THE INTERNATIONAL FLOW OF PRIVATE CAPITAL, 1956-1958

This report examines private foreign investment as per direct investment, portfolio investment, and credit extended by banking institutions, and assesses their changes during the last few years. Attention is given to Western Europe as a capital supplier and to the prospects for private capital in Latin America, Africa, and Asia and the Far East. 107 pp. (Rs. 3.57)

WORLD OF JUTE

Pakistani Competition

OF the factors responsible for the growing competition to Indian jute goods in world markets in recent years, the emergence of Pakistan as a producer of jute goods is perhaps the most important. Although it had been realised ever since Partition that Indian jute goods would, sooner or later, have to be prepared for competition from Pakistani produced goods in overseas markets, it was only in recent years that a fuller awareness of the problems of our industry in the context of a growing jute goods industry in our neighbouring country seemed to have come about. The Pakistani industry has two great advantages still not available to our industry. As it is of recent origin, it has been able to take full advantage of the latest technical improvements in jute mill machinery. With the result, it is more efficient than its Indian counterpart which is still in the midst of its modernisation programme. The second advantage is the availability of a plentiful supply of raw jute of a high quality.

That the Pakistani industry has not been slow to realise the potentialities of a jute goods industry of its own is evident from the rapid progress made in the installation of mills. The energetic steps taken by this country to increase its exports of jute goods is reflected in the figures for exports during the jute year 1958-59. Total exports during the year have increased to 134,252 tons from 107,928 tons in the previous year. Exports of hessian are placed at 42,254 tons, sacking at 91,212 tons and other goods at 786 tons. The corresponding figures for the previous year are: hessian 33,747 tons, 73,801 tons sackings, and 380 tons other goods. It is true that, compared to India's exports, Pakistan's exports are quite small. For, exports of jute goods from India in the year 1958-59 amounted to 825,000 tons. But it would appear that unlike India, for the time being Pakistan is not being troubled by mounting stocks. At a time when heavy goods stocks were accumulating in mill godowns in India, Pakistan has been able to sell its production months in advance. In this regard it may be recalled that if in recent weeks Indian heavy jute goods have been able to find favourable markets it is partly because there has been no competition from Pakistan. That Pakistan has been able to sell its heavy goods quite easily during the past year is also borne out by the increase in sacking exports. During the same period Indian heavy goods exports have shown a downward trend—sacking exports have declined to 320,700 tons from 376,700 tons in 1958-59.

It is to be expected that Pakistan will continue to make strenuous efforts to better its performance from year to year. Information from that country is that fresh measures have been initiated to promote expansion of the jute mill industory. With the reported finalisation of a plan for manufacturing paper from jute cuttings and other measures to bring down the cost of production of jute, the Pakistani industry may also be having the third advantage of high quality raw material at cheap prices.

* * *

Conditions in the jute goods market were subdued during the past week ended Wednesday. It would appear that reports about Chinese incursion into Indian territory and the subsequent categorical statement of Prime Minister Nehru that border violations by no power will be tolerated by Government were largely responsible for the reactionary tendency noticeable in earlier dealings. The apprehension seems to be that in view of the recent deterioration of the Sino-Indian relations the Jute trade between the two countries would get a severe set-back. In view of the fact that latterly the Chinese orders have been the mainstay of the heavygoods section which is leading the market, the possibility of stoppage of Chinese business, more of which has been said to be in the offing, has led to speculative selling. A steep decline in rates was, however, averted by the report that Government had invited a tender for the supply of B Twills for near delivery. The hessian section was featureless in the absence of fresh interest.

The market opened on an easier note on Thursday closing the day with Hessian 40x10 oz August at Rs 40.85 and B Twills at Rs 107.20. Friday found the market in a depressed mood with prices all along the list sharply marked down on the news of Chinese activity on the Indian borders. B Twills August dropped nearly two points to close at Rs 105.30 while Hessian 40"x10 oz also reacted in sympathy to Rs. 40.60. Very little activity was in evidence on Saturday and in the absence of much business the rates were nominally placed as follows: Hessian 40"x10 oz August Rs 40.40 and B Twills Rs 105.00. The announcement of a Government tender for B Twills improved sentiment on Monday and B Twills August recovered to Rs 105.60. Hessian 40"x10 oz however continued to rule unchanged at Rs 40.40. After an uneventful session on Tuesday, the market steadied up in sympathy with the futures section on Wednesday with B Twills August at Rs 106 and Hessian 40"x10oz at Rs 40.80.

The raw jute market witnessed narrow price fluctuations. The news of a further tender for 250,000 bales of jute on behalf of China failed to leave any lasting impression on sentiment on account of the deterioration in the Sino-Indian relations.

WORLD OF TEA

Good Demand at Dearer Rates

IN the Export Sale held this week, there was a better tone and offerings were 62,482 packages. The demand was strong and general. Plain Broken Pekoes and Fannings were dearer, Fannings and Orange Fannings, in this category, being particularly strong and often selling at 10 nP to 20 nP above valuations. Medium BP and Fannings were also sold readily at dearer rates, especially the better liquoring sorts which were very strong.

Orthodox Assam BOPs again tended easier except for the best liquoring kinds which were sold well. Orange Fannings found a ready market at somewhat irregular rates, buyers following quality closely. There was, at first, a better enquiry for the CTC teas. But, as the sale progressed, the demand dimnished and, at the close, most teas in this category were 20 nP to 40 nP per pound down, although a few of the very best realised useful prices. The cheaper varieties were well supported at about last rates.

Non-wither Doars teas were irregular, while the cheaper sorts were firm, the better kinds being sold at a discount of 6 nP to 12 nP per pound. Whole Leaf grades, especially Orange Pekoes, were easier to buy. Although there was a fair enquiry for Darjeelings, teas from this district were again lower and there were some withdrawals.

Tippy teas were irregular and generally easier except for a few of the best which realised satisfactory prices. Following rates were quoted:—Clean Black Pekoe Rs 1/92 to Rs 1/94; Plain Broken Pekoe Rs 1.82 to Rs 1.86; Plain Fannings Rs 1.98 to Rs 2.08; Medium BP Rs 1.96 to Rs 2.06; Medium Fannings Rs 2.10 to Rs 2.20; Best Assam CTC BP Rs 2.60 to Rs 2.90 and Best Assam CTC Fannings Rs 3.10 to Rs 3.50.

Meanwhile, stocks of tea in Calcutta warehouses, at the end of July 1959, were lower at 390,838 packages against 482,964 packages on the corresponding date of last year. Arrivals of tea, during the same month, declined to 395,431 packages from 458,744 packages in July 1958. In the four months ended July 1959, arrivals were lower at 731,942 packages as against 822,230 packages in the corresponding period of last year.

Approximately 307,200 packages of tea were disposed of in local auctions in the current season up to the end of July as compared to 247,400 packages in the corresponding period of last season.

In the Colombo market, offerings were 5,757,145 pounds of tea. There was active demand. Uva quality improved and all descriptions were considerably dearer, buyers closely following quality. Broken Orange Pekoe Fannings, in particular, showed considerable advances. Best Liquoring Dimbula/Dickoya Brokens were substantially dearer, while Good Mediums with useful colour were also dearer to buy. Poor-liquoring high-grown and medium teas of inferior appearance were lower with low-grown teas easier.

In the Chittagong market, offerings were 4,864 packages of Dusts and 15,262 packages of Leaf grades. There was a strong demand for Dusts with prices generally two to three annas per pound above valuations. The non-wither and popular varieties continued to attract buyers and fetched very satisfactory prices. Plain Sylhet Dust was quoted at Rs 2/7 to Rs 2/7/6 per pound.

Leaf grades met with a strong general demand from all sections and most lots were sold at one to two annas above valuations. While there was keenest competition for legg-cut Fannings between Rs 2-10-6 and Rs 2-11-0, Whole Leaf grades were barely steady. Plain Fannings were a very strong feature and were sometimes up to two annas per pound dearer as also were the best liquoring teas. Green teas were sold readily at around valuation.

In Mincing Lane, a very buoyant tone prevailed for the smaller quantity of around 61,900 packages offered. There was generally good competition from buyers, with prices of North Indian descriptions dearer. Higher prices were also realised for the Ceylon teas, particularly Uva qualities. Although the quality of the South Indian offerings was very plain, prices were fully steady to dearer. The useful colourv and better quality British and African invoices were sometimes dearer. More willingness on the part of buyers to pay more money for the North Indian seasonal peak qualities has resulted in the spread between the top and bottom grades widening. Plain descriptions were a penny up.

The following were the price trends:

WORLD OVERSEAS

US Notes

AMERICAN automobile manufacturers are a confident group these days. If they are evaluating the outlook correctly, consumer demand for new cars will not only rise significantly, in the next year, but will come close to, and could conceivably top, the annual peak of 7.2 million reached in 1955.

These optimistic estimates obviously represent Detroit's thinking on the generally favourable trends of business, employment and incomes in the United States—trends which should, by all odds, be reflected in a larger consumer market for new automobiles. In addition, there are certain development within the auto industry itself which are adding to the Detroit confidence.

One is the expected stimulating effect of the introduction this fall of smaller, so-called "compact," cars by the "big three" of the industry—General Motors, Ford and Chrysler. Another is the hope, if not the prospect, that auto makers will be able to hold the line fairly well on the suggested retail prices for their 1960 models.

It is the widespread introduction of the compact car—something of a revolutionary turn in the American auto market—which is seen as probably the industry's most important "plus" factor. Tentative production schedules point to an output of at least 800,000 of these by the big three alone. This would be in addition to the compact models already being turned out, with considerable success, by the two "independents" of the industry—American motors, with its "rambler," and Studebaker-Packard, with its "lark."

Not all of the big three's 800,000 will necessarily represent a net gain to the market, of course, some of the new compact cars bought undoubtedly will reflect a shift of consumer preference from the larger American cars which have been the industry's standard for a number of years.

This means that most of the present-day larger cars will probably be yielding ground to the new compact cars. On the assumption that the market grows the way Detroit believes it will, however, total sales volume would be sufficiently large so that few if any of the present brands would be hurt very much.

In the process, the big three hope that their compact cars will be able to slow down somewhat the amazing inroads being made by the smaller imported cars. An estimated 600,000 European cars, for instance, are expected to be sold in the United States this year, accounting for close to 10 per cent of the total American market.

The price factor may be an important consideration in this effort. American manufacturers are hopeful that if they can curb the rise in the prices of their cars, they will be in a better position to meet the competitive challenge of the small "economy" imports from abroad.

At the moment, the price outlook is anything but clear, with much depending on the outcome of the current labour-management dispute in the American steel industry. A number of experts believe that if the line can be held on steel prices, or even if prices of that key metal rise only moderately, the automobile industry will be able to hold the price line reasonably well on its 1960 models.

It is pointed out here that some new costs already have been absorbed by Detroit. These include a recent wage boost of 7 cent an hour for automobile workers under the annual "improvement" factor written into the industry's labour-management contract, and some price rises during the past year in such basic materials as copper, zinc and aluminium.

Interestingly enough, the present inventory of 950,000 new cars seems to concern the auto industry little, if at all. Industry officials point out that at the current large and rising rate of sales, this apparently huge inventory actually represents less than a 60-day supply. Moreover, production will be declining noticeably during the next two months—the change-over from 1959 to 1960 models—and this holds out the prospect of further substantial inventory reductions.

As a matter of fact, automobile makers appear more concerned about the possibility of a shortage, rather than an over-supply, of new cars. This could become a danger if the steel strike—now in its sixth week—were to continue for another month, and the automobile industry were to find itself during a period of rising demand without sufficient steel to build up its new model production and normal inventory requirements.

Right now, however, auto manufacturers still have a good supply of steel on hand, deliveries to dealers should be on schedule at least to the end of September.

*

Sweden

LATEST ECONOMIC NEWS FROM SWEDEN

Sweden's foreign trade over the first half of 1959 resulted in a deficit of Kr 402,000,000 (£27,724,000; $78,000,000). This compares with Kr 1,017,000,000 for January-June 1958 and Kr 1,059,000,000 in the same period of 1957. The over 60 per cent reduction in the trade gap compared with last year followed upon a decline in imports of Kr 287,000,000 to Kr 5,828,000,000 (£402,931,000; $1,132,000,000) and an increase in exports of Kr 328,000,000 to Kr 5,426,000,000 (£374,207,000; $1,054,000,000).

Exports, which for every month except January have been higher than a year ago, in June showed a minor drop compared with the same month of 1958. Monthly imports, larger than in 1958 only in April this year, showed a new upturn in June. Trade in June this year thus resulted in a deficit of Kr 38,000,000, as against a surplus of Kr 52,000,000 in May and Kr 107,000,000 in June last year.

An analysis of Sweden's foreign trade during the first six months of the current year shows that the decline in imports was due to both price and volume factors. Oil imports went down from 5.2 to 5.1 million tons, with a decrease in value of Kr 43,000,000. Textile imports dropped by Kr 79,000,000. Imports of merchant iron and steel rose in volume from 370,000 to 387,000 tons, although the value dropped by Kr 68,000,000. Machinery imports went up by Kr 51,000,000.

The number of imported cars fell from 77,036 to 61,105 units, corresponding to a drop in value of Kr 69,000,000, and imports of air-craft and ships dropped by altogether Kr 86,000,000. Coffee imports showed a slight increase in volume but decreased in value by Kr 40,000,000.

