FOR THE INVESTOR

Outlook Bright, but . . . .

Investment Gossip :

THE smart rally in equities witnessed this week is in a sense inherent in the investment situation obtaining in the country at the present moment. But it is to be admitted that there would appear now and then dark clouds claiming our anxious attention and operators carrying on their business in a country wedded to a socialistic pattern of society would do well to make allowance for the inscrutable ways of Authority. From the revival of interest in equities displayed this week on the Stock Exchange, it would appear that operators have learnt to discount fairly quickly developments which have their origin in Government departments.

I am referring to the inordinately long time taken by Government to make known their decision with regard to the proposed new capital issue of TISCO. The issue is now deferred and there are whispers that, if Government's ideas on the matter do not fully tally with those of the company, the issue may altogether be abandoned. Be that as it may, operators have relegated the matter to the background, electing to look for the silver linings on the investment horizon. And the result is the cheerful trading noticed most of the time during the past week.

That is as it should be. For, corporate news, which should be the main deciding factor in investment matters, is indeed good. And there is every reason to believe that it will continue to be good. In this regard, it may be noted that, according to Dr B. K. Madan, Financial Adviser to the Reserve Bank, investment in the private sector during the Second Plan has far outreached the target set. The resounding success of the new Central Loan is according to expectations and operators have every reason to hope for a larger inflow of funds for investment in equities in coming weeks.

The outlook for equities must therefore be considered bright. But it is doubtful if the bulls will be able to dominate proceedings in view of the alarming situation still prevailing in Kerala. A late report indicates that the Communists are planning to take the Kerala issue to the rest of India while the opposition in Kerala is intensifying the struggle. The stock markets will perforce be obliged to take note of any further deterioration in the problem State of the country.

Investment Notes :

The figures of production of Indian Iron and Steel Company, Limited for June released during the week show declines except in steel ingots. Output of pig-iron amounted to 78,795 tons as compared with 94,105 tons in the previous month. Steel ingots are higher at 62,510 tons as against 57,483 tons. Saleable steel is lower at 49,296 tons as compared with 49,470 tons and the June output of this category is made up of 16,109 tons of semi-finished steel and 33,187 tons of finished steel. During May semi-finished steel amounted to 18,323 tons and finished steel to 31,147 tons.

£R$

Results of Metal Box Superlative

Balance-Sheet Reviews :

SUPERLATIVE results have been announced by the Metal Box Company of India Limited for year ending March 1959. Sales have risen from Rs 6.22 crores to Rs 7.10 crores. The cost of production has apparently not risen in any corresponding proportion, so that the net profit before depreciation and tax has gone up steeply from Rs 75.34 lakhs to Rs 111.59 lakhs. Including the amount brought forward Rs 16.63 lakhs, the amount available for disposal was Rs 1.14 crores, after providing Rs 14.02 lakhs for depreciation against Rs 13.04 lakhs in the previous year.

From the current year's profit, the provision for tax has been placed at Rs 56 lakhs. This compares with the provision in 1957-58 of Rs 39 lakhs; the development rebate reserve gets Rs 2.50 lakhs against Rs 2 lakhs. The transfer to general reserve has been raised substantially by Rs 5 lakhs to Rs 15 lakhs. The ordinary dividend has been maintained at 17½ per cent, leaving Rs 19.34 lakhs to be carried forward.

The Directors Report points out that the increase in profits is due in part to improved operational efficiency. The further information is vouchsafed that land has been purchased at Faridabad for a new factory to serve North-Indian customers, and production in the new premises is expected to commence early next year. Moreover, the old Calcutta factory has been substantially reconditioned. Both these are factors which augur well for even better profits being earned by the company in the future.

According to the balance sheet of Metal Box as at the end of March 1959, the paid-up capital is Rs 1.45 crores, of which Rs 36 lakhs is in 6 per cent redeemable cumulative preference shares. Against this, the reserves and surplus, swelled as they have been by allocations from the current year's profits, are placed at Rs 1.66 crores.

On the asset side of the balance sheet, additions during the year amount to Rs 28.27 lakhs. However, assets sold are shown at Rs 3.40 lakhs, so the gross block as at the end of March 1959 was placed at Rs 3.09 crores.

Depreciation provided so far amounts to Rs 1.13 crores so that the fixed assets have a book value of Rs 1.96 crores. Cash and Bank Balances are shown somewhat higher at Rs 17.04 lakhs.

The review of the year's working by the Chairman, Mr K. C. Mahindra, relates to the accounts of 1958-59. Mr Mahindra has pointed out that it was particularly satisfying to him to review a record performance achieved by the company. Sales rose during the year by 14 per cent. And there are various other points made by Mr Mahindra, but perhaps it may be as well to wait until the annual general meeting of the company is held. Reference needs, however, to be made to the fact that rights issue has been decided upon, for which consent has been received from the Controller of Capital Issues, in the ratio of two new shares for every five held. This issue is likely to be made later in the year. With the new issue, the ordinary capital will rise by Rs 46 lakhs. It is to be presumed that part of the proceeds may be utilised to redeem the preference share capital, which, it may be noted, is as from 1st April 1959 eligible for redemption at a premium of Rs 6.50 per share up to April 1, 1964. However, it is to be noted that the premium at which the redemption may take place goes down to Rs 1.50 per share after April 1, 1969. It may, therefore, be expedient for the company to utilise such new capital as it may raise in further expansion of the company's activities, or in redemption of current liabilities, rather than in redemption of the preference shares of the company.

Looking at the accounts, it is scarcely any wonder that Metal Box are among the bluest of the Blue Chips on the Calcutta Stock Exchange.

£R$

Larsen & Toubro

As a result of import restrictions, sales of Larsen & Toubro Limited, during the year ended March 1959, fell from Rs 3.76 crores to Rs 2.61 crores. On the other hand, servicing and service fees more than doubled from Rs 6.11 lakhs to Rs 12.98 lakhs. Commission, compensation and engineering fees were more or less unchanged at Rs 10.37 lakhs against Rs 10.43 lakhs. On the other hand, the amount charged for completed contract declined from Rs 11.15 lakhs to Rs 3.90 lakhs. Finally, however, there was an improvement both in the income from trade investments and in miscellaneous income, so that, after providing for all expenditures, the net profit, before taxation and depreciation, rose from Rs 25.55 lakhs to Rs 32.64 lakhs. Depreciation receives rather more at Rs 5.10 lakhs against Rs 3.73 lakhs. Development Rebate claims nearly Rs 1 lakh at Rs 0.98 lakhs against Rs 0.68 lakhs in the previous year. The provision for taxes has been raised sharply from Rs 12 lakhs to Rs 16.60 lakhs. The balance thus available is added to the sum of Rs 0.57 lakhs being provision for taxes no longer necessary. From the profits, a transfer of Rs 1 lakh has been made to the Dividend Equalisation Reserve and Rs 2 lakhs to the General Reserve.

The dividend on the ordinary shares has been maintained at 12½ per cent although, meantime, the ordinary capital had increased by Rs 10 lakhs for part of the period.

According to the balance sheet, the share capital is Rs 10 lakhs higher at Rs 75 lakhs, of which Rs 60 lakhs is in ordinary shares. The Reserve and Surplus are placed at Rs 19.37 lakhs. The gross block of Rs 56.44 lakhs is shown at a net value of Rs 32.03 lakhs.

The Directors state that the output from the company's workshop at Powai is steadily increasing. Substantial orders are under execution, and the workshops are being worked to full capacity. Further expansion is in progress.

Moreover, the company intends at its annual general meeting to

be held on 20th July to consider resolutions whereby purchases of shares are to be made in Alu Capsules Private Limited, India Crown Cork Company Private Limited and Viking Transport Private Limited, so as to make them wholly owned subsidiaries.

It may be noted that the Directors have resolved to increase the paid-up capital by Rs 20 lakhs with a rights offer to ordinary shareholders. Consent for the capital issue has already been obtained from the Controller of Capital Issues, and the notice of offer is due to be sent out early in August this year.

The successive balance sheets of Larsen & Toubro show that it has been notching up steady and satisfactory progress year by year.

£ R$

Cawnpore Textiles

The Cawnpore Textiles, Ltd., in its accounts for 1958, show that sales have risen from Rs 66.41 lakhs in the preceding nine months period to Rs 1.16 crores in the full calendar year. Thus, comparisons are not possible. In the last year, an amount of Rs 3.35 lakhs has been provided for depreciation. After meeting this charge, the company has suffered a loss of Rs 11.85 lakhs during the year. Nevertheless, with additions to block during the year, of Rs 5.12 lakhs, it became necessary for the company to provide Rs 1.20 lakhs against the Rehabilitation Reserve Development Rebate account. Thus, the debit balance carried forward to the balance sheet is Rs 12.94 lakhs.

The Directors Report stresses that the results for the year reflect the extremely difficult conditions in the industry. Not only were the cotton prices high, but a substantial rise in the dearness allowance further increased the cost of production. However, since the year under review ended, trading conditions have somewhat improved. In this sense, the Directors expect that the results for the current year are expected to show an improvement on the those of the past year.

According to the balance sheet as at the end of 1958, the ordinary share capital of Cawnpore Textiles is Rs 36 lakhs. Against this, the reserves and surplus amount to Rs 34.63 lakhs. The gross block of Rs 81.00 lakhs has a net value of Rs 18.13 lakhs.

£ R$

Coorg Tea

The accounts The Coorg Tea Company Limited for the year ended March 1959 reveal an increase in sales from Rs 6.99 lakhs to Rs 7.15 lakhs. The net profit has risen by more than 50 per cent from Rs 1.35 lakhs to Rs 2.08 lakhs. The advantages mainly accrued to taxation, which receives Rs 72,100 against Rs 21,562. The provision for depreciation is also higher at Rs 22,787 against Rs 16,623. Although the rate of dividend has been maintained at 20 per cent, this is on an ordinary capital which is higher by Rs 80,000. Thus, the amount absorbed by the dividend is Rs 96,000 against Rs 80,000.

According to the balance sheet as at the end of March 1959, the gross block of Rs 10.89 lakhs has a net value of Rs 8.93 lakhs, in addition to the ordinary capital of Rs 4.80 lakhs, there are preference shares to the tune of Rs 2.50 lakhs. The Reserve and other funds are shown at Rs 4.70 lakhs.

The prospects for 1959-60 are a crop of 3.50 lakh lbs. of tea against the crop of 4.12 lakh lbs. in the year under review. In fact, it was the much lower cost of production of tea during 1958-59 which contributed to the handsome profit in the year. The estimate for 1959-60 provides for a slightly higher cost of production.

£ R$

Ogale Glass

The Ogale Glass Works Ltd has in its accounts for 1958 been able to declare a dividend of 4 per cent on the paid-up capital of the company. Sales rose from Rs 54.40 lakhs to Rs 63.02 lakhs. Depreciation has absorbed less at Rs 2.68 lakhs against Rs 3.03 lakhs. The balance carried down is Rs 56,690 against Rs 36,569.

The Directors Report points out that a further sum of Rs 2.16 lakhs has been repaid to the Industrial Finance Corporation. The balance now outstanding to the IFC is Rs 9.86 lakhs.

Fixed assets at Rs 51.00 lakhs are shown at a net value of Rs 30.19 lakhs.

'The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right'—The Analects of Confucius.

The Goodwill Trade Mission

THE good work done by the Industrial Delegation led by Mr G. D. Birla, which visited USA, Canada, UK, Germany and France in the fall of 1957, has been continued and consolidated by the Mission led by this year's President of the Federation of Indian Chambers, which has just turned in a competent and comprehensive survey of export prospects and problems. *The Mission consisted, apart from the President and the Secretary of the Federation, of six members selected by the Federation to represent specific industries and trade. In the course of its two months' visit, the Mission covered most of the important countries outside the Soviet bloc with which India has trading relations. The members also attended the XVIIth Biennial Congress of the International Chamber of Commerce which met in Washington on April 20-25 and two of the members took part in the subsequent Conference on "India-USA, 1959".

Apart from its main assignment of exploring export prospects, the Mission also took advantage of the opportunity to discuss the scope of participation of American private capital in Indian industrial ventures, and the observations made on this topic in the Mission's report are of considerable interest. The report urges that the Government of India should give immediate attention to the proposal, made two years ago, for setting up an Investment and Information Centre in the United States with a base office in India. In addition to giving information about investment opportunities and conditions in India, the Centre, it is suggested, could also perform the useful function of having applications of foreign investors processed and expedited in their progress through the departmental mills. The delay in establishing such an agency is perhaps the result of failure to arrive at a decision regarding the agency, governmental or non-governmental, under which the centre should be set up. In view of the general attitude of businessmen in the United States to governmental agencies, it will be preferable that the Federation should take the initiative in setting up the Centre. If the Federation is to be enabled to undertake this heavy responsibility, it will be necessary to strengthen its status and financial resources as well as of its constituent bodies. As the Mission has suggested, the status of the Federation as the central organisation of Indian industry, trade and commerce must receive both administrative and legal recognition.

As regards the main objective of their tour, the Mission has been particularly careful to place the drive for exports in proper perspective. The compulsion to export arises not from a genuine surplus except perhaps in one or two commodities, but from the necessity for the imports required for our programme of development. Unless the countries which are in a position to supply equipment and materials for our industry are prepared to help by buying more from India, it will not be possible to look forward to an early relaxation of the import restrictions over a wide range of goods. At the same time, the Mission has emphasised that India is only one of the countries seeking to export to the International market and will have to go after its share on a competitive basis by adopting the appropriate measures.

Hitherto measures of export promotion have been directed mainly towards the Indian businessmen—to the provision of facilities and incentives and relaxation of administrative restrictions on exports. These include the setting up of Export Promotion Councils and Committees; schemes of drawback of import and excise duties paid on materials used in the manufacture of articles for export; reduction or withdrawal of export duties; supply of iron and steel and other materials in short supply on a priority basis to export industries; issue of special import licences for essential commodities required by these export industries; and railway freight concessions. These measures have been helpful in maintaining Indian exports during a difficult period. Indian businessmen are also keenly aware of the importance of exports for maintaining the level of economic activity in the country. But the main work in expansion of exports has to be done abroad. The Mission has rendered valuable service in drawing attention to the difficulties from the standpoint of the foreign buyer.

One of the principal difficulties arises from frequent changes in export policy in respect of quota items. The Mission urges that there should be continuity in export policy and, in respect of quota items, a minimum level of exports should be ensured. While efforts to diversity exports and to explore new markets should be intensified, we have to look to the traditional markets and exports for a large part of our export earnings at least for many years to come. In this context the Mission has drawn attention to the need for upgrading standards of manufacture of textiles according to the specifications and requirements of foreign buyers. The jute industry must be alert to meet the competition from substitutes as well as from other manufacturing countries and should take steps to manufacture the specialities which the USA, one of its principal markets, now gets from other jute manufacturing countries. As regards tea, the Mission has stressed the need for effective propaganda abroad.

Development of trade is a matter of establishment and maintenance of personal contacts. The Mission has suggested that Government should facilitate such contacts by more liberal allotment of foreign exchange for business trips abroad and by smoothening the visits to India by foreign nationals, whether tourists or businessmen. The Mission has also strongly urged the importance of encouraging Indian firms to open branches abroad. The fact that such concession may be exploited by some black sheep, for evading foreign exchange regulations, should not stand in the way of the adoption of a flexible and pragmatic approach.

In view of the heavy weather that is made from time to time about the complaints against Indian exporters, it is satisfactory to note that the Mission found on enquiry that the complaints were not such as to cause serious concern. The complaints were generally against new entrants who were anxious to make quick profits. In this context the Mission has made the useful suggestion that exports in particular commodities should be handled by export houses or associations which will be responsible for the maintenance of the standards of quality and performance. It is also suggested that adequate publicity should be given to facilities for arbitration now available and that the possibility of entering into arbitration agreements, similar to those with the American Arbitration Association and the Japanese Commercial Arbitration Association, should be considered.

As regards the State Trading Corporation, it is not surprising that the Mission has made the categorical declaration that the STC is not the answer to our export problems. To this negative conclusion it has added the constructive suggestion that industry and trade in India should "organise themselves in such a way as to make unnecessary the continuation of the STC, which apparently is irksome not only to business in India, but also to business abroad, especially in free competitive countries."

*The members of the Mission were: Mr Madanmohan R. Ruia, leader; Mr K. P. Goenka; Mr Bharat Ram; Mr Ramanbhai B. Amin; Mr A. M. M. Arunachalam; Mr A. Nagappan; Mr T. Abdul Wahid; Mr P. Chentsal Rao.

The Structure of Interest Rates in India—V

By B. KRISHNA RAO

LIMITED PRIVATE AND PUBLIC BORROWING:

In India the capital market is not broad-based. The savings and investments habits are not widespread. There are few specialised financial institutions established by private effort. Little information is obtainable in India on the new issue activity of the private sector, and also on the finances of the Local Bodies. During 1952-57 the total amount of capital issues sanctioned by the Controller of capital issues is Rs 403 crores of which only Rs 319.34 crores were subscribed. Debenture capital sanctioned was of the order of Rs 43.66 crores and of this only Rs 37.04 crores only were subscribed. A survey made by the Reserve Bank regarding the borrowings and investments of local authorities during 1951-57, a survey which bridges a gap in the available financial statistics,* reveals that in each year of the First Plan period net borrowing of the local authorities averaged a little over 3 crores. Most of the loans had been approximately for a period of 10 years and the rate of interest offered by the Corporations and Port Trusts had been within 3 per cent to 3¾ per cent in 1951 which had later risen to 4—4¼ per cent. Dealing with the problem of making available cheap credit to the private sector, the Shroff Committee has suggested that the In-

*Monthly Bulletin of the Reserve Bank of India, April 1958.

dustrial Finance Corporation should try to reach a workable arrangement with the borrowing company by which the rate of interest on loans granted by the Corporation should be reduced on condition that the assisted company compensates the corporation when it reaches a profitable stage by repaying to the Corporation the difference between the reduced rate and the Corporation's usual rate. The recommendation of the Gorwala Committee that trading in securities must be restricted under the law to one exchange only in any suitable area has the aim of securing an effective control over speculation. It incidentally brings about a concentration of the forces acting on the rate of interest in the area concerned. This may reduce the variation of the interest rates as within a region. The existence of regional variations is a noticeable feature in under-developed countries such as ours. The marketable rupee loans issued by the Government of India show an increase of only Rs 195.99 crores between 1951-52 and 1957-58 and at the same time the permanent debt of the States increased approximately by Rs 152.83 crores only. The rate of interest on public debt has been rising in this period; the loans between March 1952 and March 1958 allowed a higher yield to the investor than before. The rise in small savings has been more than Rs 300 crores but the rate of interest was not raised until June 1957, when an increase on various items was announced. Public and private loans do not appear to be large during 1951-58.

CAPITAL FORMATION AND LOWER RATES OF INTEREST:

In the long run the mobilisation of capital resources and the developmental effort of the Indian economy helps to lower the interest rates by improving capital market and increasing the capital stock. Efforts are now being made to improve the institutional set-up of the country. The Reserve Bank is authorised to subscribe to the share capital of any financial institution notified by the central government and also to provide such institutions with short term accommodation for a period of three months. Further, the State Bank is enabled to grant medium credit in certain cases upto seven years under an amendment in 1958 of the State Bank of India Act. The Industrial Credit and Investment Corporation was established in India in 1955 to make cheap credt available to industries entirely in the private sector. This Corporation has secured the assistance of the IBRD in addition to the assistance provided by the government of India. The provision of short term credit to State Cooperative Banks, and the State Financial Corporations for financing production and marketing activities of cottage as well as small scale industries by the Reserve Bank, the grant of medium term credit for agricultural purposes for periods extending upto five years, the opening of new branches by the State Bank of India in rural areas, the expansion of postal savings facilities, the improvement of remittance facilities available to the banking system etc., increase the degree of monetisation of the economy and influence the interest rates. The central government has also set up the National Small Industries Corporation to cater to the requirements of the small scale industries and the National Industrial Development Corporation to encourage and aid the medium and large-scale industries, for the development of all these industries is necessary for the harmonious development of both the public and the private sectors of the economy. The setting up of the Refinance Corporation in 1958 to provide relending facliities to industrial concerns against loans given by banks is also another step in the expansion of financial facilities made available to the industries included in the second Five Year Plan. In order to spread the habit of investment in the rural areas, rural debentures are issued by the apex cooperative land mortgage banks at the time of harvest at slightly higher rates than their ordinary debentures and the Reserve Bank has been also participating in this scheme to make it a success. The rate of development which is sought to be increased by creating the new institutions and organised efforts under the Five Year Plans may increase the rate of interest during the process of development. It can be concluded, however, without a premature judgment on the various institutions which are all of recent origin, that if the credit mechanism becomes more developed and if the available capital is better mobilised in conjunction with the developmental efforts taking place in the economy, the rates of interest in the country may tend to move downward. Normally this result is facilitated if the rate of population growth will at least be matched by the rate of capital formation. When population grows too rapidly, the demand for capital increases too, raising the rate of interest which will however be abated to the degree that labour-intensive techniques become economical or desirable.

CASE FOR A CHEAP MONEY POLICY:

Gearing down the structure of interest rates to a lower level is not entirely without justification for dear money raises the cost of public borrowing which takes place on a large scale during the period of planning in under-developed economies. In addition to raising the cost of public debt dear money also affects the lending policies of various credit institutions which are established to assist small scale and large scale industries. Moreover, the high rates of interest prevailing in the present when in the future the rates are expected to fall do not create a climate favourable for the rationalisation of industry for which borrowing on a large scale is necessary. The fact that the rates such as those charged by cooperatives operating in rural areas also affected because of the rise in the concessional rates at which accommodation is made available by the Reserve Bank to the Cooperative-apex-banks does not augur well for the improvement of credit facilities in agriculture, and for the further extension of the cooperative movement. The high rate of interest is in itself a cause of a high level of rural indebtedness and the effort only to lower these rates could be regarded as beneficial to the agriculturist and agricultural production. As savings respond more easily to increases in incomes than to slight increases in the rate of interest a lower rate of interest may not react adversely on savings. In fact the effect of lower rates in agriculture may facilitate increased production which besides acting as a restraint upon inflation also enables the urban areas to strengthen their savings margin. If a lower rate of interest is charged on advances under the bill market scheme, it may increase the popularity of the scheme and help the speedy development of a bill market. It is these advantages that could be urged in favour of a cheap money policy. A sufficient dose of deficit financing aided by a lowering of the Bank rate may bring about cheap money conditions at once but these should be prevented from creating an inflation. The pursuit of a cheap money policy can however be timed when over-all economic conditions are favourable.

EDITORIAL NOTES

Transport Council

The fact that the Transport Development Council, at its first meeting held in New Delhi last week, decided to set up a high-level committee to lay down a long-term policy for development of transport is an indication of the complex nature of the problem. The Committee has broad terms of reference, but its main task is to co-ordinate different means of transport and to suggest suitable mechanism for effecting such co-ordination. The Railway Minister's reference during his speech on the Railway Budget to the diversion of high rated traffic from Railways to Roads, and the subsequent imposition of heavy excise duties in diesel oil in the General Budget had created some apprehension that further curbs might be placed on road transport. In his address to the Transport Development Council the Union Minister for Transport has emphatically rejected the suggestion that there was any conflict between his Ministry and the Ministry of Railways. As Mr Patil pointed out, we are far from reaching the point of saturation as regards the scope for various modes of transport. It should not therefore be necessary to safeguard the interests of railways by placing restrictions of the expansion of motor transport. As it is, motor transport in our country has to contend against several handicaps which stand in the way of the development of its full potentialities. Attention has been drawn on several occasions to the need for rationalisation of the tax system, liberal issue of permits and removal of interstate barriers to the movement of commercial vehicles. But the basic requirements are the provision of motorable roads and secondly an adequate number of vehicles to make use of them. In both respects there is large scope for planned development. The Council was told by Mr Raj Bahadur that the Nagpur Plan targets had been achieved four years ahead of the scheduled date for the completion of the Plan. But, as he himself pointed out, there are still many urgent works to be executed and missing links have to be provided before the country is fully linked up by a system of national highways.

Pakistan Budget

The budget presented by Pakistan's Finance Minister at a press Conference on June 30 shows competence according to orthodox standards. This is the first budget of the Military Government covering a full year. The beginning of the financial year has been shifted from April to July, as announced last January. The new financial year from July to June also coincides with the financial year of the United States. When the announcement of the decision to change the financial year was made, it was explained that it would facilitate the formulation of budget proposals as the extent of the US aid would be known. The argument has considerable force, since US aid accounts for the lion's share of the Pakistan Government's expenditure.

Revenue is estimated at Rs 154.08 crores and expenditure met out of revenue at Rs 151.45 crores, leaving a surplus of Rs 2.63 crores. This has enabled Mr Shoaib fulfil in part his earlier promise of a revision of tax policy, by offering concessions. The tax reliefs intended to benefit the common man include reduction of duties on some items of everyday use like spices, cheaper rail fares and exemption of coarse cloth from increased duties. The budget also benefits companies. The inter-corporate tax, that is tax on investments in other companies has been reduced to 15 per cent in case of holdings in approved undertakings while the maximum profit limit for 5 per cent rebate has been raised from Rs 25,000 to Rs 2 lakhs. Addressing a press conference in Karachi on January 17, Mr Shoaib had stated that he intended to reduce "personal taxes" in his budget. Apparently circumstances have not enabled him to carry out his promise.

In his budget statement Pakistan's Finance Minister has also underlined the favourable developments in the economy. Production has improved in the Jute and Cotton industries. The revised estimates for the period of fifteen months ending June 30 shows a surplus of Rs 19 lakhs after writing back to revenue loss of Rs 19 crores on account of subsidies on sales of food grains, as against an estimated deficit in April 1958.

The budget is calculated to sustain the impression that administrative stability of the military regime is matched by financial rectitude. But a surplus by itself means little. And tax concessions can only afford temporary satisfaction unless accompanied by a well conceived programme of economic development. But Pakistan Government, unfortunately, continue to be handicapped by a heavy load of military expenditure, in spite of broad hints from their friends and patrons in the United States to prune the military budget.

That the military budget accounts for Rs 86 crores out of total expenditure of Rs 151.45 crores, excluding US military aid, is not however, a matter for surprise. It is not reasonable to expect that the Government of Pakistan would be able to cut down military expenditure immediately after criticisms had been made in testimony before US Congressional committees. It is clear that US military authorities do not set much store by Pakistan's military machine as a bulwark against Soviet aggression. So President Ayub Khan has been busy resurrecting the Indian bogey to justify inflated military expenditure, though no intelligent person in Pakistan, not to speak of the outside world, will be prepared to take it seriously. The real problem is that Pakistan has built up an outsized military establishment with foreign assistance and its reduction will be difficult for any regime and more so for a Government based entirely on army support. That does not however make it any less of a menace to neighbouring countries like India which only desire to be left in peace to pursue economic development of their own territories. It is the inescapable responsibility of the United States which has raised this Jinn to keep it safely bottled up.

*

Swatantra

True to its name, the Swatantra party has started by giving complete **Swatantra** (freedom) to its members to propagate their own views on current political controversies. A few days ago Mr Rajagopalachari issued a pungent statement on Congress tactics in Kerala, which he castigated as a mean subterfuge to bypass the Constitution. It is obvious that for Rajaji any stick is good enough to beat the Congress. But his principal lieutenants hold other views. For instance Mr Masani has issued a tortuous statement showing how it is possible, within the four corners of the Constitution, to deny its protection to the Red regime in Kerala. Mr V. P. Menon from his retreat in Bangalore is more forthright. He has no doubt, whatever, that the Communists in Kerala are a set of thugs who should be straightaway dislodged from seats of power. Then there is the interesting spectacle of some of the ardent supporters of this party, which was formed by Rajaji to halt what he fears is a headlong plunge down the slippery socialist slope, arguing desperately that what the new party stands for is 'genuine socialism' as opposed to the spurious Congress pattern. If this goes on we may look forward to the emergence of a Swatantra Socialist party.

For the moment what holds together this motley band of intellectuals, who have agreed to accept Rajaji's walking stick as their flagstaff, is opposition to State Trading in foodgrains and cooperative farming. As regards State Trading, it is difficult to see how it can survive the latest changes in food policy which the Government of West Bengal have been obliged to adopt, though its ghost will continue to haunt ministerial utterances for sometime, frightening the superstitious. As for cooperative farming, Government is evidently in no hurry to go beyond service cooperatives. An examination of cooperative laws is now under way. When this will be completed, and the laws simplified so as to enable illiterate kisans to form cooperative societies free from official contamination, is anybody's guess. Unless, therefore, the Swatantra party is able to frame a positive policy as against sterile opposition to the Congress programme, it will find itself in the position of the boy in the fable who amused himself by crying "Wolf".

WORLD OF FINANCE

New Loan Fully Subscribed

THE subscription lists for the new loan opened on July 1; were kept open on July 2; and the notification that the lists were closed, owing to the loans being fully subscribed—and not oversubscribed—came late in the afternoon of the second day. Information has also been vouchsafed about the extent of cash and conversion subscriptions, as well as the realisations by the medium term and the long, long-term. Pending further evidence, in the banking statements, we may therefore now proceed to make our first observations about the first tranche of the Government's borrowing programme during the current fiscal year.

Total subscriptions, at Rs 183.84 crores, exceeded the amount on offer by Rs 8.84 crores; that is to say, almost exactly by 5 per cent. Conversions, presumably as relating both to the 3 per cent 1959-61 and the 2½ per cent Hyderabad loan, were at the considerable figure of Rs 89.38 crores; thus, roughly Rs 30 crores of the maturing loans have not been converted but have, for the moment, opted for cash upon maturity. The 3½ per cent 1969 fetched Rs 102.91 crores, and the 4 per cent 1979 realised Rs 80.93 crores. Cash subscriptions are to be placed at Rs 94.43 crores; and if allowance is made for Rs 30 crores of maturing loans which have to be paid off, net new cash accruing to Government from the loan programme is of the order of Rs 64 crores.

The money market information is that banks were reluctant to convert into either of the new loans; even the 3½ per cent 1969 is considered too long an issue. While Indian Scheduled Banks had no choice about the matter, the Exchange Banks were clearly in a position to bide their time, hoping no doubt that, with the proceeds from the maturing loans, they could purchase short-dateds in the open market or from the Reserve Bank tap.

Secondly, provident fund institutions and other institutional investors were quite happy to convert into the 4 per cent 1979; the loan already quoting at a premium of one anna.

Thirdly, the bulk of the maturing 3 per cent 1959-61 was held by the Reserve Bank; so the considerable magnitude of conversions need cause no surprise.

Next, the LIC is known to have kept apart a fair amount for the new loan; the State Bank might have put in about Rs 20 crores; the other Scheduled Banks are also likely to have mustered another Rs 20 crores. But, beyond all this, it is almost certain that, in manner similar to recent years, the Reserve Bank will also have subscribed in cash; and the amount involved in the current year may be around Rs 40 crores.

Cash subscriptions received by Government should enable them to institute reverse ad hocs for, say, Rs 80 crores.

Finally, the long term, with a maturity period of 20 years, must be deemed a considerable success, since subscriptions to it fell short of realisations by the medium term only by Rs 22 crores.

✣

Slack Season Gathers Momentum

THE returns of the Reserve Bank for the week ended June 26 are replete with indicators confirming that the slack season has now got well into its stride. Active Note circulation has, in the latest week, fallen by Rs 24.22 crores to Rs 1713.56 crores. As at the latest week, the contraction in Note circulation has amounted to the considerable figure of over Rs 61 crores, from the peak touched in the wake of the 1958-59 busy season during the week ended May 8. Moreover, Rupee Coin has returned from circulation in the considerable amount of Rs 1.51 crores. Currency has been contracted against Rupee Securities for Rs 20 crores by transfer to Investments in the Banking Department. In the result, the Reserve Bank's cash in the till has somewhat improved by Rs 5.72 crores to Rs 38.45 crores.

The return of the Banking Department shows that the Reserve Balances of Scheduled Banks have increased steeply by Rs 19.47 crores to Rs 99.35 crores—this is the highest such figure during the current calendar year. No doubt, a moiety of this—Rs 9.64 crores—is attributable to the State Bank. In one sense, the improvement in this wise and of such dimensions in the Reserve Balances may be said to betoken slack season conditions. But it needs to be remarked that Scheduled Banks may have chosen to augment their Deposits with the Reserve Bank in view of opening of the subscription list for the new loan a few days after the week under review. Hence, the return of the Reserve Bank for July 3 may disclose a considerable drawing on their Reserve Balances by member banks. There is, it is true, a rise of Rs 3.11 crores to Rs 64.81 crores in the Other Loans and Advances of the Reserve Bank; but this is accompanied by a decline of Rs 2.01 crores to Rs 1.45 crores in the Reserve Bank's advances against usance bills. It is, therefore, possible that the rise in the Reserve Bank's Other Loans and Advances relates, not to increased borrowings by Scheduled Banks, but to greater accommodation obtained by other entities, who in this behalf are eligible to utilise the Reserve Bank for buttressing their Ways and Means position.

Investments in the Banking Department are, by dint of the transfer from the Issue Department, higher by Rs 20 crores. It would follow that the Central Government did not stand in need of deficit financing. So, the small rise of Rs 0.65 crores to Rs 50.47 crores in the Centre's Deposits would be the result of net receipts being experienced during the week. Similarly, though the Deposits of State Governments are lower by Rs 1.70 crores at Rs 16.60 crores, this is after State Governments had been able to reduce their indebtedness by Rs 3.65 crores to Rs 23.43 crores.

The continuing import surplus is reflected in a decline of Rs 1.07 crores to Rs 14.55 crores in Balances Held Abroad.

We now come to what, at the moment, is the most interesting figure in the Reserve Bank returns. Other Liabilities have risen by Rs 2.26 crores to Rs 56.33 crores. It is under this head that the profit of the Reserve Bank accrues week by week. At the end of June each year, a transfer is usually made from Other Liabilities and, pending the audited accounts and the payment thereafter to the Central Government, the amount equivalent to the profit figures under Other Deposits. Thus, we have to expect a very steep fall in Other Liabilities in the next returns of the Reserve Bank. In this context, attention may be drawn to the fact that the Budget for 1959-60 has taken credit for Rs 40 crores as the surplus profit of the Reserve Bank.

In the last return for June in 1958, Other Liabilities were, in the Reserve Bank returns, shown at Rs 50.42 crores. The return for July 4 indicated clearly that Rs 6 crores had been transferred to the two agricultural credit funds, and that a sum of Rs 30 crores had been placed under Other Deposits. Thus, the probable gross profit of the Reserve Bank in 1957-58 was Rs 36 crores. However, this caused a fall of over Rs 42 crores in Other Liabilities in the first week of July 1958. Today, Other Liabilities, as compared with the figure for the corresponding week of last year, are higher by Rs 6 crores. This larger accrual to Other Liabilities is consequent upon the funding operation conducted at the end of June 1958, when Government sold Rs 300 crores of 4 per cent 1973 in cancellation of ad hoc Treasury Bills for like amount. It is the difference in the interest on the 4 per cent loan and on Treasury Bills which accounts for the larger profit being earned by the Reserve Bank. Thus, it would appear as if the gross profit of the Reserve Bank in 1958-59 is in the environs of Rs 46 crores. This would leave Rs 6 crores for transfer to the two agricultural funds and still yield a profit to the Central Government of roughly Rs 40 crores. The next returns of the Reserve Bank will be notable not only for the impress of transactions relating to new loan but also for the adjustments in respect of the end of the accounting year of the Reserve Bank.

The statutory return of the State Bank for June 26 fully confirms the impression already discerned in the Reserve Bank returns of the slack season having got well into its stride. Deposits have risen by Rs 5.29 crores to Rs 536.03 crores. At the same time, the total of Advances, in its sharpest fall in the current slack season, has been marked lower by Rs 5.42 crores at Rs 188.70 crores. The accretions to resources in both these respects are reflected in an improvement of Rs 9.64 crores to Rs 39.36 crores in the State Bank's Cash in Hand and with the Reserve Bank. This leads us to speculate that the State Bank may conceivably have been able to spare Rs 15 crores from its Cash Balances for subscription to the new loan. In addition, an amount exceeding Rs 5 crores is probably available under the head of Other Assets. So, it seems to us likely, as the next return of the State Bank may confirm, that the State Bank's subscriptions to the new loan could well have exceeded Rs 20 crores.

The statutory statement of Scheduled Banks for June 19 is notable mainly for the substantial rise of Rs 10.72 crores to Rs 1778.51 crores in Deposit Liabilities. At the same time, the total of Advances has fallen by Rs 1.79 crores to below the Rs 1000 crore mark at Rs 999.67 crores. With the gilt-edged portfolio largely unchanged, Cash Balances have improved by Rs 12.75 crores to Rs 178.47 crores.

The next return of the Scheduled Banks will almost certainly place Deposits very near Rs 1800 crore mark. In addition, if we are to judge by the experience of the State Bank during the week ended June 26, a considerable fall in Advances is also on the cards. Thirdly, Cash Balances will inevitably be around the Rs 200 crore mark. As such, it would appear as if Scheduled Banks were well placed for subscribing to the new loan, although the impression in the money market seems to be that the banking system did not extend as much support to the new loan as could have been expected.

✣

New Wage-price Spiral in Britain?

By Paul Einzig

AT the time of writing the printers' strike, which at present affects provincial newspapers and periodicals, is threatening to spread over the London newspapers, so that quite possibly Britain will be without any newspapers in a matter of days or weeks. Even though a number of small firms of printers gave way to the Trade Union demands, the big firms employing some 90 per cent of the labour involved are holding firm. Printers are among the highest-paid workers in the country. What is worse, they are among the least hard-worked, owing to the prevailing restrictive practices under which the output of each man is kept down to a fraction of what he would be able to do without undue exertion. The combined effect of unduly high wages and unduly low output has been the closing down of a number of newspapers and periodicals. In the book trade the high prices resulting from high printing costs resulted in growing consumer resistance.

Although the number of workers involved is only some 300,000, the strike is widely regarded as a test case of first rate importance the outcome of which is liable to affect the attitude of employers and employees in the more important industries. For instance the wage the wage claim of the engineering and shipbuilding unions, and their demand for the 40 hour week, is liable to be affected by the way in which the printers strike will be settled eventually. Should the employees give way a general wage offensive will be initiated. There will be all-round wage demands of between 10 and 15 per cent, and claims of adopting the 40 hour week, which again is nothing but a concealed additional wage claim. In industries which are fully employed the reduction of the working week simply means more overtime at considerably higher wage rates.

What is disconcerting is the short-sighted indifference of the Trade Unions towards the prosperity of their industries. Surely printers are aware that if their claims are conceded it would mean the closing down of a number of periodicals and provincial newspapers, and possibly even of one London newspaper, and that the fall in the demand for books would bankrupt a number of weaker publishers and printing firms. They hope that limiting the entry of new workers into the industry they would maintain full employment in spite of the higher wages. Likewise shipbuilding workers must be aware that even on the basis of the existing wage level British shipyards are losing orders in favour of their foreign competitors. But the threatening unemployment does not deter them from diverting even more orders to foreign shipyards by raising the cost of British shipbuilding.

The stability of the cost of living has failed to affect the vigour with which wage demands are pressed forward. The cost of living index actually declined by one point during May and it is now exactly where it was twelve months ago. Thus, for the first time since the beginning of the war twelve months of stability has long last been achieved. Should organised labour could restrain its appetite for a while we should witness a moderate decline in prices as a result of increasing productivity. The entire public would derive a fair share from technological progress. But the trade unions have totally different ideas on the subject. They want to secure for themselves the entire benefit from the adoption of labour-saving machinery without caring about the rest of the public.

Many Unions press their wage demands on the ground that profit margin are wide. Yet the absence of profits, and even the existence of heavy losses, does not prevent them in static or declining industries from pressing their claims with equal determination. For instance the nationalised transport and coal mining industries suffered very heavy losses in the past year. While the railway employees are in a position to demand that freight rates and passenger fares should be raised, coal miners know only too well that higher coal prices would mean a further decline in demand and further accumulation of unsold coal supplies at the pitheads. Both unions are pursuing their wage claims relentlessly regardless to the fact that an increase in transport charges and coal prices would inevitably bring the period of price stability to an end. It would mean the resumption of inflation on the same rate as it was proceeding before the disinflationary measures of 1957 were adopted. The stability achieved at the cost of unemployment and a fall in the output would be sacrificed.

Wage inflation is proceeding also in the United States and this will tend to weaken resistance to wage inflation in Britain, because there is no immediate cause for worrying about the effect of wage increase on sterling. It must be remembered, however, that American industries are not the only rivals of British industries. In Western Germany coal miners have accepted wage reductions while British coal miners are pressing forward with wage demands. In France the de Gaulle Government's firm measures prevented a railway strike, while the possibility of such strike, foreshadowing heavy losses to industries, is very much present in Britain. In Japan shipbuilders manage to keep costs down and capture orders for tankers. So it seems that the attitude of trade unions in the United States and Britain is likely to place the English- speaking world at a grave disadvantage in the industrial sphere. This would be a great pity, for the economic strength of the Anglo-saxon world constitutes the basis of the resistance of the free world to Communism. While the consolidation of Western Germany, France and other democratic countries is very welcome a corresponding weakening of Britain and the United States would be a major calamity from the point of view of all freedom-loving peoples.

WORLD OF JUTE

Need for Vigilance

THE present subdued tendency in the jute goods market has mainly stemmed from the absence of any indication as to the eagerly anticipated enquiries from the Argentine where normal activities seem to have been disturbed due to political reasons. The latest information from that country, however, is of a variety that should revive hopes of an early renewal of enquiries for Indian hessian. Even so, the fact remains that market sentiment of late has become too delicate to withstand even temporary setbacks. A possible reason for this is the growing difficulty encountered by our jute goods in foreign markets. It is true that the industry and trade are quite aware of the need for utmost vigilance but at the same time it is realised that sustained efforts will be needed to maintain our position in the world jute goods markets. It is also becoming increasingly clear that quite a few among our important overseas customers have reduced their requirements of jute goods by adopting bulk handling methods. It is idle to hope that they can be attracted to jute goods once again for the simple reason that the change-over has been effected by them at considerable cost.

But it is not as though the jute industry's prosperity is entirely dependent on the packaging needs of the world. Research has demonstrated that jute can be profitably used in a wide variety of ways. Some of the new outlets for jute are already well established in countries like the USA. The Goodwill Trade Mission of the Federation of the Indian Chambers of Commerce and Industry who visited the USA among a number of Western Countries have this to say about the consumption of burlap in that country. "USA is one of the principal markets for our burlap. New competitors are fast getting a grip on the US market. The Indian jute industry should immediately explore the possibility of manufacturing the specialities which are currently imported by the USA from other countries, such as, Japan, UK, Germany and Belgium.

A diversification of production in our mills has become a compelling necessity. But the industry's mainstay will continue to be its traditional items of manufacture for a considerable time to come and consequently our efforts should be concentrated on meeting the packaging needs of overseas consumers through the supply of adequate quantities of jute goods at attractive price levels. This is possible only when our jute industry is assured of a plentiful supply of raw jute at a cheap price. It is gratifying to note that the Government of India are making strenuous efforts to minimise the cost of production of jute. According to Mr A. K. Banerjee, Chief Jute Development Officer, Government of India, the Union Government propose to implement a scheme during the Third Five Year Plan to improve the country's jute yield. Although considerable progress has been made in jute production in India—last season's output has given us self sufficiency in raw jute—the yield continues to be poor. The yield per acre in India is only 2.5 bales while it is as much as 4.5 bales in Pakistan. Even in regard to self-sufficiency in raw jute, the position in the current season does not seem to be as good as last year's. For Mr Banerjee has revealed that the area under jute has decreased by about 25 per cent this year in North Bihar. The main reason for the decline in acreage, according to him, is jute's low price which is having a depressing effect on the cultivators.

✣

The jute goods market ruled quiet during most part of the past week largely due to the absence of fresh overseas interest. The deterioration in sentiment seemed to have stemmed mainly from the news about the political disturbance in the Argentine which was expected to place substantial orders for hessian in the Indian market. Though toward close of the week there were indications of an improvement in the situation in the Argentine, sentiment continued to be subdued. Hessian Ready which was quoted at Rs 42.15 last Friday declined as low as Rs 41.15 to be finally placed on Thursday at Rs 41.50. B Twills was, however, not much affected and closed at Rs 96.85 as against Rs 96.60 last Friday.

The raw jute market ruled dull with business passing at a low ebb. It would appear that so long as the dispute over the contract form remained unsettled, business would not show much improvement. Assam Bottoms eased to Rs 22 from Rs 22.25 over the week.

The sagging tendency noticeable in the raw jute market is partly attributable to the expectation of a good jute crop in the current season. Though there are indications of a smaller outturn from Bihar, reports from the other growing areas are quite encouraging. According to the latest crop report issued by the Calcutta Jute Balers Association, although wet conditions prevail in most jute growing districts, the crop continues to make satisfactory progress. Even in Assam where heavy rainfall has been experienced, it is said, the crop may not be adversely affected.

WORLD OF TEA

Slight Improvement in Demand

ALTHOUGH there has been a slight improvement in sentiment at this week's Export sale in Calcutta (Sale No 3), results continue to be rather disappointing as withdrawals have been considerable in some sections. Price levels as a whole have not also recorded any notable appreciation. Demand for plain brokens and bright liquorings has been better than at the last sale but elsewhere interest has been at a low ebb. While plain brokens received good support, similar fannings were generally neglected. Bright liquorings in orthodox Duars attracted moderate attention. Among legg cut teas interest was confined to the few brightest ones. Orthodox and CTC Assam with useful liquors had good enquiries at the lower levels. There were substantial withdrawals in the more ordinary kinds which met with little support. Support was forthcoming for whole leaf grades and Darjeelings only at lower levels. Offerings totalled 31,481 chests.

Quotations: Clean Black Pekoe Rs 2.00; Plain BP Rs 1.62 to Rs 1.68; Plain Fannings Rs 1.60 to Rs 1.70 nominal; Medium BP Rs 1.90 nominal; Medium Fannings: not quotable; Best Assam CTC, BP Rs 3.20 to Rs 3.40; Best Assam CTC Fannings Rs 3.70 to Rs 4.10.

It was pointed in this column last week that though tea exports from India during the first five months had been rather disappointing there were reasons to believe that the outlook would improve in coming months. For there is ample scope for increasing our exports to countries like the USA. But it would appear that Indian tea is not making headway there though tea imports into the US is increasing. According to an official report issued in Washington last week, total imports of tea during April 1959 were higher at 10.23 million pounds compared to 9.22 million pounds in the corresponding month of the previous year. But an analysis of the April total reveals a disappointing trend as far as our country is concerned. For, supplies from India during the month under review have dropped to 2.59 million pounds from 2.71 million pounds in April 1958. But our main competitor, Ceylon, on the contrary, has been able to increase its share from 3.91 million pounds in April 1958 to 4.77 million pounds during April 1959. East Africa has almost doubled its exports while Pakistan has also entered the list during the month under review whereas it was not in the picture at all during April 1958.

At this week's internal sale held in Calcutta there was a good general demand though the rates were sometimes easier with some withdrawals. Teas of orthodox manufacture were generally well maintained but were occasionally sold below valuation. Legg cut Dooars were some times easier while there was keen demand for the powdery types. Those with flavour among Darjeelings Dusts were dearer as compared with last levels but the general trend was irregular. There were some withdrawals here. An irregular tendency was noticeable in Medium CTC dusts with those with bright liquors often fetching rates above valuation and those with early flush character meeting with less demand. Among Best CTC demand was keen in smaller types. There were 11,326 chests on offer of which 2,104 chests were of old Season's manufacture.

Quotations: Medium Dooars Dusts Rs 1.66 to Rs 1.72; Medium Assam Grainy Dust, unquotable; Medium Assam CTC Dust Rs 2.03 to Rs 2.38; Best Assam CTC Dusts Rs 2.78 to Rs 2.98.

In contrast to the conditions at the Calcutta auctions, the trend in Ceylon is encouraging. At the auction held early this week in Colombo when 7,005,345 pounds of tea were on offer, there was a good general demand. Final figures available for April showed that the total for the first four months of the current year was approximately 10 million pounds less than the total for the corresponding period of last year (April output was placed at about 39.5 million pounds). As favourable weather conditions have been experienced since, it is expected that May figure will show a substantial improvement over that for April.

At the export sale held on the 23rd June at Cochin approximately 14,74,000 pounds were on offer. There was a good general demand but the interest was not maintained at the opening levels till the end. Quality of the teas on offer showed some deterioration except in the case of Nilgiri teas. The better Nilgiri Brokens were fully firm to dearer whilst similar Fannings ruled about steady; the lesser sorts, however, were often easier. An easier tendency was noticeable in good and coloury medium descriptions. Plainest kinds, low medium and low grown descriptions were in good demand at improved levels. There were ready buyers in black leaf brokens and Fannings, while the trend was irregular in whole leaf grades.

At last week's internal sale in Cochin (25th June) about 5 lakh pounds were on offer and there was a general demand with prices showing a hardening tendency. Nilgiri and CTC descriptions met with some inquiry. Some interest was also noticeable in dusts from Travancore and Wynaad. Black leaf teas fetched dearer levels.

WORLD OVERSEAS

Britain

BRITAIN'S exports in May were not only a record but provided evidence that the trading improvement evident in the past two months is broadly based, the Board of Trade said on June 23, in issuing a detailed analysis of the May figures.

The unusual concentration of deliveries of large-value items which helped to swell the April export figures was not repeated in May, says the Board, but in their place were substantial further rises in shipments of machinery, cars and commercial vehicles, chemicals, nearly all types of textiles, and most other forms of consumer goods. Exports of cars and chemicals set records. It is considered that this provides "encouraging evidence of the wide-ranging nature of the recent advance".

"The rise in exports in the last two months represents one of the sharpest changes in the trend for a long time", declares the Board of Trade. "In the two months together, exports were 13 per cent above the rate for the first quarter of the year 1959, and 8½ per cent more than in the same months of the year 1958.

"In effect, the rise has more than matched the whole of the decline which took place during the previous 18 months. It cannot be expected that anything like the recent rate of advance will be maintained for long; but the recovery, together with the other evidence of resumption of strong growth in industrial activity and trade in many parts of the world, now gives good prospect that the year 1959 will see all, or more than all, of last year's fall in exports caught up".

As indicated by the Board of Trade's earlier provisional figures, the total value of exports was £299,200,000—£3,500,000 higher than in April. It surpassed the figure of the previous record month—May 1957. Imports, at £310,900,000, were £35,000,000 lower in May, and the visible trade deficit was reduced to only £1,500,000—the smallest recorded in 100 years.

The Board of Trade comments that the May import figures seem to have been at an overall level too low to be maintained, and that higher figures seem likely in the coming months. Although imports in May were relatively low, in the last two months together they show a rise of 4 per cent compared with the rate for the first quarter of this year, and of 7 per cent in value and rather more in volume compared with the corresponding months of the year 1953, though the latter comparison is slightly exaggerated because of the effects of a London dock strike.

The Board concludes that it is unlikely that the very large payments surplus on visible trade in the first half of 1958 will be approached this year. But the balance is still good enough to ensure, with the addition of earnings from invisible trade, a further substantial surplus on the balance-of-payments current account as a whole.

Britain expects to achieve at least a threefold increase in power from uranium in the advanced gas- cooled nuclear-power stations now being built.

Speaking of this "second generation" of nuclear-power stations, Sir John Cockcraft, member for scientific research of the United Kingdom Atomic Energy Authority, said in Teheran, Persia, on June 23 that the new stations would have higher capital costs than coal—or oil-fired stations, but "we are now carrying out an intensive research and development programme to reduce the capital costs of nuclear-power stations. This will be achieved by raising the operating temperature of the uranium fuel elements and, by this and other technological developments, we will increase by a factor of 3 or 4 the amount of power which can be developed from a given amount of uranium and a given size of reactor".

Sir John, who was speaking at the opening of the Teheran nuclear centre, had talked of nuclear-power experience in the United Kingdom and the United States over the last three years, and said that this had shown that stations such as Britain's Calder Hall could generate electricity steadily for months on end, producing hundreds of kilowatts.

Calder Hall had already produced well over 1,000 million units of electricity. "Nuclear power has, therefore, been proved to be technically feasible, and the operation of this new type of power station has been shown to be reliable and no more difficult than that of ordinary power stations".

He estimated that, by 1966, the United Kingdom's total electricity output would probably be between 5,000,000 kw and 6,000,000 kw. It was impossible to say when nuclear power would be competitive with power from coal—or oil-fired stations; it depends upon a number of circumstances, and the break-even dates would vary from country to country. If, however, they took a long-term view, it seemed quite obvious that nuclear power was essential if the living standards of mankind were to be steadily improved.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

LIFE International carried, in its issue of March 2, an article by Ludwig Erhard, the West German Minister of Economic Affairs, on "How the West Can Help Asia". A reprint of the article has been sent to me and it makes interesting reading. In the photograph accompanying the article, Herr Erhard looks as fabulous and glossy as the German revival he largely brought about. But the article itself will testify to the fact that he is very far from the stock figure of socialist demonology—the smug plutocrat. When in Delhi last October for the Fund-Bank meetings, he showed himself acutely aware of the problems of an underdeveloped country. In other contexts, too, he has shown himself ready to consider practical proposals for making available German skill and capital for use by underdeveloped countries. It is therefore, worth while examining his ideas on the question of Western assistance to Asian plans of economic development.

*

One remarkable fact is straightaway to be noticed. It is not strictly relevant to the subject of the article, but it has a certain topical interest. It is no secret that the internal stresses in the domestic politics of West Germany and more particularly of the Christian Democratic party were due to the rivalries between Dr Erhard and Dr Adenauer. Though well over eighty, Dr Adenauer changed his mind over his earlier announcement to step down from the office of West German Chancellor. This wholly unexpected decision has been attributed to his reluctance to hand over German destiny to the younger and more resilient man. The domestic clashes at personal levels are not wholly unrelated to West German rigidity at the current parleys at Geneva. These clashes had assumed the proportions of a crisis a few days ago. But the Christian Democrats, after vehement initial protests, have reconciled themselves to Dr Adenauer's decision. Dr Erhard himself had sharp exchanges with the Chancellor but, later, both he and Dr Adenauer have come to some kind of understanding.

*

There is some evidence to suppose that, left to himself, Dr Erhard will be less implacable in his political stances. It may be that it is because he is unpolitical in his approach to problems. In any case, he has not Dr Adenauer's obsessional absorption in political and military issues. This is strikingly evident in his article in Life. Never once in the article does he tie up aid to Asia with the military threat to the free world from communist sources. The one reference to communism in the article occurs in the context of the now familiar Western concept of an economic race between India and China in which each is supposedly trying to prove the superior virtues of its own particular philosophy of development. For the rest, for a member of Dr Adenauer's Government, Dr Erhard shows himself astonishingly free from anti-communist and cold war obsessions.

*

Dr Erhard says that the principal purpose of his article is to clear certain misunderstandings that have arisen about some remarks of his during his tour last year of South-East Asia. I shall deal with these presently, but the central attitude of Dr Erhard to the question of Western assistance to Asia is unambiguous and accords with instructed opinion all over the world. He says: "In the last analysis it is for the unity of the free world that all of us in the industrialised Western nations should—in fact must—demonstrate our readiness to extend our economic, financial, and moral assistance to the countries which are still in the development stage. Such assistance should not only be concerned with closing gaps in the countries' balance of payments, although that too may be useful. Our efforts should also be bent toward helping to open up, in cooperation with the Governments and the business communities of developing areas, more and better opportunities for human labour to find fruitful employment". It is abundantly clear from this that Dr Erhard is in the distinguished company of men like Adlai Stevenson who exhorted Western nations the other day to repay some of their obligations under Marshall Aid by extending in their turn a helping hand to India.

*

On the subject of institutional agencies of such, Dr Erhard's view is this: "With certain doubts, I am willing to admit that a combination of lencing by the International Bank which must of necessity be governed by economic criteria, with other financial assistance, mainly designed to promote basic projects belonging to the economic infrastructure of a country, may in the end prove more successful and effective than either assistance on its own. Even though the giving and receiving countries may not always be in perfect agreement on the form and extent of such loans or allowances, the necessity of assistance as such was never questioned. Not only economic, but political and tactical ones as well, make it advisable for us all to combine what resources are available than to undertake scattered operations".

*

In a sense, this is an argument for an agency like the SUNFED, or a new subsidiary of the World Bank as canvassed in Delhi last October. The World Bank has limitations of its own—some impatient people will say limitations of its own making. Therefore, the alternative to bilateral arrangements of the sort that have been providing funds for development seems to be an international agency. But despite theoretical consent to the idea, there is wide-spread practical resistance to the idea as will be evident from the comparative lack of success of the SUNFED. The tax payers in donor countries would still seem to prefer their Governments to do the giving. A contribution to a UN fund to be administered by the UN is still to obtain a ready acquiescence. It is easy to be harsh at this reluctance, especially when you are at the receiving end, but scarcely understanding. The reluctance certainly does not betoken parsimony, since bilaterally substantial amounts are being contributed by the richer nations of the world to the less fortunate, though such contributions are nowhere near the needs of the situation.

*

Again, it is not always the donor country that prefers a bilateral arrangement. Once the agency of aid is the UN, then the same kind of squabble that goes on about national representation in the UN bureaucracy will surround the dispensations of the agency. By the very nature of contemplated aid, too close a scrutiny of the economic viability of a project is precluded, or at any rate, resented by the applicant country. In fact, the complaint of such a fussiness on the part of the World Bank is the very reason that has compelled this search for alternative institutional agencies. A country may lack the necessary technical, organisational and administrative capacity for absorbing the aid asked for and yet, dazzled by what it sees elsewhere, ask for it. And when it is denied, it may make a grouse of it. And when there are well-known enmities among rival contenders for aid, the task of the special agency is far from enviable.

*

The case for a concerted and centralised agency for developmental aid is based on that splendid sense of international responsibility for the whole world—or at least, its "freer" part that the more conscientious among the richer nationals have shown in the post-war period. It has also considerable practical advantages, the most important of which is psychological. For an arrangement of this sort removes one particular source of exacerbation of national

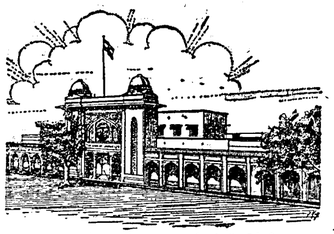
sensitiveness and substitutes a "donor-receiver" relationship by something that is more neutral and less hurtful to one's self esteem. From the point of the richer countries, there is a certain simplification of responsibility, much in the same way as contribution to the Red Cross may solve your practical problems of private charity. (It is another question whether your conscience will be at ease at the sight of private misery, however substantial your contribution to the charity). But, as I pointed out, there is a case for bilateral arrangements. That is probably the reason for the "doubts" that Dr Erhard expressed at the beginning of the sentence I quoted. In practice, I suppose, the three kinds of agency will continue to exist side by side. As in much else in life, such a state of affairs is not as tidy as you could wish, but it works better in practice.

✱

Having enunciated the principle of the necessity of economic aid, Dr Erhard pleads for a better co-ordination and efficient use of such aid in the recipient country. This is probably one of the suggestions that brought on Dr Erhard the opprobrium of "lecturing Asians". Now, I have a simple test for verifying the political adulthood, economic readiness and organisational adequacy of an underdeveloped nation. It is to find out how they react to advice of the sort just quoted. If one sees in it presumptuous lecturing or, what is worse, hidden "strings", it is clear that one is politically immature. Advice for intelligent use of anything can and should be received without embarrassment or resentment, even if it comes from the mouth of a child. In any plan of economic development with inadequate resources, it is commonsense to devise agencies of utilisation that will fit the terms on which resources are likely to be made available to us. I can certainly imagine circumstances when this is not possible, and I am by no means suggesting that aid must be accepted on any terms. But I do say that, within a broad and undogmatic political framework, it is possible to fit in a wide variety of forms of assistance.

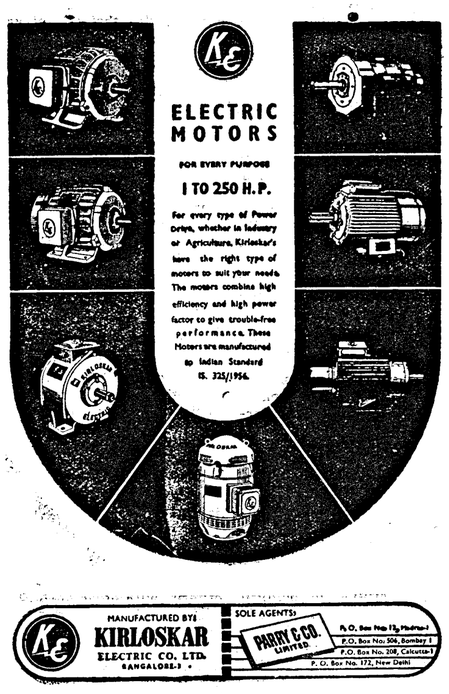
✱

But Dr Erhard was treading on doubtful ground when he was trying to indicate the best way the resources of an under-developed nation should be deployed. Here his particular experience has perhaps led him astray. The experience of the American and to a lesser extent of European economies with their relative abundance of resources, technical and entrepreneural skills and organisational complexity may support a proposition like the following: "In terms of production and economic planning, this means that the big centralised investments should not necessarily come first. Rather, private initiative should be encouraged to go ahead and produce, setting up as many small workshops as possible and, above all, turning out a maximum of consumer goods of a broad variety. *It does not matter much if the goods produced are essential or not.* In my opinion, one can trust entrepreneurs to produce only those goods which have a market, which means simply that they are wanted by the people and will be bought with the people's earnings".



I am pretty certain that it is this particular attitude that must have given rise to the cavilling that he complains of in his article. It is by no means a minority view. I know quite a number of people in this country who hold this view, but I am convinced that it is wrong. The point, of course, is that ours is an under-developed country, whereas America is an "over developed" country. (This phrase is not mine. In a recent broadcast over the BBC, Mr Galbraith, the noted American sociologist and author of "The Power Elite," has used the expression "over developed society" to refer to the American Society). In economic terms, the American society is "consumer-oriented". Such an economy, though making a fetish of efficiency, is shockingly wasteful in many respects, because, as Mr Galbraith puts it, "the community is too well off to care'" Even in such a society, it is not true to say that entrepreneurs will produce only what people want, since with high pressure advertisement people may be made to want "to want things". In a poor country with appallingly inadequate resources, it would be inexcusable if there was not a sensible ordering of priorities. And absence of priorities will precisely be the result if entrepreneurs are to be allowed to produce "a broad variety of consumer goods". It is true that an entrepreneur will not produce a television set: but he may conceivably embark on producing, say, luxury cars. Now, there is always sure to be a market for a reasonable number of such cars, since we are not all of us poor, and none of us is as immune to the wiles of advertisements as we would like to pretend. For a people who are scraping the bottom for the essentials of life, it is unforgivable luxury to let luxuries be produced in the hope that "a sucker is born every minute". It is no answer to say that this hope may be belied and the chance of this happening will be a sufficient deterrent from inessential enterprises. But the junk yards of the world are full of the remains of over-hopeful enterprises. Adjustments involved in bad businessmen going to the wall by the freeplay of the market are too leisurely and wasteful for an underdeveloped economy in a hurry.

✱



It is not only that, left to himself, an entrepreneur will produce plastic goods, he would produce the Hula Hoop rather than the water bottles. It is that he simply does not have the wherewithal either in resources or skills to start the kind of enterprises that are basic to any economy and from which returns are unlikely for a considerable number of years. (I think I remember Professor Galbraith making the same point in an article in Foreign Affairs). A good deal of basic industrialisation was financed by private capital (often foreign capital, moving through the world's money markets) in the nineteenth century as a matter of course. But such large scale movement of private capital has ceased for a long time now. A good deal of socialism one finds in an underdeveloped country today is there, simply because there is no alternative to it. One may conceivably wish it otherwise, but there is no escaping it.

INDIAN SECRETARY TO GOVT. 7 - JUL 1959

GATEWAY GOSSIP

THINKING on the Third Plan is still puzzled; vagueness persists in figures and as to targets; and talk about it continues to be in general terms. The Gateway City fortunately had some elucidation in this respect, when Dr B. K. Madan, who is the Principal Adviser to the Reserve Bank, was invited to address Rotarians here; and his theme was the Third Plan.

It is in respect of the private sector especially that Dr Madan's views prove helpful. His estimate is that development in the private sector will have, during the Second Plan, far outstripped the target of Rs 2400 crores—actual investment, according to him, may be in the environs of Rs 3000 crores. In such a background, he considers it entirely feasible that the target of investment by the private sector during the Third Plan rises to, say, Rs 4000 crores.

But he couples such a statement with his assertion that the people have to prepare themselves for "some real austerity". Now, in the context of finding the resources for the Plan, it is doubtless true that some element of additional tax burden is inescapable. But, even here, he has proceeded to suggest that, unless taxation in the agricultural sector was raised considerably, it would be hard to devise a "rational financing Plan." So, we have here an implicit recognition of the fact that the scope for imposing fresh tax burdens on those already taxed is extremely limited. Thus, the call for austerity cannot wholly or even mainly refer to the shouldering of tax burdens.

Am I to infer that Dr Madan had in mind austerity in consumption? I hope I shouldn't, for more than one reason. Firstly, it is time that we did away with the notion of tightening consumption belts and of preparing to undergo sacrifices for the sake of future generations. For, if the standard of living is to improve, consumption standards must of necessity improve. It is no prosperity, if the poor mortal man who earns an extra hundred rupees a year is asked to conserve it all, and not spend a naya paisa more than he used to. Secondly, development in the private sector is futile, if the additional output is not absorbed. I agree, an important element of new production will not be consumer goods; but there will nevertheless be a significant addition to the supply of consumer goods; and austerity in consumption and development of the private sector are therefore incompatible and mutually contradictory.

No: let us be done with calls for austerity. I am beginning to fear the word, because it is the antithesis of all that we hope to achieve from planned endeavours. And, surely, there must be a limit to calls for sacrifice, too: how many of us are concerned with the national prosperity, of doubling of national income in two decades and a half, that future generations may be blessed with?

Certainly, conspicuous consumption and expenditure on luxuries have to be kept in check. Equally certainly, what are considered luxuries today will tomorrow be necessities. Sugar in one's tea is no luxury, a fan tomorrow in the village home will be thought to be indispensable; and it is only as goods and services move down from being luxuries to necessities that we really have advancement in living standards.

Then: Dr Madan says that all of us, in all strata of the community, should be prepared for additional burdens of direct and indirect taxes. Inevitable are new excises; and this is as it should be. But impossible, in my view, is any considerable increase in rates of direct taxes, whether as affecting individuals or corporate bodies.

So, it is up to the monetary authorities to find other ways of financing a Rs 10,000 crore plan. As this journal has pointed out before, prospects are that Rs 2,000 crores from additional taxes are going to be an impossible proposition. At best, such an amount can be raised from additional taxes plus surplus at current rates of tax. But, then, it is always possible that the slack from agricultural imposts turns out to be considerable. It is only if more tax paying entities are created, that, in the future, real elasticity in tax revenues is to be expected or hoped for.

Dr Madan's estimate is that, on the basis of a Rs 10,000 crore plan, requirements of foreign exchange will be around Rs 2,500 crores; and Rs 500 crores of this will represent the liability, in respect of foreign loans taken so far, which will come up for repayment during the Third Plan.

The Principal Adviser to the Reserve Bank has certain interesting views as regards the foreign exchange problem of the country. He considers that "the stage of self-sustaining growth or self-generating development" will be possible only if external aid is of significant dimensions. He adds: "The shorter the period over which we desire to attain self-realiance in regard to foreign assistance, the heavier the immediate reliance on foreign aid."

It is probably true that, in the foreseeable future, and until our new manufactures find export markets, and unless India itself has the machine-making capacity, we shall have no alternative to considerable reliance on foreign friendly countries. It is nevertheless somewhat disheartening and discouraging to have somebody in the higher echelon of the Reserve Bank asserting that we are going to be helplessly dependent on the assistance from the richer and friendly countries.

But the foreign exchange aspect of the Third Plan is, I think, of neither more nor less importance than the internal resources position. We have, it is true, to plan our exports in such manner, that we may hope to add to our foreign exchange reserves through an export surplus, at least during the Third Plan. But it is equally necessary to go all out for finding internal resources. I would particularly commend Government borrowings from the market as a significant, and perhaps even the most important, source of resources for putting the Third Plan through.

Dr Madan's conclusion, however, is cheerful:

> "On the whole, it is possible to find reasonably adequate solutions to the resources problem on the technical plane, but any solution will call for courageous political leadership, efficiency in administration and rigour in execution supported by public cooperation and understanding of the purposes of the Plan."

BOMBAY REVIEW

Dr Madan on Third Plan

S. E. RLY TENDERS.

Sealed tenders are invited for (1) Tender No. CON|GM|37|P&M|B|59 for supply of 3 Nos. Priest Man or similar Grab with 4 to 5 prongs capacity 3 ton loaded. To be operated by two ropes (without chain) suitable for double Drum Winch. Earnest money is Rs. 1000/- tenders will be opened on 28.7.59 at 3 P.M.

(II) Tender No. CON|GM|38|F2|59 for supply of 10 Nos. Block instrument single line Neals ball token type 'A' as per I.R.S. Drg. No. SA-2070 (advance) Earnest Money is Rs. 1000/- tenders will be opened on 29.7.59 at 3 P.M.

Tender forms are obtainable from the Controller of Stores (Construction Section) Garden Reach, Calcutta-23, on remittance of Rs. 5/- (not refundable) per copy per tender by money order to him direct in the case of outsided firms and on production of Cash Receipt from the Chief Cashier, S. E. Railway, Garden Reach by local firms.

Tenders should accompany the receipt for depositing Earnest Money as stated above with this Rly's Chief Cashier without which the Tenders are liable to be rejected. Approved contractors having a permanent deposit of Rs. 1000/- with the Controller of Stores are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the Tender.

GATEWAY NOTES

Industrialisation of Bombay

One of the deplorable features of the industrialisation that had taken place in the Bombay State in the past, is the concentration of industries in a few centres such as Bombay city, Ahmedabad, Sholapur, and Nagpur. This concentration of industries in a few centres, had brought about great disparity in the general economic conditions in the different areas and had aggravated the backwardness of the undeveloped regions. Nearly 95 per cent of the industries in the State are located in the Bombay division and even here, the distribution is inequitable. While dispersal of industries from their present location would not be a financial proposition the balanced development of all the areas in the State would require greater consideration being given to the possibility of starting new industries in the present undeveloped regions and alluring entrepreneurs to the new areas.

However, the development of industries in new areas is contingent on the Government to make available greater supplies of power at cheaper rates as well as developing communications and transport in these areas. The necessity needed for tackling these problems in the course of the Third Plan was stressed at the meeting of the Regional Committee convened to discuss the draft of the Master Plan for industrial development of the Bombay Division.

It is also necessary with a view to helping relieve the present congestion of industries to investigate the scope for dispersal, and offer inducements to the industrialists. The scope for such dispersal should necessarily be greater in the case of State industries and the financial implications of such dispersal should be balanced against the benefits accruing from such dispersal. Mr Shantilal H. Shah, the Minister for Law and Labour, would not mind compulsion being brought to bear on the industrialists for a policy of dispersal even at the risk of incurring the displeasure of industrialists.

The Master Plan for the industrial development of the State is expected to be ready in the next two or three months. However it has been made clear by Mr S. K. Wankhede Bombay's Minister for Planning and Development that the Plant would only indicate the possibilities of development and that the suggestions and recommendations would not be binding on the Government.

Development of mineral resources in the State is also to be given high place under the Third Plan. In this connection, Mr Wankhede, referred to the attempts made by the State Government to tap mineral resources by undertaking departmental prospecting in addition to the surveys conducted by the Geological Survey of India. As a result of the departmental prospecting conducted by the Government, it is claimed that it has been possible to locate deposits of bauxite near Kolhapur, deposits of iron in Redi area in Ratnagiri District, and extensive deposits of coal near Kampti in Vidarbha.

*

Development of Fisheries

Development of fisheries has been accorded an important place in the programmes of the Government to increase the supply of food in the country. The importance of filling up the gap between present production and production potentials having been recognised by the Government, the latter has been, of late, busy drawing up prog-schemes for stepping up the production of fish. It is the coastal States that have a vital stake in the development of fisheries and it is their responsibility to see that production keeps pace with the growing demand.

With a vast coastline of about 1,200 miles, the Bombay State holds a pre-eminent place in fisheries and potentialities and scope for further development of fisheries are greater in the Bombay State than elsewhere. The State accounts for an important share of the total production of fish. The total production of fish and other marine products was estimated at 180,000 tons valued at Rs 5.5 crores. Production reveals a progressive increase over the years as is reflected in the rise in the per capita availability to 8.31 lbs in 1958 from 5.52 lbs in 1931. Some measure of success is also discernible in the schemes for raising the productive capacity, improving distribution channels and raising the economic conditions of fishermen. However the growing demands of the people for better and more nutritious food would require more serious efforts directed towards faster development of fishing.

The Bombay Government have shown a welcome awareness of the scope for development of fisheries, and had set up a study group to report on the measures that are to be taken for raising production. The study group in its report had indicated a number of which, among others, include supply of fishing boats on easy credit terms, mechanisation of fishing boats, with Governmental loan and subsidy, supply of fishery requisites to fisherfolk on a loan-cum-subsidy basis, improvement of fishing harbours, establishment of a boat-building yard, establishment of service stations to repair and service marine engines, fish-seed supply to fish culturists, stocking of fish in large reservoirs etc.

The organisation of co-operatives with active assistance from the Government is one of the important recommendations of the Government, calculated to increase production as well as for increasing the earnings of the fisherfolk. Loans to the tune of Rs 22.5 lakhs to fish marketing co-operative societies is also recommended to enable them to widen their activities. Finally, intensification of the training programme for fishermen is also urged and toward this, the setting up of more primary and high fisheries schools has been suggested.

GATEWAY MARKETS

Late Recovery in Oilseeds

The oilseeds market closed on a steady note on Monday though for most part of the past week the tendency had been downward. The late revival was attributed to renewed hopes about American enquiry for castor oil. With groundnut also meeting with some support following improvement in spot demand, the rest of the market developed a hardening tendency in sympathy with the principal sections. Reports of rainfall in some of the important growing areas depressed sentiment quite early in the week and bulls began to unload. The situation was taken advantage of by the bears who succeeded in hammering down prices. Sentiment, however, rallied in late dealings and the down trend was averted.

Conditions in the castor seed section were un-interesting most of the time though there were indications that business was picking up. There were reports about business having been done with Communist countries. Some business with UK had also been reported done. Perhaps the most encouraging indication was the possibility of sizable enquiries from the US for commercial oil. Some support was also noticed from crushers. Toward the close of the week there are hesitant rumours of business with US and consequently sentiment improved.

Though interest from the spot market helped the groundnut market to maintain some stability, the undertone was rather subdued. As against perhaps the only powerful bullish factor-paucity of ready supplies—there were quite a number of advance developments to push down the price level. Reports of rainfall in growing areas were indicative of a fall in prices. Overseas demand for oil and cake was not so good as to justify a rise in rates. Further there were reports of lower offerings of oil from Nigeria. Another bearish influence is the report that the US Government is to release a substantial quantity of coconut oil from its stock pile.

Linseeds and cottonseed prices followed the trend in the other two sections. There were reports of some enquiries for linseed from Australia.

*

Bullion

Contrary trends prevailed in the bullion market during the past week. While gold continued to meet with fair demand, silver experienced poor offtake with a consequent sagging in prices levels.

Bull support was mainly responsible for the steady conditions in the gold section, where earlier in the week the trend was rather uncertain following rumours of imminent increase in ready arrivals. As the week advanced there was no indication of any sizable increase in the floating stocks. Thus encouraged, bulls began to dominate the market and that situation remained unchanged during the rest of the period. On Monday sentiment was further helped by the widening backwardation charges. An automatic margin of Rs 25 per tola came into operation on that day. Stocks of gold were placed at 20,000 tolas with average daily arrivals at about 3,000 tolas. Daily average offtake approximate to the size of the average daily arrivals.

The silver section was fairly steady at the commencement as support was forthcoming from South Indian and Calcutta interests. But it was evident from the very start that sentiment had been adversely affected by rumours about heavy arrivals. Throughout the week such rumours continued to hold sway and Tibet was frequently mentioned as the source of the anticipated fresh arrivals. With declining demand in the ready section the forward section yielded ground to lower levels and by the end of the week the difference between ready and forward rates was reduced to a few annas. The poor demand is borne out by the fact that the daily offtake averaged 10 bars. The stocks were put at 500 bars.

*

Yarn

Firm conditions prevailed in the rayon yarn market. Although some believe that the export promotion scheme for rayon goods may result in a decline in exports, sentiment in the market has been sustained by demand for yarn from upcountry centres where offtake from weaver interests has been quite good. The cotton yarn section ruled unchanged in the absence of fresh buying interest.

*

Non-Ferrous Metals

The recent firm phase in Zinc has proved shortlived as during the week zinc prices developed a sagging tendency following selling pressure from a big holder. The main reason for the reactionary tendency appears to be the possibility of a sizable increase in supplies in the market as well as in the hands of consumers. Reports had it last week that sizable sales had been effected on benalf of a holder. It was also said that the STC was allotting increased quotas to industrial consumers. Zinc Ready receded to Rs 101 from Rs 104 per cwt quoted earlier. In the London Market zinc ruled steady though operators discounted ideas about any sizable increase in prices as supplies in world markets would increase the moment prices showed any marked uptrend.

Tin and lead ruled steady.

WORLD OF COTTON

Irregular Trend in Cotton Futures

TRADING in the cotton market during the past week, especially in the new cotton crop contract, was indicative of the fact that operators were not very optimistic about a rising trend in prices. The weakness of Jarilla March has stemmed from the improved prospects for the new cotton crop. Reports that beneficial rains have recently been experienced in the major growing areas have been followed by indications that growers who have already commenced sowings are quite optimistic about the bumper crop. In view of the general bright outlook for the crop as a whole the report that the acreage under cotton in Punjab may show a decline as growers in that state are inclined to bestow more attention than hitherto on the production of oilseeds has had little effect on sentiment. The second factor that has encouraged bears to tighten their hold on the market is the continued uncertainty as regards the offtake of textiles. For, the piecegoods market has not shown much improvement. Offtake of goods continues to be meagre both on the domestic and export fronts. Mill's working shows that extremely difficult conditions prevail with regard to medium and coarse varieties. Thus with the improved prospects for a bumper crop and with no sizable improvement in the piecegoods markets, bear operators did not find it difficult to dominate the cotton market. The result was that the spread between the maturing and the new contracts steadily increased to the disadvantage of the latter.

Ideas of a plentiful supply of cotton have been strengthened with the revised estimate of the cotton crop for 1958-59. The latest estimate shows an increase of one lakh bales from the previous estimate. The crop is now placed at 47.50 lakh bales. This will bring the total availability for the season to 74.26 lakh bales as there was a carryover from the previous season of 22 lakh bales made up of 20.45 lakh bales Indian cotton and 1.56 lakh bales foreign cotton and as imports were placed at 4.75 lakh bales. As against this, the total distribution is estimated at 54.85 lakh bales made up of 51.25 lakh bales by way of mill consumption, and 3.60 lakh bales exports. According to these estimates the carryover into the next season will be only 19.41 lakh bales comprising 17.60 lakh bales Indian cotton and 1.81 lakh bales foreign cotton. It will be noted that though the total availability of cotton during this season may indicate a comfortable position a sizable increase in the total distribution is also anticipated leaving a smaller carryover into the next season. This is a factor in favour of the bulls and if these estimates are borne out, prices may not remain at very low levels.

Jarilla August encountered selling pressure from upcountry interests early in the week but toward close slightly steadied up on revival of support. After having been pushed down to Rs 675.25 at one time, the contract closed on Monday at Rs 683.30.

Jarilla March, on the other hand, was under pressure throughout the week except for a short period when prices attempted to rally on the strength of adverse weather reports. By the close of the week the reactionary tendency was well pronounced as later reports indicated beneficial rains in the growing areas. The contract opened the week on a depressed note at Rs 663.25 but later recovered to Rs 668. On Monday the quotation opened slightly better at Rs 669 but soon declined to Rs 666.50 to be finally placed at Rs 667.50.

×

SPOT:

Compared to the futures section, conditions in the spot market should be considered to be stable. No doubt there had been a decline in prices but the loss was well related to recognisable factors in the market. Mill interest was at a low ebb presumably due to the continued listlessness of the piecegoods market. In the absence of buying interest prices developed a sagging tendency. A probable reason for the comparative steadiness of the spot section was that shipper interest was noticeable in fine Bengals on reports of inquiries from Japan. The trend of cotton shipments during the current season is also encouraging. Shipments for the first nine months of the 1958-59 season are placed at 2.88 lakhs bales as against 1.74 lakh bales in the corresponding period of the previous season.

It would appear that the recent agreement with the Egyptian Government as regards cotton purchase from that country has come a bit too late as the trade has almost exhausted the recent import quota. The agreement which applies for imports for the season 1958-59 and 1959-60 stipulates that the discount on the ruling rate of cotton will be decided by the Egyptian Government controlled Misr Foreign Trade Company. The price will be quoted by the exporters from Alexandria after deducting the discount. The discount for the week June 22-28 is 35 per cent for the current crop and 30 per cent for the new crop.

×

NEW YORK:

Though activity in the New York cotton market was restricted the undertone was steadier with prices showing some improvement. It would appear that the trend of the market is largely dictated by reports pertaining to the new crop about the size of which there are divergent ideas. While reports of a setback to the crop has been received from the eastern and central belts, news from the other growing areas speak about good progress of the crop.

×

PIECEGOODS:

Conditions in the piecegoods market continued to be rather dull both in the domestic and export sections. In the former buyers seemed to be reluctant to extend their commitments beyond present and near future requirements. Demand for superfine varieties was on a fair level with seasonal goods also attracting some attention. On the export front fresh enquiries were few and far between.

BOMBAY REVIEW

THE NEW SAMANBAGH TEA COMPANY, LIMITED

Notice is hereby given that the Fifty-sixth Annual General Meeting of the Members will be held at the Registered Office of the Company, No. 4, Bankshall Street, Calcutta, on Thursday, the 23rd July 1959, at 3-15 P.M. for the following purposes:—

(1) To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1958.

(2) To declare a dividend on the Preference Shares.

(3) To elect a Director.

(4) To appoint Auditors and to fix their Remuneration.

(5) To consider and it deemed fit to pass the following Resolution as a Special Resolution:—

"That it is hereby approved that Clause (2) of the contract entered into between the Company and the Managing Agents Messrs. Shaw Wallace & Co. Ltd. in terms of special Resolution No. 7 passed by the Shareholders in the General Meeting of the Company held on 16th April, 1958 and contained in letters dated 1st and 2nd May, 1958 exchanged between the Company and Messrs. Shaw Wallace & Co. Ltd. respectively, whereby the Company was inter alia authorised to borrow money at interest from Messrs. Shaw Wallace & Co. Ltd. the Managing Agents, to the extent of Rs 5 lacs at any particular time, be varied to read as follows, such variation to come into force from 1st January, 1959, and that such contract varied in conformity with this resolution shall be valid for a maximum period of 5 years from 1st March, 1958 unless previously terminated by either party giving to the other one month's notice in writing".

Clause (2)

"Money lent by Shaw Wallace & Co. Ltd. to the Company which shall not at any time exceed Rs 8 lacs in the aggregate may be repaid by the Company without notice and shall be repaid within three days of demand".

The Transfer Register will be closed from the 13th July, 1959 to 23rd July, 1959, both days inclusive.

N.B. A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and the Proxy need not be a Member of the Company.

By Order of the Board,
SHAW WALLACE & COMPANY LTD.
Managing Agents.

Explanatory Statement

The above Resolution has been necessitated due to the fact that the Company's funds could not be transferred from Pakistan to India and the Managing Agents are having to advance money to the Company to meet the expenses in India. These advances by the Managing Agents will continue to increase till such time as the Company is able to receive sanction from State Bank of Pakistan to transfer its funds to India. In order therefore to regularise the recurring future advances by the Managing Agents to the Company the above Resolution is necessary.

Calcutta,
12th June, 1959.

DELHI REVIEW

Rural Development

THE probable final shape of the Third Five Year Plan, from the point of view of basic objectives, is become clearer every day. Details are being filled in both by official spokesmen and by those who have close association with the ruling party. Mr Dhebar, for instance, indicated, in a speech in Hardwar last week, the broad outline of the Plan. According to him, the Plan will consist of five parts: the first would deal with the "implications of the socialist pattern", the second with finding resources for financing the various projects, the third with the determination of wages, the fourth with the principles of allocation of projects to be executed, and the fifth with the facilities and rules for government officials and organisational wings of non-governmental agencies. The above schematic classification seems far too sketchy and scrappy to be taken as a comprehensive summary of the Third Plan's contents. But, in the same speech, he called upon the Mandal Congress Committees to take up the "seven fold problems of Panchayat, co-operation, village crafts, schools, saving schemes, agricultural development and health". The concern with villages implied in the above priorities in preoccupation would appear to indicate that the Third Plan would be more overtly committed to development of villages and rural life. This is explicitly stated by Mr Shriman Narain, former General Secretary of the Congress and now a member of the Planning Commission. At a meeting in Delhi, he said that "preliminary thinking done so far on the broad outlines of the Third Five Year Plan led to the conclusion that the next Plan would have to be mainly rural-oriented and employment-biased". The implications of this commitment are worth analysing.

In a sense, there is nothing new in this preoccupation with the villages, since, even before, planning became central in our economic life, the village has loomed large in all our thinking about our economy. Indeed, it could hardly be otherwise, since our economy, despite significant recent changes, is still predominantly agricultural. The First Five Year Plan, for instance, was principally concerned with increased agricultural production. Of the total outlay (revised) of Rs 2377 crores, 44 per cent was spent on agriculture and community development (16%) and irrigation and power (28%). The Second Plan's objectives were, it is true, significantly different and a conscious industrial bias was attempted. But, even so, the central importance of the rural sector was well understood by the planners. Thus, though in percentages of total outlay, the share of the rural sector was less than what it was under the First Plan, in absolute terms, the sum set apart for it was larger. Thus, the original Second Plan estimates were 35 per cent (Rs 1681 crores) and the revised estimates 33.1 per cent (Rs 1490 crores). The corresponding figures of the First Five Year Plan are 44 per cent and Rs 1001 crores, which is less by about Rs 500 crores than what was planned to be spent in the Second Plan. Agriculture was, therefore, a crucial preoccupation even in the Second Plan, both because of its intrinsic importance and because of the need for keeping inflationary pressures in control. As the Plan progressed, these truths were painfully brought home to us. Our foreign exchange difficulties tended to aggravate the inflationary pressure, since the cushion provided by our foreign balances was becoming ragged at the edges and thin in the middle. Moreover, vital foreign exchange needed for the Plan projects was being consumed by food imports. All these difficulties led those of us, who had forgotten the importance of the rural sector in our enthusiasm for basic industrialisation, back with a jolt to our basic and chronic problem.

Apart from this, the Second Plan's basic strategy was stated to be the development of village industries for meeting the demand of consumer goods. The theoretical merits claimed for this strategy were many. First, it gives a much needed stimulus to village industrialisation and the revival of traditional arts, which were dying because of lack of patronage and the necessary technical assistance and servicing. Secondly, it sets the pattern for a harmonious social structure in which the village is not exploited by the town. For, under the new dispensation, it will not be the villages that looks to the town for its subsidiary consumer goods as is the case now, but the other way about. The ugly agglomerates of the slums and factories that constitute towns these days will become a thing of the past and a pyramidal industrial structure with the villages supplying the needs of districts and districs supplying the needs of the bigger cities will make impossible industrial squalor and urban misery. A constant feeding and refeeding of the village and town economy will provide just the kind of decentralised complementary economy that will avoid the errors of the excessively organised industrial West. We will not have a rootless proletariat huddling in hovels without any of the props of traditional life. Instead, we shall have industries as part of a way of life of our villages.

There was another attraction of the idea of net work of self employing rural producers of consumer goods. It was the opportunity it provided for solving the problem of unemployment. This problem, which was bad enough at the beginning of the Second Plan, is now assuming nightmarish proportions. The estimates of possible employment opportunities under the Second Plan are not worth recalling, because these expectations have been hopelessly belied. The principal reason for this failure was that the organisational structure necessary for the servicing of a vast net work of village industries was simply not there and could not be created within the period anticipated. Some progress has been made in the creation of industrial estates and in the marketing of products. But, as yet, no kind of effective liaison exists between the villages and those who would like to use manpower for the manufacture of components needed for their purposes. Power shortage in the rural areas is another difficulty. The co-operative ideal of which a great deal was expected is still to capture the imagination of the people. And, finally, the comparative lack of success of the community development idea has been another discouraging feature of our present rural development plans.

Therefore, there is a certain inevitability about the increasing emphasis on the rural sector in the Third Plan. In the first place, it is the essential emphasis of any kind of planning, since, unless production —and, in India, at the moment, production means principally agricultural production—catches up with investment in the economy and the money supply, all our calculations of the benefits of planning will go hopelessly awry. Secondly, this emphasis is merely the organising of the benefits of earlier achievements of planning, the proper utilisation, for example, of the irrigation projects executed at such enormous cost. Thirdly, it is really the awareness of the unfinished tasks of the Second Plan, is respect of rural industrialisation and employment opportunities. Circumstances are now more propitious for the realisation of these ambitions, though time has also added to the magnitude of the problems. Thus, the getting into stride of the organisational structure and co-operative institutions will make rural industrialisation gather momentum. Moreover, foreign exchange stringency has given an edge to local ingenuity and this in its turn should stimulate the creation of opportunities for rural industrialisation. And, again, the increased quantities of steel, the gift to the nation by the Second Plan, will give a fillip to fabricating units which could be intelligently dovetailed into the pattern of pyramidal rural industrialisation. Finally, the increasing American interest in Indian small-scale industry and the availability of funds for new units can be taken advantage of for getting the necessary technical equipment and expertise.

In another sense, the emphasis on the rural sector may indicate a desire on the part of the planners to pause before the next big leap in industrialisation. Whatever may be said in political contexts, it is clear that the planners are encountering serious practical problems in the pursuit of the ideal of quick basic industrialisation. There is no question of abandoning the idea of transforming the Indian economy into an industrial one: for only that way can we improve the standard of living of our people and protect our economy from the rough winds of international trade. But, apart from the question of resources, both domestic and foreign, the immediate pressure of our other problems like unemployment and food production brooks no delay. And basic industrialisation is not capable of providing any significant reduction in unemployment. Moreover, there is a lot to be done by way of efficient organisation and the benefits of the earlier Plans. These, there are abundant reasons to believe, are being wastefully husbanded. Above all, our rural life still needs quickening. The community development idea has not yielded a fraction of its early promise. Part of the reason for this is the nation's hypnotised absorption in basic industrialisation. In the interests of the harmonious development that is the Plan's ultimate ideal, it is necessary that this overmastering preoccupation yields place to a more balanced view of our economic life. For all these reasons, the shift in emphasis deserves to be welcomed.

NORTH INDIAN NOTES

Road Transport

One salutary result of the meeting of the Transport Development Council held at New Delhi last week, was the acceptance by the authorities, of the need for evolving a clear-cut transport policy which would provide for the rapid development of all modes of transport as also for their proper coordination and regulation. The claims of road transport received the major share of attention and this is to be welcomed in view of the fact that, in the past, the Government had been inclined to under-rate the importance of road transport relatively to railways and shipping, and had not cared to provide for its development at the same pace as was sought in respect of the other two. At the Delhi meeting, however, there was unanimity of view about the urgent need for faster development of road transport. Dr B. C. Roy, put up a vehement plea in behalf of road transport pointing out that adequate investment in roads was essential for the attainment of the objectives of development of industry, commerce and agriculture.

Mr S. K. Patil, union Minister for Transport and Communications, in the course of his speech, stated that at least for the next 25 years to come there would be scope for the unrestricted development of all modes of transport. Naturally, in such a perspective, the controversy about the supposedly conflicting claims of the different modes of transport and especially between road and rail transport has little meaning. However, this does not obviate the need for a clear transport policy which would define the respective roles of the various modes of transport and indicate lines for their proper coordination.

The meeting has also decided to set up a high level committee to lay down a long-term policy for the development of all modes of transport. The rate of development in the different sectors of transport would, therefore, be decided only after the Government considers the report of the Committee. However there are indications to show that outlay on road transport would be considerably stepped up in the course of the Third Plan. Mr S. K. Patil has expressed the hope that the Planning authorities in the country would recognise this need. Mr Raj Bahadur also was of the view that the Third Plan should be based on the urgent requirements for roads subject to the capacity to execute the works.

Development of road transport raises not only questions of outlay but also other issues such as rationalisation of taxes, liberalisation of permits, removal of limitations on movement of vehicles. A rational policy towards road transport has to take into account the effects of the policy pursued in respect of these matters and make the policy subserve the need for rapid development of road transport.

*

Punjab Financial Corpn.

State Financial Corporations have become important agencies for dispensing loans and credit for the developmoent of new industries as well as for the expansion and rehabilitation of existing ones. The twelve such corporations that exist in the country have been rendering remarkable help in the industrialisation of the country. During the five year period from 1953 to March 1958, for example, these corporations had sanctioned loans amounting to Rs 16 crores out of which about Rs 10 crores had been disbursed. Apart from large-scale industries, small-scale industries had been marked for special treatment with a view to aiding their speedy development.

The Punjab Finance Corporation which had completed six years of its existence, has a fine record of service to industries to look back. Delivering the speech at the Sixth Annual General Meeting of the Shareholders of the Punjab Fnancial Corporation held at Chandigarh, Mr J. S. Basur, Chairman, pointed out that during these six years of its working, the Corporation had sanctioned loans to the extent of Rs 2,19,68,000. Against this, the amount disbursed stood at Rs 1,18,11,000. This discrepancy between sanction and disbursal is explained by the inability of the loanee concerns, to avail of the loans sanctioned to the full amount. Thus, while the amount sanctioned was Rs 2,19,68,000 the effective sanctions were only Rs 1,81,85,900, Rs 37,82,100 being the amount not availed of by the parties.

The improvement in the working of the corporation is reflected in the progressive rise in the amount sanctioned which is reported to have touched a record figure of Rs 73,15,000 in the year under review. This shows that the Corporation had been sparing no efforts in raising its own efficiency by reducing the time lag between sanction and disbursement. The industries which have benefited from the operations of the Corporation are general engineering, textile manufacturing (including hosiery, and weaving units) cold storages and chemicals and pharmaceuticals manufacturing. The Corporation has also been playing a notable part in the development of small-scale industries and had entered into an agreement with the State Government to act as their agent to provide medium term finance to small industrialists and industrial cooperatives ranging between Rs 25,000 to Rs 50,000 at 3 per cent and 2½ per cent per annum.

NORTH INDIAN MARKETS

Sugar Prices Continue Firm

Firm conditions continued to prevail in the sugar market largely because of the tight supply position. Retail sugar continued to be scarce even at higher prices. With a view to meet the scarcity conditions prevailing in the commodity, the Punjab Government have assumed the responsibility of distributing sugar to the consumer. It would appear that Government are keen on keeping the sugar supply situation under control. Meanwhile efforts are also likely to be made by the trade to make available adequate quantities of sugar to the public. In this regard it is said that the Indian Sugar Mills Association may open sugar fair price shops in the principal towns of North India.

It would appear that the present scarcity conditions have stemmed directly from apprehensions about a decline in production during the current year. These ideas have been strengthened by the trend of sugar output so far in the season. A section of the trade seems to hold the view that supplies this year may fall short of demand. The remedy that has been suggested apart from efficient distribution and effective control over prices is a limited quantity of sugar import to fill any possible gap in domestic supplies.

In the world market for sugar last week's decision of the International Sugar Council to cut the 1959 import quota to 80 per cent seems to have had little effect partly because the cut is too small to make much of a difference to the total exports and partly because the world market gets supplies from countries outside the sugar Agreement. The possibility of a larger quota from Cuba is also being taken into calculation in the assessment of the world sugar situation.

Gur prices firmed up on good demand and a poor stock position. Local stocks were placed at 57,000 maunds and daily average arrivals at 200 maunds with off-take also at about that size. A sharp advance in prices was also registered in the Khandsari section in line with sugar prices.

*

Foodgrains

Foodgrains prices ruled quiet in the Hapur market due to poor demand. The supply position earlier in the week was reported to have slightly improved. The UP Government's procurement programme coupled with sales of imported wheat through fair price shops is leaving its impression on wheat prices in the open market. During the past week both arrivals and offtake had been affected by unfavourable weather conditions. Towards the close of the week under review poor stock position coupled with higher outside advices imparted some steadiness to wheat prices. Largely due to restrictions imposed by Government on the movement of supplies from surplus districts, rice prices registered some advance.

Gram prices continued to be quiet as the reports of a bumper crop kept buyers on the side lines. There was no appreciable change in the prices of barley and bejhar. The market for peas also displayed a quiet trend as arrivals were placed at a daily average of 500 maunds.

Wheat prices here ruled quiet during the week to be quoted on Monday at Rs 18 per maund for average quality and upto Rs 19.50 for farm produce. These quotations referred to private deals and wheat is not openly available as Government purchasing price of 50 per cent of arrivals continues at Rs 13 to Rs 15 a maund. Daily arrivals in private were reported at an average of 100 maunds and they were being lifted by consumers directly. Sales of imported wheat through fair-price shops also continue, but the beneficiaries are persons below the average income of Rs 150 per month.

Rice prices registered an advance of about Re 1 per maund during the week due to tight supply position. The decline in gram prices is due to the fact that the U P State Government is anxious to purchase gram and has invited tenders for the purpose, but as Government purchasing price fixed at Rs 11 per maund is far below the market prevailing prices, no Government purchases were possible. Prevailing weekend prices (in rupees per maund) were:—Rice sela basmati 34/- to 37/-, manipuri 24/-, raimunia 27/- gadda 23/-, gram 13.25, barley 12.62, bejhar 12.37 to 12.75, jowar 14/- to 16/- guwar white 15/- black 12/-, bajra 14/- to 16/-.

*

Shellac

A slightly improved tone was noticeable in the shellac market during the past week. Shipments during June until the 27th were 29,725 packages comprising shellac 13,482 packages; Seedlac 12,730 packages; Buttonlac 1,105 packages; Others 2,408 packages. The following table gives the rates on July 1.

Quotations	Buyers Rs.	Sellers Rs.
Standard Pure Buttonlac	80.00	82.00
TN Ture	62.00*	63.00
Standard One ...	68.00	70.00
F.O. Superfine ...	70.00	72.00

MADRAS REVIEW

Human Relations in Industry

IT is almost a self-evident truism in industrial economics that all-round progress in the industrial sphere and particularly increase in production, depends, to a considerable degree, on the existence of sound human relations in industry. Whatever might be the other temporary factors that might hold up production or productive capacity, even a slight rupture of relations between human elements could permanently impair operational efficiency in industry. For India, which is keen on achieving a rapid pace of industrialisation, cooperation between human elements in production holds very great importance, which, the past experience of the country, should only have fortified. While the Government had realised the role of healthy industrial relations and had taken steps for promoting mutual understanding between labour and management the results that had followed could, by no means, be considered satisfactory from the point of success achieved in maintaining industrial peace. In proof of this, the repeated stressing of the importance of the subject, to which the people are often treated could be pointed to.

Presiding over the two-day conference on human relations in industry, sponsored by the South Indian Textile Research Association (SITRA), Dr C. P. Ramaswami Iyer, stressed the psychological aspect of the issue and pointed out that the problem of human relations was a problem of psychology. Since psychology was the science of human behaviour, the essence of the problem of human relations in industry lay in creating mutual understanding and goodwill between employer and employee.

The creation of such goodwill and understanding was not just a matter of exhortation to either of the parties, but involves the need for positive steps to be taken to remove hindrances to mutual understanding. What separates labour from employers is the feeling nursed by labour of being exploited and deprived of their legitimate share in the wealth they labour to create. It is therefore around the acceptance and implementation of measures intended to promote the welfare of labour that better employer-employee relationship is sought to be built. The Government's attempts had also been mainly directed toward this; and hence the spate of reforms in labour laws to protect and advance the interests of labour. It cannot be denied that such measures would go a long way in improving industrial relations in the country and that continuing outbreak of troubles only points to the persisting leeway that remains to be made up in raising labour to higher standards of living.

The main aspects of such welfare activities relate to slum clearance, housing, and factory welfare. As Dr Ramaswami Iyer pointed out, no study of human relations could be complete without including these elements of welfare, and it is in these respects that the country had been lagging behind. More also remains to be done to make working conditions comfortable for the workers especially in the direction of lighting and seating arrangements in factories, respite for labour, avoidance of boredom and fatigue etc. Dr Ramaswami Iyer has in this connection laid stress on labour saving devices also. While this would take away much of the present wearisome labour whether and to what extent such devices could be introduced without straining employer-employee relations will have to be carefully studied. For, it is always the case that the introduction of such devices results in part of the labour force getting surplus and attempts inevitable in the circumstances to dispense with the surplus labour creates frictions between employer and employees.

It is in respect of these factors that govern the conditions of working in factories that scope lies for research for improving human relations in industry. While no amount of research could tackle the problem created by the ideological cleavage between workers and management, research could, on the basis of the reactions of workers to particular conditions of working ,indicate some lines for creating a better climate for the growth of mutual understanding. Naturally such research will have to deal with the problems not only in their general aspects but also take into account the special conditions prevailing in the country. The importance of regulating industries with a view to keeping them in harmony with their essential agricultural environment, pointed out by Dr Ramaswami Iyer, is only too obvious. Otherwise there is the danger of disparity developing between the living standards of the worker in the industrial centres and the villagers in the countryside, which may become the focal point for new discontent in the countryside.

The deplorable feature of industrial relations in India is not the mere attitudes of mutual hostility adopted by either parties, but the undersirable methods adopted for settling disputes. When it is not a trial of strength, and in instance when nothing is achieved by a mutual show of strength, it is adjudication that steps in to settle the differences, and this could by no means be considered the most desirable way of settling disputes since, bitterness is not buried in the process of adjudiaction but only kept simmering beneath.

The legal bulwark that has been erected for preserving industrial peace offers very little promise for improving mutual relations between employers and employees. Most importantly it overlooked the human side of the question. On the other hand, settlement of disputes through the machinery of conciliation would reflect real improvement in the industrial relations and conduce to the maintenance of human relations in industry. On this basis, the present trend in respect of industrial relations in the country cannot be considered satisfactory. The peculiarities of trade unionism in Indian industry had made conciliation practically an unworkable machinery and the attitude of trade unionists also suffers from a bias towards outside intervention to bring about a settlement. Ultimately it is the weaknesses of the trade unions in India that are reflected in the state and course of industrial relations. It is therefore in the evolution of sound trade union code and conduct that the future of industrial relations depends. The multiplicity of trade unions that now obtain in almost every industry with rival political parties in their leadership and embracing conflicting ideologies has done, perhaps, the greatest harm to industrial peace in the country.

MINERVA MILLS, LIMITED

NOTICE TO SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT THE Thirtyninth Annual General Meeting of the above Company will be held at the Registered Office of the Company, Temple Bar Building, 70, Forbes Street, Fort, Bombay, on Thursday, the 6th August 1959 at 4.30 P.M. to transact the following business:—

1. To receive and adopt the Directors' Report and Audided Statements of Accounts for the year ended 31st December 1958.
2. To appoint Directors in place of those who retire but are eligible for reappointment.
3. To appoint Auditors for the current year and to fix their remuneration.
4. To approve and authorise variations in the terms of two contracts referred to in the Prospectus dated 5-12-'58 issued in connection with the issue of 6½% taxable Debentures 1967-70.

