FOR THE INVESTOR

China-phobia

Investment Gossip:

DIVERGENT trends prevailed in Dalal Street and Lyons Range during the first half of the week just ending. The Bombay Stock Exchange ruled steady to firm with conditions becoming almost buoyant on Thursday. There has been a reversal of the trend on Friday as most pivotal scrip have lost part of their earlier gains on selling pressure. In Calcutta, the trend has been irregular. After a promising start, equities turned listless and the dullness continued unbroken up to close of Wednesday. The ontinuous higher advices from Bombay induced a cheerful undertone on Thursday but the recovery did not last long as on Friday sentiment seems to have become somewhat jittery.

It is clear that stock markets in India are worried over the developments in the NEFA region. Sino-Indian relations have become a vital matter for stock markets and fertile imaginations will find full play in the market places till a clear-cut settlement is reached between the two countries. It would appear that the cause of Friday's nervous selling both in Lyons Range and Dalal Street is some fresh adverse rumour about the NEFA border. Presumably, in the estimate of the situation by the speculative fraternity, anything may happen any moment. It is against this mental attitude that Mr Nehru has warned the nation at his monthly press conference on Friday.

But our market friends may argue that the Prime Minister has at the same time admitted that, after the letter from Chou En-lai, the situation is to be deemed serious. Evidently when the selling orders were given, the more important part of Mr Nehru's statement had not been heard. He has said that he does not at all expect any sudden development which would lead to any kind of conflict, even a small one.

Calcutta's depression while Bombay has been putting up a cheerful front is quite understandable. In the first place, the situation in the city arising out of the food agitation was not hundred per cent normal in the sense that the echo of the Government action to quell the disturbances would be heard for some time to come. Secondly, the deterioration in the Sino-Indian relations cannot be viewed as calmly as in other parts of the country for the simple reason of Calcutta's close proximity to the disturbed area. Thirdly, with the year's longest recess only a month away, there is what is called the Pre-Puja feeling.

It is to be expected that the stock market will shed its China-phobia in the light of Friday's statement of Mr Nehru. A point to be noted is that Government do not view the matter as one for alarm. For, some important members of the Central Cabinet are out of India or will soon go abroad. The Finance and Defence Ministers have already left, and Mr Nehru has said that his programme of visit to Afganistan and Iran stands. He will be away for a week from next Monday.

Once the anxiety about Chinese incursions on our soil is banished, investors and operators cannot remain unimpressed by the bright prospects ahead of equities. The Reserve Bank Board's annual report published on Thursday, as far as the stock exchanges are concerned, contains good tidings. The Second Plan as revised will go through. The report says that judging from certain indicators overall economic activity "appears to have recorded a rise during the year". One may add to this Mr Nityananda Kanungo's announcement on Friday that India's exports during the first seven months have risen by Rs 13 crores as compared with the corresponding period of last year. He has also said that the increase has been brought about largely by new lines of exports.

£ R$

Star Paper

Investment Special:

A new issue which has all the ingredients of ensured success is that of Star Paper Mills Limited.

Firstly, it is being made at a time when the money market is easy, and the stock exchange is relatively starved of good scrip.

Secondly, the industry represented by the company is assured of continued prosperity as far ahead as we care to look.

Thirdly, the form that the new issue has taken should be such as to be particularly enticing For the Investor.

Fourthly, prospects as they emerge from the prospectus announcement (details of which are published on page 525 et seq) are For the Investor promising.

The new issue now being made is for a total of Rs 70 lakhs; but, of this, Rs 45 lakhs' worth have already been taken or agreed to be taken by existing shareholders, directors, managing agents and their friends.

Now offered to the public is Rs 25 lakhs' worth of 7 per cent Cumulative tax-free Convertible Third Preference shares of Rs 100 convertible into equity capital at par after seven years at shareholders' option, and redeemable, if the option is not exercised, within 15 years from date of allotment.

This issue is being made to finance an expansion scheme intended to raise annual output from the present 6,500 tons to 25,000 tons and costing Rs 3.3 crores.

The expansion is to be financed as to Rs 1 crore by way of loan from the Industrial Finance Corporation, as to Rs 1.05 crores through deferred payment facilities against imported plant and equipment, as to Rs 55 lakhs through an earlier issue and as to the balance of Rs 70 lakhs from the new issue.

RECORD OF ACHIEVEMENT
Sound underwriting and outstanding service to Policyholders are reflected in the rapid progress made by the ORIENTAL FIRE. Transacting Fire, Marine, Motor, Accident and all other classes of non-life business ORIENTAL FIRE also offers specialized cover against Machinery Erection and Breakdown and Boiler Explosion risks.
ORIENTAL FIRE AND GENERAL INSURANCE CO., LTD.
Head Office : Oriental Buildings, BOMBAY-1

Calculations of estimated profit suggest that, after meeting depreciation and tax provisions, the company would be able to repay the loan against deferred payment and, at the same time, after paying preferential dividend, declare 10 per cent on equity capital.

Thus, subscribers to the new Convertible notes are offered a two fold advantage of: fixed dividend, cumulative and tax-free in character, during the period when loan repayments may be heavy; and option to convert into equity capital, at a time when the company would be in a position to declare a satisfactory dividend on ordinary shares.

It needs hardly to be added that the Company's prospects are further enhanced by its strong directorate, and particularly headed as it is by Mr N. K. Bajoria, as the Chairman.

It is these features which indicate that the Star Paper issue will be a steller attraction.

£ R$

Investment Notes:

The India Paper Pulp Company Limited proposes to issue 2,52,000 Ordinary shares of Rs 10 each at a premium of Rs 2.37 per share. The shares are to be offered in the ratio of two new ordinary shares for every five ordinary shares held. The consent of the Controller of Capital Issues has been received. The new capital is being raised with a view to liquidating the indebtedness incurred in connection with the expansion programme of the company.

The production of the Indian Iron & Steel Company Limited, for the first five months of the current financial year, compares favourably with that of the first six months of the previous year (figures in tons):—

	1959-60 (for 5 months)	1958-59 (for 6 months)
Pig Iron ...	451,638	444,905
Steel Ingots ...	321,230	255,504
Saleable Steel ...	252,376	206,517

The output of saleable steel of the Tata Iron & Steel Company, Limited is slightly lower at 97,100 tons last month as against 98,500 tons in the previous month. There is, however, an increase in the production of Finished Steel to 61,300 tons from 56,900 tons. The output of Semi-finished Steel has declined to 35,800 tons from 41,600 tons. Pig Iron production has, however, risen to 128,700 tons from 125,000 tons and Steel Ingots to 125,500 tons from 121,100 tons.

The Orissa Cement Company Limited has proposed to issue 7,50,000 equity shares of Rs 10 each, at par, in the ratio of 1:2 to holders as on the 30th September, 1959.

In Bombay, there are rumours that the New Great Eastern Spinning and Weaving Company, which is under the management of W.H. Brady & Company, will change hands. It is said that Mr Shriyans Prasad Jain and Mr S. R. Damani will acquire over 8,000 ordinary shares of the company. The shares are presently quoted around Rs 180.

In Madras, K.C.P. Limited has decided to issue 1,96,205 new equity shares of Rs 10 each, at par, to the existing shareholders in the proportion of one new share for every two shares held.

The Haileyburia Tea Company Limited proposes to raise the autho-

rised capital from Rs 25 lakhs to Rs 50 lakhs by the creation of 2.5 lakh equity shares of Rs 10 each and issue 62,500 shares, at par, in the ratio of 1:3. The company has agreed to issue the new shares to the holders as on a future date.

The Twyford Tea Company Limited proposes to issue 45,000 equity shares of Rs 10 each, at par, to holders as on the 24th August in the proportion of two shares for every five equity shares held.

Midland Rubber and Mysore Amalgamated have maintained the dividends at 10 per cent for the year ended 31st March, 1959.

4,000 miles of Indian coastline

Look at the vast coastline of India with its many ports and harbours, both large and small. There is a lively trade along the 4000 miles of the Indian coastline and many people travel from port to port.

The coastal trade is guaranteed to Indian shipping companies. The Scindia Steam Navigation Co. Ltd. and its subsidiary the Bombay Steam Navigation Co. Ltd. carry between them large number of passengers and many tons of cargo in their ships every year. The passenger steamers are fast and modern and fitted with many conveniences for the comfort and safety of the passengers.

SCINDIA SHIPS SERVE INDIA'S NEEDS

THE SCINDIA STEAM NAVIGATION CO. LTD. Scindia House, Ballard Estate Bombay 1.

McLeod Repeats

Balance-Sheet Reviews:

DESPITE a reduction in profits, McLeod & Company, Limited has maintained the dividends, on both the Ordinary and Deferred Ordinary shares, at 12½ per cent and 7½ per cent respectively for 1958. The decline in profits is mainly due to a reduction in the Agency Department's earnings, which are shown at Rs 24.45 lakhs against Rs 28.23 lakhs. Revenue from the Jute and Tea departments have recorded some improvement, while income from the Insurance, Engineering and Shipping Departments have shown little variation when compared with that of the previous year.

Sales have declined to Rs 3.15 crores from Rs 5.91 crores, while the net profit, after providing for Depreciation and Taxation, amounts to Rs 10.73 lakhs against Rs 12.95 lakhs in the previous year. Apart from setting aside a sum of Rs 2.00 lakhs for Convertible Notes Redemption Reserve, Rs 1.00 lakh for General Reserve and Rs 673 for Development Rebate Reserve, the Depreciation amount is reduced to Rs 81,413 from Rs 1.21 lakhs and Taxation provision to Rs 8.00 lakhs from Rs 9.30 lakhs.

The balance-sheet, as at 31st December 1958, shows a paid-up capital of Rs 96,86,900, which includes Rs 1,86,900 being the Share Premium Account. The capital consists of 40,000 Ordinary shares of Rs 100 each; 50,000 Deferred Ordinary shares of Rs 10 each; 40,000-5 per cent Cumulative Second Preference shares of Rs 100 each and 10,000-5 per cent taxable Cumulative First Preference shares of Rs 100 each. 18,000 Ordinary shares of Rs 100 each have been set aside for issue to the holders of the Rs 45,00,000-4 per cent Convertible Notes in the event of the option to convert before 31st December, 1972, being exercised.

Reserves and surplus are shown at Rs 84,00,672. Of this, Convertible Notes Redemption Reserve stands at Rs 22 lakhs; General Reserve at Rs 52 lakhs; Investment Reserve at Rs 10 lakhs and Development Rebate Reserve at Rs 672. The gross block at Rs 44.70 lakhs is depreciated by Rs 11.95 lakhs to show a net block value of Rs 32.75 lakhs.

£R$

Rewa Coalfields

Rewa Coalfields Limited has reported a net profit of Rs 4.76 lakhs for 1958 as against Rs 1.54 lakhs in the previous year, thanks to a rise in sales from Rs 64.82 lakhs to Rs 76.11 lakhs. After providing a sum of Rs 2.35 lakhs for General Reserve and Rs 98,348 for Development Rebate Reserve, the directors have raised the Depreciation amount to Rs 2.05 lakhs from Rs 1.83 lakhs and Taxation provision to Rs 2.69 lakhs from Rs 1.60 lakhs. The dividend, is, however, maintained at 10 per cent.

Both raisings and despatches are higher at 409,275 tons and 410,693 tons against 373,388 tons and 373,679 tons respectively.

£R$

Bormah Jan Tea

The Bormah Jan Tea Company Limited in McLeod group, has been able to declare a dividend of 7½ per cent for 1958 as against nil in 1957 following a net profit of Rs 3.07 lakhs against a loss of Rs 1.47 lakhs. In respect of allocations, the Depreciation is raised to Rs 33,832 from Rs 31,510, while a sum of Rs 86,000 (nil) is provided for Taxation; Rs 4,000 (nil) for Wealth Tax; Rs 6,800 (nil) for Development Rebate Reserve and Rs 70,000 (nil) for Building and Machinery Reserve. Crop outturn is higher at 7,816 maunds against 4,319 maunds and the average price realised at Rs 2.49 against Rs 2.16 per pound.

£R$

Dejoo Valley Tea

The Dejoo Valley Tea Company, in the same managing agency group, has raised the dividend from 20 to 30 per cent. The net profit amounts to Rs 1.28 lakhs against Rs 43,015 in the previous year. The directors have set apart Rs 42,304 (Rs 52,529) for Depreciation; Rs 94,000 (Rs 45,000) for Taxation; Rs 2,000 (nil) for Wealth Tax; Rs 7,000 (nil) for Development Rebate Reserve and Rs 1.00 lakh (Rs 25,000) for General Reserve: Crop outturn is shown at 5,179 maunds against 4,045 maunds and the average price realised at Rs 2.49 against Rs 2.42 per lb.

£R$

Teloijan Tea

The Teloijan Tea Company Limited —the third in the group—has, however, reduced the dividend from 30 to 25 per cent due to a lower profit of Rs 1.71 lakhs against Rs 2.43 lakhs. Apart from providing Rs 3,800 for Development Rebate Reserve and maintaining Wealth Tax at Rs 8,000 and Building & Machinery Reserve at Rs 50,000, the Depreciation sum is raised to Rs 67,026 from 53,326 and Taxation provision to Rs 1.77 lakhs from Rs 1.45 lakhs. Crop outturn is lower at 9,945 maunds against 10,300 maunds; but the average price realised is higher at Rs 2.35 against Rs 2.25 per lb.

£R$

Tyroon Tea

The Tyroon Tea Company, Limited, the fourth in the group—has halved the dividend to 15 per cent for 1958 despite a rise in the net profit to Rs 2.62 lakhs from Rs 1.56 lakhs. This is mainly due to larger provisions made for various funds. Taxation amount is raised to Rs 1.85 lakhs from Rs 1.20 lakhs; while a sum of Rs 10,000 is set apart for Development Rebate Reserve and Rs 1.50 lakhs for Building and Machinery Reserve. Crop outturn is shown at 15,467 maunds against 16,082 maunds and the average price at Rs 2.47 against Rs 2.16 per lb.

£R$

Seajuli Tea

The Seajuli Tea Company Limited, in Williamson Magor group, has earned a net profit of Rs 91,520 against Rs 1.10 lakhs. The directors have provided Rs 34,014 (Rs 35,342) for Depreciation; Rs 1.00 lakh (Rs 80,000) for Taxation; and Rs 25,000 (nil) for Repairs and Renewals Reserve. The dividend is, however, maintained at 22½ per cent. Crop outturn is higher at 439,136 maunds against 420,226 maunds; but the average price realised is lower at Rs 2.74 against Rs 2.91 per lb.

£R$

Birpara Tea

In our comments on Birpara Tea for 1958, it was stated that General Reserve was maintained at Rs 10,000. In its place, it should be read as "Revenue Reserve is maintained at Rs 50,000".

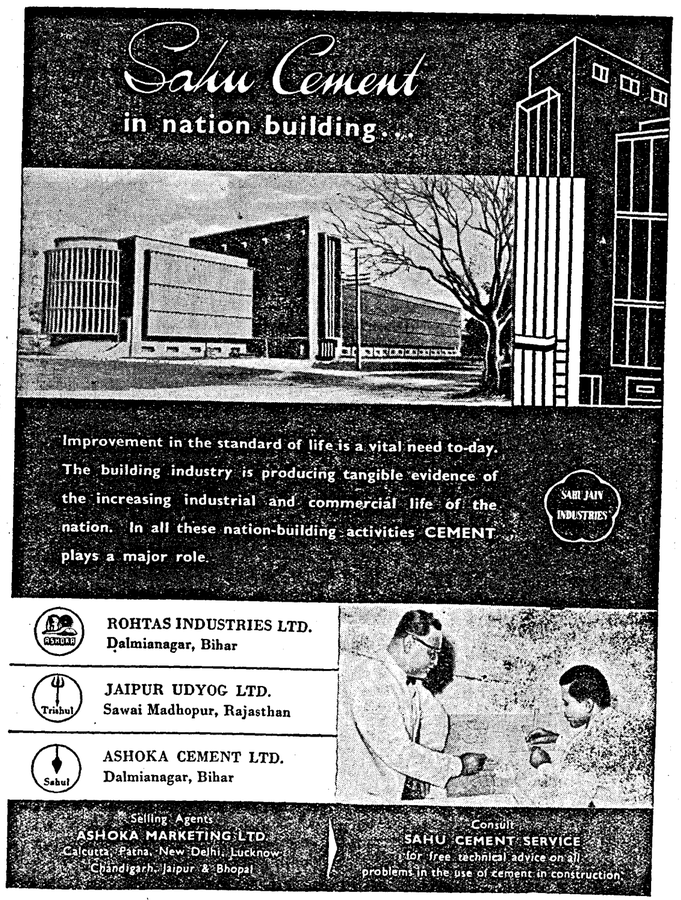
£R$

Periakaramalai Tea

The net profit before providing for taxation and depreciation has been announced at Rs 19.75 lakhs. This was against Rs 20.20 lakhs in the previous year. The amount set aside toward depreciation is Rs 3.31 lakhs against the last year's Rs 3.06 lakhs. The tax appropriation is Rs 6.70 lakhs. This was higher at Rs 10.43 lakhs last year. Development rebate receives Rs 58,731 against last year's Rs 42,538. A sum of Rs 2 lakhs has been trnsferred to General Reserve against Rs 1.72 lakhs last yaars. The dividend on ordinary shares has been raised to 12½ per cent from 10 per cent. Current year tea harvest was 4.87 million lbs against 4.91 million lb. last. Coffee crop was 9.75 tons against last year's 14.73 tons. Tea estimate for 1959-60 provides for a crop of 4.70 million lbs.

The Company had incurred capital expenditure during the year on buildings and machinery amounting to Rs 2.29 lakhs and Rs 3.11 lakhs respectively. In the upkeep of immature tea acreage, the expenditure involved is reported at Rs 1.14 lakhs.

£R$



Duncan Brothers

In our comments on Duncan Brothers' accounts for 1958, we have stated that there has been a provision for taxation of Rs 17,000 (Rs 19,000). It should be read as Rs 17,00,000 (Rs 19,00,000).

£R$

Aluminium Industries

The net profit of the Aluminium Industries Limited for the year ended March 31, 1959, is reported at Rs 33.55 lakhs against Rs 32.38 lakhs in the previous year. Production was higher. Sales due to competition were lower at Rs 3.36 crores as against Rs 3.76 crores in the previous year. Consumers had therefore the benefit of the lower prices. Amount allotted to depreciation is Rs 9.14 lakhs against Rs 7.53 lakhs. Taxation allotment this year is at Rs 10.35 lakhs against Rs 14.27 lakhs. While there was no allocation for the development rebate last year, this year's allotment is Rs 4.07 lakhs. To meet residual tax liability, a sum of Rs 2.85 lakhs has been transferred to taxation reserve. A final dividend of 6½ per cent has been made, which with the one already made makes the total dividend 12½ per cent for the whole

year. The amount required for this is Rs 10 lakhs against Rs 8.75 lakhs last year.

£ R$

Madras Safe Deposit

The Company reports a profit of Rs 21,375 for the year ending June 1959. With another Rs 4,013 brought in, the amount available is Rs 25,318. Depreciation provision is Rs 9,442, taxes Rs 7,400 and a dividend of 5 *per cent is declared. The carry* forward is Rs 624. Rents from locker, etc., total Rs 56,208 against last year's Rs 53,218.

£ R$

Cottanad Plantations

The report shows a profit of over Rs 79,942 and after taking Rs 20,000 from general reserve the disposable surplus exceeds Rs 1.08 lakhs. The directors have allotted Rs 33,000 to taxation and dividend of 15% on the ordinary shares requires Rs 60,000. The directors expect the earnings to be better after establishment of the tea factory on its own estate.

£ R$

Enfield India

Enfield, India Limited by the year ended December 31, 1958, had increased sales to Rs 68.01 lakhs against Rs 41.16 lakhs due to increased production by 50%. The net profit has increased to Rs 4.92 lakhs from Rs 1.51 lakhs. The amount set aside for depreciation is higher at Rs 2.68 lakhs against Rs 82,496 last year. A sum of Rs 2 lakhs has been provided for development rebate. No sum was allocated in the previous year in this account. It has been possible only to pay dividends on a larger preference capital. On the larger earnings expected in 1959, dividends on ordinary shares would be possible.

£ R$

Venkatesa Mills

The net profit for the year ended 31 December 1958 before providing for taxation and depreciation was better at Rs 18.53 lakhs as against Rs 16.86 lakhs in 1957. Amount set *aside for depreciation is Rs 6.61* lakhs and development rebate Rs 4.78 lakhs. Taxation provision is higher at Rs 5.40 lakhs. The dividend of 16% on ordinary shares is payable on a capital increased by *the issue of new ordinary share f r* every five shares held. The dividend on the previous capital was 20%. The dividend amount required Rs 5.39 lakhs against Rs 5.63 lakhs.

General Papers

The net profit for year ending 31, March 1959 rose to Rs 3.75 lakhs. It was Rs 2.95 lakhs in 1957-58. The Depreciation provision amount is Rs 2,639, transfer to general reserve is Rs 48,452 and dividend equalisation reserve is Rs 45,000. The provision for bad and doubtful debts is Rs 10,000 while taxation provision is Rs 1.71 lakhs. The ordinary dividend of 12½% is payable on increased capital (paid up of Rs 7.5 lakhs) and the amount required is much higher at Rs 93,750.

£ R$

Mysore Lamp Works

For the year ended March 31, 1959, the Mysore Lamp Works Limited reported a better profit of Rs 3.31 lakhs against Rs 2.97 lakhs in 1957-58. Depreciation allotment is Rs 45,309 against last year's Rs 44,347. Taxation appropriation is Rs 1.60 lakhs against Rs 1.41 lakhs of last year. Gratuity reserve allocation is Rs 20,000, and no provision was made last year. Dividend on ordinary *shares has been raised to 76% from* 15%. Production has recorded an increase, and the company has proposals to expand its manufacturing programme, undertaking the making of floorescent and mercury vapour lamps. They hope to secure foreign collaboration.

£ R$

Negapatam Electric

The profit upto 31st March 1959 amounted to Rs 49,460 against Rs 57,585 in the preceding year. To these may be added Rs 3,243, withdrawn from the Tariff and Dividend Control Reserve, Rs 10,000 from Taxation Reserve, Rs 741 being excess tax provision in the previous year and Rs 3,688 brought forward from the previous year. The aggregate of Rs 67,312 is allocated: Development Reserve Rs 8,000, Contingencies Reserve Rs 3,700, Debentures Sinking Fund Rs 4,000, Tariff & Dividend Control Reserve Rs 2,071, Consumers Benefit Fund, Rs 2,071, Gratuity Rs 3,000. The preference dividend absorbs Rs 6,000 and the 7% dividend recommended on the ordinary shares against 8% last year absorbs Rs 37,364 and the balance of Rs 1,106 carried to the current year. The Company expects that in view of the revision of bulk supply rates by the Madras State Electricity Board effective October 1959, the increase in the bill payable to Government would be Rs 84.000.

THE HONGKONG AND SHANGHAI BANKING CORPORATION

(Incorporated in Hong Kong with Limited Liability)

Head Office: HONG KONG

Chairman and Chief Manager: The Hon. MICHAEL W. TURNER, C.B.E
Deputy Chief Manager: C. O. W. STEWART
London Office 9, Gracechurch Street E.C. 3.

Capital Authorised	- Hong Kong $ 100,000,000
Capital Issued and Fully Paid up	- Hong Kong $ 62,311,375
Reserve Fund	Sterling £ 8,000,000

Every description of Banking and Exchange Business transacted with the principal commercial centres of the world.

A comprehensive service as Trustees and Executors is also undertaken by the Bank's Trustee Companies in Hong Kong, London, and Singapore.

The White Paper

COMMENT on the White Paper on the notes and letters between the Government of India and of the People's Republic of China from July, 1954 to August, 1959 is an unavoidable though melancholy task. Coinciding as the period does with the life of the doctrine of Pancha Shila, the White Paper throws a depressingly ironic light on the Chinese professions of the doctrine during the period. It now appears that, within three months of the signing of the Indo-Chinese declaration on peaceful coexistence in 1954, China was making attempts at territorial aggression against India. The hundred-twenty-page document contains the texts of 34 notes (23 from India and 11 from China) and of correspondence between Mr Nehru and Mr Chou En-lai on such diverse subjects as allegations of misbehaviour of Indian troops in Gyantse, violation of frontiers by aircrafts, passing on of complaints by Bhutan of Chinese high-handedness, accusations of espionage in Kalimpong, harassment of Indian nationals and traders in Tibet, complaints about maps and more recently of allegations of "Indian imperialism" and refutation thereof and of actual aggression against India. Border troubles have continued throughout the period, with China sporadically occupying small bits of Indian territory along the Himalayan ranges. One of the more serious of such incursions took place about four years ago in the Barahoti region of Garhwal in the UP. Later in 1957, the Chinese built a road that passed through Ladakh, parts of which were also occupied by the Chinese from time to time. Whenever protests were sent, the Chinese claimed that the area in question really belonged to China and that it was India that was trespassing on Chinese territory.

The White Paper throws a lurid light not only on Chinese cynicism about obligations under Pancha Shila, but also on their blatant opportunism. Neither at the time of signing of the agreement in 1954 nor at the time that Mr Nehru was in China immediately thereafter, was any indication given by China that there were outstanding border disputes between the countries. It was Mr Nehru who brought up the question of certain Chinese maps showing large chunks of Indian territory as part of China. Mr Nehru also told the Chinese Prime Minister that, as far as India was concerned, "our boundaries were quite clear and were not a matter for argument". Mr Chou was good enough to reply that "these maps were really reproductions of old pre-liberation maps and that they had had no time to revise them." In 1956, when Mr Chou visited India, he discussed the border question with Mr Nehru in the context of disputes with Burma on the border question. He also told Mr Nehru that he accepted the McMahon Line as far as Burma was concerned, and that he "proposed to recognise this border with India also." Mr Nehru's minute of these talks further records that "Premier Chou had gone into the question in connection with the border dispute with Burma, and although he thought that this Line, established by British Imperialists, was not fair, nevertheless, because it was an accomplished fact and because of the friendly relations which existed between China and the countries concerned,.... the Chinese Government were of the opinion that they should give recognition to this Line. They had, however, not consulted the Tibetan authorities about it yet. They proposed to do so." In the light of how the Tibetan authorities were treated subsequently, this solicitude for their concurrence makes odd reading.

Subsequent to this, however, protracted talks over one of the minor border disputes led to nothing; and meantime, a Chinese journal printed a map of China including therein large chunks of North Eastern Frontier Agency, some other parts of India and a good bit of Bhutan. When questions were asked in Parliament and elsewhere in India and the attention of the Chinese authorities was drawn to it, India was again told that these were old maps. But now, significantly, it was added that the "Chinese authorities had not yet undertaken a survey of the Chinese boundary nor consulted with the countries concerned and that it will not make changes in the boundary of its own." This is the first occasion when the People's Republic refers to the need for survey for determining the frontier.

In his letter dated 14th December 1958, Mr Nehru wrote to Mr Chou detailing these circumstances and expressing his surprise at this change of the Chinese stand on the question. Mr Chou's reply dated 23rd January 1959 to this shows clearly that the Chinese had come to the conclusion that it was no longer necessary to keep up appearances. He acknowledges that the border question was not raised in 1954, but the reason he gives for this reticence has a familiar unpleasant ring. It is that "conditions were not ripe for its settlement" in 1954. So, all the time the welkin was being rended by the slogan, "Hindi-Chini Bhai-Bhai", Mr Chou was smilingly acknowledging it, and he was waiting for the border question to "ripen". But even this will not explain why he "accepted" the McMahon Line. Mr Chou now explains what he meant when he discussed things with Mr Nehru and U Nu. "McMahon Line is a product of British policy of aggression against the Tibetan region of China....Juridically, too, it cannot be considered legal. I have told you that it has never been recognised by the Chinese Central Government. Although related documents were signed by a representative of the local authorities of Tibet, local authorities were dissatisfied with this unilaterally drawn line." But, since the Line was drawn, India and Burma have become independent and have shown themselves friends of China. Therefore, the Chinese Government are, on the one hand, going to take a more "realistic attitude towards the McMahon Line" and, on the other "cannot but act with prudence". This particular contrast between "realistic" attitude toward McMahon Line and "prudent acting" is somewhat intriguing. Why should it be imprudent to be realistic toward the McMahon Line? Is it that the translator has missed Mr Chou's point? Or can it be that Mr Chou is in effect asking Mr Nehru to read between the lines and understand that Mr Chou thinks it politically expedient for him not to accept too readily the McMahon Line? Earlier references in the letter to the Chinese people's indignation about the McMahon Line may make this explanation plausible. If this indeed is the explanation, it would be a matter for some gratification to us as democrats. For, this is probably the first time that the Communist regime in China has shown itself not only responsive to but actually apprehensive of popular opinion in the country!

Mr Nehru's second letter to Mr Chou sets him right about the history of the McMahon Line. It was at the tripartite conference in Simla in 1913-14 of the three plenipotentiaries of the Governments of India, Tibet and China, that the McMahon Line was actually drawn. The representatives of Tibet signed the agreement on instructions from Lhasa. But the representative of China refused to sign it, though he had earlier initialled it. But, interestingly, the reason for the refusal was not that the McMahon Line between India and China was unacceptable but that the Chinese had some objections to the delineation of the frontier between Inner and Outer Tibet, and between Tibet and China.

Apart from this, the McMahon Line, running as it does along the crest of the High Himalayan ranges, is geographically the most sensible demarcation. Short of a hypothesis of expansionism on the part of China, it is difficult to account for China's obduracy over the Line whose geographical raison d'etre is so unquestionable. Surely, it is not that these hilly and almost uninhabited tracts have any value except that they give China a foot-hold on our side of the Himalayas. We should be loath to believe that China's thoughts lie that way at all.

Two other aspects of the White Paper call for brief notice. One is the Chinese bad manners revealed in some of their notes. In a people noted for exaggerated formality, this lapse in good taste can only be attributed to deliberate rudeness. In a sense, it is a measure of their secret shame at what they have done in Tibet. In another sense, it is their cynicism on the rebound. The Chinese authorities must have felt disconcerted to discover that India did not interpret Pancha Shila as a craven acquiescence in whatever China did, in order merely to keep up appearances.

The other aspect that needs comment is that the most recent note to China dated 28th August 1959 has clearly warned the Chinese Government that any further violation of Indian territory by the Chinese frontier forces would be met with resistance and that our "frontier posts have been asked to use force on the trepassers if necessary." In other words, the responsibility for the consequences of such ill-advised encounters as took place last month will be squarely on the shoulders of the People's Republic. No sane Government can lightly risk taking on itself such odious responsibility.

In such manner have the Indian Government indicated their firm resolve. It would be dangerous folly for China naively to believe that India will not back up, if necessary, its words by deeds. China would be wise to remember that War it was, though not of the traditional kind, that won us freedom 12 years ago.

"Cinva-Ram"—Simple Home Building Tool

A WORLD-WIDE organized effort is under way to put a simple house building tool into the hands of millions of eager, willing but unskilled people in order to alleviate the desperate shortage of decent housing, school buildings and other community facilities in the rural areas of developing countries.

The tool is the **Cinva-Ram** Block Press which makes it possible for two people working together to make enough bricks or building blocks and tiles in five to eight days to build a three-room house. Necessary materials are soil, water and a small amount of lime or portland cement depending on local conditions.

Described as "a manual tool—not a machine," families of limited means can themselves use it to "build the walls and floors of their houses." It is already proving its worth in many areas. It is also intended for rural cooperatives for use in building schools and community buildings.

Interest in the machine has spread around the globe, according to the monthly journal **Economic World,** published by the Committee for International Economic Growth, Washington D.C.

Two US Government agencies—the International Cooperation Administration and the International Division of the Federal Housing and Home Finance Agency—and the National Retail Lumber Dealers Association are all cooperating to give advice and assistance in the marketing and use of the **Cinva-Ram** presses in foreign countries.

The world distributing and licensing operations for the **Cinva-Ram** block-making press have been taken over by the IBEC Housing Corporation of New York, a subsidiary of the International Basic Economy Corporation which the Rockfeller brothers established in 1947 to promote economic progress in the developing countries. Royalties will be paid for the world franchise to the Pan American Union, which is the General Secretariat of the Organization of the American States (OAS).

About 300 presses a month are being produced under the first licensing arrangement with the Richmond Engineering Co., Richmond, Virginia. The Mexican affiliate of the US Business Council for International Understanding has been granted a license and will start soon to manufacture the presses for Central America and Mexico. Eventually the IBEC Housing Corporation plans to license manufacturers throughout the world.

Looking much like an oversize cooky cutter, the 140-pound block press consists of a metal box mould into which is shovelled a slightly moistened mixture of ordinary soil and 8 per cent or less of a stabilizer such as portland cement or lime. Preferably the soil should have a sand-to-clay ratio of between 60-40 and 75-25.

The mixture is compressed by a piston moved by a hand-operated lever mechanism, making it possible for a "pull-down" of about 70 pounds force to exert a compression force of 40,000 pounds. Its retail cost at present is $150.

The building block the **Cinva-Ram** produces has proven stronger than conventional cement or cinder block in tests made by the US Government's National Bureau of Standards and others.

In many areas of the world **Cinva-Ram** blocks cost as little as six-tenths of a cent ($.006) each if made by the user—about one-twentieth of the cost of conventional masonry material. For example, in a three-room house recently built in Venezuela of **Cinva-Ram** bricks, the total cost of the bricks, including the inside partitions, was $30. Similar commercially made bricks for the same house would have cost approximately $300.

The inhabitants of one small village in Mexico each saved pesos comparable in value to 15 naye Paise out of their meagre earnings each week, and after four months had eough to build a combination community centre and school building.

Usually the press is operated by two persons. One operates the lever while the other loads the earth mixture into the box and removes and stacks the finished block. The two men can turn out 300 to 600 blocks a day which need no baking and are ready for use after 15 days curing away from sun and rain.

China's Iron & Steel Industry

IT may be recalled that a brief reference was made in the Delhi Review page of **Indian Finance** dated August 1, 1959, to some of the recommendations of the Indian Steel Delegation to China. The report, now available, of this delegation, which was led by Mr K. S. Raghupathi of the Ministry of Steel, Mines and Fuel, is notable for the light it throws on the "native furnaces" built in 1958 and since abandoned and on the current techniques of iron and steel production in small-scale units in that country. The "native furnaces", which took only a few days to build, came into existence in hundreds of thousands all over the Chinese countryside and produced iron which was acceptable, according to the report, for the limited purpose of meeting the sudden spurt in demand for agricultural implements required for the fulfilment of the agricultural plan in 1958. These improvised furnaces were generally of two types, single and twin shaft, varying from 3 cu. m. to 6.5 cu. m. in volume per shaft. The inside of the furnaces was lined with a mixture of fireclay and coke powder. At about 8 to 10 metres from the furnace proper was installed a small blower run by an electric motor, air being led through a pipe 12 mm. in diameter. The entire construction was in the open except for a small corrugated sheet cover for the electric motor. Transport of materials to the furnace and sizing, mixing and charging of raw materials were all done manually. All the iron produced at these furnaces was sent to steel works elsewhere. The co-efficient of utilisation of these furnaces—tons of iron produced per cubic metre volume in 24 hours—was less than half of the appropriate co-efficient in the case of large furnaces. The cost of production of iron by these "native furnaces" was, therefore, as high as Rs 392 per ton (200 Yuan).

With the abandonment of these uneconomic furnaces, small modern furnaces ranging in size from 6.5 cu. m. to 28 cu. m. have recently come into vogue in China. These small furnaces are of brick work with a casing of steel plate for the bosh and tuyere jacket zones. Some mechanical aids in handling of raw materials are used here. Iron made in these furnaces is of a slightly better quality than that made in "native furnaces". The co-efficient of utilisation of the small furnaces is only 0.7 to 0.8, and the cost of production of iron is comparatively high. This high cost of production, however, is not likely to discourage their continued operation because there is the favourable factor of iron ore and coal occurring almost in every one of the 25 provinces of China—a factor enabling the dispersal of iron and steel works all over that country. Such dispersal is also necessitated by the inadequacy of railway mileage which, by the end of 1962, will only be about two-thirds of the present mileage in India.

It is stated in the report that the fact of development of bigger furnaces alongside the small furnaces shows that the latter are also a first step in the evolution of indigenous designs for bigger and more modern furnaces—medium furnaces having a volume of 54 cu. m. to 255 cu. m. and a co-efficient of utilisation of 1.0 to 1.3 and large furnaces having a volume of up to 1,600 cu. m. and a co-efficient of utilisation, where unsintered burden is used, of 1.2 to 1.4—which permit the maximum use of local plant and equipment. Small and medium scale furnaces generally use coke produced in open type coke ovens where the by-products are not recovered. In some of the smaller blast furnaces, anthracite and charcoal are also used in addition to coke, the proportion of these to coke being 40:60.

As for steel making in China, conversion of pig iron into steel is undertaken both in conventional open hearth furnaces and in side-blow converters. The open hearth process is mostly confined to large integrated works of 800,000 tons to 1,000,000 tons annual capacity. Medium scale works of 200,000 tons to 800,000 tons annual capacity and smaller works of less than 200,000 tons capacity generally make steel in what are called "side-blown converters". Although the theory of making steel in side-blown converters is well known, it has been adopted on a mass scale for commercial production only in China. This technique eliminates metalloids such as phosphorous effectively and sulphur fairly satisfactorily. Converters, blowers and ancillary pit side teeming equipment as also the steel work and refractories are all made within the country. The size of converters ranges from half ton per blow to 5-6 tons per blow. The 5 or 6-ton converters yield in each pour about 48 small ingots with satisfactory surface characteristics.

The advantage of such small ingots, according to the report, lies in the fact that they do not need expensive blooming or slabbing mills, thereby reducing considerably the cost of diminution. Although steel made in these small converters does not have the quality required for the manufacture of rails, wheels, tyres, axles, etc., which are subject to dynamic stresses, it is good enough for the manufacture of agricultural implements, light engineering components and light structural sections used in ordinary building construction. Ingots are rolled into finished sections at the same plant if it has rolling facilities, otherwise they are sent to a bigger plant having rolling mills. while the smaller rolling mills are mostly made within China, the larger ones in integrated steel works are mostly obtained from the Soviet Union. Buildings of smaller steel works are all of re-inforced concrete construction and the use of steel is limited to large mill buildings and to run-ways of heavy cranes. Production of plant and equipment for the steel industry is undertaken in big and small works alike. A number of small engineering works have been encouraged to produce heavy equipment which ordinarily would not be produced in such works.

The Raghupathi delegation have virtually ruled out the possibility of adopting Chinese techniques on a large scale in India where they say that economy and efficiency should continue to be important factors in deciding the size and location of new iron and steel plants. They, however, consider that there is scope for some modern small-size blast furnaces and side-blown converters in areas where conditions are favourable to the development of such small units. The fact that iron ore and coal occur only in a few States in India should not be overlooked in this connection.

15 SEP 1959

Election and Markets

By Paul Einzig

AT the time of writing, it appears highly probable that Mr Macmillan will announce the date of the general election in the immediate future, and that it will take place in October. The imminence of the election affected both sterling and the Stock Exchange toward the end of August and the beginning of September. After the announcement of the election date, the markets are likely to come overwhelmingly under the influence of election prospects. Beyond doubt, the indications distinctly favour a Conservative victory. Otherwise, Mr Macmillan would avail himself of his constitutional right to defer the election date till next spring. In face of the Gallup Poll results such a decision would be distinctly unpopular in the Conservative Party. For, pubic opinion surveys foreshadow the return of the Government with an increased majority.

The Government's popularity has increased as a result of the recovery in trade and employment, coupled with the stability of the cost of living. Its foreign policy, favouring a summit meeting and a flexible attitude toward Soviet Russia, is also widely supported. In the absence of unforeseen developments, the Government certainly stand a reasonable chance of being confirmed in office, though it is of course impossible to foresee whether it will be with an increased or reduced majority.

In the circumstances, it may appear surprising that both sterling and the Stock Exchange have been included to be weak. The obvious explanation is that, until recently both sterling and equities were exceptionally firm. At their present level, they must have already largely discounted a Conservative victory. If that is the case, it is a matter of elementary prudence on the part of investors and speculators not to expose themselves to the ever-present possibility of a socialist victory.

At the end of August and the beginning of September, the foreign exchange market witnessed an important change—the forward dollar went to a discount, for the first time since the war. This was not due to the anticipation of a weakness in the sterling-dollar spot rate. It was the result of the increase in interest rates in New York owing to which short-term investment can earn more in New York than in London. There has been therefore a certain amount of shifting of funds to the former centre. Before the war, European banks would have considered it safe to keep balances in New York with the exchange risk uncovered, but, today, British banks, and also banks of many other countries, are prevented by exchange restrictions from increasing their uncovered balance beyond a certain figure.

In any case, even though very few people envisage even a remote possibility of a dollar devaluation within the next three months, such possibility is borne in mind. Even Swiss banks, which are entitled to hold uncovered dollars, prefer now to cover most of their dollar balances. This means that a demand for spot dollars is linked with the selling of forward dollars. Hence the development of a discount on forward dollars in London.

Higher interest rates in New York also caused a fall in British Government loans in anticipation of a higher Bank rate. But it would be a mistake to assume that the London Bank rate must necessarily be raised if higher New York interest rates should attract too large an amount of funds to New York. The Bank of England is well in a position to stem the tide of covered interest arbitrage by the device of intervening in the foreign exchange market to widen the discount on forward dollar to a figure at which it would offset the profit on such operations.

The question whether the Bank of England should intervene in the forward exchange market has been subject recently to much academic discussion. Those in favour envisaged a situation such as existed in 1957 when forward sterling was weak owing to speculative pressure. They argued that, by supporting forward sterling, the Bank of England could have made it unprofitable for bank to transfer funds from London to New York with the forward rate covered and this would have reduced the drain on the gold reserve. It was urged that such operation should always be pursued whenever sterling is subject to speculative pressure, in order to prevent heavy losses of gold resulting from interest arbitrage. Two economists in their evidence before the Radcliffe Committee advocated thus technique, but the Report of that Committee, rejected the suggestion, while leaving the door open for official forward exchange operations in special situation. Although it does not specify the circumstances for which it recommends the device, obviously it had situations such as the present situation in mind.

The history of 1929 is repeating itself on an infinitely more moderate scale. For, in 1959 as in 1929, the United States authorities were anxious to discourage Wall Street speculation and over-trading, and to that extent they wanted to tighten money conditions. But higher money rates attracted additional funds from abroad. In 1929, Keynes suggested that this could be prevented by means of official forward exchange operations aiming at increasing the cost of covered interest arbitrage. A similar advice could be applied in the present situation. It would be more effective today than it would have been thirty years ago, because, at that time, most holders of dollars did not deem it necessary to cover the exchange risk, while today a very large proportion of holders would consider this expedient.

From a British point of view, a stiffening of money rates in London would be anything but welcome at present. It is true, business conditions have improved, but they are still far from booming. No dear money is called for to damp down production and consumer demand; on the contrary, a further expansion would be welcome, especially in the sphere of capital goods. A setback resulting from dearer money would be most inopportune to the Government and to conservative banking and business interests on the eve of the general election. This could be obviated by the use of the device of intervention in forward exchange.

It is true, such intervention could affect only covered interest arbitrage. Those who are sufficiently certain that the dollar would not depreciate in the near future would disregard the discount on forward dollars and would leave their short-term dollar investment uncovered against exchange risk. From this point of view, it might be expedient for the authorities to allow spot sterling to depreciate to the lower support point of $2.78. They would increase thereby the exchange risk attached to uncovered interest arbitrage, because holders of dollars would be exposed to a depreciation of one per cent or more in three months. This is equivalent to four per cent or more per annum which would be several times larger than any conceivable profit on the London-New York interest arbitrage. It is possible that the British authorities deliberately abstain from supporting sterling in order to discourage pre-election pressure, in order to discourage uncovered interest arbitrage.

Small Savings and the Third Plan

By a Special Correspondent

SMALL Savings were expected to yield Rs 500 crores during the Second Plan period, but the collections were only Rs 206 crores during the first three years. In the first quarter of 1959-60, collections fell to Rs 7.8 crores (of which 62 per cent was contributed by the Bombay State). This works out to an annual rate of slightly over Rs 30 crores, the target being Rs 100 crores per annum. In its appraisal of the implementation of the Second Plan during the first three years, the Planning Commission observed: "The small savings drive has yet to reach down to the semi-urban and rural areas sufficiently to mobilise savings on the scale envisaged in the Plan." Among alternative small savings schemes offered, the ten-year four per cent income-tax free National Plan Savings Certificates are the most attractive, but, inspite of huge staff and heavy working expenses, results are rather disappointing. The working class cost of living index rose to 122.7 in August 1959 (base year: 1952-53) and, as the Governor of the Reserve Bank of India pointed out recently, the purchasing power of the rupee went down by 29 per cent as between 1947 and 1959. Standards of living among the masses are fast rising, more on account of Government policy pronouncements than actual increases in real incomes. As such, it would not be a generous classification to group all income-ranges of less than Rs 500 per month as marginal and sub-marginal, from which sector real savings could not possibly be expected. Among artisans, industrial workers, agricultural tenants, agricultural and non-agricultural labourers, there is great need for subsidisation, leave alone saving. Among non-agriculturist and agriculturist self-employed there may be some saving margin among the well-to-do, but the actual current rate of interest charged by non-institutional lenders is generally 12 per cent on good security.. Even then, the self-employed who have some savings have also capital needs which are much in excess of their savings. To cite only one instance, at least 50 million additional acres are expected to come under irrigation in projects, big and small, taken up during the First and Second Plan periods, according to the Vice Chairman of the Planning Commission. Development Finance, even at a modest rate of Rs 200 per acre, would involve Rs 1,000 crores, of course spread over about 10 years, but rural savings during that period should be much less, collectively speaking. The small collections which ae being made are much more due to pressure and compulsion than voluntary action. Government servants', particularly small savings employees', contributions belong to this category.

RATE OF INTEREST

In the USA, interest rates allowed by the Federal Legislature on bonds of more than five years' maturity, go up to 4.25 per cent while there is no legal ceiling rate of interest on bills, certificates and notes of shorter term maturity. If anything, the structure of interest rates should be higher in India than in the United States on account of comparatively non-competitive conditions, and the small amount which may be available can be mopped up only with more attractive terms than offered at present. At present rates, deposits

in co-operatives and subscriptions to land mortgage bank debentures are quite nominal.

RURAL DEBENTURES

With this background, recent experiments in the issue of rural debentures may be referred to. The first series issued by land mortgage banks in Saurashtra, Andhra and Orissa had the following features. To attract small savers not prepared for long maturities, redemption was fixed at seven years. Interest was allowed at between 4.50 and 5 per cent. Institutions were not allowed to subscribe, but only individuals. The Reserve Bank of India set the seal of approval by undertaking to purchase 20 per cent or shortfall of sales, whichever was less. Under this scheme, Rs 25.89 lakhs, Rs 5.97 lakhs and Rs 2.23 lakhs were collected in the three states respectively in 1958. In January 1959, a second series of issues was made with some changes, by land mortgage banks in Andhra, Madras, Mysore and Saurashtra. Maturity was limited to seven years in the case of individual investors, but was fixed at 15 years for the Reserve Bank of India, which undertook to purchase 66.6 per cent of bonds or shortfall whichever was less, at 4 per cent while the rate allowed to individuals was between 4.50 and 5 per cent. All issues were at par. Under this scheme, collections from individuals were Rs 16.50 lakhs (Andhra) while total collections are expected to amount to Rs 42.33 lakhs even after allowing several months for the debentures to be on tap. It is held that these experiments, although not very successful, augur well for future issues.

PROSPECT

One is remided of a daughter's house in which practically everything is found by the parents of the daughter, with a view to educating her in home economics and home finance, but in a featherbed style. The results are so poor that the Reserve Bank could itself lend much larger sums at lower rates of interest to meet the long-term needs of agriculture instead of trying to facilitate collections of rural savings which are hardly there. The little that may be available in the shape of small savings can be mopped up with a competitive rate of interest like 5 per cent incometax free. The idea of entrusting the small savings drive to the Employees' Provident Fund staff or the Life Insurance Corporation deserves close examination as such a step should perhaps widen the scope for the small savings drive and lessen working expenses.

The Chinese Economy Since 1949

Part—II : The First Five-year Plan and the "Great Leap Forward"

By YUAN-LI WU

(Professor of Economics and Director of the Institute for Asian Studies at Marquette University.)

COMMUNIST China's first Five-year Plan, from 1953 to 1957, called for radical social change as well as economic development. By the end of the plan period all large-scale industry and commerce had been either taken over by the state or transformed into "joint state-private enterprises" under state control. Both capital accumulation and current production could thus be controlled by state planning authorities.

Small traders and handicraftsmen were organized into cooperatives to facilitate supervision and planning. These social changes, incidentally, were carried out much more rapidly than originally provided for in the plan.

An even more drastic change was carried out in the villages. When the peasants had been given more land in 1950-52, they were assured that they would be permitted to retain it "for a considerable period of time." Collectivization was to proceed in gradual steps, and was not to be completed until the second Five-year Plan. Nevertheless, collectivization and the take-over of industry by the state were accelerated abruptly during the second half of 1955; and both processes were completed during 1956. All but five per cent of the peasants were organized into collective farms which removed the land from individual control.

The Communists established a state monopoly on trade in foodstuffs and a system of compulsory purchase of agricultural products was set up. A large part of agricultural income was already taken by the state as taxes; these new measures channeled most agricultural output into the government sector, thus providing more food for export and limiting domestic consumption. Rationing of food, cloth, and other basic commodities was also introduced. These actions increased the regime's capacity to exact more savings from the economy.

During the first Five-year Plan, and especially since 1956, there was a rapid growth of industrial output on the mainland. It was not, however, accompanied by a comparable increase in products available for consumption by the Chinese people. Most of the increased production remained in the hands of the state.

Agricultural production lagged behind. This was partly due to the Communists' stress on heavy industry. There were also numerous bottlenecks and areas of disorganization caused by the abrupt transition from individual to collective farming.

The Communists were faced with a basic question: how to provide an incentive for the peasants? During 1957 Peiping briefly allowed peasants to withdraw from collectives, but the decision was reversed after millions of peasants chose to return to individual farming. In Chekiang and some other provinces a majority of peasants withdrew, and Peiping complained that in those areas collective farms had "collapsed." The Communists were also alarmed because the small number of peasants who had remained outside collectives were considerably more effective than the collective farms; one Communist spokesman said that they produced 20 per cent more grain per hectare of comparable land..

This situation threatened the continued expansion of the Chinese economy, which needed more grain for export, more food to feed the new industrial workers, and more agricultural raw materials. After some hesitation and experimentation, the Communists launched the third phase of their economic policy: the "Great Leap Forward" of 1958.

Established industrial enterprises were ordered to produce "more, better, faster, and more economically." More important, however, was the Communists' new stress on small-scale local industrial units. This was intended to raise industrial production and make more effective use of China's abundant labor supply.

Small local factories required less capital and fewer modern machines. The burden of finding capital resources for the small-scale plants fell on provincial and other local bodies rather than the central state planning authority.

Heavy industry, however, was not to be forgotten. The Communists emphasized that large and small-scale industry must be developed simultaneously. This policy, summed up in the slogan "walking on two legs," led to a considerable increase in gross industrial production during 1958. Much of the increase, however, was in products of low quality and limited usefulness. The formation of numerous small industrial units created serious problems: planning was disrupted, raw materials were oten used inefficiently, and the transport system was overstrained.

Between September and December 1958 virtually all Chinese peasants were enrolled in communes, an extreme form of collective farm, much larger than the collective set up in 1955-56. Commnues, averaging about 5,000 peasant families, were intended to make farming more efficient and make better use of peasant labor. Equally important, communes limited consumption. All grain was put under certral control and commune members were fed in mess halls. But the communes and the new local industries, organized under close party direction, served to maintain a vigilant political control over peasants and workers.

In carrying out these policies of the "Great Leap Forward" the Communist Party is running considerable risks. In order to exploit the labor force more intensively the Communists have made unprecedented demands on the Chinese people. The working day has been lengthened to fourteen and even eighteen hours, and some special "shock brigades" have been required to work around the clock for days at a time. Steel workers have been asked to cultivate vegetable gardens when their shift is finished. Peasants are required to tend crude roadside blast furnaces after a hard day in the fields. Their pay has not been increased commensurately, and in many cases pay and food rations have been cut.

The Communists' attempt to rely on political controls, coercion, and exhortations rather than economic incentive adds a political dimension to their problems of economic development.

One question must be asked: are the Communist policies necessary? They face two principal dangers. In the long run, coercion may not be an effective means of increasing output, and sooner or later is likely to cause popular opposition. Furthermore, taxation, rationing, and other controls may not succeed in restricting consumption, and China's suppressed inflation may become runaway inflation once again.

The outcome rests upon imponderables of political discipline as well as upon economic factors. Will the Communist Party and its political workers be able to disregard the wishes of the population indefinitely? Will the party members always be willing to follow the orders of their leaders? It is impossible for an outside observer to answer these questions at this time. It is equally probable that the Chinese Communists themselves are also apprehensive about the outcome of their gamble.

As a decade of Communist rule draws to a close it is clear that the radical social and economic changes brought about by the Communists cannot be regarded simply as an attempt to solve the economic problems faced by any underdeveloped country.

The basic determinant of these changes has been the Communist presupposition that only the Communist Party is to be the agent of Chinese economic development.

Only time and experimentation will show whether the Communists' radical policies will work, and in the meantime the political fortunes of the Communist Party will remain at stake.

Concluded

EDITORIAL NOTES

More Muddle

The National Development Council, after two days' deliberations on the food situation, has decided to maintain the status quo in regard to the basic policies already decided upon by the Council at its last meeting. This a not a decision which is likely to be hailed with enthusiasm in any quarter. The difficulties caused by the inadequacy of efforts to deal with the regional shortages are at the root of the distempers now afflicting the country. The problem admittedly is difficult. It proved too much for the former incumbent of the Union Ministry of Food, who in his last speech as Food Minister made a frank analysis of the drawbacks of policy and the inadequacy of the administrative machinery to implement the policies that were laid down. The hope raised by new Minister's speech in Parliament, that he would be able to achieve greater correspondence between policy and the means for its implementation, especially in regard to the ticklish issue of State Trading, has not been borne out by the conclusions of the National Development Council. The question of the reorganisation of the Food Zones, constituting each State into a separate zone, has been held over for further consideration. In fact, so long as the whole country is not treated as one zone, and State trading remains official policy, there is no rational alternative to constituting each State into a separate zone for purposes of food administration.

The discussions have served to draw attention once again to the differences of approach as between the surplus States and the deficit States and as between the Centre and the States. The Centre is interested in limiting its commitments to the deficit States. The Surplus States desire a free hand to maintain the price line within their territory, while the deficit States are anxious that the deficit should be met in full. The problem of reconciling these diverse approaches is particularly difficult in respect of rice, as imports of rice are not available to any great extent from other countries. The representatives of deficit States are reported to have suggested that it would be necessary for the surplus States to adopt more intensive measures of procurement, not only from the trade but also from producers, and that it would be necessary for them to fix retail prices and also, to some extent, to undertake distribution directly. The suggestion, quite apart from the practicability, would at least sound reasonable if it were put forward as part of a comprehensive and nationwide policy of compulsory procurement and rationing. But, so far, the deficit States have not been prepared to embark on compulsory procurement, and for very good reasons. Kerala did not find it practical to introduce price control when all the other States had fixed maximum prices. And West Bengal, where an attempt was made to control prices including retails prices, was forced to suspend the price control order as well as the levy from traders. It may, therefore, be asked why the cultivators in surplus States should be subjected to disabilities from which the producers in the deficit States are completely free. An attempt to enforce such a policy may be the surest way of converting the few surplus States that there are into deficit areas. A national approach to the solution of the food problem should be based on equity as between producers in surplus and deficit States, in addition to ensuring a fair deal for consumers.

State Trading

The most unsatisfactory feature of the National Development Council's discussions is the manner in which the topic of States Trading has been dealt with. The Food Minister has announced that no change has been proposed and that the status quo was continuing. Most of the troubles on the Food front can be traced to the announcement of the policy of State Trading far ahead of administrative preparations to implement it in an effective manner. From what the former Food Minister has stated, it is possible to conclude that many of those who have subscribed to the policy of State Trading have done so with mental reservations. Mr S. K. Patil himself had stated in his first speech as Food Minister that State Trading was not an end in itself and that it was by no means a permanent feature of the country's economy. It appears that the NDC has not been able to find a way of retreat from the untenable position that had been taken in regard to State Trading. The position would not be so bad if the scope of State Trading had been clearly defined. In conditions of continuing shortage, State Trading can play a useful role in stabilising prices through operation of buffer stocks. But this can be done without disrupting the established channels of trade and distribution. But, so far, no serious attempt has been made to build up buffer stocks as the instrument for controlling prices. And State Trading, instead of performing this useful function, has only served to demoralise the trade and interfere with the normal flow of supplies.

Retarded Progress

The most striking feature of the Controller's report on the working of general insurance companies in 1957 is the slowing down of the rate of growth of the business. The net premium incomes of Indian insurers both in India and outside was higher for 1957 than for the previous year, in all classes of business. Non-Indian insurers also wrote a larger volume of business in Fire and Miscellaneous insurance business in 1957 as compared to 1956. But the index number of general insurance business in India records a rise of only 0.7 for 1957 as against a rise of 4.2 for 1956.

The reasons for the slowing down of the rate of increase of business deserve careful examination. It is worthy of mention in this connexion that the slackening of the pace of development in insurance preceded the general slowing down of industrial development in 1958 as a consequence of foreign exchange shortage and import restrictions. In fact, 1957 was a period of rapid industrial growth and it appears that this has not been adequately represented in the working of insurance companies.

In 1957, insurance business in India had not recovered from the impact of the nationalisation of life insurance business. Most of the companies transacting general insurance business were composite companies whose main interest was life insurance. With the nationalisation of the major part of their business, part of their entire organisation was disrupted and the insurers had to undertake radical changes of their arrangements in field and office. This inevitably entailed for most insurers a contraction of their field of operations. Few insurers in this situation were in a position to undertake developmental activities to bring in new business.

The Controller's remarks on the experience of insurance in the matter of expenses of management also underlines this point. The Controller has pointed out that the groups of insurers who spent less than the basic limits in terms of Rule 17E of the Insurance Rules, 1939, wrote a decreasing proportion of the total gross premium written direct in India. A larger share of the gross premium written direct in India went to insurers spending more than the basic limits for Fire and Miscellaneous insurance business, while the position was the opposite in Marine business. It is also relevant to mention in this context that the proportions of the gross premium income spent by of way of commission throughout the period 1952 to 1957, and by way of expenses and miscellaneous outgo from 1954 onwards, were higher for non-Indian insurers than for Indian insurers.

International Law

The Indian Society of International Law has recently come into existence with Mr Jawaharlal Nehru as Patron and Mr V. K. Krishna Menon as President. Its inaugural session held over the week-end was notable for the learned though inconclusive discussions on how such concepts as "aggression" and "domestic jurisdiction" in international law should be defined. One of the papers read and discussed at the session dealt with the question of diversion of international waters and thus had a bearing on the continuing dispute between India and Pakistan on the

score of the Indus river system. The author of this paper, Dr J. S. Bains of the University of Delhi, contends that, since irrigation on an extensive scale has been resorted to only during the last sixty years, the practice of states has not evolved any positive rule of international law imposing limitations on the freedom of a state to use such waters at its own discretion. Since there is no norm of conventional or customary international law imposing upon the state the obligation to behave in a certain way, the state is under international law legally free to behave as it pleases. And so, unless it is shown to the contrary, it is a rule of international law that the state concerned has the unrestricted right to the use of water flowing through its territory. At the same time, due to political, economic, strategic and humanitarian considerations, the upper riparian states have not rigidly adhered to this rule. Keeping in view their own national interests, they have voluntarily conferred some benefits on the lower riparian states. This has been done by the conclusion of treaties like the Indo-Pakistan treaty of 1948 and the US-Mexican treaty of 1906 which, however, have not deprived the upper riparian states of their sovereign rights guaranteed by customary international law. The existing rights and duties regarding the waters of a particular international river must therefore be determined on the basis of existing treaties, concludes Dr Bains.

S. E. RLY TENDERS

Sealed tenders are invited for (1) Tender No. CON|COS|80|H(C)|59 for supply of 4148 Nos. Buckle turn guy as per ELS Drg. XO-67B-Part B. Earnest money is Rs 475. Tenders will be opened on 1-10-59 at 12 noon. (2) Tender No. CON|COS|P&M|81|B of 59 for supply of 2 Nos. Wheel Tractor Diesel Engine driven as per specn. Tractors equipped with diesel engine of at least 40 H.P. & suitable for touring loaded pole carriers with gross load upto 17 tons approx. fitted with heavy duty pneumatic tyres. Earnest money is Rs 475. Tenders will be opened on 5-10-59 at 12 noon. (3) Tender No: CON|COS|82|H(e)|59 for supply of 5 Nos. Automatic battery charger, metal rectifier type, input 230 V. 50 cycles single phase output adjustable between 158-210 V. at 2 to 3 amps. Earnest money is Rs 250. Tenders will be opened on 5-10-59 at 12 noon.

Tender forms are obtainable from the office of the undermentioned (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs 2 (not refundable) per copy per tender by money order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, S. E. Railway, Garden Reach by local firms.

Tenders should accompany the receipt for depositing earnest money as stated above with this Rly's Chief Cashier without which the tenders are liable to be rejected. Approved contractors having a permanent deposit of Rs 1,000 with the undermentioned are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

"Not A Bad Start"

The indications of a more hopeful trend in Indo-Pakistan relations which were evident after the meeting of the Finance Ministers of the two countries last month have been further confirmed by the meeting between Mr Nehru and General Ayub Khan at Palam airport last week. The meeting, arranged at the latter's suggestion, was an informal affair intended to prepare the ground for mutual understanding.. As such, it is not reasonable to expect that any of the outstanding issues between the two countries were discussed except in very general terms. Apart from the formal communique which has stressed the need for a spirit of friendliness, cooperation and good neighbourliness in the settlement of these issues, the statements made by General Ayub Khan at the press conference contain the welcome indication that the talks have helped to establish the basis of mutual understanding General Ayub Khan stated that, "whatever had happened in the past, the time has now come when we should be thinking of having more rational and neighbourly relations with each other." And in answer to a specific question regarding the progress achieved in this respect, he said: ".....the Prime Minister knows my mind and I hope and trust that he believes what I stated, as I trust what he said. That is not a bad start."

✱

Babies in Teens

There is no doubt about States in India downgrading into provinces, if not Local Bodies, economically at an accelerating pace. The dependence of the States on the Centre and the growing disincentives in the psychology of the State Governments are glaring. Between 1953-54 and 1956-57, State deficits rose from Rs 11 crores to Rs 77 crores, but due to Central grants and allottments on the recommendation of the Second Finance Commission, State budgets were balanced between 1957-58 and 1959-60. But the prospect is by no means promising. Except the tax on motor spirit and motor cars, State taxes have become inelastic, including land revenue which showed some improvement on account of the abolition of zamindaris. By 1961-62, the States are expected to take over from the Centre additional functions under items like Education and National Development Blocks. Even from now, the States should prepare to meet the additional responsibilities, and the Centre should either warn the States against spoonfeeding, or frankly take over financial responsibility in the last resort. The experience during the first four years of the Second Plan has not at all been happy. In that period, Plan outlays by the States were respectively Rs 300, Rs 340, Rs 417 and Rs 483 crores while Central transfers stood respectively at Rs 373, Rs 518, Rs 638 and Rs 655 crores. Thus, Central contribution to non-Plan expenditure by the States rose from Rs 73 crores in 1957-58 to Rs 172 crores for the budget year 1959-60. Collectively speaking, the Centre is bearing nowadays 40 per cent of States' revenue expenditure, and 80 per cent of their capital outlay. Loans and advances to local bodies and agriculturists by State Governments have not fared well: repayments have come down from 50 to 33 per cent as between 1951-52 and 1959-60.

✱

The Consumer Rupee

Mr H. V. R. Iengar sounded a timely warning by pointing out that, as between 1947 and 1959, the purchasing power of the Indian rupee had gone down by 29 per cent while the corresponding decline in the USA was by 19 per cent, in Britain by 46 per cent and in France by 69 per cent. He said that, during the period, the money supply (including rapidity of circulation) had increased by 32.8 per cent while the national income had increased only by 26.2 per cent. It was imperative that simple inflation should not be allowed to degenerate into galloping inflation. The case for stabilising the consumer rupee is much stronger. In the USA, the consumer index rose by 24.4 per cent as between 1947 and 1952, but only by 8.6 per cent as between 1953 and 1958 (corresponding increases in money supply having been 19 per cent and 9 per cent). Here in India, the food index rose to 122.7 in August, 1959 with 1952-53 as base. During World War II, the motto in Germany, we may recall, was: "Next to winning the war, the purchasing power of the mark is sacrosanct."

✱

UK Investments Oversea

Time there was when Britain earned about £250 million per annum from its overseas investments. With the liquidation of the Empire, most of the overseas investments were nationalised with nominal compensation. During the period 1951-58, capital exports amounted to £ 1,453 million within the Sterling Area and £ 878 million outside the Sterling Area, totalling £ 2,331 million. Capital imports during the same period were £153 million from within the Sterling Area, £ 778 million from non-Sterling Area, total £ 931 million. Net capital exports worked at £ 1,300 million within the Sterling Area, £ 100 million into non-Sterling Area, total £ 1,400 million. There has been a shift in capital exports, from India, Pakistan and Ceylon to Australia, South Africa and the Colonies. Even now, the scope for investment of British capital in India, specially on private account, is quite good, but much depends on the climate created in India for the purpose.

✱

Famine in Coal?

In a leading article two weeks ago, this journal pointed out that the reaction of the coal industry to the Government announcement of an increase of 50 nP per ton would undoubtedly be that it would be inadequate even to cover the rise in the cost of production since the time when the Coal Price Revision Committee, on the basis of whose recommendations Government announced a rise in the coal price, conducted its study of the coal situation. A communique issued under the joint aegis of the three Coal Mining Associations goes so far as to assert that the Government announcement "came as a very rude shock". The Joint Committee has pointed out that, while the approach of the CPRC was unexceptionable, the basis on which that Committee arrived at its assessment of costs is altogether faulty. Indeed, the assumptions made, in assessing a "normal" cost of Rs 17.90 per ton, are stated to be entirely incorrect. The Joint Working Committee points out that the CPRC has admitted in its report that, since 1947, an increase of Rs 8.25 per ton has been allowed to the industry for the implementation of labour awards; and, since the CPRC has calculated the "normal" wage cost at Rs 9.55 per ton, this would imply that the labour element per ton of coal prior to 1947 would have been Rs 1.30. As the Joint Working Committee of the three Coal Associations points out, such calculation "is simply absurd". In various other ways, too, the Joint Working Committee has pointed to assumptions which are wrong and findings which are consequently incorrect. In such a situation, "a realistic price increase" is called for. As this journal asserted, there can be no question that, if Government seriously intend to allot some responsibility to the private sector in coal for achieving targets under the Third Plan, Government's attitude to coal must be less muddled than it has hitherto been. For, if such revision in coal policy is not forthcoming, the prospect may well be that, during the Third Plan, this country will face a famine in coal.

WORLD OF FINANCE

Report of RBI's Central Board

THE Report of the Central Board of Directors of the Reserve Bank of India for the Bank's accounting year to the end of June 1959 is, in some ways, in refreshing contrast to the Report on Currency and Finance which was published a few weeks ago by the central banking institution. There is, if we may say so, a more discernible impression of confidence in the Board's report, as distinct from what appeared to be the slurring over of significant features in the economy which appeared to mar the Currency and Finance Report. For example, in a concise paragraph on industrial production, the slackening in the rate of industrial production in 1958 is unambiguously ascribed to "the decline of 5.8 per cent in the cotton textiles group which has a weightage of 36 per cent in the general index". It is also interesting to note that, whereas the Currency and Finance Report traces the decline in output in some industries, notably cotton textiles, to "the slackness in domestic demand during the greater part of the year and the difficulties of maintaining exports at previous levels", the Board's Report essentially sees the decline in exports as being primarily responsible.

It is the price situation with which the Board's Report principally concerns itself. The situation "again caused some concern". It is, of course, the disquieting trend in foodgrains which has mainly been responsible for the untoward turn in the price situation as such. In this context, the Board has made the interesting suggestion that "the inflow of supplies to markets has been affected to some extent by the announcement of introduction of State trading in foodgrains." The inference is clear that the Board of the Reserve Bank is none too pleased with the impact that has been produced on the price situation as a result of what are clearly political decisions in economic matters. We wish to emphasise at this stage that there is need to wait for no more proof before taking the decision that State trading in foodgrains would be injurious to the Indian economy. Moreover, the Board also points out that bank financing has hardly been utilised for foodgrains, and that "the increased stocking of rice and wheat" is either privately financed or self-financed. If this finding of the Board is to be taken as correct, it is most heartening news that we have been vouchsafed. For, if the farmer is today possessed of greater withholding power, it is proof positive that he is economically a much stronger person.

As far as the monetary situation is concerned, the Board points out that stringent conditions re-emerged during the 1958-59 busy season, notwithstanding a very large contraction during the 1953 slack season. In all such assessments, what is usually emphasised is the very sharp expansion in bank credit during the busy season. But what is apt to be overlooked is the fact that stringency in the banking situation, occurring as it did despite large scale accretions to bank Deposits, was owing to the fact that banks invested almost the whole of their new Deposits in giltedged. The reason why banks were thus compelled to enlarge their investment portfolios is simple enough: a very much larger proportion of total Deposits is today of the higher interest-bearing categories; and, besides, operating costs being what they are, banks simply cannot afford to keep on hand such idle resources as may be released by return of funds during the slack season. Thus, so long as industrial production is headed upward and so long as operating costs are high, whatever the magnitude of the slack season return of funds, the following busy season nevertheless imposes some strain upon the banking system.. For example, in the first four months of the current slack season, gross Deposits of Scheduled Banks have risen by Rs 112 crores. Furthermore, Advances during this period have contracted by Rs 90 crores. It may be recalled that Mr H. V. R. Iengar, Governor of the Reserve Bank, recommended to the banks that they should bring about a contraction of Rs 100 crores in Advances during the 1959 slack season—and two months remain for the balance of contraction of Rs 10 crores. In other words, in order for Scheduled Banks, in the words of the Board, "to meet the credit requirements of the next busy season without much strain and without large scale resort to the Reserve Bank", a contraction in Advances to the tune of Rs 100 crores was called for. This target will certainly be achieved. But, to come back to the situation as it is today, as against an augmentation in resources of the order of Rs 200 crores (increase in Deposits plus decline in Advances) Scheduled Banks utilised roughly Rs 45 crores in reducing their indebtedness to the Reserve Bank and the State Bank; another Rs 16 crores in adding to Cash Balances; and as much as Rs 100 crores in augmenting the investment portfolio. Thus, all that remains of the enlarged resources at the present moment, as compared with the 1958-59 busy season peak, is scarcely of the order of Rs 30 crores to Rs 40 crores. In such a situation, we shall on a future occasion give our own suggestions as to how the seeming impasse can be solved.

+

Foreign Balances Again Higher

Beginning of the month disbursements have, at least in the returns of the Reserve Bank, again caused an interruption in the smooth progress of the 1959 slack season. Notes in circulation have expanded by Rs 14.70 crores to Rs 1,664.91 crores. There has been an outflow of Rupee Coin for Rs 1.46 crores, and with Rupee and Foreign Securities unchanged, the Reserve Bank's cash in the till has dwindled by Rs 16.15 crores to Rs 22.23 crores.

In the Banking Department, the noteworthy feature is a drop of Rs 17.12 crores to Rs 283.11 crores in Investments. It is extremely unlikely that the Central Government would have been in a position to institute reverse *ad hocs*, particularly since it was only in the earlier week that, with the receipt of Reserve Bank profit, there was cancellation of ad hoc Treasury Bills for Rs 40 crores. In any event, there is reason to believe, as we shall see presently, that the fall in Investments of the Reserve Bank may be mainly due to sales through the tap. We may, however, first note that the Balances of the State Governments have declined by Rs 9.96 crores to Rs 23.82 crores. Here, too, by reason of the fact that, in the previous week, the State Governments are likely to have purchased a considerable parcel of securities from the Reserve Bank, it is hardly possible that the fall in the balances of State Governments is owing to fresh investment in giltedged. Nor, again, is it likely that there have been inter-Governmental transactions, with the Central Government being the recepient, since the latter's Deposits have improved by Rs 1.87 crores to Rs 65.36 crores. It seems possible, therefore, that the movement in balances of Central and State Governments reflects the impact on the two entities of month early disbursements.

The Reserve Balances of member banks are shown to be sharply lower by Rs 15.84 crores at Rs 70.19 crores; and, at first glance, this would appear to be an index of the strain experienced by the banking system in meeting month early demand. But, then, the major portion of this, or Rs 14 crores, is ascribable to the State Bank. It is, we suggest, between the Reserve Balances of member banks and Investments of the Reserve Bank that, in the week under review, a link is to be discerned. The State Bank is likely to have purchased Rs 14 crores of securities from the Reserve Bank, though, in the former's return, only Rs 6 crores have been incorporated in the Investment Portfolio, the balance being shown as an increase under Other Assets. (The remaining Rs 3 crores of the decline in Investments of the Reserve Bank would presumably relate to tap sales to other Scheduled Banks). We are to suppose that, for its part, the Reserve Bank has incorporated the sale of the whole amount of Rs 14 crores to the State Bank, whereas the State Bank has not done so.

Finally, it is heartening to note that Balances Held Abroad have risen, for the third week in succession, with an increase of Rs 0.96 crores to Rs 21.23 crores.

+

The return of the State Bank for September 4, shows that cash in hand and with the Reserve Bank has been drawn down by Rs 13.94 crores to Rs 21.33 crores. Such drawing down was to effect an increase in the Investment portfolio which as such shows a rise of Rs 6.09 crores to Rs 361.28 crores; but, besides, Other Assets are marked higher by Rs 7.98 crores at Rs 29.91 crores. Doubtless, a further rise in the giltedged portfolio will be recorded in the next return of the State Bank. It is noteworthy that, in the first week of the month, Advances are lower by Rs 0.83 crores at Rs 166.00 crores; therefore, the fact that Deposits are lower by Rs 0.51 crores at Rs 562.41 crores is indicative of the likelihood that constituents preferred to run down their balances for meeting their month early disbursements.

+

The return of the Scheduled Banks for August 28 continues to reflect the impact of the State Government loan subscriptions. Firstly, the rise of Rs 14.20 crores to Rs 1,838.41 crores in Deposits may be linked with the refund during the week of oversubscriptions to the tune of Rs 16 crores by the Reserve Bank. While the increase in Deposits would reflect refunds received by constituents, the rise in Cash Balances by Rs 4.71 crores to Rs 171.22 crores would be indicative of refunds received by the banking system. Then, the drop of Rs 11.81 crores to Rs 938.08 crores in Advances is in part due to slack season return of funds, but also partly due to transactions connected with new loan subscriptions. It may be recalled that Scheduled Banks increased their borrowings from the State Bank during the new loan week of State Governments. In the latest return, borrowings from the State Bank are shown to be nearly Rs 5 crores lower. Hence, Rs 5 crores of the decline in the Advances of Scheduled Banks would relate to repayment made by Scheduled Banks against borrowings from the State Bank. Similarly, the Scheduled Banks have also reduced sharply from Rs 14.10 crores to Rs 2.96 crores their borrowings from the Reserve Bank. Lastly, the Investment portfolio shows a rise of Rs 12.60 crores to Rs 735.47 crores. This rise, however, would not relate to the further consolidation of purchases in the State Government securities, but rather to open market purchases through the Reserve Bank tap. This is because confirmation is now available that, during the week ended August 28, the Central Government instituted reverse *ad hocs* for Rs 40 crores. Another element of Rs 25 crores of the decline in the Invest-

ments of the Reserve Bank in the relevant week could be ascribed to purchase of giltedged by State Governments. The balance of the decline of Rs 13 crores, we suggested last week, could be owing to purchase of securities by Scheduled Banks. The fact that the Investments portfolio of the Scheduled Banks shows a rise of almost exactly this magnitude would seem to confirm our hypothesis of last week.

✣

The Madras State Electricity Board has floated a three crore rupee loan redeemable at the end of twelve years carrying 4½ per cent interest. The loan is issued at par.

The loan will be closed on September 23, opening on September 17. Subscriptions will be received in the State Bank of India, in Madras, Bombay, Calcutta, Delhi, Bangalore and Bangalore City.

A Press note issued by the Chairman of the Board, Mr W. R. S. Sathyanathan, ICS, says:

The bonds are fully guaranteed by the Government of Madras in regard to repayment of both the principal and interest. The bonds will be trustee securities under the Indian Trusts Act, 1882, and also approved securities for the purpose of the Insurance Act, 1938, and the Banking Companies Act, 1949. The Electricity Board will be contributing each year 8 per cent of the value of the issue to a Redemption Fund.

The assets of the Electricity Board now comprise the five hydro-electric power stations at Pykara, Moyar, Mettur, Papanasam and Periyar and two thermal stations at Madras and Samayanallur inter-connected in a common grid with a total installed capacity of 31,000 kilowatts and with transmission and distribution lines totalling 29,500 miles. The work on the Kunndah Hydro-Electric Scheme, the largest electricity project executed in Madras State, is in an advanced stage of construction. This scheme, with a capacity of 180,000 kilowatts, is expected to be commisioned during the current financial year and will raise the power generation in the grid to 571,000 kilowatts.