On the export side, forest and engineering products contributed the largest share of the increased earnings, while a drop was noted for iron-ore exports. In terms of volume, timber shipments went up from 304,000 to 426,000 stds, pulp from 1,040,000 tons to 1,280,000 tons and newsprint and other kinds of paper from 466,000 to 511,000 tons. Iron-ore shipments dropped from 6.8 million to 6.7 million tons, whereas exports of merchant iron and steel rose from 133,000 to 176,000 tons.

Automobile exports went up by well over one-third, or from 18,547 units to 25,132 units, while ship exports remained more or less unchanged. For machinery and instrument exports there was an increase in value of Kr 24,000,000 compared with January-June 1958.

* * *

While turnover and profits in the Swedish shipbuilding industry rose in 1958 compared with the preceding year, there was a decline for the iron and steel manufacturing industry, according to a survey published by the Central Bureau of Statistics.

Fifteen yards with a total of over 21,000 workers included in the survey report an increase in turnover by 27 per cent to Kr 1,585,000,000 in 1958. The gross profit was up by 29 per cent and the net profit by 28 per cent, while dividends rose by 8 per cent. The number of workers showed an increase of 2 per cent. At the same time wages rose by 7 per cent.

The 60 iron and steep manufacturing works surveyed showed a drop in turnover of 4 per cent to

THE STERLING GENERAL INSURANCE CO., LTD.

NEW DELHI

Premium exceeds Rupees *One Crore Twenty* Lacs

The fifteenth Annual General Meeting of the Sterling General Insurance Company, Limited was held on August 31, 1959, when the Accounts of the Company for the year ended December 31, 1958 were passed. The following is an extract from the Directors' Report.

The gross premium booked during the year amounted to Rs. 1,20,88,518 (*Rs. 1,04,36,280 in 1957*) showing an increase of about 15.8 per cent and the net premium amounted to Rs. 56,50,889 (Rs. 55,01,062 in 1957).

Reserves Exceed Rs. 25 Lacs

The reserve for unexpired risks at the end of the year amounted to Rs. 25,94,355 against Rs. 25,04,427 at the end of the previous year.

Increase in Profit and Dividend

After providing for various reserves, writing off bad debts and increasing the reserves against doubtful debts, the working of the year resulted in a net profit of Rs 1,39,838. Adding to this Rs. 4,096 brought forward from the previous year, the total profit came to Rs. 1,43,934 which has been appropriated as follows: Rs. 72,000 as provision for income-tax and Rs. 68,324 as provision for dividend to shareholders. The balance of Rs. 3,610 has been carried forward to next year.

All Round Progress

The working of the Company during the year under report resulted in all-round progress in business development and financial strength of the Company. The gross premium increased by over Rs. 16 lakhs over the figures of the previous year. The net premium increased however only by Rs. 1,49,827 because of larger reinsurances effected. Paid up Capital increased by over a lac and the Company has been able to declare a dividend to shareholders at 5% free of income-tax on the increased Capital.

Assets Exceed Rs. 89 Lakhs

The total assets of the Company amounted to Rs. 89,01,253 at the end of the year (Rs. 83,39,640 as at 31st December, 1957).

Kr 481,000,000. The gross profit went down by 10 per cent and the net profit by 5 per cent whereas the staff of workers dropped by 2 per cent. Wages rose by 2 per cent.

* * *

The Swedish State Railways have ordered 25 Nohab-GM diesel-electric locomotives from Nydqvist and Holm AB, Trollhattan. They will be equipped with a 12-cylinder diesel engine developing 1,425 h.p.

The first unit is scheduled for delivery in January 1961 and final delivery is to be effected in April 1962. The locomotives are intended for line duty and are successively to replace steam locomotives now in operation.

Nohab-GM locomotives are at present in service in all the Nordic countries. The Danish State Railways will, when a recent new order has been completed, have 89 such locomotives in operation and in Norway there are now 20 units running. One unit is also being tested by the Finnish railways.

* * *

Employment in Sweden's engineering industry rose by 0.8 per cent from May to June this year and was 1 per cent higher than in June 1958. The share of export orders in overall employment was 26 per cent as against 25 per cent a year ago.

For the steel and other metal manufacturing industry the increase over June 1958 was 3.6 per cent, for the mechanical engineering industry and the foundries 1.8 per cent and for the electrical engineering industry 3 per cent.

* * *

The aggregate assets of Sweden's large insurance companies rose by 3.2 per cent to a face value of Kr 15,574,000,000 (£1075,100,000; $3,024,000,000) over the first half of 1959. Newly signed policies for individual capital insurance were 5 per cent larger than in January-June 1958, while new group life insurance showed a rise over 1958, of 24 per cent.

*

Australia

THE robust state of business in recent months in Australia is reflected in the banking figures for twelve months to May. These show that deposits rose by over £47,000,000 during the period. In addition, over £43,000,000 of the special accounts lodged at the central bank, were released during the twelve months.

The following table, from the Statistical Bulletin of the Commonwealth Bank, illustrates the trends of banking in relation to the major trading Banks:—

	(In Million £) May 1958	May 1959
Total Deposits ...	1,565.0	1,612.4
Special Accounts with Central Bank ...	293.3	249.6
Advances, Discounts, Etc.	932.9	915.4

In the change which has occurred in business conditions in Australia in recent years a considerable amount of the financing formerly carried by the banks is now provided in various ways by the active and continually expanding money market. Facilities offered for financing, through debentures, secured and unsecured notes, have increased enormously in recent years.

While rises in deposits are undoubtedly linked with reduction payments on overdrafts, the increases indicate also a healthy state of business generally. To keep pace with developments, the trading banks formed subsidiaries to engage in hire purchase and unit trusts, which represented a radical departure from the principles of conservative banking so long practised in the country.

In recent months banking funds have made a notable impact on the newly established short-term money market. The statistical bulletin of the Commonwealth Bank shows that they had an average of £18,200,000 in the market during March, £24,500,000 in April, and £28,800,000 in May.

This was more than half of the total funds in the market over the whole period, and provided the banks with an outlet for surplus funds not required for advances.

It is probable that the extent of banking interest in this market may, in time, be regarded as an indicator of the extent of the calls upon banking resources, and to some degree a pointer to general business conditions.

* * *

Export payments insurance is playing an important role in assisting Australian industries obtain new overseas business, and enter new markets by providing protection against a major risk involved in marketing.

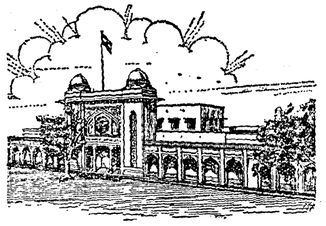
The Exports Payments Insurance Corporation, a public authority, established by the Australian Government, has been in operation for about 22 months. Exports currently insured exceed £21,000,000, while another £40,000,000 worth of business is under offer and negotiation.

The policies issued give protection to the extent of 85 per cent of any loss arising from insolvency of the buyer, or protracted default, such as failure to pay the exporter within twelve months after due date for goods accepted.

Loss occurring from blockage of funds and transfer difficulties, or delays which prevent the Australian exporter from receiving payments due, is also covered.

Other contingencies which are provided for by the policies are the possible imposition of overseas government regulations (including the imposition of valid import licenses) which, in circumstances outside the control of the exporter and the buyer, prevent the import of the goods into the buyer's country; war between the buyer's country and Australia; revolution in the buyer's country, and generally, any other cause not being within the control of the exporter, or of the buyer, which arises from events occurring outside Australia.

Many overseas companies which have established factories in Australia are finding the services offered by the Corporation of great value in the planning of their export programme.



The form of insurance helps the exporter in the management of his overseas accounts, assists him to face the risks involved in unfamiliar markets, or in selling oncredit. The Corporation also gives him help and advice in collecting overdue accounts, and in minimising losses.

To meet the varying conditions of trade the Corporation also issues policies to insure primary and consumer goods sold on short terms, and for capital goods and services where payment may extend over a number of years. Cover provided can be from the date of shipment, or from the date of contract if the nature of the goods establishes the need for protection during the pre-shipment period.

* * *

Banking legislation introduced early this year in the Parliament of the Commonwealth of Australia had passed all stages by June; it will come into operation on a date to be proclaimed later in the year. The legislation provides that the central bank shall be separated from the present Commonwealth group of banking institutions and that it, together with the Rural Credit Department of the Commonwealth Bank, shall become the Reserve Bank of Australia. The Reserve Bank will function only as a central bank and will not be responsible for the administration of the retail banking business carried on by the Commonwealth Trading Bank of Australia, the Commonwealth Savings Bank of Australia, and the Mortgage Bank and Industrial Finance Departments of the Commonwealth Bank. The legislation also establishes a Commonwealth Banking Corporation, under a new board and with a separate staff, to be responsible for the administration of the Commonwealth Trading Bank, the Commonwealth Savings Bank, and a new institution to be called the Commonwealth Development Bank of Australia. The Commonwealth Development Bank will be, basically, an amalgamation of the present Mortgage Bank and Industrial Finance Departments of the Commonwealth Bank, with some increase in resources and with a charter enabling it to assist the development of worthwhile enterprises in both primary and secondary industry which are unable to obtain elsewhere the necessary financing on reasonable and suitable terms. Under the new legislation the present Special Accounts System will be replaced by a system of statutory reserve deposits.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

FOR the sensation-hungry, last week's Indian news provided substantial fare. To us in Calcutta, processions and protests are a daily diet, but even so, the last two days have seen an orgy of violence reminiscent of the bad old days. But the impact of this, except for its immediacy, was not comparable to the news of Chinese aggression against Indian territory of which Mr Nehru gave details in the Lok Sabha last Friday. About this time, too, came the news of the Dalai Lama's firm resolve to take the Tibetan question to the UN. But all this was completely put into the shade by reports of the resignation of the Service Chiefs. Coming as it did immediately, after news of Chinese aggression, it was a great shock. Happily, at the time of writing, it has been reported that General Thimmayya has withdrawn his resignation and, though the picture is not entirely clear, we have the assurance of the Prime Minister and General Thimmayya himself that the Services are in fine fettle.

*

It is possible to read more than a fortuitous combination of circumstances in this succession of sensational news. In the timing of the Dalai Lama's decision, the present Indian disenchantment about the People's Republic in China is very likely to have entered. The week before, Mr Nehru declared in Parliament that this country is bound by treaty and other obligations to go to the aid of Bhutan and Sikkim in the event of Chinese aggression against them. Close on the heel of such declaration comes news of further Chinese unfriendliness. Indian opinion is understandably disturbed by these provocative acts and, therefore, may be inclined to consider the idea of the UN debating the Tibetan question with less detachment than before. Whether the Dalai Lama worked it all out this way, it is difficult to assert for certain, but it is highly plausible.

*

But a correlation between the border incidents and the admitted lack of harmony at the highest level in the Defence Ministry is somewhat far-fetched. Of course, the timing of the resignation of the Army Chief of Staff was profoundly disturbing, because it came immediately after the announcement of the army taking over the border defences. But though there is much that is unclear about the whole unfortunate episode, the so called political angle (which disturbed many when the news first broke into print) was in relation to promotions and had nothing whatever to do with the incidents near the border. And even in relation to these promotions, Mr Nehru had categorically denied any political implications and has offered to place the entire file at the disposal of any opposition member who wants to scrutinise it. Therefore, whatever else may be said about this unfortunate business—and a lot will be said before we hear the end of it—it is a matter for profound thankfulness that, at a juncture when the country is passing through uneasy times, there is no divided counsel in the Defence Ministry on fundamentals. It is true that the existence of other differences serious enough to make the Service Chief want to resign may have a depressing effect on the morale of the army and the country. From this point of view, the timing of the resignation is most unfortunate. Mr Nehru's diagnosis is that the difficulties are "temperamental" and are capable of adjustments. One should hope so, for, one imagined that the Army was a stern school where there was no room for prima donna tantrums. It is welcome news that Mr Nehru is going to look into these "differences" and bring into play his undoubted gifts of mediation and inspiring a common loyalty to remove these causes of friction. When this is done, one hopes the present episode will soon fade into the limbo of unpleasant memories.

*

Two other aspects of this incident are worth commenting on. First is Mr Nehru's declaration in Parliament that, under our constitution, no less than under the general principles governing our politics, civil authority is supreme and the services are to take their ultimate orders from this authority. I am rather intrigued why Mr Nehru should have bothered to bring up this piece of commonplace in the discussion at all. May be, he was thinking of what has happened in Pakistan, Burma and Indonesia and so forth. But what has happened here is entirely different. A person who felt that he could not function properly in a particular set of circumstances and who wanted to spare himself the attendant stresses had simply asked to be relieved of his responsibility. Far from assuming more authority, he is surrendering such authority as he had. Surely, in such a context, the question of army attempting to usurp civil authority does not arise at all. In the absence of any indication about the contents of General Thimmayya's letter, it is difficult to say anything about what really impelled him to resign. Mr Nehru says that the reasons appeared to him "trivial", but it is rather strange that a seasoned general like Thimmayya should ask to be relieved, at the time he did, for trivial reasons. It is true that Mr Nehru has indicated that he does not approve of General Thimmayya's action in resigning, but unless we have what the latter has to say, it is difficult to form any opinion on the question.