The Transfer Books of the Company will be closed from 11th July 1959 to 31st July 1959, both days inclusive.

A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a Member.

Detailed Notice of the above Meeting has been published in the Press and is also being posted to the shareholders individually.

By Order of the Board,
N. Sirur & Co. Private Ltd.
Manging Agents,
N. D. SIRUR
Managing Director.

Bombay,
16th June 1959.

THE PENINSULA

BURN & COMPANY LIMITED.

NOTICE

NOTICE is hereby given that the Annual General Meeting (being the sixty-fifth Ordinary General Meeting) of the Company will be held on Friday, the 31st July, 1959, at 11 a.m. at the Registered Office, 12, Mission Row, Calcutta, to transact the following business:

1. To receive and adopt the audited accounts for the year ended 30th April, 1959, and the Directors' and Auditors' Reports thereon.
2. (a) To confirm the interim dividends declared by the Directors comprising the dividends payable on the Preference Shares for the half years ended 30th June, 1958 and 31st December, 1958.
   (b) To declare a dividend on the ordinary shares. The dividend, if declared, will be paid on or after the 4th August, 1959 to the Shareholders whose names are on the Company's Register on the 31st July, 1959, or to their mandatees.
3. To appoint a Director in place of the retiring Director.
4. To appoint auditors and fix their remuneration.

The Ordinary Share Register of the Company will be closed from the 23rd July, 1959 to the 31st July, 1959 both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and a proxy need not be a member.

By Order of the Board
MARTIN BURN LIMITED,
A. G. GIDLEY,
Secretary,
Managing Agents.

Calcutta,
3rd July, 1959.

SOUTH INDIAN NOTES

Plantations' Problems

A difficult period ahead had been forecast for the plantation industry in Kerala by Mr C. H. S. London, retiring Chairman of the Association of Planters of Kerala in his speech at the 20th annual meeting of the Association. The new agrarian law and the new industrial relations law, are the sources of threat to the prospects of plantations in the State. While the new agrarian law, has placed obstructions by means of heavy taxation to the maintenance and expansion of the plantation industry, the industrial relations law, has erected new impediments to the fair and peaceful settlement of all industrial disputes. Under these two stringent measures, what could be the outlook for the industry in the future could be easily imagined.

A hostile labour force constitutes perhaps the greatest threat to the prosperity of plantation industry in Kerala. This explains for the reversal of the relationship between the reduction of working hours and production. Mr London points out that in more advanced countries, shorter hours are usually balanced by a corresponding rise in per capita production. This, does not apply to Kerala where the workers are instigated to utilise the spare hours to foment troubles for the management. Mr London is also highly critical of the attempts of the Government to settle plantation workers in waste lands near plantations. This, he says, has encouraged labour in the plantations to be less dependent on work in the plantations. Turnover of work in the plantations has suffered as a result.

The lack of representation for the producers in the Rubber Board is another point taken up for criticism by Mr London. The evils that had followed this exclusion of producer elements from the Rubber Board, he lists as bureaucratic administration with no conception of commercial practice, and inefficient management with little interest for the future of the rubber industry. He contrasts this state of affairs in the rubber industry with that in the tea industry, where he claims, a succession of able Chairmen with the industry's interests at heart had considerably enhanced the efficiency in the working of the Tea Board.

However, Mr London is not very optimistic about maintaining the level of production attained last year. Production of tea in 1953 was at 152 million lbs, 8 million lbs higher than production in 1957. But in the decline in production in the first four months of 1959 against production in the corresponding period in 1958, Mr London sees signs of a lower level of production for 1959. In respect of rubber, against a production of 28,825 tons for the year ending April 1959, production for the current year is estimated only at about 25,000 tons.

*

Andhra Pradesh State Financial Corporation

Speaking at the Third Annual General Meeting of the Shareholders of the Andhra Pradesh State Financial Corporation, Mr Bikkani Venkat Ratnam, Chairman of the Corporation, referred to the expanding role of the Corporation in assisting the industrialisation of the State by extending loans to industrial concerns in the large-scale, medium and small-scale sectors. The Corporation has todate sanctioned a sum of Rs 143.22 lakhs as loans to a wide variety of industrial concerns. Oil mills with an amount of Rs 31.43 lakhs account for the largest share of the loans sanctioned by the Corporation, while textiles with a sum of Rs 19.90 lakhs come second. Other important industries to have received loans from the Corporation are chemicals, solvent extraction, rice and flour, light engineering, tobacco redrying, cigarette manufacturing, printing etc.

The Corporation's activities in extending loan assistance to needy industries, received a slight setback in the current year as compared to last year and is reflected in the fall in the number of applications considered by the Corporation. Against 40 applications for an amount of Rs 53.57 lakhs considered by the Corporation in the last year, the number of applications considered by the Corporation in 1958 totalled only 32 involving a sum of Rs 29.52 lakhs. Against this 32 applications the Corporation sanctioned loan assistance only for 24 applicants the amount sanctioned being Rs 15.94 lakhs.

The accounts of the Corporation for the year reveals improvement in financial working and discloses an increase in the net profit to Rs 6,15,406.83 from Rs 5,55,242.69 in the last year. The reserve fund of the Corporation also discloses an increase to Rs 1,86,800 achieved by transfer of Rs 42,000 from last year's profits. Similarly the provision for bad and doubtful debts is higher at Rs 25,000 against Rs 5,000 previously. The total of various reserves stands at Rs 2,16,800 inclusive of the Investment Reserve of Rs 5,000 created last year.

The Corporation is far from having reached a state of financial self-sufficiency to meet all its obligations. This is evident from the continuing dependence on the State Government for subventions to meet the expenditure arising from liability to pay dividend at the guaranteed rate of 3½ per cent.

SOUTH INDIAN MARKETS

Oilseeds Dull

THE oilseeds and oil market in Madras ruled dull but steady during the past week. The main factor that is responsible for the resistance ot lower price levels especially in the seeds section is poor arrivals both in Madras and district markets. In the Madras market arrivals continued to be small while South Arcot centres also reported a decline. But buyers were chary of supporting the market at prevailing levels as the comparable prices in the oil section were unremunerative. Moreover with prospects for the crop becoming bright following good rains in the growing areas in the North Arcot and South Arcot Districts the feeling is gaining ground that the present higher prices for seeds may become untenable. Reports from the growing areas seem to indicate larger availability of the crop as the recent rains would facilitate the harvesting of the current crop as well as the preparations for the winter crop. The news of about the Pollachi crop continues to be quite encouraging.

The continued uncertainty about the export policy with regard to groundnut oil is a restraining influence. It is pointed out that Government should announce their policy well in advance of the commencement of any particular period so as to enable exporters to have sufficient time for negotiations. The time factor is particularly important in the case of oil exports as traders are often confronted with a situation in which the margin between domestic and overseas prices is slender as at the present juncture. The market for oil in Madras has been dull as buyers seem to have found it advantageous to obtain their requirements from Andhra where prices are reported to be quoting lower than in Madras where the oil prices are based on the prevailing high prices for seeds.

*

Hides and Skins

A steady trend prevailed in the hides and skins market during the past week. There was no sizable change in the rate of arrivals which continued to be rather poor and that factor was fully responsible for the improved tone of the market. Arrivals of tanned cowhides were more or less on the same level as in the previous week and an improvement in clearances at hardening price levels was noticeable. Buff hides arrivals of which recorded little change from the previous week were in good request with prices showing a steady trend. Calf met with moderate demand at unchanged prices. Active conditions prevailed in the tanned sheep skins section where arrivals were moderate.

In the export section sellers were reluctant to discount rates and UK buyers' indications continued to be lower than Madras offers. Prices were generally unchanged and an exception was some light weight cow hides which were on offer at slightly reduced rates. Sheep skins met with good demand at enhanced rates while goat skins attracted some attention at generally unchanged prices.

*

Coffee

Coffee prices ruled firm at the recent auctions with Plantation "A" meeting with good demand at enhanced rates. According to the All India Coffee Merchants' Association, Coimbatore, the sudden spurt in prices has stemmed from the fact that the monthly releases by the Coffee Board continue to be unrelated to prevailing market conditions. In this regard the Association points out that though a sudden increase in prices especially in Plantation "A" has been noticed immediately after the last Coimbatore auction, there has been no increase in the release for the Mysore auction held on June 25 with the result the price has been pushed up further. In a communication to the Coffee Board the Association has urged Government to release in the monthly auctions sufficient stocks of Plantation "A" Coffee for which there is good demand from the consumers.

An all time high in World Coffee production is forecast for the 1959-60 marketing year. According to the US Agricultural Department the world coffee crop may be of the order of 69,968,000-60 kilo bags and world exportable production 56,120,000 bags. These forecasts show an increase of 6,191,000 bags and 5,006,000 bags in world production and exportable surplus respectively over the previous marketing year as the Departments revised estimates for 1958-59 are 59,777,000 bags and 51,114,000 bags for world production and exportable production respecitvely.

*

Bangalore Silk

Although there was a slight slackness in the demand for all qualities of raw silk, prices in the Bangalore Silk Market during the week ended 25-6-59 continued to hover around the higher levels. However, market circles hold the view that prices would soon come down consequent on the increased production of cocoons following favourable showers in some of the sericultural areas of the State.

Filatures continued to remain unchanged excepting for a slight decline during midweek in the case of Kisan, which however closed at the opening rate of Rs 41.00 per lb.

Variations in the price of Reeling Cocoons were unusually erratic with the price of Mugur and Channapatna quoting around the same levels at one stage, a feature not noticed thus far.

SEN-RALEIGH INDUSTRIES OF INDIA LTD.

*

Mr. S. K. SEN ON PROGRESS TOWARDS SELF-SUFFICIENCY

The 9th Annual General Meeting of Sen-Raleigh Industries of India Ltd., was held in Calcutta on the 29th June, 1959. The following are extracts from the speech of Mr. S. K. Sen, the Chairman of the Company, delivered on the occasion.

Your Directors have in their report explained to you the reasons for the decline in profits of the Company, following on a shortage of raw materials which did not allow achievement of those targets of production which were necessary to offset the general rise in costs. They have, however, recommended that dividends for the Preference and Ordinary Shares be paid at the same rates as in the past year.

The year under review opened for us on a note of pessimism with imports of even raw materials being to a degree dependent on the availability of foreign aid. The frequency of layoffs—although mostly sectional—did not make for smooth and regular production and the results was a turnover not much beyond the level of previus year, achieved, however, at a much higher cost. Our factories were particularly affected in as much as the major part of our plant for expansion had arrived but could not be fed, resulting in so much idle capacity and unremunerative blocked capital.

Towards the middle of 1958, an import licensing policy for the bicycle industry, based on the 1957 level of production, was ultimately evolved but this did not benefit our expansion programme immediately to any great extent as the foreign exchange released under this policy only allowed the 1957 level of production to be repeated. It was possible to increase production of bicycles beyond the 1957 level if raw material supplies could be augmented from indigenous sources.

In the present circumstances, what the industry needs badly is an import licensing system that allows licenses for all categories of materials to be issued simultaneously, instead of the issue being spread over 4/5 months in each period when production is always dependent on the last license issued. Much of the material supply problems encountered by industries today would automatically disappear if such simultaneous issue of licenses could be achieved.

I am pleased to find from the recent address of the Union Minister for Industries to the Cycle Manufacturers Association of India at Madras that he is fully alive to the situation and his Ministry have in the meantime announced certain changes in the April/September, 1959, licensing policies, the effects of which, if fully realised, would help to stabilise production programme in a large number of growing industries.

In my previous addresses to you I had stressed on the necessity of planning our expansion so that self-sufficiency in the manufacture of components be given priority over the quantum of overall production. The benefits of this policy are becoming evident now when we are in a position to increase our bicycle production well above the 1957 level because we depend on component imports only to the extent of Rs. 2/- per bicycle, and we are also in a position to use more indigenous materials.

Despite the difficulties encountered, the foreign exchange stringency has achieved one significant result. It concentrated the attention of all manufacturers on the possibility of utilising the country's resources to the maximum, so that more and more production could be maintained on indigenous supplies alone. This drive towards self-sufficiency accomplished in the short space of one year what would normally perhaps have taken four or five years to realise.

This is evident from the fact that despite import ceilings being held at the 1957 level of production, the bicycle industry recorded a considerable expansion in production in 1958 and this trend continues into the present year. That the added production was achieved in a period of diminishing import licenses for components, would indicate that the production of components within the country is now nearly keeping pace with bicycle production. It is important to effect a still larger production of components, particularly of friction parts, as, apart from any question of equipping new bicycles for the road, the time is fast approaching when the indigenous production of friction parts would play a vital part in supplying essential replacement spares.

There is an increasing demand from assemblers and manufacturers for friction parts made by your Company. The trade has just as big a demand for these parts for supply to consumers as essential spares. In the overall interests of the country—supplies of the friction parts being limited—our products were made available to manufacturers first and only the balance was supplied to the trade. The need for placing more friction spares on the market is fully realised and through our expansion in the components section, which is now gradually taking place, we hope to be able to meet some part of the market demand later.

In my last report I had mentioned that rights of export for bicycles, components and accessories for a number of countries in Eastern Europe and Asia, had been granted to the Company by its foreign associates. In addition to the countries mentioned previously, provisional sanction to export bicycles to two further areas, viz., Burma and Egypt, were received during 1958. Our efforts at developing an export market have not as yet met with any major success. Eastern European countries offered prices at which transactions were not possible and in the case of Burma, notwithstanding the existence of a trade agreement for some time now between that country and India covering imports of cycles from India, no import licenses for cycles have been issued as yet by Burma.

During the last year there has been a growing realisation in this country of the need for the study of productivity. The bicycle industry was well to the fore in this sphere. Two members of the First Productivity Team that was sent out by the Government for studying this subject in the United States and Europe, were from the bicycle industry and Mr. Sanjoy Sen, a Director of your Company, was one of them. I am certain the Company will benefit greatly from the experience gained by him during the course of this tour.

I welcome to the Board, Mr. S. Venkataraman, nominee of the Industrial Finance Corporation, who takes the place of Mr. C. D. Khanna. I take this opportunity to thank Mr. Khanna for the valuable services rendered by him to the Company during his term of office.

Before I close, it is my pleasant duty to thank my colleagues, the staff and the workers of the Company, our foreign associates and our dealers for another year of unfailing support to the Company.

Note : This does not purport to be a report of the proceedings of the Annual General Meeting.

NEW INDIA INVESTMENT CORPORATION LIMITED

Notice is hereby given that the Twentysecond Ordinary General Meeting of the shareholders of New India Investment Corporation Ltd. will be held at the registered office of the Company at 9, Brabourne Road, Calcutta, at 4 P.M. on Wednesday the 5th August, 1959, to transact the following business:—

1) To receive and adopt the Directors' report & audited Profit & Loss account and Balance sheet for the Y.E. 31st Decr. 1958.

2) To declare dividend recommended by the Directors.

3) To appoint Directors in place of Sir B. D. Goenka and Sir Walter Michelmore, who retire by rotation and offer themselves for reappointment.

In this connection to consider and if thought fit to pass the following resolution of which special notice as required by Section 281(2) of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which is annexed separately as required by Section 173 of the said Act.

To be proposed as an ordinary Resolution:

That the age limit specified in Section 280 of the Companies Act, 1956, shall not apply to Sir Badridas Goenka, who has attained the age of 75 years and who retires by rotation from the office of Director under Article 117 of Articles of Association of the Company and that he be and is hereby reappointed a Director of the Company.

4) To appoint Auditors & fix their remuneration.

5) To transact any other ordinary business of the Company.

The share transfer register of the Company will be closed from 30th July to 5th August, 1959, both days inclusive.

By order of the Board
RAMDUTT RAMKISSENDASS,
Secretaries & Treasurers.
Calcutta,
26th June, 1959.

Note:—a) A member entitled to attend & vote is entitled to appoint a proxy to attend & vote instead of himself and a proxy need not be a member.

b) The dividend if declared will be paid to those shareholders whose names appear on the Company's books on the 5th August, 1959, or to their mandatees. No application for dividend warrants will be necessary.

Explanatory statement u/s. 173.

In the special notice given to the Company of the resolution under Item No. 3(a) of the above notice it has been stated that Sir Badridas Goenka, who is proposed to be reappointed a Director of the Company, & who retires by rotation and offers himself for re-election, has attained the age of 75 years. He is one of the Promoter Directors of this Company & it is most desirable that the Company should continue to avail itself of his experienced guidance and as such the age limit prescribed to Directors u/s. 280 of the Companies Act, 1956, should not apply to him.

By order of the Board
RAMDUTT RAMKISSENDASS,
Secretaries & Treasurers.

BURN AND COMPANY LIMITED

NOTICE is hereby given that a General Meeting of the members of the Company will be held at the Company's Registered Office, 12, Mission Row, Calcutta, on Friday, the 31st day of July, 1959, immediately following the termination of the Annual General Meeting of the Company called for 11 a.m. on that day to consider and if thought fit to pass with or without modification the following resolutions the first of which will be proposed as an Ordinary resolution and the second as a Special resolution.

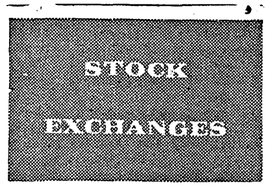
Ordinary Resolution:

1. That the proposed reappointment and the draft agreement (which has for the purpose of identification been subscribed by the Chairman of the Board of Directors) submitted to this Meeting setting forth the terms and conditions on which it is proposed that Martin Burn Limited be reappointed the Managing Agents of the Company for a period of 10 years from the 15th August 1960, be and is hereby approved and an application to the Central Government for its approval to this proposal under Section 326 of the Companies Act 1956 be and is hereby directed to be made.

Special Resolution:

2. That the Articles of Association of the Company be altered in manner following:—

Articles 131, 132, 133, 134, 135, 136, 137, 138 and 139 shall be deleted and for Article 131 the following shall be substituted—



"131. Subject to the approval of the Central Government Martin Burn Limited shall be the Managing Agents of the Company upon such terms and conditions as may from time to time be agreed upon between the Company and the Managing Agents and embodied in an agreement in writing between the parties."

By Order of the Board,
Martin Burn Limited
A. G. Gidley,
Secretary,
Managing Agents.

12 Mission Row,
Calcutta.
Dated 3rd July, 1959.

Note: (i) A member entitled to attend and vote at this Meeting is entitled to appoint a Proxy to attend and vote on a poll instead of himself and a Proxy need not be a member of the Company.

(ii) An Explanatory Statement is annexed to the Convening Notice issued to members of the Company.

Smart Rally in Equities

Watch-Dog Writes:

STOCK markets in India during the past week have been quite active with prices showing an uptrend under the lead of the more speculative issues. The improvement in sentiment has been rendered possible because the disappointment over the postponement of the proposed new capital issue of TISCO has been offset by good corporate news coupled with the continued easy conditions in the money market even after public subscription to the new Central Loans.

Conditions in the Calcutta Stock Exchange were quite cheerful following higher advices from Bombay. During the week's trading not only the speculatives but selected scrip all along the list participated in the uptrend with the result the market closed the week on a fully steady note.

In Bombay buoyant conditions were noticeable from early in the week and apart from the pivotal shares, several shares in the textile and Miscellaneous sections recorded handsome gains.

The trend in the Madras Stock Exchange was towards higher price levels. Sectionwise Plantings were prominent though other sections also contributed quite a large number of active counters.

*

Calcutta

Friday Evening.

TRADING on the Calcutta Stock Exchange last week was on a cheerful note with activity noticeable all along the list. It would appear that strangely enough the lead had been provided by Dalal Street where operators were generally expected to be pre-occupied with discussions about the now postponed TISCO Capital issue. But it was evident from the very start of the week under review that Dalal Street had begun to turn its attention to the brighter aspects of the investment situation. With Bombay in a buoyant mood sentiment in Lyons Range also improved and but for a brief set back on Thursday the undertone of the market had been steady throughout the week.

Apart from the good corporate news, marketmen have been encouraged to extend their commitments by the slack conditions in the money market which does not seem to have been much disturbed by subscriptions to the new Central Loans. From the day the terms and conditions of the new Loans have been announced marketmen are proceeding on the assumption that the loans would not have any sizable influence on trading in the stock markets. As expected the loans have been oversubscribed and this factor has further aided market sentiment this week.

Giltedged securities ruled firm throughout the week with 3 per cent 1986 done at Rs 73.78 on Thursday.

In the Banking section, Punjab National Bank was marked down to Rs 22.19 from Rs 22.31 earlier in the week.

Textile shares were selectively better. Kesoram was a bright spot improving by one point over the week to be placed at Rs 16.25 on Friday. Jayshree was another active counter in this section having been done upto Rs 9.56 from an opening rate of Rs 9.06.

Coal shares were a neglected market presumably because of the continued uncertainty as regards the selling price of coal. The delay on the part of Government in announcing their decision on the Coal Prices Enquiry Committee's recommendations has given rise to the doubt that Authority may not be in favour of a rise in prices. As already the industry is experiencing great difficulty with regard to funds, it is felt that without an early upward revision in the selling price of coal, the working of the industry will be seriously affected. Towards close of the week rumours about an early announcement on coal prices induced selective interest in the section. Bengal attracted attention in late dealings and closed at Rs 317. Burrakur opened the week at Rs 17.19 and after having been done upto Rs 18.06 closed on Friday at Rs 17.75. South Karanpura was done around Rs 13.12. Raneegunge was almost unchanged on balance at Rs 17.19. Bharat was done upto Rs 7.25 Western Bengal was better at Rs 6.62.

Jute shares met with improved demand presumably on expectations of satisfactory working results for jute mills. Apart from indications of increased offtake of jute goods by foreign consumers operators seemed to think that with better prospects of cheaper raw material supply mills would record higher profits. Anglo India opened the week at Rs 251 and by close the next day was quoted 10 points higher at Rs 261. The scrip, however, closed on Thursday at Rs 258. Barnagore was done upto Rs 159. Auckland gained some five points to be finally placed at Rs 186. New Central after earlier steadiness closed at Rs 16.87. Gourepore was steadier at Rs 403 as were Budge Budge at Rs 150, Kamarhatty at Rs 209 and Nuddea at Rs 65.50. Howrah and National opened at Rs 24.69 and Rs 23.50 and closed at the same rates.

In the Engineering section Indian Iron opened steadier at Rs 24.47 and

THE NEW SAMANBAGH TEA COMPANY, LTD.

Notice is hereby given that a General Meeting of the abovenamed Company will be held at the Registered Office, No. 4, Bankshall Street, Calcutta on Thursday, the 30th July, 1959 at 3-30 P.M., in the afternoon to consider and if thought fit to pass with or without modification the following resolution, namely:

That subject to and upon the terms and conditions specified in the Letter of Offer to be issued by the Company dated the 31st July, 1959 a copy whereof has been submitted to this meeting and subscribed by the Chairman thereof by way of identification and in compliance with the provisions of Section 372 of the Companies Act, 1956, this meeting hereby sanctions the purchase by the Company of issued and fully paid Ordinary Shares of Rs. 10 each in the Capital of the Rajnagar Tea Company, Limited up to the amount of 32,000 shares and, pursuant to the provisions of Section 81 of the Act, hereby approves the issue and allotment of Ordinary Shares of Rs. 10 each credited as fully paid for a consideration other than cash to the registered holders of the issued Ordinary Shares in the Capital of the Rajnagar Tea Company, Limited as consideration of the acquisition by the Conmpany of the shares in the Rajnagar Tea Company, Limited held by them on the basis of one Ordinary Share in the Company for every two Ordinary Shares in the Rajnagar Tea Company, Limited so acquired and where fractional cases arise the purchase of the share represented in such fraction by payment in cash of the market price of such share ruling at the time the offer becomes unconditional in accordance with the terms therein specified and that the Directors be and are hereby authorised to take such steps as may be necessary in order to give effect to the above purchase and issue of shares and payment thereof in cash (if any)".

The Share Transfer Register will be closed from the 21st July, 1959 to 30th July, 1959, both days inclusive.

By Order of the Board,
SHAW WALLACE & COMPANY LTD.
Managing Agents.

Calcutta,
Dated 16th June, 1959.

Note: A Member entitled to attend and vote at the meeting is entitled to appoint a Proxy to attend and vote in his stead. A Proxy need not be a member of the Company.

closed the day further higher at Rs 24.63. On over night support the scrip opened Wednesday firm at Rs 24.76 but could not make much headway closing the day at Rs 24.72. The result of Thursday's trading was a loss of 9 nP as the days's closing rate was placed at Rs 24.63. Though during Friday's trading there was not much improvement as the closing rate was only Rs 24.66, sentiment improved after hours with the result the quotation was taken to Rs 24.74. Elsewhere in the section J. K. Steel was wanted up to Rs 13.90. Kumardhubi improved to Rs 7.25 x.rts. Guest, Keen, Williams firmed upto Rs 41.19. TEXMACO opened at Rs 25.65 and closed at Rs 25.45.

In the sugar section Carew was a bright spot showing a gain of over 2 rupees over the week at Rs 13.88. SKG was done at Rs 10.06 with Cawnpore quoting at Rs 12.50, Raza Buland at Rs 13.94.

Though there has been a slight improvement in demand at this week's tea auctions the absence of sizable improvement in price levels kept enthusiasm for Tea shares at a low ebb. Among the few shares transacted during the week Hantapara was well maintained at Rs 121 as was Jayshree at Rs 12.31.

Several bright spots were noticeable in the miscellaneous section. Among paper shares India Paper Pulp met with good support to close higher on balance at Rs 24.81. On publication of an excellent report by the company Balmer Lawrie was done upto Rs 221 to be later quoted at Rs 220. Indian Oxygen met with good support to advance to Rs 28.56. Aluminium Corporation was prominent in later dealings to move upto Rs 15.81. NICCO met with sustained interest and improved to Rs 35.19. National Tobacco was taken up to Rs 18.19 while Rohtas Industries gained ground on buying support to be placed at Rs 23. National Carbon was an active counter and was quoted at Rs 33.69. The following are the week's closing quotations of some important shares: Orient Paper Rs 36.05, Indian Cable Rs 31.69, Indian Copper Rs 4.08, Indian Aluminium Rs 22.

*

Bombay

WITH revival of bull support in the more speculative counters and investment interest in textile and selected miscellaneous shares, conditions in the Bombay stock exchange during the past week were quite cheerful. The disappointment over the delay in regard to the new TISCO Capital issue had proved shortliver as operators seemed to have derived consi derable encouragement from other developments.

In the steel section Tata Iron closed last Friday at Rs 190.75 but was taken to Rs 192 by close on Monday. Sentiment further improved on Wednesday and consequently the rate was pushed up to Rs 193.25. Profit-taking reduced the gain somewhat on Thursday and the scrip was finally placed on that day at Rs 192. Indian Iron closed at Rs 24.64 as against its previous week's close of Rs 24.24.

The undertone in the textile section was steady with selected shares meeting with good demand. Following reports of Government approval of the company's scheme for expansion of production, Century was keenly sought after and closed higher on balance at Rs 567 as against its previous week's closing of Rs 554. Kohinoor firmed up to Rs 365 from Rs 284.50. Bombay Dyeing after earlier firmness closed alsomt unchanged at Rs 65.70. Simplex was a bright spot at Rs 193.

In the Miscellaneous section, National Rayon was in keen request at advancing levels following encouraging news from the Chairman of the company regarding the expansion schemes. But in later dealings the price developed a sagging tendency to close on Thursday at Rs 336.50. Premier Construction was a strong feature improving to Rs 356 from Rs 338. TELCO attracted attention and advanced briskly to close at Rs 222.50.

*

Madras

BUOYANT conditions were witnessed in the Madras Stock Exchange during the past week with buyers showing interest at increasing levels. Selected shares all along the list were in good request. Sectionwise, textiles, sugars and plantings recorded brisk trading.

In the textile section Travancore Rayon was a prominent spot and met with inquiry throughout the week and closed higher at Rs 22.90. While Madura was firm at Rs 28.12, Lakshmi was almost unchanged. Bangalore Woollen was done at Rs 177.50 but Buckingham was quiet.

Among sugar shares EID, met with some enquiry around Rs 38.25. Deccan was an active counter and was well maintained around Rs 12.75. United Breweries continued to be in request and on Wednesday spurted to Rs 450.

In the Planting section Cochin Malabar attracted good deal of attention and was placed at Rs 7 but in later dealings lost ground to be finally placed on Wednesday at Rs 6.65. Following the announcement of an interim dividend of 15 per cent Anaparai improved to Rs 4.85. Elsewhere Vaikundam Rajagiri, Haileyburia, Consolidated Coffee and Bababudin were in good request at enhanced levels.

Among Miscellaneous issues Aluminium Industries gained sizable ground on sustained buying support to be finally placed at Rs 22.50. India Cement, FACTs, Mysore Paper and Mettur Chemicals were other bright spots.

JESSOP AND COMPANY, LIMITED.

NOTICE IS HEREBY GIVEN that the TWENTY-SEVENTH ANNUAL GENERAL MEETING of the Members of Jessop & Co., Ltd., will be held at the Registered office of the Company on Friday, the Twenty-fourth day of July, 1959, at 11.00 o'clock in the forenoon, for the transaction of the following business:—

1. To receive and consider the Accounts, together with the Reports of the Board of Management and Auditors, for the year ended 31st October, 1958.
2. To declare a Dividend.
3. To appoint Auditors and fix their remuneration.
4. To transact any other business of an Ordinary General Meeting.

The Ordinary Share Transfer Registers of the Company will be closed from 8th to 24th July, 1959, both days inclusive.

By order of the Board
D. D. MARKAN
Secretary

63, Netaji Subhas Road,
Calcutta,
29th June, 1959.

NOTE: A member entitled to atend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

THE EAST INDIAN COAL COMPANY, LIMITED.

(Incorporated in England with Limited Liability).

NOTICE is hereby given that an interim dividend in respect of the year ended 30th April, 1959, at the rate of Naye Paise fifty per share, subject to deduction of Indian Income-tax and Super-tax at the prescribed rates, has been declared payable by the Directors and will be paid to the Registered Shareholders as on 27th July, 1959.

The Share Transfer Books of the Company will be closed from the 14th to 27th July, 1959, both days inclusive.

By Order of the Board,
JARDINE HENDERSON, LIMITED,
I. F. Morriss,
Actg. Secretary,
Managing Agents and Secretaries.

4, Clive Row,
Calcutta,
26th June, 1959.

N.B.—Payment of the above dividend will be made only to those members whose names are registered in the Books of the Company on the 27th July, 1959 or to their mandatees. No application for Warrants will be necessary. Claims on behalf of the holders of shares on blank transfer will not be entertained.

Corrigendum

In the notice of Balmer Lawrie & Co Ltd, appearing in Indian Finance dated 27th June 1959, (Page No 1090) the date of the Annual General Meeting should be 13th July 1959 and not 15th July 1959 as mentioned.

INDUSTRIAL INFORMATION

INDEX NUMBER OF WHOLESALE PRICES IN INDIA.

The official wholesale price index (with the year ended March 1953 as during the week ended June 13, 1959 100) rose by 1.7 per cent to 116.6 as compared with 116.6 (revised) for the previous week. The index was also higher by 1.6 and 5.2 per cent respectively when compared with the correspondng weeks of the previous month and of a year ago.

The index for 'Food Articles' advanced by 3.4 per cent to 120.8 as against 115.8 (revised) for the earlier week due to the reappearance of Tea at a higher level and an increase in the prices of Milk (+27%), Meat at Patna (+20%), Oranges at Madras (+12%), Ragi at Ghoti and Potatoes (+8% each), Jowar at Coimbatore (+6%), Salt (+4%), Ghee, Gingelly Oil and Coffee (+2% each) and Rice, Barley, Mung, Urad and Bananas (+1% each), although the prices of Onions at Calcutta (—13%), Cat Fish at Bombay (—11%), Jowar at Rohtak (—9%), Gram (—3%) and Maize, Arhar, Turmeric and Cardamoms (—2% each) showed declines.

CUSTOMS AND EXCISE REVENUE.

According to the returns received in the Department of Commercial Intelligence and Statistics, the total gross sea, land and air customs revenue collected in the Indian Union during the month of October 1958, amounted to Rs 12.10 crores as compared with Rs 14.95 crores in the corresponding month of the previous year.

The comparison in the subsequent paras refers to that of the current figures with those of the corresponding period of the preceding year.

Of the total customs revenue collections, import duties accounted for Rs 9.58 crores as against Rs 12.07 crores, export duties for Rs 1.99 crores as against Rs 2.23 crores and land customs and miscellaneous for Rs 48 lakhs as against Rs 54 lakhs and air customs for Rs 5 lakhs as against Rs 11 lakhs.

The total gross collection of Union excise duties amounted to Rs 25.83 crores as compared with Rs 21.26 crores.

During the seven months, April to October, 1958, the grand total of gross customs and Union excise revenue realised was Rs 257.05 crores as compared with Rs 255.05 crores during the corresponding period of the preceding year. Of this amount, import duties accounted for Rs 62.88 crores as against Rs 92.86 crores, export duties for Rs 14.06 crores as against Rs 12.94 crores, land customs and miscellaneous for Rs 2.24 crores as against Rs 2.57 crores, air customs for Rs 42 lakhs as against Rs 1.51 crores and Union excise duties for Rs 177.45 crores as against Rs 145.17 crores.

NEW COAL DEPOSITS.

A coal bearing region extending over an area of 13 sq. miles has been located by the Geological Survey of India in the Bankura district of West Bengal.

So far four seams of coal have been established in the area.

A new deposit of the mineral has also been located near Ondal. This has been established to be the extension of some of the known seams of the **Raniganj coalfield.** The reserve is estimated to be of the order of 5.26 million tons with a much larger quantity of probable reserves.

In Ondal area, Narsamuda and Upper Kajora bottom seams are inferior in quality but Upper Kajora top, lower Kajora, Bonbahal and Topsi Kenda seams carry grade I coal.

COAL MINES PROVIDENT FUND.

The Government of India have decided, in consultation with the Board of Trustees of the Coal Mines Provident Fund, to grant interest to subscribers to the fund, on their accumulations, at the rate of 3¾ per cent per annum during the year 1959-60. The same rate of interest was allowed during 1958-59.

About 3.44 lakhs of colliery workers subscribe to the provident fund. The total accumulations in the fund, at the end of March 1959, was about Rs 16.64 crores.

WASHED COAL FOR STEEL PLANTS.

Dugda Coal Washery—work on which has already begun is expected to be commissioned towards the end of 1960.

The Washery which is estimated to cost Rs 43.8 million is being put up by an American firm under an agreement with the Government of India. The foreign exchange component of the cost is estimated at Rs 27 million.

It is proposed to utilise the credit extended by the Export-Import Bank of the U.S.A. to the tune of Rs 27 million to finance the foreign exchange cost of the Washery.

The Hindustan Steel Limited will provide power, water, access road to plant site and rail road sidings.

The Dugda Washery will supply washed Jharia coals to Bhilai and Rourkela.

The annual requirements of washed coals for the three new steel plants in the public sector and the expanded steel plants in the private sector are estimated at 8.27 million tons.

There are at present three washeries, which with certain improvements, will supply 1.2 million tons of washed coal. The new 500-ton washery, which has been set up by the National Coal Development Corporation at Kargali, will supply 1.1 million tons to Rourkela and 0.5 million tons to Bhilai. In the contract for the steel plant at Durgapur is included a washery to supply 0.8 million tons of washed coals to that steel plant.

For the balance—about 4.15 million tons—three washeries are proposed to be put up—in Dugda, Bhojudih and Patherdih, all in the Jharia coalfields. The washery in Bhojudih will supply to the Tata Iron and Steel Works and that in Patherdih to the Indian Iron and Steel Works.

Construction and management of these three washeries has been entrusted to the Hindustan Steel Limited.

RECORD WHEAT PRODUCTION.

The 1958-59 record production of 9.69 million tons of wheat represents an increase of 1,201,000 tons, or 14.1 per cent, over the average for the previous five years. The corresponding increase in area, this year's figure being 30,966,000 acres, is 1,435,000 acres or 4.9 per cent.

As compared with the partially-revised estimates for 1957-58 of 7,741,000 tons and 29,300,000 acres, the estimate for the current year show an increase of 1,953,000 tons or 25.2 per cent in production and 1,666,000 acres or 5.7 per cent increase in area.

The All-India Final Estimate for the current year, as released by the Directorate of Economics and Statistics of the Ministry of Food and Agriculture, states that a siginificant feature is the increase in yield per acre of wheat from 592 lbs. in 1957-58 to 212 lbs. 701 lbs. this year, indicating an increase of over 18 per cent. This is also higher by about 9 per cent than the average yield per acre of the five years ended 1957-58.

PART PLAYED BY RABI CAMPAIGN.

The increase in area in 1958-59 has been shared mainly by Madhya Pradesh, Uttar Pradesh, Punjab, Rajasthan, Bihar and Jammu and Kashmir.

All the principal wheat producing States ahve been responsible for the big increase in production this year. Also, the *Rabi* Campaign has played a part in this higher production. Bombay particularly mentions that efforts under the *Rabi* Campaign were responsible for the substantial increase of 217,000 tons this year as compared with last year.

In Madhya Pradesh, Uttar Pradesh, Punjab and Rajasthan, the increase in production as compared with last year has been 792,000 tons, 341,000 tons, 240,000 tons and 205,000 tons respectively.

MACHINE TOOL PRODUCTION

Indian Machine Tool Manufacturers' Association report that the total approximate production of various machine tools by their 14 leading member-firms during the month of April, 1959, was:—

Description		Quantity Nos.	Value Rs.
Lathes	...	130	9,24,710
Shaping machines		34	2,42,935
Drilling machines		43	1,24,300

Milling machines	...	3	29,000
Oil Fired Furnace		6	16,500
Tilting Furnace	...	2	9,635
Hacksaw machines		4	9,380
Saw benches	...	6	3,000
Drill chucks	...	27	1,146
Miscellaneous.	...	2	2,100
Total	...	745	14,83,141

CEMENT PACKING CHARGES FOR JULY-SEPTEMBER

On March 27, 1954, the Government of India announced that packing charges for cement would be fixed every quarter on the basis of the average of the maximum and minimum market price for packing material, during each week of the immediately preceding nine months, plus Re 1.25 per ton to cover incidental charges. On this basis, packing charges for the current quarter were fixed at Rs 11.54 per ton.

The packing charges for cement for the next quarter commencing from July 1, 1959, work out to Rs 11.40 per ton. The Government of India have informed all State Governments of the revised packing charges.

MASON'S TOOLS FOR PLASTER WORK

The Indian Standards Institution has issued a draft specification for mason's tools used for plaster work.

Masonary, perhaps, is one of the oldest occupations of man. Through the pre-historic ages to the modern time, a variety of tools have been developed and used for plaster work. Because of the several regional practices, these tools differ from region to region. In order to promote their mass production and improve their quality, it was felt necessary to rationalise their dimensions and specify the materials that should go in their manufacture.

The draft standard lays down the materials, essential dimensations and performance requirements for a number of tools commonly used in building construction. It also indicates the different uses for which the tools are best suited.

Comments on the draft standard may be sent before August 28 to the Indian Standards Institution, New Delhi.

SPECIFICATION FOR DUPLICATING INK

A standard specification for duplicating ink has been published by the Indian Standards Institution.

The standard specifies the requirements and methods of test for determining specific gravity, drying time, performance, etc of the all-weather, black duplicating ink, used on drum type machines.

Copies of the standard are available from the office of the Indian Standards Institution, Manak Bhavan, 9 Mathura Road, New Delhi and from its branch offices at Bombay, Calcutta and Madras.

PROTO-TYPE WAGONS

The State-owned Integral Coach Factory at Perambur, near Madras, hitherto engaged in the manufacture of all-welded light weight passenger coaches only, has now been entrusted with the manufacture of four proto-type all welded bogie wagons to a special design, for the movement of iron ore for export..

The new wagons will carry about 60 tons of iron ore as against the 22-ton carrying capacity of the traditional four-wheeler broad gauge wagons. The new wagon has been designed by the Indian Railway Research, Design and Standardization Organisation.

SURVEY FOR OIL IN UP

The aeromagnetic survey carried out by the Oil and Natural Gas Commission in the Tarai region of UP indicated a substantial thickness of sediments in certain parts of the Bareilly-Shahjehanpur area.

In view of the interesting results indicated by the survey, seismic investigation has been extended along the road from Ramganga River to Mathura via Badaun, Kashganj and Hathras in order to interpret the results.

One of the parties has completed the southern extension and returned to Bareilly whereas the other party is investigating in the area between Barielly and Kathgodam along the road.

Working from Kathgodam, the party has covered about 120 square miles of geological mapping and 27 line miles of traversing.

Geophysical work in Bijnore district is also continuing.

At Neyveli—engineers conquer Nature!

EVERY year for many decades, millions of tons of lignite will come from the mines of Neyveli...to yield vast sources of domestic fuel and fertilisers, feed a great thermal station, provide by-products for other industries, irrigate vast areas and create employment for thousands!

Yet this great multi-purpose project, which will help change the face of India, particularly the South, is made possible only by a high order of technical skill, aided by modern machinery. For lignite lies below 180 feet of over burden and under pressure of water. To reach the 60-foot-thick seam, extending over 75 square miles, 48,000 gallons of water must be pumped *every minute*... 27,000,000 cubic yards of earth moved. Most of the equipment for this gigantic project has been supplied by Larsen & Toubro Limited.

Part of a mighty project

At Neyveli, L & T engineers are ready day and night, to give on-the-spot service to Government engineers and their technical consultants on equipment supplied by Larsen & Toubro Limited. This comprises a fleet of 'LMG' Bucket Wheel Excavators; 'LMG' Spreaders; CATERPILLAR Tractors, Bulldozers and Bottom Dumpers; FAILING Drills; JOHNSTON Turbine Pumps; 'LK' Switchgear for controlling the 8-mile-long belt conveyor system.

Established in India many years ago, Larsen & Toubro Limited are proud of their part in yet another of India's great projects — confident of giving at Neyveli as everywhere, the service which has made them famous.

IN SERVICE L&T LIES SUCCESS

The most important equipment at Neyveli—the 'LMG' Bucket Wheel Excavator, supplied through Larsen & Toubro Limited. Each wheel helps in the job of moving 10,000,000 cubic yards of over burden every year

Indian Finance — INVESTOR'S SUPPLEMENT

Late Rally in Equities in June

THE uninteresting conditions noticeable in the second half of May continued to characterise trading during the first half of June also. The restraining influences were further strengthened by developments with regard to the two pivotal counters, Indian Iron and Tata Iron. The impending announcement of the Central loan was another factor calling for caution. But by the time the month was about 20 days old sentiment revived and soon operators were in a buoyant mood enthusiastically pushing prices to high levels. Towards close, however, the higher levels were found to be untenable.

The first week of the month witnessed little activity in the Calcutta Stock Exchange and the trend was easier. It was evident that both operators and investors were reluctant to extend commitments, and what was more, some were keen even to liquidate their position in view of the prevailing ideas about the shape of things to come in the next Five Year Plan period. The speculative issues were kept down by rumours about a lower dividend for Tata Iron.

The week that followed showed little change in sentiment though there were no serious attempts at depressing prices. Presumably marketmen found little in the various rumours and conjectures that were circulating in the market place to move either way. The subdued tendency stemmed partly from the general expectation that the Central Loan would be launched sooner than usual. A report that the cooler plate of one of the blast furnaces at the IISCO works in Burnpur had been brunt out caused some anxiety especially when some reports said that the damage would entail considerable loss to the Company. Sentiment, however, rallied soon on indications of a speedy recommissioning of the furnace.

The main reason for the lack of interest witnessed during the early part of the month under review was the uncertainty shrouding the proposed new capital issue of TISCO. The initial enthusiasm over the announcement of the new capital issue had begun to wane as doubts came to be entertained about the possibility of some difference between the view of Government and the company on the terms of the new issue. Rumour had it that contrary to expectations Government were not quite prepared to allow the issue to be made at par. That provided a talking point for the bears, who lost no time in pointing out that the Government policy should have undergone a change recently.

The second half of the month began on encouraging note largely because of the satisfaction felt over the terms of the new Central Loans. The loan was for only Rs 175 crores whereas the market was made to believe that it would amount to about Rs 225 crores from earlier official indications. While it was admitted that Government might come to the public for another loan for the remainder of the amount later in the year, it was thought that the placing of the amount of the one that had been announced at Rs 175 crores showed that Authority was anxious not to tax the market too much.

The revival of confidence had been helped by corporate news which was indeed quite good. Investors seemed to be anxious to take advantage of the prevailing low levels and indications were that the feeling was gaining ground that the attractive terms might not obtain for long considering the progress that was going on in the corporate sector. People who held the view that money conditions would not be favourable to the stock markets were reduced to an ever-shrinking minority and the new loan terms strengthened the belief that funds would be plentiful for investment in equities. The uptrend, however, was retarded by the continued pre-occupation of the market with the proposed new capital issue of TISCO.

The information was vouchsafed early during the third week that the company had deferred the new issue as the Government were yet to make known their decision. The news imparted a reactionary tendency to the market as the inordinate delay on the part of Government was interpreted to mean a definite indication of Authority's vote in favour of a premium. But a fair proportion of marketmen held the view that the delay might be due to the simple reason that Government were preoccupied with their borrowing programme. Anyway operators made it clear before the month was out that they were not going to let the matter of the new TISCO issue overshadow all other developments. In Calcutta sentiment was aided by news that the damaged blast furnace was back in commission.

Sectionwise, Textiles were selectively better following indications of some improvement in the cloth markets. Kesoram was in good request and in later dealings moved up smartly to be placed finally at Rs 15.

Trading in the Coal section was generally listless during the whole of the month. The subdued tendency seemed to have stemmed mainly from the continued uncertainty over the question of the selling price of coal. The delay on the part of Government in announcing their decision on the coal Prices Enquiry Committee's recommendations was interpreted to mean that Government were not in favour of any increase in the selling price. It was generally believed that the Committee had recommended an increase. It would appear that without a suitable price increase the coal industry would find it extremely difficult to pay adequate attention to its expansion schemes on the successful implication on which depended the attainment of the target for coal production under the Second Plan. The industry was already feeling the pinch for funds and the only satisfactory way of obtaining them seemed to be through charging a higher price for coal supplies. Bengal moved within narrow limits and closed at Rs 303 with Burrakur at Rs 17.44.

Jute shares were an active market during the month. To the satisfactory statistical position enjoyed by hessian for some time was added during June an improved tone in the erstwhile slow moving sacking section also. Demand for the heavy goods was reported from a number of countries including China. Though buying from Australia continued to be slack it was believed that inquiries would increase in coming weeks as the crop in Australia had been delayed due to unfavourable weather conditions. As for hessian buying interest was quite good and there were indications of a sizable enquiry from the Argentine. The trade also expected that offtake by US would also record improvement. An indication of the improvement in sentiment in the industry is the decision to unseal 1½ per cent of the looms with a view to make adequate stocks available to the trade. There is a section which believes that there is need for some more unsealing of looms as the 1½ per cent of looms brought back into commission will not make any appreciable change to the total availability of jute goods. Anglo India which was quoting around Rs 228 at the beginning of the month was quoted at Rs 251 by the end of the month. Howrah moved up from Rs 23.12 to Rs 24.69. National closed at Rs 23.50 as against opening level of Rs 21.50.

In the Engineering section trading was largely influenced by fluctuations in Indian Irons. Although the scrip was subdued most of the time due partly to news about the damage to one of its blast furnaces, sentiment revived in late dealings with the scrip closing the month at Rs 24.12 as against its opening rate of Rs 24.63.

Tea shares which met with some interest in earlier dealings became a neglected market in later dealings as the demand at the new season's first export sale at Calcutta was rather disappointing.

In the Miscellaneous section groupwise paper mill shares met with good interest at enhanced price levels. Hindustan Motors was a prominent spot on dividend expectations. Selected interest was also noticeable among miscellaneous industrials.

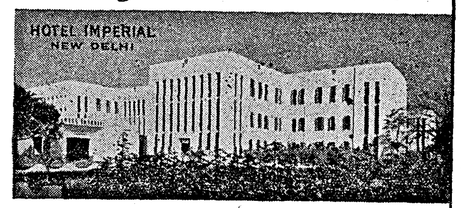
Indian Finance

Indian Finance
Saturday
July 11, 1959
Volume LXIV No 2
Price: Rs 1.50

HIGHLIGHTS OF THIS ISSUE

Banking returns are this week notable for :

a) Impact of new loan subscriptions.
b) Disposal of Reserve Bank profits.
c) Interruption of the slack season.



Read World of Finance for an interpretation of Banking figures in all three respects.

4,000 miles of Indian coastline

Look at the vast coastline of India with its many ports and harbours, both large and small. There is a lively trade along the 4000 miles of the Indian coastline and many people travel from port to port.

The coastal trade is guaranteed to Indian shipping companies. The Scindia Steam Navigation Co. Ltd. and its subsidiary the Bombay Steam Navigation Co. Ltd. carry between them large number of passengers and many tons of cargo in their ships every year. The passenger steamers are fast and modern and fitted with many conveniences for the comfort and safety of the passengers.

FOR THE INVESTOR

Mr Nehru Helps Market Sentiment

Investment Gossip:

BUT for a bout of nervousness, and a single bout at that, the week past witnessed remarkably firm conditions.

The nervousness came from rumours that the LIC would take advantage of the current satisfactory prices to sell some stocks.

The firmness, on the other hand, had its source in two factors.

Firstly, there was the continued expectation, in Dalal Street, that Government would see their way to sanctioning the Tata Steel rights issue being made at par.

Secondly, there was the emphatic declaration by Mr Nehru as to the place of the private sector in the Indian economy.

All three factors that I have mentioned, however, were put to use mainly by the speculative fraternity. Sharp and substantial price movements were the order of the day.

As yet, beyond stating my conviction that it would be unfair for Government to insist on a premium issue for Tata Steel, I do not want to write at any length about the matter.

But the other two may be briefly discussed.

Firstly, if it is admitted that the LIC is intended to act as a stabiliser to stock exchange prices, we need to expect that relatively high prices ruling will provoke it to come out as a seller. Stabilisation does not merely mean support; it means moderation, moderation both as regards an upward and a downward movement. Open market operations of the LIC are intended to de-accentuate fluctuations.

Secondly, it is good that Mr Nehru has categorically refuted the reported decisions at the Ooty seminar. Coming on top of good corporate news and successes of recent new issues, the according of a large area for Private Sector is, psychologically, the best news For the Investor.

Both short-term and long-term outlook, therefore, is bright.

* * *

"Bengal Central Building Society Ltd" may be included as a shareholder in Indian Financial Journals Private Ltd, in pursuance of the statement of ownership published in March this year. The omission at that time is regretted.

Investment Notes:

It may be recalled that the issue of the Indian Rayon Corporation has been oversubscribed. At their meeting held on 2nd July, 1959, the Board of Directors of the company have fixed the basis of share allotments to various categories of applicants.

In regard to Equity Shares, only half the number of the applicants for 5 shares will be fully allotted by drawing lots. Those who have applied for 10 to 20 shares will get 5 shares each, for 25 to 50 shares 10 shares each, for 60 to 80 shares 15 shares each, for 100 shares 20 shares each, for 150 to 175 shares 30 shares each, for 200 to 250 shares 100 shares each, for 600 shares 150 shares each, for 800 shares 200 shares each and for 2,000 shares 400 shares each.

In regard to Preference Shares those who have applied for less than 1,000 shares will get full allotment, for 2,000 to 3,000 shares 60 per cent of the shares applied and for 10,000 shares 50 per cent of the shares applied.

£ R$

Pros & Cons of 'Arranged' Match

Investment Special:

CONSIDERABLE controversy has been engendered by the proposal to bring about an integration in the working of the Sirpur Paper Mills Limited and the Sirsilk Limited. I am afraid that I have been deferring passing any opinion of my own, though my reluctance in this regard flowed from a valid reason, namely, inadequate data on which to base my remarks. I am now in possession of certain facts which, while not distorting the main conclusion, nevertheless enable more balanced assessment of the pros and cons of any such merger. Though the meeting in this behalf convened by Sirpur Paper was called for July 4, it is not too late to take up the matter in hand, since, before the scheme of integration can be carried out, even though the shareholders might approve it, Government's sanction is necessary.

The controversy arises because, simply, all the advantages from the integration appear to accrue to Sirsilk—and all that Sirpur Paper seem to be taking on hand is a load of liabilities. The facts of the matter, simply stated, are as follows:

The unabsorbed depreciation of Sirsilk, estimated as at the end of 1956-57, is Rs 5.01 crores.

Sirpur Paper will have to assume, indirectly, the liability for arrears of dividend on preference shares in the amount of Rs 48.59 lakhs as at the end of 1957-58.

The proposition should be attractive to equity shareholders of Sirsilk because, though the ratio of allotment in Sirpur Paper will involve a loss to them, they will be entitled to share in the equity profits of Sirpur.

RECORD OF ACHIEVEMENT

Sound underwriting and outstanding service to Policyholders are reflected in the rapid progress made by the ORIENTAL FIRE. Transacting Fire, Marine, Motor, Accident and all other classes of non-life business ORIENTAL FIRE also offers specialized cover against Machinery Erection and Breakdown and Boiler Explosion risks.

ORIENTAL FIRE AND GENERAL INSURANCE CO., LTD.

Head Office: Oriental Buildings, BOMBAY-1

Even as regards the preference shareholders of Sirsilk, though, as far as I can see, they do not get a look into the profits of Sirpur, there are other reasons why they may expect Sirsilk to be in an early position to start paying the arrears of dividend.

Then, you have the fact that the Sirsilk Factory is erected on land which was acquired by the State Government in behalf of Sirpur Paper. Sirsilk is thus not able to raise loans on the security of its block, because it has no title to the land. Thus, by the fact of integration, Sirsilk will be in a position to raise loans on its block.

There is the fact, next, that integration in this fashion will enable economies in administrative overheads and in purchases and stores.

These, as far as I can see, are the pros and cons of the scheme. It will be noticed that Sirsilk has a number of advantages—and also that Sirpur is not faced with any significant disadvantages. For, the only immediate and direct liability is the dividend that is payable to Sirsilk equity shareholders who will be given Sirpur equity capital. As far as the Sirsilk preference shareholders are concerned, Sirpur assumes liability only in the sense that Sirsilk becomes a subsidiary: it is on Sirsilk's own earnings that depends payment of arrears of dividend to Sirsilk preference shareholders.

Any future liability may constitute the guaranteeing of loans taken by Sirsilk as a subsidiary of Sirpur. But the advantage to Sirpur is, apart from the economies in respect of overheads, etc, that, with a capital investment by Sirpur of roughly Rs 61 lakhs, Sirpur will have as subsidiary a company with block investment in the environs of Rs 6 crores.

I may also mention that, technically, both factories are essentially based on cellulose, and a common purchase and store policy could be formulated.

Last of all, I understand that Sirsilk as a corporate entity has now turned the corner. For, aside from the arrears of depreciation, and after providing for interest payment to Government to the tune of Rs 15 lakhs, the estimated profit in 1958-59 should be sufficient to write off the accumulated losses. This is because Government of India have approved a price policy for Sirsilk yarn which is just and fair. The prospect therefore is that, even on its present capacity and present costs of production, Sirsilk's earnings will suffice to meet, as from 1959-60, both Government interest and preferential dividend. Thereafter, it will depend on whether or no expansion programmes are envisaged for Sirsilk; with expansion, greater earnings are to be expected.

But the main conclusion, which I said was not distorted, is that all apparent advantages belong to Sirsilk; and advantages, if any, to Sirpur can and may accrue only in the long term. It is also fair to

mention that Sirpur shareholders are already sure that the scheme is in their interest: the resolution considered by them on July 4 was unanimously passed.

New India's Superb Year

Insurance Reviews:

THE New India Assurance Company Limited, in its accounts for 1958, discloses a superb year of working. So much so, the distribution to shareholders has been increased considerably from Rs 21.36 lakhs to Rs 37.98 lakhs.

Although premiums in the Fire Department declined somewhat from Rs 3.24 crores to Rs 3.07 crores, the consequent reduction in the reserve for unexpired risks, together with additional reserve, to Rs 1.94 crores has partly contributed to the profit in the department rising considerably from Rs 21.15 lakhs to Rs 50.45 lakhs.

In the Marine Department, there has occurred a very sharp increase of Rs 0.6 crores to Rs 2.49 crores in premium income. So, the reserve for unexpired risks, including the additional reserve, has been increased by Rs 43 lakhs to Rs 1.45 crores. In the result, the profit transferred to the Profit & Loss Account has declined from Rs 12.12 lakhs to Rs 7.99 lakhs.

In the Marine Department, though premium income rose by Rs 0.55 crores to Rs 1.97 crores, and though the additional reserve no longer is provided, the loss experienced has increased almost five-fold from Rs 0.54 lakhs to Rs 2.54 lakhs.

The Profit & Loss Account shows that, with income by interest, dividends and rents recording a small rise of Rs 2.42 lakhs to Rs 12.37 lakhs, the gross income went up steeply by Rs 28.11 lakhs to Rs 71.58 lakhs. The Profit before taxation has mounted sharply from Rs 39.97 lakhs to Rs 65.72 lakhs.

The provisions for the year comprise a transfer of Rs 3 lakhs to exchange reserve of Rs 4 lakhs to reserve for doubtful debts and of Rs 8 lakhs to dividend equalisation reserve. After the payment of the interim dividend, and including the final proposed, the carry forward is slightly lower at Rs 1.22 lakhs against Rs 1.41 lakhs brought in.

In broad terms, net claims of New India in the three departments fell slightly from 52.2 per cent to 51.5 per cent. Commission, expenses of Management and other charges also declined as a ratio of premium income from 39.3 per cent in 1957 to 36.7 per cent.

The paid-up captial of New India rose during the year from Rs 1.07 crores to Rs 1.42 crores. There is a capital reserve of Rs 0.52 crores, and reserve and contingency accounts are placed at Rs 1.68 crores. The investment portfolio of New India shows a small decline in the holdings of Indian Government securities and a very considerable rise, from Rs 1.55 crores to Rs 3.02 crores, in ordinary stocks and shares of companies. The classified summary of assets indicates that the market value exceeds the book value by Rs 7 lakhs. This is because, although the market value of ordinary share holdings and of Government securities exceeds book value by roughly Rs 17 lakhs, there appears to be depreciation in the value of guaranteed and preference stocks to the tune of Rs 7 lakhs.

The review of the company's working by the Chairman, Mr A. D. Shroff, has been circulated together with the accounts, and his conclusion is of significant interest to shareholders: "Your Directors are confident of the continued expansion of the company's activities in the future".

£R$

Marine & General

Improved results have been announced by Marine & General Insurance Company Limited for 1958. Premium income in the Fire Department increased from Rs 4.25 lakhs to Rs 4.39 lakhs. After keeping the reserve for unexpired risks, including additional provision, at Rs 2.70 lakhs, the profit transferred is roughly doubled to Rs 1.11 lakhs.

Premium income rose in the Miscellaneous Department from Rs 0.97 lakhs to Rs 1.11 lakhs. The Reserve for unexpired risks has been kept at 50 per cent and a profit has been transferred of Rs 7,144 against the loss in 1957 of Rs 4,359.

The Marine Department, however, in spite of an improvement in premium income from Rs 1.08 lakhs to Rs 1.21 lakhs, has after keeping its reserve and additional provision at Rs 1.46 lakhs, experienced a loss of Rs 15,418 against a profit in 1957 of Rs 58,335.

With income by interest and dividends showing a commendable rise, gross income of Marine & General Insurance improved by Rs 0.30 lakhs to Rs 1.34 lakhs. After providing Rs 11,327 for depreciation on investments, the profit carried down, before taxation, improved from Rs 1.23 lakhs to Rs 1.42 lakhs. Provision for taxation has been raised from Rs 0.65 lakhs to Rs 1.00 lakh. The reserve for investment receives Rs 0.46 lakhs. A dividend at Rs 5 per share has been proposed. The balance carried forward is Rs 88,382 as compared with Rs 96,165 brought in.

The balance sheet of Marine & General shows that, aside from the specific funds, the reserve and surplus amount to Rs 3.09 lakhs against an ordinary capital of Rs 5 lakhs. The investment portfolio shows an increase from Rs 3.31 lakhs to Rs 10.38 lakhs in spite of a reduction in giltedged investments from Rs 5.68 lakhs to Rs 3.49 lakhs. This is mainly because of an increase in holdings of debentures, preference shares and ordinary shares.

The classified summary of assets indicates that, in all categories of investments, market values exceed the book values.

£R$

Disappointing Crop of Tea Results

Balance-Sheet Reviews:

A crop of Tea balance sheets has been received during the week. Three of them are Andrew Yule gardens and two others are under the Managing Agency of Duncan Brothers. It is a strange co-incidence that four of the companies, relative to their accounts for 1958, have been unable to recommend the payment of a dividend to shareholders, but we trust that the results about to be reviewed are not representative of the 1958 crop of tea garden balance sheets.

£R$

Engo Tea

Sales of Engo Tea rose from Rs 3.48 lakhs to Rs 4.21 lakhs. This was by dint both of an improvement in the crop from 2,944 mds. to 3,348 mds. and in the average price from Rs 1.67 per lb. to Rs 1.89 per lb. However, the Directors consider the price obtained for 1958 teas as being "still unsatisfactory". Then, with cultivation and manufacturing stores, in the profit and loss account, absorbing more at Rs 70,102 against Rs 51,448, and other expenses also generally rising, Engo Tea, after providing Rs 15,051 for depreciation against Rs 15,520, has experienced a loss of Rs 1,961 during 1958, though this is rather smaller than the 1957 loss of Rs 37,721. The balance at debit carried forward in the balance sheet is Rs 59,525.

According to the balance sheet of Engo Tea as at the end of 1953, the capital is placed at Rs 1.20 lakhs, with which can be compared the reserves and surplus of Rs 2.04 lakhs. The gross block has risen over the year by Rs 0.41 lakhs to Rs 4.99 lakhs, and the fixed assets have a book value of Rs 2.14 lakhs.

The 1959 crop is based on an estimate of 3,250 mds. at a cost of Rs 4.77 lakhs. The Directors' report asserts: "This is considered a conservative crop forecast and, provided normal conditions prevail, it is likely that a larger crop will be secured".

£R$

Jaybirpara

The Jaybirpara (Dooars) Tea Company Limited, on the other hand, has reported a decline in sales from Rs 9.59 lakhs to Rs 8.57 lakhs. Both the crop and the average price have declined, the former from 6,425 mds. to 6,362 mds. and the latter from Rs 1.87 per lb. to Rs 1.85 per lb. The Directors' report indicates that "the effects of the serious flooding of the garden a few years ago have not been eradicated and remedial measures are being continued".

Thus, after reducing the provision for depreciation from Rs 31,352 to Rs 22,305, Jaybirpara was able to reduce its loss from Rs 74,517 to Rs 34,854. The balance at debit shown in the balance sheet is Rs 60,919.

As against the ordinary capital of Rs 7 lakhs, the reserves and surplus of the Company are placed at Rs 4.51 lakhs. The gross block which shows an addition during the year of Rs 0.82 lakhs to Rs 11.20 lakhs, has a book value of Rs 6.09 lakhs.

The crop planned for 1959 is 7,000 mds. at a cost of Rs 10.84 lakhs. The Directors' report vouchsafes the heartening information to shareholders that "the present season has started favourably and crop to the 14th June 1959 amounted to 1,449 mds. compared with 1,279 mds. to the same day a year ago."

£R$

Mim Tea

The Mim Tea Company Limited also reports a decline in the sales from Rs 5.90 lakhs to Rs 5.44 lakhs, but a poorer crop of 1,978 mds. against 2,062 mds., owing to heavy hail damage early in 1958 largely offsets the advantage accruing from a much higher average price of Rs 3.93 per lb against Rs 3.45 per lb. Nevertheless, after the depreciation account was pruned to Rs 12,492 from Rs 23,442, Mim has been able to announce a profit of Rs 30,079 against a loss in the previous year of Rs 58,830. This barely sufficed to take care of the debit balance brought forward and hence there is a small credit balance in the latest balance sheet at Rs 5,657.

Mim has a capital of Rs 1.59 lakhs against which the reserve and surplus amount to Rs 3.57 lakhs. Additions to block during the year amounted to Rs 0.41 lakhs, and the gross block of Rs 4.98 lakhs is shown as having a book value of Rs 2.78 lakhs.

The crop planned for 1959 is rather higher at 2,500 mds at a cost of Rs 6.45 lakhs; and the Directors anticipate that the crop of approximately this size will, in spite of slight hail damage in April this year, be secured. The crop harvested till the 14th of June this year amounts to 1,000 mds. and compares favourably with the outturn, until the same day in 1958, of 843 mds.

£R$

Phaskowa

The Phaskowa Tea Company Limited reports net sales slightly higher at Rs 4.02 lakhs against Rs 3.87 lakhs. The crop was slightly higher at 2.57 lakhs lbs against 2.50 lakhs lbs and the average price was one naya paisa higher at Rs 1.76 per lb. but, after meeting expenses, and providing more for depreciation at Rs 21,428 against Rs 13,366, the company experienced a revenue deficit of Rs 17,205 against a loss in 1957 of Rs 27,149. But various transfers have been made, Rs 79,539 from Depreciation Reserve and Rs 5,000 from Development Reserve. After this, a transfer has been made to building and machinery reserve. There is a balance at credit, in the balance sheet, of Rs 7,452.

The reserve and surplus of Phaskowa at Rs 3.84 lakhs are more than 1½ times the capital of Rs 2.50 lakhs. Fixed assets other than the estate, are shown at an original cost of Rs 3.78 lakhs and have a book value of Rs 1.68 lakhs.

The estimates for 1959 provide for a crop of 2.56 lakhs lbs at an outlay of Rs 4.94 lakhs.

£R$

Rungamattee

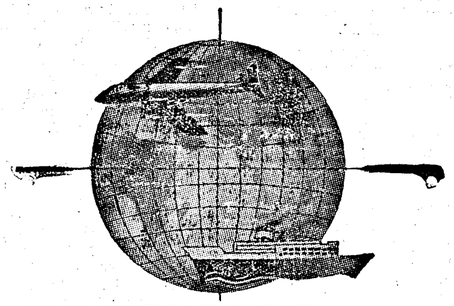
The Rungamattee Tea Company Limited shows a considerable decline in its sales from Rs 10.42 lakhs to Rs 8.63 lakhs. The crop was rather lower at 5.53 lakh lbs. from 6.97 lakh lbs, but the average price improved from Rs 1.72 per lb to Rs 1.75 per lb. After providing Rs 11,000 more for depreciation at Rs 49,633, there was a revenue deficit of Rs 1.60 lakhs against the revenue profit in 1957 of Rs 46,713. According to the profit and loss account, there has been a transfer of Rs 1.45 lakhs from the revenue reserve of Rs 3.34 lakhs from depreciation reserve and of 5,000 from development reserve. There is then a transfer to building and machinery of Rs 3.34 lakhs and of Rs 9,500 to development rebate reserve. A dividend of 2½ per cent has been recommended, leaving Rs 1,700 to be carried forward.

Against the ordinary capital of Rs 5.25 lakhs, the reserves and surplus amount to Rs 10.33 lakhs. Assets other than the estate have a gross value of Rs 9.87 lakhs and a net value of Rs 5.51 lakhs.

The crop for 1959 is on the basis of 6.40 lakh lbs and an outlay of Rs 11.68 lakhs.

£R$

Dena Investment



In its accounts for the year ended March 1959, Devkaran Nanjee Investment Company, Limited has fared better. Dividends on shares have yielded more at Rs 1.27 lakhs against Rs 1.24 lakhs. Profit on investments has multiplied 11-fold to Rs 56,504. On the other hand, loss in investment is also marked higher, though by a much smaller amount, at Rs 13,417 against Rs 5,096. The provision for taxation is raised to Rs 48,000 from Rs 41,000. The net profit carried down has considerably improved to Rs 83,062 from Rs 68,617. The proposed dividend is at the rate of Rs 0.87 per share, marking an increase from last year's Rs 0.81 per share.

The balance sheet shows that against the equity capital of Rs 25 lakhs, reserves and surplus are placed at Rs 0.86 lakhs. Investments in quoted shares have a book value of Rs 27.69 lakhs against the market value of Rs 25.62 lakhs. There are other unquoted shares, shares in companies under liquidation and shares in public limited companies amounting to Rs 1.40 lakhs.

£R$

Pullangode

The Pullangode Rubber & Produce Company Limited has had a good year in 1958-59 when the net figure of sales rose from Rs 9.09 lakhs to Rs 9.99 lakhs. The provision for depreciation has been raised to Rs 39,548 from Rs 35,280. The amount provided for tax has risen from Rs 0.87 lakhs to Rs 1.16 lakhs. The profit, after tax and depreciation, has risen by nearly 50 per cent from Rs 0.64 lakhs to Rs 0.95 lakhs. After transfer of Rs 0.25 lakhs from provision for tax no longer required, the company has announced a dividend of 5 per cent, marking a rise from the 1957-58 dividend of

4 per cent. The additional provision for rubber rehabilitation has been made to the tune of Rs 0.31 lakhs, and the amount carried forward as shown in the balance sheet is Rs 0.72 lakhs. The good results of Pullangode Rubber were due to the record crop of 6.48 lakhs lbs realised in 1958-59 against the estimate of 5.75 lakh lb. The average sale price also rose somewhat. The conservative estimate is for, during 1959-60, a crop of Rs 5.75 lakh lbs at a slightly higher estate expenditure per lb.

Of the capital of Rs 18 lakhs, Rs 1.50 lakhs is in 6 per cent tax-free cumulative preference shares. The reserves and surplus are shown at Rs 3.02 lakhs. On the estate side of the balance sheet, the gross block of Rs 21.56 lakhs has a net value of Rs 16.04 lakhs.

Jessop

The accounts of Jessop & Company Limited for the year ended October 1958 are somewhat disappointing. Agency sales fell from Rs 60.52 lakhs to Rs 54.63 lakhs. However, works sales improved considerably from Rs 5.34 crores to Rs 5.96 crores. While economies have been effected by the company, and expenditure has been kept well in check, the fact remains that the net earnings of Jessops have declined. The provision for depreciation has been raised by over Rs 4 lakhs from Rs 6.81 lakhs to Rs 10.89 lakhs. The development rebate reserve receives Rs 3.54 lakhs, and the provision for tax has been cut sharply from Rs 42 lakhs to Rs 23.10 lakhs. The balance carried down is somewhat lower at Rs 26.18 lakhs against Rs 27.77 lakhs. After including Rs 5.01 lakhs being excess provision no longer required and after payment of preferential dividends an ordinary dividend at the rate of Rs 0.60 per share has been proposed. Of the remaining profits there is the substantial transfer of Rs 24 lakhs to general reserve against Rs 26.76 lakhs in the previous year. The balance carried forward is Rs 58,330.

This augmentation of reserves is undoubtedly due to the continued uncertainty about investments in Richardson & Cruddas. Such investments are shown at a book value of Rs 65.36 lakhs. The Auditors have raised queries about this investment, pointing out that no dividend payment has been received by Jessops, in spite of dividend being declared by Richardson & Cruddas on 21st June, 1957. The verification of Jessop's title to these shares is, the Auditors point out, beyond their competence and authority. Similarly, there is some doubt about the investments of Rs 7.35 lakhs in Assam Cements Limited.

The Board's report also throws light on this matter. It is pointed out that, although the company has supplied information called for by Richardson & Cruddas, Jessops have not had any further communication from the company. While full provision has been made for any eventual loss as regards the advance paid of Rs 60.24 lakhs for the purchase of shares from Richardson & Cruddas in the last year's accounts, the matter is now in the hands of the company's legal advisers with the object of taking all possible steps to recover the amount advanced.

In regard to the Assam Cements, the matter is, the Board states, sub judice.

The Board has also pointed out that, while the figure of works sales appears to have increased, this is merely because of a change in procedure and that, in fact, "due to shortage of materials and components, the works output has fallen".

During the year, the new coach works, which adds very considerably to the manufacturing potential of the company, was commissioned; but it was not until the end of 1958 that production commenced, and, therefore, the new coach works did not contribute to the financial results now under review.

Finally, the Board states that, while it is still necessary to build up the company's resources for meeting the cost of manufactures now in hand, the Board of Management still feels that a dividend on the ordinary shares is justified.

According to the balance sheet of Jessops, against the capital of Rs 1.22 crores, the reserves and surplus are placed at Rs 82.08 lakhs. The gross block has risen very considerably during the year from Rs 1.72 crores to Rs 2.55 crores, and the net block is shown at Rs 1.82 crores.

THE HONGKONG AND SHANGHAI BANKING CORPORATION
(Incorporated in Hong Kong with Limited Liability)
Head Office: HONG KONG
Chairman and Chief Manager: The Hon. MICHAEL W. TURNER, C.B.E
Deputy Chief Manager: G. O. W. STEWART
London Office: 9, Gracechurch Street E.C. 3.

Coal's Problems

Indian Finance
Established 1923
July 11, 1959

"The Wise Man in his attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right"—The Analects of Confucius

BLACK indeed has been the situation in which the industry which produces black diamonds has found itself in recent years, and bleak, unfortunately, seems to be the prospect. The trouble that afflicts the coal industry is that which is born of multi-pointed control over its working, and the sustained reluctance on the part of Government, solicitous as they are of keeping down inflationary pressures in the economy, to approve of any increase in coal selling prices. The history of the industry, accentuated since India became independent, is a doleful one in which profits have been squeezed right out of existence by the all too ready acquiescence on the part of Government to impose fresh burdens on the industry in response to the clamour from labour for better conditions and, we repeat, the hesitancy and delay in sanctioning any increase in the statutory price of coal to compensate the industry for higher costs of production. On the one hand, various labour awards, the idea of bonus payable on quarterly attendance, the compulsory provision of pithead baths, a rising cost of living and, consequently, an increased charge of dearness allowance, have all gone steadily to take up a larger slice of the earnings of the coal industry. On the other hand, this marked reluctance to appreciate the higher cost of production, this hesitancy and delay in acting upon recommendations of committees set up or on representations made by the industry have acted steadily to limit and restrict any expansion in earnings at a pace sufficient to cover increases in the cost of mining coal. What makes the Government attitude to coal tragic is the fact that their reasonings and assumptions are so patently wrong.

The first axiom which, we suggest, Government would do well to keep in mind, is that an increased output of coal is basic to the cause of Indian industrialisation. Without coal, more coal, there cannot be an expansion in freight lifted by the railways, nor indeed any expansion in the production of any of the fundamentals in the Indian economy. This has to be the starting point of official thinking on the subject of coal, and, consequently, the official attitude has to be conditioned by this need to foster, to ensure, the conditions in which an expansion in the output of the coal industry will not only be possible but also guaranteed and vouchsafed.

The present reasoning seems to be that were an increase in the price of coal to be allowed, all Indian manufactures will feel the impact and suffer an increase in their own costs. This is understood by Government to mean inflation, and it is this aspect of inflation that worries them and causes them, in this regard at least, to be gloriously inactive.

Was the labour legislation, some which covered industry generally and, therefore, applicable to the coal industry as well, and others directed particularly at coal, really so urgent? There is little to be gained in a theoretical discussion of whether the miners could not themselves have waited some few years more before they enjoyed, for example, to them the unknown luxury of a pithead bath in place of the thorough washing they gave themselves in a wayside stream. But what does matter is the fact that it is this self-same legislation, intended as it was and is to contribute to the greater well being of coal miners, which has caused the cost of production in coal to become higher relative to the selling price presently obtaining. Reasoning thus, the seedlings of the inflationary spiral flowing from an increase in the selling price of coal are to be found, not in any past increase sanctioned in the price of coal, nor yet again in any prospective rise in the selling price that might be permitted, but in the Government's own labour legislation for betterment of conditions in which the mining labour works.

If, then, in fact, the miner is better off, no inflation has come about. His purchasing power has increased, as will have increased the purchasing power with the mass of the labour force in other industries, as a first step by means of Governmental directives. What we have in India is a state of affairs in which it is not labour that has to be compensated for an increase in the cost of living so much as industry which has to be compensated for the higher cost of its labour. In due course, we presume, there will be a perceptible—but, we hope, a gradual and moderated—upward tendency in the general run of prices. But this is not something which need occasion any apprehension, since an increase in the cost of living is one of the prices that will have to be paid for a betterment in the standard of living.

But this is a negative argument which we have so far pressed, that it is the industry in India which stands in need of recompense. The positive argument flows from the fact, we wish to stress again, that coal is basic to India's planned development and industrialisation. For the sake of argument, let us for the moment admit—most certainly we do not concede—that the sanctioning of a higher selling price for coal will be detrimental to the Indian economy because of the inflationary pressures that it will give rise to. The coal industry, then, has to make do with what it gets today for its output. What it gets today barely covers the cost of present production. In cases, even the cost of production is not earned, and the company finds it is working at a loss. What is worse, there is never the situation where there is any surplus by way of resources available with the industry for developing new seams. With coal a wasting asset, if there is no expansion of worked areas, not only will production fail to rise, it will not even be static; output will fall.

This is the bald truth. Unpalatable, but nevertheless a home truth which the authorities would be well advised to take cognisance of. Stores cost more today, plant and equipment have gone up in price, the new regulations under the Mines Act impose a greater financial burden upon the industry. The industry repeatedly drew the attention of the Government to this alarming situation where the chances of the private sector in coal achieving the Second Plan target set for it were being jeopardised because of this squeeze upon earnings by costs. More than two years ago, it looked as if, finally, Government were taking a more realistic view of coal's problems and the Coal Prices Revision Committee was constituted with the direction that its report might be submitted to Government within two months. The comprehensive task that the committee was asked to take up needed two years rather than two months to be adequately dealt with. The committee did better than might have been expected, and the main report was in the hands of the Government late in 1958. Six months and more have since passed, but no announcement has been forthcoming from Government about their decision in the matter.

The delay in such an announcement regarding selling prices is, as far as the coal industry is concerned, particularly unfortunate because, unlike as in cement or steel, there can be no such thing as a revision in prices with retrospective effect. So, the months of delay will have resulted in accumulated losses which will inevitably have to be borne by the industry, unless, as is most unlikely, Government approve a selling price which has regard for this past loss as well. Again, since the Committee which looked into the revision of prices addressed itself to the situation obtaining in 1956-57, its findings as to an apposite price increase will themselves need to be revised.

In another important respect, the governmental policy on coal selling prices differs from the formula that has been adopted for cement and steel. We refer to the fact that the so-called retention prices paid in the last regard are intended to include a special element to finance development. It is, we suggest, as necessary and as vital in the national interest that a similar element for development be included in the coal selling price.

In brief, therefore, we feel that it is imperative to the cause of industrialisation that, firstly, Government avoid delays in acting upon recorded increases in the costs of production of coal and that, secondly, they recognise the essentiality of providing the industry with the wherewithal for development in terms of the selling price.

We have, finally, two suggestions to make. Since various factors seem perpetually to be operating in favour of increase in costs of mining, there seems little doubt as to the desirability of a permanent body to keep a close tab on the economy of the coal industry. We wonder whether it will be feasible for a body like the Tariff Commission to be entrusted with the task of advising from time to time about the level at which, relative to costs of production, the selling prices of coal should be.

Secondly, we are afraid that the case of the coal industry has largely gone by default. There should be a more vigorous attempt to place coal in the perspective of the Indian economy. If necessary, publicity should be accorded, after research, as to the extent to which a particular price increase in coal will affect other basic costs of production.

It would be fatal to India's planning, if by inaction the upward trend in coal production is not resumed.

Economics of Co-Operative Farming

An Indian Finance Special Study

IN the process of policy making the authorities often forget that four hundred million people are involved, and that interior villages constitute the weakest links in the chain. The Indian currency was declared the sole legal tender in the Hyderabad State in 1950, but the door is still open for Hyderabad currency holders to offer them and get in return Indian currency: and almost ten years have since passed. Earlier, when the Rs 500 currency note was demonetised, the time limit had to be extended several times: the last in the queue was the Nizam. The **Naya Paisa** and the Metric System of weights and measures have been introduced, but by far the bulk of the country have and use their own local measures and denominations. A maund comprises 40 seers of 80 tolas weight each, but the same term means 28 lbs in some places and 24 in others. Foodgrains, even vegetables, are measured in seers just—because balances and weights can be had only for a price, and the masses are too poor to buy them. **Naya Paisa,** will take at least five years to become familiar in villagers' hands.

The latest fad is co-operative joint farming. It is not as though villagers did not instinctively resort to joint farming on the basis of mutual help, but there were no accounts. Lakhs of cultivators have only one bullock each: thousands have none. But they manage ploughing, harvesting and threshing by mutual informal co-operation. But, formal "Co-operation" is something quite different. Putting seasonal finance per acre at the very modest figure of Rs 10 on the average (including dry, wet, garden and special crop lands), co-operatives account only for 9.98 per cent, the balance of 90.02 per cent being met by savings (to a very minor extent), and by moneylenders for the rest. Recently, it was announced that 17 per cent of the rural population had been covered in Madhya Pradesh co-operatives after 55 years of official patronage. In a recent Sample Enquiry, it was found that only 55.53 per cent of members were active and 44.47 per cent were defunct, among agricultural credit societies. It was also found that members of rural co-operatives owed 23.79 per cent of their debts to their respective co-operatives while 76.21 per cent was due to private money-lenders. Thus, the Co-operative Movement in general is a 55 year old child and ward leaning on Government support, with chronic stunted growth. As for present co-operative farms, most of them are on paper, many running at a loss and some short-lived. Strictly on co-operative principles, these should have been wound up earlier, but the parental care of Registrars refuses to certify their uselessness: "hope told a flattering tale." The Indian Constitution foreshadowed a Co-operative Commonwealth, but a few years later it was made clear that what was meant was a blessing, not the goal. After the Avadi Resolution, co-operatives and Panchayats came to be regarded as the keystones for rural reconstruction. The Rural Credit Survey ushered in the principle of State participation, but recently the Prime Minister declared that the Movement should be based on self-help.

Main Features.

The Socialistic pattern of society adopted at Avadi led inevitably to land reforms which have had rather contrary objectives. The slogan of "land to the tiller" has now been followed up by the "land for the co-operative farm." This has been championed by Mr Nehru himself. Before examining the hurdles involved, the main features of the proposal may be enumerated:

1. Land ownership to continue on personal basis, but cultivation to be carried on jointly in the pool.
2. Membership to be voluntary in the full sense of the term.
3. Universalisation of co-operative joint farming to be realised within a specified period.
4. If agricultural production in India is to be stepped up to modern dimensions, co-operative farming is the only way.
5. No specific support for mechanisation.
6. If some cultivators refused to join, economic discrimination is to be applied against them.
7. Congressmen differing from the Nagpur Resolution to quit Congress ranks.

Even the process of settling tenants as owners on the basis of tribunals' awards and tenant purchase agreements has resulted in a multiplication of objections complaints and counter-complaints: many lands are lying fallow as a result of fear on the part of tenant purchasers. The proposal to universalise co-operative farming is bound to pull out the roots of Indian agriculture, and before deciding on ignoring the earlier stages of adventure or experiment, and committing the country to such universalisation, it is very necessary that several issues involved should not only be remembered but examined in their true perspective.

Sentiment.

The sentimental attachment of the average raiyat to his land is probably the most difficult hurdle. The proposed reform may vest land rights in him and take over his lands for joint cultivation, but that sort of theoretical ownership will not appeal to him. In an Enquiry in the twenties in Aurangabad District, it was discovered that large areas had passed from cultivators to non-cultivators under the "oral mortgage and formal sale" system (vishwas khareedi). That system allowed the owner-cultivator to continue on his land as a tenant of the money-lender against whose dues the land was formally sold, with an oral promise that if and when the cultivator repaid the same price as shown in the document, the money-lender would release the land and the cultivator would once again become owner-cultivator. The bulk of such down-graded ex-owners (later tenants) were quite contented because there was no apparent change in their status: their lands continued with them as before although they had to pay rent (half the produce) to their money-lenders-cum-owners. This is proof of the fact that the average raiyat prizes cultivation rights much more than legal ownership rights accompanied by surrender of personal cultivation rights. The Prime Minister has again and again stressed that membership would be voluntary. It could not be said now what the response would be after a decade or two of education, but at present, not even 5 per cent will agree. Even this 5 per cent will consist of distress cultivators holding very tiny pieces of land extensively cultivated heretofore.

"Go Slow" Danger.

Pooling the lands for joint cultivation should prove a powerful disincentive because the average raiyat would no longer cherish personal interest. Agriculture is extensive, spreading over wide areas, and it would be impossible to detect any general "go slow", and more difficult to spot out the specially idle. On the whole, efficiency is bound to suffer, even as it did on collective farms in the USSR.

Intensive Cultivation.

Mechanisation raises agricultural out-turn in standardised crops while intensive cultivation is a pre-condition for special crops. Recently, Mr A. P. Jain observed in Coimbatore that even small farms, intensively cultivated, often produce more than bigger farms per acre. In Japan, yield of rice per acre is estimated at 3,750 lbs while in India the average yield is 702 lbs. The main reason for the Japanese advance is that 34 per cent of the holdings are less than 2½ acres, and the cultivators get facilities in the shape of cheap and adequate credit, fertilisers and technical aid. The arecanut gardens in the Mysore Malnad and betel leaf gardens near Nizamabad are significant: Rs 16,000 per acre in the Mysore Malnad and Rs 40,000 per acre in Nizamabad will not persuade the owners to sell. This is due to the very rich yields in those areas. What will happen to intensive-cultivation in a co-operative joint farm? Rich special crops require the cultivator and his family to live on the premises and attend to the work all the 24 hours: even at night, they have to drive away monkeys and bandicoots. In the proposed co-operatives, everybody's land will be no-body's land for purposes of constant attention and care. The serious blow to gardens growing arecanut, coconut, betel leaf, plantains, etc., would be too severe even to estimate. The scope for intensive cultivation in this country is much greater, both horizontally and vertically, than for mechanised large farms. It is not known whether members would be allowed domestic yards and kitchen gardens for personal cultivation. If these are excluded, the contribution to the pool by most of the members would be very small—smaller than domestic yards, etc., allowed for personal cultivation in the USSR. If not allowed, the lady of the house would not agree to the workers to enter the domestic yard and carry on cultivation: here again, the element of sentiment would be much more powerful.

Interspersion.

Joint farming, like consolidation of holdings, implies the pooling of all the lands in the village. Interspersion of pooled lands and personally cultivated land would prove more uneconomic than the present system of personal cultivation. How could this be fitted in with voluntary membership?

Evaluation, Accounts and Audit.

Another tough problem would be evaluation, accounting and audit. It could not be a barter arrangement, and property registers, account books, ledgers, etc., would have to be in rupee terms. The main categories for the pool would be: (1) agricultural lands, (2) cattle, (3) implements and carts, and (4) miscellaneous items. In the case of lands, for example, there would have to be sub-categories like dry land, wet land, garden land and special crop areas (like orchards and plantations). Among each of these sub-categories, at least three grades would have to be made according to fertility. Land revenue is the only available (although imperfect) yardstick, but land revenue assessment does not take into account several considerations like proximity to the village site, to a road or to a railway station. There would be an endless number of complaints and objections. Even among these non-recurring items, there would be

An Indian Finance Special Study

changes frequently on account of erosion, floods, cattle disease and depreciation. Recurring contribution would be personal labour with sub-categories of men, women and children to be graded into skilled and unskilled workers. Man-hours, not man days, would have to be recorded because women and children work a smaller number of hours per day than men. Again, internal migration goes on as usual, and this must bring changes in contribution of labour hour units. Accounts and audit are bound to prove very complicated on account of the number of entries and the difficulty of evaluation.

Debt Settlement.

Will the co-operative farm leave the debts of members alone, or will it take them over? If left alone, practically all the debt would become bad and doubtful for the simple reason that the creditors could not informally or legally pursue the crops and collect instalments: the entire crop would belong to the co-operative farm. If taken over, a good portion of it would be impossible to rationalise on account of insufficient assets and smallness of income. This must tell heavily on the annual balance sheet: provision for bad and doubtful debts would have to be liberal, thereby reducing the annual dividend per unit of contribution. What is more, the farm management would have to find funds for weekly or monthly advances to members in anticipation of the annual dividend for usual purposes like sustenance, clothes, house repair, marriages, funerals, pilgrimages, etc The credit branch in the Farm Accounts must substantially add to the cultivation section of the farm. Where is the money to come from? Not even in a single village in India have debts been rationalised like this, and Sample Surveys reveal that the task is not only vexatious but also very risky.

Option to Secede.

Would it be open to a member to withdraw from the co-operative farm even after giving due notice? If the option is not allowed, membership must prove less than 5 per cent (comprising mostly insolvents): it has already been explained earlier that the joint farm should cover the entire village, or not be started at all. On the other hand, if the option to secede is allowed, the element of instability must prove a big handicap: withdrawals must be expected on account of migration and party factions, apart from mass withdrawals that might have to be faced in times of depression or drought.

Management.

Management would have to be vested in an elected Panchayat or a nominated tribunal. The latest report of the Projects Evaluation Organisation has pointed out that, even in the management of credit societies, personal influence and manipulated transactions were frequent. Further, village leadership practically vanished on account of adult franchise and land reforms. Tribunals bring in their train red-tape, delays and corruption, apart from setting up more or less an administration parallel to Government at the village level.

Education.

All these difficulties and dangers should be reduced with sound education, but that would be a matter of decades. In the meanwhile, the authorities appear to be convinced that sufficient education is already there, and they issue decrees laying down programmes and percentages.

The Chinese Way?

Whither Socialistic Pattern? In the USSR and China, the term "co-operative" was used as a convenience to spring over to the Communist economy. Are we heading there? The production of foodgrains in China last year was over 50 ounces per capita per day, produced by communes of labourers as such, without garb. They were free from want according to Chinese standards, with three meals a day and whatever was available of housing, medical aid and education. Universalisation of co-operative joint farming would be a half-way house between Democracy and Communism, bereft of the benefits of both.

Survey and Spade Work.

Only a few of the problems have been referred to in this note: there are many more. Grave consequences are ahead, and the Nijalingappa Committee would do a great service to the country by a Fact-Finding Report on how far the existing co-operative farms have been failures and the underlying causes for such failures. But unfortunately, that Committee has adopted the imperial way of asking each State to send information with regard to 10 farms, obviously with the idea of ascertaining how the present farms have fared. It is certain that, in the orthodox style, the states will send glowing pictures for admiration by the Nijalingappa Committee. Even now, it is not too late. The right thing to do would be to entrust the fact-finding task to Research Institutes, asking them to select 10 per cent of the present farms at random and report after intensive enquiries. The Rural Credit Survey took more than two years. For a much bigger task, the Nijalingappa Committee should not agree to the time limit of two months.

Major Factors in American Economic Growth

By CARL F. OECHSLE

OUR very emphasis in the United States on optimum freedom and self-development means that America's economy is characterized by growth, by geographical shifts, by competition which results in expansion, contraction, location, and relocation.

In only the last 50 years our population has doubled. But even more dramatically, our per capita output has also doubled, so that today our gross national product—in real terms—is four times what it was in 1909.

The implications of the rapid changes in the size, location and character of business enterprise in America should be clear to anyone who has a mature viewpoint. At every step of the way change has meant that some individuals and some industries have been affected, often adversely.

Those with vested interests in the status quo often found themselves rendering a service or producing a product for which demand had disappeared. Others found that new sources of power energy, new processes, or new materials had made their products, location or plant obsolete. Still others found that old markets had disappeared or were being served by new foreign or domestic competitors.

These facts have inevitably spelled business failures and temporary unemployment for some, while yielding new business and job opportunities for many. It has been well and truly stated that no war, no strike, no depression, can so completely destroy an established business or its profits, as new and better methods, equipment and materials in the hands of an enlightened competitor.

Nevertheless, such has been the vigor of the US economy that 1958—a recession year—wound up with a record business population of 4.6 million firms, or around 26 per thousand population.

Incidentally, and in the light of our rapidly expanding population, this ratio of around 26 firms per thousand has persisted for over a decade. In 1900 the ratio was about 21 The increasing ratio indicates a greater rate of growth in business concerns than in population over the last half-century except for sharp dips in wartime and periods of depression.

Business failures, even in the recession period 1957-58, were a little over 50 per 10,000 firms as contrasted with 92 in 1900 and 109 in 1928. But the number of new business incorporations reached a record high in 1953. This seems to indicate that businessmen were confident of opportunities—particularly in small business—even in a recession year.

What have been the major factors in our growth over the past 50 years at an annual rate of 3 per cent? How have we doubled our per capita output since 1909? These related questions deserve a clear answer. Fortunately Commerce Department economists have given it, in a recent publication of our Office of Business Economics entitled "US Income and Output."

Starting with that annual growth rate of 3 per cent, it is noted that the aggregate number of man-hours worked has increased about 1 per cent per year since 1909. Employment expanded about 1¼ per cent per year, but this was accompanied and substantially offset by a sharp decline in the length of the workweek and workday.

So the remaining 2 per cent in annual growth had to come from what the statisticians call "output per man-hour worked"—more briefly, productivity.

This factor, broken down into its constituent parts, means gains in technology, management skills, a high rate of capital formation including natural resource development, plus constant advances in the education and skills of the workers.

Add to these the economies of mass-production and mass marketing associated with our population growth, free markets and national advertising, and the stage was set for achievement of the highest standard of living for the most people.

The story is particularly dramatic in the case of manufacturing. Over the last 30 years the amount of capital per man-hour increased over one-third. While the number of man-hours worked was increasing only 40 per cent, the physical amount of capital applied in manufacturing production virtually doubled and output rose to 2½ times its 1929 volume.

The conclusion reasonably to be drawn from these facts is that the kind of economic growth we have experienced is greater than can be accounted for by input of either man-hours worked or the tangible capital assets such as plant and equipment dedicated to production.

Less tangible assets were at work which cannot be neatly measured by known quantitative standards, and which can only be indicated by such phrases as education, skills and technological and managerial progress.

These intangibles, in turn, boil down to our people and their response to the opportunities and incentives which our way of life provides. Government's best contribution to economic development has been preserving a climate friendly to enterprise and all that connotes in terms of private incentives for saving, investment and hard work.

To achieve a faster rate of growth requries more in the future of those ingredients which have been successfully used in the past.

EDITORIAL NOTES

Medical Care

Among the topics being discussed in connexion with the formulation of the Third Plan, the problem of medical relief deserves special consideration, especially in view of the basic strategy outlined at the Ooty Seminar. While the emphasis, very properly, is on increased production, both in industry and in agriculture, the Ooty Seminar decided that the broad strategy must also cover two other important objectives, namely, maximum possible further employment and a national minimum of social services apart from the commonly accepted objectives, in order to "make for a balanced and satisfying growth of the economy." And a comprehensive scheme of medical care should find a place in any programme for a national minimum of social services.

The Second Five Year Plan included a limited programme for expansion of basic health services. Though it comes nowhere near a comprehensive medical service, its implementation should have shown up the magnitude of the problem which is too big for available resources in money and personnel. One point which has now become clear is that expansion of hospital facilities to the extent necessary will not be a practical proposition. Anyone who has experience of admitting a patient to a Calcutta hospital will vouch for the inadequacy of the hospital accommodation that is available in spite of all the substantial progress that has been achieved in the last one decade.

Apart from the financial problem, shortage of trained personnel is one of the major obstacles to the rapid extension of medical services of hospital standard. Contrary to usual impressions on the subject, the shortage is not so much in respect of doctors, as of auxiliary personnel like nurses, midwives etc. The Second Five Year Plan has estimated the requirements of different categories of medical personnel and the number that would be available by 1960-61. Actually 80,000 doctors would be available by 1960-61 against estimated requirement of 90,000. But the gap between availability and need is much wider in the case of other categories of personnel. Only 31,000 nurses (including auxiliary nurses) 41,000 nurse-dais and dais and 32,000 midwives will be available against the requirement, in each case, of 80,000. Therefore, even if sufficient number of doctors are available, shortage of trained nurses will hold up expansion of hospital facilities. In West Bengal, there is actually a surplus of doctors. There was in West Bengal, last year, one doctor to 1,552 of the population, which is almost near the UK standard. But, unfortunately, as a result of their low income status, the majority of the population is unable to avail of the facilities of treatment by private practitioners. For the same reason, only very few among the private practitioners enjoy what may be called a satisfactory practice.

These are some of the objective factors that have to be taken into account in drawing up a programme of public health and medical assistance, which should be designed to make the services of qualified doctors available to those who need them.

In this connexion the proposal for a domiciliary medical service for low income groups in Calcutta, which Lt. General D. N. Chakravarti, Director of Health Services, is reported to have outlined at a symposium organised by the Indian Council of Economic Affairs, of which only very brief reports have appeared in the daily newspapers, is of considerable importance and deserves to be pursued with vigour. Such a programme will help to bring the patients and doctors together, bypass the shortage of trained nurses and relieve pressure on hospital accommodation.

*

Industries in West Bengal

Prospects of industrial expansion West Bengal have been discussed from a new angle by Mr B. M. Birla in his address to the fifth annual meeting of the West Bengal Financial Corporation of which he is the Chairman. If we confine our attention to the material basis of industry namely, natural resources, availability of skilled labour and accessibility to markets and communications, West Bengal is, indeed, very favourably situated. The availability of basic materials like iron and steel, cement etc. is also bound to be easier in future that it has been in the recent past. There is also unanimity on the need for development of industries to create employment opportunities on a scale adequate enough to absorb the unemployed. This is one subject on which the different political parties in the State are not likely to have conflicting views. There is no reason to apprehend that an analogue of the Price Increase and Famine Resistance Committee will start an agitation against industrialisation. Attention of businessmen has also been focussed on this topic at the West Bengal Business Convention held last February, under the joint auspices of three Chambers of Commerce. But, in spite of all the favourable factors mentioned above, the urge to establishment of new industries remains at a low level.

The lack of interest or hesitancy on the part of businessmen in launching on new enterprises is highlighted by the large proportion of loans sanctioned by the West Bengal Financial Corporation that have been subsequently declined by the applicants. During the five years that the Corporation has been functioning, it has sanctioned loans aggregating over Rs 2 crores, of which nearly 25 per cent have been declined by the parties concerned without assigning satisfactory reasons. Mr Birla suggests that it is likely that lack of confidence, or absence of opportunities for carrying out the proposed schemes satisfactorily, was in many cases the explanation why many parties backed out after arranging for the loans. In this connexion, Mr Birla also makes the pertinent point that the local youngmen who have been accused of lack of enterprise and unwillingness to take to business cannot be blamed for their hesitation, especially when those who were already in business were not able to work with confidence about the future.

Discussing the factors which inhibit enterprise, Mr Birla has referred to the fiscal and monetary policies of the Government. The impact of these policies should be felt all over the country and not merely in West Bengal. It is a point for consideration whether credit institutions like Industrial Financial Corporations in other States are also faced with similar reluctance on the part of businessmen to avail of the facilities. Taking the country as a whole, there is little to show that private investment in industry has suffered as a result of Governmental policies or the expansion of the public sector. While investment in the public sector under the Second Plan has been pruned down from the original Rs 4800 crores to Rs 4500 crores, it appears that private sector investment is likely to be nearer Rs 3000 crores than the Rs 2400 crores envisaged when the Plan was drawn up. The factors which really hold up industrial development in West Bengal have to be identified before corrective action can be usefully considered.

*

Aid Expeditor

Attention has been drawn more than once in this journal to the slow progress of the utilisation of the loan of $150 million granted by the Eximp Bank of the United States and we had made the suggestion that special steps should be taken to expedite utilisation by straightening out the procedural wrinkles. It is clear that the authorities of the Eximp Bank have also been thinking on similar lines for they have sent Mr Sherwood to Indian on a special assignment to study the difficulties at first hand. The conditions of Eximp Bank loans were well understood at the time they were accepted. The main purpose of the Bank is promotion of US exports and loans are granted on condition that the proceeds are spent in purchasing equipment and material in the United States. There is a general impression that the high cost of American machinery and equipment has been the principal obstacle to utilisation of the Bank's aid. In an interview shortly after his arrival in New Delhi, Mr Sherwood has sought to counter this impression by pointing out that in purchasing industrial equipment and machinery, the prices should not be the only criterion. If other relevant factors like quality, working life, availability of spares and so on are also taken into consideration, American equipment, said Mr Sherwood, would work out cheaper in the long run.

WORLD OF FINANCE

New loan's Impact on Bank Figures

Reverse Ad Hocs for Rs 80 Crores?

AS always, the banking returns relating to the week during which new loan subscriptions have been received by the Central Government provide us with material for an excursion into the art of sleuthing. For, while certain basic facts are known about the new loan subscriptions, their impact as reflected in the Reserve Bank returns primarily is confusing and paradoxical. The basic facts are:

(1) Subscriptions to the new loan programme totalled Rs 183.84 crores.

(2) Cash subscriptions were in the amount of Rs 94.43 crores.

(3) The medium term or 3½ per cent 1969 brought in Rs 102.91 crores.

(4) Subscriptions to the 4 per cent 1979 Loan amounted to Rs 80.83 crores.

For a start, we may take the figure of cash subscriptions. The magnitude of cash realised by the new loan would or should have gone correspondingly to add to the balances of the Central Government. But, in fact, the Reserve Bank returns show that the Central Government's balances have risen only by Rs 8.57 crores. We are therefore confronted with the mystery of what happened to the balance of Rs 85.86 crores. Our hypothesis in this regard is presented below:

Firstly, Rupee Securities in the Issue Department are lower by Rs 10 crores.

Secondly, Investments in the Banking Department have declined by Rs 28.17 crores.

Thirdly, the sum of these two, or Rs 40 crores in round numbers, can be seen as contraction in Rupee Securities in the two departments of the Reserve Bank; and it is a permissible assumption that Rs 40 crores represents the cancellation of Treasury Bills by the Central Government as a consequence to their balances with the Reserve Bank being swollen to proportions much larger than they need.

Fourthly, the return of the Reserve Bank in which the new loan figures stand reflected also relates to a period during which commitments as to the beginning of the month disbursements would have had to be met. Our next assumption is that month early disbursements were such as to result in governmental expenditures being in excess of their receipts during the week by roughly Rs 6 crores.

Fifthly, there is the final balance of Rs 40 crores which, we believe, represents the size of the Reserve Bank's subscription to the new loan.

But the purchases of the new loan by the Reserve Bank would have caused the Reserve Bank's holding of Rupee Securities to rise by such amount. What the Central Government have apparently done is to consider the sale of the new loan to the Reserve Bank as a contra, in cancelling Treasury Bills held by the Reserve Bank for a corresponding amount of Rs 40 crores. It is this concealed institution of reverse ad hocs for Rs 40 crores which, when added to the discernible cancellation of Treasury Bills for Rs 40 crores, provides us with the hypothetical figure of Rs 80 crores as the magnitude of cancellation of ad hoc Treasury Bills by the Central Government during the new loan week. Confirmation of our hypothesis in this regard should be available when, next week, the weekly supplement to the Reserve Bank of India Bulletin gives the figure relating to outstandings of Treasury Bills.