The book value of the assets of the Board as on March 31, 1959, amounted to Rs 109 crores including investments in Government securities of Rs 7 crores towards depreciation reserves. The bulk of these assets were transferred to the Board on July 1, 1957, when the Board was first constituted and the book value of the assets was treated as a loan by the Government to the Board as provided for in the Electricity (Supply) Act, 1948. The total liabilities including loan from State Government (Rs 85 crores) and other liabilities (including the Public Loan of Rs 2.2 crores raised by the Board in the open market in 1958) aggregate Rs 94 crores. The Board is making adequate provision toward depreciation as prescribed in the relevant statutes.

The Madras District Cooperative Bank celebrated its silver jubilee last week with all the jubilance and pride usual to such an important occasion. To have been functioning for a stretch of 25 years is a mark of distinction for any institution and particularly for one such as the District Cooperative Bank, which works in a pioneer field where success is always elusive and only won the hard way. In common with all such institutions, the Bank had a chequered career, particularly in the early period. It was only in 1947, that the Bank attained a position of comparative eminence with a phenomenal increase in loan outstandings. Since then, the loan outstandings have continued to increase and now stand at Rs 131 lakhs against Rs 10 lakhs in 1947. In this period, the Bank also experienced a sizable increase in membership. Against 101 member-societies and 56 individual members, there are at present 225 society members and 64 individuals.

The phenomenal increase in loan outstandings is proof of the prominent role the Bank has been playing in the field of consumer credit. In this connection, Dr P. Natesan, President of the Bank, has pointed out that the employees' societies and the Urban Banks financed by the Bank have been rendering good service to their members in the District. But it was the help given to ultimate borrowers by arranging for loans at a cheap 4½ per cent interest which Dr Natesan considers to be the most outstanding achievement of the Bank. The uniqueness of this success should be evident from the fact that nowhere in the Indian Union had any agricultural village organisation lent at 4½ per cent to the ultimate borrower. It is also to the credit of the Bank that it has grown up to a position to be able to extend credit to a varied number of cooperative societies.

Dr Natesan also takes pride in the results obtained by the Bank in improving efficiency and removing defects and deficiencies. The success in this field is reflected in the considerable reduction in overdues achieved by the Bank.

Is Reversal of Inflation Practicable?

By Paul Einzig

FOR the time being at any rate, inflation in Britain has been halted. For over sixteen months, the cost of living has remained virtually unchanged. It is, true, the Chancellor of the Exchequer who brought about this result by his drastic disinflationary measures—Mr Peter Thorneycroft—lost his office, at the beginning of 1958, before the beneficial effects of his unpopular policy began to make themselves felt. But the Conservative Government and the Conservative Party are now reaping the benefits of his toughness, in the form of popularity due to business recovery unaccompanied by inflation. And Mr Thorneycroft's successor at the Treasury, Mr Heathcoat Amory, is not content with resting on his predecessor's laurels. He is determined to carry the fight against inflation into the enemy's camp.

Instead of merely aiming at preventing a resumption of the rise in the price level, Mr Amory's declared object is to bring about a decline through an increase in the output coupled with the reduction in costs through technological progress. The Chancellor of the Exchequer launched out a country-wide campaign in favour of inducing business firms to cut down the prices of their goods.

This movement has received strong support from the Council on Prices, Productivity and Incomes (popularly known as "the three wise men") and the National Institute of Economic and Social Research. Judgements by the Restrictive Practices Court, outlawing practices aimed at enforcing price maintenance in various industries, also tend to favour the new policy. It seems likely that, between now and the general election, various employers' organisations are likely to support the Chancellor's campaign by word and by action, in order to strengthen the Government's prospects of winning the election. They also want to bring into relief the unmitigated selfishness of trade unions which would not hesitate to re-start the inflationary spiral in their efforts to secure unwarranted wage increases. A contrast between this attitude and self-denial by employers could not fail to impress public opinion.

Some commentators on Stock Exchange trends are beginning to feel concerned about the possibility of witnessing a decline in prices, profit margins and even dividends as a result of a success of the agitation for cuts. Until now, their task has been simple. For, it appeared perfectly safe to assume that inflation would proceed at approximately the same rate as during recent years, and there appeared to be a strong possibility that the pace of its progress might ever become accelerated as the public was becoming more inflation-conscious. Investment consultants simply repeated themselves by advising their public to buy equities. Even though some equities may be overvalued at their present level, and the market as a whole is naturally subject to ups and downs, taking a long view the experts' unanimous advice was that investors cannot go for wrong in acquiring and holding good-class ordinary shares.

Now that the possibility of a reversal in the inflationary trend has to be reckoned with, investment experts have to re-consider their views of the prospects of equities. They have to make up their mind about the odds in favour of such a reversal, and the possible or probable extent of a reversal if it should materialise. This problem, like other economic, social and political problems in Britain, is bound to be affected by the outcome of the general election. If the Socialists should win, the class-selfishness of organised labour would be allowed to proceed without any attempt at effective resistance by the application of the weakness of monetary policy. The trade unions would be able to force their Government to refrain from employing the weapon of credit squeeze and high Bank rate as a means of restraining the wages spree which would then resume its course.

If the Conservative Government should be returned, Mr Heathcoat Amory would stand a chance to succeed in his new policy. He might not have to apply credit squeeze and high Bank rate. By making Transport House realise that he too could be fully as tough as the trade union leaders are, he might be able to attain the desired end. With a five years' mandate, a Conservative Government would be politically in a position to resort to disinflation if necessary to check wage inflation. Although this would be the last thing the Government would want to do, the mere fact that they would be in a position to do it might suffice to bring the trade unions to their senses.

The probable extent of the decline in costs and prices is of course impossible to guess. For one thing, the outcome of the wage disputes which are in progress will indicate if and to what extent trade union greed will be able to deprive the rest of the public of the benefits of automation. But, in some industries, there is now a good chance of inducing cuts in costs and prices, thanks to the adoption of labour-saving devices. Until recently, such devices were unable to produce their full beneficial effects, because owing to a decline in consumer demand the modernised plants were not employed in full. Thanks to the revival of consumer demand, the firms concerned will now be able to spread the overhead costs over a larger number of units of output.

It is not enough to take a view about the likelihood of a decline in prices and about its probable extent. Investment consultants also to have to make up their mind how individual industries are likely to be affected by the cuts. And this is where their real difficulties will start. In the period of creeping inflation, it was easy for them to predict a rise in almost any section. After all, everything was bound to rise, and the difference between good advice and bad advice was merely in the extent and time of the inevitable rise. But now, the experts and their clients will have to face a considerable degree of uncertainty.

WORLD OF JUTE

Sacking Stocks Lowest Since December 1957

WITH the announcement this week of stock figures pertaining to jute goods as at the end of last month, it is confirmed that August has been an exceptionally good month for the industry and trade. Total stocks at 81,100 tons are the lowest in the past nineteen months. It was at the end of December 1957, that the industry was carrying a still lower total stock at 75,000 tons. A significant feature is that sacking stocks are also the lowest in as many months as total stocks. For, it was again at the end of December, 1957, that sacking stocks at 38,400 tons were lower than at the end of last month.

As compared with the previous month and the corresponding month of last year, August-end stocks show sizable decline. There has been a drop of 11,700 tons as compared with July of this year and the fall is as much as 36,100 tons as compared with the position as at the end of August 1958. Comparing the figures for the last two months only, it will be seen that of the total drop of 11,700 tons, as much as 8,500 tons have been accounted for by sacking with hessian recording a fall of 1,300 tons only. Other varieties are down by 2,100 tons. The stock position as at the end of August according to sections is hessian 24,700 tons, sacking 45,800 tons and other varieties 10,600 tons.

The sizable decline in stocks last month has resulted in a very encouraging statistical position for jute goods. Total stocks with the industry are now less than one month's production and the position is particularly heartening in regard to sacking, the stocks of which now approximate a month's output of this category of goods. Hessian stocks, although they have been showing an irregularly higher trend in recent months, are still comfortably lower than a month's production.

It will be only repeating what has been noted already in these columns to say that the notable improvement in the gunny stock position of the industry is largely due to the increased offtake of sacking goods noticeable in the past few months. It is an old story now that perhaps the major single factor in sacking's recovery is the sustained interest shown in this category of goods by China, and that the IJMA have found it necessary to increase production by the unsealing of a total of 4 per cent of the looms thus bringing down the percentage of idle looms with IJMA mills to 10. Since it is not unlikely that further Chinese orders may not materialise in view of the strained relations between India and China and having regard to the assumption that the 2½ per cent of the looms unsealed from the 24th of last month will be switched over to the production of heavy goods, one has necessarily to await developments during the current month for an assessment of the situation with regard to heavy goods. It should not be forgotten that in the coming months, there will be more heavy goods in world markets than has been the case in the past few months, as competition from Pakistan is likely to intensify from next month.

While on the subject of the outlook for sacking, it will not be out of place to see how exports of heavy goods had fared in the last jute year. It was noted last week briefly that total exports during 1958-59 were higher at 825,900 tons as against 802,200 tons in the previous year. The higher total is mainly brought about by an increase in the exports of hessian to 454,800 tons from 387,800 tons. Sacking exports, however, were lower at 320,700 tons as against 376,700 tons.

From the detailed figures now available as to exports of gunnies from India by countries, it is clear that decline in sacking exports is largely due to the sizable fall in the offtake by Africa. It is, however, to be noted that the offtake by most of the countries has also been lower than in the previous year. The most striking fall has occurred in the case of Africa, which has taken in 1958-59 only 60,900 tons as compared with its previous year's total of 100,200 tons. American countries other than the USA, Canada and Argentina have also recorded a sizable fall at 61,200 tons from 75,700 tons. The UK has been a steady customer with 13,700 tons against 13,100 tons. Other European countries have taken a higher quantity at 12,800 tons against 11,000 tons. Near Eastern countries' share has increased to 6,900 tons from 2,200 tons. Far Eastern countries have taken a somewhat smaller quantity at 67,500 tons against 68,200 tons. Exports to the USA show an increase to 6,800 tons from 5,200 tons. Australia has accounted for 70,700 tons as compared with 68,700 tons in the previous year. Exports to Argentina are 1,700 tons against 2,200 tons and New Zealand 11,200 tons against 10,700 tons. The rest of the importers account for 8,500 tons as against 19,500 tons.

The decline in sacking exports is by no means a sudden development. The downward trend has been noticeable for some time now. In 1956-57, exports totalled 392,300 tons and, in 1957-58, they declined to 376,700 tons to be placed at 320,700 tons last year.

During the first two years, Africa was at the head of the list with its offtake at 84,200 tons in 1956-57 and 100,200 tons in the next year. There was a steep decline in exports to the Far East in 1957-58 to 68,200 tons from 84,200 tons in the previous year. The other country to which sacking exports show a sizable fall is Australia. Exports to Australia in 1956-57 totalled 80,700 tons but they show a fall to 68,700 tons in the next year. During last year there has, however, been a slight increase. In the last three years. Africa has recorded wide two-way fluctuations. There has been a rise of nearly 20,000 tons in 1957-58 as compared with 1956-57 but in 1958-59 there has been a precipitous fall by nearly 40,000 tons to 60,900 tons. Leaving Africa, it will be seen that the two regions that wield considerable influence over total sacking offtake from India are the Far East and Australia.

Turning to exports of hessian, however, the picture is bright. During the year 1958-59, the outgo has recorded an increase of as much as 67,000 tons over the previous year. The trend over the past four years is by no means regular. From a total of 395,900 tons in 1955-56 exports improved in the next year to 422,100 tons. But in 1957-58 there was a sharp decline to 387,800 tons. The past year has been a good year for hessian exports with the total at 454,800 tons. More than 40,000 of the increase over the previous year's exports have been accounted for by higher offtake from USA to which exports in 1958-59 amounted to 212,400 tons as compared with the previous year's total of 169,800 tons. It is also to be noted that in the lean years of hessian exports the USA's share has been considerably low. An inference that flows from a comparison of the figures for the past two years is that in 1958-59 Indian hessian has been in good request in almost all the consuming countries. This is seen from the increase in the offtake of most of the countries. Exports to the UK has increased from 31,700 tons to 42,800 tons. Other European countries' share is marked upto 36,500 tons from 27,900 tons. Exports to Near East, Far East, Australia and American countries other than USA, Canada and Argentina have recorded small increases. Indicative of the fall in the Argentine offtake of Indian hessian in recent years is the small fluctuations in exports to this country in the past four years. During the past year exports to Argentine were placed at 59,500 tons as against 58,200 tons in the previous year.

✱

The jute goods market ruled rather quiet during the week ended Wednesday. Except for a report about a Government order for a quantity of B Twills for near delivery—the quantity involved was said to be around 14,000 bales—there had been nothing in the shape of fresh foreign enquiries. The sacking section was particularly depressed and B Twills September sustained a loss of about Rs 4 over the week. Even the news that sacking stocks had declined by 8,500 tons to stand at the end of August at 45,800 tons failed to revive much enthusiasm. It was evident that, apart from the apprehension that further Chinese purchases of heavy goods in which that country was showing keen interest in recent months, may not be forthcoming in view of the border violation by China and the subsequent strong attitude that is apparent on the part of Government of India toward that country, there was the expectation that the unsealing since August 24 of 2½ per cent looms would augment the supply of heavy goods. It cannot, however, be gainsaid that the speculative fraternity has also been partly responsible for the steep decline in sacking prices noticeable during the week under review. Hessian has been comparatively steadier.

Trading was on a quiet note on Friday (there was no market on Thursday on account of the hartal). B Twills September closed at Rs 105.05 while Hessian 40"×10 oz. September was placed at Rs 40.90. Despite news of a fresh Government order for B Twills, sentiment continued to be depressed on Saturday and prices dropped further in the course of the day's trading. B Twills September lost another point to Rs 104.10. Hessian was also rather weak at Rs 40.75. The downtrend gathered momentum on Monday with the result the rate was pushed down to Rs 102.50 for B Twills September. Hessian also reacted in sympathy to Rs 40.40. The trend continued to be downward on Tuesday also when, in the absence of fresh foreign enquiries, speculators hammered down rates taking their cue from the futures section. B Twills September shed another 1 1/4 points to be placed at Rs 101.25. Hessian also moved back to Rs 40.25. With the release of stock figures for jute goods as at the end of August, sentiment rallied somewhat and the downtrend seemed to have been arrested for the time being. B Twills September steadied up to Rs 101.50 with Hessian marked at Rs 40.45. The trend of trading in the heavy goods section can be clearly seen from the fluctuations in the futures section. B Twills November which opened last Friday at Rs 101.60 was finally placed on Wednesday at Rs 98.35 after having been done down to Rs 97.40.

The raw jute market-ruled quiet during the past week in the absence of mill interest. In earlier dealings, holders offered considerable resistance to lower levels but it would appear that they had to yield ground ultimately largely due to the steep decline recorded by sacking prices. The reluctance of holders to discount rates seemed to have stemmed from the belief that good quality jute might be scarce for some time in view of the reported inadequate supply of steeping water at some of the growing regions. Assam Bottoms declined during the week to Rs 22.75 from Rs 23. In the futures section, Assam Bottoms September opened last Friday at Rs 23.34 and was finally placed on Wednesday at Rs 22.96.

Following were the price trends:

	Sept. 4 Rs.	Sept. 8 Rs.	Sept. 9 Rs.

WORLD OF TEA

A Slow Export Demand

TEA auction results for the past three weeks have been rather discouraging and the trend of prices obtained has been downward. The main contributory factor is that demand from overseas buyers has been slow, not to speak of the bigger arrivals from the various gardens. There is a general fear that the trend of prices will not change much in the coming weeks for some obvious reasons.

First, the output in East Africa is increasing. The production, up to the end of June 1959, has risen to 41.5 million pounds against 35.9 million pounds in the corresponding period of last year. Secondly, there is a general feeling that the wage increase in the Dooars and Terai gardens will make the working of the estates unremunerative. Thirdly, some quarters feel that many estates in Darjeeling may have to be closed down in case of an increase in wages for the labourers of these gardens, too. Finally, heavy producing months are still ahead. Naturally, overseas buyers have been adopting a "wait and see" policy.

In the Export Sale held in Calcutta this week, offerings were 65,559 packages. The market opened with a good general demand; but interest waned slightly toward the close. Plain BPs showed some irregularity, while Black Fannings, in this category, were strong and occasionally dearer. The medium class BPs and Fannings were, however, firm to dearer. There was fair demand for orthodox BOPs and OFs, which were easier by about 20 nP per lb. Clean OFs met with keen competition. CTC BPs declined by 20 nP to 30 nP, while Fannings eased by 30 nP to 40 nP except for the few top quality teas which showed smaller declines and the cheaper varieties which were firm to dearer. Non-wither Dooars were a little irregular and generally eased by 4 nP to 6 nP per lb.

Best Whole Leaf grades were sold well; but others were up to 20 nP lower although clean black Pekoes were firm and medium Pekoes were sometimes dearer. BPs were again in demand. There was a little more enquiry for Darjeeling teas although at slightly lower rates. Tippy kinds were well supported. Following rates were quoted (per lb):—Clean Black Pekoe Rs 1.90 to Rs 1.94; Plain BP Rs 1.82 to Rs 1.86; Plain Fannings Rs 1.98 to Rs 2.08; Medium BP Rs 1.98 to Rs 2.08; Medium Fannings Rs 2.10 to Rs 2.24, Best Assam CTC BP Rs 2.40 to 2.80 and Best Assam CTC Fannings Rs 2.80 to Rs 3.20.

The Internal Sale, which was postponed last Wednesday, was held on Tuesday this week when offerings consisted of 21,673 packages of Dusts. There was a good general demand, the strongest feature being Black Leafy exportable types which were generally 4 nP per pound dearer and sometimes more. Medium Assam Dusts of orthodox manufacture also appreciated in price. Legg-cut teas were generally firm and occasionally dearer, while Darjeeling Dusts were an irregular feature of the sale.

Medium CTC Dusts were irregular and generally easier by 10 nP to 15 nP per pound. Powdery dusts were, however, well supported. The very best grainy CTC kinds were sold at about 20 nP below valuations; but the stronger liquoring powdery types, in this category, were about firm and often dearer.

In the regular internal sale held on Wednesday, offerings were 22,505 packages of Dusts. The few lines of Green teas, on offer, were well supported at slightly easier rates. Following were the rates, figures shown within brackets being the rates for the sale held on Tuesday:—Medium Dooars Rs 1.86 to 1.94 (Rs 1.82 to Rs 1.90; Medium Assam Dust Rs 1.84 to Rs 1.90 (Rs 1.78 to Rs 1.90); Medium Assam CTC Dust Rs 2.00 to Rs 2.10 (Rs 2.00 to Rs 2.10) and Best Assam CTC Dust Rs 2.55 to Rs 2.80 (Rs 2.55 to Rs 2.80).

In the Cochin market, about 1.125 million pounds were offered for export. There was good general demand. Plain sorts were strong and dearer by 5 nP to 10 nP per lb. While Medium teas were weaker, improved quality teas were stronger. Black Leaf teas attracted very keen enquiry. Also, 525,000 pounds of Dusts were offered for internal consumption. The market was fully firm to dearer except for good-liquoring high-grown teas, which were easier. Black Leaf were very strong.

Meanwhile, tea shipments from South India have fallen sharply to 8.71 million pounds in July from 12.55 million pounds in the corresponding month of last year. Out of these, 7.07 million pounds were exported and 1.64 million pounds were shipped to Indian Ports. In the first seven months of the current year, shipments have totalled only 48.96 million pounds as compared to as much as 61.6 million pounds in the corresponding period of 1958.

In the Chittagong market, offerings were 9,581 chests. There was a fair, but somewhat irregular demand from overseas buyers. Well-made Orange Fannings were the strongest feature of the sale and these were sometimes As 3 to As 4 per pound dearer. Leaf grades and Broken Pekoes also fetched prices over valuation. BOPs and PFs were generally easier to buy.

In Mincing Lane, offerings were 22,767 packages including 18,342 packages of Northern India teas. The demand was good and general for all descriptions. The best CTC Assams sold at prices well above brokers' valuation, while the better quality Dooars were upto 3d per pound dearer. Only light liquoring Brokens showed any irregularity and were sometimes easier. The small offerings of Plain teas were sold well and were fully firm.

Following are the price trends in the Calcutta market during the past three weeks:—

EXPORT SALE	On 7-9-59	On 31-8-59	On 24-8-59
	Rs.	Rs.	Rs.
Clean Black BP ...	1.90 to 1.94	1.92 to 1.94	1.92 to 1.94
Plain Broken Pekoe	1.82 to 1.86	1.82 to 1.86	1.80 to 1.84
Plain Fannings ...	1.98 to 2.08	1.98 to 2.08	1.96 to 2.04
Medium BP ...	1.98 to 2.08	1.96 to 2.06	1.94 to 2.04
Medium Fannings	2.10 to 2.24	2.10 to 2.20	2.08 to 2.18
Best Assam CTC BP	2.40 to 2.80	2.60 to 2.90	2.70 to 3.00
Best Assam CTC Fannings ...	2.80 to 3.20	3.10 to 3.50	3.30 to 3.70

MARTIN BURN LIMITED.

NOTICE is hereby given that the Board of Directors of this Company has sanctioned payment of the Dividend on the Preference Share Capital of the Company at the rate of 5% per annum for the half-year ending 30th September 1959. The Preference Share Registers will be closed from the 1st October to the 14th October, 1959, both days inclusive. Payment will be made on or after 14th October, 1959, to those Preference Shareholders whose names appear on the Company's Registers on the 30th September, 1959, or in accordance with their instructions.

By Order of the Board,
A. G. Gidley,
Secretary.

12, Mission Row,
Calcutta-1.
10th September, 1959.

MARTIN BURN LIMITED.

Convertible Notes.

NOTICE is hereby given that interest for the half-year ending 30th September, 1959, will be paid on or after that date to those holders of Convertible Notes whose names appear on the Company's Register on the 30th September, 1959, or in accordance with their instructions.

A. G. Gidley.
Secretary.

12, Mission Row,
Calcutta,
10th September, 1959.

WORLD OF BOOKS

What is Good for West Germany . . .

Prosperity Through Competition by Ludwig Erhard: Asia Publishing House. 257 pp. Rs 12.50.

Seeing the rubble and devastation wrought by war, few could imagine, in 1945, that, before two decades were to pass, the partitioned Germany would be able to show as having surpassed, in production, in living standards and in every other facet of economic activity, the best year before the Second World War. Thus, West Germany, from almost the status of a nation possessing less than nothing, if regard is had to the reparations which West Germany was obliged to honour, was transformed into a country whose standing in economic well-being could compare favourably with any other country in the world—this transformation has aptly been called the economics of the German miracle. The man responsible for the achievement of this miracle more than any other is Professor Ludwig Erhard, who, in 1949, became Minister of Economic Affairs in Dr Adenauer's Cabinet. The Professor has sought to describe vividly the fact of this German miracle, tracing what he considers to be the policies which made possible the great and considerable achievement of West Germany; and he has, in his book, succeeded magnificently in giving a graphic picture of Germany facing problems from day to day, and solving them by the steadfast application of the principle, "prosperity through competition," which Dr Erhard so earnestly believes in. The engineering of the modern economic miracle would be sufficient reason for reading through this fascinating book; but interested as this country is in economic advancement, there would appear to be a more immediate desirability of learning the lessons and morals of the German experience, so that, to the extent possible and in the directions practicable, we could adopt them or apply them usefully.

That, indeed, is the reason why the Asia Publishing House has creditably taken the initiative in bringing out an Indian edition, for which Dr Erhard has written a special preface. He remarks that he was deeply impressed by developments in India and he considers that the Indian edition will "assist those in India who are interested in the question to inform themselves of the ideas that conceived and maintained the German revival, and the factors that made it possible". However, even a superficial study of the economic philosophy adumbrated by Dr Erhard inescapably produces the impression that what was good for West Germany need not necessarily be good for India. This, incidentally, is a finding that Mr H. V. R. Iengar, Governor of the Reserve Bank, came to, when, early in August, he addressed the guests assembled at the Indo-German Social Centre. For, a point that Dr Erhard ceaselessly emphasises is, fundamentally, to allow the free market forces unfettered, as it were, to shape the economic destiny of a nation. In his preface, the West German Vice-Chancellor asserts that, "only by firmly rejecting socialistic dogmas, of whatever complexion, and by affirming a free economic order can mounting prosperity and genuine security be achieved". Mr Iengar has remarked that Dr Erhard envisages the role of the state as that of a supreme judge, who, as referee, does not participate in the game of productive activity, but merely lays down the rules of the game so as to urge the economy forward to progress and further expansion. The Reserve Bank's Governor has added that, in his book, there is no evidence of Dr Erhard laying down a "universal panacea for all countries in all stages of development". But the impression given by Dr Erhard's preface is precisely the opposite, that he considers that, it bears repetition, "only by firmly rejecting socialistic dogmas.....and by affirming a free economic order can mounting prosperity and genuine security be achieved". But can, in fact, the German example be equally applicable to other countries with substantially differing basic economies and stages of growth? It would be worthwhile for Dr Erhard's conclusions in particular respects to be analysed in the light of Indian conditions.

Dr Erhard remarks, at the very outset, that he planned for a broadly based mass purchasing power. Not for him the old society in which none but the thin upper crust had money to burn, with the lower strata, the masses, having a level of purchasing power that was totally inadequate. It may straightaway be stated that it should be, if it is not explicitly so, equally the avowed intention of the Indian Government to improve purchasing power at the mass level, since, only by so doing would the standard of living be bettered. Germany's problem, moreover, was to provide work to the growing number of those that sought jobs. Here, too, India's problem appears to be no different from that of West Germany's. Then, the West German Vice Chancellor asserts that every one could be given a larger slice out of a bigger cake, whereas nothing can be gained from discussing the division of a smaller cake. This view will also find general agreement among Indians. Similarly, it is undeniable that, midway through the twentieth century, "the functions of the State are unlikely to shrink". But here agreement with Dr Erhard ceases, because the German example ceases to have relevance for the simple reason that, though the basic objectives are the same, there are basic differences in the state of the economy. If Dr Erhard complains, as he has done, that West Germany's economic ills were aggravated by the flood of refugees, an important qualification that has to be made is that such additions to the population comprised people with technical skills and who had known what work was in industry. The Indian problem of unemployment may possibly be less acute today than the position in Germany when Dr Erhard took over. But the Indian unemployed are, unfortunately, to some extent unemployable and to a large extent innocent of the skills and abilities of working in industry. Once, in Germany, capital was made available and investment began to be made, the process of economic recovery and rehabilitation was made possible precisely because there was such a vast army of unemployed—but fully employable—skills. In India, on the other hand, side by side with savings and investment, there has to be the education of talents and skills in the today's unemployed. In short, the liability of unemployment very quickly became in Germany an asset, whereas in India, the liability continues for a considerable time.

Furthermore, in Germany, the market economy could work because, with human skills and talents available, the setting up of industry itself meant that the primary objective of mass primary purchasing power could be achieved. That is to say, industrial expansion would itself create an improvement in the standard of living of the masses, because they would be the workers in the factories. On the other hand, in India, with the rural population accounting for 83 per cent of the total, an unplanned expansion in industry would not be able to release this mass purchasing power. In another context, Dr Erhard remarks that price increase should not be tolerated, denying that "a strong expansion must be naturally or lawfully combined with a general rise in prices". But it would appear that, in India, where agricultural produce was for so long sold at depressed prices, some element of price increase might indeed contribute to the achievement of this primary objective of release of mass purchasing power. It is true, an improvement in agricultural yields would be a better way of vouchsafing larger incomes in the hands of the agriculturists. But this presupposes that the farmer is in a position monetarily to adopt the new techniques, that he could afford to buy fertilisers and better seeds, that he can sink tubewells; none of which, in Indian conditions, is quite true. It would be wise to recognise that the price that India will have to pay for a general improvement in living standards, is a rise in prices at least in agricultural commodities. To some extent, this might be viewed to be the start of an inflationary spiral, since industrial workers particularly and the urban population generally would be affected by such higher levels obtaining for agricultural goods. But then, meantime, the agriculturalist is for the first time able to buy consumer goods and, hence, directly as a result of this increased mass purchasing power, the demand for industrial goods itself rises. This should enable, theoretically, industry to achieve an improvement in productivity, and so to pay higher wages for labour, compensating for increase in agricultural prices; since the higher cost of labour could be met from an improved productivity which itself springs from greater demand from the agriculturists, there need not necessarily follow an increase in the prices of industrial goods. Indeed, in Indian conditions, some small element of rise in foodgrains prices, etc., should be reckoned to be desirable.

If Dr Erhard's market economy were to be made applicable to India, true, industry would be left free to produce the things that it would like. But what would avail a smart rise in the output of consumer goods, for example? A prerequisite would be the purchasing power to absorb such larger quantities of consumer goods and, so, a pre-condition would be a betterment in the earning capacity of the agriculturalists. As Professor Galbraith once remarked, in an underdeveloped country, the responsibility for development of basic industries will inevitably rest with the State. It is in this context intriguing to find that, even in Germany, the basic industry sector received, under the Law of Investment Assistance, "not less than DM one millard of credits" as against a total investment of DM 4,745 million. (In the book, the latter figure, erroneously it appears, is rendered as milliard). The basic industries mentioned are: iron and steel, coal mining, electricity, water and Federal railways. It is precisely in these directions that the Indian Government, too, have assumed considerable responsibility, either as helping to find resources for the private sector or in putting through projects under their own aegis. Thus, an important qualification that has to be made is that a greater duty will devolve upon an underdeveloped State than in the case of an industrialised country like West Germany in the setting up of basic industries.

Dr Erhard states that consumption must not lag behind. It is, of course, consumption which absorbs, as it were, every increase in purchasing power and, therefore, serves to thwart inflation. But, in Germany, the level of investment in 1955 was 27 per cent of the gross national income; in India, the "plough back" is around 10 per cent. Thus it is that it is necessary that there be some restraint in consumption, so that the savings thus enabled go into new investments. The problem in this regard of an underdeveloped country is very much greater than that of an industrialised country.

In conclusion, certain basic differences, in the industrial sector, as affecting employees and employers may be enumerated. The following quotations from Dr Erhard's book offer a contrast to Indian conditions:

> "An important element of stabilisation was the wages which in the beginning—at a time of considerable unemployment—did not follow price increases".
>
> "The relative moderation of trade unions wages policy...."
>
> "It is thus quite wrong for the socialists to demand... that every price increase must be compensated by a corresponding increase in wages".
>
> "I tried to oppose all wage increases which were not justified by progress in productivity".
>
> "....German economic policy has succeeded on the whole in maintaining the desired stability (of the currency) ever since the currency reform of 1948—a success which is due in equal measure to the implementation of such a policy and the disciplined behaviour of both worker and employer...."

15 SEP 1959 PUBLIC DEPARTMENT

Iron & Steel Review: British Foundry Number. Vol. II No 12.

As the title indicates, it is with the British Foundry Industry that the best part of the issue deals. The technology research and other features of the British foundry industry are traced in a series of special articles by British authors. Relatively less space is given to the developing Indian foundry industry. By way of explanation, it is pointed out that, being the first foundry number, this is only the modest precursor to more ambitious Annual numbers on foundry industry to follow in future. The statistical annexe gives information about the trends in production, prices, trade, etc.

*

Finance and Commerce: Vol. II Part 1, July, 1959.

The publication, which is the first anniversary number, contains articles on subjects as varied as the food situation and the Companies Act. Discussing the problem of unemployment, Mr A. C. Guha comes to the conclusion that the setting up of labour-intensive industries and organisation of rural productive units had not received the attention they deserved. Professor B. R. Shenoy analyses the rise in foodgrain prices in terms of variations in currency expansion and supply of foodgrains. Mr M R. Masani, in his article on "A realistic approach to the Third Plan", criticises the current official thinking on planning and pleads for a new approach based on large-scale investment in agriculture, equality of opportunity for both the private and public sectors, and incentive to foreign equity capital.

WORLD OF BUSINESS

Bharat Electronics

Significant progress has been made by Bharat Electronics during the past twelve months. This enterprise, which is a Government of India undertaking under the Ministry of Defence, has been designed to produce all wireless, radio and electronic equipment, particularly electronic valves of all types required in the manufacture of radio equipment. The factory which is situate in Jalahalli near Bangalore, Mysore State, went into production toward the end of 1956, and since then it is making steady progress.

Highlights of the factory's activities during the past one year are the development of a Twin Channel VHF Trans-receiver for air to ground communication for the Indian Air Force, the construction of a transistor hearing aid; the development of a transistorised Loudhailer called "BELHAILER"; the manufacture of Piezo Electric Crystals; and the manufacture of "BELWIN" transmitters. A significant feature as regards the last mentioned item is that efforts are being made to find foreign markets for this equipment.

There has been a steady increase in production during the past year, the total value placed at Rs 65 lakhs. This compares with the previous year's total of Rs 26 lakhs. It is expected that in the current year the value of production will be over a crore of rupees.

Two other important developments during the past year deserve special mention. The first is the agreement that has been signed with PYE Telecommunications of Cambridge for the manufacture of their Wireless Set type 62, which is a high frequency mobile Trans-receiver for the Defence Services, who have been importing this set for the last several years. With the production of this set by Bhart Electronics, there will be no need for imports.

The second agreement is the one that has been signed with Philips of Holland for the manufacture of valves. The capacity of the valve producing plant will be 1.8 million valves of the miniature type which can be substantially increased by double shift working. It is expected that the valves will be available for the general public by January 1961.

Bharat Electronics is shortly to enter into an agreement with M/s Siemens and Halske of Germany for the manufacture of high power Transmitters. There is an urgent need for such transmitters in the Defence Services and other Government Departments. With the manufacture of these transmitters at Jalahalli, there will be considerable saving in precious foreign exchange.

Besides all the above equipment Bharat Electronics is well equipped for the design and manufacture of a wide range of high quality Transformers and Chokes including power transformers smoothing Chokes (sealed and oil filled types) suitable for a wide variety of electronic appliances. It may be mentioned here that all Transformers and Chokes required for Bharat Electronic's equipments are produced in its own factory.

Now that agreements have either been concluded or in the process of being finalised, for foreign collaboration in the production of both vital equipment required by the radio industry and Government departments including the Defence Services, it can be confidently expected that, by the end of the current Plan period, the value of the total production of Bharat Electronics will be very much more than during the last financial year.

Indo-Burmese Trade

The members of the Burmese trade delegation headed by U Ba Aye, which visited Madras city last week, have expressed themselves as keenly interested in the expansion of trade with India Indo-Burmese trade had in recent years been severely curtailed by the imposition of restrictions on Indian exports to Burma. However, continuing sterling difficulties seem to have pointed to the need for a change in its trade policies with India on the part of the Burmese Government and the recent relaxation of restrictions on certain items of Indian exports was a step taken by the Burmese Government to meet the adverse situation in respect of sterling. The bilateral trade agreement signed between the two countries gives the certificate of access to a limited number of Indian exports such as bicycles, sewing machines, etc.

The leader of the Delegation has pointed to scope for improvement of trade relations between the two countries over and above what is already agreed to under the bilateral agreement. Burma would purchase anything and everything offered by India in future if the Indian goods were of good quality and cheaper. This, however, is a very important qualification which should be borne in mind in assessing the prospects for Indian exports to Burma. Relaxation of restrictions on Indian exports has only given entry to Indian goods and the success made of this opportunity would naturally depend on the ability displayed by Indian exports to meet competition offered by other countries in the Burmese market. China particularly has emerged as a powerful competitor to other countries in the Burmese market and would show no scruples in regard to the methods it adopts for stepping up its own exports. By sale at a "rock-bottom and ridiculously low price" it has achieved spectacular increase in exports of cotton textile goods to Burma. In the face of such unfair competition offered by China, there does not appear to be any bright prospects for Indian exports and particularly for those goods which have to contend against subsidized Chinese competition. However, the leader of the Burmese delegation has pointed out that there are a number of goods produced in India which remain unknown to the Burmese people and which could be successfully exported to Burma. The existence the Joint Venture Corporation, a less rigid counterpart of the State Trading Corporation of India, should facilitate trade nepotiations for Indian exporters. Closer contacts between the Indian chambers of commerce and the Joint Venture Corporation of Burma should be conducive to mutual interests.

*

Kalinga Tubes

Kalinga Tubes can justifiably be proud of the record of their activity. The company has the distinction of being the first to manufacture in our country steel tubes and pipes. The Kalinga factory went into production in April 1955 with a rated capacity of 40,000 tons per annum. Since then, Kalinga Tubes have helped save foreign exchange to the tune of Rs 10 crores as, prior to April 1955, our entire requirements of steel tubes and pipes for water and gas distribution were met from imports.

Situated on the banks of the river Mahanadi at Choudwar, Orissa State, the Kalinga Tube Mill is equipped with the most modern machinery and the tubes which are manufactured by high frequency electrical induction welding process, are suitable for water and gas connection and also for structural fabrication. The popularity of Kalinga Tubes is reflected in the fact that the company has already made rapid progress in its expansion scheme with a target of production of 100,000 tons of pipes and 300,000 step down poles. The additional facilities will become available to the factory by the middle of next year.

It is a tribute to the excellence of the quality of the company's products that Kalinga Tubes have begun to attract consumers abroad. It is interesting to note that Kalinga, which is the first to make pipes in India, is also the first to enter the export field in steel tubes and pipes. Kalinga expects to earn during the first year of its export business foreign exchange to the value of Rs 50 lakhs and seems to be confident that it can double its export earnings in the second year

Kalinga's activities are by no means confined to tube making. It has turned its attention to the production of pig iron and, from August 21, its first low shaft furnace has gone into production. The furnace has a capacity of 120 to 150 tons of pig iron per day, and is located in the iron ore district of Keonjhar in Orissa. Though designed by M/s Fried. Krupp of Essen, West Germany, 50 per cent of the plant was manufactured in India under the supervision of Indian engineers. The commissioning of the furnace was done entirely by the company's engineers without any foreign assistance. According to Kalinga, these furnaces can be set up all over the country as they can be operated with poor quality coke or coke out of lignite. As for ore also, it is pointed out that these furnaces are designed to use the types of ores which can neither be used in blast furnaces nor exported. Kalinga's claim is bound to receive the most careful official notice because, unlike armchair theorists about small scale iron production, it has, to use a metaphor produced something concrete in which its theories can be put to test.

*

Business Briefs

The Madras Government have decided on further experiments on a decentralised basis in Erode and Tiruchengode areas with a "16 spindle Model" Unit Scheme. Introduced as a pilot scheme in 1957 in Pollachi to find out the potentialities of these units evolved by the Textools Company, Coimbatore, the conclusions reached seem to be satisfactory in that the tensile strength of the yarn thus produced through the power worked spindles. The product is said to favourably compare with mill yarn. Initially ten sets of units would be supplied in select weavers' cooperative area of Erode and Tiruchengode where yarn of 20s and 40s counts are now produced. As usual financial aids would be available through the cooperative societies.

*

Hundred small teagrowers with 250 acres have formed into an industrial cooperative in the Nilgiris. This has been sponsored at the instance of the Government. This will also run a factory for the manufacture of tea. According to the scheme, the profits made out of the industry will be shared by the grower-members in proportion to the value of green leaves supplied to the tea factory. Estimated cost of the factory is about Rs 4,00,000. Already a sum of Rs 1,00,000 had been raised: members' share capital Rs 30,000, share-capital loan Rs 45,000 advanced under the State Aid to Industries Act and another working capital loan of Rs 25,000 under the same Act. The balance of Rs 3,00,000 is proposed to be raised as loan and grant from the Tea Board.

WORLD OVERSEAS

US Notes

It is beginning to look as if the long-awaited rise in US merchandise exports finally has begun to materialize.

Throughout the past year, experts in the field of foreign trade have been insisting that there is nothing inherently weak in the US export position, despite the 1958-59 dip in sales abroad, and it would be only a matter of time before the generally rising rate of economic activity in the US and around the world would be reflected in a resurgence of foreign purchases of US goods.

Early in June, some experts began to discern modest increase in export cargoes at several major US ports. When the June trade statistics became available a month ago, they showed that, for the first time since November 1957, US exports in a single month had exceeded those of the same month of the previous year—$1,426 million as against $1,406 million in June 1958. Counting only commercial exports, which exclude military shipments, the total was $1,348 million in June 1959 and $1,308 million in June 1958.

Now, the US Commerce Department's export report for July, released last week, seems to provide further evidence that the prolonged slump in US overseas shipments may be ending. The Department estimates commercial exports in July at $1,354 million, compared with $1,287 million in July 1958.

Total exports, including non-commercial shipments, are estimated at $1,468 million, compared with $1,416 million in July a year ago. For anyone looking for a trend, it is notable that the July 1959 increases over year-earlier results, in both total and commercial exports, were far larger than was the case in June.

It may be too soon, of course, to read any sustained trend into two months' results. Nevertheless, Government trade officials have reason to hope that the upward movement will continue in August. This is largely because the July 1959 increase over 1958, was due primarily to substantial rises in the exports of eight major commodity classifications, while only three classifications dropped in value.

Among the groups striking rises over July 1958 were edible animal and animal products, wood and paper, metals and manufactures, and chemicals and related products.

Moreover, trade experts note that the weakest spot in the July export picture—textile fibres and manufactures—is almost certain to show an increase in strength when the August trade figures are released. This view is based on reports by Agriculture Department officials of a marked rise during the past month in the amount of cotton registered for export.

Even with the improved showing of the past few months, however, US exports during the first seven months of this year still ran some 3 per cent behind the 1958 pace. Nor is it certain that the total for the year will come up to or exceed 1958's total of $16,300 million.

This export situation is in sharp contrast to the movement of imported goods into the United States. Along with the remarkable growth of the American economy, particularly during the past year, have come amazing increases in US purchases of merchandize from abroad.

These now are running at a record rate and are generally expected to reach an all-time annual high this year of close to $15,000 million, compared with 1958's total of a little under $13,000 million.

In explaining the lag in exports, the experts usually point to the conclusion that the world is entering a new era of trade competition. They attribute this to the economic recovery of Europe and Japan, coupled with the continuing advancement of developing nations—both of which have been consistent, long-term objectives of US policy. One result is that American traders apparently can no longer take export markets for granted.

Despite some complaints about this new competition, US officials, by and large, are convinced that the opportunities for further expansion of international commerce far outweigh the possible hazards.

Just a week ago, US Assistant Secretary of Commerce Henry Kearns—one of those, incidentally, who has been forecasting an upturn in the US export trend this year—pointed out in an address in Canada to the Toronto Board of Trade that "the potentials for growth in foreign trade are enormous."

He sees a vast world-wide population growth ahead, rapid industrialization in the developing areas, risinp incomes, and an expanding demand for capital and consumer goods, to say nothing of schools, hospitals, roads, harbours, electric power plants, and facilities and equipment of all kinds. He shares the view that meeting these needs will be both a great challenge and a great opportunity.

Britain

EXPORTS of British cars in July, at 53,561 units worth £20,848,610, created new records for any July in both number and value. Production and export figures for passenger cars and commercial road vehicles were issued by the Board of Trade in London on August 21.

Exports of cars, commercial vehicles and buses in July totalled 65,464 units and their value £28,704,712—also record figures, both in number and value, for any July.

According to the Society of Motor Manufacturers and Traders, car exports in the first seven months of this year—336,086 units worth £131,964,398—constituted another record.

* * *

The Sterling Area's gold and convertible currency reserves rose by £10,000,000 last month and stood at £1,160 million on August 31, it was announced by the Treasury in London.

During August, £9,000,000 was paid in respect of the United Kingdom's bilateral debts with the European Payments Union, and £2,500,000 was paid to the European fund under the European Monetary Agreement.

*

Russia

The engineers of the biggest Leningrad electrical engineering plants—the Metal Working and Elektrosila—have begun designing turbines and generators for the Hirakud-2 Hydroelectric Station in India. Machines with the trade mark of these plants are already operating on the rivers of People's China and the Korean Democratic People's Republic. In the Soviet Union most of the hydroelectric stations are equipped with Leningrad-made electrical machines. These include the Volga Hydroelectric Station named after Lenin, the biggest station in the world.

The working design of a 27,000 kilovalt-amper hydrogenerator will be completed early next year.

* * *

The Soviet economy has lately made a new great leap forward. The recent report issued by the Central Statistical Board shows that the plan for the first half of 1959 was overfulfilled both according to the total volume of industrial production and according to the majority of industrial goods. The volume of industrial production in the USSR increased by 12 per cent as compared with the first half of 1958. The six-month's plan of industrial output was overfulfilled by all Union republics and by all economic councils.

The rapid growth of Soviet industry demands a corresponding development of agriculture providing the country with food and industry with raw materials.

Soviet agriculture has lately scored great success and this is being felt by every Soviet family. During the past few years there has been a sharp rise in grain production, this cornerstone of agricultural production. Whereas in 1953 the country's gross grain harvest amounted to 82 million tons, it exceeded 141 million tons in 1958. In 1958 the state alone stocked up 58 million tons of grain as compared with 31 million tons in 1953. Such an increase in grain production during the past five years was achieved mainly by developing virgin lands. Some 22 million tons of grain were for instance harvested in Kazakhstan in 1958 as compared with five million in 1953. The gross grain harvest has also increased considerably in Siberia.

The setting up of a powerful grain-growing base in Siberia and Kazakhstan has resulted in the shifting of grain production from the European part of the Soviet Union to the East.

In 1956 the virgin land areas supplied the state with the same amount of grain as was procured throughout the entire country in 1953, i.e. before the development of virgin and long-fallow lands. A bumper grain crop was harvested last year.

Additional production of grain in the virgin land areas has made it possible to increase the area under industrial crops and to improve the specialization of agricultural production in the various districts of the country.

Soviet peasants have attained considerable success this year as well. The spring sowing plan was overfulfilled on the whole. In all, including both winter and spring crops, some 200 million hectares have been sown. Reports indicate a bumper harvest. It is expected that Kazakhstan alone will this year supply the country with 24 million tons of grain.

Considerable achievements have also been attained in animal husbandry. During the first half of 1959 collective farms and state farms have produced 38 per cent more meat and 19 per cent more milk than during the same period of last year. The further rise in the output of animal husbandry produce made it possible to extend state purchases. As compared with the first half of 1958 state purchases for the first six months of 1959 increased; meat-by 46 per cent, milk-by 20 per cent, eggs-by 31 per cent, and wool-by 17 per cent.

The success attained in animal husbandry this year is the first major step along the road to the preschedule fulfilment of the Seven-Year Plan targets.

Soviet agriculture has attained such a high level as was unconceivable six or seven years ago.

IN PARLIAMENT

SURPLUS MACHINERY WITH IRRIGATION AND POWER PROJECTS.

Construction equipment worth Rs 5,100 lakhs was in use on the river valley projects and Irrigation and Power Departments of the States. In addition to the machinery worth Rs 264.65 lakhs, already declared as surplus by the projects and States, machinery valued at Rs 854.00 lakhs was spare at D.V.C., Mayurakshi, Hirakud and Tungabhadra projects.

This was stated in a summary of *the salient observations made* by the Special Officer, appointed by the Union Ministry of Irrigation and Power, to assess the availability of capital equipment and spare parts surplus on irrigation and power projects.

The summary was given in a statement laid on the table of the Lok Sabha on August 7, by Shri Jaisukhlal Hathi, Union Deputy Minister of Irrigation and Power, in a written reply to a question by Shri Ram Krishan Gupta and two other members.

The summary of the Special Officer's report also stated that norms had been proposed to determine the percentage of investment on construction equipment to the capital cost of the project. Annual provision for spare parts had also been suggested.

A summary of other salient observations made by the Special Officer was as follows:

"1. (i) No change is required in the formula 'Book value minus depreciation", already in vogue, for determining the transfer price of surplus machinery. The minimum depreciation to be charged for a machine in any year may continue at 1/12th of the cost of the machine. (ii) Depreciated value of surplus equipment according to the above rate should be certified by the competent accounts authorities of the project. (iii) No storage or supervision charges should be levied on surplus equipment. (iv) To avoid delay in payment for surplus machinery disposed of, the system of payment by cheque at the time the machinery is taken delivery of should be introduced.

II. The data about actual consumption of spare parts at Bhakra Dam, Hirakud Dam Project and D.V.C. projects should be analysed, and a yardstick for assessing the requirements for assessing the requirements for different conditions of working should be established. The project purchasing a surplus machine should take at full book-value, the spare parts required for the remaining life of the machine as determined by this yardstick. All spare parts over and above this, but which can be used on the model of the machine, under transfer, should be taken over by the purchasing project along with the machine at 20% of the book-value.

III. (i) Construction plant and equipment which can be economically repaired, should be put in good working order before transfer; those that cannot be repaired, should either be cannibalized for spare parts or sold at "as-is-where-is" basis. (ii) The best agency for effecting major repairs and overhauls is the transferring project; where this is impracticable, the possibility of employing the assistance of the authorised agents in India of the manufacturers, may be considered. (iii) The unspent balance in the reserve for major repairs and overhauls should be used for effecting the repairs and overhauls and if there is still some balance left, it should be transferred along with the machine. Where, however, the actual expenditure is more than the reserve, the owning project should bear the cost of labour and the local materials like steel required for major repairs and overhauls, the cost of all spare parts being borne by the purchasing project. (iv) Where an immediate purchaser is available, the repairs to be undertaken should be jointly determined by the transferring and purchasing projects; otherwise, the Central Water and Power Commission and the owning project should determine, what repairs should be effected, and such repairs should be effected under the supervision of the Central Water and Power Commission who should fix the transfer price of such machines.

IV. (i) The efficiency of working of machinery is low at present, the principal cause being non-availability of spare parts and indifferent maintenance. (ii) The procedure for allotment of foreign exchange and issue of import licenses needs simplification. (iii) Planning for spare parts requires improvement to avoid shut down of machinery for lack of spare parts. (iv) Master catalogues should be obtained from all important foreign manufacturers to enable greater use being made of interchangeable spare parts. (v) No project should be started by any State Government without clearance of the Planning Commission. (vi) No new type of model of machinery should be imported into the country without sufficient spare parts. (vii) The transfer of agency in India in respect of any make of equipment should not create inconvenience to the users of that make, in regard to spare parts.

V. (i) Each State should establish a central mechanical agency for the operation and maintenance of the machinery other than those employed on major projects. Major projects may have their own agency. (ii) In view of the acute scarcity of foreign exchange, the building up of items like track chains, and lending of spare parts to other projects should be resorted to on a large scale.

VI. Certain modifications in the existing procedure for reporting surplus machinery by State Governments/Project authorities to the Central Water and Power Commission and in the constitution of the arbitration board for the settlement of the transfer value of surplus machinery in case of dispute, have been suggested.

VII. (i) The Central Water and Power Commission should keep the register of surpluses up-to-date. (ii) The Central Water and Power Commission should analyse the data available and lay down yard-sticks for:—

(a) consumption of spare parts;
(b) major repairs and overhauls and field repairs, and
(c) consumption of petrol, oils and lubricants and other consumable stores, plant hours and working of machinery.

VIII. A trial may be given to the system of stocking of spare parts by authorised agents in India of the foreign manufacturers.

IX. Spare parts worth about Rs 588 lakhs are held at present by State Governments and Projects.

EXPORT OF ROLLING STOCK.

Mr Shah Nawaz Khan, Deputy Minister for Railways was asked by Mr Pahadia during question hour in the Lok Sabha, whether Government were looking for markets abroad for locomotives, wagons and coaches. Replying in the affirmative the Deputy Minister said: "Government are most interested in exports".

He added that possibilities of export were being explored jointly with the Commerce and Industry Ministry.

COACH BUILDING PROJECT IN KERALA.

The project regarding the location of the proposed metre gauge coach building factory in Kerala, it has been decided, is to be held in abeyance, for the time being. This was stated by Mr Shah Nawaz Khan, Deputy Minister for Railways, in reply to a question by Shri Narayanakutty Menon and Shri Punnoose in the Lok Sabha.

The Deputy Minister added that in view of subsequent improvement in the output of existing coach building units, the position had been reviewed.

FRENCH ASSISTANCE FOR PILOT PLANT FOR INDUSTRIAL RESEARCH.

Replying to a question by Shri N. C. Sekhar regarding French technical assistance for the establishment of a pilot plant for industrial research in India, Shri Humayun Kabir, Union Minister of Scientific Research and Cultural Affairs, said in the Rajya Sabha on August 12, that the French Government had agreed to arrange practical training in France for a few scientists of the laboratories of the Council of Scientific and Industrial Research in their respective fields for pilot plant development. French experts, he said, would later assist in the setting up of a pilot plant development cell in India under the Council.

The Minister further said that the entire expenditure in connection with the deputation of Indian scientists and the assignment of French experts would be borne by the French Government. Necessary action to avail of these facilities was being taken by the Council of Scientific and Industrial Research.

GANGA BARRAGE SCHEME

The main features of the Ganga Barrage Scheme were: (i) A barrage across the River Ganga at Farakka; (ii) A feeder Canal on the right bank outfalling into the river Bhagirathi at Jangipur; and (iii) A barrage at Jangipur across Bhagirathi above the feeder canal outfall.

This information was given by Shri Jaisukhlal Hathi, Union Deputy Minister of Irrigation and Power, in written reply to a question by Shri Ram Krishan Gupta and two others in the Lok Sabha on August, 12.

The Deputy Minister added that the Ganga Barrage Scheme had been prepared but had not yet been finalised.

PRICES OF PETROLEUM PRODUCTS

The discussions in regard to reductions in the selling prices of petroleum products in India had reached an advanced stage and final results would be announced as soon as these were completed.

This was stated by Mr K. D. Malaviya, Union Minister for Mines and Oil, in reply to a question by Shri Ram Krishna Gupta and nine others in the Lok Sabha.

The Minister stated that as a result of the negotiations last year, the oil companies made certain *ad hoc reductions in their selling prices* (which were mopped up through additional duties) and also agreed to an examination being made by the Chief Cost Accounts Officer of the Government for the evolution of a new price formula to have retrospective effect from April 1, 1958.

This examination having been completed, added the Minister, after considering its results, discussions had been started with the oil companies for the finalisation of a new price formula, on the basis of which new prices would be established.

RESEARCH ON CATTLE FODDER

In an answer placed on the table of Rajya Sabha on August 11, in reply to a question by Shrimati Savitry Devi Nigam enquiring what were the results of research work undertaken on cattle fodder, especially on Kudzu, Love grass, Star grass, in the Government research institutions, the Minister of Food and Agriculture, Shri A. P. Jain, stated that research work done on Kudzu, Love grass and Star grass in the Government research institutes, had shown that Kudzu is a promising legume for supplying nutritional cut fodder and for grazing purposes under a wide range of soil and climatic conditions. It checks erosion on steep slopes and is useful for embankments and for plugging gullies. It is also used to restore fertility to infertile and worn out lands.

Love grass had not shown much promise except in the arid and semi-arid regions.

Giant star grass had been found suitable for humid regions, for pastures and for soil conservation.

Independent work was in progress, the Minister added, at the Indian Agricultural Research Institute and State Research Stations. Useful grasses and legumes had been selected for lands of various classes and for different purposes.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

IN his speech at the recent annual general meeting of TISCO shareholders, Mr J. R. D. Tata was understandably more concerned with the affairs of the company than with the broader economic issues before the country. As he himself put it, the year he reviewed was "one of the most difficult ones" in the history of the company. Though the new plant has been commissioned, its erection took longer than originally planned, and its initial production has been somewhat disappointing. Interested rumours about the incapacity of the new plant to achieve the rated production have had to be scotched. The year's labour troubles and violence in Jamshedpur were a matter not only for sorrow but for future misgiving. And of immediate interest to the shareholders whom he addressed was the question of dividends about which there has been some dissatisfaction. Mr Tata's speech was naturally taken up with these and related matters.

✱

It may not be entirely fanciful to detect in Mr Tata's speech an undercurrent of a deeper disappointment than what is likely to have been caused by the "few setbacks" he has recounted. The two million ton programme had, in the course of the years since it was originally conceived, accreted to itself the characteristics of a symbol. "Onward to two million tons" was more than a mere advertising slogan. It was an act of piety, a tribute to the founder of TISCO on a jubilee occasion. It was therefore a matter of professional pride for TISCO steel makers to complete the programme on time. There was, certainly, a certain amount of not wholly unworthy competitive zeal, especially in relation to similar simultaneous efforts in the public sector. But it was mostly the professional man's pride in his job. Ironically, this pride was hurt at its deepest point because the failure to complete the programme on time was largely a professional failure. It was the Communist inspired strike in May 1958—in itself a serious breach with TISCO traditions—that was responsible for the upset in the final stages of the programme.

✱

But then, as Mr Tata himself notes, the year is also a year of achievement for the company. It is significant that Mr Tata counts among the two major achievements the conclusion of a three year agreement with the Union for a comprehensive revision of the wage structure. There is still a tendency in the country to consider problems of labour-management relationship as a marginal nuisance. This is so despite the plethora of labour legislation and multiplicity of arbitration and conciliation machinery and constant friction. Among managements who have seen the central importance of labour in a productive enterprise are the Tatas. It is perhaps a little highfalutin to talk of managements being trustees for the shareholders, on the one hand, and workers, on the other: but it can hardly be denied that the TISCO management spends at least as much time negotiating with the Union as on the technical details of production and on the financial results of its activities. It has also shown itself eager to consider any idea that Labour is willing to put forward. Indeed, some of the more obstepurous shareholders of TISCO complain that the management is more solicitous about the welfare of labour than of the shareholders.

✱

But Mr Tata's speech was not entirely about the affairs of TISCO. He did, though in a smaller compass than usual, deal with the general economic trends at home and abroad. With much of what Mr Tata has to say about these, I am in agreement. He is, unlike some other public men in the country, satisfied about the basic economic and political health of the country. In particular, he does not hold with much gloomy head-shakes about the external value of the rupee. In a general atmosphere of crumbling regimes in South-East Asia, India continues to stand forth as the one example of a nation with political stability. I am not forgetting Kerala. The Kerala episode has its lessons, but none of them is that the country's political sanity is in imminent jeopardy. Indeed, it has drawn our attention to certain built-in shock absorbers in the polity. Otherwise, an upsurge of the order that took place in Kerala would have left the country politically limp. Comparisons are misleading, but one can compare the intensity, though not the nature, of the political passion roused by the Kerala episode to that roused in England by the Suez episode. Though our political resilience is far less than that of England, it is a matter of some gratification that we were able to come out of the Kerala agitation as well as we did. The fact that there is shortly to be an election there, shows how the democratic process is clung to even in circumstances that might seem to some as justifying a less austere notion of the demands of democracy.

✱

Mr Tata also reports, and he ought to know, that "in political circles abroad, there is goodwill and real appreciation of our needs and of what we are trying to achieve for our people. In financial and business circles, there is growing confidence in our ability to withstand the disruptive forces and to ensure orderly development and along with a dawning recognition of the long term potentialities of the Indian economy".

✱

But when it comes to examining the outlook within the country itself, Mr Tata finds much that is vexing. He finds that the left wing minority of the ruling party is vociferously peddling the most old fashioned kind of doctrinaire socialism. He also finds that the Planning Commission and the Government allow themselves to be unduly influenced by this vocal minority in their long term economic thinking. The consequence is that ideological solutions are sought for problems that require an empirical approach. In agriculture, for instance, what is needed is streamlining of agencies of supply of credit and seeds and fertilisers and better provision of marketing and storage facilities. Instead, attempts at State trading in foodgrains are being made half-heartedly, and the whole country thrown into a frenzy of debate about cooperative farming.

✱

I will not deny the justice of much of Mr Tata's criticism of not only the verbal extravagance of the vocal minority, but also of specific surrender of Authority to ideological bullying. But there is more to what Mr Tata calls "the Congress party's schizophrenia" than he seems to allow. In so far as our difficulties proceed from a complete dissociation of economic thinking from economic reality, they are pathological manifestations of Authority's split personality. There are, to be sure, specific manifestations of this sort. But it is no aid to diagnosis to misread sympotoms. And some of Mr Tata's remedies are, if not exactly worse than the disease, at least totally inapplicable to the disease. Take Mr Tata's prescription of lessons from the post-war economic history of Western Europe and Japan. There has been much talk recently of "the Erhard Way" in the country, but, as I said in these columns a few weeks ago, the relevance of West German experience for our problems is extremely limited.

✱

In a searching analysis in two recent issues of the Economist of problems of economic growth, Professor Walt Whitman Rostov envisages what he calls five stages of growth. Every country or society can be fitted into one or the other of these five stages. Thus, there are traditional societies, transitional societies and societies on the point of "take-off". About sixty years after a

Khira

furniture in steel

Calcutta Madras New Delhi

nation's take-off begins, it reaches the stage of maturity from which it can, if it eschews the alternatives of aggressive war or welfare state, reach the final stage of "high mass consumption". I am not at the moment concerned with the future niceties of Professor Rostov's doctrine, interesting though there are. But the point I am making is that, in this schema, India is just on the threshold of its "take-off", a "brief period concentrated usually within a few decades when the economy and the society start to transform themselves so that economic growth becomes more or less automatic". Germany and Japan, on the other hand, have long ago left behind their "take-off stage" which, in the case of the former, can be roughly put between 1850 and 1873 and for the latter between 1890 and 1900. In other words, after allowing their respective economies to mature for sixty years, both chose the wrong alternative of war. Be that as it may, post-war Germany and Japan are well on their way to the high mass consumption society, and indeed they are already there. India has just moved or is still to move into the take-off from the transitional stage. (For India is still a transitional society, according to some of the tests devised by Professor Rostov, namely, the rate of investment relative to its rate of population increase. "If the rate of investment is less than 5 per cent of national income, it is a traditional society and if it is ten per cent or over, it is a society on its way to take-off". The ratio of investment to national income was 7.3 per cent at the end of the First Plan and is expected to be 10.7 per cent at the end of the Second. (Professor Rostov himself puts India firmly in the take-off stage along with Argentina, Turkey and China). Now, a good proportion of Indian socialism is nothing but the dynamics of take-off. At the stage of "take-off," Professor Rostov envisages a "key-role for the States". Even in the case of the Japanese take-off, Professor Rostov notes that the "whole series of new industries that took hold in 1880s and 1890s were "initially sparked by Government initiative".

*

In any event, to refer to the experience of Japan and Germany, whose stock of technical, managerial and even material resources is, despite the war, far more abundant than ours, as a possible guide to our immediate problems caused by paucity in all these respects does not take us anywhere. I am not for one moment saying that Government have learnt all the lessons that are to be learnt from our difficulties in the last few years. All I am saying is that, though some of our difficulties have been caused by our espousal of socialism, especially socialism of an outmoded kind there are other difficulties which are not so caused.

*

Even when we assume the worst about the effect of the opiate of ideology, there is one redeeming feature. It is that men in power in India today are too humane to be thorough-going ideologists. When they are not in a position to bend economic facts to shapes forged by ideological preconceptions, they do not, as some others notoriously do, take their pay off in human cost. They shrink from the inhumanity involved in it. Indeed, they stop far short of ideological brinkmanship. Thus, as Mr Tata himself notes, nationalisation of banks has been firmly ruled out. In a number of other things too, ideology has been held in abeyance. Invariably, too, in practice, ideology is tempered by an awareness of its limitation. But there is a sense in which "flying in the face of facts" is no quixotism but the plain duty of a nation poised for an economic "take off". In economic growth, as in Aerodynamics, the take-off initially involves flying in the face of facts. And Orville Wright was literally flying in the face of facts when he "took off" in 1903, in his rickety contraption. And so did, Sir Jamshedjee Tata, for that matter, when he founded TISCO.

EAVESDROPPER

DURGAPUR

IS GETTING READY

At the Durgapur steelworks at this moment, nearly ten weeks ahead of schedule, the first Simon-Carves coke oven battery is being gradually and carefully heated up to operating temperature.

When this highly skilled process is finished, the coke ovens will be ready to supply coke for the first blast furnace to produce Durgapur's first pig iron.

Simon-Carves, a leading member of the British consortium ISCON which is building the Durgapur steelworks, are privileged to be the first contractors to put their plant into service—plant which is vital to Durgapur's coming production of another million tons a year of Indian steel.

BOMBAY REVIEW

TISCO's Progress

THE Chairman's speech at the annual general meeting of the shareholders of the Tata Iron and Steel Company Limited, is an event which is looked forward to with eager expectation not only by the shareholders of the company but by investors in general. This widespread interest stems from the fact that Tata Steel is the bellwether of Indian Stock Exchanges. But the eager audience is by no means confined to the investing public. The speeches are read as carefully by laymen as by students of Indian economics. Proof of the general interest that the speech evokes is its exhaustive review in Indian Finance in a number of sections.

As I am sure that this year's speech will be accorded a similar treatment, I am confining my study of the speech to those portions that deal with the affairs of the company. It may be noted that, unlike last year, Mr J. R. D. Tata has devoted the best part of his speech to explaining the working of the company during the year under review and to indicating the prospects ahead. This is as it should be, because TISCO shareholders have been quite worried as there were a number of disconcerting rumours circulating in the marketplace about the company's Two-Million Ton Programme.

As a matter of fact, the period of anxious suspense for the shareholders of the company began with the announcement from the company that it was obliged to postpone consideration of the proposed new issue of the company as Government were yet to communicate their decision in this regard. The unexpected postponement gave rise to the rumour that the delay was due to the fact that Government were not in favour of allowing the company to make its new issue at par as desired. Then came what was generally considered to be the disappointing dividend announcement. In between, there was the rumour about some serious breakdown in the new plant. With the publication of the annual accounts, the earlier apprehensions, which had been more or less banished through the cumulative effect of Government sanction for a par issue, the satisfactory explanation of the company's dividend policy to a delegation of the Bombay Shareholders' Association and authoritative denial of the breakdown story, seemed to have returned. Mr Tata's detailed account of the situation and developments within the company during the past year in his address to the annual meeting of the shareholders of the company should once again remove the apprehensions.

In his characteristically forthright way, Mr Tata draws up at the very outset a balance sheet of the company other than the one composed of figures. The new balance sheet contains only facts. Although the explanatory notes are quite long, the items on both sides of the ledger are few. On the credit side we have the completion and commissioning of the new plant and the conclusion of a three year agreement with the labour union for a comprehensive revision of the wage structure. The items on the debit side are the labour strike of May 1958, the six month delay in the completion of the new plant, low rate of initial production achieved and the consequent decline in profits for the year. The assessment of the position of the company as at the present juncture, according to Mr Tata, is that, while the setbacks have no doubt been not quite minor though temporary, the point to be noted is that the achievements are permanent. True, it would have been extremely welcome not only to the shareholders and the company management but to the country as a whole had there been no delay in the implementation of the new plant project and had there been the expected quantum of production at the initial stages. But that is not to be for various reasons; and, later in the speech, Mr Tata shows that initial operating difficulties have largely stemmed from factors beyond the control of the company. So far as the shareholders of the company are concerned, although they may be disappointed to hear that the full benefits of higher output may not accrue before 1960-61, the fact that the job of building up additional capacity to give a production of two million tons is now completed denotes certain prosperity. Mr Tata has also allayed grave apprehensions as regards soundness of the new plant and its total cost. The design, layout, and quality of the new plant as a whole and of all the major units in it are entirely sound. There is also no truth in the rumour that Kaiser Engineers have far exceeded the estimated expenditure of the plant. It is, however, true that the estimate has been exceeded, but the additional expenditure incurred is well below 10 per cent of the original expectation.

The question now arises as to why the new plant has not been able to produce the expected quantity of steel. Judging from the space taken by Mr Tata to answer this question, it will be evident that the TISCO chairman has espied deep concern among the company's shareholders about the performance of the new plant. It would appear that, in this regard, the shareholders fall into two groups, one anticipating the immediate achievement of the full producion denoted by the name of the expansion programme and the other expecting a sizable increase in production soon after the commissioning of the new plant. The first group is easily satisfied with the statement that its expectation is based on a basic misapprehension that the commissioning of the new plant means the availability to the plant of all the new facilities all at once. "A large iron and steel plant, however carefully designed and built, cannot produce at the maximum rate immediately after its construction and it is the common experience of steel-makers throughout the world that it takes considerable time for all the new facilities included in an integrated plant to be brought into full operation".

The second group's expectation is quite justified. The performance of the plant would have come up to expectations had it not been for a number of militating influences. As mentioned above, a large part of the blame is to be borne by Government. Now if there are two things that are very important in a steel plant, they are iron ore and coal. In the supply of both these essential items, Government occupy key positions. In the case of coal supply, the delay in setting up a washery at Bhojudih, which is the responsibility of Government, has resulted in the use of inferior quality coal. The delay in the construction of the Government railway line to Joda has deprived the new plant of the facility of getting a suitable blend of ore obtainable from mixing the Joda ore with ore from the company's older mines.. Other difficulties are the rather unsatisfactory operation of the ore crushing and screening plant and the new steel melting shop.

What shareholders should note of is that, although some of the difficulties in working the new plant still continue to be present, they will soon be things of the past. There is every reason to hope that, with no further undue delay in the full commissioning of the railway line to Joda and in the completion of the coal washery at Bhojudih, the new plant will rapidly progress toward full production. On its part, the company is making concerted efforts to set things right where they have been found to have gone wrong. So far as the new steel melting shop is concerned, the delayed operation has largely stemmed from the unfamiliarity of the processes used. But this handicap is sought to be removed by bringing foreign experts to aid our technicians as well as by achieving better coordination within the melting shop and its connected departments. According to Mr Tata, "The most determined and comprehensive efforts are being made to overcome present difficulties as quickly as possible and we hope that we shall reach an acceptable rate of production by the end of the current financial year". As the performance in the first half of the current year has not been satisfactory, the full benefit of the additional capacity is not expected to accrue before 1960-61.

Mr Tata naturally does not expect much improvement in the financial position during the current year. In the first, place, the overheads per ton are expected to be as heavy as last year. Secondly, the increase in wages under the new agreement with the labour Union cannot be expected to be fully compensated by higher productivity as full output will not be reached this year. Thirdly, there is the question of increase in the retention prices and the increase in the price of pig iron under the uniform price scheme.

In the meantime, there is the assurance that the dividend for the next year will not be less than Rs 10.50 for the old shares and between 5 and 5½ per cent for all shares issued after April 1956. Mr Tata is justifiably surprised that there has been such a furore over the dividend for 1958-59. It has taken a deputation of the shareholders and an explanation to it by a company spokesman to demonstrate that, far from being a reduction over the promised quantum, the 1958-59 dividend has been slightly higher as far as the new shareholders are concerned.

What strikes me most about Tata Steel is that it is a scrip about which there is very little that is unknown to the general public. In getting the required information, one need not depend on market rumours or the so called knowledgeable circles. The Chairman's speech gives a complete picture of the affairs of the company up to the time of the meeting, and no important development in between one annual meeting and another goes without an authoritative explanation.

BOMBAY REVIEW

Production of Polystyrene

SPEAKING at the third annual general meeting of Polychem Limited, Mr Ambalal Kilachand has said that indications are that the demand for various grades of Polystyrene will be in the neighbourhood of 12 million pounds by 1961-62. This gives an indication of the rapid progress of the plastic industry in the country in the past two or three years. Judging from the target of production of 6 million pounds of polystyrene at the end of the Second Plan, it is clear that the Planning Commission did not anticipate such rapid progress of the industry. The big strides that the Indian plastic industry seems to be now taking, however, are in no way surprising to those who care to take a casual look at the market places or even for that matter at an ordinary household. The versatility of this new wonder material which costs so little has found itself into the remotest village homes as well as into big industries. A material which is in keen demand both at the humble household and the factory will consequently require a good deal of the raw materials from which it is made. It is here that the production of polystyrene comes to one's notice.

Polychem is the only enterprise producing polystyrene in the country. When the company's factory was put up, the assumption was that it would be required to cater to a demand of 6 million pounds of polystyrene by the end of the Second period. But even now—during the third year the demand for polystyrene moulding powders is estimated at around 9 million pounds per annum. From current trends of demand, it has been concluded that the demand will increase to about 12 million pounds by 1961-62. Polychem has naturally considered the trend of consumption of polystyrene to be of great significance to itself and has been prompt to take steps to get itself ready to meet the increased demand. In this, it has already achieved signal success. Polychem is now in a position to manufacture and handle one million pounds of polystyrene per month, that is, 12 million pounds per annum. Incidentally, it may be noted that the company has doubled its Second Plan targetted capacity even when there is still two years to go for the completion of the Plan period.

The increased productive capacity, however, has meant little in the shape of actual increased production and so far the only redeeming feature is the assurance that the company is poised to meet the demand of the country in full. At present, production is limited to 4 million pounds even though there is a known demand for 8 to 9 million pounds of polystyrene. The reason for the low output despite a doubling of installed capacity is to be found in the fact that polystyrene depends on the raw material styrene monomer which is now being imported. And import of styrene monomer in its turn is being subjected to severe control on account of the present acute stringency of foreign exchange. It is, however, gratifying to note that Polychem is taking active steps to establish the manufacture of styrene monomer in India in conjunction with its collaborators, the Dow Chemical Company of USA.

In the meantime, the company's plea that import of an adequate quantity of styrene monomer should be allowed seems to be quite justified. For, the plastic industry has grown up rapidly in the country providing employment to a number of people. A stringency in the supply of polystyrene will adversely affect the employment situation in the industry. It is on this score the allocation of the requisite quantity of foreign exchange to meet the larger imports of styrene monomer is to be considered by Government.

Problems of Urban Housing

The two-day seminar on the problem of urban housing held in Bombay early this week has served to focus attention on a matter which is generally considered to be next in importance only to food. Organised by the Bombay Branch of the Indian Institute of Public Administration, the seminar was attended by representatives of several official and non-official agencies actively interested in the urban housing problem. The seminar appointed a six-member expert committee to study the problem and make suitable recommendations with a view to relieving the present shortage of housing in urban areas.

The discussions at the seminar have shown that the problem does not admit of an easy or an early solution. For, it would appear that it is primarily a problem of finding the huge finance that will be needed. According to Mr C. R. Desai, Housing Commissioner, Government of Bombay, the overall outlay on new housing in urban areas in the State may be of the order of Rs 10 crores per annum. It is evident, therefore, that if the problem is to be tackled effectively, new sources have to be tapped to yield the requisite finance. Mr Desai's suggestion is that the Life Insurance Corporation and Scheduled Banks should set apart substantial amounts every year for providing housing loans.

It would appear that the problem will by no means be resolved once the requisite finance has been found. In urban regions, a major impediment is the difficulty in acquiring building sites. The heavy tax burden on urban house property is another serious disincentive in new house construction. Over and above these, the prospective house builders have to face the ordeal of procuring the necessary building materials, most of which are quite costly.

A sizable improvement in the urban housing situation can, however, be brought about in the near future provided there is concerted effort on the part of everybody concerned. Perhaps, it may not be wrong to say that the primary responsibility in the matter is that of the municipality. But nothing worthwhile could be done if there is no cooperation from Government both in the Centre and the State. While it is true that the high tax on house property in urban areas is one of the major inhibiting factors in house constructions, it is to be admitted that municipalities have to secure enough funds to provide the various amenities that city dwellers demand. It will, therefore, be an unworkable proposition to place tax reduction on house property as an essential prerequisite to fostering new construction. A proper solution to the whole problem may perhaps be found in some form of subsidy from Government. The suggestions that Government and employers should evolve a plan to make housing accommodation put up by them available to tenants on hire purchase and that it should be made possible for banks and other lending institutions to give loans on flats owned by dwellers, if implemented, should go a long way toward an expansion of building activities in the urban areas

Advertising Research

A striking feature of the well-developed economies of the free world is the important role assigned to advertising. In the United States, for example, the annual outlay on advertising is computed in several billions of dollars. Similar huge spending in this regard is also noticeable in the UK and other advanced European countries. In India, advertising may be said to be still in its infancy but it is fast growing. Considering the rapid industrial development that is going on now in the country, the coming years may well witness increasing demand made on advertising facilities. There are, however, in India serious limiting factors for the widespread expansion of advertising, for those who want to tell people about their wares do not have some of the highly potent media that are available for their counterparts in other parts of the world. The radio and television are unavailable for commercial exploitation for various reasons. As Dr Keskar told a meeting of advertinsing agents the other day in Bombay, there is need for developing new media to spread the message of advertising to the rural population. But as matters stand at present the newspapers and periodicals are the mainstay of advertisers to reach the consumers and it is to be noted that this medium will gain in importance in the coming years with the rapid spread of literacy in the country.

Although advertising in India is yet to become part and parcel of business activity, it is increasingly being realised by advertisers that advertising needs expert handling. Advertising agencies are people especially equipped to do the job. In western countries, advertising is placed on a par with other jobs calling for high technical training. This explains the vast array of research and other kindred organisations connected with the development of the advertising technique in these countries. Perhaps the most important thing that an advertiser wants to know is how effective is his advertisement. The advertiser in the US for instance can quite easily find this out. Either he can entrust the matter to an organisation dealing with such matters or himself take up the work for which trained personnel are available. Such facilities have yet to be available in our country. But advertisers will be glad to note that beginnings are being made in this direction by advertising agencies. It is generally accepted that the effectiveness of an advertisement can be measured by what is called Recall Value. "Advertisements which are seen and remembered are said to have a Recall Value." Everest Advertising of Bombay have been conducting pilot surveys to assess the recall value of advertising, using simple methods of obtaining an opinion. The results of one of these surveys are contained in a booklet entitled Recall Study recently published by them. The general conclusion reached as a result of these surveys is "The data obtained are reliable; in asmuchas they show that those who read advertising are conscious about advertising, and are able to recall such advertising by product name". Recall study contains the results of a survey to measure the recall value of advertisements appearing on a particular day in five newspapers published from Bombay. The information obtained is presented in a series of tables. To mention an important inference: Generally more than 50 per cent of the readers contacted could recall advertisements appearing on that day.