*

The other aspect of the matter that calls for comment is one on which the Communist members mainly concentrated. They wanted to know how the news became public. Now, from the sequence of events indicated by Mr Nehru, it appears that General Thimmayya had already accepted Mr Nehru's advice to withdraw his resignation (though he had not formally written to that effect) when the news of his resignation appeared in the press. Thus, if the news had not been published, the entire thing would have passed unnoticed by the public. There can be two views about the duties involved in publicising such news. One view would define the function of the press as nothing more and nothing less than gathering news from whatever source and, after making sure of its accuracy, printing it. The other view would extend the duty of the press to include an appraisal of the likely effect on the public and on the Government of the news it publishes. Men in authority would naturally prefer the latter formulation of the function of the press. Those who have read the history of The Times will recall a classic controversy on the subject in which The Times itself was involved in the last century. In 1852, Lord Derby was upset by the comments made by The Times on the coup d'etat which enabled Louis Napoleon to become Emperor of France. "If in these days," said Lord Derby, "the press aspires to exercise the influence of statesmen, the press should remember that they are not free from the corresponding responsibility of statesmen and that it is incumbent on them, as a sacred duty, to maintain the tone of moderation and respect, even in expressing frankly their opinion on foreign affairs, which would be required of everyman who pretends to guide public opinion." This promptly drew a rejoinder from The Times in two successive leading articles. The fallacy in arguments like those of Lord Derby's lies in the assumption that a newspaper—though the accident of its nomenclature unwittingly seems to imply such supererogation—has ambitions of being a statesman. As The Times put it: "We cannot admit that the newspaper's purpose is to share the labours of statesmanship or that it is bound by the same limitations, the same duties, the same liabilities as that of the Ministers of the Crown. The purpose and duties of the two powers are constantly separate, generally independent, and sometimes diametrically opposite....The first duty of the press is to obtain the earliest and the most correct intelligence of the events of the time, and instantly by disclosing them,

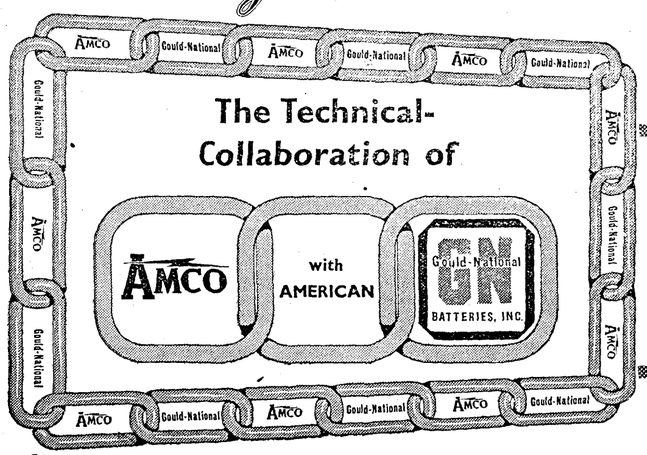
to make them the common property of the nation." Thus, the only obligation that a journalist, qua journalist, has is to ensure that the news he purveys is correct. Of course, it is possible to present truth in a sensational way, but when the news itself is sensational, there is no question of making it more so. But developments about the Army Chief's resignation should not allow the public to push out of its consciousness the border incidents. To say this is not to be alarmist. For, the Chinese acts of aggression—Mr Nehru made no bones about describing them as *such*—are a reminder of duties that we had only been dimly aware of. It now appears that, as early as 1957, the Chinese had built a road through the north eastern part of Ladakh. When an Indian reconnaissance party had been there last year, it was apprehended and later released on protest. The Chinese claim is, of course, that the part *through* which the road passes was Chinese territory. Since there is no physical demarcation of the international boundary here, there are bound to be some differences, though the maps we have do show the areas as ours. In any case, quarrels about the border are a matter that should be settled by discussion. Last week's incidents are more sinister in that they have involved violence and shooting. In the NEFA area, the Chinese walked into our territory, apprehended a dozen armed policemen manning the outpost and took them away. When about eight of them escaped and returned to the outpost, they were fired on. The Chinese are saying that the firing was started by us and they fired only in self-defence. Considering that the Chinese numbered "some hundreds" and our men were only a handful, it seems preposterous that our men should have started the trouble. In any case, it does not explain the capture of our men, four of whom are still in Chinese hands.

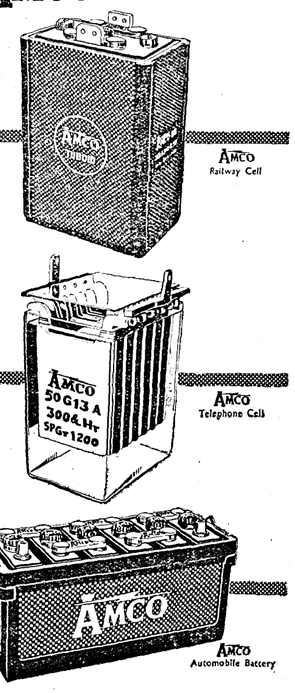
*

Temptation to say "I told you so" is naturally strong in those who have been warning us of China's expansionist tendencies. They may also urge us to take a more "realistic view" of the situation and urge us, for instance, to identify ourselves more overtly with the Tibetan cause. They would ask us to sponsor the Tibetan complaint in the UN, as a practical indication of such a departure from past policy. All such advice is to be firmly rejected. Though it seems clear enough that the principal motivation of current Chinese unfriendliness is their resentment against Indian sympathy for the Tibetans, it will never do for us to confuse issues. If the Chinese are wanting to create confusion along the border, the way to deal with it is to strengthen the border defences and tell them firmly that an act of aggression will be firmly dealt with and do so when it does take place. At the same time, they must be told that if they want the question of border demarcation discussed, India is ready enough for it. But to allow ourselves to be provoked to depart from policies otherwise sound merely to spite the Chinese will be childish.

*



Equally irrelevant is all talk of a joint-defence pact with Pakistan against Chinese aggression. I am all for improving Indo-Pakistan relations and to the extent that the recent Nehru-Ayub talks have given an indication of a fresh effort *toward that end*, I wholeheartedly welcome it. But, in President Ayub Khan's constant references to the historical and traditional strategic considerations that make the Indian subcontinent a geopolitical homogeneity, there was a certain amount of special and specious pleading. Readers will recall how, when the Tibetan trouble started, Pakistan came out with a suggestion of joint defence pacts and so forth. To some people, the idea is very attractive, especially because it appears to them that Indo-Pakistani disputes are likely to be nearer solution by this approach. But it is very doubtful whether such a way out of our difficulties is really available and, if it is, whether it is worth the price you have to pay for it.



Not quite twenty-one years ago, Mr A. K. Sen joined, as accountant, The Indian Oxygen and Acetylene Co., Ltd. to which the successor company is *Indian* Oxygen; he could have little dreamed then, in 1938, that, in this subsidiary of The British Oxygen Co., Ltd., he was in due course to be appointed to the *highest office*. These days, it is easy to shrug off each such elevation of an Indian as the inevitable consequence of the process of indianisation of the hierarchy, a movement that began to gather momentum some four years ago. But it would be doing less than justice to Mr Sen, as it would be less than fair to British Oxygen, to trace the promotion to nothing more than this zeal on the part of foreign controlled companies progressively to entrust, if not responsibility, at least the show of it to an Indian. I know Mr Sen; I know his abilities, his keen mastery over the rites and mysteries of company finance, his air of affability and his penchant for hard work. So, may I suggest, Indianisation or no, Mr Sen was always slated to become the Managing Director of Indian Oxygen; and this counts with me for far more than the incidental fact that he is the first Indian to achieve such a status with the company. More power to him.

EAVESDROPPER.

Announcing

AMCO BATTERIES

AMCO Batteries have now entered into a Technical Collaboration Arrangement with Gould-National Batteries Inc. U.S.A. Under this arrangement, AMCO will receive complete Technical Know-How for production of all types of Storage Batteries.

Gould-National, the world's largest manufacturers of Automotive Replacement Batteries, have 29 Battery Plants strategically located all over the United States of America and Canada. These Plants produce Batteries for Automobiles, Railways, Telephones, Telegraphs, Air-crafts, Ordnance, Missiles and Submarines as well as for other Heavy Duty and Industrial purposes. It is noteworthy that Gouids were commissioned to fit the batteries for the World's First Atom-powered Submarine - "Nautilus."

Obviously, this Technical Tie-up with an organization of such eminence is a positive guarantee to revolutionise the Scope and Technique of Battery Manufacture and bring AMCO in line with the status attained by the Battery Industry in the most advanced countries in the world.

BOMBAY REVIEW

Cloth Production in Third Plan

IF discussions on targets for the cotton textile industry in the Third Plan do not seem to be evoking the same enthusiasm as before the finalisation of the Second Plan, it is presumably because previous estimates have gone awry. The production target set for cotton textiles under the Second Plan is 8,400 million yards originally distributed as follows: mill industry 5,000 million yards, handloom 1,500 million yards, powerloom 200 million yards and unallotted 1,700 million yards. In view of the improved offtake in the early months of 1956, Government revised their cloth policy in June of that year as under: Mill industry 5,350 million yards, handlooms 2,200 million yards, powerlooms 400 million yards, handspun handwoven 300 million yards leaving only 150 million yards unallotted. The figure for the total targeted production has been arrived at on the basis of an estimated per capita consumption of 18.5 yards and an export target of 1,000 million yards. It will be seen that under the revised policy the targets of all the sectors have been upgraded by additions from the unallotted portion which as a consequence has been reduced to 150 million yards from the original level of 1,700 million yards.

The cotton textile industry as represented by the Millowners' Associations of Bombay and Ahmedabad, however, estimated the total requirements as at the end of 1960-61 at the much higher level of 10,000 million yards. The joint memorandum submitted by these two associations in August 1955 had based its calculations on an estimated per capita consumption of 22 yards. That indications at the time the Second Plan was drawn up were towards a faster *rate of consumption* is also evidenced by the fact that the Planning Commission's Programmes of Industrial Development 1960-61 has noted that it may become necessary to revise the output target on the basis of a per capita consumption of about 20 yards.

The mill industry has more than fulfilled its allotted task as it has attained its target even as early as the second year of the Second Five Year Plan. But this laudable achievement has been overshadowed by the severe slump that is afflicting it for the past two or three years. The crisis has left its impress in the shape of a decline in production in 1958. It is true that world cotton textile industry is not having a prosperous time. But unlike its counterparts elsewhere in the world the Indian cotton textile industry has not had the inner strength accruing from efficient modern machines coupled with export-oriented textile policies.

The erratic pattern of cotton textile exports in the past years is an indication of the growing competition in world markets. But even so few expected that our export performance last year would be as disappointing as it had turned out to be. Evidently the post-war trends in the international cotton textile trade have not been fully grasped by the powers-that-be. But the shape of things to come seems to have been clearly visualised as early as 1952 by the Working Party for the cotton textile industry which has made it clear that one of the *urgent tasks to which* the industry has to address itself is the problem of rehabilitation and modernisation of its equipment.

Had it not been for the fact that the declining trend in exports has been accompanied by a fall in offtake for internal consumption, the industry would not have been reduced to its present unenviable position. The soaring food prices in the country have been directly responsible for the stagnancy in the cloth markets as the earnings of the masses have been just enough to pay for their food needs. Cloth purchases are either postponed or are confined to the barest minimum In the meantime a policy aimed at reducing consumption has been initiated through enhancement of excise duties. The policy has achieved much more than it has been intended to achieve in that it has put consumption at a standstill. Government were obliged to retrace their steps by successive reductions in the excise duty hastily enhanced in September 1956.

It is now generally believed that the increase in the excise duties has been a powerful contributory factor in the textile crisis. This belief seems to be shared also by the Textile Inquiry Committee which has last year made a thorough study into the working of the industry with a view to making suitable recommendations to extricate it from its malaise. Government, however, have attributed the reduced offtake to an error in the assessment of the expected per capita consumption during the Plan period.

It is against such a background that the future plans of the industry have to be discussed. In a memorandum submitted to the Planning Commission the Committee of the Indian Cotton Mills Federation has estimated that at the end of the Third Five Year Plan the total requirements of cloth will be around 9,600 million yards. Domestic consumption at 20.3 yards per capita for a population of 434 million is expected to absorb 8,810 million yards and exports are estimated at 800 million yards. The suggested allotment of the total production is mill industry 6,300 million yards, 2,500 million yards for handlooms, 500 million yards for powerlooms and 300 million yards for amber cloth. In arriving at the likely trend of consumption at the end of the Third Plan, the ICMF has taken into consideration the fact that the per capita consumption reached the figure of 16.7 yards in 1958 coupled with the assumption that by 1961 consumption "will actually reach, if not exceed the figure of 17.5 yards" based on the observation of the Textile Inquiry Committee in this respect.

The ICMF has pointed out that it is with some hesitaion that the industry is submitting the estimates for the Third Five Year Plan in view of the opinion in Government Circles that its Second Plan estimate of a per capita consumption of 22 yards was too high. However, the memorandum contains what may be termed a rejoinder to this criticism. Indications at the time of formulating the estimates justified the assumption of a sizably higher per capita consumption during the Second Plan period than at the end of the First Plan. The particularly unfavourable turn in the food situation coupled with the unimaginative Government policies has completely altered the picture. The memorandum is content to emphasise that the factors governing the per capita consumption have all been beyond its control. However it is quite evident from the memorandum that if there is anyone to be blamed it is the Government. "....instead of considering ways and means of increasing the supply so as to meet the demand, the Government decided to increase the excise duties in September, 1956, with a view to inhibiting consumption and increasing exports".