The procedure adopted, as far as the cancellation of Treasury Bills, would have been as follows:

Firstly, the Central Government's Balances would have risen by Rs 94.43 crores, less about Rs 6 crores representing the excess of expenditure over receipts during the week. Secondly, the Reserve Bank's holding of Rupee Securities in both departments would have risen by Rs 40 crores. Rupee Securities in the Issue Department would then, by dint of reverse ad hocs, have been reduced by Rs 80 crores. As the Reserve Bank is presumed to have made purchases amounting to Rs 40 crores, the actual magnitude of the decline in the two departments is Rs 40 crores. But so sharp a decline in Rupee Securities would have left insufficient cover for the note issue. Depending upon whether the new loan subscriptions of the Reserve Bank were credited to the banking or the issue department, a transfer amounting to an adjustment would have been made from the Banking Department to the Issue Department to cover the note issue. Thus, while there appears to be contraction of Rs 10 crores in Rupee Securities, there would in fact have been the transfer of marketable securities from the Banking Department for a minimum of Rs 30 crores.

Thus much for our interpretation of Reserve Bank figures as regards reverse ad hocs instituted during new loan week.

Then, there is another approach which is available to us of finding some confirmation about the magnitude of Reserve Bank subscriptions. The State Bank's return for July 3 indicates that its subscriptions to the new loan programme are probably in the environs of Rs 30 crores. This is composed as to Rs 21 crores in the drawing down of Cash Balances and as to Rs 7 crores by decline in the State Bank's investments. Both the drawing down of Cash Balances and decline in investments tally with the rise in Other Assets of the State Bank. the head under which the State Bank's subscriptions are customarily kept in suspense until formalities as to scrip are completed. But the decline in the Reserve Balances of the Scheduled Banks as appearing in the returns of the Reserve Bank amounts to Rs 33.35 crores. Moreover, the Other Loans and Advances of the Reserve Bank rose during the new loan week by Rs 10 crores. The State Bank's cash in hand and with the Reserve Bank fell, as we have seen, only by Rs 21 crores. So, clearly, Rs 12 crores is on account of other Scheduled Banks. Similarly, the State Bank has not figured as a borrower from the Reserve Bank, but the other Scheduled Banks were presumably compelled to have recourse to the Reserve Bank for an additional amount of Rs 10 crores. Thus, Rs 12 crores on account of drawing down in the balances with the Reserve Bank of other Scheduled Banks and Rs 10 crores increase in the borrowings of the other Scheduled Banks may both be said to reflect resources of other Scheduled Banks, limited to the indices in the Reserve Bank, which clearly played a part in subscriptions to the new loan programme.

Thus, the decline of Rs 12 crores in balances with the Reserve Bank ascribable to the other Scheduled Banks may be interpreted to suggest that this is roughly the extent of their subscriptions to the new loan financed by drawing down of their balances. On the other hand, subscriptions of the entities other than the banks would have affected the Deposits of Scheduled Banks; and the Scheduled Banks would have consequently, perhaps in a corresponding degree, been compelled to raise borrowings from the Reserve Bank. So, the Rs 10 crore increase in the borrowings from the Reserve Bank may be said roughly to represent the subscriptions of entities other than banks.

Let us add up the figures:

(Rs in crores)

State Bank figures as having subscribed to the New Loan a sum of ...	30
The other Scheduled Banks ran down their balances with the Reserve Bank, presumably for their subscriptions to the New Loan, by	12
Moreover, the other Scheduled Banks, presumably for getting over the embarrassment caused by drawing on Deposits by other institutional investors subscribing to the New Loan, increased their borrowings from the Reserve Bank by	10
The total is, thus, ...	52

The Reserve Bank, according to our hypothesis, put in Rs 40 crores. The two together add up to Rs 92 crores and this figure compares with the known cash subscriptions of Rs 94.37 crores.

We are afraid that, at the present juncture at least, it is impossible to essay a guess as to the proportion of the medium term or the long term loan which was taken up by Scheduled Banks, other institutional investors and the Reserve Bank. One thing, however, is clear. The considerable subscriptions to the 1979 Loan could have been possible only if the Reserve Bank figured as a considerable cash-cum-conversion subscriber to the long term issue. For, the Scheduled Banks, it is safe to conclude, would have shown no interest in the 1979 Loan. The other institutional investors, we repeat, could have mustered scarcely Rs 10 crores by way of cash subscriptions. We have no idea as to the magnitude of the maturing loan which may have been held by provident fund societies,

S. E. RLY TENDERS

Sale of packing and scrap wood

Sealed tenders are invited for the sale of about 284 tons of Packing Wood, 58 tons of Crates Wood and 28 tons of Scrap Wood lying at the Wagon Erection Plant, Waltair. Tender form No. S-236/S/3/Pt. II (not transferable) are obtainable from the office of the undermentioned (Sales Section), S. E. Rly., Calcutta-23 at Rs. 5/- (not refundable) per set by Money Order to him direct in the case of firms residing outside Calcutta and on production of a Cash receipt for Rupees five only from the Chief Cashier, S. E. Rly., Calcutta by Calcutta firms.

The samples of wood are displayed for inspectoin by intending purchasers in offices of the Controller of Stores, Southern Railway, Madras, Western Railway, Bombay and S. E. Railway, Calcutta-23. The samples are only picked up at random and are not representative, but the lots must be purchased as they are. Tenderers should, in their own interest, inspect the lots at Wagon Erection Plant, Waltair, before they submit their tenders.

Tenders will be opened in public at 3 P.M. on 3-8-59.

CONTROLLER OF STORES
S40

the Life Insurance Corporation, etc. On the other hand, it is known that the bulk of the maturing loan was being held by the Reserve Bank. At best, therefore, 3 per cent 1959-61 converted into 1979 Loan by entities other than the Reserve Bank would have been considerably less than Rs 20 crores. This leaves roughly Rs 50 crores as the amount invested by the Reserve Bank in the 1979 issue.

The magnitude of Reserve Bank subscriptions at Rs 40 crores should not be allowed to detract from the success which the first tranche of the borrowing programme undoubtedly is. For, it has happened in almost every recent year that, at new loan time, the Reserve Bank would go in for a considerable parcel of the new loan. During the last year or two, the Reserve Bank has usually sold, through the tap, securities for an amount greatly exceeding its subscriptions to the new loan programme in that year. Thus, the facility of the Reserve Bank taking up a large parcel of the new loan at new loan time is being used by Government to prevent any strain being imposed on the money market. Indeed, our present understanding is that the Reserve Bank's holdings of medium dated securities are rather small. There may be not much available from the Reserve Bank tap by way of medium term securities; holding of short-term securities will most certainly not be offered by the Reserve Bank;—and the long term holdings of the Reserve Bank will be attractive only to provident fund societies, etc. So, as far as the Scheduled Banks are concerned, the prospect continues to be an inadequate supply of short and medium dateds. It is in this view that, as we shall be writing at greater length on a future occasion, we wish strongly to suggest that the second tranche of the new loan, which must be made before, say, the middle of September, should be addressed principally to the Scheduled Banks; and, hence, we would recommend a new issue in the form of 3½ per cent 1966. The year 1966 is apposite because it falls outside the Third Plan period and because, also, it is a year when maturities are relatively light.

+

1958-59 Profits of the Reserve Bank

THE anticipations in respect of the Reserve Bank's profits for 1958-59, as foreseen in this section last week, have been fully borne out. The manner of the disposal of the profits is also along the lines that we had indicated.

The returns of the Reserve Bank for July 3 show that Other Liabilities are very considerably lower by Rs 47.35 crores at Rs 8.98 crores. This decline in Other Liabilities represents the withdrawal from under this head of the profits of the Reserve Bank for 1958-59; and the gross profit can with some certainty be put down at Rs 46 crores. From the disposable profit, a sum of Rs 5 crores has been transferred to the National Agricultural Credit (Long-term Operations) Fund, which is now placed at Rs 30 crores. A further sum of Rs 1 crore is transferred to the National Agricultural Credit (Stabilisation) Fund, raising it to Rs 4 crores. In this context, we may note that the two funds were constituted some three years ago, and they are being built up in terms of the recommendation to this effect by the General Report of the Committee of Direction of the All-India Rural Credit Survey. The funds are intended to enable the Reserve Bank to facilitate the rehabilitation and revitalisation of the machinery of cooperative credit and, for this purpose, the Reserve Bank of India Act was amended in 1955 for enabling the setting up of the two funds. The Long-term operations fund was constituted on February 3, 1956 and the stabilisation fund on June 30, 1956.

After the transfers to the two funds, the balance of profit of the Reserve Bank payable to the Central Government and for which credit has been taken by the latter in their Budget for 1959-60, amounting to Rs 40 crores, is now shown, in the Reserve Bank's returns under the head of "Other Liabilities". Here the profit will remain pending the completion of audit and other formalities in regard to the Reserve Bank's accounts. Usually, by the third week of August, such formalities are completed and the immediate making over thereafter of Rs 40 crores to the Central Government would, we presume, be followed by the Central Government instituting reverse ad hocs in substantial, and may be even corresponding, amount.

The higher profit, during 1959-60, of the Reserve Bank arises from the fact that, at the end of June last year, a funding operation was carried out by the Central Government. Rs 300 crores of 4 per cent 1973 Loan were sold to the Reserve Bank in cancellation of Treasury Bills for like amount. It is the higher interest earned on the 1973 Loan, as compared to the 2½ per cent yield from Treasury Bills, which largely contributed to the enhanced earnings of the Reserve Bank. Moreover, we may also note that, as between the end of June last year and the end of June 1959, the decline in Foreign Securities has been of very small proportions. In this sense, earnings realised on Foreign Securities would not have declined precipitately, as had been the case in the two earlier years. On the other hand, it may also be recognised that the extent of deficit financing during the Reserve Bank's accounting year has been smaller than was the case during 1957-58. Nevertheless, increase there has been and the additional earnings from the larger volume of Treasury Bills held by the Reserve Bank would have much more than offset the decline in interest earned on Foreign Securities. Finally, however, the Reserve Bank has figured as a considerable seller of securities through the tap. This will have reduced the size of the Reserve Bank's earnings from marketable securities held by it.

The prospect is that, during 1959-60, there is likely to be moderation both in the magnitude of deficit financing and in the size of the decline in Foreign Securities. Meantime, it seems likely that the Reserve Bank will be able to continue to sell securities through its tap. For these reasons, 1959-60 is not likely to result in any sizeable increase being registered in the earnings of the Reserve Bank—unless, of course, Government contemplate another funding operation.

+

State Bank: Rs 30 crores in new loan?

IN addition to the impact of the new loan and the changes consequent upon the end of the accounting year for the Reserve Bank, the returns of the Reserve Bank for July 3 reflect, we believe, the interruption of the slack season owing to beginning of the month disbursements. Notes in circulation have risen by Rs 7.84 crores to Rs 1721.40 crores, and there has also been an outflow of Rupee Coin for Rs 0.88 crores. In connection with the new loan transactions, Rupee Securities in the Issue Department are Rs 10 crores lower at Rs 1315.73 crores. As an end result, the Reserve Bank's cash in hand has practically been halved to Rs 19.73 crores, in dropping by Rs 18.72 crores.

In the Banking Department, arising from the temporary disposal of Reserve Bank's profits, Other Liabilities have declined by Rs 47.35 crores to Rs 8.98 crores; the long term operations fund is Rs 5 crores higher at Rs 30 crores, and the stabilisation fund is marked up by Rs 1 crore at Rs 4 crores; Other Deposits are higher by Rs 40 crores at Rs 162.47 crores.

The set of transactions relating to the new loan is reflected in an increase of Rs 8.57 crores to Rs 29.04 crores in the Deposits of the Central Government; in a decline of Rs 33.35 crores to Rs 65.98 crores in the Reserve Balances of member banks; in a rise of Rs 10.07 crores to Rs 74.88 crores in the Other Loans and Advances of the Reserve Bank; and in a steep fall of Rs 28.17 crores to Rs 294.21 crores in Investments.

Government Treasury Bills purchased and discounted by the Reserve Bank are higher by Rs 6.91 crores at Rs 8.04 crores. Since, lately, the State Bank has apparently been the main support for the public auction of Treasury Bills, and since the State Bank figured in the relevant week as having sold Rs 7 crores of securities, presumably for subscription to the new loan, this also may be an item connected with the new loan transactions.

For the rest, Deposits of State Governments have been marked down by Rs 2.80 crores at Rs 13.90 crores. This is despite an increase of Rs 3.31 crores to Rs 26.74 crores in the Ways and Means borrowings from the Reserve Bank. These, no doubt, point to the pressure of beginning of the month disbursements. Finally, the import surplus is reflected in yet another drop of Rs 2.26 crores to Rs 12.29 crores in Balances Held Abroad.

The return of the State Bank for July 3 shows that cash in hand and with the Reserve Bank has been drawn on to the extent of Rs 21.00 crores and is placed at Rs 13.36 crores, presumably for subscription to the new loan. The giltedged portfolio of the State Bank has declined by Rs 6.96 crores to Rs 294.76 crores, and this may relate, as we have pointed out, to rediscount of Treasury Bills with the Reserve Bank. These two together apparently constitute the State Bank's subscription to the new loan, since Other Assets have been marked up by Rs 28.39 crores at Rs 45.22 crores. For our part, we place the State Bank's subscription at a round figure of Rs 30 crores. Month early disbursements have caused a small decline of Rs 1.04 crores to Rs 534.99 crores in Deposits and an equally small rise of Rs 0.56 crores to Rs 189.26 crores in Advances.

The return of Scheduled Banks for June 26 was largely foreshadowed in this column last week. Deposits have registered a smart rise of Rs 10.08 crores to Rs 1788.59 crores, Rs 5.29 crores of this rise being traceable to the State Bank. The total of Advances, in true slack season fashion, has fallen by nearly Rs 15 crores from Rs 999.67 crores to Rs 984.82 crores, and the State Bank's share is Rs 5.42 crores. Cash Balances have gone up by Rs 14.09 crores to Rs 192.56 crores, the State Bank's share being Rs 9.64 crores. This is in spite of a decline of Rs 1.45 crores in the borrowings of Scheduled Banks from the State Bank and a fall of Rs 2.25 crores in indebtedness to the Reserve Bank. Investments were lower by Rs 3.35 crores at Rs 631.60 crores.

+

Influence of Wall Street on London

By Paul Einzig

IN spite of the printers' strike during the last week or two the London Stock Exchange was holding its own. That strike, though by itself a relatively small affair, carries far-reaching possibilities that are liable to affect the national economy as a whole. The reduction of advertising facilities is liable to curtail consumer demand. Should the strike become prolonged the shortage of labels and other printed materials in which commercial articles of most kind are packed might gravely handicap retail trade. And any serious setback in retail trade would discourage capital expenditure which is only just getting into its stride as a delayed effect of the recovery of consumer demand from the recent recession.

Moreover, there appears to be possibility that the strike might spread over other industries, as in fact it has already spread over the manufacturing of printers' ink. In particular transport is liable to become involved in the strike as a result of the refusal of transport workers to handle British newspapers printed abroad or by "strike-breakers". Moreover, the strikers display an unusually aggressive temper. They have already a number of violent scenes, does not help the Stock Exchange towards adopting an optimistic attitude.

Nor is the international political outlook encouraging. The resumption of the Geneva discussions is imminent, but the prospects are not viewed with optimism. The possibility of a deadlock during the summer tends to induce many investors to play for safety by liquidating their commitments. In addition the chances of a general election in the early autumn seem to have increased, which again tends to induce investors to get out of the market.

Equities have been nonetheless steady to firm. The main cause for this has been the steady to firm tendency in Wall Street. The extent to which the London Stock Exchange follows Wall Street is considerable. All other influences may operate in the opposite direction, but the opening on the London Stock Exchange usually reflects the Wall Street tendency at closing time on the previous closing. Even on Mondays, Friday's closing trend is followed, although sentiments in Wall Street might well have changed since closing time on the previous Fridays and many things may have happened also on our side of the Atlantic during a long weekend.

American buying and selling has not been so much in evidence lately in London as it was until recently. While earlier this year hardly a day passed without financial commentators making reference to the influence of American operations on equity prices, in more recent weeks one only comes across occasional references to the subject. Moreover American transactions never accounted for more than a fraction of the turnover on the London Stock Exchange, although they were relatively substantial in a limited number of equities favoured by American investors. The presence or absence of American buyers or sellers affects the markets psychologically rather than materially.

It is not so much the actual volume of buying or selling orders cabled from New York that matters as the fact that New York is buying or selling British stocks. This fact indicates the degree of prestige Wall Street enjoys in Throgmorton Street. For some reason it is widely assumed that American operators know what they are doing, even though they are thousands of miles away while on the spot. Or it is perhaps assumed that, even though the actual volume of orders from New York is small, potentialities for an increase in their volume are considerable. The prestige of the immense size of financial resources in the United States amounts for a great deal.

Above all, the London Stock Exchange looks towards Wall Street as a barometer indicating business prospects in the United States. Notwithstanding the experience of recent years showing that trade conditions in Britain need not always follow those of the United States, British business forecastes continue to attach considerable importance to any indication pointing towards an expansion or a contraction of American trade. They widely assume that, should inflation develop in the United States, Britain would also experience inflation, while another setback resulting from any drastic disinflationary measures the United States authorities might take would affect British economy in a similar sense.

Grossly exaggerated as this assumption is, the fact that it is widely held goes a long way towards confirming it. Should a slump develop in Wall Street, it is certain that there would be a slump also on the London Stock Exchange. There is no basic reason why this should be so. The level of yields on equities in the United States is some 2 per cent below the corresponding figure in Britain and owing to the consolidation of sterling during the past twelve months there is no justification any longer for such a wide gap. There would be justification for prices in the London Stock Exchange to remain stable in face of a fall in Wall Street, or for a sharp rise in London prices in the absence of a fall in Wall Street.

Such sharply conflicting trends in Wall Street and Throgmorton Street do not now appear likely, however. The unnatural discrepancy between yields may narrow down, but not through a spectacular movement in either market unaccompanied by a similar movement in the other market. The adjustment will probably take place gradually over a longish period, without affecting the basic fact of London's tendency to follow Wall Street.

WORLD OF JUTE

Raw Jute Steady: Goods Irregular

JUTE markets displayed an irregular trend during the past week. Raw jute prices were generally steady partly due to small but sustained mill interest which presumably had been aided by the reported settlement of the dispute over the TSD contract. In the goods section, hessians were steady in earlier dealings following reports of business from the Argentine but encountered selling pressure during most of the time. It was in heavy goods that a two-way movement in prices was well pronounced.

It is evident that the week's trading has been dominated by speculative elements who have selected the heavygoods section as the most suitable area for their operation. The proximity of the publication of the stock figures as at the end of June has provided a basis for speculation. Sacking goods are known to have been in good request during the last month and mill production continues to be in favour of hessian. Hence sacking stocks may be expected to have recorded a sizable decline. Some such inference seems to have been at the back of the sudden interest evinced by operators in the futures market last Saturday and Monday. With the release of the stock figures on Wednesday the scope for speculation was considerably lessened. The quiet tendency obtaining in earlier dealings on Wednesday clearly showed that the bull operators considered the decline in sacking stocks rather disappointing.

Total stocks of jute goods at the end of June are placed at 95,900 tons against 99,400 tons at the end of the previous month. So there is a net fall of 3500 tons. But the fall is not shared by all categories of goods. Hessian stocks have increased by 2,300 tons to be placed at 23,700 tons as compared with 21,400 tons at the end of May. There has been a decline of 3,500 tons in Sackings which are thus placed at 57,900 tons as against 61,400 tons. Stocks of other categories are down by 2,300 tons to 14,300 tons against 16,600 tons. Compared to the stocks at the corresponding date of a year ago, present stocks are at quite a low level. At the end of June 1958 total stocks stood at 134,000 tons comprising 31,000 tons hessian, 87,900 tons sacking and 15,100 tons other varieties.

The jute goods market opened the week on Thursday on a steady note especially around hessians as there were persistent rumours about renewed enquiries from the Argentine. The Sacking section was devoid of any interest but prices there also were well maintained in sympathy with the hessian section. Hessian 40"×10 oz July which closed at Rs 41.50 on Thursday was taken up to Rs 41.65 by close on Friday B Twills also advanced to Rs 97.60 from Rs 97.15. In Saturday's trading it was the sacking section that claimed the attention of marketmen who seemed to have derived their enthusiasm from the futures market. B Twills moved up smartly to Rs 98.15. Though neglected Hessian also improved in sympathy to be finally placed at Rs 41.85.

In the second half of the week under review the sacking section was more active than hessian. The inspiration, however, continued to be derived from the futures market. At the close on Monday B Twills were another 10 nP higher on balance at Rs 98.25 Hessian was unchanged at Rs 41.85. The market displayed a quiet undertone on Tuesday on selling pressure all along the line. The hessian section was depressed due to the continued absence of fresh foreign enquiries. B Twill reacted to Rs 97.90 while hessian came back to Rs 41.60. Prices were easier in earlier dealings on Wednesday reflecting the market's disappointment over the small decline in goods stocks. But toward close price especially in the sacking section made a smart rally following reports of enquiries from Australia for cornsacks. The quick rally in sacking prices on the news of the Australian enquiry is not surprising because this may well be the beginning of the long-awaited buying programme of that country.

Steady conditions prevailed in the raw jute market though business passing continued at a meagre level. Contrary to expectations the settlement over the TSD contract had little effect on the volume of business passing. It would appear that mills were reluctant to extend commitments pending further clarification from Government as regards the contract. The lack of sustained interest in the raw jute market seemed to have also partly stemmed from prevailing ideas about the size of the crop. Reports of widespread floods in Assam notwithstanding the generality of marketmen appeared to have gained the impression that the new crop would be quite adequate to meet requirements. The latest weather report indicated that weather in most of the jute growing districts had been favourable and that the crop was making satisfactory progress. During the past week scattered mill business was reported done but prices ruled steady. Assam Bottoms was quoted on Thursday at Rs 22.25 and Rs 24.00 for the old and new crop respectively.

WORLD OF TEA

Steady Rise in Demand

From the pattern of trading during the first four export auctions in Calcutta it would appear that though demand is still small it is steadily picking up. The first two sales engendered some anxiety but the next two have been of a variety that should revive confidence if not enthusiasm. It is also to be noted that some sluggishness atleast at early stages had been anticipated in view of the larger availability of supplies to world consumers. By the same token buyers were even expected to follow quality. In this view it is no wonder demand had been disappointing at the first two auctions because the quality on offer could not be said to be quite satisfactory. The improved demand at this week's auction is due to the fact that quality has begun to show improvement. A correct assessment of the prospects for the new season's tea should not therefore be based entirely on the response met with in the first few auctions. For one thing it is generally known that the quality of teas on offer at the first few auctions would not be quite good because due to unfavourable weather conditions there has been a fall in quality, atleast as far as the early pluckings are concerned.

Just as it has been certain that buyers this season will not be in any great hurry to get their requirements, it has been equally certain that there will not be any dearth of demand for good quality teas. Here again both the industry and trade in India are well aware of the difficulties to be met with in marketing common teas overseas. That is the reason why it is being pointed out that increased attention has to be paid to stepping up domestic consumption.

At this week's export sales in Calcutta where 44,061 chests were on offer, there was a strong general demand for "teas for price" and all teas with bright liquors. Quality on offer also showed improvement. Interest in plain brokens showed marked improvement with rates marked upto 4 nP dearer than previous levels. But similar Fannings displayed an opposite trend and were often 4 nP cheaper. There was a fair enquiry for orthodox Dooars with bright liquors. Among Legg cut teas the more ordinary sorts were irregular.

A firm trend developed in bright liquoring Assam BOP's Simla Fannings also came to an active market with rates showing some improvement. The more ordinary sorts were, however, easier. Strong demand was noticeable in Best CTC at enhanced prices but the medium and the more ordinary CTC's sold well below valuations. There was a general demand for whole leaf grades though the stalky ones were easier. The firmest features were those with clean leaf appearance. Both Darjeelings and Tippy teas met with fair enquiry but only at below valuations. Quotations: Clear Black Pekoe Rs 2.00; Plain Rs 1.64 to Rs 1.70; Plain Fannings Rs 1.60 to Rs 1.66; Medium B.P. Rs 1.95 to Rs 2.0 Medium Fannings Rs 2.10 to Rs 2.20; Best Assam CTC BP Rs 3.30 to Rs 3.50; Best Assam CTC Fannings Rs 3.90 to Rs 4.30.

At this week's internal sale in Calcutta a further improvement in sentiment was noticeable with the offerings meeting with a good general demand. There were 13,413 chests on offer with 237 of them old season's manufacture. Support for teas of orthodox manufacture was fair and prices were well maintained. Demand for powdery kinds was quite good and consequently prices were dearer. Competition was equally good in Legg cut Dooars and the powdery kinds while Darjeeling teas came to an easier market. An irregular trend prevailed in Medium CTC Dusts with some done about 15 nP easier while those with better quality were taken at enhanced rates. Good support was forthcoming for the very best CTC dusts which generally sold above valuations. The small powdery kinds among these were in good request in earlier deals but interest weakened later on with the result that there were a number of withdrawals. Quotations: Medium Doars Dust Rs 1.66 to Rs 1.72, Medium Assam Dust: unquotable, Medium Assam CTC Dust Rs 2.10 to Rs 2.40; Best Assam CTC Dust Rs 2.80 to Rs 3.20.

A strong general demand was noticeable at this week's auctions in Colombo with Uvas meeting with good support. Among others Dimbulas were better except with regard to the poorer kinds. Mediums and low growns came to an easier market.

At the sale on Monday in London the demand for the remnants of the old season's North Indian teas on offer was on a meagre level with prices also showing a sagging trend but buyer's evinced selective interest in new season's tea. Offerings at the day's auction totalled 22,536 packages of North Indian and other miscellaneous growths. It is quite probable that when there is a sizable increase in arrivals of quality teas demand will record considerable improvement. Such a view is also supported by the low stock position in UK. There has been a further decline in stocks as stocks for the week ended June 26 are placed at 130.2 million lbs as against 131.12 million lbs at the end of the previous week.

WORLD OVERSEAS

US Notes

It has become increasingly popular in many quarters to refer to the American economy as a "people's capitalism." Regardless of one's attitude toward that particular term; it certainly is a fact that the economy's essential aim is to meet the the needs and wants of the people, who have derived from its operation continuing increases in income, living standards and personal security.

But there is also another way in which the term "people's capitalism" can be applied to this economy of the American people. The passing years have seen a growing public ownership of American business enterprise through the purchase of corporate securities. This means, of course, direct ownership by individuals, not merely indirect or theoretical ownership through the intermediary of some far-removed state or semi-public organism.

How far this "people's" ownership has come is revealed in a report published about a week ago by the New York stock exchange, the nation's largest. It shows that the shareowning population of the United States stands today at 12,490,000 in 1952. Thus, the present total is nearly double that of seven years ago and 45 per cent higher than it was only three years ago.

As a matter of fact, the New York stock exchange survey reveals that the number of stockholders has been expanding at a rate far exceeding earlier expectations. In 1956, Keith Funston, president of the exchange, noted that 500,000 people a year were becoming stockholders. The actual growth in the past three years, however, has been more than double this rate, with the result that the shareowner population now has reached a total not anticipated before 1965. No wonder Mr. Funston characterizes this trend as a "quiet revolution that is reshaping America."

Indicative of the broadening base of stock ownership is the fact that shareowners are found not only in all income brackets, but also in all occupational groups, from professional men to farm labourers. Included are no less than 4,000,000 housewives.

Employee stock purchase plans, which are offered by many companies in the United States, have contributed materially to shareowner growth.

Of the total number of shareowners, more than 2,500,000 first acquired stock through company plans, and an estimated 1,340,000 are investing regularly through these plans. An additional 1,230,000 individuals, four times the number in 1956, are represented in the stockholding total through their ownership of investment company shares.

The survey also gives a significant breakdown of other types of investments held by shareowners, indicative of the scope of the personal security protections Americans have built up for themselves through their own efforts. Thus, 81 per cent have life insurance policies, 80 per cent have savings accounts, 68 per cent own their own homes, 59 per cent hold government bonds, and 37 per cent are participants in private pension programmes. These are all in addition, of course, to government social security benefits.

* * *

Of all the expenditures that contribute to US economic activity—by government, business, agriculture and individuals—outlays by consumers account for some two-thirds.

As consumer income has advanced, so has consumer spending. But for the past few years, up until recently, most of this rise was concentrated on "soft" or non-durable goods—such things as food gasoline, pharmaceutical and the like. It is significant that back in 1955, the consumer devoted 14.4 per cent of his disposable, after tax income to hard goods, compared with 11.8 per cent in 1958.

Over-all industrial production, including durable goods, non-durable goods and minerals, has been hitting new highs with regular frequency in recent months, and in May—the latest month for which official figures are available—reached 152 per cent of the 1947-49 average. This means that the nation's factories and mines are producing at least 20 per cent more than they were a year ago at this time,, and at least 6 per cent more than they were at the pre-recession peak two years ago.

The resurgence in durable goods buying is largely responsible. More and more industries in the hard goods field are stepping up production; many already have topped their previous peaks. Others are close. It all adds up to a new high for the durable goods index; at 168 it is 4 per cent above the pre-recession peak and a sparkling 25 per cent above a year ago.

The department notes that even with the recent increase, the value of all business inventories held at the end of April 1959 was no larger than the total on hand at the same point of 1958, while April sales this year were a full 15 per cent higher than they were last year. Thus, the inventory-to-sales ratio actually has declined, and is considerably below the levels prevailing at this time in the two preceding years.

Powering the current rise in industrial output are gains by a whole host of industries.

This indicates the broad base of the current economic rise, and is a welcome change from the situation in 1955, also a year of post-recession growth. Then, as now, an increase in consumer buying helped spark a vigorous business expansion. Unlike the present situation, however, the 1955 surge was centred mainly on automobiles and a few other items. The wider sweep of today's advance is lending the strength of diversity to the vitality of the U.S. economic expansion.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

NO capitalist myself, I was more than a little perturbed at the condescending attitude of the Ooty Seminar toward, and the scurvy treatment that was meted out there to, the private sector. I am not forgetting the colossal anti-social activities of the private sector during the war. But what the party in Government seems to be forgetting, as I most certainly do not, is the fact that, since India's planned era began, our entrepreneurs have responded nobly to the call for industrialisation and fulfilled satisfactorily their allotted task in this respect. The governmental condescendence, for condescendence I surely sense there is, arises from a number of factors, not the least of which is the inability of many a large Indian enterprise, without the apposite assistance of Government, to find the resources for putting through its plans of expansion. I do not deny, and the private sector will be the first to admit, the considerable and variegated help that has been extended by Government in this regard. Consider, if you will, the tax policy of Government pertaining to the corporate sector. Aside from the fact that the Budget for 1959-60 appears to impose a greater burden on companies, though Mr Morarji Desai, the Finance Minister, has flatly asserted that it was not his intention to secure an augmentation of revenues through the new tax system, all fiscal measures have had as their ultimate aim the furnishing of resources with companies for expansion and development. The generous depreciation allowances were followed by the even more generous gift of development rebate. Tax holidays were proclaimed for new enterprises. If an excess dividend tax was imposed, it was with a view to gently persuading companies to conserve resources rather than to distribute the whole of their profits. No, I do not think it will be seriously questioned that the bias of corporate tax measures has been in favour of the growth of internal resources with companies. Consider, then, the interest-free advances that, particularly for steel, Government have extended. Besides, the loans obtained by Tata Iron and Indian Iron from the World Bank needed as a pre-requisite the guarantee of the Central Government. Then, there are the agencies set up by Government, the Industrial Finance Corporation and the National Industrial Development Corporation, which are intended to render assistance to entities which would have been unable to raise funds through normal channels. The Refinance Corporation is a nascent organisation which also is to serve a specialised purpose. If it came to foreign exchange, the loan already granted for the Industrial Credit & Investment Corporation of India, as well as the second loan in the offing from the World Bank, was arranged with Indian Government guarantee. These, then, are the specific ways in which Government have sought to ensure that companies have resources for increasing output as well as branching into new lines of endeavour.

*

I have presented, or tried to present, the reasons why the attitude of Government toward the private sector has so far been one of condescension. Take this feeling of condescension to its extreme and you get the view point expressed at the Ooty Seminar of private enterprise being at best tolerated in this country, presumably until such time as the State control over industry is complete. Such a decision, of which there is every evidence that the AICC came to, has naturally given rise to the apprehension in the private sector that its days are numbered. It is in such a background that, very commendably, Mr Madanmohan R. Ruia, President of the Federation of the Indian Chambers of Commerce and Industry, took the initiative to request an audience for his committee with Mr Nehru. It is good that these talks were held, because the air has now been cleared of much of the clouds of doubt and diffidence that, till then, were obscuring the economic landscape of this country.

*

It is, however, only theoretically that the place of the private sector in the Indian economy has been less ambiguously defined. From a practical point of view, much needs to be done, much particularly by Government, to ensure what Mr Nehru once termed the proper fulfilment of its honourable role in the Indian economy by private enterprise. But, before I proceed to give my own views about what more the Government have to do, let me sum up the trend of discussion when the FICC Committee obtained an interview with the Prime Minister.

*

At the outset, Mr Nehru brushed aside Mr Ruia's assertion that the Ooty Seminar had concluded that private enterprise in India was at best to be tolerated, by saying that his own impression of what transpired at Ooty did not coincide with Mr Ruia's views in reference to news reports. But, from the point of view of the apprehension in business circles, even such perfunctory denial of the purport of Ooty discussions from the Prime Minister was more than what was required.

*

The Governmental attitude was not doctrinaire but pragmatic. There could be no objection to planning because even the expansion of an industrial unit in the private sector required planning. His conviction was that the development of the public sector did not stand in the way of a considerable vista of development before the private sector. In brief, the broad pattern of industrial development that Mr Nehru had in mind included the growth of hundreds and thousands of enterprises within the broad framework of the Plan.

*

Mr Nehru has thus said what required to be said about the scope for private enterprise. If, at the beginning of this article, I have indicated what are the benefits accruing to the private sector from the governmental attitude to industry, let me now point to the pin pricks and difficulties that the private sector is facing because of Governmental measures. Firstly, there is the high rate of personal taxation. For my part, I do not see how the "Haves" in this country can escape the responsibility for contributing, as it were, toward an attempt at the improvement of the well-being of the "Have Nots". But the bald fact remains that the profit motive, and the incentive born of it, has been deadened by the tax rate. Next, there is also the fact that the fiscal measures of Government have had an adverse effect upon the investment climate and, therefore, upon the capital market in this country. If, therefore, private enterprises have shown themselves these past few years to be unduly reliant upon generous Governmental assistance, it is because Governmental measures, in another field, rendered it impossible for the private sector alternatively to find resources. Secondly, though the intention of the taxation of excess dividends might have been to bring about an enlargement in profits ploughed back into industry, this measure, together with the still existing taxation of capitalisation of reserves, is a strong deterrent to the investor risking his money, particularly in new and unproved lines of activity. Similarly, if the steel companies could go ahead with their expansion programmes only by virtue of special advances from Government, it is because the Government system of steel retention prices, which in effect meant a subsidy being paid to imported steel, prevented the growth of resources with Indian steel producers. As for the Export/Import Bank credit, or World Bank loans, or participation by the International Finance Corporation in Indian enterprise, there are so many obstacles in the way of the utilisation of such proffered resources that they are causing these credits to be looked upon as so many birds in the bush, with nary a bird in hand.

*

The trouble about the Export/Import Bank line of credit is, as we have heard so often, the fact that the money has to be disbursed in

. . . the synthesis of elegance and utility

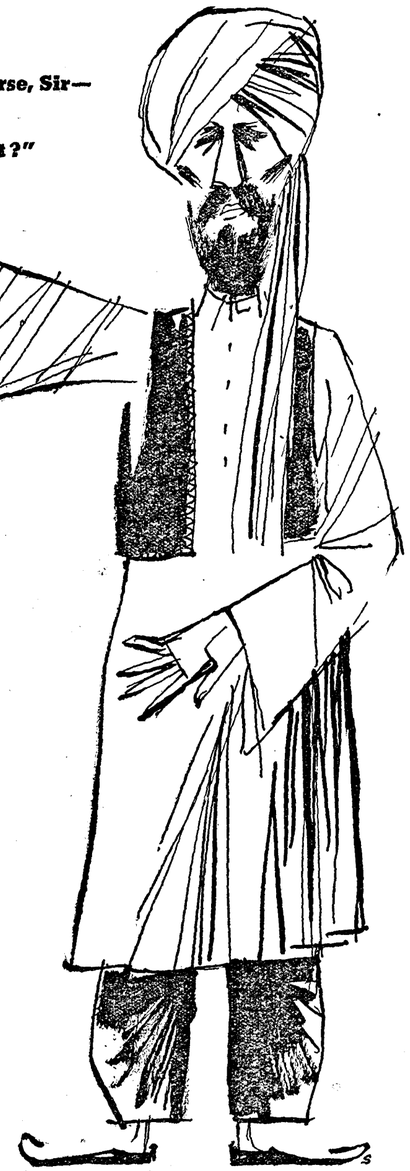
CALCUTTA MADRAS NEW DELHI

America. Generally speaking, the cost of American goods is found to be some 20 per cent higher. This in itself need not be looked upon as a deterrent, since the better quality of, and better servicing given with, American goods more than compensates. Nevertheless, the fact remains that there is a higher capital cost involved for Indian industry. But even if a company is willing to undertake the higher burden of purchases in America and thus utilising the Export/Import Bank credit, the company might still find that it has no resources to utilise the credit. For, the procedure seems to be that, although the Export/Import Bank credit given to Government involves some sort of extended payments scheme, the Indian company which wants to utilise the credit is required by the Indian Government to deposit the counterpart of the foreign exchange in rupees with the Indian monetary authorities. Thus, strange to say, it is lack of rupee resources which stands in the way of industry utilising the Export/Import Bank credit. It is strange that the extended payments obtained by India should not be a facility that could be shared with Indian industry. After all, if a company is able to arrange an extended payment scheme with some other manufacturers in some other country, its liability to pay, in Indian rupees, is over a period of years. Why, then, do the Government insist on the immediate counterpart deposit of rupees? Is there any need, for Government to fear that, on due dates of the foreign exchange repayment by India, the individual company might default? My first suggestion, therefore, as to what Government need to do to enable development of the private sector is to waive the current requirement that a counterpart deposit must be made before Indian industry can utilise the Export/Import credit.

*

As to the International Finance Corporation participating in Indian enterprises, a friend tells me that the terms on which the IFC is prepared to invest will prove to be unconscionably costly. For, the IFC requires not only a minimum interest and participation in profits over a period, but also reserves the right to convert its notes into equity capital. Thus, whether to the enterprise concerned or to the Indian Government, the cost in terms of both resources of the company concerned as well as in foreign exchange is proving to be prohibitive.



*

The World Bank is perhaps the only entity whose assistance is unexceptionably useful. But here, too, it is only the big enterprises which can approach the World Bank. As at the end of June 1958, of the ten loans from the World Bank for which the Indian Government stood guarantee, the smallest involved $5.6 million. But how many companies are there which will require capital for purchases abroad in such large amount?

*

Government could help by taking suitable steps, fiscally speaking. This at least would improve the prospect of the private sector finding the internal resources. My suggestions in this regard are as follows: (1) The Finance Minister must stand by his statement that he did not look to the new tax structure to bring in an increase in revenues; and, if the experience during 1959-60 is that, at the rates fixed, there is a rise in Government revenues not ascribable to an expansionary trend in the economy, the rates should be suitably revised. (2) The taxation of bonus issues is, as the Taxation Enquiry Commission found, unjustified. Much more unjustified is the rate of 30 per cent on capitalisation or the levy of the tax on the capitalisation of share premium account. I feel that, without much loss of revenue, and as a gesture which will have the effect of toning up the investment climate, the least that can be done is to reduce considerably the rate of the bonus tax. (3) With the new tax system, there is some doubt about whether or not grossing up facilities will be given in respect of dividends declared from reserves accumulated out of profits taxed under the old system. Since there will be much complication if Government were to say that such grossing up will be permitted, according as the rate of tax that was borne on the reserves thus created, I feel that it will be eminently proper for Government and will give a considerable fillip to the investment climate if they stated that grossing up at a prescribed blanket rate will be allowed on all reserves built up prior to the new corporate tax structure. (4) I do not presume to suggest that the personal rate of tax should be reduced. But I do maintain that loose talk about additional taxes being imposed by all and sundry politicians must be strictly eschewed. What undermines the confidence of the private sector is precisely the kind of loose talk that the Ooty Seminar produced.

EAVESDROPPER

Of course.

The Taj Mahal by moonlight
is a must for every tourist.

And every tourist who comes
to this country
brings with him foreign exchange.

That's why the tourist industry
is so valuable . . . it earns
currency as well as goodwill.

*But there are many other
tourist centres waiting to be developed
in India . . . centres which can only
be reached by road.*

Yet another reason why road
construction must have topmost
priority. Everything to do with roads is
important to the country as a whole.

Bitumen, for example.
One of the better road-building
materials.

Inexpensive. Easy to handle.
Long-lasting. Hard-wearing.
Supplied by Burmah-Shell.

Burmah-Shell Bitumen is more than an important material—it's a service. Burmah-Shell make available the advice and experience of skilled engineers, whose job it is to assist in the construction of roads. Good roads. Cheaper roads.
BURMAH-SHELL BITUMEN CAN BE SUPPLIED IN BULK. THIS STEP FORWARD MADE BY BURMAH-SHELL, SAVES VITAL STEEL BECAUSE IT MAKES DRUMS UNNECESSARY. BULK BITUMEN IS PARTICULARLY SUITABLE FOR MECHANIZED ROAD CONSTRUCTION—AND IT IS MUCH CHEAPER IN ITS INITIAL COST.

BURMAH-SHELL
BITUMEN FOR BETTER ROADS

GATEWAY GOSSIP

LIC's First Valuation

THE first valuation, covering the period ended 31st December 1957, of the Life Insurance Corporation's assets and liabilities has brought cheer as well as an assurance of stable prosperity to the innumerable policyholders. That the affairs of the Corporation have, by and large, been well managed could be inferred from the size of the profit of Rs 33.0 crores disclosed by the valuation even after some pruning of the assets inherited from the past. The holders of with-profits policies as a whole can now look forward to Rs 27.6 crores in all being credited to them. This sum represents the net profits after making provision for income-tax and a contribution of Rs 1.5 crores to the Government in accordance with the provisions of the Life Insurance Corporation Act.

The distribution of net profits amongst individual policy holders is proposed to be done on a differential basis representing a six-fold categorisation of different policies taken out with the former insurers and the LIC. It may be recalled here that Sec 49 (2) (k) of the Life Insurance Corporation Act has provided "that the Corporation may make regulations for the classification of policies for the purpose of declaring differential bonuses, i.e., bonuses at different rates on policies of different insurers." Pending the evolution of a final scheme therefore, the LIC has just drawn up a tentative scheme. It is expected that the final classification of differential bonuses would not materially differ from the one provisionally adopted.

Under this tentative scheme, there is a Special Group covering most of the foreign insurers and some Indian insurers with exceptionaliy strong financial reserves. The rate of bonus per annum per thousand of sum assured is Rs 21 for whole life policies and Rs 16.8 for endowment policies in this group. Such policies together constitute 32 per cent of all with-profits policies.

Group I includes policies by the Corporation and policies issued by all insurers between 19th January 1959 and 1st September 1956. The rate of bonus per annum per thousand of sum assured is Rs 17.5 for whole life policies and Rs 14 for endowment policies in this group. Such policies (whole life and endowment) together represent 49 per cent of all with-profits policies.

In Group II, the rate of bonus per annum per thousand of sum assured is Rs 14 in the case of whole life policies and Rs 11.2 in the case of endowment policies. The total number of policies in this group represents 9 per cent of all with-profits policies.

In Group III, the rate of bonus per annum per thousand of sum assured is Rs 10.5 for whole life policies and Rs 8.4 for endowment policies. Such policies in this group account for 4 per cent of all with-profits policies.

In Group IV, the rate of bonus per annum per thousand of sum assured is Rs 7 for whole life policies and Rs 5.6 for endowment policies. The policies in this group account for 3 per cent of all with-profits policies.

Group V policies, representing 3 per cent of all with-profits policies, would not qualify for any bonus.

In addition to the above groups, there is a miscellaneous one which is to be dealt with in a special manner in view of the different methods of distribution of profits adopted by units comprising this group.

What is noteworthy in this tentative scheme of differential bonuses is that nearly four-fifths of all with-profits policies would qualify for rates of bonuses which do not compare unfavourably with the ones declared by the former first eight or ten life insurance companies. The Life Insurance Corporation's claim that the bonuses proposed by it "could be termed satisfactory" is **PRIMA FACIE** just. Incidentally, it should not be forgotten that the high competitive bonuses declared by some former insurers were not unrelated to their premium rates. With the rationalisation of the premium rates by the LIC, it may be validly supposed that somewhat lower rates of profit bonuses may have meant somewhat lower and more uniform premium **rates.**

It may be emphasised again that the LIC's present scheme is only a tentative one and, therefore, not a final declaration of reversionary bonuses. However, with a view to avoiding hardship in the case of policies which become claims by death or maturity, the Corporation has decided to pay on such policies bonuses at the tentative rates. It is announced that as soon as the scheme is finalised and approved by Government, the Corporation will allocate bonuses to all the with-profits policy holders in respect of the period covered by the valuation date out of the profits held in reserve for their benefit. It is hoped here that the LIC will do this expeditiously with a view to giving a fillip to the drive for new business.

S. E. RLY TENDERS

Sealed tenders are invited for tender No. GM.459|S1|A|5|KGP|59 for handling of materials at Khargpur Scrap Yard Mathurakati & General Stores during 17.8.59 to 31.3.61. Tender Forms are obtainable from the office of the Controller of Stores (ADMS Section) on remittance of Rs. 5/- (not refundable) per copy by Money Order to him direct in case of outside firms and on production of Cash Receipt from the Chief Cashier, South Eastern Railway, Garden Reach by local firms. Opening date of the tender is at 3 P.M. on 27.7.59. Firms not on the Railways list of approved contractors must deposit Rs. 1000/ in cash with this Rly's Chief Cashier, as Earnest Money and enclose his receipt together with a valid Income Tax Clearance Certificate with the tender.

S41 GENERAL MANAGER

GATEWAY NOTES

Grinding Wheels Industry

A number of minor industries had sprung up in the post-war period mainly under the shelter of protection and the grinding wheels industry is one such. The progress of the industry under protection was traced by Mr C. Ramasubban, Chairman of Tariff Commission, while opening the public inquiry into the question of continuance of protection to the industry. Protection to the grinding wheels industry granted in the first instance in 1946 by means of an import duty of 80 per cent ad valorem and reinforced by prohibition of all imports of grinding wheels throughout 1947-48 had been continued since then, though at varying rates depending on the progress made by the indigenous industry.

The benefits which protection had conferred are fully reflected in the production and productive capacity of the industry. The productive capacity of the industry had gone up from 2,550 tons in 1957 to 3,020 tons mainly because of the addition of a new unit namely, Krishnalal Thirani & Co Ltd Calcutta which went into production in April 1959. Besides this new concern, there are five other units three of which are in Bombay, one each in Madras and Delhi.

Production had until very recently, shown a progressive tendency, and increased from 1,132 tons in 1956 to 1,493 tons in 1957. However, shrinkage of demand for grinding wheels from engineering and steel processing industries consequent on shortage of steel for these latter industries, together with a shift in the pattern of demand towards precision wheels, had precipitated a fall in production in 1958 actual production being estimated only at 1,268 tons.

There is at present a large gap between capacity and production which should obviate the need for fresh investment for some years to come. Production at present is fairly adequate to the demand which is currently estimated at about 1,450 tons. Further rise in demand is dependent on increase in the availability of steel for engineering industries. In view of such increased supply of steel being available consequent on the opening up of the three steel plants, the grinding wheels industry could reckon on a rising demand for its products in the future.

*

Machine Screw Industry

The fourth tariff inquiry into the machine screw industry was initiated sometime back by Mr C. Ramasubban, Chairman of Tariff Commission, and concerns the question of continuance of protection beyond 31st December 1959. Protection was first granted to the industry in 1951 by levying a protective duty of 31½ per cent ad valorem on imports of iron and steel machine screws. After that, protection was renewed on two occasions in 1954 and again in 1957.

The progress of the industry under protection followed the familiar pattern of all protected industries. The rated capacity of the industry on single shift basis was estimated at 1.4 million gross in 1957. Present annual capacity of the industry for the manufacture of machine screws, bolts classified as machine screws and socket head screws aggregates 3.6 million gross on single shift basis. The combined output of these items by the industry which was 1.8 million gross in 1957 is estimated to have gone up to 2.7 million gross in 1958. Thus in regard to both capacity and production, tremendous progress had been made by the industry in the last two years.

Shortage of steel in the form of wire-rods or wire has stood against production being higher than the present level and is mainly ascribable to the general shortage of steel throughout the country. The working of the industry on the two-shift basis has consequently been adversely affected. This shortage of supplies of wire-rod etc. is however not expected to continue indefinitely since the new Blooming and Sheet Bar and Billet Mills at Tata Iron & Steel Co, Ltd is expected to be commissioned shortly. Improvement in supply position is already evident from December 1958.

The industry is now facing a fresh inquiry to decide the question of continuance of protection after December 31, 1959. Though the industry has prayed for continuance of protection for a further period of 3 to 8 years beyond 1959, Mr Ramasubban has indicated that the request of the industry would be considered in the context of the balance of payments difficulties and restrictions on import of machine screws.

GATEWAY MARKETS

Steady Trend in Oilseeds

THOUGH the past week in the oilseeds market brought the long-awaited announcement regarding the export policy for groundnut oil, price levels at the end of the week showed that they did not derive much benefit from the announcement. The export incentive scheme for groundnut oil now announced shows that Government have decided to extend the old scheme for another three months. There is no doubt that there is some satisfaction at this but marketmen believe that the delay has lost a good opportunity for Indian groundnut oil in foreign markets. While the Government of India have been deliberating over the matter, there have been important developments in the world markets. Nigeria has been offering oil at attractive prices and as a result the prevailing rates for groundnut oil in London is several points lower than some time ago. The declining trend has continued during the past week also and naturally traders in India find it extremely difficult to sell oil overseas even after the new policy announcement. At present domestic prices in India are much higher than prices overseas and it is said that the earlier expectation that once the policy is announced sizeable business can be put through with the UK and Burma is unlikely to be fulfilled so long seed prices in India are at the present high levels.

The undertone in the groundnut markets was firm throughout the week under review. The main reason for the uptrend seemed to be the paucity of stocks which were depleted due to poor arrivals and sustained enquiry from crushers and vanaspati interests. Toward close prices developed a sagging tendency due to lack of buying support. Groundnut August closed on Monday at Rs 197.

Expectations of business with the US and continued moderate buying from the Communist countries kept castor seed steady. The improvement in sentiment in the groundnut section was another powerful influence. The general expectation seemed to be that though the magnitude of business passing did not justify the prevailing price levels, the fact that supplies had been depleted by recent heavy overseas offtake would render the higher rates tenable. But by the close of the week sentiment was depressed as indications of overseas enquiries continued to be conspicuous by their absence. Castor seed September which was done upto Rs 163 at one time during the week was pushed down to Rs 158 to be finally placed on Monday at Rs 158.50.

Dull but steady conditions prevailed in the linseed section as sentiment had been helped by hopes of enquiries from Australia and smaller arrivals. The strength in linseed oil also aided the steady trend. Toward close prices were lower in sympathy with the major sections. Linseed September closed at Rs 33.06 Cotton seed was a steady market on sustained support and closed the week at Rs 136.50.

*

Bullion

The bullion market reported another active week with the white metal in the limelight. It would appear that the sustained interest in silver has stemmed from the expectation that available indications were in favour of a steady trend. As against the improved demand from Calcutta and other upcountry centres the stocks were considered to be inadequate and though there had been frequent rumours about augmentation of floating stocks from arrivals of silver coins from Tibet, supplies had not shown any improvement. Consequently the belief had gained ground that possibility of arrivals of Tibetan coins could be discounted. The improvement noticeable in the yellow metal was also to be attributed to the expectation that owing to the stringent measures initiated by Authority the market supplies of gold were extremely unlikely to be increased by way of additions from smuggled gold.

The bull grip on the silver section showed no sign of relaxation. Closing rates on the day were as follows: Ashad silver Rs 194.13; Shravan Rs 194.6; Ready silver Rs 195.6. The gold section also continued to rule steady on bull support. Toward close the trend was irregular on alternate bouts of selling and buying. The selling pressure was due to reports of heavy arrivals. Monday's closing rates: Ashad Gold Rs 118-2-6 Shravan Rs 117-11-6 and Ready Rs 118-8-6 and Sovereign Rs 78-4.

*

Yarn

Conditions in the yarn market were steady though business passing was only on a moderate level. Demand was, however, good in cotton yarn, especially for fine counts, sentiment having been helped by hopes of a firming up tendency in yarn in sympathy with the cotton prices. Staple fibre yarns were slightly easier reflecting the cautious attitude of buyers on account of the uncertain outlook for finished goods. Rayon yarn met with some enquiry at unchanged prices. It would appear that the lack of sustained demand for art silk yarn stemmed from the revised export promotion scheme for rayon goods. It would appear that doubts had arisen as to the capacity of the industry to maintain exports at a high level in view of the provision in the scheme for pre-shipment inspection of goods. Early this week the Government of India have clarified the import control policy for artificial silk yarn and threat during the current licencing period. According to the Import Trade Control Public Notice the quota licences issuable to established importers during April/September 1959 will be valid only for import of bright viscose rayon yarn of 55,60,75,100,120,150 Deniers and cupranunomium yarn only.

WORLD OF COTTON

Cotton Consumption Trends

ACTIVE conditions prevailed in the Bombay Cotton Market during the past week with Jarilla August recording a smart uptrend. Spot cotton also reported improved business at enhanced price levels. It would appear that the sudden revival of interest in the August contract had stemmed from ideas about paucity of cotton in the ready market. Earlier theories were favourable to the bears who thus emboldened had made heavy commitments. With the scarcity view slowly gaining ground bears rushed to cover but by that time bulls had begun to dominate the market. A brisk rise in the price of the contract became inevitable.

A contributory reason for the price appreciation in the maturing contract was the trend of mill consumption in the country. According to the provisional figures mill consumption in May amounted to 3.79 lakh bales bringing the total for the nine months September 1958 to May 1959 to 34.91 lakh bales. It will be seen, therefore, that consumption this season is running at a faster rate than during last season. In the nine month period the increase is of the tune of 1.3 lakh bales. In this connection the latest report of the International Cotton Advisory Committee has also pointed out that in recent months consumption in India has been running higher than a year ago and for the full season should be about equal to 1957-58.

According to the ICAC, the outlook for world cotton in the current and next seasons seems to be brightening. This conclusion is mainly based on the fact that cotton consumption has shown improvement in most of the consuming countries. Moreover, there are also signs of improvement in the textile trade. The estimate of cotton consumption of non-communist countries in 1958-59 is placed at 28.5 million bales as against an output of 28.9 million bales. While the committee admits that "everything hinges on consumption," it does not find it difficult to subscribe to the view that larger exports would be possible next season. Its estimate is about 12.5 million bales against last season's 11 million bales. The trend of consumption in a number of countries lends support to the view that prospects for world cotton will be better next season. In the USA, consumption is estimated to increase to 8.7 million bales as compared with last season's total of 8 million bales. In Canada the textile industry's improving position may be reflected in a higher consumption of cotton. A rise in consumption in Western Europe may also be expected as there has recently been a revival in the textile industry there. As noted above consumption in India is also showing a rising tendency this season.

In the futures section, Jarilla August received sustained support and moved up briskly to higher and higher levels every day. A gain of about 20 rupees was recorded by the end of the week and the gap between this contract and March widened as the latter was comparatively sluggish. On Monday Jarilla August opened strong at Rs 703.50 but due to selling pressure the rate declined to close at Ps 695.50. The March contract was maintained around previous levels and was done upto Rs 672.25 but in Monday's trading encountered selling pressure on reports of rains in the growing areas and came back to close at Rs 664.

×

SPOT

In the spot market also sentiment improved in sympathy with the futures section. An uptrend was also indicated by the increased mill consumption and paucity of supplies. Mill interest from a number of centres had been reported. The improvement ranged from Rs 5 to Rs 10 and it cannot be said that the rise in prices is spectacular considering the limited stocks of good quality cotton available in the ready market.

In the export section shippers continue to evince keen interest in good quality Bengal on hopes of enquiries from Japan. It would appear that hopes of Japanese interest had got further strengthened as during the past week shipper purchases had been on a substantial level. In the import section scattered business had been reported.

×

PIECEGOODS:

The undertone in the piecegoods market showed some improvement during the past week and this better turn had solely stemmed from a revival of interest from Sudan. The domestic market, however, had continued unchanged with business not extending beyond the immediate requirements of up-country markets.

OLYMPUS

Toward Maximisation of Exports

DELHI REVIEW

The question of maximisation of exports came up prominently for discussion at the tenth meeting of the Central Advisory Council of Industries here early this week. Mr Lal Bahadur Shastri, Union Minister for Commerce and Industry, spoke of the possibility of an element of compulsion being introduced into the country's export trade if all efforts to make Indian export prices competitive failed. In which case, he said, the country would have to incur losses in selling her goods abroad—losses which might have to be made good by the industries concerned through voluntary contributions. The Minister, however, emphasised that any such compulsory exports even at a loss was only thought of as a distant possibility.

In the near future, therefore, the export promotion drive is proposed to be intensified on familiar voluntary lines. A note circulated to the Council by the Commerce and Industry Ministry has rightly drawn pointed attention to the need for evolving schemes for improved productivity geared to a dynamic drive for exports. While the Ministry appreciates the constant efforts made by industry to reduce its cost structure and thereby increase its competitive capacity in the internal market, it has a word of criticism for the lack of interest in reducing costs from the point of view of export needs. This would appear to call for some rethinking on the following lines suggested by the Commerce and Industry Ministry:

"To the extent overhead costs remain the same, an increase in demand by way of an increase in exports should have a healthy effect on our cost structure. This needs to be examined from factory to factory in every industry. Such of the units as would benefit by earmarking a part of their production for exports should be carefully selected so that they could increasingly participate in export promotion. They might examine how far it is possible to reduce the export price by omitting to take the overhead costs into the price of the articles earmarked for exports. If such a reduction of costs is not possible, the industry should consider a voluntary scheme such as is now being followed in the case of the bicycle industry. After exports get into their stride larger production would be encouraged which, in turn, would no doubt favourably affect the cost factor and then the export price."

After listing the various export promotion facilities provided by Government in recent years, the Commerce and Industry Ministry's note has emphasised the need for organising the necessary institutional arrangements on the part of industries. The idea here is that if export associations are formed and reasonably administered, prices of export products could be stabilised, overheads reduced, standardisation of grades effected and centralisation of inspection and consolidation of shipments provided for. In this connection reference is made to the experience of American export associations which handle claims collectively, eliminate too liberal credit terms, present a united front against competitors and even provide facilities for handling large orders. The Commerce and Industry Ministry's note has given the advice that especially the industries engaged in the production of electric fans, electric motors, electric lamps, power driven pumps, radio receivers, sewing machines, paints and varnishes, power and industrial alcohol, caustic soda, refractories, etc., should take steps to constitute appropriate export associations.

Incidentally, the figures given in respect of exports as percentages of production of different commodities in 1958 are revealing in this connection. These percentages are:—Handloom goods 1.9, mill made cloth 11.8, jute manufactures 67.9, tea 71.4, iron ore 32.1, cotton 8.6, wool 52.3, tobacco 18.7, black pepper 53.8, linseed oil 14.7, coffee 31.0, castor oil 93.3, rubber footwear 0.8, caustic soda 0.1, soap 0.3, cement 0.7 razor blades 1.3, hurricane lanterns 0.6, oil pressure lamps 0.01, diesel engines 2.4, sewing machines 4.1, storage batteries 0.2, electric motors and electric lamps negligible, electric fans 3.5 and bicycles 0.03. These percentages of exports to production would appear to suggest that except in traditional items like cotton piecegoods, jute manufactures and tea, India's exports in the case of most industrial items form a negligible proportion of the total production. In view of the additional capacities licensed for a number of industries in recent years the need for a voluntary export drive by industry is underlined in the Commerce Ministry's note.

The main elements of such a drive are also indicated by the Ministry. The first suggestion here is that every industry which is not organised into a development council or an association should organise itself into an association. Such an association should carry out a survey of the export potential of its members who are to be divided into two categories, namely, those members who will directly participate in exports and the non-participating members who will provide aid and assistance to those who perform. The export association, continues the Commerce Ministry, should study both prices and merchandising techniques and evolve schemes suitable to each industry. Such schemes should provide for reduction in sale prices to competitive levels and for advertising and sales propoganda to secure the acceptance of Indian products in foreign markets. Another suggestion is that collaboration arrangements with foreign manufacturers should be strengthened so that production based on India may be used to meet the demand of neighbouring foreign markets.

The meeting of the Central Advisory Council of Industries was also notable for some facts and opinions mentioned in Mr Lal Bahadur Shastri's address. These are highlighted as under:

In most of the industries the capacity targets under the Second Plan have been nearly reached. This conclusion is reached not on the basis of capacity licences under the Industries (Development and Regulations) Act only but on the basis of actual capacities covered by import licences for capital goods and equipment and for which orders have already been placed.

Under the Third Plan, the development of machine building capacity in the country will be accorded the highest priority so as to reduce the foreign exchange component of the industrial development programme.

There should be coordination and cooperation between the two sectors—public and private. The private sector has to depend greatly on the Government for loans and other forms of assistance. The industrialists must accept the view that in the coming years the public sector will play an increasingly important role. They must not indulge in ideological buttles but concentrate on higher production because there is essentially no conflict between the two sectors.

There are yet some industries in which installed capacities are yet far short of target capacities set out in the Second Plan. To step up investment expenditure for filling these gaps in the industrial structure our existing industries should follow a cautious and discreet policy in regard to dividend distribution so as to step up savings in the corporate sector for fresh investments. Industry should bestir itself to put up the finance necessary for obtaining funds from such lending institutions as the Industrial Finance Corporation and the Refinance Corporation.

Mr Lal Bahadur Shastri's concluding remarks should go some way in setting at rest the controversy between the two sectors and bringing the whole issue to the pragmatic level. They would bear full quotation:

"Industry in the private sector in India today enjoys quite a sheltered position. The restriction on imports necessitated by our foreign exchange position shuts out external competition and domestic competition is also of little significance when demand keeps on outstripping production. In these conditions, Industry has its own obligation. The public sector instead of being a source of danger does sustain its growth."

SMALL SCALE INDUSTRIALISTS GET YOUR FACTORY REGISTERED

Registration entitles you to make best use of Government assistance — technical, marketing financial & other — and helps you to develop your enterprise on scientific lines.

AT YOUR SERVICE

For	Contact :

NORTH INDIAN NOTES

UP's Textile Production

While in all the States, which had been hit by the textile crisis, signs of improvement had been evident to a greater or lesser extent, in Uttar Pradesh there seems to be, as yet, no indication of a process back to recovery in the textile industry. The misfortunes of the textile industry in UP had only multiplied involving the textile interests in heavy losses resulting in closures and accumulation of stocks. That the mills in the State should become mortgaged to the hilt was inevitable in a situation which was complicated by multitudinous factors acting and reacting on each other.

A deputation of the States' textile mill-owners who waited on Mr Lal Bahadur Shastri, Union Minister for Commerce and Industry to apprise him of the present plight of the industry in the State, had pointed out in a memorandum that stocks, complete block assets, in some cases even stores and book debts had been offered as collateral security. Modernisation of machinery which was the only way out of the present troubles, has little chance of making headway without an agency to support the scheme with the requisite finance. The deputationists had pointed to the stringent conditions laid down by the National Industrial Development Corporation and the Industrial Finance Corporation which practically closed these channels to the industry. That these agencies whose normal duty it is to help industries in financial difficulties found it impossible to accommodate the textile industry in Kanpore is to be regretted. But whether these agencies should have their eyes fastened on rules without providing for extraordinary situations that might develop in a particular industry would have to be examined in the light of the situation revealed by the Kanpore textile industry

While the difficulties faced by the textile industry in UP came as a sequel to the crisis that swept the textile industry all over the country, they also reflect the locational disadvantages of UP for cotton textile production. The State is dependent on imports from other States for raw material machinery and mill stores. The addition to the cost of production contributed by the high freight element is not counterbalanced by any other special advantages which UP could offer. Besides suggesting special railway freight concessions for the textile industry in UP, it has also been pointed out that the levy of Central Sales tax on the consumption of raw cotton in UP, discriminates against the textile industry in UP and is without justification in view of the fact that mills in other cotton growing States are exempt from this impost.

*

Assam Finlancial Corporation

The Assam Financial Corporation, like many of its counterparts in other States had been making steady progress in raising the scale of its operations. This is clearly reflected in the fifth annual report and accounts, that has just been published. Against an amount of Rs 35,70,000 sanctioned in favour of 11 industrial concerns in the State during 1957-58 the Corporation had during 1958-59 sanctioned a sum of Rs 46,25,000 to about 20 industrial concerns. Disbursal of the amount sanctioned also reflects improvement in work done by the Corporation. Out of a total of Rs 95,89,480 that has so far been disbursed to 43 industrial concerns by the Corporation since its inception, about Rs 26,56,500 alone had been disbursed during 1958-59.

The Corporation, during the five years of its working, has sanctioned loans amounting to Rs 1,53,75,000 of which loans aggregating Rs 21,75,000 were either declined by the parties or subsequently cancelled by the Board. The loans were sanctioned for different purposes though a major part of the loans sanctioned during 1958-59 was for setting up of new industries. These new schemes related to the extraction of oil from castor seeds, manufacture of caffeine from tea waste, treating and seasoning of timber, production of textiles by powerlooms.

Industry-wise, tea industry with a share of Rs 24,50,0000 benefited more than others from the operations of the Corporation during 1958-59, while in the total business done by the Corporation also tea industry figures prominently. Other industries which have availed themselves of the loan facilities offered by the Corporation are electric supply, saw mills and timber treating, plywood and furniture making.

Speaking on the occasion of the fifth annual general meeting of the Corporation, Sri J. P. Chaliha, Chairman of the Corporation referred to the immense potentialities of the State for industrial development. Transportational bottlenecks being the major hindrances to the industrial progress of the State it is on tackling these problems that attention will have to have diverted. The State financial Corporation will have a major role to play in the expanding scope for industrialisation of the State. The present resources position of the Corporation hardly matches its responsibilities. No doubt the Corporation had increased its net profits from Rs 36,70,000 in 1957-58 to Rs 46,25,000 in 1958-59. But the resources which is already exhausted need replenishing and the Corporation will have to find out means of doing this.

NORTH INDIAN MARKETS

Foodgrains Quiet

WHEAT prices in Hapur ruled quiet, and although wheat was not openly available in the market, prices in private where arrivals were put at about 50 to 100 Mds were unchanged at Rs 18 per md for average quality and upto Rs 19.50 for farm produce. The U.P. State wheat levy is being continued, but Government purchases here at controlled price of Rs 13 to Rs 15 per maund were nominal. The U.P. State Government has claimed that food situation in the State has improved and sales through 72 fair-price shops had to be discontinued due to fall in purchases and the number of such shops was now 2723 in the State. Rice prices also tended to go down and the State Government is reported to have purchased about 80,000 tons of paddy and rice at controlled prices for making a reserve. Prevailing prices of rice here in the weekend were:—sela basmati Rs 33 to Rs 36, mainpuri Rs 24, raimuna Rs 27, gadda Rs 22.75 a maund.

Gram prices ruled quiet and were almost unchanged. The State Government has not been able to make purchases of gram from the open market as prevailing prices in the market were still higher than the Government controlled purchasing price at Rs 11 per maund. Barley and bejhar prices also ruled quiet, but good quality maize required for seed purposes was being sold at one seer 8 chs per rupee. Jowar and guwar prices ruled steady and weekend prevailing prices were:—gram Rs 13.06, barley Rs 12.75, bejhar Rs 12.37 to Rs 12.75, jowar Rs 13.25 to Rs 15.50, guwar white Rs 15, black Rs 12, bajra Rs 13 to Rs 15 per maund.

Peas prices improved fractionally in the weekend due to good demand from east U.P. and Bihar for dal. Arrivals were at an average of 500 Mds daily and included arrivals from nearly east U.P. districts by road. Arhar prices continued to register a depressed trend due to want of support and arrivals were small at an average of 75 to 100 Mds. Prices of other pulses stayed steady and weekend prices were:—peas dara Rs 12.37 to Rs 12.50, peas dal Rs 14, arhar Rs 16.50 to Rs 16.75, arhar dal Rs 20 to Rs 21, urad Rs 19 moong Rs 20.50 to Rs 22.50, mssoor Rs 15 to Rs 19, stock peas Rs 48, arhar Rs 27 khatties.

*

Sugar

Sugar prices continued steady. Although supply position has been made easy with the release of the monthly quota of 1.85 lakh tons and special quota in deficit areas, prices as yet showed no signs of coming down and were being quoted at a premium of about Rs 10 per maund over the controlled prices. Sugar prices have been controlled in Punjab and measures are being taken in other States also to bring down sugar prices. In U.P. the Government have called a meeting of sugar mill-owners for July 9 to discuss about the sugar situation.

Khandsari prices registered further gains during the week in sympathy with the bullish trend in crystal sugar prices coupled with good demand for marriage season and premonsoon support. Prevailing prices were:—khandsari superior Rs 38 to Rs 43, Boora Rs 40 to Rs 42 per maund.

Good outside demand accounted for steady conditions in ready gur prices and local stocks are fast running down. Arrivals from rural areas have dropped to an average of 150 to 200 Mds daily and local stock ran down by 4,000 Mds during the week to 52,000 Mds estimated now. The Corresponding figure last year was 60,000 Mds. Total arrivals of gur here during the season just ending were 6.60 lakh maunds as against 3.97 lakh maunds last year and 4.67 lakh maunds in 1957. The condition of the standing cane crop was good, but rains were badly needed. Prevailing prices were:—gur pansera Rs 21.50 to Rs 21.75, shakker Rs 23 per maund.

Future trading in gur phagun 2,016 was inaugurated here today by Mr Rao, Member Forward Markets Commission and opening at Rs 15.14, prices eased to Rs 14.70 and closed at Rs 14.80 in four minutes of muhurat trading. Heavy margins have been imposed and it is feared that trading will be very much on a restricted scale.

It may be recalled that futures trading in gur was suspended all over the country on Feb. 11 this year by the Union Government. According to a Press Note issued by the Forward Markets Commission futures trading in gur will be resumed during the week in Agra and Meerut and in due course in Delhi and Muzaffarpur.

*

Shellac

The shellac market ruled steady. The following table gives prices as on 6th July:

Quotations	Buyers Rs.	Sellers Rs.
Standard Pure Buttonlac	80.00	82.00
TN Pure	62.00	63.00
Standard One ..	68.00	70.00
F. O. Superfine ...	70.00	73.00
Lemon No. 2 ...	74.00	75.00
Lemon No. 1 ...	81.00	84.00
Kusmi Seedlac No. 2	...	70.00
Kusmi Seedlac No. 1	...	76.00
Golden Kusmi Seedlac	...	95.00
One B Seedlac ..	67.00	68.00
Two B Seedlac ...	60.00	61.00
Golden Bysaky Seedlac	70.00	72.00
Manbhum Fine Seedlac	65.00	66.00
London Standard Fine Bysaky Seedlac ...	62.00	63.00
London Standard Genuine Bysaky Seedlac	56.00	58.00

THE PENINSULA

Power in Third Plan

THOUGH the Third Plan had aroused considerable interest in every quarter, discussions on it had been confined to such broad categories as total outlay, method of financing, scope for further taxation etc. The Plan being still on the anvil, the details remain to be worked out, and therefore the aims are also couched in only general terms such as indispensability of foodgrain self-sufficiency, accelerated development of industrial sector, expansion of facilities for social services etc. The picture of the Plan is clear only in respect of total financial outlay; and even in respect of this, finality is far from being a fact, and discussions had been going on for a considerable time, pointing to one general trend namely, that the Third Plan outlay should be higher than outlay under the Second Plan. A figure of Rs 10,000 crores has found favour with influential opinion inside the Congress Party and is awaiting the approval of the Planning Commission.

In view of the probability of the size of Third Plan being fixed at twice the Second Plan outlay, it is certain that allocations for almost all the sectors would also be higher, though in what proportion, it would be difficult to say, and would depend on the assessment by the Planning Commission of the relative importance of different sectors based on the relation of progress in one sector to general rate of development. This consideration rules out an equally proportionate increase of outlay in all sectors since the process of development would be stultified if the inherent claims to priority of particular sectors, progress in which holds the key to general development of the economy, are brushed aside. The scope and nature of such priorities, implicit, to a certain extent, in the very process and character of development itself, become more exact in the context of the current economic conditions in the country and in the background of the experience already gained under the First Plan and the first three years of the Second Plan. Complacency about foodgrain production under the Second Plan, induced by success attained at the end of the First Plan, had for example, proved costly and had called for a reappraisal of priorities by Planning Commission. In like manner, the attitude towards road transport, which lay in relative unimportance under the First and Second Plan is also in the process of being revised and the Third Plan is expected to initiate a process of vigorous development in this field.

There are however, other sectors of activity which had never presented a problem to the Planning Commission in respect of priority, their claims being almost automatically accepted in view of the key role played by them in giving impetus and momentum to economic development. Development of power resources, had, for this reason, had a prominent place under both the First and Second Five Year Plans, and is expected to figure even more prominently in the Third Plan. It has been indicated by Mr Jaisukhlal Hathi, Union Deputy Minister for Irrigation and Power, that in the course of the Third Plan the power generating capacity of the country would be doubled from 6.4 million k.w. to 12.8 million k.w. and toward this the total outlay would be raised to Rs 1,200 crores. This is a sizable outlay, which however, could not be grudged, if regard is to be had to the bearing which addition to power resources has on the general rate of development.

While the schemes for the distribution of this outlay are yet to be worked out, the more important of the details concerning the objectives of the Third Plan under power have been disclosed by Mr Jaisukhlal Hathi, and on this basis, it is evident that development of hydro-power would receive greater attention than thermal power. However, Government would be setting up bigger thermal stations in the vicinity of coal areas and such thermal stations would emerge in Bengal Bihar and Madhya Pradesh which contain the important coal producing areas in the country. The emphasis on hydro-power development accords with the need for conserving the limited metallurgical coal resources of the country and is therefore in the best interests of the country.

Rural industrialisation would also make more rapid headway, the target being provisonally laid for taking power to 32000 more villages. Against this, the number of villages that would be electrified at the end of the Second Plan would be 18,000 which represents commendable progress considering that at the beginning of the First Plan, only about 3,000 villages in the whole country had the benefits of electrification.

Mr Jaisukhlal Hathi, had also painted rosy prospects for power development for the Madras State under the Third Plan. The probable additions from hydro-electric sources at the end of the Third Plan have been placed at 435,000 k.w. and include 180,000 k.w. and 55,000 k.w. from completing the third and fourth stages of Kundah Project, 100,000 k.w. from Mettur Project and another 100,000 k.w. from the Parambikulam Project. A further rise of the order of 180,000 k.w. is expected by the completion of the first and second stages of the Kundah Project while Neyveli would yield about 250,000 k.w. at the end of the Second Plan. The Deputy Minister has also indicated the scope for doubling the generating capacity of the Neyveli thermal plant. This however is contingent on the ability of the Neyveli lignite authorities in increasing the output of lignite from three million tons to six million tons. This would enable output of power to be increased from 250,000 k.w. to 500,000 k.w. Taking all these factors into account, Mr Jaisukhlal Hathi, has predicted a comfortable power position for the Madras State in the course of the Third Plan.

The Deputy Minister has evidently been concerned only with the immediate possibilities and has omitted to consider the possible power situation as it might develop in the Madras State after the Third Plan. It is a matter causing concern and worry to the authorities at Madras, that the State is fast reaching a stage of exhaustion in its power potentials and will be confronted with a power shortage when the probable schemes are implemented. There are of course prospects for adding to the power resources of the State by common exploitation of power resources by the Southern States. The Parambikulam Project has for instance, diverted a share of the Kerala's resources to the Madras State. There is similar scope for sharing of water resources by the Madras and Mysore Governments in respect of the Cauvery river. There is a pending dispute between the two State Governments over this matter and an amicable settlement of the dispute would open out further possibilities for addition to power resources of the Madras State.

The exhausting potentials of hydro-electric sources and lack of adequate thermal sources, has set the stage for consideration of prospects of power development from atomic sources. The Centre has set their policy toward atomic power development in clear terms and has sanctioned the first unit to be set up at Ahmedabad. Madras has a reasonable claim for priority in future allocation not only in view of the lack of alternative sources, but also because of the availability in the State of the necessary raw materials to make the scheme a workable proposition. The recommendation of the Atomic Energy Commission should further re-inforce the claims of Madras.

UPPER JUMNA VALLEY ELECTRICITY SUPPLY COMPANY, LIMITED.

NOTICE.

Natice is hereby given that the Annual General Meeting of the Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Monday, the 10th August, 1959, at 11-0 a.m. for the following purposes:—

1. To receive and adopt the audited Accounts for the year ended 31st March, 1959, and the Reports of the Directors and the Auditors thereon.
2. To declare a Dividend.
3. To appoint Directors in place of those retiring.
4. To appoint Auditors and fix their remuneration.

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 4th August, 1959, to the 10th August, 1959, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy, who need not be a member, to attend, and on a poll, to vote instead of himself.

By Order of the Board,
MARTIN BURN LIMITED,
A. G. Gidley,
Secretary,
Managing Agents.

12, Mission Row,
Calcutta-1.
10th July, 1959.

MADRAS REVIEW

SHAW WALLACE & COMPANY LIMITED

NOTICE is hereby given that the Thirteenth Annual General Meeting of the Members will be held at the Registered Office of the Company, 4, Bankshall Street, Calcutta on 3rd August, 1959, at 3 p.m. for the following purposes:

(1) To consider the Profit and Loss Account for the year ended 31st December, 1958, the Balance Sheet as at that date and the Reports of the Directors and the Auditors.
(2) To declare a Dividend on the Ordinary Shares.
(3) To appoint Auditors and to fix their remuneration.
(4) To elect Directors in the places of three Directors retiring.

The Share Transfer Register of the Company's Ordinary Shares will be closed from 25th July to 3rd August both days inclusive.

N.B.—A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and the Proxy need not be a Member of the Company.

By Order of the Board
(D. A. Houghton)
Calcutta Director & Secretary.

4, Bankshall Street,
Calcutta.
Dated, 6th July, 1959.

SOUTH INDIAN NOTES

Sericulture Industry

THE sericulture industry which is more or less concentrated in the Mysore State, has been forced, by competition of imported silk, to address itself very seriously to the question of improving the quality of silk manufactured at present. The predominance of charkhas which account for the production of about 15 lakh lbs out of a total of 19 lakh lbs, in the sericulture industry does not reflect healthy conditions, since charkhas are not considered satisfactory for the production of quality silk. The manufacture of better grades of Silk therefore, requires the replacement of charkhas by other means which would give scope for improvement of quality.

The responsibility for putting the sericulture industry in a position of being able to stand up to the competition of foreign goods, devolve upon the State Government. Mr T. Mariappa, Minister for Finance in Mysore, who is also in charge of sericulture has pointed out that the State Government are aware of the difficulties faced by the sericulture industry and has besides indicated some lines of action for promoting the interests of the industry in the State.

The immediate scheme which the State Government have for improving the quality of silk produced in the State is that of replacing charkhas by improved basins which had been found to work satisfactorily from the point of quality of silk manufactured. The Minister has claimed some good progress in the implementation of this measure as a result of which the proportion of quality silk to total production had increased.

High cost of production of filature silk is another problem what is awaiting solution. This works as a disadvantage for filature silk in relation to silk produced from charkhas and improved basin. Though filature silk is of higher quality than silk manufactured by charkhas and improved basins, the difference in quality is not such as to justify the present disparity in the cost of production. Modernisation of filature on the Japanese pattern is therefore important and has been accepted for implementation by the State Government. Apart from these, other measures on the lines of the recommendations of the Working Groups set up by the Government are also awaited and when implemented should go a long way in enabling the industry to show better results from the side of quality and quantity.

Food Production

The inability of the country to increase foodgrain production to meet internal requirements and dispense with imports has been constantly looming up in the discussions of the Planners and attests to the importance which self-sufficiency has as a primary factor in the development of the country toward a higher and diversified state of activity. Forecasts of possible state of supply of foodgrain at the end of the Third Plan have also not been particularly encouraging; and the Food Foundation team which recently reported on this issue, have struck an alarmistic note.

Continuing shortage of foodgrain production is not all due to failure to implement the most important of the measures for stepping up production, though, perhaps, lapses here and there in the agricultural policy of the Government and in the implementation of agricultural schemes could be pointed out. Drive for increasing production had given satisfactory results in the case of jute and cotton. In respect of the former, production had risen to nearly 54 lakh bales which represents an increase of nearly 200 per cent while, production of cotton had also been stepped up by about 80 per cent since partition. There is sufficient evidence in the responsive behaviour of jute and cotton production to show that there is nothing intractable in the problem posed by inadequate foodgrain production.

The unscientific attitude of agriculturists had been mentioned as one of the hindering influences on production by Mr A. P. Jain, Union Minister for Food and Agriculture while addressing the students and staff of the Coimbatore Agricultural college. This instantaneously suggests the dissemination of information about modern methods and agricultural education toward this as the way out of the present stagnancy of foodgrain production. While facilities for agricultural education have been provided on an expanded scale, this has not guaranteed the transmission of such knowledge to the farmers who continue to be separated from such knowledge not only by inadequacy of trained extension personnel but also by their own inertia. Joint farming has some significance in this connection since it is impossible that under it, the lands of even the least progressive cultivator could for long remain outside the scope of measures intended to raise production.

Mr A. P. Jain emphasised an important truth when he said that mere advice to farmers was not enough. There was need for very close cooperation between the experts and the farmers so that the latter could, by following the lines which research had indicated as useful for improving productivity, raise a higher yield per acre. For this demonstration farms are more important than empty lectures.

SOUTH INDIAN MARKETS

Groundnut Firm

A firm trend continued to characterise trading in the groundnut market in Madras. The pattern in oils, however, showed a sagging tendency. The firmness in seeds did not seem to be very closely related to the prevailing conditions or future prospects. It was evident that the uptrend in prices was made possible by the tight supply position. During the past week even the supply position in Madras showed some improvement as arrivals were somewhat larger than in the week before. Even so small but sustained demand from medium and small crushers was noticeable. The trend in oils were easier in later dealings partly because local and Calcutta interests continued to show a marked preference for Andhra in the matter of getting their requirements presumably due to the advantageous prices available there. Though the export policy for groundnut oil had at long last been announced there was no enthusiasm in the market. Evidently traders were doubtful if they could put through any sizable business overseas in view of the prevailing low prices for oil in foreign markets. There was a further decline in overseas prices during the past few days.

*

Hides and Skins

In the hides and skins market demand for cow hides was good. With prices showing a firm tendency. Both goat and sheep skins came to a steady market. Arrivals in the hides section were moderate alround while those in the skins section were moderate around sheep skins and somewhat better than the previous week as regards goat skin. Though buff hides met with a quick clearance the price level recorded little change. Cow calf and buff-calf also ruled unchanged.

In the export section some small business with Yugoslavia was reported to have been concluded. As far as the UK was concerned buyers continued to be selective and rather hesitant in extending commitments. Small business has been reported done in selected categories of hides and a fair amount of business passed in goat skins. The trend of the London auctions did not have much effect in the market for sheep skins which met with fair buying support. At the auction held early last week in London goat skins were in keen demand while sheep skins were neglected.

*

Coffee

Referring to the complaint that the recent rise in coffee prices has stemmed from the lack of uncertainty in the release of coffee for the monthly pool auctions, the Coffee Board have pointed out in a statement issued this week that the statistical data regarding the monthly releases show that quantity released so far this year is sizably larger than that released during the corresponding period of last year. The figures of Coffee releases during the period January-June 1959 in metric tons with the corresponding figures for 1958 in brackets are as follows: January 428 (175); February 375 (225); March 466 (455); April 437 (27); May 350 (423); and June 300 (413); Total for January-June 2356 (1718). It will be seen that the Board has so far in the current year released 638 tons more than during the corresponding period of last year. The Board concludes: "The rise in prices cannot thus be attributed to the releases made." It may be recalled that the All India Coffee Merchants' Association in a recent statement have attributed the sudden spurt in prices of Plantation coffee to the lack of systematic and uniform policy in regard to the monthly releases of coffee by the Coffee Board.

*

Bangalore Silk

As we had anticipated last week, the prices in the Bangalore Silk Market during the week ended 2-7-1959 of raw silk, particularly Charka varieties, have declined to some extent, following increased production of cocoons in some of the sericultural areas of Mysore State. The decline was noticed only during mid-week, the prices regaining the lost ground towards the close.

Filatures, however, continued to remain unchanged excepting for Kisan variety which showed a nominal variation of 50 nP per lb.

The decline in values was particularly marked in the case of both Reeling Cocoons and Seed Cocoons. Sidlaghatta which was quoting between Rs 1.94 and Rs 2.62 was placed at around Rs 1.25 to Rs 2.25 at the close of the week under review. Although not to the same extent, prices of both Channapatna and Mugur also declined to close the week at between Rs 1.50 and Rs 2.00 and Rs 1.00 and Rs 2.00, respectively. Rs regards Seed Cocoons, Mysore quoted between Rs 4.00 and Rs 5.00 as against Rs 4.50 and Rs 10.00 in the previous week.

Trend of Foreign Markets

Country	Grade	Date
Japan	20/22 "A" F.O.B.	During May Landed Cost
1959	Rs 18.23	Rs 29.60
Italy	20/32 "2A"	During Jan.
1959	Rs 23.93	Rs 37.53

*

Pepper

The pepper market in Alleppey and Cochin displayed a steadier tendency in later dealings on buying interest. The improvement in sentiment seemed to have stemmed from paucity of arrivals and a fairly steady undertone noticeable in overseas markets.

THE METAL BOX COMPANY OF INDIA LTD.

Review by the Chairman—Mr. K. C. Mahindra

The Twentysixth Annual General Meeting of The Metal Box Company of India Limited will be held on Thursday, the 16th July, at 59C Chowringhee Road, Calcutta.

The following is a copy of the Review by the Chairman, Mr. K. C.Mahindra, which has already been circulated to members.

Sales

On this first occasion that I am addressing you it is particularly satisfying to be reviewing a record performance achieved by your Company. Sales for the year increased by Rs. 85 lakhs from Rs. 612 to Rs. 697 lakhs, a 14% improvement which would not have been possible but for our success in developing the sales of such of the Company's products which are not made from tinplate, a major raw material in short supply throughout the year.

Satisfactory sales of tinplate products—mainly General Line containers for a miscellany of packs and Open Top cans for processed foodstuffs—were achieved in the face of considerable odds which affected the high standard of performance to which we aspire. By the second half of the year the Government of India had recognised the inadequacy of the level of our tinplate stocks and enabled us to increase them. As a consequence, we were able substantially to supply our customers' requirements. During this period we increased our production and improved considerably our operational efficiency so that, with the forward tinplate situation fairly well assured, we have been able to announce a reduction of 2½% in our General Line prices.

Open Top can sales have increased following the emergence of a canned prawn export trade with Europe and America and the stimulation afforded by the Ministry of Food and Agriculture's subsidy scheme for processed fruit and vegetables. Under this scheme can prices are reduced by the equivalent of Rs. 500 per ton of tinplate used in their manufacture. For the most popular size of can this means a price reduction of 26%. The Union Government's vesting in your Company the responsibility for ensuring that this subsidy is passed on to the canners is a significant expression of faith in us, and in response to this trust we simultaneously announced a reduction in our prices of Rs. 100 per ton of tinplate used. This, together with a further reduction in prices we were able to announce because of a fall in the cost of the special quality of tinplate imported for Open Top cans, amounted to a decrease in prices of 15% since 1st April 1958. In total this means that the canner now buys his cans 41% cheaper at prices which, notwithstanding the fact that Open Top cans are produced in the United Kingdom by thousands of millions and in the U.S.A. by tens of thousands of millions, must be comparable with the cheapest in the world.

Though our indirect exports increased considerably, our direct exports, owing to Burma's foreign exchange difficulties, were below expectations. However, during the year we set up an export promotion unit; we undertook extensive touring in South-East and West Asia and planned an intensification of this work for the current year; we are thus well placed to make the best of our opportunities in the more promising of the export markets open to us. As a result an impressive order book has already been built up and I am confident that by next year I shall be able to report a substantial increase in our export sales. We continued to receive excellent support from the Export Promotion Directorate of the Government of India and the Export Promotion Councils.

Demand this year remains brisk: there are signs that the market of our customers, the packers of India, is growing and that materials are being made increasingly available to meet it.

Raw Materials

The low level of stocks of tinplate, our most important raw material, caused grave concern in the first part of the year. The possibility of increased imports in view of the critical foreign exchange position seemed unlikely. It was envisaged that the consumption of available stocks would have to be drastically rationed to avoid a major closure of our factories.

In the second half of the year our Associates in the U.K. responded to our appeal for assistance by offering to finance the import of a substantial tonnage of tinplate on most generous and favourable deferred payment terms. This, together with the arrangements the Government of India made for the import of tinplate under the U.S.A. Development Loan Fund, resulted in an improved forward position. Stocks are still below the desired minimum operational level, but there are now good prospects that the position will improve in the near future.

The Tinplate Company of India Limited is maintaining a satisfactory output but has a considerable backlog of orders with which to deal. If Tata's supply of tinplate bar is sufficient to ensure the continuance of indigenous production at the present level, then the prospects of liberalised supplies of tinplate to the Container Industry are more encouraging than they have been for a number of years. It is to be hoped that the Government of India will be able to maintain an adequate level of imports until the substantial increase in indigenous tinplate manufacturing capacity planned for 1961 comes into production.

The price of indigenous tinplate remained unchanged during the year but freight rates and sales tax were increased. A slight downward trend in price was noted in the price of imported tinplate reflecting the export drive in those countries where mills were working below capacity.

During the year supplies of indigenous aluminium were adequate to meet the substantially increased demand on your Company for a range of non-tinplate products and it appears we will be able to cover the enhanced requirements of this raw material for the current year from the same sources.

Steel for the manufacture of our widening range of industrial components was in short supply throughout the year. As these components were previously imported and represent a saving in foreign exchange, we believe the Government of India will not reject our present application for a licence to import part of our requirements of steel to supplement the material available to us from indigenous sources to meet demand.

In respect of other raw materials, it was reported last year that prices had substantially increased. Unfortunately the upward trend continues.

Developments

The new Calcutta factory was completed and the manufacturing equipment transferred from the B2 Hide Road factory. The benefits of the move have already been reflected in improved operational efficiency.

The manufacture of industrial components remains in the old premises at B2 Hide Road, which have been reconditioned. The additional space there will be utilised for the production of plastics embracing injection moulding and polyethylene extrusion, printing and bag making. Machinery building on an increased scale will be installed there and provision is being made for the manufacture of a range of spare parts required for our production machinery and machinery sold to customers.

Government permission was received to proceed with the new factory at Faridabad, near Delhi, and constructional work has already commenced on the site. It is expected that the new factory will be in production during the first quarter of 1960.

A small extension to our Madras factory has been completed. An extension to our Worli factory in Bombay is being planned and as this will utilise to the full extent the vacant area on the site, negotiations are proceeding for the acquisition of a new site of approximately 12 acres near Chembur.

Our Research Division which has hitherto confined its activities mainly to the development of indigenous materials to replace imported materials, will be expanded to include the field of plastics and to provide greater service to our customers.

A plan is under consideration for the acquisition of additional machinery to extend our range of products manufactured from raw materials readily available in India and to meet the demand for industrial components which are presently imported.

Increase in Ordinary Capital

In order to assist in the financing of the above new developments it is proposed to increase the Ordinary Share capital by means of a rights issue to shareholders. Consent has been received from the Controller of Capital Issues to a rights issue at par in the ratio of two new shares for every five shares held. It is anticipated that the issue will be made later this year.

Industrial Relations

During the year there was considerable activity in the field of employee relations.

In keeping with the Company's policy of reward for increased productivity, the Production Bonus Scheme, in force since 1948, was revised offering increased incentives. It was implemented in the Bombay factory at the end of the year and already the results have been to the mutual benefit of the employees and the Company.

A Gratuity Scheme has recently been introduced offering retirement benefits in addition to the yield from the Provident Fund Scheme.

The Prosperity Bonus Agreement concluded in 1956 expired on the 31st March 1958 and was renewed in March 1959 for another period of three years, after consultations with eight different establishments in five States. The advantages of the Scheme are clearly indicated by the results achieved. The bonus earned during the period of the previous agreement averaged 30% of basic earnings per year and in respect of 1958/59 will be at an even higher level. Unfortunately in the course of discussions relating to the disposal of the Bonus Reserve Account on the expiry of the Agreement, there were breaches of industrial peace for brief periods at the Calcutta and Madras factories, engineered by non-worker leadership of Unions: These marred the otherwise very satisfactory record of our relations with our employees throughout India since May 1955.

On the occasion of the retirement of Mr. H. Chiswell Jones, the employees of all our establishments expressed their appreciation of his 26 years' service in a manner that left no doubt as to their high regard for him and his leadership, and demonstrated the mutual respect and sense of res-

ponsibility that exist between the Company and its employees.

The rising cost of living during the year under review resulted in increased payments of dearness allowance and led to the examination of the rates of dearness allowance for the monthly rated employees which have now been linked, as is the case with our daily rated employees, to cost of living indices. The award relating to wages and dearness allowance in the engineering industry in West Bengal was implemented in December at our Calcutta establishments. Although the question of interpretation of certain ambiguous provisions resulted in another Tribunal embracing the industry as a whole, our Calcutta establishments are free from any complication on this score.

Training continued to occupy a good deal of the attention of the Company. During the year under review ten of our Indian executives were sent to the U.K. for training under the Company's Training Scheme. In addition, advantage was taken of the various facilities for supervisory and craft training that are available in India. Recognising the importance of training, a full time Training Officer has been appointed at our Calcutta factory and a similar appointment is contemplated for our Bombay factory.

Staff

The Officers and staff are to be congratulated on their efforts during the year, on the ability and ingenuity they showed in adapting themselves rapidly to deal with the constantly changing conditions resulting from an uncertain supply of raw materials and on maintaining cordial relations with customers who must at times have been disappointed by our inability to meet their orders as and when required. We thank them for their continued loyalty and the high sense of duty they display. The satisfactory results achieved despite the difficulties which arose during the year will, we hope, encourage them and make them feel their efforts have been really worth while.

Retirement

It was with regret that we said farewell to Mr. Chiswell Jones at the end of the year when he retired as Chairman of your Company to return to the United Kingdom. He served with your Company for nearly 26 years and for 17 of those years he was Chairman and, until March last year, Managing Director, bearing the heavy responsibility of managing the Company's affairs and guiding it along the successful path that it has followed. His leadership and energetic management have been an example to us all. Mr Chiswell Jones continues to be a member of your Board of Directors and has also joined the Board of our Associates, The Metal Box Company Overseas Limited. I am sure you will wish to join me in placing on record the Company's appreciation of Mr. Chiswell Jones' services and our thanks for the success that he has achieved for the Company.

UPPER JUMNA VALLEY ELECTRICITY SUPPLY COMPANY, LIMITED.

NOTICE is hereby given that an Extraordinary General Meeting of the Members of the above-named Company will be held at the Registered Office of the Company, No. 12 Mission Row, Calcutta-1, on Monday, the 10th August, 1959, immediately following the termination of the Annual General Meeting to be held on that day at 11-0 a.m. to consider, and if thought fit, to pass, with or without modification, the following subjoined resolution, namely:—

"That approval be and is hereby accorded to the appointment of Martin Burn Limited, the present Managing Agents of the Company, as Secretaries & Treasurers of the Company for a period of 10 years with effect on and from the 16th August, 1960 on the terms and conditions contained in the draft agreement submitted to the Meeting and, for the purpose of identification signed by the Chairman thereof."

By Order of the Board,
MARTIN BURN LIMITED,
A. G. Gidley,
Secretary,
Managing Agents.

12, Mission Row,
Calcutta-1.
10th July, 1959.

Note: (i) A Member entitled to attend and vote is entitled to appoint a Proxy to attend and, on a poll, to vote instead of himself. Such Proxy need not be a Member of the Company.
(ii) An Explanatory Statement is annexed to the Convening Notice issued to Members of the Company.

CORRIGENDUM

In the notice of Bridge & Roof Co. (India) Ltd appearing in Indian Finance dated 13th June, 1959 (page 1017) the words and expression "Dividend of 10% for 1956" should read as "Dividend of 10% for 1955."

STOCK EXCHANGES

Firm Trend

Watch-Dog Writes:

BUOYANT conditions have prevailed on the Stock Exchanges last week. Though a reactionary trend was much in evidence around midweek, sentiment revived after a short while and at the time of writing most prices are at or near their earlier best levels with a few showing fresh new highs. The upsurge is generally attributed to the rumour circulating in the market early in the week that Government sanction for the TISCO issue at par was imminent. But it would appear that both operators and investors have been encouraged to enter into fresh commitments by the new favourable developments in the investment situation. The Prime Minister's assurance to the Federation of Indian Chambers of Commerce that the Private Sector industries will be allowed to function unhampered has also greatly aided the bullish fervour. The temporary setback witnessed during the week seemed to have directly stemmed from a sudden apprehension that the LIC may turn a seller of equities.

The Calcutta Stock Exchange ruled firm except for a brief period during which prices were rather sharply marked down. By Friday evening the pivotal counters were once again buoyant. Section-wise coals and jutes attracted attention while the miscellaneous section featured a number of bright spots.

The Bombay Stock Exchange witnessed hectic trading in a few shares while the rest of the list was quite active under the leadership of Tata Steel.

Widespread gains were noticeable in the Madras Stock Exchange with sugar shares in the limelight.

Calcutta

Friday Evening.

Conditions akin to a boom have prevailed on the Calcutta Stock Exchange during the past few days. Sentiment, which appeared to have been somewhat subdued at last Saturday's short session atleast as far as the more speculative counters were concerned, became quite buoyant when trading commenced for the week under review. The uptrend, however, was first seen in Dalal Street which put up a cheerful appearance presumably on reports of Government decision to allow the proposed new issue of Tisco to be made at par. The onward movement in equity prices gained further momentum with the approach of the Settlement as bear operators found to their discomfiture that lower levels were untenable. Early in the second half of the week, however, some nervousness developed following rumours that the LIC would turn sellers of equities. The reactionary tendency noticeable on Thursday was found to yield place to steadier conditions on Friday when equities regained a large part of the ground conceded on the previous day. It would appear that apart from the continued encouraging news from the corporate sector the Prime Minister's assurance to the Federation of Indian Chambers of Commerce that existing industries would not be nationalised served to revive confidence in the future of the private sector.

Giltedged section ruled firm with 3 per cent 1986 quoting at Rs 74.

In the Banking section Punjab National Bank was quiet at Rs 22.12 as was United Commercial Bank at Rs 61.50.

Steady conditions continued to be in evidence in the textile section. Kesoram was done upto Rs 16.50. Dunbar advanced to Rs 167 from Rs 162. Elgin was in request upto Rs 14 while Jayshree steadily moved upto Rs 9.87.

The recovery movement noticed in late dealings last week in the coal section made further headway during this week. The explanation for the revival of interest is, to be sought in the expectation that a decision favourable to the industry would be taken by Government over the question of coal prices. Bengal which was quoting at Rs 316 last week end moved up to be placed at Rs 321. Central India was well maintained at Rs 8.19 East India improved to Rs 25.87 from Rs 24. New Beerbhoom was in good request and improved to Rs 21.50 from Rs 20.06. Raneegunge had buyers upto Rs 17.62 as against its quotation of Rs 17.06 a week ago. Western Bengal was better at Rs 6.62.

Despite the irregular trend in the gunny market, the jute section continued to be active with selected shares receiving sizable gains over the week's trading. Evidently operators are confident that conditions will soon become conducive to increased offtake of Indian jute goods overseas. Auckland was a prominent spot advancing to Rs 192 from Rs 187. Fort Gloster gained 10 points to be placed at Rs 280. Gourepore had good support in earlier dealings and advanced to Rs 425 from Rs 407 but towards close was placed at Rs 419. Budge Budge was pushed up from Rs 155 to Rs 162. Barnagore appreciated to Rs 160 from Rs 156. Kamarhatty was sizably higher on balance at Rs 220 as were Kinnison at Rs 198, Lansdowne at Rs 141 and Ganges at Rs 94. Howrah closed on Friday at Rs 24.62 as against its week's opening rate of Rs 24.57. National closed at Rs 23.25 against its opening rate of Rs 23.50.

In the Engineering section Indian Iron opened the week at Rs 24.88 as against previous closing of Rs 24.74 and moved upto Rs 24.91 by close on Monday. The scrip opened next day at Rs 25 but was back at Rs 24.97 by close. Settlement day commenced at Rs 25.10 and closed at Rs 25.28. The settlement rate of Rs 25.28 compares with the previous settlement rate of Rs 24.25. On overnight support the scrip opened firm on Thursday at Rs 25.46 but in later dealings the price sagged to close lower at Rs 25.37. The setback proved to be temporary and the scrip regained lost ground to close on Friday at Rs 25.45 to be called upto Rs 25.52 in kerb trading. TEXMACO opened at Rs 25.50 and closed at Rs 25 xd. J. K. Steel was

in demand and closed higher on balance at Rs 15.19. Guest, Keen, Williams was steady at Rs 41.25. Kumardhubi was marked at Rs 7.44.

Among sugars, Carew after initial two way movement closed easier at Rs 13.12. Cawnpore was a brighter spot and advanced smartly to Rs 14.62. SKG was wanted upto Rs 10.69.

Tea shares were again a neglected market, though an improvement in sentiment was noticeable in recent tea auctions in Calcutta. Among the few transactions, Brooke Bond was fractionally better at Rs 19.81, Jayshree recorded some improvement at Rs 12.94 and Hasimara was placed at Rs 23.25.

In the Miscellaneous section Indian Copper firmed up to Rs 4.25 on the announcement that dividend had been maintained but in later dealings came under pressure to close at Rs 4.19 Indian Aluminium moved up from Rs 22 to close at Rs 23.19. Indian Cable was a bright spot advancing to close at Rs 33.25 National Carbon spurted to 36. Rallis was done up to Rs 79.50 Among Paper shares Orient firmed up in later dealings to Rs 37.50 India Paper Pulp receded to Rs 25.56 from the earlier level of Rs 27.12.

*

Bombay

Buoyant conditions prevailed on the Bombay Stock Exchange most of the time last week. Towards close on Thursday the undertone was easier on bull liquidation. The earlier firmness stemmed mainly from the rumour that Government had decided to sanction the TISCO issue at par. The reactionary tendency in the late deals seemed to have been brought about by reports that the LIC might turn a seller of equities.

In the steel section Tata steel opened the week at Rs 194.75 and touched a high of Rs 196.50 before closing the opening day at Rs 195.75. The uptrend was well pronounced on Wednesday and a high of Rs 201.50 was touched on Thursday. But by the time the day's transactions came to a close the quotation was back at Rs 198. After touching a high of Rs 25.55 Indian Iron closed at Rs 25.10.

In the Textile section Bombay Dyeing was done upto Rs 67.70 before closing at Rs 66.90. Century after having been higher by 17 points closed with an on balance gain of 5 points. Kohinoor was easier at Rs 292. Swadeshi moved up to Rs 257 from Rs 254.50 but closed quiet at Rs 253.