GATEWAY NOTES

WORLD OF COTTON

Outlook for 1959-60 Season

THANKS to a marked improvement in the textile situation in recent months, the Government announcement permitting an export quota of 75,000 bales of new crop Bengal Deshi and the import of 1.40 lakh bales of foreign cotton, the new cotton season (1959-60) has commenced with an optimistic outlook. With the carryover of 17.50 lakh bales, an indigenous crop of 48½ lakh bales and imports of 6 lakh bales, the total supplies of cotton are placed around 72 lakh bales. The textile industry's requirements will be about 53 lakh bales. With an estimated export of about 4 lakh bales, the carry-over for the next season will be about 15 lakh bales.

The 1958-59 season, just ended, is described to be an encouraging one. For, cotton prices were higher, while the accumulated crisis in the textile industry showed definite signs of getting solved. Mill consumption of cotton, during the season, recorded a steady increase. On the basis of monthly average consumption of 3.85 lakh bales, traders place the 1958-59 season's mill consumption at 4.65 million bales as compared with 4.43 million balances in the 1957-58 season.

Again, cotton circles in Bombay have welcomed the fixation of "ceiling" and "floor" rates of cotton stapling one inch and above for the 1959-60 season. The "floor" and "ceiling" price, fixed by the Government for extra long-staple varieties of cotton, are Rs 795 and Rs 1,165 per candy of 784 lbs net respectively for a basic staple length of one inch fine. "On" allowances of Rs 65, Rs 415, Rs 165 and Rs 215 have been fixed for staples 1|32", 2|32", 3|32" and 4|32" respectively above the basic staple. The "off" allowances for staple length of 31|32" and 15|16" have been fixed at Rs 30 and Rs 55 respectively.

These rates are, more or less, in line with those of the previous season. The rates fixed for higher quality cotton are said to be satisfactory inasmuch as foreign cottons are currently sold at or above the ceiling levels. For instance, Sudan cotton is bought around Rs 1,450 a candy and Egyptian or its equivalent grade fetches Rs 1,200. Even more or less comparable Indian varieties like CO2 are quoted around Rs 1,400, although the CO2 quality from Saurashtra is easily sold around Rs 1,250. In the light of the present fixation of ceilings for higher staples, market circles hope that the fixation of "floors" and "ceilings" for lower and medium-grade cotton also will be satisfactory.

Meanwhile, reports of heavy rains in cotton-growing areas have caused serious concern to the trade and industry. Many mills and investors have re-entered the market on fears of damage to crop in Vidarbha, Gujerat and Malwa areas. Their anxiety over the crop is reflected in a rise of about Rs 8 per candy in the futures market. Jharilla March 1960 delivery has shot up from Rs 683 to Rs 695, to finish at Rs 693 per candy.

In London, traders are predicting higher prices for cotton and believe that the commodity is entering into a brighter period. This optimism is based on several factors. The first is the International Cotton Advisory Committee's report that non-Communist world production and consumption in the season just ended is roughly in balance. But, the trade has been encouraged by the good start made by the United States Commodity Credit Corporation (CCC) in disposing of last season's American surplus.

The first official estimate of the cotton crop in the USA is placed at 14.8 million bales against 11.5 million bales in the previous season. Although a rise in world consumption of raw cotton in the new season is generally expected, it is doubted if the increase will be large enough to absorb the additional 3.2 million bales that the United States expects to produce. But, the International Cotton Advisory Committee's report has been interpreted as suggesting that the increase in American output will be at least partially offset by declines in production elsewhere. The Central American growing areas and the Middle East are mentioned as probably producing less in the new season.

×

EXPORT FRONT:

With the commencement of the new season, the Government of India have announced an export quota of 75,000 bales of Bengal Deshi cotton, valid for shipment up to the 29th February, 1960. A part of the quota will be earmarked for distribution among cooperative societies and the balance will be licensed on a "first-come-first-served" basis, but subject to an individual quantitative ceiling of 10 per cent of the quantity allowed. Shippers have greeted the export quota, as they had already put through business of about 20,000 bales with Japan, subject to export licences.

Unfortunately, due to keen competition from other raw cotton exporting countries, all the quotas issued could not be disposed of in full, notwithstanding the reduction in export duty from Rs 50 to Rs 25 per bale on all varieties. Nevertheless, the total shipments, during the season, were about 60,000 bales higher than in the previous season.

×

IMPORT FRONT:

Although the long-awaited import quota of 1.4 lakh bales has been welcomed, import houses are disappointed to find that they are excluded from participating in the import quota as it is reserved only for actual users. The basis of allocation of the one lakh bales to non-user mills against applications to be submitted before September 15 has been announced as Rs 10 in value per licensed and installed spindle actually working on July 1, 1959. This quota will command a premium of 10 per cent under the export incentive scheme. Those mills, who surrender the quota, will get a premium of 10 per cent, since reallocations of such surrenders are to be made at 20 per cent, including 10 per cent. Shipments will be permitted against this quota up to the 29th February, 1960.

×

CLOTH AND PIECEGOODS:

Trading conditions in the Bombay Piecegoods market have continued to remain active with prices ruling firm. Mills are somewhat reserved in their sales. Hopes are held that there may be better movement of goods after a few days, as offtake by upcountry centres may be expected to broaden.

On the export front, conditions are generally satisfactory and substantial business is expected in the near future.

BOMBAY REVIEW

JUBBULPORE ELECTRIC SUPPLY COMPANY LIMITED

NOTICE

Notice is hereby given that the Annual General Meeting of the Company will be held at the Registered Office, No. 12 Mission Row, Calcutta, on Wednesday, the 30th September, 1959 at 11 a.m. for the following purposes:—

1. To receive and adopt the audited Accounts for the year ended 31st March, 1959, and the Reports of the Directors and the Auditors thereon.
2. To declare a Dividend.
3. To appoint a Director in place of the retiring Director.
4. To appoint Auditors and fix their remuneration.

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 24th September, 1959 to the 30th September, 1959 both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy, who need not be a member, to attend, and on a poll, to vote instead of himself.

By Order of the Board,
MARTIN BURN LIMITED
A. G. GIDLEY
Secretary,
Managing Agents.

12, Mission Row,
Calcutta-1.
5th September, 1959.

113 branches continues to
play its useful part in India's
economic development.

BOMBAY REVIEW

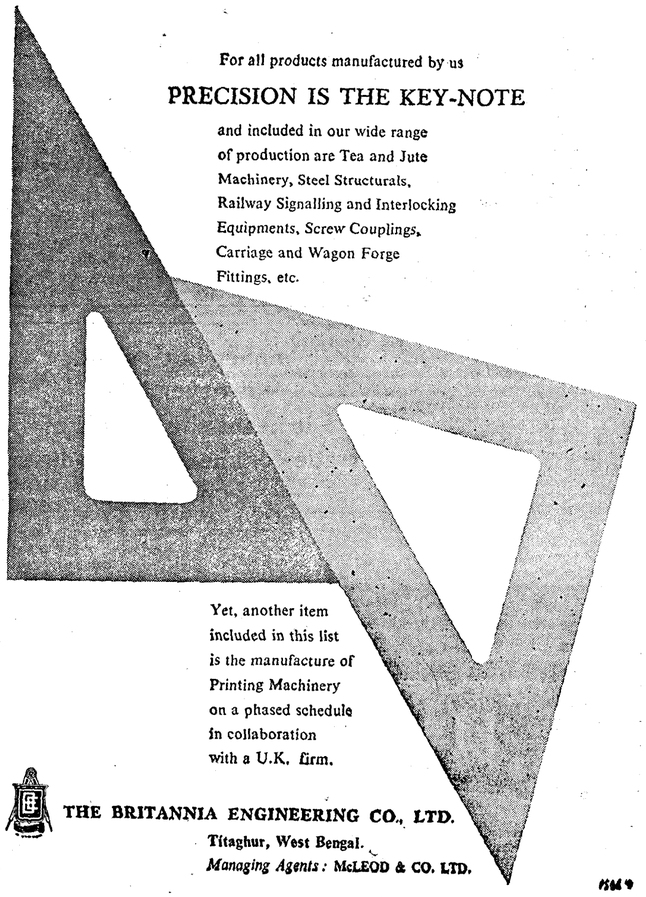
Scarcity of Tin

IN India, the price of Tin has been ruling very firm at Rs 144.50 per quarter (or Rs 582 per cwt) during the past few months. This is attributed to the belief that imports will be restricted by the foreign exchange shortage. On the London Metal Exchange, the price has been steadily rising since last September and is presently quoted around £793 a ton. This steady rise has been mainly due to the operations of the Tin Council's Buffer Stock, which buys or sells metal to keep prices as stable as possible.

According to trade sources in London, world supplies of tin may not be enough to satisfy demand later in the year. These sources estimated that, if the current export restrictions, imposed by the International Tin Council on producing nations, were maintained at their current levels, world production this year would be 21,000 tons below consumption. This may probably be the reason that the ITC has now decided to raise permissible exports in the fourth quarter of 1959, for the six exporting members, to 30,000 tons against 25,000 tons in the current quarter.

It is felt that, as a result of the above decision, the higher prices now ruling for tin will attract back into production some of the smaller producers, who closed down when export quotas were first introduced. But, trade sources say that it will take some time to bring unused production capacity back into operation and temporary shortages will develop. Some of the smaller opencast mines in Malaya have become flooded and they are not likely to be reopened unless prices increase substantially.

Some sources say that the Buffer Stock now has only enough metal to make it possible to ease any temporary shortage that may develop in the next few months. If such a temporary shortage were to develop, the price of the metal is expected to rise sharply to well above £800 a ton.



The International Tin Council has set up a Technical Committee to draft a new agreement to come into effect when the present agreement expires in 1961. The Technical Committee will begin its work next week.. In view of the Council's experience over the past three years, it will be necessary to amend several articles in the present agreement. The draft agreement will be placed before the Council in December and then submitted to all members of the United Nations. A conference of interested nations, to be held in New York next May, will try to reach accord about the new agreement. It will then be placed before the governments concerned for ratification.

The Council's decision (announced on September 3) to fix a permissible total export amount for the six producing members of the agreement during the control period October to December at 30,000 tons, as compared with 25,000 tons for the preceding three months is taken unanimously. It shows, that there is good agreement between producers and consumers. India, Australia, Belgium, the Belgian Congo and Ruanda-Urundi, Bolivia, Canada, Denmark, the Federation of Malaya, the Federation of Nigeria, France, Indonesia, Israel, Italy, Korea, the Netherlands, Thailand, Turkey, and the United Kingdom are represented on the International Tin Council.

For all products manufactured by us

PRECISION IS THE KEY-NOTE

and included in our wide range of production are Tea and Jute Machinery, Steel Structurals, Railway Signalling and Interlocking Equipments, Screw Couplings, Carriage and Wagon Forge Fittings, etc.

Yet, another item included in this list is the manufacture of Printing Machinery on a phased schedule in collaboration with a U.K. firm.

GATEWAY MARKETS

Oils and Oilseeds

The markets for both Oils and Oilseeds displayed an uncertain behaviour. Reports of satisfactory progress of monsoon, apprehensions of heavy offerings of spot supplies against the maturing contracts and the discouraging conditions on the export front, were the main contributory factors.

In the Groundnut section, price fluctuations were confined to a narrow range. The Government decision to grant a fresh extension of the export promotion scheme for groundnut oil has been welcomed by exporters. It is stated that the timely announcement will enable exporters to put through a substantial business in groundnut oil and expeller oilcake in the near future, as the UK and the Continent are likely to show a keen interest after the recent spell of holiday feeling.

The current prices of groundnut oil, in the UK, are placed at about £107 a ton against the Indian parity of £109/109½. Groundnut oilcake of the expeller variety is indicated at £35/35½ a ton with Indian prices being higher by about 10sh. Exporters feel, however, that the small disparity in prices will shortly disappear, as the interest in Indian supplies picks up. Moreover, the fact that the prices of African supplies are substantially higher is expected to help exports from India.

Sentiment remains depressed in the Castorseed section by the sustained absence of foreign demand for castor oil. With Brazil offering first pressure oil at 13.50 cents per pound, the USA is inclined to mark time, especially because of the easy trend in India. Business with the UK and the Continent is also at a low ebb.

DELHI REVIEW

ISMA's Case for a Fairer Sugar Price

THE Indian sugar industry, it is well known, occupies the second place in the organised industrial sector of the country. As of 1956, for which the latest official census of the industry is available, the value of sugar production is Rs 126 crores of which the canegrowers alone receive about Rs 77 crores. The total productive capital employed in the industry is a little over Rs 100 crores of which Rs 33 crores is fixed capital. And it disburses nearly Rs 12 crores by way of wages and salaries to 123,000 employees. These facts are highlighted at the outset in a comprehensive memorandum recently submitted by the Indian Sugar Mills Association to the Tariff Commission on fair sugar price. The industry's plea, in short, is that a fair price for sugar should not only provide for the actual cost of production and a fair return but also take into account the cost of rehabilitation and modernisation. This plea is partly based on the results of two separate enquiries-one into the finances of the industry and the other into the works cost of sugar.

The first survey covered 123 factories for 1954-55, 127 for 1955-56, 129 for 1956-57 and 123 for 1957-58, representing respectively 91 per cent, 92 per cent, 92 per cent and 88 per cent of production of sugar. According to this survey, more than a fifth of the companies in 1955, more than a fourth in 1956 and almost a third each in 1957 and 1958 incurred losses, and the absolute amount of loss also increased from Rs 84 lakhs in 1955 to Rs 121 lakhs in 1958. The reserve funds of the industry declined from Rs 21.0 crores, representing 16.8 per cent of the total assets, in 1955 to Rs 20.5 crores, representing 12.5 per cent of the total assets, in 1958. And net profits as per cent of net worth also declined from 7.3 per cent in the former year to 7.2 per cent in the latter in all-India; as far as North India, which mainly constitutes the present controlled area, is concerned, the percentage decline was more serious, the relevant figures being 5.9 in 1955 and 3.5 in 1958.

The findings of the second survey for 1957-58, covering 119 factories in all-India with a crushing season of 133 days and a recovery of 10 per cent per average unit, are that the actual manufacturing cost (excluding cane) is Rs 6.66 per maund of sugar (composed of Rs 1.75 on account of power, fuel and stores, and repairs and renewals; Rs 2.39 on account of wages and salaries including bonus; Rs 0.56 on account of packing; Rs 0.90 on account of miscellaneous items excluding managing agency, selling commission and interest charges; and Rs 1.06 on account of depreciation). When to this manufacturing cost of Rs 6.66 is added the cane cost of Rs 17.20 per maund of sugar on account of cane price, cane cess, cooperative societies' commission, transport charges for cane, loading and unloading, salaries and wages of outstation cane supply staff, etc., the works cost amounts to Rs 23.86 per maund of sugar.

This compares with the works cost of Rs 22.70 per maund of sugar (again excluding managing agency, selling commission and interest charges), worked out for a crushing season of 120 days and a recovery of 10 per cent per average factory from the Tariff Commission's own findings covering 49 factories in all-India for the years 1955-56, 1956-57 and 1957-58. This works cost of Rs 22.70 per maund of sugar is composed of Rs 5.73 as manufacturing cost and Rs 16.97 as cane cost. Incidentally, for a crushing duration of 133 days, the manufacturing cost may be Rs 5.43 only, in which case, the works cost on this basis would be Rs 22.40 per maund of sugar. When the two estimates—one by the ISMA and the other based on the Tariff Commission's findings—are thus rendered strictly comparable for the same crushing duration and recovery, the difference is found to be just under Rs 1.50 per maund of sugar.

But this difference is partly attributable to the fact that the ISMA's estimate of just under Rs 23.90 for works cost reflects the actual position in the 1957-58 season whereas the other estimate based on the Tariff Commission's findings represents the average position in three successive seasons including 1957-58. It is also partly attributable to the fact that the Tariff Commission's survey sample of 49 factories was not fairly representative of units with different crushing capacities. It is pointed out in this connection that, whereas, of the total number of factories in all-India, 34 per cent were of the capacity group of 800 tons and below, only 27 per cent of the factories selected by the Commission belonged to this capacity group. Again, while the factories in the group of 1,200 tons and above were 26 per cent of the total number of factories in all-India, as much as 33 per cent of the factories selected by the Commission belonged to this capacity group. It would thus appear that smaller units with relatively higher cost structures were underrepresented and bigger units with relatively lower cost structures over-represented in the Commission's sample. This is further confirmed by the fact that the average capacity of the factories selected by the Commission was 12.4 per cent higher than the all-India average and the average production per selected factory per day was 9.4 per cent higher than the all-India average.

The ISMA's memorandum, therefore, concludes with good reason that the costs worked out on the basis of the Commission's sample of 49 factories are bound to be lower than the actual costs worked out on the basis of a more representative sample of 119 factories covered by the independent survey. If to the ISMA's estimate of works cost (which might come to Rs 23.55 per maund for a duration of 120 days) are added the same provisions as in the Government's schedule for managing agency, selling agency and interest charges, export loss, rehabilitation, profit margin and excise duty, it would mean an increase of Rs 1.10 in the ex-factory price of Rs 36 per maund of sugar (D-29 grade) which has been fixed by Government for factories in the Punjab, Uttar Pradesh and North Bihar.

It looks as though a possible rounded ex-factory price of Rs 37 per maund may not, however, satisfy the sugar industry in North India. This is just an inference from the ISMA's memorandum which has pleaded for additions of about 50 nP per maund on account of selling agency and interest charges, Re 1 per maund on account of "contingencies" like the vagaries of nature and the competition from gur and khandsari affecting cane supplies for economic crushing, Rs 3 per maund on account of rehabilitation and modernisation cost, Rs 1.50 per maund on account of the cost of expansion and about Rs 3 per maund for profit margin and managing agency commission. These expected additions would mean that the ex-factory price of sugar might have to be nearly Rs 46 per maund.

It may be recalled in this connection that the provision for rehabilitation cost in the current ex-factory price of Rs 36 per maund is 50 nP and that for profit margin and managing agency commission is just under Re 1. The desired substantial additions under these two heads are elaborately justified in the ISMA's memorandum. In regard to the former, it is explained that the industry's gross block of about Rs 95.5 crores almost completely absorbs the paid-up capital (Rs 37.4 crores), reserves and surplus (Rs 20.5 crores) and depreciation funds (Rs 38.6 crores), leaving almost nothing to meet prior charges on stores and spare parts amounting to Rs 14.8 crores. Thus, the industry has no available funds which could be utilised for rehabilitation which is long overdue. It is further explained that the sugar industry has not squandered away its funds all these years.

The desired addition to profit margin is justified on the basis of the 1938 Tariff Board's formula of 10 per cent on the gross block which left a net of 8 per cent for the industry. The ISMA's memorandum submit that 8 per cent net on existing gross block after paying all taxes on profit and dividends be provided as profit margin. It is pointed out here that the sugar industry, judged by any criterion, is not making adequate profits now. Although sugar sales exclusive of excise duty have risen from Rs 105 crores in 1955 to Rs 132 crores in 1958, the net profit (after taxation) in the industry as a whole has increased from Rs 3.7 crores in the former year to only Rs 4.1 crores in the latter and the percentage of net profit to sales has declined from 3.5 to 3.1. The Indian Sugar Mills Association has therefore pleaded for a positive price policy which will provide the industry with the necessary wherewithal to rehabilitate, modernise and expand to the point of producing three million tons of sugar by the end of the Third Plan.

OLYMPUS

S. E. RLY TENDERS

Sealed tenders are invited for tender No. CON|GM|52|P&M|B|59 for supply of 2 Nos. 'ATLAS' or similar Pole carriers 12 tons to 15 tons pay load suitable to carry up to 42 ft. long rails, poles, pipes and other structural steel sections when extended and when closed makes 15 ft. long general purpose Trailor. N.B.—The trailor should be fitted with extra heavy duty pneumatic tyre and should be complete with suitable Draw Bar for towing by Tractor. Tenders will be opened at 3 P.M. on 28th September, 1959.

Tender forms are obtainable from the Controller of Stores (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs 5|- (not refundable) per copy by money order to him direct in the case of outside firms and on production of Cash receipt from the Chief Cashier, S. E. Rly. Garden Reach by local firms.

Tenders should accompany the receipt for depositing Earnest Money of Rs 625|- with this Rly's Chief Cashier without which the tender is liable to be rejected. Approved contractors having a permanent deposit of Rs 1000|- with the Controller of Stores are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

S61 GENERAL MANAGER

DELHI REVIEW

UP's Industrial ills

In his presidential address to the Uttar Pradesh Merchant Chamber, Mr Sitaram Jaipurta, the President, posed for consideration by the Central and the State Governments, the problems faced by the State arising from the unresolved crisis in the UP textile industry and from the unhappy conditions in the sugar industry. Even considered from the point of view of total production for the whole country, these industries would seem to show definite symptoms of stagnancy, total production having declined in both cases. However, the impact of such decline was greater in the UP which, so far as the cotton textile industry is concerned, could be explained in terms of the peculiarities surrounding the industry, while, in the case of the sugar industry, it is ascribable to the marked concentration of sugar production in the State.

As Mr Jaipuria points out, the measure conceived by the Government in the national perspective of the decline in cotton textile production and accumulation of stocks were bound to be ineffective in helping the UP's industry, which, specialising in the production of coarse and medium varieties of cloth, was not export-oriented, whereas the measures taken by the Government were largely aimed at solving the problem through stimulation of exports. The beneficiaries of such measures, Mr Jaipuria points out, were the textile mills situated in the Bombay State. The comparatively higher and more rigid cost structure has further aggravated the difficulties of the UP's textile industry. And the only solution to all these, according to Mr Jaipuria, lies in modernisation and rehabilitation of the outmoded machinery which is the greatest obstacle to reduction of cost of production.

In sugar production, the UP is in danger of losing its dominant position to the peninsular area, which is better placed with respect to the cultivation of sugarcane. Congestion of factories in the Eastern districts of the State has led to ruinous competition for sugarcane supplies and the incursions made by khandsari producers into the normal sources of sugarcane supplies to vacuum pan factories has rendered the position in regard to supplies worse. In the face of such developments, continuing low yields and falling sucrose content doom the industry to worse trouble unless effective steps are taken to promote sugarcane cultivation on an improved basis. Mr Jaipuria has suggested that the revenue yields from the sugarcane cess should be exclusively utilised for the cultivation and dissemination of improved varieties of sugarcane, provision of fertilisers to the sugarcane and the construction of roads connecting the mills with sugarcane growing areas.

Mr Jaipuria has also pleaded for giving consideration to the claims of the UP for setting up in the State a few steel using plants. Though locational factors do not seem to be advantageous, Mr Jaipuria points out that such conventional factors are no longer important in the location of most of such industries.

*

Tax Administration

Inaugurating the first meeting of the Customs and Central Excise Advisory Council Mr Morarji Desai, Union Finance Minister, stressed the need for improvement in tax and customs administration. Improvement in tax administration should have as its primary aim simplification of the machinery of collection so that there will be no room for harassment of the tax payers. However, the multiplication of taxes has increased the scope for such harassment and this has rendered imperative a reconsideration of the rules and procedures of tax collection with a view to avoiding harassment to the taxpayers. In so far as such harassment has acted as an inducement to evasion, a simplification of tax collection machinery would help swell the total collections also.

Mr Desai also indicated scope for improvement in customs administration by giving instances of difficulties caused to the business community by administrative delays. These relate to the unduly long time taken to conduct tests to determine the classification of goods, delay in releasing import documents, unnecessary duplication of tests, etc. All such delays, Mr Desai points out, put a premium on inefficiency. In the light of the actual defects noted in the working of the Customs administration a change of attitude with emphasis on efficiency seems to be needed. In so far as delays and inefficiency result from too strict an adherence to rules, liberalisation of such rules would also seem to be called for.

Mr Desai also referred to the decision to combine the Central Advisory Council for Customs and the Council for Excise into one body and justified the step in terms of the scope it gave for proper coordination of the activities of the two bodies which were more or less similar in nature. Explaining the small size of the Council, Mr Desai pointed out that this was done deliberately to make it function effectively. Though consideration of policy questions is not included in the functions of the council, Mr Desai said that the Government would have no objection if policy matters impinging on procedures were also considered by the Council.

*

Defence Factory

Inaugurating the Second Defence Production Conference at New Delhi, Mr V. K. Krishna Menon, Union Defence Minister, reviewed the progress made by the Defence industry in increasing production alround. Both in volume and range, the production of arms and ammunition and other items of defence stores and equipment had increased enormously.

The most important feature of this progress was the progressive increase in the production of components and equipment by the Bharat Electronics (Private) Ltd. The value of production which was Rs 5 lakhs in 1956-57 and Rs 27.88 lakhs in 1957-58, is for 1958-59 estimated at Rs 64.57 lakhs and represents attainment of nearly 90 per cent of the target. The target in terms of value set to be reached during 1959-60 is one crore rupees worth of equipment and components. Similarly, production in the ordnance factories had increased in terms of value to Rs 21 crores in 1958-59 from Rs 18.08 crores in 1957-58 and Rs 14.19 crores in 1956-57.

The effect of such increased production in enabling saving of foreign exchange resources has been substantial. Such saving in the import of weapons and ammunition from the UK and elsewhere during 1957-58 and 1958-59 is estimated at Rs 7 crores. With an additional saving in respect of civil trade output, to the tune of Rs 6.5 crores, the total saving in foreign exchange ascribable to the improved performance of the Defence industry is Rs 13.5 crores.

Improvement in respect of the production of stores is reflected in the fact that nearly 95 per cent of these requirements comprising textiles, clothing, mechanical and chemical stores, steel and other ferrous and non-ferrous materials, petrol and lubricants, leather goods and a variety of other miscellaneous items are being met by the defence industries as well as the public and private sectors.

Notable advance in the fields of research and establishment of new laboratories and recruitment of technical personnel is also revealed. Referring to the role of research, Mr Krishna Menon pointed out that, already, during the last two or three years, capacity had been built to absorb the results of development in research.

*

Small-Scale Industries

The discussion on the small industries in the Lok Sabha, while disclosing the general satisfaction of members at the progress made by the Small Industries Corporation, also indicated scope for improvement along various lines. First and foremost, there was need to see that such industries grew up in the rural areas. In this connection, it was suggested that a tax holiday for three to four years should be given to the small scale industries set up in the rural areas. The small scale industries are depended upon to carry industrialisation to the rural areas and this could not be achieved without giving priority to backward areas in the setting up of such small scale industries. This is the accepted policy of the Government, and Mr Manubhai Shah gave the assurance that preference in the allotment of industries would be given to backward areas.

That the small industries, with a few exceptions such as shoes and handloom products, had not fared well in the matter of exports was a point of criticism by a communist member of the work done by the Small Industries Corporation. It was also pointed out that progress in organising small scale industries as ancillary wing to large-scale industries was slow. Automobile machinery, textile and jute-plants gave scope for the development of small industries for the manufacture of components required by them and this could be taken advantage of to develop small industries in these lines. Production of sub-standard goods was a weak feature of small industries and this has to be solved in terms of standardised production, which would also be helpful in giving a fillip to export of goods produced by the small scale sector.

Mr Manubhai Shah disclosed that the Government were considering a proposal to liberalise the terms for the supply of machinery to small industries on hire purchase basis by the National Small Industries Corporation. This would enable the industries to arrange for the supply of machinery from the Corporation on the basis of 5 per cent of the price of goods being given in advance as deposit instead of the 20 per cent of the cost of machinery at present insisted on by the Corporation. The machinery of hire purchase is being increasingly availed of by small scale industrialists and the liberalisation of the terms should give a fresh impetus to the setting up of more of such industries in the country.

NORTH INDIAN NOTES

Lower Trend in Shellac Prices

ACCORDING to the annual report released by the Indian Lac Cess Committee, the range of prices of shellac and seedlac in the calcutta market was generally low in the 1957-58 season, mainly due to a large carry-over of about 450,000 maunds, good crops and recession in the world trade. Prices varied between Rs 73 and Rs 91 per maund on Pure TN basis during the season under review against Rs 111 to Rs 130 in 1956-57 and Rs 145 to Rs 163 in the 1955-56 season.

Total production of all the four lac crops, during 1957-58, was 1,140,500 maunds as compared to 1,315,000 maunds in the previous year. But, the crop was higher than the average production of 1,067,500 maunds based on the last 10 years.

Total lac export of about 740,100 maunds during 1957-58 was not much below the previous year's figure of 769,147 maunds; but earnings declined sharply to Rs 6.86 crores from Rs 9.47 crores due to the marked fall in prices. The earnings from lac exports average Rs 9.8 crores in the post-war period.

A feature of the lac export trade was the interest shown by China, which became the fourth largest buyer with an offtake of 34,157 maunds valued at Rs 36.35 lakhs during the year under review as against only 120 maunds in 1956-57. Exports to the USA, Canada and Egypt were also considerably higher; but those to the UK, West Germany, USSR, Argentina and France recorded a decline.

Exports of refuse lac were considerably reduced due to Germany having switched off from shellac to synthetic materials for the manufacture of gramophone records.

The present rate for Pure TN quality shellac is quoted at Rs 82 per maund. Shipments, during the current month upto 3rd, are substantially lower at 1,475 maunds as against 4,284 maunds in the corresponding period of August. Of these, shellac comprises 255 packages against 1,344 packages; seedlac 530 packages against 2,825 packages; buttonlac nil against 25 packages and other varieties 690 packages against 100 packages.

*

Foodgrains

Quiet conditions have continued to prevail in the Hapur Foodgrains market. Led by gram and maize, the prices of all grains, including wheat, have registered a fall. The most influencing factor is the good prospect of the "khariff" crop. Pulses prices have declined further in the absence of support.

Although daily arrivals in the open market are scarce, Wheat is flowing in greater quantities in private, as cultivators have released their stocks for sale. Stockists are also anxious to liquidate their stocks in anticipation of good "khariff" crop. The Uttar Pradesh Government are continuing with their Wheat Levy Scheme and are purchasing wheat at the controlled rate of Rs 13 to Rs 15 a maund.

Rice prices have also recorded a fall of about Re 1 a maund, thanks to better supply position and expectations of good paddy crop. Gram prices are ruling easier on the Punjab and Madras advices and poor demand in the face of comfortable stock position. New maize arrivals are gradually increasing and prices have drifted to lower levels as crop prospects are excellent. Prices in the Pulses section have shown an easy trend in the absence of ready demand.

Sugar

In the Hapur market, sugar prices have touched fresh higher levels due to lack of ready stocks and good demand for festive seasons. The open market in the commodity has dwindled following the enforcement of total ban on despatches by factories in Northern India. Confronting brisk demand in a market of meagre supplies, prices have naturally registered a further rise over last week's levels. The rate is presently quoted at Rs 123 to Rs 125 per bag.

In the Muzaffarnagar market, prices are ruling steady and there has been no trading in mill-delivery season. New production is not expected to start before early November.

DELHI REVIEW

World prices of sugar have also developed a firmer tendency. The main reason is the smallness of the Northern European beet crops brought about by drought. It is said that some countries will have to import more sugar than was expected and other countries like Spain are believed to require large quantities.

*

Khandsari

The market for Khandsari is ruling steady, as demand for Boora sugar for festive season is very brisk. Production from old stuff is reported to be nearing completion. Rates are moving between Rs 35 and Rs 41 per maund, according to quality.

We always use WHEEL BRAND Industrial glycerine

It's guaranteed to contain 98% glycerol

Years of experience have proved to this factory manager that he can rely on WHEEL BRAND Industrial Glycerine —because it is of an *unvarying* high quality.

It is guaranteed to contain not less than 98% glycerol. What's more, it is backed by the experience and reputation of its makers, HINDUSTAN LEVER LIMITED.

In textiles, dyeing and printing, paints, varnishes and lacquers, plastics, leather, rubber and glass...in these and other industries, WHEEL BRAND GLYCERINE is used, and has been used for *years*.

Remember, PYRAMID BRAND GLYCERIN B.P. also has many uses in the industry as well as medicinal and domestic uses! Write for a *free* leaflet about its various uses in the home to: HINDUSTAN LEVER LTD, P. O. Box No. 409, Bombay 1.

DISTRIBUTORS: Imperial Chemical Industries (India) Private Limited
Bombay • Calcutta • Delhi • Madras

MADRAS REVIEW

Prospects of Private Sector

THE Southern India Chamber of Commerce is to celebrate its Golden Jubilee in 1960. For forty-six years it had bided its time in a location overlooking the bay of Bengal in the far northern extremity of the City in a flat of an antique building. Probably due to the Second World War, it had to think of finding its own habitat. Pioneers of the Chamber saw to it that it possessed its own structure right in the heart of business town and in 1956 moved to Esplanade amidst the opulent Burmah Shell and the United India Insurance buildings. The membership had gone up as also their multifarious activities. It contains from very small retail traders to automobile manufacturing tycoons, mill-owners, textile experts, and, in fact, representatives of every business and trade in the South. That this Chamber contains all the members of the former parts of the Composite Madras State is itself a tribute to its all pervasive national bias, of course with a keen outlook for the development of an industrial Southern Zone.

Mr K. V. Srinivasan, the President of the Chamber, functioned as such for the last time during his office when he presided over the 49th Annual General Meeting, inaugurated by a short Tamil speech by the State's Chief Minister, Mr K. Kamaraj. The Chief Minister, suggested to the mercantile and business communities that they cooperate with the Government in times of stress like the present occasion, so that the public would not be misled into thinking that the Government and the business community were colluding to the detriment of the public welfare. No doubt he conceded the difficulties of the commercial section in their tax-paying difficulties, but then, he wanted them to discuss those difficulties with the Government, who in a sympathetic manner would understand them and do as much as possible to alleviate them. What he, however, would lay emphasis upon was that the responsible way with which they cooperated with the State Administration so that the people's difficulties would be smoothened and that they (the people) were educated on the difficulties to be encountered both by the Government and the business community during periods of difficulties.

Mr Srinivasan in his presidential address reiterated the low level of industrial production and the slowing down of the investment rate and other unsatisfactory features in the economy of the country. He recalled the representation about the slackness in capital market to India's Finance Minister during his recent Madras visit. But Mr Desai, Mr Srinivasan said, relied on the ready subscriptions to the various Government loans to rebut the fact of slowness in industrial production and slackness of capital. Mr Srinivasan believed notwithstanding enormous popularity of the Government loans, the prospects for the private sector raising a reasonable amount of capital, especially for new industries, were rather difficult. He again dwelt on the necessity for increasing the tempo of private investment and private initiative in industries. If this was not done, he feared it would take a long time to bring down unemployment or increase the standard of living.

Some measure of control was essential in a planned economy, but too much of it would be self-defeating. Mr Srinivasan said when the country was again thinking of controls of the pattern existing in the following years of last war, he would like to utter a note of warning that all such controls could not be very much effective as long as the supply position of articles was not improved. They were at the mercy of unsocial elements of the community cornering whole stocks of goods in short supply. The Government and the public have been unfortunately mixing up the established commercial men and the ambitious blackmarketeers. It was a very erroneous impression and Mr Srinivasan wanted that both the public and the Government realise these two categories of people were not the same.

Inflation agitated minds of many, especially businessmen, in this country and Mr Srinivasan reckoned that the general price index had advanced in the last three or four years at the rate of 8.1 per cent per year. There were no indications that the increase would come down in the foreseeable future. The situation was worsened by enormous deficit financing of the last few years. He suggested a halt to this deficit financing by revising plans in such manner as to arrest further inflation. No doubt he blamed the taxation policy for a big slice of price increase, and he claimed that the rising cost was more to be laid at the doors of Government than at those of the industrialists and businessmen.

Total export in current year—1958—totalled Rs 565 crores against Rs 605 in 1957. During the first five months of the current year of 1959 export values were Rs 225 crores as compared to Rs 231 and Rs 263 crores in the corresponding periods of 1958 and 1957. The net adverse balance of trade was in the order of Rs 418 crores in 1957 but declined to Rs 299 crores in 1958. Mr Srinivasan pointed out that these facts were revealing and showed all efforts to boost up export trade had not been fruitful.

The most important reason according to him was the cost of labour besides the cost of production. He wanted the cost of labour to be kept at the same level of agricultural. Not a little of the present inflationary trend was due to the better paid industrial workers who were in a position to put up the price levels to the detriment of the agricultural classes. And so it was that he wanted the Government to regulate labour policy suitably.

Mr Srinivasan pleaded for the association of commercial and industrial interests with planning in some advisory capacity. He also referred to high electricity tariff and corporation water rates being increased as other disincentives to industrialisation.

The two plans had not altered the unemployment position. Therefore he thought there can be no justification for huge plans which naturally meant enormous outlay and expenditure resulting in further inflation.

As regards the power requirements of Madras, he was of the view that despite Neiveli, it was necessary to think even now of a nuclear power plant for future expansion. He stressed the need for a steel plant in the South. The aluminium deposits in the State have also to be developed and he was sure Government would give all help for successfully solving the problem connected with this industry so that this might be started without further delay. Mr Srinivasan had some words also to his community, appealing to them not to make unjustified large profits or reducing quality of articles manufactured.

The following were elected for the coming year: Mr M. A. M. Muthiah Chettiar President, Messrs Jacob Louis, and M.. Ct. Muthiah, Vice-Presidents.

* * *

The US Small Industries Exhibition, previously shown in New Delhi and Calcutta, was opened in Madras last week by State Governor, Mr Bishnuram Medhi. Mr Winthrop G. Brown, Charge d'Affairs ad interim of the American Embassy in India, flew here to associate himself with the function.

Unmistakably marking the site are the unusually-shaped 'bubble' geodesic domes, which house major portions of the exhibit. The Family of Man and the Design in America and Europe exhibitions were also familiar sights last year and early summer this year here.

Accompanying the exhibition are the missions from the US Department of Agriculture, the US Department of Labor; the Trade Mission under the sponsorship of the US Department of Commerce. The Trade Mission has just completed a three-week tour of Andhra, Mysore and Madras States, preparatory to the opening of the exhibition. The members of the missions will be present at the Exhibition grounds to discuss their specialities with Indian counterparts.

Mr Winthrop Brown in his welcome speech at the exhibition said there were more than four million small business firms in USA. About 65 percent of all workers were employed in the small firms, the mainstay of huge industrial plants. He stated that fears that machine would displace the skilled workers had been proved to be groundless in America. Statistics had shown that the proportion of craftsmen in the labour force was increasing, despite great advance made in mass production technique.

THE PENINSULA

JUBBULPORE ELECTRIC SUPPLY COMPANY LIMITED.

NOTICE is hereby given that an Extraordinary General Meeting of the Members of the abovenamed Company will be held at the Registered Office of the Company, No. 12, Mission Row, Calcutta, 1 on Wednesday, the 30th September, 1959, immediately following the termination of the Annual General Meeting to be held on that day at 11-0 a.m. to consider, and if thought fit, to pass, with or without modification, the following subjoined resolution, namely:—

"That approval be and is hereby accorded to the re-appointment of Martin Burn Limited, as Managing Agents of the Company for a further period of 10 years with effect on and from the 16th August, 1960, on the terms and conditions contained in the draft agreement submitted to the Meeting and, for the purpose of identification signed by the Chairman thereof, and that an application to the Central Government for its approval to this proposal under Section 326 of the Companies Act, 1956 be and is hereby directed to be made".

By Order of the Board,
MARTIN BURN LIMITED
A. G. GIDLEY
Secretary,
Managing Agents.

12, Mission Row,
Calcutta-1.
5th September, 1959.

NOTE: (i) A Member entitled to attend and vote is entitled to appoint a Proxy to attend and, on a poll, to vote instead of himself. Such Proxy need not be a Member of the Company.

(ii) An Explanatory Statement is annexed to the Convening Notice issued to Members of the Company.

SOUTH INDIAN NOTES

Public vs Private Sector

That the public sector had no inherent claims to better results in all the enterprises it could lay its hands on, was the point stressed by Sir C. P. Ramaswami Iyer in the third and last of the Mokshagundam Visveswarayya lectures delivered in Hyderabad early this week. State investment and State management were preferable in respect of intrinsically non-competitive undertakings; but they tend to become formal, mechanical and unenthusiastic and therefore basically inefficient in competitive and commercial undertakings.

Sir C. P. also underlined the need for evolving proper criteria for assessing the performance of undertakings in the public sector and pointed out that mere accounting and audit did not ensure efficiency in management. Similarly, the mere earning of adequate profits by public enterprises was no indicator of efficiency since this has to be set against the basic fact that such undertakings were run in the nature of monopolies. However he would not absolve the private sector of its due quota of defects and deficiencies. The failures of private sector in the country are particularly striking in respect of maintenance of quality, introduction of modern methods of mass production, and business technique, etc. They had also not kept abreast of new inventions and techniques and new methods of management, in relation to labour.

One remarkable thing that distinguishes the working of undertakings in the private sector from public sector enterprises, is that the private sector has also always to keep a vigilant eye on efficiency to avoid insolvency, a possibility from which the public sector undertakings are immune. For this reason, factors of efficiency, economy and avoidance of wastge are less conspicuous in the public sector than in the private sector.

Referring to the role of the private sector, Sri C. P. Ramaswami Iyer said that, in the present context, when demand for foreign goods has outstripped demand for internal goods, there was pressing need to produce immediate and maximum economic growth. The role of the private sector in such a context could not be underestimated. But toward creating a proper climate for appropriate participation by private sector in this endeavour, a consistent policy was, according to him, needed. An unambiguous statement of policy is particularly necessary in view of the conflicting statements which Ministerial spokesmen have been prone to make.

*

LIC's New Building

The Rs 87 lakh sky-scraper of the Life Insurance Corporation of India, opened by India's Finance Minister Mr Morarji Desai on Sunday last, is a landmark in the progress of structural designs in the country. It stands imposingly in Mount Road, quite a central situation, and would prove an adornment for the City which till now prided itself in modest but ancient buildings to symbolise the traditional conservative outlook of the South.

There were sharp showers when Mr Desai opened this fourteen storeyed 177 ft tall structure overlooking the entire business venue of the City in what is called the big-business location that is Mount Road. The late M. Ct. M. Chidambaram Chettiar, as Chairman of the United India Life Insurance Co., intiated the idea for this big building in 1952 with the hope that it would be the tallest in this country. After the insurance nationalisation, however, there were some alterations in the plan.

In his speech, Mr Desai referred to the necessity to look promptly into policy-holders' complaints, though sometimes they might be exaggerated. Also, he noted the other complaint that all LIC offices in the City should be moved into the new place for good coordination and efficiency. He was happy to say that the intial setback was not as much as anticipated and even a brilliant set of men could not have achieved better. To him,the progress made was not adequate. The plan worked out by the LIC was not ambitious for the five year period, and Mr Desai suggested that the same be pressed within a period of two years. Obviously, it might have been intended to help the plan proposals, because the LIC officials apparently had calculated their business upon a graded system based upon the national income upward curve.

Mr P. A. Gopalakrishnan, LIC Chairman, said that the new building was the second highest in their possession and hoped it would serve as the sign and symbol of their aspirations. Listing the investment made on various real estates by the LIC, Mr Gopalakrishnan said that, on nationalisation of insurance in September 1956, some 541 properties valued at Rs 19.27 crores came into their possession. Of these, buildings worth about Rs 1.75 crores were in the Southern Zone. About one crore rupee worth of 24 buildings were in the Madras City itself. After nationalisation, eleven more buildings have been added and the total now was worth about Rs 18.5 crores.

*

Marking for Handlooms

As the State having the largest number of looms and always under the need to stabilise an industry that had been too often hit hard by fluctuations of demand, Madras has been interested in the stimulation of exports of handloom goods. In the face of the existence of a vast potential market for handloom in the foreign countries, and particularly in the USA, which had been testified to by visiting American teams and Indian teams to America, measures intended to step up Indian exports of handlooms were long overdue. The quality marking scheme that was inaugurated for handloom goods last week, by Mr Nityananda Kanungo, Union Minister for Commerce, would be welcomed as perhaps the most important of the measures that the Government could have taken to stimulate Indian exports of handloom goods. For, complaints about the irregular quality of Indian exports are too familiar, and, in respect of such an item as the handloom, where production is diffused and decentralised, the difficulties of keeping up quality and standards are aggravated. However, for this very reason of the diversity in quality, marking of standards becomes all the more important.

The scheme as conceived at present is only voluntary and therefore does not seem to have in it seeds of certain success. However, as Mr Kanungo pointed out, almost in every country such schemes had been born out of voluntary efforts and even the subsequent addition of penalties for infringement had come at the pressure of the trading interests themselves. As pointed out by Mr Venkataraman, the Madras Minister for Industry and Labour, the quality goods, once they gain a foothold in a foreign market, would tend to drive unmarked exports out of the field. Quality making would thus become a practical necessity for exports.

Mr Kanungo also stressed the need for such observance of quality and standards in regard to the internal market. The consumer should know the quality of goods offered to him for sale and on such services rendered depends the growth of further demand. Production on the basis of standards also gives scope for reducing costs.

*

Central Bank's Sub-office

That Indian banking for the past half century had shown its great capacity for organisation and for rendering service in the highly socialised field, that, in the international field, too, Indian banking had achieved a high reputation; and that it was generally accepted as fulfilling its role truly and faithfully in promoting the larger interests of the community, were points made by Mr C. H. Bhabha, Vice-Chairman of the Central Bank of India, in a function to mark the opening of Central Bank's sub-office in Madras. It had quite often to tread unconventional paths in order to afford facilities for the benefit of the mercantile and business communities. Mr Bhabha felt convinced that the innate, dynamic spirit of Indian banking would enable it to progress fast and maintain its supreme position in the nation's economy. Comparison of advanced commercial banking in other countries with Indian banking was not desirable, and Indian Banks had to function under various handicaps and fetters making it almost work in a strait-jacket. If Indian banking had occasionally indulged in business like underwriting and other acts, it had done so on its own initiative, while, in other advanced countries, these functions belonged to specialised agencies.

Madras State's Finance Minister, Mr C. Subramaniam, who inaugurated the new branch of the bank in the City, paid a tribute to Central Bank by stating that the history of Indian Banking was more or less the history of the Central Bank. Mr N. K. Karanjia, General Manager of the Bank, traced the part played by it in the South since the twentyfive years of its functioning here, and stated that the Central Bank had 31 offices in Madras State, alone not to speak of the 290 offices throughout India. Mr Karanjia's other point of emphasis was that the Central Bank did not function on regional or extraneous considerations in policy decisions.

*

AMCO

Within the next couple of years, India would attain complete self-sufficiency in the production of all kinds of storage batteries for diverse purposes. This is the expectation of Mr Parameswaran, member of the Development Council, Light Electrical Industries, India Government. He told newsmen at Bangalore early last week that the AMCO, the wellknown automobile batteries manufacturers and supplies of train-lighting batteries to Indian railways have currently undertaken an expansion programme with the technical collaboration—agreement with Gould-National Batteries, United States of America.

He stated as on date the instailed capacity in India for production of storage batteries was 5,25,000 per annum. This included 4,55,000 automobile storage batteries, and 7,000 train lighting batteries. The Actual consolidated production attained during 1958 was 4,20,000 units in what might be called the organised sector of the industry. Mr Parameswaran said four AMCO technicians would be trained in the Gould-National in America. AMCO had plans to export batteries to Egypt, Indonesia, Iraq and other foreign countries.

MADRAS REVIEW

Groundnut Oil Touches New High

Groundnut oil touched a new high of Rs 360 ready today mainly due to the incentive given by the Government of India extending the bonus shipping period for oil upto October 31; 1959. The inducement has also given higher premium to kernels and cakes because every ton of oil shipped is entitled to ship 3½ tons of exportable expeller cakes up to November 30.

Closing prices hardened in sympathy with Bombay advices, but today the ready oil rates was at Rs 360, September Rs 357, October Rs 347, December Rs 317-318.

Groundnut kernels also remained firm at Rs 196 superior and medium at Rs 191-192.

Castor oil remained steady at Rs 310.

Coconut oil softened to Rs 38-8 local.

There was heavy business in ready transactions due to paucity of upcountry arrivals. When the closing last day was Rs 357 steady, the opening today began with Rs 360, it rose up to Rs 365, but resiled after a session of hectic higher price for fulfilling the quota of shipments. Finally, the price was lower at Rs 360. Business was even transacted earlier in the day at higher rates, that is Rs 360-8 to Rs 361.

As usual, the political developments in the country had had some effect on commodity prices. Calcutta disturbances and lower North Indian levels in oil prices initially checked the rise in prices last week end. Anticipated Government incentive to shippers by extending the period did not materialise till late in the week. And so dull trading was over and there were steady, higher quotations from Monday onwards.

In groundnuts, arrivals in the local market are still small, and can be said to be slightly better than the closing week. The daily arrival from Monday last would be averaging 25-28 tons. Bulk of the arrivals is from Cuddappah's last summer peanuts. Small crushers absorbed all the arrivals. The price range was around Rs 195/196. Earlier than this, the quotation ranged between Rs 144 and Rs 145 on pucca parity. Even Medium varieties had been in good demand, and the initial offer at Rs 186-187 advanced to Rs 190-191. Today, the price advanced further to Rs 193 at the beginning of the session, went up by still another fifty nP and then came down to Rs 192.

In groundnut oil, the retail interest has been supplanted by shippers' buying fervour. While, last week-end, only 200-300 candies were taken up, the absorption on Monday, Tuesday and today was considerably higher, and at a quotation far higher than the previous closing of Rs 350. The earlier taking price of Rs 353 was thought good enough, but sellers were in no mood to part with stocks at that price with the result the transaction had an effect of higher prices when exchange began its activities today. Offerings were taken up at Rs 360-363 early enough and towards the end of the session the price of Rs 363 remained. At the last stage the quotation eased to Rs 360 and remained very steady.

Profit taking accounted for a good turnover in forward positions. Even here the incentive had some good effect on sellers. Early lifters of September paid as much as Rs 343 Monday, but Tuesday the quotation hardened to Rs 356 and came down to Rs 350 at close. Today, it rallied again at higher level to close at Rs 357.

October position was still better. It opened up at Rs 343 Monday, went up to Rs 347, but closed in a firm manner at Rs 345.50. Opening at the same level, the offer went up rupee by rupee till it steadied up to Rs 347 today.

December Vaida had early transactions Monday around Rs 320. Over thousand candies were taken around the lower price of Rs 309-311, but today's opening rate in this position was six rupees higher per candy. Tuesday's closing price was the same, and December did not very much allow for speculation since buyers had been cautious and sellers did not press for better rates. Occasionally, the quotation lingered at a slightly higher level within a range of 25 nP only. December today closed at Rs 317-8 The trend is firm.

*

Groundnuts

The Government of India incentive measure toned up prices. The latest price is Rs 25-12 to Rs 26 per bag of 160 lbs with gunny exmill.

*

Upcountry Markets

Arrivals of summer crop at South Arcot district markets have turned out to be slightly less during the week ending Saturday; but slightly better reports are made from Monday to Wednesday forenoon. The arrivals would be about 200-225 tons each day.

As indicated earlier in this review, prices registered a higher trend at Rs 198-200 even till early today. The same was only about Rs 196-196 per candy last-week end. The quantum of arrival and marketed bulks improved slightly this week. The arrivals recorded of unshelled groundnut is about 10,000-11,000 bags. Crushers quickly absorbed decorticated goods by Madura, Ramanad, Coimbatore, and Salem interests. Higher oil containing red qualities were quoted and traded at Rs 188-189 per candy. Peanut varieties also were higher at Rs 180-181. Presently the Salem arrivals are small. Improvement is expected in about 10-12 days. In this centre only there was a price drop to Rs 185 from Rs 190 due to good stock position. Vanaspathi interest took good quantities of groundnut oil around Rs 355-356 per candy, though some bulk transactions were also put through at the lower level of Rs 352 per candy.

There were no changes in other oils and seeds.

Castor seeds were not quoted and castor oil was quoted at Rs 310. Ready Tiruppattur.

Groundnut oil in other centres of the Southern region also maintained a firm level after last week-closing. The prices are per candy of 500 lbs. In Guntur/Bezwada the quotation touched Rs 360 maximum and went down to Rs 358. In Vriddhachalam the price slowly rose from Rs 346 to Rs 348. Nandyal market fluctuated between Rs 347-8 and Rs 350. The Villipuram Centre had not much to gain between Rs 348 and Rs 350. Cuddappah and Yerraguntla in Andhra quoted between Rs 345 and Rs 347-8. Pollachi offered stocks at Rs 348 to Rs 352. Tanjore maintained its quotation steady around Rs 346-348. Tiruvannamalai also remained at Rs 345-348. Salem sold at Rs 346-348.

*

Hides and Skins

Prices were unchanged in tanned cow hides arrivals of which remained at last week's level. Exporters showed a preference to wait and bidders refused higher asking quotations at Madras. Feature remained irregular. Inferior 5-5½ lbs remained unchanged. American interest in buffalo hides resulted in a turnover at unchanged prices of last week.

Tanned cow-calf supplies were restricted. Prices were higher by 8 nP. Tanned buffalo arrival was small, and sold 3 nP higher.

The market had 70,000 tanned goat skins, and a like number was cleared. Prices remained steady to firm. Continental enquiries for goat skins were more in number, France absorbing some stocks. The traditional UK buyers are resisting present prices, though enquiries are there as usual in the market.

In Tanned sheep, there is a general easing in price. There was stock of 32,000 and only 12,000 had been cleared. Fair enquiries continue for 10-12 lbs. Inferior fifths were quoted 39½d. Light inferior fifths had a meagre turnover. 8-8½ lbs were hard to be dealt with at present prices. In lower selections of tanned calf skins, good demand existed but supplies were quite inadequate. Kips shipments for the month were over 5,000 bales. In the cif section tanned goat sales were meagre and slow due to high asking Madras prices. For 8-9 lbs there were stray enquiries, but 11-12 lbs goat were neglected. Inferior fifths were steady and firm at an advanced price by 3d to 6d.

Tanning materials quotations: Avaram Bark Rs 77.50-97.50: Konnam Bark Rs 60-70: Myrobalam (Salem) Rs 105-110.

Price of raw skins (Last week's price in brackets) Bangalore Goat Rs 610-660 (Rs 580-700): White wool sheep Rs 530-600 (Rs 525-600); Black wool sheep Rs 440-490 (Rs 440-490); Bezwada Goat Rs 570-575 (Rs 565-590) He Sheep Rs 565-570 (Rs 560-565): She sheep Rs 390-395 (Rs 380-395).

*

Sugar

The price on Wednesday in the local market of authorised dealers is Rs 113 per bag of two cwts, Parrys Nellikuppam and Samalkot varieties. The local market price however is Rs 139. The stock position is one from hand to mouth. Immediately there is arrival of a lorry or wagon, the stock is cleared off quickly. The defect in the licensing of dealers other than the State continues, the Bangalore or Trivandrum merchant buying up his quota in Madras and disposing of the stock here itself for a premium and continuing this operation for next week, thus depriving the quota of sugar intended for a part of consumers who may be served by these quota holders shifting their trade to Madras instead of at the places to which they are attached.

SOUTH INDIAN MARKETS

JARDINE HENDERSON, LIMITED

NOTICE is hereby given that an Interim Dividend at the rate of 2¾ per cent. less Indian Income-tax and Super-tax at the prescribed rate thereon, will be paid to the Registered holders as on the 5th October, 1959, of the 50,000 Cumulative Preference Shares of Rs. 100 each in the Company in respect of the year ending 31st March, 1960.

REGISTERED OFFICE

27, Brabourne Road, Calcutta-1.

HISTORY AND BUSINESS

The Company's paper mills are situated at Saharanpur, U.P. One Fourdrinier paper machine with the daily production capacity of 15/16 tons of paper from sabai grass was installed in October, 1938. The renovation of the paper machine and the addition of certain modern equipment in the pulp plant enabled the Company to step up production from 15/16 tons to 21/22 tons a day in May, 1955. The present annual production of about 6,500 tons consists mainly of writing and printing papers such as (1) white printing, (2) creamlaid, (3) azurelaid, (4) coloured printing, (5) covers, (6) bonds, etc.

STAR PAPER MILLS LIMITED—Announcem ent—(Contd)

DEVELOPMENT AND EXPANSION

It is now proposed to increase the annual output of the mills to about 21,000 tons, by the installation of two M. G. papermaking machines, one having a daily production capacity of 20/25 tons thin substance paper, the other one of 30/35 tons paper of heavy substance. A licence, No L21/13/54 L24/(1)/8 dated 1st December, 1954, under the Industries (Development & Regulation) Act, has been granted to the Company. It is proposed to manufacture on the new paper machines M. G. Kraft paper of genuine quality not hitherto manufactured in India. Besides M. G. Kraft paper, M. G. Sulphites, Pressings, Manilla, Posters and other varieties of M. G. Papers will also be manufactured.

RAW MATERIAL

At present, paper is manufactured from sabai grass which is obtained from the Western Circle forests of U.P. The manufacture of M. G. papers on the new plant will be made from pine wood which is an excellent raw material for the production of the high grade Kraft paper. The Company has been fortunate in obtaining sanction of a long-term lease of twisted pine, available in the Almora and Naini Tal forest divisions of U.P. It is estimated that the cost of twisted pine delivered at the mills will be about Rs 120 a ton or say, Rs. 2/- a cu.ft. which is a comparable price for the raw materials in the industry, if yield and quality of pulp made from it, are taken into consideration.

POWER

The normal capacity of the existing steam and power plant is 50,000 lbs. of steam an hour obtained from two boilers at a pressure of 250 lbs. per sq. inch, and 2,000 Kw. power obtained from one 2,000 Kw. turbine. There is one stand-by boiler with a capacity of 25,000 lbs. of steam an hour at the above pressure. There is also a stand-by turbine of 1,200 Kw. capacity. The anticipated total requirement of process steam after expansion is about 105,000 lbs. an hour, and so two new steam boilers have been ordered which will provide about 60,000 lbs. of process steam an hour. The total requirement of power after expansion is expected to be about 5,500 Kw. The existing stand-by turbine of 1,200 Kw. will be modified to suit the increased demand for power and steam. The U. P. Government have agreed to make available to the Company, during the current year, 2,000 Kw. of power from their existing hydro-electric power station. They will also supply further power later on, when required by the Company.

COST OF EXPANSION SCHEME

The total investment of capital for the implementation of the expansion scheme is estimated at about Rs. 330 lakhs made up as follows:—

1.	Plant and machinery including erection ...	Rs. 260 lakhs.
2.	Factory buildings and staff and labour quarters ...	Rs. 40 „
3.	Working capital	Rs. 30 „
		Rs. 330 lakhs.

The Industrial Finance Corporation of India, after carefully examining the scheme, has sanctioned a loan of Rs. 1 crore to the Company. This loan will be available against existing as well as future assets. A Deed of Mortgage has been executed in favour of the Corporation and the Company has so far received the sum of Rs. 15 lakhs from them.

DEFERRED PAYMENT FACILITIES FROM THE MACHINE SUPPLIERS

The total f.o.b. cost of the imported plant and machinery has been estimated at Rs. 185 lakhs, out of which machinery worth about Rs. 20 lakhs is being imported from the U.S.A. on cash terms. Machinery for the remaining amount of Rs 165 lakhs f.o.b. is being imported from the U.K. and the Continent under deferred payment terms.

The Company has received necessary Government sanction for the foreign exchange required for the import of the entire plant and machinery for the expansion scheme. Shipment of one of the two machines has been made and it is anticipated that this will be installed and started by the end of 1959. The other machine is expected to be shipped by September, 1959 and installed by the middle of 1960. As it will take some more time for the delivery and erection of the Soda recovery plant, full anticipated production from the new plant is expected to be achieved by the end of 1960. By the end of 1960, a total amount of Rs. 60 lakhs will have to be paid to the machine suppliers in the U.K., Sweden and West Germany, which will leave a balance of about Rs. 105 lakhs payable later by the Company to the machine suppliers out of profits earned on the new plant. The total estimated cost of the expansion scheme, assessed at Rs. 330 lakhs, will thus be financed as under:—

Deferred payment facility from machine suppliers ...	Rs. 105 lakhs.
Loan from the Industrial Finance Corporation of India	Rs. 100 „
The Company's finances out of previous issue of share capital	Rs. 55 „
New issue of share capital	Rs. 70 „
	Rs. 330 lakhs.

PROFITS AND DIVIDENDS

At present, the average profit per ton of paper is about Rs. 200/-, which means an annual profit of about Rs. 13 lakhs on a production of 6,500 tons. After full implementation of the scheme, the average profit per ton of paper is estimated at Rs. 467/-. After allowing Managing Agents as well as Directors' commission, the annual profits on the basis of the said estimate are expected to be about Rs. 87 lakhs, which will be sufficient to declare a dividend of 10 per cent on the Equity share capital of the Company as well as fixed dividends on the entire Preference share capital.

LAND AND BUILDINGS

As stated above, the net annual profits after expansion are estimated at about Rs. 87 lakhs, after making provision for depreciation. Taking annual gross profits, before allowing depreciation, at Rs. 100 lakhs, the tax liability for the first three years, after taking into account Development Rebate, is estimated at Rs. 54 lakhs, which leaves a balance of Rs. 246 lakhs. The amount of dividend payable on Preference shares at the fixed rates of 5 per cent, 6½ per cent and 7 per cent free of Income-tax and on Equity shares calculated at 10 per cent comes to Rs. 16,50,000/- a year, which means a total sum of Rs. 49,50,000/- for three years. After deducting this amount of dividend, the sum of Rs. 196.5 lakhs, remains with the Company as surplus for repaying the loans. This amount will be sufficient to pay off the liability of Rs. 105 lakhs to the foreign machine suppliers. From future profits it will be quite convenient for the Company to make payment of yearly instalments with interest against the loan taken from the I.F.C., which is repayable within 15 years from March, 1962. Even if there is a fall in selling prices to the extent of Rs. 100 a ton due to competition, profits earned by the Company after expansion will be sufficient to meet the Company's liabilities to the machine suppliers and to the I.F.C.

CAPACITY TO REPAY LOANS

The Company has got sufficient land for the erection of the new plant, as well as for the construction of staff and labour quarters. The construction of buildings to house the new plant has started. The preparatory, machine and finishing houses will be completed shortly when installation of the new plant will be started.

AUDITORS' REPORT

The Directors,

STAR PAPER MILLS LIMITED, 27, Brabourne Road, Calcutta—1.

Dear Sirs,

We have examined the books of Accounts of the Star Paper Mills Limited for 5½ years ended 31st March, 1959, in which for the half-year ended 31st March, 1959, Statement of Accounts of Mills at Saharanpur duly certified by the Mill Manager are included which have been audited by us and report that the profits of the Company are as set out below. The Profits have been arrived at after charging all the expenses of Manufacture, working and Management and after making such adjustments as are in our opinion appropriate.

INCOME:	Year ended 30th Sept. 1954	Year ended 30th Sept. 1955	Year ended 30th Sept. 1956	Year ended 30th Sept. 1957	Year ended 30th Sept. 1958	Six Months to 31st Mar. 1959

Dated at Calcutta 21st day of August, 1959.

INDUSTRIAL INFORMATION

CENTRAL AID TO MAJOR IRRIGATION AND POWER PROJECTS

The Government of India has sanctioned Rs 63.5 crores as loans to various States to enable them to meet the expenditure on some of the major irrigation and power projects in 1958.59.

Of this, a sum of Rs 7 crores has been allocated to Andhra Pradesh for financing the expenditure on the Nagarjunasagar Project. The total loans sanctioned since 1955-56 up-to-date to the Andhra Pradesh Government for this purpose amount to Rs 19.07 crores.

A sum of Rs 15.38 crores has been sanctioned to the Punjab Government for financing the expenditure on the Bhakra Nangal Project in 1958-59. The total loans sanctioned so far to the Punjab Government for this purpose up-to-date amount to about Rs. 166.83 crores.

In addition, the Government of India has sanctioned a loan of Rs 1 crore to the Rajasthan Government for the Bhakra Nangal Project—the total loans sanctioned since 1954-55 to the State Government amounting to about Rs 5.92 crores.

Other loans sanctioned by the Government of India to State Governments or irrigation and power projects (in 1958-59 and total so far repectively) were:

Bombay; Koyna Hydro-electric project Rs 5.41 crores, Rs 14.51 crores; *Rajasthan;* Chambal Project Rs 3.45 crores, Rs 8.57 crores; Rajasthan Canal Project Rs 2 crores, Rs 2.25 crores;

Madhya Pradesh; Chambal Project Rs 7 crores, Rs 16.05 crores;

West Bengal; D.V.C. Rs 7.74 crores, Rs 75.58 crores;

Bihar; Kosi Project Rs 4.35 crores, Rs 14.64 crores; D.V.C. Rs 3.17 crores, Rs 24.70 crores;

Uttar Pradesh; Rihand Dam Project Rs 5.5 crores, Rs 13.29 crores.

The Government of India has also sanctioned Rs 3.09 crores as its share of expenditure on the Damodar Valley Corporation during 1958-59, bringing the total contribution up to the end of March, 1959, to Rs 31.26 crores.

MANUFACTURE OF DRUGS AND DYES.

Mr Manubhai Shah, Minister for Industry, inaugurated the first meeting of the reconstituted Development Council for Drugs, Dyes and Intermediates. Dr. K. Venkataraman, Chairman of the Council and Director of the National Chemical Laboratory, Poona, presided.

Complimenting the industry on the phenomenal progress that it had made in recent years, Mr Manubhai Shah said the drug production last year was about Rs 45 crores and this year it might rise to about Rs 65. Till a few years ago, pharmaceutical manufacturers in the country had been producing mainly formulations by importing drugs and chemicals in bulk, but today the position was different.

The Minister, however, regretted that not enough progress had been made in the field of manufacture of dye-stuffs. We had still to depend too much on the import of organic intermediate chemicals from outside.

Referring to the recent agreement arrived at with the Soviet Union for the setting up of five drug units, the Minister said that production from these units and the existing units in both public and private sectors, coupled with the establishment of a unit for the manufacture of basic chemicals and intermediates which was under consideration, India would become more or less self-sufficient in respect of all important and essential basic drugs and medicines.

Mr Manubhai Shah stressed the need for devoting greater attention to research and said that research units should be a built-in feature of every important project.

THE OIL & NATURAL GAS COMMISSION

An assessment of the achievements and an examination of the difficul-

ties faced during the first three years of the Second Five Year Plan by the Oil and Natural Gas Commission of the Government of India will be made by a team of Soviet experts. The experts will review the progress made in consultation with the experts of the Oil and Natural Gas Commission at its headquarters at Dehra Dun.

The Soviet team, which has arrived here at the invitation of the Oil and Natural Gas Commission, consists of Mr N. A. Kalinin of the Soviet Ministry of Geology, Mr E. I. Targev, Director of Scientific Research Institute of Boring Technique, Mr G. K. Maximovitch, Chief Specialist of the Department of Oil and Gas Industry, and Mr M.A.D. Aliev from the Oil Ministry of Azerbaizan Republic.

A team of top ranking specialists from Soviet Russia had visited India in 1955 to advise the Union Government on oil exploration. The Rs 30 crore scheme for oil exploration was drawn up by the Government of India mainly on their recommendations.

The recruitment and training of geologists, geophysicists and the drilling personnel in large numbers, the organisation of the Commission's headquarters at Dehra Dun and of branch offices at various places, the setting up of a Central Laboratory and Workshop, the organisation of geological, gravity-cum-magnetic seismic, electrologging and drilling parties, the finding of gas in Jwalamukhi and of oil in the Cambay region, and discovery of promising structures for future drilling in other areas are some of the main achievements of the Oil and Natural Gas Commission during the last three years.

Special consideration will be given in the review to the schedule of work adopted for the remaining period of the Second Five Year Plan and to the training programme.

Attention will also be paid to the difficulties being experienced in planning and to delays in the procurement of equipment.

With the increased tempo of oil exploration and drilling, it is essential that equipment and spare parts which can be manufactured in India should be produced within the country to save foreign exchange and to expedite the operations. A move has been made in this direction with the proposal to establish manufacture of such equipment at the Heavy Machine Manufacturing Plant scheduled to be set up in Ranchi. The Commission now requires manufacturing designs and other specifications necessary for their local manufacture. The experts will advise the Commission on procuring detailed specifications and blueprints.

AREA AND PRODUCTION OF PRINCIPAL CROPS

The first volume of the publication "Estimates of area and production of principal crops in India" has just been released.

Issued by the Directorate of Economics and Statistics, the publication contains all-India figures for the last ten years and State figures for the five years ended 1956-57, besides data on rainfall conditions.

The publication costs Rs 3.50 nP. and is available from the Manager of Publications, Delhi, and the Indian High Commission, London.

OVER ONE MILLION TON CARGO HANDLED BY KANDLA PORT IN 1958-59

The Major Port of Kandla handled a total traffic of 10.7 lakh tons of cargo in 1958-58 against a traffic of 8.5 lakh tons handled in 1957-58.

The imports in 1958-59 were 5.74 lakh tons of mineral oil, 2.01 lakh tons of foodgrains, 0.97 lakh tons of building material, iron and steel and 0.1 lakh tons of miscellaneous commodities, while the exports comprised 0.99 lakh tons of iron ore, 0.5 lakh tons of salt, 0.26 lakh tons of mineral oil and 0.13 lakh tons of other commodities.

Kandla was declared a Major Port in April 1955 with a hinterland—Rajasthan, Punjab, Delhi and north-west Uttar Pradesh—covering an area of 2,75,000 square miles with a population of 45 millions.

Four cargo berths were included in the first stage development of the port. Two were completed and thrown open to traffic in March 1957 and the remaining two in July of the same year.

In the first five-year period after the completion of the first stage development, the port was expected to handle an annual traffic of about 8.5 lakhs tons of cargo, consisting of 4 lakh tons of oil and 4.5 lakh tons of general cargo. The total imports and exports of oil in 1958-59 stood at 5.99 lakh tons, the general cargo handled being 4.71 lakh tons. Thus the out-turn within a short period of the completion of the major harbour works at the port is well above expectations.

TEA EXPORTS

Exports of tea during May last totalled Rs 5,58,72,000, according to figures for the month released by the Department of Commercial Intelligence and Statistics here.

Exports of jute fabrics were valued at Rs 4,95,58,000 and of bags and sacks for packing at Rs 3,07,69,000.

Wheat and spelt, including unmilled meslin, worth Rs 5,87,29,000 were imported during the month. Imports of raw cotton, other than linters, were valued at Rs 4,98,98,000 and of conveying, hoisting, excavating, road construction and mining machinery at Rs 2,15,72,000.

Exports to the United Kingdom totalled Rs 10,44,32,000, to the U.S.A. Rs 7,20,21,000 and to Japan Rs 2,83,95,000.

Imports were highest from the U.S.A. totalling Rs 14,43,38,000. The value of imports from the U.K. was Rs 13,68,98,000 and from West Germany Rs 10,76,02,000.

The total value of exports during the month was Rs 44,30,84,000 and of imports Rs 66,12,00,000. The total value of exports and imports during the corresponding period last year was Rs 44,08,34,000 and Rs 63,28,81,000.

SPECIFICATIONS FOR COPPER AND COPPER ALLOYS.

The Indian Standards Institution has issued four draft revisions of published Indian standards pertaining to copper and copper alloys.

The first draft, which is for brass ingots and castings, is a revision of IS: 292—1951. This standard specifies the requirements for three grades of brass commonly used in the brass industry, having copper and zinc as their main constituents, with a small quantity of lead added to improve machinability.

The main modifications made in revision relate to slight adjustment in the chemical composition to bring it in line with the revision of the specification for the corresponding alloy in BS: 1,400—1948 and inclusion of standardized metric values for tensile property requirements.

The second draft is a revision of IS: 304—1952, for high tensile brass ingots and castings. The standard specifies the requirements for high tensile strength in the copper-zinc alloy used for specific purposes. These high tensile brasses can be hot-stamped and extruded easily.

The main modifications made in this revision relate to inclusion of micro-structure requirements for grades 2 and 3, 0.1 per cent permanent set stress, and diagramatic sketches showing the shape of ingots.

The third draft is for aluminium bronze ingots and castings and is a revision of IS: 305—1952. This standard has been prepared to meet certain special requirements for which copper-aluminium alloys are preferable to copper, because of their resistivity to wear, oxidation and corrosion by sea water and their superior mechanical properties at room and elevated temperatures.

The main modifications made in this revision relate to slight adjustment in the chemical composition to bring it in line with the draft revision of the corresponding alloys in BS: 1,400—1948, and inclusion of standardized metric values for tensile properties.

The last draft standard, which is for leaded tin bronze ingots and castings, is a revision of IS: 318—1952. This standard covers five grades of leaded tin bronze ingots and castings. They are grades 1 and 2 meant for general castings and having a fair strength and good machining properties, grade 3 suitable for high speed and heavy pressure bearings and used where resistance against mineral waters and sulphite liquor is required; grade 4 used for general castings, and as a moderate pressure, general purpose bearing metal and grade 5, used for bearings under light leads and high speeds.

The main modifications made in this revision relate to the addition of sampling clauses for chemical composition and physical tests, and a clause on freedom from defects. The drawings showing the shapes of ingots of different grades are also included.

Comments on the draft standards may be sent before October 3, 1959 to the Indian Standards Institution, "Manak Bhavan", 9, Mathura Road, New Delhi.

PRODUCTION OF PIG IRON AT BHILAI

The Bhilai Steel Works produced 28,708 tons of pig iron during July, 1959. The production since the first blast furnace was commissioned in February, 1959 thus totalled 1,56,306 tons till the end of July, 1959.

Nearly 19,758 tons of pig iron valued at about Rs 42,48,000 were despatched to various places in the country, during the month, bringing the total despatches to 1,15,934 tons valued at about Rs 2,49,25,000.

The coke production during July was 39,565 tons. The total quantity of coke produced at Bhilai till the end of July was 2,03,784 tons.

The quantity of coal tar recovered during the month was 1,426 tons.

The coal tar despatches during the month were 703 tons, bringing the total despatches to 2,356 tons.

During the month, 45,306 tons of coal were received at Bhilai from the mines. The coal consumption here during the month was 52,884 tons.

RAIL FREIGHT CONCESSION FOR MANGANESE ORE EXPORTS

To encourage the export of manganese ore to foreign countries the Railway Board has decided to allow with effect from September 1, 1959 a rebate of freight on traffic in medium and low grade mananese ore from the stations situated over 200 miles from the ports from which such traffic moves.

The Railway Administrations concerned are separately issuing notifications announcing the stations from which the rebate arrangements will operate and also the quantum of rebate. Other terms and conditions under which the rebate will be allowed will also be notified by the Railway Administrations.

Generally speaking, the quantum of rebate in case of medium grade ore will be Rs 2.18 nP per ton for traffic carried over 300 miles, Rs 3.27 nP for traffic carried over 400 miles, Rs 4.09 nP for traffic carried over 500 miles and Rs 4.36 nP for traffic carried over 600 miles.

The corresponding rebate for low grade ore will be Rs 2.99, Rs 4.90, Rs 5.99 and Rs 6.53 respectively for distances covering 300, 400, 500 and 600 miles.

Particulars of the exact rebate permissible in specific cases would be available from the Chief Commercial Superintendents of the Railways on which the booking stations are situated.

IRON ORE PRODUCTION IN INDIA.

The total output of iron ore during the month of June 1959 was estimated at 575,000 metric tons, according to the Indian Bureau of Mines.

This brings the total production since the beginning of 1959 to 3,771,000 metric tons as compared with 3,078,000 metric tons in the corresponding period of 1958.

The largest output was reported from Bihar and Orissa with 263,000 metric tons and 187,000 metric tons respectively.

Among the minor producing states, Mysore and Madhya Pradesh accounted for 59,000 metric tons and 32,000 metric tons respectively.

During the month despatches of iron ore to Iron and Steel plants and export market were 440,600 metric tons and 126,000 metric tons.

The Tata Iron and Steel Company Limited

Year of Achievement—But Also Disappointment

Government Attitude to Private Sector

Address of Mr J. R D. Tata, the Chairman

"The following is the speech of the Chairman, Mr. J. R. D. Tata, delivered at the Fifty-second Annual General Meeting of the Shareholders of the Tata Iron and Steel Company, Limited, on Wednesday, September 2, 1959.

Ladies and Gentlemen,

It has been customary for me to open my remarks at these meetings with a review and discussion of important economic trends and events with special reference to those which impinge on business and industry in general and our own affairs in particular. I shall this year curtail such remarks to the minimum, as I know that shareholders are specially concerned with the situation and developments within our own Company and would wish me to give them as complete a picture as possible.

ECONOMIC TRENDS

2. On the international front, the year under review was highlighted by the spectacular end of the third economic recession in the western world since the war, by the outstanding economic progress made by most of the countries of Western Europe and, unfortunately, by the developing crisis in many parts of South Asia reflecting growing political or economic chaos, in striking contrast with the situation in Europe.

3. What do these world-wide trends portend for India? The troubles in a number of countries in South Asia, which have led in most of them to the emergence of military dictatorships, naturally have for us potentially serious repercussions. They contain a warning of the inevitable consequences of poor or corrupt administration, doctrinaire or unrealistic economic policies and of the resultant dissatisfaction amongst the people.

4. The political stability of our governmental institutions, with the temporary exception of Kerala, and, even more, the stability of the Indian rupee, have brought prestige to India and confidence in her future throughout the world. In political circles abroad there is goodwill and real appreciation of our needs and of what we are trying to achieve for our people. In financial and business circles there is growing confidence in our ability to withstand disruptive forces and to ensure orderly development along with a dawning realisation of the long-term potentialities of the Indian economy; there are also in Europe and America increasing funds seeking investment abroad and a growing willingness to invest both money and technical and managerial skills in under-developed countries.

5. To the extent that the buoyant economies and general feeling of optimism in the western world must lead to increased prosperity, world trade and travel, the favourable background to our own situation, which I have just mentioned, should be further improved. With restraint in international affairs in keeping with a genuine policy of neutralism and with realistic economic policies at home, there is much that we could legitimately gain from the present world situation.