It would appear that so far as consumption of cotton textiles in our country is concerned, one has to be prepared for reversals of the trend now and then. For, cloth is a basic necessity next only to food. People can make one year's supply of cloth serve for two years. But such a procedure is not possible in the case of food. Available resources will, therefore, be utilised for meeting food needs with cloth getting the second place in the list. Availability of food at reasonable prices is still to be attained. There is, however, a new awareness all over the country that the continued absence of a satisfactory solution of the food problem will seriously jeopardise all planned endeavour and consequently concerted measures are being taken toward attainment of self-sufficiency in food. It is also to be remembered that the lower-than-expected rate of economic development during the current plan period which is one of the causes of the decline in the rate of increase in per capita consumption may be followed by a greatly accelerated improvement. In this view it is quite possible that there is a spurt in consumption. The fact that a previous set of estimates for the Second Plan period proved to be too wide of the mark, therefore, cannot be deemed to be a valid argument for setting the targets for the coming five year plan at a level as low as possible. As mentioned above the industry is not the only one to have made a wrong forecast. It is now almost taken for granted that the per capita consumption of cloth at the end of 1960-61 will be around 17.5 yards as against the Planning Commission's estimate of 18.5 yards. It is quite on the cards that the developmental activities undertaken during the current plan may be having a delayed effect on the nation's economy.

Role of Universities

Sir C. D. Deshmukh's Convocation address at the Bombay University is more an exhortation to the universities themselves rather than to the new graduates. The usual dilations upon education in general or the stereotyped advice to the young hopefuls who are supposed to be ready to face the world outside their erstwhile sheltered life, where hard economic facts are seldom met with, would not have sounded appropriate at this juncture if they issued from the Chairman of the University Grants Commission.

A lecture to the universities on their proper role, instead of to the outgoing students, is quite in order because the future of the graduates who leave their portals is closely related to what the universities do now to enable the students to equip themselves so as to fit in the many walks of life. In the absence of an efficient and realistic university system, advice to the new graduates will be a farce. The present situation in our country is brought out clearly by the fact that, while there is a dearth of personnel to man our new industries, the ranks of the educated unemployed is yearly being swelled.

Sir Chintaman Deshmukh is anxious that, by virtue of its close association with Government, the University should not lose its autonomy. The respective positions of the State and the University are well brought out by the descriptions "repository of power" of the State and "shrine of wisdom" of the university. The emphasis on the need to train young men and women according to the requirements of the State cannot be carried too far. The supply of personnel can only be subservient to the more important role of the university as a training ground for inculcating the enduring aspects of life. Sir Chintaman rightly avers that the essential function of the university is to provide the nation's best young people "a free and creative educational experience." This will be possible only when the university is free to decide how best it can serve the needs of the State without militating against the discharge of its proper duties to the community.

The preservation of the autonomy of the university is as much the responsibility of the State as it is of the universities themselves. For, only when the university is enabled to discharge its proper function without let or hindrance will the benefit of the system accrue to the nation. The crucial dilemma of quantity or quality will cease to bother the universities once their proper role is kept prominently in mind. The pitiful sight of the so-called educated young people roaming the country in search of employment should serve as a strong argument in favour of quality. Expansion of university education does not consist in rapidly multiplying the number of degree holders. Sir Chintaman has postulated the following two principles which should govern schemes of university expansion: (a) minimum permissible standards and (b) opportunities to young people capable of benefiting from university education to receive such education. It is, however, sad to mention that these two wholesome criteria are yet to be seriously adopted in our country. Independence has unleashed the pent up demand for collegiate education and it is no wonder the universities are finding it difficult to resist the pressure. It is to be hoped that a proper perspective in matters pertaining to university education will obtain sooner rather than later.

*

Problems of Electric Supply Industry

With demand for electricity increasing by leaps and bounds in the country, it is a natural assumption that investment in the electricity supply industry will be quite profitable. But, in actual pratice, shares of electric supply companies are far from popular. Evidently, the return on investment in these shares is not considered attractive in comparison with other equity scrip. And since corporate enterprise without investment support is like making bricks without straw, the electric supply industry has developed a chronic lack of funds even for its day-to-day working, let alone its expansion.

This unenviable position is, of course, partly due to the industry being a public utility which, as a consequence, attracts the special attention of Authority in the matter of the price at which electricity is sold to consumers. The real disability, however, stems from the fact that it is hemmed in by the provisions of the Electricity (Supply) Act and the Income-tax Act. The industry has been asking for "grossing up" of dividends in the hands of shareholders as it would help render electricity supply company shares somewhat attractive. The "grossing-up" has now been replaced by a new scheme of corporate taxation introduced by the Finance Act, 1959. The revised arrangement of deducting tax on all future dividends at the source at the prescribed rate of 30 per cent, as far as the electricity supply industry is concerned, seems to make the position still worse.

Mr P. D. C. R. Clark, Chairman of the Bombay Suburban Electric Supply Limited, has pointed out in the course of his address at the recent annual general meeting of the Company that, under the Finance Act 1959, the generally accepted principle that the return to the shareholders of electric supply industry "should be 'net' and free from income and all other taxes" will be seriously undermined if the tax deducted at source is not permitted as a charge to the consumers. The valid argument that, as all tax concessions accrue to the consumers, it is only proper that all additional liabilities also should be charged to them, should help Government ensure that no additional tax burden is imposed on an industry whose capacity for eliciting the support of investors is already severely limited by the provisions of the Income Tax Act and the Electricity Supply Act.

*

Outlook for Advertising

Speaking at the annual meeting of the Maharashtra Advertising Agents Association, Dr B. V. Keskar emphasised the need for taking advertisement to the masses. Nothing will be more welcome to the advertisers than a widespread notice of their messages. But Dr Keskar has been of little help as he has been content to draw attention to the inadequacy of newspapers as a mass medium in our country. The low percentage of literacy no doubt severely limits newspapers' usefulness.. Perhaps, the most suitable medium under existing conditions is the radio as it can convey advertisers' message to the rural population in an easily understandable manner. But Dr Keskar has made it clear that this highly efficient medium will not be available for commercial exploitation for a considerable time to come. Besides the need for maintaining a certain standard in a vital medium as the radio, the experience of other countries where commercial broadcasting is in vogue does not seem to encourage the extension of the facility to the general public. The Informaion and Broadcasting Minister, however, does not entirely rule out the possibility of commercial broadcasting in India.

As Mr N. T. Thakur has pointed out in his presidential address, there need be no apprehension about a declining popularity of newspapers, even supposing that the radio or other suitable media are made available because, even in the countries where radio, telivision, etc., are at the service of advertisers, newspapers are by no means starved of advertisements. On the contrary, newspaper advertising is steadily on the uptrend.

The point to be noted as regards advertising in India is that, with the progress of industrialisation and the steady improvement in the standard of living of the people, there will be a progressive increase in the demand for advertising facilities. Consequently, advertising agents will be called upon to play an increasingly active role in canalising advertisements with a view to maximising the benefits accruing therefrom.

WORLD OF COTTON

Cloth Production Target

THE Indian Cotton Mills' Federation has suggested that India should aim at a total production of 9,600 million yards of cotton textiles by the end of the third Five-Year Plan. The Federation has pointed out that, with the expected population of 434 million, the country will require 8,810 million yards of cloth in 1966 on the basis of a per capita consumption of 20.3 yards. It will also have to provide for estimated exports of nearly 800 million yards.

The total output in 1961 is expected to amount to 7,900 to 8,000 million yards with the mills producing 5,100 to 5,200 million yards; handloom 2,100 million yards; Ambar "charkas" 300 million yards and powerlooms 400 million yards. It is felt that the additional production of 1,600 million yards should be allocated between the mill sector and the handloom and powerloom sectors in the proportion of their targets for the second Plan period, since the Ambar "charkha" scheme had not been able to make progress on the scale orginally envisaged.

The mill sector will be required to produce 6,300 million yards, while the handloom and powerloom sectors will be required to raise their output from 2,500 million yards in 1961 to 3,000 million yards in 1966 with handloom contributing 2,500 million yards and powerlooms 500 million yards.

The Federation has, however, pointed out that its estimates are subject to the presumption that the excise duty and other burdens on the industry are maintained at reasonable levels; cotton and other raw materials are made available at reasonable prices; the changes in the wage structure will be bsed on scientific correlation between wage rates and workloads and the economy of the country progresses along lines of the basic targets of the Plan.

×

COTTON FUTURES MARKET:

Prices in the Cotton futures market, after suffering a setback early in the week, showed a sharp recovery toward the close on frantic short-covering and bull support, being influenced by the fears of damage and delay in crop in certain producing areas. Reports from various cotton tracts suggested that the crop was in danger owing to excessive rains. All these developments unnerved upcountry operators to cover their sales. Those, who had sold earlier, also came forth to cover the losses. Jharilla March contract moved between Rs 684.75 and Rs 691.75 to finish at Rs 691.

SPOT MARKET:

Prices in the Spot section have continued to rule firm, although the demand for domestic styles has slowed down. Spinners are showing good interest in Lakshmi, Kalyan, Wagad and CO2.

When the price policy for Indian cotton for the 1959-60 season was announced, it was stated that the "floor" and "ceiling" prices for extra long-staple cotton were under consideration of the Government of India. The Government have now decided to fix floor and ceiling prices for extra long-staple cotton excepting those having a staple length of over 1 1/8". Formal notification, containing the revised price schedule, will be published in due course.

Activity on the export front was limited; but the full reaction to the announcement of allowing the export of 75,000 bales of Bengal Deshi cotton, valid for shipment upto 28th February 1960, will be known in the coming week. In this connection, it is made clear that a part of the above quantity will be earmarked for distribution among Co-operative Societies and the balance will be licensed on a "first-come-first-served" basis, subject to an individual quantitative ceiling of 10 per cent of the quantity allowed.

Except for some business reported done in Gezira Sakel high grades, no interest was shown in other foreign growths. The Government of India have extended the shipment period for the import quota of 60,000 bales stapling 1 3/16" and above upto 15th September. The extension, it was felt, was granted because of the great delay in the announcement of the reimbursement procedure for Egyptian cotton. The Government have emphasised that no new crop cotton will be allowed to be shipped against these licences.

The statistical position of Egyptian cotton appears to be healthy at the moment, though the carry-over this year may be slightly higher. According to the fourth crop estimate, the crop is placed at 1,359,546 bales (one bale equals to 720 lbs), which comprise 308,100 bales of Karnak variety; 488,201 bales of Menoufi; 96,500 bales of Giza-30; 425,170 bales of Ashmouni and 41,575 bales of other varieties. With the carry-over of 273,138 bales, the total supply for the season comes to 1,632,684 bales. On the other hand, exports, during the season 1958-59 upto the 12th August, amounted to 946,543 bales and local consumption to 292,150 bales. This leaves a carry-over of 392,991 bales as on the 12th August, including Government stocks.

Meanwhile, exports by rail, from 1st September 1958 to the 20th August, 1959, were 244,105 bales. Estimated mill consumption in Bombay, during the same period, was 1,203,985 bales as against 1,227,093 bales in the corresponding period of last year. Estimated stock of raw cotton held by exporters, dealers and mills in Bombay, as on the 20th August 1959, was 664,441 bales as compared to 666,659 bales on the corresponding date of last year.

GATEWAY MARKETS

Linseed Oilcake Export

THE Government of India have announced the release of a fresh quota of 15,000 tons of Linseed Oilcake for export by all shippers without any restriction of maximum shipment by an individual shipper up to the end of September, 1959.. Licensing will be done on shipping bills, supported by documentary evidence of firm sale contracts.

The above decision has been welcomed by dealers in the Bombay oilseeds market. Following this announcement, the price of linseed cake has firmed up by about Rs 5 to Rs 380 per ton. It appears that the Government have been encouraged to allow additional exports in view of the prompt overseas response evoked by the previous releases. Thanks to sustained demand from the UK, Germany, France, Belgium and Holland, the previous quota of 10,000 tons has been almost exhausted.

The latest release has, however, resulted in a slight setback in foreign prices from £35½ to 34¾ a ton, because of the larger quantity involved in the quota. The Government decision to restrict the validity period to the end of September has also been responsible in pushing down prices.

As things stand at present, the fall in overseas prices has tended to make the business difficult. The rush to sell abroad has also affected the situation adversely. It is, however, believed that prices will get adjusted in the near future owing to the potential demand from abroad. Meanwhile, ready linseed is quoted at Rs 31.94 and Linseed Oil at Rs 15.81.

Castorseed was, however, characterised by a further widening of spread from Rs 3.12 to Rs 4.00 per candy. The rise in contango is attributed to the general reluctance to await the deliveries in September. In the spot section, too, prices showed an easier trend in the absence of export business in castor oil. Apart from stray transactions for small quantities with the UK, the demand for castor oil remained subdued. The USA continues to be out of the market and the reports, that Brazil is offering supplies at lower levels, has tended to increase the feeling of pessimism. Castor ready is quoted lower at Rs 29.81 and Castor Oil, commercial quality, at Rs 15.25.