In the Miscellaneous section, National Rayon was a bright spot in earlier dealings moving briskly to Rs 361.50 from Rs 345. A major portion of the gain was, however, erased towards close on Thursday and the scrip closed at Rs 352. Premier Construction was also in good request to be done up to Rs 381 as against its opening rate of Rs 355. Towards close the scrip was marked down to Rs 371 on heavy selling pressure.

INDUSTRIAL INFORMATION

INDEX NUMBER OF WHOLESALE PRICES IN INDIA

The official wholesale price index (with the year ended March 1953 as 100) declined by 0.4 per cent to 116.1 during the week ended June 20, 1959 as against 116.6 for the previous week. The index was, however, higher by 1.2 and 2.8 per cent respectively when compared with the corresponding weeks of the previous month and of a year ago.

Lower prices of Bananas at Bombay (—15%), Gur at Patna (—13%), Onions at Calcutta (—12%), Eggs at Bombay and Milk (—8% each), Mung at Madras (—6%), Masur at Patna and Potatoes at Mettupalayam (—5% each), Urad (—3%) and Jowar (—1%) brought down the index for 'Food Articles' by 1.1 per cent to 119.6 as compared with 120.9 (revised) for the earlier week. The prices of Bajra at Jodhpur and Potatoes at Patna (+7% each), Maize at Dohad (+5%) and Rice, Gram and Betelnuts (+1% each), however, moved-up.

The index for "Tobacco" rose by 1.4 per cent to 96.3 due to an increase in the prices of Tobacco raw (+2%).

The index for the 'Fuel, Power, Light and Lubricants' group worked out to 116.5 as against 116.4 for the earlier week, Castor oil (+1%) showed a rise during the week.

The prices of Silk raw (+2%) and Groundnuts, Cottonseed and Lac (+1% each) moved up while Wool raw and Castorseed (—1% each) showed declines and the index for the 'Industrial Raw Materials' group advanced by 0.3 per cent to 120.1 as compared with 119.8 (revised) for the previous week.

The index for 'Intermediates' Products' stood at 108.2 compared with 108.1 (revised) for the last week. Items which showed noticeable variations during the week were:—Zinc (+6%), Rayon yarn and Tin (+2% each) and Copper (—2%).

The index for 'Finished Products' rose by 0.2 per cent to 109.4 as against 109.2 (revised) for the earlier week due to an increase in the prices of Jute manufactures (+3%) although Silk and Rayon manufactures (—2%) showed a decline.

WORKING OF COMPANIES ACT.

The number of newly-registered companies during 1958-59 was 1095 as against 961 in 1957-58 and 848 in 1956-57.

The total amount of the authorized capital of the newly-registered companies in 1958-59 was Rs 284 crores as against Rs 103 crores in 1957-58 and Rs 211 crores in 1956-57.

The last two years' figures of the new company incorporations show that the set-back in new company registrations recorded during the first year of the operation of the Companies Act was "a passing phase". They broadly indicate that the misapprehensions prevailing in certain sections of the public about the provisions of the new Companies Act were rather unwarranted and that any fears that the promotional activity was not likely to revive so long as the restrictive powers of the new Act existed, were also unfounded.

PUBLIC AND PRIVATE COMPANIES.

The total number of public companies registered during 1958-59 was reported to be 58 as against 65 in 1957-58 and 84 in 1956-57. The total authorized capital of these public companies came to Rs 59 crores as against a total of Rs 53 crores in 1957-58 and Rs 54 crores in 1956-57.

STATE-WISE DISTRIBUTION.

Out of 1,095 newly-registered companies in 1958-59, 364 companies were formed in West Bengal, 240 in Bombay State, 130 and 113 in the Union Territory of Delhi and the State of Madras respectively. There has been a steady rise in new company registrations in each of these four areas since 1956-57,

INDUSTRIAL PATTERN OF COMPANIES.

Of the new companies formed during the year, 502 were for processing and manufacturing of food stuffs, metals and chemicals and other industrial goods. The total authorized capital of these companies came to Rs 168 crores, which was nearly 59 per cent of the total authorized capital of all the companies registered in the year.

Under trade and finance, 302 new companies with a total authorized capital of Rs 37 crores were registered. Thus, the two main industrial groups, viz., processing and manufacturing and trade and finance together accounted for 804 companies, which is about 80 per cent of the total number of companies formed.

GIANT FEDERATIONS.

The number of new giant companies having an authorized capital of Rs 1 crore and above during the year under review was 22 as compared with 28 companies in each of the two preceding years.

Out of these companies, eight—three Government and five private companies—account for a total authorized capital of Rs 210 crores. This represents 74 per cent of the authorized capital of all the 1,095 companies registered during the year.

COMPANY NOTICE
INDIAN COPPER CORPORATION LIMITED
(Incorporated in England)

Dividend No. 33.

NOTICE IS HEREBY GIVEN that at the Thirtyfifth Annual General Meeting to be held in Committee Room No. 1 of the Bengal Chamber of Commerce and Industry, Royal Exchange, Calcutta, on Wednesday, the 23rd September, 1959 at 11-30 A.M. the Directors will recommend payment of a Dividend (No. 33) for the year ended 31st December, 1958 of 18% (4.32 pence i.e. 24 Naye Paise per unit of stock) free of Income Tax payable by the Company in respect of the Issued Capital of £.1,371,300. Subject to confirmation of members, the dividend will be paid on the 30th September, 1959 to all members registered in the books of the Company at the close of business on the 3rd August, 1959.

The Registers of Members will be closed from the 4th August to the 29th August, 1959, both days inclusive.

The nett profit for the year ended 31st December, 1958 was £.197,735 (against £.252,215 for previous year), after providing £.150,000 for depreciation (£.175,000 last year), £467,282 for Taxation (against £.522,534), £.125,000 for General Reserve (against £175,000), and £.50,625 for Development Rebate Reserve (against Nil). With £.120,361 brought in from 1957, there is an available balance of £.318,146 (against £.367,195). After providing £.246,834 for proposed Dividend of 18% free of Income Tax payable by the Company (Dividend No. 32 of 18% free of Income Tax last year—£.246,834) the balance carried forward is £.71,312 (against £.120,361 brought in from previous year).

By Order of the Board,
S. C. GLADSTONE,
Acting Secretary.

Gillander House,
Netaji Subhas Road,
Calcutta-1.
Dated the 8th July, 1959.

FOR THE INVESTOR

Cautious Mood

Investment Gossip:

The rumour that has apparently been the cause of the nervousness noticed earlier in the week happens to be nothing so damaging as to have called for the voilent shakedown witnessed. The rumour was that the Two million tons expansion project of TISCO was not proceeding as smoothly as expected. Available information goes to prove the contrary though it is not improbable that there might have been here and there minor set-backs which, however, will have little effect on the progress of the main project.

Another retarding influence was the conjecture with regard to Tata Steel's opposite number in Calcutta. With the announcement as regards book closing the usual speculation about the size of the dividend has started. And this year the gambling fraternity has the additional uncertainty created by the Union Budget proposals.

But it is grossly to underestimate the prowess of the stock marketmen to think that they had bowed down to such flimsy attacks. For, two important factors have been clamouring for the attention of bulls for some time now and both of them are of a variety that can be only ignored with peril. As a matter of fact both the factors are really one in the sense the one has its origin in the other. The first is the lurking apprehension that equity values have reached their high water-mark. Once this position is conceded the natural corollary is profit-taking.

The second influence is now nearly three weeks old, and it is only during the past week that it has come into its own. I refer to the reported intention of the LIC to sell part of its holdings of equities in view of the attractive price levels. It would appear that the sizable increase in the number of shares in recent clearings has been interpreted to mean that some unloading from the LIC has taken place as apprehended.

This would confirm the theory that equity prices in general have, in the opinion of institutional investors, been overrated. By the same token, it is prudent to expect further unloading of shares from the LIC and other institutional investors. Such apprehensions may largely disappear if it is remembered that the LIC and other institutional investors have perforce to invest their funds and equities even at the so called "high" levels are much more attractive propositions than most other avenues open to them.

The adverse elements in the investment situation are too weak to hold up the onward march of equities for long. Funds seeking investment are increasing in volume and that with the continued good news from the corporate sector and encouraging developments such as the abolition of the carriage tax as regards tea by the Assam Government, it would appear that it will be the Investor who will set the pace of the market in coming weeks.

£ R$

Investment Notes:

The directors of Khandelwal Ferro Alloys Limited have, in consultation with the Bombay Sstock Exchange, made the allotment of the company's new shares to the public. It is learnt that, in respect of equity shares, 50 per cent of the total number of shares, available for allotment, have been allotted by drawing lots among the applicants of 5 and 10 shares; so that every winning number gets five shares each. The balance of shares available admits of allotment of only 45 per cent of the total number of shares applied for by the remaining number of applicants, subject to broken units of over 2½ shares being rounded off to the next higher multiple of five, and the broken units of 2½ shares and below being dropped.

As regards Preference Shares, all applicants in the categories of five and ten shares have been allotted five shares each. The balance of shares available admits of allotment of only 75 per cent of the total number of shares applied for by the rest of the applicants, subject to broken units of over 2½ shares being rounded off to the next higher multiple of five, and the broken units of 2½ shares and below being dropped. Letters of regret together with refund cheques as also Intimations of Allotment have been posted. Share Certificates will be ready before the end of this month. Both the Equity and Preference Shares have been listed on the Bombay Stock Exchange.

It is learnt that Colour-Chem Limited has advised their bankers —the Bank of India Limited—to cash the cheques of only those applicants whose names have been drawn in the lot for share allocation against the issue of 35,000 equity shares offered to the public.

TEXMACO has decided to raise the share capital by the issue of Preference shares up to Rs 1.6 crores with a view to meeting the financial requirements for the expansion programme. The necessary sanction has been obtained from the Controller of Capital Issues.

£ R$

Burn & Company's Results

Balance-Sheet Reviews:

There is a general anxiety among companies to pay the Ordinary dividends on the grossed basis in order to enable the shareholders to get the same net dividend. The first example was set by Devkaran Nanjee Banking Company Limited, which declared a gross dividend of Rs 1.86 per share, working out actually to a higher net dividend of Rs 1.30 per share.

Another company is Burn & Company Limited. The directors of this company have, in their report, indicated that "the net available profits, after providing for taxation on the revised basis and covering the increased incidence of the dividend on the preference share capital are such as to enable them to recommend a payment of a gross dividend for the year under review on the ordinary share capital at such a rate as in comparison with the previous year will compensate the loss of the notional tax credit". This is good news indeed for the shareholders of the Burn & Company.

The net profit, before providing for Depreciation and Taxation, amounts to Rs 119.20 lakhs for the year 1958-59 as against Rs 128.45 lakhs for the previous year. The amount provided for Depreciation is Rs 18.31 lakhs (Rs 17.36 lakhs) and Taxation Rs 50 lakhs (Rs 56.90 lakhs). The Wealth Tax claims Rs 2.10 lakhs on the last occasion. The transfer to Development Statutory Reserve is Rs 2.07 lakhs (Rs 68,447); Reserve for Works, Reconstruction and Expansion Reserve Rs 3.64 laghs (Rs 3.25 lakhs) and Reserve for Salem Projects gets Rs 20 lakhs (same) and Niwar Project Rs 1 lakh (Rs 6 lakhs). An Ordinary dividend of 28½ per cent is to be paid on the gross basis against 20 per cent without deduction of tax previously.

The dividends on the Preference shares will be paid on the basis of grossing up of the net amount paid previously. It is said that the incidence against profits of preference dividends will, in future, accordingly be the gross amount. Naturally, companies with a heavy prior charge will stand to lose to greater extent than the rest.

Shaw Wallace

Shaw Wallace & Company Limited has reported a higher profit of Rs 44.44 lakhs for 1958 against Rs 37.91 lakhs in the previous year after raising the provision for Depreciation from Rs 4.83 lakhs to Rs 7.04 lakhs. The directors have proposed to maintain the dividend of 10 per cent.

Sales are higher at Rs 5.86 crores against Rs 5.46 crores. Agency and other commissions and allowances have amounted to Rs 44.60 lakhs against Rs 38.86 lakhs. Dividends from subsidiary companies have amounted to Rs 5.46 lakhs against Rs 6.46 lakhs.

In respect of allocations, the provision for Taxation absorbs Rs 21.74 lakhs against Rs 18.24 lakhs. General Reserve is raised to Rs 7.50 lakhs from Rs 4 lakhs. The Development Rebate Reserve gets Rs 1.62 lakhs against nil.

Rohtas

Preliminary reports about the working of Rohtas Industries Limited are encouraging. The profits of the company, for the year ended 31st March 1959, are expected to be higher at about Rs 2.5 crores against Rs 2 crores for the preceding period of 17 months. Informed quarters feel that the directors will recommend a dividend of 15 per cent on the increased capital as against 20 per cent on the original capital.

Sales are likely to improve from Rs 15.11 crores to Rs 15.25 crores. Assuming that, out of the gross

BURMAH-SHELL REFINERIES LIMITED

Accounts 1958

The Directors' Report and Accounts reveal the following items of interest.

2.27 million metric tons of crude oil were processed during the year, yielding 2.23 million metric tons of finished products.

Capital expenditure during the year amounted to Rs. 34 lacs.

As anticipated last year the profits for 1958 show a decrease compared with 1957 due mainly to the narrowing of the margin between refined products and crude oil prices and to the increased liability to taxation.

The net income for the year ended 31st December 1958 after providing for depreciation and an estimated liability for taxation amounts to .. Rs. 309 lacs

To which is added the balance brought forward from last year of .. Rs. 42 „

Rs. 351 „

From which has been appropriated—

	Rs. lacs	
Dividends	207	
General Reserve	82	
Tax Equalisation Reserve	8	Rs. 297 „

Leaving to be carried forward to next year's account .. Rs. 54 „

The Government has accepted an offer by the Company to surrender, as from 1st July 1959, the duty protection enjoyed on Furnace Oil, High Speed Diesel, Light Diesel and Bitumen and the Government has agreed to an increase in the refinery intake to approximately 2.6 million tons per annum which will help materialy to rectify the present imbalance of products and will also result in a saving of foreign exchange. The effect of this Agreement as regards the financial results for 1959 will be a reduction of income from refining.

The Company are also examining a scheme for increasing the refinery intake up to 4,000,000 tons of crude oil per annum and a plant for the manufacture of Lubricating Oils. Government have given us their assurance that when these proposals are submitted with all necessary details, they will be examined by them on their merits.

profits, provision for Depreciation will claim Rs 80 lakhs and managing agency commission Rs 15 lakhs, there will be a net profit of over Rs 1.5 crores. As against a gross block of about Rs 14.5 crores, Depreciation provision will total about Rs 5.5 crores, leaving a net block of nearly Rs 9 crores at the end of March, 1959.

After paying dividends and taxe a surplus of about Rs 1.25 crores pe annum is anticipated and this may be utilised for repayment of debentures and borrowings or for expansion.

£R$

Walford Transport

Walford Transport Limited has shown a decline in profits from Rs. 7.70 lakhs to Rs 4.11 lakhs for 1958. The dividend on the Ordinary shares is, however, maintained at 14 per cent.

The provision for taxes amounts to Rs 2.51 lakhs against Rs 5.18 lakhs, while Depreciation gets Rs 54,636 against Rs 64,134. The Development Rebate Reserve gets Rs 967 against against Rs 734.

The directors have reported that the total turnover for 1958 was Rs 1.52 crores, representing a drop in volume of 31.6 per cent compared to the preious year. The Siliguri branch of the company has now been firmly established. It commenced operations in October 1958 and the progress is reported to be satisfactory.

£R$

Tata Oils

Favourable purchases of raw materials, larger turnover of all products excepting vanaspati, upward revision in prices of soaps and toilet products in August last and a reduction of Rs 1.50 lakhs in interest charges as a sequel to smaller borrowings for the greater part of year, are fully reflected in the working results of the Tata Oil Mill Company Limited for the year ended 31st March, 1959.

The company's gross profit is higher by Rs 17.27 lakhs at Rs 48.64 lakhs. Sales have risen by Rs 40 lakhs to Rs 6.51 crores. The dividend on the Ordinary shares is raised to Rs 3.25 from Rs 2.50 per share. After providing Rs 11.30 lakhs for Depreciation (Rs 10.80 lakhs); Rs 21.75 lakhs for Taxation (Rs 11.62 lakhs) and Rs 3.25 lakhs for Development Reserve (Rs 1.07 lakhs), the net profit is higher at Rs 12.34 lakhs against only Rs 7.88 lakhs in the previous year. The directors have provided Rs 2.25 lakhs for General Reserve.

According to the directors' report, the demand for the company's products has continued to grow with the total sales of soap and glycerine rising by 9 per cent and those of hair preparation by 16 per cent. However, sales in the export market have not shown any advance. The erection of the new solvent extraction plant at the Bombay factory was completed towards the end of the year. The plant has now gone into full production. At the Calcutta factory, a new soap cooling and drying equipment has been installed.

£R$

India Cements

The India Cements Limited, Madras, has reported satisfactory results for the year ended 31st March, 1959. The gross profit has risen from Rs 38.52 lakhs to Rs 44.85 lakhs. After providing Rs 3.77 lakhs for managing agents' commission against Rs 3.13 lakhs and Rs 11.58 lakhs for Depreciation against Rs 11.90 lakhs, the net profit is higher at Rs 20.49 lakhs against Rs 23.48 lakhs. The directors have recommended a final dividend of 10 per cent per annum for the half-year ended 31st March, 1959, making a total of 9 per cent for the whole year.

Sales have risen from Rs 1.43 crores to Rs 1.76 crores. The provision for Taxation amounts to Rs 11 lakhs against Rs 8 lakhs and Development Rebate Reserve Rs 21,000 against Rs 20,000.

The directors have stated that the erection of the third unit in Talaiyuthu has almost been completed and the new unit is expected to go into production by the end of July or early in August this year. As regards the factory in Vizag, further progress has been delayed. The company's application to the IFC of India is still pending.

£R$

Sangameshwar Coffee

Sangameshwar Coffee Estates Limited has earned a profit of Rs 1.69 lakhs for the year ended 31st March, 1959, against Rs 3.07 lakhs in the previous year after providing Rs 33,434 for Depreciation against Rs 21,605 and Rs 85,000 for Taxation against Rs 1.80 lakhs. The dividend is maintained at 9 per cent.

The crop harvested amounts to 5,343 cwts at a cost of Rs 110.24 per cwt and this has been delivered to the Coffee Board and valued in the accounts at Rs 2.25 per point.

Foreign Exchange Outlook

FOR the first time in recent months, the level of Balances Held Abroad, in the Banking Department of the Reserve Bank, fell so low as to necessitate a transfer from Foreign Securities in the Issue Department. This fact highlights the present plight in India's foreign exchange position, and serves also to point to the possibility of an autumnal crisis in the balance of payments. While, from another point of view, the last week has been rewarding, with the announcement by the World Bank of its approval of two loan applications for a total amount of $ 60 million, the fact remains that there is now the real threat of foreign exchange reserves, particularly over the next few months, being drawn upon at a disquietingly heavy rate.

It would appear that exports have not fared encouragingly during the "season" that lasts between, say, November and May. That, for a time, the foreign exchange reserves showed steady, though small, accretions week by week, seemed to suggest, early this year, that India had turned the corner in respect of its exchange crisis. But the reappearance of the trade gap since then, and in steadily increasing magnitude, must now provoke Government freshly and urgently to review the foreign exchange position.

It is not enough that vague remarks are made about schemes of compulsory export. What is really necessary, if Government seriously intend to achieve an increase in both the volume and value of exports, is that serious attention be paid to the desirability of evolving a system of subsidising exports. Some industries, perhaps, will be able to afford the "loss" from their own resources. But, inevitably, and particularly in respect of manufactures which are sought for the first time to be exported in any considerable or worth-while quantity, a direct governmental subsidy seems to be unavoidable.

There are, then, the unending attempts to secure foreign assistance. The Finance Minister's annual autumnal excursion abroad will perhaps see the beginning of various negotiations. But it should, we believe, be made clear that there are kinds of assistance which help, and others that, unfortunately, remain unutilised. The Export-Import Bank credit, as Eavesdropper pointed out in last week's Clive Street Gossip, is an instance. For whatever the reason, and cost is merely one, there appears to be great reluctance, both on the part of Government and as far as the private sector is concerned, to avail of the line of credit that has been vouchsafed to us these many months from the Export-Import Bank. True, the loans so far given by the World Bank have been both timely and helpful. But many other "allocations" are not being drawn on, because they are on specific project basis, and hence the delay in aid utilisation is oftentimes considerable.

Moreover, the trade gap that India is presently experiencing cannot be covered by project basis assistance. Hence, the prospect would seem to be that we shall have week by week to draw from the foreign exchange vaults in order to pay for the excess of imports over exports.

But the foreign exchange reserves are at such a low level, that there is a discernible limit, which will be reached at not too distant a time, beyond which no drawings will be possible. It is therefore necessary that Government, in addition to launching an export promotion drive, consider other ways of improving the foreign exchange position.

We believe that, firstly, India will have no choice but to approach the International Monetary Fund for the rest of India's quota. There is, even on the basis of the quota before it was enlarged consequent to last October's Fund-Bank Conferences, a sum of $200 million available from this source.

Secondly, attempts should perhaps be made to ensure that new allocations of assistance are "general", as was, for example, the advance payment under the pensions agreement by the United Kingdom. After all, in any case, all such loans stand repayable or guaranteed by the Indian Government. In such view, is it really necessary that there should only be project-wise release from allocations?

Thirdly, more serious thought than has heretofore been paid should be expended upon the practicability, the feasibility and the desirability of issuing gold bearer bonds. It is patently absurd, not to say scandalous, that such vast resources in gold should lie idle and unutilised.

Finally, negotiations may be instituted for considering some at least of future foreign assistance as being retrospective "recompense" in regard to particular projects. This would meet any insistence on the part of lenders that loans can only be on a project basis.

The months ahead are crucial. And it is only by solving the foreign exchange problem over the Second Plan period, by use of resource in negotiations and by the expeditious launching of an export drive, that India can at all hope for sufficient foreign assistance forthcoming for the Third Plan.

Productivity Movement—A World Perspective

By HARISH CHANDRA

PRODUCTIVITY is not entirely a newfangled theory of the twentieth century. It has been implicit in man's economic activity from the very early times. But the present-day concept of productivity with its modern techniques and refined processes, and organized national movement to systematize and develop it, it is very much anew, indeed a post-war development, which has rightly been considered a cornerstone of the economy of the future.

"To speak and write about productivity is worthwhile only if it leads to action." This little but incisive observation made in an ILO publication, "Higher Productivity in Manufacturing Industries." crystallises the vital importance of productivity in industrial planning and development, and has incidentally induced the writer of this article to present a snapshot picture of the growth and development of productivity movement in certain countries in recent years.

American Productivity:

Since American leadership in the field of productivity has been accepted for a long time past, we begin with the movement and ideas of that country.

Although one of the first statistical enquiries on the subject, directed especially to a comparison of the productivity of labour in hand and machine operations, was carried out as far back as 1898 by the Bureau of Labour Statistics in the United States, little attention was given in American official reports to the problem of productivity. In the First Annual Report of the Council of Economic Advisors productivity was not discussed. However, fresh developments occurred at the end of the war. In the years 1945-57, wage disputes, more than any other factor, attracted attention to man-hour output. In the Economic Report of the President (January 8, 1947), it was stated that 'labour, on its part, must recognise that high volume at low costs and low prices requires high productivity and the absence of restrictions on productions. The gain of 3 per cent per year in man-hour output during 1900-20 had been ascribed to technological developments and a steady stream of additions to plant and machinery. Nevertheless, in the Midyear Economic Report of the President (July 21, 1947), it was emphasized that "recognising their common interest in common ends, they (capital and labour) should do every thing in their power to increase production so that the goals of maximum production, employment, and purchasing power can be continuously achieved."

Inspite of apparent under-emphasis in the United States, remarkable high productivity has been achieved there—thanks to the American 'know-how', technological efficiency, and business integrity. According to a recent Economic Survey, United States business has further increased its capital outlays, encouraged by the sustained high level of trade and by the further growth of industrial production, the rise of personal income to higher and higher records and the economies resuting from improved equipment. The advantages of high labour productivity in the United States have been succinctly summarised by E. Glague in his article Planning Guides for Industry' in Dud's Review (October 1948, pp. 20-21) in the following words:

"Productivity, once simply a tool for the economist, is acquiring new significance to the worker, the businessman, the soldier, and the statesman. It has long been understood that the relatively higher standard of living of the American citizen was the direct fruits of higher productivity in our economy. In effect, it has given us not only bread and butter, but jam as well.

During most of the last century there has been a high and steady rate of growth in production per man-hour in the U. S. Primarily, this has resulted from the continued acquisition of technical knowledge and its steady application to the jobs we want done. The cumulative effects have reshap-

ed the lives of all of us. As our production potential has increased, the average worker has been able to buy steadily increasing quantities of goods. Simultaneously with more goods, we have been able to afford more leisure time in which to enjoy them. Many arduous but necessary tasks have been eliminated. The labour of the home has been greatly reduced. As we have freed ourselves from the pinch of material wants, we have been able to divert an increasing proportion of our resources to such activities as schools and social services."

Productivity in U.K.:

The productivity problem first attracted attention in the UK after World War I as a result of loss of foreign markets. The scarcity of goods and labour after World War II again moved British experts to consider the problem. But the credit for highlighting the problem goes to Dr Rostas whose pioneer study on the subject revealed that man-day output in the US was 106 per cent above that in the UK and the excess was 20 per cent additional on an hourly basis. The Cotton Textile Commission to the USA also found that, whereas from 1910 to 1935, the output of eight types of grey cloth per man-hour in the United States had increased from a minimum of 46.74 per cent for carded weft sateen to a maximum of 1951.8 per cent for terry cloth, there had been little change of productivity in the United Kingdom. Another Textile Commission emphasized "the need of a rise in productivity to cope with a deficiency of man-power of 40 per cent, and increased competition abroad." A Commission of Experts on Coal similarly reported that "from 1925-27 to 1936, output per man-shift had risen by 54,81 and 118 per cent in Poland, the Ruhr, and Holland, respectively, but only 14 per cent in the United Kingdom." The need of increasing productivity was left pressingly in 1947 when the British balance of payments deficit was estimated at £650 million or about 12 per cent of the country's personal consumption. Another estimate (F. W. Paish: "The Finance of Reconstruction" Economic Digest, May 1947, p 30) placed the British requirement around £14,020 million (about twice the national output then) over the next ten years for repairing war-damages, deferred maintenance and replacement; for paying war debts, and for covering budgetary deficits. The UK Economic Survey for 1947 accordingly referred to the problem of productivity in these words:

> "In the longer view, increased output per man-year is the only way to expand production and the standard of living. The way to effect this is by the organised combined effort of men, management and machines.. With this direct object, (the Govt.) has allocated large resources to industrial equipment and maintenance work in 1947 and is ready to make foreign exchange available for imports of machinery which increase efficiency."

Efforts in this direction have borne fruit and we find that the British Government in its latest Economic Survey has drawn the picture of a prosperous Britain this year. The Survey reports that there was a total surplus of £455 million on current account last year. This was easily the best year since the war.

In Russia:

Productivity is an old story in the USSR Lenin wrote: "productivity of labour is, in the end, the most important matter, the essential matter for the victory of our social system." The increase of productivity of labour has been one of the most important aims of the Soviet Union's policies. Among the objectives of the fourth Five-Year Plan the Soviet Government would "raise the productivity of labour by making the utmost of the 8-hour working day, by the all-round mechanization of heavy labour-using branches of industry, by extending electrification in the national economy and by intensifying production processes." According to this Plan, overall national income in the years 1946 to 1950 was to rise by 48 per cent in stable prices, labour productivity by 36 per cent and the amount of capital by 50 per cent. Within 15 years, the output of steel and coal, expected to reach 60 and 500 million tons, respectively, would compare favourably with the production in the USA. A rise in productivity is the recognised nub of the Soviet economic problem.

In other European countries:

Of the other major countries, France has, in particular, focussed its planning camera on productivity. In the pre-war period, it was observed, real income per capita was but one-third as large in France as in the United States. Commenting on the high income level in Holland which has no iron, in Sweden, which has no coal, in Switzerland and Denmark, which have neither coal nor steel, and in New Zealand, the Monnet Report concluded that the standard of living depends on technical advances and not on economic resources considered in absolute manner and that while a longer working day will help in the short run, a rise in productivity is by far the most effective means of raising output in the long run. Referring to France, it stated: 'To restore its economic situation, France has been striving since the liberation to increase production. In her efforts to reach this aim, she has tried to ascertain the factors which limited production; some factors, such as the coal crisis and restricted imports, have been eliminated or their influence gradually reduced; one of them—and one of the most important —has not yet been sufficiently brought to light and studied; it has limited and still limits our production: it is our low productivity."

In Asian Countries: Japan & India:

The problem of productivity is of special interest to under-developed Asian countries with their non-industrialized employment structure and dominant role of agriculture. Considerable attention has been given to the problem of productivity in Japan and lately in India and a good deal of progress made in generating productivity consciousness and movement to attain higher rate of industrial output. Despite the rapid economic recovery of Japan after the Second World War, the present per capita income in Japan is only 1/10th of USA, 1/4th of UK and 1/3rd of West Germany. The productivity of the Japanese industry is also low compared to industrially more advanced countries. It is only 1/5th of the USA, 1/3rd of UK, and 1/2.5 of West Germany. The necessity of launching a productivity drive in Japan has been increasingly realised for strengthening their economy and thereby to meet the problems of over-population, of unemployment, low per capita income and inadequacy of national resources. In March 1955, the Japan Productivity centre was established. It has since opened four Regional Centres. The aim of the Productivity Centres in Japan is to organise the productivity drive as a national movement. The basic philosophy of the new movement has been defined as:

> "(i) Increased productivity ultimately increases employment, but as to the transitional surplus employment, pertinent measures should be taken to prevent possible subsequent unemployment as much as possible by the joint efforts of the government and people standing on the viewpoint of the national economy, by means of transposition, etc.
>
> The actual system for the increase of productivity based on each industry should be studied and consulted, by the joint efforts of management and labour.
>
> (ii) The results of productivity increase should be fairly distributed, according to the actual conditions of the national economy, among capital, labour and consumers."

Coming to India, it is a known fact that productivity indices of most of our industries are pretty low as compared to the figures of the developed countries. India has to make a great leeway in order to catch up with industries of other countries and compete effectively in the world markets.

Attention of the Indian Industry was focussed on productivity when ILO teams came out to this country in 1952 and 1954. Assignment of the teams consisted in showing how productivity and earnings of workers could be raised by the application, in selected plants, of modern techniques of work study and plant organization and, in addition, where appropriate, by the introduction of suitable system of payment by results. These teams worked in some textile mills of Ahmedabad and Bombay, and in certain engineering concerns in Calcutta. They demonstrated to the managements and trade union leaders that given adequate supervision, with the same plant and equipment, the existing staff can secure distinct improvements in productivity even after comparatively short training in productivity techniques. Besides, beneficial results were obtained in regard to labour relations and materials utilisation. Work done by the ILO teams showed a production increase from 12.5% to 116% in engineering industries in various plants in individual items of manufacture by utilising the tools of method study, product study, layout of workplaces and material handling. In the matter of cost, in engineering plants, they showed that production cost was reduced for instance, from Rs 3.85 to Rs 1.91 for a certain type of screw, from Rs 233 per 1000 amplifier fuses to Rs 48 per 1000, and from Rs 297 to Rs 137 for 100 clamps of a certain variety. In textile industry the teams showed increase of production ranging from 6% to 36% in various processes including stentering, calendaring, winding, carding and drawing. These increases were effected by method study, quality control and improved machine maintenance.

The necessity for advancing the industrialization of under-developed Asian countries is recognised and the process of industrialization is already under way. National and international efforts are being made to accelerate the tempo of development. Economic development requires and implies higher productivity per capita. As productivity increases and incomes rise, the expenditure pattern will change. Increased productivity in sectors outside, as well as inside, industry itself will call for an increased application of manufactured producer goods, machinery, tools of all kinds, cement, structural steel, fertilizers. From the stand-point of rapid economic growth, capital intensive techniques offer distinct advantages. The higher levels of productivity which can be achieved with these techniques would make possible a higher rate of capital accumulation, larger output and, in the longer period, creation of larger employment. Some capital intensive activities might have a more immediate effect in the indirect promotion of employment in other fields.

NOTE: This article has nothing to do with the official position of the author as Assistant Director of Industrial Statistics, Government of India, and any opinion contained in it is his personal opinion and not of the Government or of the Directorate of Industrial Statistics.

Thoughts on the Third Plan

THESE are days of Seminars, Working Groups, Study Teams, Conferences and Memoranda—all in connection with spade work for the Third Plan. Sectional studies have their value, but a bird's eye view might have its own value in helping a sense of proportion and balance.

What should be the size of the Plan? There are two views about it. One votes for fiscal respectability, minimum dependence on external aid, and cutting the coat according to the available cloth. In those critical months of 1958, The Economist (London) referred to "enthusiasm outrunning the constable" while commenting on the Indian Second Plan, and hoped that this country would not degenerate into the predicament of : "Help me or I shall go bankrupt." The downgrading of the Second Plan from Rs 5,400 crores to Rs 4,500 crores, in spite of Rs 1,423 crores of foreign aid, is pointed out as a lesson to learn from. On the other hand, there is the other view that a plan which does not stimulate a crisis which in turn is bound to produce the required effort and achievements beyond the expectation and even the imagination of the planners themselves, is no plan at all. The economic potentialities of India are immense, and anything less than Rs 10,000 crores, after the experience of the first two plans, should be considered as proof of an inferiority complex. It cannot be denied that **per capita** income is abominably low from the view point of modern standards, the saving margin is just not there and consequently local resources must be admitted as being very limited. But champions of the other view hold that copybook maxims like "neither a lender nor a borrower be" should not apply to public finance: countries like Canada and Japan imported heavily from abroad, and the resultant investments proved very helpful in economic development, unaccompanied by any political domination. Further, nationalisation of gold (with liberal exemptions) must bring in several thousands of crores worth of the yellow metal, and the international prestige of India should stand much higher than at present, with such augmented gold backing. "Discretion is the better part of valour" is opposed by the view: "nothing venture: nothing gain." In this respect, the hint given by Prof J. K. Galbraith should be considered very timely: he is definitely for a big plan.

Where are the resources? Optimists point out that internal resources should prove quite good. Fresh taxation in rural areas, particularly on agriculture, is pointed at as a fat source. The opposite view is that such fresh taxation would be undesirable because there are already several disincentives in rural areas resulting in stagnant production, and any fresh taxation might prove the last straw on the camel's back. Additional taxation in urban areas is upheld by some, but others believe that the saturation point has already been reached. The idea of maximising profits from the public sector is quite rosy, but technicians hold that such profits should be devoted to reinforcement and regeneration: diversion to the common pool must rouse loud complaints from consumers as well as workers: the Indian Railways are an instance in point. Any way, it would be wise to cherish limited expectations with regard to internal resources. No doubt, the recent Rs 175 crore loan was over-subscribed in two days, but the small savings campaign yielded only Rs 210 crores during the first three years of the Second Plan period. Another possible source is the tightening up of the tax gathering machinery, but this would remain a pious hope until public morality improves sufficiently. Thus, it might be rather too high to expect an additional Rs 2,000 crores for the plan from taxation. Rs 3,000 crores is probably to be allotted to the private sector, Rs 1,000 crores is the high watermark for deficit finance, and another Rs 1,000 crores is expected from external quarters.

How much can be expected in the shape of external aid? The inflow can be at government level or in the private sector. Mainly as a result of heavy borrowings at government level during the past few years, the creditor-debtor position of India has definitely worsened, but this is from the accountant's view point, not the financier's. As recently as in 1956, India was a creditor to the tune of Rs 215 crores (net), but by the end of 1958 it became a debtor to the extent of Rs 648 crores (net). Taking the Government sector only, India changed from plus Rs 970 crores in 1955 to minus 60 crores at the end of 1958. Since 1951, US advances to India amount to over $1,700 million, and foreign aid (secured and promised) during the Second Plan stands at Rs 1,423 crores in the fourth year of the plan. On the other hand, import of private capital has been quite small: Rs 9.2 crores (1954-55 average), Rs 11.6 crores in 1956, and Rs 16.3 crores in 1957. There has been a distinct change for the better as a result of the World Bank Conference at New Delhi in 1958 and business surveys like the one headed by Mr Paul Brent and another from the Columbia University. Private capitalists in the USA have been told that if they do not wake up and push forward immediately, competition with European private capital might prove difficult later in India. The scope for foreign private capital in India is practically limitless because of inexhaustible and inestimable potentialities: almost every month, we are stumbling across mineral deposits here, oil there and gas at a third place. But, such import of foreign private capital would be enormously facilitated by local enterprise jointly sharing the capital. America has already gone so far as to discuss the superiority of tax deferrals to reduction in tax rates on private capital invested abroad, with a view to encouraging re-investment abroad. Unfortunately, the Ootacamund "quick march" gesture to socialisation has come as a damper, and it has not yet quite been neutralized by views expressed by the Prime Minister and Mr Lal Bahadur Sastri. The latter said that there was sufficient room in India for both the public and the private sectors, but he forgot to add that there was inevitably wide scope for complementarity, not merely rivalry and competition. In brief, resources should prove plentiful, particularly through the import of foreign private capital: the concommitant import of technical know-how should prove equally valuable: there have already been about 500 instances of technical collaboration from abroad. Unfortunately, the private sector is being discouraged not only in the field of large scale enterprises but even in small industries: the Small-scale Industries Board has all the advantages of government support.

How about priorities? Many a minister has attached first priority to one or the other of the following four items, not from the long-range national point of view, but according to the place of meeting and composition of the audience:

(a) Steel, electricity, oil and gas, railways, machine tools, machine making factories, etc..
(b) Food production.
(c) Small and hand industries.
(d) Import-export policy intended to curb consumption.

The present commitments with regard to (a) will prolong far into the Third Plan and any additional items should prove too heavy: the only exception would be the installation of a fertilizer plant making factory. With regard to (c), the best policy would be to allow full freedom to private enterprise, government contenting themselves with advice and rationalisation. Export-import policy has of late been very autocratic and spasmodic, resulting in social misery at home and suspicion abroad. Food production should undoubtedly get first priority. Imported grain is not only a matter for humiliation but also a crushing burden on the country's finances. The achievements in Japan and in China point at the possibilities of intensive cultivation and communising agriculture: we have embraced neither, but are busy with academic discussions about land ceilings and Co-operative farming. The average production of rice in Japan is 3,750 lbs per acre while the corresponding figure in India is 702. In 1958, China produced over 50 ounces of foodgrains per capita per day, while the target in India is only 14 ounces. Where is the shoe pinching? The cultivator's obedience to orders is taken for granted, and policies and programmes are announced from the hill-tops without reference to practicability. The Third Plan should prove a miserable failure if it did not raise foodgrains out-turn in India to at least 25 ounces per capita per day: The Prime Minister has announced a 73 million ton out-turn in 1958-59, but this is encouraging only as a trend: the minimum target is much higher.

What are the cognate problems? Planning cannot be all economic: it must pervade the entire national life from all aspects. A few of such problems may be cited here. Excise revenue is a variety of small savings, apart from sentiment, and it is difficult to understand why unable and unwilling quarters are asked to contribute, while denying excise money.

Linguism has attained an importance not even dreamt of in the forty's. Seven languages face the child: mother tongue, state language, english, hindi, a North or South Indian language according as the child belongs to South or North India, sanskrit and any European language like French, German or Russian. Should the Universities teach through the local language, hindi or english? Opinion is sharply divided, but one thing is certain: already, the power of expression has deteriorated a great deal on account of handicaps unavoidable in local languages. Commonsense should be the deciding factor, not sentiment.

Planning implies a high degree of regimentation, and ten years of planned economy have developed the totalitarian tinge into a definite trend. Yes-men are on the increase and, in spite of the democratic garb, free thinking and expression are being pigeon-holed. An instance in point is the cold way in which the new Conservative Party has been talked about even in Parliamentary circles. Panchayats and Co-operatives are held up as the panacea for all socio-economic evils, but ministers and Heads of Departments run up to New Delhi even on very minor issues: verily, a variety of brown colonialism has been developing, and this should be done away with before the Third Plan period begins. It should be Peoples' Plan—clearly thought out, boldly framed, adequately explained and loyally worked with due regard to flexibility or elasticity.

EDITORIAL NOTES

Contaminating?

THE controversy over the relations between the Swatantra Party and the Forum of Free Enterprise is getting "curiouser and curiouser". The trouble was started by Mr. Nehru with a stray remark at his last press conference, defining the Swatantra party as the "political projection" of the Forum of Free Enterprise. This is a legitimate inference which many others might have drawn from the *identity of the economic ideologies* of these two organisations. Both Mr. Shroff and Mr. C. Rajagopalachari have acknowledged this similarity in their rejoinders to the Prime Minister's remark. But it appears that both have been touched on a sore spot and their reactions are, to say the least, amusing.

Rajaji has hastened to deny what he has described as the Prime Minister's allegation. He has also taken the public into confidence regarding the actual parentage of his Swatantra Party. To that he has added the curious statement: "While I deny the Prime Minister's charge, I shall take it as a caution and be very careful about it."

All this is very puzzling and more so when the statement is made by Rajaji whom one cannot accuse of failure to understand the plain meaning of words or of mathematical metaphors. To say that one organisation is the projection of another does not necessarily mean that one is the creation of the other. It only draws attention to the similarity of aims which Rajaji has acknowledged in so many words. But the anxiety shown by Rajaji to dissociate himself from the Forum makes one suspect that, in his view, the contact is contaminating. If Rajaji really thinks so, it is up to him to make the reasons clear.

After this statement by Rajaji, the Forum would have been perfectly justified in opening hostilities against him and his Swatantra Party. But surprisingly, Mr. A. D. Shroff, the Founder and the presiding genius of the Forum, has chosen to pitch into Nehru, and in doing so has crashed right through the Looking Glass into the other side. He has solemnly declared that the Forum is a non-political organisation which is exactly what was meant by the phrase chosen by the Prime Minister. And, even otherwise, why should he get so hot about it and go on to suggest that the Prime Minister was indulging in unwarranted imputations and insinuations." Does Mr Shroff really think that contact with the Forum will pollute the Swatantra Party or *vice versa*?

*

Food Prices

While the Parliamentary committee on food is non-plussed by the prevailing high prices of food grains in spite of last year's "record" output, and Government's advisers on agricultural statistics seem to be caught in the same plight, businessmen appear to be better placed to view the problem in perspective. Addressing the Maharashtra Chamber of Commerce on State Trading in Food grains, last week, Mr Lalchand Hirachand, President of the Indian Merchant's Chamber, pinpointed declining supplies as the principal reason for the rise in prices. He also emphasised that State Trading could not cure the evil, which would disappear only with increased production and efficient distribution.

When Mr Lalchand Hirachand was referring to declining supplies, he must nave had the marketable surplus in mind. It is common experience that increased estimates of productions are not invariably reflected in the supplies coming to the market. In recent months, the normal flow of foodgrains from producers to consuming centres has been interrupted by prevailing uncertainty about Government policy and, more directly, by the unco-ordinated manner in which prices were fixed in different regions.

While hostility of businessmen to State Trading, in principle, colours their reaction to the proposal for introducing State Trading in food, the practical difficulties they have pointed out should not be dismissed as the inventions of prejudiced minds. A few days ago the Union Food Minister, speaking in Madras, reiterated the Government's determination to implement the scheme of State Trading in Foodgrains. The position would not have been so bad if the Government had taken the decision and immediately proceeded to implement it, instead of talking of State Trading in season and out of season. The result of Government's fumbling has been to block the flow of the marketable surplus while Government has no effective machinery to take over the functions discharged by the private traders.

The interruption of supplies, the direct result of this inept policy, was the main reason for the rise in prices. In this context talk of conspiracy by the Trade and the producers, to hold back supplies, is just silly. With the threat of State Trading hanging over their heads, traders cannot be blamed if they took precautionary action to limit their commitments, by curtailing credit at one end and reducing their purchases at the other. In fairness, the blame cannot also be shifted to the producers, even though the traders are only too ready to pass the buck. With the spectre of compulsory procurement looming large in the wake of State Trading, the producers should not be blamed if they were reluctant to part with their surplus to the traders. Naturally they wished to keep back some stocks in order to hand over to Government procurement officials, who, they expected, would be raiding their barns any time. Their memories of the days of wartime rationing and compulsory procurement were not exactly pleasant. They knew what to expect if they had no stocks for the official "raiders." What they had kept for their own use would be taken away by force and they would be left to depend on the uncertain supplies from the ration shops and to starve when these failed. The reason for the debacle of Government's food policy is not a conspiracy. Rather it is incompetence at all levels of policy-making and implementation

*

Record Output

In the context of costly food, it is also apposite to examine what exactly the "record output" of the last season, over which Food Ministry appears to be still gloating, actually means in terms of food supplies. The total production, including cereals and pulses, is estimated at 73 million tons. This figure, it may be added, has been cooked up by including a guesstimate of five million tons for small millets, which are not normally included in food statistics. But, this year, these figures were also included, perhaps, as a tribute to the *Rabi campaign*.

Even including small millets and cattle feed, what does the record output actually mean in terms of per capita availability? After allowing ten per cent for seed and wastage, and taking population at about 365 millions—it must be certainly larger—this works out to a ration, per head, per day, of about one pound, including, rice, wheat, jowar, bajra, barley, oats, maize, ragi, arhar, mung, masur, chana, kesar, beans, peas and non-descript millets whose consumption is confined to small isolated pockets. Anyone who regards this as an overwhelming surplus of foodgrains must be either a diabetic, or a dyspeptic.

A daily ration of one pound of foodgrains of all categories will mean an intake of less than 1600 calories at the most liberal estimate. Diet surveys have shown that the masses get over 75 per cent of their calorie intake from foodgrains. Other items necessary for a balanced diet, like meat, eggs, fat, milk fruits and vegetables sugar and gur, do not figure to any significant extent in the average Indian dietary. That means that the total energy intake is only about 2133 calories. Against this must be set the fact that the energy requirements of an average adult doing light sedentary work has been estimated, by the Nutrition Advisory Committee of the Indian Council of Medical Research, at 2400 calories. The actual availability is not only below requirements but is also less than the rate of basal metabolism, even taking the lower figure for tropical countries. Will the experts and statisticians who are alternately crowing over the record output of the 1958-59 season, and throwing up their hands in despair at the insatiable appetite of the Indian people, take time off to digest the significance of this brutal fact?

When the availability of food, even in the best of times, is below the minimum required for adequate nutrition, the cultivators eat a little more in the years when the harvest is good, so that the marketable surplus does not increase in proportion to the total output. And when a bumper crop follows a bad year as happened last year, they have an additional incentive to hold back a little more, as insurance against a repetition of the experience of the previous year when crops were short.

Food policy is not likely to yield expected results, unless it is based on a realistic appreciation of supplies and requirements. In this context, patterns of consumption, regarding which there is ample information in their archives, instead of being led astray by theoretical estimates whose only purpose apparently is, somehow, to equate supplies and requirements.

WORLD OF FINANCE

Second Tranche Prospects

NEITHER the Scheduled Bank return nor the State Bank return released during the course of the last week has any considerable light to throw on the manner in which Government received their new loan subscriptions. However, in money market circles, it s generally assumed that the support for the new loan programme forthcoming from the banking system can at best be described as having been middling to fair. The State Bank has figured as smaller subscriber to the new loan this year than was the case last year, the other Scheduled Banks are known to have been less enthusiastic about putting in new cash in addition to their conversion into the 3½ per cent 1969; and the Exchange Banks are known to have been reluctant not merely about cash subscriptions but also about conversions. It is time that we asked ourselves why the monetary authorities decided against a three-tier loan, in which one at least of the issues was intended specifically to pander to and conform to the requirements of the banking system. For, the fact of the matter is, let it be admitted, that a loan with a maturity of 10 years could have scarcely proved popular with the banking system. What, then was the motivating factor behind the decision of the Government not to include a short or short medium?

We suggest that Government were fully aware of what they were doing. In the first place, having regard to the state of the money market when the new loan announcement was made, little reliance could have been placed on the capacity of the banking system to invest new money in the new loan. At that time, the slack season had not yet fully got into its stride, the return of Advances was not pronounced, the accretion to Deposits was not of worthwhile dimensions. In this sense, the monetary authorities apparently decided that they stood to gain very little if a bank-orientated issue was included in the first tranche of the borrowing programme. Moreover, the intention would surely have been to compel banks, as far as it lay in the power of the monetary authorities, to extend the maturity pattern of their holdings. The Scheduled Banks could not afford to keep large cash balances and there was no possibility of an increase in the demand for funds. Hence, banks were left with no alternative than to convert their holdings in the maturing loans into the 3½ per cent 1961. The monetary authorities might have felt that they would needlessly add to short-term maturing liabilities, if a new loan programme had included a short-term issue, since banks figuring as holders of the maturing loan, in such a contingency, would not at all have considered the 3½ per cent 1969, not to speak of the 4 per cent 1979. Hence, it may be argued that the monetary authorities seized on a convenient set of circumstances to bring about an extension in the maturity pattern of securities held by the banking system.

But, surely, it will be the intention of Government to mop up the extra resources that will accrue with the Scheduled Banks during the course of the current slack season. On the one hand, the first tranche of the borrowing programme has not achieved the target set for borrowings in the Budget. On the other hand, resources of the banks have not been channelled into securities in the way in which it was done last year. Hence, it is apparent that the second tranche of the borrowing programme will or should be intended mainly to what we may call the giltedged requirements of Scheduled Banks.

In such a light, it should be obvious that the second tranche of the borrowing programme, which itself is inevitable, will seek particularly to induce subscriptions from Scheduled Banks. If we grant that such is the intention or desire of the monetary authorities, then, it stands to reason that the loan to be offered cannot have as long a maturity as ten years. Our own view is that a 3½ per cent 1966 should be planned. It is not strictly a short-term loan, but a seven-year loan which would, it is obvious, appeal much more than would a ten-year issue.

The advantage of a 3½ per cent 1966 is that it will not add to the maturing liabilities during the Third Plan period. Secondly, 1966 is perhaps the only year until 1969 wherein maturities amount to less than Rs 100 crores.

+

Reverse Ad Hocs for Rs 75 Crores

While the return of the Reserve Bank for July 10 is largely barren of interest, the statutory statement of Scheduled Banks for July 3, read in conjunction with the return of State Bank for the same week, is fascinating in its implications.

Firstly, Deposits of Scheduled Banks fell by Rs 6.43 crores to Rs 1782.16 crores; secondly, Advances rose very steeply by Rs 20.44 crores to Rs 1005.26 crores; thirdly, cash balances declined by Rs 37.28 crores; and lastly, the investment portfolio marks a rise of Rs 6.27 crores to Rs 637.37 crores.

The changes in Deposits and Advances must be ascribed to a combination of month early demand for funds and of Advances taken perhaps for subscription to the new loan programme. In both these regards, the State Bank's share was negligible, and our view continues to be that public subscriptions involving a drawing upon Deposits and/or an increase in borrowings sought from the banking system would have amounted to scarcely Rs 10 crores or so. This view, consequent to the assessment that we made last week, receives some confirmation from the figures relating to Scheduled Bank investments.

It may be recalled that, during the week ended July 3, the State Bank figured as a seller of securities for nearly Rs 7 crores; and, despite this, investments of Scheduled Bank as shown in their statutory return have been marked up by Rs 6.17 crores. Allowing for some banks adopting the same procedure as the State Bank, which does not incorporate new loan subscriptions until the completion of formalities, it can be seen that the subscriptions of Scheduled Banks other than the State Bank would have been at a minimum of Rs 15 crores.

Then, outstandings of Treasury Bills, as on July 3, showed a drop of Rs 75 crores; and our own estimate of cancellation of ad hocs was, it may be recalled, Rs 80 crores.. Lastly, the latest State Bank return shows that it invested in the new loan for Rs 25 crores. One more fact needs to be borne in mind, and that is, that, on the basis of reverse ad hocs for Rs 80 crores, we had put down Reserve Bank purchases of the new loan at Rs 40 crores.

The position now seems to be as follows:

	(Rs crores)
State Bank	25
Other Scheduled Banks ..	15
Other institutional investors	10
Reserve Bank	35

But this adds up to roughly Rs 10 crores short of cash subscriptions. This, we presume, has roughly been shared by other Scheduled Banks and other institutional investors. And confirmation should soon be available.

In other words, it may be suggested that the support to the new loan from Scheduled Banks, which at one time was thought to be feeble, can now be described as fair.

Spillover of month-early disbursements has caused a small rise of Rs 0.31 crores to Rs 1721.71 crores in active note circulation, according to the returns of the Reserve Bank for July 10. However, Rupee Coin has returned from circulation for Rs 0.25 crores. The Reserve Bank's cash in the till is practically unchanged, consequently, at Rs 19.67 crores. Because Balances Held Abroad had

declined to rather a low level, a transfer of Rs 5 crores has been made to the Banking Department from Foreign Securities in the Issue Department, and there is a countervailing transfer from Investments to Rupee Securities.

✣

The return of the Banking Department is largely featureless. The Centre's balances are lower by Rs 7.35 crores at Rs 51.69 crores; on the other hand, Deposits of State Governments show a slight improvement. The Reserve Balances of member banks have recorded a rise of Rs 11.16 crores to Rs 77.14 crores, owing largely to the State Bank. Banks would appear to have reduced their indebtedness, since the Reserve Bank's other loans and advances are lower by Rs 3.91 crores. Finally, the import surplus has occasioned a considerable fall of Rs 3.73 crores in foreign balances.

✣

The return of the State Bank for July 10 shows that Deposits have gone up by Rs 2.93 crores to Rs 537.92 crores. The investment portfolio, in round figures, shows a rise of Rs 25 crores, with Other Assets being drawn down by Rs 27 crores. The total of Advances is lower by Rs 3.69 crores. As a result, cash in hand and with the Reserve Bank has improved by nearly Rs 10 crores to Rs 28.29 crores.

✣

The Practice of Take-over Bids

By Paul Einzig

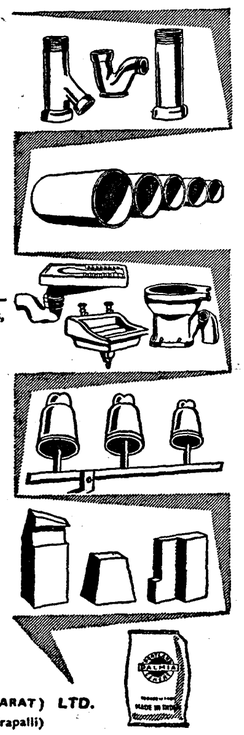
TAKE-OVER bids have become the favourite topics of conversation overshadowing the difficulties over Berlin, the hydrogen bomb controversies, the coming general election, the revival of wage demands, and even major sports events which have always been a favourite British topic of conversation. Those interested in the Stock Exchange as investors or speculators look out in their newspapers for the latest news about take-over bids. People comment or gossip wherever they meet about the latest developments in the struggle for the control of Harrods Stores or some other firm which has been or is expected to be the subject of take-over bids. Hardly a day passes without some new development in that sphere.

Those directly concerned as shareholders in any or all take-over bids constitute of course a small minority of the public. But those who have no stake in the game, and have not the financial means or the temperament to take a hand, also take an interest in the progress of some competitive bidding for the control of some well-known business house. As customers of the firm concerned they may be worried about the possible effect of the impending change of control on the service they receive. They may be interested in the broader economic aspects of the transactions. If they are Socialists they turn green with envy and yellow with spite at the evidence of big profits being made in connection with take-over bids, not only by those who make the bids also by investors and speculators who were lucky or clever enough to get in at the right moment.

The subject of take-over bids was debated at some length in the House of Commons at the beginning of July. The Labour Party delivered a major attack on the practice and criticised the Government for failing to devise means for its prevention. In the eyes of true Socialists it is one of the mortal sins to make a profit through Stock Exchange operations, and on that ground alone they condemn take over bids out of hand. There is, of course one exception—the successful take-over bid made recently by Odhams Press, publishers of the Socialist Party's newspaper *'Daily Herald,'* for two important groups of publications, the Hulton Press and Newnenses.

Class-hatred is not, however, the only basis on which take-over bids can be criticised. Only too often hostile criticism is only too well justified. Changes brought about by successful bids are often not to the advantage of the firms acquired. Admittedly, the shareholders benefit by the high prices paid for their holdings. But if they remain shareholders they are apt to come to regret it sooner or later, for the successful bidder may exploit the resources of the firm for his own purposes to the detriment of the firm he acquired. Financiers concerned in such deals are not bound in any way by traditions for good service, high quality, and generous treatment of employees. They may be after a quick profit and to that end they pay high dividends instead of ploughing back a reasonable proportion of the profits into the firm. They may sell the real properties in which the firm and its many branches operate, in order to raise funds for financing other operations.

It is easy to make out a formidable case against take-over bids on the basis of recent experience. It is considerably more difficult to suggest measures that the Government could usefully take against the device. It always remains possible to buy up gradually the controlling interest in firms the shares of which are held widely, and the difference between this method and take-over bids is mainly the dramatic character of the latter method in securing control with a single bold stroke instead of acquiring it in driblets. As for the ultimate effect, it is the same, whichever method is employed for securing the controlling interest



In any case, it is doubtful if it would be wise to prevent take-over bids even if this were possible. At least one or two of the recent changes in control resulting from take-over bids were justified by leading to increased efficiency and the elimination of waste. The replacement of inefficient or inactive managements by more efficient and active managements is to the lasting benefit of shareholders, employees, consumers and the country as a whole. Although in a great many instances traditional methods are an assets, in other instances they are a liability. And British business is often gravely handicapped by its management being too tradition-ridden, and the introduction of new blood is in many cases useful and necessary

In one respect at any rate, Socialist opposition to take-over bids is most illogical. Socialist pressure tends to keep down the level of dividends. Firms abstain from distributing a sufficiently large proportion of their profits, for fear of attacks by Socialist politicians and of steeper wage demands. It is the low level of their dividends that is responsible for the low valuation of their equities. The low level of Stock Exchange prices provides opportunities for take-over bids by bargain hunting financiers.

The practice of take-over bids is not new, but in recent months their number and extent has increased. The result is an atmosphere of restlessness on the Stock Exchange. Nowadays investment in any group of equities which are liable to be subject to take-over bids has become a gamble. The anticipation of such bids has raised the prices of many equities, even though only one or two of any group is likely to be subject to take-over bids. The shares for which nobody bids are likely to drop back to the level whence they had risen in anticipation of the bid. In the circumstances, the investment advisor's lot is not a happy one.

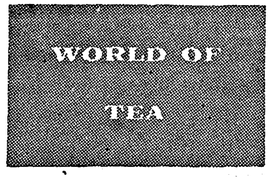
Diversification of Production

WITH the release of the figures for production of jute goods during the month of June, it will be interesting to study the production trend in the Jute year 1958-59 in comparison with that obtained during the previous year. Total output during June at 82,700 tons shows a fall of 4,100 tons as compared with the previous month and a small increase of 300 tons as compared with the corresponding month a year ago. Of the June 1959 total, hessian has accounted for 37,800 tons. . Sacking for 35,800 tons and other varieties for 9,100 tons. It appears that the decline is due to the fact that during June the mills have worked for 200.5 hours as against 206 hours in the previous month. But it is to be noted that during June mills have worked toward the close for a week with only 12½ per cent loom sealed whereas during May the percentage of sealed looms was 14. The output figures for June do not seem to reflect the additional production that should have accrued from the 1½ per cent looms unsealed from June 22.

Taking the figures for the whole year, July 1958—June 1959, it will be seen that total production has amounted to 1,040,500 tons, somewhat lower than the total of 1,056,200 tons recorded in 1957-58. The shift from sacking to hessian production is well borne out by the comparative totals for the two sections in the two years. Output of hessian in 1957-58 totalled only 391,700 tons; such output has considerably been stepped up during 1958-59 to be placed at 446,400 tons. As for sacking, output has declined from 596,700 tons to 509,600 tons. There has been a sizable increase in the output of other varieties from 67,800 to 84,500 tons. The extent of improvement in this section will become evident if it is noted that production in this sector has only been around 70,000 tons in recent years. (It was 69,100 tons in 1955-56, 70,100 tons in 1956-57 and 67,800 tons in 1957-58). The sharp increase last year is perhaps due to the increased attention that is latterly being paid to diversification of production in our mills. It is now increasingly being realised in our jute mill industry that if our overseas markets are to be retained and expanded, it is essential to cater to the changing needs of the foreign consumers. This new development in the pattern of production of our jute goods has been referred to by Mr David Pilkington, Deputy Chairman of the IJMA in his speech in New York last May. This change in the production pattern is also reflected in exports of the category of goods grouped under "others". Other goods exports have totalled 38,100 tons during July-May 1959 whereas such exports during July-May 1958 amounted to only 26,200 tons.



From the two sets of figures pertaining to stocks at the end of, and production during, June, it would appear that the overall conditions in the jute goods industry during the month have been quite satisfactory. Total despatches have been in the neighbourhood of 86,200 tons and the new year has begun with a stock of 95,900 tons as compared with a beginning stock of 134,000 tons.

✱

Conditions continued to be irregular in the jute goods market during the week-ending Wednesday. While the hessian section remained subdued with activity at a low ebb, the heavy goods section came in for alternate bouts of buying and selling mostly on speculative accounts. In the early stages the trend was downward on persistent rumours that the IJMA might shortly announce the unsealing of a further quota of looms in order to make available adequate stocks to meet the anticipated upsurge in overseas demand.

Hessian 40" x 10 oz July was quoted at Rs 41.30 last Friday and eased to Rs 41.20 by close on Saturday. Conditions in this section continued listless on Monday when Hessian 40" x 10 oz closed at Rs 41.15. After earlier weakness the rate recovered to Rs 41.25 by close of transactions on Tuesday mainly due to buying interest in the futures section. Wednesday found the hessian section no better and Hessian 40" x 10 oz closed easier at Rs 41.15. B Twills began easier at Rs 97.70 on unsealing rumour and lost further ground on selling pressure on Saturday to be placed at Rs 97.40. The undertone continued to be easier on Monday also when the closing rate was Rs 97.35. Thanks to speculative buying support the rate was pushed up to Rs 97.50 on Tuesday to make a smart upward movement on Wednesday on reports of fresh business from China for heavy cees, to be finally placed at Rs 98.25.

The raw jute market was generally listless in the absence of active mill interest. During the past week some scattered mill business was reported done but the volume of business passing was too small to make any impression on the price levels. In the absence of effective buying, sentiment followed the pattern in the goods section. Assam Bottoms was quoted at Rs 22.25 last Friday but later on steadily declined to Rs 21.75 by Tuesday. The rate remained unchanged on Wednesday.

Outlook Fairly Good

DISCUSSING the prospects for Tea, a well-known firm of brokers has stated that good tea will continue to command high prices, although the outlook for plainer varieties cannot be forecast with the same degree of certainty. The silver lining, however, is the steadily increasing consumption on domestic account and this will absorb a considerable quantity of the tea which is not wanted by overseas markets.

In respect of crop, it is feared that the second flush in Darjeeling will be as disappointing as the first flush; but it seems that many estates will produce quite useful second flush invoices and some very stylish Tippy advance samples have been seen. The general standard of manufacture from the district recently has been good and not only the best but some of the less well-known gardens have produced useful invoices which should shortly be seen in the Calcutta auctions.

The early second flush samples seen from Upper Assam have been oustanding with quality and flavour much above last year's standard. There has been an abundance of tip from orthodox gardens and many tippy teas are either in Calcutta or will shortly be arriving. As some of the estates may have been affected by the floods and the earlier rains have restricted production, the second flush may be good but small. There has also been a marked improvement in the standard of current manufacture from the Dooars, both in leaf appearance and cup quality. Although it is not expected that many fine teas will be seen, the second flush will be better than earlier samples suggested.

On the whole, it appears that the outlook for North-East Indian tea in the current season, is one of quiet optimism, provided care is taken to avoid a glut of unwanted tea in August and September. Although it is too early to talk of the crop prospects, there is a general belief that finer plucking will be maintained this year too or even intensified.

There is, however, a general fear in London tea circles that Common tea production, this year, will again be too great. Latest crop reports have certainly strengthened this feeling. It is estimated that world production, up to the end of June, totalled 266.7 million pounds as against 277.3 million pounds in the corresponding period of last year. The small decline is mainly due to a fall in output in India and Ceylon; and this is likely to be made good in the coming months.

Meanwhile, in the Export Sale held in Calcutta this week, offerings amounted to 42,743 packages. Quality showed a further improvement. There was a fair demand, which improved as the sale progressed. Buyers were, however, discriminating though satisfactory prices were paid for the best liquoring teas on offer. "Teas for price" and Plain Brokens were firm to dearer; but similar Fannings were irregular and sometimes upto 4 nP per pound easier. The brighter legg-cut teas were sold well, but the more ordinary types were easier and at times difficult of sale.

Best CTC Assams and bright liquoring teas of orthodox manufacture received fair support at irregular and slightly easier rates. The brighter Orange Fannings were well supported and were firm to dearer; but the remainder were irregularly easier. First flush CTC offerings were again neglected. The most stylish Leaf grades were a little easier; but the remainder declined by 10 to 20 nP per pound.

Darjeeling teas met with fair support at a further drop; but the most flavoury types were keenly competed for at dearer rates. Tippy teas were again considerably easier. Following rates were quoted:—Clean Black Pekoe Rs 1.96; Plain BP Rs 1.66 to Rs 1.72; Plain Fannings Rs 1.60 to Rs 1.66; Medium BP Rs 1.95 to Rs 2.00; Medium Fannings Rs 2.10 to Rs 2.20; Best Assam CTC BP Rs 3.40 to Rs 3.60 and Best Assam CTC Fannings Rs 4.00 to Rs 4.40.

In the Internal Sale, offerings amounted to 14,860 packages of Dusts and 297 packages of Leaf grades. There was a good general demand. Dusts of orthodox manufacture were firm to dearer, particularly the powdery kinds. Legg-cut Dooars were upto 6 nP per pound dearer, powdery kinds in this category being well supported. Darjeeling Dusts were again sold at generally easier rates.

Medium CTC Dusts were irregular, the more ordinary kinds being upto 20 nP easier and often difficult of sale. Where quality showed an improvement, prices were firm and often dearer. The very best CTC Dusts generally followed this trend, more interest being shown in the exportable types which sometimes sold appreciably above valuations. The stronger liquoring powdery kinds also met with keen competition and realised satisfactory prices. Following rates were quoted:—Medium Dooars Dust Rs 1.70 to Rs 1.74; Medium Assam Dust Rs 1.70 to Rs 1.78; Medium Assam CTC Dust Rs 2.00 to Rs 2.30 and Best Assam CTC Dust Rs 2.80 to Rs 3.20. In the Export Quota section, business was reported done at 2¼ nP per pound. Towards the close, there were buyers at 2 nP with sellers at 2¼ nP.

WORLD OVERSEAS

Britain

THE gold and convertible currency reserves of the Sterling Area rose by £19,000,000 in June and stood at £1,133 million on June 30, the Treasury announced in London on July 2.

The reserves, which now stand at their highest point since September 1951, have shown a net rise of £37,000,000 in the first six months of this year.

With the exception of three months when special payments were made out of the reserves, they have risen every month since September 1957.

* * *

Reporting some falling-off in the world trade in rice during the first quarter of 1959, the Commonwealth Economic Committee's Rice Supplement for June, just published in London, notes in its general review that Burma has sold substantial quantities on government-to-government contracts at £33 per ton—slightly above the rate expected.

The inter-governmental sale by Burma of 350,000 tons to India was confirmed, the report notes, as well as that of 100,000 tons to Pakistan. It is believed, the report adds, that India will buy another 100,000 tons this year, leaving 350,000 tons of the five-year contract for 2,000,000 tons to be purchased in 1960.

There is also a report of the purchase by Ceylon of some 310,000 tons, of which 200,000 tons would be on the account of China to meet its obligations under the rubber-rice agreement. If these transactions are completed, the report states, it will reduce the carry-over from the 1959 crop to less than 300,000 tons—the exportable surplus, previously estimated at 2,000,000 tons, is now believed to be somewhat less, the report adds.

Of rice (paddy) production generally, the report notes that in Indonesia an official estimate of the 1958 crop is given as 7,600,000 tons, some 300,000 tons more than last year; trade circles, however, consider this estimate too high. In Formosa, greatly increased acreages are under cultivation, it is stated, and bumper harvests are expected. In Thailand, farmers are being given considerable assistance by the Government, it is noted, while in Egypt the prospects for the new season are good.

Of exports, the Commonwealth Committee's report says that details so far available point to a falling-off in the rice trade during the first quarter of this year. Shipments from Burma are estimated at about 318,000 tons, compared with about 330,000 tons a year earlier; consignments from Thailand showed a more marked decline from some 419,000 tons to about 262,000 tons. Shipments from South Viet-Nam declined slightly, while recorded exports from China showed a falling-off in March, the report says.

The United States is to purchase from Britain the largest stack of special nuclear film ever made. It will weigh 4 cwt and will cost £20,000.

The film will be used to photograph cosmic rays at a height of 120,000 ft. Ilford Ltd., of Britain, is the only company in the world to make this type of film in large quantities. Tracks recorded on such film enable scientists to determine the type of atomic particles present in the cosmic rays.

Ilford film emulsions were also used for recording cosmic rays in the U.S. satellite *Discoverer II*. The satellite carried a capsule which returned toward the earth but was not recovered. This carried five packs of Ilford film as part of an experiment designed to determine the nature of cosmic radiation in outer space. Further experiments of a similar nature are to be carried out.

*

Australia

[By CHARLES LYNCH]

REPORTS by the London 'Financial Times' that British investors are showing increased interest in Australian equity shares have not occasioned surprise in Australia, where a large volume of British capital has flowed into industry in recent years.

British funds form a considerable part of the total investment finance available to expanding companies particularly for the fixed interest type of security.

Last month Dalgety & Co., Ltd., one of the biggest wool agency houses, obtained £1,500,000 on the Melbourne Stock Exchange in one day, for an issue of 7 per cent secured notes.

Just prior to this, Imperial Chemical Industries of Australia and New Zealand Limited, in one day also, obtained an even higher sum, £3,000,000, for its 7 per cent secured notes, with a 20-year life.

The 'Financial Times' pointed out that Australia enjoys political and economic stability. Increasing diversification of the economy is steadily broadening the basis of stability, so that adverse effects of a fall in overseas prices, or a bad season, no longer brought depression.

Apart from these factors, the Australian economy is experiencing the stimulating effects of an increase in wool prices, and Australia's biggest export product now shows every sign of regaining its lost ground.

The *Financial Times* also says that the rapid rate of new capital raising, to finance expansion, has increased the supply of securities for trading on the Australian stock exchanges.

Results achieved, and the generally bright prospects for Australian industry, are believed to represent a strong inducement to far-sighted British investors.

As at June 1957, British investors had a total of £229,000,000 in paid up capital, issued debentures, and unsecured notes in Australia. When official figures for last year are released the total is expected to be substantially higher.

Australia's inflow of overseas private capital for portfolio and direct investment during 1957-58 totalled £95,000,000 including undistributed income.

Stating that this was a preliminary figure, the Australian Commonwealth Statistician said that there had been little change in the annual rate of identified overseas investment from the previous financial year, the total for which was £96,000,000.

Portfolio investment in Australian companies increased from £11,000,000 in 1956-57 to £14,000,000 in 1957-58.

The total direct investment from overseas interests in 1957-58 in branches of Australian firms and subsidiaries was £83,000,000 compared with £87,000,000 in 1956-57.

However, the official figures also show that overseas interests are increasing their holdings in their Australian subsidiaries. Direct investment in these, including undistributed profits, rose from a total of £71,000,000 in 1956-57 to £76,000,000 in 1957-58.

Commenting on the rise in value of of Australia's exports in the first half of 1958-58, the Statistician says that the most important factor underlying the increase was the rise in the value of meat exports. Higher prices were obtained and there was a large expansion in exports.

Increased tourist-class traffic and bookings, stimulated by the introduction of new aircraft on main trunk routes, have brought increased business for Australian domestic airlines at a time when a slight slackening of demand was becoming apparent in passenger loadings.

Electra aircraft introduced in March on the main Sydney-Melbourne route have proved successful for Ansett-A.N.A., the privately-owned airline. The government-owned trans-Australia Airlines, meanwhile, has been increasing its tourist-class business. This has contributed substantially to T.A.A.'s maintenance of traffic volume in the face of Ansett-A.N.A.'s heavily advertised and dramatic innovation of Electras.

The Electras have been extremely popular and unofficial estimates show that, in recent weeks, Ansett-A.N.A. has made spectacular gains in its proportion of Australian domestic passenger traffic.

The first Electra went into operation on March 18. In its first 21 days it made 80 round trips between Melbourne and Sydney and carried 10,142 paying passengers. Its 78 seats were utilised to 81 per cent. capacity. A second Electra was introduced in mid-April.

Observers see the impact of Electras as being of great tactical value to Ansett-A.N.A. but reserve judgment on the ultimate competitive picture that is likely to emerge. Only after Electras have settled into the operational picture and are being run by both airlines on a competitive basis, will it be possible gained by Ansett-A.N.A. in securing to measure any long-term benefit the first two Electras to operate in Australia.

Airline bookings on Australian domestic routes for the first months of 1959 are showing a substantial rise compared with 1958. Preliminary figures for January and February show increase of over 8 per cent. compared with the corresponding months last year. The March increase of over 14 per cent. reflected the Easter traffic which had lifted the April 1958 figures and thus reduced the April 1959 comparison. Business being written for May is particularly good.

Territory Rice Limited, engaged in rice-growing at Himpty Doo, in Australia's Northern Territory, is now harvesting its first sizeable crop. It is expected to produce over £100,000 worth of rice from 2,800 acres, and estimates of annual income from future crops during the next few years are rom £400,000 to £500,000.

Cotton growing may be added to the agricultural industries of the Northern Territory if experiments by the (Australian) Commonwealth Scientific and Industrial Research Organisation are successful. At Katherine, research workers are carrying out growing experiments with several cotton varieties.

New equipment to manufacture compressed asbestos fibre jointing, used for valve and pressure vessel joints, was recently installed by James Walker & Co. Australasia Ltd., in its Regent's Part, New South Wales, factory.

The new plant will enable the company to be the first in Australia to manufacture compressed asbestos products. Previously, such products were imported from the United Kingdom.

They have extensive application in industry, and to meet the requirements of the chemical trade, special bonding compounds and materials are used in the manufacturing, so that the jointing will not be affected by sulphuric and nitric acids.

The basic processing involves mixing synthetic or natural rubber with asbestos fibre. The finished product can be given a pre-determined thickness, and possesses great tensile strength.

The coral polyp, responsible for building the GREAT BARRIER REEF along the north-east coast of Australia, is also responsible for the establishment of a big cement-producing industry at Darra, Queensland, where the Queensland Cement and Lime Co. Ltd., has established Australia's biggest cement works to exploit the vast coral deposits. Coral is dredged out at the rate of 500,000 tons a year, and the rate will increase to meet demands for cement by Queensland users.

Darra cement is the cheapest capital-city cement in Australia.

£1,200,000 is now being spent by the Company to lift the plant's present cement capacity of 300,000 tons annually to 500,000 tons.

Darra is probably the only major cement works in the world using coral, a substance very rich in lime.

Successful dredging and transporting arrangements to bring the coral 40 miles by sea to the plant has played a major part in the expansion of the industry. The coral deposits, built up thousands of years ago, are 18 to 20 feet thick, and extend over a wide area between high and low water.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

THE British Labour Party is in the throes of a "crisis of conscience"—this time over their nuclear policy. Such anguished public introspection is not new to it and indeed it would appear that inspecting one's heart in public is the occupational disease of the political left all over the world. (The conservatives, even at the time of the Suez trauma, hid their split personality decorously out of sight). And the British left is fortunate in its comparative resilience. A debate like the one currently going on within the British Labour Party would elsewhere have split a party beyond redemption. But the Labour Party is sure to restore some kind of order, though this sudden itch for inspecting one's conscience could not have occurred at a more awkward moment. The general election is just round the corner and this divided counsel among the labour has been seized upon with unconcealed joy by the conservatives. Though embarrassed, the Labour leadership is hopeful of persuading the dissidents to the "official view", but whether the electorate at large would be amenable to such management is a moot question. For, in many ways, the "revolt" this time has some odd features. It has not come from that traditional nuisance to party leadership—the lunatic fringe of the party harbouring ideological cranks and odd fish. It is not even the left-wing intellectual sporting the New Statesman who is bothering it, though a very powerful section among this class has been urging a policy similar to the one now demanded by the dissidents. Indeed, the New Statesman has been loyally scouting a rather silly idea that some of the Aldermaston enthusiasts had been canvassing: one should refuse to vote for a Labour candidate if he is not in favour of renunciation of nuclear weapons. But the demand for a change in official policy has now come not from Great Turnstile but from the Transport House. It was not some constituency but the Municipal and General Workers Union, one of the "strong-holds of conservatism on the left", that has passed a resolution demanding that Britain should cease to manufacture nuclear weapons and prohibit the use of all such weapons from British territories. Close on its heels, the Transport and General Workers' Union, under the leadership of Mr Frank Cousins, has joined the dissidents. There is rich irony in a reversal of roles in which Aneurin Bevan appears as a fumbling apologist of a timid official line and the Transport House aflame with unconventional idealism going for him.

In justice to the official leadership, it must be said that their position is far from enviable. As Mr Gaitskell put it, he cannot give pledges which he may not be in a position to honour when he becomes the Prime Minister. The utmost that he is willing to do is to take the initiative in what is called a "Non-nuclear club". So far, official Labour leadership was committed to the production of nuclear bombs by Britain. In this, it hardly differed from the conservatives. But, now, the official leadership is willing to consider the idea of renouncing nuclear weapons if Britain can persuade other nations, with the exception of the US and the Soviet Union, likewise to renounce them. Thus there will be two clubs, a rather snooty nuclear club consisting of two members, who are not on speaking terms with each other, and another, a large, noisy bonhommous crowd, without nuclear weapons. Of course, this does not mean renunciation of any of the Nato obligations, and the provision of rockets and bomber bases in Britain for use by the US will continue. By the same token, American stock of nuclear bombs will act as the great deterrent against communist aggression.

*

This certainly is an advance from the early position which consigned renunciation of nuclear weapons to a distant future as part of a general settlement of global disarmament of both nuclear and conventional weapons. What is more important, it appears to recognise the crux of the argument of the critics of official policy that it is possible for Britain to exist with producing its own bombs. And it is this implied recognition that makes nonsense of the idea of non-nuclear club and makes it appear like a smokescreen to hide a desire to hold on to the bombs. If Britain can do without the nuclear bombs when others except the US and the USSR renounce them, there is no reason why it should not now. After all, it is not that the threat to Britain is from those people who are still to make their first atom bomb. The obverse of this logic is what conservatives have seized on to ridicule Labour leadership: what will be the new element introduced by the creation of the non-nuclear club that warrants the cessation of the manufacture of British nuclear bombs? Critics both from the left and the right allege that the Labour leadership is counting on the near certainty of their conditions for the formation of nuclear club not being ever fulfilled. If none else, France and probably China on the other side will refuse to give the kind of assurance of the sort required for membership of the non-nuclear club. And since the non-nuclear club envisaged by the Labour Party also implies, as a condition of its existence, a nuclear of only two members, the non-nuclear club will die even before it is born.

*

It seems to me that the Labour leaders are making a serious mistake in not accepting at least partially the demand of the party to renounce the status of a nuclear power. It may not be practicable to "prohibit the use of all such weapons from British territories" as demanded by the Municipal and General Workers Union. In the overt strategy against communist aggression, Britain may have to make available rocket and bomber bases for the take off of American nuclear weapons. But manufacture of its own nuclear weapons has always had a dubious moral, political and military case. The Labour party's reasons are hardly distinguishable from those of the Tories. Britain cannot have an effective voice in the councils of the nations unless it had its independent armoury of nuclear weapons. As Mr Bevan once put it without realising the incongruity of its coming from him, the British Foreign Secretary cannot be sent naked to the conference hall. Basically, the motive is merely a variation of old imperialist pretensions. Such pretensions in others are readily enough spotted by the British, as for instance, General de Gaulle's France. It is not seen that the logical conclusion of such an attitude is that every nation, which desires to influence the course of international events—and where is the nation that does not want to do it?—would be perfectly justified in wanting to have its own atom bombs. If this argument is valid, there is no valid reason for wishing to end the night-marish procession of aspirants for a nuclear status among the nations.

*

It is further claimed that, with its own bombs, Britain will be able to influence the US more effectively than without them. This argument, if not disingenuous, throws a rather odd light on the much vaunted Western community of interest. And one does not see how Britain's possession of bombs can restrain the US from doing anything foolish. The only contingency I can visualise is one in which America is deterred by fear of Britain using the nuclear bombs against itself. Such a proposition is not even funny. And if it is meant that the US evaluates advice and friendship in proportion to the number of hydrogen bombs the friend and adviser possesses, the Atlantic Alliance of free and equal

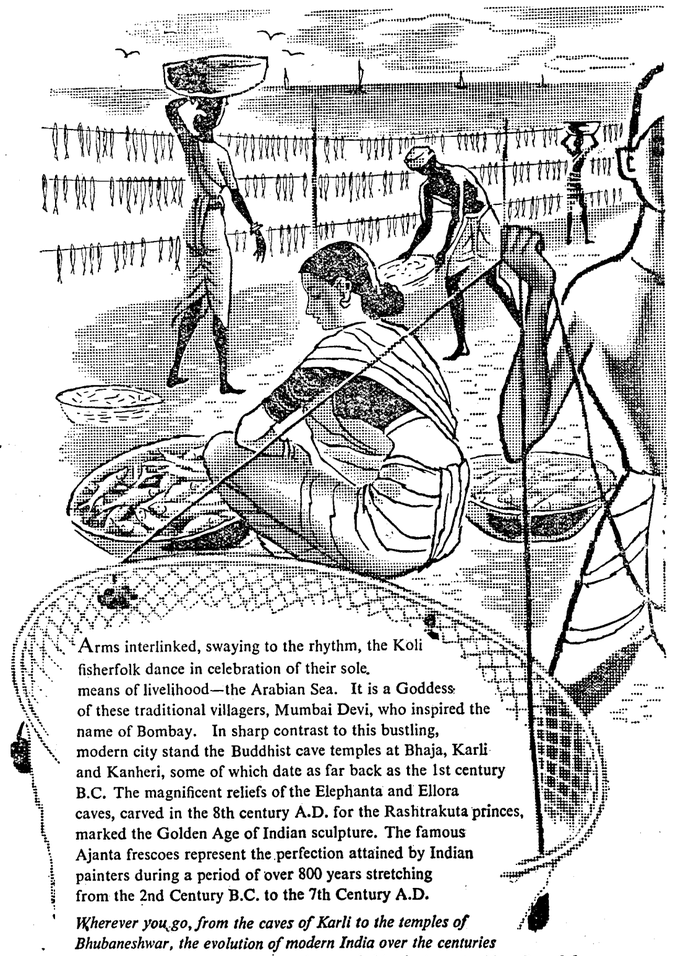
nations will be a meaningless farce.

*

The case, therefore, for Britain's wanting to be a nuclear power has always been dubious. Even from the point of view of preparedness against communist aggression, it has never made sense. In a series of articles in Encounter last year and early this year, the whole gamut of the nuclear logic was traversed. Summarising the various strands of the argument, Mr Alastair Buchan wrote, "Unlike the rainbow, this spectrum meets at both ends. At the one end stand the Air Force Generals in Washington, and a dwindling number of people in Whitehall, their eyes riveted on the long-distance arms race, convinced that the only modern alternatives are total peace and total war, believing in the implications of strategic stalemate are too dangerous to accept and that credibility must somehow be resolved to the American deterrent by a continuing accumulation of offensive power..... At the other end stand a motley array of organisations and individuals....united in the demand that the atomic weapon must be eliminated from international relations....In the centre, there is a growing body of opinion for which Strachey and Crossman and many others speak. They are supported by most naval and army officers in London, Washington and SHAPE, most of the leaders of the Democratic party, some influential Tories and the majority of intelligent newspapers, but all with little influence as yet upon the makers of high policy. The assumption which unites them is that the Soviet/American strategic deadlock is now fundamentally unbreakable and therefore unlikely to lead to total war, that conflicts for limited objectives are a more likely contingency and that therefore convential forces, the means of fighting them, must have as high a priority as weapons of deterrence, the means of preventing total war".

*

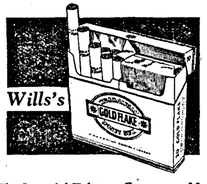
Even if you are to discount the moral and fundamentally political arguments against the nuclear weapons like those of Bertrand Russell and Rajaji, the narrow military and economic arguments of people like Crossman are irresistible. Militarily, Britain's bombs do not add a jot to the deterrent power already possessed by the US, and the sole professed justification for production of nuclear bombs is its deterrent power. Economically, their manufacture is doubly wasteful in the sense that it is using up funds that can be better used for gearing up the conventional fighting forces. From the larger economic point of view it is imposing an intolerable burden on the British economy, and —this is an argument that the Labour Party must be able to appreciate—is using up funds that are better spent on social services. It has been estimated by the National Planning Association of Washington that, if the present trend continues the world will, over the next twelve years, spend between 500,000 million and 2,000,000 million dollars on armaments—of which the US and the USSR will account for a third each —and, of the rest of the third, Britain's will be a sizable chunk. Again, the British Labour Party more than any other should be able to appreciate the chagrin and frustration of undeveloped nations at the waste of such enormous funds when a tiny fraction of that amount will put them on the road to prosperity.



*

Considering that renouncing manufacture of nuclear weapons would leave Britain not the least worse off either politically or militarily, the psychological and moral advantages of such a gesture should, I would have thought, have been irresistible to Labour leadership. It would, I have no doubt, have had a profound effect on the whole world. But, despite pressure from a section of the party, the leadership is not yet ready for such a gesture. Which is a great pity.

*



A last word about election prospects in the UK. The Labour Party split comes at a particularly unfortunate time, not merely because autumnal elections are certain, but moreover because the party in power has never looked more confident of being re-elected. But we can hardly be sure about the way in which the British voter exercises his franchise: in 1945, a Tory win at the polls was taken for granted; the only circumstance of doubt, therefore, is whether the 1959 elections will equally witness an upset.

EAVESDROPPER

Arms interlinked, swaying to the rhythm, the Koli fisherfolk dance in celebration of their sole means of livelihood—the Arabian Sea. It is a Goddess of these traditional villagers, Mumbai Devi, who inspired the name of Bombay. In sharp contrast to this bustling, modern city stand the Buddhist cave temples at Bhaja, Karli and Kanheri, some of which date as far back as the 1st century B.C. The magnificent reliefs of the Elephanta and Ellora caves, carved in the 8th century A.D. for the Rashtrakuta princes, marked the Golden Age of Indian sculpture. The famous Ajanta frescoes represent the perfection attained by Indian painters during a period of over 800 years stretching from the 2nd Century B.C. to the 7th Century A.D.

Wherever you go, from the caves of Karli to the temples of Bhubaneshwar, the evolution of modern India over the centuries is recorded in the innumerable relics of the past scattered all over the country. AND WHEREVER YOU GO there is the full, rich flavour of Wills' GOLD FLAKE to add to the pleasure of your excursions.

Wherever you go... they're good

Trends of Foreign Investment in India

BOMBAY REVIEW

THE important role of foreign investment in the economic growth of underdeveloped countries is now well recognised by planners and economists all the world over. True, rapid industrialisation, which alone can bring about a sizable improvement in the standard of living of the people in these countries, can be attained in diverse ways. But in essentially democratic countries the process has perforce to follow certain well defined lines. May be, some of the methods adopted as in India do not necessarily tally with those that one is familiar with in the older democracies. But there is and will be a basic identity in the different methods pursued.

Economic growth of any particular country can come about through self improvement by utilisation of the resources available within its boundaries, by foreign aid or by both. Since there are countries which have excess resources, the underdeveloped countries have a fair chance of quickening the pace of their development not only by their own concerted efforts in mobilising their resources but also by obtaining foreign aid in the form of both loans and investments.

With the beginning of planned development endeavours in our country, the problem of resources has come to the fore and as is to be expected our planners have taken into account the inflow of resources in the shape of foreign private investments. The acute shortage of foreign exchange in the country has brought into sharp focus the problem of resources that have necessarily to be obtained from abroad. It has been found that foreign loans are not to be had for the mere asking and there is also the aspect of interest and repayment to be taken into consideration even if loans were easy to obtain.

It is not surprising, therefore, that renewed emphasis has come to be laid on marshalling resources from abroad through investment the scope for which is considered to be quite good for a variety of reasons at the present juncture. To mention one, money in some of the more advanced economies is ready to participate in profitable investments abroad. But such money is also in great demand from many an underdeveloped country. The foreign investor is generally attracted towards countries where he is getting security for his investments combined with a good return thereon.

Has India been successful in attracting foreign investments of a sizable order? The answer to this question is both yes and no. Statistics show that foreign business investments have been steadily increasing from year to year since 1948. From Rs 288 crores in 1948, foreign investments stood at Rs 508.7 crores at the end of 1957. But it is averred that had it not been for the restrictive policies of Government the rate of foreign investment would have increased to such an extent as to have already helped the attainment of development on a wide scale.

Though the trend of foreign investment in India seems to be upward from an overall point of view, it would appear that the size of foreign investment is nothing to feel elated about. A review of the trends in foreign investments in India during 1957-58 appearing in the June issue of the Reserve Bank of India Bulletin shows clearly the position in this regard. Foreign business investments during 1957 less capital repatriation amounted to Rs 48.8 crores. This is a record for foreign investments in our country. This figure compares with Rs 36.8 crores during 1956 and annual average net inflow of Rs 17.6 crores during 1955-56. But the picture is not so rosy when the World Bank Capital is excluded. During 1957 IBRD capital amounted to Rs 32 crores as against Rs 12.1 crores in 1956.

Thus the net inflow amounted to only Rs 16.8 crores during 1957 and it was much below the 1956 inflow of Rs 24.7 crores. The review, however, points out that the reduction in the net foreign private capital inflow during 1957 as compared to that during 1956 is due mainly to two special factors such as a decline in re-invested profits and an increase in capital repatriation. The latter is substantially affected by compensation payments amounting to Rs 4.8 crores to life insurance companies and gold mining companies as a result of their nationalisation in 1956. The position from the standpoint of fresh capital receipts is quite encouraging. "Taking only fresh capital receipts from abroad, the position showed a significant improvement as compared to 1956; these receipts amounted to Rs 16.3 crores during 1957 as against Rs 11.6 crores during 1956 and Rs 9.2 crores (on an annual average) during 1954-55".

Apart from the compensation payments for gold mining and life insurance companies the outflow of Rs 9.1 crores in 1957 (as against Rs 6.3 crores in 1956 and the annual average of Rs 5 crores in 1954-55) is largely made up of outflows under trading, tea and Managing Agency. The Review notes that the declining trend in these is a "continuation of the trend which has been in evidence for some time." The fall under Managing Agency may be traced to certain restrictions under the Company Law that companies under this group have to work under. In all these three groups considerable sales of assets to residents have taken place but the review records that "the outflow of tea capital in 1957 represented not so much sales of assets to residents as withdrawals of accumulated earnings in the context of lower profits earned during the year." It would appear that in 1958 the petroleum industry would show a sharp decline in investments. And "it seems there was even some outflow of capital from this sector."

The overall position in 1958 would appear to be rather disappointing. The total inflow during 1958 is estimated about Rs 10 crores. Including the IBRD capital received by the private sector, total foreign investments in the private sector in 1958 was about Rs 35 crores as compared with Rs 48.8 crores in 1957. A redeeming feature, however, is the improvement noticeable with regard to sectors other than petroleum investments which during 1958 fell markedly.

While it is true that the trend of foreign investments in the last three, four years is not of a variety that should cause concern, it nevertheless shows lack of enthusiasm on the part of private foreign investors for deployment of their capital in our country. It is upto the Government and the private sector to take energetic steps to increase the rate of flow of foreign capital. It cannot be denied that Government have been bestowing considerable attention on this question. An earlier survey of the Reserve Bank in this connection has dedmonstrated that the return on foreign investments in our country compares quite favourably with that such investments are likely to get in their home country. It is no idle claim that foreign investment is getting the same treatment as is meted out to Indian investments. The agreements entered into by the Government of India with a number of countries with a view to avoid double taxation is an instance in point. Even so, it may be argued that Indian investment itself is not getting a square deal at the hands of our Government and as the foreign investor is also taking into consideration among other things the treatment meted out to his counterparts in the country in which he may develop an interest, it is of paramount importance that Indian private enterprise is kept in good mettle. Now that the Prime Minister has categorically stated that Government have no intention of nationalising existing industries in the private sector and that this sector has still immense scope in the country, private enterprise can confidently make its plans for the future. As the so called nebulous industrial policy of Government has been said to be the main impediment in the way of a free flow of foreign investment, Mr Nehru's authoritative clarification of the role of private enterprise should be a source of great encouragement to the foreign investor.

A happy augury in regard to foreign investment in our country is the improved rate of inflow from the USA. This welcome development occurred in 1957 when the USA figured at the head of the countrywise table of foreign business investors. Though the UK continues as the principal contributor accounting for as much as Rs 412.7 crores in 1957 out of Rs 508.7 crores of outstanding investments, the inflow of capital which increased to Rs 15.7 crores in 1956 from Rs 9.6 in 1954-55, has declined to Rs 6.3 crores in 1957. On the other hand the inflow from the USA has been showing a steady uptrend in these three years at Rs 9.6 crores in 1954-55, Rs 7.1 crores in 1956 and Rs 10.4 crores in 1957. The trend may be reversed in 1958 because of the marked decline in and some outflow of petroleum investments which constituted in 1957 about 90 per cent of the total inflow from the USA.

But there are indications that private investors in the USA are evincing keen interest in India. Competent observers who have visited that country do not seem to have found much disappointment among US businessmen over the investment prospects obtaining in our country. It would appear, therefore, that the generality of investor in the US is still largely ignorant of the opportunities available in India.

THE BANK OF INDORE LTD.

INDORE (Incorporated in Indore 1920)

GATEWAY NOTES

Problems of Vidarbha

The Vidarbha area of the Bilingual Bombay State is a region of immense industrial potentialities, but oddly enough remains in the rear of development for want of vigorous efforts to exploit the resources. The region is rich in manganese ores, one of the important foreign exchange earners of the country and is also fairly well-developed with regard to the cotton textile industry. But consequent on crisis conditions that swept the cotton textile industry, and the debacle that overtook the export trade in manganese ores, the region has presented a picture of industrial stagnancy that looks so incongruous against its economic potentialities.

The problems created by the developments in the manganese trade and the textile industry were focussed into public view by Mr H. R. Nevatia, when he delivered the Presidential Address at the first quarterly general meeting of the Nag-Vidarbha Chamber of Commerce at Nagpur on July 3. Referring to the decline in the exports of manganese ore and the fall in the value of exports which was of the order of Rs 163 million, Mr Nevatia pointed out that the adverse turn in the tide of manganese ore exports had precipitous impact on manganese mines in the Vidarbha region, many of which had since then been closed. Mr Nevatia is also harsh on the activities of the State Trading Corporation, which though intended to promote and assist the export of manganese ores, is considered by Mr Nevatia to have signally failed in its objective and can therefore make no justification for continuance of its privileges in respect manganese exports. On the contrary he believes that reduction of freight rates and sales tax would go a long way in regaining lost grounds in the export of manganese ore.

The textile crisis is traced to the decline in exports caused by foreign competition, higher prices of Indian cotton as compared to its price in the international market increasing financial burden arising from legislation passed to protect the interests of labour etc. He absolves the industrial interests of charges of mismanagement and seeks the justification of his view in the inability of the State Government to run the closed mills some of which had been reopened under Government auspices, without exemption from existing labour laws.

Mr Nevatia is also critical of the cut in power supplies enforced by the State Government for industrial concerns in the region. This he points out is inconsistent with the need for more rapid industrial development. The effect of this cut is further aggravated by the time schedule which being uniform has varying effects on industries depending on their working hours.

*

Central Engineering Research Institute

The Bombay Government took a significant step in the direction of engineering research, when the State's Chief Minister, Mr Y. B. Chavan, laid the foundation stone for the building of the Central Engineering Research Institute at Nasik last week. Concerned preeminently with research in public works engineering, the objectives of the Institute are: (1) assistance in selection, use and control of construction materials (2) assistance in investigation of sites, foundations, and conditions of nature such as climate and rainfall which have a bearing on the proposed engineering projects, (3) solution of problems arising in design and constructional engineering, (4) improvements in operation of completed projects (5) investigations on models in laboratories and completed works in the field for evolving better and more efficient engineering practices, and (6) formulation of specifications and standards, revision of the PWD Handbook as and when necessary and preparation of courses of instruction on subjects falling within the scope of the Institute.

Engineering research is a neglected field though its importance has been considerably heightened by the numerous schemes and projects launched under the five year plans. Economy is an important consideration in the execution of such projects and this necessarily directs attention to research which could indicate scope for it. The Central Designs Organisation, has for example, in the short span of iss working effected savings of lakhs of rupees without lessening the benefits of the schemes. It was not too soon, therefore, that the Central Engineering Research Institute has been set up for conducting research in public works engineeriny. The Institute in the words of Mr Chavan, would be the brain centre of the Public Works Department and together with the Central Designs Organisation has a major role assigned to it in formulating the Third Plan.

The operation of such an Institute acting as a wing of the PWD should have a telling effect on the progress of the State's plans. For, 50 per cent of the Plan expenditure and 60 to 65 per cent of the total budget expenditure, including that on buildings, is being incurred by the Department, and with a research department to advise on technical problems, expenditure on projects should bring in larger benefits than formerly.

GATEWAY MARKETS

Oils and Oilseeds Markets Subdued

THE markets for both Oils and Oilseeds displayed a subdued appearance during the past week. Large-scale release of the hoarded stocks of groundnuts and oil in upcountry centres, following favourable weather conditions, resulted in a downward trend of prices. Hedge selling as well as tired liquidation also found buying orders limited. According to trade reports, a large parcel of groundnut oil R/R from Raichur side was offered on the local market and the deal could be put through only at a lower price. Moreover, arrivals of summer crop in the South had already commenced and this made the supply position little more comfortable. Again, arrivals of the new crop from the Pollachi area were also expected in the beginning of the next month.

Preliminary trade estimates are, that groundnut acreage, for the new seacon, will be substantially higher than that in the current season. Reports emanating indicate that, in Saurashtra, the cutlivators have concentrated their attention on groundnuts crop, while the acreage under foodgrains will be very much lower. Meanwhile, Groundnut Bold quaity was quoted at Rs 41.25 and Groundnut Oil ready at Rs 21.19.

Trading in Castorseed revealed a measure of uncertainty in the absence of export business in castor oil. Moreover, reports of favourable monsoon and the pressure of spot supplies prevented any improvement in prices. There was also some anxiety in a section of the trade about the market's ability to absorb the delivery of spot castor seed against the maturing contract. Castor ready was quoted at Rs 31 and Castor Oil, commercial quality, at Rs 16.

There was little fresh development in the Linseed and Cottonseed sections.

*

Gold & Silver

There are indications that the impact of the slack season is not likely to be felt in the bullion market. The outlook for the precious metals continues to be bright on account of increasing investment demand and limited supplies. Floating stocks of both gold and silver are reported to be lower by about 20 per cent this year.

Arrivals of silver coins from Tibet have considerably declined during the past few months and the uncertainty prevails about the future imports. Arrivals amounted to 5 bars against an offtake of 6 bars. Unrefined metal receipts amounted to 19 bars. Spot silver changed hands at Rs 195.75 to Rs 196.31, to finish at Rs 196.25.

Arrivals of smuggled gold have also been lower this year. A feeling is, therefore, growing that the current price trend in the market will be maintained. Receipts were heavy at 3,000 tolas against an offtake of 2,000 tolas. Unrefined metal receipts were also heavy at 4,000 tolas. Spot rates moved between Rs 118.81 and Rs 119.12, to finish at Rs 119.09 Sovereign was quoted at Rs 78.

*

Yarn

Conditions on the Bombay Yarn market were distinctly firm, thanks to improved offtake from various consuming centres. Rayon yarns met with excellent support on increased offtake of piecegoods. In some places, there was an actual shortage of stocks, while consumption showed a distinct improvement.

Staple-Fibre Yarns also evoked keen interest as there was a fear of shortage of supplies, particularly in 40x2. The Government's decision to allow exports on "first-come-first-served" basis up to a ceiling of 1.5 million pounds has been welcomed by the market circles. It is presumed that these exports also are linked up with the export promotion incentive scheme for art silk fabrics.

Production of staple-fibre yarn has been steadily rising from about 30 lakh to 35 lakh pounds a month. It is believed that the quantity allowed for export—1.5 million pounds—would not adversely affect internal consumption.

*

Non-Ferrous Metals

Conditions on the Bombay Non-Ferrous Metal market remained generally steady with Copper Scrap quoting at Rs 216 per cwt. Supply of Lead was very small. With the result, activity in this metal was much restricted with the rate hovering around Rs 80.50 per cwt. Zinc ruled very steady at Rs 99 per cwt. Tin was, however, quiet at Rs 145 per quarter, thanks to fresh arrivals.

On the London Metal Exchange, however, conditions remained unsteady, as traders in New York had a nervous feeling that the smelters or producers might again cut down prices. Evidence, that world production is rising, has continued to come in. Moreover, the chances of a strike breaking out in US copper industry are now smaller, though the current wage negotiations have so far failed to produce an agreement.

Lead and Zinc have remained contrasting markets. Lead consumption has simply failed to improve, while the consumption of zinc is now running at a substantially higher level. Tin prices have held fully steady. In general, operators are awaiting the final outcome of the American steel negotiations. If a strike does take place, it will have widespread repercussions throughout the US economy.

WORLD OF COTTON

Listless Conditions

LISTLESS conditions have prevailed in the Bombay Cotton futures market during the week under review. The new crop contracts moved aimlessly in the absence of support, while some operators preferred to go long in the new crop contract in the belief that the gap between the two contracts would gradually narrow down. Jharilla August delivery was quoted lower at Rs 692.25 and March delivery at Rs 665.25.

The Spot section, however, witnessed good enquiry for popular growths of indigenous cotton, although prices remained almost unchanged. Mills appeared to be eager buyers of domestic varieties on fears of a shortage of quality cotton in the coming three months. Their consumption of domestic cotton, during the first nine months of the current season, was estimated at 34.91 lakh bales, showing an increase of 1.30 lakh bales over that of the corresponding period of the previous season. It was believed that the consumption of indigenous cotton would be higher by about two lakh bales this season.

The consumption of foreign growths, however, showed a decline of 96,913 bales during the same period, mainly due to the cheapness of indigenous cotton. Moreover, mills from most of the upcountry centres demanded only Indian growths for the production of medium and fine varieties of cloth.

On the export front, there was a revival of activity, as shippers were reported to have exhausted their quotas and trying to secure some quantity of Bengal Deshi out of the unutilised quotas of co-operative societies. There was, however, no demand for ¾" and below staple cottons and almost 85 per cent of the quota remained unused. Some business was reported done in the new crop on hopes that the Government would soon announce a fresh export quota for Bengal Deshi.