6. In that context the portents would be discouraging if one were to judge only by the views expressed from time to time by the left wing of the ruling party which is also the most vocal, as often happens with minorities, and which, unfortunately, seems to influence the long-term economic thinking of the Government and the Planning Commission.

DOCTRINAIRE SOCIALISM

7. On the eve of the Third Plan, little seems to have been learnt in these doctrinaire circles from the mistakes of the past or from the post-war economic history of Western Europe and Japan. They still cling to an outmoded nineteenth century conception of socialism; they stubbornly ignore the immense changes which have taken place since then, which have led, on the one hand, to the modern democratic welfare state nurtured by a dynamic form of "people's capitalism" and, on the other, to the totalitarian Socialist State generally under Communist rule. They still believe in ideological solutions for economic problems. For instance, the food problem is to be solved not so much by meeting the down to earth needs of the farmer in water, seeds, fertilisers, credit, storage, marketing facilities and the like, as by the magic wands of land reform, cooperative farming, state trading and bureaucratic intervention; the growth of industrial production is to be achieved not so much by stimulating initiative and rewarding honest and productive work and thus encouraging people to work, save and invest, as by State capitalism and the heavy hand of bureaucracy. According to them the Private Sector, with its wicked profit motive, should be eliminated. Pending that happy day it should be rapidly surpassed by the Public Sector and made more subservient to it. Banks and large-scale industry should be nationalised forthwith; there should be ceilings on holdings and incomes; interest or dividend incomes, being immoral, should be taxed out of existence; only self-employment or employment by or through the State should be permitted; above all, people should not be allowed to exercise individual judgment or initiative; only Government and Government officials really know what is good for them. Therefore the bigger the Government, the more pervasive its controls, the more obedient and docile the people, the happier everyone will be!

8. In a way, the fact that this sort of thinking has recently been openly and seriously discussed in the higher counsels of the party in the context of the Third Five-Year Plan, is a good thing, for it brings out in the open the present schizophrenia in the Congress Party's economic philosophy and makes thinking people realise fully where they might be led. Already there are signs of a restiveness in the country and in the party itself against extreme leftist doctrines and policies. In this context, the categorical assurance recently given in Parliament that Government had no intention to nationalise the banking system either today or in the foreseeable future is very welcome and I hope that Government will find opportunities to make similar reassuring statements of policy in regard to other sectors of business and industry.

PROGRESS AND SETBACK

9. To come to our own affairs, the year under review has been one of the most difficult ones in our history. It has been a year of achievement as well as of disappointment. On the credit side we may count the completion and commissioning of the new plant, and the conclusion of a three-year agreement with the Union for a comprehensive revision of the wage structure. On the debit side were the lamentable communist-led disturbances and strike of May 1958, the delay of about six months in the completion of the plant as compared to the original target, and the low rate of initial production achieved, reflected in the low profits for the year. We have thus made considerable progress and at the same time suffered some setbacks. Although we may deplore the latter, there is no cause for despondency, for the setbacks are temporary while the achievements are of a permanent nature and should soon bring their expected rewards.

NEW PLANT

10. Although it will have taken us longer than we hoped to get the planned additional output from our new plant, there is no question but that we shall get it. I believe some stories have been circulated to the effect that the new plant built is incapable of producing the rated output although Kaiser Engineers have spent on it far more money than was originally sanctioned. There is no truth in these rumours. It would have been surprising if a project of such magnitude and complexity and carried out with such speed had been wholly free from errors or defects, but the design, lay-out and quality of the new plant as a whole and of all the major units in it are entirely sound. A large iron and steel plant, however carefully designed and built, cannot produce at the maximum rate immediately after its construction and it is the common experience of steel-makers throughout the world that it takes considerable time for all the new facilities included in an integrated plant to be brought into full operation. So far as the capital cost of the plant is concerned, the excess over estimates has been on the whole quite small. Excluding such items as enhanced import duties, increases in the amount of spares purchased by the management and additional items of construction or plant not included in the original scheme, the net excess has been well below 10%.

11. Paradoxically, we have suffered to some extent from the very maturity and long experience of our organisation. Had we been entirely new to this industry we would have employed a large number of foreign experts and technicians for starting and operating the plant while our men were being trained. For reasons of economy as well as morale we did not do so, except to a very small extent, and our staff have had to learn the hard way to operate new equipment and to adapt themselves to new techniques and new processes. It is, incidentally, inte-

resting to note, and to the credit of Kaiser Engineers, that in the construction of our new plant, which is comparable in size and capacity to that of the Government plants, the number of foreign engineers and technicians employed on the project was only a small fraction of the number employed at Rourkela and Bhilai. Even the construction labour force at Jamshedpur was, at its peak, much smaller than at the other plants.

INITIAL OPERATING DIFFICULTIES

12. The difficulties we have had, and still have, in achieving a higher rate of output in the plant, have been largely concerned with the quantity and the quality of the raw materials received at Jamshedpur, with the operation of the ore crushing and screening plant, and with Steel Melting Shop No. 3.

13. There has been a progressive deterioration in recent times in the quality of both iron ore and coal received at our Works and it is most unfortunate that this trouble should have reached its climax just as the new plant was coming into operation and when we could least afford it.

14. In the case of coal, the situation has been aggravated by the delay in the installation by Government of a coal washery at Bhojudih earmarked for washing coal destined for Jamshedpur. In consequence we are compelled to use an excessive amount of high-ash coal which adversely affects the quality of iron as well as the rate of output of iron from the blast furnaces.

15. In the case of iron ore, our operations had been planned on using a certain proportion of ore from our new Joda mine which, mixed with ore from our older mines, would have given us the most suitable blend. Unfortunately, the Government railway line to Joda was considerably delayed and is still in the process of consolidation. It suffered heavily during the present monsoon, and could not deliver to Jamshedpur anything like the required tonnage of Joda ore. We therefore had to use larger quantities of ore from the other mines with the result that the composition of the ore mixture has been unsatisfactory and has led to irregular blast furnace operation and low production of iron.

16. The initial operation of the ore crushing and screening plant has not been satisfactory upto now partly owing to troubles with the plant itself and partly owing to the high moisture content and irregular quality of the ore received during the present monsoon.

17. To turn to steel making, the new Steel Melting Shop utilises a scrap/blown metal process which is new to this country. Although the furnaces and Bessemer converters used are not very different from those in S.M.S. No. 2 which give us no trouble at all, the process itself is more complicated and requires greater speed, timing and coordination between the various sections of the shop and between the latter and the blast furnaces. These we hope to achieve in the coming months.

18. Furthermore, we are for the first time using fuel oil in open hearth furnaces and lack of experience in the use of this "hotter" fuel has resulted in an abnormally large incidence of furnace breakdowns, and consequently in poor furnace availability and output, apart from considerable added expenditure on repairs which is reflected in the relevant part of the Profit and Loss Account. In order to expedite progress in this plant, we have recently decided to secure from abroad the temporary services of a very senior expert in steel making and also of some furnace operators. With their help and the growing experience of our own men, we hope to get over most of the present difficulties in S.M.S. No. 3 in the reasonably near future. There should also be an appreciable improvement in pig iron output from the next month onwards when we may expect more regular supplies of better blended ores. I must repeat, however, that full production from the blast furnaces and the steel melting shops will always depend on full and regular supplies of suitable ores and reasonably low-ash coals. The latter requirement must await the completion of the delayed Bhojudih coal washery to which I referred earlier.

19. I am glad to say that, apart from normal minor tuning troubles, the new rolling mills have shown themselves to be sound and will undoubtedly roll all the steel the melting shops can supply to them.

FINANCIAL RESULTS

20. While the difficulties and problems from which the plant has suffered in its initial period of operation are not of a serious or permanent character and will undoubtedly be put right in time, they have, in combination with the delay of about six months in completing the plant, had a serious effect on our Profit and Loss Account as shareholders will have found, possibly to their dismay, from the accounts for the year 1958-59. The reasons for the lack of any distributable profits last year have been set out in the Directors' Report. The basic cause, of course, was that after spending about Rs. 100 crores on the plant, we produced during the year under review only about 100,000 tons more steel than the rated capacity of the old plant. It is obvious that the additional revenues from such a small tonnage could not bear the overhead charges on Rs. 100 crores, in addition to the heavy non-recurring expenditure incurred in bringing the new plant into operation and the losses inflicted by the strike which took place during the year.

21. It must also be remembered that the gross profit earned per ton during the year was substantially lower than in the preceding years owing to increases in costs which have been only partially compensated by increases in prices and also owing to the composition of the output which consisted of an abnormally high proportion of semi-finished products on which the margin of profit is naturally lower than on fully finished products.

22. Most of these adverse factors will automatically disappear when the plant operates at full or near full capacity. Only then will we obtain benefit of lower costs and higher labour productivity resulting from the vast investment we have made in new plant and machinery. The most determined and comprehensive efforts are being made to overcome present difficulties as quickly as possible and we hope that we shall reach an acceptable rate of production by the end of the current financial year. Because of the poor production in the first half of the year, however, the total output for the year must remain substantially short of the original target and the benefits of a higher output can therefore only be expected from 1960-61 onwards.

CURRENT YEAR PROSPECTS

23. While we shall, I hope, make substantially more steel, the overheads per ton will probably be almost as heavy as in the past year. For instance, even at the flat rate of 6¼% on gross block which the Board have decided to adopt for depreciation from this year onwards, the charge on this account next year is likely to be in the neighbourhood of nine crores of rupees while interest charges will rise to about three and three quarter crores. The increase in wages under the new agreement with the Union will also swell our costs so long as we do not get the full output.

24. Much will depend again on the extent to which the Tariff Commission and Government are willing to compensate us for increased costs and on the price scheme they will adopt from 1960 onwards. I am sorry to say in this regard that in the last year or two Government have been somewhat unresponsive to our problems. For instance, we have been claiming, unsuccessfully so far, legitimate increases in the price of pig iron due to us under the uniform price scheme adopted by Government. Again, although Government had undertaken to increase retention prices to the full extent required to compensate for the increase in excise duty on ingots from Rs. 4 to Rs. 40 per ton from 16th May 1957, they have chosen to adopt a formula under which we have recovered something less than the extra duty paid, and we have not been able so far to make Government see the justice of our claim.

25. A number of other items of increase in costs, including the higher cost of power supplied by Government from the D.V.C. grid, has been similarly disallowed with the result that we are suffering in the aggregate a loss of revenue under these heads of about Rs. 19 per ton.

GOVERNMENT'S ATTITUDE TOWARDS PRIVATE SECTOR

26. I hope that this unsympathetic approach to the legitimate problems and difficulties of our industry does not reflect a hardening attitude on the part of Government towards the Private Sector. While those forming part of this sector may not agree with all the present economic policies of Government, they have repeatedly made it clear that the Private Sector accepts the general objectives of a Welfare State; it favours a reasonable degree of planning and control; it does not ask for or believe in 19th century laissez-faire; it condemns corrupt practices and abuses wherever they occur, and particularly in its own ranks. All it wants is to be allowed to contribute to the fullest extent to the industrial development of the country and, in the process, to earn and pay a reasonable return on the monies entrusted to it. It asks no special favour but claims the right to live and serve the country in dignity and in peace and to be afforded some relief from the surfeit of Government controls and interference.

27. In our own Company we have gone to great lengths to be helpful and co-operative. Not only have we willingly undertaken a crushing load of debt and imposed upon our management and staff a great burden of added responsibility and strain in the construction of our new Works, but we have gone out of our way to co-operate with, and to be helpful to the Public Sector of the steel industry Our relations with Hindustan Steel could not be more cordial at all management levels and their spokesmen have been good enough to recognise our helpfulness and co-operation. There is a natural fraternal spirit among steel makers anywhere, and I am happy that our and Hindustan Steel's staff, some of whom, incidentally, have come from our own ranks, are mutually so friendly and co-operative.

DIVIDENDS FOR 1958-59

28. I am aware that some shareholders of this Company have felt somewhat aggrieved at this year's dividend and are worried as to the likely dividend next year and in subsequent years on the much enlarged capital. I would like first to put the record straight in regard to the dividend your

Directors have recommended. From the sharp reaction in the market when the announcement was made, it is clear that many shareholders either expected an increase in dividend this year or have wrongly interpreted the Directors' decision as a cut in the previous year's dividend. I have not been able to understand how such an impression was created in the minds of shareholders, as I thought I had made the position amply clear at the annual general meeting in 1957 and again last year. Shareholders had then asked me what dividend they could expect on the new Ordinary shares issued in 1956-57 for an aggregate amount of Rs. 13½ crores including premium. I stated clearly then that, barring unforeseen circumstances, it was the intention of the Directors, until the new plant was in full operation and additional profits earned therefrom, to pay such dividends as would in effect maintain the previous dividend of Rs. 10.50 on the old shares and give a return of about 5% on the new shares, including the premium.

29. Your Directors have more than fully carried out this undertaking during the last two years and the dividend this year is in fact equivalent to maintaining the dividend on the old Ordinary shares of Rs. 10.50 and to paying 5.54% on the new capital including premium, which is ½% more than the rate promised in 1957. While there has thus been no cut in the dividend, I put it to you that it would have been little short of irresponsible for the Directors to have raised the dividends in one of the worst years of the Company's history when there were no disposable profits and dividends had to be paid out of reserves, when the outlook for the subsequent year was still uncertain, when labour had to bear a heavy cut in their bonus and when the Company had applications pending before Government for the issue of new shares at par and for a review of retention prices.

DIVIDEND POLICY

30. The position was fully explained to a delegation of shareholders sponsored by the Bombay Shareholders' Association at the end of July and I think it is only fair that I should repeat today the statement I made at the time regarding the next year's dividend. I was asked whether shareholders could at least count next year on the same net dividends after deducting the 30% tax under the Finance Act, 1959 or whether the same gross amount would be paid with a resultant cut in the hands of the shareholders. My answer was that, barring unforeseen circumstances, it would be the intention of the Directors to gross up the dividends so that, after deduction of tax, shareholders would earn approximately the same return as under the present formula, that is, Rs. 10.50 on the old Ordinary shares and five to five and a half per cent on all shares issued after April 1956. The additional cost to the Company of such grossing up during the next three or four years under the provisions of the Finance Act, 1959, will amount to about one crore per year, including the loss of income tax recovered on dividends on Preference shares which the Company used to retain but which will now have to be paid over the Government.

31. I must warn the shareholders that, unless the provisions of the Finance Act, 1959, are amended, the tax burden will be substantially heavier from the current financial year onwards. While the tax on Companies has been reduced under the new system, the total taxes which the Company and the shareholders will pay between them on profits and dividends respectively in a normal year will be substantially higher than under the existing tax system as relief from income tax will no longer be granted to shareholders on their dividends. Furthermore, under the new system, approximately, Rs. 4 crores of tax relief accumulated in reserves built up from past taxed profits will be lost. The Finance Minister, when introducing these tax proposals, stated that it was Government's belief that the new system would not add to the tax burden and promised to review the position next year if it is shown to him that in fact Government would recover substantially higher taxes. I sincerely hope therefore that as a result of the representations made on behalf of industry and commerce, there will be an appropriate adjustment in the tax proposals next year.

LABOUR

32. I am glad to be able to report that after the violent happenings of May 1958, which ended in the total failure of the Communist attempt to capture by force the labour movement at Jamshedpur, the labour situation greatly improved during the year and has since remained satisfactory. The great majority of our workers are intelligent and responsible men who did not take long to realise how grossly they had been misled by the Communists. Such doubts as had been created in their minds as to the Company's intention to carry out its undertaking to grant an appreciable increase in wages once the new Plant came into operation, were dramatically set at rest by the comprehensive agreement on a new wage structure, which the Company entered into with the Tata Workers' Union in February of this year. The negotiations in their final stages were assisted by the Labour Commissioner of Bihar acting as Conciliation Officer. We are grateful to him and to the Government of Bihar for their help in the matter.

NEW WAGE STRUCTURE

33. The new wage structure which came into force in April 1959 was the end product of two full years of study and preparation and, finally, of intensive negotiations with the Union. The old wage structure was cumbersome and complicated and suffered from many anomalies. The new structure is a much simplified and streamlined one, reflects a better balance between basic wages and earnings depending on results and has been so devised as to absorb in the next few years without stress or strain, the gradual changes required under the agreed job evaluation scheme.

34. Finally, it carries out in full the promise of a substantial increase in total wages and emoluments which we made in an agreement with the Union in January 1956. The new wage structure will bring our employees at Jamshedpur an immediate increase in their emoluments of about Rs. 1.8 crores in the current financial year, rising gradually to about Rs. 2.25 crores in the fifth year . This is equivalent to an increase of nearly 23% at the beginning, rising to 28% in the last year.

35. While this additional burden on the Company is a heavy one for us to bear at a time when production is low as at present, it will not be an unreasonable one when spread over the larger output of the plant after normal production is established. It affords a just and fair recognition of the co-operation we have received from the workers and the Union in the re-allocation of the existing labour force as between the old and the new units.

36. The modernisation and expansion of our plant will automatically result in a marked increase in average labour productivity and even though it will have been achieved at a cost of over Rs. 100 crores on which the additional burden of depreciation and interest will be of the order of some Rs. 10 crores a year, it is fair and in keeping with modern practice throughout the world that the workers should share in the fruits of increased productivity, even when achieved through plant improvements.

BONUS

37. The agreement signed by the Union and ourselves in February this year includes a provision under which a new bonus scheme is to be negotiated to replace the old profit-sharing bonus scheme which expired last year. As such a scheme would necessarily be based on the results of a reasonably normal rate of output, it was also agreed that any payment of bonus this year arising from the operations of 1958-59, should be negotiated on an ad hoc basis. When, some months later, the accounts for that year disclosed the fact that there were no disposable profits, we informed the Tata Workers' Union of the situation and also pointed out that the workers themselves had largely contributed to the situation by joining the illegal strike last year which had cost the Company over a crore of rupees..

38. The Union have on their side claimed, in our view wrongly, that the annual bonus should be treated as a deferred wage, that the men produced more steel than in the previous year and that, except for the loss of production due to the strike, they had worked hard and under difficult conditions during the year and were not responsible for the poor financial results. On those grounds the Union has demanded the payment of a bonus comparable to the previous year's which is of course unacceptable to us. We have not upto now succeeded in reaching a settlement and the matter may have to be referred to arbitration or adjudication.

39. As regards the new bonus scheme for the next three to five years, we are continuing our negotiations with the Union. The scheme in force since 1949 was based on the distribution of a share of the net profits calculated according to a formula which provided for depreciation on the gross block and a return on the issued capital. While this scheme was theoretically sound and attractive, it is a fact that it caused a great deal of trouble and argument in its annual interpretation and application. In fact, I do not remember a single year in which the bonus paid was not made the subject of negotiations.

40. We feel therefore that any new bonus scheme should be based on a simpler formula and one less liable to fluctuations due to causes beyond the control of the workers themselves. No final agreement has yet been reached and negotiations are still going on.

41. I shall end, as in past years, with an expression of thanks to the management and staff of the Company. The members of management and supervisory staff deserve our special gratitude for their devotion and loyalty to the Company during a most trying year in which they were subjected to tremendous strain and long hours of work, at first in connection with the strike and, later, with the operating difficulties to which I have referred earlier. On behalf of the shareholders and the Board, I extend our sincere thanks to them and also to all employees who have worked hard and done their best to increase the output of the plant.

"Note: This is not a report of the proceedings at the above Annual General Meeting".

STOCK EXCHANGES

Active Support at Lower Levels

Watch-Dog Writes:

STOCK markets, after suffering a sharp setback in the middle of the week, have staged a gradual recovery toward the close, thanks to bear-covering and some replacement buying.

Encouraged by higher Bombay advices, equities on the Calcutta Stock Exchange staged a sharp recovery from the low levels touched on Wednesday this week.

Prices on the Bombay Stock Exchange made good headway under the lead of Textile issues.

Except for Textile issues which evoked better investment enquiry, conditions in other sections on the Madras Stock Exchange were quiet.

With the recent selling dried up, prices on the London Stock Exchange showed a sharp recovery on vigorous bear-covering.

Wall Street finished the week with widespread losses on balance.

*

Calcutta

Calcutta, Friday Evening.

THE local stock market witnessed another dull session and, in the absence of any support, smaller offerings were found to be sufficient to depress prices to fresh lower levels in the middle of the week.

The developments on the north-eastern border were taken seriously by the market operators, because of their impact on the defence expenditure. Moreover, the pattern of recent preference dividends gave rise to a feeling that the new system of company taxation might affect the net payment to the shareholders. Above all, there was some eagerness on the part of the investors to conserve a part of their funds for the forthcoming new capital issues. But for higher Bombay advices and the general feeling that prices should stabilise at lower levels which induced heavy bear-covering, the market would have witnessed a veritable debacle with heavy decline in values.

Conditions in the Giltedged market remained steady. The short-dated issues continued to be in demand, while some of the medium-dated loans found sellers as the recent demand seemed to have been satisfied. Activity in State Loans slowed down with buyers showing only small interest at higher levels. 3 per cent 1986 Conversion Loan changed hands at Rs 74 to Rs 74.35.

Bank shares were mainly dull with fractional movements either way. Punjab National closed better at Rs 21.69 after touching a low of Rs 21.12 early in the week. United Commercial were quoted around Rs 61.75.

The satisfactory dividends paid by the Bird-Heilgers group of companies had little effect on the Jute section, where prices developed a slightly reactionary tendency on lower advices from the jute goods market in the absence of any foreign enquiry. Some of the scrip, however, managed to emerge with only minor losses on balance, thanks to the news of a sharp decline in stocks of jute goods with the mills and the strong statistical position of the industry. Howrah were pushed down at one time to Rs 23.31 from Rs 23.62; New Central to Rs 16.50 from Rs 16.75 xrts and Megna to Rs 13.87 from Rs 14.06, to finish better at Rs 23.37; Rs 16.62 xrts and Rs 13.94 respectively. National remained firm at Rs 23, while Ganges were enquired up to Rs 100 from Rs 93.50 on expectation of encouraging results. Barnagore were a steady feature at Rs 163.

Although Coal shares remained subdued on the feeling that the recent increase of 50 nP per ton in the price of coal was inadequate to meet the enhanced cost of production, prices showed a small recovery toward the close in sympathy with the general trend of the market. Burrakur closed better at Rs 16.75 after touching a low of Rs 16.62 from Rs 16.87. Equitable were enquired upto Rs 32.62 from Rs 32.37, while Bengal were on offer at Rs 294 against Rs 308. Central India moved narrowly between Rs 8.09 and Rs 8.25 and Western Bengal between Rs 6.25 and Rs 6.50.

Higher advices from Bombay induced a hardening tendency in the prices of a few selected Textile scrip. Most prominent were Kesoram, which forged ahead to Rs 19.06 from Rs 18. Dunbar were enquired upto Rs 192 from Rs 188 and New Victoria upto Rs 1.38 from Rs 1.25. Elgins were, however, marked back to Rs 15 from the recent high of Rs 16.12 on lack of fresh support. Jayshree were quiet at Rs 10.12 against Rs 10.25.

One section that was still lagging behind was tea. The uncertain outlook for Common grades contributed to the depressed sentiment in the section. The only relieving feature of trading was the small recovery noticed in the prices of the shares of those gardens producing quality teas. In this respect, activity was prominent in Brooke Bond, changing hands at Rs 17.87 to Rs 18.06; Bishnauth at Rs 17.37 to Rs 18.87; Hasimara at Rs 19.94 to Rs 20.75; Jayshree at Rs 13.81 to Rs 14.00 and Dhelakhat at Rs 22.50 to Rs 22.75. Eastern Cachar met with some business at Rs 1.44 to Rs 1.62 and Bormah Jan at Rs 14.94 to Rs 15 cd.

Sugar shares, which had been ruling quiet for some time past in view of the uncertain prospects for cane supplies in the new season, steadied up on higher advices from the commodity market. Raza-Buland came in for business at Rs 12.75 to Rs 13.00; SKG at Rs 11.12 to Rs 11.25 and Darbhanga at Rs 18.50 to Rs 18.62. Carew were, however, quiet at Rs 11.12 against Rs 11.19.

The general decline and the subsequent recovery in equity prices was mainly due to the speculative issues under the lead of Indian Irons. After starting the week at Rs 23.90, Indian Irons receded gradually to Rs 23.76 at which level heavy bear-covering coupled with speculative buying pusned up the scrip to Rs 24.00, to close finally at Rs 23.94 TEXMACO were at one time taken upto Rs 24.30 from a low of Rs 24.10; G. K. Williams upto Rs 38.56 from Rs 38.25 and Jessop upto Rs 28.94 from Rs 28.56, to finish the week at Rs 23.20; Rs 38.50 and Rs 28.75 respectively. Kumardhubi changed hands at Rs 6.62 to Rs 6.75 and Indian Standard Wagon at Rs 79 to Rs 81. Britannia closed better at Rs 12.75 against Rs 12.56.

In an otherwise dull session, Miscellaneous issues behaved better throughout the week, thanks to the emergence of investment support at the recent low levels. Orient Paper changed hands at Rs 38.40 to Rs 38.85 (Rs 38.80); Indian Cable at Rs 31.12 to Rs 31.50 (Rs 31.31); Indian Aluminium at Rs 21.44 to Rs 21.69 (Rs 21.50); Indian Copper at Rs 4.08 to Rs 4.11 (Rs 4.10); Titaghur Paper at Rs 44.37 to Rs 44.62 (Rs 44.50); Sirpur at Rs 13.75 to Rs 14.06 (Rs 13.94); National Carbon at Rs 36.50 to Rs 38.00 (Rs 37.25); NICCO at Rs 38.75 to Rs 39.25 (Rs 38.87); Hindustan Motor at Rs 12.03 to Rs 12.44 x.d. (Rs 12.44 x.d.); Indian Oxygen at Rs 27.25 to Rs 27.62 ((Rs 27.37); Dunlop at Rs 33.25 to Rs 33.62 (Rs 33.25); India Steamship at Rs 13.94 to Rs 14.12 (Rs 14.09) and BIC at Rs 5.25 to Rs 5.62 (Rs 5.32). Figures shown within brackets were the week's closing rates. Rohtas came in for good demand up to Rs 23.06 from Rs 22.25 on reports of announcement of a dividend at 15 per cent for the year ended 31st March, 1959 as against 14 2/7 per cent for the previous year.

RAJAHBHAT TEA COMPANY, LIMITED

Notice is hereby given that the Annual General Meeting of the Members of RAJAHBHAT TEA COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Wednesday, the 30th September, 1959, at 2-50 P.M., for the following purposes:—

1. To receive and consider the Profit and Loss Account for the year ended 31st December, 1958, the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.
2. To appoint a Director in place of Mr. G. T. Routledge, the Director retiring by rotation.

   And, in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956:—

   "That Mr. G. T. Routledge be and is hereby appointed a Director of the Company liable to retirement by rotation."

   Special Notice of the intention to propose the foregoing resolution as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, has been received by the Company wherein it is stated that Mr. G. T. Routledge is an "associate" of the Managing Agents within the meaning of the Act, and that therefore, he can only be appointed by a Special Resolution as a Director liable to retirement by rotation.
3. To appoint Auditors and fix their remuneration.

As Special Business

4. To consider, and if thought fit, to pass the following Resolution which will be proposed as a Special Resolution of which Special Notice as required by Section 261 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which, as required by Section 173 of the said Act, is annexed hereto:—

   "That Mr. A. K. Jalan be and is hereby appointed a Director of the Company liable to retirement by rotation."

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

By Order of the Board,
McLEOD & CO. LTD.,
C. L. Bajoria,
Director,
Managing Agents.

3, Netaji Subhas Road,
Calcutta,
1st September, 1959.

Explanatory Statement

Mr. A. K. Jalan was appointed an Additional Director of the Company in July, 1959, and vacates Office at this Annual General Meeting. A Special Notice has been received from a member of the Company notifying his intention to propose a Special Resolution as set out in item 4 of the above Notice. In the said Special Notice, it has been pointed out that Mr. A. K. Jalan is an "associate" of the Managing Agents and that, in view thereof, it will be necessary for the members to pass a Special Resolution, in conformity with Section 261 of the Companies Act, 1956, if they desire to appoint him as a Director of the Company liable to retirement by rotation since McLeod & Co. Ltd., the Managing Agents of the Company are authorised by the Articles to appoint a Director or Directors on the Board of the Company.

Bombay

A REVIVAL of interest was noticeable in the Bombay Stock Exchange during the week ended Thursday. The main incentive seemed to have been derived from the textile situation which was considered to have much improved in view of the continued good advices from the cloth market. Elsewhere, good corporate news imparted steadiness while the more speculative counters especially Tata Steel, were in request due to special reasons. At the commencement of the week, sentiment was rather uncertain presumably due to the political developments in and around the country. Though, as the week progressed, the reports regarding the border disputes with China continued to be of a disturbing variety, operators appeared to have taken the view that the matter was not one that should be allowed to agitate minds unduly in the marketplace. Even the rather lower advices from Lyons Range, which seemed to be worried about the threat of continued agitation in Calcutta over the food situation, failed to induce a reactionary tendency in Dalal Street which closed Thursday on a steady note.

In the steel section, Tata Steel was initially depressed presumably due to the so-called disappointment over the absence of any encouraging indication about the current year's prospects in the Chairman's speech at the recent annual general meeting of the shareholders of the company. In view of the fact that the scrip was shortly to be listed ex-rights, some support was forthcoming toward close last Friday with the quotation taken to Rs 175.25. The trend was rather listless on Tuesday with the scrip moving within a narrow groove to be finally placed at Rs 161 xr. In the next two days, the quotation steadily improved to be finally placed on Thursday at Rs 162.50. Indian Iron improved in later dealings to move up to Rs 24.96 from the week's opening rate of Rs 24.40.

Active conditions were noticeable in the textile section where, on renewed investment interest, prominent shares gained sizable ground during the week's trading. Kohinoor was a very prominent spot in later dealings on speculative support due to reports of good working. The scrip, which closed on Wednesday at Rs 304.50, spurted to Rs 317 during next day's trading. Bombay Dyeing advanced to Rs 64.60 from Rs 62.80. Century moved up to Rs 565 from Rs 548. Central India advanced to Rs 109 from Rs 102. Svadeshi was finally placed at Rs 251 against its opening rate of Rs 238.

In the Miscellaneous section, there were several active spots. In the engineering section, Premier Construction met with good support and improved to Rs 353.50 from Rs 339. Tata Loco came in for attention in earlier dealings but was under pressure toward close to be placed at one time at Rs 191.50. It, however, recovered toward close to be finally quoted at Rs 194. Among automobile shares, Hindustan Motors was steadier at Rs 12.88 as was Premier Automobile at Rs 135.75 Elsewhere, Natinoal Rayon was wanted up to Rs 350.50 from its opening level of Rs 339.50. Bombay Burmah advanced to Rs 527 from Rs 510.

Madras

Madras, Thursday.

MADRAS stock exchange today was easy with subdued trend in many of the transactions. Banks were quiet. Sugars proved better on inquiry with E.I.D. proving stronger on demand at Rs 39.50. Plantings were easy. Textiles were lower though a few came up for dealings. Cements in the Miscellaneous section proved better and Aluminium Industries was in demand though at a lower quotation.

Government Securities: Government of India 3½% 1964 National Plan Loan was higher at Rs 100.20. 4% Madras Government 1968 was offered at Rs 100.25, lower than last day's closing of Rs 100.30. The loans of 1963 and 1964 (4%) loans remained at quoted price of Rs 100.30 and Rs 100.20 respectively. While the 4% 1971 was on par, that 4½% 1970 remained firm at Rs 101.95. There were no changes in Mysore Government Loans. The taxable loans, 4% 1963, remained at Rs 101.50; and 4% 1953/63 was quietly steady at Rs 101.50. 4% 1971 was also lower today at Rs 99.85. 4% 1970 Kerala Loan were offered at Rs 99.10, 4½% 1970 were rated at Rs 100.95. Andhra 4% 1971 stood at Rs 99.85, while Orissa's scrip of the same type was quoted at Rs 99.10.

Banks: Mysore Bank was steady at Rs 330, and the Rs 100 paid Indian Bank could be bought at Rs 192; Rs 80 paid shares were available at Rs 152.50 and Rs 100 paid Indian Overseas stood steady at Rs 179, and Rs 75 paid could be negotiated for Rs 144.25. Punjab National had buyers at Rs 21.12 which was higher by seventeen nP than last closing. Travancore was quoted at Rs 25.35.

Electrics: There was not much of a change either in this section. Kumbakonam remained at Rs 11.88, Negapatam at Rs 13.25, South Madras at Rs 11.65, Tinnevelly-Tuticorin at Rs 12.50, Vellore at Rs 13.75, and West Coast Rs 14.

Sugars and Breweries: Cauvery Sugar had been in good demand at Rs 118.00 having gained fifty nP over last day's closing. Deccan had sellers at Rs 12.23, out E.I.D. gained strength at Rs 39.50 from Rs 38.80. K.C.P. were marked at Rs 15.50. Travancore at Rs 12.20, lower by 15 nP. United Breweries did not change at Rs 459.00.

Plantings: Not much was gained in this section except in stray cases, and tone remained easy. Amalgamated were quoted at Rs 14.50, Ananoam at Rs 15.50, Balanoor at Rs 18.75 Balamadies did not move beyond Rs 3.12 and Be Be kept steady at Rs 2.90 No change either was noticeable in Blue Mountain, bid at Rs 3..40. Chembra on selling went down to Rs 4.00 from Rs 4.28, its previous closing. Cochin Malabar were offered at Rs 6.52. Consolidated Coffee gained points at Rs 22.10, but Coffee Lands did not move up at Rs 23.75 Coonoor and Coorg respectively were available at Rs 22.80 and Rs 4.98. Cowcoody gathered strength today at Rs 6.30 from its previous rate of Rs 6.25. Emerald Valley was quietly firm at Rs 7..30 and Haileyburia was easy at Rs 18.50. Highland were offered at Rs 12.65. Kailas and Kalasa were steady at Rs 4.70 and Rs 4.20 respectively, and Kil Kotagiri were available at Rs 8.25. Malabar Industrial remained at Rs 16.00, but Malankara had sellers at Rs 19.40. Mysore Amalgamated and Mysore Coffee were both good at Rs 5.90 and Rs 4.26 respectively. Nenmeny were offered and bought better at Rs 15.50. and Nilgiri and Nonsuch could be transacted at Rs 7.80 and Rs 28.40 respectively. Outcherlony was lower fractionally at Rs 5.53. Periakaramalai was unchanged at Rs 4.41. While Rajendra has been available at Rs 16.75, Stanes Amalgamated were lower still at Rs 16.25. Travancore Rubber was quoted at Rs 14.62 Twyford had sellers at Rs 15.10, lower by Rs 1.50, but United Nilgiri on demand went up to Rs 21.40.

Textiles: Cambodia were good at Rs 9.95 but Cauvery Spinning were lower at Rs 12.35. Coimbatore Spinning on selling inclination were available at Rs 45, three rupees lower, but other shares in the Coimbatore textile group remained steady. Dhanakalashmi were at Rs 200, Janardhana at Rs 65, Kadri at Rs 120. Kotharai was on par at Rs 10, Lakshmi xd, were quoted at Rs 117. Madura was lower at Rs 29.45 on enquiries, but Mettur remained steady at Rs 372. Bangalore Woollen remained at the same price of Rs 181.50 and Buckingham at Rs 189.00. Ranga Vilas went down to Rs 49, as well as Travancore Rayon to Rs 23.45. Venkatesa was firm at Rs 113, Virudhunagar unchanged at Rs 38.

Miscellaneous: Aluminium Industries on selling were offered lower at Rs 21.85, but Ashok Leyland gained value at Rs 7.90. Andhra Cement did not improve at Rs 9.59. A. V. Thomas indicated its value at Rs 20.25, Binny's at Rs 158, Dalmia Cement at Rs 10.60, Enfield at Rs 13.50. F.A.C.T.s were quoted at Rs 9.23, only a small gain of 2 nP. General Papers improved to Rs 13.90. Hindustan Level also went down to Rs 29.30 from Rs 30.25. India Cements were better at Rs 6.58, though gaining a small margin. Mettur Chemicals were in demand at Rs 12.20, Mysore Lamp were steady at Rs 22.12, and Mysore Papers was quiet at Rs 21.40. Orissa Cements improved to Rs 16.55 and Parrys Confectionary to Rs 4.19 after its 20% dividend declaration. Textool also gained substantially by Rs 2 at Rs 187 and Travancore Chemical Mfg. was priced higher at Rs 13.50. United India Fire were operated around Rs 8.50 and W. I. Plywoods at Rs 200.

*

London

GENERALLY dull conditions prevailed on the London Stock Exchange following talk of an early general election and nervousness concerning the future course of interest rates. Toward the close, however, the market rebounded sharply due to vigorous bear-covering, resulting in prices quickly moving ahead.

Industrials claimed the most attention and gains were widespread and in many cases, substantial. Giltedged securities, after ruling initially easier, steadied up at the close following the unchanged British Bank Rate announcement and a rally in sterling in the foreign exchange market.

*

New York

PROFIT-TAKING and evening up in anticipation of rises in Federal Reserve Bank discount rates sent Wall Street to a new low for the week, although the market appeared to recover its equilibrium toward the close. In general, caution and buying apathy due to continued domestic and international uncertainties were counteracted to a certain extent by favourable economic news.

Some quarters feel that, over the next few sessions, values may well fluctuate around the current comparatively low levels, particularly in view of the continued lack of progress in steel negotiations, the chances of an increase in Federal Reserve Bank discount rates and Mr Khrushchev's approaching visit to the USA. Anaconda Copper was quoted at $65 1/8; General Motors at $56 1/4 and US Steel at $105 1/8.

MEETINGS AND DIVIDENDS PROPOSED

How much bamboo do you use in a week?

TP

TITAGHUR PAPER alone consumes 3,000 tons of bamboo every week. Bamboo is India's most important raw material used in paper making. In the last 77 years our Company has utilised the raw materials and technical resources of this country to the fullest advantage, producing the widest range of quality paper and effecting tremendous saving in foreign exchange. Today, the Titaghur Mills produce more bamboo pulp and paper than any other mills in the world.

FOR THE INVESTOR

Lack of Interest

Investment Gossip:

IT is evident that both operators and investors are finding the present investment situation too confusing to take an active interest in equities in the sense of increasing commitments.

This is an ideal set-up for the bears who have not been slow to catalogue the adverse factors, present and prospective.

As was noted last week, the Sino-Indian relations provide bears with a convenient stick to beat the bulls whenever it suits them. It all needs the starting of a whispering campaign about some new developments in the border.

Anything that has a remote connection with the border situation, no matter how absurd it is, will do. It may be recalled that last Friday one such rumour was set afloat and promptly equity prices were pushed down sharply.

There are also other seemingly plausible calculations issuing from the present Sino-Indian differences. In any event, it is argued, the Defence Budget will show an increased outlay in view of the need for continuous vigilance on our long borders with China. The repercussions of large defence spending will be felt on the general tax level and to this should be added the still unfilled gap in the internal resources.

Evidence of this line of thinking is the selling pressure noticed last week following the statement of the Prime Minister that aggression will be met with a firm hand.

The bears have nowadays a powerful ally in the leadership of the food agitation in Calcutta. Bigger processions and a more widespread, more intense programme to defy law and order are promised for next week. It would appear that already a few marketmen have started taking a precautionary attitude on this. Some heavy selling in one speculative counter has taken place around midweek.

In view of the forthcoming Puja holidays operators and investors alike also seem to have decided to adopt a cautious attitude earlier than usual.

In short it will be no exaggeration to say that bears are having a field day. Evidence of their attempt to take full advantage of their present dominance was the near-panicky conditions especially around the more speculative counters they were able to bring about, on Friday. I am told it was a rumour about a very large block of shares of an important scrip coming for sale. It would appear that the convincing manner in which the rumour was circulated has made it difficult even for seasoned operators to ignore it. The bears can well claim that they have attained signal success in their endeavour.

£ R$

Investment Notes:

THE prospectus of the Hindustan Aluminium Corporation is expected to be released before the end of this month. The company proposes to issue Rs 6 crores worth of Ordinary shares, of which Rs 2.15 crores will be available for public subscription. In addition, preference capital carrying an interest of 6.3 per cent, tax-free will be issued. The American firm of Kaisers, who are participating in this venture, is expected to take up Rs 1.60 crores. The plant will go into production in 1962.

The Textile Machinery Corporation has proposed to raise Rs 1 crore by the issue of one lakh 6¼ per cent tax-free, Cumulative Redeemable Preference shares of Rs 100 each, at par. The subscription list opens on the 30th September, 1959. These shares are redeemable after 11 years. The shares are being offered, in the first instance, to the existing shareholders on the basis of one new share for every 19 Ordinary shares held and ten new shares for every 19 Preference shares. The company has taken steps to have these shares listed on the Calcutta and Bombay Stock Exchanges.

In Bombay, the Century Spinning and Manufacturing Company Limited will, it is understood, be issuing right shares at a premium of Rs 20 in the ratio of two for every three shares held. This proposal replaces the initial move for one-for-five issue at par, which has been turned down by the Controller of Capital Issues. The chances of the revised scheme being accepted are considered bright. Meanwhile, the company has recommended an interim dividend of Rs 11.50 per share for 1959, subject to deduction of tax.

Kirloskar Electric Company has proposed to issue 50000 shares of Rs 10 each, for cash, at par, to holders as on the 15th October, 1959, in the ratio of one share for every eight shares held. The amount is payable in full on application. The last date for the receipt of applications is the 30th November, 1959.

Brooke Bond Tea has raised the Ordinary dividend from 10 to 12½ per cent for the year ended 30th June 1959. Transfer Books are closed from the 31st October to the 27th November, 1959.

Champdany Jute has recommended a final dividend of Rs 4, making a total of Rs 7 for the year ended 31st March 1959 as against nil in the previous year.

In Vinnamangalam of North Arcot District, a thirteen lakh wool processing industry providing raw material for exportable druggets and other woollen articles will begin functioning in early 1960. The construction of the buildings has been completed and machinery erection over. This joint Mysore-Madras, States project will process wool to standard quality for distribution to cottage industries. These would turn it over into druggets and other wool products for export market. The capacity of this new industry is stated to be 24-lakh pounds of wool worth about Rs 1.2 crores yearly. Exports of these products are expected to fetch Rs 2 crores of foreign exchange. This joint Madras-Mysore venture would employ initially 60 men. A third of the initial cost of the Centre will be shared by Madras and Mysore and the balance by the Government of India.

The Government of India have taken up the survey of capital formation in the urban and rural areas for collation of statistics on amounts spent on land, buildings, livestock and tools and implements. The next census will also be a departure in that it would formulate statistics on the basis of investigation based on family units, how many depend on agriculture, how many on professions, and how many remain dependents. There is also to be an attempt to find out in what manner the producers of cereals and other foodgrains, excluding rice, dispose of their stocks. A pilot scheme in protesting the census operations is to be inaugurated in this State, and the Census Operating officer expects that the figures to be obtained in the next census would be as far as possible reliable with the margin of error narrowed to within 10 per cent. In this respect, Madras is the first State to have already commenced the sampling of a new kind of census enumeration in the pattern evolved by the Government.

The eighty million rupee rayon pulp factory buildings of the Birlas to be set up in Kerala's Vazhakkad-Cheruvayur area of Ernad Taluq, 28 miles from Calicut, would be begun by the end of this year. The factory is expected to be completed by 1961, when it will also begin production at the rate of 100 tons daily. Providing work for 6,000 workers, the plant needs 1,60,000 tons of bamboo expected to be provided by the Nilambur forest area alone. But the inadequacy of this stock from this area above has necessitated the exploitation of the bamboo resources in all the areas of Calicut, Wynaad, Palghat and Nemmara forest divisions. Foreign exchange having been provided to import the needed machinery, a Swedish consulting engineer has already been appointed. An office will begin functioning at Calicut, in October.

Investment Briefs:

Khatau Makanji Spinning and Weaving Company has recommended a dividend of Rs 16 per share, subject to deduction of tax, for the year ended 30th June, This works out to a net dividend of Rs 11.20 against Rs 10 paid for the previous year.

Swadeshi Cotton of Kanpur has announced a dividend of 40 nP per share on the Ordinary shares.

Bombay Cycle and Motor Limited has raised the dividend from Re 1 to Rs 2 per share for the year ended 31.3.1959.

Vasanta Mills have announced an interim dividend of 3¾ per cent for the year ended 30th June 1959.

£ R$

IPP to Raise Fresh Capital

Balance-Sheet Reviews:

IT would be recalled that the directors of the India Paper Pulp Company Ltd had made a proposal, in August 1955, to increase the mill's production capacity from 6,000 tons to 15,000 tons of paper per annum. Subsequently, it was decided not to expand the mill's pulp-making plant in view of the probability that the company would be able to obtain its additional requirements of bamboo pulp from a proposed Pulp Mill in Assam. In addition, they took the view that the capacity of the mill's existing paper-making machines should not be increased until it was possible to estimate when the mill would receive supplies of bamboo pulp from this source.

The Assam Pulp Mills Limited, in which the company has made an initial investment of Rs 1,12,500, has not yet completed its arrangements for the necessary finance and foreign exchange, although considerable progress has been made in this connection during the past twelve months. The immediate expansion programme was completed, therefore, when the third paper-making machine came into operation; and the mill's annual production of paper is now running at about 11,500 tons per annum.

The cost of this expansion will be about Rs 105 lakhs. This capital expenditure has been financed, partly by a cash issue of 3,30,000 Ordinary shares of Rs 10 each at

a premium of Rs 10 per share, partly out of the company's resources and partly by a loan from the company's managing agents. The Board proposes that the company's indebtedness should now be liquidated by the issue of 2,52,000 Ordinary shares of Rs 10 each at Rs 12.37 per share, which will be offered to the shareholders of the company in the ratio of two new shares for each five shares held by them at the time of the issue. The Board considers that this further issue of capital is preferable, under present conditions, to a Debenture issue, which formed part of its original proposals. An application has been made to the Controller of Capital Issues and the sanction is reported to have been obtained.

Meanwhile, the company has produced excellent working results for the year ended 31st March, 1959. Sales have risen to Rs 1.55 crores from Rs 1.06 crores, while the net profit, after providing for Depreciation and Taxation, has jumped steeply to Rs 10,50,026 from Rs 3,86,927 in the previous year. The Depreciation amount is raised to Rs 14.70 lakhs from Rs 7.92 lakhs. After transferring Rs 64,000 from Taxation Reserve and Rs 7 lakhs from Repairs & Renewals Reserve, the directors have provided Rs 74,000 (Rs 4.05 lakhs) for Taxation and Rs 11.59 lakhs (nil) for Development Rebate Reserve. The dividend on the Ordinary shares is maintained at Re 1 per share.

£R$

Dalmia Cement

The uneconomic price fixed by the Government for cement, the decline in production due to labour agitation and strikes and a rise in production cost, are all reflected in the working results of the Dalmia Cement (Bharat) Limited for the year ended 31st December, 1958. Sales are lower at Rs 1.90 crores against Rs 2.26 crores, while the net profit is substantially lower at Rs 7,57,937 against Rs 21,13,425 in the previous year. Apart from providing Rs 3.85 lakhs for Development Rebate Reserve, the Depreciation amount is raised to Rs 6.23 lakhs from Rs 4.92 lakhs. Taxation provision is, however, lowered to Rs 17.50 lakhs from Rs 26.50 lakhs.

The directors have, after transferring a sum of Rs 5.76 lakhs from Rehabilitation & Expansion Reserve and Rs 6.50 lakhs from Dividend Equalisation Reserve, set apart Rs 1.21 lakhs (Rs 1.50 lakhs) for Gratuity Reserve and Rs 5.21 lakhs (Rs 5.43 lakhs) for Rehabilitation & Expansion Reserve. The dividends, both on the Ordinary and Deferred shares, are reduced to 10 per cent each from 12 per cent each.

According to the directors' report, the installation of the third cement kiln of 500 tons per day capacity has made very rapid progress. The new plant is expected to go into production by the end of next month. The rated capacity of cement at the Dalmiapuram Works will, on completion of the expansion, rise to 4.12 lakh tons per year.

£R$

Sone Valley Cement

The Sone Valley Portland Cement Company Limited has reported a net profit of Rs 5,38,985 for 1958 as against Rs 4,64,440 in the previous year, thanks to a rise in sales from Rs 1.46 crores to Rs 1.94 crores. After providing a sum of Rs 1.30 lakhs for Development Rebate Reserve, the Depreciation amount is raised to Rs 5.19 lakhs from Rs 4.85 lakhs. Wealth Tax provision is reduced to Rs 48,000 from Rs 89,000. After transferring a sum of Rs 4.50 from General Reserve No. 1, the directors have provided Rs 4.00 lakhs (Rs 4.50 lakhs) for General Reserve No. 2. The dividend is maintained at 30 nP per share.

In view of the slackness in demand experienced by the cement industry in general, the expansion plans of the company have been kept in abeyance.

£R$

Britannia Biscuit

Thanks to a marked rise in earnings, the Britannia Biscuit Company Limited has raised the Ordinary dividend from 12 to 14 per cent for the year ended 31st March, 1959. Sales have risen to Rs 2.04 crores from Rs 1.85 crores, while the net profit, after depreciation and Taxation, amounts to Rs 13.36 lakhs against Rs 10.36 lakhs in 1958. Apart from providing Rs 3.00 lakhs for Debenture Redemption Reserve, Rs 43,000 for Development Rebate Reserve and maintaining General Reserve at Rs 2.50 lakhs, Taxation provision is raised to Rs 16.23 lakhs from Rs 11.80 lakhs. The Depreciation amount is, however, reduced to Rs 5.66 lakhs from Rs 5.98 lakhs and Taxation Contingency Reserve to Rs 1.00 lakh from Rs 2.00 lakhs.

According to the directors' report, the implementation of the plant replacement and modernisation programme remains severely curtailed owing to import restrictions.

£R$

Kettlewell Bullen

Kettlewell Bullen & Company Limited has raised the Ordinary dividend from Rs 5.00 to Rs 6.00 per share for 1958 following a net profit of Rs 4.27 lakhs against Rs 3.91 lakhs in 1957. The directors have set apart Rs 14,809 (Rs 13,301) for Depreciation; Rs 3.50 alkhs (Rs 3.06 lakhs) for Taxation; Rs 23,500 (Rs 24,000) for Wealth Tax and Rs 50,000 (nil) for General Reserve. Income "By Commission" is shown higher at Rs 4.15 lakhs against Rs 3.50 lakhs.

£R$

National Screw & Wire

The National Screw & Wire Products Limited has again passover the dividend for 1958 despite a net profit of Rs 1,94,916 against a loss of Rs 2,88,224 incurred in the previous year. The directors have provided Rs 4.44 lakhs (nil) for Taxation; Rs 7,969 (nil) for Wealth Tax and Rs 2,696 (nil) for Development Rebate Reserve. The Depreciation amount is reduced to Rs 52,345 from Rs 56,844.

£R$

Hoare Miller

Hoare, Miller & Company Limited has reported a slight increase in net profit from Rs 3,46,371 to Rs 3,61,700 for 1958 with sales shown at Rs 9.06 crores against Rs 10.63 crores. Apart from providing a sum of Rs 3.00 lakhs for General Reserve, Taxation provision is raised to Rs 44,641 from Rs 32,500. The Depreciation amount is slightly lower at Rs 92,381 against Rs 1.20 lakhs. The interim dividend of 50 nP, declared earlier, has been treated as final and this compares with the same in the previous year.

£R$

Karanpura Development

In view of the uncertainty of the future as regards the company's assets, the directors of the Karanpura Development Company Limited have decided to pass over the dividend again for 1958. The net profit works out to Rs 1,41,620 against Rs 1,70,365. A sum of Rs 5,379 (Rs 10,150) is provided for Depreciation; Rs 2.28 lakhs (Rs 1.31 lakhs) for Taxation; Rs 17,000 (Rs 15,300) for Wealth Tax and Rs 3,000 (nil) for Statutory Development Rebate Reserve. Raisings are shown at 1.18 million tons and despatches at 1.15 million tons.

£R$

Borrea Coal

The Borrea Coal Company Limited, in Heilgers group, has maintained the dividend at 7½ per cent for 1958 with a rise in the net profit from Rs 1.21 lakhs to Rs 1.67 lakhs. After providing a sum of Rs 25,000 for Dividend Equalisation Reserve and Rs 66,120 for Statutory Development Rebate Reserve, the directors have raised the Depreciation amount to Rs 72,707 from Rs 60,626 and Taxation provision to Rs 1.45 lakhs from Rs 29,085. Wealth Tax provision is lower at Rs 13,000 against Rs 26,100.

Sales are higher at Rs 37.02 lakhs against Rs 30.81 lakhs. Both raisings and despatches have risen to 171,109 tons and 174,148 tons from 152,270 tons and 151,308 tons respectively.

£R$

India Jute

Following a marked decline in the net profit from Rs 14.32 lakhs to Rs 8.75 lakhs, the India Jute Company Limited has reduced the dividend from 12.49 per cent to 10 per cent for the year ended 31st March, 1959. Gunny sales are higher at Rs 2.16 crores against Rs 1.89 crores, while raw jute sales have declined to Rs 15,852 from Rs 15.24 lakhs.

In respect of allocations, the Depreciation amount is raised to Rs 5.42 lakhs from Rs 4.76 lakhs and Taxation provision to Rs 10.40 lakhs from Rs 3.83 lakhs. Wealth Tax provision is lower at Rs 74,115 against Rs 79,693. After transferring Rs 1.50 lakhs from Contingency Suspense account, the directors have set apart Rs 1.82 lakhs (Rs 51,474) for Development Rebate Reserve.

According to the directors report, the modernisation of the Preparing and Spinning departments will be completed soon. On the 18th March 1959, it was decided to close No. 3 mill due to uneconomic working and arrangements are being made to transfer the productive capacity to No. 2 mill. Subsequently, the directors agreed to sell No. 3 mill. The company has recently purchased a cotton mill, Shree Radheshyam Mills Limited, which has been standing idle for some time. Arrangements are being made to commence manufacture of cotton fabrics.

£R$

Megna Mills

The Megna Mills Company Limited has also reported a sharp decline in the net profit from Rs 21.36 lakhs to Rs 9.83 lakhs for the same year, although gunny sales are higher at Rs 3.77 crores against Rs 3.42 crores. A sum of Rs 7.36 lakhs (Rs 6.48 lakhs) is provided for Depreciation; Rs 11.59 lakhs (Rs 4.70 lakhs) for Taxation; Rs 64,377 (Rs 1.14 lakhs) for Wealth Tax and Rs 2.84 lakhs (Rs 62,350) for Development Rebate Reserve. The directors have recommended a final dividend of 50 nP, making a total of Re 1 per share as against Rs 1.75 paid in the previous year.

The company has recently embarked on the manufacture of Tufted Carpet Backing and Broad Looms for this purpose are being installed and will very shortly go into production.

£R$

Dishergarh Power

Despite a slight decline in the net profit from Rs 5.49 lakhs to Rs 5.44 lakhs, the Dishergarh Power Supply Company Limited has raised the Ordinary dividend from Rs 7.00 to Rs 7.50 per share for the year ended 31st March, 1959. All allocations to funds have been raised; Depreciation from Rs 2.37 lakhs to Rs 2.50 lakhs; Taxation provision from Rs 2.79 lakhs to Rs 4.28 lakhs; Contingency Reserve from Rs 24,501 to Rs 25,290 and General Reserve from Rs 1.00 lakh to Rs 5.00 lakhs. Sales of energy totalled Rs 66.45 lakhs against Rs 56.08 lakhs. Units sold amount to 103.44 million as compared with 91.20 million in the previous year, representing an increase of 13.4 per cent.

£R$

Mysore Paper

The company has reported increased production by 10% at 8,000 tons of paper in the year ending March 31, 1959. In value, the paper produced was of the order of Rs 125,35,169, exceeding production last year by Rs 16,81,942. The net profit for the year is Rs 6,29,158 as against the preceding year's Rs 5,29,437. Allocations are as follows: Depreciation on fixed assets Rs 3,94,325, interest on borrowings Rs 1,62,084, gratuity Rs 4,10,000, development rebate Rs 24,142, Income-tax Rs 70,000, Wealth-tax Rs 30,000. After these allocations, amount available for disposal is Rs 6,56,294, inclusive of the carry over. A sum of Rs 3,00,000 has been allotted for repayment of the Industrial Finance Corporation Loan. A 10 per cent dividend has been recommended plus 2½ per cent bonus absorbing Rs 3,12,500.

£R$

Swinton Estates

For the year ended March 31, 1959, the net profit earned by the Swinton Estates Ltd., was Rs 12,443. This is in contrast to the previous year's amount of Rs 65,512. Provision for depreciation is Rs 1,760, taxation Rs 3,000 against Rs 35,000 in 1957-58, and a sum of Rs 3,375 has been written off as underwriting commission. The dividend on ordinary shares has been maintained at 7½ per cent. The coffee crop secured was 415 cwts and current year estimate is 45 tons.

£R$

Tea Group Results

Twenty-five tea companies, belonging to various managing agency groups, have produced their reports and accounts for 1958. The working results of almost all of them have been very satisfactory, resulting in the dividends being raised in some cases, thanks to better prices obtained at the auctions held in 1958. The following table shows the net profits earned (after providing for Depreciation and Taxation) and the dividends recommended for 1958 as compared to 1957:

Mlamallay Tea

For the year ending 31 March 1959, the profits amounted to Rs 99,326, after providing for Depreciation, Taxation and Bonus to staff. The previous year profits were Rs 72,353. The profits along with Rs 3,724 brought forward from the previous year leave a sum of Rs 1,03,050 available for allocation. The Directors have recommended a transfer of Rs 18,000 towards Capital Expenditure. The preference dividend of 7½% absorbs Rs 22,500 and the Directors have recommended a dividend of 20% on equity shares against 15% of the previous year, absorbing Rs 60,000. A sum of Rs 2,550 is carried to the current year. The crop harvested during the year amounted to 5,41,050 lbs against 5,35,772 lbs in the previous year. The price realised is reported at Rs 1.61 per lbs as against Rs 1.51 last year.

£R$

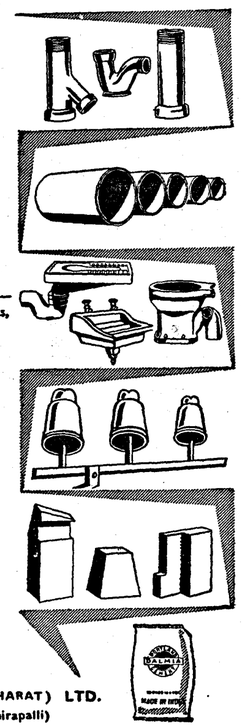
Kalasa Tea & Produce

Upto the year ending March 31, 1959 profits of the year after providing for depreciation and all charges amounted to Rs 2,13,561 against Rs 69,230 of the previous year. This along with Rs 76,650 brought in from the previous year leave a sum of Rs 2,09,211 available for allocation. Out of this, tax provision took Rs 86,277, General Reserve Rs 41,500 and Development Rebate Reserve Rs 4,600. A dividend of 15% on the shares has been recommended absorbing Rs 90,000 against 12½% paid in the previous year. A sum of Rs 67,834 is carried to the current year. Tea crop during the year harvested was 5,06,751 lbs against 4,064,700 lbs in the previous year. The selling price of this year was 199.30 cents against 184.04 cents.

£R$

Haileyburia Tea

The profits of the year ended December 31,1958 was Rs 4,27,368 after providing for depreciation and all expenses amounting to Rs 4,85,000. The profits for the previous year were Rs 3,82,301. The year's profit along with the carry-forward of Rs 28,840 bring the total amount available for allocation to Rs 4,56,208. Out of this the preference dividend absorbed Rs 12,500 and the transfer to Development Reserve amounted to Rs 50,000. A dividend of 20% has been recommended on the equity shares absorbing Rs 3,75,000 against 15% in the previous year. The total crop was 22,69,367 lbs against last year 19,25,000. The average selling price was 187.89 cents against the previous year's 195.50 cents.



Capital expenditure of the company was Rs 3,70,700. The company is considering issue of 62,500 equity shares of Rs 10 each with a view to improve their ways and means position and to meet the outstanding Debentures and Capital expenditure. The Directors expect when the Factory improvements are complete there should be considerable improvement in the quality of tea produced by them.

Mettur Chemical

The profits for the year ending March 31, 1959 amounted to Rs. 15,07,155 against Rs 17,03,788 for the previous year. Addition to this amount is Rs 30,413 brought in from the previous year, Rs 1,93,484 is transferred to the Development Rebate, Rs 60,500 to the General Reserve and Rs. 7,25,000 to taxation provision. Donations given amounted to Rs 9,901, Staff bonus to Rs 49,681 and incometax paid Rs 3,633. The final dividend of 4.4% free of tax on the equity shares which along with similar interim dividend already paid and the preference dividend absorbs in all Rs 4,76,400. A balance of Rs 18,969 is carried to the current year. The dividend for the last financial year was 8.75%. The fall in profits is due to fall in production largely ascribable to severe power cuts lasting for about three months and also owing to the delay in the repairs to the rectifier equipment and delay of spare parts therefor from abroad. The Company is putting through an expansion scheme to augment the capa-

city of the caustic soda production from 20 to 40 tons. The expansion is to be carried out partly by Finance Corporation and partly by the issue of fresh capital to shareborrowings from the Industrial holders. The stable bleaching powder plant is also to be expanded to double its existing capacity and part of the machinery has arrived at Mettur. Both the stable bleaching powder plant as well as the caustic soda plan expansions will increase the capacities respectively to 32 and 40 tons and the additional capacity will be in commission by March next year.

£ R$

Indian Steel Rolling Mills

The profits for the year ended 31st December 1958 is Rs 1,79,333 as against the previous year's Rs 2,72,161. Transfers made to this sum are from repairs and renewals reserve Rs 39,826, From General Reserve Rs 7,500, and amount brought in from previous year Rs 22,669. This left a sum of Rs 2,49,328. As against 10% previous year dividend, 7% is recommended on the ordinary shares absorbing Rs 1,66,501. The preference dividend absorbs Rs 27,497, refund of retention money to the Iron and Steel Controller Rs 54,679 and a sum of Rs 652 is carried to the current year.

Bars and rods production during the year was 21,462 tons and hoops 456 tons against 21,098 tons and 1,022 tons respectively in 1957. The Wire Mill Plant recently erected produced 775 tons of wiresand 507 tons of wirenails. Owing to powercut, the Wire Mill Plant could not be put into full production during the year. The report refers to the proposals to augment the wiremill capacity by installing additional plant and machinery for lighter gauge wire and nails. It is expected that this may involve the Company in a further capital expenditure of Rs 5 lakhs.

£ R$

Devashola Tea

This company had a record tea crop, according to its report ending December 31, 1958. Its harvest was 383,675 lbs. against last yeaer's 332,056 lbs. Naturally, the net profit after making usual provisions for depreciation and taxation was higher at Rs 3.41 lakhs against Rs 1.26 lakhs in 1957-58. Taxation provision is Rs 1.56 lakhs against last year's Rs 50,390. Depreciation allocation is Rs 32,683 against the previous year's Rs 37,127. The final dividend of 15 per cent together with the interim dividend makes the total dividend 25 per cent for the whole year. Last year's dividend was 17½ per cent.

£ R$

Kumbakonam Electric

THE balance sheet reveals a profit of Rs 1,81,046 as against the previous year's Rs 1,94,146, as on March 31, 1959. A sum of Rs 12,944 is added being the amount withdrawn from the Tariffs and Dividend Control Reserve, Rs 26,000 from Taxation Reserve and Rs 7,369 brought forward from the previous year. From out of this aggregate sum of Rs 2,27,360, the appropriations made are: Development Reserve Rs 30,000, Contingency Reserve Rs 13,000. Tariffs and Dividends Control Reserve Rs 12,944, Consumers Benefit Fund Rs 12,944, Gratuity Provision Rs 5,000 and additional taxation in respect of previous assessment Rs 1,687. The preference dividend absorbs Rs 15,000, and a 9% dividend is recommended on ordinary shares absorbing Rs 1,34,959. A balance of Rs 1,824 is carried to the current year.

The Company is revising its tariff effective October consequent on the increase of rates for bulk supply by the Madras State Electricity Board. This would increase the Government's bill by Rs 1,44,000 annually at existing consumption levels. The reduction in dividend from 10% to 9% has been caused by slight reduction in profits.

£ R$

Puthuthottam Estates

The net profit of the Puthuthottam Estates (1943) Limited for the year ended March 31, 1959 was lower at Rs 5.10 lakhs against Rs 6.24 lakhs in 1957/58. The tea crop was much higher at 344,316 lbs. Working expenses also were higher and the coffee crop was smaller with only 187 tons of harvest. The amount set aside for depreciation is Rs 51,661, (Rs 48,186) and development rebate is Rs 6,695 while previously there was nil provision in this account. The provision for taxation is Rs 2.30 lakhs against the previous year's Rs 2.75 lakhs. A dividend of 10%, the same as in previous year, is to be paid. The estimate for 1959-60 provides for a tea crop of 3,00,000 lbs and a coffee crop of 216 tons.

THE HONGKONG AND SHANGHAI BANKING CORPORATION
(Incorporated in Hong Kong with Limited Liability)
Head Office: HONG KONG
Chairman and Chief Manager: The Hon. MICHAEL W. TURNER, C.B.E
Deputy Chief Manager: C. O. W. STEWART
London Office 9, Gracechurch Street E.C. 3.

Capital Authorised - Hong Kong $ 100,000,000
Capital Issued and Fully Paid up - Hong Kong $ 62,311,375
Reserve Fund - Sterling £ 8,000,000

Every description of Banking and Exchange Business transacted with the principal commercial centres of the world.

A comprehensive service as Trustees and Executors is also undertaken by the Bank's Trustee Companies in Hong Kong, London, and Singapore

"The Wise Man in his attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right"—The Analects of Confucius.

Objective of Planning

BOTH by its inherent limitation and by the limitations set by the terms of its reference, the Planning Sub-Committee of the AICC was obliged to eschew the particular and confine itself largely to generalities. Its report, just released, formulates its task as "giving thought to the basic considerations that should govern the formulation of the Third Plan and suggesting social and economic objectives that should be achieved during the Third Plan as part of a phased advance **toward a democratic socialistic society". Thus** rendered, the tasks of the Committee are largely those connected with the ends rather than the means of planning. Though the Committee has traversed beyond these limits, as indeed it could hardly help doing, and dealt with certain aspects of the broad strategy to be adopted, it is true to say that it has not gone into details. To those who consider that a discussion of planning that does not come to grips with details is synonymous with bandying platitudes, the report would indeed appear a profitless document.

But this is to take too technical view of the limits of discussion. As the party most likely to be in power during the Third Plan period, the Congress has to draw up a balance sheet of the successes and failures of planned endeavour and draw the relevant lessons for the future. As for details, not being the Planning Commission, it need not work out all its ideas in all their implications. It merely asks to be judged by the soundness of the general strategy it suggests.

The report attributes the comparative lack of success during the Second Plan period in the matter of agricultural production, creation of employment opportunities, reduction of inequalities or mobilisation of resources to "(i) deficiencies in official and nonofficial organisational efforts; (ii) deficiencies in the creation of the necessary social outlook, lack of sufficient regard for values on what we have decided to base the new social order, the lack of a sensitive regard for the plight of our people in the lower rungs of the social order, and (iii) last but not least to those changes that are coming about in our economy under the impact of changing world conditions as well as domestic conditions". But this way, a variety of sins of omission and commission is comprehended. There is qualitative as well as quantitative variation in the failures listed. For instance, statistically speaking, agricultural production with its 73 million tons for 1958-59 may be considered not unsatisfactory, but the impact of this production is, paradoxically, not being felt on the economy. On the other hand, the failure to create employment opportunities is both a qualitative and quantitative failure and the Third Plan will not so much be carrying on the good work done in the Second Plan, as do what the Second Plan failed to do. The third failure listed, viz, reduction of inequality, is by its nature a difficult aim to measure precisely, in any case, on short term reckoning. As the Committee itself realises in other places of the report, it is possible, if one were so inclined, to cut a few tall poppies without any meaningful reduction in inequality. As for failure in the mobilisation of reasources, it would appear that facts may not altogether justify the Committee's assumption of failure. For instance, the tax effort, envisaged in the Second Plan, has been amply fulfilled, at least as far the Centre is concerned. It may be that not all of the taxes collected out of new levies acquired in the interests of the Plan have been available for purposes of the Plan, but that would be failure on another front.

Likewise, the experience of the last two years has shown that the market loans of the Government are sure to reach the estimated figures. The outstanding success of the recent floatations of the State Governments leaves little doubt on the matter. As for small savings, it is true that the success has fallen far short of expectations, and it is also true that the deficiency is really organisational. As for the last item of resources, foreign exchange, the modest targets of exports are being realised and a variety of new entrants in the exports market are making up the shortfalls in the earnings of traditional items. As for foreign aid, as even the Planning Commission's reappraisal in May 1958 admitted, receipts therefrom have far outstripped the original estimates.

All this is only another way of saying that the Committee is probably wrong in saying that there has been any shortfall in the mobilisation of resources. We should not labour the point were it not for the fact that a wrong diagnosis of this sort will lead to wrong remedies.

As far as resources are concerned, the real lesson of the experience of the Second Plan would seem to be the need for stricter watch over non-Plan expenditure rather than greater effort to raise the estimated resources. It is true that the size of the Third Plan will be significantly larger than that of the Second, and it might conceivably entail a larger tax effort—though fresh taxes seem, difficult enough to think up—but that would be an absolute necessity, unrelated to what happened or did not happen in the Second Plan period.

All this is not to say that the reasons for failure, to the extent there was failure, were those listed by the Sub-Committee. The organisational inadequacy is only too pitifully evident. Here again, there is need for qualification. Official failure is evident enough. But people more readily blame everything on Government (as they are only too dependent on Government for everything). Non-official lapses are none the less serious in this matter. It was the duty of the leaders of men at all levels to enthuse the people over the aims of the Plan and more particularly to see that such resources as were brought into existence were utilised promptly and fully. In the field of agriculture, it is notorious that irrigation facilities provided at great cost have not been utilised fully, because of quarrels over betterment levies. Had the political leadership not shirked its plain duty of explaining people's obligations under the Plan, this situation would not have arisen.

Of the broad strategy of the Third Plan, the Committee is accommodative of rival point of eclectism. This is sure to enrage the ideologically committed on both the left and the right. (The right in the country often pretends that it is ideologically uncommitted, but it is not so). The Committee considers all the familiar suggestions canvassed in the context of development of undeveloped economies. The Erhard way (increased production without any consideration of social and economic priorities) is one. The Communist way (forcing the pace of basic industrialisation with indefinitely deferred consumption) is another. The third view emphasises the creation of employment opportunities, even if it would imply technological stagnation. The Committee rightly rejects the more extreme implications of all these strategies and would try, within the limits of avaliable resources, to adopt a middle path. Though it is likely to present a theoretically untidy picture, there can be no doubt that, in practice, an empiricism of the sort envisaged is the best strategy to follow.

In practice, this would mean the overriding importance of agricultural production, a more immediate preoccupation with the creation of employment opportunities and the conversion of idle manpower into socially useful assets. It would also mean the continuation of basic industrialisation, but with the emphasis now more on the creation of machine making industries. And since a minimum of social services cannot await the emergence of a state of development that can theoretically be said to support it, we should provide it, though it would involve diversion of resources from strictly development plans.

It is possible to make theoretical mincemeat of the report on various grounds. But anyone who has given any thought to the practical tasks of economic development of undeveloped countries would readily agree that the ends and means suggested here represent the maximum that is possible and the minimum that is inescapable. "Good politics and good economics," says the report, "should take note of what is possible and practicable." There is every evidence that this consideration has been continually present in the mind of the Committee when it formulated its proposals. We may add that good politics and good economics should also take note of what is the minimum that we should attempt. Luckily, the minimum that should be attempted is not more than what is possible and practicable, though it is close enough to it. An undeveloped country's task thus lies in a narrow but heroic range. True, as the report points out, the problems ahead are neither simple nor easy of solution. What is more, paradoxically, the greater the progress, the more numerous the seeming difficulties. In brief, in the words of the Sub-Committee, all these problems, old and new, "add up to a formidable challenge." But no nation can fail to take on the challenge without loss of respect and, what is more important, self respect.

The State of the Food Economy

MR S. K. PATIL remarked rather humorously the other day that he would rather be a Minister of Agricultural Production than be a Minister of Food Distribution. He could well have made that remark more seriously and with good reason, for the very designation of his portfolio has all along suggested, by implication, that food distribution has primacy over agricultural production. But it is doubtful if even a lively recognition on Mr Patil's part of the need for dealing with food as a problem of production rather than of scarcity, imports and procurement would be equally well shared by the vested interests of his Ministry. For, the fact remains that in the last three or four years this administrative ministry has systematically been built up to a mammoth size as a machinery oriented more to directing or administering partial food controls in all their bewildering complexity than to directing or administering effective action programmes for increasing agricultural production.

What the new Food Minister has inherited is a cobweb of controls and restrictions which add up to a cumbersome half-way house between a wholly free economy and a fully controlled economy. These controls and restrictions which have taken the form of maximum controlled prices for procurement in different States and controlled issue prices at fair price or informal ration shops, movement restrictions through zoning, cordoning, etc, control of bank credit against foodgrains, ban on forward trading in wheat and coarse grains and pulses, licensing of wholesale dealers and requisitioning of stocks in suitable cases, have been ostensibly intended to check any rise in prices and to facilitate procurement. But, judging by recent reports, neither purpose appears to have been achieved to the desired extent. At the same time, it looks as though these partial controls (which do not involve monopoly procurement from producers at control prices and statutory rationing as in 1948-52 when full-fledged control was in force) have nevertheless had a measure of success in as much as the wholesale prices of cereals in the country as a whole have been higher in 1958-59 by only 7 per cent as compared to 1952-53. In this connection the following table has been specially constructed to show what broad correlations there are between production of cereals, prices of cereals, money supply, and prices of commercial crops.

Year	Index of production of cereals.	Index of wholesale prices of cereals.	Index of money supply with the public.	Index of wholesale prices of		
				Sugar & gur.	Oilseeds.	Fibres.
1952-53	100	100	100	100	100	100
1953-54	119	98	102	125	124	102
1954-55	114	80	109	115	92	108
1955-56	112	76	124	89	85	106
1956-57	116	96	131	98	120	116
1957-58	108	101	135	108	120	118
1958-59	125	107	142	127	127	108

It will be seen from this table that if the increase in cereal production in 1953-54, 1954-55 and 1955-56 as compared to 1952-53 was responsible (partly, of couse) for the decline in prices, the steep increase in money supply since 1955-56 was responsible (partly, again) for the rise in prices. At the same time, the comparatively higher prices for commercial crops in recent years also appear to have been partly responsible for the rise in cereal prices because when the money returns from commercial crops were obviously greater, the cash needs of agriculturists should have been met to a substantial extent, thereby obviating the need for premature selling of their cereal surpluses. The most relevant fact that emerges is that the increase in money supply and the increase in the prices of commercial crops have together been responsible for lifting cereal prices from out of their slump. From the point of view of the prosperity of the agriculturists, this has been a salutary development.

But, at the same time, it looks as though the increase in cereal prices might easily have been greater in the circumstances of currency inflation and of higher profitability of commercial crops, if this has nit taken place it should have been due to the increase in production in 1958-59 and to the partial effectiveness of partial controls, and this may be reckoned as a salutary development from the point of view of the non-producing consumers. If, however, production declines in 1959-60 as compared to 1958-59—the present indications are that it well may in view of the partial drought conditions todate in the current kharif season in the larger part of North India as in the kharif season of 1957-58—and, if at the same time, money supply and commercial crop prices increase further, the chances are that cereal prices will rise further irrespective of whether there is state trading or not.

In the circumstances, the only factor that can conceivably exercise some restraint on prices is a possible steep increase in production in the last two years (1959-60 and 1960-61) of the Plan when deficit financing is expected to continue. That any such increase in production is not likely to come about may be inferred from the fact that planning in the last seven years has not had any spectacular dynamic impact on the economy of food production. In this connection has been specially constructed the following table:

Year.	Index of Population.	Index of cropped area under cereals.	Index of crop under commercial crops.	Index of absolute production of cereals.	Index of per capita production of cereals.
1952-53	100.0	100.0	100.0	100.0	100.0
1953-54	101.3	106.2	112.0	118.5	116.7
1954-55	102.6	104.5	110.9	114.2	111.0
1955-56	103.9	106.2	113.8	111.6	107.3
1956-57	105.2	106.8	117.0	116.3	110.3
1957-58	106.6	104.9	116.6	107.7	101.0
1958-59	108.0	108.1	116.3	124.6	115.3

N.B.:—

(1) Population.....366.9 mill. (1952-53).

(2) Cropped area under cereals.....202.3 m.acres (1952-53).

(3) Cropped area under commercial crops ....52.3 m.acres (1952-53).

(4) Production of cereals.....49.2 m.tons (1952-53).

(5) Per capita production of cereals..... 300 lbs. (1952-53).

(6) Commercial crop do not include plantation crops.

(7) Cereals are rice, jowar, bajra, maize, ragi, small millets, wheat and barley.

It will be seen from the above figures that the increase in cropped area under cereals has only just kept pace with the growth of population. Even here, five-sixths of the increase in cropped area have represented only the normal extension of cultivation to marginal or sub-marginal lands under the pressure of increasing population and to some previously uncultivated lands in years of good rainfall; only a sixth of the increase has been due to reclamation of waste lands and to some increase in double cropping resulting from the increased irrigation facilities, and this alone is attributable to the two plans. On the other hand, the fact is striking that the percentage increase in the cropped area under commercial crops has been twice as much as that in the cropped area under cereals. Here, at least, almost the entire increase has been due to the Plans for the increased irrigation facilities, fertilisers, etc., have been utilised mostly for the production of commercial crops.