The Government decision to extend further the validity period of the current quotas of HPS Groundnuts from the end of September to the end of December 1959 is welcomed. For, out of a quota of 35,000 tons, the unsold quantity is mentioned around 20,000 tons. Since export of HPS has ceased to be remunerative, the Government may do away with the quota system and allow free export, subject to a ceiling. This will encourage initiative and enterprise. Ready groundnut bold is quoted at Rs 38.87 and Groundnut Oil at Rs 19.69.

There was little of importance in the Cottonseed section and prices showed an easier tendency in the absence of activity.

*

Gold & Silver

The Silver section, on the Bombay Bullion Exchange, provided abundant evidence of its underlying strength. The main impetus has come from reports regarding political situation in Tibet, Sikkim and Bhutan; the grave news of border intrusion by Chinese troops and fears of fresh taxation. Operators from Calcutta have continued to support the market and prices have touched new peak levels. Ready rates moved between Rs 205.25 and Rs 206.50.

The Gold section displayed considerable strength. Although there was some selling in the spot section on reports of some arrivals, bull operators were inclined to support the market, being encouraged by the performance of the silver section. Reports regarding the progress of talks of the future of the Bombay State and the probable bifurcation of the State led to renewed bull activity. Ready rates moved between Rs 124 and Rs 124.75.

*

Yarn

The Texile Commissioner has reviewed the position with regard to the distribution of indigenous Art Silk yarn to the art silk powerloom weaving units during the quarter July to September, 1959. It has been decided that 20 per cent more allocation can be made to such art silk powerloom weaving units, who have been issued allocation cards for the supply of indigenous art silk yarn during the current quarters. All the art silk powerloom weaving units, who have been issued allocation cards in the current quarter, are required to approach the indigenous yarn manufacturers for additional supplies of the same.

*

Non-Ferrous Metals

Importers of non-ferrous metals are perturbed over the prolonged indecision on the problem of Zinc distribution. It appears that the importers are nursing stocks of imported zinc for nearly three months in the absence of a Government directive on its disposal. The supplies were meant to be handed over by the importers, either to permit holders or units of non-scheduled industries; but the Government have been silent on the issue.

At the same time, the virtual freezing of supplies with importers has resulted in a shortage in the market. Consequently, the price soared to Rs 109.50 per cwt, to be presently quoted at Rs 106.50. It is felt that the Government should take up this question immediately, so that both the importers and the consumers may be saved from unnecessary difficulties.

The question of imports of non-ferrous scrap has also been hanging fire for quite some time now. Although several months passed, the Government have yet to take a decision. Copper Scrap is quoted at Rs 225 per cwt. Lead is quoted at Rs 80 per cwt and Tin at Rs 145 per quarter.

SONE VALLEY PORTLAND COMPANY LIMITED.

NOTICE

Is hereby given that the Annual General Meeting of the Shareholders of Sone Valley Portland Cement Company Limited will be held on Wednesday, the 30th September, 1959 at 4-30 P.M. at the Registered Office of the Company at 11, Clive Row, Calcutta to transact the following business:—

1. To receive and adopt the Director's Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st December,1958.
2. To declare a dividend.
3. To elect a Director in place of Shri V. Poddar who retires by rotation, but being eligible, offers himself for re-election.
4. To appoint Auditors for the current year and to fix their remuneration. The retiring Auditors Messrs. Lovelock & Lewes, Chartered Accountant, being eligible, offer themselves for re-appointment.

The Transfer Books and Register of Members of the Company will remain closed from the 18th September to 30th September, 1959, both days inclusive.

By Order of the Board,

S. L. TAPARIA,
Secretary.

CALCUTTA
The 25th August '59.

NOTE: A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote on poll instead of himself and such proxy need not be a member of the Company.

OLYMPUS

The State of the Second Plan

THE Planning Commission's latest review of resources and outlay concludes hopefully that, if the aggregate plan outlay for the first four years is taken at Rs 3,550 crores (as against the figure of Rs 3,660 crores arrived at by aggregating the 'actuals' for the first two years and the 'revised estimates' and the 'budget estimates' for 1959-60 respectively), the outlay for the five years will reach, if not exceed somewhat, the total of Rs 4,500 crores envisaged by the National Development Council in November, 1958. The five-year outlay, so estimated now, will be the equivalent of about Rs 4,000 crores in 1952-53 prices which, in turn, will represent five-sixths of the originally contemplated outlay of Rs 4,800 crores. This picture of the likely ultimate size of the Second Plan is a distinct improvement over what the Commission presented rather gloomily in November last. The then estimate, it may be recalled, conveyed in effect that anything between three-fourths and four-fifths only of the Plan in its original size would have been actually implemented over the five-year period. Now the turn for the better in the fortunes of the Plan has since come about may be better known from the following estimates of resources for the first four years 1956-57 to 1959-60 taken together:

(Rupees Crores)

Heads	Centre: Estimates for N.D.C. meeting in Nov. 1958	Centre: More recent estimates	States: Estimates for N.D.C. meeting in Nov. 1958	States: More recent estimates
Balance from current revenues ...	295	305	271	290
Railways' contribution ...	186	166	...	...
Loans from the public ...	408	435	191	196
Share of small savings ...	125	122	171	174
Misc. capital receipts ...	—48	—2	—50	—47
Central assistance to States ...	—799	—799	799	799
Deficit financing ...	898	1022	...	...
Withdrawal from reserves and ways and means advances from the Centre ...	...	...	89	99
External assistance ...	798	795	...	...
Total ...	1863	2044	1471	1511

It will be seen from the above figures culled out from the maze of tables in the Planning Commission's latest document that their present estimates of the 1956-60 aggregate outlay of Rs 3,550 crores very nearly tallies with the more recent total estimate of Rs 3,555 crores (Rs 2,044 crores plus Rs 1,511 crores) by way of resources at the Centre and in the States together. The Commission, however, have also given at the end of their review a conflicting picture of estimated resources for the four-year period. This is compared in the following table with the position as emerging from the foregoing table:

Heads.	As per recent estimates in the foregoing table.	Estimates as given on Page 80 of the Commission's documents.
Balance from current revenues ...	595	625
Railways' contribution ...	166	130
Loans from the public ...	631	611
Small savings	296	289
Miscellaneous capital receipts ...	—49	78
Deficit financing	1022	1245
External assistance	795	682
Total resources=Plan outlay ...	3556	3660

The discrepancies in the two sets of break-up figures are apparent but somewhat hard to explain. In respect of the difference of about Rs 100 crores in the two totals of the estimated resources, the Commission have assumed, on a broad judgment, the actual outlay on the plan in 1958-59 at about Rs 80 crores lower than the revised estimates of that year's Central and State Budgets. As for 1959-60, it is assumed that the actual outlay may turn out to be about Rs 25 crores lower than the year's budget estimates. This explanation for the Commission's present estimate of the likely aggregate outlay of Rs 3,550 crores over the first four years may be good enough in so far as the discrepancy in the aggregate figures is concerned.

But there is also the discrepancy in the estimates for deficit financing. Here it is figured out that the actual budgetary deficit in 1958-59 may have been lower by about Rs 110 crores. In which case, the estimate of Rs 1,245 crores may be reduced by a nearly corresponding amount. Even after such reduction, there is to be found a difference of more than Rs 100 crores in the two estimates for deficit financing, and this defies explanation. Similarly the difference of more than Rs 100 crores in the two estimates for external assistance cannot be adequately explained.

More reliable estimates of deficit financing and external assistance are clearly called for if one is to figure out the resources requirement for the last year of the Plan. If, however, a figure of Rs 1,149 crores for deficit financing in the first four years is taken as correct, it would mean that the revised five-year limit of about Rs 1,100 crores therefor has already been exceeded in the first four years. If the Planning Commission's argument that "with prices at the present level and with the growing pressures for wages and salaries to compensate for the increase in cost-of-living, there is, strictly speaking, no case for deficit financing for some time to come" is accepted, the Central Budget for 1960-61 would have to be a balanced one. But it may also be argued that if food production increases substantially or if large-scale food imports continue under P.L. 480 deals with the United States, and if, as a consequence, food prices register a distinctly downward trend, additional deficit financing can be safely contemplated.

The Commission, however, have left this question vague as far as the last year of the Plan is concerned. If it is assumed that out of the required resources of about Rs 950 crores for the fifth year, budgetary resources like balance from current revenues, railways' contribution, public loans small savings and miscellaneous capital receipts will be at the same level as in 1959-60, both deficit financing and external assistance may have to account for about Rs 440 crores. Since the foreign exchange gap estimated by the Commission for the last two years of the Plan is about Rs 310 crores and credit has been taken for external assistance of Rs 337 crores (covering both foreign exchange loans and P.L. 480 assistance for food imports) for 1959-60, it is doubtful if external assistance could be had on the same scale in 1960-61 as in the current year.

The substantial deficit financing that may take place even otherwise will have to be further stepped up in that situation if the financial target of Rs 4,500 crores by which the National Development Council has sworn and to which the Planning Commission seems to pay lip-service is to be attained. In which case, effective cushions in the form of food controls or otherwise against the possibly inflationary impact of deficit financing may well be deemed expedient. Whether the present system of partial food controls will logically lead to full-fledged controls is much more than an academic question in the present state of the Second Plan. It is difficult to believe that the new Food Minister, Mr S. K. Patil, will be able to think in terms of total decontrol which Mr Rafi Ahmad Kidwai effected in 1952-53. The conditions in 1959-60 and in 1951-52, it would appear, are not identical.

NORTH INDIAN NOTES

Food Debate

The debate on food in the Rajya Sabha, that was provoked by the resignation of Mr A. P. Jain, was marked by a fairly detailed exposition of the present situation obtaining in respect of prices for foodgrains in the States by Mr A. M. Thomas, Deputy Minister for Food and Agriculture. The main burden of his that the situation was not as alarming as was sought to be made out. And this he sought to prove by reference to the declining trend in the price for foodgrains in most of the States with the exception of Bombay and West Bengal. Prices for wheat and rice prevaling in the Punjab, Madhya Pradesh, UP, Orissa, Assam, Bihar and Rajasthan, according to Mr Thomas, were lower than last year. In the South, though prices were higher, a downward trend is already discernible.

As reasons for the rise in prices for foodgrains, which has an element of paradox in the context of the claims made by official spokesmen about record foodgrain production this year, Mr Thomas referred to factors such as impact of developmental activity and deficit financing and the phenomenon of producers holding up stocks with the support of credit available from cooperative societies.

The debate also evoked a variety of suggestions from members for solving the food shortage. And in all these suggestions there was discernible a concern for a realistic approach to the problem. Mr B. Shiva Rao, who was the most effective speaker from the side of the members, laid stress on increase in production which was the primary need as far as food was concerned. In this light, he welcomed the reported desire of the new Food Minister for coordinating the efforts and policies of some of the Central Ministries such as the Ministry of Irrigation and Power, Community Development and Commerce and Industry. Such coordination would go a long way in avoiding delay in laying down policies and taking decisions. With the responsibility for implementing agricultural programmes resting with State Governments, such inter-Ministry coordination at the Central level could be only partially helpful. What was even more desirable was the attainment of such coordination between the Food Ministry at the Centre and the State Ministries of Food and Agriculture.

The ideological explanation for the Food Ministry's failure to halt the price level was provided by Mr Bhupesh Gupta, the Communist leader, on the one hand, and Mr Rohit Dave, the PSP spokesman, on the other. Mr Gupta attributed the present level of foodgrain prices to deficit financing, ineffective implementation of the State Trading scheme and the non-utilisation of the Essential Commodities Act. According to Mr Rohit Dave, the machinery of State Trading created by the Government was by its very nature of self-defeating, since it was composed of the very wholesalers whom the state trading scheme was intended to replace.

*

Kanpur Power Shortage

A growing demand for power both for industrial and residential purposes is a current phenomenon in all the important urban centres and Kanpur, which is an important industrial centre, has been no exception to this. The annual report of the Kanpur Electricity Supply Administration refers to this growing pressure of demand from both industrial and residential consumers and states that the Administration has been fairly successful in meeting all demands from commercial, municipal and domestic consumers as well as from Government organisations.

Supply of electricity to residential consumers as well as to small scale industries registered an increase of nearly 1.9 million units during the last year, working out to an increase of about 5 per cent. However, consumption of electricity by bulk industrial consumers during the year is revealed to have gone down by 9.7 million units. The report explains this in terms of the failure of some of the large undertakings to utilise fully the blocks of power to which they were entitled. In the context of continuing pressure of demand, the report points out that the undertaking was not in a position to accept promptly all the demands for additional power required for industrial purposes. A pending demand for 35,000 kW of power reflects a state of shortage of power supplies and is an indication of the possibilities of industrial development in the near future.

The present power shortage is expected to continue until such time as the project for installation of 15,000 kW of power capacity gets completed. Undertaken in 1956, the implementation of this project is reported to have been halted by difficulties in obtaining finance and foreign exchange for the importation of plant.

For this hartal-abbreviated issue of Indian Finance, no explanation, I think, is necessary. Some of the despatches have not yet been received. (I don't know far this is the fault of the postal authorities). Some were received too late. Some workmen in the press did not turn up; and some came too late to do much work. We shall be able, I hope, to return to normalcy next week.

EAVESDROPPER

NORTH INDIAN MARKETS

Wool Prices Firm

THANKS to a general feeling among buyers that Wool is now on the way back to its former strength in world demand, the price for this commodity has been developing a firmer tendency. From the present manufacturing trends, it is expected that production in Amritsar will beat all previous records.