Figures relating to exports of raw cotton make satisfactory reading. Exports, during the first ten months of the current season, totalled 306,680 bales against 204,245 bales in the corresponding period of the last season. Knowledgeable circles think that exports, during the whole season, may total to around 350,000 bales. Break-up figures indicate that Japan has been the principal buyer of Indian cotton, accounting for as much as 215,469 bales during the period from 1st September 1958 to 27th June 1959 of the current season as against only 150,814 bales in the corresponding period of the previous season.

The trade is, therefore, confident that the entire quantity of 85,000 bales of Bengal Deshi, allotted to shippers, will be absorbed in course of time. Demand for other varieties, however, seems to be very little, the main reason being that the price asked for these varieties is higher than the buyers are willing to pay. Market circles expect the first announcement about the Bengal Deshi export quota for the new season to be made either at the end of this month or early next month. The Government may, in all probability, allow exports of some quantity of current and old crop cottons of longer-staple than hitherto permitted.

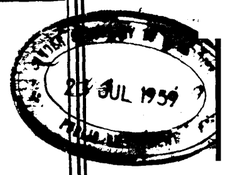
In the import section, there was no activity except for a small business put through with Sudan for July/August shipment. Mills did not show interest in the American cotton. According to latest advices from Egypt, the discount rate on sales of current crop Egyptian cotton to India for this week has been revised downward from 35 to 32½ per cent. This discount rate on new crop cotton sales has, however, been retained at 30 per cent. Against 473,013 bales licensed for import in the first ten months of the current season, actual arrivals, so far, total 357,420 bales. This leaves a balance of 115,593 bales yet to be absorbed.

×

STATISTICS:

Exports by rail from 1st September 1958 to 9th July 1959 were 205,432 bales. Estimated mill consumption in Bombay, during the same period, was 1,067,522 bales as against 1,095,402 bales in the corresponding period of last year. Estimated stock of raw cotton, held by exporters, dealers and mills in Bombay, on the 9th July 1959, was 774,501 bales as compared to 730,925 bales on the corresponding date of last year.

Cotton extension schemes in Rajasthan, for the Third Five-Year Plan, envisaged additional production of 223,000 bales of cotton at the end of the third Plan. According to official sources, the production of cotton in the State, by the end of the second Plan period, would be of the order of 2.90 lakh bales against the target of 2.65 lakh bales.



The International Cotton Advisory Committee reports a better situation for cotton during the season ending on July 31; but comments that, with increased production expected in the future, everything now hinges on consumption. For this year, total cotton production outside the Communist countries is estimated at 28.9 million bales as compared with 27.8 million bales in 1957-58. Total consumption is expected to be close to last year's figure of 28.5 million bales.

BOMBAY REVIEW

CLOTH AND PIECEGOODS:

Divergent conditions were witnessed in the Bombay Piecegoods market. The domestic market continued to remain subdued with bookings restricted to the immediate requirements. On the export front, conditions were lively with the entry of Sudan for a substantial quantity of goods, with fresh tenders from Burma and increased bdokings from the UK.

Meanwhile, total production, during the first five months of the current year, was 705 million pounds of yarn and 2,040 million yards of cloth. The corresponding figures for the first five months of 1957 and 1958 were 754 and 693 million pounds of yarn and 2,290 and 2,063 million yards of cloth respectively. Production for June was provisionally estimated 133 million pounds of yarn and 403 million yards of cloth. The estimated stock of cloth with the mills, at the end of June, worked out to a total of 3.99 lakh bales of cloth including 2.04 lakh bales of unsold cloth and 1.95 lakh bales of cloth sold but not lifted.

Are You a Small-scale Industrialist?

This will interest you

To help small scale industries fulfil their role in the country's developing economy, the State Bank, in collaboration with other interested institutions, put into operation in 1956 a Pilot Scheme at a few selected centres to make available to them co-ordinated credit facilities.

The scheme has worked well and the Bank is now in a position to offer, at all its branches, liberalised facilities which were originally made available only at the Pilot centres.

If you require financial assistance, why not talk things over with the Agent of our nearest Branch? He will welcome the opportunity of assisting you and will be glad to forward your application, if need be, to the appropriate Governmental and other authorities.

OLYMPUS

Dilemma in Kerala

DELHI REVIEW

NEW DELHI rather than Trivandrum has been the focus of interest last week for those following the political unrest troubling Kerala currently. Direct action and its consequences are less avidly followed than the political and constitutional manoeuvres of the two sides. Moves and counter moves have been bringing the rival combatants to Delhi and each side is trying to frustrate the 'gains' of the other. Thus, the Kerala Congress leaders came to Delhi early last week with the famous 'charge sheet'—later more decorously described as a memorandum—to the President. They also met the President and discussed with him the situation. Mr Namboodiripad too came to Delhi in order, as he put it, to see that his side did not go unheard.' He made a characteristically thorough job of it, seeing everyone from the President downwards. He met Mr Nehru at Simla where the latter is holidaying and almost every member of the Central Cabinet. He addressed a meeting in Delhi and two press conferences at which he withstood with adroitness and good humour heavily loaded questions and even hostile grilling. Other communist leaders too have been seeing the President to urge the impropriety of Central intervention which the opposition parties in Kerala are clamouring for. They are also seeking further interviews with the President to present him with 'their charge-sheet' against other State Governments. Meantime, the Congress party has released to the press its circular to the various Pradesh Congress committees in which the Congress stand is sought to be explained.

Side by side with this flood of mutual denunciation and self justification, there is a good deal of oracular advice and admonition from technical outsiders, both for and against the present agitation. Constitutional pundits are having the time of their lives trying to split hairs about the precise scope of Articles 352 to 356 (especially 356) of the Constitution, and the nature of the presidential discretion involved in their invocation. Meantime, no decision has yet been taken either by the Government—indeed Mr Nehru said that the question has not even been 'formally discussed' by the Cabinet yet—or the President. The President is sure to be examining the legal and other issues involved and would be particularly anxious to avoid the imputation of partiality against a non-Congress Government. Mr Namboodiripad has claimed at the end of his talks that the 'total impression' he has gained was that there was no likelihood of Central interference. Congress circles, on the other hand, claim that such intervention is round the corner and will take place as soon as Mr Nehru returns from his holiday.

From the point of view of practical strategy, the position is obvious enough. Mr Nehru's suggestion of a general election is unexceptionable and is probably the only possible solution. But the communists are bound to see it as a disingenuous proposal for gaining the sole declared purpose of all this agitation—the unseating of the communist Government in Kerala. The fact that the local opposition parties have taken up the idea enthusiastically would only confirm communist suspicion of the bona fides of the suggestion. There is some evidence, despite assertions to the contrary, that the present Government in Kerala is finding the strain of the concerted agitation less and less bearable. It may be thought that this circumstance would make communists accept the suggestion of the Prime Minister as a way out of their present difficulties and obtain a reputation of reasonableness, in the bargain. But such a reading does not take note of communist deviousness. In the first place, it is far from certain that a general election will send the communists back to power once again. Indeed, the indications are all to the contrary. So the communists will resist a mid-term election as long as they can. Secondly, a ready acquiescence to the Prime Minister's idea may be interpreted as a resounding success for the opposition party and even as a complete justification of the movement. It is easy to see the damage to the prestige of the present Government in Kerala that will be inflicted by such an impression gaining ground. And, lastly and most importantly, the communists are probably arguing that though they would be only too relieved to get out of the present predicament, they may as well wangle a halo of martyrdom, even while they are gaining their dearest wish. Since Central intervention is vehemently solicited by the opposition, it is bound to come. If for any reason the Centre—as it is actually doing at the moment—should hesitate to act, the pressure of local public opinion would be sure to stampede it into it. The Centre possibly, and Mr Nehru certainly, is hoping that the advice of a voluntary dissolution of the present Government and ordering fresh elections would save the Centre the embarrassment of constitutional intervention. But this is precisely what the communists are unwilling to spare them. Though they are probably as anxious to get out of the present predicament as the opposition parties are anxious to send them out of office, they would much rather have general elections after intervention by the Centre than before. Since the worst that could happen to them is loss of office, they may as well lose it by a process that will bring a certain amount of constitutional odium on the Centre. Indeed, such 'high handedness' may be useful in the electioneering which is almost certainly inescapable.

Whether Mr Nehru himself has thought out in detail these implications of his suggestion of fresh elections is not very clear. At his press conference, he did not rule out the possibility of intervention by Centre, though his reluctance to involve it was obvious enough.

But apart from constitutional niceties and party political manoeuvring, the situation in Kerala raises certain fundamental issues about democracy. These problems were bound to arise sooner or later, once communists started for the first time in history to working within the frame work of a democratic constitution. Elsewhere and in the past, communists have cynically discarded even formal respect for democracy the moment they entrenched themselves firmly in the seat of power. Such cynicism accorded so well with their central doctrines that one was hardly surprised when it happened. But the peculiar circumstances in India compelled the communists to profess genuine allegiance to the Constitution and democratic processes. The famous Amritsar thesis was enunciated. Many thought that this was merely a blind hiding ulterior sinister intentions. Others, more hopefully considered it a genuine change of heart. In any case, they hoped that one unconsciously became what one pretended to be. From one point of view, the present communist Government has so far been different—from its historical predecessors elsewhere. Even the fiercest critic of the Kerala government has had to concede that it has not done anything overtly unconstitutional. It is this constitutional correctness of the present communist government of Kerala that has led to such a remarkable split in the instructed opinion in the country. Such a split cuts across party lines. On the one hand, we find Mr Rajagopalachari, Chintaman Deshmukh and even a Congressman (and a constitutional Governor at that!) like Mr N. V. Gadgil, deploring the present agitation in Kerala. On the other, we have men like Asoka Mehta, K. M. Munshi and Minoo Masani (co-sponsors with Rajaji of the Swatantra Party) asserting that the spirit of the Constitution has been violated time and again in Kerala. Mr Mehta thinks that history is merely repeating itself and communists are engaged in their old game of playing on the scruples of sensitive democrats to gain their own ends. In his view, what is happening is the repetition of the tragic story of social democrats acting misguidedly as midwives of totalitarianism. Allowing the communists to continue their full term of office is the surest way to complete the process of infiltration and subversion of democracy that has, in his view, been allowed to go too long already. He would be a rash man, who would consider Mr Mehta an interested alarmist. Though facts about Kerala are far from clear—it would be a good thing if we had an independent assessment of the 'charges' against communist government, instead of vague and unsatisfactory description of 'a mass upsurge' and so forth—none who knows anything of the history of communism, would be complacent about the possibility of communists subverting every principle of democracy the while they are paying sanctimonious homage to it. It is all too easy to take your stand on formal democratic grounds and condemn direct action of the sort going on in Kerala. It is also easy to ridicule the fumbling of Congress leadership in clearly defining its stand. But the very plausibility of the communist case, should make us wary of the hidden dangers to democracy. You can make logical mincemeat of such a stand, but none who knows anything of communism will fail to see its profound truth.

S. E. RLY TENDERS

Sealed tenders are invited for tender No. PB/11/59/GM|12-CS|EB1 (59) for supply of 500 Nos. Cradle Draw Bar as per LW Drg. No. 22B, WU 21D, WU 23C assembled as per LW Drg. No. WU 20C. All parts to be assembled & to IRSS M-5 (Current) Class II.

Tender forms are obtainable from the Controller of Stores, South Eastern Railway, Garden Reach, Calcutta-23 (PB Section) on remittance of Rs. 5/- (not refundable) per copy per tender by money order to him direct in the case of outside firms and on production of Cash Receipt from the Chief Cashier, South Eastern Railway, Garden Reach, Calcutta-23 by local firms. Closing date of the tender is 18.8.59 at 3 PM. Firms must deposit in cash Rs. 1090/- as Earnest Money with the Chief Cashier, S. E. Railway, Garden Reach, Calcutta and enclose his money receipt together with a valid income-tax clearance certificate along with the Tender.

NORTH INDIAN NOTES

Electrical Industry

The Government of India's decision to double the production capacity of the heavy electrical equipment project in the process of being erected at Bhopal will be welcomed for the benefits it will confer of having an internal unit of production, but will not completely obviate the need for imports in the course of the Third Plan. While, in view of the step to double production capacity, Rs 25 crores worth of electrical equipment would be available from internal production, demand for electrical equipment in the course of the Third Plan is expected to be of the order valued at Rs 60 crores against imports at present which are valued at Rs 28 crores. The value of the present factory is that it would prevent imports of electrical equipments and the consequent drain on foreign exchange reserves from being larger than it would otherwise be.

In view of the anticipated increase in demand for electrical equipment in the course of the Third Plan, it is urgent that the present factory should be completed according to schedule and start production by the beginning of the Third Plan. It is at present envisaged that the factory would be ready for production from January 1961. With the upward revision of the production target and investment outlay the latter having been revised from Rs 52 crores to Rs 70 crores for construction costs alone the arrears of construction work to prepare the factory for production by the targeted time would have also gone up considerably and this invariably directs attention to the need for expediting work. Delay in starting production to the full extent envisaged at present, would place the country in the position of having to meet the entire requirements from imports which is least desirable considering the heavy draft on foreign exchange involved.

*

Public Vs Private Sector

One of the important points that emerged from the tenth meeting of the Central Advisory Council of Industries, held last week, in New Delhi, was the futility of the public vs private sector controversy, which had at times caused grave misgivings in the minds of private sector. There was near unanimity of views among the members who participated in the proceedings about the need for laying to rest this barren controversy which, without doing anything good to clarify the respective roles of the private or public sectors had only unfavourable repercussions on the investment climate. There was tremendous scope for both sectors to expand together without coming into conflict.

Dr V.K.R.V. Rao, pointed out that what was wanted was co-operation and coordination between the two sectors of economy and not competition. Mr G. L. Mehta suggested that instead of discussing the question of private and public enterprises in terms of generalities, the Government and industry should meet and try to define their scope more precisely and objectively. From the side of the Government, Mr Lal Bahadur Shastri, Minister for Commerce and Industry, said that both the public and private sectors of industry had enough scope to expand and they should try to go ahead and do their best without criticing each other, and further pointed out that there were shortcomings in the working of industrial concerns in both sectors.

Prime Minister, Pandit Nehru, had also echoed these same sentiments in the course of his talks with the Committee of the Federation of Indian Chamber of Commerce and Industry last week. The statement of Mr Nehru that the Government do not propose the nationalisation of existing industries merely for the sake of nationalisation should further go to allay the apprehensions of the private sector. The need for such an assurance to the private sector was mentioned by Dr V.K.R.V. Rao at the meeting of the Central Advisory Counil of Industries.

However, the role of the private sector in the realm of large-scale industries remains a matter still causing concern to the private sector industrialists since it has come to be known that such large-scale enterprises would for the most part be reserved for public sector undertakings. Dr Rao had stated in this connection that in a socialist set-up, the State would play a larger part as far as large-scale units were concerned and that multiplication of large-scale industrial units in the private sector was a menace to democracy. Congress thinking in this matter also seems inclined to this view, and the Ooty Seminar on the Third Plan has given prominence only to the expanding scope for public sector without suggesting scope for the development in private sector.

Even while the private sector is assured of its legitimate place in the economic development of the country, the comparative advantages enjoyed by the public sector undertakings relatively to undertakings in the private sector, make the competition between the two sectors a highly uneven one. Dr Ramaswami Mudaliar has pointed to the uneven distribution of facilities and advantages as between undertakings in the public sector and undertakings in the public sector, as for instance, the use of the radio for publicising the achievements of the public sector.

NORTH INDIAN MARKETS

Futures Trading in Gur

AFTER a lapse of about four months, futures trading in Gur has been resumed at Hapur under the Forward Contracts (Regulation) Act, 1952. It may be recalled that, to check excessive speculation, the Government of India ordered the suspension of gur futures on February 11 until regulated markets were set up at five places—Agra, Hapur, Meerut, Muzaffarnagar and Delhi.

The enthusiasm with which the operators were awaiting the resumption of trading in gur has given place to uncertainty, because of the heavy special margins imposed by the Forward Markets Commission. When the closing price of Gur Fagan delivery crosses specified levels on any day, members of the Hapur Chamber of Commerce are required to pay special margins the next day in accordance with their net long position. If the price is Rs 14.75 or more a maund, members holding net long positions from 1 to 100 units (one unit of 225 maunds) have to pay Rs 225 per unit; those holding 101 to 500 units Rs 280 and those holding from 501 to 1,000 units Rs 500.

If the price is Rs 16.25 or more, the margin payable for the three respective groups of net long holdings are Rs 225, Rs 800 and Rs 1,000 per unit. Similarly, if the price is Rs 17.75 or more, the margins payable will be Rs 225; Rs 1,350 and Rs 1,600 per unit respectively. It is feared that heavy margins and the difference of about Rs 7 in the rates of ready and forward gur may force the trade to enter into illegal deals. Anyhow, the trade has learnt a lesson and, it is hoped, will not repeat earlier mistakes by indulging in unhealthy speculation.

Meanwhile, the market for ready gur is ruling steady, as stocks are reported to be fast declining. Moreover, it is still over two months for the beginning of the new season. Outside demand is fair and arrivals from rural areas are almost nil. Stocks at Hapur have run down by 3,000 maunds to 49,000 maunds. The condition of the standing cane crop is reported to be fairly good; but rains are bardly needed.

*

Sugar

Conditions in sugar markets are ruling firm due to tight supply position and the reluctance of traders to part with their stocks. Sugar is reaching Hapur from Kanpur side and the prices are quoted at Rs 130 per bag—the highest quoted so far.

It is learnt that the Committee of the Indian Sugar Mills' Association has offered to start cane crushing in the last week of October or early November if the Union Government are prepared to forego the excise duty and cane cess for the first three weeks of November to compensate for the loss in the cost of production. During this period, recovery from the cane will be less owing to its poor sucrose content.

It is also learnt that sugar stocks in the country are just sufficient to meet public requirements until the end of October. There is a general belief that production can be raised to between 22 and 23 lakh tons provided there is no unfair competition from the khandsari units. In view of the measures adopted by the Government to ensure regular supply of sugar to consumers, it is decided to drop the plan of opening fair price shops.

The Khandsari market has been ruling very steady, thanks to the demand for the marriage season.

*

Foodgrains

With reports of good rainfall in many areas, the customary easy trend in grains and pulses has started. Barring wheat and rice which have moved irregularly due to the ban on exports imposed by many producing States, all other grains have come down by about two to three per cent during the past few days.

Production of small millets in 1958/59, as compared with last year's figure, has increased by 22.6 per cent and the yield per acre by 19 per cent. The all-India final estimate for small millets puts the current year's production at 2,048,000 tons as against 1,671,000 tons in 1957/58 and the area at 12,156,000 acres as against 11,848,000 acres last year. The yield per acre has risen from 316 lbs in 1957-58 to 377 lbs this year.

In the Hapur market, quiet conditions have continued to prevail. Wheat prices have remained unchanged, average quality being quoted at Rs 18 and the farm variety at Rs 19.50 per maund. The Rice market is ruling steady, thanks to slightly better supply position. After an early fall, Gram prices have tended to go up due to less rainfall, affecting the prospects of good "khariff" crop in this area.

The offtake in the Pulses section has declined considerably. Prices have eased by three to five per cent in all areas despite the fact that arrivals have been poor during the past few weeks. Reports from Berar, the Punjab and Rajasthan suggest that farmers are expecting a bumper crop of pulses. Gram from the Punjab has buyers in Bombay at Rs 125 and that from Uttar Pradesh at Rs 130 per candy.

The grains market in Delhi, however, has presented a firm front on higher outside advices coupled with poor arrivals. Demand from the local and outside consuming centres is satisfactory, while arrivals and despatches are moderate.

MADRAS REVIEW

Dr Deshmukh on Democracy

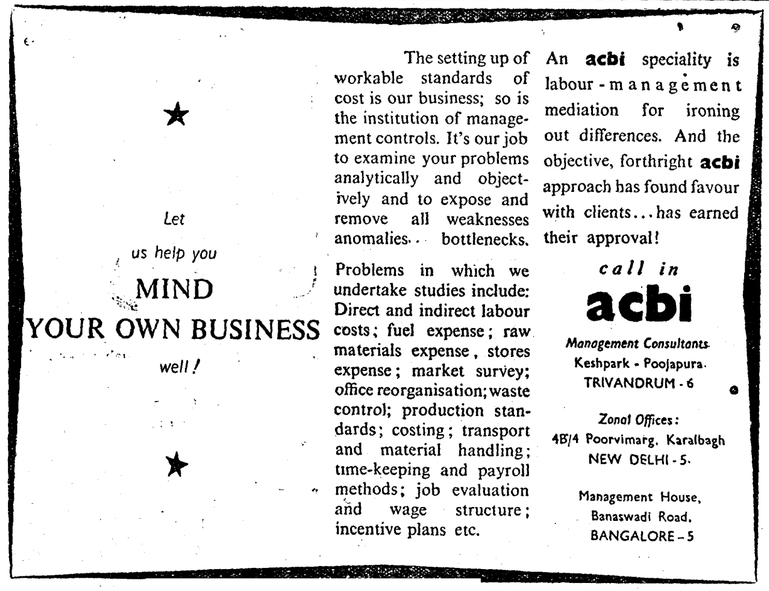
THE PENINSULA

THE working of democracy in India has evoked universal interest centering round the facts that it embraces the largest population on the one hand, and that it is possibly the youngest of democracies in the world, having taken its birth only in the post-war period. The international political situation, with the raging cold-war politics has invested the Indian experiment with a special significance and India has become in the eyes of Westerners the testing ground for democracy in Asia, and the sole hope for the survival of democracy in the continent which is subject to ideological pressures of communism more than any other continent, is placed on the success of the system in India.

In India faith in democracy as the best system to live under, was bred and nurtured during the period of British rule though it was only Independence which brought home to the people the full implications of the democratic system of Government. Democracy has stood the painful test of two general elections involving the largest number of adult voters and conducted peacefully, and the robust stability of administration has been contrasted with the misfortunes that had overtaken the neighbouring countries which started their Independent political career with all the paraphernalia of democracy.

However, in its working in the 12 years since Independence, the democratic system in the country had not remained above criticism and non-partisan leaders keen to see that democracy survives in the country, had been concerned to note the existence of some glaring defects and deficiencies, which remaining unchecked would invariably go to corrode faith in the system. With this view the working of the system has been subjected to frequent re-appraisals the latest attempt being made by Dr C. D. Deshmukh, Chairman of the University Grants Commission, in the course of Sastri Memorial Lectures, under the auspices of the Madras University.

Dr Deshmukh little subscribes to that patriotism which would ascribe to democracy a place in the ancient history of the country and which would not believe it to have been a system imported and transplanted into the soil only recently. This short lease of life, however, saves democracy from a final judgment of its merits or suitability to the country, which on the basis of the working in the 12 years may not be highly favourble to it.



Dr Deshmukh is fairly outspoken in his criticism of some of the evil features which have become associated with the running of democratic institutions in the country, evils which are lightly passed over by ruling powers believing in the infallible tendency of free institutions towards ultimate self-correction and success. It is this smug faith which presents the most potent danger to democracy in the country and which, therefore, needs to be warned in advance against the evils which are sapping the roots of democratic life in the country.

While recognising that democracy inevitably entails acceptance of the egalitarian principle with the one-man-one-vote, which is what makes it worth having and aspiring for, Dr Deshmukh, does not find it to have worked satisfactorily from the point of view of giving good government, and attributes to it the exclusion of merit and talent from their claims to a share in the Government. Democracy has suffered further dilution because of the sneaking consideration given to communal and parochial factors in the distribution of office. With the democratic environment being made up by illiterate voters not easily weaned from local, communal and sectional loyalty, and with falling standards of public life with officials in seats of power being only too prone to the temptations of office, democracy, according to Dr Deshmukh promises little scope for the best development of the innate faculties of the individual, which is its distinguishing title to recognition. He considers the trends even in the advanced countries of the West which had a longer period of time running democratic systems of government, far from encouraging, it being evident everywhere that the individual is tending to get lost in a crowd of mediocrity.

While Dr Deshmukh does not deny that democracy had not been barren of achievements to its credit, he points out that it had failed at significant points and particularly in gearing up the administrative machinery to its complex and stupendous tasks ahead. He refers to the administrative machinery at present obtaining in the country as erratic and inadequate at all levels, and attributes much of the messy state of affairs at the administrative levels to ministerial incompetence. On this basis he develops the argument for a cabinet of all talents drawn from all important parties as well as the non-party public, on the basis of an agreement to implement a national programme such as the series of five-year plans. This is not the first time that the virtues of an all-party government had been advocated for public and governmental consideration. A similar proposal was made by a leading member of the opposition on the floor of parliament and if it failed to make any impression on the Prime Minister it could only have been due to obvious difficulties in its way.

The administration is also blameworthy for its failure to lay the foundations for a rapidly accelerating progress and this, Dr Deshmukh attributes to the self-delusion of the ruling powers about the adequacy of the present machinery. However, Dr Deshmukh finds several vulnerable spots in the foundations for a self-accelerating development particularly in the areas of law and order situation, control of growth of population, and conservation of land surfaces. His chief complaint against the Government in respect of these matters is that these were dealt with in a lackadaisical manner and with infirmity of purpose. The legal system revealed many loopholes and deficiencies not to mention the inordinate delay involved in its administration which is strikingly inconsistent with the stress on the rule law laid by the Government as the foundation of all parliamentary systems of democracy. Dr Deshmukh has urged the need for a comprehensive review by a high level commission of the law and order situation in the country with particular reference to the penal law and the law of evidence, which according to him stand in need of modification to deal with transgressions against the interests of the country, against which there are no adequate provisions under the present law.

Dr Deshmukh describes the present situation in the country as one of languishing of the moral law and to check this languishing of the moral order is the supreme problem facing the country. Dr Deshmukh is not the ultra-pessimist who would give up hope in the face of such a grave situation; but points out that only the lead of the enlightened, cultured and truly educated could save us from ultimate disaster.

SOUTH INDIAN NOTES

Social Welfare

MADRAS REVIEW

The size of the outlay for social welfare services under Third Plan would in all likelihood be fixed at about Rs 100 crores. This was disclosed by Mrs Durgabai Deshmukh Chairman of the working Group set up by the Planning Commission for preparing the blue-print for the Third Five Year Plan in the field of social welfare. This is roughly double the outlay allotted in the Second Plan for social welfare under both Central schemes as well as State schemes, the respective amounts being Rs 30 crores and Rs 25 crores.

The schemes for social welfare under the Third Plan are not expected to contain anything new and the Second Plan schemes would provide the framework which however would admit of an expansion of facilities in proportion to the rise in outlay. While any increase in allotment would be welcomed, that this alone does not promise results would have become, by now, evident to those familiar with the working of the social welfare schemes under the direction and guidance of the Central Social Welfare Board. Many shortcomings and deficiencies are noted to exist in the implementation of social welfare projects, and had been brought to light by the Programme Evaluation Organisation of the Planning Commission in a recent report on the working of the Social Welfare Projects. The report is itself a scathing criticism of the working of these projects and is so because of what it calls the absolute lack of cooperation between the Central Social Board and its agencies, bad state of work in some of the projects, non-payment of salaries to the workers at the lower level, which are only a few of the short-comings noted in the report.

Referring to the lack of coordination between the Central Board and agencies at the lower level, the report says that "the Board does not come in day-to-day or even periodic contact with the welfare extension projects. The Chairwoman of the Project Board or some important member may come to inaugurate a welfare extension project or lay the foundation-stone of some buildings. But once the projects had started functioning, the actual progress was not noted by the Central Board". These statements amount, in effect, to the rebuttal of the very rationale of the Board since it is the inherent function of the Central Board to coordinate activities at all levels. Mrs Deshmukh seems to realise this and has stressed the importance of cooperation and coordination between various organisations doing social welfare work, and the Government Departments.

*

Land Mortgage Banks

Addressing the twentieth Conference of the representatives of Primary Land Mortgage Banks, Mr N. S. Ramalingam, President, dwelt on the progress made by the Madras State in the provision of long term credit to agriculturists and the role played by the Madras Cooperative Central Land Mortgage Bank. The progress made by the Central Land Mortgage Bank in providing larger credit facilities to the agriculturists was particularly mentioned, such credit given by the Bank having gone up to Rs 71.71 lakhs in 1957-58 from Rs 34.70 lakhs in 1954-55. While this should induce gratification, it cannot be ignored that, the demand for long-term credit that remains unprovided is of considerably larger volume than could be met by the existing number of land mortgage banks. Land mortgage banks as the agencies for the provision of long term credit of which Indian agriculturists are in great need for effecting improvements of long term benefits to them, have, evidently, been slow to grow even in the Madras State which having pioneered credit cooperation in the country is in the forefront of the movement. The long term credit needs of Indian agriculture are only inadequately and partially met by the existing number of land mortgage banks underlining, thereby, the need for multiplication of such banks throughout the country at an accelerated speed.

The problem is not solved by the mere growth in their number; for mere increase in number is no guarantee of smooth working as would be illustrated by the problems faced by the Madras Central Bank. Mr Ramalingam has pointed to the difficulty of raising resources for the Bank through floatation of debentures and points out that it was only after much persuasion that the Life Insurance Corporation of India could be brought to invest in the debentures issued to the Central Land Mortgage Bank. The reluctance of the Life Insurance Corporation has no reason if it is considered that the Corporation draws a major part of its funds from rural savings, part of which, accepting the principle of quid pro quo in the investment operations of the Corporation should have been utilised for investments calculated to benefit rural population and investment in land mortgage banks should have provided the best outlet for the funds of the Corporation. The reluctance of the Corporation is to be contrasted with the enthusiastic interest taken by insurance companies in the pre-nationalisation era in the land mortgage banks. In this connection Mr Ramalingam recalls that against Rs 5.75 lakhs subscribed by the LIC representing 7½ per cent of the series issued by the Central Bank, the insurance companies in the old days subscribed to the extent of 20 per cent. The support of organised sector to the land mortgage banks has become all the more important in view of the present trend in the money market towards extreme tightness. It is necessary, therefore, that the Union Government get itself interested and move the LIC and the State Bank of India to support the land mortgage banks by subscribing to their debentures.

TEZPORE TEA COMPANY, LIMITED.

NOTICE is hereby given that the Forty-first Annual General Meeting of the Members will be held at the Registered Office of the Company, No. 4, Bankshall Street, Calcutta, on Thursday the 13th August, 1959, at 3.30 P.M. for the following purposes:—

(1) To receive and adopt the the Directors' Report and the Audited Accounts for the year ended 31st December, 1958.
(2) To declare Dividends.
(3) To elect a Director.
(4) To appoint Auditors and to fix their Remuneration.

The Transfer Register will be closed from the 3rd August, 1959 to 13th August, 1959, both days inclusive.

N.B. A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and the Proxy need not be a member of the Company.

By Order of the Board,
SHAW WALLACE & COMPANY LTD.
Managing Agents.

Calcutta,
23rd June, 1959.

THE INDIAN IRON & STEEL COMPANY, LIMITED.

12, Mission Row, Calcutta.
14th July, 1959.

NOTICE.

The Board of Directors of the Indian Iron & Steel Company Limited in meeting held to-day has decided that the Ordinary Share Register and Transfer Books of the Company will remain closed from Thursday the 20th August, 1959, to Thursday the 3rd September, 1959, both dates inclusive, for the purpose of payment in due course of dividend for the year ended 31st March, 1959, on the Ordinary Shares ranking for such dividend, that is to say, exclusive of the Bonus Shares issued in February, 1959. The dividend when declared will be paid to those shareholders entitled thereto whose names appear on the Company's Register of Members for Ordinary Shares on the 3rd September, 1959, or to their mandatees.

Announcement of the Directors' recommendation of the dividend for the year ended 31st March, 1959, will be made in due course.

By Order of the Board,
MARTIN BURN LIMITED,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

THE TATA IRON AND STEEL COMPANY, LIMITED.

NOTICE

Notice is hereby given that the Register of Members and the Transfer Books of the Company will be closed from Monday, the 3rd August 1959, to Saturday, the 29th August 1959, both days inclusive.

Notice is also hereby given that the dividends for the year ended 31st March 1959, when sanctioned, will be made payable to those shareholders whose names stand on the Share Registers of the Company on Saturday, the 29th August 1959.

Notice is also hereby given that in the event of the Special Resolutions I and II mentioned in the Notice of the Extra-Ordinary General Meeting of the Company, dated the 29th May 1959, being passed at the adjourned Extra-Ordinary General Meeting of the Company to be held on Wednesday, the 2nd September 1959, and the Controller of Capital Issues giving his consent to the issue of new Ordinary and "A" Second Preference shares mentioned in Resolution II, the holders of Ordinary shares and the holders of Preference and Second Preference shares on the Register of Members of the Company on Saturday, the 29th August 1959 (being the date fixed by the Board for the purpose) will be entitled to the new Ordinary and "A" Second Preference shares in terms of the said resolutions.

Dated at Bombay this sixth day of July, 1959.

By Order of the Board,
For and on behalf of
The Tata Iron and Steel Company, Ltd.,
Tata Industries Private Ltd.,
Managing Agents,
by their constituted attorney,
V. G. Mokashi.

MADRAS REVIEW

Pepper Markets Quiet

PEPPER markets have shown little change during the past fortnight. In the Alleppey market, superior Palai variety is quoted around only Rs 643.75 per candy. In London, too, business has been very quiet indeed, although black pepper has remained distinctly stronger than white pepper. White pepper prices are currently around 2sh 8d per pound—about 6d below the highest point reached earlier this year. Black pepper, in contrast, is only 2d down to around 1sh 7d. The longer-term position appears somewhat obscure; but the demand is generally expected to improve later this year.

Although black pepper shipments from India, during May, at 10,556 cwts are higher by about 4,000 cwts as compared to April, the overall exports in the five months of the season (November 1958 to May 1959) are lower by 51,398 cwts at 131,122 cwts as compared to the exports during the corresponding period of last season. The improvement in exports, during May, was mainly due to the recent buying by the East European countries. But, the offtake by the USA was poor at 400 cwts against 2,313 cwts in April and 2,350 cwts in March.

The sharp drop in shipments to the USA, in May, apparently reflects that the trade has slowed down buying of late. Shipments from Singapore to the USA in May also were lower at 1007.79 tons against 1245.84 tons in April and 1891 tons in March despite the fact that total shipments from Singapore, in May, were maintained at 2,369.19 tons against 2,277.65 tons in last May. Shipments from Singapore, in the five months of this year, at 13,021.26 tons also compare favourably with the 13,196.32 tons shipped in January|May last year.

*

Copra

Copra crushers in Bombay are reported to be seriously hit due to the delay in the issue of actual-user import licences for the commodity for the April|September period. Although the latest coconut crop in the West Coast is reported to have been a satisfactory one, supplies of copra from there to Bombay have not been satisfactory, partly because of the emergence of more small crushing units there and partly because of transport difficulties due to weather.

Even otherwise, the domestic material price is far too high for the crushers in Bombay; because Alleppey copra is quoted at Rs 445 per candy of 500 pounds against the prevailing price of Rs 1,050 per ton for Singapore copra. In this connection, it may be added that market circles in London expect a fall in price although they do not foresee any major break in price levels. Much of the rise, that has taken place in the past nine months, was due to unusual circumstances and it seems likely that the market in London is now due to return to more normal conditions with the price of Philippine copra ending up somewhere between 220 and 240 dollars a ton.

*

Groundnuts

Conditions in the Madras Groundnut market remained steady with price movements confined to a narrow range. Arrivals last week averaged 25 to 30 tons per day and these were taken up mainly by local small crushers. The rate for superior oil-quality seeds was quoted at Rs 200 per candy.

Summer crop arrivals in up-country centres of the South Arcot district were steady and moderate in volume.

In the Groundnut Oil section, buyers were adopting a cautious policy, while sellers were not eager to do business in view of the fact that there was no parity between seed and oil. The rate for the ready position was quoted around Rs 375 per candy.

*

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides were on the same level as in the previous week and the market for these ruled steady. Arrivals of Buff hides were moderate; but the market was dull. Arrivals of Cow Calf and Buff Calf were small and the quality was poor; but prices remained unchanged.

In the export section, trading with the UK has been irregular and only selective demand is noticed. Generally, speaking, UK buyers are bidding slightly lower, while sellers in Madras are firmly holding on to their last levels.

In the Tanned Skins section, there was no change in the arrivals of both goat and sheep skins. Prices of goat skins ruled steady, while those of sheep skins were up by 12 nP to 25 nP per pound.

On the export front, there was good demand for 8|9 lbs goat skins. In the sheep skins section, primes and semi-primes ruled steady.

The market for Raw Hides remained firm in all centres.

*

Bangalore Silk

A notable feature in the Bangalore Silk market, during the week ended 9-7-1959, was the decline in the prices of Charka raw silk. However, moderate demand for all qualities of raw silk is reported excepting for Cottage Basin silk.

As regards Reeling Cocoons, the trend was erratic with a slight rise at the opening of the week followed by a decline during mid-week and closing the week at around the opening rates. In the case of Sidlaghatta, the closing quotation showed a distinct improvement at Rs 2.37 per lb. as against Rs 2.25.

It is reported that, on account of continuous rains during the first week of July, the quality of cocoons has deteriorated. However, as only coarser varieties of Charka silk are being produced by Charka establishments, the demand for reeling cocoons did not slacken; hence the price recovery towards the close.

It is reported from Japan that waste silk market there picked up some strength during the latter part of June following vigorous demand among home weavers for spun silk yearn. Most dealers expect a further rise in the near future.

Trend of Foreign Markets

Country	Grade	Date	F.O.B.	Landed Cost
Japan	20/22 "A"	During May 1959	Rs 18.23	Rs 29.60
Italy	20/22 "2A"	During Jan. 1959	Rs 23.93	Rs 37.53

SOUTH INDIAN MARKETS

BAREILLY ELECTRICITY SUPPLY COMPANY, LIMITED

NOTICE is hereby given that an Extraordinary General Meeting of the Members of the above named Company will be held at the Registered Office of the Company, No. 12 Mission Row, Calcutta-1 on Monday, the 10th August, 1959, immediately following the termination of the Annual General Meeting to be held on that day at 11-20 a.m. to consider, and if thought fit, to pass, with or without modification, the following subjoined resolution, namely:—

"That approval be and is hereby accorded to the appointment of Martin Burn Limited, the present Managing Agents of the Company, as Secretaries & Treasurers of the Company for a period of 10 years with effect on and from the 16th August, 1960 on the terms and conditions contained in the draft agreement submitted to the Meeting and, for the purpose of identification signed by the Chairman thereof."

By Order of the Board,
MARTIN BURN LIMITED,
A. G. GIDLEY,
Secretary,
Managing Agents.
12, Mission Row,
Calcutta-1.
13th July, 1959.

Note:—

(i) A Member entitled to attend and vote is entitled to appoint a Proxy to attend and, on a poll, to vote instead of himself. Such Proxy need not be a Member of the Company.

(ii) An Explanatory Statement is annexed to the Convening Notice issued to Members of the Company.

KUMARDHUBI ENGINEERING WORKS LIMITED

At a meeting of the Board of Directors held recently it was decided to recommend the payment of dividends for the year ended 30th November, 1958 as under:—

On Cumulative Preference shares @ 5% p.a. without any deduction for Income Tax payable by the Company.

On ordinary shares @ 30 n.P. per share without any deduction for Income Tax payable by the Company.

By Order of the Board
BIRD & CO. (PRIVATE) LIMITED
MANAGING AGENTS
Chartered Bank Buildings,
Calcutta, 9th July, 1959.

S. E. RLY TENDERS

Sealed tenders are invited for Tender No. CON|GM|39|P & M|B|59 for supply of spare parts for Parkins Diesel Engine No. 34602. Approximate value is about Rs 50,000/-. Details to be obtained from the tender schedule. Tenders will be opened on 4-8-59 at 3 P.M.

Tender forms are obtainable from the office of the Controller of Stores (Construction Section), Garden Reach, Calcutta-23, on remittance of Rs 5/- (not refundable) per copy by money order to him direct in the case of outside firms and on production of cash receipt from this Rly's Chief Cashier by local firms.

Tender should accompany the receipt for depositing the earnest money of Rs 1000/- with this Rly's Chief Cashier without which the tender is liable to be rejected. Approved contractors having a permanent deposit of Rs 1000/- with the Controller of Stores are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

BAREILLY ELECTRICITY SUPPLY COMPANY, LIMITED.

NOTICE

Notice is hereby given that the Annual General Meeting of the Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Monday, the 10th August, 1959 at 11-20 a.m. for the following purposes:—

1. To receive and adopt the audited Accounts for the year ended 31st March, 1959, and the Reports of the Directors and the Auditors thereon.
2. To declare a Dividend.
3. To appoint Directors in place of those retiring.
4. To appoint Auditors and fix their remuneration.

The Register of ordinary shareholders of the Company, and the Transfer Books will be closed from the 4th August, 1959, to the 10th August, 1959, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy, who need not be a member, to attend, and on a poll, to vote instead of himself.

By Order of the Board,
MARTIN BURN LIMITED,
A. G. GIDLEY,
Secretary,
Managing Agents.
12, Mission Row,
Calcutta-1.
13th July, 1959.

STOCK EXCHANGES

Mild Recovery After Initial Shake-out

Watch-Dog Writes:

EQUITIES, after suffering a sharp setback early in the week under the lead of speculative issues, staged a mild recovery towards the close of the week under review. The initial setback in prices was mainly influenced by lower Bombay advices, while the subsequent recovery was due to some replacement buying at lower levels. It looks as if the shake-out has helped improve the technical position of the market, not to speak of the fact that bulls have still the control over the market.

Trading on the Calcutta Stock Exchange was dull and featureless and price movements were narrowly irregular.

Activity on the Bombay Stock Exchange slowed down with equities moderately recovering from the sharp setback in prices early in the week.

Firmness in selected scrips continued to be the feature of trading on the Madras Stock Exchange.

Conditions on the London Stock Exchange remained unsettled, although some buying of certain leading equities was noticed towards the close of the week.

Wall Street made a good recovery after showing fairly widespread losses early in the week.

*

Calcutta

Calcutta, Thursday Evening.

INFLUENCED by easier Bombay advices, the week's session on the local Stock Exchange witnessed a marked recession in values, although there was a mild recovery towards the close, thanks to some replacement buying and bear-covering at lower levels. The ground for the general landslide in values was paved by a crop of bearish rumours. Mainly amongst these were the breakdown in the new steel plant at Jamshedpur and the move by the LIC to liquidate a part of its holdings. Moreover, some of the professional operators thought it wise to reduce their commitments and, as this unloading could not be absorbed, the decline in prices was rather sharp and rapid.

But, this liquidation enabled the market to improve its technical position. Again, Mr Nehru's earlier assurance about the future of large-scale private sector, the subsequent news of the World Bank having sanctioned a loan of $10 million to the ICICI to meet the foreign exchange requirements and the hope of substantial funds being available for investment in equities during the slack season, helped to maintain the bull phase which, it was believed, would be uninterrupted.

Conditions in the Giltedged section continued to rule firm with the trend of prices remaining upward. Short-dated Loans were in keen demand and the rates continued to rise due to paucity of stocks.

Jute shares enjoyed selective support on dividend prospects as well as the fact that a few mills might diversify their activity. The main reason, of course, was the broadening of foreign enquiries for goods. Moreover, recent increased despatches overseas had particularly benefitted sacking goods, which had been a weak spot due to over-production and stiff competition from Pakistan. Anglo-India were taken upto Rs 267 from Rs 261 and Ganges upto Rs 94 from Rs 90/50. Barnagore changed hands at Rs 161.50 to Rs 166 (Rs 163); Budge-Budge at Rs 163 to Rs 166 (Rs 165); Howrah upto Rs 24.19 to Rs 24.62 (Rs 24.25); National upto Rs 23 from Rs 22.50 (Rs 22.50) and New Central upto Rs 18.00 from Rs 17.37 (Rs 18.00). Figures shown within brackets were the closing rates for the week under review.

Coal shares remained generally dull. The main reason was that a decision on the report of the Coal Prices Revision Committee, submitted to the Government of India, was not likely to be taken for quite some time. However, prices remained practically steady on hopes that the Government had to announce a price-increase soon. Burrakur moved rather erratically between Rs 18.06 and Rs 18.50, to finish at Rs 18.19, while East Indian met with business at Rs 25.62 to Rs 25.87, Equitable at Rs 31.50 to Rs 31.75; Central India at Rs 8.19 to Rs 8.31 and West Bengal at Rs 6.62 to Rs 6.69. Bengal remained firm at Rs 316.

Conditions in the Textiles section, remained generally steady although profit-taking erased some of the extreme gains at the close. Kesoram were at one time enquired upto Rs 16.75, to recede towards the close to Rs 16.56, while Elgins were marked higher at Rs 14.12 against Rs 13.87. New Victoria remained unchanged at Rs 1.19 with Jayshree ruling firm at Rs 9.87 against Rs 9.69.

Sugar shares, after initial firmness, turned quiet as operators were inclined to book profits, pending further developments on the sugar front. Carew were taken upto Rs 12.81; Cawnpore upto Rs 15 and SKG upto Rs 10.94, to ease off at the close to Rs 12.06; Rs 13.69 and Rs 10.81 respectively. Balrampore and Belsund were nearly maintained at Rs 7.00 and Rs 13.12 respectively.

Although Tea shares were rather dull and quiet for the time being, interest about the outlook for tea had not waned and this was reflected in the sustained enquiry for a few selected scrips. It was believed that the new season had begun without any undue handicaps and finer plucking would be maintained this year too, or even maintained. Activity was prominent in the following scrips. Betjan changed hands at Rs 25.12 to Rs 25.57; Dhunseri at Rs 14.87 to Rs 15.19; Grob at Rs 18.25 to Rs 19.19; Jayshred at Rs 13.31 to Rs 13.81; Methoni at Rs 24.00 to Rs 25 and Tezpore at Rs 17.12 to Rs 17.37.

In the Engineering section, price movements were mostly influenced by the speculative activity in Indian Irons which, in turn, were subjected to alternate buying and selling on Bombay advices. Against the week-end closing of Rs 25.48, Indian Irons opened better at Rs 25.53 and after improving further to Rs 25.56, receded gradually to Rs 25.03, to

S. E. RLY TENDERS

Sealed tenders are invited for Tender No. CON/COS/55/F1/59 for supply of 60,000 sq. ft. BR. C. Fabric for roofing 7ftx12 S. W. C. x 240 ft. long in roll. 'BRC' No. 12 or similar 'BRC' Fabric to be made from hard drawn steel wire complying with B. S. S. Specification 785-1938, working stress of 25,000 lbs. per sq. inch. Tenders will be opened on 14.8.59 at 12 noon.

Tender forms are obtainable from the office of the undermentioned (Construction Section), Garden Reach, Calcutta -23 on remittance of Rs. 2/- (not refundable) per copy by Money order to him direct in the case of outside firms and on production of Cash Receipt from this Rly's Chief Cashier by local firms.

Tender should accompany the receipt for depositing the earnest money of Rs. 240/- with this Railway's Chief Cashier at Garden Reach without which the tender is liable to be rejected. THE BENGAL PAPER MILL CO. LIMITED.

NOTICE is hereby given to the members of the above-named Company that the Annual General Meeting (being the One hundred and thirty-fifth Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Friday, 7th August, 1959, at noon, to consider the Accounts of the Company for the year ended 31st December, 1958, and to transact other ordinary business.

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 24th July, 1959 to 7th August, 1959, both days inclusive.

By Order of the Board,
BALMER LAWRIE & CO. LTD.
D. MANSON
Secretary,
Secreataries & Treasurers.
21, Netaji Subhas Road,
CALCUTTA, 10th July, 1959.

Note:—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

THE SAMNUGGUR JUTE FACTORY COMPANY LIMITED

The Directors of this Company have decided to pay Interim Dividends for the current year of 3% on the Ordinary Shares and at the rate of 6% per annum on the Preference Shares. These Dividends will be paid on 4th August, less Income Tax at 7/9d per £.

The Transfer Books will be closed from 21st July to 4th August inclusive.

P. Williams,
Secretary.
Dundee, 14th July 1959.

THE TITAGHUR JUTE FACTORY COMPANY LIMITED

The Directors of this Company have decided to pay Interim Dividends for the current year of 2% on the Ordinary Shares and at the rate of 6% per annum on the Preference Shares. These Dividends will be paid on 4th August, less Income Tax at 7/9d per £.

The Transfer Books will be closed from 21st July to 4th August inclusive.

P. Williams,
Secretary.
Dundee, 14th July 1959.

finish the week better at Rs 25.14. Meanwhile, speculation has now started with regard to the size of the dividend for last year as the book closing has been announced. Transfer Books will remain closed from the 20th August to the 3rd September, 1959. In this connection, the directors have stated that the announcement with regard to the dividend will be made in due course.

Among Engineering scrips, TEXMACO touched a high of Rs 24.95 and a low of Rs 24.50, to finish the week at Rs 24.60, Kumardhubi were on offer at as low as Rs 6.69 against Rs 7.19 following the cut in dividend from 45 nP to 30 nP per share for last year and the announcement with regard to the right issue. Braithwaite changed hands at Rs 28.37 to Rs 28.50 and Jessop at Rs 30.19 to Rs 30.25. Indian Galvanizing were quoted at Rs 20.37 and Burn at Rs 455.

Miscellaneous issues moved in sympathy with the general trend of the market. Alkali Chemicals were done at Rs 22.75 to Rs 23.06; Orient Paper at Rs 37 to Rs 37.50; Indian Cable at Rs 32.69 to Rs 33.25. Indian Aluminium at Rs 22.75 to Rs 23.12 (Rs 22.87); Rohtas at Rs 22.12 to Rs 22.50 (Rs 22.37); Dunlop at Rs 34.06 to Rs 34.37 (Rs 34); NICCO at Rs 36.75 to Rs 37.37, (Rs 36.75); National Carbon at Rs 35.25 to Rs 35.62 (Rs 35.27); Sirpur at Rs 12.75 to Rs 13.06 (Rs 12.75); Titaghur Paper at Rs 43.75 to Rs 44 (Rs 44) and Hindustan Motors at Rs 10 to Rs 10.37 (Rs 10.19). Orissa Minerals were a firm feature at Rs 40, while Indian Oxygen were a shade cheaper at Rs 28.31 against Rs 29.25 on lack of enquiry. Philips India were practically unchanged at Rs 24.06 and so also Sone Valley at Rs 6.00. Figures shown within brackets were the week's closing rates. Indian Copper, after being marked down from Rs 4.19 to Rs 4.00 on reports of the company having lost the case in the suit filed against the Bihar Government, recovered partially at the close to Rs 4.07.

*

Bombay

DISAPPOINTING dividend news coupled with rumours of work dislocation due to mechanical reasons at Jamshedpur seemed to have been mainly responsible for the sharp decline in the prices of the pivotal issues noticed during Tuesday on the Bombay Stock Exchange. A contributory factor for the reactionary tendency was the continued apprehension about large scale selling of equities by the LIC. Though the general pattern of price movement at the opening was rather irregular sentiment firmed up following very keen interest noticeable in selected shares. The undertone the next day became easy as pivotal counters were sujected to heavy selling pressure on adverse rumours. The down trend seemed to have been halted on Wednesday but activity was rather restricted.

In the Steel section, Tata Steel firmed up on Monday to be finally placed at Rs 201.50 as against previous closing of Rs 197.75. But the trend was completely reversed due to heavy selling pressure with the result the scrip was Rs 6.50 lower on balance at Rs 195. With sentiment showing a slight recovery on Wednesday, the scrip closed half a point higher at Rs 195.50. The fluctuations in Indian Iron were not so wide as in Tata Steel as the scrip after coming down to Rs 25.00 recovered to close at Rs 25.30.

Textiles were generally subdued and followed the trend in the Steel section. Bombay Dyeing after a steady opening came back to Rs 65.60 on Tuesday to recover again to Rs 66.10. Standard was a prominent spot spurting to Rs 570 from Rs 552 on the opening day only to be pushed back to Rs 548 the next day. The scrip staged a recovery to Rs 555 on Wednesday. Century closed easier on balance at Rs 559 as did Kohinoor at Rs 29.

In the Miscellaneous section, National Rayon on renewed support moved up briskly on the opening day to Rs 368.50 as against the previous closing of Rs 357.50. After Tuesday's shakeout the scrip closed at Rs 359.50. Premier Construction was the other scrip which recorded a sharp improvement at the beginning to Rs 388.50 as against previous closing of Rs 374. But a large part of the gain has been erased in later dealings as the closing rate was placed at Rs 369. Toward close Associated Cement met with good support and closed at Rs 157.

*

Madras

ACTIVE conditions were seen on the Madras Stock Exchange. Profit-taking, which lowered some of the active stocks, gave place to resh buying at lower levels.

Textiles:—In this section, Travancore Rayons and Madura Mills were in the limelight, having buyers upto Rs 24.65 and Rs 30.50 respectively. Anglo-French met with some sellers at the market rate, while Cambodias remained dull.

Plantings:—Rubber shares enjoyed keen buying and a good volume of business was reported done. Cochin Malabars improved to Rs 6.85 from Rs 6.71 on renewed support, while Gokuls met with some demand at the market rate. Rajendras had, however, some sellers at Rs 18 with Wartyhully remaining soft at Rs 3.75.

Among Tea shares, Periakaramalais continued to maintain the rate at Rs 4.20. Haileyburias met with some sellers at Rs 20.25 with Coonoors, Chembras and Neelamalais remaining unchanged.

THE VICTORIA JUTE COMPANY LIMITED

The Directors of this Company have decided to pay Interim Dividends for the current year of 3% on the Ordinary Shares and at the rate of 6% per annum on the Preference Shares. These Dividends will be paid on 4th August, less Income Tax at 7/9d per £.

The Transfer Books will be closed from 21st July to 4th August inclusive.

P. Williams,
Secretary.
Dundee, 14th July 1959.

In the Coffee group, Consolidated Coffees were an active scrip and improved further to Rs 22.50, to finish at Rs 22.35 on orogt-taking. Ouchterionsys were a steady feature at Rs 5.70.

Miscellaneous:—In this section, Aluminium Industries came in for good attention and business was done upto Rs 23.10. FACTs were maintained at Rs 10.10, while Ashok Leylands remained very firm at Rs 6.75. General Papers came in for some enquiry upto Rs 12.

*

London

SENTIMENT on the London Stock Exchange was again dominated by election uncertainties. Buyers were reluctant to extend commitments, resulting in a preponderance of losses in the industrial section. Oil shares were depressed, while Rubbers and Teas were on the dull side. Gold shares had a quiet week.

Giltedged securities, however, continued to meet with investment demand and prices improved further. Dollar stocks were quiet, pending further developments in the threatened US steel strike.

*

New York

NERVOUSNESS over the prospects of a steel strike dominated the market this week. The strike situation also attracted selling to Rails, which derive a good portion of their revenue from the steel industry. Towards the close, the news, that the steel talks had been broken off, had little or no influence on the market.

As a matter of fact, the market reversed its downward trend and moved higher, led by Steels and Motors. Aluminiums made good progress, reflecting the increased likelihood of a steel-strike and talk of a more general use of aluminium by car manufacturers. American Motors advanced on continued good sales of Rambler cars and station-wagons. Brokers were convinced that only an unexpectedly long steel strike would have any pronounced adverse effect on stock prices.

*

In Briefs

Kumardhubi Engineering has decided to offer right rates, at par, to those shareholders whose names are registered as on the 26th June, in the ratio of one such share for every two shares held. Meanwhile, the company has reduced the dividend from 45 nP to 30 nP per share for the year ended 30th November, 1958.

Indian Copper has maintained the dividend at 18 per cent (24 nP per share) for 1958.

In Bombay, TELCO has maintained the dividend at 9 per cent for the year ended 31st March, 1959.

Stanvac has passed over the Ordinary dividend for 1958.

In Madras, Venkatesa Mills have reduced the dividend from 20 to 16 per cent for 1958.

Singareni Collieries have halved the dividend to 7½ per cent for 1958.

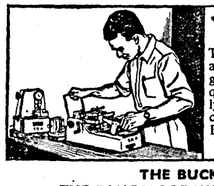
IOB/140

"Dressing up a scarecrow, Mrs Banerjee?"

This isn't a scarecrow. It's my husband."

"A thousand apologies. But it is obvious your husband has not heard of BINNY'S cloth. BINNY'S Quality Control* their production you know..."



"Quality Control? Never heard of it! What does it do?"

"Modern machines process yarn and cloth so fast that often defects, invisible to the naked eye, creep into the cloth. Quality Control is laboratary testing to root out defects at every stage of production. That's why BINNY'S suitings stay smart so long."

"That's wonderful news. We shall dash to the nearest BINNY'S shop the moment I can fix this tie and my husband is able to breathe again."

BINNY - a great name in textiles

* **Testing the effective staple length of cotton**

This apparatus measures the length and variation of all cottons that go into BINNY'S cloth. The quality of the cloth depends largely on the cotton used. Only specially selected cotton goes into BINNY'S fabrics. That's why they last so long.

BINNY'S manufacture nearly 90 million yards of cloth every year. Here are some of the varieties they make:

Shirtings - Khaki Drills - Bleached and Dyed Drills - Towels - Anticrease Suitings - Tussores - Union Fabrics - Silk Sarees - Rugs etc. etc.

Steel Dividend Affects Sentiment

Investment Gossip:

THE more speculative counters have had a bad time this week. It has been, however, anticipated that these will witness considerable fluctuation in the second half in view of Thursday's Tata Steel Board meeting to decide about the size of the dividend. It is not surprising, therefore, that trading from the beginning of the week has been under the influence of speculations about the size of the Tata Steel dividend.

Though only the most optimistic among the operators believed that the dividend would be maintained at Rs 8.25, the majority seemed to think that it would be lower but not lower than Rs 7.50. But from early Thursday, there were signs of nervousness in the market and this mood was reflected in a sizable reduction in the closing rates at the end of the day's trading. The announcement that the Board of Directors have decided upon a dividend of Rs 6.50 came too late for the market to register its reaction but in the kerb that night there was panic selling and the rate fell sharply to Rs 178. Indian Iron was also likewise sold down to below the Rs 24 mark.

Though operators are quite justified in expecting a lower but a reasonable level of dividend for Tata Steel, the Board of Directors of the company must have had sound reasons for reducing the dividend to Rs 6.50. The main reason should have been conservation of resources to meet the enormous commitments in respect of the expansion programme. Last year's earnings have been seriously affected by the strike and this may be another reason for the reduction in the distribution to the shoreholders.

It is inconceivable that any important development regarding Tata Steel will leave sentiment undisturbed in the stock markets. Indian Irons has the added reason to move with its opposite number in Dalal Street that its dividend is also in the offing. It is but natural that comparisons are made between the two steel shares and that apprehensions are voiced as to the size of the Indian Irons dividend also.

Apart from the Steel dividends, the stock markets have been worried about the possibility of sales from institutional investors at higher levels. The developments in Kerala also called for caution.

The week has not been entirely bereft of good omens. The dividend announcement from Howrah is indicative of the improvement in the financial position of the jute industry. The fact that recently the IJMA has deemed it necessary to reopen a portion of their sealed looms shows the uptrend in offtake of goods. In view of the interest evinced in Indian heavy goods by a number of overseas consumers in recent weeks it is generally believed that the IJMA may perforce have to decide to reopen a further quota of the sealed looms.

Elsewhere also there has been encouraging news. The maiden dividend announced by Hindustan Motors is taken an indication of the good progress made by the automobile industry. Other automobile shares have also been in request at enhanced price levels. That a bright future awaits the automobile industry is also evident from the active interest taken by Government in fostering its development. While inaugurating the first meeting of the Development Council for Automobiles, Mr Manubhai Shah has indicated that a new high in production will be reached by the industry in 1959.

The present subdued tendency is unlikely to show any marked change in the coming week because it is generally believed that the Union Government will be obliged to make a decisive move in regard to Kerala within the next few days.

Investment Notes:

The country will soon have another paper mill in Mandya, near Mysore. The mill will perhaps be the first of its kind to make paper entirely from bagassee - the bye-product in the sugar industry. There are indications that the capital of the company will be Rs 3 crores, consisting of Rs 2.4 crores in Ordinary and Rs 60 lakhs in Preference shares. It is also learnt that Rs 40 lakhs of the ordinary capital will be offered to the public, while the entire issue of the preference shares will be open for public subscription. The chances of success of the company are rated high, both on account of its association with Parsons & Whitmore (world's best-known firm in the paper line) and the expected reduction in the cost of production due to the use of bagassee, which will be much lower than that from pulp.

The Indian Rayon Corporation has drawn lots in regard to the allotment of shares to applicants for five shares each. As a result, 50 per cent of the applications for five shares each has been rejected and the balance of 50 per cent has been accepted in full.

For the first time since it came into existence seventeen years ago, Hindustan Motors Limited has proposed to pay a dividend of 50 nP per share for the year ended 31st March, 1959.

Mysore Electrical Industries have proposed to issue 5,000 equity shares of Rs 100 each, at par.

The list for the new issue of shares of the Canara Industrial & Banking Syndicate Limited has been closed, having been oversubscribed. All applications, received upto July 2, will be allotted in full in order of priority. The subscriptions received on July 3 will, it is indicated, receive only proportionate allotment.

Investment Briefs:

Dehri-Rohtas Light Railway has recommended a higher dividend of 17 per cent for the year ended 31st March 1959 as against only 10 per cent in the previous year. The dividend is payable on or after 1st September, 1959. Transfer Books are closed from the 18th August to 1st September, 1959.

Kesoram Cotton has maintained the dividend at 25 nP per share for the year ended 31st March, 1959.

Polychem Limited has announced a maiden dividend of Rs 3 per share for the same year.

Excellent Results of Bengal Paper

Balance-Sheet Reviews:

THANKS to a combination of higher production by an increase in the number of working hours and the manufacture of certain industrial papers, the Bengal Paper Mill Company Limited has produced excellent results for last year. Sales have risen to Rs 2.63 crores from Rs 2.09 crores, while the net profit, after providing for Depreciation and Taxation, amounts to as much as Rs 17.01 lakhs against only Rs 8.87 lakhs in the previous year.

In respect of allocations, the directors have provided a sum of Rs 1.14 lakhs for Development Rebate Reserve and maintained Capital Reserve at Rs 10,000 apart from raising the Taxation provision from Rs 8.67 lakhs to Rs 17.67 lakhs and General Reserve from Rs 1.00 lakh to Rs 4.09 lakhs. The Depreciation amount is, however, reduced to Rs 3.45 lakhs from Rs 4.03 lakhs. The dividend on the Ordinary shares is raised to 22 from 12½ per cent.

£ R$

Fort Gloster

The Fort Gloster Industries Limited has reported considerable progress in the Cable division. The technical team has since arrived and it has given an opportunity to co-ordinate erection and production programme. Except in the Rubber Mill Department, erection in other sections is almost complete and the directors hope to start the Wire Drafing section in July as scheduled and other section in the following months.

The most modern method of producing cables in the latest Continuous Vulcanizing Machines has been chosen. By this fast method of production, the company will be in a position to meet, to a large extent, the country's needs of Insulated Cables, thereby saving a considerable foreign exchange.

The improved statistical position of the jute industry is fully reflected in the working results of the company for the year ended 31st March, 1959. Sales are only slightly lower at Rs 3.82 crores against Rs 4.02 crores and the net profit, after providing for Depreciation and Taxation, at Rs 12.02 lakhs against Rs 14.56 lakhs in the previous year. The directors have provided a sum of Rs 8.73 lakhs (Rs 7.49 lakhs) for Depreciation; Rs 11.75 lakhs (nil) for Taxation; Rs 77,182 (Rs 1.08 lakhs) for Wealth Tax; Rs 1.14 lakhs (Rs 2.70) for Development Rebate and Rs 1.75 lakhs (same) for Debenture Sinking Fund. The dividend on the Ordinary shares is just maintained at 20 per cent.

£ R$

Murphulani (Assam) Tea

The Muphulani (Assam) Tea Company has raised the dividend on the Ordinary shares from Rs 1.75 to Rs 2.00 and Preferred Ordinary shares from Rs 2.25 to Rs 2.50 per share for 1958, thanks to a net profit of Rs 1.68 lakhs against Rs 1.20 lakhs in the previous year. A sum of Rs 22,560 against Rs 31,997 is provided for Depreciation; Rs 1.36 lakhs against Rs 1.10 lakhs for Taxation; Rs 2,225 against Rs 6,691 for Wealth Tax; Rs 85,000 against 50,000 for General Reserve and Rs 371 against nil for Development Rebate Reserve. A crop of 5,171 maunds was secured and sold at an average price of Rs 2.75 per pound against 5,544 maunds and Rs 2.45 respectively in 1957.

£ R$

New India Investment

The New India Investment Corporation Limited has raised the dividend from Rs 2.50 to Rs 3.75 per share for 1958 following a net profit of as much as Rs 1.83 lakhs against only Rs 57,954 in the previous year. Apart from providing Rs 75,000 for Taxation and Rs 50,000 for General Reserve, the Depreciation amount is reduced to Rs 134 from Rs 154. Income by dividends is shown higher at Rs 2.36 lakhs against Rs 2.24 lakhs.

£ R$

Stanvac Refining

The Standard-Vacuum Refining Company of India Limited has reported an increase in the turnover to Rs 28.16 crores for 1958 from Rs 27.26 crores in the previous year. The volume of crude oil processed averaged 33,890 barrels daily against 31,638 barrels, while total sales amounted to 40.93 crores

With next week's issue, Indian Finance will release a Banking Supplement.

gallons against 31.18 crores gallons.

The net profit, before providing for Depreciation and Taxation, amounts to Rs 292.64 lakhs against Rs 271.38 lacs for 1957 The amount set aside to Depreciation is Rs 76.38 lakhs (Rs 75.99 lakhs); Taxation Rs 76.11 lakhs (nil) and Wealth Tax Rs 5.04 lakhs (Rs 4.27 lakhs). The Reserve for Deferred Taxation receives Rs 97.27 lakhs on the former occasion, while the Statutory Reserve for Development Rebate gets Rs 21.99 lakhs presently. No dividend on the Ordinary shares is again payable. The transfer to General Reserve No. 1 is Rs 34.97 lakhs and General Reserve No. 2 Rs 74.85 lakhs against Rs 83.84 lakhs to General Reserve previously.

£R$

Burmah-Shell

The net earnings of Burmah-Shell Refineries Limited, for the same accounting period, have, however, recorded a decline, mainly due to the narrowing of the margin between refined products and crude oil prices and to the increased liability to taxation. Only the preliminary figures are now available.

The net income for 1958, after providing for Depreciation and an estimated liability for taxation, amounts to Rs 309 lakhs against Rs 424 lakhs for 1957. The transfer to General Reserve is Rs 82 lakhs (Rs 1.05 crores) and Tax Equalisation Reserve Rs 3.00 lakhs (Rs 75 lakhs). After paying the same Ordinary dividend, the sum carried forward is Rs 54 lakhs against Rs 41.66 lakhs brought in.

£R$

Western India Plywoods

The net profit of Western India Plywoods Limited, for the year ended 31st March 1959, is slightly lower at Rs 15.24 lakhs against Rs 15.69 lakhs for 1957-58. The provision for Depreciation is Rs 1.46 lakhs (Rs 2.4 lakhs) and Development Rebate Rs 46,033 (Rs 62,639). Taxation claims Rs 7.48 lakhs (Rs 7.00 lakhs), while the transfer to the Dividend Equalisation Fund is Rs 50,000 (Rs 65,000) and Reserve for Rehabilitation Rs 30,000 (Rs 50,000). The provision for repayment of IFC loan is Rs 2 lakhs (same). A dividend of 10 per cent (same) is to be paid.

Minerva Mills

The working of the Minerva Mills Limited has resulted in a loss of Rs 7.99 lakhs for 1958 as against Rs 7.46 lakhs in the preceding year after providing Rs 4,053 for Depreciation against Rs 3,931; Rs 22,941 for Development Rebate Reserve against nil and maintaining managing agents' remuneration at Rs 40,000. The directors have proposed to pass over the dividend again. A debit balance of Rs 7.73 lakhs is carried forward. Sales of yarn, cloth and waste have risen from Rs 1.30 crores to Rs 1.42 crores.

£R$

Ambika Silk Mills

The Ambika Silk Mills Company Limited has earned a net profit of Rs 2.03 lakhs for 1958 against Rs 2.08 lakhs after raising the provision for Depreciation from Rs 2.78 lakhs to Rs 3.13 lakhs and Taxation from Rs 80,000 to Rs 2.39 lakhs. A sum of Rs 75,964 has been set aside for Development Rebate Reserve. The directors have recommended a dividend of Rs 12 per share.

To meet the enhanced range of operations and turnover, the directors have raised the paid-up capital from Rs 7.7 lakhs to Rs 11.55 lakhs by a rights issue in December, 1958. Since then, the capital has been further raised to Rs 17.32 lakhs by a fresh rights issue.

£R$

Radhakrishna Mills

Radhakrishna Mills Limited has shown a profit of Rs 4.87 lakhs for 1958 against Rs 6.51 lakhs in the preceding year after providing Rs 3.87 lakhs for Depreciation against Rs 4.39 lakhs and Rs 54,121 for managing agents' remuneration against Rs 72,444. The directors have recommended a dividend of 6 per cent. Contingency Reserve absorbs Rs 1.76 lakhs against Rs 1.86 lakhs.

The company has proposed to alter the capital structure so as to have a uniform class of shares of Rs 25 each. The authorized capital of Rs 1 crore will be divided into 4 lakhs equity shares of Rs 25 each; and Rs 100 and Rs 50 paid-up shares will be sub-divided, so that each of Rs 100 and Rs 50 will yield 4 and 2 equity shares of Rs 25 each respectively.

Indo-Pakistani Trade

THE trade talks held between a Pakistani delegation which has come to New Delhi for the purpose and representatives of the Indian Government will, by the time this appears in print, have been completed. A formal communique is expected to be released, which presumably will give an indication of the trend of the talks. But it would be optimistic on our part, if we were to be misled by an imposing array of commodities in which, the communique may inform us, greater trade between the two countries is envisaged. For, the simple, brutal fact is that, while, once upon a time, the economies of the regions that comprise Pakistan and India were complementary and inter-dependent, the position today is that, at least on India's part, there is not much need for, in the sense of an undue reliance on, trade with Pakistan. For this state of affairs, Pakistan has only itself to blame. If, particularly after the devaluation of the Indian rupee in 1949, Pakistan had chosen to be somewhat less intransigent or arrogant in its ideas of trade with India, there would have been neither desire nor ambition enough for provoking this country into taking up programmes of self-sufficiency in raw jute and cotton. And raw jute, it is abundantly clear, is about the only commodity that Pakistan is in a position to export in any considerable quantity. On the other hand, our neighbour country's main imports from India would be coal and cement; of the former, there is not much, in view of our plan programmes, that we can spare; of the latter, however, it is true that a surplus has emerged, and we would be thankful for such modicum as might be lifted by Pakistan. Lastly, the export of films, it is true, would constitute a fairly important exchange-earner for India, but there does not seem to be much prospect that free and unfettered export into Pakistan will be allowed, for exchange difficulties of its own. But Pakistan has an urgent need to export raw jute, and an equally imperative necessity for importing cement and coal. Hence, what can be the kind of agreement that will be reached? Will it be honoured in its observance, or in its breach? Lastly, in the light of diminishing—or diminished—Indian demand for raw jute, what form, if any, is future Indo-Pakistani trade likely to take?

We believe the anticipated agreement can prove to be useful, although limitedly so. Of the commodities most prominently mentioned, let us take jute first. Pakistan's embarrassment arises from a series of bumper crops with India, at the same time, virtually doing without imports. For, while world economy has generally been expanding, it has been a strange and inexplicable phenomenon that demand for jute goods has remained practically static. It is not, surely, reason enough that, in regard to some commodities previously packaged in jute goods, bulk handling methods are in vogue, or that, secondly, some measure of substitute packaging materials has displaced jute goods. For, even after some loss of markets due to adoption of bulk handling, jute goods should, because their prices are extremely competitive, have more than held their own. In India, internal consumption of jute goods has been steadily rising. Why, then, should offtake in other countries decline? This is a broader question that needs to be studied, and our preoccupation is with Pakistan's jute and what to do with it. Even though, quantitatively speaking, India can now be deemed to be self-sufficient in raw jute, an improvement in the quality of the jute goods could be possible by a judicious mixing of Pakistani jute—provided, of course, prices are fair and reasonable. Simultaneously, India would be in a position to export some part of its acknowledgedly lower grades of raw jute, for which there is reportedly demand. If we can be sure that, in poor crop years, the letter of any agreement that is arrived at will be honoured, then India could undertake to relieve Pakistan as to its problem of surplus of raw jute.

We come, next, to coal. It is only at the sacrifice of our own needs that it may be possible to spare Pakistan quantities that would do it any useful purpose. But we suggest that exports to Pakistan should be considered to be no different to exports generally; and, therefore, though we may not be able to make available the superior qualities of coal, it may well be worth India's while to build up an export market in Pakistan for grades of coal which, over a reasonable future, we may expect to have as surplus to our requirements.

We come, lastly, to cement. Prospects of trade are best in regard to this particular commodity. For, on the one hand, with Pakistan's need of cement, the nearness of India will make cement from this country relatively inexpensive in price. On the other hand, with India's planners having somewhat over-estimated our requirements, our output is surplus to our needs, and we would be only too willing to earn some foreign exchange by sale of cement to Pakistan.

Thus, over the short-term, the expansion of Indo-Pakistani trade will depend upon the preference shown, in lean years, by Pakistan in exports of raw jute to India as also upon the quantity of coal that we make available for that country. Over the long-term, other considerations creep in. Both countries have plans of industrialisation. The one already has a surplus in the output of newsprint, and we could profitably import from Pakistan. The other has a surplus in cement, and Pakistan would be happy to be assured of a steady supply.

Newsprint and cement are just cases in point. They give an indication of the manner in which a complementarity in the trade needs of the two countries can be restored. At the same time, they pinpoint one aspect of industrialisation in the under-developed countries which, so far, has been neglected. We refer here to the fact that it would be undesirable and unnecessary for each of the under-developed countries to plan on industrial self-sufficiency. Not only is such an undertaking likely to be impracticable or even impossible, it would be a waste and duplication of effort and capital. Indeed, some "group" planning for the under-developed countries would be eminently useful. For example, there is little sense in Pakistani setting up a steel mill; unless, of course, it is of special steels. Looking to Pakistan's needs, imports would be much less expensive; and India would soon be able to supply Pakistan with all the steel it would require. Thus, the growth of light engineering industries could, as it were, be dove-tailed into a pattern for the region as a whole.

The current talks on Indo-Pakistani trade would have served well the cause of trade generally in this area, if, as a consequence, thoughts begin to be turned upon the practicability and feasibility of drawing up a plan for industrial responsibilities for individual nations in the under-developed area in this part of the world.

The Development Loan Fund

MR JOSEPH TONER, Secretary, the US Development Loan Fund, has just returned, after a world tour of inspection, to Washington, and has given some details with regard to the Fund's working. These details should interest Indian business circles profoundly. Accordidng to the latest estimates, Rs 3,000 crores have been allotted to the private sector out of a total outlay of Rs 10,000 crores during the Third Plan period. Potentialities and consumer demand in India are so great that even Rs 10,000 crores should be absorbed by private enterprise in this country provided financial resources were made available. We have already a satisfactory skeleton for financing the private sector, but financial anaemia is too glaring to be ignored. There are the Industrial Finance Corporation, the Industrial Credit and Investment Corporation of India, State IFCs and the Small Industries Board which have all made a good beginning, but the ground covered is quite nominal compared to the scope. Thanks to the efforts of Mr G. L. Mehta, $10 million have been secured as a loan from the World Bank by the ICICI, and Rs 20 crores from US rupee balances on account of wheat loans. The Forum of Free Enterprise and the Federation of Indian Chambers of Commerce and Industry have been bewailing the fast narrowing scope for the private sector and shortage of funds on account of Government collections in the shape of taxes, loans and small savings. Foreign private capital is willing and eager to come in, but an efficient co-ordinating agency is lacking. At this juncture, the prospects of the DLF serving the private sector in India should be properly gauged.

US LOANS

The US Foreign Aid Programme is gigantic, beginning with the Marshall Plan for Europe. The financing agencies are the Federal Government, the Reconstruction Finance Corporation, the Export-Import Bank, the International Co-operation Administration and the Development Loan Fund. The usual understanding is that US loans should involve US goods, US ships and US technical personnel. Apart from military aid, economic aid involves

the lending of more than $3,000 million during the current year by the US Government to different parts of the world. Ordinarily, Government loans are made to other Governments.

SPECIAL FEATURES

The DLF has several special features. Started 15 months ago, the Fund has a programme of lending $700 million during the current year against applications totalling upto $3,000 million. So far, loans have been made to 71 concerns in 33 countries in South East Asia, South America and Central Africa. It lends to private concerns as well as to Governments: it makes small loans as well as big. For example, the Government of India have already borrowed from the Fund $195 million, and another $100 million may be lent in the course of the next 3 or 4 months. The Fund lent $12 million for a fertilizer plant in Greece, $4 million to Pickik, a Development Bank in Pakistan, for financing small enterprises. The Fund lent $190,000 to a saw mill in Liberia.

FURTHER FACILITIES

Another special facility provided is that repayment is received in the local currency, which avoids a Foreign Exchange liability. The Fund raises money anywhere: in Liberia, the Saw mill loan was partly financed from funds raised locally. There is no dictatorship with regard to the nature of the business or management policy: the only criterion is that the deal should help the economic development of the borrowing country. Irrigation works, fertilizer plants and other agricultural enterprises are also eligible for assistance. Another facility is that the loans can be utilised for purchases anywhere, bearing quality and price in mind.

GUARANTEEING AGENCY

The Fund is also a guaranteeing agency; some New York banks lent to the firm in charge of the tanker ship and ship yard in Taiwan on the basis of the Fund's guarantee. The rates of interest charged are moderate compared to loans at Government level. Even projects fairly advanced in execution are also eligible, and side by side financing by other agencies is permitted. Ostensibly a revolving fund, long-term loans are not infrequent.

MAIN OBJECTIVES

The two main objectives of the Fund are (1) to help peace and prosperity among underdeveloped nations by raising standards of production and consumption, and (2) to find new markets for American exports in such underdeveloped countries. Special emphasis is laid by the Fund on helping private industry and private enterprise. Where does India stand? The demand for foreign private capital outlay in India is limitless, and foreign capitalists, particularly American, are eager to invest in India, hand in hand with local enterprise on a 50-50 basis or thereabouts. But the supply and demand have not been integrated, one reason being the vascillating Government Industrial Policy. If only foreign private capital comes in and starts numerous enterprises, it should be easy to get further funds with the help of the Fund's guarantees in addition to direct Fund Loans to indigenous concerns. From this viewpoint, it is desirable that Mr Shroff and Mr Ruia should go to Washington and explore possibilities of maximising the speed of foreign private investment in India: Platform preaching and exchanges through press conferences cannot stimulate free enterprise. The Government of India do not appear to be alive to the needs and capacity of the private sector: the proposed $100 million loan being negotiated by the Government of India from the DLF, reminds one of the mythological messenger aspiring to become the lover himself, instead of confining himself to delivery of the message.

Commonwealth Co-operation in Trade Unionism

By ROB MANSFIELD

GENEVA may seem a strange place for a Commonwealth conference. But during June, representatives of Commonwealth trade unions were holding discussions in that ancient and renowned Swiss town, examining common problems and exchanging information and experience.

This was, in fact, another illustration of the habit Commonwealth countries have developed of getting together whenever the opportunity offers. For the trade-union leaders were really delegates and advisers at the annual International Labour Conference—the legislative body of the Internation Labour Organization (ILO). But for 10 years past they have taken the opportunity to hold a Commonwealth trade-union conference during this annual ILO conference.

Commonwealth co-operation in the field of trade unionism does not depend on this one yearly meeting. On the contrary, it is constant and detailed. Obviously, much of the inspiration for it stems from Britain, first nation in the world to experience an industrial revolution, and one with nearly two centuries of trade-union experience behind her.

But it has not been the policy of Britain's Trades Union Congress (TUC) to attempt to impose its own pattern on others. Rather has the TUC contributed its vast experience—particularly emphasizing the basic principles of free trade-unionism—that the unions should not ultimately be "owned" either by government or employers, and that they should be elastic enough to adapt themselves to the conditions and traditions of their own country.

As one TUC official told me recently, "all we do to help is done with one aim—that our colleagues overseas must run their own show".

ADVISORY COMMITTEE

The TUC has its own Commonwealth Advisory Committee in London, and is in constant touch with trade unionists throughout both independent and dependent territories. It sends its own representatives abroad to help and advise when requested, and receives a constant flow of Commonwealth visitors who go to Britain to study trade unionism. The infant unions overseas are helped with equipment, books, and financial contributions.

It is illuminating to read through the annual reports of the TUC and to note how it has sent out advisers to many widely separated countries. Earlier this year, Mr Victor Feather, assistant secretary of the TUC visited India at the invitation of the Indian National Trade Union Congress (INTUC), attending that body's annual conference and travelling round the country meeting trade unionists.

These personal visits are invaluable, for trade unionism can be a most tender plant in different stages of its development. In many Commonwealth lands it is deeply rooted, but in parts of Africa and Asia it can easily be destroyed by unscrupulous demagogues.

INDIA'S LEAD

It is heartening, therefore, to see so stalwart a member of the Commonwealth as India leading the way in democratic trade unionism in Asia. During the past few years INTUC has made great progress, and trade unions are operating in all the major industries (with, of course, the exception of agriculture, which in its present state of organization does not lend itself to such a development.)

The leadership which the great Commonwealth nation is giving in Asia was underlined in 1957, when the ILO's Asian regional conference was held in New Delhi. Furthermore, the International Confederation of Free Trade Unions (ICFTU) has established its Asian Trade Union College in Calcutta. (Incidentally, it is planning to establish another one, for Africa, in Uganda.)

ICFTU is the organization of the democratic world, and a large number of unions from practically all Commonwealth countries are affiliated. Membership of ICFTU was estimated last year at 55,000,000 from 95 different countries, and the influence of the Commonwealth inside this vitally important organization can hardly be overestimated. The British TUC, which has nearly 8,500,000 trade unionists affiliated to it, was, indeed, one of the prime movers in the formation of ICFTU.

PROGRESSIVE BRITISH POLICY

It is not hard to see why the British concept of trade unionism, adapted to local requirements, fits into the scheme of things in other Commonwealth countries.

In the non-self-governing territories, long before the war, Britain was pursuing a vigorous and imaginative policy in the labour field—building up labour departments, appointing labour officers, overhauling legislation, and encouraging responsible trade unionism. The figures tell the story. In 1932 there were only three registered trade unions in these territories; today there are something like 1,500.

This progressive policy has had its own just reward. For the trade-union links have continued into the stage of independence for the newer members of the Commonwealth—and in Malaya, India, and other lands the most cordial relationship exists with British trade unionism.

IMPORTANT BONDS

This was well expressed in a letter to the TUC from Mr K. V. Thaver, General Secretary of the Trade Union Council of Malaya, that newest member of the Commonwealth. Wrote Mr Thaver: "We are confident that the bonds we have built.... will continue in closer collaboration".

And when the Federal Parliament of the West Indies was inaugurated last year, the TUC echoed the same ideal in a message to Prime Minister Sir Grantley Adams, himself a former trade-union leader. That message said: "For more than 20 years we have appreciated the close and traditional association with the working peoples' organizations of your islands. In Britain as well as the West Indies. bonds of friendship have grown strong".

The meeting at Geneva will have made those bonds a little stronger still, drawing together the tin miner in Malaya with the lorry driver in Australia, the mechanic in Birmingham with the dockworker in Calcutta. They are important bonds, for responsible trade unionism is one of the most valuable instruments in buttressing that concept of prosperous democracy on which the Commonwealth rests.

EDITORIAL NOTES

Industrial Relations

In his presidential address to the annual meeting of the All-India Organisation of Industrial Employers, Mr Lakshmipat Singhania has taken the current problems of industry in a comprehensive sweep, which includes a lucid presentation of the approach of enlightened employers to the problems of industrial relations. This was particularly appropriate to the occasion, for, apart from the fact that the Organisation deals mainly with the problems and demands of Industrial labour and commercial employees vis-a-vis management, the annual meeting was inaugurated by Mr Gulzarilal Nanda, Union Labour Minister. Industry, as Mr Singhania emphasised, does not grudge improvement in the position of industrial workers. In this context he underlined the great importance that employers attached to a well contented labour force and suggested that industrial relations should be given as great a priority as political stability.

While acknowledging the value of the various measures for improvement of industrial relations initiated by the Labour Minister, Mr Singhania did well to suggest that the problems of industrial labour should be studied against the background of the conditions of living of the rest of the labour force who do not receive any of the benefits of labour welfare legislation and of the common effort and sacrifice necessary to pull up their standards as well to open out new employment opportunities for the growing army of the unemployed.

Labour problems, especially those regarding increased rewards and amenities, are usually regarded as the sole concern of employers and their workers. Such a limited view has created in popular imagination a composite image of the industrial worker as a poor, exploited creature. deserving sympathy and support on all occasions. Not many realise that industrial workers yet constitute hardly 7 million out of total work-force now estimated at about 154 million, or less than five per cent. As a matter of fact, they are actually outnumbered by the unemployed. The problems of industrial labour and the legitimacy of their demands cannot be correctly evaluated, unless they are examined in relation to the problem of unemployment and the data regarding the living standards of non-industrial workers and the self-employed.

*

Company Registrations

The review of the working of the Companies Act for the three years ending March 1959 focusses attention on some interesting trends in business activity in the corporate sector. Despite the rigours of the new Companies legislation, the report indicates that the formation of new joint stock companies has not been adversely affected. During the three year period covered by the review, 2904 companies, with authorised capital of Rs 598 crores, were registered under the Act. Out of these, 207 companies with capital of Rs 166 crores were incorporated as public companies, while 2697 companies with total authorised capital of Rs 432 crores were formed as private companies. The Act, it is clear, has strengthened the preference for private companies.

In view of complaints voiced from time to time about the migration of capital from West Bengal, it is relevant to draw attention to the the fact that West Bengal leads in new incorporations. Nearly a third of the new companies were registered in West Bengal, and only one-fifth in Bombay which came second. The factors which inhibit investment in West Bengal, it appears, are not so formidable as they are sometimes made out to be. Out of the total new registrations, 1024 were in West Bengal, 601 in Bombay, 284 in Madras and 359 in Delhi. These three States and Delhi accounted for about 78 per cent of new registrations. These figures suggest that the Planning Commission will have to devote special attention to the problem of industrial development of the vast hinterland which seems to have but little attraction for company promoters.

Business in India till the recent past had been predominantly concerned with trade and commerce. The figures of new company formations give indication of a welcome shift in the direction of business activity. Industrial and manufacturing business, along with mining and quarrying, account for the majority of the new company formations. The number of new companies formed to carry on trade and commerce was 875, while 1259 companies were started for undertaking industrial and manufacturing business and another sixty belonged to the category of extractive industries.

Another interesting feature is the large number of companies that have been formed with capital not exceeding Rs 5 lakhs. The actual number of these small-sized companies was 1777, about 61 per cent of the total. It seems that the scope for small undertakings is being more widely appreciated.

On the basis of the evidence available from the report, it seems that the Companies Act has encouraged a decided preference for management directly by Board of Directors as compared with management by managing agents. Out of 2904 companies, only 36 showed preference for managing agents to run the business, while 2184 were to be managed by Board of Directors and the remaining 674 by managing directors.

Inland Waterways

Since the attainment of independence, the problem of development of waterways has attracted sporadic public interest. The numerous multipurpose projects which were envisaged in the first flush of enthusiasm were supposed to furnish adequate facilities for navigation. But in actual implementation the navigational aspects have been overlooked in most cases. Perhaps as compensation for what appears to be an unavoidable development, the Central Power and Water Commission drew up a grandiose scheme for linking the seas on the east and the west and revived the poet's dream of fertilising the dry barren lands of the South with the life-giving waters of the Ganges. They could also quote the respectable authority of Sir Arthur Cotton who also drew up plans for similar enterprises in the middle of the last century. It is fascinating to speculate how the economy of the country would have developed if the Government of India had not turned down that proposal in favour of railway development. But at the same time it seems that the approach of expert and laymen alike to the problem of waterways is governed more by sentimental than practical considerations. The engineers moreover seem to be fascinated by the technical aspects of a system of locks and gates to pay much attention to other considerations.

A workable scheme for development of waterways should begin with a realistic appraisal of the scope for water-transport in competition with other agencies. Speed is a primary factor. It is not an accident that most of the inland waterways were developed long before the advent of the automobile. Waterways are not likely to prove successful in attracting traffic unless they are able to carry fast moving craft. The famous canals of England are gradually going out of use. Considering the topography of the country, it is desirable that more attention should be devoted to the improvement and maintenance of existing waterways than to the construction of canals which are bound to be very costly if they are to serve any useful purpose.

In India, besides the navigable reaches of the rivers of about 3000 miles, there are 2670 miles of canals and backwaters. And many of them have suffered from systematic neglect. The economics of operation of water transport does not also appear to be very satisfactory. In North East India where conditions are most favourable, special inducements had to be offered to river transport companies to remain in business. The formation of Pakistan has, it may be mentioned in this context, disrupted the formerly existing system of water transport. The withdrawal of water for irrigation has also adversely affected the navigability of the Ganges except for low draft vessels. The Gokhale Committee has, therefore, done well to turn its back on ambitious schemes of new construction in order to emphasise that the greatest present need is to take action to arrest the further deterioration of existing waterways.

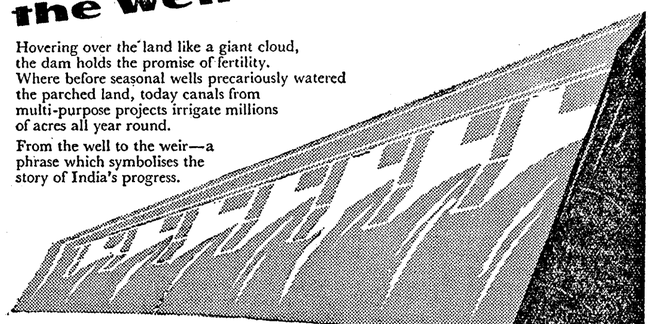
WORLD OF FINANCE

State Loans Imminent?

IT should not now be long before the State Government issues are placed on the market. More than reasonable time has elapsed since the Central Government's borrowing programme has been completed, but, more important than this, there is reason to believe that institutional investors who support both Central Government and State Government borrowing programmes, did not, this year, show much interest in the Central Government loan. Furthermore, it has for some years been the contention of this journal that the State Government loans have built up a clientele of their own and that there is no question of a large Central Government borrowing effort encroaching upon intending subscribers for State Government issues. Then, there is also the fact that there is a long queue of corporate bodies wishing to approach the capital market, and sanction for issue of capital for such entities is being withheld by the Controller of Capital Issues until such time as the State Government loans are out of the way. For these reasons, it is extremely unlikely that there will be much further delay before the State Governments make their new loan announcements. The loans issued last year were, it may be recalled, on a 4¼ per cent basis at varying rates of discount. Every such 4¼ per cent issue is quoting at a substantial premium. This premium ranges from Rs 1.25 to Rs 2.35. The redemption yield has shrunk, in the case of Bombay 4¼ per cent, 1970, to just under the 4 per cent mark at 3.99 per cent. It is in this light that we have to gauge the possible terms of issue of the impending State Government loans.

An interest coupon of 4¼ per cent may, we believe, be ruled out as being absurd and impossible. Secondly, since last year's issues had a maturity of 12 years (Bombay alone had a second issue, 13 years), it may be taken as certain that the minimum maturity period will be 12 years. Bombay alone might step it up to 13 or 14 years.

On the basis of the redemption yields now available on State Government loans, the discount at which the loans may be issued should be nominal. The redemption yield ranges from a low of 3.96 per cent on some of the 4 per cent 1968 Loans to 4.11 per cent on some of the 4¼ per cent 1970 issues. Nevertheless, it seems expected practice nowadays that, particularly in the case of the State Governments, new loan issues be made at a discount. We wish to emphasise that on no account should this discount be more than nominal. Indeed, we hope that the monetary authorities in Bombay will have the courage to issue their new loan at par.

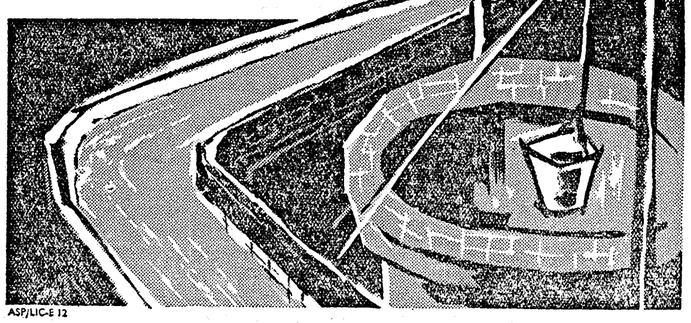


The consequence of the State Government loans may well be to cause temporary tightness in the money market position. Estimates of State Governments' requirements are put down at a minimum of Rs 50 crores. The whole of this subscription, except for such small part of it as may be accounted for by subscriptions from the banking system, will undoubtedly provoke a telling drawing upon Scheduled Bank Deposits. While, normally, a decline of such dimensions in Deposits would put the banking system to great strain—larger borrowings from the Reserve Bank are inevitable—the satisfactory progress of the 1959 slack season gives cause for hope that the impact of the State Government loans upon the money market may be less severe than is expected now. If, within the next two, three weeks, Scheduled Bank Advances should decline by another Rs 40 crores to Rs 50 crores, and, if, in the meantime, the present trend of rising Deposits is maintained, it may well happen that the banking system will take in its stride the repercussions flowing from the State Government borrowing programme in 1959-60.

(THE CHANGING FACE OF INDIA)

the weir & the well

Hovering over the land like a giant cloud, the dam holds the promise of fertility. Where before seasonal wells precariously watered the parched land, today canals from multi-purpose projects irrigate millions of acres all year round.



From the well to the weir—a phrase which symbolises the story of India's progress.

All over the country, in every field of endeavour, a better way to do the job is being found. This needs money...a lot of money. And here the Life Insurance Corporation plays its part. More than a million rupees a day are invested by the Corporation both in the public and the private sectors.

Corporation funds are employed to building dams, to mechanising agriculture, to erecting factories—in fact, to bringing about a modern and prosperous India. And along with the Life Insurance Corporation, every policyholder plays *his* part in building a better life for himself and the generations to come.

Life Insurance Corporation of India

Deficit Finance on Vast Scale?

The returns of the Reserve Bank for July 17 are noteworthy for the indication they give of the progress of the slack season, on the one hand, and of inter-Governmental transactions, on the other.

Active Note circulation is lower by Rs 16.64 crores at Rs 1705.08 crores. Rupee Coin has returned from circulation for Rs 1.44 crores. Currency has been contracted against Rupee Securities by transfer of Rs 15 crores to Investments in the Banking Department. In the end result, the Reserve Bank's cash in the till is marked higher by Rs 3.09 crores at Rs 22.76 crores.

Further evidence of the onward march of the slack season is afforded by the fact that the Reserve Balances of Scheduled Banks have moved up considerably by Rs 14.66 crores to Rs 91.79 crores. What is more, the Other Loans and Advances of the Reserve Bank have declined during the week by Rs 3.17 crores to Rs 67.80 crores.

Inter-governmental transactions were of such considerable magnitude that the Central Government were compelled during the week to have recourse to deficit financing on a vast scale.

Investments in the Banking Department have been marked up by Rs 54.55 crores at Rs 343.56 crores. After allowing for Rs 15 crores being transferred from the Issue Department, it will be seen that, in broad terms, ad hocs sold by the Central Government in favour of the Reserve Bank must have been in the region of Rs 40 crores. Very heavy payments have been made to the State Governments, whose balances with the Reserve Bank are higher by Rs 25.31 crores at Rs 39.36 crores. This is despite a reduction in the Ways and Means borrowings from the Reserve Bank by Rs 8.24 crores to Rs 21.23 crores. Thus, the State Governments improved their position vis-a-vis the Reserve Bank by roughly Rs 33½ crores. The additional deficit financing incurred by the Central Government was, we presume, with a view to meeting the maturing liability on Government Treasury Bills purchased and discounted held in the Banking Department of the Reserve Bank. This portfolio shows a decline of Rs 4.89 crores to Rs 6.17 crores; and there is also reason to believe that, during the week, the State Bank rediscounted Treasury Bills with the Reserve Bank for roughly Rs 4 crores. Thus, maturing liability in respect of Treasury Bills in this regard would have been in the region of Rs 9 crores. After applying the balance of deficit financing incurred toward meeting this liability, the Central Government experienced a fall of Rs 2.13 crores to Rs 49.56 crores in their balances.

Finally as far as concerns the Reserve Bank returns, the import surplus continues to make its impact felt, with a fall in the week in Balances Held Abroad of Rs 3.63 crores to Rs 9.93 crores.

The State Bank return for July 17 bears evidence of the continued progress of the 1959 slack season. Deposits have risen by Rs 2.05 crores to Rs 539.97 crores. Advances have shrunk by Rs 1.77 crores to Rs 183.80 crores. The State Bank figures, strangely, as having sold giltedged during the week for Rs 3.95 crores. Our supposition is that this relates to the portfolio of Treasury Bills held by the State Bank, as the State Bank was the main, if not the only, purchaser from the public auctions over the preceding several weeks. Nevertheless, it is difficult to plumb the reason for such sales being effected by the State Bank. It may be recalled that, in the new loan week, the State Bank appeared to have re-discounted Treasury Bills for Rs 7 crores, but that, at least, was owing to the possible need for larger subscriptions to the new loan programme. Are we, thus, to interpret the latest rediscount of Treasury Bills as presaging further purchases of securities from the Reserve Bank? In any event, the combined effect of the increase in Deposits and declines in Advances and Investments has been to add to the State Bank's Cash in hand and with the Reserve Bank by Rs 9.48 crores to Rs 37.77 crores.

By and large, the return of the Scheduled Banks for July 10 shows the completion of transactions relating to the Central Government's borrowing programme early this month. In the week under review, the Investment portfolio marks a rise of Rs 30.38 crores to Rs 668.25 crores. Of this amount, Rs 25 crores is ascribable to the State Bank. In broad terms, increase in Investments to the tune of Rs 5 crores can be seen to be on account of the other Scheduled Banks. As at July 10, the net addition to the Investment portfolio of Scheduled Banks is roughly Rs 37 crores. But, then, to this we have to add the Rs 7 crores disinvestment, probably in Treasury Bills, by the State Bank during the new loan week. In other words, the investments in the new loan as such of the Scheduled Banks as at July 10 may be placed at Rs 44 crores. We repeat that the State Bank's share has been Rs 25 crores, and the inference clearly is that the other Scheduled Banks have put in Rs 19 crores in the new loan. This exceeds by roughly Rs 4 crores our estimate of what the other Scheduled Banks would have put in to the new loan, but the total for Scheduled Banks as a whole marks no change, since, in the case of the State Bank, we had overestimated the probable subscriptions by Rs 5 crores.

Deposits of Scheduled Banks, which had shown a drop during the new loan week, have much more than recovered in rising by Rs 13.41 crores to Rs 1795.57 crores. What is intriguing is the fact that there has been a sharp switch-over from Demand Liabilities to Time Liabilities. Net Demand Liabilities are lower by Rs 28 crores, whereas net Time Liabilities are higher by Rs 37 crores. It is to be presumed that some constituents, apprehending a reduction in the banking money rates, have taken advantage of the present position to earn a little more interest over the next three or six month period.

Cash Balances have improved by Rs 10 crores to Rs 165.25 crores, but this is almost wholly on account of the State Bank. Finally, the total of Advances, which had risen steeply during the new loan week, has declined almost as steeply by a little under Rs 20 crores to Rs 985.23 crores. This means the total contraction in Advances, since the peak touched on May 8, 1959, is of the order of Rs 42 crores.

+

Western European Economic Recovery

By Paul Einzig

CONDITIONS in Europe are showing a striking improvement. In its latest bulletin, the Economic Commission for Europe in Geneva gives an optimistic account of the economic situation and prospects of Western Europe. Following on the recession of the last two years recovery seems to be well on its way. The rate of expansion in Britain and in Western Germany has increased, and the Economic Commission expects this to react favourably on the economic situation of the smaller Western European countries.

France is also recovering rapidly. It is becoming increasingly evident that since the advent of General de Gaulle the French economy has greatly benefited by the political stability achieved under the new regime.

We are likely to witness a French economic miracle comparable with the Western German economic miracle staged ten years ago. Germany has resumed her place among the leading countries, not because of the twelve divisions which she is going to contribute to the armed forces of NATO, but because she has succeeded in combining economic stability with economic expansion. The size of the Western German gold reserve and not the size of the Western German armed forces has secured power and prestige for Germany.

It would not be surprising if within the next year or two we shall see the emergence of an economically and financially powerful France. On more than one occasion in history the economic recouperative power of the French people surprised the world. In 1871 victorious Germany imposed on France a huge war indemnity which was expected to cripple France for generations. In fact the indemnity was paid in an amazingly short time. When in 1926 France was on the verge of economic chaos and collapse, the achievement of political stability under Poincare's Government led to her complete recovery in two years. It enabled France to accumulate a large gold and foreign exchange reserve which completely changed the international balance of power. From being the 'rich man of Europe" France became a financially strong country, second only to the United States.

History may well repeat itself. As soon as recovery and stability in France will be able to inspire confidence among French people there is bound to be a wholesale repatriation of French funds from the United States and other countries, and a wholesale de-hoarding of gold at home. As during the years that followed Poincare's measures. France will accumlate a very strong gold and foreign exchange reserve. Her influence in the international economic and political sphere will increase accordngly.

If the economic recovery of Europe is accompanied by a continued expansion in the United States, it is bound to reverse the unfavourable trend that has been in operation in the raw material producing countries. The Western European countries represent a very considerable total purchasing power which may have a decisive effect on the economies of underdeveloped countries. It has become a habit to regard American demand for raw materials as the decisive factor in world economy, because it represents the demand by a single country. But if we regard Western Europe as an economic unit its total demand of raw materials is fully comparable with that of the United States.

We have also grown used to regard Western Europe as being in need of American economic assistance. Beyond doubt in the absence of Marshall Aid Europe would not have had its chance to recover to anything like the extent to which it has recovered. But that is now past history. Western Europe is now quite capable of standing on its own feet; more than that, she is in a position to join forces with the United States in assisting economically weaker countries.

While Europe is still in need of American military aid, most Western European countries are now in a position to pay for the arms delivered by the United States. It is no longer the need for dollars that provides the main link between Western Europe and the United States.

It is indeed time for the United States to concentrate on the husbanding of their own financial strength. The geatest service the United States could render to the Free World would be the reinforcement of the defences of the dollar. From the point of view of the prestige and power of the United States it is of the utmost importance that the dollar should not come under suspicion. Although the United States is likely to lose more gold between now and the Presidential election next year, it is essential that such inevitable losses should not be aggravated by an untimely generosity in respect of foreign financial aid or by foreign investment beyond the immediate resources of the country.

Even from the point of view of the countries which stand to benefit by American financial aid and by the export of American capital the maintenance of the strength of the dollar is of paramount importance. A temporary decline of dollar aid would be a smaller evil than a weakening of confidence in the dollar. Now that Europe is becoming stronger it should be able to carry a large and increasing proportion of the financial burdens of the Free World.

Copyright

WORLD OF JUTE

Rise in US Burlap Consumption

AFTER the settlement of the dispute over the TSD contract the one topic that seems to be engaging the anxious attention of marketmen is whether or not the IJMA will come to an early decision on the question of the unsealing of a further quota of looms. Rumour has it that the matter is again coming up for discussion at a meeting toward the end of the current week.