That there has been far less dynamism in the growth of cereal production can be proved from the the indices of absolute and per capita production of cereals. The fact that both absolute and per capita production of cereals have increased by about the same extents in 1953-54 and 1958-59—the two comparable years of ample and seasonal rains—as compared respectively to the two corresponding previous years of partial drought, namely, 1952-53 and 1957-58 proves that the so-called dynamic impact of planning on the economy of food production has been very much exaggerated. If the impact of such factors under planning as irrigation, improved seeds, fertilisers and improved cultural practices is properly measured with reference to production performance in two comparable years of subnormal rains, it will be found that the additional annual production potential created in the last six or seven years of planning is just a million tons or so, representing about 2 per cent of the cereal production of 1952-53, after allowing for the increase in production resulting from the larger part of the area increase not attributable to the Plans.

From the point of view of per capita production, it may be stated that virtually no improvement has taken place in so far as a year of partial drought like 1957-58 is concerned. So long as secure irrigation does not make any significant impact on the situation, food as a problem of production subject to the vagaries of monsoon will continue to remain with us. 'Man proposes, monsoon disposes' may well be coined as a new adage to be applied to a situation where, even at a liberal estimate, not more than 15 per cent of all cultivated lands will be covered by secure and dependable irrigation in all seasons by the end of the Third Plan. Where rains fail at some critical stages in the growth of crops or where they come down at those stages when they are not wanted, the other factors making for higher productivity are bound to be rendered inoperative to some degree or other.

Boom for Ever—Thanks to USA?

DURING the depression in the 'thirties, the national income of the United States went down from $87.8 billion (1929) to $40.2 billion (1933). While personal saving was $4.2 billion in 1929, there was personal dissaving to the tune of $600 million in 1933. The situation was equally bad if not worse in practically all countries. But with the New Deal programme of President Roosevelt, including the re-organisation of the Federal Reserve System, the Agricultural Adjustment Acts and the Social Security Acts, with a Council of Economic Advisers, the United States managed to have only three slight recessions after World War II. From $241.9 billion national income in 1950, the United States reached $360.5 billion in 1958, and although the rate of increase was not uniform, there was no set back except in 1958 when the national income went down from $364.0 billion in 1957 to $360.5 billion (on account of the latest recession, from which that country has recovered in 1959). Even in India, the national income recorded a slight decrease as between 1956-57 and 1957-58, from Rs 11,000 crores to Rs 10,830 crores. Scientific planning precludes the possibility of trade cycles, and Americans are confident that they will be able to maintain succeeding booms steadily. How they have been able to do this is obvious from some data given in the following paragraphs with regard to foreign aid, gold reserves and stockpiling of agricultural poducts.

FOREIGN AID

The United States Foreign Aid Programme is huge and covers numerous countries. The following figures show the Federal Government expenditure on Military Assistance and International affairs:

Year	Expenditure (in million dollars)	
	Military Assistance	International Affairs
1955	2,292	2,181
1956	2,611	1,846
1957	2,352	1,976
1958	2,167	2,234

Military Assistance covers 12 countries with which the United States has Military Pacts (including Pakistan). Special assistance has been given to Morocco, Tunisia, Lybia, Jordan and Bolivia. 1959-60, President Eisenhower put up a demand for $3,900 million, but the Foreign Affairs Committee has reduced it to $3,030 million, of which $1,465 million is for economic aid. The latest tendency is to prefer loans to grants and economic to military aid. The 1959 cut is under military aid, the economic aid having been left unaxed. The underlying objective is to protect weak countries against domination by neighbours, and set the stage for economic emancipation and development.

KING DOLLAR

With regard to gold reserves, United States policy has been equally enlightened and liberal. On account of persisting favourable balances of payments, its gold reserves rose from $4.226 billion in 1932, to $22.042 billion in 1940, and the peak was reached at $24.600 billion in 1949. After that, some amount of gold flowed out due to the prosperity of countries like West Germany, and its gold reserves stood at $20.479 billion at the end of February 1959. Recently, the Chairman of the Board of Governors of the Federal Reserve System gave out that $2.5 billion worth of the precious metals (gold and silver) flowed out of the country during the last 15 months. Excluding Communist countries, for which no data are available, (it is believed that Moscow has gold worth about $10 billion), world monetary gold totals $39.9 billion. That is, the United States holds more than 50 per cent of world monetary gold. The US dollar is a hard currency, and is given the same status as gold in all parts of the world. Figures are given below to show the relative importance of gold and the US dollar in some countries' reserves:

	Country	Gold holdings (in million dollars)	Short-term dollar holdings (in million dollars)	Total gold and dollar holdings (in million dollars)
1.	Federal Republics of Germany ...	2,678	1,716	4,398
2.	Canada ...	1,082	2,007	3,089
3.	United Kingdom ...	3,156	569	3,725
4.	Switzerland ...	1,993	785	2,778
5.	France ..	589	545	1,134
6.	Japan ...	n.a.*	n.a.*	1,098
7.	India ...	247	77	324
8.	Union of South Africa ...	211	30	241

*not available

Although opinion is gaining strength that gold outflow should be terminated, the United States Government are supplying other Governments and Central Banks, gold at 35 dollars per fine ounce (1 dollar equals 0.888761 gram of gold). Thus, the value of gold in the world market is directly controlled by the United States, but at great risk; new sources of gold might be discovered and exploited, or a system of close exchange control might be adopted all round (as in the case of Germany during World War II) in which contingency gold might drop down from monetary to commodity value.

PUBLIC LAW 480

In 1954, Public Law 480 was passed which enabled the US Government to stockpile and sell surplus agricultural products. Under this Law, $3,500 million worth of about two scores of agricultural commodities have been sold so far to 38 countries, India leading with $544 million worth, Pakistan's share being $240 million worth. Under this Law, sale proceeds are payable in local currency, and there is provision for re-investing such funds in the economic development of the country concerned. Recently, Rs 20 crores was lent out of this Fund to the Industrial Credit and Investment Corporation of India and the Industrial Finance Corporation. Under the second clause, $393 million worth of agricultural products were given as free grants to other countries. Under the third clause, $749 million worth was given away to International Organisations doing relief and rehabilitation work, and $998 million worth was utilised for payments under barter agreements. In spite of all this, the American stockpile included at the beginning of 1958:

Commodity	Quantity
Wheat	749 million bushels
Corn	1,116 „ „
Cotton	1,298,000 bales
Butter	41.8 million pounds
Dried Milk	119.6 „ „

The wheat crop in 1958 was 1,180 million bushels, average yield per acre working out to 26.8 bushels. The 1959 estimate is 1,182 million bushels with an average yield of 23.2 bushels per acre. In terms of loaves of bread, 64,720,000,000 are held by the Government which they do not want and cannot sell, and 31,755,000,000 held by the Commodity Credit Corporation against which Government money is tied up. Very recently, India negotiated a purchase of 3 million tons of wheat and some cotton worth $250 million. There was a time when excess wheat was thrown into the sea and excess coffee (in Brazil) was burnt. But now, under the PL 480 arrangement, the United States Government have succeeded in feeding numerous countries with deficit foodgrains, the export price being about 60 per cent lower than in the domestic market. Under the Price Support Programme (total cost working out to $7 billion), the American farmer gets a subsidy of $1.78 per bushel of wheat produced. Mechanisation has advanced so far that even with 5.2 million labourers engaged in agriculture (against 58.6 million engaged in industry), and in spite of limitation of wheat acreage to 55 million under the Agricultural Adjustment Act, the US is having record crops in 1958 and 1959.

TWO BIRDS WITH ONE STONE

Thus, in the matter of foreign aid, gold reserves and disposal of agricultural products, the United States has achieved success wonderfully well, having at the same time succeeded equally well in aborting recessions and depressions at home and augmenting production. In addition to wheat, for which figures have been given earlier in this article, annual output of a few vital products is given below:

Product	Annual Production
Steel	125 million metric tons
Oil	335.5 „ „ „
Electricity ...	724,000 million Kwt hours
Automobiles ...	6 million
Meat	10 million metric tons

All this extraordinary splendid achievement has not brought about any slump: the main aim in American foreign policy is "to defend human frontiers" and help in the development of under-developed countries so that human beings anywhere and everywhere in the world may be enabled to maintain decent standards of life. The same objective is pursued by American participation in the World Bank, the International Co-operation Administration, the Special United Nations Fund for Economic Development, the International Monetary Fund, the International Finance Corporation and the International Development Association. The Development Loan Fund was started as a Government agency about two years ago, and a $700 million loan programme is being put through in numerous countries. Such economic development in Asia, Africa and Latin America should provide wider markets for American products: it has already fulfilled its mission in West Europe, thanks to the Marshall Plan followed by other schemes. A Plan American Development Bank and Loan Fund is proposed with $1 billion to start with. It has been estimated that, in order to raise under-developed economies to modern standards, it might require $10 billion per annum for several decades and "modern standards" are themselves rising at an accelerating pace. Call it global patriotism or global operations, the richest country in the world has during the last 14 years, succeeded in aborting slumps and achieving booms by measures that bless both the donor and the beneficiaries.

Lunik II

Lunik II has, of course, blazed a new trail, but it still remains to be seen whether such attempts and activities will ever amount to anything more than lunacy. Scientifically, the Russian achievement is much more than great. It is almost incredible and is certainly fantastic. Especially from the point of view of timing, the performance of Lunik II will be found greatly satisfactory by Mr Khrushchev, since it reached the Moon almost on the eve of his own landing in America. But, in some quarters, this fact that the successful moon shot was allowed in point of time to take place just before Mr Khrushchev's visit to America has been interpreted as an obvious blatant, futile piece of propaganda. In all such criticism, there is no doubt an element of sour grapes. It would have been wise if the world generally had recognised the moon-shot for what it is, a scientific achievement of momentous significance. Instead, it is distressing to note that official reaction in quite some cases has been coloured and distorted by cold war politics. Mr Khrushchev is hardly the man to be disappointed by or take umbrage at the noticeably reticent expression of appreciation. Indeed, he will likely revel in the situation since, undoubtedly, he will interpret this restrained admiration as signifying no little envy, and considerable jealousy, at the Russian achievement.

EDITORIAL NOTES

Import Policy

In his inaugural address to the newly constituted Import Advisory Council, Mr Lal Bahadur Shastri, Union Minister for Commerce and Industry, gave a hopeful indication of Government's ability to meet the foreign exchange needs of the Plan, in spite of the widening import gap. The latter, however, is a warning that the Government are not yet in a position to adopt a liberal policy in the matter of issue of import licences. The gap between imports and exports in the first half of the current year was Rs 180 crores as compared with Rs 128 crores in the corresponding period last year. The import surplus has increased because of larger imports, especially of foddgrains, chemicals and transport equipment and not due to any decline in exports which are at a slightly higher level than last year. At the same time, import of consumer goods has been pared to the bone and these account for only nine per cent of the total import bill. Industrial goods account for the largest share, 60 per cent, while capital goods and food grains account for 16 and 15 per cent respectively.

The Minister acknowledged that serious problems have been created as a result of the imports cuts which had become unavoidable. The position in respect of capital goods was easier as compared with industrial materials. External assistance received from friendly countries like the USA, UK, Soviet Russia and West Germany, and bilateral agreements with East European countries to finance imports through blocked rupees; have improved the position in regard to import of capital goods, subject to certain limitations. Except supplies of raw cotton under PL 480, most of the foreign assistance is for new development and is not available for meeting current requirements of industrial raw materials which have increased with the growth of new industries.

Mr Shastri has also referred, in the course of his speech, to the measures adopted or under consideration to simplify and speed up the processing of applications for import licences and for extending the benefits of long-term licensing to small industries. While the reliefs promised for industry will be widely welcomed, it is a matter for regret that the Minister for Commerce and Industry had no thought to spare for the Import Trade. As a result of import restrictions, many of the importing firms have been forced to curtail their activities, while a number of firms have closed down, aggravating the problem of middle class unemployment. As the sorry plight of the importing firms and their workers is the direct consequence of policies adopted by the Government in the larger national interest, there is an obligation on the Government to assist in their rehabilitation in other walks of trade. At the last meeting of the Calcutta Import Trade Association, the Chairman suggested that, in view of the increasing share of Government in the total imports of the country, the services of established importers should be utilised for import of goods on Government account and distributing goods imported by the State Trading Corporation. In addition to ensuring continued employment to a large section of the people, the association of businessmen experienced in the line will ensure efficient and economical handling of Government's import trade transactions.

Oil Exploration

An indication of the allocation for oil prospecting in the Third Five Year Plan was given by Professor M. S. Thacker, Secretary of Union Ministry of Scientific Research and Cultural Affairs, in the course of an address to the Mining, Geological and Metallurgical Institute of India last week. Prof Thacker pointed out that present indigenous oil production was hardly seven per cent of the demand. Even including additional production expected from Assam oil fields by 1965, the demand will be over three times the local production. The present demand for petroleum products is of the order of six million tons and is expected to rise to 10 million tons by 1965. Even at that level, as pointed out by Mr O. R. Underhill, Manager of SVOC, in a talk to Calcutta Rotarians last June, oil and natural gas will meet only 15 per cent of the country's industrial energy demand. These facts underline the importance of locating and developing new reserves of oil in the interests of economic progress and national security.

The Second Plan has provided Rs 30 crores for oil exploration. Prof Thacker revealed that, according to current estimates, a sum of Rs 85 crores will be required for the purpose in the Third Plan. Considering the cost of oil exploration and the needs of the country, this estimate is by no means excessive. In his address to the 33rd Annual General meeting of the Geological, Mining and Metallurgical Society of India, Mr W. B. Metre estimated that the investment needed to meet annual requirements of petroleum of 50 million tons by 1976 would be about Rs 3000 crores and out of this amount Rs 1500 crores would be needed for oil exploration. That means an investment of Rs 1500 crores in oil exploration over three plan periods, or an average of Rs 500 crores over a five year period.

With the proposed allocation of Rs 85 crores it will not be possible to carry out intensive exploration in all the regions of the country where there is promise of finding oil. This raises the question whether private organisations will be enabled to enter the field of oil exploration. Mr Underhill, in his talk mentioned above, had said that there were many internationally known private organisations that would be ready to prospect for oil in India, if the terms were made sufficiently attractive. At present, apart from Government, Stanvac is the only organisation engaged in the search for oil. Government's policy in respect of issue of prospecting licences to private organisations has been stated in broad terms by the Minister for Mines & Oil. He said that Government's policy is guided by the overriding consideration of national interest and, subject to this, foreign private organisations can participate in the search for oil. The policy has now to be defined in precise terms, and it is to be hoped that the slow progress of discussions between the Government and Oil companies over the questions of oil prices, which seem to have stalled, will not block efforts to reach a satisfactory arrangement regarding oil prospecting.

✱

British Elections

The announcement of the date of the British General Election has come at a time when circumstances offer little assistance to political prophets in forecasting the outcome. Even the pollsters are content with indicating current trends without venturing to extend them into the near future. Mr Truman's return to the White House for a second term in 1948 has made the pollsters wary. Though the actual date remained uncertain, it was evident that both parties were prepared for an autumn election. That explains the very short interval between the announcement and the polling date. Explaining the reasons for choice of the date, Mr Harold Macmillan said: "Important international negotiations lie ahead. It is, clearly, right that the people should have the opportunity of deciding as soon as practicable who are to represent them in these negotiations." This may be regarded a sign of confidence in the chances of his party. And the confidence will not be misplaced. Mr Gaitskell has stated categorically that Britain will stand firm by the NATO and that American bases in Britain would remain. He reminded a questioner that it was a Labour Government which first negotiated the arrangements about the bases. While there is no division over questions of foreign policy, in domestic affairs the Tories, in spite of eight years in office, have been lucky not to leave any firm handle for Socialist attack.

The prosperity that Britain has been experiencing is not favourable for advocating sweeping reforms. And the policies of both parties have tended to approximate to each other, except for a few vestigial issues like nationalisation of steel. Incursion of the Liberal party, which proposes to contest 200 seats, is regarded as likely to help Labour more than the Tories. More importance is rightly attached to the preferences of about one million voters who will be voting for the first time. The result may well turn on who has the more impressive TV personality—Macmillan or Gaitskell.

Better Prospects for Banking?

THE reduction, as from September, in banking money rates is most welcome. It was, of course, inevitable, and the result of the none too happy performance in the first half of 1958. For, although the first quarter in the year did produce a considerable expansion in Advances, the coming of May witnessed a return to slack conditions. Meantime, Deposits were continuing to accrete to the banking system, and mainly in the form of the more costly Time Liabilities. In order to mitigate the squeeze between costlier Deposits and a lower level of earnings from Advances, Scheduled Banks have, particularly from July this year, been considerably adding to their giltedged portfolios. Nevertheless it appears likely that the 1959 results of banks will not compare favourably with those for the previous year.

However, should there arise a concentrated demand for funds from the very start of the 1959-60 busy season, hope would still remain for banks to show relatively satisfactory results for 1959. This would be because, this year, banks have consistently and week by week been investing their spare resources in giltedged, so that the proportion of their "idle" assets to the total has been kept small.

The question that has now to be considered is whether there is at all any need for an inter-bank agreement on Deposit rates. Surely, the ruinous experience of the last year and a half, when the higher cost of Deposits, added to the rising operating costs, cut deeply into bank profits, would be sufficient reason for banks to desist from Deposits war. Indeed, it may be that the rates allowable on Deposits as from September are themselves on the high side.

The argument, presumably, will be that, if banks are not prepared to pay a certain minimum on their Deposits, resources would instead to be diverted to small savings, etc, where available interest would be higher. This is specious reasoning; bank accounts are maintained, not because they are sources of income, but because of convenience.

In any case, we have to be thankful that some order has been restored to the structure of interest rates, as against the chaos that formerly prevailed. One of the important influences on money rates has been the open market policy of the Reserve Bank. The Government and the central banking authority have found it possible to sell increasingly larger parcels of giltedged at higher prices and lower interest coupons. If, as is to be hoped, the second tranche of Central Government borrowings, to be announced perhaps by the end of the month, shows the determination of the monetary authorities to borrow from strength, it is possible that, as a consequence, money rates will ease further. However, in view of the approaching Pujas, a short period of monetary stringency, particularly in Calcutta, is to be anticipated.

+

4th Week of Rise in foreign balances

SPILLOVER of month-early disbursements is reflected in the returns of the Reserve Bank for September 11, wherein it is to be noticed that, for the second week in succession, there has been expansion in note circulation. Active Notes have been marked up by Rs 5.37 crores at Rs 1670.29 crores though, on the other hand, there has been a small inflow of Rupee Coin to the tune of Rs 0.04 crores. With both Rupee Securities and Foreign Securities in the Issue Department unchanged, the Reserve Bank's cash in the till has been drawn down by Rs 5.33 crores to Rs 17.03 crores.

The noteworthy feature of the Banking Department figures is yet another rise, for the fourth successive week, in Balances Held Abroad, which have been marked up by Rs 2.02 crores at Rs 23.25 crores. The current week's level of foreign securities held by the Reserve Bank in both Departments, at Rs 186.26 crores, it is interesting to note, is just a shade higher than the Rs 184.36 crores obtaining in the corresponding week of last year. While, undoubtedly, the steady receipt of foreign assistance has contributed to the steadiness in level of foreign balances, it may not be out of place to suggest that the recent stability, where indeed some element of rise has been registered, is at least in part due to a better export performance.

It is, presumably, spillover of beginning of the month expenditures which is responsible for the drop of Rs 8.54 crores to Rs 56.82 crores in the Centre's Deposits; and we may add here that there does not seem to have been any modicum of deficit financing. Likewise, we are to interpret the drop of Rs 3.34 crores to Rs 20.47 crores in the balances of State Governments, who have besides been compelled to increase their ways and means borrowings from the Reserve Bank to Rs 19.02 crores, or higher by Rs 2.44 crores over the previous week.

The fall of Rs 3.79 crores to Rs 279.32 crores in Investments is seemingly related to the purchase of securities in the relevant week by the State Bank to the tune of Rs 4 crores. However, we believe that it is the other Scheduled Banks who have purchased through the Reserve Bank tap in this amount, the rise in the State Bank's portfolio representing the consolidation of purchases effected in the earlier week.

It may be recalled that the Reserve Bank had last week figured as a seller through the tap for Rs 17 crores. It is now known that the Scheduled Banks, in the relevant week, took up Rs 12 crores; and, of this, only Rs 6 crores were directly traceable to the State Bank. But, then, a rise besides in the Other Assets of the State Bank had suggested further investment by the State Bank. We now suggest that the balance of sale of Rs 5 crores of investments, consolidated already in the returns of the Reserve Bank last week, has now been recorded in the statutory statement of the State Bank for September 11. And so, the current week's decline of Rs 3.79 crores in the Investments of the Reserve Bank would relate to tap purchases by the other Scheduled Banks.

There has been a rise of Rs 10.58 crores to Rs 80.77 crores in the Reserve Balances of member banks, and the State Bank's predominant share is suggested by the rise of Rs 7.36 crores in that institution's cash in hand and with Reserve Bank. This would indicate that the banks quickly got over what strain they experienced in meeting the month-early demand for funds. The small rise of Rs 1.19 crores to Rs 74.16 crores in the Other Loans and Advances of the Reserve Bank may, in this view, be due to increased accommodation availed of by cooperative banks, etc, rather than to larger borrowings on the part of the Scheduled Banks.

Finally, as already noted, Balances Held Abroad have risen for the fourth successive week, in going up by Rs 2.02 crores to Rs 23.25 crores.

Slack season influences have helped the State Bank to record both a rise in Deposits and a decline in Advances in the week ended September 11. Deposits have been marked up by Rs 4.68 crores to Rs 567.09 crores, and, meantime, there has been contraction in Advances by Rs 3.71 crores to Rs 162.29 crores. The consolidation of giltedged purchases from the Reserve Bank, relating presumably to the previous week, is reflected in the drop of Rs 3.33 crores in Other Assets and in a rise of Rs 4.18 crores to Rs 365.47 crores in giltedged investments. In the end result, cash in hand and with Reserve Bank is marked higher by Rs 7.36 crores at Rs 28.69 crores.

The impact of month-early disbursements is to be discerned in the return of the Scheduled Banks for September 4. As suggested last week, constituents have apparently preferred to draw on their balances rather than to increase their borrowings. Deposits are shown to be lower by Rs 4.05 crores at Rs 1834.36 crores. At this stage, we may also note that there has been an apparent switch-over from Demand to Time Liabilities. Perhaps, the decision of the Scheduled Banks to scale down the maxima of interest that may be paid on Deposits influenced constituents to avail of higher rates available up to September 1. Hene the fall of over Rs 10 crores in net Demand Liabilities and the rise of a little under Rs 9 crores in net Time Liabilities. The total of Advances has shrunk by a smaller margin, in falling by Rs 3.01 crores to Rs 935.07 crores. It is very possible that the target of Rs 100 crores contraction in the 1959 slack season, which Mr H. V. R. Iengar, Governor of the Reserve Bank, had called for, will be achieved in the return of Scheduled Banks for September 11. Cash balances have been sharply drawn down by Rs 10.67 crores, but, as the State Bank figured in the relevant week as having reduced its cash in hand and with Reserve Bank by over Rs 14 crores, it is clear that the other Scheduled Banks added to their balances. Of course, the cash so drawn down was mainly utilised for increasing the investment portfolio, which has shown further rise of over Rs 12 crores to Rs 747.51 crores. Since the new loan week of the Central Government, the addition to giltedged holdings of Scheduled Banks has exceeded Rs 115 crores. It is this fact which suggests that, though the Scheduled Banks will succeed in reducing the total of Advances by over Rs 100 crores during the 1959 slack season, it is still possible that the 1959-60 busy season will impose some strain upon the banking system, since resources freed from Advances have already been utilised in investment, and will not, consequently, be available for purposes of meeting the next busy season expansion in Advances.

+

Election and Stock Exchange

By Paul Einzig

AS soon as the general election date was announced, there was a sharp if short-lived rise on the London Stock Exchange. Many people, including the majority of Socialists, assume that the Government will win, and this assumption results in a demand by investors and speculators alike for equities and, to a less extent, for Government loans. The election boom was checked, for the moment, by the reaction to the minor setback in Wall Street and the increase in the Federal Reserve rediscount rates. It is generally

expected however that if public opinion surveys should indicate a safe majority in favour of the Government, the Stock Exchange would witness a fairly substantial boom in equities between now and October 8..

The possibility of such a boom is causing dismay among leading Government supporters who realise that the effects of such a boom on the "floating vote" might be very damaging for the Government prospects. Many of the less prosperous sections of the middle classes might resent it if capital profits are made out of a boom due to the anticipation that the Conservative Government would be re-elected with their support. They might abstain from voting as a result of their resentment. What is even more important, resentment over such capital profits would tend to induce Socialists to muster up their full strength on polling day. There would be less abstentions by the Government's opponents.

Envy and spite constitute a factor of major importance in British political and economic life in our days. The sight of many people, who have either the capital to invest or the boldness to speculate, making suasbtantial profits on an election boom would greatly increase the Socialist vote and would, greatly diminish the Tory vote.

The Left-wing Press makes the best of the existence of this influence on the electorate. It is the usual practice that, when there is a rise on the Stock Exchange, front page headlines appear about so and so many millions of pounds having been added to the total value of securities. Such figures are impressive but grossly and deliberately misleading. The financial editors who write such news stories well know that the bulk of the stocks never or hardly ever changes hands. The rise in their Stock Exchange value only means a bookkeeping appreciation. By the time holders sell out, the supposed capital gain may have disappeared or may even have become a capital depreciation. Moreover, there are seldom if ever striking headlines when there is a setback on the Stock Exchange, to indicate the capital loss that is supposed to be suffered by investors.

The one-sided presentation of the figures showing huge capital profits is an effective election propaganda against the conservatives. Thus, paradoxical as it may seem, the more confident the Stock Exchange is about Tory victory, the more it tends to reduce by the display of its confidence, the chances of such a victory.

This paradox has resulted in a dilemma for Mr Mamillan and his supporters. Should they show optimism about election prospects, they would encourage a Stock Exchange boom which is likely to be highly damaging for them. Yet, unless they show that they believe in their victory, they are liable to discourage many people from supporting them on polling day. Electors who hold no firm political convictions are liable to be influenced by the prospects of the two sides. Many people would like to be on the winning side. The absence of evidence that the Prime Minister and other leading Conservatives are certain of their victory might induce many voters to vote Labour.

From this point of view, the setback in Wall Street and dear money in the United States might well prove to be a blessing in disguise for the Conservative Party. To the extent to which it checks a boom on the London Stock Exchange, it obviates the necessity for Conservative leaders to try to check it by the dubious device of deliberately playing down their chances. Needless to say, if the adverse tendency in the United States should go so far as to have obviously adverse economic repercussions on Britain—such as a heavy outflow of funds resulting from higher money rates in New York—that would affect unfavourably the Government's prospects. Conservatives may hope for a setback in the United States during the next few weeks. But they must pray that there should be no major developments on the other side of the Atlantic that would affect the situation in Britain.

Rising stock exchange prices are by no means the only weapons with which Socialists are attacking the Government. The British electorate will hear a great deal during the next few weeks about take-over bids, directors' expense accounts, tax evasion, etc. The term "Take-over bid" has become a term of abuse in the British political controversy. By their attitude,Socialists are commiting themselves heavily to introducing legislation to prevent them. Now, anyone familiar with the subject must know that, owing to the impossibility of finding a definition for take-over bids, any such legislation would have to prevent a wide range of useful and productive tansactions as well as the kinds of transactions which the Socialists denounce. They could only be prevented at the cost of paralysing business in general by the imposition of crippling restrictions on any change, however sound and beneficial.

Any fears that the confirmation of the Conservative Government in office would be followed by the adoption of deflationary measures which the Government does not dare to adopt on the eve of the election are ruled out by the contents of the Conservative Manifesto. It contains many expensive promises, the sum total of which is inflation. The additional expenditure undertaken is of course much smaller than that of the Socialist promises. But the difference is only one of degree. Both Parties are committing themselves to inflation.

US Notes

The school bells are beginning to ring again, heralding the start of another school year, and they are making beautiful music for retail stores throughout the United States. For the back-to-school season invariably means an increased demand for goods of all kinds, from shoes to pencils, dresses to lunch boxes. And this year the nation's youngsters, from nursery school tots to sophisticated collegians, bid fair to do their part in making 1959 a banner year for retail sales.

This certainly seems to be the case so far, even though back-to school buying has barely begun in a number of areas. In many states, the new school year does not start until after Labour Day, which is observed on the first Monday of September. And through the vagary of the calendar, this American holiday comes on the seventh of the month this year, later than usual.

In addition, this has been an inordinately hot summer in most of the country—a phenomenon of the weather which historically has tended to keep customers away from crowded stores. Yet despite these two adverse factors—the later Labour Day and the hot weather—the retail trade is full of optimism about a heavy buying season ahead.

The optimism, it should be noted, is not confined merely to the autumns, or to the back-to-school influence. Sales have held up remarkably well throughout the summer, all things considered, and most retailers believe that the upsurge now getting under way pressages continuing sales gains for the rest of the year. Few experts are talking in terms of a nationl shopping spree, but most seem confident that 1959 will exceed the 1958 high by at least two and perhaps five per cent.

At the same time, it is significant that stores catering to "back-to-school" shoppers are consistently outdoing the over-all retail sales indexes. In some cities, these stores are reporting gains of as much as 50 per cent over last year, although smaller gains, generally in the range of 10 to 15 per cent, are more common.

One important reason for all this, of course, is the nation's extraordinary postwar population growth —more particularly, the rising number of school-age children. The US office of education estimates that some 46.5 million youngsters, from elementary through college levels, will be going to school this September, marking the fifteenth consecutive year of record enrollment. And the US Department of commerce forecasts a continuing steady growth in the nation's school-age population, with the number of youngsters from five through 21 years of age expected to approach the 75 million mark within 15 years.

These statistics, however, tell only part of the story, retailers also are impressed by the apparent optimism of shoppers, as seen in their buying patterns. They seem to want better merchandise, and are willing to pay for it.

Again, this does not necessarily imply any reckless spending boom; customers appear to be selective rather than profilgate. They are demanding quality even in so-called "bargain" merchandise. Nevertheless, it does point to a rise in the sales dollar along with an increase in sales volume.

Individual buying habits differ, of course. This is especially the case when it comes to shopping for new school clothes. A small but growing number of customers comes prepared to buy a whole wardrobe at one swoop. Others still prefer to shop for one item at a time. Needless to say, there are all sorts of variations in between.

One tendency, however, appears to be rather common. It seems that mother and father seldom spare the expense when it comes to buying things their children need.

Reflected in this rosy retail pictures are the large inventories being carried in the stores; in most cases, these are noticeably heavier than they were a year ago. This is an obvious outgrowth of both the size and the variety of the current demand, although a number of retailers admit quite frankly that they are not always sure of just how much merchandise, and of what kinds, to stock.

Except in rare instance, however, the inventory levels are few and far between as the nation's stores take a close look at what seems to be shaping up as their best year yet.

*

Britain

Potential operational use in India of one of Britain's new airliners, the Avro 748, was emphasized at a press preview of the prototype now in production at the factory at Chadderton, near Manchester, of A. V. Rose & Co. Ltd.

The chief designer, Mr J. R. Ewans, after pointing out that the Indian Government was to manufacture the Avro 748 under licence for the Indian Air Force, said that his company had studied in great detail the potentialities of the new aircraft as far as India was concerned. The majority of commercial planes in service in India were Dakotas, the type which the Avro 748 was being built to replace.

Commenting on the agreement signed with the Indian Government, the firm's joint managing director, Mr J.A.R. Kay, said: "It is always part of such a deal that there is a programme. It may be that we supply a number of planes first and components later, or it may be that only components go. There is a mission from India here now, and details are being worked out".

The Avro 748 costs about £170,000 and is cheap to run, with an operating cost per passenger-mile of 1½d (2 nP).

Production of 30 Avro 748s is in hand, including the prototype which is due to fly next February. The first production aircraft is expected to be flying in November 1960. When, as the company plans, the prototype flies within 13 months of the first piece of metal being cut, the company will have achieved a British record for a plane of this type.

Powered by two Rolls-Royce Dart 6 turbo-prop engines, the Avro 748 can carry 44 passengers seated four abreast, plus freight up to a maximum payload of 9,750 lb. It is able to operate from DC-3 type airfields within the latest Civil Airworthiness requirement, and provides pressurized comfort at 20,000 ft at a speed of 265 m.p.h.

Particular attention has been paid to obtaining maximum interior space for minimum weight, and the whole of the cabin between the bulkhead just aft of the pilot and the rear pressure bulkhead is entirely available to the airliner operator. No equipment or systems are located in this area.

Mindful that the 748 will be used in remote parts where airfields are simply grass or stony strips, the makers have fitted large-diameter twin wheels with low-pressure tyres as well as a short robust undercarriage. The propeller blades have a ground clearance greater than usual—two feet. Most of the equipment of the 748 is already in use, particularly in the Vickers Viscount.

It is understood that A V Roe & Co is negotiating with operators in the United States, South America, Europe, Australia, New Zealand, and South Africa for the sale of the 748. The British Minister of Supply has already ordered three of these aircraft, which will be made available to a United Kingdom operator for proving and introduction into regular service. Skyways Ltd has given a letter of intent to buy an undisclosed number for operating on its non-scheduled and charter services.

* * *

The Financial Times, writing on Britain's expanding industry, says: "The July figure for the index of industrial production is remarkably good. It takes the index to a level of 111 to 112, which is nearly as high as it had been expected to reach by the end of the year. The July figure compares with a level of 106 in July of last year, and with 107 last January. If this rate of expansion is continued, industrial production will rise this year by substantially more than the five per cent which had until now been generally expected.

"It is, of course, true that July was a holiday month and may, therefore, prove somewhat misleading as an indicator for the rest of the year: on the other hand, it seemed more reasonable to expect that the holidays would represent a pause in expansion, and that the last quarter of the year would see the next major move forward.

"It still seems likely that production will be rising fast in the coming months, though August and September would do well to maintain the high July level. By the last quarter the expansion should be spreading back with increasing strength to the capital goods industries. The July figures strongly suggest that the capital goods recovery must already have progressed further than had been generally realized. The present level of production could not have been reached simply because of a boom in consumer durables powerful though that is".

Later, after a reference to the revival of industrial investment and a review of bank rates, the Financial Times says:

"The outlook for expansion in the coming months is encouraging. It will not affect all industries equally: shipping and shipbuilding, the coal industry, and some sections of the heavy electrical industry show little prospect of an early recovery. It depends largely on the underlying strength of consumer demand, which shows little sign of being checked or of checking itself. It is likely to lead to a considerable increase in new industrial investment, though investment in plant is still lagging behind. It is, in fact, a stage of economic expansion which still has a powerful force behind it".

The Daily Telegraph, refers to the estimates just published as "amply reassuring", reporting the advance of the index of industrial production and stating that it is now seen that industry has achieved a fairly steady two to three per cent increase a quarter on the rate of production a year ago.

The paper adds: "Looking ahead, it is also clear that, at the present rate of progress, production will, by the end of the year, have risen by four to five per cent above that of 1958".

* * *

The Armstrong Whitworth Sea Hawk turbo-jet fighter aircraft which has just been ordered for the Indian Navy provides the "backbone" of Britain's naval air strength.

Capable of speeds well over 600 mph, with operational altitudes of much more than 40,000ft, it is one of the most efficient aircraft in service with Britain's Fleet Air Arm.

Since the Sea Hawk was first introduced into Royal Naval service in 1953, more than 500 have been

built. They went into service with the Royal Netherlands Navy in 1957 and with the Federal German Navy last year.

Deliveries to India will commence in January or February 1960, and the order for two squadrons will be completed within the first half of the year.

It is a dual-purpose aircraft for land or aircraft-carrier operation, either as a conventional fighter or a ground attack plane. Its standard armament is four 20mm cannons with provision for rocket projectiles or bombs.

British crude-steel production in August averaged 337,100 tons a week, compared with 299,200 tons a week in August of last year, an increase of 13 per cent.

The Iron & Steel Board's monthly statement, published in London today (September 10), states that both months were affected to a similar extent by the normal holidays and that the rise in output reflects the strengthening of the demand for a wide range of products. Production was still 10 per cent below that achieved in August 1957.

Pig-iron production was at a rate of 219,600 tons a week, compared with 221,000 tons in August 1958.

An order for 500 of the latest Hillman Minx de luxe cars, valued at £250,000, has been received from Czechoslovakia by Rootes, the British motor-car manufacturers. The order has been placed by Motokov, the Czechoslovak State organization responsible for the import of motor vehicles.

Spares worth £20,000 have also been ordered, and a Rootes Group mobile school will be sent to Czechoslovakia to help train mechanics.

Russia

SOVIET TEXTILE INDUSTRY IN THE NEXT 7 YEARS

Russia was an industrially backward country before the Revolution. The textile industry was the only industry more or less developed. It produced some 2,500 million metres of textiles a year, or 18.6 metres per capita.

In the years of Soviet power the textile industry has grown and developed along with the large-scale development of heavy industry. Its output today exceeds 7,000 million metres of textiles a year, which, together with knitted fabrics, comes to 40 metres per capita.

GENERAL PATTERN OF DEVELOPMENT

The target figures for the development of the Soviet national economy in 1959-65 envisage an increasing output of textiles up to 10,600 million, exclusive of knitted fabrics. The biggest increase will be in the manufacture of silks, and then in the woollens. Already the Soviet Union ranks first in the world in regard to the manufacture of woollens and by the end of the seven-year period the USSR will surpass the present US level of the manufacture of these fabrics by 80 per cent. The annual output will reach 500,000 million metres. As for cotton cloth, the Soviet Union produces more of it than any European country. In the seven-year period, its output will increase by more than 2,000 million metres.

The ratio of different kinds of textile products will change. The share of artificial fibre will register a steep curve upward. The output of cottons with the admixture of artificial yarn will go up six-fold. Nearly all silk and wool manufacturing industries will be using viscose, kapron and other materials of this kind. The manufacture of unweaved textiles, based on the ability of chemical fibre to glue to natural fibre, will be set up.

New kinds of textiles: cheap, durable, washable, unfading, unshrinkable and water-proof, when necessary, will appear in the market.

Thirty textile mills are to be built in the seven-year period. The majority of them will specialise in the manufacture of stapel textiles for suits, a new kind of synthetic fabrics. They are just as good as woollens but cost only one-third or one-fourth.

New textile enterprises will be built where raw materials for them are available. As a result, important changes in the geographical location of Soviet textile industry will take place. Some twenty textile mills will go up in Central Asia, a cotton producing region of the Soviet Union. New factories will be built in the Urals and Siberia. All in all, 156 textile enterprises will go into operation.

IMPROVEMENT OF EQUIPMENT AND TECHNIQUE

The envisaged increase in the output of textile will be attained also through the improvement of equipment at the enterprises already in operation, through the installation of highly efficient weaving looms, mechanization and automation of spinning and finishing operations. Spinning automatic transfer machines will be used; all processes of loosening, scutching, hackling and roving will be done automatically. Such a transfer machine, consisting of 78 units, is being already installed at a factory near Moscow. Cotton will move automatically from one process to another up until it comes out as finished product. The system of spinning will be shortened. Scutching and hackling will be done in one unit which will be a part of an automatic transfer machine.

The finishing of textiles will be done in a streamline fashion with automatic control of manufacturing process and continuous bleaching and dyeing.

Automatic processes will be introduced into the manufacture of silks, including cocoon-reeling.

WORLD OF TEA

Rise in Production

ACCORDING to the latest figures, production of Tea in North-East India has risen to 100.42 million pounds in August from 94.41 million pounds in August last year. This brings the total production of tea in North-East India, during the first eight months of the current year, to 302.54 million pounds as against 294.25 million pounds in the corresponding period of last year, showing an increase of 8.32 million pounds.

It is reported that tea production in Australia, New Guinea and Papua is to be encouraged and this may, in time, affect the imports of Ceylon tea into Australia. The construction of a tea factory has been authorised at the Agricultural Experimental Station at Garaina, New Guinea. It is estimated that this factory will produce tea worth about £A1,500,000 a year, provided the costs can be kept to a competitive level.

It is also learnt that the Government of Kenya have decided to make a loan of £2,600 to start tea planting in the Nandi Reserve where more and more African farmers are turning to cash crops, and pamphlets on tea growing will be circulated to those interested in tea production.

Again, the production of tea in the Soviet Republic, under the collective farm system, is reported to be expanding considerably. The largest tea-growing district is, of course, Georgia. But, tea is also produced in other areas. The Georgian tea-growers appear to be full of enthusiasm and, in fact, keen to reach the target set in the Seven-Year Plan. It seems possible, therefore, that, as far as quantity is concerned, Russia may well be self-sufficient in the foreseeable future. Although quality will undoubtedly improve, it is probable that the finer teas from India, Ceylon and China will still be taken for blending and will be sought after by the many tea connoisseurs in that large country.

Meanwhile, in the Export Sale held in Calcutta this week, offerings were 59,298 packages. Although the market opened on a quiet note, a better tone prevailed and a good general demand became apparent toward the close. Plain BPs were about steady; but medium BPs were occasionally easier. Clean Black Fannings and Medium Fannings were strong and generally dearer, particularly those in the brighter liquoring medium category.

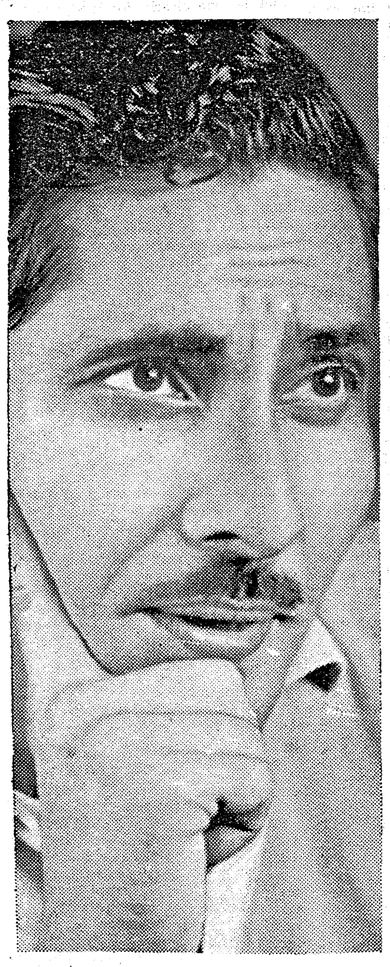
Medium orthodox BOPs with tip were a weak feature of the sale and there were a number of withdrawals. Orange Fannings tended to be easier, although some of the brighter liquoring ones were sold well. There was a slightly better demand for CTC teas. The best of these types were sold well although there was a fairly general drop of 10 to 20 nP per pound for the medium and good medium varieties. The cheaper sorts were well supported as were non-wither Legg-cut Dooars teas.

There was a fair demand for Whole Leaf grades, which were, however, a little irregular. Tippy sorts were in fair demand, but at generally easier rates. There was a slightly better enquiry for Darjeeling teas, which were again irregular. Following rates were quoted:—Clean Black Pekoe Rs 1.94 to Rs 1.98; Plain BP Rs 1.84 to Rs 1.86; Plain Fannings Rs 2.00 to Rs 2.10; Medium BP Rs 1.94 to Rs 2.04; Medium Fannings Rs 2.16 to Rs 2.26; Best Assam CTC BP Rs 2.30 to Rs 2.70 and Best Assam CTC Fannings Rs 2.70 to Rs 3.10.

In the Internal Sale, offerings were 22,051 packages of Dusts. There was a good general demand, particularly for exportable kinds of orthodox manufacture which were upto 4 nP per pound dearer and sometimes more. Legg-cut teas shared in this tendency and also appreciated in price, while Darjeeling teas, though irregular, generally realised satisfactory prices.

Medium CTC dusts were irregularly easier. At the beginning of the sale, they were about 10 nP easier. As the sale progressed, demand eased considerably and they were 15 nP to 20 nP easier and often difficult of sale. Toward the close, however, buyers showed more interest in these types. The very best CTC kinds generally followed this tendency. Following rates were quoted:—Medium Dooars Dust Rs 1.90 to Rs 2.00; Medium Assam Dust Rs 1.88 to Rs 1.96; Medium Assam CTC Dust Rs 2.00 to Rs 2.05 and Best CTC Assam Dust Rs 2.50 to Rs 2.70.

Also, 901 packages of Leaf grades were offered for internal consumption. There was a good general demand. The few lines of Green tea, on offer, were sold at slightly easier rates. In the Export Quota section, business was done at 2¼ nP per lb.



In the Chittagong market, offerings were 15,942 chests of Leaf grades and 4,724 chests of Dusts. There was a strong general demand for Leaf grades. Well-made Orange Fannings were sometimes up to As 2 per pound dearer, while cut-Fannings once again aroused keenest comptition and were quoted around Rs 2.11.0 per pound. Brokens did not arouse so much competition.

Dusts met with a fair demand at lower rates with prices generally As 4 per lb easier toward the close. Plain Sylhet Dust was quoted at Rs 2.3.6 per lb.

"To give you a wide choice, my friend, there are ten different blends of Brooke Bond Tea"

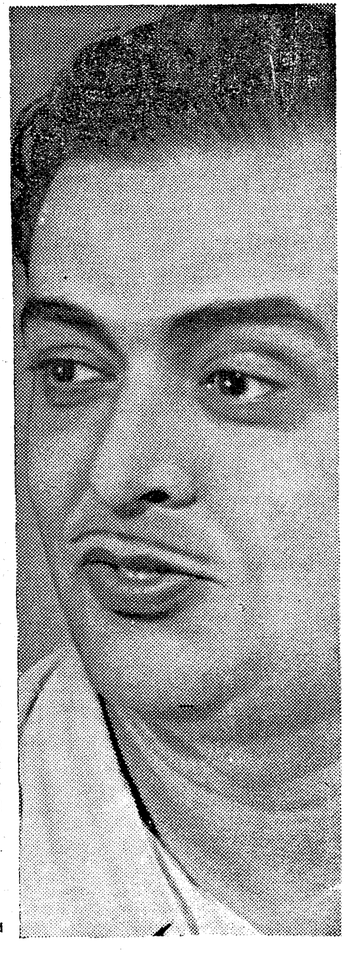
Bhai Sahib and a friend out shopping

Really, Bhai Sahib? I shouldn't have thought it necessary.

You would be surprised, my friend, how much people's tastes can vary. To satisfy everybody—and to suit all pockets—Brooke Bond market as many as ten different blends of tea. Six of them are leaf teas and four are dust.

Dust tea? What an odd name!

So you may well say. But as the name suggests, this tea consists of pieces of leaf so small and light that they are easily blown about like ordinary dust. Actually, dust tea is often quite expensive—sometimes it costs more than leaf tea.



Tell me, Bhai Sahib, what is the difference between dust and leaf teas?

Ha-ha! That's a question the experts would love to take hours over answering! As far as you and I are concerned, though, the chief difference between leaf tea and dust tea is that the latter takes much less time to brew. As soon as boiling water is poured on dust tea it starts infusing and is ready to serve almost immediately. Leaf tea, on the other hand, has to stand for about five minutes before serving and generally gives a rather more delicate flavour than dust.

But why do Brooke Bond produce four grades of dust tea?

Only because their customers are so choosy! Each tea, whether dust or leaf has special characteristics which may satisfy some people but not all. For instance, Brooke Bond's Special Hotel Blend is a hot favourite in hotels and restaurants, whilst Kora and A-1 Dust are household words all over the country. And yet all three are dust teas!

There is no accounting for people's tastes, but Brooke Bond seem to have the right idea in catering for one and all.

UNDER SECRETARY TO GOVT. 22 SEP 1959 PUBLIC DEPARTMENT

GLEANINGS

"Money Muddles"

IN India, the banking situation is such that, as from September 1, the subscribers to the so-called voluntary agreement on interests rates decided to reduce the maxima which may be paid on Deposits. This decision to bring down the maxima was as a result of the recent banking experience wherein Deposits have been accumulating at a satisfactory rate, but expansion in Advances has by no means kept pace. In the result, banks have had to pay, in absolute terms, a larger sum of money for their Deposits while, at the same time, especially with the onset of the 1959 slack season, their earnings from Advances have been on the decline. Hence, the decision to reduce the maxima. But, in the countries of the industrialised West, the trend in interest rates is just the opposite. The over-weening concern, for example, of the United States is inflation. So, in recent months, the monetary authorities in the USA appear to have taken a tougher attitude in the handling of the money market. This attitude to inflation has been described by Edwin L. Dale Jr, in The New York Times of August 30, extracts from which are published below:

"Ever since the present session of Congress began, President Eisenhower's overriding interest on the domestic front has been inflation and the means of dealing with it".

The President's concern with preventing another round of inflation has by no means been peculiar to himself. A powerful school of opinion—mostly, but not entirely, conservative—has decided it is imperative that postwar inflation in the United States be stopped convincingly once and for all.

The reasons include equity to the citizens, the need to preserve foreign trust in the dollar, the need for savings to finance economic growth and fear of another and more serious recession as an aftermath of renewed inflation. Above all, this view holds that once the citizenry—for the first time in our history—becomes convinced that steady inflation is inevitable, our whole system of spending and saving and investing will change, with severe damage to our well being.

The keystone or anti-inflationary debt management is floatation whenever possible of long-term bonds instead of floating only very short-term securities maturing in a few months or a year or two years.

A huge short-term debt has the potential effect of adding to the nation's spending power. For one thing, these securities are near-money to those who hold them. For another, if the short debt swells much further, there will be no alternative but to borrow the money from banks, which amounts to an addition to the money supply beyond what is needed for regular growth of the economy.

So much for the Administration view. What do the critics say? They say various things.

Some deny the threat of inflation, citing the recent stability in the indexes.

Some say that our inflation since about 1954 has been of the non-financial, non-demand kind, and that fighting it with financial weapons causes hardship without doing any good. They argue that financial restraint slows down the economy and its growth, and helps bring on recessions.

Others, agreeing it has not been a demand inflation, say the main blame lies with administered prices and high profits on the part of big business. They, including practically the whole of organized labor, say wage increases are not only not to blame but are positively desirable to expand demand and spur economic growth.

Others, including many members of Congress, simply find the austerity involved in financial measures—higher gasoline taxes, sharply reduced housing programs, a curb on many other desirable spending programs, higher interest rates—simply too tough to take and not worth the price. If forced to choose, they would prefer a little more inflation.

Commenting on this situation. The Economist, in its issue of September 5, pointed to the impact that peak prices for money would have on the economy as such:—

While the latest rise in short-term interest charges was set off by Congress's adamant refusal to allow the government to pay the going rate for its long-term borrowing, the rise had been developing, in a less sensational way, for some time out of the booming prosperity of the country. When it was realised that the Treasury must rely on the short-term market, already under heavy pressure, for the $15 billion or so which it will need for cash and refunding before the end of the year, the interest it had to pay on its three-month bills shot up to the highest level since 1933. The discount rate, the amount which the Federal Reserve Banks charge on loans to member banks, cannot long remain below the Treasury bill rate; therefore it seems probable that the discount rate will go up to 4 per cent this week and certain that it will before long. The commercial banks have already put up their prime rate to 5 per cent, the highest in 28 years, instead of waiting for the discount rate to go up as they usually do.

The rise in the prime rate, the interest which banks charge on loans to their best customers, began in New York, as it customarily does, but is spreading fast across the country. It is particularly welcome in the west and south-east where banks have been squeezed for funds more severely and for longer than they have been in the east. Bank loans are now higher in relaiton to deposits than they have been for over 25 years.

At the same time, businessmen are now using cash which until recently they were prepared to leave in the bank and other depositors, attracted by high interest rates elsewhere, have also been running down their accounts. Banks normally supplement their supplies of money by selling government securities but they are reluctant to do this when prices are so low. Finally the Federal Reserve is keeping bank credit exceptionally tight.

The increase in the prime rate, which sets the standard for all interest charges by banks, will discourage some borrowers and is already diving up other short-term money rates. It is bound to become more expensive to borrow on mortgages or for buying cars and other consumer goods on the instalment plan. Thus the chief sufferers from a situation which is at least partly due to Congress's obstinacy will be the small businessmen and the consumers whom Congress is normally most anxious to help.

But the USA is not the only country facing a problem of what to do about its monetary policy. New Statesman of September 5 contains a note by Taurus on money muddles, wherein some light is thrown on the remarkable happenings in Canada:

There's nothing quite like monetary policy for producing eccentric passions and absurd situations. Take Canada, for example. The Canadian government is working hard to accelerate the country's relatively slow recovery from the recent recession.

The Bank of Canada, however, is much more concerned with the danger of inflation next year or the year after, and has been operating vigorously in the market to reduce the supply of money. Interest rates have been rising and have now risen to the point where the banks can argue that, since they must pay more for loans from the central bank than they are allowed by law to charge on advances to customers, these advances must be reduced. The government is furious, and has said so. Last week the Finance Minister took the unusual step of turning down a quarter of the bids put in for the weekly offering of Treasury bills and succeeded in getting the rate down a little, but open warfare of this kind between the government and the central bank cannot continue for long without doing serious damage.

The situation is less serious but equally absurd in the United States. Most people in Europe are now prepared to admit that, if the government should be borrowing long rather than short and if for any reason—shortage of capital, or fear of inflation, or whatever—it is difficult to sell long-dated stock at what used to seem a reasonable price, then interest rates should go up: the cost to the community of a bigger interest item in the Budget is a good deal less than that of financial and economic mismanagement. But monetary sentimentalists are even more common in the United States than they are here. There is a legal ceiling on the interest rate which the Treasury may offer on long-term bonds, and Congress has refused to raise it, even to help the Treasury. The result is that long-term borrowing is impossible for the time being and that three-quarters of the national debt is due for redemption within five years by some means or other that no one clearly foresees.

However, it is intriguing to find that, in tight money policy, Dr Erhard of West Germany continues to provide the lead. The Economist of September 12 relates the latest steps taken by West Germany in the management of the economy through monetary measures:

The German central banking authorities since the war have established an impressive record of monetary and economic leadership. The Bundesbank is rarely content to follow in the wake of events, as has been known in London and New York; its political weight certainly seems to be greater, and that must be an important influence. Last week, while the New York market was expecting a move from the Federal Reserve and the Bank rate board was again being watched in London, action came from Frankfurt. The Bundesbank raised its discount rate from 2½ per cent, the low point to which it was reduced in January, to 3 per cent. This is a modest increase to a level that is still low—a full one per cent below both London and the rate to which New York is expected to move shortly.

The chief aim of this warning signal is to check the pace of Germany's domestic boom, which last month brought unemployment down to 1 per cent of the labour force. The Bundesbank and Dr Erhard are urging a better spreading out of public building orders, and the bank gives a clear-cut warning to trade unions and employers: "Sharper measures of credit policy would become necessary if the concentrations of new orders and the tightening of the labour market variously observed were to be exploited to demand price and wage increases calculated to endanger the stability of the price line." The central bank was also worried by the hectic rise in share prices. It now seems reconciled to seeing the rate on fixed interest securities back to 5½ per cent; the 5 per cent basis established in the spring met with much resistance.

WORLD OF JUTE

Importance of Price Factor

IN a Press Note explaining the aim of the unsealing of 4 per cent of looms in all during the past three months, the Indian Jute Mills Association inter alia claim that that prices have been stabilized and the confidence of overseas buyers retained. Proof of this, it is pointed out, is in the encouraging fall of 11,700 tons in jute goods stocks during August.

The main aim of the unsealing move is to maintain the maximum level of activity, employment and foreign exchange earning, while retaining fair and stable prices in the jute goods markets. In furtherance of this objective, IJMA's member mills had unsealed a total of 4 per cent of their looms during the past three months. As a result, the industry now has only 10 per cent of its looms still sealed and this is the first time since 1956 that such a complement of its looms are in commission. The recent two instalments of unsealings will increase jute goods production by an average of 5,000 tons per month. The unsealings have been done in stages—1½ per cent of looms were returned to production on June 22 and a further 2½ per cent on August 24. On the employment side, the additional productive capacity will create 5,000 temporary jobs. Raw jute consumption will also increase by 28,500 bales per month.

The Press Note has pointed out that the latest unsealing of 2½ per cent of looms is concentrated almost entirely on sacking production. This is because of the increase in demand for this category of goods latterly. The fact that usually the second half of the year witnesses an improvement in offtake has also been a contributory influence in the decision to increase production. The need for retaining a high degree of flexibility by the industry is also emphasised. In regard to jute goods, world demand often fluctuates widely from year to year and between the various categories of jute goods in any particular year. It is therefore necessary to adjust production according to demand.

It would appear that New Delhi is keenly following the recent developments in the jute trade and industry and has framed its own conclusions. According to the Jute Bulletin, the Union Commerce and Industry Ministry is reported to be reviewing its jute policy. In broad outlines, the policy, as far as the jute goods industry is concerned, seems to favour a rising trend in production. The two main factors said to be responsible for the advocacy of increased production are that it is no longer possible to maintain that higher production will require more imports of raw material, thanks to the self sufficiency attained in raw jute production, and that increase in production will mean decrease in overhead expenditure and, therefore, increase in competitive capacity. In making their assessment, the Government, it is said, have been guided by this season's crop prospects which are believed to be nearly as good as in the past season. Coupled with this is the fact that the export of jute goods has picked up this year, a trend which should be encouraged with ample supplies at reasonably low prices.

It will be seen that there are points of difference in the assessments of Government and the jute goods industry as represented by the Indian Jute Mills Association. It seems to me that Government's argument that higher production will ultimately result in increasing the competitive capacity of the industry need special emphasis in the present context of the growing difficulties of the jute goods trade in overseas markets. It cannot be gainsaid that the IJMA are less keen than Government in maximising exports of jute goods. But the rather halting manner in which the recent unsealings have been done seems to have given the impression that the industry may be under the belief that excessive production and exports will not give higher foreign exchange earnings because the prices will be lowered by competition from mills in India.

It is, however, wrong to think that jute good exports are merely a question of increasing foreign exchange earnings. Of course, it will be quite welcome if our jute goods fetch in a sizably increased quantum of foreign exchange. And it is incumbent both on the industry and Government to leave no stone unturned to maximise export earnings from jute goods. But it seems to me that it is high time that jute goods exports are placed on a special footing. That is to say, there is urgent need for the recognition of the possibility that, unless concerted efforts are made in a number of directions simultaneously, jute goods exports may decline to an anxiously low level. It will then be not a simple matter of an export industry encountering a temporary lean period. It will verily be a question of saving one of the biggest of the major industries in the country from extinction.

I am of course referring to the growing competition to jute goods as packaging material in world markets. Both the industry and our Government are no doubt fully aware of the fact that, if jute goods are not moving easily in world markets as before, it is largely because substitute packaging materials have seriously encroached upon what had been the close preserve of jute goods. Bulk handling methods have made strident headway in such jute goods using countries as the United States and Australia. Paper bags have almost driven out jute goods from the cement packaging field and the continuously enlarging their field of influence. Artificial fibres have also entered into the competition with considerable success in certain special fields. Last but not least is the competition from other natural fibres. For instance, kenaf cultivation is being pursued with vigour in America and Latin American countries. Kenaf is almost similar in properties to jute with the added advantage that unlike jute, it can be grown in a wide variety of climates. The growing importance of kenaf is brought out by the fact that the US Department of Agriculture has recently issued a circular detailing the varieties of competition for the fibre and the means of meeting such competition. The following passage from this circular will serve to illustrate how an important consumer of jute goods views the price factor in a packaging material: "A covering material needs to be cheap compared to the product being protected, or its cost becomes prohibitive. The price of burlap bag is now only about one-half the 1947 price; nevertheless, it is about twice the pre-war (World War II) price, and consumers continue to search for less expensive ways to protect their products in order to counteract the continued rise in labour and equipment expense"..

In endorsing the view that perhaps the most vital objective of our jute goods industry should be that of retaining the confidence of overseas buyers, I am not omitting to take note of the present improved outlook of Indian jute goods. For various reasons, and primarily on account of their dependence on foreign countries for the supply of raw material, the jute goods industries except in India and Pakistan may not be able to enter the overseas markets in jute goods. By the same token, jute goods from India and Pakistan may expect to have an improved demand even in continental countries where there are jute industries. It has been reported that, in recent months, the jute goods industries in some of the European countries are finding it difficult to dispose of their stocks due to competition from India and Pakistan. But this improvement in the outlook of jute goods should not lull us into complacency. The traditional markets for jute goods should be maintained, if not expanded, and if we fail to offer our products not only at competitive prices but also at quite cheap rates keeping prominently in mind that, these days, consumers have perforce to keep low the cost of the packaging materials they use, in view of the rising cost of production and the growing competition for all kinds of goods in the international market, we will be only giving direct further encouragement to substitutes.

*

The trend in the jute goods market during the week ended Wednesday was irregular as sentiment had been largely influenced by speculation. Price movements, especially for the near delivery positions, continued to be governed by reports about the Chinese offtake. The general view seemed to be that further orders from this quarter, earlier confidently expected, were unlikely to materialise in view of the deterioration in the Sino-Indian relations. A section, however, seemed to hold the view that, in any event, Chinese interest in sackings would have considerably slackened as China's requirements had been more or less met with the recent purchases. It is now officially confirmed that the 2½ per cent of the looms unsealed from the 24th of last month will be diverted to the production of heavy goods. This will mean a larger availability of this category of goods in the next four months at least, as the unsealing is to remain in force up to January next.

The growing emphasis on the production of heavy goods in mills' output is already evident in the month of August. During the last month, total production amounted to 86,900 tons as against July's total of 89,600 tons. The decline is attributable to the lower hours worked during August than in the previous month. Mills had worked in August for 200.5 hours as compared with 209 hours worked during July. Of the total production in August, hessian accounted for 37,600 tons, Sacking for 41,900 tons and other varieties for 7,400 tons. It will be seen that heavy goods' output is now higher than that of hessian. In July, the position was different in that output of hessian was at a higher level than that of sacking. As compared with July, only the output of sacking has increased while the other categories have declined. It is to be expected that September production figures will show a further increase against sacking as by the time the production figures are computed mills will have worked a full month with the additional 2½ per cent looms included in the sacking section. The steadiness of the heavy goods section seems to have partly stemmed from the belief that, in view of the strained relations with China, the India Government may increase their offtake of sacking for defence purposes.

The subdued trend in hessian is presumably due to the continued absence of overseas interest. The news that burlap consumption in US during August has recorded a decline to 65 million yards from 69 million yards in July has also somewhat depressed sentiment. A redeeming feature in the news from America is that in August burlap stocks have declined sharply

to 255 million yards from the previous month's level of 271 million yards. The lower stock position in US and the possibility of a large Government of India order for sackings may contribute to the steadiness of hessian. Operators may not fail to note that hessian production is kept almost static as the newly unsealed looms will be devoted to the production of heavy goods.

B Twills September was quoted at Rs 102.15 last Thursday but in later dealings the rate declined to Rs 100.80. Toward close, however, on expectations of Government tender the rate recovered to be finally placed on Wednesday at Rs 101.50. Hessian 40"×10 oz began at around Rs 40.45 and after being slightly lower on announcement of August burlap consumption was finally placed unchanged on balance at Rs 40.45.

The raw jute market ruled steady during the first half of the week under review largely due to sustained mill interest. Though mills' stock position in raw material is by no means uncomfortable, the expectation is that they have perforce to increase their offtake of raw jute in view of the recent unsealing of looms. Toward close, however, trading tended to be dull in the absence of fresh mill interest. Assam Bottoms after having been done up to Rs 23.25 turned quiet to be finally placed on Wednesday at Rs 23.

The following were the price trends:

	Opening Sept. 10	Week's High	Closing Sept. 18

STANDARD-VACUUM OIL COMPANY (Incorporated in the U.S.A. with Limited Liability)

CHITTARANJAN LOCOMOTIVE WORKSHOP

There is a proposal to increase the capacity of the Chittaranjan Locomotive Workshop to the extent of building five electric locos per month and establishing a steel foundry for an ultimate production of about 7,000 tons of castings per year.

This information was given by Mr Shah Nawaz Khan, Deputy Minister for Railways, in a written reply to a question by Mr Ram Krishan Gupta in the Lok Sabha.

In a written reply to a question by Shrimati Ila Palchoudhuri and Mr Aurobindo Ghosal, the Deputy Minister said that a training school had recently been opened at Asansol for training of the crew and maintenance staff for electric locomotives.

Answering another part of the question regarding procurement of necessary equipment, the Deputy Minister said that part of the demonstration equipment had been obtained from the French National Railways, France, at a cost of £12,000 f.o.b. (Marseilles), and an order had been placed for the training car and the remaining equipment.

MANUFACTURE OR DIESEL RAIL CARS IN INDIA

Indigenous manufacture of Diesel engines and suitable transmission for the rail cars to be manufactured in the country is under consideration.

This was stated by Mr Shah Nawaz Khan, Deputy Minister for Railways, in a written reply to a question by Mr Ram Krishan Gupta in the Lok Sabha.

RAIL FREIGHT FOR MANGANESE ORE

Mr S. V. Ramaswamy, Deputy Minister for Railways, said in the Lok Sabha during question hour that Government had taken a decision to allow, with effect from September 1, 1959, graded rebates varying with distance on medium and low grade manganese ore, booked to ports for export.

He added that no rebate would be allowed on traffic booked over less than 200 miles or on high grade manganese ore booked over any distance.

BONE MANURE

In a written reply to a question by Mr Jhulan Sinha in the Lok Sabha on August 7 the Minister of Food & Agriculture Mr A. P. Jain, said that the question of utilisation of the bone resources of the country fully had been considered at the Seminar on Local Manurial Resources held at Madras in January this year.

1. The right of ownership on the dead bodies of animals should either be vested in the States or Gram Panchayats so that States or Gram Panchayats can give contract to an agency which may be found to do the work on proper scientific basis.
2. The State Governments should take such measures as might be necessary to make available increased collection of bones and also make available large quantities of bones for bonedigesters with the help of which raw bones are completely converted into steamed bonemeal.
3. As far as possible, all the bones which are unutilised at present, should be converted into bonemeal. In places where it is not possible to install bone digesters, mobile bone-crushing units worked by tractors may be recommended.
4. The preparation of steamed bonemeal should be organised on cooperative basis, as far as possible, but if any individual wants to take up this work, he should be encouraged.

The States had been urged to take urgent action on the above recommendations.

It had been reported that about 350 bonedigesters had so far been set up. The All-India Khadi and Village Industries Commission was giving financial assistance for the setting up of flaying centres where carcass recovery, including bones, is one of the items attended to.

Replying to another part of the question the Minister said that it was estimated that at present about 40 per cent of bones are being collected and it may be possible to increase the collection to 70 or 75 per cent of the potential availability of about 3 lakh tons of bones.

FOREIGN LOANS

Government are fully seized of the problem of the early utilisation of foreign loans on the purposes for which the loans are intended—mainly the acquiring of capital goods for Second Plan projects. With many of these loans, the progress in utilisation is normal and satisfactory. With certain of the loans, the progress in in utilisatoni is apparently unsatisfactory, though, in fact, it is not so. They are progressing reasonably, since it is only after the loan has been negotiated for specific purposes that in most cases global tenders can be invited, orders placed perhaps in stages as required, delivery obtained, perhaps two years or longer from the date of order, payments made on shipment of equipment and finally, reimbursement can be obtained from the foreign loans. In effecting due utilisation all essential procedures are observed, some of which may be obligatory to conform to the requirements of the legislation under which the loans are made available.

Where utilisation is complete or largely complete, as it is in certain cases, action is taken, with the cooperation of the foreign Governments concerned to effect the appropriate drawals under the credit. Wherever necessary, appropriate simplification of the procedure is negotiated. Drawals are thus facilitated.

Where any difficulty in utilisation arises because of price levels, the Government endeavour to reallocate the loan for other equally essential purposes, so as to obviate this difficulty and facilitate utilisation.

The Finance Minister, Mr Morarji Desai, gave this information in the Lok Sabha in a written reply to a question by Mr Ram Krishna Gupta.

SETTLEMENT OF DISPUTES IN BANKING INDUSTRY

The Union Deputy Minister for Labour, Mr Abid Ali, stated in Lok Sabha that the conference held by Government with bankers and their employees on August 8, 1959, at New Delhi was of an exploratory nature. The conference considered whether a new tribunal should be appointed or whether there was scope for settling outsanding points by mediation or arbitration. The representatives of employees expressed the view that there was scope for settlement without the appointment of a new tribunal and the representatives of employers agreed to inform Government of their views within a fortnight. Further action would be taken after a reply was received from the employers.

INTERIM RELIEF TO WORKERS IN SUGAR INDUSTRY

One hundred and eight sugar factories have already begun implementing the recommendation of the Central Wage Board for Sugar Industry regarding interim relief workers. The managements of the remaining 32 factories, which are covered by the Wage Board's recommendation, are being persuaded by Government to implement the recommendation.

This was stated by the Union Deputy Minister for Labour, Mr Abid Ali, in reply to a question by Mr Nawab Singh Chauhan in Rajya Sabha.

The Wage Board for sugar industry had recommended the following quantum of interim relief to workers with effect from January 1, 1959.

1. To workmen drawing consoldiated wages up to Rs 100 per month—5 per cent subject to a minimum of Rs 3.
2. To workmen drawing consolidated wages more than Rs 100 and up to Rs 200 p.m.—4 per cent, subject to a minimum of Rs 5.
3. To workmen drawing consolidated wages more than Rs 200 and up to Rs 300 p.m.—3 per cent, subject to a minimum of Rs 8.
4. To workmen drawing consolidated wages more than Rs 300 and up to Rs 500 p.m.—2 per cent, subject to a minimum of Rs 9.

SOIL CONSERVATION MEASURES IN D.V.C.

The Damodar Valley Corporation had taken up the soil conservation work in the Upper catchment of the Damodar Valley with a view to improving and maintaining the productivity of the land in this area and also to reducing the silting rate of the reservoirs to the minimum.

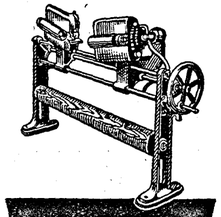
Shri Jaisukhlal Hathi, Union Deputy Minister of Irrigation and Power, gave this information in a statement laid on the table of the Lok Sabha on August 7 in a written reply to a question by Mr Ram Krishan Gupta and four other Members.

The statement also said that the programme of soil conservation work in DVC area included mainly:

1. Afforestation of highly eroded lands and regeneration of the existing forests which were in an extremely depleted condition to the extent of 5,000 acres annually.
2. Soil conservation demonstration on the cultivators' fields, with the active participation of the farmers which included treatments like construction of terraces with proper water disposal system, strip cropping, crop rotation along with proper fertilisation and necessary plant protection measures. The programme also included consolidation and reallotment of holdings along contour.
3. Demonstrations on grass land development and management along scientific lines. This was being done on both Government owned land as well as on tenancy lands.
4. Construction of different types of engineering structures in gullied waste lands for retarding runoff, safe disposal of excess runoff, trapping silt and retarding flood. The nature and size of the structures depended entirely on the local conditions and called for precise designing.

Before the land was taken up for soil conservation treatments, a soil survey was carried out by the Soil Survey Unit and the soil was analysed in the laboratory in order to classify the lands according to their fertility and petontiality so that they could be put to the best possible use.

Experiments regarding run-off, cropping practices, terrace designs, etc., were conducted at the Deochanda Station for working out proper soil conservation techniques suitable under the local conditions. These were then recommended to the farmers and ultimately adopted in the cultivators' fields.



SOIL CONSERVATION RESEARCH, DEMONSTRATION AND TRAINING CENTRE

The Government of India have established a Soil Conservation Research, Demonstration and Training Centre at Chhaleshwar near Agra on a 200-acre farm, with the object of: undertaking soil surveys of the ravine areas with a view to classify them and determine the rate of transformation of different land types into ravines; studying suitable species of trees, shrubs, grasses and legumes for stabilising gullies, bunds, etc., studying the engineering aspects of gully control, terracing and levelling, designs for diversion ditches and spillways, construction of various types of bunds, etc., working out suitable types of crop husbandry, to control erosion and runoff in the cultivable areas above the gully heads; and demonstrating the usefulness of soil conservation measures in checking advancement of gullies in ravine lands.

From 1957-58 when work was actually started at the Centre, the following items of work have been carried out:

1. Eight agronomy experiments covering an area of 5.56 acres have been started.
2. A nursery on an area of 3 acres for trial of trees and grasses has been set up.
3. An area of 25 acres has been afforested.
4. Different types of trees useful for wind and shelter belts have been grown.
5. Small gullies and terraces have been planted.
6. Economies are being worked out in regard to terracing and levelling of suitable ravine land by means of mechanical and manual labour at Rs 700 per acre and 35 acres by mechanical labour at Rs 476 per acre.
7. Different types of waste weirs are being tried.
8. Effect of different trees and grass species on gully heads is being investigated.
9. Meteorological data is being collected.

The above information was given in the Lok Sabha on August 12 by the Minister of Food & Agriculture, Shri A. P. Jain, in a written reply to a question by Mr Shivananjappa.

DRILLING FOR MINERAL OIL IN SURAT DISTRICT

The drilling operations in Mahuvej village in the Surat district have given useful stratigraphical data, said Sardar Swaran Singh, Union Minister for Steel, Mines and Fuel, in reply to a question by Mr M. P. Bhargava, in the Rajya Sabha. Some gas under pressure was also encountered during drilling operations.

Possibilities of getting oil and gas in the area could not be indicated at this stage, added the Minister, Several new wells would have to be drilled to assess the commercial possibility of the area.

ESTATE DUTY AMENDMENT ACT, 1958

The Estate Duty Amendment Act, 1958, which has received the assent of the President, has not yet come into force. No official notification enforcing it has been issued because it is necessary to bring it into force simultaneously for non-agricultural and agricultural properties. This could be done only after resolutions under the relevant article of the Constitution are passed by the various State legislatures. The required resolutions have, so far, been passed by all the States except Andhra Pradesh, Bihar and Orissa. In Bihar, the resolution has been passed by the Legislative Council and remains to be passed by the Legislative Assembly. It is hoped that the resolutions will be passed by the legislatures of these States before the commencement of the next session of Parliament. It is also hoped that it will be possible to introduce in that session a short-Bill giving effect to the resolutions passed by the State legislatures in respect of estate duty on agricultural land. After such a Bill is passed, the provisions of the Amendment Act will be brought into force from a suitable date.

This information was given in the Rajya Sabha today by the Finance Minister, Mr Morarji Desai, in reply to a question by Mr P. N. Rajabhoj.

STEEL FOUNDRY AT CHITTARANJAN

The Deputy Minister for Railways, Mr Shah Nawaz Khan replied in the affirmative to a question by Mr R. C. Majhi and Mr Subodh Hansda in the Lok Sabha whether negotiations had been completed with the technical collaborators in the UK for setting up a steel foundry at Chittaranjan to produce steel castings for railway track. He said that the final draft agreement had been drawn up and sent to Messrs F. H. Lloyd and Co. UK for acceptance.

Replying to another part of the question, the Deputy Minister said that production was expected to commence after the completion of construction and installation work which was estimated to take a period of about three years from the date of the signing of the agreement.

INTEGRAL COACH FACTORY

There has been reduction in the cost of manufacturing coaches at the Integral Coach Factory, Perambur, said Mr Shah Nawaz Khan, Deputy Minister for Railways, in a written reply to a question by Mr Anthnoy Pillai and Shri L. Achaw Singh in the Lok Sabha.

The Deputy Minister gave the figures of the average cost per shell year-wise as under:—

1955-56	..	Rs 2,13,000
1956-57	..	Rs 1,82,000
1957-58	..	Rs 1,22,000
1958-59	..	Rs 92,000
1959-60	..	Rs 85,500

Replying to another part of the question, Mr Shah Nawaz Khan said that the ex-works cost of the similar coach in Europe was about Rs 1,07,000. He added that the reduction in cost was due to increased production at the ICF resulting in reduced labour and overhead charges per unit built.

WRITING OFF OF INCOME TAX ARREARS

The Deputy Minister of Finance, Shrimati Tarkeshwari Sinha, informed Mr Abdur Rezzak Khan in the Rajya Sabha that there was no proposal, at the moment, for writing off a sum of Rs 47 crores out of the income-tax arrears. However, she added, a review of the tax arrears which had been outstanding in the income-tax departmental books for a long period, had shown that there were several instances where owing to the absence of assets there was no possibility of recovering any portion and there were also cases in which the available assets were heavily encumbered with prior mortgages or there were legal difficulties in enforcing recovery.

A rough estimate of the amount which might ultimately be found to be irrecoverable out of the demand outstanding on March 31, 1958, was indicated to be of the order of Rs 47 crores in the reply to a question given in the House last year. Before any outstanding demand was written off, the Deputy Minister said, the department would have to be satisfied after taking all necessary steps for recovery that no part of it was recoverable and that it would be futile to devote any further attention to it.

ELECTRIFICATION OF RAILWAY STATIONS

Sixty-nine railway stations were electrified in different railway zones during the period April 1, 1959, to August 15, 1959, at a cost of Rs 6.14 lakhs approximately said Mr Shah Nawaz Khan, Deputy Minister for Railways, in a written reply to a question by Mr D. C. Sharma in the Lok Sabha.

The Deputy Minister in a statement laid on the table of the House gave the details of the stations electrified in different railway zones as follows:—Northern Railway 37; North-Eastern Railway 14; Southern Railway 7; Western Railway 4; South-Eastern Railway 3; and, Eastern and North-East Frontier Railways; two each.

GAS GRID FROM DURGAPUR TO CALCUTTA

The Government of India had accorded approval for the construction of a Gas Grid from Durgapur to Calcutta by the Government of West Bengal.