Australian wool prices have jumped by 10 to 15 per cent above last season's closing levels when the new Australian wool selling season opened toward the end of last week. It is stated that prices have been buoyed up by strong buying from Japan where small and medium mills are reported to be almost out of stocks.

With stocks now low, buying will certainly be better than hand-to-mouth and all connected with the woollen industry, from farmer to final consumer, can look forward to a good year. Although raw wool prices may rise, manufacturers may well be able to avoid passing the higher costs on through lower operating rates, more efficient machinery and keener selling. If this proves to be the case, the 1959-60 season in wool should prove an exemplary year in the commodity's history.

*

Foodgrains

Quiet and easy conditions have continued to prevail in the Foodgrains market, thanks to timely rains and excellent prospects for the "khariff" crop. The total output of foodgrains in the country in 1958-59 was put at 73.5 million tons, showing a substantial increase over the previous two years. Besides, heavy imports are reaching the country. India imported rice worth Rs 83.82 lakhs in May, 1959 against Rs 57.05 lakhs in the same month last year. In the first five months of the current year, however, the expenditure on rice imports is reported to be lower at Rs 3.03 crores against Rs 6.22 crores in the corresponding period of last year.

Meanwhile, state trading in foodgrains has, so far, proved to be a failure and the Government are anxious to maintain adequate stocks for the coming lean period. With the resignation of Mr A. P. Jain, important changes in food policy have been predicted.

In the Hapur market, Wheat prices have been ruing easier at Rs 18.25 to Rs 19.50 per maund, according to quality. Arrivals in the open market are still sparse and supplies from private sources are being diverted directly to consumers. The State Wheat Levy scheme is being continued; but very small quantity has reached Government stocks.

The market for Rice has registered a modest fall in prices following good crop prospects of the paddy crop. Gram prices are ruling easier due to the State Government's decision to stop gram purchases even at the controlled rate of Rs 12.50 a maund in the hope of a further fall in prices. Barley and Bejhar have eased fractionally in sympathy with the fall in gram prices and expectations of good "khariff" crop. Harvesting of early sown maize has begun and this is reflected in an easier tendency in the commodity price. The Pulses section remains quiet on lack of support.

Sugar

In the Hapur market, Sugar prices have spurted to a new high as open sales through the fair-price shops have been stopped and rationing arrangements are still incomplete. Supplies in the market are restricted and the demand for the coming festive season is brisk. Crushing for the new season is expected to begin some time in November. The rate for the commodity is quoted around Rs 125 per bag.

The Government of India have released 1.75 lakh tons of sugar for sale. There will be no free sale release from factories in the Punjab, Uttar Pradesh and North Bihar, except for a small quantity for factory employees.

BHATKAWA TEA COMPANY, LIMITED

Notice is hereby given that the Annual General Meeting of the Members of BHATKAWA TEA COMPANY, LIMITED, will be held at McLeod House; No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Wednesday, the 30th September, 1959, at 2-40 P.M., for the following purposes:—

1. To receive and consider the Profit and Loss Account for the year ended 31st December, 1958, the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.
2. To appoint a Director in place of Mr. G. T. Routledge, the Director retiring by rotation.

   And, in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956:—

   "That Mr. G. T. Routledge be and is hereby appointed a Director of the Company liable to retirement by rotation."

   Special Notice of the intention to propose the foregoing resolution as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, has been received by the Company wherein it is stated that Mr. G. T. Routledge is an "associate" of the Managing Agents within the meaning of the Act, and that therefore, he can only be appointed by a Special Resolution as a Director liable to retirement by rotation.
3. To appoint Auditors and fix their remuneration.

As Special Business:—

4. To consider, and if thought fit, to pass the following Resolution which will be proposed as a Special Resolution of which Special Notice as required by Section 261 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which, as required by Section 173 of the said Act, is annexed hereto:—

   "That Mr. A. K. Jalan be and is hereby appointed a Director of the Company liable to retirement by rotation."

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

By Order of the Board,
McLEOD & CO., LTD.,
C. L. Bajoria.
DIRECTOR.
MANAGING AGENTS.

3, Netaji Subhas Road,
Calcutta,
28th August, 1959.

EXPLANATORY STATEMENT

Mr. A. K. Jalan was appointed an Additional Director of the Company in July 1959, and vacates Office at this Annual General Meeting. A Special Notice has been received from a member of the Company notifying his intention to propose a Special Resolution as set out in item 4 of the above Notice. In the said Special Notice, it has been pointed out that Mr. A. K. Jalan is an "associate" of the Managing Agents and that, in view thereof it will be necessary for the members to pass a Special Resolution, in conformity with Section 261 of the Companies Act, 1956, if they desire to appoint him as a Director of the Company liable to retirement by rotation since McLeod & Co. Ltd., the Managing Agents of the Company are authorised by the Articles to appoint a Director or Directors on the Board of the Company.

MADRAS REVIEW

In Defence of the Government's Tax Policy

THE PENINSULA

THE South Indian Business representatives who mustered strong at the meeting addressed by Mr Morarjee Desai, Union Finance Minister, in expectation of some hints about any possible future concessions of taxes, would have no reasons to feel satisfied with the speech of the Finance Minister. For, Mr Morarjee Desai did not give even the shred of a hope of a relaxation of the fiscal pressure on the business community. He could not be led to an indefensible ground in respect of the taxation measures of the Government by the harping on the harsh features of the Government's tax policy by the President of the South Indian Chamber Mr K. Srinivasan. In an evidently extempore speech, Mr Morarjee Desai, gave almost a point-by-point answer to all the complaints raised by the Chamber President in respect of the adverse effects on saving, investment, capital formation wrought by the tax measures of the Government. In short, the Finance Minister furnished a thorough vindication of the fiscal policy pursued by the Government.

In his speech, Mr Srinivasan presented almost a lurid picture of the prospects for industrial growth under the conditions created by the Government levying taxes indiscriminately on the private sector. A 45 per cent direct tax on companies together with a 30 per cent levy on the distribution of dividends was straining the resources of the companies, and investors were left with hardly anything to subscribe to shares to which they were entitled. Scope for news savings is being narrowed by the gathering inflationary forces. What Mr Srinivasan wanted to bring to the attention of the Finance Minister was, that the economy was entering upon a phase of dissaving with a pprallel phenomenon of non-formation of new companies, on the scale and in the manner it occurred in previous years. The reduced tempo of industrial expansion referred to in the Reserve Bank Report was a sure indication of such dissaving being caused by the penal tax measures of the Government.

Mr Morarjee Desai had little difficulty in answering the points raised by the Chamber President concerning the difficulties caused to business enterprise by the Government's tax policy. These, the Finance Minister pointed out, look rather magnified when they are considered in isolation from the general strains that had developed in various points of the national economy in the process of implementing the Five Year Plans. These burdens over which the business men are complaining would shed much of their weight if they are considered in the wider perspective of the national efforts in which almost every section of the people are made to participate and contribute in proportion to their ability and resources. When a person drawing barely Rs 100 a month is being made to pay a variety of taxes on the articles he purchases, the businessmen have no reason to grumble for what they pay to the Government which the Finance Minister pointed out is neither repressive or excessive by any canons of taxation. Such taxes could be considered excessive if they had reached the stage of diminishing returns. This point has not been touched and tax realisations from Mr Morarjee Desai pointed out, had only increased with the new taxes imposed by the Government. There was therefore a case for more taxes and not for less.

Mr Morarjee Desai was also not convinced by what the Chamber President sought to prove as the impediments constituted by the tax measures to capital formation; for this argument stands refuted in the face of the phenomenal support extended by the money market to the recently floated State Government loans all of which came ultimately to be oversubscribed by a fairly wide margin. Against a total of Rs 68 crores which was sought by the State Governments, the total subscriptions were placed at about Rs 100 crores. The difficulties of capital formation were just a bogey raised by businessmen, which Mr Morarjee Desai said would only spoil the climate for investment.

Mr Morarjee Desai also would not accept what the Chamber President referred to as the effect of tax measures on industrial production in respect of which the Chamber President had quoted the Reserve Bank Report. It was not as if industrial growth had been retarded. If the index number of industrial production points to a decline, it only bears evidence of the distortion caused to it by the sweeping decline in cotton textile production. If this steep decline in cotton textile production could be disregarded, there should be no cause for alarm about the decline in industrial production referred to in the Reserve Bank Report.

Mr Morarjee Desai also provided a justification for the controls that had been clamped on various sectors of the national economy and pointed out that such controls were inevitable in a developing economy and were necessary to mitigate the rigours of adverse developments that occur in the process of implementing economic programmes. Such controls in some instances were the only answer to the contradictory trends which are in evidence in the country. For example in spite of the record production of foodgrains that is reported in the current year, prices have been following a strange upward course. When the normal relationship between price and production gets disrupted as in the case of foodgrain production and prices, the only way to hold the line on prices was to introduce control. To make insinuations of totalitarianism on the basis of such controls, would be to forget the factors that occasion such controls and the general aims that underlie them. Further, the mere existence of controls did not constitute sufficient proof of any totalitarianism or even the trend toward it. America which has more stringent controls than India could, on this basis, have no better claim than India to be called a democracy or to be considered less totalitarian.

Mr Morarjee Desai did not deny evidence of inflationary forces in the country; but pointed out that the difficulties posed by them could be smoothly tided over by a co-operative approach on the part of the Government and the business community. For that reason, however, he would not countenance the argument of the Chamber President that it was industrial labour, a comparative minority in relation to the massive agricultural population, which contributed solely to the creation of the problem. It was true the earnings of industrial labour had considerably increased thanks to the various measures taken by the Government to improve their living conditions. But, it was not for businessmen to complain of these consequences when they themselves as a tiny sector of the national economy were far ahead of the rest of the population in respect of spending power. With the wide gulf that divides the business community from the industrial workers, it was unthinkable that the Government should institute a reverse process of reducing the share of industrial labour in the national wealth. On the contrary there was need for increasing it still further.

Though Mr Morarjee Desai's ideas about the effects of taxes etc, were at complete variance with the viewpoints of the Chamber President, Mr Desai will have nothing of the controversy or conflict between the private and public sectors. In this view there was nothing controversial or conflicting in their character since they formed part and parcel of one national sector.

It is all very well to talk of the national sector in these terms. But the bald fact remains that private enterprise, or at least section of it, believes that there is discrimination on the part of Government as between the private and public sectors. I agree, that the work done by the two belongs to the national sector because it is in the national interest. But I still think that some incentive should and need be provided for private enterprise.

MADRAS REVIEW

Foodgrain Prices

It should not be surprising that, in the general upward movement of foodgrain prices, prices for foodgrains in Andhra Pradesh also should have gone up, notwithstanding the fact that the State is surplus in foodgrain production. Central purchases as well as purchases from Kerala were the chief factors that added to the pressure working toward a high price level for foodgrains. Procurement had to be introduced to protect the consumer against any unwarranted increase in price in the context of growing pressure. However, it is intriguing to find that the price paid by the consumer is excessively high as compared to the procurement price, the difference working out to about Rs 6 per maund. Mr Sanjiva Reddi, the State Chief Minister, has, sought to explain it in terms of the activities of speculators. Speculation is, of course, not to be discounted as a factor in the price rise, though to what extent such speculation exists cannot be known. It cannot, however, be overlooked that, in the context of partial procurement, the price will be influenced by the general trend toward a narrowing of the differences between prices in the different States.

In so far as the free access allowed to neighbouring States under the Zonal arrangement to draw on the supplies of Andhra had contributed to the price, a drop in it should follow the abolition of the zonal arrangement, and the constitution of the State into a zone by itself. It is from this viewpoint that the State Government had judged the merits of the zonal arrangement. Continuing high prices in the face of a surplus production to the tune of 5 lakh tons had hardened the Government's stand in favour of the abolition of the South Food Zone and for the creation of a separate zone for Andhra Pradesh. Until lately a subject of disagreement between the State Government and the Centre, there has been, latterly, a reported reconciliation of the Centre to the idea of a separate zone for Andhra Pradesh. The move has been welcomed in Madras also as indicating the prelude for the constitution of the Madras State also into a separate zone by itself for the movement of foodgrains. The Madras Ministers have also been equally frustrated with the working of the South Food Zone arrangement under which there was a regular drain of rice to Kerala.

*

Srisailam Hydro-Electric Project

The Andhra State Government utilised the visit of India's President to show him the potentialities of the proposed Srisailam Hydro-electric project. Estimated to cost Rs 34 crores and capable of generating 550,000 Kilowatts of electrical energy, this project would irrigate 3.5 lakh acres of land.

The Chief Minister of Andhra, Mr N. Sanjeevi Reddi, rightly stressed the need for his State of an exclusive power project. Presently Andhra State is sharing power from the Thungabadhra and Machkund systems with Mysore and Orissa Governments. The proposed Srisailam Project, on completion, would give cheap power to the Andhra State and also satisfy the much needed power for the industrial progress of this State.

It is so well known that the Krishna empties itself into the sea wasting a lot of water capable of producing plenteous power and also raising abundance of food and cash crops. The Srisailam project is an attempt, partly of course, to harness the river into two stages for a total production capacity of 550,000 Kilowatts. Five turbines would be installed, each capable of generating 110,000 Kilowatts of power. Facilities for further development would of course be made also in the erection. The water emptying itself into the Srisailam Dam would be further harnessed at the Nagarjunasagar Dam to produce additionally 200,000 Kilowatts of power. The irrigation acreage of 3.5 lakhs was originally proposed by the Siddheswaram Project. The new scheme would submerge 73,000 acres on completion.