From indications available as to the demand or jute goods in general in coming months it does not seem improbable that an artificial scarcity of supplies may come to prevail in case production remains unchanged at current levels. Atleast in the case of hessian such a situation is a distinct possibility. For the availability of hessian is such that a moderate improvement in offtake will be enough to bring about a squeeze. The fact that the expectations in regard to business from the Argentine have not yet materialised cannot be too strongly pressed in favour of pegging production at the present level. For, the Argentine business, though delayed, may turn out to be quite substantial. Further, there is the improved demand from the United States to be taken into consideration. Burlap consumption in US last month has recorded a substantial improvement over the previous month at 81 million yards as compared with 71 million yards in May of this year. This encouraging development confirms earlier expectations that burlap consumption will show an uptrend. The US has consumed 879.7 million yards in the twelve month period ending June 1959 as against 815.2 million yards consumed during the year 1957-58. Though burlap stocks during the last month have recorded a small decline to 285 million yards from 287 million yards at the end of the previous month, they are substantially higher than stocks at the end of June 1958 when they were placed at 232 million yards.

Some idea as to the trend of demand can also be obtained from the figures for despatches for the year 1958-59 as a whole. Total despatches amounted to 1074,870 tons against 1030,600 tons in the previous year. As production for the year amounted to 1040,500 tons, offtake has been running ahead of output. Both exports and internal consumption have contributed to this improvement. Exports are higher at 854,925 tons against 832,600 tons during 1957-58 and the increase is brought about mainly by hessian whose exports have amounted to 433,933 tons against the previous year's total of 381,000 tons. Exports of sacking, however, show a decline to 374,035 tons from 423,000 tons.

The fall in the exports of sackings reflects the lack of overseas support for this category of goods during most part of 1958-59. But the position has begun to show marked improvement during the past few months and in view of the fact that Pakistani production in the coming few months has been booked in advance, Indian sacking will have a good chance of attracting overseas buying for near term requirements. Moreover, several countries have come as buyers in the Indian market and business from China should have already amounted to a sizable quantity judging from the reports about enquiries from this quarter heard frequently in the course of the past few weeks. A point to be noted about sacking exports is that the market is yet to receive sizable enquiries from heavy goods' principal customer, Australia. The reason for the absence of any marked increase in the volume of business from this country is said to be the delay of its wheat crop due to unfavourable weather conditions earlier in the year. Latest reports, however, show that the crop, though delayed, is a bumper one. It is, therefore, quite on the cards that the Australian demand may pick up sizably in coming months.

The jute goods market opened the week on a steady note sentiment having been helped by the encouraging influence of a substantial increase in burlap consumption in US in June and reports of a Government order for 18,500 bales of B Twills. The news of a fall in gunny despatches during June however did not have any adverse effect on the undertone of the market. Though later the initial encouraging developments were buttressed by reports of fresh enquiries from China the higher price levels could not be held. It would appear that the sudden steep decline on Tuesday stemmed mainly from rumours that the benefit of the earlier Government order for B Twills would not accrue to the market. In the depression caused by the heavy selling pressure from the futures section the reports that the South Vietnam Government have decided to buy 1.2 million gunny bags and that bids in this regard will be received up to the 29th of this month seems to have been completely ignored by marketmen. Apart from the Chinese enquiry, small business had been reported done during the week with Australia and New Zealand in heavy goods and the Argentine in hessian.

Trading in the raw jute section was on a meagre level in the absence of mill interest. The trend mostly followed that in the goods section. Assam Bottoms old crop closed on Tuesday at Rs 22 with the quotation for the new crop placed at Rs 23.50.

WORLD OF TEA

Outlook for Common Grades

LATEST tea production statistics, covering January to June period, reveal that the supply is catching up with the 1958 crop. This year's total, as at the end of June, was 449.8 million pounds as compared with 456.1 million pounds at the end of June last year, resulting in a short-fall of only 6.3 million pounds against 18.2 million pounds a month ago.

In large measure, this was brought about by heavy plucking during May in both South India and Ceylon. The North-Indian crop for June also recorded a rise over a year ago and weather reports from this area indicate favourable crop prospects.

Although the improvement in the auction results this week is encouraging, it does not by itself provide an adequate reason for taking a bullish view. Buyers will, no doubt, be discriminating and good grades may not be difficult to sell as there is a shortage of them. Again, gardens, which will concentrate on quality production, are likely to be well rewarded.

However, Common tea producers may find it extremely difficult to sell their tea at remunerative prices unless substantial fiscal reliefs are given. In this connection, the Chairman of the Indian Tea Planters' Association, Jalpaiguri, has expressed concern at the absence of any promotional machinery for Indian tea in the biggest tea-consuming country of the world, the United Kingdom. He says that, since India came out out of the International Tea Market Expansion Board seven years ago, the promotional machinery is left in the hands of Ceylon.

He adds that, if positive steps are not immediately taken by India, gradually the market will be lost in favour of Ceylon, East Africa, Indonesia, China and others. Refering to the problem of Common tea, he says that Ceylon, being at a comparative advantage of 21 cents per pound, most of the buying orders for such tea will be diverted to that country (apart from East Africa, Indonesia and others) and exports of Indian common tea will further go down.

Meanwhile, in the Export Sale held in Calcutta this week, offerings were 42,629 packages. Quality was well maintained. There was a good general demand. "Teas for price" and Plain Brokens advanced by upto 6 nP, while similar Fannings received much more support and were up to 10 nP above last rates and sometimes more. Legg-cut teas were sold well, but were a little easier.

Best CTC Assams and bright liquoring teas of orthodox manufacture came in for strong competition at about last rates. The medium and more ordinary CTC teas, however, were 10 to 30 nP easier, while low medium Assam and Dooars BOPs with tip were a weak feature of the sale.

Whole Leaf grades were well supported at irregularly easier rates. Darjeeling teas met with fair support and the most flavoury types were sold well. There was more demand for Tippy teas. Following rates were quoted:—Clean Black Pekoe Rs 1.96; Plain BP Rs 1.70 to Rs 1.76; Plain Fannings Rs 1.68 to Rs 1.76; Medium BP Rs 2.00 to Rs 2.05; Medium Fannings Rs 2.10 to Rs 2.20; Best Assam CTC BP Rs 3.40 to Rs 3.60 and Best Assam CTC Fannings Rs 4.00 to Rs 4.40.

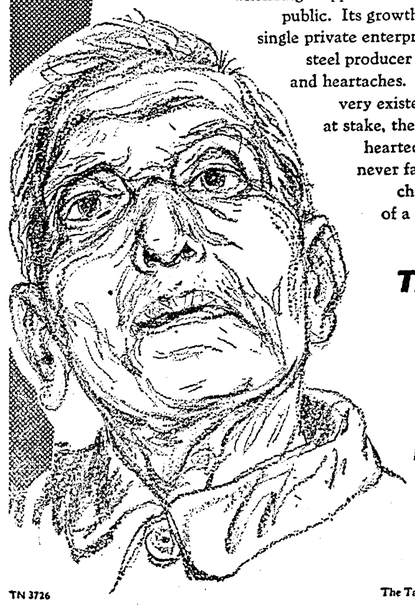
In the Internal Sale, offerings were 18,179 packages of Dusts and 386 packages of Leaf grades There was a good general demand. Dusts of orthodox manufacture were firm and often dearer. Legg-cut Dooars teas met with keen competition and were 4 nP and sometimes 6 nP dearer. Darjeeling Dusts were irregular, but generally sold at about last rates.

The demand for medium CTC dusts followed the trend of recent weeks, keen interest being shown in invoices with improving quality and in grainy exportable types, which sometimes sold above valuations. The more ordinary kinds, however, received less support, prices declining by upto 20 nP and they were often difficult of sale. The very best CTC dusts were irregular and received less support as the sale progressed. Following rates were quoted:—Medium Dooars Dust Rs 1.74 to Rs 1.78; Medium Assam Dust Rs 1.72 to Rs 1.80; Medium Assam CTC Dust Rs 2.00 to Rs 2.20 and Best CTC Assam Dust Rs 2.80 to Rs 3.10. Leaf grades met with a good demand at generally dearer rates.

In the Cochin market, offerings were just over 1.1 million pounds and the quality showed a slight improvement in general. Low Medium and Medium-Brokens were fully firm; but similar Fannings were sold at slightly easier rates than the previous week. Improved quality Good Mediums and in particular highgrowns met with useful enquiry and were sold at dearer rates. Offerings of Dusts were 5,75,000 pounds. Against a very strong demand, prices advanced occasionally by 20 nP over valuation for every sort except highgrowns which were steady.

The Internal Sale No. 5 in Chittagong has been postponed to July 22nd. This postponement was made to decide whether to keep the controls or lift them altogether. Tea circles favour the lifting of controls, as they say that Pakistani tea crop prospects are now very bright and a bumper crop of 60 million pounds is expected this season.

In Mincing Lane, offerings were 52,775 packages. The quality of the Ceylon teas continued to decline and prices were again lower except for the new remaining bright liquoring invoices. Of the North Indian offerings, prices for the best invoices were about maintained, while legg-cut Dooars were irregular and often lower. African types were in good request, especially the better invoices for which prices were fully steady.



Tea stocks, in London, again recorded a fall, totalling some 125.1 million pounds for the week ended July 10 as against about 127.6 million pounds in the previous week. Teas afloat to the UK were, however, up at 24.2 million pounds from 11.4 million pounds.

men of faith

"From early morning till late at night the Tata offices in Bombay were besieged by an eager crowd of investors. Old and young, rich and poor, men and women, they came offering their mites; and, at the end of three weeks, the entire capital required for the construction requirements, £ 1,630,000 (over Rs. 2 crores), was secured, every penny contributed by some 8,000 Indians."

—Axel Sahlin

India's first venture into heavy industry, The Tata Iron & Steel Company, was thus launched on 26th August, 1907, with overwhelming support from investors and the public. Its growth into the country's largest single private enterprise and the principal steel producer was not without struggles and heartaches. In the 1920's when the very existence of the Company was at stake, there were many stout-hearted investors whose faith never faltered, and who cheerfully accepted the risks of a pioneering enterprise.

TATA STEEL

79-year old Mr. Rash Behari Law of 13-B Cornwallis Street, Calcutta-6, one of the first shareholders, who still holds stock in the Company.

The Tata Iron and Steel Company Limited

Indian Insurance Companies' Association

Review of General Insurance

Envisaging a bright future for Indian Insurance, Shri M. S. Dastur, Chairman of the Indian Insurance Companies' Association, while presiding over the 31st annual general meeting of the Association held on Tuesday, the 21st July, at Bombay, observed: "With the progressive implementation of the various schemes for the economic development of the country, there will be a considerable scope in the years to come for Insurance Companies to develop new lines of business to meet the many and varied requirements of industry". He, however, felt that it would be necessary for certain conditions to be fulfilled and certain handicaps removed if the vast potential was to be realised in practice.

Acceptance of Policies

Shri Dastur, after prefacing his speech with a brief reference to world economic conditions and the general prospects for insurance, went on to refer to the onerous conditions imposed by financing institutions in their dealings with Insurance Companies. In this connection, he cited the example of the Industrial Finance Corporation which insisted on some Insurers to obtain letters of credit from their Treaty and Reinsurance Offices to the effect that in the event of a claim arising, these Offices would pay the claim direct. He also mentioned other Industrial Investment Corporations who required Companies to participate in the share capital of the Corporations in order to ensure acceptance of their policies. Continuing, he added that some Banks also insisted on special conditions, requiring Insurers to lodge with them Government or other Securities of certain value or, in the alternative, provide for the policies issued by them to be guaranteed by another Insurance Company of repute, acceptable to the Banks. He deplored the insistence of these conditions, as derogatory to Indian Insurance as a whole and emphasised how it was essential in the interests of trade and industry that the two important adjuncts to national economy, banking and insurance, should work in close co-operation.

Formula for Expenses

Adverting to the problem of expenses of management of insurance companies, Shri Dastur said that the expenses had risen more steeply than the premium income during recent years. He referred in this context to the formula for expenses provided under Section 40C of the Insurance Act, read with Rule 17E, which was framed as far back as 1950 and suggested that inasmuch as economic conditions had changed since then, the formula should be revised so as to reflect the requirements of the trade in the altered circumstances.

Code of Conduct

The Code of Conduct for General Insurers, according to Shri Dastur, had achieved reasonable success. Given a fair trial, it should yield good dividends in the long run. He expressed the hope that the Sub-Committee of the Executive Committee, which had been appointed to take stock of the present position in the trade and recommend on the future course, would evolve a satisfactory solution acceptable to all sections of the trade. He also appealed to the authorities not to change the Code frequently, nor to make it too elaborate, complicated or expensive, but to formulate a compact and balanced scheme. Further, he stressed the need for such stringent measures as enforcement of a uniform pattern for maintenance of Account Books and appointment of Inspectors. He made a fervent plea to Insurers to adopt a policy of 'live and let live' and evince a sense of mutual co-operation, based on tolerance and goodwill.

Reserves

The Chairman regretted that the Indian Insurers' plea for facilities designed to encourage the building up of ample Reserves continued to be ignored by the Government. He felt that heavy taxation and failure to take into account the special features of the industry would tend to weaken Insurers. He strongly urged the Government to allow the industry to build up tax-free reserves to enable it to provide still better and more efficient service to the community.

Fire Tariff Rates

Proceeding, Shri Dastur subjected the move to reduce fire tariff rates to critical scrutiny. He observed how fire insurance rates, in the aggregate, must be sufficient to cover (1) losses, (2) expenses of management, (3) ample free reserves to withstand unforeseen calamities and (4) fair and reasonable profits to shareholders. He, however, said that only the first of these factors was now being taken into consideration for the purpose of revision of rates. The Fire Department underwriting, on the other hand, really consisted of several sub-sections, such as (1) fire, (2) riot, (3) earthquake and (4) other extraneous risks. Fortunately, Insurers had not faced in recent years losses under (2) and (3) and there had been very little losses under (4). He therefore pointed out that it would not be proper to revise the premium rates on the basis of a claims ratio which, while taking into account premiums derived from all sub-sections, was in effect based on the actual occurrence of losses in one sub-section alone, ignoring the possibility of losses in the other sub-sections. He also emphasised that, in deciding the case for the revision of fire tariff, the relatively limited increase in fire premium income, the increase in expenses of management and the need for building free reserves to meet unforeseen contingencies should all be taken into account. Again, it was necessary to bear in mind that it was easier to reduce the rates than to raise them again when circumstances so warranted. Nor would their reduction eliminate malpractices.

The New India Assurance Company Limited

BOMBAY

Mr A. D. Shroff, the Chairman, on need for healthy Cooperation between Public and Private Sectors

The following is a summary of the Speech delivered by Mr. A. D. Shroff, the Chairman, at the Fortieth Annual General Meeting of the shareholders of the New India Assurance Company Limited, at Bombay, on July 22, 1959.

Referring to the continuing drift in international affairs Mr. Shroff made a fervent plea for peaceful co-existence. In the economic field, Mr. Shroff analysed the broad trends in the developed and underdeveloped countries and said that the recessionary trends of the previous year have tended to peter out and a cautious re-expansion of economic activity was well under way in a number of countries. Referring to the establishment of common markets or regional groups in the sphere of trade, he expressed his apprehension that these might degenerate into rival blocks indulging in economic wars, and exploiting and weakening the under-developed countries instead of becoming reservoirs of strength for their uplift.

He was gratified to note that more emphasis was now placed on economic rather than military aspects of aid to underdeveloped countries.

After reviewing the trends in the Indian economy, Mr. Shroff stated that our national policies called for a fundamental reorientation and re-adjustment so as to make them consistent with our paramount need to maximise production. In this connection, he pleaded for Government policies which were free from ideological or doctrinaire inhibitions. In the industrial sphere, Mr. Shroff favoured the establishment of industrial nuclei of key and basic industries around which small clusters of ancillary cottage industry units are organised and developed. This would not only solve the problems of technical know-how, credit facilities and marketing, etc. but also evolve a diversified and integrated industrial structure. In this connection, he advocated the establishment of special types of institutions for hire-purchase financing, central marketing and technical services. He recommended the promotion of institutions like the Unit Trusts to promote savings on a larger scale.

Turning to General Insurance, Mr. Shroff stated that 1958 continued to be a difficult one for general insurers the world over. Referring to the Code of Conduct and its Administrative Machinery, he said that though results had not yet been adequate, a more effective organisation of the Administrative Machinery and observance of the Code by the Insurers, both in letter and spirit, could improve matters a great deal. He expressed the hope that the adjustments in Fire rates proposed by the Tariff Committee would be a significant step forward in achieving the ultimate objective of a rate structure equitable to the insurer and the insured. Reviewing the problems of the industry, Mr. Shroff said that insurers should build up an efficient claims organisation to investigate into claims and render prompt service to the insured with the same zeal which they now display for the procurement of business. He strongly advocated an obligatory marine tariff in so far as India was concerned, to avoid wasteful and uneconomic competition. Mr. Shroff very much regretted that his appeal to the Government for an equitable and just deal to private enterprise in the matter of placing the insurance business of Government-owned or aided industries had so far gone unheeded. He emphasized the need for a spirit of healthy cooperation between the public and private sectors of the industry to eradicate common maladies.

Reviewing the results of New India's operations during 1958, Mr. Shroff stated that the total premium income for the year amounted to Rs. 7.54 crores as against Rs. 6.30 crores in 1957. Profit transferred to the Profit and Loss Account amounted to Rs. 55.90 lacs as against Rs. 32.7 lacs in 1957. As a result of the year's operations the Company's Total Funds increased by Rs. 61.4 lacs to Rs. 9.11 crores.

Mr. Shroff concluded by saying that the Directors were confident of the continued expansion of the Company's activities.

(This does not purport to be a record of the proceedings of the Meeting).

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

PARLIAMENT is not in session. The important Chamber meetings have long since been held. The Central Government borrowing programme is out of the way. The Second Plan is at that stage of implementation where it is hard either to sing praises of achievement or decry a mounting sense of failure. Thinking on the Third Plan has not crystallized. In such a background, pity poor me, who has to find a topic each week that will lend itself to a gossipy treatment. The Indian press has been hardly helpful and all that you read—or reluctantly shy away from reading—is column upon column of drab and uninteresting stuff. Picture me therefore at my desk, my stenographer in front of me, waiting, as it were, for inspiration to strike me. As was to be expected, no inspiration. So, in an atmosphere of unnatural silence, not with the hope of finding something suitable to write upon, but merely that I might be accorded some relaxation from my effort at a gossip, I looked idly upon my desk to see what it had to offer. Never was I so lucky. There was, on the one hand, a glossily produced publication, put out by the United States Information Service and styled "India's New Horizons". There was, on the other hand, the latest issue of an American journal "Business Week"; and, though the former contains but little of text and though the latter has but one short article, there was material and more for fresh thoughts on a topic that has as much relevance to the Second Plan as to the Third Plan. I refer here to foreign investment generally and investments by America in India in particular. There is, I am afraid, a great deal of misunderstanding about the scope for foreign investment in a country like India. This is an error that the "Business Week" article, for example, is guilty of. Not only, I believe, is the scope for private investment limited in a country like India, I am afraid I cannot shrug off my conviction that no imposing list of concessions or reliefs or incentives will ever succeed in inducing one extra dollar of investment in India. So, thanks to the United States Information Service, let me proceed to share with readers of this gossip my impressions of the proper perspective in which foreign investment is to be viewed, the scope that there is for foreign investment and the manner in which at all foreign investments can be attracted.

*

Ambassador Ellsworth Bunker, who has written the foreword for "India's New Horizons", remarks that India "has been engaged in a great adventure of economic and social development which has captured the interest and appealed to the imagination of peoples throughout the world". Though it took some time, there can be no question that such interest by friendly nations has taken the form of assistance on a government to government footing. But, as Mr Howard E. Houston, Director of the US Technical Cooperation Mission, remarks in his tailpiece, "it is through the sacrifices and toil of the Indian nation that success has been achieved". What has happened is this, that, with the assistance at a governmental level, the foreign exchange help so derived is in the nature of a catalyst; and it is in this sense that both Mr Bunker and Mr Houston see US help to India as illustrative of a symbolic attempt by America to help India achieve its aspirations. What is the scope for governmental assistance? What is its usefulness? The answer to both questions is "unlimited". Even here, however, there is a certain qualification that we have to make, namely, the capacity of the country to absorb foreign assistance. By its very nature, external aid is intended to cover the cost of importation from abroad of capital machinery or what have you. But it is India that will have to find the resource in men and materials, not to speak of money, to translate a particular scheme from blue prints to reality. What could avail, for example, a spanking new aluminium plant with a rated capacity of a hundred thousand tons, if India did not have the use for that quantity of aluminium or if India did not have the men or the material to sustain such a level of production? No, I am afraid, we will have to be clear in our minds that, even for governmental assistance, there is a limit imposed by the ability of the receiving country to utilise that assistance. There will, of course, always be projects which are foreign exchange-incentive, there will be other general directions in which, perhaps merely to tide us over balance of payments difficulties, foreign exchange credits will serve a useful purpose. But, by and large, I wish to emphasise that all this talk of foreign exchange assistance being central to our planned endeavours is quite, quite wrong. Let me repeat what Mr Houston has to say. The people and Government of America, he says, are "aware of the fact that it is India's people and Government and resources which are at the very centre of these plans; that the dreams and plans and hopes and aspirations are India's; that it is through the sacrifices and toil of the Indian nation that success is being achieved".

*

I do not mean to imply, I hasten to add, that India can do without external assistance. At a pinch, India would have to, but external assistance consistent with plans that India can implement will enable us with much less difficulty to forward our endeavours. At the same time, I am afraid I do not lay much store by the oft repeated adage that never before in history has an industrial revolution been achieved without the importation of foreign capital in one form or another. For example, the mobilisation of gold hoards in this country and a sustained drive for multiplying our iron ore exports manyfold should, I believe, largely enable the solution of our foreign exchange problems. This is neither here nor there, since all official thinking at the moment seems to be based on the view that nothing is possible without external assistance. For all that we have received not a little by way of governmental assistance, the cry raised in all quarters is that India has failed miserably in the task of trying to induce private foreign investment.

Thus, "Business Week" lists three reasons why the attitude of the underdeveloped countries toward private foreign investments seems to be negative. Firstly, the profit motive is suspect. Secondly, the be-all and end-all of all efforts seem to be for complete economic self-sufficiency. Lastly, there is the bias in favour of state ownership of basic ventures. It may be stressed that these are three statements with general reference to the underdeveloped countries, but, nevertheless, it can be seen that India has all three ingredients of this so-called negative attitude. But let us see to what extent this approach, seemingly negative as it might be, is nonetheless for India an eminently correct and justifiable one.

*

I must admit that I have no sympathy with the frowning upon the profit motive that we have in India. It is only lately that profit has become a respectable word, since, in fact, Government enterprises were on the verge of making some money and since the time that the problem of resources for the Third Plan began to be real and dominating. All human endeavour is influenced by the profit motive, and it is unnatural for India or for any other country to expect that its industrialists will be moved by high moral or patriotic impulse and without any regard for whether or no in their endeavours some profit is being made. Emphatically, I say that it is time for the authorities in this country to realise that it is the profit motive essentially which alone can be responsible for the growth of industry or the proof of entrepreneurship. As far as economic self-sufficiency is concerned, India's ambitions in this regard are much more

justified. This is aside from the fact that, during the long years of British rule, little attempt was made to provide India with any industrial framework. Indeed, an obsession with self-sufficiency, if such there is, really started with Partition, if not later. It was the intransigent and unfriendly attitude of Pakistan to this country, an attitude that jeopardised the very existence of the jute mills industry in India, which set India to consider seriously the possibilities of self-sufficiency. India's dependence on imports in regard to two key industries was much too great. The years since then have shown that we were capable of producing our raw cotton and raw jute adequate to our needs. In our planned endeavours at industrialisation, the manner in which this desire for economic self-sufficiency influenced our planning, is apt to be exaggerated. Indeed, the stress on basic industries, which I suppose will be interpreted as signifying much too great a preoccupation with economic self-sufficiency, is really because our planners realised that not much headway, in present conditions, can be achieved without the availability of the basic raw materials. So, at least in the case of India, I do not see that there is any unusual predilection in favour of self-sufficiency. We come, finally, to the bias in favour of state ownership of basic industries. I remember Professor Galbraith writing somewhere, perhaps in Foreign Affairs, that the real reason why underdeveloped countries had to assume state ownership of basic industries was because, in such countries, private enterprise was either unable to command the resources for or unwilling to take the risk in respect of the establishment of basic industries. Not only was the capital required for basic industries large, considerable time would elapse before the enterprise would begin to show a profit. It is in such circumstances that there exists this assumption of responsibility for basic industries by the State. In the case of India, moreover, it is not as if Government reserve the right to themselves for development in these spheres. Whether it is fertilizers or aluminium or even iron and steel, the cooperation of the private sector has been sought, obtained and welcomed.

*

We have now to consider in which way, if at all, the leaning toward state ownership of basic industry stands in the way of foreign capital coming to India. The "Business Week" article has this to say:

"The preference for state ownership of the means of production is an even clearer obstacle to much foreign private investment. For example, the Indian government plays a dominant role in industrial areas in which private foreign investors might be interested. All the basic industries now are reserved for government development under the five-year plans. In some industries the Indian government keeps an important segment of production in state hands, which means that a foreign investor would be forced to compete with subsidized state plans."

*

"Business Week" also cites as an example a report, which I had not heard before, to the effect that India had "cold-shouldered" an offer by international aluminium companies to build a fabricating plant that would turn out 100,000 tons a year of finished products. But this is precisely the point, that a unit of this size is beyond India's needs and even beyond the capacity of India to provide minimum necessary Indian resources.

*

As to the objection that "control" over basic industries is a hurdle, it seems to me that I have just to repeat Professor Galbraith's remarks: the lack of a profit motive will anyhow prevent private capital, foreign or Indian, from being attracted to production of primary products. Indeed, it is with governmental endeavour to set up basic industry, that the way is being opened out for the establishment of ancillary industry. And it is in this sense that the scope for private foreign capital, in the first place, is restricted. It is restricted, in the second place, by the ability or, rather inability, of the Indian investor to put up the indigenous capital. Look at it which way you will, I am afraid the inevitable conclusion is that, in all current talk of resources for the Third Plan, the place of private foreign capital is being unduly exaggerated.

Road Transport

BOMBAY REVIEW

THERE has been a marked change in Government's attitude toward problems of road transport in the past one, two years. Transport operators who have reconciled themselves to finding their appeals for help turning into cries in the wilderness are now agreeably surprised to see ministers vying with one another in extolling the vital role of road transport in the planned development of the country. The revival of official interest in this department of transport has been perceptibly reflected in the relaxation of policies in its favour and within a remarkably short time of the removal of some of the major impediments in the way of inter-state movement of goods by motor trucks, road transport has shown that it can be a serious competitor to the railways.

It is, however, wrong to think that Authority has been aware of the exact role of road transport all along. Though transport and communications is the one item in the Second Plan which has got an allotment far in excess of any other department—Rs 1385 crores out of a total of Rs 4800 crores—it cannot be maintained that the provision is either adequate or has been apportioned intelligently among the various sectors of transport. While it is true that the provision for railway development is by no means enormous considering the backlog of repair and replacements and the amount of additional carrying capacity expected of them during the Second Plan period, it is to be admitted that the claims of other modes of transport especially road transport, have not received their legitimate share of attention.

It was not before the half way mark of the current plan period had been passed that authority had begun to take serious note of the fact that by the Second Plan period there would be a wide gap between transport needs and availability. True, the revised needs of traffic demand in 1960-61 is only 168 million tons against 181 million tons originally estimated in the plan, but according to an assessment of the total availability as at last year even the revised estimate will leave a big enough gap of about 50 million tons. It is also interesting to note that the only agency that can make any attempt at all toward narrowing the gap is road transport. Such belated realisation of the vital importance of road transport has been mainly responsible for the newfound enthusiasm in Government in its development.

Even so, it is not as though road transport has been given the green signal toward unfettered development. The bogey of nationalisation which has been raised from time to time has had a depressing effect on sentiment and only for the past one or two years authority has condescended to be somewhat specific on this point. Some time apo we were told that the nationalisation issue would not be raised till the end of the current plan. Private transport operators have all along been demanded a sufficiently long time limit and they should now have no cause for complaint atleast on this score as Mr S. K. Patil has made it clear the other day in Ahmedabad that transport operators can plan on the safe assumption that there will be no nationalisation in the next 15 years to come. The only requirement for the freedom from undue Government interference is efficiency. This is as large a charter as road transport operators can hope to obtain in the context of the national ideal of a socialistic pattern of society and there is no doubt that Mr Patil's assurance will go a long way toward fostering development of road transport in coming years. But there is no denying the fact that much remains to be accomplished in the shape of development of roads before road transport in our country can hope to reach the position that such transport has attained in developed countries of the world, particularly, of the United States of America. It is gratifying to hear from Mr Patil that Government are now aware of the "gigantic nature of work which road transport presents." The Union Minister for Transport and Communications rightly thinks that the task requires the unstinted cooperation of Government, local bodies and road transport organisation.

It is but natural to expect that the experience gained during the Second Plan period with regard to transport planning will result in a more realistic approach to transport problems in the Third Plan than has been the case hitherto. It is generally felt that potentialities of road transport in meeting the transport needs should receive due recognition. In a recent memorandum submitted to the Jha Committee on automobiles, the Indian Road and Transport Development Association, has pointed out that the emphasis on transport planning in the third plan should be laid on road transport. Four reasons are adduced for according such priority. In the first place, the growing industrialisation of the country demands quicker turnover of finished goods and road transport can play a large part in providing the needed facilities at a faster rate than the railways. Secondly, the country is not getting as much return as it should from the investments on roads, in terms of vehicle per mile of surfaced roads. Thirdly, the employment potential of the road transport is much higher than in the case of railways. According to the calculations of the Association "for the same road transport provides employment for about seven times as many hands as rail transport." Fourthly, Government can obtain a high return from taxation from motor vehicles.

Transport planning so far no doubt has been lacking in exactitude but it will be unfair to accuse Government of discrimination between railways and road transport because the latter is largely in the hands of private enterprise. The bogey of nationalisation need not bother us for some considerable time to come. There are now enough indications in official policy to engender the hope that Authority will not repeat the mistake of underestimating the role of road transport in the context of the rapidly developing economy of our country.

*

The announcement made last week in Bombay by Mr G. L. Mehta, Chairman of the Industrial Credit and Investment Corporation of India Limited, that the World Bank has made a second loan equivalent to $ 10 million to the ICIC should be a source of encouragement to the private sector. For, in the context of the present acute shortage of foreign exchange the ICIC has stood it in good stead. Since the start of its operations four years ago, the Corporation has approved investments and underwritings amounting to Rs 15.8 crores. Of these, rupee and foreign currency loans totalled Rs 7.3 crores and direct equity participation totalled Rs 1.7 crores.

A wide variety of industries have received assistance from the Corporation. From the world Bank's first loan, an amount of $ 6.5 million has been used for six projects in the electrical, chemical, mechanical and shipping sectors.

S. E. RLY TENDERS

Sealed tenders are invited for Tender No. CS.1/59/S/1/A/5/SHM (59) for handling of materials at Shalimar Stores Depot & Yard during 1.10.59 to 30.9.60.

Tender forms are obtainable from the office of the undermentioned (ADMS Section), at Garden Reach, Calcutta, on remittance of Rs. 2/- (not refundable) per copy by Money Order to him direct in case of outside firms and on production of Cash Receipt from the Chief Cashier, South Eastern Railway, Garden Reach, Calcutta by local firm. Opening date of the Tender is at 12 A.M. on 14.8.59. Firms not on the Railways list of approved contractors must deposit Rs. 500/- in cash with the Chief Cashier as Earnest Money and enclose his receipt together with a valid Income Tax Clearance Certificate with the Tender.

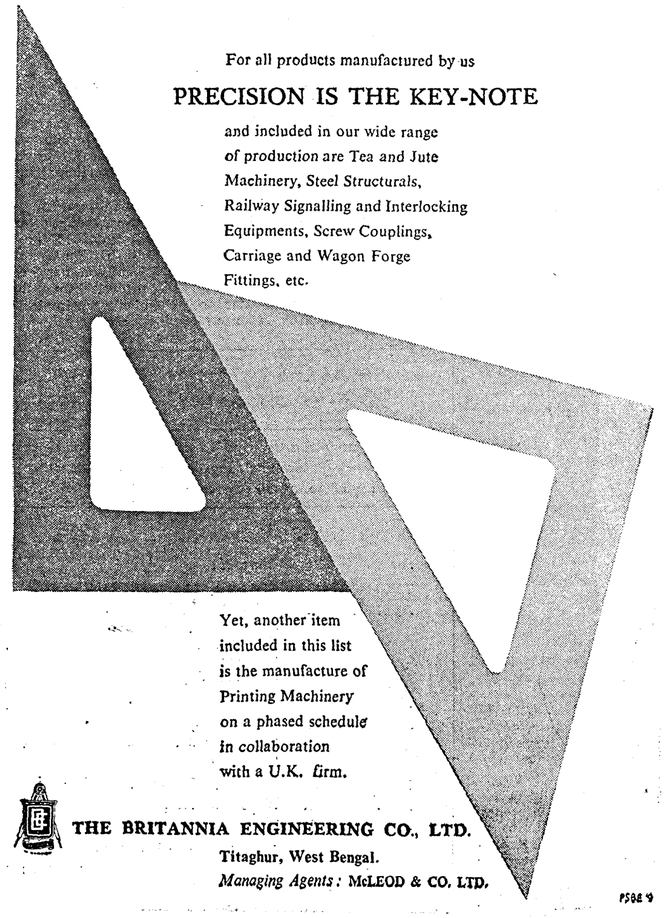
Manganese Exports

At a time when maximisation of exports should be one of the governing principles of national economic policy it is incumbent on Government to be extremely vigilant with a view to ensure that our traditional exports are well maintained. While it is true that new lines of exports have to be fostered if we have to make our planned development a success, it is also necessary to remember that our country has to depend largely on its traditional exports for considerable time to come. But it is unfortunate that this wholesome principle is not being followed as strictly as it should be.

For instance in the case of manganese exports it would appear that Authority is more anxious to get the State Trading Corporation established in the trade rather than ensuring a maximisation of export in this commodity. From the facts and figures as regards the export trade given by the Western India Minerals Association, Bombay, it would appear that official interference has done considerable harm to the export trade. According to the Association ever since the advent of the State Trading Corporation the export trade in manganese has begun to be adversely affected. Whereas in the year before the STC entered the trade, total annual exports amounted to 16 lakh tons there has been a steady decline thereafter from year to year to about nine lakh tons in 1958-59. Indications are that exports will continue to show a declining trend. In support of the contention that the STC has failed to demonstrate its ability to deal with such exports as manganese it is pointed out that out of the total export of 8.63 lakh tons for the eleven months ending last May, the STC has accounted for only 1.9 lakh tons. It is claimed that the private exporters have not only exhausted their quota but have also arranged the export of a substantial quantity through the Corporation. It is further said that while private exporters have been able to conclude forward deals, the Corporation seems to have had little success in this respect. It is strange therefore to hear that the Corporation is trying to take up the entire responsibility for the export trade in manganese by means, for the employment of which there appears to be no official sanction. It is upto the Government to convince the public at large that the maximisation of manganese exports through the regular trade channels which have shown that they can handle the job quite efficiently is less important than the fostering of the State Trading Corporation at any cost.

BOMBAY REVIEW



Automobile Leaf Spring Industry

The automobile leaf spring industry may be divided into two parts, the organised and small-scale sectors. In the former there are six units with two more for which licences have been granted. The latter comprises a number of units in the shape of small scale enterprises about whose annual production and installed capacity no definite information is available. In all there are about 25 units engaged in the manufacture of spring leaves and leaf springs and their aggregate capacity is put at 10,424 tons a year on single shift. The production of these units amounted to 2,143 tons in 1957 and 3,554 tons in 1958. The installed capacity of the organised sector is placed at 9,530 tons while their production was 5,945 tons in 1957, 7,047 tons in 1958 and 2,068 tons during January-March, 1959.

The industry is enjoying tariff protection for the past five years and it would appear that the concession has not been in vain. The industry has not only stepped up its production but it has already attained a high degree of perfection so much so that the generality of consumers has expressed satisfaction at the quality of the indigenously manufactured leaf springs and spring leaves. The current period of protection for the industry is due to lapse on 31st December 1959 and the Tariff Commission have instituted an enquiry into the working of the industry in order to enable them to take action in relation to the protection granted to the industry.

The opinion among the manufacturers themselves on the question of continuance of protection is not unanimous. While one of them has expressed the view that when there is an effective import control, further tariff protection will be redundant, another producer has pointed out to the Commission that since the industry is already well established there is no need for further protection. The majority of the producers have however asked for tariff protection for a further period.

Apart from the foreign competition to which the indigenous industry will be exposed in the event of the abolition of protection, there appear to be some other disabilities which have to be removed if the industry as a whole can be deemed to have attained a fair degree of stability.

For all products manufactured by us

PRECISION IS THE KEY-NOTE

and included in our wide range of production are Tea and Jute Machinery, Steel Structurals, Railway Signalling and Interlocking Equipments, Screw Couplings, Carriage and Wagon Forge Fittings, etc.

Yet, another item included in this list is the manufacture of Printing Machinery on a phased schedule in collaboration with a U.K. firm.

WORLD OF COTTON

Steady Decline in Cloth Production

PRODUCTION of cloth in the country has been showing a steady decline during the past six months. The provisional figures for June disclose a further decline of two million yards at 403 million yards as compared with 430 million yards in January, which is the highest recorded so far during the past six months. When compared with the corresponding output for the six months ended June last year, the decline is of the order of nine million yards. The monthly comparatime figures of cloth and yarn production are as follows:—

Cloth:	(In Million Yds.)	
	1959	1958
January ..	430	437
February ..	392	392
March ..	406	406
April ..	407	408
May ..	405	421
June ..	403	388
Total ..	2,443	2,452

Yarn:	(In Million Lbs.)	
January ..	151	149
February ..	137	133
March ..	141	138
April ..	140	134
May ..	136	139
June ..	133	126
Total ..	838	819

The declining trend in production is explained by the falling exports together with the absence of brisk local demand for cotton piecegoods and the anxiety of the mills to avoid being burdened with the unsold stocks. Hence, they seem to be cautiously planning their production, bearing these considerations in mind. It is even felt in cotton textile circles that, if production does not increase in the next few months, the country may experience shortage of cloth following favourable monsoon so far. All efforts are, therefore, to be concentrated to step up the textile production as far as possible so as to avoid shortage. In this respect, the Bombay Government's scheme to help the upcountry mills by way of providing finance is to be welcomed.

There is nothing surprising in the increase of cloth stocks with the mills from 378,200 bales at the end of May to 399,000 bales at the end of June. It is a seasonal phenomenon. As compared to the stock of 572,400 bales at the end of last year, the present stocks show a sharp drop. Moreover, it is to be noted that, out of 399,000 bales stock cloth sold but delivery not taken at the moment, has increased to 195,000 bales at the end of June as against 179,000 bales at the end of May, while unsold stocks during June have increased by only 4,800 bales to 204,000 bales. Stocks of cotton yarn unsold with the mills, at the end of June, have increased to 47,400 bales as against 46,500 bales at the end of May and 64,100 bales at the end of last year. Thus, the overall picture is not depressing. There is a general feeling that the present trend is likely to persist for another two or three months. The demand, however, should revive with the start of the harvest season in the country.

×

FORWARD MARKET:

Conditions in the forward section of the Bombay cotton market remained generally steady, thanks to renewed support by mills. There was, however, a general reluctance to trade in the new crop, pending a clearer picture of the progress of the monsoon in cotton areas. Jharilla August delivery moved narrowly around Rs 703 and March around Rs 667.50. ×

SPOT MARKET:

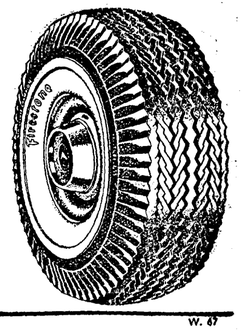
The Spot section recorded a nominal rise of about Rs 5 per candy in popular growths. Mills from Ahmedabad were buyers for Vijay, Jaydhar and Laxmi varieties; but were not prepared to pay high prices. The turnover was, therefore, limited.

On the import front, quiet conditions prevailed although some business was put through with Sudan for nearby shipments. There are indications that Indian mills will not be able to secure much Egyptian cotton this season. The Government of India have, it is learnt, not accepted Egypt's offer of 35 per cent discount. This means, that the normal discount of 15 per cent continues to be applicable to imports of cotton from that country.

Conditions in the export section were listless in the absence of overseas enquiries. Shippers were reported to have put through some business with Japan in Bengal Deshi. There were no enquiries for other short-stape varieties.

×

LIVERPOOL COTTON MARKET:



Conditions in the Liverpool cotton market remained dull. Forward months eased under long liquidation, which was only partly taken by the trade, while nearbys were maintained due to a shortage of offerings. The nearby positions, particularly in the mixed contract, advanced by 20 points, thanks to scarcity of offerings in the face of brisk trading.

BOMBAY REVIEW

Outlook for Copper

IN the past eighteen months, the Copper industry has passed through the complete cycle of experience. A year and a half ago, copper was in surplus and producers cut their output. Then consumption began to recover; prices went up too and the industry started to reopen its unused capacity. This movement was accelerated by the artificially high prices late last year and much of this when strike factors were affecting the market.

Now the point has been reached where copper is once again in surplus. The price of the metal, both in London and New York markets, has reached the lowest level for many months on expectations that a substantial world surplus is developing in the metal. In London, the price, after touching a low of £210, is now quoting around £219 per ton. This sudden increase is due to the announcement of a 7 per cent cut over 1959 first-half of Phelps Dodge Corporation production and a 10 per cent cut over 1959 first-half production of the Rhodesian Selection Trust Group of companies.

In New York, the major producer, Kennecott Copper, has cut its price by 1½ cents to 30 cents per pound. This is the first change in a major American producer's quotation since a 1½ cents rise in May when strikes threatened copper with a world shortage.

Latest statistics show that world copper production is runinng at a record peak and that stocks in the USA and elsewhere are rising. To these are added two other factors. The possibility of a strike in the USA has now become very much less likely than it was earlier this year and the United States Government is believed to be contemplating selling substantial amounts of copper from its stock-pile. This threat is sufficient to help in depressing prices.

Meanwhile, conditions in the Bombay Non-Ferrous metal market ruled generally steady with Copper Scrap quoting around Rs 219 per cwt. Apart from scarcity of supplies in the market, the STC had been unable to accommodate the scheduled industries with a loan of copper as the Corporation itself had not any appreciable stocks.

Among other non-ferrous metals, Zinc remained firm at Rs 101 per cwt following good demand. Lead also remained steady at Rs 80.50 as the supply of imported lead was reported to be declining day by day. There was some demand for Tin, which is quoted at Rs 143 per quarter.

*

Yarn

Prices on the Bombay Yarn market showed a mixed trend. Staple-Fibre and Rayon yarns met with good demand, while the cotton yarn section remained dull. The premium commanded by import licences for Art Silk yarn has shot up further from 70 to 80 per cent. It is claimed that stray transactions have been put through even at 82 to 85 per cent. This spurt in the premium is attributed mainly to the acute shortage of import licences in the market. With the virtual suspension of exports of yarn fabrics for the past four months, the chief source of licences had dried up.

In this connection, it is pointed out that the pressure can be relieved only by a prompt issue of licences against past exports of rayon textiles. Reports are current that the imports will range from 40 to 80 per cent of the value of cloth exports. According to some sources, even this limited issue will take three or four weeks. However, present developments are viewed with concern by a section of the industry, which is already hit by the relatively high prices of yarn and the unremunerative level of rates for rayon fabrics.

Meanwhile, there are reports that the export trade in Cotton Yarn has taken an encouraging turn during the past few days. Indonesia is stated to have concluded a deal for 12,500 bales through the State Trading Corporation. This business is reported to have been done on the basis of about Rs 640 per bale of 20s yarn with a breaking strength of 82 lbs.

GATEWAY MARKETS

The entire order is scheduled to be completed in the August-October quarter. Several cotton yarn units in Bombay and Coimbatore are expected to participate in the Indonesian order. It is also believed that Indonesia will place more orders if this country is satisfied with the supplies already booked.

*

Oils and Oilseeds

Conditions on the Bombay Oilseeds Exchange remained generally quiet. With reports of favourable monsoon from all growing areas, stockists in Groundnut preferred to unload their holdings. Moreover, the pressure of demand on the local supplies abated significantly in view of the reduced purchases of crushers and vanaspati manufacturers. Groundnut Bold quality was quoted at Rs 40.12 and Groundnut Oil at Rs 21.

Trading in Castorseed revealed a significant lack of enthusiasm and price variations were generally dictated by the movement of the groundnut section. While, there were reports of stray business in BSS oil with the UK at £113 per ton, the USA was unresponsive at the nominal rate of 13.50 cents per pound. With the result, operators seemed to be willing to press sales. Ready Castor was quoted lower at Rs 30.87 and Castor Oil, commercial quality, at Rs 15.87.

There was little doing in the Linseed section which attracted selling at higher levels. Linseed ready was quoted at Rs 32.25 and Linseed Oil at Rs 15.75.

In the Cottonseed section, trading was listless.

GLOBAL NAILBITINGS

Selling in export markets is always a tough job, it is more so now when competition is fierce. All over the world experts are doing a lot of nailbiting to develop export markets.

Nearness to the Afro-Asian markets and familiarity with conditions and needs there, are India's clear advantages over her competitors.

With quality products and competitive prices, Indian engineering products could keep on feeding the Afro-Asian markets for decades to come.

DELHI REVIEW

Automobile Industry

The consensus of opinion in the capital is that the Kerala question has reached a crucial stage. The long awaited charge-sheet of the KPCC against the State Government has been published. The leaders of the agitation have personally come here to apprise the President and Union Government of their view points. A delegation of lawyers led by the former Advocate General of the State has also been here to emphasise the need for Central intervention. The Central Government seem to be on the horns of a dilemma. It is evident that neither of the two courses open to them is going to bring the desired result of normality in Kerala. The combined opposition will have nothing short of the dismissal of the ministry. The Communist ministry is equally vehement in its opposition to a mid-term election. In their consideration of the matter Government have to keep two points prominently in their mind: The agitation leaders' threat to intensifying the movement till their aim is attained and Mr Dange's statement in Calcutta that the Communists can assemble mass upsurges in a matter of hours. The fact that Mr Nehru has thought it necessary to talk the matter over with Home Minister Pant immediately on his return from Simla notwithstanding his indisposition is an indication of the seriousness of the Kerala situation. It would appear that no decision will be taken before the Cabinet hears the State Governor Mr Ramakrishna Rao who is expected in New Delhi within the next few days.

The overwhelming importance rightly accorded to the happenings in Kerala has resulted in crowding out in the press other important developments. This column is no exception to this and the result has been the holding over the reporting of the inaugural meeting of the Development Council for Automobiles, Automobile Ancillary Industries, and Transport Vehicle Industries held on the 13th July. This meeting has acquired special importance in view of the Government decision to take up the manufacture of trucks needed for the Army in the Army's own workshops. The rolling out of the works of the first multifuel 3 ton truck christened "Shaktiman" within nine months of the decision seem to have given substance to the charge that private manufacturers have not been addressing themselves to their task seriously. The information vouchsafed that the cost of the "Shaktiman" works out much lower than that of a comparable truck produced by the private sector coupled with the Prime Minister's invitation to private enterprises on the occasion of the opening of the Jabalpore works to learn the secrets of efficient working from the public sector has put the private manufacturers in a none too favourable light.

Private enterprise should, therefore, feel thankful that Mr Manubhai Shah, Union Minister of Industry, has given quite a favourable account about its handling of the automobile industry. Of course Mr Shah has also emphasised the need for a reduction in the prices not omitting to point out that "there is undoubtedly great scope for reduction of cost." It is to be admitted that Mr Shah's view point in regard to price is unexceptionable. The point to be noted is that that the cost of an indigenous vehicle is higher than a similar vehicle produced abroad. Some allowance has no doubt to be made for the teething troubles of the nascent industry as well as for the fact that mass production, an important factor in low cost production, is still a long way off for the industry. Even so, the price is still deemed to be high by Mr Shah who says that a considerable reduction can be effected through "intensive efforts on raising productivity per man hour employed" and by "developing commonality and interchangeability of parts and standardisation of parts and components."

The need for making available to the consumers automobile vehicles at reasonable cost cannot too greatly be stressed. If, as Mr Shah points out, there is great scope for cost reduction then there is no reason why the manufacturers should not have taken energetic measures toward this objective. It is gratifying to hear that Government are actively engaged in exploring the possibilities of making available low priced cars. The distribution end of the industry should give its full and instincted co-operation to serving the consumer efficiently and honestly. Otherwise the entire scheme will be reduced to a farce. Latterly Government have taken some steps to stop malpractices in distribution. It is, however, incumbent on manufacturers to demonstrate that they do not lag behind Government in safeguarding the interests of the consumers.

Barring the cost question, the automobile industry seems to have acquitted itself quite creditably considering the enormous difficulties that an industry of its type has to encounter in its formative stage. Mr Shah himself admits that its slow development till 1953 is largely due to the multiplicity of types that have been allowed to be assembled. The setback in 1958 is to be attributed to the paucity of foreign exchange for essential imports. The overall picture of the progress of the industry in the past few years is of a variety that should instil optimism as to the future of the industry.

Production of all types of vehicles has been steadily going up except for a setback in 1958. From 17,360 vehicles output has increased to 32,138 in 1956 and to 31,735 in 1957. In 1958 there has been a decline to 25,631 but Mr Shah has pointed out that "this increase could not be maintained in 1958 mainly due to the lack of inadequate provision of foreign exchange." Thanks to the increased provision of foreign exchange there has been a marked improvement in the current year and it is estimated that output will touch a new high of 34,500. Mr Shah has also expressed satisfaction at the extent of indigenous content achieved by the industry. At the present moment the percentage of indigenous content ranges between 49.4 and 73.4. Now that Government have been able to approve and sanction the release of necessary foreign exchange for machinery, equipment etc, it is hoped that the indigenous content of the cars and vehicles would be raised to 75/85 per cent on an average.

The rapid progress that the industry has made since 1951 can also be seen in the increase in the value of production. Total production was Rs 34 crores in 1951 and it is estimated it will amount to Rs 62 crores in the current year. A notable development in regard to automobile manufacture is the commendable headway made by the ancillary industries. The progress of ancillary industries augurs well because the rapid development of the industry as a whole depends to a large extent on the ability of the ancillary industries to supply increasingly large number of components and accessories. A study of the automobile industry in the advanced countries of the West will show that quite a large number of parts that go to make up a finished car are supplied by the ancillary industries. It is interesting to note that the percentage of the 4000 or so parts in a car (ranging from 55 to 65 per cent) supplied by the ancillary industries is higher than that accounted for by the main manufacturing unit. It will be clear therefore, that the development of the ancillary industries is of vital importance to the automobile industry. Already quite a few items are manufactured by the indigenous ancillary units. Mr Shah has revealed that licences have been granted for the setting up capacity for the production of many more items. From the trend of production in these industries it is evident that they are well set for further achievements. The total production of automobile ancillaries was about Rs 42 lakhs in 1951 and such production has increased to 3 crores in 1957 and then to Rs 5 crores in 1958. As these industries will be called upon to meet the needs of other industries such as agricultural tractors road rollers etc the ancillary industries have a very bright future indeed.

It is, however, important to note that the progress of the ancillary industries depends largely on their ability to produce articles of a high standard. At present there are 44 units engaged in the manufacture of various ancillary items besides the Original Equipment manufacturers, and therefore it will be seen that during the past three years considerable progress has been achieved. But, for this rate of progress to be maintained it is essential that the ancillary industries come to be considered as valuable assets by the automobile industry by virtue of their ability to produce products of quality which are acceptable not only to the indigenous industry but also to international standards. As Mr Shah has noted a high degree of efficiency of the ancillary industries will be rendered practicable if both sections—the ancillary industries and the automobile industry—realise that it is in the national interest to establish perfect co-ordination between the two sectors.

Manufacturers of automobiles may also derive some comfort from Mr Shah's certificate as to the quality of their production. But they should not forget the fact that the credit for this is largely to accrue to their foreign collaborators on whose designs the indigenous vehicles are being produced. Our manufacturers would, however, do well to note Mr Shah's remark that "there is still great need of improvement and streamlining in assembly as well as standardisation in manufacture of each and every component and part."

From Mr Shah's account of the working of the automobile industry one indisputable fact emerges and that is that the indigenous industry is now well on the way toward big achievements in coming years. Considering the emphasis that is now being laid on the development of road transport there will be no dearth of demand. But the automobile industry can hope to experience prosperity only if it is able to satisfy the twin requirements of an equitable cost and a high quality for its products.

NORTH INDIAN NOTES

Mineral Production

The foreign exchange shortage has given a new point of view for the development of industries in the country. Either it is the benefits that would accrue from the stoppage of the drain on foreign exchange which the development of any particular industry would make possible or it is the scope opened out for earning more foreign exchange. The mineral industry has claims on both counts. Manganese ore has prominence as figuring in the list of leading mineral exports and has been a valuable foreign exchange earner. Iron ore has also great potentialities in the export market which however is just beginning to be realised. In the category of minerals for which there are no internal sources of production and which have therefore perforce to be obtained through imports, sulphur is important. In these circumstances it would be trite to point out that the economic advancement of the country is basically linked with the development of mineral resources production.

There are however hurdles in the way of rapidly advancing towards higher targets of mineral production. These arise mainly with reference to equipment, technique and trained personnel. The lack of trained men came for particular mention by Mr K. D. Malaviya, Minister for Mines and Oil when he addressed the meeting of the Mineral Advisory Board at Calcutta this week. The present shortage is evidently the result of the complacency with which this aspect of mineral development was viewed by both the Government as well as the private industrialists. It is simply a case of inaction particularly on the part of the big mining industrialists, as Mr Malaviya would have it since the Government had never let slip any opportunity to bring home to the mining interests the importance of a self-sufficient cadre of mining experts and other technical personnel.

Mr Malaviya also touched on the controversial issue connected with the State Trading Corporation's handling of mineral exports. The fall in manganese are exports has been particularly attributed to the ineptitude of the STC, a view with which Mr Malaviya does not agree. According to him, it was the growing competition from Latin American Countries and Soviet Russia that had brought about the decline in the Indian exports of manganese ore. In support of this argument Mr Malaviya points to the inability of the private traders who enjoy 50 per cent of the export quota, to effect deliveries within the period prescribed in the contract.

*

Ship Repair Industry

Development of shipping industry could not be complete without the parallel development of ship repairing industry. This is the general tenor of the recommendations of the Ship Repair Committee set up by the Government of India to enquire into and report on the existing ship repair facilities in Indian ports and the improvements and expansion required in such facilities. The Committee has stressed the need for rapid development of the ship repair industry on proper lines and has urged the Government and the port authorities to accept the responsibility for this.

The rationale for Government participation is found in the complexities that surround the problem of developing a ship repairing industry, which it is beyond the power of private ship repairers to tackle effectively. The requirements of ship repair facilities are such as only the Government could provide. These include well-organised workshops situated on the water-front, adequate provision of dry docks which are an essential link in ship repairs, suitable repair berths situated in protected waters, availability of essential spares and materials, an efficient and trained labour force and easier customs procedures. Only Government could ensure unified ownership which is considered essential for the efficient working of the industry. With these considerations in view, the Committee has stated that "there will be no real solution for the problems of the ship repair industry until this is recognised by the Government and the port authorities".

When fully developed, the ship repair industry will stop the drain on foreign exchange that is inevitable in the absence of facilities in the country's ports. Indian shipping companies incur an expenditure of approximately Rs 2½ crores per year on repairs and this is expected to double itself when the total tonnage increases to 1.5 million tons gross by the end of the Third Five Year Plan. An indigenous industry besides saving such foreign exchange could make positive gains by providing services for foreign ships. An annual turnover of about Rs 10 to 15 crores, makes the early development of such an industry a very desirable proposition.

The Committee has stressed that the ship repair industry should be so organised as to be able to survive against competition; for ship repair costs form an important part of the total operational costs of a ship and an uneconomic ship repair industry would adversely affect the competitive strength of national shipping as against shipping of other countries.

NORTH INDIAN MARKETS

Continued Firmness in Sugar

SUGAR prices, in all important markets, have continued to display a firmer tendency, as the supply position is reported to be steadily deteriorating. In the Kanpur market, sentiment gained fillip from the activity of outside buyers, who reappeared on the scene in an attempt to obtain maximum possible stocks before the Government sealed off Kanpur's supplies. Buyers from West Uttar Pradesh, Rajasthan and the Punjab were still lifting bulk quantities in the Kanpur market. What inclined the trade to a bullish view was the fact that, under the new distribution scheme, 35 per cent of the quota was to be released to the factories in Uttar Pradesh, and the balance was to be earmarked for sale to the open market.

The Uttar Pradesh Government have decided to enter the sugar trade with a policy of restricted distribution of sugar at controlled prices in view of the high prices of the commodity. Out of the total monthly consumption of 25,000 tons, the Union Government have allotted over 16,700 tons to the State Government for distribution through fair-price shops and the balance will be distributed by the Centre in the State in the open market through their agencies.

In Bombay, the supply position of the sweet commodity is reported to be steadily deteriorating. Only four or five sugar mills out of 20 in the State have managed to supply sugar at the stipulated rates to the wholesalers, while some of the mills have insisted to supply the goods only to their agencies. It appears that the Bombay Government are seriously considering as to what measure should be taken to meet with the situation. It is reported that, unless the Government act promptly and firmly, the sugar middle may worsen.

As far as the Calcutta market is concerned, prices are quoted at As 2½ to As 3 per seer beyond the legitimate price of the commodity. It is felt that, if the Government are really interested in protecting the consumers from the hands of unscrupulous sugar profiteers, there is a splendid opportunity for them now to do it.

It is learnt that a section of the sugar dealers is now negotiating with the Government on a proposal which will enable the citizens to buy sugar from 16 nP to 19 nP cheaper per seer than the present price level in the market. The dissident group of sugar dealers have submitted their scheme to the State Government which, in effect, is that, if they are allowed to draw quotas of sugar from the mills, they will supply the commodity at the rate of Re 1 per seer to the consumers. They are also reported to have assured the Government that the supply of sugar at the same rate will be continued during August and onwards, provided they are given necessary allotments to import sugar to West Bengal from the mills situated outside the State.

*

Foodgrains

Quiet conditions were again noticed in the Hapur Foodgrains market. Wheat prices remained almost unchanged at Rs 18 per maund for the average quality and Rs 19.50 for the farm quality. The Rice market also remained quiet. Gram prices, however, developed a hardening tendency on reports that rainfall in the Uttar Pradesh area was deficient and prospects of good "khariff" crop were being marred. The markets for other foodgrains were also quiet.

In the Delhi grains market, prices showed a mixed trend. Wheat was dearer by about a rupee per maund as a result of better offtake, while Gram improved on rumours of a ban on movement from Rajasthan. Barley was quoted slightly higher with good demand for Rice or small arrivals. Among coarse grains. Jowar drifted lower by about Rs 1.50 to Rs 16 a maund due to reduced demand at higher levels. Demand for Maize, too, lacked in sympathy with this grain.

*

Shellac

According to the Indian Lac Cess Committee, exports of various kinds of Lac from India have declined to 769,193 maunds during the financial year ended 31st March 1959 from 740,055 maunds in 1957-58. Though shipments to the USA rose from 302,146 maunds to 329,365 maunds during the year under review, earnings declined from Rs 2.82 crores to Rs 2.49 crores. Similarly, shipments to West Germany increased from 77,820 maunds to 86,056 maunds; but the value of exports fell from Rs 53.29 lakhs to Rs 51.7 lakhs.

Shipments to the UK fell sharply from 107,833 maunds, valued at Rs 1.03 crores, in 1957-58 to 76,157 maunds worth Rs 66.1 lakhs during 1958-59. Out of the total shipments during the year, shellac and buttonlac accounted for 316,795 maunds (Rs 2.98 crores); seedlac for 358,000 maunds (Rs 2.63 crores) and other kinds for 34,398 maunds (Rs 9.58 lakhs). The corresponding figures for 1957-58 were 413,520 maunds (Rs 4.3 crores); 290,803 maunds (Rs 2.42 crores) and 35,732 maunds (Rs 14.41 lakhs) respectively.

Meanwhile, the shellac market continued to rule quiet with Pure TN quality quoting around Rs 66 per maund. Shipments, during the month till the 16th, were 18,053 packages, comprising 6,535 packages of shellac; 10,485 packages of seedlac; 323 packages of buttonlac and 715 packages of other varieties.

THE PENINSULA

Ancillary Industries

DECLARING open the factory of Engine Valves Ltd at Alandur Mr Manubhai M. Shah, Union Minister of Industry, stressed the importance of promoting ancillary industries. Such industries have a great role to play in the industrialisation and have good scope for being developed along with other industries which are now gradually emerging in the industrial sector. The automobile industry provides the example of the place and scope of ancillary industries in promoting and assisting industrialisation. This industry in almost all the countries, where it is highly developed, operates on the basis of assembling components supplied by innumerable ancillary units each specialising in the manufacture of one item. Even the biggest automobile manufacturing concern in the foreign countries had not found it fit to manufacture more than 40 per cent of the components required by automobile. Considering that a great number of components go into the production of a finished automobile, the scope for the growth of ancillary units to supply the components required by the automobile industry should be great. As pointed out by Mr Manubhai Shah, there was scope for the production of nearly 5000 components.

Thus in the absence of ancillary industries to supply components to large-scale industries, industrial growth would tend to become lop-sided. Industrial growth in India is sliding into this lop-sidedness for want of adequate development of ancillary industries. The ancillary wing to the automobile industry though in the process of growing, is not adequately developed to obviate the need for concentration of component production in the assembling unit itself. Part of the present high cost of production in automobile manufacture is attributable to this organisational imbalance.

Automobile industry provides only one instance of the importance and utility of ancillary industries. Even in those other fields where there is as much scope for the growth of ancillary industries as in the automobile industry, development has been slow for want of proper direction, lack of resources etc.

Mr Manubhai Shah also dealt at length upon the role of industrialisation in the economic development of the country, and pointed out that the twin solution to the Indian economic problem lay in a happy development of Indian agriculture and massive industrialisation. Notwithstanding all the progress that had been made since the initiation of the five year plans, the country has to go a long way to reach the status of advanced industrial countries in respect of industrial production. In these latter countries, industrial production contributed nearly 75 per cent of the national income whereas in India only 25 per cent of the national income was accounted for by industrial production. A figure of 50 per cent is at least necessary to give balance to the economy which is predominantly dependent on agriculture for giving employment to the huge population. This necessarily calls for a change in the investment pattern and a larger portion of the investment outlay will have to be diverted to the development of industries old as well as new. Against this, the country is far from having reached even the self-sustaining stage in development. It is with this that the Third Five Year Plan will have to be concerned. Mr Manubhai Shah has indicated that the Third Plan would have a good proportion of industries in the public as well as the private sectors.

Mr Manubhai Shah also touched on the supposed conflict between Gandhism and the development of big and large-scale industries. Denying any such conflict, Mr Shah pointed out that the only basic criterion was the transformation of the backward economy of the country into a balanced one, and this depended to no small extent on the development of heavy industries. Dogmatic or doctrinaire ideas about development would invariably preclude a balanced and harmonious approach and only stultify and delay economic progress. It was only necessary that either extremes should be avoided and that development of small-scale and cottage industries is not denied scope by the undue stress on large-scale industries. The Government had taken care not to be found guilty of such bias towards the large-scale sector alone as the plans and schemes for the development of small-scale and cottage industries would easily testify. But maximum benefits from industrialisation call for the proper dovetailing and coordination of activities in both the small-scale and large-scale sectors. Development of ancillary industries points the way for such rationalisation of industrial production.

Mr R. Venkataraman, Madras Minister for Industries and Labour, who presided over the function, stressed the importance of adequate raw materials for the uninterrupted progress in industrial production and at the same time pointed out that for want of such raw materials, the industries had been languishing, a view with which Mr Manubhai Shah agreed. Mr Manubhai Shah however hastened to point out that such scarcity was not peculiar to Madras but was an all-India phenomenon which therefore ruled out any special consideration being given to the Madras State alone to the exclusion of other areas or regions.

This bottle-neck is traceable to the import cuts enforced as part of the Government's policy to conserve foreign exchange and therefore, has countryside impact. While helping the campaign for conservation of foreign exchange, the policy of import cuts had been responsible for holding up the rate of increase in industrial production. Engineering industries and small-scale industries had suffered particularly for want of adequate supplies of steel which lay under severe import cut and which could not be had from internal sources for want of adequate production. The steel shortage is however not expected to continue for long since it will not be long before the steel plants start begin production. The country has also to develop sources for many other raw materials which are required by Indian industries and which are obtained through imports from abroad. Steel itself is required in so many types and qualities for which there are no plans of production at present.

Mr Manubhai Shah also made a plea for avoiding the barren controversy regarding the conflict between the public and private sectors in the development of the country's economy. This controversy had done nobody any good; neither the private sector itself nor the public sector and had only served to divert attention from the pressing problems of the day. Much of the misunderstanding between the two sectors exists only by way of magnification of some slight points of difference by either of the parties. However, the complimentarity of the two sectors had been recognised and accepted at the Delhi Conference of the Industrial Advisory Board. Even in respect of the development of large-scale industries, which an influential section of opinion in the country would like to reserve to the public sector, and on which score the private sector had been entertaining fears, an open policy had been hinted by Mr Nehru himself. This is inevitable in the need for rapid progress in the industrial sector so much desired by the Government. It is least likely therefore, that the private sector would be asked to be content with a secondary role in the industrial development.

The slow process of capital formation was referred to by Mr Shah as being responsible for the slow pace of industrial growth, inadequacy of capital being particularly marked in the private sector. Difficulties of such types are to a very great extent inevitable and inherent in an economy so much under-developed and undeveloped as India's. In the stepping up of the rate of capital formation, the public sector has to play a great part and it is for this reason that an expanding role had been envisaged and assigned to it under the five year plans. This point of view does not generally seem to be appreciated by private sector industrialists. Mr Shah was but stressing this truth though with an element of exaggeration when he pointed out that every rupee of investment in the public sector was as good as five rupees in the private sector.

Mr L. Lakshminarayanan, Managing Director of the new concern, in the course of his welcome address, traced the origin of the concern and referred particularly to the service rendered by Messrs Rane in securing a technical aid agreement with the English concern. Founded in 1956, the buildings were completed by November 1958 while trial production was commenced in January 1959. The factory is the first of its kind in the country and is well equipped to manufacture valves for all the internal combustion engines.

MADRAS REVIEW

SOUTH INDIAN NOTES

Rural Roads

A scheme for the development of rural roads is being drawn up and is calculated to expedite the development of roads in the countryside. This was disclosed by Mr Raj Bahadur, Union Minister of State for Transport and Communications, while inaugurating the annual session of the Association of Madras State Highway Engineers at the Highways Research Station in Guindy.

The plan envisages close collaboration between the Centre, State Government and the local authorities in respect of implementation. The State Government will be drawing up district-wise maps taking note of the alignments of the National highways and the roads already constructed by Block Development authorities and these maps would provide the basis for the planning of road construction under the new scheme. The responsibility for providing the mechanical equipment on the basis of the district-wise or division-wise requirements or allotment would be borne by the Centre. In respect of the training of technical personnel the cost would be shared between the State Governments and the Centre on a pre-determined basis, the State Government providing the technical personnel and being also responsible for the pucca masonry works. The people in the panchayats would participate in the implementation of the Plan, by provision of 'shramdan' or other forms of voluntary labour and also make available the land for the alignment of rural roads.

This reflects concern on the part of the authorities at the leeway in the development of roads in the country. The Chief Engineers of States had also in a conference held sometime ago drawn the attention of the Government to the deplorable lack of an adequate system of roads in the country and had drawn up a 20-year plan for the development of roads, setting up a target of 6.57 lakh miles and involving an outlay of Rs 5,200 crores. On completion of the plan at the end of 20 years the average road mileage would be 52 miles per hundred square miles against the present average of 26 miles.

The financial implications of this plan are almost prohibitive. It involves the stepping up of the annual expenditure on road development from Rs 80 crores in 1960-61 to Rs 440 crores in 1981-82 while the maintenance expenditure would also increase to Rs 135 crores from Rs 30 crores. Even if the resources position may not allow of an outlay of such order being incurred, that there is going to be faster development of roads has been clearly indicated by the spokesmen of the Government in their various statements on road transport in recent times.

*

Village Development

Rapid development of the villages in the country is set to be achieved through Community Development programmes and naturally progress could only be proportionate to the pace set up in the implementation of the community development programmes. As is now only well known this has kept behind expectations for reasons of lack of sufficient resources and paucity of personnel. Even in respect of mobilising the energy and enthusiasm of the people in the rural areas, the community development movement had not been that success it was expected to be, and the results do not bear out anything spectacularly creditable.

The authorities had acted on these indications and taken steps to impart momentum to the movement, and the non-officialisation of the movement at the block level was the result being calculated to give greater flexibility to the movement at the block level. This process has proceeded to a greater extent than elsewhere in the Madras State, which was the first to entrust the system of community development to non-official bodies. The Bloc Committee in the State is a non-official body and has charge of community development activities. The greater progress in the community development programmes in the Madras State is attributed to this particular feature.

The proper method in dealing with the problem of development at the district, block and village level was explained by Mr V. T. Krishnamachari, Deputy Chairman of the Planning Commission, in his address to the Block Development Officers of the State Madras. The district plan would be built upon all the block plans while at the lowest rung, the village panchayats and the village cooperatives would be the agents for implementation, the primary responsibility for working in the villages resting on the village level worker.

Referring to the food problem, Mr Krishnamachari, explained that the proper solution to it lay in the efficient organisation of the requirements of agriculturists. Organisation of seed farms had particular importance and the Second Plan envisaged the setting up of about 4,000 seed farms throughout the country during the Plan period. Delay in the implementation of this programme has been admitted by Mr Krishnamachari. In respect of other requirements of the agriculturists also such as manure, fertilisers etc, the leeway to be made up is still great and only in the measure in which these deficiencies are rectified could foodgrain production be expected to increase.

SOUTH INDIAN MARKETS

Import of Hides and Skins

THE Government of India have modified the import policy for Hides and Skins, raw or salted, during the current licensing period. Supplementary licences will now be granted to established importers on an ad hoc basis for imports of hides and skins from the neighbouring countries. These licences will be granted on furnishing evidence that the applicants have substantially or fully utilised their quota licences for the last as well as the current licensing period. The particular country from which supplies are intended to be imported should also be indicated. Applications for supplementary licences should be made to the licensing authorities at the Ports by August 31, 1959.

Meanwhile, conditions in the Madras Hides market remained firm with arrivals of Cow hides on the same level as in the previous week. There was a good clearance at firm prices. Arrivals of Buff hides were moderate, while those of Calf were restricted.

On the export front, trading in Kips continued to be irregular with London generally underbidding Madras prices by at least 1d per pound, although a small volume of business was done in selected marks at acceptable prices. In the Calf section also, prices were unchanged.

In the Tanned Skins section, arrivals of both Goat and Sheep were small and there was a scramble for the available supplies of market middle class sheep, which resulted in the prices being pushed up by 25 nP per pound.

In the export section, better classes of goats were firm. In Sheep skins, primes and semi-primes were steady.

*

Coffee

India is likely to have another bumper Coffee crop this year. The 1958-59 season's crop has surpassed all previous estimates with total Pool receipts, to the end of June, amounting to 45,398 metric tons against 43,670 metric tons in the corresponding period of the previous season.

It is encouraging to note that the home market continues to absorb a large quantity of coffee. The internal offtake, during the first half of this year, amounted to 14,652 metric tons as compared with 13,457 metric tons in the corresponding period of last year. This shows that coffee is becoming increasingly popular in the country, the consumption rising by 9 per cent over the six-month period.

The quantity sold for export, out of the 1958-59 crop, till the end of June, is 9,937 metric tons. Tenders have been invited for a further sale of 1,317 metric tons. The Coffee Board has estimated that, in view of a record harvest, the exportable surplus from the 1958-59 crop is likely to be of the order of 17,000 tons.

*

Pepper

Most commodity markets are still being affected by the usual seasonal lull in industrial activity. One market, contrary to the general trend, has been Pepper. Actual demand for pepper has been light; but there has been a distinct hardening of tone within the trade itself. A month of small consumer offtake has gone by without signs of selling pressure from any of the major producing countries and some dealers are now suggesting that the lowest prices of the season may have been seen.

According to latest indications, prospects of a larger pepper crop, in this country during the next season, are bright. This optimism is based on early and ample monsoon in Kerala this year. The current season's crop (1958-59) has been estimated at 22,000 tons. Of this, exports and home consumption, up to June, are reported to have absorbed 15,000 tons. Knowledgeable circles believe that the balance of about 7,000 tons will not be difficult to dispose of during the four months still to go for the next season.

While foreign demand for the commodity in recent months has been slack, it is hoped that the steadily rising home consumption will more than offset the decline in exports. Although the offers at around 25 cents a pound (against a prevailing Indian parity of 26½ cents) do not attract business, exporters feel that buyers will soon revise their price ideas to around the Indian parity.

The trade is encouraged by the latest reports suggesting that Lampong's new crop will not be available till September-end and that the crop will be considerably smaller this time. Normally, July/August is a period when the US lifts about 5,000 tons of its average offtake of 15,000 tons from India. Export houses think that the present enquiries will be followed by substantial buying by that country soon.

*

Rubber

According to the figures released by the Rubber Board, production has shown a decline to 1,878 metric tons in May as compared to 2,543 metric tonnes in the corresponding month of last year. Consumption is shown at 2,967 metric tonnes, while stocks with the estates and dealers, as on the 31st May 1959, are shown at 4,190 metric tonnes and with the manufacturers at 4,876 metric tonnes. Stock of synthetic rubber is recorded at 1,381 metric tonnes. The quantity of raw rubber imported, during the month under review, amounted to a total of 121 metric tonnes.

STOCK EXCHANGES

Demoralised State

Watch-Dog Writes:

STOCK markets are still in a demoralised state and prices of most equities have suffered a further setback from last week's levels due to renewed offerings. This is mainly due to the fact that, in the absence of any incentive, sellers have predominated in all counters with buyers reluctant. Renewed weaker advices have been the main contributory factor and the news of the disappointing dividend for Tata Ordinaries has accelerated the downward trend in prices. On the whole, the confidence is impaired and the market is expected to take some time to steady up.

Trading on the Calcutta Stock Exchange continued in the same dull vein, fresh offerings causing prices to recede alround.

The announcement of a disappointing dividend for Tata Ordinaries loosened a spate of selling orders on the Bombay Stock Exchange.

Buying support generally slackened on the Madras Stock Exchange as evidenced by the drop in values.

Uncertain conditions continued to prevail on the London Stock Exchange.

Wall Street closed barely steady.

*

Calcutta

Friday Evening.

CONDITIONS on the local Stock Exchange continued to remain subdued and the downward trend in prices, that was noticed in the previous week, gathered momentum due to renewed offerings in the speculative issues. Although the main contributory factor were the easier advices from Bombay following the announcement of a disappointing dividend by the TISCO, the ground for the general landslide in values was paved by the sustained unloading of stocks by bulls on the feeling that the shares were fully priced and the yield pattern had come down to a level when investment in equities was no longer attractive. There were also rumours of early Government action to check speculative activity in essential commodities. Again, there was some suspicion that the LIC was secretly releasing some of their holdings to get the benefit of new high rates. Thus, transactions were slow and half-hearted although a few scrips attempted at a slight recovery in prices from the low levels touched during the week due to some bear-covering. The undertone, however, remained weak.

The only section, which presented a steady appearance, was the Gilt-edged. Demand was concentrated upon the short-dated issues although there was a general disposition to await the announcement of the borrowing programmes of the States. 3 per cent 1986 Conversion Loan opened at Rs 74 and, after touching a low of Rs 73.85, steadily improved to finish the week at Rs 74.40.

Bank shares were a steady feature with Punjab National changing hands at Rs 22 to Rs 22.12 and United Commercial at Rs 62.75 to Rs 63.

Jute shares were sluggish on persistent rumours with regard to the possibility of another 2½ per cent looms being unsealed, although some operators entertained the hope that no move might be made until a clearer picture of the supply-demand position was available. National were pushed down at one time to Rs 22.50 from Rs 23 and New Central to Rs 17.56 from Rs 18.25, to finish better at Rs 22.75 and Rs 17.94 respectively. Howrah, after touching a low of Rs 22.81 from Rs 24.37, improved to Rs 23.31 following the news of a final dividend of 50 nP, making a total of Re 1 per share against nil for 1957-58. Among higher-priced scrips, Anglo-India were on offer at as low as Rs 250 against Rs 267; Budge-Budge at Rs 159 against Rs 167 and Gourepore at Rs 401 against Rs 414. Champdany and Ganges were nearly maintained at Rs 138 and Rs 92 respectively.

Coal shares remained quiet with prices displaying an easier tendency in view of the inordinate delay in the announcement of the price increase for the commodity. Some operators felt that even if the price increase was permitted, it might not help collieries much. The only steady features were Bengal having buyers upto Rs 312; New Beerbhoom upto Rs 20.62 and Central India upto Rs 8.06. Burrakur moved rather irregularly between Rs 17.62 and Rs 18.06 on alternate buying and selling, to close finally at Rs 17.62. Equitable were well maintained at Rs 31.19 with East Indian turning quiet at Rs 25.62 against Rs 25.87.

Although trading in the Tea section continued to remain restricted, a few selected scrips, especially of the Assam gardens, maintained their best levels on reports that the Assam Carriage Tax had been suspended for the time being. Better prices obtained at the recent auctions were another contributory factor. It was also hoped that the West Bengal Government might follow suit in respect of Entry Tax. Dealings were prominent in Brooke Bond changing hands at Rs 20.12 to Rs 20.50; Bishnauth at Rs 19.94 to Rs 20.12; Eastern Cachar at Rs 2.94 to Rs 3.31; Grob at Rs 18.50 to Rs 18.87; Jayshree at Rs 13.19 to Rs 14.62 and Patrakola at Rs 135.50 to Rs 138.

Limited interest was shown in the Sugar section, as operators were inclined to await further developments on the commodity front. Carew came in for sustained support upto Rs 12.31 from a low of Rs 11.62, while SKG were supported upto Rs 10.87 from Rs 10.69. Balrampore were better at Rs 7.12 against Rs 7.00 and so also Belsund at Rs 13.31 against Rs 13.12. Darbhanga were on offer at Rs 18.25.

In the week's dealings, speculative issues were subjected to constant selling pressure under the lead of Indian Irons on weaker Bombay advices following the news of the disappointing dividend for Tata Ordinary. The continuation of the steel strike in the USA also induced fears that, if the strike continued for long, it would have adverse repercussions on the cost of plant and equipment and essential raw materials which this country might import. Against the week-end closing of Rs 25.14, Indian Irons opened better at Rs 25.15 at which level renewed selling pressure induced the scrip to slip down at one time to Rs 23.92, to finish the week at Rs 24.09. In sympathy, TEXMACO was marked down to Rs 23.70 from a high of Rs 24.40, to finish at Rs 23.75. G. K. Williams were cheaper at Rs 40.12 against Rs 41 and so also Jessop at Rs 29.94 against Rs 30.25; Marshalls at Rs 6.25 against Rs 6.56 and Kumardhubi at Rs 6.94 against Rs 7.12. Burn closed better at Rs 450 after touching a low of Rs 446 from Rs 455 quoted in the previous week.

In the Miscellaneous section, price movements were irregular on alternate bouts of buying and selling and most of the scrips closed with major losses on balance. Orient Paper changed hands at Rs 36.20 to Rs 36.95 (Rs 36.20); Indian Cable at Rs 31.50 to Rs 32.81 (Rs 31.56); Indian Aluminium at Rs 21.81 to Rs 22.81 (Rs 22); Sirpur Paper at Rs 12.50 to Rs 12.75 (Rs 12.50); Rohtas at Rs 21.09 to Rs 22.25 (Rs 21.56); Alkali Chemicals at Rs 22.12 to Rs

THE NEW SAMANBAGH TEA COMPANY, LIMITED

NOTICE is hereby given that a General Meeting of the Members of the Company will be held at the Registered Office, No. 4, Bankshall Street, Calcutta, on Thursday, the 20th of August, 1959 at 3-10 P.M. to consider and if thought fit to pass with or without modification the following resolution which will be proposed as an Ordinary Resolution, namely:

"That the proposed re-appointment and the draft Agreement submitted to this meeting setting forth the terms and conditions on which it is proposed that Shaw Wallace & Company Limited be re-appointed the Managing Agents of the Company for a period of 10 years from the 15th August, 1960, (which has for the purpose of identification been subscribed by the Chairman of the Board of Directors) be and is hereby approved and application to the Central Government for its approval to this proposal under Section 326 of the Companies Act, 1956, be and is hereby directed to be made."

The Transfer Register will be closed from the 13th August, 1959 to 20th August, 1959, both days inclusive.

By Order of the Board,
SHAW WALLACE & COMPANY LIMITED
Managing Agents.

Calcutta,
Dated 15th July, 1959.

RAJNAGAR TEA COMPANY, LIMITED

NOTICE is hereby given that a General Meeting of the Members of the Company will be held at the Registered Office, No. 4, Bankshall Street, Calcutta, on Thursday, the 20th of August, 1959 at 3-40 P.M. to consider and if thought fit to pass with or without modification the following resolution which will be proposed as an Ordinary Resolution, namely:

"That the proposed re-appointment and the draft Agreement submitted to this meeting setting forth the terms and conditions on which it is proposed that Shaw Wallace & Company Limited be re-appointed the Managing Agents of the Company for a period of 10 years from the 15th August, 1960, (which has for the purpose of identification been subscribed by the Chairman of the Board of Directors) be and is hereby approved and application to the Central Government for its approval to this proposal under Section 326 of the Companies Act, 1956, be and is hereby directed to be made."

The Transfer Register will be closed from the 13th August, 1959 to 20th August, 1959, both days inclusive.

By Order of the Board,
SHAW WALLACE & COMPANY LIMITED
Managing Agents.

Calcutta,
Dated 15th July, 1959.

NOTE: A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

22.50 (Rs 22.50); Indian Copper at Rs 3.94 to Rs 4.08 (Rs 4.03); India Steamship at Rs 14.19 to Rs 14.31 (Rs 14.28); Philips India at Rs 23.12 to Rs 23.62 (Rs 23.25) and BIC at Rs 4.50 to Rs 5.00 (Rs 4.62). Figures shown within brackets were the week's closing rates. The announcement of a maiden dividend of 50 nP per share caused Hindustan Motors to spurt at one time to Rs 11.00 from Rs 10.44, to ease off at the close to Rs 10.50 on profit-taking. Dunlop Rubber were done at Rs 33.44 to Rs 33.75. Metal Box were quoted around Rs 41.12 and Titaghur Paper at Rs 44.

*

Bombay

SENTIMENT in the Bombay Stock Exchange during the past week had been mainly governed by speculation about the size of the Tata Steel ordinary dividend. On Thursday marketmen were particularly under the influence of rumours about the dividend which was expected to be announced that evening. From the trend of prices on that day it would appear that most operators were preparing to hear about a cut in the dividend. The dividend announcement came late in the evening and the effect of the lower than expected dividend of Rs 6.50 was reflected in the sizable fall in the quotation for Tata Steel in kerb trading. It was not surprising that sentiment became much depressed because few believed that the dividend would be lower than Rs 7.50. Conditions akin to panic prevailed after the dividend announcement with the scrip pushed down steeply. Even otherwise the market was far from steady because of the lurking apprehension that institutional investors would come as sellers at higher levels.

In the steel section, Indian Irons opened the week on a steady note with the quotation at Rs 193. After improving further to Rs 193.50 the scrip developed an irregular tendency to be done down to Rs 191.50 and to close the day at Rs. 192.75. The next day the scrip again displayed a two-way movement to be finally placed rather steady at Rs 192.25. Wednesday found the scrip more or less in a similar conditions as in the previous day with the closing rate at Rs 192.50. With the dividend announcement expected that evening the scrip was quiet throughout Thursday as most operators inclined to the belief that the dividend would be lower. The dividend announcement which was made late on Thursday came as a rude shock as the dividend of Rs 6.50 announced fell far short of expectations. The result was a steep decline in the rate of Rs 178 as against previous day's closing rate of Rs 190.75. Indian Iron after earlier steadiness sharply reacted on Thursday in sympathy with Tata Steel to be quoted at Rs 24 after hours.

In the textile section conditions were generally subdued presumably due to the uncertain outlook for exports. It would appear that the disappointing export performance so far in the current year despite promotion steps had not been quite conducive to expansion of activity in this section. However a few shares met with good support at various points during the week. Kohinoor was quite active and at one time was done upto Rs 300 before closing on Thursday at Rs 292. Standard was a steady spot in earlier dealings but closed lower at Rs. 549. Century met with good support in late dealings on Thursday to be placed at Rs 555 as against its opening rate of Rs 545.

In the miscellaneous section Premier Construction was subjected to alternate bouts of buying and selling. On Wednesday the scrip moved up smartly to Rs 358 but on Thursday developed a reactionary tendency to decline sharply to Rs 348. National Rayon after having been done up to Rs 351 as against an opening rate of Rs 349 closed easier at Rs 341.50. Bombay Burmah closed at Rs 537 against its opening of Rs 545. Elsewhere motor shares were prominent with Hindustan Motors taken up to Rs 10.84 to close at Rs 10.64 on Thursday on announcement of a maiden dividend of 8 annas. Premier Automobiles was also in request and closed at Rs 128.

*

Madras

CONDITIONS on the Madras Stock Exchange remained generally quiet and there was no tendency to lift prices as professional support was halting and patchy.

Textiles:—This section noted small business. Maduras came in for large buying at one time around Rs 30.50, the closing rate being a shade easier at Rs 30.10 due to profit-taking. Though the mills have not reopened yet, there was good speculative and upcountry buying of the scrip. Travancore Rayons, however, reacted to Rs. 23.30 from Rs 23.70 on further profit-taking. Ranga Vilas were offered lower at Rs 42 with Cambodias having sellers at the market rate.

Plantings:—Although there was support for active shares both on professional and investment account, there were no special features. In the Rubber section, Cochin Malabars improved to Rs 6.78, while Midlands were on offer at Rs 11.80. Rajagiris and Travancores were lower on the week's business.

Among Tea shares, sellers were seen for Coorgs and Highlands at the quoted rates. Periakramalais softened to Rs 4.12 on selling pressure, while Devasholas met with some demand at the market rate

---

MARSHALL SONS & CO. (INDIA) LIMITED

NOTICE is hereby given that the FORTYFIRST ANNUAL GENERAL MEETING of the members of MARSHALL SONS AND COMPANY (INDIA) LIMITED will be held on Wednesday the 19th day of August 1959, at 10 a.m. at the Registered Office of the Company, No. 33/1, Netaji Subhas Road, Calcutta, to transact the following business:

1. To receive and adopt the Directors' Report and audited Balance Sheet and Profit and Loss Account for the year ended 30th. June, 1959.
2. To declare a dividend.
3. To elect Directors.
4. To appoint Auditors for the current year and to fix their remuneration.

And also the under-mentioned Special Business:

SPECIAL BUSINESS

NOTICE is also hereby given of the following Resolution which will be proposed as a Special Resolution:—

"That the following contracts between the Company and Associates of its Managing Agents as defined by Section 2 (3) of the Companies Act, 1956, drafts whereof have, for the purpose of identification, been subscribed by the Chairman of this Meeting, be and the same are hereby approved and the Directors are hereby authorised to execute the said contracts on behalf of the Company with all convenient despatch:

1. With Marshall, Sons & Co. Ltd., (an Associate of the Managing Agents)-
   for purchases of plant, machinery and equipment of all kinds, including road rollers, tea garden machinery, tractors, steam engines, boilers and accessories and spare parts therefor in all of which the Associate regularly trades or does business and which the Company may require for the purpose of its business:
2. With John Fowler (India) Private Limited (an Associate of the Managing Agents)-
   for purchases of accessories and spare parts for filtration equipment and accessories and spare parts for diesel and steam road rollers and diesel locomotives in all of which the Associate regularly trades or does business and which the Company may require for the purpose of its business."

The Share Transfer Books of the Company will remain closed from 12th August 1959 to 19th August 1959, both days inclusive.

As dividend warrants are sent only to registered shareholders or to their mandatees, shares on blank transfer should be submitted with completed deeds for transfer registration before the transfer books are closed.

By Order of the Board,
Marshalls (Direction) Private Limited
Managing Agents
H. K. Ames
Managing Director.
33/1, Netaji Subhas Road,
Calcutta, 23rd July 1959.

The Dividend when sanctioned will be payable on and after 1st September 1959 to those Shareholders whose names stand on the Register on 12th August 1959.

NOTE:—A member entitled to attend and vote at this Meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

EXPLANATORY STATEMENT

The Agreements referred to in the Special Resolution are proposed to be entered into in order to comply with the provisions of Section 360 of the Companies Act, 1956 and are intended to be effective from the 1st June, 1957. The Agreements relate to the normal trading transactions taking place between the Company and Associates of the Managing Agents.

The Managing Agents of the Company hold no shares therein nor in Marshall, Sons & Co. Ltd., but hold 20% of the issued share capital of John Fowler (India) Private Ltd. The Managing Agents may, therefore, be deemed to be interested in the Resolution to the extent of such shareholding.

Save as hereafter mentioned, none of the Directors of the Company is either a member or a Director of either of the Companies mentioned in the Resolution. Mr. N. W. Keyworth is, however, a Director of both the said last mentioned Companies.

To the extent of their qualification shares in the Company, Mr. D. P. Dunderdale and Mr. P. B. Nicholls may be deemed to be interested in the proposed Resolution. Mr. S. K. Mullick and Mr. V. S. Vijayaraghavan may also be deemed to be interested as persons appointed to the Board of the Company by Marshall, Sons & Co. Ltd., under a provision in that behalf contained in the Company's Articles of Association.

The draft Agreements referred to in the Resolution may be inspected by any member at the Registered Office of the Company between the hours of 2 p.m. and 4 p.m. on any business day prior to the Meeting and will be available at the Meeting.

To the Shareholders of Marshall, Sons & Co. (India) Limited and in particular to:—

Mr. Mark Burton, Mr. J. Hugh Marshall (decd), Mr. L. F. Warren, Mr. Jerbhai Hormusji, Miss M. Reid, Mr. M. C. Dubash (decd), Mr. P. J. D'Souza, Mr. F. C. Nelson, Mr. A. E. Kinsey, Mr. Shantishekhareswar Ray, Mr. W. S. Beech, Mrs. M. G. Thorpe (decd), Mrs. A. Hecquet (decd), Messrs Kalidas Bashak, Paresh Ch. Bashak, Naresh Ch. Bashak & Ashim Kumar Bashak (minors represented by their mother, Sm. Rakeshwari Bashak), Mrs. M. H. B. Morton, Mrs. M. H. Softly, Mrs. M. S. Redpath, Mrs. S. H. Goss, Mr. I. L. Watson, Mrs. E. S. Fink, Mr. R. C. M. Short, Mrs. Gole Anar Bibi, Messrs Marshall Sons & Co. Ltd., Maj. C. H. H. Young and Mrs. I. H. Young, Mr. Ghulam Murshed, Mr. Abdullah Rahimtullah, Mrs. Virbaiji Pestonji Dastur and Faredoon Pestonji Dastur, Mr. E. J. Ellis, Brig. Col. Indra Bahadur Karki & Capt. Nara Bahadur Karki, Messrs B. H. Hurd & J. R. Hunter, Mr. Lal Ram Sharan Singh, Mr. J. R. Kay, Mrs. K. J. Legge, Mr. P. E. Perry, Mr. C. W. Anderson, Mr. G. A. Rainey, Mr. D. Yule, Mrs. E. M. Collingwood, Mrs. E. F. Nepean, Messrs W. E. Witt, G. W. Taylor and H. C. Nelson, Extrs. to the Est. of Mrs. M. J. F. Witt (decd), Miss N. Kelly, Mrs. Elizabeth Cook, Mr. H. T. Bates (decd), Mrs. M. G. Annan, Messrs C. K. Mistry & N. K. Mistry, Mr. A. Viegas, Mr. C. Viegas, Mr. T. Viegas, Mr. N. Viegas, Messrs D. F. Virjee, F. D. Virjee and R. F. Virjee, Mr. A. Aboobaker, Mr. H. A. Baigmohamed, Mrs. A. J. Watson.

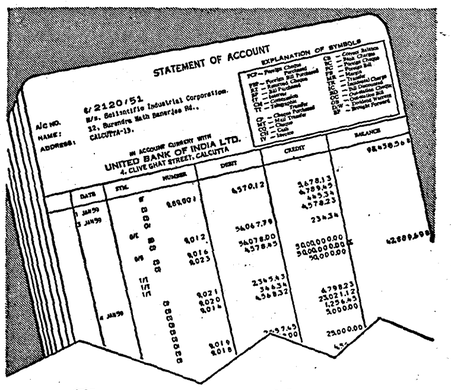
B·O·A·C introduces the **Shippers' Service Unit**
... a new aid to air cargo users!



BOAC's Shippers' Service Unit offers *you* something entirely new in air cargo service. Your telephone becomes a direct link with BOAC's team of freight experts.

For *instant* action on any consignment phone BOAC Calcutta (44-3671/7, week-ends—44-3677) and ask for "SKYLOAD". You will go *straight through* to the Shippers' Service Unit, for immediate information on costs, transit times, delivery dates and Customs' regulations. The Unit's specialists will solve all your problems.

BOAC's new Shippers' Service Unit is there to help you. Just say the word-"SKYLOAD"

All over the world **B·O·A·C** *takes good care of your cargo*

BRITISH OVERSEAS AIRWAYS CORPORATION

They are so neat!

These mechanised Statement of Accounts! They save the customers so much time and bother. The Bank's Head Office and some branches supply them regularly. More and more branches will be supplying them soon.

Amongst the Banks in India the UNITED BANK is in the van of mechanization.

HIGHLIGHTS OF THIS ISSUE

The State Governments, too, are borrowing from strength. What is more important is that the magnitude of loans sought by State Governments ensures that the Second Plan's borrowing programme will be a success.

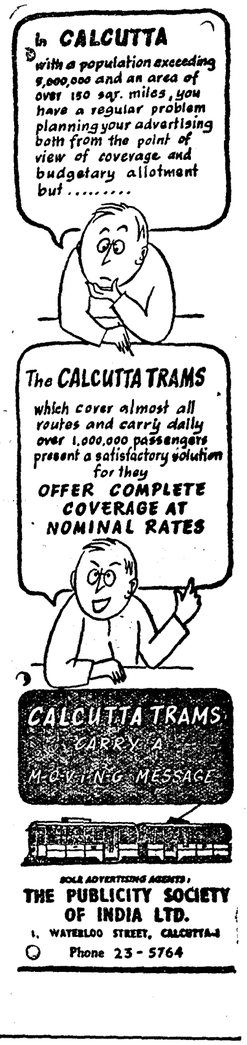
a new life



"Do you not hear the entrance of a new theme?'
Do you not hear the asserting cry of the newborn,
see myriad men rise to work;
to build, to wield the power of the sun?
Fashioning life, making a world that offers a little more:
a little less of the care, a little more of the joy.
Yes, you feel the awakening—
an ancient nation sheds the stagnation of the ages.

TODAY, as in the past, our products help to make homes cleaner, healthier, happier. But today we are also working for . . .
TOMORROW, when the evergrowing urge for better living will demand still greater efforts. And we shall be ready with wider service, new ideas, new products . . .

Today and Tomorrow... Hindustan Lever serves the home

Trading Subdued on Dividend Thoughts

Investment Gossip:

The statement that the behaviour of the stock market is as unpredictable as the weather is only partly true. For, there are particular periods during the year when what is called a cautious mood prevails on the stock exchanges in India. The pre-budget week, and sometimes the month, and the weeks immediately before the long holidays such as the Puja and Diwali are usually characterised by a tendency on the part of operators to lighten their commitments. The weeks before the announcement of the Steel Dividends are also equally productive of a similar reaction. In recent years, the steel dividends have gained further uncertainty and consequently have come to wield increased influence over the stock market in view of the fact that, in the determination of the sizes of these dividends, Government have come to have a decisive say.

Last week's announcement by TISCO of a dividend of Rs 6.80 as against the previous year's distribution of Rs 8.25 is still an unsolved enigma. Now, it is Indian Iron's turn to make the announcement as regards its dividend. The TISCO example has set operators thinking and the resultant conjectures are somewhat disturbing. In marked contrast to hopes at this time last year of an increase in the distribution to the shareholders, operators would now gladly heave a sigh of relief if they hear the news that the Indian Iron dividend is maintained. The ruling apprehension is that it may be reduced.

The continued delay in making the announcement has made marketmen somewhat nervous. It was said earlier in the week that the dividend announcement was imminent. About mid-week, the important declaration was postponed for today (Friday), though God alone knows who fixed the original date and did the subsequent postponing. It is now said that the announcement has been held over for next week.

Last week's postponement of the settlement in Calcutta to today has had its effect on sentiment, as it indicated that matters were not as smooth as should have been. However, it would appear the extra time afforded has been productive of the desired result as Indian Irons today are slightly better, quoting just above the Rs 24 mark after opening the day with the quotation several naye paise below it. In view of the apprehension that the LIC may figure as a seller, the forthcoming meeting of its investment committee at Calcutta next Thursday is awaited with considerable interest.

There have been other contributory factors for the listless trading conditions noticed during the week. The apprehension regarding unloading of shares by institutional investtors, including the LIC, has been strengthened by the continued rise in volume of shares at the settlement. The State loans and the Kerala situation have also called for a cautious approach. It would appear that marketmen may not find it possible to bestow much attention to corporate news or the undoubtedly bright prospects of industry, till the IISCO dividend, the State Loans and the Kerala situation are out of the way.

£ R$

Investment Notes:

There is a proposal for amalgamating Bharat Collieries with Rohtas Industries. The terms of amalgamation, as proposed, are on the following basis:—Every holder of a preference share in Bharat will get a preference share in Rohtas; every holder of 2½ ordinary shares will get one ordinary share of Rohtas and the holders of debentures will get a debenture of corresponding value in Rohtas. The above scheme has already been approved by general meeting of the companies and also by the Central Government, but Court Orders will be necessary for finalising the scheme.

It is learnt that the Simplex Mills Limited will issue the prospectus for a Depenture loan of Rs 60 lakhs in the first week of September. The proposal to raise the ordinary share capital by Rs 8.40 lakhs, by issuing one right share for every five shares held, has been approved by the shareholders.

Standard Motor Products of India Limited has proposed to raise additional capital of Rs 42 lakhs—Rs 22 lakhs in ordinary shares and Rs 20 lakhs in preference shares. Of the equity shares, 25,898 shares will be offered to the Standard Motor Company Limited, U.K. The balance of equity shares and the whole of preference capital will be offered for subscription in India.

The Coonoor Tea Estates Limited has proposed to raise its share capital by issuing 18,891 new ordinary shares of Rs 10 each, at par. The new shares will be offered, in the first instance, to the existing ordinary shareholders in the ratio of one new share for every two shares held.

Krilampudi Sugar has decided to issue 5,000 equity shares of Rs 100 each, at par, to the existing shareholders as on the 10th August, in the ratio of 5 new shares for every 12 shares held. The amounts to be paid are Rs 20 on application; Rs 20 on allotment and the balance in two equal instalments of Rs 30 per call.

Bombay Suburban Electric has proposed a final dividend of Rs 4.50, making a total of Rs 7.50 per share for the year ended 31st March, 1959 as against Rs 7.00 in the previous year.

Kesoram Cotton Repeats

Balance-Sheet Reviews:

THE Ordinary Shares of the Kesoram Cotton Mills Limited have been ruling very firm during the past few weeks, and this is attributed to the expectation that the company will be able to do much better in the coming years on account of the commissioning of the rayon plant. The company has also been granted permission to manufacture cellophone paper to the extent of 5 tons per day.

The construction of the rayon factory is proceeding satisfactorily. Buildings are nearing completion and the major part of plant and machinery has already arrived at the site. The erection work is making good progress and it is expected that the factory will go into production before the end of the current year.

Meanwhile, the working results, for the year ended 31st March, 1959, cannot be considered to be quite satisfactory. The full impact of higher wages and the duty on the consumption of electricity resulted in a considerably higher level of working expenses during the last accounting period. Labour efficiency was not up to expectations for some months. Besides, the improvement in offtake of coarse and medium varieties has not been equally pronounced, while higher cotton prices reduced the margin of profit.

The net profit, before providing for Depreciation and Taxation, amounts to only Rs 8.92 lakhs for the year as against Rs 11.60 lakhs in the previous year. The amount set aside to Depreciation is Rs 3.99 lakhs (nil for the previous year) and Wealth Tax Rs 2.11 lakhs (Rs 2.52 lakhs). The Development Rebate Reserve gets Rs 2.08 lakhs (Rs 1.13 lakhs). The above allocations are helped by a transfer of Rs 8.15 lakhs from Reserves against Rs 20.80 lakhs on the former occasion. The ordinary dividend is maintained at 25 nP per share.

£ R$

Marshall, Sons

Despite lower profits, Marshall, Sons & Company (India), Limited has maintained the dividend at 20 per cent for the year ended 30th June, 1958. Sales have risen to Rs 3.02 crores from Rs 2.68 crores; but the net profit, after providing for Depreciation and Taxation, has declined to Rs 1.60 lakhs from Rs 2.45 lakhs in the previous year. According to the directors' report, this reduction in profit is mainly due to the very competitive market conditions which entailed a reduction in the normal realisable margins of profit on a number of orders.

In respect of allocations, the Depreciation amount is raised to Rs 92,273 from Rs 86,393, while a sum of Rs 2,270 is provided for Development Rebate Reserve. The Taxation provision is reduced to Rs 2.75 lakhs from Rs 3.50 lakhs.

The directors state that the working of the Marshall/Britannia agreement continues to be satisfactory. The indigenous manufacture of Marshall/Baxter Stonebrokers has developed satisfactorily and these machines, together with the required spare parts, will contribute considerably toward stabilising the turnover of the company.

£ R$

Polychem

A higher profit of Rs 5.09 lakhs against Rs 3.12 lakhs in the previous year has enabled the directors of Polychem Limited to propose a dividend of Rs 3 per share on the ordinary shares for the year ended 31st March, 1959. The profit figure is arrived at after providing Rs 3.93 lakhs for Depreciation against Rs 3.47 lakhs; Rs 7.21 lakhs for Plant Development Rebate Reserve Fund against nil and Rs 5.75 lakhs for Taxation against nil. Taking into account Rs 2.71 lakhs, the balance brought forward from last year, the amount available for appropriation is Rs 9.59 lakhs.

According to the directors' report, the Plant, after recent expansion, has demonstrated a capacity to manufacture at the rate of 12 million pounds per annum. The installation of the Distillation Plant for distilling Styrene Monomer has been completed in March, 1959 as scheduled. The Sheeting Plant is also installed and commissioned into production during the yeaer under review to meet the growing demand for Plastic sheets. The company is installing a Rubber Dissolving Unit for manufacturing an improved quality of High Impact Polystyrene, which has a potential market in the country; but the working of this unit depends on the availability of raw material.