This information was given in the Lok Sabha by Mr Manubhai Shah, Minister for Industry, in a written reply to a question by Mr Ram Krishan Gupta and three other Members.

The Minister stated that the Gas Grid would be about 120 miles in length and the cost was estimated at Rs 315 lakhs. The Yugoslav Government Agency had offered to supply pipes on the basis of rupee payment, the rupee being utilised in accordance with the agreement existing between Intertrade, Yugoslavia, and the State Trading Corporation.

The Government of West Bengal, the Minister added, would continue to supply gas locally to certain projects at Durgapur and to spare daily 67 million cubic feet of gas of 450 BTU value for transmission to Calcutta.

ANCILLARY AND FEEDER INDUSTRIES

Replying to a question by Mr Harish Chandra Mathur and two other Members, Mr Manubhai Shah, Minister for Industry, stated in the Lok Sabha that the Government had finalised a scheme for the growth of ancillary and feeder industries.

The scheme envisaged approach by various agencies to large scale units for the purpose of obtaining voluntary agreements from them to purchase their requirements of components and parts from small scale ancillary units, the Minister observed.

The Minister added that a number of large manufacturing concerns both in the private and public sectors had approved the scheme in principle and several ancillary units were in an advanced stage of establishment.

Giving a few illustrations of feeder units, the Minister stated that four units would be for Sen Raleigh Industries of India, three for Hindustan Machine Tools, one for Premier Automobiles, one for Messrs Kirloskar Oil Engines, one for Jay Engineering Works and one for Indian Telephone Industries.

A very large number of ancillary and feeder units were already functioning in the country and more would be established as a result of this policy, the Minister observed.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

TEMPTATION for "system building" is the historian's (more than even the philosopher's) occupational hazard. (Some Jungian analyst should tell us about the psychological roots of the compulsive fascination of the cycle and the dialectic, the fatal Cleopatra of the Marxes, the Spenglers, the Keyserlings and the Toynbees of the world. One explanation that readily occurs to me is a passion for tidiness, or what you might call the "housemaid's complex". This may be a superficial explanation and there may well be others that go to the very threshold of consciousness where the primordial shapes and forms of human thoughts are bodied forth). Very few are as austere as H. A. L. Fisher, who was gently ironic about such "patter-weaning" in his History of Europe. "One intellectual excitement has, however, been denied to me. Men wiser and more learned than I have discerned in history, a plot, a rhythm, a predetermined pattern. These harmonies have been concealed from me. I can only see one emergency following upon another as wave upon wave, only one great fact with respect to which, since it is unique, there can be no generalisations, only one safe rule for the historian: that he should recognise in the development of human destinies the play of the contingent and the unforeseen". On the whole, this scepticism would seem to be well-founded, for the varous determinisms require for their validity the jettisoning of large areas of reality. Neither the gloomy horoscope of the West Spengler cast nor the Marxian prophecies of the unlovely death of capitalism have been justified by events, certainly not in the manner predicted. Ironically enough, these very prognoses have made, by their timely warnings, the final calamity if not impossible, at least much more bearable.

✱

That the Marxian analysis of the final phases of capitalism has been falsified by events is now generally accepted by everyone outside the charmed circle of Communist orthodoxy. Recent analysis has also shown that Marx was wrong not only about the future of Capitalism but also about the future of Communism. Far from being the end product of the social dialectic, Communist Russia is really the last but one stage toward a suburbia of gadgetry. This haven is known by various names like the "affluent society" or the "society of high mass consumption". I mentioned last week Professor Walt Whitman Rostow's theory of economic growth, that aims to comprehend in a single pattern the economic history of mankind. The Economist, which has published in two recent issues a summary of Professor Rostow's ideas originally elaborated in a series of lectures at Cambridge last autumn) calls it a "non-Communist manifesto". Though, on the face of it, Professor Rostow's theory looks very much like other cyclical determinisms, there are two important differences. First, his approach is empirical and, on detail, the variants to the basic pattern are accepted by him with equanimity. Secondly, and more importantly, Professor Rostow considers the various stages as matters of private and public choice. In his own words, "In surveying the broad contours of each stage of growth, we are examining not merely the sectoral structure of economies transforming themselves; but a succession of strategic choices made by whole Societies". This is important since, conceived thus, the pattern ceases to be determinist at all.

✱

The principal value of such a hypothesis, whatever you may think of its historical truth, is its usefulness as a tool of analysis. A good deal of what Professor Rostow says is common, though unrelated, knowledge; and much the same kind of policy decisions that he advocates has been advocated (and even adopted) by others by mere empiricism. Thus, countries follow one or another of the others that have gone before in their stages of development without having discerned in their choices the historical parallels.

✱

Let me first give a rapid summary of Professor Rostow's model. He conceives of modern economic history as a set of "stages of growth". There are five such stages, and it is possible to fit in all the countries of the world in one or another of these stages. These are: (i) the traditional society; (ii) the transitional society; (iii) the society in the crucial process of "take-off"; (iv) the maturing society; and (v) the society of high mass consumption.

✱

It is of the essence of Professor Rostow's theory that the transition from one stage to another is conditioned by a variety of non-economic factors, involving a multitude of private and social decisions.

✱

Of the five stages, the traditional society has all but disappeared. Its characteristic, economically speaking, was a low ceiling on productivity. Income, savings and investments are all low and, technologically, it is both incurious and unambitious. The transitional society is a more familiar phenomenon: and, in fact, outside Europe and North America, most countries are in, or just out of, this stage. Economically, the test is the rate of investment. "With a capital-output ratio 3 to 1, a society that invests more than 10 per cent of its national income will outstrip any likely population growth; and a regular increase in output per head can then be assumed". In most cases, the transition from the traditional to the "take-off stage" has been due to external stimulus, mostly of nationalism—colonialism producing its enemy—with a persecution mania. (Often the persecution was no mere mania). The non-economic factors are the emergence of a new elite, both political and economic. This stage also involves a direct application of technology, reallocation of work-force away from agriculture and deployment of capital into industrial rather than commercial channels. "Capital formation is not merely a matter of maximising profit; it is a matter of society's effective attitudes towards science, applied science, and risk taking as well as adaptability of the working force". At this stage agricultural productivity, despite the shift from agriculture to industry, is very important as "agriculture has to supply more food for the likely rise in population, and thus it will have to do with the use of less manpower". It will have to supply the raw materials for the new industries, whose markets are expanding. And, finally, it should provide increased finance by way of taxation on the increase in real income that the farmer is likely to enjoy. And it must also provide through savings capital for further expansion of the new enterprises. It is easy enough to recognise some of contemporary India's characteristics and problems in the above description.

✱

As near take-off, xenophobic nationalism gives place to more forward impulses to sections. Intellectuals imbued with modernism and zeal for reform, entrepreneurs no longer content to be commission agents, and a kindlier attitude toward the colonial past when some of the foundations of present progress, like the Railways in India, was laid, is evident. Curiously, Professor Rostow considers "the soldier" an absolutely crucial figure of the transition—a finding that sounds strange to Indian ears and experience. Of course, he is thinking of Germany and Japan in their transitional phase—when the Junkers and the entrepreneurs in one case and the Samurai and the merchants joined hands in the other. The centrality of the soldier also explains the fact that, in the greater part of the Middle East and South East Asia, power-elite today is the army. India being the exception to the general rule, is an interesting and important commentary on itself as well as the theory.

CALCUTTA BOMBAY MADRAS NEW DELHI

Professor Rostow also assigns an important role to the State, which must organise the nation so that unified markets develop, and create and maintain tax and fiscal systems which divert resources into modern uses. . In particular, the State has an inescapable responsibility for ensuring that the stock of social capital required for the take-off is built; and it is also likely that only vigorous central leadership can bring about these radical changes in productivity in agriculture and extractive industry whose quick achievement may also constitute a precondition for take-off. Professor Rostow is no Communist and, having the Christian name that he does, it would be extremely odd if he was (which in fact he is not) an enemy of liberty. The opposition to the present Government by the Swatantra party, in so far as it stems from ideological reasons based on libertarian and anti-Communist considerations will see that according to this analysis, our current socialism is an inescapable economic necessity.

*

The "take-off" is a crucial stage in social dynamics described by Professor Rostow. He defines it as the short stage of development, concentrated within two or three decades, in which the economy and the society of which it is a part transform themselves so that economic growth becomes "more or less automatic". In Great Britain, it took place between 1783 and 1802, in France, between 1860 and 1880; in the US between 1843 and 1860; in Germany between 1850 and 1873; in Sweden between 1868 and 1890; in Japan between 1878 and 1900; and, in Russia, between 1890 and 1914. Professor Rostow thinks that, at the moment, China and India (these two roughly neck and neck) Argentina and Turkey are in the stage of take-off.

*

To complete Professor Rostow's schema, some sixty years after the nations have taken wings, economically speaking, they arrive at the stage of maturity. The nature of the take-off determines the nature of the flight and the speed with which you arrive at your destination. Some nations, like Australia and Canada, reach the next stage of high mass consumption even before they reach full maturity—a felicity wholly fortuitous and certainly not available to nations whose problem is over-population. Once you arrive at this stage, you have the choice, according to Professor Rostow, of four alternatives. Depending upon its "geography, resources, values and the dominant political leadership", the choice is one or, where possible, a combination of the following: (a) the national pursuit of external power and influence; (b) the welfare state, which will reorganise its order of priorities directed toward redistribution of income, increasing social security, generally increasing the commonwealth; (c) the expansion of the range of mass consumption, beyond basic necessities and satisfaction of wide varieties of wants (often newly created); and (d) leisure—the reduction of the working time. Historically, Germany and Japan took the first of these courses in 1914 and 1940; but, having paid dearly for it, have now recovered and are well set on their career as societies of high consumption. (It is interesting that, once you have taken off, and achieve maturity, the result of a miscalculation is not a relapse into a position before take-off. Hence the crucial nature of the take-off. A disastrous war may cost you delay; but once the economy has abandoned the first of the two Newtonian alternatives—viz: a state of rest—its state of continuous though not of uniform, motion in a straight line seems assured.

*

If, therefore, war merely interrupts, but does not disrupt, a nation's progress—once the take-off stage is reached—it is clear that the most important objective should be to achieve as quickly as possible, in the case of planned economies, the greatest possible momentum for the take-off. But, of this later.

*

Of immediate interest to us in this country is Professor Rostow's analysis of the characteristics of the stage of "takeoff". Equally important to us, as to the rest of the world, is the fact that the Soviet Union has just reached its maturity and is on the point of making crucial decisions about the alternatives open to it. These involve important policy decisions for the Soviet Union as well as others. A discussion of these, I shall hold over for the next week.

EAVESDROPPER

BOMBAY MUNICIPAL CORPORATION

LOAN NOTIFICATION

Bombay, Dated 21st September 1959

4 per cent Loans 1959 – Repayable on 28th September 1971

Rs. 300 Lakhs Bombay Municipal Loan of 1959 for Financing Capital Works Pertaining to Budget 'A',

Rs. 125 Lakhs Bombay Municipal Loan of 1959 for Financing Capital Works Pertaining to Budget 'D',

Rs. 50 Lakhs Bombay Municipal Loan of 1959 for Financing Capital Works Pertaining to Budget 'E', and

Rs. 25 Lakhs Bombay Municipal Loan of 1959 for Financing Capital Works Pertaining to Budget 'F'.

1. Issue Price Rs. 99.75 per cent.
2. Each loan will bear interest at the rate of 4 per cent per annum from 28th September 1959. Interest will be payable half-yearly on 28th March and 28th September and will be subject to tax, under the Indian Income Tax Act, 1922.
3. Subscriptions will be received from 10-30 A.M. on 28th September 1959 and the lists will be closed on the 30th September 1959 or earlier as soon as it appears that the requisite amounts have been received either by private negotiations or through public applications. The Municipal Commissioner reserves the right to accept applications for subscriptions received in excess of the sum of Rs. 500 lakhs upto 10 per cent.
4. Sinking Fund will be set aside annually and invested in such manner as may be authorised by the Government from time to time.
5. Interest will be paid in Bombay at the Head Office of the State Bank of India, Bombay, or such other Agent or Agents as may be approved by the Corporation from time to time in that behalf.
6. The loans are raised on the security of the general revenues of the Bombay Municipal Corporation pertaining to Budgets 'A' 'D' 'E' and 'F' respectively, subject in each case to any prior charges in respect of the balances of previous loans not yet fully paid off.
7. The loans will be issued in the form of debentures.
8. Applications for the loans must be for Rs. 500/- or for a multiple of that sum and will be received at the office of the Chief Accountant, Bombay Municipal Corporation, Municipal Head Office Building, Fort, Bombay.
9. Copies of the Notification and Application form may be had at the Office of the Chief Accountant, Bombay Municipal Corporation, Bombay-1.

MUNICIPAL COMMISSIONER'S OFFICE,
Bombay 15th September 1959.

V. L. GIDWANI,
Municipal Commissioner for Greater Bombay.

GATEWAY GOSSIP

When it was known that the National Development Council had decided to maintain the status quo in regard to food policy, many people in the country were disappointed. For, it was generally expected that, in view of the indications of bold thinking in the earlier speeches of the new incumbent of the Food portfolio, there might be an attempt on the part of the Government to soft-pedal, if not altogether abandon, some of the controversial measures like State Trading in Food. By reiterating that there is no need for effecting any change in the food policy, the NDC has scotched this popular expectation. And, in his speeches after the NDC meeting, Mr Patil is generally much more emphatic than he appeared to be in his earlier utterances.

In a speech in Bombay early this week, he has given a fair indication of how he is going to tackle the vexed problem. He would have the country believe that food scarcity is a figment of the imagination. He assures us that there is enough food of every type and, what is more, there is going to be much more in the immediate future. Evidently, he is referring to the good crop that Government statistics have revealed. Now, the problem to be tackled is to convince the people that there is enough to go round. It would appear that Mr Patil is convinced that, once this confidence is restored, the remaining task will become easier of achievement. He has diagnosed the trouble as one of "crisis of confidence". He illustrates his point by drawing attention to what is happening in the country with regard to sugar. There is just a five per cent shortage in supply, and yet there is such furore, confusion and what not. The malady can be traced to the general anxiety among consumers to have the same quantity of sugar they have been accustomed to take. In the resulting scramble, the little shortage is magnified into a famine. Mr Patil says that, by simply reducing the offtake slightly, the situation can be brought under control. As regards the food situation, there is not even this shortage. Food is available in the country in adequate quantities and it is logical to assume that, by implication, Mr Patil means that the problem should be easier to tackle. His reading of the situation is that it is the distribution system that is at fault. Success will attend efforts if the distribution is managed in such a way that no one in the country will be able to say that one does not get food whenever one wants it. By implication, again, this means that what has been wrong with the food situation in the country so far is that the official policies have not been wholeheartedly implemented. As a corollary, Mr Patil is to bring to bear on the job a frame of mind which is attuned to the spirit of the food policy. Only such an inference will sensibly explain the exit of Mr Jain, the reiteration by the NDC of a status quo food policy and Mr Patil's emphasis on the streamlining of the distribution system.

It is, therefore, clear now that the new Food Minister cannot be expected to do anything sensational as he will have a charter no bigger than that of his predecessor. Perhaps, his ready subscription to a no-change food policy is a gain in the sense that one may hereafter be sure that the policies will be implemented with gusto. Mr Patil refers to State Trading in foodgrains as though it is a temporary expedient and hence need not be bothered about. He does not seem to realise that there is a sizable body of opinion in the country which firmly believes that it is State Trading that is mainly responsible for bringing about the present shortage or feeling of shortage in foodgrains.

If, as Mr Patil has concluded, it is the distribution that is all wrong, the question may well be asked, why it has become defective. Government's meddling with the distribution is, it is widely believed in the country, largely responsible for creating artificial scarcity and the resultant high prices in many parts of the country. The zonal system is not wanted by many and there seems to be a considerable volume of opinion, even among the State Governments, which is by no means convinced about the efficacy of State Trading to bring about satisfactory distribution without giving rise to further serious complications. It is even apprehended that, instead of effecting any improvement, State Trading would only make confusion worse confounded.

The basis of Mr Patil's confidence is the availability within the country of all the facilities that are required to reach self-sufficiency in food. Food production trend also encourages the hope that a sizable improvement in the situation will be witnessed in the next few years. No doubt there is an annual rise of about 2 per cent in population. But at the same time food production is also increasing at an average of five per cent.

It is, however, to be noted that the Food Minister admits that there is one more thing that is required for reaching the objective of increased food production. That is a determined human endeavour to produce more food. It is generally accepted that the crux of the food problem is how to bring about this concerted human endeavour. The question why such effort is not forthcoming at the present juncture will naturally have to be answered first.

The matter is not as simple as Mr Patil would have us believe. Very big issues are involved and we have already witnessed an influential opposition party come into being sponsored by one of the most ardent of the old-guard congressmen. The opposition to cooperative farming is, if anything, growing in the country. Whatever may be the merits of the land reform measures that are being introduced throughout the country by the State Governments, there is no gainsaying the retarding effects of these steps on food production. There is a sense of insecurity among the traditional cultivators on account of the discriminatory policies followed by the Congress Government in the name of a socialistic pattern of society. The ethics of putting a ceiling on agricultural incomes only are not satisfactorily explained. In this context of confusion and uncertainty in the rural areas of the country, one wonders how Government are going to bring about this all important "determined human effort" referred to by Mr Patil.

In the meantime, the food situation in Bombay State is by no means satisfactory. Prices are rising and people are anxiously looking to Mr Patil to devise ways and means to effect an improvement in the food supply, especially in a deficit State such as Bombay. It would appear that the State Govrenment are not very happy over the NDC decisions. Mr S. G. Kazi, the State Food Minister, who has thought it necessary to make a comprehensive statement on the food situation in the State indicating the measures taken to meet it, has expressed himself rather cautiously on the question of State Trading. He has, however, admitted that its repercussions "are likely to be serious" and has said that, while exploring the possibilities of implementing the scheme, the State Government are keeping prominently in mind the fact that Bombay is a heavily deficit State.

Mr Kazi attributes the present rise in food prices to the fact that the lean period in production is approaching. He has admitted that prices have risen between Rs 3 and Rs 14 in various parts of the State during the first six months of the current year. The trend is still upward and the State Food Minister has given as contributory factors for the hardening price levels the zonal restrictions and the general deficit position of foodgrains in the State. The State Government are doing their utmost to avert scarcity conditions from developing. Larger quantities of rice are being released to fair price shops At the same time, the Central Government have been told that larger allotments will have to be made to the State to help tide over its difficulties. In the meantime, efforts are being made to expedite the movement of allotments of wheat already made from Madhya Pradesh.

It is true that one of the main benefits of State Trading in foodgrains will be the elimination of the inordinate rise in prices during the lean season. But it is evident that the State Government are not going to adopt this apparent panacea without a thorough examination of its implications. Mr Kazi seems to be quite aware of the disturbance, at least in the initial stages, that may be caused to the distribution system. This is borne out by his admission that serious repercussions are bound to ensue with the introduction of State Trading. It is gratifying to note that Mr Kazi has taken care to make it known that the State Government are keeping an open mind on State Trading, but the threat of a fresh bout of a fruitless endeavour still remains undiminished.

S. E. RLY TENDERS

Sealed tenders are invited for (1) Tender No. CON/COS/83/H(C)/59 for supply of 26,500 Nos. T.W. Junction Boxes 5″×3″ to be impregnated with two coats of Shellac Varnish. Earnest money is Rs 475/-. Tenders will be opened on 26-10-59 at 12 noon.

(ii) Tender No. CON/COS/84/H(C)/59 for supply of 250 Nos. Control Test panel with 2D. P.D.T. Switches with covers as per I.E.W's Cata Ref. R. 157 or similar. Earnest money is Rs 500/-. Tenders will be opened on 27-10-59 at 12 noon.

Tender forms are obtainable from the office of the undermentioned (Construction Section), Garden Reach, Calcutta —23 on remittance of Rs 2/- (not refundable) per copy per tender by money order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, S. E.. Rly., Garden Reach by local firms.

Tenders should accompany the receipts for depositing the earnest money as stated above with the Rly's Chief Cashier without which the tenders are liable to be rejected. Approved contractors having a permanent deposit of Rs 1,000/- with the undermentioned are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Certificate with the tender.

BOMBAY REVIEW

Progress of Co-operation

Mr S. K. Dey, Union Minister for Community Development and Co-operation, told the Bombay State Cooperative Union that the co-operative Movement as a whole had made considerable progress. Much of this headway is to be attributed to the abiding interest taken by Government in recent years in fostering the growth of the movement. A closer look, however, will reveal that the results are far from satisfactory. It has been found that cooperative societies, although they are shown to have increased in number, are not fully serving their objective in the sense of inculcating the cooperative spirit among the members. Another unhealthy feature noticeable is the misapplication of the funds and even misappropriation. The inference that is to be drawn is that Cooperation is yet to grow deep roots in the soil. According to Mr Dey himself, one of the urgent needs of the movement is the education of the public in the principles of cooperation.

There is also a feeling in certain quarters that Government participation will not be conducive to the healthy growth of cooperation. On this question, Government are generally guided by the recommenrations of the Rural Credit Survey Committee. The official stand has recently been explained by Mr H. V. R. Iengar, Governor of Reserve Bank. Speaking in Poona, Mr Iengar has pointed out that, at the present juncture in our country, active participation of Government in the cooperative movement is inevitable if it is not to stagnate.

No great emphasis on non-official endeavour can be placed under the prevailing conditions in the country and the Reserve Bank Governor finds the controversy artificial because, for one thing, cooperative societies and even cooperative banks cannot function effectively entirely on their own without official assistance and, for another, officials of the cooperative department are functioning under the orders of popularly elected governments. This does not mean that the movement is to be permanently under the tutelage of Government. Mr Iengar thinks that, in the course of the next 15 years or so, the movement would have become so strong as to stand on its own legs. The cooperative department will also have fulfilled its purpose then and the movement can completely be non-official. In the meantime, Government will and should continue their efforts at fostering the growth of the movement. Mr Iengar has disclosed that Government will soon appoint an expert committee to advice them on the future pattern of cooperative activities in the country.

✱

Future of Bombay

Bifurcation of Bombay State is now considered a settled matter. But reactions to the news, however, are not uniform. They range from jubilation to depression. A large majority welcomes it in a general way in that the acceptance of the principle of bifurcation will make agitations for unilingual states purposeless. The Samiti and Parishad naturally claim success for the cause they have been espousing vehemently. There is a section of the people, which like Prime Minister Nehru, honestly thinks that bilingual Bombay, which has been built up into a strong economic unit by dint of hard work of the State Government, should be left undisturbed. Yet another group there is, which avers that the best solution had been the one indicated by Mr C. Rajagopalachari. It may be recalled that Rajaji had said that the whole question of States Reorganisation should be put in cold storage for twenty years. The proper time for consideration of the reorganisation of States on a linguistic basis would be when the country as a whole has made sizable progress in the economic, social and other spheres.

Evidently, the Congress Party has at long last decided to bow public opinion. But it is idle to think that bifurcation can be achieved overnight. A wide variety of problems has to be solved satisfactorily before the actual work of division can be undertaken. Perhaps an immediate problem to tackle will be that of dealing with the claim for a separate Vidharbha State. The demand has already taken a violent turn in Akola. There is then the question of the future of Bombay City. The Bombay Regional Congress Committee has pointed out in a statement that, while congressmen in the State will abide by the decisions of the Central organisation of the Congress Party, they are anxious that the cosmopolitan character of the city is guaranteed in any future set up.

✱

Corporate Profits

Spokesmen of private enterprise have been continuously drawing attention to the growing difficulties of capital formation but they cannot be said to have gained a sympathetic hearing from Government. Successive Finance Ministers have made it their special business to add to the tax burden of the corporate sector in the name of the Five-Year Plan. The appeals for a reduction of the tax incidence on the private sector have generally met with scant attention and it has become the fashion with Finance Ministers to enter into a philosophical vein when businessmen are taking immense pains to show the adverse effects of the taxation policies on the working of the corporate sector. Apparently, the powers-that-be are determined not be moved by the argument that a slow-down in the capital formation in the private sector will also seriously jeopardise the progress of the Five-Year Plans which are so dear to them. The inference is inescapable that, while Government, are themselves become big entrepreneurs in that they have big enterprises under their care in the Public Sector, may not be unaware of the hardships that have to be faced by the corporate sector, they have perforce to act against their better judgment due to exigencies of politics.

It is not as though the disquieting trends in corporate working cannot be verified. The Reserve Bank of India conducts surveys of the finances of joint-stock companies and the results of these surveys are available to the public. The surveys for the three years 1955, 1956 and 1957, are now available, the latest, that is for the year 1957, having been published in the August issue of the Reserve Bank Bulletin. The latest study reviews, as for 1955 and 1956, the finances of 1,001 Indian joint-stock companies during 1957. As the companies included in this study comprise approximately three-fourths of the sectors covered and are common for all the three years, the data are strictly comparable. The main findings are that the profitability of equity capital in 1957 has further declined at that capital formation has been static. The profitability of equity capital of the 1,001 companies as measured by the percentage of profits after tax to net worth, which had declined from 9 per cent in 1955 to 8.7 per cent in 1956, dropped further to 6.2 per cent in 1957. The average rate of dividend on ordinary shares, which had risen from 9.1 per cent in 1955 to 9.5 per cent in 1956, declined to 8.7 per cent in 1957. The ratio of dividends to net worth also declined from 5.2 per cent in 1956 to 4.9 per cent.

There is nothing to show that 1958 has been a better year than 1957 so far as the corporate sector is concerned. The main tax burdens have remained, and, if anything, due to the stringency of foreign exchange and the consequent paucity of raw materials, profits may be found to be further downward. It is true that, latterly, industrial equities have become steady, encouraged by the improvement in the investment climate. But it is doubtful if the corporate sector's profits will be able to show any sizable improvement so long as there is not a considerable easing in the tax burden now being borne by it.

✱

Small Savings

Small Savings in a developing economy with a large population have a double function, paying for part of the expenditure and curbing inflation which is inherent in large-scale spending on development projects. It is clear, therefore, that Small Savings can play an important role at the present juncture in India. There is no gainsaying the realisation of the potentialities of Small Savings, but this is one of the departments in which the attainment of targets is still to become a reality. Although the overall picture is rather bleak, there are bright patches here and there. Perhaps the brightest patch is represented by the splendid record of the Small Savings drive in Bombay State.

GATEWAY NOTES

The State has collected more than Rs 6.75 crores in small savings during the first four months of the current financial year. This is roughly Rs 2 crores higher than the collections during the corresponding period of last year. In the month of July alone, the collections have amounted to Rs 1.92 crores. The all-India total for the first four months is Rs 14.54 crores, an amount Rs 2 crores less than that for the corresponding period of last year. Bombay is at the head of four States which have exceeded the Rs. 1 crore mark in small savings upto July.

While it is true that Bombay's excellent record is largely to be attributed to the zeal with which the drive is being organised by the Chief Minister down to the agents in the villages, there is no reason why comparable results should not be achieved in other States also. In view of the mounting threat of inflation as a result of sizable increase in Government spending and the continuous spiralling of wages, it is imperative that part of the increased spending capacity of the people is directed toward productive channels, and small savings are perhaps the most effective way of bringing this about.

✱

Shifting of Textile Mills

The report that some textile mills in Bombay City are contemplating moving into less congested regions of the State will be welcomed both by the State Government and the citizens of Bombay. It is an extremely desirable thing to spare the urban areas the problems of health and housing that the siting of large factories in them will inevitably raise. If appeals to entrepreneurs to set up their factories in the rural areas have not been of much avail, it is largely because some of the essential pre-requisites for the establishment of factories have been readily available only in the urban areas. Thanks to the emphasis that is being laid on rural rehabilitation and the rapid development of transport and communication in the country, entrepreneurs can now conveniently set up their factories in the interior. The need for an even dispersal of industries among the various parts of the State has been long recognised, and one of the main objectives of the Master Plan for industrialisation of the State that is being drawn up by the State Government is the siting of new industries at convenient places in the industrially backward regions of the State. The proposal to shift some of the textile mills from the city will, therefore, be doubly welcome to the State Government. It is but natural, however, that sanction for such shifting will depend on the assurance that the shifting is accomplished without loss of employment to the present complement of workers in the mills which are shifted to their new location in the interior.

PUBLIC DEPARTMENT

WORLD OF COTTON

Prices Flare Up to New Peak Level

BOTH spot and the futures sections of the Bombay Cotton market have remained in a buoyant state with prices touching new higher levels for the week. The sharp rise of Rs 30 in spot and about Rs 25 in futures rates within a fortnight of the commencement of the new season has caused concern to the authorities. It is feared that, if the situation worsens, the Government of India will be obliged to enforce control over the distribution of indigenous cotton.

Basically, the cotton position is bullish and the reports of damage to the crop in several growing areas have, no doubt, fanned bullish fervour. Crop conditions in the Punjab, which were considered satisfactory a few days ago, are stated to be not so encouraging. The position in other important tracts is not bad; but the unseasonal rains have induced some uncertainty about the crop outlook.

It is very difficult to have any precise ideas about the crop at this stage, though the preliminary estimate is placed around 48 lakh bales. It is felt that the Government may also study the feasibility of liberalising imports to augment the supply of cotton in the country. The current import target is only six lakh bales.

The carryover of Indian cotton, as on the 1st September 1959, is placed at 17.85 lakh bales as against 20.35 lakh bales brought in on the 1st September, 1958. Carryover of foreign cotton, as on the 1st September 1959, is estimated around 1.80 lakh bales as against 1.56 lakh bales a year ago. Apart from crop conditions, the main driving force for the market is the excellent state of the yarn as well as cloth market following increased exports as well as enlarged domestic offtake.

×

FUTURES MARKET:

Naturally, the futures market experienced boomlike conditions. Operators from Akola and Bombay were reported to be buying heavily in a rising market. Despite the emergence of selling pressure, the Jharilla March contract shot up to Rs 719 from Rs 703 quoted toward the week-end.

×

SPOT MARKET:

The Spot section witnessed cheerful conditions. Many mills appeared eager buyers of the new crop for November-December deliveries on fears of an acute shortage of cotton in October and November. The daily turnover showed signs of broadening demand for all varieties, particularly for Surat, Kalyan and Jharilla growths which crossed the ceiling levels. For instance, mills are reported to have bought Khandesh 27|32" at Rs 885 against the ceiling of Rs 840 per candy; Berar 13|16" fine at Rs 860 against Rs 840; and Vijay 13|16" at Rs 1,020 against Rs 945. Digvijay is placed at Rs 80 above the ceiling level of Rs 965 and Kalyan 24|32" at Rs 20 above the ceiling level of Rs 780 per candy.

×

IMPORT FRONT:

Listless conditions have prevailed on the import front. Small business is reported in top quality Gezira Sudans, subject to licences. Some demand is also in evidence for small quantities of Egyptian Giza-30 and Menoufi. Mills have, however, not shown much interest in East African and US cottons. Mills are now awaiting the procedural details of the quantity of 40,000 bales out of the import quota of 1.40 lakh bales recently sanctioned.

Actual arrivals of foreign cotton during the 1958-59 season have amounted to only 438,948 bales as against the licensed quantity of 536,688 bales. In the previous season, actual imports came to 397,167 bales as against the licensed quantity of 309,137 bales.

The following figures show the quantity licensed for import and actual arrivals of foreign cotton into India in the season 1958-59 (1st September 1958 to 31st August 1959):—

Variety	Quantity Licensed	*Actual Arrivals
Sterling Area:		
Egyptian ..	75,940	56,740
E. African ..	213,080	184,530
Sudan ..	136,439	110,011
Peru & others	14,253	4,170
	439,712	355,460
Dollar Area:		
USA ..	96,976	83,488
Total ..	536,688	438,948

*Arrivals include quantity licensed in the previous season.

In the season 1957-58, actual imports of Egyptian cotton amounted to 68,137 bales; East African 111,917 bales; Sudan 73,638 bales and American 142,131 bales.

×

EXPORT FRONT:

Despite poor export enquiries, Bengal Deshi has maintained a firmer tendency, superfine and fine qualities being placed at Rs 800 and Rs 760 per candy against the official ceiling levels of Rs 685 and Rs 665 respectively. The business put through in Bengal Deshi is, however, limited.

Exports of Indian cotton to foreign countries for the 1958-59 season are placed around 340,000 bales as against 235,000 bales in the previous season. Japan has absorbed about 250,000 bales as against 170,000 bales. Exports to Hong Kong are about 40,000 bales against 18,500 bales. UK imports are about 8,000 bales against 14,000 bales, while the Continental countries have taken about 25,000 bales against 22,000 bales.

✱

US COTTON CROP:

The Crop Reporting Board of the United States Department of Agriculture, in its third crop report of the 1959 season, estimates production of cotton, as on the 1st September, at 14,678,000 bales (of 500 lbs each). This compares with last month's estimate of 14,815,000 bales and last season's final output of 11,512,000 bales.

Yield per acre is estimated at 470 lbs against 474 in August and last season's final yield of 466 lbs. Ginnings, prior to September 1, are put at 1,046,000 running bales as compared with 1,009,000 bales at this time last year. The next crop report will be issued on the 8th October.

BOMBAY REVIEW

Over 777 Offices and Enlarged Service

Perhaps you would like to know how rapidly the State Bank of India is expanding. On 1st July 1955, when the Imperial Bank of India was reconstituted into the State Bank of India, the Bank had only 243 branches. By August 1959, it had 555 fullfledged branches in urban and semi-urban areas. The rate of growth is now about 100 branches a year. The Bank has also 238 sub-offices.

With a net-work of over 777 offices spread all over the country and many more to follow, the State Bank is particularly suited to handle your remittance and collection business.

Thousands of account holders have benefited by the wide range of services offered by the Bank. You too can take advantage of the Bank's services.

Why not contact the nearest Agent of the Bank to talk things over?

BOMBAY REVIEW

Bullion Market Reacts

THE recent boom in the Bombay Bullion market appears to have partially subsided. The setback in prices is attributed to the absence of support at the recent high levels. The sustained weakness of the spot section has also aided the easy tendency in prices.

Although the smuggling activity has tended to decline generally, the recent high prices of Gold have attracted a steady flow from upcountry centres in the face of a slack demand. Consequently, stocks are reported to have risen from 25,000 tolas about ten weeks ago to nearly 58,000 tolas. Ready rates moved between Rs 122 and Rs 122.69, to finish the week at Rs 122.31. The Sovereign market is ruling quiet with the rate idling around Rs 78.25.

Also, the offtake of Silver has considerably fallen short of arrivals for several days past. With the unusually high level of prices attracting a larger inflow, the stock position in respect of the white metal has improved significantly. The latest estimates of the all-India supplies are placed around 2,280 bars. The stock at the end of the last season in June was as low as 600 to 780 bars. Ready rates moved between Rs 203.12 and Rs 203.69, to finish at Rs 203.25.

Oils and Oilseeds

Prices on the Bombay Oilseeds Exchange displayed generally a firmer tendency, thanks to reports of heavy rains in the producing regions, firmness in the ready section and higher advices from the cotton market.

The market, in general, was impressed by the recent better turn in the outlook for exports of groundnut oil, oilcakes and HPS groundnut. The extension of the export promotion scheme for groundnut oil resulted in a revival of overseas interest. With the result, exporters were able to conclude substantial business in Oil. Deals with Burma were placed at Rs 1,580 per ton, although the rate declined to Rs 1,530. On the other hand, the UK rate moved from £107 to £110 per ton. There were also hopes of business with the Communist countries.

The impressive revival in the export trade was matched by a sustained paucity of domestic supplies due to keen buying by the millers, who were encouraged by the steady overseas demand for groundnut Oilcake. Reports of deterioration of quality in respect of the Pollachi crop strengthened the belief that the supply position might continue to be tight till the major crop started moving in November. Groundnut Bold quality was quoted at Rs 39.87 and Groundnut Oil at Rs 20.12.

Conditions in the Castor section remained generally steady. Although the UK prices of castor oil were a shade better at £112 for the BSS quality in bulk, business continued to be small and sporadic. Some shippers were reported to have done business in commercial oil with the USA at 13 cents per lb; but the quantity involved was reported to be small to merit an immediate change in the position. It was, however, felt that the USA would sooner or later turn to India in view of the lower Brazilian crop. Castor ready was quoted at Rs 30.50 and Castor Oil, commercial quality, at Rs 15.75.

In the Linseed section, prices, after showing a firmer tendency early in the week, displayed a slightly reactionary tendency toward the close. The initial firmness was due to the improved prospects for exports of linseed oil and hopes of fresh enquiries from Australia. At the close, however, fears were entertained with regard to the delivery of spot goods against the maturing contract. Linseed ready was quoted at Rs 32.50 and Linseed Oil at Rs 16.37.

GATEWAY MARKETS

Non-Ferrous Metals

A further advance in Zinc prices was the main feature of trading in the Non-Ferrous Metal market. Zinc, after advancing to Rs 109.50 per cwt due to scarcity of sellers, reacted to Rs 108 toward the close In general, ready material has become scarce, as it has now been cornered by a syndicate of speculators, who hope to push up the market in the near future despite the expectation that the release of the imported zinc might be able to bring down the prices. But for the reports that the Bombay Metal Exchange was going to be consulted regarding the distribution of imported material and the Commerce Minister's assurance that small-scale industries would also be given licences, Zinc would have maintained the high level till the close of the wek. e

There was some activity in the Tin section, the rate ruling firm at Rs 145.50 per quarter. This activity was influenced by reports that the import policy might be deferred by three months.

Copper Scrap appeared to maintain its position around Rs 223 per cwt. Due to the absence of demand in the ready section, Lead was dormant with the rate hovering narrowly around Rs 80 per cwt.

Savings Survey in Delhi

THE tentative findings of a recent survey covering the urban population of Delhi were presented by Dr P. S. Lokanathan, Director-General of the National Council of Applied Economic Research, at a press conference here last week. A stratified random sample of 600 households scattered over the entire region of Old and New Delhi has been selected for this purpose. The weighted non-response rate of the survey has been found to be about 7 per cent which is much lower than the rate of non-response obtained in other countries. The 600 households selected for this survey are representative of 16 lakhs of population living in authorised residential buildings in Old and New Delhi. The elements of population excluded are (a) unauthorised hut dwellers, (b) homeless population and pavement dwellers, (c) the institutional population living in hostels and hospitals, hotels, prisons, etc. (d) foreigners living in Delhi whose period of stay is less than 10 years and (e) transient population. Further, households in Delhi with annual incomes exceeding Rs 25,000 have been omitted from this study —but not from the field survey, it appears—largely due to statistical reasons. The financial data obtained from this survey relate to the calendar year 1958.

The average level of saving per household in Delhi showed marked variation both between and within different income groups. However, income was found to be the most important determinant of saving and, by and large, households with high incomes in Delhi saved more absolutely and in relation to their income. The average net saving per household in this city worked out to Rs 380 or about 11 per cent of the average gross income of a household. (However, when that section of the population with incomes exceeding Rs 25,000 was taken into consideration, the average net saving per household was found to be about 13.6 per cent.)

Households in Delhi up to an annual income level of Rs 3,000 were found to dissave on the average. The propensity to save beyond this income level increased with increasing incomes and the average saving propensity of the highest income class (annual income Rs 10,000-Rs 25,000) was found to be about 30 per cent. This class, constituting about 5 per cent of total households in Delhi, accounted for as much as 64 per cent of the total aggregate saving of Delhi households. (However, when that section of the Delhi population with incomes exceeding Rs 25,000 was taken into account, the share of the highest income class (Rs 10,000 and above) in the aggregate savings of Delhi households was found to be 77 per cent.)

Occupation-wise, households belonging to the managerial, executive and supervisory class saved the highest absolute amount (about Rs 900 per household per annum). An average household belonging to the self-employed business class also saved as much as Rs 700 and this class of households in Delhi seems to display a higher marginal propensity to save in comparison with other occupational groups.

An international comparison (based on multiples of mean income) of saving propensities revealed that an average household in Delhi saved a larger fraction of its income in comparison with the UK (1951-52) and as large a fraction of its income as its counterpart in the USA (1950).

Life insurance was found to be the most frequent form of saving for Delhi households. Nearly a third of households saved by paying life insurance premiums and their mean payment amounted to about Rs 370 per household. Nearly 3.5 per cent of the total aggregate income of Delhi households was found to be saved through payments to life insurance.

About 28 per cent of households in Delhi saved by contributing to provident funds and their mean contribution was found to be Rs 380 per household.

Taking together all households in Delhi, nearly 44 per cent saved contractually (that is, either contributed to life insurance or provident fund or both) and their mean saving by this form of saving amounted to above Rs 520. Nearly 6.6 per cent of the total aggregate income of Delhi households was found to be saved contractually.

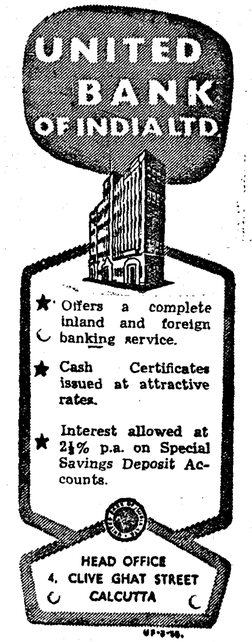
Besides contractual saving, retained profits in partnerships and sole proprietorsips was also found to be an important form of saving. Nearly 10 per cent of households in Delhi were found to save by retaining a part of their profit for actual or potential reinvestment in their business while 3 per cent were found to dissave by incurring business losses. However, taking into account both profit and loss, it was found that nearly 6 per cent of the total aggregate income of Delhi got invested in business.

Purchase of National Savings Certificates does not seem to be an important form of saving for Delhi households. Only 6 per cent of households in this city were found to save by purchasing National Savings Certificates in the year 1958 while about 3 per cent dissaved by encashing these certificates in the same year. The net result of these transactions, although positive, is not significant enough (only a little less than 1 per cent of the total aggregate income was found to be invested in these certificates) to count these certificates as an important form of saving for Delhi households.

As regards the net absorption of gold by households in Delhi, it was found that the value of additions to gold stock by 6 per cent of households in Delhi very nearly matched the value of gold sale by 4 per cent of households. Thus, for Delhi as a whole, there was very little net saving resulting in accumulation of gold.

From an inquiry into the saving-spending preferences of the Delhi households, it emerged that nearly three quarters of households in the lowest income class and about 90 per cent in the middle and the highest income classes preferred to save rather than spend any extra money available after meeting "normal" household expenses. This motivation to save was found to be positively correlated with the level of education in Delhi households.

Up to an income level of Rs 10,000, property holdings comprising residential houses, commercial buildings and landed property constituted an important form of wealth for Delhi households whereas, beyond this income level, business assets held by households appear to account for a greater proportion of wealth.



Nearly 45 per cent of households in Delhi had some liquid assets comprising one or more of current accounts, savings accounts in banks and post offices and National Savings Certificates. Gold and jewellery holdings were found to constitute 13 per cent of the total value of all assets for Delhi households. The value of gold stock accounted for 18 per cent of the total value of all assets for the lowest income class, 13 per cent for the middle income class and only 7 per cent for the highest income class.

On the basis of the information obtained regarding the propensity to save of different income classes and some knowledge of the percentage distribution of households in different income groups for the entire Urban India (estimated on the basis of various urbanisation and other survey reports), it appears that the present level of urban saving in India may be assumed to be of the order of Rs 300 crores. This implies an average propensity to save of 8 per cent of gross income for the urban population as a whole.

DELHI REVIEW

There are some reasons to believe that this figure is an underestimate, because (1) the real income of similarly placed households in other urban areas (that is, households with similar income) will be higher as compared to Delhi, (2) certain high income households have been excluded from the study in Delhi and (3) it might be possible that gold purchases might have been under-reported. On the contrary, it may be argued that the above-mentioned figure is an over-estimate for the reasons that (1) a significant proportion of low-income households have been excluded from the Delhi study and (2) business investments might be overstated. Although the net effect of the abovementioned factors cannot be evaluated, the figure of Rs 300 crores is likely to be of the right order of magnitude in the opinion of the National Council.

An interesting finding which is a by-product of the Delhi savings survey may also be finally mentioned. This finding is that nearly 40 per cent of households approved of dowry-giving while 60 per cent disapproved of it. It was also found that poor people in Delhi favoured dowry-giving while wealthy people were against this institution. This is not surprising.

DELHI REVIEW

State Trading Corporation

The debate in the Lok Sabha of the annual report of the State Trading Corporation disclosed divergences of views in regard to the role played by the Corporation. Among the critics were Congress members also who condemned what appeared to them to be the enormous profits made by the Corporation at the expense of the consumer. The chief critic of the Corporation was Mr N. G. Ranga, who accused the Corporation of discriminating against the small traders. Mr Ranga urged the setting up of a committee to look into the working of the Corporation. Referring to the profits earned by the Corporation, which was advanced as proof of the profitable working of the Corporation by Mr Nityananda Kanungo, the Union Minister for Commerce Mr Ranga said that such profits formed an unfair test of the success of the Corporation which should be judged rather by its ability to face the competition from the private sector.

A Congress member suggested that the STC should confine itself to trading with Communist countries since its dealings with non-Communist countries had not been satisfactory. The fall in manganese exports after the State Trading Corporation took charge of this item of export was an unmistakable sign of failure of the Corporation in its dealings with non-Communist countries. However, the Commerce Minister would not accept this fall to be due to the STC's handling of the manganese export. On the contrary, it was pointed out that it was because of the STC that the export trade of manganese ore did not register a greater decline than was witnessed. The fall in the manganese export trade was traced to unfavourable trends in the world market and the competition offered by new countries, particularly Soviet Russia. Mr Kanungo went a step a further and pointed out that the closure of some mines was not the result of the policy of the STC but the result of the inefficiency in the working of the mines.

Mr Kanungo turned down the suggestion made by some of the leftist members for extending the sphere of the STC to include the entire export and import trade of the country. This, the Minister pointed out, would go against the original intentions which confined the Corporation to a supplementary role to that of private trade.

Mr Kanungo owned that the STC suffered from several defects; but, at the same time, he assured members that these were being gradually removed. It was an important achievement of the STC that it had been able to ensure that certain raw materials which were not easily available were distributed at fixed prices.

*

Employees State Insurance

Severe criticism marked the debate in the Lok Sabha on the working of the Employees State Insurance Corporation. With the exception of a solitary voice raised in praise of the working of the Corporation, even Congress members were inclined to speak rather critically.

The failure of the Corporation to provide even the minimum of medical facilities to industrial workers gave the members the most vulnerable point for attack. Members went to the extent of demanding an explanation for the delay in the construction of hospitals for the insured workers at least in important industrial towns. The disparity between the contribution made by the workers and the benefits provided to them was another important point raised in criticism of the Corporation. The Communist members put up a plea for raising the contribution of employers to 5 per cent of the total wage bill. This, it was pointed out, was necessary for sharing the burden equitably since, at present, the major share in implementing the scheme had fallen on the workers. Instances of employers seeking to divert the workers' contributions to purposes other than the provision of benefits to workers were also disclosed. The delay in extending benefits of the scheme to the families of workers and the present low coverage of the scheme, which extends to only about 15 lakhs of workers against a registered labour population of 1½ crores, were the other points of criticism against the working of the Corporation.

In the face of such unmitigated criticism by members belonging to all the parties, Mr Nanda sought to salvage Government's prestige by disowning Central responsibility for implementing the scheme. The responsibility rested with the Corporation while the State Governments were responsible for administering medical benefits. However, he was sure that steps had been taken to ensure coordination between the Corporation and the State Governments.

The criticism was not completely barren of results, and Mr Nanda gave an assurance that the entire reserve of Rs 14 crores at the disposal of the Corporation would be utilized for constructing new hospitals by the end of the Second Plan.

*

Broadcasting under Third Plan

With the Second Plan having barely two years to run its full course, and with discussion on the Third Plan having already had its start, the Ministry of Information and Broadcasting has begun to think in terms of its tasks under the Third Plan. The Ministry had indicated in rather broad terms the scope of its activities under the Third Plan, and had made certain proposals though only in a general way which give an idea of its priorities under the Third Plan.

These proposals, which are now under the consideration of the Ministry, envisage the installation of a permanent exhibition at Delhi, expansion of wireless broadcasting and more colour documentaries. For the reason that broadcasting had already been developed under the First and Second Plans on a fairly considerable scale, the Ministry would seem to favour concentration on visual publicity through films and exhibitions. This is also in tune with the growing interest evinced by the public in exhibitions and films. The Ministry is keen on providing even the remote corners of the country's villages with these facilities and expects to do this by organising mobile exhibitions in motor vans and railway coaches. However, the prime requisite for progress to be made in the extension of such exhibitions is the setting up of proper organisational apparatus in every State. The proposals now under consideration provide for this as also for expansion of State organisations for such exhibitions.

The Ministry is also not wrong in the emphasis it has laid on films and documentaries since films have become the most popular medium of mass entertainment and education. However, it is important to bear in mind the need for presenting such films and documentaries through the regional languages. The Ministry claims that documentaries are already being produced in all the languages. This, however, does not appear to be true in the case of newsreels. Further, in view of the growing use and popularity of films it should also be found possible to provide for the setting up of a raw film factory. This would obviate dependence on imports for raw films and save foreign exchange. Processing facilities have also to be developed within the country itself.

Expansion in the field of broadcasting will be not so much in the form of increase in the broadcasting stations as in the facilities that would be provided for increased listening by provision of special transmitters capable of being tuned in by cheap medium wave sets. The reduction in the license fee for radio now under the consideration of the Ministry would be very much welcomed.

NORTH INDIAN NOTES

Small-Scale Industries

A seven-member Japanese delegation was in the capital discussing measures with the spokesmen of the Government of India for Indo-Japanese collaboration in the development of small-scale and medium industries. As a result of the discussions, Japanese aid has been assured for the development of small-scale industries. While the details of the agreement arrived at between the delegation and the Government of India are not known, it has been disclosed that Japan would provide credit facilities to an extent of Rs 25 crores. Besides, Japan has also undertaken to given technical training for personnel needed for the development of the five industrial estates proposed to be established in the country. It is known that arrangements have already been made for sending 250 young men from India for training in various industries for periods from three to six months. The five industrial estates to be established would, according to one of the members of the delegation, deal with industries relating to metals, textiles plastics and chemicals.

The visit of the delegation and the agreement signed provide a good augury for the development of small industries under the Third Plan which, as is now disclosed, allocates nearly Rs 600 crores for the small-scale sector against Rs 200 crores allotted under the Second Plan. Japan is one of the few countries which has attained a fairly high level of industrialisation on the basis of the development of small industries and nothing could be more desirable for India when conditions are more or less similar to those of Japan, than Japanese help in the form of credit and technical know-how. An official Japanese team has already visited the country to explore the scope for the development of small industries, and its report, which is yet to be submitted, should contain much that could be useful in the setting up of small-scale industries.

It is the aim under the Third Plan to place the small-scale industries on a self-reliant basis and, accordingly, provision for subsidy is expected to be considerably reduced. Whether the development of small-scale industries could be sustained by withdrawing subsidy remains to be seen. A phased and gradual elimination of subsidy might obviate any untoward effect that might follow a forthright withdrawal. At the same time, guarantee of capital and finance as as also of technical service and assistance would make for smooth progress and enable the small-scale sector to stand on its own legs.

NORTH INDIAN MARKETS

Foodgrains Firm Up

THE market for Foodgrains, which had been ruling quiet during the past many weeks, has developed a firmer tendency, being influenced by two main factors. First, the decision of the National Development Council to maintain the status quo in respect of the country's food policy had a bullish effect. Secondly, the reports of near-drought conditions from many parts of Uttar Pradesh also contributed to the sudden change in market sentiment. The remarks made by the new Food Minister have given a rise to expectations that State Trading in foodgrains will be abandoned and restrictions on inter-zonal movements abolished.

Grain dealers, on their part, are inclined to feel that there will not be any major fall in prices, for at least a month, as the future trend of prices will depend essentially on the demand and supply position. They also feel that the chances of a fall in prices will depend on the ability of the Government to raise the quantity distributed on ration cards at present.

In Uttar Pradesh, the scheme of State Trading in grains is stated to have failed with the farmers being unwilling to bring supplies to the market, as they are forced to sell 50 per cent of the stocks at relatively low controlled prices, which range from Rs 13 to Rs 15 per maund. It is stated that the consumers are often obliged to turn to villages for their requirements and pay as much as Rs 19 per maunds.

In the Hapur market, Wheat prices are quoted at Rs 18 a maund for the average quality and Rs 19.50 for the farm varity. The Rice market continues to rule steady on reports of heavy damage to the standing paddy crop. Gram has registered good gains on firmer advices from the Punjab and Madras. Arrivals of new Maize are still poor, while Barley and Bejhar have also tended to move up in sympathy with other grains. Peas has recorded fractional gains on better outside demand.

*

Sugar

Conditions in the Sugar market have remained steady, thanks to the shortage of supplies. Demand is fairly good and there are indications that the problem of shortage of sugar may grow more acute in the coming months preceding the commencement of the new season. The rate for the commodity is quoted at Rs 124 per bag.

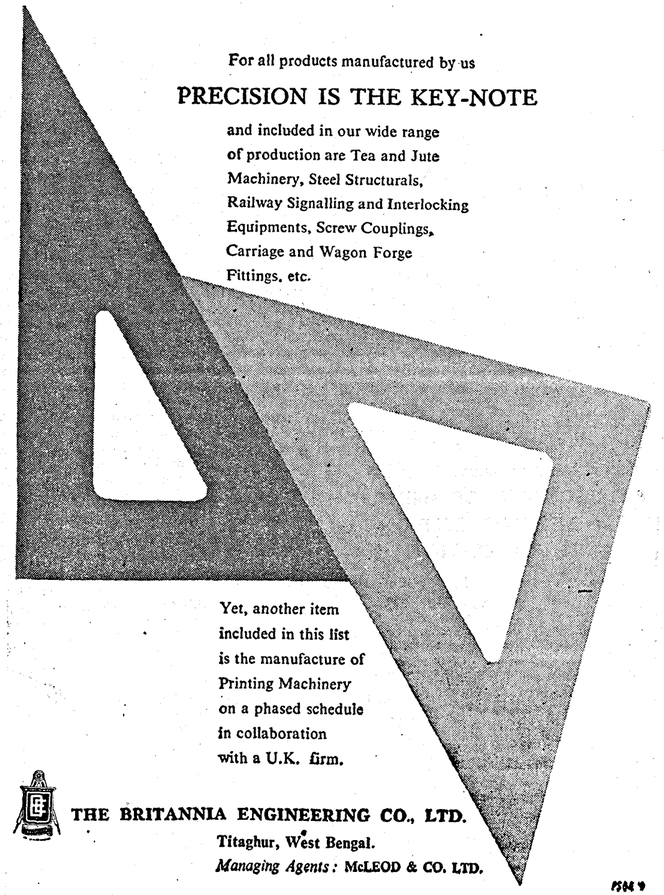
It is agreed that the monthly release of sugar, produced by the four States—Andhra, Madras, Mysore and Kerala—should be equitably distributed amongst these States on the basis of the past consumption figure. For easing the situation in Kerala, the Government of India have also made available 1,500 tons of sugar from factories in Uttar Pradesh for distribution in that State under arrangements made by the State Government.

In London, sugar prices have remained firm on the expected deficiencies in the sugar beet crop in Northern Europe. Indications are that West Germany may not produce more than 1.3 million tons this year against 1.7 million tons in 1958. France is expected to require 300,000 tons to meet its deficiency in sugar beet and tenders for sugar are also expected from Eastern Europe. There is strong speculative support for sugar in the New York market.

*

Khandsari

The Khandsari market is also ruling steady following good demand. Following export ban from Uttar Pradesh, about 10 lakh maunds of khandsari are lying unsold in the State and producers are naturally anxious to sell stocks before the advent of the new season. The State Government have asked interested persons not to install new crushers for manufacture of khandsari in mill areas, as the entire matter relating to the control or sugarcane supplies is under the Government's consideration. Rates are moving between Rs 25 and Rs 40 per maund, according to quality.



*

Shellac

Conditions in the Calcutta Shellac market remained practically unchanged. Pure TN quality is quoted at Rs 77 per maund with sellers at Rs 79. Shipments, during the current month until the 8th, were 4,564 packages comprising 1,501 packages of shellac; (4,895) 2,258 packages of seedlac (7,218); 15 packages of buttonlac (120) and 790 packages of other varieties (725). Figures shown within brackets were the shipments made in the corresponding period of August.

The decision of the Indian Lac Exporters' Association to consider fixing maximum selling prices for shellac is timely. The move will help bring stability to the trade, as prices have increased substantially during the past couple of months. In a number of grades, export prices are at present 15 to 20 per cent higher than minimum export prices. If the trade is stabilised by price regulation moves, foreign enquiry can be well maintained.

DELHI REVIEW

MADRAS REVIEW

Madras and the South Food Zone

THE PENINSULA

FOOD is the ubiquitous problem and, in different ways and with varying success, the State Government's have been wrestling with it. Taken as a whole, the situation reveals an artificial feature in that, notwithstanding what is claimed to be record foodgrain production at 73 million tons, prices have been persistently and defiantly on the upgrade. None of the regulatory measures which the Government had taken was of much avail in bringing down prices.

The Madras State also went through the vicissitudes of abnormal prices and uncertain supplies. The situation in the State resembles the general picture of continuing high prices in the midst of sufficiency of production. Beyond this, however, the analogy breaks down. For, while there is baffling ignorance about the real causes for the continuing high prices for foodgrains elsewhere, the high prices ruling in Madras are explainable in terms of the impact wrought on supplies by the working of the South Food Zone, and, more precisely, in terms of the large-scale diversion of rice that had taken place to neighbouring Kerala. In fact, this eventuality had been forecast at the very formation of the South Food Zone by the Madras Government, and even at that time there was some hitch about admitting Kerala into the Zone. But, Central pressure prevailed against the reluctance of the Madras Government, and the South Food Zone was inaugurated.

The Madras Government have not changed their views about the sacrifice which the maintenance of the South Food Zone would involve to its own interests, and therefore had been pressing hard for its abolition. The State Government's view about the futility of the South Food Zone from the point of view of keeping foodgrain prices under check and maintaining reasonable supplies, is sought to be substantiated in the white paper recently placed in the Legislative Assembly. The figures for production, consumption prices and movement of foodgrains given in the white paper would seem to bear out the conclusion regarding the impact of the working of the South Food Zone on the prices and supplies position in the State.

Though deficit in its production at the time of the separation of Andhra Pradesh, Madras State had, consequent on the implementation of development schemes intended to raise foodgrains output, and the States reorganisation which involved the separation of Malabar, a perennially deficit area, and the acquisition of Kanyakumari district, a paddy growing area, emerged as a surplus area from the point of view of foodgrain production. This is reflected in the increase in production from 46.79 lakh tnos in 1956-57 to 50.21 million tons in 1958-59. According to the white paper, this represents a surplus to the extent of nearly 1.5 lakh tons actual consumption being estimated at 30.42 lakh tons. Such level of production should normally have given little cause for worry about any possible rise in prices except for such rise that may become inevitable in the context of the general trend toward higher prices. However, the actual increase in Madras was greater than could be explained in terms of the general trend and the reason given in the white paper is the large-scale diversion of supplies to Kerala. The actual supplies that moved to Kerala from Madras are estimated at between 2 and 2½ lakh tons for the period 1954-55 to 1957-58. There has been a decline in 1958-59 attributable to the ban imposed by the Madras Government on the movement of paddy. According to the white paper it is the excess demand from Kerala over and above the surplus in the supplies that is responsible for high prices The difference in the prices as between Kerala and Madras, estimated at about 4 to 5 rupees, also worked to the advantage of Kerala in drawing off supplies outside of normal channels. The calculated delay in introducing procurement in the Kerala State, even though such procurement had been enforced in Madras State three months earlier, caused further depletion in the supplies of Madras.

Such a situation, the white paper explains, entailed the introduction of measures to check unwarranted movement of foodgrains as also to keep prices reasonable to the consumer. These included the Madras Rice and Paddy Requisitioning Order 1957, enabling the officers of the Government to requisition stocks of paddy and rice; the Madras Foodgrains Dealers' Licensing Order, providing for the licensing of all dealers transacting business in more than 50 maunds of foodgrains at a time, and, finally, the Rice and Paddy (Madras) Price Control Order. The enforcement of the last-mentioned measure was the signal for larger diversions to Kerala since there was no similar restriction on prices in Kerala. This situation was sought to be met by banning the movement of paddy to Kerala.

The white paper explains the difficulties in enforcing the procurement policy in the face of continuing diversions to Kerala. That the Government should have been able to procure about 113,914 tons of rice against the target of 2 lakh tons is itself creditable. The success would have been greater but for the unrestricted movement to Kerala. The ban on the movement of paddy had not been very effective in preventing diversion to Kerala, since decline in the movement of paddy was more than offset by increase in the movement of rice.

The views of the Madras Government about the impact of the movement of foodgrains within the zonal set-up are thus based on the actual experience with the working of the scheme. The zonal setup has been kept from foundering at considerable sacrifices to the State. There is therefore a *prima facie* case for the abolition of the South Food Zone and for the constitution of the State into a separate zone for the movement of foodgrains. Andhra Pradesh had similar experience with the working of the zonal scheme and had been urging the abolition of the food zone with equal vehemence. The only beneficiary was the Central Government, which had been relieved of responsibility for meeting the deficit of Kerala. It is in consideration of this that the Centre had chosen to be lukewarm to the pleas of Andhra Pradesh and Madras. The Centre has sought to put off the arguments advanced by the Madras Government by assurances of Central supplies to supplement its own resources. But in the face of unrestricted movement to Kerala which the zonal system entails, the State Government would be powerless in preventing prices from taking an upward course.

The abolition of the South Food Zone would necessarily raise the question of maintaining supplies to Kerala to meet its deficit. A major portion of this could be met from the surplus production of Madras and Andhra Pradesh. Andhra Pradesh has an estimated surplus production of 5 lakh tons, while the surplus in Madras is placed at 1.5 lakh tons. The Madras Ministers have expressed their willingness to part with this surplus to meet Kerala's needs. No great difficulties would therefore be caused to Kerala in the event of the break-up of the existing scheme. Further, in the light of what has been recently revealed as the tendency of deficit States to inflate their deficit unduly, there is reason to believe that deficit States are drawing off supplies much in excess of their requirements. In the absence of a clear assessment of the extent of deficits, a regulation of the movement of foodgrains between States would remain ineffective in restoring prices to their natural level.

The State Government's attitude to the continuance of the South Food Zone is also shared by the general public. This was evident from the discussions in the State Legislative Assembly. The demand for the abolition of the South Food Zone cut across party lines. Only the Communists, for understandable reasons, pleaded for the continuance of the zonal scheme, tracing the rise in foodgrain prices to factors other than the large-scale movement to Kerala. Endorsement of the Government's view would have amounted to condemnation of some of the policies pursued by the Kerala Communist Government, while it was in office.

*

SWATANTRA PARTY

"Rajaji Writes:

This is an appeal for funds for the Swatantra Party. The Principles of the Party, as adopted at the Bombay Convention, have been published and are now well known. We stand for maximum freedom without detriment to the principle of protection of the weaker elements of the society. The legend is circulated that we are a rich man's Party. This is not true. We require the immediate support of all classes of people, for funds as well as in the Membership drive. Our aim is to create a broad based Opposition Party in the country in the fullest sense of the term. The very rich are in the grip of the ruling political Party.

Apart from contributing to the funds of the local branches, this is an appeal for contributions to the Central Organisation of the Party. For this purpose, we depend on small as well as big contributions. All amounts, big or small, will be welcome.

Cheques and money orders should be sent to Shri B. V. Narayana Reddy, 19 Race Course Road, Bangalore—1, or to Shri H. P. Mody, Bombay House, Sir Phiroze Shah Road, Bombay—1."

(Sd.) C. RAJAGOPALACHARI.

DIRECTORY OF INDIAN ENGINEERING EXPORTERS THIRD EDITION

We are glad to announce the publication shortly of the Third Edition of the above Directory.

Advertisements from bonafide manufacturers/exporters of engineering goods will be accepted for inclusion in the Directory. Advertisement rates are as follows:

Full Page	**... Rs. 400/-**
Half Page	**... Rs. 250/-**
Quarter Page	**... Rs. 125/-**

For full particulars write to:

SOUTH INDIAN NOTES

Hindu Religious Endowments Bill

MADRAS REVIEW

Though a non-controversial measure, in the sense that it does not touch upon party interests, the Hindu Religious Endowments Bill did not have a smooth passage in the Legislative Assembly and exacted prolonged discussion before it could qualify itself to be passed as a Bill. The Bill seeks to consolidate the law relating to administration and governance of Hindu temples, the basic idea being to protect temples from mismanagement.

The Bill embodies a number of clauses relating to various aspects of temple administration and a complete unanimity of views was therefore not to be expected. The general reaction of the members was one of support to the Bill. There were, however, a few members who mustered up sufficient courage to challenge the need for such legislation at all. Among them was a Christian Congress member who opposed it on the ground that it sought to cut at the very root of the democratic set-up of temple administration. The PSP leader, Mr P. S. Chinnadorai, also could see no need for urgency in bringing such a Bill, while a member belonging to the INDC questioned the propriety of a Government which professes secular principles intervening in matters pertaining to religion. These voices were, however, feeble against the general support that was extended to the measure almost from all parties.

The most controversial parts of the Bill, which evoked considerable discussion, related to the powers of the supervisory staff sought to be created for the ensuring of better temple administration, and the provision for the diversion of the surplus temple funds for purposes having nothing to do with religion at all. The Communist members were for clothing the Commissioners with more powers than had been given under the Bill while, from the other side, it was pointed out that even the existing powers of the Commissioners would take away much from the authority of the trustees. However, Mr Bhaktavatsalam sought to allay fears based on what are considered to be the excessive powers conferred on Commissioners by pointing out that their function would only be supervisory and that intervention of commissioners is provided for only in the case of actual mismanagement. Extreme care in the selection of candidates to occupy the posts of commissioners is necessary to provide aganist any abuse of authority by the Commissioners. It was with this view that a suggestion was made that recruitment should be confined to members belonging to the judicial service.

*

Nagarjunasagar

Mr Bhimsen Sachar, Governor of Andhra Pradesh, inaugurated the work on the tunnel at the Nagarjunasagar Project. Envisaged to become one of the largest in the country, the tunnel will have a diameter of 32 feet and a length of 7,500 feet and is estimated to cost about Rs 22.682 million. Further, the tunnel would involve 8 million cubic feet of excavation in rock and 1.6 million cubic feet of concrete lining. The carrying capacity of the tunnel is estimated at 15,000 cusecs. It will lead water from the reservoir, through a regulator to supply water mostly to Nalgonda and Khammem districts and will irrigate more than 1 million acres.

Mr Sachar in his address referred to the "swadeshi" method of executing the project and the minimum amount of machinery being used for work as the two characteristic features of the Nagarjunasagar Project. Both go to make the project less expensive as also more labour intensive, affording employment to the maximum extent.

The total cost of the Nagarjunasagar Project is put at more than Rs 200 crores and the project is expected to be completed in two phases, the first phase involving an outlay of Rs 91 crores and the second phase involving another Rs. 122 crores. About 3.45 million acres of land are expected to be brought under irrigation on the completion of the project. Further, it is expected that foodgrains of the value of Rs 50 crores. would be produced under the project every year. The work in connection with the project is so phased so as to enable irrigation from the canals in 1964.

*

Co-operative Farming

The State's Chief Minister, Mr K. Kamaraj, has proved himself apparently unmoved by certain political developments in his own home State. While his colleagues in the State Cabinet and Congress members took no time at all to criticise the advent of a new political party under the sagacious leadership of their erstwhile colleague, Mr C. Rajagopalachari, Mr Kamaraj did not at all hasten to utter any adverse remarks. He told a Coimbatore meeting that he welcomed the new party whose opposition was needed to correct the errors of the present administration. He has repeated this view several times. Likewise, he was not categorical about co-operative farming. "If some think there is the other way than the co-operative way, let them show us that way instead of creating confusion in the minds of the farmers. We are not adamant about co-operatives. We only want a method, whatever be the name you give it, that would be really useful and helpful to the people."

This remark of Mr Kamaraj was made at his inaugural speech to the fourteen-member Madras State Co-operative Farming Board in the City. The members of this body include three Ministers, (Agriculture Revenue and Co-operation Ministers) and seven officials and four non-officials. This Board would soon report on schemes of co-operative farming in the State.

It was the belief of Mr Kamaraj that the farmers welcomed this co-operative method by having help from the joint societies for the individual members. He said there was no truth in the propaganda that the members would be deprived of their land if co-operative farming came to be introduced. The small holders would stand to benefit by co-operative farming. Big landholders do not need such societies, but even then they could set up such societies and they could still form societies to set an example to smaller ones. Mr Kamaraj said that he found farmers enthusiastic about co-operative farmin in his tours of the village. The only complaint he had heard was about the delay in registering societies.

Mr R. Venkataraman, who is in charge of the Co-operation portfolio, had made known his views long ago, closely following the argument of Mr Nehru in this matter. He was president of this meeting and he is also Chairman of the Board. He recalled how the experiment on temple lands by the service co-operatives proved good. He blamed the opposition to co-operative farming either because they had not understood or because they had misunderstood this for collective farming as found in China or Russia, where the lands in the pool belonged to the societies. But, said Mr Venkataraman, the co-operative farming proposed by the Congress Party did not expropriate lands to the societies. Every component member continued to have ownership of the land and on his death his heir would become the successor.

MADRAS REVIEW

Spurt in Groundnut Prices

THERE has been a sudden spurt in all positions of Groundnut oil and kernels today. Small arrivals of kernels contributed to the high prices and the business transacted was in the nature of purely obligatory manner. Groundnut oil ready closed today at Rs 375, September Rs 375/377, October Rs 355/357 and December Rs 320/321.

Likewise, kernels, superior variety, were at Rs 205 and medium Rs 197.

Castor oil remained steadily firm at Rs 315.

Coconut oil had gone upto Rs 39-4-9 local.

The foreign market rates per on today were: Groundnuts £63, Castorseeds £58, Nigerseeds £54-10; Groundnut oil September-October £110/111; Coconut oil (Straits) £131½, Coconut oil (Colombo) £138/139; Castor oil (BSS) £111/112 and Castor oil Commercial Quality £105½ to £106.

Parity prices could not be expected with such foreign prices since prices in Madras had gone up very high since last two weeks.

A firm front was maintained by groundnut oil throughout the week-end and up to the time of writing. As stated in an earlier dispatch, the bullish tendency was due to the Government of India announcement of the incentive scheme for shippers of oil. The bulls had not, however, bestowed thought to the overseas market conditions. Though UK Continent have slightly improved their price levels, (in the region of £111/- per ton c.i.f. in bulk, though Burma may be willing to pay upto Rs 1,580 per ton c.i.f. in drums) these rates were found to be unworkable on the basis of the Indian prices obtained at today's levels and quoted as above. Nor is there any substantial margin in the export of expeller cake if the shipment is made from Madras port. Even the last week's rate of Rs 360 per candy would involve in a loss of about Rs 180 to Rs 200 per ton of shipped oil. These rigging up operations benefit only the middlemen and there is no necessity for it now when shipment obligations had to be undertaken. Naturally, the high quotations would not fulfil the Government's hopes of getting more foreign exchange for which the extension of time to shippers was given.

At this high price, Calcutta operators were also not prominent. They could not buy anything at even last week's prices. Naturally, the retail bazaar consumers were depended upon by the trades. But even then, the local needs depended on the chekku or rotary crushers who do not have to pay excise duty. Due to the small arrivals of the summer crop in the market, oil arrivals, too, have shrunk. Even in South Arcot, the position did not improve; nor did Pollachi/Coimbatore report any encouraging arrivals. Spot short supply was therefore mainly due to dearth of arrivals in these markets. Groundnuts gained about Rs 28/30 in the market while oil gained Rs 45/50 by today's closing rates.

Even Tuesday's opening rate of groundnut oil was at Rs 371 for ready. It did not go below Rs 370 and closed at Rs 371. October position opened at Rs 354 and closed at the same rate, fluctuating around Rs 351 to the closing rates in the middle. December position too remained similarly quoted at Rs 318 at the opening, went upto Rs 320 and came down to Rs 318 at close. Groundnut kernels remained firm at Rs 319 at close.

In groundnuts, arrivals continued to be small. The average daily arrival was placed at 25/28 tons. Most of these stocks came from the Ceded Districts of Andhra and were of the peanut variety of the summer crop. Superior oil kernels, which also came in small qdantities, were taken up at Rs 202/203 and even went upto Rs 204. Similarly, medium varieties were taken up at Rs 197/198. Chittor varieties of bold groundnuts arrived in meagre supplies and were absorbed around Rs 187/188 per candy.

In groundnut oil, there was no large scale activity. The price boosting being temporary, due to shortage of seed arrivals, traders remained aloof. If at all there were negotiations, interest was shown only around Rs 355/356 per candy, but reluctance to part with stock did not mean much business. And the firmness forced buyers to deal at the higher rate of Rs 362/363 though sellers indicated a still higher price of Rs 364/365. Just to meet with immediate contracts local vanaspathi interests absorbed small quantities last week. This week, it was negligible.

In forward positions, activity turned out to be really small. During last week-end in early part of this week, some shippers evinced interest. In October and December positions, there was considerable enthusiasm.

Squaring-up transactions were witnessed in September position. It opened up at Rs 355 at the week-end, improved to Rs 358, and finished at Rs 362 at the week-end. On Tuesday evening, transactions around Rs 365 were pot through.

In October position, the price opened at Rs 342, but went upto Rs 347 last week-end. It went up higher to Rs 354. From Saturday's price of Rs 347/8, at which about 300 candies were transacted, the volume of business in this position was not much today at the prices quoted then.

December vaida opened at Rs 314 last Saturday, but on Tuesday (Monday being a holiday) opened at Rs 318. Though another 300 candies in December position was put through on Saturday, Tuesday's business was again not much. Today's prices further precluded higher purchases.

Groundnut Oil Cake: Cake market maintained a firm trend. Sellers quoted Rs 26/8 per bag new gunny ex-mill. Upcountry arrivals were available eight annas less F.O.R. Royapuram.

Castorseed: May 1960 delivery was quoted at Rs 156.25 per candy.

Upcountry Markets: Arrivals of summer crop in South Arcot district markets had become appreciably smaller. The average daily arrivals in important centres amounted to about 150 tons. Price improved to Rs 202/203 per candy. About 10,000 bags of unshelled nuts arrived in Pollachi/Coimbatore region daily. Two hundred tons were marketed daily here. Superior red varieties were taken up at Rs 192/195 per candy and medium varieties at Rs 190 per candy. Peanut qualities were taken up around Rs 182/185. All local arrivals were readily absorbed by local crushers in Virudhunagar, Ramnad, Madurai, Saem Bhavani, and the buyers were only for local consumption.

There was no change in gingelly oil and seed.

Coconut Oil: After last week's report, the West Coast market showed considerable improvement. Spot goods were ruling at over Rs 620 per candy at Cochin, September Rs 624, and October Rs 630 per candy. Quilon price per tin was Rs 36/8, but local sellers today quoted in Madras Rs 39-4-9.

Groundnut Oil: Closing prices per candy in upcountry markets on Wednesday were: Guntur/Bezwada (nominal) Rs 368, Vriddhachalam Rs 358, Nandyal Rs 360, Villipuram Rs 358, Cuddappah/Yerraguntla Rs 352, Pollachi Rs 357, Tanjore Rs 353, Tiruvannamalai Rs 200 and Salem Rs 352.

Castorseed September variety were not quoted: and May 1960 was quoted at Rs 156.25.

Sugar: With an approximate stock in the market of about 2,000 bags, sugar position in Madras has considerably hardened since last week. The open market is Rs 156, while the controlled rate is Rs 113.

The off-take is considerably higher than the stock today, and dealers' difficulties are enhanced on the poor arrivals.

An arrangement is, however, in the offing by which the South Indian Sugar Mills Association would get about 10,00 tons of Andhra sugar for Madras. Allotment of this quantity has been a matter for negotiation, and if this stock arrives in the market, the Government of Madras expect to market this at a price a bit lower than the present one for the consumers. The scarcity of this commodity is deepening in the district, where flow of stock is obviously restricted, and businessmen with moderate stocks are prone to withhold. The festival season of Dusserah to be followed by Deepavali has added to the stock-shyness in the districts.

SOUTH INDIAN MARKETS

Hides and Skins

At fair prices, clearance of cow, buffs, tanned goat and sheep skins were made in the Madras Hides and Skins market. Calf arrivals were poor and therefore whatever was available was quickly absorbed. In the c.i.f. section, business was restricted at narrow levels and shippers were hesitating to put through deals till the eleventh hour waiting for lower quotations. Business was done in 8/8½ lbs. at 59d/56d/53d basis. In prime qualities, the price range was between 88d and 75d and in 10/12 lbs and inferior fifths at 39½d. Tanned cow calf skins were scarce. UK inquiries were good. Clearance of goatskin at the beginning of the week was about 6,000 pieces, leaving about 10,000 stock in the market.

The Paris Leather Fair between September 11 and 17, added to the spurt in prices. But it has not been computed as to how much the price rise is due to genuine business demands. Raw goat skin price is reportedly higher in South Indian centres. Clearance of this variety was about 14,000 with a leftover of 32,000 in the market. It would be more in the next days before the week is out, but in view of the higher prices, the coming week's clearance is expected to better.

In the export section, buying was selective. Light weights came under greater demand, fifths and inferior fifths at 18sh 3d and 17sh 3d. Thirds and fourths were scarce and difficult to obtain. 8/9 lbs goat skins were quoted a 18s 9d and 11/12 lbs upto 15s. Prices were very high for inferior fifths of 8/9 lbs and 11/12 lbs. Middle qualities attracted much attention and much business was reported in this quality.