Selection of Srisailam as the site was based on considerations of cost. At this spot the river is narrow, unlike at Nagarjunasagar, and due to this only a third of the expenditure need be met in proportion to the cost at Nagarjunasagar which is estimated at Rs 122 crores.

Along with the building of the Dam, it is proposed to construct a tunnel through boring of 45' diameter at Srisailam left bank for over 450 yards to drain the flow in the river. This tunnel would be usable later on to drain flood waters.

*

Dispersed Industrialisation

Indicating the future lines of industrialisation, Mr Manubhai M. Shah, Union Minister for Industries, pointed out, in the course of his inaugural address to the 31st annual general meeting of the Andhra Chamber of Commerce at Madras, that the Government's policy, during the Third Plan would be to see that the heavy industries were well dispersed. The need for rectifying regional discrepancies in industrial development had been for long urged by the States which, though having potential for industrial development, are, because of historical factors, industrially backward. The disparity in the development between the Southern States in the Peninsular region and such other States as, Bombay and West Bengal is pronounced and is reflected in the concentration of heavy industries in these two latter States and absence of such industries in the Southern States. Though a result of natural and historical factors, there could be little justification for the continuance of such disparity in the new era of planning.

Though the Government had never in policy statements, ignored the objective of regional balance in industrial development, the relatively modest outlays that were incurred under the First and Second Plans seem to have prevented proper consideration being given to regional development of industries. The postulation of larger outlays for the Third Plan has therefore a significance in that they should give more scope for promoting regional balances in industrial development.

Such regional development could considerably be helped by providing for the particular needs and aspirations of the backward regions and States. So far as the Southern region is concerned, these needs are clear enough. Andhra Pradesh has, for example, been very particular about a fertiliser factory, the lack of which is considered an anomaly in the context of its claims as a major foodgrain producing State. In Madras, the Neyveli lignite project and the bauxite ores found near the Salem district point to the possibilities for the setting up, though in a small scale, of an aluminium plant. These are only instances of projects the feasibility of which have been established by expert teams. A proper survey of the general resources of the region would point to possibilities in many other directions.

*

New Companies

The review of the working of the Companies Act in the Southern region for the quarter ending 30-6-1959 discloses that 87 new companies with an authorised capital of Rs 212.86 lakhs were registered in the region comprising the four States of Andhra Pradesh, Kerala, Madras and Mysore. The Madras State accounts for the largest share with 69 new registrations comprising both public as well as private companies. During the same period, the number of new companies registered stand at 3 in Andhra Pradesh, 7 in Mysore and 8 in Kerala. A feature in Kerala is that all the 8 registrations are in respect of private companies, while figures for the other States disclose registrations of public companies also.

Industry-wise, transport accounts for the largest registrations, the total being 37, while processing and manufacturing, which embrace such varied items as foodstuffs, textiles, leather, metals, chemicals, etc., come a near second with a total of 25. In the field of commerce, 13 new companies have been registered. The other company registrations are connected with agriculture, mining and quarrying, constructions, etc.

SOUTH INDIAN NOTES

The three public companies are limited by shares with an authorised capital of Rs 56 lakhs, while of the remaining 84 private companies, two are associations not for profit The other 82 private companies have an authorised capital of Rs 156.86 lakhs. The total investment by way of paid up capital of companies during the quarter is placed at Rs 543.55 lakhs.

The number of companies that went into liquidation during the period is put at 37, their paid up capital being placed at Rs 38.58 lakhs. Apart from this, information is given that 73 companies, including a company limited by guarantee, were struck off the Register of Companies as defunct, the paid up capital involved being Rs 18.33 lakhs.

The vigorous enforcement of the Company law is reflected in the facts and figures about prosecutions launched against companies for non-compliance with provisions of the Company Law. In this connection, the Review states that 64 prosecutions were launched in the Region against certain companies and their officers, for reasons which, in most cases, were failure to hold the Annual General Meetings and failure to file Annual Returns and Balance Sheets.

*

New Power House for Mettur

At an estimated cost of Rs 5.98 crores a new power house with an installed capacity of 100,000 Kilowatts with capacity to double it at a later stage has been given technical approval by the Central Water and Power Commission to be erected at Mettur. The new power house would utilise the irrigation discharge of the Mettur Reservoir.

The Madras State had reconstituted its Electricity Board with Mr W. R. S. Sathianathan as its Chairman. Mr Sathianathan was Chief Secretary to Government of Madras and he replaces Mr S. K. Chettur. The Board sanctioned necessary staff and preliminary work for the Mettur Tunnel Scheme envisaging the utilisation of the irrigation discharge of Mettur Reservoir during the season July to January. Under this a new tunnel will be constructed on the left side of the Mettur Reservoir through which water will be let into a new power house.

STOCK EXCHANGES

Recovery at Close

Watch-Dog Writes:

SENTIMENT in stock markets has continued to remain subdued and prices have recorded fresh lower levels on renewed selling pressure following the adverse developments in the political situation in the State. Operators are, therefore, inclined to restrict commitments, pending a definite improvement in the situation. But, a relieving feature is the marked recovery in prices noticed towards the close of the week.

The Calcutta Stock Exchange was in a dull mood with prices tending to ease in limited trading, although the closing tone was better.

The Bombay Stock Exchange finished the week with widespread decline in prices due to bull liquidation.

On the Madras Stock Exchange, buying support continued to be feeble.

Generally firm conditions prevailed on the London Stock Exchange.

Wall Street closed barely steady.

*

Calcutta

Calcutta, Friday.

CONDITIONS on the local Stock Exchange remained subdued and the downward trend in values, noticed towards the week-end, was carried a stage further during the week under report due to renewed selling pressure and lack of any support even at the lower levels due to various adverse factors. The most important factor, which induced hesitancy in the minds of the operators, was the dangerous turn in the political developments in West Bengal. The second factor was the complete absence of buying support from investors who had, so far, been basing their support on the growth prospects.

The hesitancy on the part of investors was due to a feeling that they had to revise their ideas if the present rate of tax was maintained or even raised in order to finance the Plan expenditures. They were also handicapped by the uncertainty over the receipt of net dividends from companies. Above all, they seemed to conserve their funds to subscribe for the forthcoming new capital issues. The only relieving feature of the week's trading was the buying interest still being shown in a few selected share groups.

Prices in the Giltedged section, continued to display a firmer tendency and the demand was concentrated on most of the short-dated and medium-dated issues; but scrip was reported to be in short supply. The decision of the Reserve Bank of India to step up the selling rates of some of the loans provided further fillip to the market. 3 per cent 1986 Conversion loan changed hands at Rs 74.10 to Rs 74.50.

The Banking section, ruled more or less steady with Punjab National changing hands at Rs 20.50 to Rs 20.87 and United Commercial at Rs 61.75 to Rs 62.

The behaviour of the Jute section, was comparatively better, with selected scrips enjoying sustained support, thanks to the announcement of satisfactory dividends by some of the mills in the Bird-Heilgers group and the ability on the part of all the mills to do simultaneous business in raw jute and manufactured goods. Profit-taking, however, erased some of the extreme gains at the close. Birlas changed hands at Rs 22.81 to Rs 22.94; Howrah at Rs 22.94 to Rs 23.62; National at Rs 22.50 to Rs 22.75; New Central at Rs 18 to Rs 18.37 and Kanknarrah at Rs 104 to Rs 107. Bally were a steady feature at Rs 219 xd. with Barnagore quiet at Rs 164 against Rs 166.

Coal shares suffered a sharp setback following the disappointment over the recent increase of 50 nP per ton in the price of the commodity. It was feared that the collieries, especially those producing lower-grade coal, might be seriously affected by the decision to turn the selling prices into "ceiling" prices, as these might boost uneconomic competition. Bengal were offered lower at Rs 308 against Rs 314; Burrakur at Rs 16.75 against Rs 16.94 and Central India at Rs 7.94 against Rs 8.09. Amalgamated were, however, a firm feature at Rs 26.50 in anticipation of encouraging working results. Western Bengal moved narrowly between Rs 6.25 and Rs 6.44.

One section, that was definitely lagging behind, was Tea. The recent increase in the wages to labourers in Dooars and Terai gardens gave rise to a fear that several gardens might have to close down on account of uneconomic working. Transactions were, therefore, few and far between. Bhatkawa were done at Rs 20.62 t Rs 20.81; Dhelakhat at Rs 21.87 to Rs 22.31; Hasimara at Rs 20.87 to Rs 21.06 and Jayshree at Rs 13.56 to Rs 13.62.

Activity in the Sugar section was restricted, as the prospects for cane supplies in the new season was considered to be uncertain, not to speak of the fears entertained in certain quarters with regard to the possibility of competition from khandsari units being still continued. The only steady feature was Raza/Buland at Rs 12.94. Ramnugger Cane were, however, on offer at Rs 20.31 to Rs 20.50 and SKG at Rs 10.94 to Rs 11.12.

Textile scrips, which had been ruling firm during the past many weeks, were also subjected to some profit-taking in sympathy with the general trend of the market. Jayshree eased off to Rs 10 from Rs 10.25; Kesoram to Rs 17.94 from Rs 18.06 and New Victoria to Rs 1.31 from Rs 1.44. Dunbar was marked down to Rs 188 from a high of Rs 194.

In the Engineering section, price movements were mostly influenced by the speculative activity in Indian Irons which, in turn, were subjected to renewed selling pressure on lower Bombay advices. The general disposition to await the announcement of the increase in steel retention prices was another contributory factor. Against the week-end closing of Rs 23.70, Indian Irons opened steady at Rs 23.71 and receded gradually to Rs 23.41. Towards the close, however, there was a sharp recovery to Rs 23.72 on reports of encouraging output for last month. In sympathy, TEXMACO was marked up to Rs 24.10 from a low of Rs 23.60 and Jessop to Rs 28.94 from Rs 28.62.

Miscellaneous issues shared the general trend of the market, although a few scrips emerged with minor losses on balance. Orient Paper were marked down at one time to Rs 37.90 from Rs 38.15 (Rs 38.40); Indian Cable to Rs 30.75 from Rs 31.37 (Rs 31.12); Indian Aluminium to Rs 21.25 from Rs 21.44 (Rs 21.62); Indian Copper to Rs 4.05 from Rs 4.09 (Rs 4.08); Sirpur Paper to Rs 13.25 from Rs 13.50 (Rs 13.87); India Steamship to Rs 13.94 from Rs 14.14 (Rs 14.06); Alkali Chemicals to Rs 22.25 from Rs 22.94 (Rs 22.37); National Carbon to Rs 36.37 from Rs 36.69 (Rs 36.56); NICCO to Rs 36.37 from Rs 36.62 (Rs 37.25) and Hindustan Motor to Rs 11.75 from Rs 12 (Rs 11.81). Figures shown within brackets were the week's closing rates. Rohtas were on offer at Rs 21.94 against Rs 22.12, while BIC and Clive Row Investments were nearly maintained at Rs 5.12 and Rs 10.25 respectively.

*

Bombay

THE Bombay Stock Exchange ruled easier during most part of the past week though toward close some improvement in sentiment was noticeable. Even so, the closing rates for the week ended Wednesday were lower on balance. Perhaps the intervention of the holidays was a contributory factor in the situation.. The main incentive for the lower levels was provided by the deterioration in the Sino-Indian relations following the violation of our borders by Chinese troops. Reports regarding the Defence Ministry from New Delhi had also had some temporary disturbing effect. Fears of higher taxation on account of the recent recommendations of the Planning Commission regarding internal resources also seemed, to be inhibiting interest in equities.

Equities opened the week on a dull note on Friday as Thursday was a holiday on account of Janmashtami. But the next day witnessed a severe setback following disturbing news from India's border with China. Thereafter sentiment slightly improved but by close on Wednesday listless conditions returned once again.

In the steel section Tata Steel after declining in earlier dealings to Rs 172.75 rerovered to Rs 175.50 but was finally placed on Wednesday at Rs 174.75. Indian Iron after fluctuating both ways closed at Rs 24.40.

Despite encouraging advices from the cloth market the textile section continued to rule easy. Bombay Dyeing after a subdued opening Rs 63.60 further lost ground to close at Rs 62.90. Century experienced alternate bouts of buying and selling on conflicting rumours about its forthcoming issue. After opening at Rs 552 it closed at Rs 547. Kohinoor opened at Rs 313 and in the course of the day's session reacted to Rs 303. It was finally placed another two points lower at Rs 301.

In the miscellaneors section, the general trend was toward lower levels. Bombay Burmah came back to Rs 514 from Rs 526. National Rayon receded to Rs 339 from Rs 348. Premier construction moved both ways to be finally placed at Rs 340. Telco was also easier on balance at Rs 197.50.

*

London

ALTHOUGH conditions on the London Stock Exchange remained somewhat unsettled early in the week due to a sharp fall in giltedged securities prices developed generally a firmer tendency toward the close following a revival of buying interest. Industrials were in good form and there was still a certain amount of selective buying in progress, Property shares being particularly favoured. Building shares went further ahead, while there were occasional gains in Stores. Motor shares, however, moved down under the lead of Fords and British Motor Corporation on the possibility of American competition in the small car field. Chemical shares were firm with Imperial Chemical meeting with good demand in anticipation of good half-yearly figures. Tin shares were steady after their recent advance.