£ R$

Andhra Cement

The Andhra Cement Company Limited was not able to utilise its increased capacity effectively during the year ended 31st December, 1958. The installed capacity has been raised to 600 tons per day, while the prices paid for cement were also raised upward, effective from 1st July, 1958. But, the benefit of these favourable developments could not be fully realised due to an increase in costs.

Thus, the improvement in the net profit, before providing for Depreciation and Taxation, to Rs 14.85 lakhs from Rs 7.98 lakhs is, heartening. The amount provided for Depreciation is much higher at Rs 9.02 lakhs against Rs 5.14 lakhs; Wealth Tax at Rs 40,000 against Rs 10,891 and Gratuity at Rs 35,000 against Rs 32,759. The Rehabilitation and Expansion Fund gets Rs 1.64 lakhs (Rs 2.23 lakhs) and Reserve for Development Rebate Rs 1.64 lakhs (nil). The dividend on the Ordinary shares is, however, reduced to 7½ from 10 per cent. There have been transfers from Reserves for Rs 2.20 lakhs against Rs 9.29 lakhs previously.

According to the directors' report, efforts are being made to reduce labour costs through rationalisation and mechanisation. But there was resistance from labour which resulted in a strike in March this year for 27 days. The points at dispute have since been referred to Industrial Tribunals.

£ R$

Basmatia Tea

Thanks to a rise in the net profit from Rs 1.21 lakhs to Rs 1.48 lakhs, the Basmatia Tea Company has raised the dividend from Rs 1.75 to Rs 2.00

per share for 1958 The profit is arrived at after providing for depreciation and taxation. Apart from providing Rs 5,788 for Development Rebate Reserve and maintaining General Reserve at Rs 50,000, the allocation to Taxation has been raised to Rs 1.06 lakhs from Rs 89,000. The Depreciation amount is, however, reduced to Rs 44,208 from Rs 70,296.

£ R$

Emerald Valley

The Emerald Valley Estates Limited has reported a net profit of Rs 33,719 for 1958, after providing Rs 38,000 for Taxation; Rs 3,723 for Depreciation and Rs 7,954 for managing agents' commission. A dividend of 6 per cent is recommended on the Ordinary shares. A sum of Rs 10,014 is transferred to General Reserve. Sales are higher at Rs 2.65 lakhs against Rs 1.65 lakhs.

£ R$

Sutna Stone and Lime

Thanks to increased demand for the products of the Sutna Stone and Lime Company Limited and satisfactory wagon position, this company has reported a substantial rise in sales from Rs 15.57 lakhs to Rs 22.65 lakhs for 1958. The net profit, after providing for Depreciation and Taxation, is higher at Rs 1.98 lakhs against Rs 1.51 lakhs in the previous year. After allocating Rs 70,000 for Development Rebate Reserve and Rs 43,263 for General Reserve, the Provision for Taxation is raised to Rs 1.8 lakhs from Rs 1 lakh. The Depreciation amount is, however, reduced to Rs 60,194 from Rs 82,653. The dividend is maintained at 17½ per cent on the increased capital.

In this connection, it may be mentioned that the company issued 16,128 Ordinary shares of Rs 10 each last year, at a premium of Rs 10 and this was fully subscribed.

£ R$

U. P. Sugar

Sales of sugar and molasses by the UP Sugar Company Limited have fetched Rs 93 lakhs for the year ended 30th September, 1958 as against Rs 1 crore in the previous year. After providing Rs 52,001 (Rs 44,004) for Depreciation, the profit amounts to Rs 5.88 lakhs against Rs 6.72 lakhs. The directors have provided Rs 3.53 lakhs (Rs 4.05 lakhs) for Taxation and Rs 55,427 (Rs 1.50 lakhs) for Development Reserve. Despite lower profits, the dividend is raised from 75 nP to Re 1 per share.

Crushing, during the year 1957-58, amounted to 29.53 lakh maunds with a recovery of 10.89 per cent, which is the highest in the whole of Uttar Pradesh and Bihar. During the season 1958-59, the crush was 40.21 lakh maunds, the highest during the past twenty-five years, with a recovery of 10.26 per cent. The results for the current year are expected to be fair.

£ R$

Nizam Sugar

The Nizam Sugar Factory Limited has fared exceedingly well during the year ended 30th June, 1958. Dividend at the rate of Rs 4.50 per share, including a bonus of Rs 1.50, has been maintained. Sales of sugar have fetched Rs 5.86 crores against Rs 5.03 crores. Excise duty paid on sugar comes to Rs 1.63 crores against Rs 1.03 crores.

The gross profit at Rs 88.51 lakhs is the highest so far achieved by the company in any year. The net profit, after providing for Depreciation and Taxation and payment of Rs 24.50 lakhs for extra cane price, has risen steeply to Rs 40.43 lakhs from Rs 22.38 lakhs in the previous year.

In respect of allocations, a sum of Rs 9.22 lakhs (Rs 10.20 lakhs) is provided for Depreciation; Rs 1.12 lakhs (nil) for Development Rebate; Rs 29.00 lakhs (Rs 29.91 lakhs) for Taxation; Rs 2.00 lakhs (nil) for Contingency Reserve and Rs 17.00 lakhs (nil) for General Reserve.

During the year under review, 529,420 tons (572,790 tons) of cane were crushed and 55,987 tons (54,047 tons) of sugar were produced.

The managing agents of the company are the Industries Department, Government of Andhra Pradesh.

£ R$

Arvind Boards

The Arvind Boards and Paper Products Limited has raised the dividend from Rs 8 to Rs 10 per share for 1958, although the working results are below general expectations. Sales have declined to Rs 53.16 lakhs Rs 57.29 lakhs. After providing Rs 1.32 lakhs (Rs 1.71 lakhs) for Depreciation; Rs 5 lakhs (Rs 7.82 lakhs) for Taxation and Rs 67,989 (Rs 11,424) for Development Rebate, the net profit works out to Rs 4.45 lakhs against Rs 9.14 lakhs in the previous year. The directors have transferred Rs 3 lakhs to General Reserve as against nil; Rs 75,000 to Dividend Equalisation Reserve against nil and depreciation towards arrears of previous years nil as against Rs 7.95 lakhs.

State Loans and Government Borrowings

Indian Finance
Established 1928
August 1, 1959
"The Wise Man in his attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right"—The Analects of Confucius.

THE terms and conditions on which the State Governments have issued their loans in fulfilment of their borrowing programme for 1959-60 must be welcomed as signifying a new found confidence on the part of the monetary authorities that, in the present state of the money market, it is they who who hold the whip hand. All twelve loans are redeemable in twelve years, and all are on a 4 per cent basis. All save one—Bombay—have been issued at a discount, though, thereby, the redemption yield offered thereon still falls short of the interest coupon that was attached to last year's offerings. The total sought is the highest in some years; indeed, if Kerala had found it possible to enter the market also, the net new cash realised by the 1959-60 borrowings may have constituted a record.

Two years ago, it did not seem possible that the States could ever hope to be masterful borrowers in the giltedged market. It may be recalled that authority's advice to the States in 1957-58 was that they should abjure from market borrowings; and only two State Governments saw fit in that year to borrow a gross amount of just under Rs 10 crores. What has caused this miraculous transformation, when, in two successive years, State Governments have been able to seek amounts exceeding Rs 50 crores?

The important point to remember is that 1957-58 was not a normal, but a freak, year. A busy season of very considerable strain had just been experienced, as a result of which the banking system was engaged in strenuous competition for Deposits. Interest rates were generally forced upward. As a result, the giltedged market was not conducive to fresh borrowings being sought. But the monetary stringency that obtained in the 1956-57 busy season did not persist, both as a result of decline in Bank Advances during the 1957 slack season and as a result of a steady improvement in Deposits. The pressure on interest rates was now downward, and it was not long before the banking system was hard put to it to find profitable avenues of utilisation for its new resources. Thus it was that the borrowing programme of Governments, both Central and State, was a triumphant success in 1958-59.

While the almost embarrassingly liquid position of banks might have caused an accentuated demand for Central Government securities, we have still to plumb the reason for the popularity, simultaneously, of State Government loans. That reason is not far to seek. It is, that there has been a sustained growth of funds with an emerging set of important institutional investors, whose preference has insistently been State Government securities. In short, State Government loans built up a clientele of their own.

What is more, the almost total abstention of State Governments during 1957-58 was responsible for an acute famine in floating stock. It thus happened that State Government borrowings in the following year were gratefully welcomed. Then, there was also the fact that the Scheduled Banks showed an abiding interest in State Government securities; in 1956-57, when "persuasion" had compelled them to subscribe, the banks soon afterward sold off their new purchases in spite of some small loss that they had to bear. In 1958-59, the position was reversed. Not only did the banking system stridently support the new loans, they were steady buyers in the open market as well. Statistics show that Scheduled Banks increased their holdings of State Government securities by roughly Rs 30 crores during 1958-59; and, in broad terms, this meant that more than half of total State Government offerings in that year was absorbed by the banking system; and this left not at all enough for the other institutional investors such as provident funds, the LIC, etc.

We believe that the lesson to be drawn from the governmental borrowing effort of recent years is that there has been an incredible expansion in the capacity for the absorption of giltedged. As such, we emphasise that, in the framing of the Third Plan, a much more hopeful, and even ambitious, assessment can be made of the resources that can be found through market borrowings.

The Emerging Competitors to Mill Cloth

WHAT khandsari is to the UP sugar industry, the handloom is to the Bombay cotton mill industry. In either case, the village industry is a red rag before the bull; in either case, the stock criticism is that it employs inefficient, wasteful and obsolete methods of production and is therefore an industrial anachronism. And the stock reply to this line of criticism is that either village industry provides employment, at levels of wages well above the levels of agricultural wages, to large numbers of rural people who otherwise remain unemployed. Although it is not the purpose of this article to examine the validity or otherwise of these arguments, it has nevertheless to be stated that, in so far as the handloom industry is concerned, the familiar reference to its unwelcome existence in any discussion of a real or fancied crisis in the cotton mill sector is just a matter of habit with some critics.

But that, unfortunately, is a habit which ignores three relevant considerations, namely, that the handloom industry has not registered any spectacular expansion at the expense of the mill sector in recent years; that it provides the biggest single market for the wholly spinning mills numbering 175 as against the composite mills numbering 295 as of 1958; and, above all, that handloom cloth has a recognised and almost stable, if not very high, place in the scale of consumer preferences. In the context of this article, which is intended to bring into focus the extent and growth of competition to mill cloth from khadi and rayon, the most relevant of the three considerations is the first one.

That both mill cloth and handloom cloth are nearly holding their respective fields may be seen from the following statistical picture:

Mill cloth including powerloom cloth (in million yards)

Year	Production	Exports	Availability for domestic market.
1956 ...	5,585	684	4,901
1957 ...	5,620	843	4,777
1958 ...	5,247	622	4,625

Handloom cloth woven from mill yarn (in million yards)

Year	Production	Exports	Availability for domestic market.
1956 ...	1,502	60	1,442
1957 ...	1,618	38	1,580
1958 ...	1,672	35	1,637

The decline to the tune of about 275 million yards in the availability of mill cloth for the domestic market since 1956 has been made good by the increase in the availability of handloom cloth to the extent of 195 million yards only. Since the production of mill yarn has been virtually the same in 1956 and in 1958—being 1,671 million lbs in the former year and 1,683 million lbs in the latter—the prima facie inference is that the mill sector has made available, wittingly or unwittingly, more yarn to the handloom sector in 1958 than in 1956. In other words, the handloom industry has only covered the larger part of the limited ground conceded to it by the mill industry. Since the handloom industry depends on the mill sector for its supplies of yarn, the quantum of production of mill yarn sets the limit to the expansion of the former. There is, therefore, no question of any undue expansion of the handloom sector at the expense of the mill sector—a fact which, again, emphasises the complementary character of the handloom industry in relation to the cotton mill industry. A related fact which compels attention is that both the sectors together have not taken advantage of the additional market (arising from the population increase since 1956) for about 200 million yards of cloth in 1958.

A good part of this additional market appears to have been covered by khadi woven from hand-spun cotton yarn and by rayon cloth together. The two emerging competitors may even be estimated to have covered more than half of that additional market, and they are demonstrably in a position to cover the additions to it from year to year. This should not be surprising because production of khadi (both traditional and Ambar) has increased from about 40 million yards in 1956 to an estimated 100 million yards in 1958 and that of rayon yarn from 20 million lbs in the former year to 34 million lbs in the latter. The following table brings out the rapid progress of the khadi industry in particular:

Production in million yards

Description	1953	1954	1955	1956	1957	1958*
Traditional Khadi ...	9.1	16.6	24.2	35.8	49.1	70.0
Ambar Khadi	...	...	...	1.9	11.2	30.0
Total ...	9.1	16.6	24.2	37.7	60.3	100.0

*Estimated.

A tenfold expansion of khadi production during the last five years has been something spectacular. This has been reflected in retail sales to the tune of about Rs 8 crores as of 1957 of which sales to the Government have accounted for just 10 per cent only. There can be no gainsaying the fact of growing public preference for khadi, though it is still very small in comparison to the preference for mill cloth and handloom cloth. This growing preference for khadi can be attributed more to reasons of utility—khadi is comfortable wear in the hot months and releases dirt quickly while washing—than to reasons of sentiment. Any observer who stands for an hour at the Khadi Bhawan in Connaught Place at New Delhi cannot fail to be struck by the fact that the patrons of khadi are men and women drawn from all walks of life. Most of them are not exclusive wearers of khadi; on the other hand, they are the ones who are anxious to add some khadi garments also to their wardrobes.

This trend of growing public patronage for khadi is most likely to increase further in the light of the rapid imporrvement that is taking place in the quality, design and variety of khadi fabrics. If, in the face of the dedicated and organised work of the Khadi and Village Industries Commission, the cotton mill industry were so unwise as to turn its wrath on the handloom industry and agitate for its elimination through powerlooms and semi-automatic looms, it might not be the handlooms which would be allowed to suffer. It would be naive to expect that 2.5 million registered handlooms, on which several million families depend for their livelihood, will be allowed to languish. The chances are that they might be encouraged to turn increasingly to the supplies of khadi and rayon yarns. This should not be surprising because the khadi programme is bound to receive steady encouragement on the compelling ground that it provides relief against rural distress and unemployment. Incidentally, the volume of employment provided by the expansion of the khadi industry is brought out in the following tables:

Category (In lakhs)	1953	1954	1955	1956	1957
Spinners ...	3.08	4.09	5.57	7.17	9.75
Weavers ...	0.18	0.30	0.43	0.54	0.93
Others ...	0.10	0.15	0.19	0.34	0.53
Total ...	3.36	4.54	6.19	8.05	11.21

No useful purpose would be served by criticising the Government for supporting the khadi programme with grants to the tune of about Rs 5 crores in 1957 and Rs 6 crores in 1958. After all, it will be justifiably said in reply that it is not too much of a cost to the exchequer where it is a question of providing employment to more than a million people. The path of wisdom for the cotton mill industry would, therefore, appear to lie in ensuring cheap and dependable supplies of yarn to the handloom industry in the belief that handloom cloth will continue to hold its own for the simple reason that it is any day cheaper, more durable and qualitatively better than khadi woven from hand-spun yarn. The dependence of the handloom industry on mill yarn is the surest guarantee of the prosperity of the cotton mill industry. The switch-over of handlooms to the use of Ambar yarn, may it be noted, will not be so difficult as in the case of their switch-over to the use of traditional khadi yarn, which continues to be a despair to many a weaver. The well-known attachment of the handloom weaver to mill yarn, which is woven more easily, calls for grateful appreciation by the cotton textile industry for which the handloom industry is verily the second line of defence.

Food and Third Plan

THERE is a growing discontentment on account of soaring food prices in the country, and this was voiced by the Deputy Chairman of the Planning Commission a few days ago. He pointed out how, compared to April, 1959, food prices in India had risen by 8.9 per cent and compared to April, 1956 by 18.2 per cent. According to the Index of wholesale prices (base year 1952-53), the Index for food articles stood at 120.9 during the week ended June 13, 1959. Actually, current prices in deficit areas are much higher according to common knowledge. A record crop of 73 million tons during 1958-59 was recently announced by the Prime Minister, and the import of at least 3 million tons has been mentioned by Sir V. T. Krishnamachari. In this estimate, five million tons of small millets have been included, which was not the practice till now. Even at 73 million tons, assuming the population at 400 million, available **per capita** foodgrains work at about 21 ounces per day, and calorial experts consider even 16 ounces as quite unsatisfactory. With 3 million tons imports, the situation should be some what better. The difference of more than 5 ounces indicated by short supplies is due to holding back for seed and reserve by the growers, the bottleneck of transport, and hoarding by profit-grabbing middlemen. The Ford Study Team recommended that at least 110 million tons should be the target for the Third Plan period, but even this should not be able to give any comfortable elbow-room because the population would have risen by then by over 50 million: the Indian population by 1965 might well exceed 450 million.

WHEAT POLICY IN US

The importance of adequate food supplies and stable prices cannot be exaggerated. It is said that an army marches on its stomach. Planning implies a war-footing, and everything should be done in order to guarantee plenty of food stuffs at fair prices compatible with a reasonable standard of living, if planning should progress at all. This has been recognised all the world over, in both democratic and totalitarian countries. No figures are available with regard to Communist countries, and some figures from the United Kingdom and the USA should prove enlightening. In the United Kingdom there has been throughout a strenuous attempt to arrest the cost of living, thereby to stabilise wages and prices. For example, the cost of living index in that country was 109.6 in April, 1958, and stood at 109.5 in April, 1959, in spite of the fact that a high percentage of foodstuffs is imported from far-off countries, and an inflationary trend has persisted during the last 20 years. In the USA, the mechanism is highly complex and more highly successful. Inspite of the limitation of wheat acreage to 55 million (under the Agricultural Adjustment Act), the wheat crop in 1958 was a record one at 1,180 million bushels, and yet the Government paid a subsidy of $1.78 per bushel (having lowered it from $2.24) under the Price Support Programme. The yield per acre in that year was 26.8 bushels while the average yield during 1948-57 was only 16 bushels. World price of wheat is about 60 per cent lower than in the US domestic market, and yet the Government holds a stock of 64,720,000,000 loaves of bread (equivalent wheat) it does not want and cannot sell. Another 31,755,000,000 loaves of bread (Wheat equivalent) are stocked by the Commodity Credit Corporation against which Government money is tied up. Under Public Law 480 (passed in 1954), the US Government have managed to export $3,500 million worth of commodities to 38 nations India leading with $544 million worth (Pakistan $240 million worth). In July, 1959, an additional $250 million worth of wheat imports was being negotiated by India. American philanthropy goes further: $393 million worth of commodities have been donated free to some poor countries in Africa and Asia, and $ 749 million worth have been handed over free to International organisations for distribution. American wheat has exerted more international influence than US dollars in several circumstances.

US FOOD INDEX

Inspite of all this, food prices have been extraordinarily steady in that country. During the 9 months ending January, 1959, food prices showed changes within 3|10th of a point. In June 1953, the index number was 114.5 while it stood at 114.9 in April 1956. The stability of food prices has been so good that workers have not been able to demand higher wages under escalator clauses.

BUMPER CROP IN CHINA

For a long period, Burma supplied appreciable quantities of rice for Indian consumption, but that country is now beset with unsettled conditions. It is admitted by all that China had a bumper crop of foodgrains in 1958, working at over 50 ounces per day **per capita.** That country expects still heavier crops in later years. This means that China must export considerable stocks of foodgrains. India is next door, Chinese prices should be lower, and handling charges still less because there is no question of oceanic transport. A 4th Indian delegation is about to leave for China, but it is given out that it goes there only to admire. On account of the recent disturbances in Tibet, we have taken on our shoulders several thousands of Tibetan refugees (in addition to 9.2 million refugees from Pakistan) and the Dalai Lama who has proved a growing problem. China is displeased although she may have no ill-will, but even now, negotiations with that country must enable India to secure considerable supplies of foodgrains either as a loan or under a Barter agreement.

REDUCE COSTS

While thus immediate needs could be met from China, long-term policy cannot depend on foreign supplies. The right end to begin with would be to lower costs of agricultural production through adequate and subsidised supplies of fertilisers, Iron and Steel, small agricultural machinery, cement, pumping sets etc., and items in short supply should be imported through bilateral agreements with countries that can deliver the goods. This is just what the USA has done. As in that country, Government in India should offer a reasonable amount of subsidy per maund of foodgrain produced, instead of worrying and confusing the cultivator with demands under betterment levies, surcharges on commercial crops, and progressive land revenue. The present neutral price policy should be dropped, and a positive price policy should be scientifically evolved and efficiently worked. On the other hand, the authorities in this country are making the situation more complex by doctrinaire concepts of land ceilings, Joint farms and State trading in foodgrains. The

Ootacamund AICC Seminar went out of its way in declaring that all basic and strategic industries should be monopolised by the public sector, but it had nothing to say about nationalising agriculture, the most basic and strategic industry. At least, State farms could have been conceived of for demonstration purposes and for supplementing agricultural production. The rich possibilities of intensive cultivation are clear in areas like Mysore-Malanad, Kerala, and Nizamabad betel-leaf gardens, and of mechanisation in Walchandnagar (near Poona) and similar estates. It is disappointing that conferences nowadays do not proceed with a sense of realism, and the danger is widely feared of the agricultural economy soon approaching a collapse on account of the scare caused by land ceilings and Co-operative Joint Farms. The prime necessity is to ensure copious supplies of food-stuffs, immediately from China, and in the long run by fostering intensive cultivation and mechanisation according to the nature of the locality and the crop: make sure of adequate and timely supplies, prices will look after themselves.

Commodity Prospects

FROM the first quarter of 1957 to the last quarter of 1958, producers of primary commodities passed through perhaps the most dismal eighteen months in recent experience. During this period, the prices of primary commodities, on which most of these countries depended to maintain the viability of their domestic economies, went into a nose dive and hit the trough some time in October last year. While the prices of primary commodities registered major declines, the movements of the prices of manufactures did not reveal a similar pattern. From the beginning of 1957, the divergence between the price trends of primary commodities and manufactures continued to increase till about the latter half of 1958. This placed the underdeveloped countries under a double disadvantage, aggravated the strain on foreign exchange reserves and added to the cost of development programmes on which most of these countries had embarked. Stabilisation of commodity prices figured prominently in the agenda of the Montreal meeting of Commonwealth Finance Ministers. At this Conference, a decision was taken to set up machinery for the examination of the problem on a commodity basis.

The predicament of the underdeveloped countries, whose economies were precariously dependent on the world demand for a single commodity produced by them for export, was also highlighted at the Seattle Conference of the Colombo Plan Consultative Committee at which the United States agreed to join as a full member. Spokesmen of the affected countries stressed the point that the maintenance of price stability was at least of as great importance as the provision of capital for industrial development. The weakness of the domestic economy was bound to react on the effective utilisation of foreign assistance. President Eisenhower's address to the Conference, in which he stressed the importance of revival of international trade, also indicated that the United States was prepared to join in discussion of such problems where special difficulties may arise in respect of particular commodities.

From about the last quarter of 1958, the outlook for commodities has registered some improvement. Though there was no dramatic recovery in the level of business transacted, the American economy is expected to sustain a steady trend. But in view of the supply position, both in respect of metals and farm produce, the recovery of demand is not expected to be reflected in prices. The latest trend indicates a further decline. Since the middle of May, the 'Economist' indicator, which covers seventeen items, has dropped five per cent to 86 (1952=100) in the first week of July. It is necessary to emphasise, in this context, that this figure is barely two points above the level reached last October, when prices of commodities as a whole touched the lowest level in the last nine years, and is one point less than the level in July last year. A fall of about six per cent in the prices of rubber, sugar, sisal, barley and a sharp decline of 17 per cent in the price of copra have contributed to this result. Disposal by the US Government of all their strategic stock of coconut oil is held partly responsible for the sharp fall in copra. Uncertainty about disposals from American stock-piles continues to hang like a dark cloud over the commodity markets.

The recent trend of prices indicates that the problems that came to a head in the middle of last year continue to bedevil the economic prospects of underdeveloped countries. The factual information for an appraisal of the impact of the fall in prices, which set in in the first quarter 1957, on the economies of producing countries as well as a survey of the leading causes is contained in the "Commodity Survey 1958" recently published by the United Nations. This report is the second in the series of commodity surveys prepared for the Commission on International Trade of the United Nations Bureau of Economic Affairs, and is mainly confined to an analysis of the trends in 1957 and 1958, which have thrown up many problems for the Commission to tackle.

The report estimates that, for the producers of primary commodities depending on imports for manufactures, the divergent movement of prices as between the two categories represents a "notional loss in import capacity equivalent to about one-sixth of the official gold and foreign exchange holdings of these countries or to about six years' lending to them by the International Bank for Reconstruction and Development at 1956-57 rates". The loss in terms of potential earnings has been of the same order as after the end of the Korean boom of 1951, though the fall in prices was not as steep as in the earlier period. During the first nine months of 1958, the prices of primary commodities entering into international trade were at about the same levels as during 1950. On the other hand, the price index of manufactured goods was one-fourth above the 1950 level. The repercussions of the price movements are sharply brought out by the decline in the unit value of exports from the countries exporting primary products, which declined seven per cent between the second quarter of 1957 and the second quarter of 1958. The worst affected was Oceania; the unit value of exports from this region declined by twenty per cent. The decline was least in the Middle East where it was less than one per cent.

Among the principal reasons for the decline, the report lists the North American recession and the slowing down of the rate of growth in Western Europe as major factors. Movements of commodities into and out of strategic stockpiles and surplus stocks have also exerted significant influence. In addition to these changes in demand, the price situation has also been affected by changes on the supply side and in some cases these have been of dominant importance. Apart from the stimuli provided by upsurge in prices during the Korean war for increase in production, steps have also been taken, since the early fifties, to increase production capacity in specific areas, as for instance metals, related to defence and rearmament. Most of such development was sponsored by the United States, which was itself the principal importer of the metals and ores of strategic importance. The prices therefore were particularly sensitive to slight changes in stock-piling or disposal of surplus stocks.

Another factor which has assumed importance in recent years is the movement of primary commodities between the Soviet bloc and the rest of the world. The report points out that in a number of cases—cotton, wool, rice, wheat and rubber—purchases by these countries exercised a sustaining influence at a time when prices were sagging. But, on the other hand, in the case of metals, increased exports from the centrally planned countries exerted a depressing influence. Between 1956 and 1957, metal exports from countries in the Soviet bloc registered a substantial increase; a fifth in aluminium, double in zinc, more than treble in lead and almost ninefold in tin. Except in the case of lead, the expansion of imports continued in the first half of 1958.

Much of the larger shipments of tin from the centrally planned countries was purchased by the Buffer Pool set up under the International Tin Agreement for stabilising prices. But, with continuing flow of supplies, the funds at the disposal of the Manager of the Buffer pool were exhausted by August 1958, when a collapse of the market seemed imminent and import restrictions were placed on imports from the Soviet bloc by the UK and several other countries.

In the case of many primary exporting countries, the recession in the prices of exports was accompanied by a sharp increase in the import bill and many of them were forced to adopt special measures in protection of balance of payments. The policies adopted ranged from measures to compensate for fall in value by increase in the quantity of exports, to measures designed to maintain prices through curtailment of production and export. Among the latter, the most significant were the attempts to stabilize the prices of such commodities as tin, coffee and wool and the measures instituted in the United States to protect local producers of petroleum, lead and zinc.

The report draws the conclusion that, in some ways, the period 1956-58 marks the culmination of a process of adjustment of the production and consumption of primary commodities that has been going on at a varying pace ever since the end of the war. The period has been marked by the end of raw material shortages, expansion of output both in respect of geographic pattern as well as of commodities, use of synthetic materials, and technological changes in the use of materials. Changes in consumer schedules, in techniques of cultivating and mining and the process of economic development in the countries which are the principal sources of supply for the world market are other factures which have influenced the process of adjustment. The report concludes that, with the emergence of a more delicate state of balance between rate of growth in consumption and rate of growth in production, and a virtual halt of stock-piling (which acted as a distorting factor), commodity markets in the immediate future are likely to be increasingly sensitive to changes in consumption demand. Stable rates of growth in the industrial consuming countries, therefore, become the determining factors in ensuring market stability.

EDITORIAL NOTES

Export Survey

The problems of export promotion in general were recently surveyed in the comprehensive report of the Goodwill Trade Mission which was published early last month. The problems of exports to particular markets and of particular products, namely engineering goods, are examined in the *report of the Engineering Export Promotion Council's delegation to Australia, New Zealand, Indonesia, Malaya, Singapore and Fiji Islands. This delegation is the sixth of its kind sponsored by the Council in the last four years and differed from its predecessors in that its itinerary covered countries like Australia which have advanced much further than India in the matter of industrialisation. Earlier delegations had visited countries where industrialisation was just starting.

There is common ground between the Goodwill Trade Mission and the Engineering Delegation in their insistence on the importance of establishing personal contacts abroad by Indian manufacturers and exporters. One of the delegation's recommendations is to the effect that "Indian manufacturers and exporters must make it a point to send from time to time, either separately or jointly, representatives who should arrange a demonstration of their products, discuss and finalise contracts on the spot". The delegation has also stressed the importance of efficient publicity through different media and, especially, through participation in local fairs and shows. In this context, the report makes the point that there should be complete coordination between the Exhibition Directorate, different Export Promotion Councils and all other individual firms who are interested in participating in the Exhibition. In the absence of such coordination, says the report, "the presentation of Indian products, whether engineering or non-engineering, gives a dismal picture."

In its survey of prospects of exports of engineering goods to different countries visited by the delegation, the report draws attention to specific problems which are of immediate relevance at a time when the authorities appear to be considering proposals for compulsory exports. In Indonesia, the delegation found scope for exports of sugar mill machinery, tea machinery and a wide variety of engineering goods. But the trade agreement of 1950, which has been extended from time to time, has not resulted in any substantial volume of business. The problem of payments is the principal obstacle to expansion of trade. Indonesia has special credit, or clearing, agreements, with countries like China, Russia and some East European countries. While issue of import licences for consumer goods is strictly controlled, in the matter of contracts for long-term projects, Indonesia prefers to do business with Japan or China who are prepared to extend long term credits. The possibility of expansion of trade between India and Indonesia, according to the delegation, is dependent, on conclusion of special payment agreements. In Australia, Indian goods have to compete against the special tariff preference given to UK products. Though New Zealand does not discriminate among Commonwealth countries in the matter of tariffs, Indian import restrictions which have cut heavily into imports of dairy products from New Zealand, have affected the scope for exports. It is also pointed out that India gives some preference to UK in the matter of tariff, and, unless a satisfactory arrangement is arrived at between the two countries, New Zealand might revise its policy of non-discrimination. These are a sample of the special problems which suggest that there is quite a lot to be done to clear the way for Indian exports before resorting to the unpopular expedient of compulsion.

*

Industrial Disputes

The analysis of industrial disputes in 1958, published in the June issue of the Labour Gazette, presents much useful information regarding one of the most potent causes that have delayed economic progress. The best year as regards industrial peace was 1952, when the index of man-days lost, (base 1951=100) for manufacturing industries came down to as low as 76. In subsequent years, the index steadily increased to a peak of 181 in 1956. There was some improvement in 1957, when the index fell to 145, to rise again to 150 last year. Though there were only 1,524 disputes in 1958 as compared with 1,630 in the previous year, the number of workers involved increased from 8,39,371 in 1957 to 928,566 in 1958, while time loss increased by 21.3 per cent from 6,429,319 man-days in 1957 to 7,797,585 man-days in 1958. As the statistical information for 1958 is not complete, it is not possible to compare the severity of the time loss between the two years by reference to the total number of man-days scheduled to work. But, in view of the fact that industrial activity last year was adversely affected in a number of sectors by import restrictions, it is reasonable to expect that time loss in 1958 represented a larger proportion of the total number of man-days scheduled to work than in the previous year. The survey published in the Labour Gazette notes an improvement in the second half of last year, both in respect of number of workers involved and man-days lost, as compared with the first half and attributes it to the Code of Discipline in Industries adopted by the Standing Committee of the Indian Labour Conference in October 1957. While this would certainly be very satisfactory development, it appears that no firm conclusions can be based on the experience of a single half year.

As in previous years, Bengal has the unenviable distinction of leading in the matter of labour disputes, closely followed by Bombay, Madras and Kerala in that order. These four States accounted for 63.6 per cent of the total number of disputes, 88.6 per cent of the total number of workers involved and 74.7 per cent of the total loss of man-days. But it is also possible to argue that the heavier incidence of industrial disputes, at least as far as West Bengal and Bombay are concerned, is the result of a higher level of industrialisation and industrial employment. The severity rate, that is, the ratio of time loss to the total number of workdays, is a more reliable basis of comparison. This rate in respect of manufacturing industries for West Bengal and Bombay was actually lower than the all India average, though each recorded large time loss. The rate was highest in Kerala where man-days lost represented 1.91 per cent of man-days scheduled to work, against the overall average for all States of 0.4 per cent. Among the different sectors, manufacturing industries accounted for 51.9 per cent of the total time loss, and, within this sector, the highest time loss was recorded by the Cotton Mill Industry, followed by Engineering and the Iron and Steel Industry. Grievances relating to wages and allowances are listed as causes of the largest number of disputes, but, at the same time, it is significant that disputes relating to bonus, and the proportion of workers involved and man-days lost therein, were much less in 1958 than in 1957. On the other hand, the larger number of disputes, workers involved and time loss in Central sphere undertakings in 1958 is disquieting.

Steel Target

An indication of the targets for iron and steel, now being considered by the Planning Commission, was given by Sardar Swaran Singh, Union Minister for Steel, Mines and Fuel, in his inaugural address to the annual meeting of the Institute of Indian Foundrymen held in Calcutta last week. He mentioned a production target of ten million tons of steel and one and half million tons of pig iron, which seems more realistic, considering our limited investment capacity, than the figure of sixteen million tons which held the field till recently. By 1961, the three Steel Plants in the public sector are expected to be in full operation and production capacity for ingot steel will be raised to six million tons as originally envisaged in the Second Plan, including the expansion of capacity of the producers in the private sector.

The one-million ton steel plant at Bokaro, doubling of the capacity of the public sector plants at Rourkela, Durgapur and Bhilai, for which provision has been made in the original plans, some small steel plants which are now being seriously considered and, possibly further expansion of the existing plants in the private sector can easily raise output to the level of ten million tons. As a good proportion of the additional production will be achieved through expansion of existing plants, there is considerable scope for economy in investment as well as in working costs. Substantial saving in foreign exchange cost will be possible, if, as expected by the Ministry of Iron & Steel, the public sector plants are able to fabricate the new steel plants.

The increase of production capacity to the level envisaged does not present any insuperable problem; but the profitable utilisation of the steel and iron that will be produced calls for careful attention being paid to detailed aspects of the development of the different branches of the engineering and, particularly, metallurgical industries. Sardar Swaran Singh has referred in this connexion to the decision to set up a plant in the public sector for manufacturing heavy steel castings. Quite apart from the fact that this will account for only a small percentage of the surplus over current levels of consumption, utilisation of the output of the steel plants in other industries manufacturing capital goods will not solve the basic economic problem facing the country, namely, raising the level of living.

The numerous small foundries engaged in the manufacture of iron and steel castings can make a substantial contribution to the effective utilisation of the expanded pig iron output of the iron and steel plants. Though, till recently, production of foundry grade pig iron, as Dr Nijhawan stated in his presidential address, was inadequate to feed the more than 1500 foundries now working in the country, the position will be radically altered with the realisation of the Third Plan targets, or even earlier. There is therefore considerable scope for the expansion of the foundry industry and for adoption of improved techniques. The key to progress, in this as in other spheres of industrial development, is research. It is gratifying to learn that the National Metallurgical Institute, which has already made a valuable contribution to metallurgy by developing a new process for nickel free stainless steel, has undertaken systematic investigation on indigenous foundry sands and moulding materials.

WORLD OF FINANCE

State Loans Announced

THE slack season is in full swing; Scheduled Bank investments continue to rise; Bank Deposits are a fraction under Rs 1800 crores; the money market has turned easy; and the State loans have been announced. This, in short, is an assessment of the World of Finance at the half way mark of the 1959 slack season. There is no reason for harbouring even the least suspicion of doubt that the giltedged borrowing policy generally will not, in 1959-60, be a resounding success. By mid-August, the State Governments, except for Kerala, will have completed their borrowing effort for the current year. Thereafter, we will have a series of new issues and rights issues of the private sector in this country. But, as things presently stand, the second tranche of the Central Government loan will probably have to be offered to the public rather earlier than the originally estimated early October. For, there is evidence of Scheduled Banks, generally, and the State Bank, in particular, making free use of the Reserve Bank tap for profitable utilisation of the spare resources that the slack season is equipping the banking system with. Of this later, since we have first to apprise ourselves of the 1959-60 borrowing programme of the State Governments.

As indicated in this column last week, the loans uniformly have a maturity of 12 years with an interest coupon of 4 per cent. Our expectation, however, that Bombay might find it feasible to extend the maturity has been belied though, hearteningly, it is the only State to offer its issue at par. Our hope, expressed last week, that "the monetary authorities in Bombay will have the courage to issue their new loan at par" has been fulfilled. All the other eleven States have issued their loans at a discount which varies from 50 nP in the case of seven States to one rupee in the case of the other four States. Here, too, we are somewhat disappointed because the discount is larger than we, for our part, would have liked. Nevertheless, it is noteworthy that the redemption yield on the new 4 per cent 1971 loans ranges from 4.05 per cent to 4.11 per cent as against the yield presently available on the 4½ per cent 1970 loans of 4.11 per cent. In this sense, the discount may be said to matter not too much, since the yields on the new loans are distinctly a shade lower than the yields on existing issues. It is this which is a sign of borrowing from strength.

The largest amount sought is by Madras and Uttar Pradesh at Rs 8 crores each, while Punjab figures at the other end of the list with the amount on offer being Rs 2 crores. The total sought by the twelve States works out to Rs 57.50 crores. In the case of the Madras loan, as already announced, the facility of conversion will be available on the 3 per cent 1959, issued in 1939, with outstandings of Rs 1.24 crores. The State Governments reserve the right, as usual, to retain 10 per cent of over-subscriptions. In broad terms, therefore, the total net new cash that is sought and is likely to be obtained by the State Governments should be in the environs of Rs 60 crores.

The borrowing effort of the State Governments in 1959-60 is somewhat larger than in 1958-59, when the total subscriptions realised by the State Governments aggregated Rs 54.42 crores of accepted subscriptions. After allowing for Rs 5.24 crores subscribed by way of conversion and repayment of maturing loans for Rs 3.19 crores, the net new cash realised in 1958-59 was placed at Rs 45.99 crores. This compares with net new cash of Rs 4.81 crores in 1957-58 and Rs 63.53 crores in 1956-57.

It is anticipated that the Scheduled Banks may themselves be inclined to lend some support to the State borrowing programme. It may be recalled that, last year, the Scheduled Banks figured as having increased their investments in State Government securities, over the whole of 1958, by the considerable amount of Rs 30 crores odd. However, in the new loan week of State Governments, the Scheduled Banks appeared to have subscribed only Rs 12 crores odd. In this sense, the balance is accounted for by open market purchases throughout the year. For this reason, we surmise that the Scheduled Banks may possibly have set apart something like Rs 15 crores for the State Government new loans this year. Thus, it is only the balance of Rs 45 crores which the other institutional investors may be expected to provide. By the time the Provident Fund institutions and the Life Insurance Corporation put in their subscriptions, there can be no question that many of the individual State Government loans will be substantially over-subscribed.

It is in the light of such an analysis that we are bemused by the fact that the lists for the State Government loans, opening on August 19, are intended to be closed on August 25—or earlier, of course, "as soon as subscriptions approximate to the amount of each issue". Our own expectation is that almost all of the lists will be closed, at the latest, by Saturday, August 22.

We may now refer to the question of Government borrowings generally. Gross subscriptions realised by the Central and State Government borrowing programmes from the beginning of the Second Plan and up to and including 1959-60 are as follows: (in Rs Crores)

	Central Govt.	State Govts.	Total
1956-57	157.73	68.71	226.44
1957-58	136.17	9.91	146.08
1958-59	201.81	54.42	256.23
1959-60*	183.84	60.00	243.84

*The 1959-60 borrowing programme is, it is quite clear, not yet completed, since a second tranche of the Central Government loan can be looked upon as a certainty. The figure for the State Governments is an estimate.

It will be seen that the total so far realised by Central Government and State Government borrowings is of the order of Rs 870 crores. The target for gross borrowings in terms of the Second Plan, it may be recalled, is Rs 1130 crores. The borrowing effort for the rest of the Second Plan period is, hence, merely Rs 260 crores, in order for the target to be achieved. Since the second tranche of Central Government borrowing is likely to fetch not less than Rs 60 crores, even if we take the figure realised by the second tranche last year, what will remain for the Second Plan target to be achieved is just Rs 200 crores in the last year of the Plan.

Thus, what the loan announcement of the State Governments serves importantly and significantly to pinpoint is the fact that, contrary to every expectation (except ours), the target for market borrowings under the Second Plan is assured of being resoundingly and thunderingly achieved.

✠

Deposits Near Rs 1800 Crore Mark

AS the half-way mark in the 1959 slack season approaches, there is every sign that the money market will witness conditions as easy as, if not easier than, in 1958. While our review of the first half of the slack season has necessarily to be deferred until the returns for July 31 are available, some interesting facts may, nevertheless, now be indicated. Active Note circulation has, since the peak touched on May 8, declined by Rs 94 crores. As at July 17, Advances of Scheduled Banks have declined by Rs 50 crores from the peak touched on May 8, 1959. What is significant is the fact that the contraction in currency has taken place during a period when the decline in foreign exchange reserves has been very much smaller. In this sense, the 1959 slack season may be said to be witnessing conditions that are truly characteristic of the slack seasons of yesteryears.

During the week ended July 24, Active note circulation fell steeply by Rs 24.73 crores to Rs 1680.34 crores. Rupee Coin returned from circulation in the high amount of Rs 2.16 crores. There has been contraction against Foreign Securities for Rs 5 crores and against Rupee Securities for Rs 20 crores. Consequently, the Reserve Bank's cash in the till has improved by Rs 1.98 crores to Rs 24.74 crores.

There is evidence, in the return of the Banking Department, of further inter-governmental transactions. But, this time, it is the Central Government which is the beneficiary. The balances of the State Governments have declined by Rs 11.46 crores to Rs 27.90 crores. At the same time, their Ways and Means indebtedness to the Reserve Bank has increased by Rs 0.88 crores to Rs 22.11 crores. The Deposits of the Central Government, in consequence of receipts from State Governments, have improved by Rs 15.05 crores to Rs 64.61 crores.

By dint of transfer from the Issue Department, it may have been expected that Investments in the Banking Department would be higher by Rs 20 crores; in fact, there is merely a rise of Rs 3.72 crores to Rs 347.27 crores. But, over and above this, there is the indication that the State Bank figures as a purchaser of giltedged from the Reserve Bank for Rs 11 crores. Hence, there remains only Rs 5 crores to be accounted for. Although this might relate to reverse ad hocs instituted by the Central Government, we suspect that Scheduled Banks other than the State Bank have also lately been interested in purchases of giltedged through the Reserve Bank tap. This would be because the slack season is providing the Scheduled Banks with a plethora of resources. The Reserve Balances of member banks in the week under review have improved by Rs 1.84 crores to Rs 89.95 crores. During this week, the State Bank is shown to have suffered a reduction of Rs 4.25 crores in its cash in hand and with the Reserve Bank. So, the other Scheduled Banks have apparently added to their Reserve Balances by Rs 6 crores. Meantime, Scheduled Bank borrowings from the Reserve Bank should now be at a nominal level. The Other Loans and Advances of the Reserve Bank have declined by Rs 2.02 crores to Rs 65.78 crores. That this decline is on account of the Scheduled Banks is suggested by the fall of Rs 2.67 crores to the nominal figure of Rs 8 lakhs in the advances of the Reserve Bank against usance bills.

The Reserve Bank portfolio of Government Treasury Bills purchased and discounted shows a drop of Rs 3.85 crores to Rs 2.32 crores. While the Central Government may easily have been in a position to meet these maturing liabilities from their cash balances, the possibility of countervailing deficit financing by the Central Government is not to be ruled out. For, such was the procedure that, it is now known, was adopted by the Central Government during the week ended July 17. During that week, it may be recalled, Rupee Securities held in the two Departments of the Reserve Bank rose by Rs 40 crores, the while that its portfolio of Government Treasury Bills declined by Rs 4.89 crores, in addition to which there was presumably rediscount with the Reserve Bank of Rs 4 crores of Treasury Bills by the State Bank. Thus, while deficit financing appeared to be for a total of Rs 40 crores, Rs 8 crores of this was offset by the fact that it represented merely the resale of ad hoc Treasury Bills for Rs 8 crores in place of Treasury Bills which matured during the week. Thus, the net deficit financing during the week ended July 17, as indicated by the table of outstandings of Treasury Bills published by the Reserve Bank, amounted only to Rs 32 crores. Thus, it is not likely that there has been either deficit financing or the institution of reverse ad hocs during the week ended July 24.

Finally, Balances Held Abroad show a rise of Rs 2.32 crores to Rs 12.24 crores. But this is after transfer of Rs 5 crores from the Issue Department, so that the import surplus stands reflected in a drain in foreign exchange reerves to the extent of Rs 2.68 crores during the week.

Our surmise in respect of further purchases of giltedged by the State Bank has been borne out in the return of that institution for July 24, wherein it is to be noted that investment in Government securities has risen by Rs 11 crores to Rs 326.49 crores. There is simultaneously a rise of Rs 4.40 crores to Rs 20.98 crores in Other Assets, and this suggests that more purchases of giltedged from the Reserve Bank are likely. Deposits of the State Bank have risen by Rs 4.10 crores to a new high of Rs 544.07 crores. The Advances portfolio registers a fall of Rs 5.82 crores, in true slack season fashion, to Rs 177.99 crores. Finally, the sum of these changes is to cause a decline of Rs 4.25 crores to Rs 33.52 crores in the State Bank's cash in hand and with the Reserve Bank.

A correction in regard to the Scheduled Bank return for July 3 has now been published by the Reserve Bank, which shows that the rise in Advances during the new loan week was not at all as severe and steep as at that time was suggested. During the week ended July 3, Advances rose, not by Rs 20.54 crores, but by Rs 5.39 crores to Rs 990.21 crores. Hence, during the week ended July 10. Advances of Scheduled Banks contracted, not by nearly Rs 20 crores, but by Rs 4.84 crores to Rs 985.37 crores. The combined impact of month early disbursements and subscriptions to the new loan of the investing public other than Scheduled Banks was not so severe as to cause a very sharp rise in Advances of Scheduled Banks during the new loan week.

During the week ended July 17, the Deposits of Scheduled Banks, in rising by Rs 3.97 crores, are, at Rs 1799.54 crores, knocking at the Rs 1800 crore mark. Half of the rise in Deposits was on account of the State Bank. The switch over to Time Liabilities apparently continues: net Demand Liabilities are lower by Rs 7.35 crores, whereas net Time Liabilities have risen by Rs 9.64 crores. Advances of Scheduled Banks have declined further by Rs 8.37 crores to Rs 977.00 crores. Borrowings from the Reserve Bank are lower by Rs 3.05 crores at Rs 3.60 crores. The giltedged investments of Scheduled Banks have marked a rise of Rs 1.85 crores, despite the fact that, in the relevant period, the State Bank figured as having disinvested in giltedged for Rs 4 crores. It would appear, consequently, either that a fresh sum of Rs 5 crores on account of new loan subscriptions has now been consolidated instead of figuring under other assets, or that the other Scheduled Banks made some purchases through the tap in the relevant week. In any case, in the end result, Cash Balances of Scheduled Banks rose by nearly Rs 15 crores from Rs 165.25 crores to Rs 180.18 crores; and the State Bank's share was Rs 9.48 crores.

✠

The Madras Loan

Our Madras Correspondent writes:

Among twelve Indian States publicly to have issued terms for 4 per cent 1971 loans, Kerala State is not one, A notification by the Kerala Government at Trivandrum states that the decision not to raise any public loan like the other States for capital expenditure has been due to the present political situation. The Travancore-Cochin and the Kerala State Bankers' Associations, in the present circumstances, the Statement said, did not like to cooperate in raising the public loan. No-tax campaign and non-cooperation with the State Government in raising public Loans had also been stated to be the objectives of the opposition political parties that had launched upon "Communist-ministry-must quit office" movement in the State on June 12.

In a Statement issued by the Madras Government Finance Ministry over the State's Financial position (in the light of its raising Rs 800 lakhs by new loan) it is pointed out that the outstanding balance of the share of public debt at the end of March 1959 was of the order of Rs 139 crores. The other liabilities are made up of the provident fund balances of Government employees (Rs 8.26 crores), deposits of the compensation from the Railway Board due to certain local bodies (Rs 1.53 crores) and the reserves of Commercial concerns (Rs 0.21 crores). On the other hand, against these liabilities, the State's assets amounted to Rs 177.5 crores comprising capital outlay on irrigation, electricity schemes investments, shares in Madras Industrial Investment Corporation and investments of earmarked funds in Government Securities.

Wage Demands and Election Prospects

By Paul Einzig

IN recent weeks the Stock Exchange got from time to time under the influence of the assumed certainty of an autumn election. That certainty is by no means absolute. People who claim to be sure about the election being held in October seem to know more about it than the Prime Minister himself who will take his final decision at the last possible moment, on the basis of the situation and prospects as they will appear to be. Admittedly, it does look highly probable that Mr Macmillan will not risk deferring the election to the last possible moment.

The economic situation, as it appears at the time of writing, distinctly favours an autumn election. For the first time since 1939 prices have been stable during the last twelve months. At the same time considerable progress has been made during the second half of the stable period towards the recovery from the trade depression.

Above all the persistence with which the trade unions are pressing forward with bigger wage demands in spite of the stability of the cost of living tends to reinforce anti-Socialist feelings in that part of the electorate which does not stand to benefit by wages inflation. Hitherto the most convincing argument in favour of wage claims was the rising cost of living. Economists argued each other to standstill over the question whether wage increases were the cause or the effect of higher prices. Most people do not understand the economic and statistical problems involved, and are inclined to sympathise with organised labour's efforts to safeguard itself against inflation. After twelve months of stability, however, there is no excuse for wage demands on the ground of higher prices. Admittedly, each trade union can put forward arguments that it has not had its fair share of wage increases before the stabilisation of prices. But the longer the stable period continues the less convincing such arguments are likely to become.

What matters is that the general public is becoming fully aware of the danger of this highly-appreciated stability being upset by trade unionist pressure for higher wages. Mr. George Woodcock, a leading member of the Trade Unions Council, in a recent broadcast talk readily admitted the growing unpopularity of the trade unions. His main arguments against the criticisms of trade unions was that, after all, their members and dependants of members represent the majority of the nation. It is open to question if this is statistically correct. But in any case a large proportion of trade union members—especially white-collared workers who have a highly developed sense of civic responsibility—realise the disastrous effect the wage spiral is likely to produce. It seems certain that the overwhelming majority of the British electorate is anti-inflationist.

Since the Labour Party blindly supports all wage claims, right or wrong, the view that in order to check inflation the Conservative Government must be confirmed in office is gaining ground among the electorate. Even so, as things are at present, the margin between Conservative victory and defeat appears to be very narrow.

It is no wonder that the Stock Exchange is suffering from "election nerves". What is remarkable is the extent to which up to the time of writing equities have been able to stand up to election fears. A downward trend towards the middle of July was followed by a partial recovery, in spite of the unwillingness of a great many people to risk maintaining their commitments on the eve of their annual holidays. It was the firmer tone in Wall Street that provided a remedy for British election nerves. Although there has been no evidence of a resumption of American buying of British equities on an appreciable scale—apart from the isolated exception of Ford shares—the mere psychological effect of the improvement in Wall Street was sufficient to offset to some extent the effect of election fears. Hence the partial recovery of equities.

The extent to which the prospects of a Socialist Government are liable to affect prices on the London Stock Exchange will largely depend on the outcome of the fight that is going on within the Labour Party between the leaders who would prefer assuming control of industries through acquiring equities on the Stock Exchange and a substantial section of the rank and file who would prefer to revert to old-fashioned nationalisation. If Mr Gaitskell's policy should be confirmed at the annual Party Conference in October, it would mean a victory for moderation (in the relative sense of the term) and also steady buying pressure after a Socialist Victory, as a result of the gradual acquisition of equities by the Pension Fund and other official funds.

If the orthodox Socialists should succeed in obtaining a majority in favour of the policy of nationalisation by compulsory acquisition of industries, it would mean a victory for the extremist wing of the Labour Party, and also that there would be no official buying of equities on the Stock Exchange after a Labour victory. Absence of anticipation of such buying, together with fears that a Labour Government would pay less than adequate compensation for compulsorily acquired industries, would accentuate the election nerves of the Stock Exchange. The extent to which an autumn election is liable to influence the Stock Exchange depends not only on election prospects, but also on the outcome of the Labour Party Conference.

WORLD OF BUSINESS

Problems of Flour Milling Industry

Working below capacity has latterly become a common factor in industry in our country. A predominant reason for this state of affairs is the shortage of raw materials directly stemming from drastic import cuts. In a few cases, output has to be restricted, as in the jute mills industry, on account of paucity of overseas demand. But one would not be unjustified in concluding that, at least in industries catering to the primary needs of the people, there will be no question of idle capacity. But it appears that some of the industries falling under this category have also been obliged to work below capacity. Speaking at the fourth Annual General meeting of the West Bengal Flour Mills Association, Mr G. D. Jatia has stated that the main difficulty facing the flour milling industry in the state of West Bengal is in respect of supply of wheat. The daily quota of roller flour mills in Calcutta now is only 800 tons, which works out to hardly 66 per cent of the installed capacity. It is not as though the allocation to the West Bengal flour mills is in accordance with an all India policy because, in Bombay, mills are getting supplies which enable them to utilise their capacity in full.

Despite periodical assurance from Government as to meeting the peoples' requirements in food products in full, citizens of cities like Calcutta know only too well that Government promises have yet to help them obtain their full quota of their food needs from the bazar. Wheat flour has developed the characteristic of disappearing from the shops quite frequently and the result, so far as the consuming public is concerned, has been a round of cross accusations among the millers, Government and the the retailers. The simple remedy seems to have escaped the attention of Authority. Anti-social practices have, of course, to be guarded against, but the availability of adequate supplies will go a long way toward minimising the hardships that the public has to undergo in the matter of procurring its requirements.

There is also another important reason for enabling the flour mills to work to full capacity. It is a truism that no industry can survive long, let alone be prosperous, if it is forced to keep idle a very large portion of its installed capacity. The question of a fair return to investors in the industry concerns not only industry but also the Government. The task, for Government's part, does not seem to be very difficult as what is sought is merely permission for the flour mills to work to full capacity. It is pointed out that the daily quota was based on conditions obtaining in 1956 and, since then, demand for wheat flour would have undoubtedly gone up, considering the sizeable addition to the population in the country in general and Calcutta in particular.

The record production of foodgrains in 1958-59 augurs well for obtaining their requirements in full for the public; and, by the same token, Government may have little argument against a restricted supply of wheat to the flour mills situate especially in areas where density of population is very high, as in Calcutta. The plea of the West Bengal Flour milling industry for a liberal quota for the export of wheat bran, the stock of which is said to be accumulating fast, seems quite reasonable. It would appear that export is the only profitable way of disposal of bran. So long as there is no other way of utilising it, there does not seem to be any point in placing a quantitative restriction on the export of bran, especially at a time when earning of foreign exchange is to be given top priority.

*

Bright Future for Jessop

By dint of hard work, Jessop & Company has earned for itself an important place in the Engineering industry in our country. As coach builders, it has long experience. It is therefore natural that, in the programme of self-sufficiency for railway rolling stock, Jessop has been called upon to shoulder a heavy responsibility. That it has been carrying out the task thus entrusted efficiently is borne out by the fact that Jessop is now to be given the considerable responsibility of manufacturing Electric Multiple Unit Broad Gauge Coaches for the Calcutta Electrification project. The plant for manufacturing the coaches is already in commission. The other departments of the company are generally doing well, though the working of some has been hampered by shortage of steel. The Diesel Road Rollers and the new B.O.X. wagons departments are particularly affected by the unsatisfactory raw material supply position.

The decline in the value of output last year will be viewed with some concern by the shareholders of the company. But enthusiasm will have revived after reading the speech of the Chairman of the Board of Management of the Company, Sir Bijoy Prasad Singh Roy, at the annual general meeting held last week. Jessop is now poised to take up bigger and newer tasks in the coach building line. There is idle capacity in respect of road rollers also. The only condition that remains to be satisfied is the supply of adequate quantity of steel to enable the Company to work to full capacity. Any sizable improvement in the steel supply position can, however, be expected only from next year. Consequently, a large increase in production can come about by 1960-61. A significant point in the chairman's speech is the assurance that every effort will be made to secure markets overseas for its well known products, once the raw material supply position becomes comfortable.

*

Cotton and Hair Belting Industry

Technological progress in recent years has been so rapid that entrepreneurs in the economically advanced countries of the world are said to be hesitant to start any new enterprise or implement programmes of expansion of existing industries due to the apprehension that enterprises that follow may reap the advantages of the progress in technology in the meantime. Of course, entrepreneurs in India have a long way to go before finding themselves in such a predicament. But this is a reminder that the term modern as applied to industry has lost much of its significance and we in our country, no matter how underdeveloped we are, will perforce be obliged to take note of this fact.

In a small measure, such a necessity seems to have already arisen. For instance, Mr C. Ramasubhan, Chairman of the Tariff Commission, has pointed out in his opening speech to the public enquiry into the question of continuance of protection to the cotton and hair belting industry, that one of the main problems of the industry has stemmed from the technological changes which have taken place over a period of years.

The cotton and hair belting industry is working below its capacity. As against an estimated installed capacity of 1363 tons on single shift, the eight units in the industry produced only a total of 777 tons in 1958. Though output in 1958 is higher than in 1957, it is much lower when compared with 1956 when output totalled 838 tons. The non-utilisation of the installed capacity in full is not to be wondered at because total demand in the past three years has been 864 tons in 1956, 735 tons in 1957 and 753 tons in 1958.

Have there been any serious miscalculations as regards the size of the future demand at the time of the setting up of the units? The demand has been quite in conformity with expectations but the miscalculation seems to have been in respect of the type of belting that will be in request. Rubber ply belting is fast replacing cotton and hair belting in many of the industries which had hitherto been almost entirely dependent on cotton and hair beltings. There is also a marked preference for individual drives in new equipments calling for the use of 'V' belts.

That the future for this industry is bleak will be evident from the fact that, in the opinion of the Development Wing, the earlier estimate of demand of 350 tons for cotton beltings and 650 tons for hair belting can hold good for the next three years. With a poor demand for its products and with future prospects far from encouraging, it is no wonder that the industry, even after 11 years of protection coupled with an almost total shutting out of foreign competition through import control in recent months, has yet to stabilise itself.

*

Coal Prices

The coal industry has undeniably strong arguments to support its plea for a rise in the selling prices of coal. These, in brief, are the rapid deterioration of the financial position of the coal industry as a result of a steep rise in working cost brought about by high cost of stores, plant and equipment, the additional labour cost since 1947 and the amenities that the industry is obliged to provide to labour under the mining legislation, and the resultant inability of the industry to take up an expansion programme. The effect of this growing weakness is already discernible in the decline in coal production. Speaking to pressmen in New Delhi this week, Mr R. H. Wright, Chairman of the Indian Mining Association, has pointed out that, if matters regarding the selling price of coal are allowed to drift for some more time, there is every likelihood of an acute shortage in coal and coke. Already, there are signs of a serious setback. Production is far behind the Second Plan target and indications are that the decline continues unabated. It is also quite on the cards that, unless there is a favourable decision in favour of the industry soon, a number of coal mines will find themselves left with no other alternative but to close down.

The remedy suggested by the industry is an immediate increase of Rs 3.50 a ton in the selling price of coal and coke. Mr Wright has pointed out that the industry admits that the principal consumers like the Railways and the Steel Ministry should be given a chance to study the repercussions of an increase in the coal prices. According to the careful calculations made by the industry, the rise in their working expense will be between 1.2 per cent and 1 per cent.

It is true that Government cannot afford to take snap decisions on so important a question as an increase in the price of coal. For, coal is a basic necessity entering into the cost of a wide variety of articles and services in everday use. But the question of coal prices has been hanging fire for many, many months and there is hardly any excuse for further delay, especially when it is quite some time since the Coal Prices Enquiry Committee submitted its recommendations.

WORLD OF JUTE

65 Lakh Bales: Target for Third Plan

WITH less than two years to go for the end of the current plan period, attention is now increasingly being bestowed on the Third Five Year Plan. Tentative targets in some cases have been indicated as early as last year but only in recent months has a clearer picture begun to emerge. So far as jute production is concerned, the first authoritative indication as to the target appears to have been given by Sir V. T. Krishnamachari, Deputy Chairman, Planning Commission, in his address to the Annual Conference on Community Development held at Mysore last week. Sir V. T. Krishnamachari has mentioned that the Planning Commission's proposed target for jute production by 1965-66 is 65 lakh bales as compared to a target of 55 lakh bales for 1960-61. According to a news agency report, the target of 65 lakh bales has now been finalised at a meeting held in New Delhi of representatives of various jute growing States. It is further stated that the Third Plan target is to be attained without any sizable increase in the total acreage under jute in the country. It would appear that an exception will be made in regard to Orissa, which may be allowed to increase its acreage quite substantially.

It is interesting to note that, already, India is self-sufficient in respect of the supply of the raw material for its jute goods industry. The goal o self sufficiency, however, may appear to be some way off if one either goes by Government estimates alone or leaves out of account the mesta crop. Taking trade estimates as the basis of calculation and including mesta production, India may be said to have attained self sufficiency in the raw material production for its jute mills during the last jute year itself. This is how this conclusion is reached. The normal requirement of our jute goods industry, that is, with the mills working to full capacity, will be in the neighbourhood of 75 lakh bales of raw material. As agaist this, we have had in 1958-59, according to trade estimate, a jute crop of 61.67 lakh bales. The mesta crop in the same year amounted to 15.81 lakh bales. Thus we seem to have obtained during 1958-59 a total crop of 77.48 lakh bales of jute and mesta put together. According to the Government estimates, however, the total crop is 67.59 lakh bales. It will be seen that, in a manner of speaking, self-sufficiency may be said to have been attained even on the basis of Government estimates because the total present annual domestic requirement is only around 65 lakh bales. That Authority itself has accepted the view that the raw material supply to the industry is plentiful, is borne out by its decision last year to lift a decade-old ban on raw jute exports.

The target of 65 lakh bales for the Third Plan period, it is to be remembered, pertains to jute production only. Though the larger than targetted production of mesta has been in a way helpful, it is generally accepted that the over much use of mesta by the industry will be detrimental to its long-term interests. In this view, the emphasis should be on the attainment of self-sufficiency on the basis of raw jute alone. The need for improving the quality of our jute manufactures also calls for such an emphasis.

The reported decision to attain the Third Plan target without increasing the acreage under jute is to be welcomed because intensive cultivation may provide a proper solution to the difficult question of ensuring an equitable return to the jute cultivator. It has already been noted that growers in some parts of the country are now evincing diminishing interest in jute cultivation in view of the uneconomic price fetched by jute during the last season. If the cultivator realises that the same area can be made to yield much more jute than he has been accustomed to reap so far, his flagging interest can be firmly turned toward jute growing. When it is suggested that the yield must be increased, it is not as though something extraordinary is being advocated.

In common with almost all agricultural produce in India, the yield in jute is also at a pitifully low level. Statistics reveal that, all through the period between *1947-48 and 1958-59, the average* yield per acre in India has been below 3 bales, the maximum touched being 2.83 bales in 1958-59. During the same period, the yield in Pakistan has mostly been above 3 bales, the maximum attained being 4.48 bales in 1956-57. During the last season, the yield worked out to 3.93 bales. The poor yield in India may be attributed to the comparative unsuitability of the land. Even so, there is no reason why an yield of, say, 3.5 bales should not be obtained. It is, therefore, quite on the cards that, with the present area under jute of 18.27 lakh acres, a crop of 65 lakh bales can be attained. There is every reason to believe that the efforts toward intensified cultivation of jute can be depended upon to bring about the desired results. The effect of the measures taken in this regard, particularly in the last season, is already evident from the improved yield of 2.83 bales obtained in 1958-59 as compared with the previous year's yield of 2.33 bales.

* * *

The jute goods market ruled irregular during the past week. After a weak opening prices developed a reactionary trend last Thursday. The decline would appear to have stemmed from the trend in the futures market where B Twills August were pushed down to a low of Rs 97.80 from an opening rate of Rs 98.15 before closing at Rs 98.25. B Twills July in the spot market closed at Rs 98.20. That the downtrend, especially in sackings, had been induced by extraneous factors was also evident from the fact that, during the day, receipt of substantial orders from Australia, Sudan and the Middle East was reported. The hessian section continued almost unchanged throughout the day as would be seen from the price trend in the futures section. Hessian 40"x10 oz August after touching a high and low of Rs 40.54 and Rs 40.34 closed at Rs 40.42.

In marked contrast to Thursday's trend, conditions, as far as heavy goods were concerned, were quite active the next day and gains upto a point were recorded. The incentive seems to have come from reports of fresh business from China which had already accounted for quite a substantial amount of business. In the futures market, B Twills August touched a high of Rs 99.50 and closed firm at Rs 99.45. In the spot section, B Twills July closed at Rs 99.45. Hessians were again unchanged with Hessian August futures closing at Rs 40.54. Hessian July was placed at Rs 40.60.

The improvement in sentiment proved shortlived, as in Saturday's trading, despite continued reports of good overseas business, values declined sharply. B Twills July in the spot market eased to Rs 98.50. Hessian 40"x10 oz July was slightly lower at Rs 40.35.

Though Monday began somewhat better due to covering business in ready on near delivery positions, the higher levels attracted profit-taking with the result the rates showed only minor improvement over those for the previous day.

Narrow fluctuations characterised trading in the next two days. Closing rates on Wednesday in the spot market were Hessian 40"x10 oz July Rs 40.50 and B Twills July Rs 98.20. In the futures market, B Twills August after opening at Rs 98.60 touched a high of Rs 99 before closing at Rs 98.50. Hessian 40"x10 oz after having been done upto Rs 40.44 was finally placed at Rs 40.30.

The raw jute market ruled listless in the absence of mill interest. A slight improvement in sentiment in earlier dealings in sympathy with the steady goods section at that time, however, yielded place to a subdued tendency in later dealings in the continued lack of support from mills. Assam Bottoms new crop fluctuated between Rs 23.25 and Rs 23.00, while the old crop was done between Rs 22.00 and Rs 21.75, all per maund.

* * *

RAW JUTE ARRIVALS IN 1958-59

A striking feature of the figures for raw jute arrivals into Calcutta and mill stations during 1958-59 is a further steep decline in imports from Pakistan. As against 694,903 bales imported during the previous season, arrivals from Pakistan during 1958-59 totalled only 337,783 bales. The grand total of arrivals is placed at 6,514,149 bales and this compares with the 1957-58 total of 6,154,972 bales. Arrivals of Indian jute last season are higher at 6,176,366 bales as compared with 5,460,059 bales during the previous season.

IJMA'S ANNUAL SUMMARY OF JUTE & GUNNY STATISTICS 1958

This is the fourth issue of the Association's Annual summary of jute and gunny statistics. The booklet contains, as far as available, comparative annual jute and gunny statistics for the past 29 years based on both jute and calendar years. Copies of the publication are available at a cost of Re 1 per copy at the accounts section of Bengal Chamber of Commerce and Industry. This booklet will be found valuable by all those who want to keep a ready reference on the working of the jute mill industry in India.

TESTING JUTE FABRICS AND CORDAGES: TWO DRAFT STANDARDS ISSUED

The Indian Standards Institution has issued two draft standards on methods of testing resistance of jute fabrics and cordages to attack by micro-organisms.

Two methods are prescribed in these standards, namely:

(i) mixed culture inoculation method, and (ii) soil incubation method.

In the first method, a mixture of spores of five different fungi, which are frequently the cause of deterioration of jute fabric and cordage, is used. In the second method, the fabric or cordage is subjected to the action of a much greater variety of micro-organisms, both fungi and bacteria, normally found in the soil.

Jute fabrics and cordages are liable to deterioration by the action of micro-organisms. Since they are often stored, transported and used under conditions favourable for the growth of micro-organisms, various preservative treatments have been developed and their number is constantly increasing. Hence the need was felt for the formulation of standard methods for testing resistance of jute fabric and cordage to attack by micro-organisms.

Comments on the drafts may be sent before September 19,1959 to the office of the Indian Standards Institution, "Manak Bhavan", 9, Mathura Road, New Delhi.

WORLD OF TEA

Strong Demand for most Types

THE improvement in Tea auction prices, noticed during the past fortnight, has been maintained this week, too, and demand is more widespread, especially for quality teas. At the export sale, offerings amounde to 40,205 packages and there was a strong general demand for all descriptions except for the thin liquoring teas from Assam. "Teas for price" and clean Brokens were fully firm and sometimes dearer, while similar Fannngs came in for strong competition and registered an advance of 10 nP to 15 nP per piund.

Best CTC types with bright liquors were well competed for and were firm and at times dearer; but the plainer types were generaly 20 nP to 30 nP easier. Bright liquoring Assam BOPs and OFS also came in for strong competition; but the ordinary kins were 20 nP and sometimes 30 nP easier. The poorer Leaf grades were well supported; but the remainder were not quite.

Darjeeling teas met with fair support at lower rates with some withdrawals. Tippy sorts were, once again, well supported. Following rates were quoted:—Clean Black Pekoe Rs 1.92; Plain BP Rs 1.70 to Rs 1.76; Plain Fannings Rs 1.80 to Rs 1.90; Medium BP Rs 2.00 to Rs 2.10; Medium Fannings Rs 2.10 to Rs 2.20; Best Assam CTC BP Rs 3.40 to Rs 3.60 and Best Assam CTC Fannings Rs 4.00 to Rs 4.50.

In the Internal Sale, offerings were 15,704 packages of Dusts for which there was a good general demand. Black exportable orthodox types met with keen competition and were often sold at 4 nP to 8 nP per pound above valuations. Legg-out Dooars teas were firm and sometimes dearer. Darjeeling Dusts met with more demand than in recent weeks and realised satisfactory prices. Medium CTC Dusts were irregular and sometimes up to about 20 nP easier except for some exportable types which met with keen competition and realised prices well above valuations. The very best CTC Dusts were in less demand and generally sold below valuations. Following rates were quoted:—Medium Dooars Dust Rs 1.80 to Rs 1.86; Medium Assam Dust Rs 1.76 to Rs 1.84; Medium Assam CTC Dust Rs 2.00 to Rs 2.20 and Best Assam CTC Dust Rs 2.70 to Rs 3.00.

A total of 329 packages of Leaf grades was offered, which included 48 packages of Green tea and these met with a good general demand. In the Export Quota section, business was reported done at 2¾ nP per pound. At the close, there were buyers at this level with sellers at 3 nP per pound.

Although buying has been discriminating, market circles think that the present improvement in prices will be maintained for quality teas and it will not be difficult to get even more attractive prices for these, as they are in short supply. Of course, it is early to assess the financial outlook for tea gardens based on the first sale and the prices realised for the second-flush teas. For, these constitute only a small part of the total output and the fortunes of the gardens are mostly governed by the prices realised for autumn and rain teas, which cover a large part of the production.

The smart rise in exports of North-East Indian tea during June should also engender the hope that the export outlook for India wil not be very discouraging. Figures are available for the season ending June, and total shipments have improved to 377.3 million pounds in the 1958-59 season from 365 million pounds in the corresponding period of the previous season. The season's total is only slightly behind the high level of 387.7 million pounds, shipped in 1956-57.

While the UK has increased its offtake from 236.9 million pounds in 1957-58 to 245.3 million pounds, representing as much as 70 per cent of the total shipments, Russia has improved its offtake to 23.4 (13.7) milion pounds and Egypt to 22.6 (18.9) million pounds. West Germany, Turkey, the USA, Iran, the Persian Gulf and Iraq have more or less maintained the offtake. But the steady and sharp decline by the Irish Republic to 14.0 (17.2) million pounds and Canada to 10 (12.3) million pounds is a cause for concern.

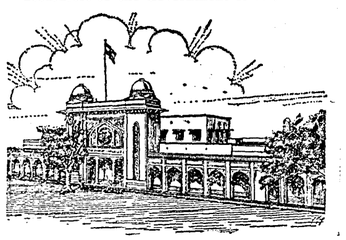
Equally serious has been the indication that Australia is diverting its attention from the Indian market, its absorption dwindling to a mere 37,056 pounds against 1.8 million pounds recorded in 1957-58. The tea export promotion authorities will do well to investigate the cause of the setback in these areas. It is felt that the position is not likely to change unless Indian tea is popularised abroad through propaganda and by trade agreement with tea consuming countries on a barter basis.

Apart from these factors, the consumption of Indian tea in the UK has gone down by about 10 per cent from 60 per cent to 50 per cent; and there is no propaganda machinery in the UK—the biggest Indian market—to popularise Indian tea. Again, the trade does not derive much optimism from reports that tea output in the major exporting countries is running at a high level. For instance, British East Africa—the low-cost producer—which can hold down prices, especially of Common grades, has produced 4.6 million pounds more, at 31.8 million pounds, to April, 1959.

That India is losing its grip over the tea market even in the Middle East and is beng faced with keen competition in the auctions with lower prices quoted for Ceylon tea, is evdent from the reports of the Internatonal Tea Committee. Ceylon has already reduced its exports duty on tea from 70 to 30 cents per pound, whereas the reduction of export duty on Common tea in India is only 24 cents against 38 cents last year.

Despite the fact that the price in London auctions for Ceylon tea is much lower than that for Indian tea, shipments frim Ceylon have been on the increase. In the first five months of the current year, shipments are higher at 149.31 million pounds as compared to 147.01 million pounds in the corresponding period of last year. In spite of this moderate increase, shipments to almost all major buying countries, with the exception of the USA and Egypt, have recorded a decline during the period under review.

Shipments to the UK have fallen from 54.32 million pounds in January-May, 1958 to 52.36 million pounds n the period under review as did those to the Continental countries from 7.1 million pounds to 5.65 million pounds. Exports to Australia and Africa are nominally lower at 15.09 million pounds and 13.65 million pounds respectively. But, the USA has increased its offtake of Ceylonese tea from 15.71 million pounds to 18.54 million pounds, while the Egyptian offtake has risen from 3.73 million pounds to 5.09 million pounds. A substantial increase has, however, taken place in shipments to other countries from 23.75 million pounds to 27.92 million pounds.



In the Cochin market, offerings were 825,000 lbs. The quality of teas showed a further improvement and there were some useful high-grows on offer. The demand was maintained throughout the sale. There was a useful enquiry for low medium and medium brokens and these were steady at last week's rates. Similar Fannings were, however, occasionally easier. High-grows were well supported and prices for these remained steady. Whole Leaf grades were firm to dearer following quality. Tippy sorts met with a useful demand.

In Djakarta, offerings totalled about 2,500 packages with no noteworthy change in quality. Demand slackened as the week progressed and prices could not be maintained at previous levels in many cases. Good liquoring BOP and other Brokens were in selective demand, while Dusts with attractive appearance and liquor changed hands above the previous week's rates.

In Mincing Lane, the quality of the Ceylon teas was again poor although demand was good. The poorer liquoring teas were often 1d to 2d per pound down; but the best invoices were well competed for at fully steady rates. Offerings tatolled 25,293 packages. Prices for the 11,185 packages of South Indian tea also submitted were generally lower following a decline in quality. Stalky and thin-liquoring kinds were weak and difficult of sale.

Meanwhile, stocks of tea in London as on July 17, totalled 114.28 million pounds as against 115.12 million pounds in the previous week. Total afloat was 21.82 million pounds including 11.19 million pounds from Calcutta; 78,000 pounds from Chittagong; 5.04 million pounds from Cochin; 3.79 million pounds from Ceylon and 1.75 million pounds from other Ports. The average price realised, during the week under review, was 46.75d per pound against 48.24d in the previous week and 51.68d a ago.

WORLD OVERSEAS

US Notes

The pace of US economic activity continues to amaze—and delight—the exports.

There is hardly an analyst, no matter how optimistic his views, who made so bold as to predict when 1959 began that the US Gross National Product (GNP)—the total output of goods and services—would be approaching an annual rate of $500,000 million by the middle of the year, and might well reach that landmark by the end of the year. At best, the $500,000 million rate generally was expected sometime in early 1960.

It still may turn out that way, of course. But data just released by the Department of Commerce show that the GNP already has reached a record annual rate of $483,500 million during the second quarter of the year. This represents a jump of $13,300 million over the first quarter's rate—the third consecutive quarterly advance of $13,000 million or better. The second quarter output was a full eleven per cent ahead of the same 1958 period.

It takes only a rather conservative estimate, therefore, to forecast a further advance to the $490,000 million level in the third quarter and to the $500,000 million mark by the end of the year. Such increases would represent quarter-to-quarter gains only about half the size of those actually attained in both the first and second quarters.

The major unsettling element now, of course, is the current work stoppage in the steel industry. If that shutdown lasts and begins to affect noticeably the operations of the industries, those third and fourth quarter projections could turn out to be too high. On the other hand, if the strike ends fairly soon and other sectors of the economy continue to show their current strength, those projections could even turn out to be too low.

Already, the economy's unexpectedly rapid rate of expansion has caused government economists to make several upward revisions in their earlier estimates. Only a few months ago, for instance, they were figuring that the first-to-second quarter gain in total output would come to about $12,000 million instead of the $13,300 million rate actually achieved. They figured that the GNP for the full year of 1959 would average out at roughly $475,000 million. Now they see the distinct possibility that the 1959 GNP will average out at $485,000 million and possibly higher, depending on the length and impact of the steel shutdown.

It should be noted that the second quarter record of $485,500 million came on top of a first quarter annual rate that had itself been revised upward just the week before, from an earlier estimate of $467,000 million to $470,000 million.

As a matter of fact, this was part of a comprehensive revision of GNP data going all the way back to 1957. The results show quite clearly that for the past two years the US economy actually has been achieving higher levels of activity than had been estimated, and that the brief 1957-58 dip was not as deep as earlier figures had indicated.

The new statistical picture is this: A GNP at the annual rate of $477,800 million in the third quarter of 1957 (the pre-recession high), declining to $431,000 million in the first quarter of 1958 (the recession trough), then climbing to $470,000 million in the first quarter of 1959 and to $483,500 million in the second quarter.

The previous official estimates had been: $445,000 million at the 1957 peak; $427,100 million at the 1958 trough, and $467,000 million in the first quarter of 1959.

There is nothing at all unusual in the commerce department's taking a new look at the GNP record. This kind of review is made each year at about this time, to enable the department "to catch up" with all the elements making up the nation's total output of goods and services.

It should be borne in mind that these GNP figures, as given, have been adjusted for normal seasonal variations, but not for price changes. Even when price fluctuations are taken into account, however, the real gains are still outstanding.

When adjusted for the slightly higher price level, for instance, the GNP for the second quarter of 1959 still shows a very substantial gain over the first quarter of $10,400 million. And the year-to-year gain over the second quarter of 1958 becomes not eleven but nine per cent—certainly a substantial enough growth rate in real terms for the huge and expansive American economy.

*

There are times when an American economist can be pardoned if he exhibits something close to jubilation at the course of events in the United States. And this should be one of those occasions.

For official reports made public within the past week show that the US reached new peaks of prosperity, in June. with employment, production and earnings soaring to heights that may well merit the appellation of "spectacular."

The most significant development was in the realm of employment, since production and income this year were already at record levels. But employment, while rising, had not as yet recovered to the peak totals of mid-1957—a normal enough experience, since increases in the number of jobholders usually lag behind production gains during the early periods of a strong economic resurgence.

But this is no longer the case. The number of American holding jobs in June spurted a remarkable 1.3 million, to bring the total to 67,342,000—the highest employment level in the nation's history and about 2.5 million above the level of June 1958. This bears out the prediction of those experts who were saying all along that before 1959 had run its course the technological advances and rising output of the past year would be reflected in a record number of gainfully employed persons.

The fact that this new peak has been reached so soon is evidence of the underlying vigour of the 1959 American economy. The number of jobs has grown by a remarkable 4.6 million in the four months since last February.

It is normal, of course, for June to show some increase in employment, as the labour force usually is swelled by new high school and college graduates seeking work for the first time, as well as by vacationing students looking for temporary jobs. Noteworthy, however, is the Labour Department's assessment that this June's employment gain was so large as to be more than a merely seasonal development.

The influx of new labour is bound to affect unemployment as well as employment statistics; not all the new entrants can be expected to find the jobs they want immediately. In this context, the 593,000 increase in unemployed actually represents an optimistic development. For it means that not only did the employment rise exceed seasonal expectations, but also that the increase in jobless fell short, by a good margin, of what might normally have been expected at this time of year.

At a total of 3,982,000 the number of unemployed was about 1.5 million below the June 1958 level. Of particular interest is the fact that joblessness among heads of families—for the most part regular workers who were not new labour force entrants—actually declined during June by 180,000.

Preoccupation with employment should, however, not, obscure the production gains. Industrial production in June set another new record, as it has for each of the past four months. In fact, the figures show that as of June, output was rising just as rapidly as in the earlier months.

The June record was 155 on the Federal Reserve Boards industrial production index, which uses the 1947-49 average as a base of 100. This was the index's fourteenth consecutive month of advance. It represented a rise of two points over the May figure, which now has been revised to show a three-point (instead of the earlier estimated two-point) rise over April. Thus, the combined May-June rise of five points matches the March-April rise—a revealing sign of the sustained strength of the current economic advance.

The June report showed continued gains in nearly all major lines of production. These included such diverse industries as automobiles, household goods, business equipment, construction materials, aluminium, textiles, apparel, paper, chemical products, rubber and metallic ores.

The only important exceptions to the general trend were steel and oil. And in the case of steel, of course, production started to dip toward the end of the month in anticipation of a possible nationwide work stoppage in that industry—a stoppage that has since materialized.

In view of the substantial employment and production gains, it is not at all surprising to find that the weekly earnings of factory workers also reached a new high in June, continuing 1959's steady uptrend. At an average of $90.54, these earnings were about nine per cent—more than $7 a week—above the June 1958 level.

*

Britain

United Kingdom steel production increased in June to an average of 388,500 tons a week, compared with 384,600 tons in May and 373,600 tons in June 1958, the Iron & Steel Board announced in London on July 16.

British steel production has now (in the second quarter of this year) recovered to about the same level as in the corresponding quarter a year ago. It is still 10 per cent below the peak second-quarter rate reached in 1957 but, whereas output was then aided by consumers increasing their stocks, preliminary figures indicate that consumers were still running down stocks in the second quarter of this year.

However, total orders, both home and export, on the makers' books have been increasing since February this year. Actual exports have also risen from the low level to which they fell in the first quarter of this year.

Steel production in June was running at an annual rate of 20,200,000 tons, the highest rate reached since April 1958. Production of steel is an important indicator of economic growth, and the June figures confirm the current trend of expansion.

ANNUAL REPORT

The annual report for 1958 of the Iron & Steel Board, just published, points out that although steel production in the United Kingdom fell in 1958 for the first time since the war, owing to a lack of demand, no major development scheme was held back by the recession in the industry.

The fall in steel production in 1958 (by over 2,000,000 tons, compared with the previous year) was due to the general state of trade at home and abroad. Exports, for example, fell significantly, and at home the pause in industrial acti-

vity affected steel output in two ways. First, the actual use of steel in industry declined; second (and even more important), there was a heavy withdrawal of steel from stocks held by users and merchants, in contrast to the accumulation of stocks in the preceding year.

The fall in steel output was not evenly distributed. Modern continuous-wide-strip mills producing sheet and tinplate worked to capacity for production of 24,500,000 tons of steel in 1959, though there is not much prospect that output will reach this figure. There may, however be enough demand, says the report, to make 20,000,000 a possible result.

Development and research went on apace in 1958. The industry's capital expenditure reached a peak of £105,000,000 —about 10 per cent more than in the previous year— and expenditure this year is not expected to be less. The Board also estimates that capacity in 1962 will be of the order of 28,000,000 ingot tons, with an even greater output if demand is there.

The Board was also able, in 1958, to lower the maximum prices of a wide range of steel products—the first such reduction to the home consumer in 19 years.

*

United Kingdom exports in June, at £250,000,000, were considerably below their high level in April and May, but the average for the second quarter of 1959 was 4½ per cent higher than for the same period last year, after making allowance for the dock strike in that year, the Board of Trade announced in London.

United Kingdom imports rose in June to £331,000,000. Re-exports, at £10,000,000, were about the same as in May.

The excess of imports (valued c.i.f.) over exports and re-exports (valued f.o.b.), as a result, rose sharply in June to £71,000,000.

It is pointed out in London that the fluctuations which are possible from month to month in the trade returns are illustrated graphically in these provisional figures for June. Some fall from the very high total for exports in May was expected on seasonal grounds, and this has occurred.

Because exports in May were at the record level of £299,200,000, the normal seasonal fall in exports in June appears, therefore all the more considerable. Imports were abnormally low in May and have risen, as expected, in June. The visible trade deficit has, in consequence, increased sharply over the exceptionally low figure of £1,500,000 in May.

Fluctuations in the trade returns from month to month—even within a wide range—are not of themselves significant, and the current underlying trend in United Kingdom oversea trade still shows expansion. Thus, the average monthly figure for exports in the second quarter was 4½ per cent (after adjustment) above the same period a year ago, while imports were 6½ per cent higher. And the visible trade deficit has not increased by much, considering the increase in imports (the latter factor partly caused by expansion at home). In the second quarter of this year, the monthly average visible trade deficit was £36,000,000, compared with £33,000,000 a year ago.

Fish trunks of aluminium produced by a British firm are helping delivery of fresh sea fish to dinner tables in the African tropics a thousand miles from the sea.

Watertight, lightweight, and almost everlasting, the trunks were developed by the Heston Equipment Co. to enable an African company to fly fish at economic rates to markets far inland in the Belgian Congo. This has resulted in sales of 60 tons in 1951 going up to nearly 5,000 tons in 1957.

Lacking the necessary chain of freezing-plants across the country, it was impossible to freeze the fish for the slow rail journey inland in the tropical climate. The alternative was air-freighting, but the handicap here was the high cost using conventional packing, and the need for trunks that were watertight.

Heston Equipment produced the answer by manufacturing a trial shipment of the aluminium trunks so light that they added little to the freight charges. Now the African company uses 2,000 of the trunks to fly the fish as far as 1,000 miles into the Belgian Congo.

Heston has since sent 10,000 of the trunks to Uruguay, 3,000 to Newfoundland, and others to South Africa and Iceland.

*

Australia

THE revival of portfolio investment throughout the world is benefiting Australia, and the spate of buying orders reaching Australian stockbrokers from United Kingdom buying interests represents a new phase in Australia's post-war influx of international investment.

This is the conclusion of Dr H. F. Bell, economist of the Australian Mutual Provident Society, expressed in a monograph on portfolio investment which he prepared for the New South Wales branch of the Economic Society of Australia.

Dr Bell referred to problems created by this capital, such as the short supply of equities, and the fluctuations it caused on the stock markets, but said that these were problems which Australia must face if the rapid sophistication of the capital market was to continue.

He said a number of factors had probably coincided to bring about an interest in portfolio investment There had been a spilling-over of equity investment from domestic stock markets to overseas markets. This had resulted from the world-wide shortage of equity scrip.

Britain's economic recovery, France's corrective monetary measures, the high investment standards of the International Bank, the work of the International Chamber of Commerce through its code for the fair treatment of foreign investments, were examples of many important influences which had been at work in promoting the improvement.

Dr Bell also believed that the removal of capital issues controls had unshackled the British investment trusts. Easing of some United Kingdom exchange restrictions, and the passage of fiscal encouragements to overseas investment had also helped to restore some of London's standing as an international investment centre.

The growth in popularity of unit trusts in investment circles in Australia, and the extent of present holdings in them, were outlined recently in an address by the general manager of Universal Flexible Trusts Ltd., Mr E. S. Knight, to the Bankers Institute of Australia, meeting in Melbourne.

Mr Knight's company is one of the leaders in this field of investment.

Mr Knight said that while it took 23 years for investments in the trust to reach £43,000,000, more than one-fifth of this amount had been invested in the past year.

Victoria was the only State in which legislation specifically provided for control of trusts. Some of the provisions were that management must be by a public company, and all agents must be appointed under seal. The trust deed, and any amendment to it, must be approved by the Registrar of companies. The Trustee must receive the approval of the Attorney General.

There were other provisions, such as the issue of a prospectus in specific terms, with an application form affixed to each prospectus.

Publication of details of dividends and unit prices throughout the past five years of each unit trust conducted by the management company was also required, Mr Knight said.

Unit trust companies to-day generally invest trust moneys in well over 100 public companies. Where there is a sufficient spread of risks, and particularly where a trust fund includes shares in a 100 or more selected companies, random fluctuations in unit pprices are very small.

In the early days of Australian trusts the fixed type was preferred where the whole of the trust fund was invested in 20 or 30 particular stocks in fixed proportions as specified in the trust deed. This type of trust has now given way to the managed, or flexible trust where the management has very wide powers for buying and selling securities.

Stating that the unit trust was a hedge against inflation, Mr Knight quoted figures to show the effect of increased retail prices upon income —purchasing power.

He said that the first unit trust in Australia opened at a price of 21/9 in 1936, and when wound up in 1951, unit holders were paid 30/7. Dividents throughout the 15 years averaged 5 75 per cent.

Mr Knight said Australia's future prospects indicated great industrial activity and profits, and that the principal beneficiaries would be the ordinary shareholders, an increasing proportion of whom would have holdings in unit trusts.

If investment continued at the present rate, the total investment in unit trust by 1965 would be nearing £100,000,000, Mr Knight said. This was the present investment total in trusts in Great Britain.

Since Mr Knight's address was given, a new trust, First Victorian Balanced Fund, received applications for more than £250,000 in its first fortnight and appear likely to ultimately reach £500,000. Launched in Melbourne by Australian fixed Trusts, the new trust combines investment in ordinary shares with fixed interest securities.

The biggest profit ever earned by a public company in Australia—£15,343,107 was announced by General-Motors-Holden's Ltd., for the year to December 31st. The sum included £105,737 from general investments.

Ordinary dividend to the parent company in the United States involved £6,437,500. Sales were a record £116,377,000, mainly because of the sharply-increased demand for Holden motor vehicles.

Since the end of 1948, when the first Holden car was produced, the total employed in the various plants of the company has risen from 8,557 to 18,699.

In addition to producing the Holden, the company makes automotive parts and accessories, refrigeration equipment, and electric domestic appliances.

The company is retaining £7,820,536 for use in its business, and last year announced an expansion programme to cost £9,000,000.

The object is to increase Holden manufacturing capacity to 125,000 units a year, and to provide facilities for the assembly of 22,000 Vauxhall, Chevrolet and Pontiac passenger cars, and Bedford commercial vehicles.

An entirely new plant at Elizabeth, near Adelaide, South Australia, is to begin operations about the middle of this year.

Last year the Holden increased its share of both the passenger car and the light commercial markets. In the passenger car field, which includes the increasingly popular station sedan, Holden accounted for 47.4 per cent, of the registrations, compared with 42.7 per cent in the previous year.

Last year distributors were appointed in Ceylon, Indonesia, Goa and Mauritius. Holden cars are now available in 24 countries, but the directors point out that import quotas and exchange restrictions in almost every country in which a demand exists, limit current exports. High shipping freight rates and lack of shipping to some areas increase export difficulties.

Apart from the operations of its own plants, General Motors-Holden's Ltd., obtains goods and services from more than 4,000 other Australian firms and organisations. The company estimates that about 35,000 people are employed in the supplying industries, and that their annual payroll totals about £35,000,000. When this amount is added to the payroll of about £15,000,000 for the dealer and distribution organisations, and the annual payroll of £20,000,000 in G.M.H. itself, about £70,000,000 is paid altogether in salaries and wages to people connected directly or indirectly with the G.M.H. enterprise.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

THE Planning Commission are, it is reported in the press, preparing a progress report on the Second Plan. This report is likely to be debated in Parliament in the coming monsoon session. This is welcome news, because, half-way through the Second Plan, there seemed to be more urgent preoccupation with the shape of the Third Plan than with the tasks of the Second. A cartoon I saw recently pointed the moral with telling effect by showing how the whole family was fussing around the new baby while the earlier arrival was left pathetically to its own resources. It is true that we should have the blue print of the Third Plan well in advance of 1961 and that there should be public discussion before it is finally formulated. But there was an element of escapism in the eagerness with which people seized on tentative calculations regarding the scope and possibilities of the next Plan, the resources available therefor and its organisational—especially in agriculture—problems. And this mood was also encouraged by the understandable reaction following the tense months of crisis in which foreign exchange difficulties threatened to overwhelm us. Now that the situation is under some control —with not much help from those who then gloomily discussed the hopelessness of the situation—the Second Plan apparently has no further interest from the sensational point of view. But to those who are actually on the job of executing the Plan, there can be no such easy holiday from duty.

*

Happily for them and for the country, they have cheerful news to give. As has been evident for some time now, the Second Plan has been making steady progress in the last year or so, after the satisfactory solution of the foreign exchange crisis. There are, to be sure, relatively barren patches in the economy, and practical endeavour has had to meet with irritating but unavoidable frustration due to absence of raw materials and essential imports. But, on the whole, the outlook has become distinctly brighter. According to reports, the assessment now in preparation gives room for a hopefulness in sharp contrast to the mood in which, about a year and half ago, the Plan was "reappraised". It is arguable—and we did argue at that time—that a more strenuously hopeful general attitude backed by public determination to perform the allotted tasks under the Plan, especially in agriculture, could not have saved the Plan in its entirety. Readers may recall how, in these columns, we had argued that the original expectations on the resources side were in certain respects more than fulfilled. And what is more important, those that were fulfilled were the more difficult and onerous ones, like taxation and foreign aid. If other items of resources did not give as good an account of themselves, and if the resources that were obtained were not fully available for Plan purposes, that does not necessarily argue the non-viability of the Plan itself as it was originally conceived.

*

The point about the Cassandra of the myth was that she was never believed her prophesies were true. That was her curse and therein lay the seed of her tragedy and that of others. But the man who argues the hopelessness of practical endeavour is only too easily believed, since he absolves you of any dereliction, for, no man can be asked to do the impossible. And what is more important, this circumstance makes him a truer prophet than he deserved to be. He could thus turn round and say that he always told you so. In retrospect, it will be difficult to say how much of the failure was due to the inherent impossibility of the task and how much was due to the sapping of the will. Conversely, of course, it is possible that, in retrospect, you are staggered by what you have achieved and this has been due to an effort of will generated by an over optimistic view of possibilities. If what was involved was only a choice in strategies in morale building, the choice is obvious.

*

In a sense, all these arguments are profitless in the context of the Second Plan, since a good bit of it, rightly or wrongly, has already been jettisoned. (They have their larger relevance, of course). And, of the pruned Plan, the Planning Commission have been able to report substantial progress. According to reports, the "physical targets" included in the "core" are likely to be "achieved" to the extent of 90 to 95 per cent, and the expenditure target will "very nearly reach" the stipulated figure of Rs 4,500 crores. (I disown responsibility for the misuse of "target" in this sentence. Perhaps the purist had better accept defeat). There is, in this formulation of the achievement, a certain confession of failure, in that a hundred per cent expenditure has yielded only 95 per cent result. But, in justice to the Planners, it must be conceded that the approximation between the two sets of targets is impressively better than what most people had dared hope for. This is particularly so, since experience has shown that there is always a tendency to underestimate the cost of projects when plans are drawn up, for the very understandable psychological resistance to inflate the total outlay figures of the plan. But the discrepancy between outlay and achievement is also a warning against judging the success of the plan in compartments. In certain appraisals of the First Plan and of various individual projects, I have seen a rather curious yardstick applied. A claim for a pat on the back is staked on the ground that the amount planned to be spent has been spent, though another part of the assessment would show that much less than what was hoped for has been obtained from the outlay. It is necessary, therefore, both to make costing more precise and to insist on full value for money spent. When the Planning Commission's report is published, we should be able to test its claims from this angle more accurately.

*

The report also will be able to throw light on the performance of the various States. There is evidence that progress is uneven and certain States have outstripped the tasks allotted to them and certain others are well behind. Again, there is also evidence that progress in certain directions has been spectacular and in certain others not so impressive. Madras and Bombay and a few other States would appear to have rendered a good account of themselves. On the other hand, some of the States and almost all of the centrally administered areas do not know what to do with their allotment. This situation throws a rather interesting light on the problems of planning. In the first place, this highlights the difficulties of allocation of funds and priorities to various States under a federal constitution. The success achieved by Madras may well be due to the fact that, compared to its administrative and other resources, its tasks under the Plan are comparatively light. Except for Neiveli, it has probably no major responsibility in basic industrialisation. Of course, there is local complaint that there is a larger scope for such responsibility, but the State Government itself is helpless since, for various reasons, it is not allowed to take it on. There is no doubt that political reasons alleged for the "neglect" are baseless. It is also true that, compared to Eastern India, the industrial potential of South India is meagre, at least on the basis of potential conventional power and fuel resources. Madras is also, ironically, suffering for having been ahead of the rest of India in certain things, like hydro-electric and irrigation projects. Even so, the question arises whether Madras projects originally included in the Plan, but pruned, could now be executed. The problem would be simple, if they did not entail financial assistance from the Centre. But, if they did, a delicate question would arise whether a successful executor of the allotted task should be made to remain idle, starved of funds merely be-

cause the tasks to be done by him are not of the highest priority. In a country with so much to be done, there is hardly anything that is not "top priority" and local opinion may, not ununderstandably, feel a sense of neglect. It is difficult to avoid, with the best will in the world, situations like this, but there will be less cause for grievance, if allotted funds elsewhere are not allowed to lapse and what is perhaps worse, spent recklessly in order to claim that they, too, have fulfilled the requirements of the Plan.

We must await the report of the Planning Commission for more detailed comment on the precise significance of its optimistic view of the prospects of the Second Plan. But one or two facts stand out clearly enough. First, the appraisal underscores once again how central to our economy is agriculture even now. Whichever way you look at it, from the point of view of national income, purchasing power, or providing a cushion for inflationary pressure, you cannot miss its crucial importance. In fact, the Planning Commission feel cheered because agricultural production has shown a record increase to 73.3 million tons this year. At the time of reappraisal, it had not dared hope for more than 75 million tons at the end of the Plan period. Some may feel that the Planning Commission are a little premature in their optimism, since agricultural production is notoriously unpredictable in our country. But it should be less and less so, since planning has taken a hand in arranging things, and in that sense the Planning Commission may have firmer data for their hopefulness. But there can hardly be any slackening of efforts to get the utmost out of all our investment in agriculture, if the present hopes are to be justified.

*

Industrial production, despite appearances,—largely due to the comparatively poor performance of the textile industry, which is the greatest single contributor to industrial production—has looked up. I have often stated in these columns that statistics are somewhat misleading in this respect and real industrial progress can be judged only by excluding such traditional items which have reached their "plateaus". But, for purposes of "qualitative analysis" —if I may use such an expression —it is necessary to have more analytical reckoning of statistics. An overall index of industrial production fails to take note of the diversification of the economy, the spectacular progress along innumerable new lines and the real progress made in basic and ancillary industrialisation. And these latter are the children of the Plan in a sense in which the older industries are not. A measure of what we owe to the Plan can be had only by analysing the data regarding these. When that is done, the qualitative change in the pattern of industrial production brought about by increased output of steel, coal, mineral and chemical products and innumerable light engineering products will bear testimony to the real progress made under the Second Plan.

*

If, almost since October 1956, the diversification and expansion in industrial production have been obscured by the decline in output of the cotton mill industry, because of the weightage given to cloth in the index of industrial production, we may now, I fancy, be in sight of witnessing, during the second half of this year, an impressive improvement being recorded in the index of industrial production. This is because, at long last, after the many months of famine since October 1956, demand for cotton manufactures is picking up. A recent report has it that stocks have further declined with mills. This is what I and this journal have been expecting for some time now. For, the travails of the cotton mill industry, quite erroneously, were put down to the higher excise duties that were levied by Mr T. T. Krishnamachari in the autumn of 1956. While, in the immediate Puja weeks that followed, there was no doubt the fostering of a certain amount of consumer resistance, the fact remains, and which has tended generally and sustainedly to be overlooked, that an improvement in cotton consumption can be made possible only by an improvement in mass purchasing power. Both in 1957 and in 1958, poor food crops reduced, and did not increase, money in the hands of the masses. So it was that you had this long period during which trials and tribulations beset the cotton mill industry. Now, in 1959, with a bumper crop harvested, the demand for and offtake of cotton manufactures have perceptibly picked up. It is merely a matter of time, I suppose, before the mills are compelled to increase their production to meet the higher emerging demand. In any case, the cloth supply position may conceivably become tight during the festive season this autumn.

*

So, cheer can be found from this near certainty of additional production by the cotton mill industry. Essentially, however, the problem will remain of how best we can judge and measure India's industrial progress. I would personally suggest that, in addition to the index of industrial production, a new set of statistics be collected, which will be confined to the new industries. The Index should be so framed as to be able to consolidate each new line of endeavour that we undertake. It may be necessary to place the three traditional industries—cotton mill, jute goods and tea—on a separate footing, since, on the short-term view at any rate, the scope for increased production is small and restricted. Similarly, I wonder whether anything can be done to emphasise the growth of sectors other than agriculture as part of the national income. For, in the present Indian economy, all it requires is a somewhat poorer food crop to produce a set of figures for national income which will show that, in the relevant year, India appears to have fared badly. I agree that, for some many years to come, agriculture will be the most fundamental aspect of economic statistics. But this predominance of agriculture should not be allowed to overshadow achievements in other spheres —whether, as related to industrial production, by the agricultural commercial crops of jute, tea and raw cotton; whether as related to the national income; and whether, indeed, as related to the index of wholesale prices. A serious attempt should be made to assess the Indian economy in its two compartments—agricultural and non-agricultural.

EAVESDROPPER.

4 PER CENT
STATE GOVERNMENTS
LOANS 1971

Name of State	Amount	Issue price per cent
(1) Andhra Pradesh	... Rs. 600 lakhs	Rs. 99.50
(2) Assam	... Rs. 250 lakhs	Rs. 99.00
(3) Bihar	... Rs. 300 lakhs	Rs. 99.50
(4) Bombay	... Rs. 600 lakhs	Rs. 100.00
(5) Madhya Pradesh	... Rs. 300 lakhs	Rs. 99.00
(6) Madras	... Rs. 800 lakhs	Rs. 99.50
(7) Mysore	... Rs. 500 lakhs	Rs. 99.50
(8) Orissa	... Rs. 350 lakhs	Rs. 99.00
(9) Punjab	... Rs. 200 lakhs	Rs. 99.00
(10) Rajasthan	... Rs. 350 lakhs	Rs. 99.50
(11) Uttar Pradesh	... Rs. 800 lakhs	Rs. 99.50
(12) West Bengal	... Rs. 700 lakhs	Rs. 99.50

All the State Governments reserve the right to retain subscriptions upto ten per cent in excess of the notified amount.