Raw skins prices (last week's in brackets): Bangalore goat Rs 585/675 (Rs 610/680), White Wool sheep Rs 520/600 (Rs 530/630), Black Wool Sheep Rs 430/495 (Rs 440/490). Bezwada Goat Rs 610/620 (Rs 570/575); He Sheep Rs 530/535 (Rs 565/575); She Sheep Rs 382/383 (Rs 390/395).

Tanning Materials: Avaram Bark Rs 72/75, Konnam Bark Rs 60/70, Myrobolam (Salem) Rs 110/115.

✱

Bangalore Silk

There has been practically no change in the Bangalore Silk Market for the week ended 10-9-'59 whether for filature silk or charka. While filature silk ruled unchanged at the previous week's levels, Charka recorded nominal variations although maintaining the higher levels.

As regards Reeling Cocoons also there has been no change, the closing quotations being akin to those in the previous week.

In the case of Seed Cocoons, Mysore showed a slight rise of 13 nP. while Foreign declined by a Rupee, to be placed at Rs 3.75 to Rs 5.25 and Rs 8.00 to Rs 15.00, respectively.

STOCK EXCHANGES

A Quiet Spell

Watch-Dog Writes:

BUT for a few firm spots, trading in stock markets has been generally dull and featureless during the week under review. Caution, prompted by Indo-Chinese relations, continues to be the keynote of sentiment in investment and, naturally, price movements have been confined to a narrow range.

The Calcutta Stock Exchange witnessed a dull session with prices displaying an easier tendency.

Lack of discernible activity kept the turnover on the Bombay Stock Exchange below normal.

Activity on the Madras Stock Exchange was restricted and no uniform trend could be observed.

There was a certain amount of hesitancy on the London Stock Exchange following the raising of the United States discount rate to 4 per cent.

Price movements on Wall Street were rather erratic on alternate buying and selling.

✱

Calcutta

Calcutta, Friday Evening.

IN the absence of any incentive, trading on the local Stock Exchange was quiet and most of the shares eased gradually due to stray bull liquidation, the pace of the decline being a little faster during the fag-end of the week. This was mainly due to the fact that operators felt that it would not be wise to extend commitments as long as the dispute over border between India and China continued. Because, they thought that, as a result, the defence budget of the country might have to be raised upward on the expenditure side.

Investors were, on their part, inclined to conserve a part of their funds for the forthcoming new capital issues. Thus, the market rounded the week on an easier note, though support was forthcoming at low levels.

The Giltedged market presented a steady appearance, the demand for some of the medium and short-dated issues being well maintained. State Loans also came in for some enquiry. 3 per cent 1986 Conversion Loan changed hands at Rs 74.10 to Rs 74.50.

Jute shares were generally sluggish due to conflicting views regarding the future of the industry. Though the statistical position was considered quite sound with low stocks of jute goods and assured supplies of raw jute, a section of the operators believed that tension with China might result in lower offtake of jute goods at a time when production was expected to increase due to the unsealing of another 2½ per cent looms with effect from the 24th August. As a result, price movements were irregular in most of the scrip. The only firm feature was National at Rs 23.00, thanks to sustained speculative support. Howrah turned ex-dividend and changed hands at Rs 22.56 to Rs 23 as against Rs 23.25 to Rs 23.50 cd quoted early in the week. India and Megna were offered as low as Rs 15.62 and Rs 14.12 following the reduction in dividends. New Central came in for good enquiry upto Rs 18.37 from Rs 16.87, while Kanknarrah changed hands at Rs 105 to Rs 107 and Kelvin at Rs 178 to Rs 182.

Coal shares were neglected on the feeling that the working condition of the industry was not likely to improve with the recent increase of 50 nP per ton in the ceiling prices of coal. The only bright spot were Equitable having improved to Rs 33.06 from Rs 32.62 on expectation of encouraging working results for last year. Bengal were nearly maintained at Rs 300.00, while East Indian turned quiet at Rs 23.50 against Rs 23.62 and New Beerbhoom at Rs 20 against Rs 20.56. Central India and Western Bengal were narrow markets around Rs 8.00 and Rs 6.25 respectively. Burrakur fluctuated rather irregularly between Rs 15.94 and Rs 16.75, to finish the week Rs 16.12.

The Tea section, was also neglected, although a few selected scrip met with some enquiry following the publication of satisfactory working results and the increase in dividends for 1958. However, turnover remained poor in view of the feeling that the working, especially of the Darjeeling, Dooars and Terai gardens, might be affected due to rise in labour wages coupled with the unremunerative prices obtained at the auctions for teas of these gardens. Bishnauth changed hands at Rs 17.12 to Rs 17.31; East India at Rs 19 to Rs 19.12; Hantapara at Rs 106 to Rs 108 and Jayshree at Rs 14.06 to Rs 14.51.

Little or no interest was shown in Sugar shares, as the outlook for the industry was considered to be uncertain. Dealings were, therefore, few and far between. Raza-Buland met with some business upto Rs 12.87 from Rs 12.56 and SKG upto Rs 11.37 from Rs 11.19. Balrampore were slightly better at Rs 7.12 against Rs 7.00.

Textile scrip were also subdued on fears that the rising trend in the cost of production might reduce the profit margin of the industry. An exceptional feature was, however, Kesoram which met with sustained support upto Rs 18.69 on reports of diversification of the company's activity, the closing rate being easier at Rs 17.87 on profittaking. Jayshree were done at Rs 10.12 to Rs 10.25; Elgins at Rs 15.31 to Rs 15.50 and New Victoria at Rs 1.34 to Rs 1.41. Cawnpore were, however, offered at Rs 5 against Rs 5.28.

In the Engineering section, price movements were mostly influenced by the speculative activity in Indian Irons which, in turn, were subjected to settlement adjustments till Wednesday. Against the week-end closing of Rs 23.92, Indian Irons opened lower at Rs 23.86 and receded gradually to touch at one time Rs 23.22 to improve toward the close to Rs 23.29 on some replacement buying. TEXMACO were marked down to Rs 23.60 from Rs 24; Guest, Keen, Williams to Rs 38.25 from Rs 38.50 and Rs 28.50 respectively. Kumardhubi changed hands at Rs 6.75 to Rs 6.94 and Indian Standard Wagon at Rs 80 to Rs 86.

Although turnover shrank considerably, the Miscellaneous section, provided a few bright features on dividend and new capital issue considerations. Most prominent were Rohtas which were keenly sought after upto Rs 24.19 from Rs 23.19 following the announcement of a 15 per cent dividend for the year ended 31st March, 1959 as against 14-2/7 per cent for the previous year (on the basis of 20 per cent for the 17 months ended 31st March, 1958). National Carbon forged ahead to Rs 40.12 from Rs 39.50 on expectation of a right issue. NICCO were taken upto Rs 39.12 from Rs 38.50 on the company's proposal to issue fresh ordinary capital. India Paper Pulp, after touching a new high of Rs 26.44 from Rs 25.87 following the publication of excellent results for last year, eased off at the close to Rs 25.75 on profit-taking. Orient Paper changed hands upto Rs 38.90 from Rs 38.60 (Rs 38.60); Indian Aluminium upto Rs 21.37 from Rs 21.06 (Rs 21.06); Indian Cable upto Rs 31.31 from Rs 30.62 (Rs 30.62); Hindustan Motor upto Rs 12.50 from Rs 11.94 (Rs 11.97); Aluminium Corporation upto Rs 15.06 from Rs 14.62 (Rs 15.06); Sirpur Paper upto Rs 13.94 from Rs 13.69 (Rs 13.69); Dunlop Rubber upto Rs 34.25 from Rs 34 (Rs 34.12); and India Steamship upto Rs 14.25 from Rs 13.44 (Rs 13.44). Figures shown within brackets were the week's closing rates. Indian Copper turned quiet with the rate easing off further to Rs 4.02 from Rs 4.00 quoted in the previous week. BIC moved narrowly between Rs 4.62 and Rs 5.25; Angelo Brothers between Rs 19 and Rs 19.25 and Sone Valley Cement between Rs 5.81 and Rs 5.90. Alkali Chemicals were static at Rs 22 and so also BBP at Rs 1.50.

✱

Bombay

AFTER a promising start under the lead of textiles, the Bombay Stock Exchange developed an irregular tendency to close on Thursday on a quiet note. The first setback was caused by rumours about a further deterioration in the Sino-Indian relations. Although sentiment attempted to rally now and then in later dealings, higher levels were found untenable in the absence of fresh support and end of account considerations.

Selling pressure was heavy on Friday following adverse border news but equities regained part of the previous loss on Saturday on revival of support. By close of Monday the reactionary tendency reasserted itself. The undertone was better on Tuesday with widespread small gains only to turn quiet on Thursday.

In the Steel section, but for the initial steadiness, Tata Steel lacked interest most of the time and receded to close at Rs 159.25. Indian Iron closed at Rs 24.48 against Rs 24.92 a week ago.

In the Textiles section, selected shares were in request on favourable news. Bombay Dyeing was a steady

THE CHAMPDANY JUTE CO LTD.

The Directors at a Board Meeting held to-day decided to recommend to the Shareholders in General Meeting the payment of a final dividend at the rate of 4% per annum of Rs. 4/- per share for the year ended 31st March, 1959.

A notice calling the Annual General Meeting for 10th November, 1959, will be published shortly.

By Order of the Board,

spot on better export prospects to close at Rs 64.50. Century moved up from Rs 559.50 to Rs 568.50. Others were generally lower on balance.

The Miscellaneous section, was featureless. A few shares appeared to have attracted renewed support but by close they also turned weak in the absence of sustained interest.

*

Madras

IN the Madras Stock Exchange today, industrials had better enquiry. Banks were a bit uninteresting. Electrics had very insignificant business. Textiles proved a selling counter.

Government Securities: Madras Government 2¾ per cent 1961 had buyers at Rs 98.00 improving upon the Tuesday closing quotation by 30 nP The holiday mood probably was responsible for meagre business. 3 per cent 1960 Development were quoted at Rs 98.95. 4 per cent 1963 were also unchanged at Rs 100.30, while the 4% 1964 security was quoted at Rs 100.20. 4½% 1971 was good at Rs 101.95, while 4% 1971 was at par. Mysore loans did not show any change. 4% 1953-63 were available at Rs 101.50. The taxable securities of this State, 4% 1963 were quoted at the same closing rate of last day at Rs 100.25, and the 4% 1967 were priced at Rs 100.25. 4½% 1971 were available at Rs 101.80, and 4% 1971 were at Rs 99.85. 4½% 1970 Kerala loans were offered at Rs 100.95 and 4% 1971 at Rs 99.85. 4% 1971 Andhra State loan, however, showed preference among buyers at Rs 99.90, and 4½% 1970 were quoted at Rs 101.81. 4% 1967 and 1968 were available at Rs 100.20 and Rs 100.20 respectively. 4½% Orissa Loan 1967 remained unchanged at Rs 100.20 and that of 1968 at Rs 100.20 also. 4½% 1971 was better at Rs 101.81.

Banks: Andhra remained at Rs 103 and Mysore Bank also continued same at Rs 322. Indian Bank Rs 100 paid was steady at Rs 192, and Rs 80 paid remained at Rs 153. Pandyan proved the same at Rs 32.00 and Punjab National continued sellers at Rs 21.45. Travancore maintained the same level at Rs 25.10.

Electrics: There was not much of transaction in this section, but West Coast Electrics had buyers at Rs 14.00. Berhampur and Cochin were respectively at Rs 7.20 and Rs 10.50, Ellore 5% cd were offered at Rs 10.75. Kumbakonam was the same at Rs 11.00, Karaikkal at Rs 10.75, Negapatam at Rs 9.62, South Madras at Rs 1.65, Salem-Erode at Rs 13.25. Tinnevelly-Tuticorin was at Rs 12.50 and Vellore at Rs 13.75.

Sugars Breweries: Andhra maintained at Rs 20.25 and Cauvery also at Rs 118.00. Deccan Sugars on selling were quoted lower at Rs 12.10. But E.I.D. improved to Rs 39.65 and Travancore had transactions at Rs 12.36. K.C.P. did not change at Rs 15.50 and Mysore at Rs 49.50. United Breweries remained also at Rs 459.00.

Plantings: There were selective enquiries, with Cochin Malabars at Rs 6.37. Cowcoody were quoted at Rs 6.25, Blue Mountain at Rs 3.41, Consolidated Coffee were at Rs 21.80. Athimattam and Bababudin were at Rs 1.00 and Rs 9.15 respectively. Balanoor maintained at Rs 18.75, and Balmadies at Rs 3.12. Consolidated Coffee were sellers at Rs 23.50. Cottanad were at Rs 16.40. Highland was better at Rs 12.87 as also Kailas at Rs 4.82. Haileyburia were not offered below Rs 18.40 as also Kil Kotagiri at Rs 8.15. Malabar Industrial were the same at Rs 16.00 but Malankara were lower at Rs 19.25. Mercara remained at Rs 9.15. Mysore Coffee were not fancied higher than Rs 4.26, but Nenmeny was firm at Rs 15.50. Nilgiri Tea were available at Rs 7.80 and Nonsuch too continued steady at Rs 28.50. Ossoor proved a better offer at Rs 3.90 today, and Ouchterlony though lower by 3 nP than the previous closing had sellers at Rs 5.50. Parkside was enquired at better in the level of Rs 24.00 Pullungode improved on buying inquiries to Rs 1.75, but Puthuthottam was lower by 4 nP at Rs 2.88. Rajagiri and Rajendra were respectively quoted at Rs 16.75 and Rs 8.72. Stanes Amalagamated continued at Rs 16.25. Travancore Rubber and T. R. & T. were not offered below Rs 14.62 and Rs 6.95 respectively. United Nilgiri had been at the same rate of last closing date at Rs 21.62. While Velimalai was at Rs 6.15, Wartyhully were offered higher at Rs 3.80.

Textiles: There were stray enquiries and shares were generally lower Adoni had some demand at Rs 8.25, as also Cauveri Spinning improving at Rs 12.50. Bangalore Woollens were down at Rs 179 from the previous Rs 183.00, but Buckingham continued at Rs 189.00 unchanged. Cambodia had good inquiries at Rs 11.25, improving by 15 nP. Coimbatore Cotton were offered at Rs 143.00, and Coimbatore Murugan remained at Rs 91.00. Coimbatore Pioneer were available at Rs 285.00, and Coimbatore Spinning did not enthuse higher than at Rs 43.00. Krishna Rajendra were in offer at Rs 72.00 and Lakshmi at Rs 118.00. Madura suffered a mild set back at Rs 29.25, Mettur was steady at Rs 372.50. Pankaja and Premier were at Rs 59 and Rs 167.50 respectively. Turbhati was quoted at Rs 9.30 and Venkatesa at Rs 113.00. Travancore Rayon had business at Rs 23.15 lower by 5 nP.

Miscellaneous: Aluminium Industries attracted attention lower at Rs 21.70 but Ashoke Leyland improved to Rs 7.83. A. V. Thomas maintained its level at Rs. 20.25, Binny's Engineering at Rs 158.00. Dalmia Cement were offered lower at Rs 10.50, Enfield were available at Rs 13.50. F.A.C.Ts remained lower at Rs 9.12. Mettur Chemical was firm at Rs 12.15, Mysore Chemical Manufacturing at Rs 23.20 and Mysore Electrical Industries remained firm also at Rs 160.00. Mysore Lamp could be had at Rs 22.12, and Mysore Paper at Rs 21.40. Mysore Tobacco (with 12½% dividend announcement) were unchanged at Rs 13.00. Parry's Confectionary improved to Rs 4.24. Radio & Electricals share was quoted at Rs 4.72 with buyers at that rate. Rallis had some transactions at Rs 78.00, Spencers improved to Rs 20.10. Standard Motors also had proved steady at Rs 17.00 while Textool was offered at Rs 191.00.

INDUSTRIAL INFORMATION

MOVEMENT OF COMMODITY PRICES (REVISED SERIES REVIEW FOR JUNE 1959

Wholesale prices as measured by the official index (with the year ended March 1953 as 100) went up by 1.5 per cent to 115.7 during the month of June 1959 as compared with 114.0 for May 1959. The index was higher by 3.6 per cent when compared with 111.7 for June 1958. During the month under review, 'Food Articles' advanced by 2.2 per cent to 118.7, 'Industrial Raw Materials' by 0.8 per cent to 120.5 and 'Manufactures' by 0.6 per cent to 109.1, while the index for 'Tobacco' declined by 1.0 per cent 96.0. The index for 'Fuel, Power, Light and Lubricants' remained unchanged at its earlier month's revised level of 116.3.

FOOD ARTICLES

Prices of all cereals witnessed a rise and the index for 'Cereals' moved up by 2.9 per cent to 101.8. Higher prices of arhar, mung, masur and urad caused an advance of 1.4 per cent to 96.1 in the sub-group index for 'Pulses' despite a fall in the prices of gram. The index for 'Fruits and vegetables' rose by 6.1 per cent to 134.6 as a result of an increase in the prices of potatoes, onions, oranges and cashewnuts notwithstanding a decline in the prices of bananas. An advance in the price of ghee raised the index for 'Milk and Ghee' by 0.4 per cent to 116.3 although the price of milk drifted down during the month under review. The index for 'Edible Oils' advanced by 0.8 per cent to 132.2 owing to a rise in the prices of groundnut oil, gingelly oil, coconut oil and vanaspati (dalda) despite a slight fall in the price of mustard oil. An advance in the prices of fish, eggs and meat was responsible for a rise of 4.0 per cent to 110.6 in the index for 'Fish, Eggs and Meat'. An increase of 2.9 per cent to 148.6 in the sub-group index for 'Sugar & Gur' was brought about by a substantial rise in the price of gur. The index for 'Other Food Articles' also increased by 2.2 per cent to 160.9 as a result of higher prices of tea, coffee and chillies although the prices of black pepper, turmeric, cardamoms, betelnuts and salt were marked down during the month under review.

TOBACCO

The index for 'Tobacco' witnessed a fall of 1.0 per cent to 96.0 owing to a fall in the prices of raw tobacco.

FUEL, POWER, LIGHT AND LUBRICANTS

The index for this group remained unchanged at its earlier month's revised level of 116.3 despite a rise in the price of castor oil.

INDUSTRIAL RAW MATERIALS

The index for 'Fibres' moved up by 1.0 per cent to 110.3 due to an increase in the prices of raw cotton, raw jute and raw silk; the price of raw wool, however, showed declines. A rise of 1.0 per cent to 135.4 in the sub-group index for 'Oilseeds' was caused by an increase in the prices of groundnuts, linseed, gingelyseed, rapeseed and copra notwithstanding a fall in the prices of castorseed and cottonseed. Lower prices of manganese ore were responsible for a fall of 2.7 per cent ot 99.6 in the index for 'Minerals'. An increase in the prices of raw skins and tanning materials pushed up the index for 'Other Industrial Raw Materials by 0.4 per cent to 113.1 despite a fall in the prices of raw hides and lac.

INTERMEDIATE PRODUCTS

The index for 'Intermediate Products' rose by 0.1 per cent to 108.2 as a result of higher prices of leather, cotton yarn, rayon yarn and zinc alhough the prices of linseed oil, coir yarn, brass, copper, tin, lead and german sliver exhibited declines during the month under review.

FINISHED PRODUCTS

A rise of 0.9 per cent to 104.5 in the index for 'Textiles' was brought about by an increase in the prices of cotton manufactures (+0.6 per cent to 113.13) and jute manufactures (+3.0 per cent to 87.1) despite a fall in the price of silk and rayon manufactures (—1.2 per cent to 94.4). The sub-group index for 'Metal Products' stood stationary at 143.3. An advance in the prices of paints, soap and drugs and medicines raised the sub-group index for 'Chemicals' by 0.5 per cent to 106.9. 'Oilcakes' also moved up by 2.9 per cent to 143.6. The sub-group index for 'Machinery and Transport Equipment' recorded a fall of 0.1 per

cent to 106.0 owing to a decline in the prices of cycles. The index for 'Other Finished Products' went up by 0.2 per cent to 113.2 due to an increase in the prices of bricks and tiles notwithstanding a fall in the price of glass. On the whole, the index for 'Finished products' advanced by 0.7 per cent to 109.3 during the month under review.

INDUSTRIAL RELATIONS

There were 102 fresh industrial disputes in June, 1959, bringing the total number of disputes current at any time during the month to 154 including 26 lock-outs. In the previous month, there were 84 fresh disputes out of 131 disputes current.

According to the Labour Bureau, Government of India, the average duration of disputes current at any time during June was 10.1 days as compared with 6.6 days in May.

One hundred and eleven disputes terminated during June. Of these, 71 lasted not more than 5 days each and 15 lasted for more than thirty days each.

During the month, time-loss of 6,60,017 out of the total of 7,88,793 i.e., 83.7 per cent was accounted for by the Manufacturing industry group. Mining and Quarrying group came next with a time-loss of 73,316 man-days i.e., 9.3 per cent of the total. Time-loss in other major groups of industries was comparatively low.

During June, Madras recorded the highest time-loss (3,78,212) followed by West Bengal (1,19,691), Bombay (85,482), Orissa (59,668) and Madhya Pradesh (36,306). Compared to the previous month, time-loss increased in Andhra, Assam, Bihar, Uttar Pradesh, Orissa and West Bengal, and decreased in all other States.

For the Manufacturing industry group, the index of industrial unrest (base 1951=100) for June was 228 (Provisional) as compared with 85 (provisional for the preceding month.

ADVANCE PAYMENT OF TAX BY COMPANIES

As a result of changes introduced by the Finance Act 1959 in respect of company taxation, all payments of advance tax (including income-tax) by companies under section 18A during the current financial year 1959-60 in respect of the assessment year 1960-61 will be wholly accountable under the account head "III Corporation Tax". At the time of making payment of the instalment of advance tax due on September 15, 1959, (and subsequent instalments), companies should, therefore, show the correct account head in the challans. The account head to be shown both for income-tax and super-tax will be:

"III Corporation Tax—Section 18A collections—ordinary collections."

Similarly, the tax (both income-tax and super-tax) deducted at source from dividends payable to companies, whether interim or final, declared by a company in respect of its accounting year relevant for the assessment year 1960-61, and from the interest on or after April 1, 1959, will also be accountable under the head "III Corporation Tax". The persons responsible for the deduction of tax from dividends and interest payable to companies should deposit the tax deducted under the following head:

"III Corporation Tax—
Deductions from dividends and other income
(a) Income-tax
(b) Super tax

In the case of any doubt or difficulty, the Income-tax Officer concerned should be contacted.

EMPLOYEES' STATE INSURANCE SCHEME.

The year 1958-59 was eventful for the Employees' State Insurance Corporation in that it saw the extension of medical care to families of insured persons, according to the annual report of the organisation. Mysore had the credit of being the first State to take this step. Other States soon followed and, in the course of the year, medical care under the Employees' State Insurance Scheme was made available to 2.26 lakh family units (i.e., 6.33 lakhs of additional beneficiaries) in 7 States—Andhra Pradesh, Assam, Bihar, Madhya Pradesh, Mysore, Punjab and Rajasthan.

VALUATION REPORT.

The second important event of the year, according to the report, was the receipt of the Valuation Report on the Corporation for the first quinquennium, i.e., 1949-54. In the absence of any reliable morbidity statistics, the Employees' State Insurance Scheme had to be framed on certain assumptions whose validity could be tested only by valuation. The Valuation Report has now confirmed that the original assumptions erred on the side of safety. It has also confirmed the sound financial position of the scheme. With this analysis of past experience before it, the annual report says, the corporation can now plan its future course of action with greater confidence.

The year had also been satisfactory from the point of view of the administration of the scheme, according to the report. The number of additional employees covered during the year was about 78,000, bringing the total number of employees covered at the close of the year to about 14.14 lakhs. The scheme was in force at 79 centres in 12 States and the Union Territory of Delhi as compared with 60 centres in 10 States and Delhi at the end of the previous financial year. The settlement of the capitation fee for panel practitioners paved the way for the introduction of the scheme in the important industrial area of Ahmedabad where 1.50 lakhs of employees and about 4 lakhs of family members would benefit by the scheme.

As regards the working of the scheme, the report says, that the experiment to keep the contribution cards at the local office of the Corporation to enable the rate of benefit to be calculated on the spot was a great success in so far as it resulted in prompt payments to insured persons. Accordingly, this arrangement was extended to all centres outside the regional headquarters of the Corporation.

RATE OF CONTRIBUTION.

During the year, the rate of employers' special contribution remained the same as in previous years, i.e., 1½ per cent for the implemented areas and ¾ per cent for the non-implemented areas. The employees' contribution and the employers' special contribution, received during the year, amounted to Rs 3,81,11,950 and Rs 2,90,24,081 respectively. The corresponding figures for 1957-58 were Rs 3,52,35,954 and Rs 2,83,41,328.

The report says that the question of increasing the rates of employers' special contribution was considered by the Corporation during the year. The Corporation decided that the increased rates might not be given effect to, but the extension of medical care to families should not be held up on that account. The additional expenditure involved in extending medical care to families might be met from the current revenues of the Corporation without touching its reserves. The increased rates might be levied if it was found that it was not possible to meet the expenditure involved from the current revenues or if the Valuation Report for the first quinquennium showed that the rate of employers' special contribution needed to be enhanced.

CAPITAL ISSUES FOR CERTAIN TYPES OF COMPANIES EXEMPTION LIMIT RAISED TO RS. 10 LAKHS.

The Government of India have had under consideration the revision of the exemption limit laid down in the Capital Issues (Exemption) Order, 1949. In view of the rise in prices since the present exemption limit was set and the fact that the capital required for even small and medium scales industries is often well above rupees five lakhs, they have decided to raise the present exemption limit of rupees five lakhs to rupees ten lakhs. As at present, the exemption limit will apply to all issues of capital except those by banking and insurance companies and provident societies incorporated as a company. The exemption limit will not apply to the issue of bonus shares by capitalisation of reserves of share premium, for which Government's permission under the Capital Issues (Control) Act, 1947, would still be necessary irrespective of the amount of issue involved.

FURTHER SCHEMES OF DUTY DRAWBACK GRANTED

As a measure of export promotion, the Government of India have decided to allow drawback of customs and Central excise duty paid on materials used in the manufacture of rubber goods other than footwear. Drawback is already permissible on the export of footwear.

Certain changes have also been made in the existing scheme of drawback for crown corks, plastic goods, fatty acids and steel products.

For further particulars and for advice regarding the procedure for obtaining these concessions, exporters are advised to consult the Customs Houses at the ports from which the goods are to be exported.

DISTRIBUTION OF INDIGENOUS ART SILK YARN

The Textile Commissioner has reviewed the position with regard to the distribution of indigenous art silk yarn to the art silk powerloom weaving units during the quarter July to September, 1959 and has decided that 20 per cent more allocation can be made to such art silk powerloom weaving units who have been issued allocation cards for the supply of indigenous art silk yarn during the current quarter.

All the art silk powerloom weaving units who have been issued the allocation cards in the current quarter may, therefore, approach the indigenous yarn manufacturers for additional supplies of the same.

ISI CERTIFICATION MARK FOR TEA-CHEST PLYWOOD PANELS

The Indian Standards Institution has granted one more licence for the use of ISI Certification Mark in respect of tea-chest plywood panels to M/s Taj Plywood Products, Calcutta with this, 52 licences have been so far granted to the manufacturers of tea-chest plywood panels.

The presence of the ISI Certification Mark on the panels is an independent third-party guarantee that the plywood panels have been manufactured under controlled conditions and conform to the requirements as laid down in (IS: 10-1953) the Indian standard specification for plywood tea-chests (revised).

The Standard Mark is stamped on the plywood panels under the supervision of the Development Wing, Ministry of Commerce & Industry, Government of India.

Any complaint regarding the quality of tea-chest plywood panels bearing the Standard Mark may immediately be brought to the notice of the licensee, Development Wing and this Institution.

FOREIGN TRADE IN JUNE 1959

The provisional figures of foreign trade of India by all routes, i.e. sea, air and land, on private and Government accounts during June, 1959, according to information available to-date in the Department of Commercial Intelligence and Statistics, Calcutta, are given below:—

Merchandise, excluding transist trade of Pakistan and other overland foreign countries viz. Nepal, Tibet, Sikkim and Bhutan: Exports Rs 42.33 crores, re-exports Rs 1.21 crores, imports Rs 77.28 crores. The import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment.

Powai...

... a beehive of industrial activity!

Busy sounds fill the beautiful valley of Powai as L & T factories keep up with the ever-increasing national demand for industrial products.

Established in India many years ago, Larsen & Toubro Limited have developed from one of the country's leading suppliers of imported plant and equipment to manufacturers of machinery. Their range of manufacture extends from electrical switchgear to production of machinery and equipment for the dairy and refrigeration, chemical, pharmaceutical and food processing industries.

This machinery will meet the essential needs of many of our national projects & help save precious foreign exchange.

At Powai, near Bombay, Larsen & Toubro Limited have established a unique manufacturing and servicing organisation that is, today, as always, contributing vitally to the country's industrial development and progress.

PRODUCTS MANUFACTURED

- DAIRY MACHINERY & EQUIPMENT
- REFRIGERATION EQUIPMENT
- SOLVENT EXTRACTION PLANT
- SWITCHGEAR & MOTOR STARTERS
- INDUCED DRAUGHT COOLING TOWERS
- PETROL DISPENSING & METERING PUMPS
- SHEEPFOOT ROLLERS
- BELT CONVEYORS
- STAINLESS STEEL, COPPER & ALUMINIUM EQUIPMENT FOR:
  - Chemical & Dyestuff Industries
  - Drug & Pharmaceutical Industries
  - Distilleries & Breweries
  - Food Processing Industries

THE CHANGING FACE OF INDIA 2

the cart & the carriage

The bullock cart rumbles along a village track, while close at hand a diesel train thunders on gleaming steel rails. This is the sharp contrast of a changing India.

Everywhere the country is awakening to a new age of prosperity. Fostering this renaissance is the Life Insurance Corporation. Every day the Corporation invests a million rupees in the country's economy. This money, collected from premium-payers, helps build, among other things, the roads and railways so vital to our economy.

Just as the Life Insurance Corporation participates in this mighty adventure of construction, so too does each policyholder. He participates today through the premiums which he pays; and he will participate tomorrow in the better standards of living which the country as a whole will enjoy.

Life Insurance Corporation of India

ASP/LIC-E-13

Cautious But Steady

Investment Gossip:

Considering the period of the year and the determined efforts made by bears who are pressing into their service facts and fables, it must be said that the stock market has done very well indeed during the past week. Thanks to the prompt scotching of the rumours about the right issue and the shares held by the Dalhousie Holding by Sir Biren Mookerjee, much damage to sentiment had been averted. The IISCO Director statement has made it clear that nothing is further from the thoughts of the company than the selling of a big block of shares of Indian Irons. But the bears' luck had not run out yet.

Came the report about labour trouble at Kulti and news of the dissatisfaction of TISCO workers over the company's bonus rate. Meantime the West Bengal Legislative Assembly commenced its monsoon session in a disturbed state. And this extraordinary phenomenon gave rise to renewed anxiety about peace in Calcutta and West Bengal.

There was then the report of the Indian Army taking over the control of the Ladakh region. Resourceful bears could also use the recent disastrous floods in Gujerat, Andhra Pradesh and Vidarbha to their advantage by raising the bogey of a further rise in foodgrains prices.

Lastly the forthcoming Puja holidays were wielding their customary inhibiting influence. Both investors and operators were also not expected to show much interest in the stock market in view of the crop of anticipated new issues in the course of the next two or three months.

Notwithstanding such terrifying array of adverse factors, the investors generally and most bull operators have been able to stand firm. Evidently they are convinced that the outlook for equities is as good as ever, if not better. Of course the current revival of interest in textile shares has been of considerable help in buttressing sentiment.

There are only a few days to go before the market closes for its longest recess of the year. It is idle to expect any wide fluctuations either way during the next few days unless something extraordinary happens.

But by the time the market reopens after the Puja holidays many of the current uncertainties especially those of a political nature—it is to be noted that the Sino-Indian situation and the Food situation in the country usurped the first place among factors influencing the stock market for some time now—may have either disappeared or would have lost much of their influence over the stock market. If the investment situation is not vitiated by these extraneous factors the post-Puja session may witness a firm trend being established in the stock market.

12 Thinking Points

Investment Special:

THE Calcutta Stock Exchange has been described as the biggest in the East. It has rendered useful services to our country by helping industrial expansion. It has always tried to safeguard the interests of the investing public.

However, some of the conditions recently introduced by the stock exchange have come in for criticism. It is pointed out that these conditions are such as will cause an unnecessary burden on companies without any corresponding benefits to the shareholders. Some of the more important objections which have been brought to the notice of the Calcutta Stock Exchange by the Federation of Indian Chambers of Commerce & Industry are summarised below:—

(1) The company has to agree to issue certificates or Pucca Receipts within one month of the date of the expiration of any Right to Renunciation.

It is impossible for companies having a large number of shareholders to issue certificates, etc., within one month. Even under the Companies Act, certificates are to be issued only within three months of the date of allotment of shares.

(2) The Company has to agree that it will not make any charge for issue of new certificates in replacement of those which are old, decrepit or worn out or where the cages on the reverse for recording transfers have been fully utilised.

The Companies Act does not prohibit any charge being made for such purposes if permissible under the Articles. Most of the companies do charge a renewal fee in view of the additional work and expenses. The charges are also necessary to check rough and careless handling of share certificates. It may also be noted that, in the case of Government securities, renewal fees are charged.

(3) The company has to agree that it will not make any charge for registration of any Power of Attorney, Probate, Letters of Administration or similar other documents.

Most companies charge registration fees for the documents under reference. The charges are very nominal keeping in view the expenses incurred in maintaining these records and the remuneration paid to the staff employed for the purpose.

(4) The company has to agree that it will not charge any fees exceeding those which may be agreed upon with the Exchange for issue of new certificates in replacement of those that are torn, defaced, lost or destroyed.

Rule 4 of the Companies (Issue of Share Certificates) Rules, 1959, permits the charging of a fee not exceeing Re 1/- for the issue of a new certificate. If the company has again to seek the approval of the Stock Exchange in this connection, it will result in unnecessary correspondence and increase in work for the company. Torn and defaced certificates must be treated separately from the lost or destroyed ones. In the case of torn and defaced certificates, generally, renewal fees are prescribed in the company's Articles of Association which are submitted to the Association at the time of enlistment. In regard to the lost and destroyed certificates, the company in its own interest has to be very careful and its rules in this respect are drawn up from experience and after consultation with lawyers.

(5) The company has to verify the signatures of shareholders on Allotment Letters, Split Consolidation, Transfer and any other Temporary Receipts and transfer deeds when so required by the shareholders or a member of the Exchange or by the Stock Exchange Clearing House.

Such verification is burdensome and unnecessary and is likely to be misused. The company should not be asked to verify the signatures on a blank transfer deed. It will lead to increase of work for the company, because, for every transaction, the brokers and/or the parties will come to the company for getting signatures of the sellers verified thereon. It may also be noted that "Bad delivery" clause of the Stock Exchange would protect the buyer.

(6) If, in view of the volume of business in the listed securities of the company, the Exchange so requires, the company has to arrange to maintain a transfer register in the city of Calcutta on which all securities of the company listed on the Exchange would be directly transferable or a Registry Office or some other suitable office within the Fort area of Calcutta which will receive and redeliver all securities tendered for the purpose of transfer, sub-division or consolidation.

This does not take into account the companies whose registered offices are not situated in the city of Calcutta. The difficulty of companies the securities of which are quoted in two different Stock Exchanges will also be great if they have to keep the Registry Office at both places. Government have framed rules regarding the issue of share scrip (published in the Gazette of India, dated the 11th July, 1959) which will ensure proper control of the issue of a certificate.

(7) The company has to agree that it will not close its Transfer Books on such days as may be inconvenient to the Exchange for the purpose of settlement of transactions. The company will give notice to the Exchange as many days in advance as the Exchange may from time to time reasonably prescribe stating the dates of closure of its Transfer Books.

If a company has to close its Books at the convenience of the Stock Exchange, there will be difficulties in regard to the securities listed on two different Exchanges. Moreover, the annual general meeting of the company must be held within nine months of the closing of its financial year and the date for the general meeting has, therefore, to be fixed in compliance with the statutory provisions of the Act.

(8) The company will publish in a form approved by the Exchange such periodical interim statements of its working and earnings as it shall from time to time agree upon with the Exchange.

It will not be possible for companies to comply with this requirement. It is an unnecessary expense to the company and may not be of benefit to the shareholders also.

(9) The company will, immediately after the meeting of its Board, intimate to the Exchange its decision by letter or by telegram if the meeting is held outside Calcutta on the net profits for the year with particulars of transfers to reserves, etc., even if such information is qualified as being subject to audit.

It is not usually possible for a company to intimate to the Exchange by letter or telegram immediately after the directors have approved of the accounts.

(10) The company will fix and notify the Exchange at least 21 days in advance of the date on and from which the dividend will be payable and will issue the dividend warrants simultaneously so as to reach the shareholders on or before the date fixed for payment of dividend.

This does not seem to be in conformity with the provision of the Companies Act that dividends shall be paid within three months from the date of declaration. Further, simultaneous despatch of dividend warrants by a company with a large number of shareholders is not feasible. The existing practice is to write up and check dividend warrants in the scheduled alphabetical order and such warrants are despatched as soon as they are ready.

(11) The company agrees to issue or offer in the first instance all shares (including forfeited shares unless the Exchange otherwise agrees), securities, rights, privileges and benefits to subscribe pro rata to the shareholders of the company unless the shareholders in general meeting decide otherwise.

Section 81 of the Companies Act, 1956 requires that new shares should be offered to the persons who are holders of equity shares unless the general meeting decides otherwise. In order to comply with this requirement ordinarily for every issue of shares, the company will have to call a general meeting unless permission is obtained from the Stock Exchange to offer the shares in accordance with the provisions of the said section.

Usually Articles of the Company provide that any forfeited shares shall be deemed to be the property of the company and the Board may sell, re-allot or otherwise dispose of the same in such manner as it thinks fit. Under the clause, the issue of forfeited shares will also have to be made to the shareholders of the company unless Stock Exchange otherwise agrees. This condition takes away rights of the Board available to them under the Companies Act, 1956. Moreover, if the small number of forfeited shares is required to be offered to the shareholders in the first instance, it would amount to unnecessary expense in calling the general meeting, etc.

(12) The company will supply upon application a copy of the Director's Annual Report, Balance-

Sheet and Profit and Loss Account to any member of the Exchange.

It is not a practicable proposition to supply to all members of the various Exchanges in which a company is listed, copies of Balance-Sheet and Profit and Loss Account. Most companies maintain a very comprehensive mailing list which includes prominent banks and share brokers. Such documents are also supplied to the Stock Exchange under Clause 31 of the Listing Agreement Form and members of the Stock Exchange can inspect th edocuments from the office of the Exchange. If this requirement is to be complied with, thousands of extra Balance-Sheets will have to be printed by each company which will involve unnecessary expense to the company.

£ R$

Investment Notes:

According to a statement issued by the Governing Director, the Indian Iron & Steel Company Limited has not applied to the Central Government for the issue of any right shares. Referring to the disposal of the company's shares in the Dalhousie Holdings any sale of these shares will be effected in such a manner as to cause the least disturbance to the market.

A two-crore Organic Chemicals Plant is soon to be erected at Rishra, near Calcutta, by the Alkali & Chemical Corporation of India Limited. The plant will produce a range of industrial organic chemicals including accelerators, antioxidants retarders and other auxiliaries required by the rubber industry. It is estimated that the annual capacity of the plant will be 2,200 tons. This will make the country self-sufficient in rubber chemicals for a considerable period .

In view of the substantial expansion planned by the rubber industry in the near future, the new ACCI plant will have an important role to play in meeting the growing demand for rubber chemicals from the tyre and the tube industry, footwear factories and manufacturers of conveyor belts, V-belts, hose and other industrial rubber products. The ACCI plant will also buy raw materials from the National Industrial Development Corporation's Intermediates plant when it is in operation.

The directors of Khandelwal Ferro Alloys Limited have stated that very considerable progress has been made in the construction of the factory structure and other civil engineering works. Approximately 80 per cent of the plant and machinery have already arrived at the site and the balance is on its way from Norway. It is expected that the installation of the entire plant will be completed by the middle of 1960, when the first furnace will go into production. The second furnace has also been ordered with the Norwegian suppliers with a view to achieving the full targetted production of 30,000 to 36,000 tons annually.

It is learnt that considerable progress has been made on the Assam Pulp Mills project. The mill is expected to produce 30,000 tons of bleached sulphate bamboo pulp a year and the output capacity will be increased to 90,000 tons a year, if required. The company will have an authorised capital of Rs 50 million, of which ordinary shares of Rs 10 each will contribute Rs 30 million and the remaining amount of Rs 20 million will be contributed by other shares of Rs 10 each. A substantial portion of the issue will be taken by the Government of Assam, Balmer Lawrie & Company Limited and their friends and associates.

In Madras, Indian Bank Limited proposes to issue 16,600 equity bonus shares of Rs 100 each fully-paid. The bank will accept coupons for transfer till the 31st October 1959 if accompanied by a duly stamped and executed transfer deed.

The issue of 25,000 Convertible 7 per cent Cumulative, tax-free, third preference shares of Rs 100 each of the Star Paper Mills, offered to the public at par, has been fully subscribed. The list opened on the 17th September and closed on the 22nd September. These shares are convertible into equity shares, at par, after 7 years at the option of the holders and redeemable at par in the case of non-conversion within 15 years from the date of allotment.

£ R$

Investment Briefs:

Gillanders Arbuthnot & Company has maintained the dividend at 10 per cent for the year ended 31st March, 1959.

New Manbhoom Coal has maintained the dividend at 5 per cent for the same year.

In Bombay, Kemp & Company Limited has recommended a dividend of Rs 17.50 plus a bonus of Rs 2.50, making a total of Rs 20.00 per share for the year ended 31st March 1959. This compares with only Rs 15 in the previous year. The dividend is payable on or after the 2nd November. Transfer Books are closed from the 14th October to the 23rd October, 1959.

Ahmedabad Electricity has proposed a final dividend of Rs 4.25, making a total of Rs 6.75 per share for the year ended 31st March 1959 as against Rs 6.50 for the previous year.

Morarjee Goculdas Spinning & Weaving Company Limited has recommended a dividend of Rs 21.50 per share, subject to tax for the year ended 30th June 1959. This works out to a net dividend of Rs 15.05 against Rs 15 for the previous year.

In Madras, Malankar Rubber has reduced the dividend from 17 to 16 per cent for the year ended 31st March, 1959.

Rohtas Results

Balance-Sheet Reviews:

ROHTAS INDUSTRIES LIMITED has been able to report satisfactory results for the year ended 31st March 1959. Sales are higher at Rs 15.07 crores as against Rs 14.87 crores for the previous accounting period of seventeen months. There is a sharp increase in the output of paper and boards to 47,130 tons from 42,303 tons for the previous period. The trend of production during 1958-59 has bee further upward, 17,672 tons of paper and boards being made available in the four months ended July, 1959. There appear to be fresh proposals for increasing the capacity for pulp and paper manufacture.

The gross profit before providing for bonus to staff and managing agents' commission, is over Rs 95 lakhs higher at Rs 2.95 crores. The provision for Depreciation is Rs 86.06 lakhs, Development Rebate Reserve Rs 16.30 lakhs and Contingency Reserve Rs 47,731. The General Reserve gets Rs 47.27 lakhs. The allocation toward Taxation is Rs 55 lakhs (Rs 10 lakhs). The dividend of 15 per cent on the Ordinary shares is payable on a capital increased by the issue of bonus shares during the year in the proportion of one share for ten shares held.

£ R$

Bagalkot Cement

The net profit of the Bagalkot Cement Company Limited is slightly better at Rs 15.71 lakhs for 1958 as against Rs 14.44 lakhs in the previous year even with lower despatches on account of the suspension of work on Government projects during the monsoon period and limited storage capacity.

The output of cement is thus lower at 101,011 tons against 104,530 tons. A sum of Rs 14,128 (nil) has been written off exploratory expenses and 35,641 (nil) on account of preliminary expenses. A dividend of 7 per cent is payable against 6 per cent previously.

According to the Directors' report, all the machinery required for expanding the capacity of the plant by 100,000 tons have been received. It is expected that the new kiln will go into production before the end of the year.

£ R$

Cawnpore Tannery

The Cawnpore Tannery Limited has incurred a loss of Rs 1.52 lakhs for 1958 against a profit of Rs 69,052 after providing Rs 48,474 for Depreciation against Rs 53,488. Adding to this the carry-forward loss of Rs 1.69 lakhs, there is a total debit balance of Rs 3.21 lakhs, which is carried forward.

The directors state that trading conditions in the tanning industry continue to be bad. A new unit has been commissioned for engineering work, particularly for making bridges for the railways and the PWD.

£ R$

Praga Tools

The working of the Praga Tools Corporation Limited has resulted in a loss of Rs 12,204 for the period of 18 months ended 30th June, 1958. This is due to the fact that, in the interests of financial soundness, the directors have considered it advisable to make certain adjustments amounting to Rs 4.42 lakhs covering reduction in value in the past years in respect of finished and semi-products and unserviceable raw materials. In addition, a provision of Rs 60,000 has been made for Development Rebate Reserve.

Without the above adjustments, the results of trading would have showed a profit of Rs 4.90 lakhs for the period of 18 months. This works out to Rs 3.27 lakhs per annum against the figure of Rs 1.99 lakhs for 1956. Sales, during the 18 months, came to Rs 75.22 lakhs against Rs 42.78 lakhs in 1956.

£ R$

Mysore Electrical Industries

The net profit of the Mysore Electrical Industries Limited has increased to Rs 6.58 lakhs for the year ended 31st March 1959 from Rs 5.55 lakhs in 1957-58. The provision for Depreciation is Rs 1.10 lakhs (Rs 1.04 lakhs); Development Rebate Reserve Rs 62,867 (Rs 29,348) and Taxation Rs 3.20 lakhs (Rs 2.40 lakhs). The General Reserve gets Rs 30,000 (Rs 47,000). On the last occasion, there was a transfer of Rs 23,500 to the Industrial Finance Corporation Loan Redemption Reserve. The Reserve for Development Rebate gets Rs 36,623. The Ordinary dividend has been raised to 15 from 11 per cent.

The output of both high tension and low tension products is maintained at a high level and the company is in the happy position to meet any shift in demand that may arise, because of the diversity of the products manufactured. There are plans for expansion on hand.

£ R$

Bank of Mysore

The profits for the half-year ended June 30, 1959 amounted to Rs 12,83,296 against Rs 12,15,424 in last year's corresponding period and an aggregate of Rs 22,58,075 for the full year 1958. These profits, along with the amount brought forward of Rs 4,76,083, is Rs 3.50 lakhs, Reserve Fund amount is Rs 3,29,387. A dividend of 23% per annum is recommended (11½% for the first half year) absorbing Rs 5,75,000. The balance of Rs 5,04,992 is carried to the current half year. The previous year's dividend was 16 per cent tax-free.

Deposits stand at Rs 19.74 crores against Rs 16.87 crores in the corresponding period last year. The Bank is shortly to become a subsidiary of the State Bank of India.

£ R$

Chembra Peak

The profits for the year ending March 31, 1959 amount to Rs 5,72,641 against Rs 3,05,307 in the preceding year. The balance brought in from last year, Rs 75,291, has to be added to the profit as also another amount of Rs 12,093, being excess provision for taxation in the last year. Thus a sum of Rs 6,60,025 becomes available for appropriation. Taxation Reserve is Rs 20,460 for Development Rebate Reserve and Rs 1,50,000 for General Reserve. A dividend of 15% is recommended against 10% by the previous year. This would absorb Rs 1,40,000, and the balance of Rs 75,555 is transferred to the current year.

The capital expenditure incurred during the year was Rs 1,64,533. Tea crop during the year was 16.87 lakh lbsl against 16.19 lakh lbs. last year. Coffee produced amounted to 274 metric tons against 139 in the previous year. 1959-60 tea crop estimate is 15 lakh lbs.

£ R$

Periakaramalai Tea & Produce

The profits for the year ending March 31, 1959 after providing for depreciation amounted to Rs 16,74,392 against Rs 17,14,272. This along with the balance of Rs 1,12,619 brought in from the previous year and income-tax refund of Rs 42,258 (on previous year's account) makes Rs 17,99,269 available for allocation. A sum of Rs 6.70 lakhs is transferred to Taxation Reserve, Rs 58,731 to Development Rebate and Rs 2 lakhs to the General Reserve. A dividend of 12½% is recommended absorbing Rs 7,24,360. The balance of Rs 1,46,178 is carried to the current year. The General Reserve now stands at Rs 26 lakhs against the capital of Rs 57,94,880.

In the current year, the Company had to go in for a considerable expenditure on buildings—Rs 2,28,928, machinery Rs 3,11,112, and development of keeping immature tea Rs 1,14,273. Total tea crop was 48,74,543 lbs against 49,06,154 lbs in the previous year. Estimated tea crop for the year 1959/60 is 47 lakh lbs.

£ R$

United Nilgiri Tea

The profit for the year ended March 31, 1959 is Rs 14,94,377 against Rs 12,47,862 in the preceding year. From this have to be deducted Depreciation, Rs 2,01,906; Managing Agents' Commission, Rs 1,13,157; Commission to Estate Manager, Rs 13,428; Transfer to Furlough Reserve, Rs 21,000; Transfer to Development Rebate Reserve, Rs 4,739; Staff Bonus Rs 24,000; and Charities and Donations, Rs 5,500. The balance along with the carry-forward of Rs 1,20,125 and Rs 21,000 being excess provision for taxation leaves a sum of Rs 12,51,763 available for allocation. From this, taxation provision is Rs 6,15,447 and the interim dividend of 7½% absorbed Rs 1,64,496. A final dividend of 12% has been recommended absorbing Rs 2,63,194. A sum of Rs one lakh is transferred to the Development Reserve, Rs 2,817 to General Reserve, Rs 3,808 to Pension and Gratuity Fund and the balance of Rs 1,02,001 is carried to the current year.

The total taxes paid by the company both to the Central and State Governments on the year's crop was Rs 11,39,036 in direct taxes. The capital expenditure incurred during the year was Rs 2,47,682.

Previous year's total dividend was last year, Rs 75,291, has to be added to the profit as also another amount of Rs 12,093, being excess provision for taxation in the last year. Thus a sum of Rs 6,60,025 becomes available for appropriation. Taxation Reserve is Rs 20,460 for Development Rebate Reserve and Rs 1,50,000 for General Reserve. tion allotment is Rs 1 lakh. A final dividend of 10% with an interim dividend of another 10% makes the total dividend 20%. Last year, the dividend was 25%. Against the estimated 9,95 lakh lbs, the rubber crop weighed 9,52,216 lbs. The decline was due to labour trouble, labour unrest and smaller acreage. Estimate for 1959/60 provides for a crop of 9,47,500 lbs. The Company had replanted the Pathanapuram Estate with high-yielding rubber under the Rubber Board's subsidy scheme. Ten more acres will be replanted during the current year.

Two Recent Studies of Rural Cooperatives

Indian Finance
Established 1928
September 26, 1959

"The Wise Man in his attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right"—The Analects of Confucius.

COOPERATION has still a long way to go before it can lay the foundations of rural stability and prosperity. Perhaps, in no other field of development, barring agriculture, are hopes entertained more facilely and disappointments to be faced more generally than in the field of rural cooperation. These broadly are the twin impressions produced by a perusal of the findings of two recent studies of cooperatives—one by the Programme Evaluation Organisation of the Planning Commission and the other, covering Basti District in Uttar Pradesh, by the National Council of Applied Economic Research in collaboration with the All-India Cooperative Union. The more notable of the two is the PEO's sample survey, with its countrywide coverage, of 33 large and 84 small societies in 18 Community Development and National Extension Service Blocks. This study is all the more notable because it has been supposed hopefully all along that rural cooperation could not have better auspices for its development than in the Community Project areas.

The sample societies covered by the PEO's survey are predominantly credit societies inasmuch as schemes integrating credit with marketing hardly exist outside the pilot projects established by the Reserve Bank of India. Very few of these societies have put into practice the principle of granting loans for creditworthy purposes in pursuance of the recommendation of the Rural Credit Survey Committee. Nor have they fulfilled the twin objectives of bringing all rural households or all small holders in the villages concerned within the cooperative fold during the three-year period, 1955-58, for which the data have been assembled in the PEO's study. These and the other main findings in respect of an average large society and an average small society are highlighted by the following tabular statement which generally relates to 1957-58 unless otherwise stated:

	Average large society	Average small society
Number of villages covered ...	11	2
Membership	418	64
Membership per 100 rural households	23	22
Smallholder members (with less than 5 acres): % of all members	36	42
Smallholder members (with less than 5 acres) per 100 smallholder households	20	19
Non-landowning members as per cent of all members ...	27	17
Non-landowning members per 100 non-landowning households ...	20	13
Share capital (in hundred rupees)	142	19
Total funds (in hundred rupees)	845	152
Loans advanced to members (in hundred rupees)	662	90
Members receiving loans as per cent of all members ...	56	57
Loan per member receiving loans (in rupees)	283	245
Loans advanced against land as per cent of all loans ...	41	55
Loans advanced against personal surety as per cent of all loans	51	44
Loans advanced on produce as per cent of all loans ...	3	0
Loans repaid on or before due date as % of total loans repaid	64	86
Loans repaid within one month of due date as per cent of total loans repaid	10	5
Loans repaid after one month of due date as per cent of total loans repaid	17	9
Percentage of overdues to outstanding loans as on 30-6-58 ...	10	13

Some of these findings would need to be examined more closely in the light of other data wherever available. In the first place, although the fact is disappointing that only about a fifth of all smallholders with less than 5 acres each have been brought into the cooperative fold, it is a redeeming trend that the proportions of such smallholders in the total membership of societies—36 per cent in the case of an average large society and 42 per cent in the case of an average small society—are not very much below the all-India figure of 52 per cent which is the proportion of smallholders in the totality of rural households. It is, again, a redeeming trend that, although only under a fifth of all non-landowning households have been covered by the societies under study, the proportions of such landless people in the total membership of societies—27 per cent in the case of an average large society and 17 per cent in the case of an average small society—are about the same as the all-India figure of 22 per cent which is the proportion of non-landowning households in the totality of rural households.

The finding that the principle of granting loans for credit-worthy purposes has generally not been put into practice would also need to be elaborated. It may be noted here that the credit limit is normally fixed by reference to the land owned or held by the borrower. The landless labourer and the artisan have, therefore, had very little chance of getting loans from the society. It is, however, a redeeming trend that, in at least four out of 18 blocks, the crops grown by the prospective borrowers are taken into consideration in fixing his credit limits although, according to the PEO's study, this is a small advance, measured against the emphasis on crop loans laid by the Rural Credit Survey Committee. Actually, loans against produce have represented only 3.3 per cent of all loans advanced by large societies while no such crop loans have been given by small societies. It would thus appear that those cultivating tenants who were not in a position to offer any landholding as security have not been given loans on the security of their crops to any significant extent.

The related finding that the principle of credit-worthiness of persons has been stretched to the point of benefiting bigholders to a greater extent than smallholders is indirectly corroborated by the following figures of borrowing members in each landholding group as percentage to total members in the same group:

Size group	Average large society	Average small society
Above 25 acres	63	64
25—10 acres	63	69
10—5 acres	58	52
5—2 acres	59	62
Below 2 acres	56	53

But the relatively greater emphasis, in giving loans, on the credit-worthiness of persons has not been equally beneficial to the societies. This is borne out by the following proportions of overdues to outstanding loans as on 30th June 1958, analysed by reference to the size of the holding of borrowers:

Size group	Average large society	Average small society
Above 25 acres ...	12	31
25—10 acres	8	11
10—5 acres	15	11
5—2 acres	9	9
2 acres and below ...	10	10

It will be seen from these figures that the members of small societies with large holdings have been much more in default than others. Of course, these figures alone would not suffice to establish that the poorer folks are relatively more credit-worthy and honest than the richer ones!

Perhaps the most revealing findings of the PEO's study are in respect of the financial structure of the relevant societies. The major finding is that, of the total funds (Rs 84,500) of an average large society, 32 per cent is represented by share capital and other owned funds, 9 per cent by deposits and 59 per cent by Central Bank advances; and that, of the total funds of an average small society, 20.5 per cent is accounted for by share capital and other owned funds, 0.5 per cent by deposits and 79 per cent by Central Bank advances. Small societies have not received any contribution from the Government to their share capital. But, as the large societies represent "not cooperation alone, but cooperation in conjunction with the Government," the latter's contribution to their share capital is expected to be equal to the amount contributed by the members although an average large society has received, as of 1957-58, only about two-fifths of the expected Government contribution.

The relatively stronger financial position of large societies may thus be due to Government contribution, actual or prospective, to their share capital, which probably encourages people's faith in them thereby facilitating the inflow of some deposits. Otherwise, they are still largely dependent on outside assistance, though not to the same extent as the small societies. If the assistance received by both categories of societies from outside is calculated per member receiving loans from them, it amounts to Rs 236 as against the loan of Rs 283 per borrowing member in the case of an average large society and to Rs 325 as against the loan of Rs 245 per borrowing member in the case of an average small society. This verily is a state of affairs which does not redound greatly to the credit of rural cooperation even in the Community Project areas wherein, it may be validly supposed, there should have come about greater prosperity by way of additional income generation.

The National Council's study of cooperatives in Basti District, forming part of its wider case study* of the economics of depressed areas, has, on the other hand, laid bare an even more unsatisfactory state of affairs than has been

*This is a socio-economic survey under the title "Rehabilitation and Development of Basti District".

revealed by the PEO's study. Although the financial position of larger societies in the District, formed through amalgamation following the recommendations of the Rural Credit Survey Committee, has improved to some extent as a consequence of the state participation in their share capital, the average loan per member has worked out to just Rs 65 as against Rs 58 before amalgamation. Despite the apparent progress represented by the increase of working capital from Rs 6.5 lakhs before amalgamation to Rs 9.1 lakhs after amalgamation, the very cooperative character of the societies, it is recorded, has been seriously affected by their transformation into unduly large ones, each covering, on an average, 60 villages.

Cooperative loans in Basti District are still granted only on the basis of land ownership. They, too, are only short-term loans given in cash without being related to specific production requirements, and they are still as low as five times the paid-up share capital of members. The Basti report has, therefore, understandably pleaded for a liberalisation of the loan conditions and programmes so as to raise the maximum credit limit and to cover credit-worthiness of purpose. But, then, any such progress should be extremely difficult in a poverty-stricken district like Basti which has a per capita annual income of just Rs 165 as against Rs 272 in all-India as of 1955-56. It is in this context that the following finding in the report of the Basti survey constitutes a pathetic commentary on the state of the cooperative movement:

> "Almost all the members of the cooperatives would be small farmers or artisans, with little saving potential. The members will not, therefore, be in a position to provide initial capital by depositing any money in the society so as to make it a self-sufficient unit, or even raise enough share capital to give it adequate borrowing strength. The cooperatives will have to depend almost solely on external sources for their finance for a long time to come."

What is true of Basti is true of the larger part of rural India. This finding is, in effect, an eloquent justification of state-partnered and state-financed cooperatives. And thereby hangs a tale.

Buoyant London Market Feeling

By W. T. C. KING
Editor of "The Banker"
(London)

THE holiday month of August has this year strikingly belied its reputation in the City of London. In spite of an extraordinary spell of fine weather to add to the attractions of the season, the financial markets have been active and equities have been outstandingly strong. Evidence that the reflationary measures have now taken a firm and pervasive grip of the economy had prepared the way for a further advance in industrial share prices. By September 1, the index of industrial shares compiled by the "Financial Times" had risen to a new all-time peak, at 259.7 (mid-1935=100), whereas at end-July it had stood at only 237.0. The market thus rose in five weeks by almost as much as it had done, on balance, in the preceding six months (the year's low point, 212.8, had been touched at end-January). There has been a moderate reaction in the past few days (252.9).

Trend Of Rates In New York

The equity market has thus stood up well (except for a brief spasm of alarm) to the fears of rising interest rates that have plagued the gilt-edged market. Having been watching for some time, a shade uneasily, the rising trend of rates in New York, the City showed distinct jumpiness when the US Government Treasury bill rate suddenly shot up, towards the end of the month, from 3.4 per cent. (at which it was still slightly below the London Treasury bill rate) to over 3.8 per cent. This movement has provoked marked weakness in the London gilt-edged market and the index of prices of Government stocks has dropped from 86.32 at end-July to 84.59 on September 4, reaching a new low point for the year (the crest of the recovery from the gilt-edged slump of 1957 was 87.10 touched last February).

Meanwhile, the US bill rate has climbed further, to only a shade under 4 per cent its highest since the great banking crisis of 1933; and since the six-months Treasury bills are now commanding almost 4½ per cent the New York banks have raised their prime commercial lending rate from that figure to 5 per cent. In spite of these rather dramatic movements, the London bill rate has not yet moved. The discount houses have kept their concerted bid price unchanged for five weeks, with the result that the average allotment rate is still slightly under 3½ per cent. Evidently they do not fear any imminent rise in the Bank of England rate.

Confidence In Sterling

Until recently, few people in the City would have thought it possible for the London rate to remain for long at roughly ½ per cent below the New York rate. Inevitably, there has been some diversion of funds, chiefly continental funds, from the London market to New York. One striking indicator of this is the fact that at the latest Treasury bill tender the discount houses secured no less than 80 per cent of the amounts for which they applied —a most unusual proportion. This trend has not, however, undermined confidence in sterling. The forward exchange market has only responded to the opening up of a margin between London and New York interest rates, so that the forward dollar, long quoted at a premium, has moved to a discount.

The fact that this interest-arbitrage demand for dollars started at a time when London was making substantial dollar payments on commercial account has led to some easing of the spot rate; from around $2.81¼ early in August, the sterling-dollar rate came back almost to its parity, but it has since rallied to $2.80 5/16. Given this drift, many people were prepared to find that, in August, there had been only a negligible gain, or even some fall, in the central gold reserves of the sterling area. But, in fact they rose during the month by £10,000,000, to £1,160,000,000 in spite of the fact that special capital payments totalling £11,500,000 (including £9,000,000 of debt repayments) fell to be made during the period —a very heartening performance for a month that generally shows a drain on the reserves.

Radcliffe Committee Report

In spite of its preoccupation with these intriguing market movements, the City during this holiday season, has been paying close attention to a major happening in quite another sphere—the appearance of the eagerly-awaited report of the Radcliffe Committee, the body appointed by the Chancellor of the Exchequer in May 1957 to inquire into the working of the monetary system. This is the first investigation of its kind for a generation—the last one was that of the Macmillan Committee, which examined the working of the system under the gold standard and reported a couple of months before sterling was forced off gold in September 1931.

The Radcliffe inquiry is thus the first to examine the workings of monetary measures of control in the light of the new conditions created by the war and of modern aims to maintain high employment and optimum economic growth. Its report, a weighty document approaching 350 pages (obtainable from Her Majesty's Stationery Office, London, under the reference "Cmnd. 827", price 15 shillings), is clearly destined to become prescribed reading for all serious students in these spheres for many years to come.

Unfortunately, the report does not lend itself to any brief summarisation, partly because of the complexity of much of the argument, and partly because the Committee, fearing to give a distorted impression of its views, did not separately list its findings and recommendations. I shall certainly have many occasions to refer to this document in this series of articles. At this stage I confine myself to a few aspects that may be of special and immediate interest to readers overseas.

Combination of Controls

First, a very broad view of the Committee's findings on the major issue before it. The Committee does not pronounce any "verdict" upon the role of monetary policy "in our society". Its broad conclusion is that all types of economic control, administrative (or "physical") and fiscal, as well as monetary, are likely to be needed in combination to regulate the modern economy. The particular combination chosen will be dictated partly by prevailing economic circumstances and ideas and partly by which of the several leading objectives of economic policy is uppermost at the time. In any case, it is for the Government of the day to make the choice.

Monetary measures as used in the 1950s in Britain have not, it finds, succeeded in keeping the economy in smooth balance, and other measures have had to be brought abruptly into play at moments of approaching crisis. The functioning of monetary weapons has been handicapped in the 1950s by excessive liquidity in the economy, which is now diminishing, so that these weapons have a better chance in the early 1960s at least. But they still cannot be expected to suffice by themselves. The Committee does, however, see scope for the monetary authorities to "make more deliberate use of interest rates", especially long rates, because of the influence these have upon the liquidity of all financial institutions, and indeed of the whole economy, as well as upon the longrange planning of capital expenditures. It is upon "liquidity" in this wide sense ,rather than upon the "supply of money" as such, that monetary policy should seek to operate. The Committee is not, therefore, much impressed by direct (sometimes called "quantitative") financial controls as normal regulators, but in an emergency it would put main reliance upon them—by direct restriction of bank advances, capital issues and consumer credit.

External Policy

Secondly, the highlights of the Committee's findings on external financial policy. It agrees that the weight of opinion is solidly behind the view that the objective of maintaining a fixed and stable exchange should be "more absolute" for Britain than is its commitment under the International Monetary Fund agreement. It thinks that a floating exchange would be a "desperate expedient". Though devaluation as an instrument of policy could not be ruled out utterly in all conceivable circumstances, the Committee underlines its grave disadvantages.

Similarly, though inconvertibility "only makes sense" in a world of imbalance, so that it was right to proceed steadily towards the goal of full convertibility, Britain ought not to tie its hands against any possibility of reintroducing discrimination—lest a situation of major world disequilibrium should recur. The Committee is evidently not satisfied that there will never again be a dollar shortage.

Finally, every effort should be made to extend international liquidity—but not by raising the world price of gold, if only because of the uncertainty that would create about further changes.

Featherbedding Vs Rationalisation

THE American steel strike is gigantic with half a million workers having downed tools, and with 85 per cent of steel production suspended. Twelve big companies are involved. The workers demand an increase in hourly wage by 15 cents, with the top men already getting $3.10 per hour. The managements have been firm, the main object being reduction in costs and capturing foreign markets. Except for some attempts by lower officials, there has been no intervention by the White House: a suggestion for the President to meet the leaders of managements and Unions was turned down by him. The tug-of-war is straight between managements and Unions, the main aim of the latter being to maximise security of employment and higher wages. The managements are quite confident that, provided the Unions agree to eight major changes in Work Rules, they would not mind agreeing to a 15 cents wage rise because costs of production would go down on the whole. The anxiety of managements to reduce costs should serve as a model to employers in Indian organised industries. It is an open **secret that, generally speaking, plant and machinery in India are out of date** (particularly in the cotton mill industry), and the consequence is that considerable labour force is employed on avoidable work. Remodelling plant and machinery should reduce costs substantially and facilitate labour materially, but managements in India are postponing their responsibility because modernisation involves heavy outlay: rationalisation could be substantial and useful only after modernisation. From this viewpoint, it is imperative that the Government of India should appoint a high power Commission to catalogue an exhaustive list of overhauling and replacement in the big industries, estimate the foreign exchange required, and arrange for securing the necessary plant and machinery, as far as possible through joint shareholding by foreign capitalists, the rest through deferred payments based on Government guarantees. Without this foundational reform, it would be idle to expect managements in India to rationalise work and cost efficiently. The only instance of such modernisation is the Tata Iron and Steel Works, but that was possible because of substantial Government co-operation.

The demands by the steel Unions in the USA relate primarily to rights of consultation and protection, that for a higher wage being secondary. For example, a steel plant in Cleveland remains idle for three days on account of a wildcat walk-out due to a very unimportant incident, the loss mounts up to a million dollars, but the management has no remedy: going to a court makes matters worse: the loss of one million dollars cannot be made up, and the management has to swallow the bitter pill. Because a work place is hot, an additional hand is provided for relief. But even after air-conditioning, the Union demands that the additional hand should not be shifted to some other employment without its approval. Some special work occurs. The management wants to depute men knowing the job well. but the Union insists on the seniormost men being given the job although they may not be conversant with it. Overlapping benefits are glaring, but the Unions do not tolerate interference and probes: a worker just retired often gets his pension and unemployment allowance as well for 30 weeks.

The US steel strike began in July, and there have been a series of conciliation meetings between the two parties. Both parties are confident that, with the human engineering skill they are capable of, a settlement must come about soon. Among the demands by the managements are:

1. Modify ambiguous and restrictive language:
2. Reinforce contract prohibitions against wildcat strikes, slowdown and picketing;
3. Recognise the functions of the managements to develop and establish sound standards;
4. Clarify the right of companies to change work schedules so as to meet the changing requirements of the business;
5. Require employees, as a condition of receiving a vacation, to perform some work in the vacation year and enlarge the period for scheduling vacations;
6. Eliminate the overlapping or duplication of benefits under various programmes, such as severance allowance, supplemental unemployment benefits, insurance, pension, etc;
7. Simplify the procedure for establishment of seniority units; and
8. Generally simplify and clarify contract language in order to develop better understanding and co-operation among the working force.

Here in India, emphasis was laid on direct mutual bargaining between managements and labour, at the latest Labour Conference at Madras. The recent settlement between managements and labour in the Mysore Plantations with regard to wage increase by seven and one-eighth per cent (justified by the profit) and provision of railway fare to and fro for the annual vacation under certain conditions, was the product of direct and friendly negotiations. Both in public and private enterprises, the best policy for Government would be to prohibit obsolete machinery, and allow competitive forces to function as between employer and worker, instead of brandishing the essential commodities order, or cajoling unions at the last moment to withdraw strike notices after offering concessions which are not always justified on grounds of profit and loss.

India and The IMF

By P. S. Sood

AT the time of the publication of the Bretton Woods Plan, India had several grievances:

(1) It had been given a smaller quota incompatible with its vast size and its importance in the international trade.
(2) It was not given a permanent seat on the Board of Executive Directors.
(3) Multilateral convertibility of its sterling balances had also not been agreed to. It, however, decided to join the Fund.

At the Bretton Woods Conference, the Indian delegation also argued for including among the objectives of the Fund the development of resources of the underdeveloped countries. This suggestion was also not accepted. The utilisation of underdeveloped resources, it was pointed out, was a long-term objective which could not be achieved through the instrumentality of the Fund.

India's membership of the Fund resulted in certain changes in the currency system and in the operations of the Reserve Bank of India. One important change was the delinking of the rupee from sterling. The par value of the rupee is now fixed in gold and our rupee is directly linked to the currencies of all countries of the world. Another change is that the Reserve Bank can now hold currency of any country which is a member of the IMF in its Issue Department as reserve against paper currency.

Membership of the IMF has conferred the following benefits on India:

(1) It has raised its status and prestige in the international sphere. It also got a permanent seat on the management of the Fund as Russia kept out. Thus, India has been playing a very valuable part in the working of the Fund.
(2) The establishment of the IMF has led to an expansion of international trade and prosperity. India as a member has also gained.
(3) India has received valuable help from the IMF in balancing its payments. In one year, i.e., March 1948-49 India purchased no less than $92 million from the Fund in exchange for rupees.
(4) India has been able to borrow from the International Bank for Reconstruction and Development, by virtue of its membership of the IMF, since membership of the Fund is pre-condition for the membership of the International Bank. This is another great advantage. Upto June 30, 1956, the total borrowings amounted to $199.9 Million for essential development projects. Thus, the International Bank has helped substantially in the financing of India's economic development.
(5) Another advantage that has accrued to the country is the frequent assessment of India's economy by the experts of the IMF. In 1952, for example, a team of experts from the Fund visited India and submitted their report on India's monetary and fiscal policies to the Government of India in 1953. The Report, which is a valuable document, was published under the title, Economic Development with Stability.

The membership of IMF has thus been of great value to India. It actively participates in International Monetary discussions. It can safeguard its monetary interests. Apart from the benefits that accrue to it, it is also instrumental in promoting International Monetary co-operation. The Fund's contribution to International Monetary co-operation may not be spectacular; nevertheless, it is not inconsiderable. The Fund offers a valuable forum for the discussion of economic policies and methods followed by the members as well as for the international exchange of ideas. The Fund provides invaluable information in its regular publications on finance, trade and balance of payments, statistics and developments. The Fund has also provided useful technical advice to many countries in solving their monetary and trade problems. India has gained in all these directions.

In India, alongside the Government expenditure under the Five Year Plan, there was also a considerable increase in Private Investment in 1956, which contributed to the mounting import figures. The Indian current deficit in 1956 exceeded $400 million and, early in 1957, India was given access to the Fund's resources to the extent of $200 million. After 3 years, in which reserves had been accumulated steadily, India's trade and payments balances deteriorated sharply in 1956, chiefly because of a steep rise in imports associated with the intensified pressure of its development programme. There was a small decline in exports and some worsening of the terms of trade, the prices of India's main export goods being lower than in 1955 and those of imports higher partly on account of rising freight rates. Tea exports increased both in volume and in value, despite a fall in price. Exports of Jute goods decreased, however, owing to a decline in foreign demand that affected both volume and price. The volume of cotton textile exports declined, influenced by both increasing competition from Japan and growing demand in the domestic market. In order to curb domestic demand, the excise tax on cotton cloth was made raised on September 1, 1956. The main cause of the worsening of the trade balance and of the drain on reserves was the sharp advance in imports, particularly of material and equipment purchased in connection with the 2nd Five Year Plan that came into operation early in 1956. Advance payments for some of these imports that were expected to arrive later added to the pressure on reserves. Moreover, somewhat smaller crops and rapidly rising food prices prompted the Government to increase staple food imports. The increase in imports and the resulting drain on reserves continued through the first quarter of 1957. The latter was relieved through drawing on the Fund in February and March, 1957, totalling $127.5 million. In addition, stand-by arrangement was agreed with the Fund under which India might draw an additional $72.5 million during a 12 month period commencing March, 11, 1957. India drew the entire amount permitted by this arrangement on June, 12, 1957.

INDIA AND THE FUND 1958-59.

TABLE I.

Quotas and Fund holdings of currencies and Gold (as on November 30, 1958).

(Amounts expressed in millions of US Dollars).

Subscription— Member	India
Quota	400
Gold	27.5
Currency	372.5
Subscription account repurchased ...	Nil
Sales of gold for currency ...	Nil
Net member drawings	200.0
Income and Exp. etc.	4.6
Fund holdings of currencies (Per cent of quota)	577.1 (144)

TABLE II.

Exchange Transaction. Drawings and their repayment (as on November 30, 1958).

(Amounts expressed in millions of US Dollars).

1947	Nil
1948	68.3
1949	31.7
1950	Nil
1951	Nil
1952	Nil
1953	Nil
1954	46.7
1955	40.7
1956	12.5
1957	200
1958 to date Gross	300
Total to date Net	200

Table I shows the quota and Fund holding of currencies and gold as on November 30, 1958. India has a quota of 400 million dollars of which 27.5 million dollars is in gold and the remainder in national currency. The net drawings have been 200 million dollars and the income expenditure account is 4.6 million dollars. The Fund holds Indian currency to the extent of 144 per cent of our quota.

Table (II) shows India's exchange transactions from the Fund covering drawings and their payment over the last ten years. India drew 68.3 million dollars in 1948 and 31.7 million dollars in 1949. It repaid this 100 million dollars in total in three instalments, 46.7 million dollars in 1954, 40.7 million dollars in 1955 and 12.5 million dollars in 1956 so that it began 1957 with no indebtedness to the Fund. In 1957, however, it drew 200 million dollars in instalments to cover the serious deficit on foreign account which appeared in that year. This amount is still outstanding against us in the Fund.

Following the Resolutions at the 13th meeting of the Board of Governors of the Fund held in New Delhi in October 1958, the Executive Directors have enlarged the resources of the fund through increases in quotas and this has now been approved by resolution which reached the Fund in February, 1959. This increase of the Fund resources might be deemed to be in India's larger interest to the extent that greater resources with the Fund increase its lending capacity, but it must be remembered that the purpose of Fund loans is to overcome short-term balance of payment difficulties and by no means to finance long term developments. It may well be that, as a result of the rise in the Fund resources, and in particular the raising of Canadian, Japanese and German quotas by substantially more than 50 per cent will imply that net indebtedness from India to the Fund might conceivably rise from 200 million dollars at present to 500 million dollars in the Third Five Year Plan. This implies, however, that, at the end of that period, the structure of our foreign trade will be such as to assure the Fund that this is not perennial drawing upon its resources but a temporary advance which can be repaid without delay. In effect, therefore, if we draw from the Fund in the period of the Third Five Year Plan another 300 million dollars, we would probably be required to reduce our indebtedness by at least this amount in the following five years. Meanwhile, the increase in the quota is to be paid 25 per cent in gold and balance in Indian Rupees. The 25 per cent gold contribution would mean we have to pay 50 million Dollars in Gold and this is temporarily an additional burden on our foreign exchange resources. However, if we borrow 300 million dollars over the period of the Third Five Year Plan, this would imply a net improvement in our temporary foreign exchange position, though obviously a significant addition to our indebtedness.

Export of Manganese Ore

By A Special Correspondent

A FEW weeks ago, it was reported that the World Bank had given a loan of $35 million for the development of manganese mines in the Gabon Republic in Africa. It was stated that a zone had been selected for initial exploitation which would yield nearly 9,000,000 tons of ore output at a scheduled rate of 500,000 tons a year.

India's shipments of manganese ore to the USA have already suffered a severe set-back. At present, the USA is reported to be buying only about 10 per cent of its requirements from India as compared to nearly 40 per cent till recently.

The development of the mines in the Gabon Republic and the large-scale diversion of American buying to other sources of supply should be a matter of concern to India. Manganese ore is an important earner of foreign exchange, accounting for nearly Rs 30 crores in 1957-58. In 1958-59, however, there was a sharp fall to Rs 13 crores.