The only exception to the general trend were Giltedged securities. Prices were generally easier although there was a partial recovery at the close.

*

New York

PRICE movements on Wall Street were rather irregular on alternate buying and selling. Trading was limited with caution evident on the feeling that Federal Resrrve Bank discount rates might be advanced to bring better alignment with the current money market.

Some quarters said that the discount rates might be raised to 4 per cent from 3½ per cent. This would be the highest level since 1932. In addition, it was noted that Bond yields had now reached a sufficiently wide premium over those available on quality stocks to attract significant interest in bonds by individuals and institutional investors.

*

Investment Notes:

The Ganges Manufacturing Company has sub-divided its Ordinary shares of Rs 100 into 10 shares of Rs 10 each.

The Simplex Mills Company Limited, Bombay, has proposed to issue 6½ per cent taxable Debentures. These are redeemable in full or partially between 31st March, 1959 and 1974. The entire issue has been underwritten by the United Commercial Bank and the Investment Corporation of India Limited.

The shares of Edward Textiles will be removed from the clearing list of the Bombay Stock Exchange from 1st October, although these will be done in the cash list after this date.

Amco Batteries (Private) Limited, Bangalore, has secured technical collaboration with a famous United States firm for the production of storage batteries.

*

Investment Briefs:

Burrakur Coal has announced an interim dividend of 5 per cent (taxable) for the year ended 30th June, 1959.

Sone Valley Cement has maintained the dividend at 30 nP per share for 1958.

Kettlewell Bullen & Company has raised the dividend from Rs 5 to Rs 6 per share for 1958.

In Bombay, Edward Textiles have maintained the dividend of Rs 15 per share, payable on or after the 8th October, 1959.

Bombay Uganda Company has recommended an interim dividend of Rs 2.50 per share, payable on or after the 5th October, 1959.

Bagalkot Cement has raised the dividend from 60 nP to 70 nP per share for 1958, payable on or after 1st November, 1959.

In Madras, Parry's Confectionary Limited has maintained the dividend at 20 per cent for the year ended 31st March, 1959.

General Papers have maintained the dividend at 12½ per cent for the year ended 31st March, 1959.

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

NOTICE OF MEETING

NOTICE is hereby given that the Forty-eighth Annual General Meeting of The Imperial Tobacco Company of India Limited will be held at Virginia House, 37, Chowringhee, Calcutta, on Friday, the 25th September, 1959 at 3.30 p.m. for the transaction of the following business:—

To receive and adopt the Accounts for the year ended 31st March, 1959 and the Reports of the Directors and Auditors thereon.

If considered desirable to declare a dividend.

To elect Directors.

To appoint Auditors and fix their remuneration.

The share transfer books of the Company will be closed from the 31st August to the 25th September, 1959, both days inclusive, and transfers received in order at the registered office of the Company by the 29th August, 1959, will be in time to be passed for payment of the dividend, if approved, to the transferees.

The dividend, if approved, will be paid on the 28th September, 1959, to the Shareholders whose names appear on the Company's Register on the 25th September, 1959, or to their mandatees.

By Order of the Board,
B. GRANGER PEARSON
Assistant Secretary

7th August, 1959
Virginia House,
37, Chowringhee,
Calcutta.

Notes: A member entitled to attend and vote at the General Meeting may appoint a proxy, who need not be a member, to attend and on a poll to vote on his behalf.

Shareholders are requested to notify the Company immediately of any change in address.

TYROON TEA COMPANY, LIMITED

Notice is hereby given that the Annual General Meeting of the Members of Tyroon Tea Company, Limited, will be held at McLeod House, No. 3 Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Wednesday, the 30th September, 1959, at 2-30 P.M. for the following purposes:—

1. To receive and consider the Profit and Loss Account for the year ended 31st December, 1958, the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. G. T. Routledge, the Director retiring by rotation.

   And, in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956:—

   "That Mr. G. T. Routledge be and is hereby appointed a Director of the Company liable to retirement by rotation."

   Special Notice of the intention to propose the foregoing resolution as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, has been received by the Company wherein it is stated that Mr. G. T. Routledge is an "associate" of the Managing Agents within the meaning of the Act, and that therefore, he can only be appointed by a Special Resolution as a Director liable to retirement by rotation.
4. To appoint Auditors and fix their remuneration.

As Special Business:—

5. To consider, and if thought fit, to pass the following Resolution which will be proposed as a Special Resolution of which Special Notice as required by Section 261 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which, as required by Section 173 of the said Act, is annexed hereto:—

   "That Mr. A. K. Jalan be and is hereby appointed a Director of the Company liable to retirement by rotation."

The Share Transfer Books of the Company will be closed from 20th September, 1959, to 30th September, 1959, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

By Order of the Board,
McLEOD & CO., LTD.
C. L. Bajoria.
DIRECTOR.
Managing Agents.

3, Netaji Subhas Road,
Calcutta,
28th August, 1959.

NOTE:—

Payment of the proposed Dividend, if declared, will be made on or after 12th October, 1959, only to those members whose names are registered in the Books of the Company on 30th September, 1959, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

Explanatory Statement.

Mr. A. K. Jalan was appointed an Additional Director of the Company in July 1959, and vacates Office at this Annual General Meeting. A Special Notice has been received from a member of the Company notifying his intention to propose a Special Resolution as set out in item 5 of the above Notice. In the said Special Notice, it has been pointed out that Mr. A. K. Jalan is an "associate" of the Managing Agents and that, in view thereof it will be necessary for the members to pass a Special Resolution, in conformity with Section 261 of the Companies Act, 1956, if they desire to appoint him as a Director of the Company liable to retirement by rotation since McLeod & Co. Ltd., the Managing Agents of the Company are authorised by the Articles to appoint a Director or Directors on the Board of the Company.

Indian Finance — INVESTOR'S SUPPLEMENT

Trading Irregular in August

Trading in the stock market during August was rather irregular with sentiment turning cautious towards the close. For some considerable time, however, indications were that the initial reactionary trend had definitely yielded place to steady conditions. It would appear that but for the somewhat serious turn in the political situation both inside the country and around it, the month would have ended on a cheerful note.

It was in an uncertain mood that the market commenced the month. But in a short while there was to be witnessed revival of interest. Evidently, the buying support stemmed from a number of favourable developments that had emerged at that time. In the first place, there was the satisfaction expressed over the TISCO dividend by the Bombay Shareholders Association. In reply to representation by the Association it was stated on behalf of the company that there was no reduction in the dividend in the sense that earlier assurances had been more than fulfilled.

Perhaps the most powerful incentive was derived from the second development, namely, the announcement that Government had accorded sanction to TISCO to issue its proposed fresh capital at par. The reason why this factor was considered to be of great significance was that Government decision on this issue would help answer the question whether or not a reversal of policy with regard to new issues had been made.

Yet another favourable development was the reiteration by the Finance Minister that a part of the LIC funds would continue to be available for investment in equities. It was also made clear by Mr Morarji Desai in Parliament that nationalisation of banks and insurance was not to be embarked upon. Those categorical statements together with the earlier assurance of the Prime Minister to the business community that the Private Sector would continue to have a prominent place in the industrialisation of the country, helped revive confidence in joint stock enterprise.

Concrete evidence of the progress of private enterprise was also available in the shape of excellent corporate news. Most industries in the private sector have now reached a stage, or fast reaching a stage, when they can reap the benefits of their expansion programme embarked upon in the past six, seven years.

The steadiness imparted by the encouraging influences noted above, however, did not last long as the market was soon put into suspense by a fresh set of adverse developments. Those were rumours regarding LIC figuring as a seller, the disappointment over TISCO accounts and continued payment difficulties. The rumour about the LIC turning a seller was not a new one as similar rumours had been circulated in the market place now and then during the previous month also.

It would appear that the rumour had its origin in the sudden increase in the number of shares at recent clearings. The argument was that in view of the general opinion that equities values had been inflated, institutional investors would like to take advantage of the higher price levels. Apart from the apprehension of the unloading of blocks of shares by institutional investors like the LIC, the rumours had undermined the confidence that the LIC would figure as a buyer only. Evidently it had been forgotten that the Finance Minister had made it clear even during last year's debate in Parliament over LIC's investment policy that it would figure both as a seller and a buyer.

A source of worry to the market had been the difficulties experienced over payments. Though no open breakdown could be discerned it was generally felt that the next settlement might not pass off as smoothly as its predecessor.

The State Loans were also contributing to the subdued tendency in the market.

The revival once again of sentiment in the third quarter of the month was largely due to the fact that earlier fears about payment difficulties were falsified although there were indications that there had been some strain. The tremendous success of the State Loans which attracted a total subscription of about Rs 100 crores as aganist a sum of Rs 68 crores asked for, was indicative of the large funds seeking profitable investment. Perhaps a helpful factor was the improvement noticeable in regard to two important industries which occupy prominent positions in Dalal Street and Lyons Range. Thanks to export incentives and other measures initiated by Government to help it, the cotton textile industry had been showing some recovery in recent months and it is expected that the current year would close with a much better record for the industry than the previous year both in regard to export performance and internal consumption. The jute goods industry is also enjoying good demand especially for its sacking goods and the general expectation is that the current year's working will show increased profits for the jute companies.

All these favourable indications in the investment situation were, however, overshadowed by the political developments in the last week of the month. The confirmation of Chinese aggression on our borders, the persistent reports of the Congress Party's decision to accede to the popular demand for the bifurcation of Bombay State, the rather unfortunate turn in matters affecting food supply resulting in the resignation of the Union Food Minister on the one hand and the intensification of the food agitation in West Bengal on the other, were not conducive to steady conditions in the stock markets. To these disturbing influences was added toward the close of the month the alarming report that the Army Chief of Staff was resigning due to difference of opinion with the Defence Minister.

Besides the inhibiting influence of political happenings, both investors and operators did not seem to be very anxious to extend commitments in view of the large number of new issues that were in the offing.

Sectionwise, Coal shares were depressed on the disappointing announcement regarding increase in coal prices. It was apprehended that the smaller collieries would be particularly adversely affected. As against the demand by the industry of a minimum increase of Rs 3.50 per ton, Government had awarded only a rise of Rs 0.50 per ton.

Tea shares also turned quiet as it was generally feared that the general increase in daily wages and a possible rise in the Calcutta Port charges might make Indian tea dearer to overseas consumers of tea than Ceylon and other teas.

Textiles were a comparatively steadier market toward the close of the month presumably in view of the higher advices from the cloth market.

(a1) Includes Rs 668,325 being amount drawn from extra excess provision made for depreciation on plant and machinery for the year ended 31-3-53.

(a2) After transferring Rs 9,00,000 from Reserve for taxation.

(a3) After transferring Rs 2,50,000 from General Reserve.

(a4) After transferring Rs 350,000 from General Reserve and Rs 165,000 from Machinery Rehabilitation Reserve.

(a5) After transferring Rs 4 lakhs from Reserve for fall in pice.

(a6) After transferring Rs 109,648 from General Reserve.

(a7) After transferring Rs 255,000 from General Reserve.

(a8) After transferring Rs 882,000 from General Reserve.

(a9) After transferring Rs 2,300,000 from Dividend Equalisation Reserve and including Rs 665,246 being profit of previous years on sale of Govt. Securities.

(a10) After transferring Rs 250,000 from General Reserve No. 1.

(a11) After transferring Rs 300,000 from General Reserve and Rs 1,428 from Dividend Equalisation Reserve.

(a12) After transferring Rs 320,000 from Contingencies Reserve.

(a13) After transferring Rs 150,000 from General Reserve.

(a14) After transferring Rs 100,000 from Dividend Reserev and Rs 163,764 from Taxation Reserve.

(a15) After transferring Rs 200,000 from Dividend Equalisation Reserve.

(a16) After rtransferring Rs 300,000 from Reserve and Rs 100,000 from Dividend Equalisation account.

(a17) After transferring Rs 470,000 from Dividend Reserve.

(a18) After transferring Rs 425,000 from General Reserve.

(a19) After transferring Rs 398,860 from General Reserve.

(a20) After transferring Rs 772,517 from General Reserve and Rs 78,483 from Development Rebate Reserve.

(a21) After transferring Rs 460,000 from General Reserve.

(a22) After transferring Rs 355,000 from General Reserve.

(a23) After transferring Rs 714,000 from General Reserve No. 1.

(a24) After transferring Rs 110,000 from Dividend Equalisation Reserve.

(a25) After transferring Rs 1,700,000 from Dividend Equalisation Fund. (a26) After transferring Rs 110,000 from General Reserve. (a27) After transferring Rs 550,000 from Machinery Reserve asd Rs 400,600 from Dividend Equalisation Reserve. (a28) After transferring Rs 240,000 from General Reserve and Rs 500,000 from Dividend Equalisation Reserve. (a29) After transferring Rs 325,000 from General Reserve. (a30) After transferring Rs 656,935 from General Reserve. (a31) After transferring Rs 100,000 from Dividend Equalisation Reserve. (a32) After transferring Rs 1,034,246 from Engine and Machinery Fund Rs 316,095 from Building Fund Rs 246,800 from Dividend Fund and Rs 50,000 from Reserve Fund. (a33) After transferring Rs 150,000 from General Reserve. (a34) After transferring Rs 1,070,571 from General Reserve.

(a35) After transferring Rs 137,557 from Contingency Reserve and Rs 117,601 from provision for refund of taxes.