All the above loans will be repaid at par on 19th August, 1971.

THE LOANS WILL OPEN FOR SUBSCRIPTION ON 19TH AUGUST, 1959 AND CLOSE ON 25TH AUGUST, 1959 OR EARLIER WITHOUT NOTICE AS SOON AS SUBSCRIPTIONS APPROXIMATE TO THE AMOUNT OF EACH ISSUE

All the loans will bear interest from 19th August, 1959.

Subscriptions may be in the form of CASH/CHEQUE in respect of all the loans.

3 per cent Madras Government Loan 1959 will be accepted AT PAR for conversion into the new loan of that Government; interest at the rate of 4 per cent from 21st June, 1959 upto and including 18th August, 1959 will be paid on the securities of the 3 per cent Madras Government Loan 1959 tendered for conversion.

APPLICATIONS FOR ALL THE LOANS WILL BE RECEIVED AT THE OFFICES OF THE RESERVE BANK OF INDIA AT BANGALORE, BOMBAY, CALCUTTA, MADRAS AND NEW DELHI.

APPLICATIONS will also be received at PLACES WITHIN THE RESPECTIVE STATES as follows:—

(i) At the office of the Reserve Bank of India at Nagpur in the case of the Bombay loan.
(ii) At the branches of the State Bank of India and at Treasuries and Sub-treasuries in the case of Andhra Pradesh, Bihar, Bombay, Madhya Pradesh, Madras, Orissa, Punjab, Rajasthan and Uttar Pradesh loans.
(iii) At the branches of the State Bank of India in the case of Assam and West Bengal loans.
(iv) At the branches and treasury pay offices of the State Bank of Hyderabad in the case of Andhra Pradesh and Bombay loans.
(v) At the branches of the Bank of Mysore Ltd. (except at Bangalore), the State Bank of India, the State Bank of Hyderabad and at Government Taluk treasuries in the case of Mysore loan.

Copies of Notifications and Application Forms may be obtained at any Receiving Office.

Applicants tendering their applications at the offices of the Reserve Bank of India, Bangalore, Bombay, Calcutta, New Delhi and Madras will, in the event of over-subscription, be given the option of transferring their cash refunds to any of the other State Government loans which may not be fully subscribed provided they complete the SPECIAL OPTION FORM copies of which are obtainable on application from any of the abovementioned offices of the Reserve Bank of India.

GATEWAY GOSSIP

IT may be poor consolation to private enterprise that a portion of insurance business still remains within its purview. For, the position of insurers has been rendered unenviable as Government have come into possession of a few units engaged in general insurance. In view of the growing strength of the public sector, even this limited power has gained overwhelming importance. But nationalisation of life insurance is now a settled issue and hence efforts can only profitably be diverted toward developing general insurance. It is gratifying to find, therefore, that insurers are taking energetic measures to enlarge this sphere of activity.

That the scope in this regard is quite large, there is no doubt. It will be seen that, in the highly industrialised countries of the West, life insurance is but one department. There are innumerable lines in which other forms of insurance have made tremendous headway. Insurance needs increase with an improvement in the standard of living of the people. Economic improvement of a country makes new calls on insurance and it is inconceivable that industrialisation can progress far without the aid of insurance. This aspect of the trade should goad insurers to new efforts. India is still on the threshold of industrial development, and, thanks to the successive Five Year Plans, the tempo of progress has been greatly accelerated in the past seven, eight years. The general insurance business in our country, however, is largely limited to two, three sections, reflecting the still under developed state of our economy. Things have started moving now and the movement is gaining momentum fast. It is quite on the cards that general insurance will before long find itself in the enviable position of having to meet a sizably increased demand for its services.

Speaking at the recent Annual General Meeting of the Indian Insurance Companies' Association, Mr M. S. Dastur, the Chairman, has rightly drawn the attention of insurers in the country to the "considerable scope in the years to come for Insurance Companies to develop new lines of insurance business to meet many and varied requirements of industries." In his opinion, conditions conducive to an expansion of insurance already exist in India in view of the considerable progress that has been achieved in industrialisation due to the implementation of developmental projects in the First and Second Five Year Plans.

The question that arises is: Why, has there not been a commensurate improvement in insurance, if there is an increase in the demand for the services offered by insurance? The answer, says Mr Dastur, is to be found in the conditions under which insurers have to carry on their business in this country. The main handicap seems to stem from the restrictive policies adopted by banks and other financing institutions. It is pointed out that financial institutions do not accord full recognition to the policies issued by Indian insurers. While the industrial Finance Corporation requires some insurers to obtain letters from their Treaty and Reinsurance offices, the other Industrial Investment Corporations stipulate subscription to their share capital as a condition to the acceptance of their policies. Some banks have also laid down special and arbitrary conditions. It is not surprising, therefore, that most insurers are finding it difficult to write more business. Apart from these inhibitory influences, the General insurance Trade is beset with other difficulties issuing out of the control over its affairs exercised by Government as well as certain shortcomings of an internal nature.

There is the general complaint that the formula for management expenses has long ceased to bear any relation to prevailing conditions with the result that, though the premium income has been showing a rising trend, the financial position of insurers has deteriorated due to a far higher rise in overall expenses. The Code of Conduct has become a highly controversial issue and some insurers claim that a major part of it has remained inoperative.

These by no means exhaust the list of complaints against Authority. It is pointed out that the taxation policy is rendering it impossible for the industry to satisfy an essential pre-requisite for its efficient working. Reserves, a sure indicator of the soundness of a company, are being depleted by onerous taxation on what are called "surpluses". And the result has been the weakening of the industry with its consequent inability to render full service to the commerce and industry of the nation. Mr Dastur has also emphasised the need for an objective approach to the question of Fire rates. A reduction in rates will be detrimental to the interests of the insurers as the expenses involved in rendering the services are very high. Other factors, like the growing congestion in urban areas and the lack of adequate fire fighting services in remote places of the country, merit consideration. Like any other business, general insurance also seems to find itself confronted with some unworkable provisions in the new Companies Act. A considerable part of the difficulties that the Insurance trade is labouring under seems to be of its own making.

Mr Dastur does not mince words when he refers to the shortcomings that have sprung from the failure of the Indian insurers in setting their house in order. He calls it a disease and traces its root cause to the "mistrust amongst insurers and a wholesale and indiscriminate scramble for business with the fundamental principles of underwriting shelved in favour of quantity rather than quality." It is no wonder, therefore, that Authority feels called upon to ensure that the interests of the insured are adequately safeguarded. Mr Dastur himself admits that the suggestion to reduce the rates is traceable to the practice of unhealthy competition adopted by many insurers.

It would appear that the Code of Conduct may yet turn out to be the panacea of the ills of general insurance, even though it has so far failed to effect much improvement. A sub-committee of the Executive Committee of the General Insurance Council is presently engaged in taking stock of the position in the general insurance industry with a view to recommending on the future course. Already, the Code has undergone considerable change since it was formulated in 1956. Such constant changes and amendments have entailed considerable handicaps to the insurers as they have to effect suitable alterations in their terms of business and record-keeping in order to conform to the changed Code. The result has, however, been disappointing, as the malpractices which the Code is expected to eradicate have continued unabated. Evidently, despite its numerous rules and regulations, the Code has not been able to achieve a general conformity to the spirit underlying it.

Mr A. D. Shroff, Chairman of New India Assurance Company, Limited, also believes that the Code of Conduct may still do quite a lot of good to the industry. However, as the chairman of the Insurance Companies' Association has pointed out, instead of constantly changing rules and regulations with a view to eliminating defects or overcoming difficulties as and when they arise, it would be better if Government give the Code a fair run before attempting to amend or change the provisions. Speaking at the Annual General Meeting of the New India Assurance Company Limited, Mr A. D. Shroff has also said that, though results have not yet been adequate, a more effective organisation of the Administrative machinery and observance of the Code by the Insurers, both in letter and spirit, can improve matters a great deal.

To say that insurers have to demonstrate to the public that they can set their house in order sooner rather than later is not to absolve Government of their responsibility in the matter. There is no gainsaying the fact that, in the set up in our country, Government have

Problems of General Insurance

BOMBAY REVIEW

come to wield an overwhelming influence on national life. Private enterprise can thrive only if it is assured of sympathetic consideration from Government. As I have pointed out at the outset, the general insurance trade has also been encroached upon by Government, though perhaps not by design. It is true that the interests of the insurers should be adequately protected and it is to be noted that insurers themselves are not averse to an overall Government control. But, in discharging their responsibilities to the public, Government should take care that the protective steps do not stunt the growth of general insurance.

There are some things about the conduct of general insurance business that I have heard which are, to put it mildly, disquieting. On the one hand, not a few people have told me that, in principle, the passing on of all Government business to general insurance under the aegis of Government is all wrong. I am not sure that this is necessarily a valid objection. For, we have in India connections subsisting between many of the enterprises in the private sector and particular general insurance companies. Wherever such links there are, inevitably, the bulk, if not all, of such business, very naturally, is passed on to the particular insurance company. If there is nothing wrong in this, there can be nothing wrong in the Government patronising the government-owned general insurance companies.

On the other hand, what I hear of the kind of canvassing that is allegedly being done by the Government controlled general insurance companies is, if it is true, shocking. Apart from any other consideration—the unfairness of competition which though legal, is not quite proper—it seems to me that it should be infra dig for State controlled general insurance to canvass by calling upon the name of Government.

I wish, thus, that there were no room for this decry on the part of general insurance companies in the private sector against unfair competition on the part of the State controlled general insurance companies. But the malaise of general insurance in India goes deeper than all this. It seems to me that we have too many general insurance companies, and too many of them too small to be able to compete on a sound footing with the larger companies. There can be no doubt that some form of consolidation is both necessary and desirable and, perhaps, the best thing would be if Government could, as they did in the case of the coal industry, set up a committee to examine the possibilities of amalgamation and consolidation of general insurance companies.

GATEWAY NOTES

THAT 1958 has not been a good year for banking institutions in the country is now generally known. The main inhibitory influence has been the rising trend of operating costs, the rate of rise of which during the past year has been faster than the rate of rise in earnings, with the result that profits have declined below the previous year's level. The reason for the steep rise in expenses is not far to seek.. What with the higher wage demands and the need to provide increasing amenities to staff, banking institutions have been left with no alternative but to look helplessly at the continuous addition to their wage bills.

Meantime, conditions also have not been conducive to increasingly profitable working. A plethora of funds has resulted in a slack demand for bank credit. The Statistical Tables relating to Commercial Banks in India 1958 issued toward the end of last week by the Reserve Bank of India gives a detailed account of the trend in banking during the year. Indicative of the increased money supply with the public is yet another impressive increase in deposits of Rs 226 crores as against a rise of Rs 280 crores in the previous year. The rise in the case of Indian scheduled banks has, however, been higher than the total at Rs 234 crores. The lower grand total is due to the fact that there has been a decline of Rs 8 crores in the case of foreign scheduled banks. A significant fact is that half of the rise in total deposits has been accounted for by the State Bank whose funds have been swollen by accounts covered by Public Law 480 imports. The Reserve Bank study, however, notes that, even after adjustment for Public Law 480 deposits, the growth of deposits has been considerable.

The question of profitable deployment of the huge deposits seems to have not been an easy one for the banking institutions. Total advances and bills discounted have recorded almost an insignificant rise of Rs 7 crores in 1958 as compared with 74 crores in 1957 and Rs 155 crores in 1956. The study says that the slowing down of bank credit expansion may be attributed to the slackening in the rate of investment in the private sector occasioned by drastic cuts in private imports. The result is to be seen in the sharp increase in banks' investments in Government securities. Whereas such investments were of the order of only Rs 70 crores in 1957, they were placed as high as Rs 201 crores last year.

The information is vouchsafed that there was, at the end of 1958 in our country, one banking office for every 11,398 of the population taking scheduled and non-scheduled banks together. The number of offices in India of banks has risen by 275 during last year as against 155 in the previous year. The rise was to the tune of only 65 in 1956. Of the rise in 1953, the major part (90 offices) is accounted for by the State Bank. The figures for the three years show clearly that the programme of expansion of banking facilities is going apace with the State Bank showing the lead.

It is quite natural that the slackening rate of bank credit expansion should be reflected in a similar characteristic in earnings. Total current operating earnings of Indian scheduled banks have increased only by 10 crores to be placed at Rs 72 crores whereas, in 1957, the increase was to the tune of Rs 12.7 crores. The rate of rise in current operating expenses, thanks to the spiralling wage bill, has outstripped earnings with the result that net profits declined by Rs 2 crores to Rs 10.5 crores. Indian scheduled banks' profits in 1957 at Rs 12.5 crores were Rs 2.4 crores higher than those of the previous year.

Apart from import cuts, scheduled banks' scope for profitable employment of funds has been narrowed down by the Reserve Bank's directives from time to time as regards advances against food grains and large blocks of equities. There is no early prospect for liberalisation of imports and banks have found it necessary to take to new methods to attract borrowings.

*

The Legal Profession

The legal profession in India has all along been noted for its many sided contribution to national life. Perhaps, the novel method of fighting the foreign ruler perfected by Mahatma Gandhi, himself a lawyer, has been responsible for attracting a large number of members of this profession to the ranks of the satyagraha-oriented Congress. The profession has been in the forefront of the national struggle, supplying prominent leaders of great integrity and character. If a list is drawn up of the prominent political leaders of our country during the past three, four decades, the number of lawyers in it will be overwhelming. But it is not only for its liberal contribution of prominent and unselfish patriots that the profession has been held in high esteem. Its high moral standard has automatically placed it on a high pedestal. There is no manner of doubt that the nation will continue to rely heavily on it for guidance in the future also.

But it would appear that even this profession, like many other facts of our national life, has suffered a decline in recent years. Mr M. C. Setalvad, Attorney General of India, in a recent speech in Bombay has expressed the doubt if the members of the legal profession have also been affected by what is called the crisis of character. He admits that overcrowding is one of the causes for the decline but this is a defect that can be remedied by the institution of suitable measures. Any real improvement is to issue, however, from the concerted efforts of members of the profession.

In the meantime, the unification of the bar in the country as a whole may pave the way for a better state of affairs. But the powers that be seem to have taken little notice so far of the plea of the All India Bar Committee for a unified roll of all advocates in the country and for the setting up of an All India Bar Council. Such a council will be able to bring about an improvement in the standards of the profession as concerted action will then become possible. Efforts are being made to have an organised body of members of the legal profession of the country. But, as Mr Setalvad has pointed out, the setting up of an all India organisation alone will be of little avail so long as the determination to bring about a change for the better is lacking.

*

Role of Forward Markets Commission

Forward markets have come to be recognised as a necessary adjunct to modern modes of trading. The hedging facilities provided by such markets help minimise risks inherent in dealing with commodities the price of which is dependent on factors of diverse origin and which are largely unpredictable. But these markets have not been an unmixed blessing. The speculative propensity of man has found that forward trading offers almost unlimited scope. The experience in this regard in our country has been quite unhappy and great harm has been done in the past both to our exports and the primary producer of commodities.

There is now the realisation that, if forward trading is not to deteriorate into unbridled speculation, the powers that be should be vigilant and be armed with adequate powers to curb the gambling propensities among marketmen. The Forward Markets Commission are the outcome and today forward markets function under the constant supervision of the Commission. It is no exaggeration to say that, under the able stewardship of the Commission, hedge trading has lost much of its horrors.

Though the primary responsibility for regulating forward markets rests with the Board of Directors of the recognised associations, the Commission have so arranged matters that speculators have to think more than twice before engineering any marked fluctuations in price levels. One of the notable safeguards that the Forward Markets Commission Act provides is the provision for nomination of Directors in the recognised associations. The nominated directors, being outstanding persons in the field of economics, banking, administration, etc, have no special interest except to ensure the efficient functioning of the markets without jeopardising the interests of the public at large. The Commission will themselves enter the picture actively only when, in their considered opinion, the Board of Directors of any association has not been able to safeguard the interests of the public.

A new feature in the Commission's constant endeavour toward fostering the growth of healthy forward markets is the convening of periodical conferences of the nominated directors of the recognised forward markets in the country. It may be recalled that the Commission some time ago organised a conference of presidents of recognised associations. The conference of nominated directors was inaugurated in Bombay early this week by Mr Nityananda Kanango, Union Minister of Commerce, who emphasised that, while Government were anxious to provide every scope to legitimate trading activities, they would not hesitate to take stringent measures if speculation became rampant. Unbridled speculation in commodity markets is too serious a matter to be left unheeded.

*

Aluminium Plant for Bombay

The prospects of an aluminium plant for the Bombay State have considerably brightened as detailed investigations of the Udgiri area in Kolhapur District by the State Geological Department have disclosed extensive deposits of bauxite. These investigations have shown that the quantity of ore available may be in the neighbourhood of 6 million tons, nearly three times the preliminary estimate. Another important factor that makes feasible the putting up of the plant in the near future, apart from the availability of an adequate quantity of bauxite, is that the plant will be assured of plentiful and cheap electric power from the Koyna power project. It may be noted that electric power in an aluminium plant is as a raw material. According to the State Minister for Planning, Development, and Industry, Mr S. K. Wankhede, the plant will be set up during the Third Plan period and will cost between Rs 20 crores and Rs 25 crores. When in full production, the output of the plant will be 25,000 tons per annum.

BOMBAY REVIEW

Banking in 1958

GATEWAY MARKETS

PRICES on the Bombay Oilseeds Exchange have shown a mixed trend during the week under report. Sentiment in the Groundnut section remains depressed following lower upcountry advices for groundnut oil, while conditions in other sections have remained fairly steady.

Trading in the Groundnut section is generally dull with prices showing a slightly easier tendency, thanks to reports of favourable weather conditions and expectations of heavy spot supplies. Groundnut Bold is quoted at Rs 40.25 and Groundnut Oil BSS at Rs 20.87.

Export interest centres almost entirely on groundnut oilcakes. Fairly heavy business is reported to have been done, mainly in distant positions. Estimates of business diverged widely from 5,000 to 15,000 tons. The UK is mentioned as the chief customer and has paid between £33-15 and £34 per ton for November/January delivery. Burma is reported to have taken a few hundred tons of groundnut oil, but only from Madras and Saurashtra. Prices there being much lower than in Bombay, UK advices for groundnut oil are easier, Nigerian oil being offered there at around £106 per ton, which is very much below the Indian parity.

The Castorseed section reflected an uncertain behaviour with the dealers reluctant to take an aggressive interest. Fears that the burden of spot supplies might weigh heavily on the market at the time of the maturity of the September contract prevented the bulls from pushing up prices. In the ready section, Castor is quoted at Rs 30.75 and Castor Oil, commercial quality, at Rs 15.75.

Export business in castor oil consisted only of a few hundred tons sold to the UK with commercial quality fetching about £108 per ton. The USA continued to keep off the market, expecting firm offers from India at below 13.50 cents per pound. The Brazilian rate for first pressure is mentioned around 14.25 cents per pound. Most estimates place Brazil's new crop around the previous year's figure of 1.90 lakh short tons. Some put it around 1.70 lakh tons.

Trading in Linseed was featured by a steady support for the new crop contract which advanced from Rs 31.50 to Rs 32.62 on reports of a smaller US crop and a decline in the Canadian acreage. Ready Linseed is quoted at Rs 32.25 and Linseed Oil at Rs 16.25.

In the London market, prices are ruling firm. Sentiment is influenced by the further improvement in overseas prices even though there seems little prospect of any export business in linseed oil, the present disparity being much too wide.

The Government of India's decision to release a fresh export quota of 10,000 tons of linseed oilcake has been welcomed by dealers in the Bombay market. The announcement will enable shippers to offer an additional quantity to foreign buyers as the previous quota of 10,000 tons has almost been exhausted.

Shipments from Bombay alone, during the first 25 days of the current month, have been estimated at 2,410 tons. Exports, in the first half of the current year, were 7,563 tons. Thus, the overall shipments, so far, have amounted to 9,975 tons. Besides, some consignments against previous commitments will be shipped in the near future.

On the whole, the outlook for linseed oil is considered to be bright, although the present prices will leave only a nominal profit. This is mainly due to the fact that, following the announcement of the fresh quota, rates of linseed oilcake have already advanced from Rs 358 a few days ago to Rs 366 per ton. Simultaneously, overseas prices have also risen recently from £33½ to £34½ per ton in line with the improvement in linseed and linseed oil. Offers for about 1,000 tons at the current levels have already been made and the shippers are eagerly awaiting the response from the UK and the Continent.

The groundnut section provides a rather intriguing spectacle, with the tendency being, as already reported, somewhat depressed. This weakness in prices has usually been attributed to favourable weather being experienced in the growing areas. But the fact is that stocks are rather lower in the light of considerable purchases being made over the past two weeks by vegetable oil manufacturers in the country. Indeed, spot groundnut is quoting at a considerable premium as compared for August and longer deliveries. Moreover, it is not as if the quality of recent arrivals is good. Indeed, there is an inadequacy of good quality groundnut and, hence, the tendency should have been for prices to rise. That they have not done so, but that the spot position commands substantial premium, is the paradoxical state of affairs to be found in groundnuts in the Gateway markets.

But the maturing contract will be off the board by the end of the week, and there is no knowing at the moment which way the trends will be after the current contract matures. But, the over-weening factor at the moment, there can be no doubt, is the influence of weather conditions on the size of the crop.

*

Yarn

Conditions in the Bombay Yarn market remained fairly active, thanks to hopes of a revision in the export promotion scheme. Exporters appeared to be not satisfied with the present scheme, as it discriminates between the exporters and the manufacturers in the matter of incentives. It is stated that incentives given to the exporters are very negligible and, with the result, no large-scale shipment has been possible.

Again, the new export performance scheme for Rayon textiles appears to have presented considerable difficulties. Although the Government have issued details of the standard specifications and the schedule of export prices, business has failed to revive on an appreciable scale. So far as the schedule of export prices is concerned, the rates of Nylon fabrics are considered generally satisfactory; but those for viscose, acetate and rayon textiles have proved to be, by and large, unworkable. It is also not known whether the exporters will get a smaller entitlement for yarn if they charge less than the scheduled rates in order to popularise their products abroad.

There was a handsome improvement in the prices of Art Silk Yarns of various deniers. In sympathy, Staple Fibre yarns also hardened, being helped by enlarged offtake from the consuming centres.

Cotton yarns also ruled firm on hopes of sizeable export business. This has largely stemmed from the fact that the State Trading Corporation has concluded a Rs 80 lakh deal with Indonesia for the sale of 5 million pounds of yarn for shipment during the August/Octoben quarter. This will provide a large fillip to several spinning units in the country. Burma is said to have already purchased about 10 million pounds of cotton yarn, shipments of which are to be completed before the end of November.

According to the latest figures, imports of art silk yarn were higher at 39.42 lakh pounds in June as against 38.02 lakh pounds in May. Italy and the UK were the largest suppliers of yarn in June with 10.55 lakh pounds and 9.19 lakh pounds respectively. Imports of synthetic yarn, however, came down from 2.46 lakh pounds in May to 1.37 lakh pounds in June.

*

Gold & Silver

On the Bombay Bullion Exchange, Gold continued to yield further ground although profit-covering finally minimised losses at the close. Selling was influenced mainly by the reports of smuggled arrivals in upcountry centres. Arrivals and offtake in gold were 3,000 and 2,000 tolas respectively. Ready rates moved between Rs 116.44 and Rs 116.94, to finish at Rs 116.78. Sovereign was quoted around Rs 77.50.

In the Silver section, prices moved narrowly in quiet dealings. Arrivals and offtake were estimated at 12 and 8 bars respectively. Ready rates moved between Rs 195.94 and Rs 196.31, to finish at Rs 196.25.

*

Non-Ferrous Metals

Prices on the Non-Ferrous Metal market displayed a firmer tendency. Brass sheet prices advanced further due to less supplies locally; but higher levels attracted a good amount of supplies from Calcutta. Copper Scrap was quoted at Rs 221 per cwt.

Zinc touched a high level of Rs 103 per cwt, to finish at Rs 102, thanks to brisk buying. As the supply position of imported lead is decreasing, the rate for this metal remained firm at Rs 80.50. The Tin market ruled steady with the rate quoting higher at Rs 143 per quarter.

On the London Metal Exchange, the price of Copper has firmed up to £228 1/4 per ton from £222 quoted in the previous week. This is attributed to uneasiness over the labour situation at the Potrevillos plant in Chile of Anaconda group. Good demand from the Continent and better United States futures advices enabled Zinc to firm up to £81 7/8 from £79 3/4. Lead, however, receded to £70 5/8 from a high of £72 3/4 in the absence of fresh buying. Tin remained steady with the rate hovering narrowly around £793 per ton.

WORLD OF COTTON

Pakistan's Duty Cut: Export Outlook

THE Pakistan Government have announced reductions in the export duty on its Deshi varieties from Rs 50 to Rs 40 per bale and on staple varieties from Rs 115 to Rs 75 per bale. This announcement hardly produced any effect on the corresponding Indian growths in Bombay, excepting an immediate decline of five to ten points on Saturday last. Later on, however, prices showed a recovery as market circles felt that Pakistan's duty reductions might not adversely affect exports of Indian Bengal Deshi cotton of the current crop.

Moreover, of the present Indian quota of 85,000 bales, exports of Bengal Deshi so far have amounted to 83,214 bales and, before long, the ceiling will be reached. But duty concessions may affect Indian exports of staple varieties upto ¾", although the balance quota is expected to be completed soon.

The export duty on permissible varieties of Indian cotton is now Rs 25 per bale and it is too early to assess the impact of Pakistan's duty reductions on Indian cotton exports next season. The export incentive scheme, announced by Pakistan for promoting exports of yarn, is said to have caused an increase in cotton consumption. As such, its exportable surplus may be lower. Already, Pakistan is said to have exported about 250,000 bales of yarn and is having orders for another 100,000 bales.

India will, however, face some difficulty with regard to exports of cotton stapling ¾" and below. In Pakistan, there is no restriction whatsoever on exports of staple length cotton. If the export quota for the next season is announced in time, this country should not find it difficult to market its surplus cotton. In this connection, it may be added that Pakistan's last cotton crop was a short one of only 15 lakh bales and its consumption is between 11 and 12 lakh bales. This leaves only three to four lakh bales for export. Even with its normal crop of 17 lakh bales, there will be only five to six lakh bales for export as compared with 16.38 lakh bales exported in the 1952-53 season.

In the Import section, the six-week-old deadlock in regard to imports of Egyptian cotton appears to have been satisfactorily solved. There are indications that both India and Egypt will soon enter into a new arrangement under which Egyptian cotton can be bought by Indian mills for payment in rupees. Instead of a fixed discount of 35 per cent, Egypt will determine the discount for its cotton every week on Monday and offer the produce to India in terms of rupees.

The above arrangement will enable Indian mills to put through business in Egyptian cotton crop only after the Government announce a fresh import quota. The present quota of 60,000 bales for long-staple cottons has been almost entirely utilised for buying Sudanese varieties. The discount offered by Egypt for new crop is 30 per cent at present; but this is also subject to alterations on every Monday.

×

FORWARD MARKET:

Price movements on the Bombay cotton futures market continued to be irregular and showed no definite trend, as many operators preferred to wait and watch the situation. Despite somewhat bullish fixation of room-rates, the nearby delivery sagged further under liquidation by weak holders, although bear-covering minimised losses at the close. Jharilla August delivery, after touching a low of Rs 695.50, finished better at Rs 699. March delivery was quoted around Rs 665 per candy.

×

SPOT MARKET:

The Spot section, however, showed improved conditions, thanks to increased mill demand for domestic descriptions. Popular varieties like Laxmi, Jaydhar, 0394 and Vijay attracted good attention and their prices advanced to higher levels. Also, traders were reluctant to sell cotton to mills in anticipation of a further rise in prices.

Meanwhile, controversy has arisen in the market over the proposed move to raise the penalty for non-delivery of Bengal cotton from Rs 25 to Rs 100 per candy next season. While shippers have favoured the move, representatives of ginning and pressing factories in the Punjab, Rajasthan and other Bengal cotton-growing areas have opposed it on the plea that the penalty, in the case of other cottons, is only Rs 50 per candy. Both the groups have referred the matter to the Forward Markets Commission.

Delivery contracts in the new crop cotton are expected to be permitted by the authorities by the end of the month. The unofficial rate for Bengal for December delivery is quoted lower following good weather reports and a general reluctance on the part of traders to put through fresh business till the decision in regard to the penalty clause is known.

Factors largely responsible for the active mill interest are the anticipated delay of about a fortnight in new crop arrivals, growing scarcity of good quality lots and improved conditions in the textile market.

×

NEW YORK COTTON MARKET:

Except for some covering orders in March and May deliveries, activity on the New York cotton futures market remained at a low ebb, reflecting the inclination on the part of traders to await further developments in connection with the crop. Middling Spot was quoted at 34 cents per pound.

×

LIVERPOOL COTTON MARKET:

Conditions on the Liverpool cotton futures market remained generally steady. Some long liquidation, encouraged by the good United States crop reports, was offset by trade short-covering in initial dealings. More forward deliveries were supported by renewed Anglo-American house buying. Sudan futures remained unchanged.

×

CLOTH AND PIECEGOODS:

Thanks to a fair offtake, conditions in the Bombay Piecegoods market were better last week. The inspiring factor was brisk buying on the part of Sudan, while some interest was shown by Singapore and Bangkok. Though Burma was conspicuous by its absence except for a few stray enquiries, the general expectations were that sizable business with this destination would be possible in the near future. Indonesia accounted for a moderate quantity, while Australia was again in the market for medium and coarse varieties. West Africa was reported to have booked towels, towelling cloth and mosquito nettings with East Africa accounting for moderate quantity of sheetings.

Businessmen's Approach to Third Plan

THE business community's approach to the Third Five Year Plan is yet to take a definite shape although the Planning Sub-Committee of the Federation of Indian Chambers of Commerce and Industry has been discussing for some time now several alternatives in this connection. The Sub-Committee's deliberations, I learn, will be rounded off only in a planning seminar in October next in which some Indian and foreign economists of repute are likely to participate. Nevertheless, the ideas now being discussed are of more than academic interest.

The central idea in one basic approach canvassed at the moment is that, in a possible overall Third Plan investment of Rs 10,800 crores, the shares of the public and private sectors on account of industries and mining alone should be of the order of Rs 1,400 crores and Rs 4,000 crores respectively. In the balance of Rs 5,400 crores, the share of the public sector for agriculture and rural development, irrigation and power, transport and communications, social services (including housing) and miscellaneous schemes (including stocks) is assumed to be Rs 4,000 crores and that of the private sector therefor to be Rs 1,400 crores. The expectation or assumption, thus, is that the entire Third Plan investment will be shared in the proportion of 50:50 by the public sector and the private sector instead of the 61:39 in the Second Plan as originally framed.

The next idea is that the public sector's share (Rs 5,400 crores) of the entire Third Plan investment should be financed by methods involving a reduction in the incidence of taxation and an increase in the dividend yields of industrial and commercial public enterprises. It is suggested in this connection that, over the Third Plan period, Rs 900 crores be obtained from taxation, Rs 400 crores by way of surplus from railways, Rs 900 crores from borrowings and small savings, Rs 100 crores by way of other capital receipts, Rs 400 crores by way of profits from other public enterprises, Rs 1,400 crores by way of external earnings and assistance and Rs 1,300 crores through deficit-financing.

Present thinking in some business circles, it would appear, does not recognise that there is any need for new taxation measures or for increases in the rates of existing taxation. On the other hand, it is argued that the rates of existing taxation would have to be reduced with a view to encouraging savings and capital investment. The secular increase in the yield of existing taxation, it is estimated, would be sufficient to make available Rs 900 crores for the Third Plan if non-plan and non-development expenditures are not allowed to eat up an unduly large proportion of tax revenue. The estimated surplus of Rs 400 crores from railways for the Third Plan (as against Rs 250 crores during the Second Plan period) is considered feasible in the light of the expected increase in traffic and the recent increases in rates. As for market borrowings by Government, a comparatively low figure is assumed in order that available funds may not be completely absorbed for the public sector projects.

As for profits from all recent State enterprises, a net yield of Rs 400 crores is regarded as a lower limit. I have my own doubt if even this expectation could materialise. Recent experience of some industrial undertakings in the public sector does not warrant any such optimism. For example, in three successive years (1955-58) of profitable operation, nine public industrial and commercial enterprises (namely, Sindri Fertilisers and Chemicals, Hindustan Cables, Hindustan Antibiotics, Nahan Foundry, Hindustan Insecticides, Indian Telephone Industries, Eastern Shipping Corporation, Air India International and Hindustan Aircraft) together accounting for Rs 64.3 crores by way of paid-up share capital and capital loans have yielded, during the period, an aggregate return to Government of just Rs 4.1 crores by way of dividend and interest. If this experience is any guide, returns from public enterprises other than railways at an average annual rate of Rs 80 crores are not likely to materialise. The other discouraging factors which may be visualised are that the prices of drugs produced by the existing and projected public sector units will be progressively reduced to cheapen the cost of allopathic medicines in the interests of public health, that the pricing policy in respect of steel will have to be such as not to put up the cost of industrial projects in the private sector, and that the pricing policy in respect of fertilisers will have to take into account the compulsions and needs of agricultural development which, according to the businessmen's provisional approach, will be accorded no more than 12 per cent of the entire Third Plan investment.

In regard to external earnings and assistance, estimated at Rs 1,400 crores, it is expected that a substantial proportion thereof will be transferred to the private sector industrial projects against the rupee resources submitted by them in exchange to the public sector. The figure assumed for deficit financing is not thought of merely as a residual one; it is deemed necessary to deal with the problems of unemployment and under-employment during the Third Plan period.

How the private industrial sector can hope to get the resources required for its Third Plan projects is also being studied in business circles. This study is preceded by an estimate of the financial sources of the private sector for the entire Second Plan period in the light of trends in the first three years. According to this estimate, the aggregate investment in private industries will have reached Rs 500 crores by the end of the Second Plan. This figure is made up of Rs 45 crores by way of new issues, Rs 180 crores by way of retained profits and reserves (including depreciation, deferred taxation and capital reserves), Rs 185 crores by way of borrowings from commercial banks, financial corporations, etc., Rs 75 crores by way of trade credits and Rs 15 crores from miscellaneous sources. As against this comparatively modest investment performance of the private industrial sector during the Second Plan, an investment of Rs 4,000 crores in private industries and mining is assumed for the Third Plan. This investment, it is suggested, could be financed by the following sources:—

- New issues—Rs 750 crores.
- Retained profits and reserves—Rs 1,500 crores.
- Commercial Banks and Refinance Corporation—Rs 750 crores.
- Government Finance Corporations—Rs 150 crores.
- Investment Corporations and Unit Trusts—Rs 50 crores.
- Foreign loans and investments—Rs 400 crores.
- Other credits and mortgages—Rs 400 crores.

This structure of financial supplies for the private sector during the Third Plan, it is emphasised, will necessitate the assumption of much greater responsibilities by the existing institutions and also a reorientation of fiscal policies so as to facilitate the traditional methods of financing with retained profits. It is thought that, although there has been some revival of interest and participation in equity issues in the recent past, that method of securing funds is not generally available to smaller and medium-sized projects. The suggestion here is that, in the absence of an organised issue market or bill market, the existing institutions should take up as much underwriting and promotion work as possible. This is deemed possible if commercial banks, with the backing of the Reserve Bank and the Refinance Corporation, broaden their conception of creditworthiness and provide advances to worthwhile projects after examining their technical viability.

The other suggestions are that the Life Insurance Corporation should take a greater interest in the financing of the private sector, that conditions be created to ensure a steady flow of foreign capital into our economy, that the number and scale of work of private investment corporations be increased and that unit or mutual trusts which enable all income groups to invest in equities without high risks be established in this country.

It is not improbable that the All-India Manufacturers' Organisation may welcome the emphasis in this approach on practical ways and means of financing medium and small-scale units. That the Basic Approach itself has been evolved after preliminary discussions with the Planning Commission is not without some significance, but this should not be taken to mean either that the Commission have provided inspiration for some of the proposals in that approach or that the business representatives have tried to meet the Commission half-way in all respects. While the Basic Approach does make a serious attempt to bridge the bigger gulf between Big Business and Small Business, it is by no means clear that it is equally serious about bridging the smaller gulf between the public sector and the private sector.

DELHI REVIEW

Slum Clearance

THE slow pace in the progress of the slum clearance movement is no new fact, having been brought to light nearly a year ago by the team which went into the working of it and revealed glaring under-utilisation of funds placed at its disposal. The Government of India have since then owned to a sense of concern at expediting progress in slum clearance schemes and have been urging the State Governments to take more active steps in behalf of the slum clearance scheme, and for their part have not been lagging in taking measures to facilitate progress.

It is in this spirit that they have announced their decision to increase the Central subsidy to States for slum clearance work from 25 per cent to 37½ per cent of the approved cost. With this, the arrangement for financing slum clearance work stands altered as 37½ per cent of Central subsidy, 25 per cent of State subsidy and 37½ per cent of Central loan to States. The old pattern of financial assistance envisaged Central subsidy at 25 per cent, State subsidy at 25 per cent and Central loan assistance at 50 per cent.

It is not intended by the Government that the revised schedule of assistance should be applicable to all centres and the limited resources of the Government would forbid this. Only six cities including Bombay, Calcutta, Madras, Delhi, Kanpur and Ahmedabad have been made eligible for the enhanced schedule of Central subsidy, the old arrangement being kept in tact so far as the other Centres are concerned.

The Centre have also taken care to stress the other important factors governing the progress in slum clearance scheme. For example acquisition of slum areas and of land needed for rehousing slum dwellers had presented formidable difficulties to the State Government and local authorities. That the State Governments had not availed of the advantage conferred by the Constitution for passing enabling legislation to tackle these difficulties only goes to illustrate the Governmental apathy in the face of the problem of slum clearance.

A high power committee consisting of representatives of all interests concerned is favoured for responsibility in connection with clearance of slums and provision of services. However, the overall supervision of municipal corporations and committees with adequate authority and representation is also indicated as necessary. The services of voluntary organisations and of slum dwellers themselves are also considered essential for more rapid progress.

*

Technical Education

The need for technical personnel, especially engineers, already great, is expected to assume largr proportions during the Third Plan. Realising this, the Government have begun to get ready to tackle it, assessing the requirements of technical personnel so that proper facilities could be ensured to meet the requirements at the end of the Plan. The annual intake of technical personnel for the Third Five Year Plan period has now been roughly estimated at about 15,000 for Degree courses and about 30,000 for diploma courses.

The step, the Government seem to be having in view is to increase the intake capacity of existing engineering colleges and polytechnics. This was disclosed by Professor M. S. Thacker, Secretary, Union Ministry of Scientific Research and Cultural Affairs, in a talk to the State Secretaries of Education at New Delhi. The Government seem to rely on this rather than on starting new institutions, since it is considered impossible to set up a sufficient number of new institutions within the Plan period to turn out the requisite number. What is aimed at is consolidation and expansion of existing institutions in such a manner that they have an intake capacity of 5,000 to 6,000 students for a Degree course of five years duration. The problem connected with the development of facilities for degree and diploma courses is now being studied by a committee on degree and diploma courses set up for that purpose by the Planning Commission's Working Group on technical education.

Introduction of part-time courses and steps to avoid the present wastage also offer scope for raising the output of technical personnel in the country. Wastage arising from failure of candidates reveals certain deplorable practices in the selection of candidates and points to the need for more rigorous insistence on considerations of merit and aptitude. Wastage due to financial factors making it impossible for the students to continue their studies could be remedied only by the institution of liberal scholarships.

A beginning in the introduction of part-time courses in technical education is expected to be made during the Third Plan, the scope for which could be considerably increased if the private sector also could be made to co-operate and participate in the provision of such facilities. The apathy of Indian industrialists in this connection stands in glaring contrast with the enthusiastic interest displayed by their foreign counterparts in developing technical education to meet their own needs.

*

New Industries in Rajastan

A plan on a scale not hitherto attempted and intended to exploit the industrial resources of the State is being drawn up in Rajasthan. In the development of the State so far, the availability of certain vital and roare minerals which the State has in sizable quantities does not seem to have been taken adequately into account. This, however is now sought to be rectified and the aim under the Third Plan is to accelerate the growth of industries based on these mineral deposits. With this view an outlay of Rs 10 crores is being allocated. Against this, outlay for industrial development under the Second Plan was only a meagre Rs 3 crores.

Figuring prominently in the list of new industries that are envisaged for development under the new Plan, are a zinc smelter with Rs 7 crores capital to be installed at Udaipur, and a copper smelter to be located at Khetri. They are the first of their kind, and apart from the main line of production, would, together, produce about 45,000 tons of sulphuric acid every year as a byproduct. Plans for the erection of a caustic soda plant using the Sambar brine and operated by the electrolytic method to produce 6,000 tons of caustic soda are also reported to be under way. A fertilizer plant at Hanumangarh, a flourite plant in Dungarpur and a large chemical industry based on the Sambhar Lake brine, are the other items in the list of prospective industries in the State.

These do not, however, exhaust the industrial potentialities of the State. Such other minerals as uranium, tungsten, and merilium offer new lines of industrial development. But in respect of these the Government are only in the stage of prospecting to assess the extent of deposits. Another promising field is the mica industry. One unit has already gone into production nearly two years ago and had been able to meet the demand from the Bhilai and Rourekela steel plants for mica insulating bricks.

The sugar industry is also included in the list envisaged for futire development. The Government are particularly keen on the growth of the sugar industry in view of possible loss of irrigation potentials that are now being developed for the cultivation of sugarcane. In case the private sector turns out apathetic to the opening of sugar mills in the State, the industry is expected to be taken up for development under the public sector.

*

Small-scale Steel Plants

The Indian Steel delegation which visited China recently has recommended that a few small steel plants should be constructed in India as an experimental measure. The delegation is of the opinion that there is scope in the country to establish modern small-size blast furnaces and side-blown converters in some areas. The delegation is, however, far from being certain about successfully operating small-scale steel plants in the country and wants only experimental units to be started, on the successful working of which would depend on the precise scope for setting up more of such plants in the country.

NORTH INDIAN NOTES

The reluctance of the delegation in taking a firm stand on the question of small-size steel plants, in spite of what the Chinese claim to be their eminent success with small-scale plants, is based on the difference in the conditions regarding availability of coal and iron ore in the two countries. In China, the wide dispersal of coal and iron ore and their simultaneous availability in almost every area, coupled with the lack of communications, has, in spite of the operational efficiency of large-scale plants, made it possible for small-scale units to function quite successfully. On the contrary, in India, deposits of coal and iron ore reserves are unevenly distributed and are found in concentrations in certain areas bordering the three States of West Bengal, Bihar and Madhya Pradesh.

There is already widespread feeling, especially in the South, about the present concentration of the iron and steel industry in only a few States and the lack of steel production in the South. The absence of raw materials, particularly iron ore, in the South is not accepted as an adequate reason for this, it being argued that the setting up of steel plants in the South, while involving the transport of iron ore, would obviate the need for transporting finished steel. The high cost of transporting iron ore to the South could not, therefore, be made the ground for denying its claim for a few small-sized steel plants. The Centre had been apprised by the Madras Government of this consideration and it is to be hoped that the latter would view the question of setting up small steel plants in the South in the perspective in which it had been presented to it.

*

Land Ceiling in Delhi

The Delhi Land Reforms Bill fixing a ceiling of 30 standard acres for a family of five was approved by the Home Minister's Advisory Committee. Provision has, however, been made for each additional member of the family subject to a maximum of 60 acres. Orchards, specialised farms and land held by co-operators is exempted from the provisions of the legislation.

The Bill fixes compensation at 40 times the land revenue for the first 25 standard acres of land acquired and 35 times for the next 25 standard acres. Surplus land would be allotted to people who agree to form co-operative societies. The Chief Commissioner is, however, empowered to reserve any part of surplus land required for a public purpose. Only about 150 people in the whole of the union territory are estimated to have land in excess of the standard ceiling and the land that is estimated to become available as surplus for distribution is a bare 2,000 standard acres. The benefit of the legislation is thus purely sentimental and is to keep in line with the States in the implementation of land ceilings.

NORTH INDIAN MARKETS

Decline in Sugar Prices

SUGAR markets, which had been ruling firm during the past many weeks, have developed a reactionary tendency following the Uttar Pradesh Government's decision to ration sugar. The release of 1.8 lakh tons of sugar for free sale and the lack of buying interest from the consuming areas are also contributory factors to the downward trend in prices.

In the Hapur market, prices have come down by Rs 8 per bag to Rs 120. In Delhi, prices are quoted 37 nP per maund lower, thanks to better arrivals. Buying has been on a small scale, as traders are not in a mood to hold more stocks in view of the rainy season. The Muzaffarnagar market rules weak on account of comfortable supply position following the opening of sale depots at different places. Heavy despatches are also reported to have been made by the Government to the deficit areas.

Distinct improvement in the supply position, apart from the outbreak of monsoon and termination of the marriage season, accounts for the bearish tendency in sugar prices in the Kanpur market. Market quotations in other centres in west Uttar Pradesh, which at one stage had touched the peak prices upto Rs 135 a bag, sagged during the week, to be quoted between Rs 115 to Rs 117 per bag. The ex-mill delivery section at Kanpur ruled dormant as factories have practically exhausted their share of the last quota.

In the above connection, it may be added that there will be no free sale release from factories in the Punjab, Uttar Pradesh and North Bihar except a small quantity to each factory for sale to the Government employees. Sugar will be allotted from factories in the Punjab, Uttar Pradesh and North Bihar either in accordance with the special arrangements made by the Governments or, where such arrangements have been made, to licensed dealers, according to the needs of different areas. The allotments will be made at prices fixed under the notification of December 22, 1958.

In order to ensure that allotments made to each State are available for consumption in that State, the Government of India have also promulgated an order prohibiting the movement of the commodity from one State to another, except under an allotment order. There will, however, be no restriction on movement within the region comprising the States of Andhra, Madras, Mysore, Kerala and Pondicherry, which have enough sugar to meet their requirements.

In this connection, the President of the Deccan Sugar Factories Association has suggested to the Government to ban the export of sugar immediately and import at least 1.5 lakh tons of sugar to tide over the present crisis. He has stressed the need for giving incentives to the industry in the shape of rebate in excise duty and cane cess for higher production prior to November 15 during the next season.

Sugar production in the country has gradually declined from the peak level of 20.26 lakh tons, reached in 1956-57, to 19.04 lakh tons this season. This has happened in spite of the fact that ten new factories went into production in 1957-58 and nine in 1958-59 in addition to expansion in many existing factories.

On the other hand, consumption is on the increase at an annual rate of 4 to 5 per cent. It has risen from 17.23 lakh tons in 1954-55 to 21.25 lakh tons in 1958-59. In the result, the balance has come down to the deplorable level of 89,000 tons in 1958-59 against 5.44 lakh tons in 1954-55, a figure which will be hardly sufficient for a fortnight's consumption. It is essential that the minimum stocks in the country should be around 4 lakh tons, i.e., sufficient for two months' consumption.

The diversion of cane to khandsari has been one of the causes of lower production. In this connection, the President of the Deccan Sugar Factories Association has stated that, if the sugar factories are to offer higher cane prices, contfols on the price of sugar should be removed. He adds that, if the Government do not remove the control, the only alternative before them is to increase the minimum cane price to, at least, Rs 1.75 per maund.

Partly because co-operative sugar factories have unwisely been located too near the existing factories and partly because of other considerations, certain Deccan sugar factories seem to be finding it increasingly difficult to get adequate cane supplies. The problem has lately become acute, as interested parties are reported to be trying to persuade the cultivators, who have entered into long-term contracts with the private sugar factories for the supply of cane. On the whole, it is felt that the Government should take vigorous steps to encourage higher production of cane and discourage its diversion to gur and khandsari manufacture.

The latest figures available indicate that sugar production in the country, up to the 30th June, is 19.04 lakh tons as against 19.67 lakh tons last year. The closing stock, as on the 30th June, was 8.41 lakh tons as against 10.40 lakh tons on the corresponding date of last year.

*

Gur

Gur prices have continued to rule steady due to good outside demand in the face of running-down of stocks in almost all assembling centres.

In the Delhi market, the demand for the commodity remains poor and prices have eased by about 25 nP per maund due to lack of support from Gujerat.

Although demand for the commodity continues to be at a low ebb, the Khandsari market remains steady. No business is reported to have been done, as sugar prices have come down considerably and there is no enquiry for this commodity from any side.

*

Foodgrains

Quiet conditions have continued to prevail in the Foodgrains market. Reports of fairly good rains have been received from all over West Uttar Pradesh. Late "khariff" sowings are in full swing, while the preparation of land for coming "rabi" sowings have also begun.

In the Hapur market, Wheat prices are mostly unchanged, being quoted at Rs 18.25 per maund for the average and Rs 19.50 for the farm quality. Arrivals in the open market are still scarce and consumers' demand is being met from private sources where arrivals are reported to be increasing. The Government's exemption of co-operative societies from the wheat levy scheme has also resulted in more supplies being available in the market.

The Rice section rules steady, as the State Government are selling the commodity through fair-price shops. Gram remains unchanged. The markets for Barley and Bejher have been ruling quiet.

In the Delhi grains market, prices have shown a mixed trend. While rice and wheat prices have advanced further, coarse grains and pulses are depressed. Wheat farm quality has improved by 50 nP to Rs 18.50 per maund due to decreased arrivals. Following poor arrivals from the Punjab, Rice prices have advanced modestly by Re 1 to Rs 1.50 per maund. Demand for Bajra is not satisfactory, thanks to the comfortable stock position. Amang Pulses, offerings have contracted and prices have declined slightly.

*

Linseed

Linseed prices, in the Calcutta market, after initial steadiness due to higher advices from the futures section, displayed a slightly easier tendency toward the close on lack of support.. Turnover was restricted, as millers found it difficult to make crushing profitable at the ruling prices. Although there was little demand for both oil and oilcake, hopes were entertained that there would soon be enquiries from abroad. In the ready section, the rate was quoted at Rs 23.75 and Small Dana at Rs 23 per maund. In the futures section, July delivery was quoted at Rs 23.12 and August/September at Rs 23.37.

*

Shellac

Prices in the Calcutta Shellac market displayed a firmer tendency with Pure TN quality quoting around Rs 69 per maund as against Rs 66 in the previous week. Shipments during the month till the 24th amounted to 22,267 packages, comprising 8,286 packages of shellac; 12,555 packages of seedlac; 456 packages of buttonlac and 970 packages of other varieties.

DELHI REVIEW

S. E. RLY. TENDERS

Sealed tenders are invited for (1) tender No. Con/GM/41/D/59 for supply of Crab Winches, as per details to be obtaied from the tender schedule. Earnest money is Rs. 1000/-. Tenders will be opened on 18-8-59 at 3 P.M.

(ii) Tender No. Con/GM/42/GB10/59 for supply of rope asbestos yarn spun, rope cotton, rope manilla, as per details to be obtained from the tender schedule. Approximately value is Rs. 78,000/-. Earnest money is Rs. 1000/-. Tenders will be opened on 19-8-59 at 3 P.M.

Tender forms are obtainable from the office of the Controller of Stores (Construction section) Garden Reach, Calcutta-23 on remittance of Rs. 5/- (not refundable) per copy per tender by money order to him direct in the case of outside firms and on production of Cash receipts from the Chief Cashier, S. E. Rly., Garden Reach by local firms.

Tenders should accompany the receipts for depositing Earnest money as stated above with this Rly's Chief Cashier without which the tenders are liable to be rejected. Approved contractors having a permanent deposit of Rs. 1000/- with the Controller of Stores are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance certificate with the tender.

GENERAL MANAGER

S 48

THE PENINSULA

Businessmen's Convention

THE Zonal Conference of Chambers of Commerce in South India turned out to be a big success in so far as it was attended by over one thousand delegates and businessmen representing Andhra, Mysore, Madras and Kerala and was addressed by eminent men from the public life of the country. The businessmen assembled with the clear purpose of discussing problems affecting them in common, some of them having country-wide impact as arising out of the acts and policies of the Central Government, with others having purely a regional setting and application.

The conference could point to several problems affecting the individual States in the Southern region which depended for an effective solution on a common regional approach. Shortage of power was general in all the States and could be tackled on the basis of a common electric grid jointly owned and operated by the State Governments. The agreement between the Madras and Kerala Governments over the sharing of the Parambikulam waters is an instance of such co-operation which could be usefully extended to the exploitation of the other important rivers for generation of electric power.

Other problems agitating the business community, in respect of which a regional approach is considered desirable, relate to sales tax, movement of foodgrains between the States, taxation of road transport, etc. The hardships caused to business and industry by differing rates of tax in neighbouring States are such as to warrant a uniform policy for the region in such matters. Commercial opinion in the Southern region is unanimous about the need for such a uniform policy, and the common interest felt by the State Governments for industrial growth should enable them to come to a mutual understanding to avoid conflicts in policies.

The conference also considered the problem of industrialisation of the Southern region and noted the present lagging pace as compared with more developed States and regions in the North. In the Second Plan, out of a total outlay of Rs 4,800 crores, only Rs 560 crores was allotted to the South; this bore no relation either to the needs of the region or to the contribution it makes to the foreign exchange earnings of the country. The Third Plan should therefore take into account the industrial backwardness of the Southern region and make more liberal provision for the development of industries.

The absence of a steel producing plant in the South is considered a handicap for industrial progress and to it is attributed the general industrial backwardness of the region. Referring to this, Mr C. Subramaniam pointed out that, since it has been decided to manufacture one million tons of steel from low grade coal under the Third Plan, place could be found for some small steel plants in the South. The steel delegation which visited China had also recommended the setting up of small-scale steel plants on an experimental basis. Further, it is pointed out that absence of iron ore or coal in large quantities should not be a bar to the development of general engineering and other processing industries for which there is claimed to be good scope.

The vast coastline covering the region points to the importance of port development, which holds the key to the general economic progress of the region. While there are three major ports, one each in Andhra Pradesh, Madras and Kerala, there are others such as Tuticorin in the Madras State and Mangalore in the Mysore State having claims to development as major ports.

The conference also passed a number of resolutions on problems of wider import and all-India concern, such as the intended policy of the Government in respect of state trading in foodgrains, export promotion and import cuts, labour policy, impact of the taxation measures introduced by the Government in recent times etc. The resolution on State trading in foodgrains expressed grave doubts on the wisdom of the intended measure, and the results of the initial steps taken by the various State Governments to implement partial procurement of foodgrains, it was pointed out, gave no hope for a successful implementation of the policy without hampering free movement of foodgrains.

The resolution on export promotion urged the need for concentrating on traditional items rather than on new ones for which there is no foreign demand at present, and the successful introduction of which in foreign markets would involve initial losses. In the case of traditional items, though international competition is getting keener, there should be no difficulty in stepping up exports. It only calls for a vigorous drive to improve the quality of goods, as also for more efficient marketing.

The resolution on taxation took note of the penal rates at which some of the taxes are levied and made a plea for concessions with a view to fostering larger investment. One suggestion made by the conference in respect of lightening the burden of taxation in one direction, was that sales tax on coffee, tea, rubber and matches might be substituted by excise duty by the Union Government.

The Government's labour policy also came under fire, and a resolution passed on this subject viewed with serious concern the worsening trend in industrial relations. For this, the businessmen would lay the blame at the Government's door, since the efforts of the Government were all along directed to placating labour even at the expense of piling up fresh financial burdens on industry. That Government themselves are not happy at the trend of industrial relations, was made clear by Mr Subramaniam who, in his speech, accepted the need for labour to cultivate a sense of discipline and responsibility. At the same time, labour had some inherent rights and privileges which had been guaranteed by the Constitution and which had to be respected and met. Much of the sorry state of things in industrial relations was attributed to the intrusion of politics into the trade union movement. A realistic labour policy should, while protecting the interests of labour, also enable industries to function properly and without friction. In the light of this standard, the present labour policy of the Government would seem to need a thorough review.

The role of the public and private sectors was not left out of the discussions and the general view was that both had immense scope to grow without coming into mutual conflict. Sir C. P. Ramaswami Iyer pointed out that it would not be useful to underrate the importance of either in view of the fact that both had shortcomings which he could vouch for from his personal experience with a few understandings in both sectors. Mr Subramaniam also sought to disprove the theory that the authorities were not well disposed toward the private sector and supported his argument with facts and figures from the First and Second Five Year Plans. But the Government were not completely cleared of malefic intentions toward the private sector; andd the encroachments of the State Trading Corporation were considered as completely inconsistent with the original objective with which it was established, and which did not envisage the infringement of the interests of the private sector in trade. The ambiguous situation into which the Government had travelled from their original industrial policy resolution, which reserved to the public sector, only basic industries where the size of capital required would preclude private sector from participation, was instanced as another source giving concern and worry to the private sector. A fresh clarification of policy, which would define and demarcate the respective roles of the private and public sectors, was therefore urged.

The resolution on the Third Plan appealed to the Planning Commission to give consideration to available resources, internal and external, as also external obligations already incurred, domestic taxable and savings capacity, in the formulation of the Plan. However, the need for achieving a higher pace of growth was recognised and was stressed by Mr Madanmohon R. Ruia, President of the Federation of Indian Chamber of Commerce and Industry.

Mr Ruia laid the following five points for being considered as "crucial posers facing the country."

1. The problem of securing in the fullest degree, conditions of equality of opportunity while, at the same time, retaining that degree of inequality which must result from offering prices sufficiently attractive to keep up within the community that amount of exertion without which no people can long continue in a state of efficiency much less develop;

2. How much and where short-term imbalances can be permitted so as to ensure that short-term imbalance does not upset the long-term needs;

3. No plans or proposals regarding regional development should be allowed to be so framed that they eventually result in even the mildest kind of tension; some kind of competition will and should always persist between regions, the competition not leading to tension or any feelings of segregation or isolation on the part of any section or region.

4. Increase in production of consumer goods should, as far as possible, be diverted to increase the per capita availability of such goods. We should reduce costs of exportable goods; and

5. Business should be conducted on modern lines and in the interests of coordinated development, the organisations at the State, district and local levels must be knit together in a well integrated pattern.

Mr Ruia was at pains to show that personal incentives and particularly the profit motive ensured efficiency almost in a self-corrective manner. However, what he calls as the controversy over the profit motive hardly exists. Government had, at no time, questioned the value or importance of personal incentives. On the contrary there has even been a suggestion from an influential quarter that the undertakings in the public sector should also be run as profit making institutions. No doubt, a great part of the profits accruing to the companies in the private sector is being mopped up by the Government. But business profits had not been the only object of Government taxation. A number of indirect taxes had been imposed which had spread the burden of financing the Plan fairly equitably over every section of the population.

SOUTH INDIAN NOTES

Community Development Programmes

THE eighth annual conference on Community Development, which was held at Mysore, is considered a significant event for the reason that it marks the beginning of a new phase in the implementation of the Community Development Programme. While, in the past seven years it was the individual efforts of the villagers that was stressed in the implementation of the various schemes, emphasis has now shifted to institutional agencies such as panchayats, cooperatives and the village schools.

Another significant thing about this year's conference was the fact that it gave importance to implementing the plans through the basic village institutions while the previous annual conferences were prominently concerned with formulating working plans for the year in the different aspects of programme. This shift in emphasis could itself be taken as a measure of the concern at the lagging progress in the implementation of the community development programmes.

The survey of the progress in the implementation of the programmes given by both Sir V. T. Krishnamachari, Deputy Chairman of the Planning Commission, and Mr S. K. Dey, Minister for Community Development reveals that the movement had failed at significant points, particularly in respect of village industries and animal husbandry. In the field of minor irrigation, arrears of work had been accumulating for want of attention to renovate works that had fallen into disuse and to take up new ones. Contour bunding, soil conservation and other dry farming programmes are yet to become integral parts of village programmes and of the Community Development movement. Construction of field channels to put to use the irrigation potentials generated through major projects is another long-delayed activity.

Without emphasising the people's role and enlisting their voluntary cooperation, it would not be possible to show striking results in any of these directions. The devolution of responsibility for implementation on representative and collective units like the village panchayats and village cooperaties has, therefore, significance and is calculated to ensure better response to village development schemes. If, as Sir V. T. Krishnamachari indicated, an element of legal obligation could also be enforced on the community or the beneficiaries in developmental work, results could be improved beyond all expectations. It is essential for the success of the scheme that employment is generated and that benefits would accrue to the villages in tangible assets which would go to improve the basic amenities of the local community.

*

Small-Scale Industries

The problems connected with the development of small industries came up for discussion at the All-India Seminar on Small-scale industries held at Hyderabad last week. In the discussions, the question of financing figured prominently and is to be explained in terms of the continuing uncertainty regarding availability of working capital for small industries. The attitude of the institutional agencies has left much to be desired, these agencies being not very much inclined to take up financing of small-scale industries. Without liberal assistance from these quarters to meet the needs of small industrialists for working capital, the latter would be hard put to it to keep their undertakings in working order. It is with enlarging the scope for financial assistance from these institutions that the Seminar was chiefly concerned and toward this it has suggested a system of guarantee loans, so that larger funds could flow to the financing of small industries from the institutional sector.

The guarantee scheme, which is mainly aimed at bringing the banks within its fold, would ordinarily be up to a maximum of 50 per cent; but, in some cases, would be higher, though not exceeding 75 per cent both of working capital loans and term or equipment loans. The guaranteeing authority would be an organ of a State Government or a Central institution linked with and operated through the Reserve Bank.

As far as Governmental assistance is concerned, while not under-rating the role Government as agencies of supplementary credit, it is their non-financial functions that have come for emphasis. Under this come technical advice, managerial training, procurement of raw material and quality control. These constitute a formidable list by themselves and would impose a severe strain on the resources of the Government. If the Government could discharge these functions adequately and satisfactorily without leaving room for bottlenecks to arise in respect of any these, it could give a big spurt to the development of small industries.

The Seminar has pointed out that the real solution to the problem of finding finance for small industries lies in increasing the credit-worthiness of the industries. This necessarily presupposes the efficient organisation and running of small enterprises and particularly the maintenance of production at an even level. In the present state of small industries, such efficient organisation is not a matter of automatic assumption, being beset by difficulties arising from almost all sides.

Government participation in the equity capital of the small industries is also favoured. Such participation could be greatly facilitated if the small units organised themselves into cooperative societies. Otherwise, Government will have difficulties dealing with individual units. The Seminar has, however, expressed the view that, in supplying such equity capital, preference should be given to industrial units with growth potential and enjoying high priority in planned development.

*

Problems of Tea

The need for starting a drive to stimulate internal consumption of tea was stressed by Mr E. J. C. Menzies, Chairman of the Anamalai Planters' Association, when he addressed the 54th annual general meeting of the Association. With production set for an increase under the present plans, and with consumption continuing at static levels, a precipitous fall in the price for tea looks inevitable in the future unless early measures are taken to step up internal sales.

A restriction on production, a seemingly easy solution, is fraught with perils for the industry and would be self-defeating since the result would be a further rise in cost of production by reason of costs having to be spread over lower production. In fact, a part of the recent increase in production is ascribable to the deliberate policy of the plantation owners going for higher production for bringing down the cost level in the industry. As Mr Menzies pointed out, increased output is becoming a compulsive feature of Plantations' economy.

In the record output of 34 million lbs achieved by the Anamalai plantation in the current season, which represents an increase of three-fourths million lbs against the previous year's production, Mr Menzies sees the signs of the coming deluge. The tea market expansion organisation of the Tea Board should, therefore, set to work early and immediately with the specific object of stimulating internal consumption. The Board had done substantial and sustained work in the past and as a result consumption had gone up from 90 million lbs in 1939 to 235 million lbs in 1958.

Export promotion has also to be pursued vigorously. While recognising this, Mr Menzies sees no bright prospects with the present attitude of the Government toward the industry. He concedes that the Government had recognised the difficulties of the industry, but, at the same time, points out that the Government had not gone the full way in meeting the demands of the planters for relief from the crushing financial burdens.

Mr Menzies is also critical of the attitude of labour in plantations and points out that the interests of the workers and the country could be served only by ridding them of the influence of unscrupulous and irresponsible leaders.

*

Indian Standards Institution

The two-day conference of the ISI members of the Southern region Madras, Mysore, Andhra and Kerala was inaugurated by Mr C. Subramaniam, Minister for Finance, Madras. The ISI, as an institution concerned with prescribing standards and specifications for industries, has been playing a vitally important role in the industrial development of the country and, in the short span of just 12 years, formulated over 1,200 standards covering a number of industries, including engineering, building, chemical, textiles, food and agriculture.

Standardised production with the accent on quality has obvious advantages which do not seem to be adequately realised by business men in the country. It was pointed out by Mr A. N. Ghosh, Joint Director of the ISI, Delhi, that a large section of the private sector had not adopted standards. So far, compulsion had not been used in implementing standards on a wide scale, and the dislocation that would be caused to production is an argument against such compulsion. Even in respect of membership of the ISI on the part of industries, which would help wider adoption of standards, there is a big gap at present. The membership is reported to be particularly poor in the case of industries from the Southern region.

Adherence to high standards has become particularly important in the case of goods exported from the country, since the entry of new countries with goods of superior quality to India's poses a direct threat to Indian exports. That India stands to lose its ground to its competitors unless quality is maintained is already being borne out by the falling exports of some of the goods. This necessarily calls for the strict enforcement of standards and minimum quality for the goods exported rom the country.

Mr Subramaniam pointed out that the ISI could play an important role in the field of advertisement to protect the interests of consumers who are easily gulled into purchasing spurious goods merely on the strength of eye-catching advertisements.

MADRAS REVIEW

MADRAS REVIEW

Groundnut Market Quiet

IN Madras markets during the week, except for weakness in prices of oil seeds and oil, the characteristic tendency has been a sharp upward trend. Thus, for example, as a later paragraph shows, in Cochin, the pepper market, due partly no doubt to speculative activities, flared upwards. While short covering would naturally be one reason why the influence on prices would have been upward, there was one other important factor which operated that did much to contribute to the sustained firmness in market quotations. This factor was the freely canvassed assertion in market circles that an important consumer, America, would need inevitably to seek its supplies in Indian markets. As a result, not only did the past week produce nervous bear covering operations, the volume of business transacted was itself large. Nevertheless, arrivals tended to be slightly ahead of offtake.

Then, there was the pleasant business of the half-yearly sale of sandalwood at Tirupattur. According to persons in the trade, there is a certain charm which is to be discerned in the manner in which these rather infrequent sales are conducted. While reports have it that there has been no perceptible improvement in the demand for sandalwood oil, there has been the emergence of foreign demand for the wood itself, presumably in consequence of official attempts to foster the sale of the manufactures of cottage industries. In effect, keener bidding for sandalwood pushed up the average price from the region of Rs 4,700 realised at last December's sale to roughly Rs 5,200. With 400 tons sold, the turnover exceeded Rs 20.7 lakhs.

Other markets, as the following paragraphs show, tended, on the contrary, to be somewhat easy.

Calcutta interests, who kept off from local markets of oils, became one among a large buyers' group. With the result, the oil market turned easy. All offerings till the middle of this week had been taken up. The price of groundnut oil, which was ruling around Rs 369/370, declined by midweek to Rs 350 due to reported heavy up-country heavy arrivals.

Shippers could not find any workable parity even with the reduced rates. Burma, nevertheless, lifted small lots at Rs 1,630 per ton c.i.f. or the basis of the incentive offered by the India Government. Some shippers sold away their oil stocks here and arranged to ship from Saurashtra port at lower rates against their prior commitment to Burma and other foreign countries.

With the arrival of 45/50 tons of groundnut of superior oil-content kind, prices, ruling at Rs 199/200 early this week, declined to Rs 193/194 by midweek. Bold variety were offered around Rs 189/190.

Recent heavy rains and dislocation of rail transport in the Andhra region created initially some reduction in offerings which, however, improved on larger arrivals of summer crop in the South. On Wednesday, there was definite weakness in the quotations which came own to Rs 352. The vaidas quotations for August and December remained at Rs 350 and Rs 308 nominal respectively.

There were no changes in other oils and castorseed quotations.

*

Hides and Skins

In the Hides and Skins market, prices advanced in several instances by 6 to 9 nP for 5/5½ lbs and by 2 to 3 nP for 8/8½ lbs. UK and Continental enquiries remained firm. The local market reported firm conditions. Semi-premium 5/5½ lbs are reported to have been sold on the basis of 80/82d, oor 8/8½ lbs at 58/59d and premium marks are stated to have realised 86d basis for 5/5½ lbs and 60d basis for 8/8½ lbs. Ordinary types were sold between 70d and 72d. Inferior fifths are finding more interest, and fair business is reported to have been confirmed with the UK in 5/5½ lbs at 46d/47d and 10/12 at 37½/38d. On account of local demand. 10/12 lbs were not easily available.

Tanned buff hides arrivals improved somewhat with prices remaining unchanged. Prices continued to be very firm in respect of tanned Cow Calf and Buff Calf. Inferior fifths Cow Calf were in great demand. Business transacted was on the basis of 67/68d.

About thousand and odd tanned goat skins were cleared upto the middle of this week. Over 48,000 pieces of skins changed hands. The stock position is about 20,000 today. The market is strong in tone with prices having advanced by 6 to 10 nP.

There is no change in the price quotation in tanning materials. Quotations: Raw Skins Bangalore Raw Goat Rs 550/630, Raw Sheep White Wool Rs 550/630, Black Wool Rs 440/500, Bezwada raw goat Rs 515, he=Sheep Rs 545 she=Sheep Rs 355.

*

Pepper

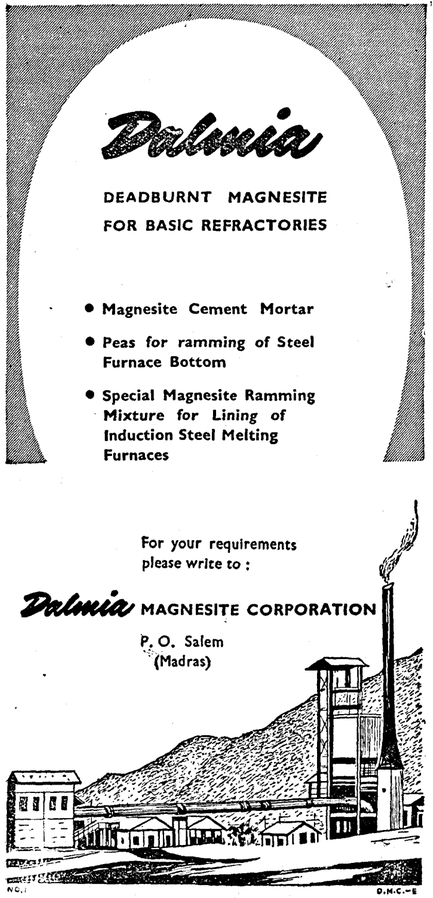
Black pepper prices in Cochin rose from Rs 644 to 679 per candy on Tuesday, the spurt being attributable to the demand of the Communist countries in Europe. There is always the Russian buying. Cochin shippers are buying all available garbled variety. This is now in short supply in view of the continued monsoonish rains in West Coast not enabling the pepper to be garbled. Rumours of Lampong harvest this season being only half of that of last year's, the fact that American buying has got to be in Indian market also contributed to the increase in the black pepper price this week. There is the disparity of 2½ cents per pound between lampong and Indian variety. If there is truth in the reduction of Lampong harvest. New York has got to agree to the Indian price and come in soon. So far, West Coast shippers have not had any orders.

*

Bangalore Silk

There was no change in the rates of filature silk during the week ended 23-7-1959 except in case of Kisan silk which moved up by Rs 0.50 per lb, to be placed at Rs 41.00.

A slight decline was noticed in the rates of all varieties of charka silk as compared to the rates prevailing during the last week.



The rates of Sidlaghatta and Mugur varieties of reeling cocoons registered an upward trend to rule between Rs 2.00 to Rs 2.87 and Rs 1.50 to Rs 1.87 per lb respectively.

The prices of foreign race seed cocoons also manifested an improvement to rule between Rs 4.00 to Rs 10.00 per 1000 Seed Cocoons.

Trend of Foreign Markets

Country	Grade	Date	F.O.B.	Landed Cost
Japan	20/22 "A"	During June 1959	Rs 18.41	Rs 29.85
Italy	20/22 "2A"	During Jan. 1959	Rs 23.93	Rs 37.53

SOUTH INDIAN MARKETS

Jessop & Company Limited

Large Increase in Production by 1960-61 Visualised

Sir Bijoy Prosad Singh Roy's Review

The following is the speech by Sir Bijoy Prosad Singh Roy, K.C.I.E., Chairman, Board of Management, Jessop & Company Limited, delivered on 24th July 1959, at the Twenty Seventh Annual General Meeting:—

Gentlemen:

It gives me great pleasure to welcome you today to the Twenty-Seventh Annual General Meeting of your Company.

At the previous Annual General Meeting held in September last year, I told you that the new Works set up for the manufacture of Metre Gauge Passenger Coaches and Electric Multiple Unit Broad Gauge Coaches for the Calcutta Electrification Project had gone into production, but output had been restricted by shortage of steel and components. As you will have read in the Press, the Railway Minister, Shri Jagjivan Ram, presided at the Inauguration Ceremony of the handing over of the first Electric Multiple Unit Coach on the 6th June 1959. This is indeed a landmark in the history of your Company, because it has established a new Industry in India. and will save the Country valuable foreign exchange.

The Company has been assured of further orders to keep this new Works fully occupied, and I hope this will make considerable contribution towards the prosperity of your Company.

For many years we have manufactured Metre Gauge Passenger Coach Shells which have been furnished by the Railways, but your Company was recently requested by the Railway Board to undertake the complete furnishing of these Coaches. I am pleased to inform you that your Works have now commenced production of furnished Coaches and hope to build up to a full output within the course of the next two or three months.

Another important development is that we have had to make a major change in the main line of wagon manufacture in your Works. For the last 30 years we have received from the Railway Board orders for large numbers of four-wheel covered goods wagons, and as demand increased your Wagon Works was organised for production of these wagons at the rate of 15 per day. In 1958 the Railway Board decided that manufacture of the four-wheel general service goods wagon should be discontinued, and that its place should be taken by a heavy bogie vehicle of entirely new design.

Prototypes have been made but details of design are still under discussion with the Railway Board, and because of shortages of steel and components it will be about the end of this year before the Works will be able to commence production of the new B.O.X. wagon in quantity.

This new wagon needs considerable amount of welding for which entirely new procedures will have to be evolved, but I am fully confident that the Technicians and Workmen at Dum Dum will successfully overcome the teething difficulties which are inevitable with any new line of production.

The demand for our Diesel Road Rollers continues at a very satisfactory rate, but the shortage of steel and imported components has prevented your Works from increasing output to its rated capacity of 200 Rollers per year. Once adequate supplies of materials are available the Works should be able to meet the present demand without difficulty.

You will note that I have more than once referred to shortage of materials, and this acute shortage has inevitably affected the financial results. At the Annual General Meeting last year I had referred to the fact that your Works were being seriously affected by the shortage of steel which was being increasingly felt throughout the Engineering Industry, and I had also mentioned that while results for the year ending in October 1958 would be satisfactory, they would certainly not be as good as they would have been if production had not been hampered by shortage of raw materials. The Accounts now in your hands show that the material shortage to which I referred has in fact restricted production to such an extent that the output from the Works was Rs. 91 lakhs less than that during the previous year. The reduction in output has caused a small fall in profits but in view of the difficulties caused by shortage of materials I think you will agree that the results for the year are quite satisfactory.

This shortage of raw materials still continues and production of wagons and other products in the Works is still on a restricted scale, but fortunately with the commissioning of the new Coach Works we have not had to retrench workmen, and it is hoped that we shall be able to continue at the present rate of production until adequate supplies of steel are available from the new Rolling Mills at Rourkela, Bhilai and Durgapur.

In view of the continued shortage of raw materials the results for the current year ending in October 1959 may not be as good as those for the year ending in October 1958 but it is hoped that materials will be more plentiful in 1960 and once supplies are readily available the output from your Works should increase considerably.

The findings of the Fifth Engineering Tribunal were announced on the 6th December, and one of the immediate effects of the Award was an increase of Rs. 5/- in Dearness Allowance to every workman at the Dum Dum Works. Several points in this Award required clarification, and were referred back to the Tribunal. We understand that a decision will be announced within the course of the next few weeks. The effect of this Award will be a substantial increase in the wage bill at Dum Dum, but this is in keeping with the Country's objective to raise the general standard of living. I hope it will also be helpful to increased output by the workmen.

The Country is most anxious to find export markets for engineering goods, and your Company has constantly borne this in mind. A preliminary survey of markets in Thailand, Malaya, Australia and New Zealand was made last year by one of the Members of the Board of Management, and this survey has clearly shown that if we are to obtain export business we must quote firm prices and guaranteed delivery times, but unfortunately supplies of steel have been so irregular during the last eighteen months that it has not been possible to submit quotations which would be considered. Your Company is fully alive to the vital necessity of engineering exports, and when raw material supplies are readily available every effort will be made to secure markets for its well known products.

It is indeed a matter of gratification to those of us who are associated with the management of your Company that it has at last been possible for the Board of Management to recommend payment of a dividend of 6 per cent on the Ordinary Shares of the Company. It is by no means a high return on the capital invested, but I hope that you agree with me that the fact that it has been possible to recommend a reasonable dividend after providing for the heavy losses suffered by the Company in 1955-56 and 1956-57, is a matter of great satisfaction and relief to all concerned.

We visualise a larger increase in production with availability of steel by 1960/61. This will naturally require a much larger working capital than ever before. Thanks to the help that the Company has received from Government, to whom we are indeed grateful, it has been possible to meet the Company's financial requirements during the last one year. It should, however, be appreciated that in order to implement the expanded production programme it is necessary to improve the Company's financial resources and to build up a substantial Reserve. For this purpose a cautious and conservative financial policy is not only desirable but essential. I do sincerely hope that the Board of Management will receive the full support of the Shareholders in this respect.

I may inform you that the Board of Management has now obtained legal opinion on the losses suffered by the Company in 1955-56 and 1956-57 due to certain speculative transactions of very doubtful nature, and has already submitted the opinion to Government for their consideration.

Gentlemen, before I conclude I feel sure you will like to join me in expressing our thanks to the workmen and staff who at all levels have worked so devotedly to produce the excellent results.

I would also like to express the Board's appreciation of the valuable services rendered by Mr. S. D. Srinivasan as Member of the Board of Management till the end of May 1959 when he was transferred to Bombay. His place has been taken by Mr. A. L. Dutta.

This does not purport to be a record of the proceedings of the Annual General Meeting.

THE RELIANCE JUTE MILLS COMPANY, LIMITED.

NOTICE OF ANNUAL GENERAL MEETING.

NOTICE is hereby given that the One Hundred and Second Annual General Meeting of Members will be held at the Registered Office of the Company, 4, Clive Row, Calcutta, at 11-0 a.m. on Tuesday, the 8th September, 1959, for the following purposes:—

(1) To receive and consider the Audited Accounts for the year ended 31st March, 1959, and the Balance Sheet as at that date and the Reports of the Board of Directors and the Auditors thereon.

(2) To appoint a Director in place of one retiring.

(3) To appoint Auditors and to fix their remuneration.

The Share Transfer Books of the Company will be closed from the 1st September to the 8th September, 1959, both days inclusive.

By Order of the Board,
JARDINE HENDERSON, LIMITED.
I. F. MORRISS,
Acting Secretary,
Managing Agents.

4, Clive Row,
CALCUTTA-1.
24th July, 1959.

Note: A member entitled to attend and vote at the meeting may appoint a proxy to attend and vote on his behalf. A proxy need not also be a member of the Company.

STOCK EXCHANGES

Sentiment Still Jittery

Watch-Dog Writes:

STOCK markets have passed another uneasy week. Lower price levels failed to evoke support. Operators are cautious in their commitments and some have preferred to wait, pending the announcement of the dividend by the Indian Iron & Steel Company Limited. Fears are also entertained in some circles with regard to payment difficulties in the forthcoming settlement. Also, there is an inclination to await the outcome of the meeting to be held by the Investment Committee of the LIC on the 6th August.

Except for a few firm spots, conditions on the Calcutta Stock Exchange were dull and quiet and price movements were narrowly irregular on alternate buying and selling.

The Bombay Stock Exchange steadied up moderately, as the recent downward trend in prices appeared to pause with the apparent abatement of heavy selling.

Steady conditions prevailed on the Madras Stock Exchange, especially in the clearing group.

On the London Stock Exchange, there was a definite change in sentiment with recent buyers of gilt-edged securities turning their attention to industrial equities.

Wall Street closed barely steady.

*

Calcutta

Friday Evening.

THE local stock market experienced another unfavourable week of trading and prices, especially of speculative scrips, tumbled down before making a slight rally on short-covering at the close. The reduction in the TISCO dividend having already caused worry among some professional operators about the size of the Indian Iron dividend, bulls were looking forward to any useful hints that might come from the LIC on the 6th August. With the result, there was a general disposition to restrict commitments and book profits at every bulge. The only relieving feature of the week's trading was a slight recovery in a few selected Jute shares, thanks to the expectation of better working results.

Price movements, especially toward the close of the week, were mostly influenced by final clearing adjustments. Following were the final settlement rates, figures shown within brackets being the interim clearing rates:—Indian Irons old Rs 24.04 (Rs 25.00); New shares 23.15 (Rs 24.10); TEXMACO Rs 23.40 (Rs 24.20); Orient Paper Rs 35.60 (Rs 36.80); Indian Aluminium Rs 22 (Rs 22.50); Indian Cable Rs 31.75 (Rs 32.31); Indian Copper Rs 4.09 (Rs 4.07); Howrah Jute Rs 23.12 (Rs 24); National Rs 23.25 (Rs 23.25) and Burrakur Coal Rs 17.25 (Rs 18.00). Satta in the case of Indian Irons is fixed at 22 nP.

The Giltedged section presented a firm front. Demand for short and some of the medium-dated issues was well maintained and their prices developed a hardening tendency. Fair enquiry was also reported in respect of State Loans on expectation that the response to the new State Loans would be encouraging. Meanwhile, 3 per cent 1986 Conversion Loan, after opening at Rs 73.50, improved steadily to Rs 74, to finish the week at Rs 73.70.

Bank shares were rather quiet following the announcement of lower interim dividends during the past few weeks. Punjab National moved narrowly between Rs 22.00 and Rs 22.19, while United Commercial were marked down by one point at Rs 62.

In an otherwise dull session, selected Jute shares fared better, thanks to the expectation of better working results and the announcement of encouraging dividends for last year by some of the companies. The substantial improvement in the statistical position of the industry also contributed to the sustained interest in the section. Higher levels, however, could not be retained till the close due to profit-taking. Howrah were at one time taken upto Rs 23.37; Birlas upto Rs 22.62 and New Central upto Rs 18.25, to ease off at the close to Rs 23.12 Rs 22.25 and Rs 18.00 respectively. National firmed upto Rs 23.25 from Rs 22.75, while Anglo-Indian hardened to Rs 252.50 from Rs 248; Barnagore to Rs 166 from Rs 161; Budge-Budge to Rs 162 from Rs 158 and Gourepore to Rs 408 from Rs 405.

In the Coal section, trading was generally dull with prices displaying an easier tendency due to selling pressure on fears that the possibility of an increase in the price of the commodity was remote. Moreover, operators were inclined to restrict commitments, pending the outcome of the discussions between the Government representatives and industrial interests during the course of next week. The only expectation to the general trend were Amalgamated, which met with sustained support upto Rs 25.37 from Rs 24.62. Bengal changed hands at Rs 306 to Rs 308; Equitable at Rs 31.62 to Rs 31.75 and Burrakur at Rs 17.19 to Rs 17.69. Central India more or less maintained at Rs 8.

Except for some enquiry in the scrip of the Assams gardens, trading in the Tea section continued to remain restricted in view of the obscure outlook for Common grades. It was feared that, if possible steps were not taken immediately to give relief to the common tea-producers, the market for this type of tea would be gradually lost to other competitors. Dealings were, however, prominent in Eastern Cachar, changing hands at Rs 2.65 to Rs 3.06; Grob at Rs 18.25 to Rs 18.81; Hasimara at Rs 22.75 to Rs 23.25; Hantapara at Rs 115 to Rs 122; Jayshree at Rs 13.12 to Rs 13.31 and Methoni at Rs 24.31 to Rs 24.50. Tezpore remained very firm at Rs 17.50 following the announcement of 12½ per cent for 1958 as against nil in 1957.

Sugar shares turned quite following easier advices from the commodity market. Carew were on offer at Rs 12.28 to Rs 12.44; Belsund at Rs 13.12 to Rs 13.25 and SKG at Rs 10.50 to Rs 10.75. Ramnugger were marked down to Rs 20 from the recent high of Rs 22.12 with Dyer Meakin quoting around Rs 18.

Textile scrip were generally steady on reports of improved conditions prevailing on the cloth front. Dunbar were well maintained at Rs 165, while Jayshree had buyers upto Rs 9.75 from Rs 9.53 and Kesoram upto Rs 15.59 from Rs 15.19. New Victoria were, however, quiet with the rate hovering idly around Rs 1.12.

Price movements in the Engineering section were mostly influenced by the speculative activity in Indian Irons which, in turn, were subjected to alternate bouts of buying and selling. Operators were generally inclined to restrict their commitments, pending the announcement of the dividend by the Indian Iron & Steel Company,

---

HOWRAH MILLS COMPANY, LIMITED.

NOTICE OF ANNUAL GENERAL MEETING.

NOTICE is hereby given that the One Hundred and Thirty-fourth Annual General Meeting of Members will be held at the Registered Office of the Company, 4, Clive Row, Calcutta, at 11.30 a.m. on Tuesday, the 8th September, 1959, for the following purposes:—

(1) To receive and consider the Audited Accounts for the year ended 31st March, 1959, and the Balance Sheet as at that date and the Reports of the Board of Directors and the Auditors thereon.

(2) To declare Dividends.

(3) To appoint a Director in place of one retiring.

(4) To appoint Auditors and to fix their remuneration.

The Share Transfer Books of the Company will be closed from the 20th August to the 8th September, 1959, both days inclusive.

By Order of the Board,
JARDINE HENDERSON, LIMITED.
I. F. MORRISS,
Acting Secretary,
Managing Agents.

4, Clive Row,
CALCUTTA-1.
24th July, 1959.

Note: A member entitled to attend and vote at the meeting may appoint a proxy to attend and vote on his behalf. A proxy need not also be a member of the Company.

Payment of any dividend declared will be made only to those members whose names are registered in the books of the Company on the 8th day of September, 1959 or to their mandatees.

MARTIN BURN LIMITED

NOTICE is hereby given that a General Meeting of the Company will be held at its Registered Office, 12, Mission Row, Calcutta, on the 28th day of August, 1959, at 11 a.m. to consider and if thought fit to pass with or without modification the following resolutions:—

1. As an ordinary resolution:

   That this meeting approves the re-appointment of Mr. Frederick George Liversedge as a Managing Director of the Company with effect from the 1st day of October 1959 on the terms and conditions contained in an Agreement dated the 19th day of March 1959 and made between the Company of the one part and Mr. Frederick George Liversedge of the other part a copy of which was laid on the table and signed by the Chairman for the purpose of identification.

2. As an ordinary ressolution:

   That this meeting approves the appointment of Mr. Saradindu Gupta as a Managing Director of the Company with effect from the 1st October 1958 on the terms and conditions contained in an Agreement dated the 27th day of July 1959 and made between the Company of the one part and Mr. Saradindu Gupta of the other part a copy of which was laid on the table and signed by the Chairman for the purpose of identification.

By Order of the Board
A. G. Gidley
Secretary.

12, Mission Row
Calcutta
Dated 1st August, 1959.

Note: (I) A member entitled to attend and vote at this Meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(II) An Explanatory Statement is annexed to the covering Notice issued to members of the Company.

---

which was expected to be made soon.

It is felt that, if the rate of dividend is not altered, the scrip will recover to the level it reached recently. On the other hand, if there is even a nominal decrease in the rate of the dividend, the result may be crashing as sentiment of operators had already been rudely shocked.

Against the week-end closing of Rs 24.04, Indian Irons opened better at Rs 24.13 and, after improving further to Rs 24.14, gradually receded, on selling pressure, to Rs 23.80, to close finally at Rs 24.04. In sympathy, TEXMACO were marked down at one time to Rs 23.35 from Rs 23.75; Jessop to Rs 28.44 x.d. from Rs 29.94 c.d. and Britannia to Rs 12.87 from Rs 13.06, to finish at Rs 23.40; Rs 28.56 x.d. and Rs 13.00 respectively. Guest Keen Williams were offered at as low as Rs 38.62 against Rs 39.50. Marshalls, after improving to Rs 6.65 from Rs 6.25 following the dividend being maintained, eased off at the close to Rs 6.12 on profit-taking.

In the Miscellaneous section, price movements were irregular on lack of sustained support although a few selected scrip emerged with minor losses on balance. Orient Paper changed hands at Rs 35.60 to Rs 36.30 (Rs 35.60); Indian Cable at Rs 31.44 to Rs 31.75 (Rs 31.75); Indian Aluminium at Rs 21.87 to Rs 22.19 (Rs 22); Indian Copper at Rs 4.02 to Rs 4.10 (Rs 4.09); Hindustan Motors at Rs 10 25 to Rs 11.19 (Rs 11.19); India Steamship at Rs 14.06 to Rs 14.25 (Rs 14.19); Alkali Chemicals at Rs 22.37 to Rs 22.56 (Rs 22.44); Dunlop at Rs 32.94 to Rs 33.62 (Rs 33.37) and Rohtas at Rs 21.00 to Rs 21.69 (Rs 21.37). Philips India had sellers at as low as Rs 21.06 against Rs 23.25 following the disappointing dividend of 8½ per cent. BIC were quiet at Rs 4.75 against Rs 5.00 and so also NICCO at Rs 33.75 against Rs 36.50; National Carbon at Rs 34 against Rs 34.50 and Indian Oxygen at Rs 26.75 against Rs 27.56. Sirpur Paper were well maintained at Rs 12.69 and Hoare Miller at Rs 7.00.

*

Bombay

Wednesday Evening.

SENTIMENT in the Bombay Stock Exchange remained rather subdued during the week ending Wednesday. With the pivotal scrip finding its level in the light of the announcement of a dividend of Rs 6.80 as against the previous year's Rs 8.25, the extreme depression that afflicted marketmen was found to yield place to renewed interest in equities. But, in a view of the uncertainties in the investment situation, any upward movement had become untenable. In the first place, the size of the dividend of the other steel share is yet to be disclosed and quite naturally operators are justifiably cautious. Secondly there is the increasing size of the number of shares tendered in the settlement indicating unloading from institutional investors. The name of the LIC is again mentioned in this connection and the possibility of this institution coming out as a seller is always a matter requiring careful noting in the marketmen's calculations. Thirdly, the developments in Kerala, where Central intervention is a foregone conclusion, are pregnant with serious possibilities affecting the country as a whole. Fourthly, there is the announcement of the terms of loans from 12 State Governments for a total amount of Rs 57.50 crores which will mean a drain from the public of investible funds though it is to be remembered that, what with the present plethora of funds seeking investment, the loans will not make much of a difference as far as the stock market is concerned.

While the more speculative counters are inevitably influenced by the factors above noted, trading during the past week has been steadier in parts. The textile section is showing signs of recovery as reports from the cotton textile industry go to show that stocks are sizably lower and that exports are improving. A few bright spots are also noticeable in the miscellaneous section following reports of good working.

In the Steel section, Tata Steel closed last Saturday at Rs 179 but by Monday opening was easier at Rs 176. Due to lack of interest the rate further sagged to close on Monday at Rs 173.75. In the next two days, fluctuations were within a narrow groove and the scrip closed on Wednesday at Rs 173.75. Indian Iron was subjected to a two-way movement on day to day dividend rumours. Expectations here are that the dividend will be maintained. The scrip closed on Wednesday at Rs 24.12.

Textile shares displayed a steady undertone. Bombay Dyeing, which was quoting at Rs 64.60 earlier closed at Rs 65. Century was also slightly better at Rs 540. Kohinoor, however, was quiet at Rs 296. Svadeshi was a steady spot at Rs 237.50.

Among miscellaneous shares, National Rayon improved in later dealings to close higher at Rs 345.25 as against its rate on Monday of Rs 336.50. Hindustan Motors continued to be in request and was quoted at Rs 10.96 at close on Wednesday. Premier Construction after earlier weakness recovered to close steady at Rs 344. Though Bombay Burmah showed some improvement toward close on Wednesday at Rs 523.50, the scrip was much lower on balance as at one time on Monday, it was done upto Rs 535. Among Shippings, Scindia was well maintained at Rs 17.84.

*

Madras

MADRAS Stock Exchange witnessed dull activity with a good deal of hesitancy. On Tuesday, conditions proved a bit cheerful after the retreat in prices last week. Deccan Sugars, Consolidated Coffee and Aluminium Industries hardened 5 to 8 nP in the forward list on speculative support. In cash dealings, Travancore among Banks, Cauvery in sugars, Kumarkode among plantings and Textools in miscellaneous were all marked down. Textiles too were neglected.

Securities:—4 per cent 1967 Madras Rs 100.33 ct; 4 per cent Madras Rs 100.18 ct. sl; Rs 100.27 ct; Rs 100.27 ct sl; 4½ per cent 1970 Madras Rs 101.95 ct; 4½ per cent 1970 Andhra Rs 101.70 ct.

Banks:—There was restricted buying interest and only a small turnover was obtained. Mysore Bank had a few turnover at Rs 303.00; Indian Bank fully paid had enquiries at Rs 185 and partly paids at Rs 150.50. Indian Overseas Banks were marked upto Rs 166.50 fully paids and partly paids at Rs 136. Punjab National Bank had dealings at Rs 22.00 and Travancore Bank at Rs 21.87.

Sugars and Breweries:—There was indifference also in this section, the dealings ending Friday on fractional losses: Cauvery had been quoted at Rs 116.00. East India Distilleries which began encouragingly this week shed several points to be offered at Rs 38.37. Mysore Sugars changed hands lower at Rs 49.50. United Breweries were quoted sellers Rs 459.00.

Plantings:—Slightly better business was witnessed in this section. Anapari were quoted at Rs 5.55, Balanoor at Rs 16.75, Chembra Peaks at Rs 4.26, Coffee Lands at Rs 24.00, Cowcoody at Rs 6.15, Hailleyburia at Rs 19.10. Kailas was better at Rs 5.00 and Kil Kotagiris remained steady at Rs 8.05, Malankara and Midland had been round Rs 19.50 and Rs 11.75 respectively. Nilambur and Nelliampathy were offered at Rs 15.85 and Rs 2.70 respectively. Nonsuch had buyers at Rs 27.50, Parkside at Rs 22.40. Peermade improved to Rs 19.40 and Rajgiri was obtainable at Rs 17.40. Tirumbadi and Travancore Rubber both fluctuated within narrow margin at Rs 1.94 and Rs 14.00 respectively. Travancore Rubber and Tea were quoted at Rs 6.85. Twyford at Rs 18.90; United Nilgiris at Rs 20.35; Virudham was around Rs 27.40 and Wartyhully at Rs 3.53. Waterfalls had a few buyers at Rs 3.90.

Textiles:—These shares were better within narrow margins. Cannanore was steady at Rs 152.00; Coimbatore Cotton were marked at Rs 142.00; Coimbatore Pioneer remained a bit weak at Rs 280.00 and Dhanalakshmi were rated around Rs 197.50; Janardhana was at Rs 70.50; Kasthuri at Rs 24.75; Kothari at Rs 10.00; Krishnarajendra Rs 74.00; Loyal Rs 29.75; Mettur Rs 273.00; Pankaja Rs 55.00; Radhakrishna Rs 119.00; Rajalakshmi Rs 61.00; Trichinopoly Rs 11.00; Vasanta Rs 211.00, Virdhunagar Rs 42.00; Buckinghams at Rs 189; Rs 191 ct; Mettur Industries Rs 371.50 xd ct; Madura Mills shed some points further from Monday, week beginning, to Rs 29.37.

In the Miscellaneous section, Aluminium Industries were lifted at Rs 21.20; Rs 21.25 ct; Rs 21.35 ct; Radio and Electricals Rs 5 xd ct; Ashok Leylands at Rs 7.25; Mettur Chemicals Rs 13.55 cd ct; Dalmia Cements Rs 19.55; FACTs Rs 9.55; FACTs Rs 9.55; Spencer Rs 20.25; Parrys Rs 4.05.

*

London

ALTHOUGH there was a tendency to limit commitments, the London Stock Exchange made a satisfactory showing, Industrial equities claiming the most attention. Selective support was responsible for a number of good improvements; but there was also a fair sprinkling of losses.

An outstanding feature was a substantial rise in Wellman Smith following excellent results. Activity in Ford Motors was on a reduced scale. Leyland Motors were a good market, while Standard Motors regained an initial fall. Feature of Stores was a further advance in Mappin and Webb. Building shares were firm.

Gold shares were again unsettled. Copper shares closed firm after initial uncertainty. Rubber shares improved in sympathy with the recent advance in the price of the commodity.

Giltedged securities, however, showed widespread losses due to small selling in a market lacking support. Dollar stocks reflected the less favourable trend on Wall Street.

*

New York

CONDITIONS on Wall Street remained practically unchanged with prices showing only minor changes over last levels. While second quarter earnings reports attracted some buying, there was much caution due to the steel strike.

A few specialities were outstanding. Magnavox scored five points, while Motorola advanced by nearly 6 points on several rumours, including a possible stock-split. Anaconda Copper was quoted at $62; General Motors at $56½ and US Steel at $102⅜.

*

In Briefs

Dishergarh Power has raised the dividend from Rs 7.00 to Rs 7.50 per share for the year ended 31st March, 1959.

Bally Jute has maintained the dividend from Rs 6 to Rs 10 per share for the same year.

Birla Jute has maintained the dividend at Re 1 per share for the same accounting period.

National Tobacco has raised the dividend from 9 to 11 per cent for 1958.

In Williamson Magor Tea group, Dimakusi has reduced the dividend from 30 to 25 per cent, while Dufflaghur has raised the dividend from 30 to 45 per cent and Soom from 35 to 50 per cent, for 1958.

In Bombay, among Ruia group of mills, Bradbury has reduced the dividend from Rs 7.50 to Rs 5 per share for the year ended 31st March, 1959. Phoenix has maintained the dividend at Rs 10. Dawn has doubled the dividend to Rs 10 per share.

Indore Malwa United Mills have reduced the dividend from Rs 6 to Rs 5 per share for 1958,

Killick Industries have declared an interim dividend of Rs 3.50 per share and proportionate on the amount paid-up on the new shares, subject to deduction of tax. The dividend is payable on or after the 22nd September, 1959 to those shareholders whose names are registered as on the 8th September, 1959.

Indian Finance — INVESTOR'S SUPPLEMENT

Earlier Firmness not Maintained in July

WIDE fluctuations in price levels especially in the more speculative counters characterised trading on the Stock markets during July. The first half of the month witnessed a sharp uptrend while during the second half equities were generally under selling pressure. The smart rally witnessed in earlier dealings stemmed firstly from good corporate news coupled with the continued easy conditions in the money market. As anticipated the Central Loans had made no marked difference to the volume of funds seeking investment in equities. Moreover the disappointment felt over the postponement of the proposed new issue by the Tata Iron and Steel Company Limited had yielded place to renewed hope of an early receipt of Government sanction. A major contribution to revival of confidence in the stock market was the Prime Minister's clarification of the decisions of the Ootacamund Seminar. In response to a representation made by the Federation of Indian Chambers of Commerce and Industry, Mr Jawaharlal Nehru made it clear that private sector industries would be allowed to function unhampered. The assurance helped remove the lingering apprehensions about the future of private enterprise and the consequent relief felt by marketmen was reflected in higher equity prices.

The upsurge witnessed in the first half did not, however, go unchallenged. The fast shrinking yield pattern as a result of the sharp appreciation of equity prices was a point in favour of the bears who did not lose much time in drawing attention to the likely attitude of the Life Insurance Corporation to the prevailing trend in the Stock Market. The prospect of the LIC turning seller continued to dog the steps of operators throughout the rest of the month. At several points rumours of large sales by LIC pushed prices down steeply.

During the Second half of the month other retarding influences were found to be at work along with the reports about moves by the LIC to liquidate a part of its holdings. At one time it was the persistent rumour about a breakdown in the steel plant at Jamshedpur. The inspiration for it seemed to have been derived from reports regarding difficulties encountered in working some of the new equipment installed in connection with the two-million ton programme. From early dealings during the third week of the month the dominating influence was the TISCO dividend. The most optimistic among operators believed that the dividend would be maintained at Rs 8.25 but a large majority did not expect a dividend higher than Rs 7.50. But when the announcement was made, both sections were proved too optimistic. The Board of Directors had fixed the dividend at only Rs 6.80. The disappointment was both deep and widespread and Tata Steel lost Rs 13 in a matter of minutes to be placed at Rs 178. Indian Iron in sympathy reacted to quote below the Rs 24 mark. Another effect of the disappointing Tata Steel Dividend was fresh apprehensions about the size of the Indian Iron Dividend. Ever since the announcement of the dates for the closing of share transfer books the size of the Indian Iron dividend became a matter for active speculation. The fact that the new share would not rank for dividend this year seemed to have been conveniently forgotten and ideas of a lower dividend gained easy credence among a section. Many, however, could not find any plausible reason for not maintaining the dividend. Apart from the factors noted above, the Kerala developments and the huge outlay envisaged for the Third Five Year Plan provided further talking points for operators. It was generally believed that should the situation in Kerala get out of control the repercussions would be felt throughout the country.

Sectionwise, jute shares maintained a steady trend in view of the improved prospects of the jute goods industry. The anxiety felt till recently about the heavy stocks of sacking goods had given place to thoughts about making available adequate stocks to meet the increased foreign offtake. Sacking stocks recorded a steady decline for six months in succession in June. An indication of the improved statistical position of the industry was the IJMA's decision to unseal 1½ per cent of looms. It was, however, generally felt that more looms should be brought into working to meet the new situation. Off-take of sacking goods in recent weeks had been quite sizable and the market was yet to receive the bulk of orders from Australia which is an important consumer of sackings. This year China had placed substantial orders and indications were that further orders from that country were in the offing. As far hessian was concerned Burlap consumption in the USA had been already at a substantially high level and the usually high burlap consumption period (July to November) had just begun. Orders from Argentina were also expected to materialise during the coming months.

Coal shares were subdued because of the delay on the part of Government in making known their decisions on the recommendations of the Coal Prices Enquiry Committee. According to the spokesmen of the industry the finances of the industry are at a low ebb as a result of the heavy burden in the shape of high wages and amenities to labour and the increased cost of stores and equipment. The effect of these adverse developments is reflected in the slowing down of coal production. It is pointed out that if there is no early improvement the chances of reaching the Second Plan Target would become remote and what is more the repercussion would be felt in the Third Plan period also. The industry thinks that an immediate increase of Rs 3.50 per ton in the selling prices of coal will enable the collieries to work efficiently.

So far as Miscellaneous industrials were concerned the announcement of a maiden dividend by Hindustan Motors revived optimism in the future of automobile shares. Indications were that the industry had done very well during the current year.

In the Engineering section, Indian Iron met with sustained speculative support during the first half of the month with the rate taken to a high of Rs 25.56. In the second half however the scrip developed a sagging tendency following easier advices from Bombay to close the month at Rs 24.04. Other Engineering shares displayed a similar trend.

Perhaps the Tea section is the only exception which displayed a diverse trend. The improved response at the auctions during the month seemed to have been responsible for the revival of sustained interest. As against the opening rate of Rs 19.25 Brooke Bond closed better on balance at Rs 20.