It is estimated that, in the first half of 1959, export of manganese ore was of the order of 80,000 tons a month. This cannot be considered as an encouraging performance, considering the fact that, in the whole of 1957, we were able to export as much as 1,700,000 tons. It may be recalled that the Second Five Year Plan has set a target of 1.5 million tons for the export of manganese ore.

In such circumstances, both the Government and the manganese trade should work in complete co-operation. The Government should sympathetically consider the various difficulties confronting the trade and adopt appropriate and timely measures for removing them.

Some of the difficulties which have been brought to the notice of the Government are:

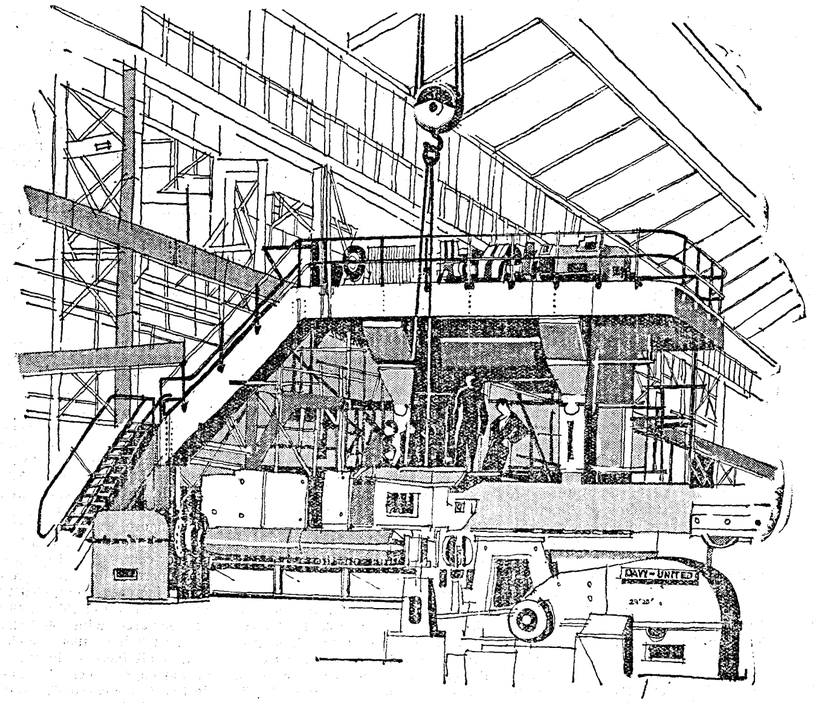
(a) The process of canalisation through the State Trading Corporation results in inordinate delay and even loss of business.

(b) The State Trading Corporation is being given preference in movement, in shipping and in the matter of quotas.

(c) The existing rail freight rates as well as the rates of royalty are rather excessive and these should be suitably reduced.

(d) The State Trading Corporation should stop the practice of issuing circulars to buyers in foreign countries that the private sector has no guarantee of movement and that only the State Trading Corporation can guarantee the execution of contracts.

It is necessary that these handicaps should be removed as speedily as possible. The Government should also consider sympathetically the suggestion that ad hoc quotas may be given to private parties in addition to their normal quota. The quota given to the State Trading Corporation may be cut to the extent ad hoc quotas are given to the trade.



The preferential treatment alleged to be given to the State Trading Corporation in regard to railway transport should be stopped. The Government should give the maximum facilities to private parties in the matter of movement.

The manganese trade should also acknowledge the fact that the State Trading Corporation has come to stay and that, whatever may be its failings so far, Government are unlikely to hand over the trade wholly to the private sector.

All that can be asked for is that the existing restrictions should be removed and that the State Trading Corporation should be given no special facilities which are not available to the private trade.

It is good to note that the Union Ministry of Commerce and Industry has realised the need for effective liaison between the manganese trade and the Government. The Ministry is understood to have suggested that an association of the entire manganese ore trade should be formed on an all-India basis to function as a liaison with Government; but, if this is not possible, a standing Committee might be set up under the auspices of the Federation of Indian Chambers of Commerce and Industry.

It is hoped that, in view of the acute competition confronting us at present, there would be better liaison and closer cooperation between trade and the Government in regard to the export of this important commodity.

Working for
THE NEW INDIA

As one of the thirteen British companies forming ISCON, Davy-United are responsible for all the Rolling Mills, the Wheel and Axle Plant, the Central Engineering Maintenance Shops and the Foundry of the great new Durgapur Steelworks from which will emerge the steel that is to be part of India's industrial future. Durgapur will produce over a million tons a year, enabling the Government of India to reduce considerably the yearly expenditure on foreign steel imports. It will provide the steel and pig iron for new industries and for urgently needed railways, hospitals and schools. And it will create nationwide employment for thousands of people. Davy-United are proud to be undertaking a major part in a project which will help to build a new and flourishing India.

EDITORIAL NOTES

Soviet-American Amity

THE Khrushchev-Eisenhower visits to each other's countries have roused high hopes, but a close study of Mr Nixon's speeches after his visit to Russia, and Mr Khrushchev's impatience here and there during his American tour, lead to the fear that there are as yet mental reservations. At a time like this, a page from history may help. Between the Red Revolution in 1917 and 1921, agriculture was particularly neglected by the Soviets: acreage under crops fell by 50 per cent by 1921. A severe famine broke out, and the Russian Government were unable to meet the situation. Maxim Gorki issued an appeal for help and relief, particularly to America. This appeal by Gorki was followed by another from Lenin. Herbert Hoover, who was then President of the American Relief Association and also Secretary of State for Commerce, responded to the appeal. Between 1921 and 1923, the ARA established 18,000 feeding stations in the USSR, with 200 Americans at key points. 788,000 tons of wheat were sent by America to Russia, and, at a modest estimate, 11 million lives were saved, out of whom 4.17 million were children. The total cost was $62 million of which the Soviet Government met one-fifth by gold payment. Throughout the three years, the Soviet Government were highly suspicious about the *bona fides* of the ARA and maintained a close watch on the movements and associations of the American workers. By 1923, the Soviet Government were able to see what was what, the ARA closed down camps in the USSR, and a warm send off was given by the Soviet Government. For the emancipation of slave-labour in the Southern States of the USA, the British people subscribed £20 million. Even nowadays, under Public Law 480, the United States Government have been helping 38 countries in relieving food shortage either through sales or free gifts of foodgrains. Under Title II of the 1954 Act, the US Government have so far donated $393 million worth of food and $749 million worth of food material has so far been presented to International Organisations doing relief and rehabilitation work. Philanthropy knows no political frontiers, social systems or race or creed: if nations sympathised with one another in the past, they should be able to co-operate much more effectively at present and in the future. A clearer understanding of American and Soviet psychology as a result of visits by Messrs Khrushchev and Eisenhower may in all probability lead to an attitude of mutual respect and trust. In his Address to the 14th Session of the United Nations General Assembly at New York on September 18, Mr Khrushchev estimated the annual global expenditure on the fighting forces and defence at $100 billion (approximately equal to Rs 50,000 crores, 5 times the estimated expenditure on the Third Indian Plan for 5 years, 25 times the expenditure per annum), and the personnel involved in military activities, direct or indirect ,was estimated by him at 100 million. Few could interpret this as an exaggeration. As he rightly put it, saving on this head (global disarmament) must more than finance slum clearance all over the world, and raise underdeveloped countries to an equal economic status with advanced countries: it is said that 90 per cent of differences are due to misunderstandings, and, in Mr Khrushchev's words: "The ice has begun not only to thaw but also to crumble."

*

Commonwealth Council

The first ministerial meeting of the Commonwealth Economic Consultative Council was held at a time when the economic outlook was decidedly better than it was this time last year, when the special conference of Commonwealth finance ministers meeting at Montreal took the decision to set up permanent machinery for consultation among the members of the Commonwealth. At that time, the restrictive effects of the recession in world trade were very much in evidence in the shape of import and credit contracts curtailment of development programmes and steep fall in commodity prices. Many of the members of the Commonwealth were deeply concerned about the commodity outlook and a decision was taken to set up a study group to work out measures for maintaining stability of commodity prices. In the year that has elapsed, the world has moved far on the road to economic recovery, though all the members of the Commonwealth had not advanced to the same extent. The most striking indication of recovery is the growing strength of sterling during 1959 following restoration of convertibility to foreign-owned sterling at the end of last year. Apart from the steady improvement in the gold and dollar reserves of the United Kingdom, which rose by £10 million to a total of £1,160 million in August, other members of the Commonwealth like Australia and New Zealand have added substantially to their reserves. While trends in commodity prices have not been uniformly favourable, a number of important commodities of special concern to Commonwealth producers show substantial increases.

One of the developments claiming continuous attention of the Commonwealth Economic Council is the impact of the European economic groupings on the exports of primary produce from Commonwealth countries. The recent meeting of the Export Promotion Advisory Council was told by Mr Lal Bahadur Shastri of the difficulties experienced by Indian exports in European countries as a result of policies which were often discriminatory in effect if not in intention. One of the principles reaffirmed at the last meeting of Commonwealth finance ministers at Montreal was multilateralism in world trade. So, the answer to European Common Market cannot be the revival of the idea of the Commonwealth as a closed economic system.

This brings us to the vital problem of encouraging investment in underdeveloped areas. The suggestion mooted at Montreal of a Commonwealth Development Bank appears to have been held in abeyance as, in the meantime, a proposal has been put forward for setting up the International Development Association. The body will be an offshoot of the World Bank, and will be empowered to make loans repayable in local currencies. The financial resources required for development of underdeveloped regions can be most effectively mobilised on an international basis. But finance is not the only desideratum, as far as the rapid development of the non-industrial and semi-industrial areas of the Commonwealth are concerned. Technical assistance and training failities are also of crucial importance. In making up the deficiencies in this field, Commonwealth cooperation can be of vital significance.

*

Air Traffic

The International Air Transport Association reported record traffic last year, when its 86 member lines carried 69,249,000 passengers, a rise of 7.3 per cent over 1957. An overall increase of ten to fifteen per cent for international air travel over last year's figure has been predicted by W. G. Lipscomb, Traffic and Sales Vice President of Pan American Airways. We in India can derive satisfaction that the rising trend of international air traffic is reflected in the performance of Air India International during the first half of 1959. During this period, the AII in its scheduled services carried more passengers and cargo over longer distance than in the corresponding period of 1958. The capacity ton kilometres operated by AII in the first half of the current year were 49,412,127 as against 46,008,965 during the second half of 1958 and 41,124,928 in the first half.

The Indian Airlines Corporation has not, however, been able to report similar improvement in traffic, and this is not altogether a matter for surprise, for, it only reflects the world trend. While international passengers increased by 12.4 per cent in 1958 over the previous figure, the number of domestic passengers increased only by six per cent. Capacity ton kilometres operated by IAC reorded a small increase from 49,042,300 in the second half of 1958 to 49,460,856 as compared with 46,782,387 for the first half of 1958. While there is a small increase in the number of passengers there is substantial decline in air cargo. Cargo declined from 21,704,346 kgs in the first half of 1958 to 19,079,503 kgs in the second half and further to 15,884,674 kgs in the first half of the current year. Such a large decline calls for explanation.

WORLD OF FINANCE

Enlarged Quota with IMF

A press release, published presumably by the Ministry of Economic Affairs in New Delhi, has drawn attention to the fact that the last week's decline in the foreign exchange holdings of the Reserve Bank was due to the purchase of gold by the Government of India prior to making over of 50 million dollars worth of gold to the International Monetary Fund in fulfilment of the Indian Government's obligation arising from the enlarged quota in the IMF of 600 million dollars.

This obligation, of course, imposes in the short term a strain upon India's foreign exchange reserves. Fortunately, arrangements for the purchase of gold are being made at a time when there appears to be a week by week export surplus. Thus, although the transactions connected with the purchase of gold would normally have involved a decline in our exchange reserves to the extent of Rs 25 crores—and the expectation is that these purchases will be spread over the next four weeks or so—the normal weekly accruals on account of export surplus might reduce the net drawing on our reserves for this purpose.

There is likely to be, however, an immediate usefulness arising from India's enlarged quota with the IMF. For, the aggregate quota limitation, according to the terms of the IMF, is that the Fund's holdings of a member's currency should not exceed 200 per cent of its quota. In other words, with India's enlarged quota at 600 million dollars, the IMF holdings of Indian rupees should not exceed 1200 million dollars worth. Another limitation is that "a member may purchase the currency of other members to an amount that would not cause the Fund's holdings of the purchasing member's currency to increase by more than 25 per cent of its quota during the period of 12 months ending on the day of the transaction". Since the last drawing that was made on the IMF was in June 1957, there would normally be no difficulty in approaching the IMF for the purchase of dollars in an amount equivalent to one-fourth of India's quota, which, in view of the larger quota, would amount to 150 million dollars. In other words, at a pinch in the early part of the Third Plan, if our foreign exchange reserves by that time have not been built up sufficiently to meet deferred payment maturities at that time, it should be possible for the Indian Government to consider that they have a nest egg of 150 million dollars that they could draw from the IMF.

It is particularly in such conditions, and much more so when we have to think seriously of re-purchase of rupees from the IMF, that the scheme for luring hoarded gold through gold bearer bonds becomes much more attractive. While, from time to time, we have been hearing that various studies have been made about the practicability and feasibility, not to speak of the desirability, of floating a gold loan, precious little seems to have resulted from any such studies. The last week's communique that India will be utilising Rs 25 crores of foreign exchange for paying one-quarter of India's enlarged quota with the IMF in the form of gold should spur the Indian Government to a more serious consideration about a scheme for gold bearer bonds.

+

Bank Advances: Target Achieved

THE return of the Scheduled Banks for September 11 should afford a great deal of satisfaction to the monetary authorities in this country, since the total of Advances, in registering a decline of Rs 8.36 crores to Rs 926.71 crores, has, as from the 1958-59 busy season peak, contracted by over Rs 100 crores. It may be recalled that, on the threshold of the 1959 slack season, Mr H. V. R. Iengar, Governor of the Reserve Bank, had urged the Scheduled Banks to reduce the volume of their Advances by a minimum of Rs 100 crores, in order that they may be in a better position to undertake the task of financing the 1959-60 busy season. There is little reason to doubt that, were it not for the prodding from the Reserve Bank, the Scheduled Banks will not have brought about a reduction in Advances by so significant an amount. For, inevitably, with the slack season growth in Deposits amounting to Rs 120 crores—and over Rs 100 crores of this being under the head of Time Liabilities—banks would have preferred to maximise their earnings, particularly from Advances. It was, therefore, both necessary and desirable for the Reserve Bank to urge restraint upon the Scheduled Banks during the 1959 slack season. But it is entirely a different question whether the achieving of the target will produce the intended result of facilitating the financing of the 1959-60 busy season. For our part, we believe that, what though there has been an addition to resources of the Scheduled Banks to the tune of Rs 220 crores —Rs 120 crores by way of an increase in Deposits and another Rs 100 crores representing a decline in Advances—banks have already, as it were, utilised such gathering resources. The table published on this page shows that an element of Rs 45 crores of the freed resources has gone to reduce borrowings of Scheduled Banks from the Reserve Bank and the State Bank. A further Rs 123 crores has been applied to enlarging the investment portfolio and the only significant addition to resources available for financing the next busy season is a rise of Rs 13 crores in Cash Balances. Thus, in spite of the fact that, as at September 11, Advances of Scheduled Banks are just a shade above 50 per cent of gross Deposits, and although it is certain that, in the remaining weeks of the 1959 slack season, the ratio of Advances to gross Deposits will fall below the 50 per cent mark, the fact that, meantime, banks have greedily increased their gilt-edged portfolio will mean that the Scheduled Banks will need considerable resort to Reserve Bank credit for meeting the demand arising in the 1959-60 busy season.

—Change ...	+71.98	—6.43	31.26	+5.23	+57.67	—58.64

The return of Scheduled Banks for September 11 is also noteworthy for a new peak being touched in Deposits, with a rise during the week of Rs 13.04 crores to Rs 184.40 crores. Even more significantly, the rise in Deposits since January 2 this year has amounted to Rs 219 crores. At this rate, it seems likely that Deposit expansion during 1959 will set up a new record—conceivably touching the Rs 300 crore mark. (The rise in the Deposits of the State Bank since the beginning of the year has amounted to Rs 101 crores, indicating, therefore, that, while the growth of Public Law 480 counterpart funds may have contributed importantly to the overall increase in Deposits, there has nevertheless been a considerable acceleration in the pace of Deposit growth with Scheduled Banks. That there should have been such increase in Deposits after cutthroat competition for Deposits had been eliminated by the Inter-bank Agreement on Deposit rates, which came into force on October 1 last year, is again a significant pointer to the fact that growth of Deposits does not necessarily depend upon the rates of interest offered by banks).

The third noteworthy change in the Scheduled Banks return is the rise of Rs 9.39 crores to Rs 756.90 crores in Investments. In the relevant week, the Reserve Bank appeared to have sold through the tap only for an amount around Rs

THE INDIAN BANK LTD
Head Office : FIRST LINE BEACH, MADRAS-1

with its 23 local offices and
113 branches continues to
play its useful part in India's
economic development.

4 crores. Our explanation in this regard, which was given in last week's World of Finance column, was that the open market sales of the Reserve Bank in the week ended September 11 were made to Scheduled Banks other than the State Bank; and rise of Rs 4 crores in relevant week in the State Bank return related, to the consolidation of purchases made from the Reserve Bank in the week ended September 4. Hence, the rise of Rs 9 crores in the latest week, of which a moiety relates to the consolidation of purchases effected by the State Bank in the week ended September 4 and a moiety to purchases of other Scheduled Banks from the Reserve Bank in the week under review.

There are nominal changes under borrowings. Scheduled Banks' indebtedness to the State Bank stands reduced at Rs 3.43 crores against Rs 4.18 crores; and borrowings from the Reserve Bank are lower at Rs 1.78 crores against Rs 2.11 crores.

Except for the impress of a special transaction, namely, the purchase of gold for payment to the International Monetary Fund, in consequence of the increase in India's quota by $200 million, the return of the Reserve Bank for September 18 generally reflects the onward march of the 1959 slack season. (The special transaction is discussed in the leading article of this section). Active Note circulation has fallen by Rs 12.47 crores to Rs 1657.81 crores. Rupee Coin has returned from circulation for Rs 1.27 crores. Currency has been contracted against Rupee Securities for Rs 10 crores and, in the result, the Reserve Bank's cash in the till has improved by Rs 3.82 crores to Rs 20.85 crores.

Balances Held Abroad, in the Banking Department, are shown to be lower by Rs 3.22 crores at Rs 20.03 crores. While the amount utilised from Balances Held Abroad for purchase of gold is a piece of information that has not been vouchsafed, it is reasonable to conclude, since the preceding four weeks had each witnessed an increase in India's Foreign Balances, that, but for the utilisation of exchange reserves for purchase of gold, the export surplus would have contributed to an increase in the foreign exchange holdings of the Reserve Bank. The Central Government's Deposits are shown to be higher by Rs 7.51 crores at Rs 64.34 crores. On the face of it, with Investments in the Banking Department higher only by Rs 8.23 crores at Rs 287.55 crores, there does not appear to be any element of deficit financing. But, then, if regard is had to the fact that Other Assets of the State Bank have been marked up by Rs 3.75 crores, it is possible that the Reserve Bank has already, in its books, completed sale of giltedged to the State Bank for, say,, Rs 5 crores. Sales through the tap to the other Scheduled Banks may have aggregated another Rs 5 crores. Hence, Rs 10 crores of deficit financing may have been instituted in the week under review, concealed by sales through the tap of the Reserve Bank. The deficit financing would have been instituted because Government's account with the Reserve Bank would have had to be debited with the cost of the foreign exchange utilised for payment toward the gold purchase. If, after deficit financing to the tune of Rs 10 crores, the Centre's Deposits have improved by Rs 7.51 crores to Rs 64.34 crores, it means that part of the proceeds from ad hocs sold in favour of the Reserve Bank has been utilised in paying for the foreign exchange purchases from the Reserve Bank.

Deposits of the State Governments are lower by 0.50 crores at Rs 19.97 crores. But they have reduced their borrowings from the Reserve Bank by Rs 2.28 crores to Rs 16.74 crores. Finally, Scheduled Banks appear to have been put to some strain, presumably because of tax payments falling due on September 15. Thus, though the Reserve Balances of member banks are higher by Rs 4.40 crores at Rs 85.18 crores, this is after the State Bank had added to its Cash in Hand and with the Reserve Bank by Rs 9 crores. Moreover, Scheduled Banks appear to have had recourse to Reserve Bank credit, as the latter's Other Loans and Advances have been marked up by Rs 6.69 crores to Rs 80.85 crores. This, however, will be purely a temporary rise in Scheduled Banks' borrowings from the Reserve Bank which have been in recent weeks at a nominal figure.

The return of the State Bank for September 18 shows a smart rise of Rs 10.91 crores to Rs 578.01 crores in Deposits; this may reflect a further tranche of counterpart funds being deposited, in which case we may expect a further rise to occur in the giltedged portfolio of the State Bank. There is a small decline of Rs 1.29 crores to Rs 160.99 crores in Advances. Though the investment portfolio is largely unchanged, the rise of Rs 3.75 crores under Other Assets may presage further purchase of giltedged from the Reserve Bank. In the end result, cash in hand and with the Reserve Bank is higher by Rs 9.27 crores at Rs 37.95 crores.

British Election Optimism and Markets

By Paul Einzig

BOTH main political Parties have now published their election manifestoes, offering bigger and better bribes to the electorate. Even the Conservative manifesto is full of expensive promises, but the Socialist manifesto has no difficulty in outbidding its rival. The contest is one between Santa Claus and Super-Santa Claus. The outcome is bound to be inflation, no matter which side wins, and the difference will lie merely in the degree of inflation.

For the moment the Labour Party is getting the better of the argument. To allay middle class fear of higher taxation, it claims that its additional expenditure would not require additional taxation, because it would be amply covered out of the extra proceeds of existing taxes resulting from an expansion of the national income under a Labour Government. The manifesto maintains that, had it not been for Mr Thorneycroft's restrictive measures, national income in 1958 would have risen to a sufficient extent to bring the Government an additional revenue of £450 million.

There is, of course, an answer to that argument, but the Conservatives have not thought of it so far. It is that, had it not been for the unrestrained greed of the Trade Unions, encouraged by the Labour Party, the need for restrictive measures leading to a check in the expansion of production would never have arisen. If the Labour Party's promise of covering additional expenditure out of increased taxation yield resulting from expansion means anything at all, it means that a Socialist Government would never resort to disinflationary measures since, by doing so, they would check the rise in the output.

Nor is this the only indication that, under a Labour Government, Britain would have to face a revival of inflation at a high rate. The Socialist manifesto foreshadows the acquisition of equities by the Government. The reserves of the National Insurance Fund, running into very substantial figures, which are at present invested in Government loans, would be switched into industrial equities. Let this would amount to an admission that the Government do not trust their own bonds, that they expect them to depreciate. This would be a signal for a flight from Government loans which would become practically unsaleable except at a very high yield. The Government would have to finance their requirements with the aid of an increased Treasury Bill issue, which would produce a highly inflationary effect.

Possibly it is because of the anticipation of such developments that the Stock Exchange has displayed firmness lately in spite of the weakish tone in Wall Street and the rise in American money rates. Nobody can be very sure at this stage whether the Government will succeed in returning with a working majority. The fact that the Gallup Poll shows a 5½ per cent lead in favour of the Conservatives is far from conclusive, for, in 1950 the Gallup Poll showed a twice as big Tory lead and yet the Labour Government scraped back with a nominal majority. But the realisation that, in case of a Labour victory, there would be unfettered inflation, and that the resulting rise in equities would be accentuated by purchases for the Government, may possibly have induced many investors and speculators to take a hand, regardless of election prospects.

The investors may be right in the long run, but speculators are taking a grave risk. The immediate effect of a Socialist victory is bound to be a sharp fall in equities. Many holders would want to clear out in haste, in order to transfer their capital abroad while the going is good. The exchange control has been relaxed, and it would take some weeks for a Labour Government to reinforce it once more. Meanwhile, the flight from Socialist taxation and from other anticipated anti-Capitalist measures would drive large amounts abroad. To check the movement, the Socialist Government might reinforce the effects of exchange control by a credit squeeze and high Bank rate, which will be necessary in any case to defend sterling against a strong adverse pressure.

Even though this is obvious, the foreign exchange market, too, seems to display an overdose of optimism. The firmness of sterling during the import season can only be explained on the basis of the assumption of a certain Conservative victory, and such a victory is far from certain. Indeed, the rise on the Stock Exchange makes it decidedly less certain, owing to its effect on a large section of the electorate which does not benefit by it.

Conservatives are hoping for a substantial decline in Wall Street which would call a halt to this suicidal speculation of British investors on the assumption of a Conservative victory. The narrowing of the yield between London and Wall Street would result in substantial American selling which would be sufficient to halt the boomlet if not reverse it.

In the absence of a setback in Wall Street, the only chance of a halt in the boom in British equities would arise through a deterioration of Gallup Poll figures. Paradoxical as it may sound, the more probable a Conservative victory may appear, the less probable it will become as a result of the effect of optimistic expectations on the Stock Exchange and through the Stock Exchange on the attitude of the electorate.

Investors, British or non-British, have good reason for fearing the anti-Capitalist attitude of a Labour Government. The Labour Government of 1945-51 expressed their anti-Capitalism mostly in nationalisations so that private firms and individuals were let off relatively lightly. But it is now quite obvious that the British public wants no more nationalisations, so much so that the Labour Manifesto gave an undertaking that there would be none beyond the re-nationalisation of steel and road transport. That being so, the pent-up anti-Capitalist feelings accumulated during eight years in opposition would be let loose in the form of anti-Capitalist measures against privately-owned industries and private investors.

WORLD OF BUSINESS

Tin Containers Industry

The main problem of our tin containers industry is the procurement of an adequate supply of tinplate for the simple reason that production of tinplate in the country is far smaller than the demand. At present, there is an installed capacity of 90,000 tons of tinplate and it is estimated that the actual production available for the public will be in the neighbourhood of 80,000 tons. But the demand is estimated to be of the order of 140,000 tons per annum. It is evident, therefore, that, in order to meet the demand, a sizable quantity has to be imported. This is no doubt being done, but, in so doing , Government have necessarily to be vigilant in view of the present scarcity of foreign exchange.

It would, however, appear that imports of tinplate cannot be too severely restricted because many a small and large industry's progress depends on the availability of containers. Although the preserved food industry is still in its infancy in our country, it is fast growing and tin containers are more or less like a raw material for this industry. Further, with the progress of industrialisation, the use of tin containers is steadily increasing and, in the coming years, such use will be much more widespread than at present. A Government estimate says that the demand for tinplate may go up by 100 per cent during the period of the Third Five Year Plan. Therefore, there is need for trebling the installed capacity of the tin plate industry.

In the meantime, it should be the endeavour of the Government to make available to the containers industry such quantities of tinplate as will enable it to meet a good part of the growing demand. In the course of his presidential address to the Tin Fabricators Association in Calcutta last week, Mr Basudeo Lal Goenka has entered an appeal for rendering timely help to the fabricators to plan for higher production. In his view, it should not be difficult for Government because there has been some improvement in the foreign exchange position. Moreover, facilities have now been secured for the import of steel under a scheme of deferred payment.

Whether or not Government are able to accede to the request for larger supplies of tin plate to the fabricators, it should not be difficult for them to reexamine their policy with regard to allocation of tinplate to various consumers in the light of the points raised by the President of the Tinplate Fabricators Association. Mr Goenka has pointed out that much hardship has come to be caused to the fabricators because two different sets of principles are followed in the allocation of tinplate to the fabricators, on the one hand, and the vanaspati factories, on the other. It would appear that the different basis has stemmed from the fact that, in the earlier stages, the vanaspati industry was the mainstay of the containers industry. A part of the containers industry is functioning as part and parcel of the vanaspati industry with the result that the original basis of allotment of tinplate for the containers manufacturing plants of the vanaspati industries has continued unchanged while fabricators are granted licences on the basis of their 1957 production. The basis of allotment of tinplate to the vanaspati factories is their packing or production capacity. Mr Goenka's contention is that there is now no reason why the different bases for tinplate allotments to the commercial fabricators and vanaspati factories should be continued.

*

The Stanmobile

A model of "People's Car" whose prototype should now be complete and whose version would have been shown to the Jha Committee was got ready by the Standard Motor Product of India.

It is named "STANMOBILE" and is a two-door version of the existing 10 HP saloon. The manufacturers expect to list this cheap car at Rs 8,000 net ex-factory (distributors' margin not included.) But, under certain conditions, the manufacturers expect to reduce the price further to Rs 7,000.

As to the performance and other technical details, it is expected that "STANMOBILE" would be doing more than 40 miles per gallon, with a cruising speed of not less than 60 m.p.h. (Two such models already offered for production are one from Tatas and the second by Hindusthan Motors.)

The present Standard Ten has gone out of production in England and the current model is the Standard Pennant "Ten", which is a Deluxe version of the 10 HP saloon. This model should also be available soon from the Madras Factory. The English list price of the current 10 HP is £440/-, while that of Standard Pennant "Ten" is £492.10.0. The difference between these two prices is £52.10. in the English market.

Standard Motor Products have completed their plan to produce 3,200 of these new vehicles per annum. The producers argue that, for the past nine months, Standard 10 HP saloons were being sold without any margin of profit. Therefore, if the Madras Pennant Saloon, whose prototype is complete in their factory, is released without any price revision at the existing prices, they would incur a loss of Rs 400 net per car. They have already applied for a price-revision for this model of car to the India Government.

To cut down cost of production on hypothetical figures would be very hard on the industry, and unless the Government themselves enabled the industry to procure similar components at prices considered proper by the Government, cheapness could not be vouchsafed

Standard Motor Products feel that the 10 per cent margin allowed by the Tariff Commission is not excessive, especially when the automobile industry is at the present stage.

If the full 10 per cent margin is allowed on their new series of Pennant Saloon, a Deluxe version of their current 10 HP car, on the basis of 3,200 Pennants annually, Standard Motor Products are willing to subsidise the price of the austere STANMOBILE and market it at Rs 8,000/- ex-factory net (excluding dealers' commission) and also reduce the price of STANMOBILE to Rs 7,500 when the volume of this vehicle reaches 2,800 cars or more, thereby giving an overall volume of 6000 or more units in the 10 HP range by 1960-61.

As for the actual cost of the Madras Pennant Saloon, it is Rs 8,686, as per the Firm's account. Ten per cent of this is Rs 869, and the net factory price (without the distributors' margin) is Rs 9,555/-. So the difference between the STANMOBILE and the PENNANT SALOON is Rs 1,555. Any increase or decrease in component parts prices would vary the price of the two models.

The management hopes that it would be possible to attain a target of 10,000 vehicles yearly in 10 HP range, provided the Government help in getting additional capital equipment required to balance the production and also sanction licences for import of KD material were issued.

Therefore, the Managament argues that, with a production range of 10,000 vehicles, consisting of the Deluxe Model and the STANMOBILE and Front-end Units, (which could be used for Delivery Vans or with any kind of special body) a further price reduction of STANMOBILE to Rs 7000 would be possible. That question would have to be reviewed anew on the basis of 1962 conditions.

*

Indian Copper

Indian Copper Corporation £700,000 project for the manufacture of electrolytic copper is waiting only for the final approval of Government to be put in hand. This information was given to the shareholders by Chairman E. G. W. Parish at the company's Annual General Meeting on Wednesday this week. The company hopes that the entire finance can be provided from within its own resources.

The company's working during 1958 has been quite satisfactory with production of copper amounting to 7,841 tons as against 7,848 tons recorded in the previous year. Sales amounted to 10,966 tons as against 10,301 in 1957. The demand for the company's products remains firm but the immediate prospects for sales have to be considered in the light of the present paucity of zinc, a compliamary metal used for the manufacture of brass, owing to stringency of foreign exchange.

Ore reserves at the end of 1958 have shown a substantial increase. Referring to costs, Mr Parish thinks that the trend is likely to be upward rather than downward. As regards the world prices of Copper, he is of the view that, if a further reduction is to be averted, it will be necessary for the big producers to curtail production. Though, in India, the price of copper is governed by the world trend, there can be no question of reduction in output as domestic production is able to meet only a part of our total requirements. Mr Parish has pointed out that, "on the contrary, it is our intention to increase production as much as possible within the limits of our capacity."

*

Jaipur Metals

Despite the difficulty in importing essential raw materials, the Jaipur Metals and Electricals Limited, Jaipur, has been able to show a sizable increase in profits during 1958. It goes without saying, therefore, that, with an easier import position, the company's performance would have been much better. Production of House Electric Meters has increased by 25 per cent while the output of the Metals division has been maintained. Indigenous production of components shows a progressive increase and the percentage of imported component has been reduced to a minimum.

There has been a rapid progress in the electrification of rural areas and perhaps one of the essential requirements for the successful implementation of this programme is an adequate supply of meters. Jaipur Metals & Electricals' arrangement for the manufacture of these meters in collaboration with a well known German firm over and above their own activities in this direction will go a long way toward improving the supply position in house meters.

*

Watch Factory

A Wrist watch factory with a capacity of producing 500,000 watches, 50% of which will be lady's wristlets, will be established in the Public Sector shortly. This was disclosed by India's Industries Minister, Mr Manubhai Shah, at a meeting with the Mysore Chamber of Commerce in Bangalore early this week. He was replying, as it were, to a memorandum presented to him by the Chamber President, Mr Jeenabai Davidoss.

This wrist watch factory will be an adjunct to the Hindustan Machine Tools factory at Jalahalli, Mr Shah said, and will be in collaboration with Citizens' Watch Company, Japan. Mr Shah did not mention anything about the capital outlay on the project.

Besides this factory at Jalahalli, Mr Shah added, there would be four or five others in the country. One will be in Poona, a second in Nettupalayam, Coimbatore District and a third in Dhera Dun. All these will be in the private sector.

WORLD OF JUTE

Continental Industry

TIME was, in the recent past, when our jute mill industry was seriously challenged in overseas markets by the Continental jute goods manufacturers. This phenomenon was largely the result of the comparative weakness at that time of the Indian industry. Although both were dependent on one and the same source for the supply of their raw jute, the continental mills had the advantage of the most modern machinery. The modernisation process, however, was not its own doing. It was somewhat of an accident as after World War II the industry found itself in a dilapidated condition. The rebuilding process actually turned out to be a modernisation programme and with its natural advantage of being in a highly industrialised part of the world, the European jute goods industry had emerged highly efficient. In the meantime, the Indian industry had continued almost unchanged as far as the efficiency of its equipment was concerned. In a sense, it was inevitable because Indian mills, unlike their continental counterparts, had to depend on foreign countries for the modernisation of their machinery. The competivity of the Continental mills increased sizably because, for one thing, they were getting good quality raw jute as all of their imports came from Pakistan and, for another, their cost of production was lower than those of Indian mills due to the high productivity of their mills. A possible reason for popularity of continental jute goods in overseas markets was their high quality which obtained partly from the use of good quality raw jute from Pakistan and partly from the technological developments in jute mills machinery incorporated in the industry after World War II.

Thanks to the vigorous drive initiated in our country for raw jute self-sufficiency, our jute mills are now assured of a plentiful supply of raw jute from within the country itself. There is no longer the pitiful dependence on Pakistan for raw jute, and how beneficial the attainment of raw jute self sufficiency has been is being seen in the steady improvement in the past one year or so of the financial position of our jute mills. The improvement is of course partly due to the rehabilitation and modernisation programme embarked upon by our mills during the past one or two years with substantial financial assistance from the Government of India. Thus, the largest section of the world jute goods industry is once again at the top of the list and there is no reason to believe that it will yield its place once again to some other section.

It appears that it is now the turn of the continental jute mills to wage the struggle for existence. There is no gainsaying the continued superiority of the continental mills' equipment. But there has been no improvement in regard to raw jute supplies. Their only source, Pakistan, has been an unreliable supplier constantly changing its jute policy. Pakistan has made no secret of the fact that it is not interested in the welfare of the continental mills. Its aim is steadily to increase the installed capacity of its jute goods manufacturing industry. The high cost of the raw jute they buy from Pakistan, coupled with the relatively high wages, has made the continental jute goods quite costly. Exports have become almost an impossibility in the past one year or so and mills' output has to depend almost entirely on domestic offtake. It woud appear that even this outlet is being slowly plugged following the lifting of the embargo on the entry of jute goods of Asian origin in many of the European countries. In recent months, there has been a rapid deterioration in the situation in almost all the jute manufacturing units in Europe. French jute goods production has declined by 15 per cent in the first five months of the current year with West Germany also showing a similar drop. The Italian industry seems to be passing through very difficult times owing to little demand for its products. The position of the Belgian industry seems to be slightly better but, even there, the export trade has almost disappeared. The present plight of the continental industry has made it abundantly clear that any industry which does not have the source of its raw material within its easy reach will have a precarious existence, however modern may be its equipment and machinery. By speedily attaining raw jute self sufficiency, the Indian jute mills industry has surmounted the biggest of the hurdles in its way. There are, of course, other urgent problems to tackle but the assurance of a plentiful supply of raw material has generated the confidence that these problems can and will be solved.

Listless conditions prevailed in the jute goods market during the past week ended Thursday. In the absence of sustained foreign interest in both the categories of goods sentiment was largely governed by the immediate outlook. Hessian offtake continues to be of small proportions and it is generally believed that the US steel strike is exerting a restraining influence on burlap consumption in that country. Traders seem to have little hope about any sizable buying support from Argentina. As far as sacking is concerned the Chinese requirements seem to have been satisfied with the recent heavy buying. Moreover the present strained relations between India and China do not encourage the hope of further support to the market atleast for sometime to come. The fact that in the next four months sacking production will be increased in view of the unsealing of additional looms from August 24 is also not conducive to higher price levels. A contributory factor for the present dullness in the market is the forthcoming Puja holidays.

Narrow price fluctuations characterised trading last Friday in the absence of interest. Hessian 40"×10 oz. September, closed the day at Rs 40.25 while B Twills was finally placed at Rs 100.10. After another dull day on Saturday the market resumed on Monday on a quiet note. Hessian September came back to Rs 40.10 with B Twills also lower at Rs 100. Tuesday brought no cheer to the market and the downtrend became more pronounced by close of transactions for the day. Hessian lost another 10 nP to be placed at Rs 40 while B Twills recorded a decline of 20 nP at Rs 99.40. Some improvement was noticeable on Wednesday in sympathy with the futures market and Hessian recovered to Rs 40.15 with B Twills also marked up at Rs 99.55. Wednesday's steadiness proved short-lived as on Thursday prices again backed away in the absence of support. Hessian reacted to Rs 40 and B Twills to Rs 99.35.

In the futures market also price fluctuations were confined to a narrow range. Hessian 40"×10 oz. was finally placed on Thursday at Rs 40.06 with B Twills November at Rs 98.5.

Except for some interest shown toward the close of the week in the lower grades mill buying had been at a meagre level. Assam Bottoms was quoted in the first half at Rs 22.75 but in later dealings the rate was marked down to Rs 22.50. In the futures section Assam Bottoms December which opened last Friday at Rs 23.20 closed on Thursday at Rs 23.

The following were the price trends:

	Opening Sept. 17 Rs.	Week's Low Rs.	Closing Sept. 23 Rs.

FACING THE FACTS ...

TO FACE THE FACTS YOU HAVE TO KNOW THEM.

Buying habits, customs and needs vary from country to country. If you are an exporter or an intending one, it is necessary for you to know the national preferences. Engineering Export Promotion Council knows all the facts worth knowing. On the spot studies are made by our trade delegations; we participate in foreign trade fairs and exhibitions; we have showrooms and staff at the right places. We will welcome your enquiries and will be glad to introduce you to reliable importers and dealers in foreign countries.

WORLD OF TEA

Revival of Interest

THERE was a revival of interest in this week's tea sales held in Calcutta. Although offerings were higher at 66,970 packages against 59,298 packages in the previous week, there was a good general demand. "Teas for price" and Plain Broken were firm to dearer, while Plain Fannings were keenly sought after at rates which showed irregular advances. Medium Brokens and Fannings were well supported. Any bright liquoring medium Assam BOPs and OFS met with good support and were sold well. The plainer BOPs, for which there was a fair enquiry, were 20 nP to 30 nP easier.

There was a better demand for CTC teas which were sold readily. Although these were sometimes dearer, prices were irregular and often to buyer's favour. Non-wither Dooars came to a ready market, but tended slightly easier. Clean black Pekoes were steady; but the better Whole Leaf grades were generally easier. Darjeeling teas, although quite well supported, were again lower and the demand for Tippy sorts showed a general decline and there were some withdrawals. Following rates were quoted:—Clean Black Pekoe Rs 1.94 to Rs 1.96; Plain BP Rs 1.86 to Rs 1.88; Plain Fannings Rs 2.10 to Rs 2.14; Medium BP Rs 1.90 to Rs 2.00; Best Assam CTC BP Rs 2.30 to Rs 2.70 and Best Assam CTC Fannings Rs 2.70 to Rs 3.10.

In the Internal Sale, offerings were 22,962 packages of Dusts and 816 packages of Leaf grades. There was a strong general demand for Dusts, particularly for exportable grainy kinds which were firm to dearer. The plainer liquoring descriptions realised prices well above valuations. Legg-cut teas were irregular and sometimes dearer.

There was more demand than in recent weeks for CTC teas. The stronger liquoring smaller kinds were firm to dearer; but the mainder were generally easier. Following rates were quoted:—Medium Dooars Dust Rs 1.96 to Rs 2.02; Medium Assam Dust Rs 1.90 to Rs 1.96; Medium Assam CTC Dust Rs 2.00 to Rs 2.15 and Best Assam CTC Dust Rs 2.50 to Rs 2.70. Leaf grades met with a good general demand at irregular rates.

Meanwhile, arrivals of tea into Calcutta Port, during the current season up to the end of August 1959, were higher at 1,428,769 packages against 1,400,003 packages in the corresponding period of last season. Exports of tea from North-East India have risen sharply to 43.39 million pounds in August from 33.94 million pounds in August last year. With a few exceptions, the improvement in exports is shared by almost all countries with the UK offtake rising from 25.44 million pounds in August 1958 to 28.64 million pounds last month. Exports to the USA are nominally higher at 1.44 million pounds. In the first eight months of the current year, however, exports are lower at 179.8 million pounds as compared to 202.06 million pounds in the corresponding period of 1958.

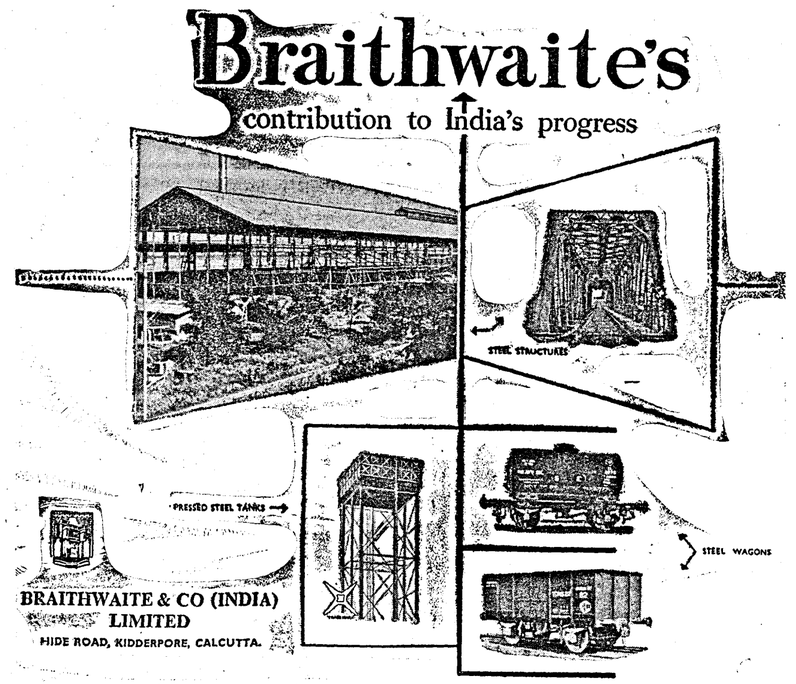
The Irish Republic increased its offtake from 537,320 pounds to 1.36 million pounds as did the USSR from 1.92 million to 2.85 million pounds. Shipments to other Continental countries also rose from 417,100 pounds to 1.38 million pounds and those to Turkey increased from 708,630 pounds to 964,750 pounds.

In the Middle East area, shipments to Iran increased from 399,440 pounds to 712,230 pounds as did those to the Persian Gulf and Iraq from 115,930 pounds to 530,000 pounds. Other Middle East countries also increased their offtake from 364,730 pounds to 3.14 million pounds. Egypt was the only notable country in this area, which reduced its offtake from 1.43 million pounds to 803,540 pounds.

In the Cochin market, 320,000 pounds of Dusts were offered for internal consumption. There was good general demand, particularly for coloury mediums, which were 5 nP to 20 nP dearer. Other sorts were irregularly 5 nP easier. Black Leaf types were strong.

Altogether 5,801,731 pounds were offered in the Colombo market. Demand was active and general. Uva teas met with an active demand at substantially dearer rates following an improvement in quality. Demand was also active for medium brokens at an advance of about 15 nP to 20 nP per pound, while low-grown Brokens were 5 nP to 8 nP cents per pound dearer.

According to trade sources from Chittagong, shipments of Pakistani tea have fallen sharply to 2.16 million pounds in July from 5.69 million pounds in the corresponding month of last year. This shortfall is entirely due to poor offtake by the UK. In the first seven months of the year, total shipments are also lower at 16.16 million pounds as compared to 19.06 million pounds in the corresponding period of last year.



Production of tea in Pakistan is estimated at 8.7 million pounds in August as against 8.6 million pounds in August last year. This brings the total outturn of Pakistan teas, in the first eight months of the current year, to 30.7 million pounds as compared to only 28.9 million pounds in the corresponding period of last year.

A buoyant tone continued to characterize the tea auctions in Mincing Lane. Competition was brisk for the smaller quantity of around 60,900 packages of North Indian, South Indian, Ceylon and other miscellaneous growths. Factors behind the improved tone are the small quantity of tea afloat to the UK and the reduced amount being offered for the sale next week.

A development of considerable interest to the traditional tea drinking habits of the British people was the marketing this week by Nestles of an "instant tea". In powder form, it is the soluble product from a blend of Assam, Ceylon and other selected leaf. For the time being, the company will concentrate its sales programme in London and the home countries. Should this prove successful, the distribution on a nation-wide scale will follow.

Although new to Britain, "instant tea" has been available on the Continent and in the USA for about ten years and considerable research went into producing a "Nestea" with a fair chance of acceptability by Britain, the largest tea-drinking country in the world. The quality of "Nestea" is said to match that of the ordinary leaf tea in the 7sh per pound range and works out much cheaper.

The first Indonesian tea auctions, held in Antwerp, was a success and further auctions are expected to be held at regular intervals following expected new arrivals. Lively bidding was noted from British, Dutch, Belgian and West Germany buyers. Prices were slightly under London levels; but higher than buyers' expectations.

WORLD OVERSEAS

US Notes

IT came as no surprise to the nation's financial community when the US Federal Reserve System, the nation's chief monetary and Credit Agency, last week began a new round of discount rate increases. The discount rate, of course, is the interest rate the system's district banks charge on loans to commercial banks. The increase, from 3.5 to 4 per cent, was instituted by eight of the system's 12 regional banks, and in line with normal practice the other four may be following suit shortly.

The move had been widely predicted for several weeks. It can be attributed to continuing gains in the nation's economy and the consequent pressure on the demand for money. Open market rates for money have been on the rise for the past year, and only two weeks ago the commercial banks raised their prime rates—their interest charges on loans to their top-rated customers—from 4.5 to 5 per cent.

In most banking circles, then, the move to higher discount rates is viewed as another instance of the Reserve System's following, rather than setting the pace for, market trends. Even with the latest increase, the discount rate still is one per cent below the prime rate, which to all intents and purposes is the lowest open market rate, since other commercial rates usually are scaled upward from it.

In other words, businessmen actually may not have to pay much more for loans as a result of the discount rate boost than they now are paying. At the same time, however, they may well find it a little harder to get loans. Although the Federal Reserve Board here in Washington seldom offers official explanations for its discount rate moves, one obvious purpose of the latest increase is to make commercial banks—which now have to resort frequently to the Federal Reserve System for additional *funds—more restrictive in their* lending.

So far this year, credit demands have been abnormally large, in terms of normal seasonal expectations. They have continued to increase in the past few months despite the effects of the work stoppages in such basic industries as steel and copper.

Last week's boost in the discount rate was the third this year and the fifth since August 1958, when demand for funds began to soar along with the surging American economy. That August 1958 raise was from 1.75 per cent to 2 per cent. The 4 per cent discount rate now in force is the highest since 1932. However, it still is a far cry from the 7 per cent—the highest in the nation's history—of the early 1920's.

One important source of the demand for borrowed funds may be found in business programmes to expand and modernize productive facilities. The Government's latest official survey, published jointly last week by the Commerce Department and the Securities and Exchange Commission, shows that US business is continuing to revise upwards its capital spending plans.

Companies of all kinds—manufacturing and non-manufacturing —expect to lay out a total of $33.300 million on new plant and equipment this year. Much of these outlays, of course, are financed internally, but a good part still must come from borrowed funds.

What makes this figure particularly pertinent to the stresses on the money markets is not only its magnitude, but the fact that it is nearly $1,000 million higher than the total outlays foreseen by the same companies just this past June, and $1,500 million more than was predicted in March.

The actual annual spending rate achieved during the second quarter of this year, moreover, was $32,500 million, also somewhat higher than was projected in the advance surveys. This marked the first time in a year and a half that actual capital spending exceeded stated plans—a pattern which is typical of a turnaround in this business sector and usually is indicative of a strong and confident economic situation.

There is the possibility, of course, that tight money policies, such as continued discount rate increases, could act as minor deterrents to business. Just how far to go in this direction during periods of economic advance always is one of the difficult decisions facing a nation's monetary managers.

The aim, obviously, is to keep inflationary forces under control while encouraging economic growth on a sound and sustainable basis. If this is the criterion, then the US government's monetary authorities seem to have done their job well, as the American economy has demonstrated a remarkable financial stability along with its vigorous expansion of the past year and a half.

*

Britain

DISPOSAL OF UK BOARD OF TRADE RUBBER STOCKPILE

Discussions have been opened with the governments of the principal rubber-growing countries regarding the disposal of rubber from the British Board of Trade's stockpile, it is announced by the Board. The stockpile, which amounts to about 100,000 tons, is no longer required for strategic purposes.

Disposal of the rubber will be spread over a number of years, and the plan of disposal will seek to avoid a disruption of the market. Further details of the arrangements will be announced as soon as possible.

* * *

Oversea construction work to the value of over £120,000,000 was carried out by British contractors in the year ended last March. Announcing these figures in London, the Ministry of Works said this was some £6,000,000 more than in the previous year, and the highest figure since the Ministry survey began in the year 1954-55. More than 60 British firms were active in over 65 countries.

New contracts amounted to just under £115,000,000—some £4,000,000 less than in the preceding year, but £13,000,000 more than in the year 1956-57. The value of work outstanding in March was a record figure of nearly £124,000,000—£2,000,000 more than a year earlier.

In the Commonwealth outside Africa, the Ministry stated, the amount of work done was greater than in the previous year—particularly in India, Ceylon Pakistan, and Malta. There was an increase of over £8,500,000 in new contracts obtained in Commonwealth countries throughout Africa.

* * *

Britain's exports and imports were lower in August than in July, but the Board of Trade, in issuing provisional figures for the month, states that some fall was to be expected as a normal seasonal movement. The visible trade deficit was smaller in August.

United Kingdom exports in August were valued at £255,400,000, as against £287,800,000 in July. As compared with the first quarter of the year, the monthly rate of exports in the five months April-August was 5½ per cent higher. Exports in January-August were 3 per cent higher than in the same period of last year.

Imports in August were worth £305,200,000, compared with £352,900,000 in July. As compared with the first quarter of the year, the monthly rate of imports in the five months April-August was 4½ per cent higher. Imports in January-August were 5 per cent greater than in the same period of last year.

Re-exports in August totalled £9,300,000.

*

Middle East

OIL PRODUCTION IN THE MIDDLE EAST

Production of crude oil in the Middle East in 1958 exceeded that in 1957 by 20.9 per cent. Total crude production amounted to 214.3 million metric tons, with Kuwait, Saudi Arabia, Iran, and Iraq accounting for 196.7 million metric tons, and the remainder being produced by Qatar, the Neutral Zone, Egypt, Bahrein, Turkey, and Israel.

The share of the Middle East in total world production rose from 20.2 per cent in 1957 to 24.2 per cent in 1958; all producing countries shared in the increase. The most rapid growth in production was in Iraq, reflecting the restoration of Iraq's pipeline to Mediterranean ports to full capacity operation by mid-1958. Kuwait, with about one-third of total Middle East production and 7.6 per cent of world production, also showed substantial gains. Saudi Arabia, on the other hand, showed the smallest increase in both relative and absolute terms; its share in Middle East production fell from 19.8 per cent to 18.9 per cent, and its share in world production dropped from 6 per cent in 1956 to 5.7 per cent in 1957 and 5.6 per cent in 1958. Iran continued its substantial and steady advance under the consortium arrangements.

Estimates of crude reserves indicated a continued increase, but the rate of increase fell sharply from 17 per cent in 1957 to 2.7 per cent in 1958. Saudi Arabia, Iran, the Neutral Zone, and Qatar were responsible for most of the increase. Egypt's reserves although small when compared with total Middle East reserves, rose from 275 million barrels to 400 million barrels.

In contrast to 1957, when prices of crude oil increased as a result of the Suez crisis, there were several decreases in crude prices in 1958. Mediterranean export prices were cut from $2.59 to $2.49 per barrel in February 1958, and Safaniya prices were reduced from $1.79 to $1.65 in September 1958. Mediterranean prices are, of course, geared to changes in the differential between tanker and pipeline rates.

Two Middle Eastern countries that have no refineries at present are expected to have refinery capacity within a year or two. The Jordan Oil Refinery Company has signed a contract with an Indian firm for the construction by 1960 of a 6,400-barrel refinery located at Zerka (see this News Survey, Vol XI, p. 146). Similarly, Syria has contracted with a Czechoslovak firm for a 20,000-barrel refinery to be ready for operation in July 1959. The only major change in refinery capacity that occurred in 1958 was an expansion of 160,000 barrels in the daily throughput of the refinery at Mina al Ahmadi in Kuwait.

Oil revenues accruing to the four major producers in the area rose in 1958 to $1,206.7 million, from $1,012.8 million in 1957. The distribution was as follows: Kuwait $415 million, Saudi Arabia $311 million, Iran $246 million, and Iraq $235 million.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

IN Professor Rostow's model, "take-off" (the characteristics of which I had held over for discussion this week) involves the presence of three related conditions. These are: (a) a rise in the rate of productive investment from roughly five per cent to over ten per cent of the national income; (b) the development of one or more substantial manufacturing sectors with a high rate of growth; and (c) the presence of a political, social and institutional framework that will exploit the impulses toward growth. The last condition would include a "considerable capacity to mobilise domestic capital resources." Historically, these conditions have assumed different shapes in different contexts. The crucial supply of finance for the take-off has usually come from shifts in the domestic repositories of capital—from land, for example, to industrial investment. This process has sometimes been made possible by land reforms involving expropriatory acts to a greater or lesser extent. Changes in social and political outlook and circumstances also release a great deal of capital resources locked up in sterile hoards. (One of the interesting consequences of the abolition of the former Indian states has been the entrance into the world of industry and finance of a number of former rulers). The second source of finance has been the ploughed back profits from enterprises which are at once the result and symbol of the take-off. Interestingly, inflation is considered by Professor Rostow as having historically aided several take-offs. Of course, it is trite enough that credit expansion and cheap money have aided industrial activity in one form or another, and a certain amount of short-term inflationary pressure is inescapable in an expanding economy. But easy money conditions do not automatically spell further momentum for the take-off. Professor Rostow gives some interesting examples where existence of loanable funds has not assisted take-off. It is the "demand side of the investment process" rather than plentiful availability of "resources" that is the decisive element in the take-off. (It is possible that the current embarrassment of Scheduled Banks in the country, with Advances not keeping pace with Deposits, is another illustration of the same predicament).

*

The difficulty of synchronising the demand side of the investment with the supply side of loanable funds is one of the crucial problems of planning for development. To the layman, who has been told ad nauseam about the difficulties of capital formation in an under developed country, it may seem a cruel paradox that available funds should lack a suitable investment opportunity. He may put it down to bad planning. This may well be true, but better planning cannot wholly solve this problem, since investment opportunity depends on the coming together of many favourable factors. Unless you are one of those who believe that there need be no order of priority in the deployment of available capital, you will see that paradoxes of this sort are inescapable during take-off.

*

Historcially, take-off has been sparked off by various sectors of the economy, depending upon the particular circumstances of an economy. Thus, it was the cotton textile industry that sparked off the British take-off. Technologically and economically, this was inevitable. For, as every schoolboy knows, it was Kay's flying shuttle, Hargreave's spinning jenny and, above all, Arkwright's spinning frame that laid the foundations of the English industrial revolution. (This, of course, is a very schoolboy way of putting the matter, but it is substantially correct). Economically, the British take-off was given a powerful momentum by the fact that this industry had (as we in India know only too well) an export market that solved at one stroke several of the problems of take-off. If only India could export a commodity for which there was half as insatiable demand as there was for British textiles in those days, our capital import problems will not be as embarrassing as they are.

*

Other nations have had relatively a tougher time trying to achieve the take-off. The United States, Canada and the Soviet Union financed their capital import during the period of take-off by export of grains; Sweden of timber and wood pulp; Japan of silk. In each of these cases, the development of a particular leading sector had important secondary results, leading to the accretion of further momentum for development. Thus, in Great Britain, cotton textile industry had its repercussions on coal, iron and machine-making industries and on transport. What Myrdal calls the spread effect came into automatic operation.

Another important source of momentum for take-off has historically been the inflow of foreign capital. This has been true of the United States, the USSR, Sweden and Canada. Professor Rostow considers that Britain and Japan have had their take-off without this assistance. This, at least as far as Britain is concerned, is not strictly correct. Britain's take-off was assisted by "foreign capital" and in a manner which is full of historical irony. Not to put too fine a point on it, it was Indian wealth systematically expropriated, that provided the impetus for the British industrial revolution. The historian Brooke Adams puts the matter succinctly: "The influx of the Indian treasure by adding considerably to the nation's cash capital, not only increased its stock of energy, but added to its flexibility and the rapidity of movement ....Very soon after Plassey, the Bengal plunder began to arrive in London and the effect appears to have been instantaneous....In themselves inventions are passive.. waiting for a sufficient store of force to have accumulated to set them working. That store should always take the shape of money, and money not hoarded, but in motion....Possibly since the world began, no investment has ever yielded the profit reaped from the Indian plunder, because for nearly fifty years Great Britain stood without a competitor."

I must hasten to add that I am bringing this up only for the purpose of qualifying Professor Rostow's assumption about one aspect of Britain's take-off. Historical grievances are hardly the sort of thing I wish to batten on. And yet, from the point of view of a sensitive Briton, an additional argument for assisting India in its take-off may well be, that it will constitute a simple act of reciprocity, if not of belated vicarious amends. I would like to make it clear that such an argument will always be secondary even for a Briton and is not legitimately available to an Indian. The argument for foreign assistance to an economy on the point of take-off is quite simply economic and to some extent historical, in the sense of its having been an inevitable concomitant of most economies on the take-off.

*

In spelling out the policy for the West in the light of his theory of growth and the present international political reality, Professor Rostow is unequivocal. "In Asia and Africa the communist technique poses what most historians will almost certainly judge as the central challenge of our time—the challenge of creating in association with the leaders and peoples of the preconditions and early take-off areas, a partnership which will see them through into sustained growth on a basis which keeps open the possibility of domestic development." This is familiar, almost conventional argument, but nonetheless valid for that reason. Addressing himself more particularly to Britain, he asks it "to lift its eyes from fair share and hire purchase and the establishment and concentrate on making a success of India's Third Five Year

Plan". One might almost say that the British labour party was merely accepting Professor Rostow's advice in explicitly committing itself to set apart, if returned to power, one per cent of Great Britain's national income for assistance to under-developed countries.

*

So far about the "take-off". The other interesting strand of Professor Rostow's argument is in relation to the crucial choices before the Soviet Union, now that it has achieved maturity. As I said last week, it is open to a State that has achieved economic maturity to choose from a set of four alternatives. These are, the pursuit of external power; the widening of the area of welfare, with emphasis on the distributive rather than the productive aspects of the economy; expansion of the range of mass consumption; and, finally, the creation of leisure. Roughly speaking, Great Britain has chosen the second and the US the third of these four alternatives. (This is rather a crude way of summarising not so much the national policies as the dominant economic mood of the two countries). Professor Rostow thinks that the Soviet Union is now ready not only structurally but psychologically for the era of high mass consumption. However, "Russia is seeking to convert its maturity into world primacy by postponing the advent of high mass consumption". But, since nuclear weapons have made ambitions of world domination a suicidal folly, what is the reason behind such a policy? Professor Rostow's answer is, "Communism is a curious form of society appropriate only to the supply side of the growth problem and likely to wither in the age of high consumption". In other words, whether the Marxian prediction of the "withering of the state" will come true or not, communism itself will wither at the first whiff of the super-market. Now, to ask Russians to accept this is to ask them to foreswear all that they have been told for over forty years. The end of maurity, they had been taught to believe, was a cataclysmic encounter with capitalism. Whether this prediction would have come true but for the emergence of the new factor of nuclear stalemate (on which Marx never reckoned) is a profitless question. What is relevant is whether Russia will allow ideological commitments to destroy commonsense. It is significant that, in practical, though not in ideological, contexts, Mr Khrushchev has shown himself aware of the hopelessness of a catastrophic encounter between the two ideologies. Two theories are possible for his speaking with two voices: one is that that peaceful professions are hypocritical and ideological avowals of the "sacred cause of world communism" are a truer reflection of the mind of the Soviet leader. On the other hand, it is possible that ideological mumbo jumbo is merely habit, if not a conscious equivocation for various reasons. It may be considerations of "face" or a desire not to spring too suddenly an ideological disillusionment on the Soviet people. Or it may be a ruse thrust upon him by exigencies of struggle for leadership within the Communist bloc (between China and the Soviet Union, for instance) or within the Soviet leadership itself. The latter alternative is certainly not implausible in the light of much recent Soviet history.

*

Within the Soviet Union itself, popular preference for the less grim alternatives open to a mature economy is becoming more and more evident and even articulate. What is more important, such impulses are not, as was only too common in the old days, immediately and ruthlessly suppressed. Even economic trends show that Russia is acquiring some of the odder features of a mass consumption society. What could be more symbolic of a "consumer-oriented" society than "hire-purchase"? Moscow Radio recently announced that Soviet citizens can now provide themselves with such "consumer-durables" as Radio sets and cameras and even clothes for 25 per cent down payment and easy monthly insalments. Another aspect of the transformation is to be seen in the recent Tass report that, from October first, working hours for all workers are to be reduced to a seven hour (for miners and others, a six hour) day.

*

Even the most hardened sceptic of Soviet intentions cannot abandon his duty of persuading Khrushchev of the attractiveness of the other alternatives to world domination (which, in any case, will never be his). He is sure to find Khrushchev receptive. For, the Soviet leader is clearly finding the strain that armaments are imposing on the Soviet economy more and more unbearable. A release of productive power equivalent to 20 per cent of Russia's gross national product currently used up in armaments will have momentous consequences. It will fill Russian homes with all the gadgets that Russian visitors to the American exhibition in Moscow looked at wistfully. Alternatively, it will make possible another Bhilai in India or elsewhere. It is in this context, that the current mood of back-slapping (however suspect its heartiness) cries aloud to be converted by the West into an opportunity. Khrushchev's disarmament proposals may be a "trick". But since he is "putting his foot" into the one place where you want it, it behoves you to pursue your advantage by not allowing him to wriggle it away.

*

A post script: I see no reason why iron should not today be to India what the cotton textile industry was to Britain. Surely, we have iron ore and to spare. Surely, there is a sustained demand for Indian iron ore. And it would be fitting if India's take-off into industrialisation were to be based on the most basic of all raw materials, iron ore.

BOMBAY REVIEW

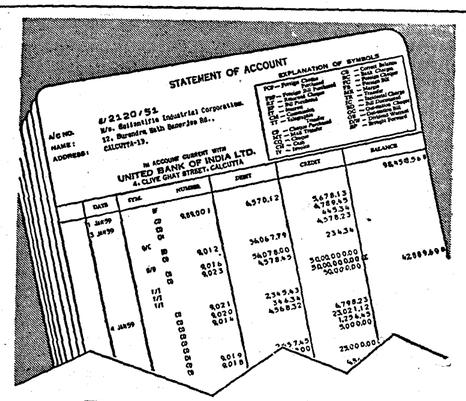
LIC Forges Ahead

THE Life Insurance Corporation of India has just completed three years of its existence, and it can look back upon this short period with satisfaction, if not pride. It could justifiably have laid claim to the latter also had it not been for the tarnishing of its name by what is now called the Mundhra affair. Perhaps this mishap is a blessing from the point of view of the policy-holders. For, the fact that the LIC has been confronted at quite an early stage of its career with a situation such as it found itself in when it was hauled over the coals, for the Mundhra deal, will make it extremely careful about the deployment of its funds. It is of paramount importance for the LIC to demonstrate that the policyholders' interests are safe in its hands as otherwise the raison d'etre of nationalisation will lose its significance.

It is to be admitted, however, that the policy-holders are still constantly reminded of the old days of private companies when they were getting much more efficient service than what is meted out to them now. Inordinate delays in issuing policies and even receipts for payments of premium are reported and there is a general feeling that there is a certain lack of a sense of promptness in dealing with the needs and difficulties of constituents.

Barring this rather serious drawback, there has been remarkable progress in the working of the Corporation. Its teething troubles have proved to be shorter-lived than generally expected, and all lingering doubts about the capacity of the LIC to capture the imagination of the people have been dispelled by the sizable increase in the value of new business written from year to year. Only a few still remain unconvinced about the superior potentialities of nationalised life insurance to spread the message of life insurance. Today, even the unlettered villager in some of the remotest corners of the country knows about life insurance and the LIC is seriously endeavouring to tell the common man and woman that the protection and security obtainable from life insurance are also within their reach. This mass contact is the special feature of LIC and one may not be wrong in saying that the private companies, whatever might have been their good points, could not have achieved to any appreciable degree the ruralisation of life insurance. It is true that the close liaison between the LIC and Government is a facility that had not been available to the private companies. Even so, the achievements of the past three years are of no mean order. The task of integrating 245 separate establishments into one single organisation has not been belittled by those who are well versed in the working of an insurance institution. Although the Corporation is well equipped to deal with the multifarious problems arising out of this huge integration, there can be no gainsaying the magnitude of the work involved. In this view, therefore, the LIC has achieved signal success during the short time that has elapsed since its inception.

A concrete instance of the redeeming of one of the promises made at the time of the nationalisation of life insurance is the declaration of bonus on the corporation's own policies and on those of other insurers which have been merged into the Corporation. The rates of bonus have been generally considered to be satisfactory. The importance of the bonus announcement does not, however, lie in the size of the disbursements but in the fact that the declaration has set at naught once and for all the apprehensions regarding the ability of the corporation to continue bonus payments on with-profit policies.



The enthusiasm to attain the annual targets fixed continues unabated and, in 1958, excellent results have been obtained. New business in that year has increased to 9.35 lakhs of policies assuring a sum of Rs 343.07 crores as compared with 7.95 lakhs of policies assuring a sum of Rs 281.90 crores in 1957. The total business in force has increased to Rs 62.30 lakhs of policies assuring a sum of Rs 1,681 crores as compared with 56.83 lakhs of policies assuring a sum of Rs 1,473 crores at the end of 1957. The uptrend continues to be maintained in the current year also. For the first 8 months of 1959, new business completed amounts to Rs 148.16 crores representing an increase of 23.0 per cent over the corresponding period of last year. Speaking at the third anniversary meeting of the Corporation on Monday in Bombay, Mr P. A. Gopalakrishnan, Chairman, has said that, if the current rate of progress is maintained during the rest of the year, the Corporation should have no difficulty in realising its target of new business of Rs 415 crores fixed for the year.

The current year is the first year of the Five Year Plan of Development. The aim is to secure new business of Rs 1000 crores in the last year of the Plan. For the implementation of a plan of this magnitude, additional facilities have to be created and the Corporation has already worked out details of a number of schemes for further recruitment and training of personnel, opening of new offices, publicity, etc.

A significant feature of the expansion programme is the emphasis laid on the taking of the message of life insurance to the rural areas. While it is true that, from a purely business point of view, intensification of the rural insurance drive is the right thing to do if expansion of business of the magnitude envisaged is to be realised, it is incumbent on the LIC as a national organisation to bring the benefits of insurance to the masses of the people who are still rural-based in our country.

It is to be noted that, by virtue of the huge sums at its disposal, the LIC has become the concern of not only the policy-holders but also of the general public. The LIC's investment rate is over a million rupees a day and the investments are made in accordance with the policy approved by Government. The LIC Chairman has revealed that, at the end of December 1958, the investments in the public and private sectors were 78.3 per cent and 21.7 per cent respectively. Compared with the position a sat the end of December 1957, investments at the end of 1958 show a slight increase in the case of the public sector and a reduction in respect of the private sector. Referring to the shrinkage of investment in the private sector, Mr Gopalakrishnan has pointed out that "it is becoming increasingly difficult to make investments other than in Government approved securities owing to the comparative short supply of sound scrips in the stock markets of the country." It is, however, expected that, in view of the recent decision of the Corporation to revive the grant of loans on the mortgage of properties, the private sector's share will show some increase.

The observation of the LIC Chairman on the supply of sound scrip in the country's stock markets deserves to be noted carefully by the private sector. For, the LIC has come to play an important role in the stock markets. As the largest single investor in equities, it wields tremendous influence over market sentiment. This is evidenced by the wide fluctuations in equity prices whenever there is some rumour connected with the investment activities of the LIC. Extra caution in buying equity shares is quite understandable after its experience in the Mundhra deal. But the LIC Chairman has made it clear that the reason for the drop in the investment in private sector is the paucity of sound scrip. The private sector has to keep this complaint firmly in mind when it points its accusing finger at the LIC for its lack of support.

They are so neat!

BOMBAY REVIEW

Food Policy

The firm conviction that adequate supplies of food are available in the country to meet the demand in full has been responsible for the adoption of a status quo food policy, notwithstanding the nationwide dissatisfaction with Government's handling of this all-important problem. It is now clear that the only change that may be witnessed in the Food Ministry, apart from the change in the leadership, will be an all-out effort to streamline the distribution system, the unsatisfactory working of which, according to Mr S. K. Patil, is the root cause of the present difficulties. One may, therefore, expect a continuous harping on the evils of hoarding and profiteering by the unsocial elements in our society and the consequent justification for the usurpation of the entire trade in foodgrains by the State.

What appears to be Authority's modus operandi in tackling the food problem was indicated the other day in Bombay by Mrs. Tarakeswari Sinha, Union Deputy Minister for Finance. Mrs Sinha has laid the emphasis on the need for maintaining an equitable level of prices. So long as prices are high, it is idle to expect smooth movement of supplies. The suggestion offered is to build up a big buffer stock so that Government will be in a position to defeat the nefarious activities of profiteers. It would appear that the Food Minister is already thinking on similar lines. For, he recently has said that he is working on a plan to interest the United States to agree to keep in India a sizable quantity of foodgrains on their own account in storage space provided by the Government of India. The idea is to draw supplies from this reserve on payment as and when needed. Mrs Sinha thinks that the very fact that there is a big buffer stock from which supplies will be released to the market by Government will deter blackmarketeers from engaging in their anti-social activities. Of course, this plan presupposes guarantees from States in regard to minimum prices and ready markets within easy reach of cultivators for their produce.

But the immediate problem seems to be one of solving the puzzle of the disappearing supplies. Evidently, Government are nonplussed to find that, while their statistics tell them that there has been, in the current year, a record production of 73.5 million tons of foodgrains in the country, a quantity which together with the imports received already should suffice to meet the country's requirements of food, there is instead of the expected easing of the food situation, still the widespread complaint of non-availability of adequate quantities of food at equitable prices. In their quest of the balance of the quantity between production and actual receipt at the consuming centres, Government seem to have made the discovery that smooth movement has been retarded by the fact that the cultivator is keeping back a good portion of his production. Different explanations are offered for this, and one of them holds Government themselves responsible for their present predicament. It is argued that, if the holding power of the cultivator has increased sizably in recent years, it is largely because of the liberal credit facilities that are now made available to the rural population through Government's programme of a rapid expansion of cooperative credit.

Mrs Sinha admits that, if it is true that it is the credit facilities which are now enabling the cultivator to keep his production from the free market in expectation of higher prices, it is indeed a serious matter. But the remedy suggested is, curiously enough, an intensification of efforts to introduce state trading in foodgrains all over the country. For, there can be no going back on the programme of expansion of cooperative credit in the agricultural sector because it is one of the main objectives of national policy. The way out is to be sought elsewhere. The ideal solution according to Mrs Sinha is state trading in foodgrains by all the States.

*

Housing

Extremely valuable suggestions have been made by the Bombay City Coordination Council, for relieving the housing shortage in the city. It will be noted that the problem of urban housing is of late receiving concerted attention. A few days ago, a seminar on this question, attended by engineers and experts deeply interested in the subject, was held in the city and thus provided a forum for the exchange of valuable ideas. The Coordination Council's contribution is slightly different from the outcome of the seminar in that the former has made some concrete proposals. One of the suggestions is that the responsibility for providing housing to the city population is to be borne by public authorities. This is arrived at by the following reasoning: practically all the residents in the city of Bombay can be included in one of the three groups (1) employees of public authorities (2) employees belonging to organised industries and (3) employees in commercial and business establishments. Hence, if all the three groups of employers take upon themselves the responsibility of providing housing for their employees, the problem of housing will solve itself automatically.

By accepting in principle that the provident Fund accumulations in Greater Bombay should be made available for financing the capital cost of housing, the Council has shown the way-out for the industrial employers. The Council is of the view that Provident fund of workers is ideally suited to provide capital finance for industrial housing.

A common handicap in urban housing is the paucity of suitable building sites and, even when such sites are available, it has been found to be a superhuman task to get legal possession of the sites. This drawback is sought to be eliminated by the council by the setting up of an organisation under its control for the purpose of obtaining, compiling and maintaining uptodate information about available plots of lands.

The problem facing planners of housing in the city is indicated by the fact that, out of 45 lakh citizens, as many as 15 lakhs are yet to be provided with suitable residential quarters. It is, however, encouraging to note that the Council is confident that, with the availability of about 5,000 acres as a result of the reclamation schemes undertaken in Bombay, the first big hurdle in the way would have been surmounted.

*

Storage Facilities

Among the measures taken in Independent India for the rehabilitation of the rural population, the programme initiated for the provision of an integrated system of cooperative credit ranks high. The Rural Credit Survey Committee, whose recommendations formed the basis of Government policy in this regard, has emphasised the need for providing adequate facilities to the cultivator for processing and storing of his produce so that he will be enabled to obtain a more equitable return for his labours. Apart from the urgent need for repaying loans taken at exorbitant interest from money lenders, cultivators are often obliged to dispose of their produce soon after harvest as they have no proper storage facilities. As part of the implementation of the programme of rural rehabilitation, the Central Warehousing Corporation has come into being. Under the Second Five Year Plan, 350 warehouses are to be put up all over the country. The programme is well under way and already there are 15 warehouses under the auspices of the Central Warehousing Corporation while 60 have been inaugurated by the State Warehousing Corporations. The programme for the current year envisages the establishment of another 15 under the Central and 120 under the State organisations.

The warehouses under the Warehousing Corporation are proving very popular with the primary producers of agricultural produce who are increasingly becoming conscious of the advantages of utilising the storage facilities. Evidence of this new consciousness is in the large increase in the quantity of commodities handled by warehouses during the past year. With the steady all-round improvement in the country as a result of the development activities of the Five Year Plans, the demand for storage facilities will increase at an accelerated rate. It is gratifying to note, therefore, that the All India Conference of Warehousemen, which met in Poona last week, has opined that the programme of building warehouses including arrangements for the setting up cold storage should be expanded during the Third Five Year Plan.

GATEWAY NOTES

S. E. RLY TENDERS

Sealed tenders are invited for (i) Tender No. CON/GM/53/D/59 for supply of Pull over Rod, Bolts, Point Lever etc. details to be obtained from the tender schedule. Approximate total value Rs. 1,50,000/-. Earnest Money is Rs. 1000/-. Tenders will be opened on 27-10-59 at 3 P.M.

(ii) Tender No. CON/GM/54/FI/59 for supply of 10,000 Rft. M. S. Pale fencing (M. S. Palisade complete confirming to CE's Drg. No. 15889. Earnest Money is Rs. 1000/-. Tender will be opened on 26-10-59 at 3 P.M.

Tender forms are obtainable from the Controller of Stores (Construction Section) Garden Reach, Calcutta-23 on remittance of Rs. 5/- (Not refundable) per copy per tender by money order to him direct in the case of outside firms and on production of cash receipt from the Chief Casheir, S. E. Railway, Garden Reach by local firms.

Tenders should accompany the recepits for depositing the Earnest Money as stated above with this Rly's Chief Cashier without which the tenders are liable to be rejected. Approved Contractors having a permanent deposit of Rs. 1000/- with the Controller of Stores are exempted. Firms not on this Rly's list approved contractors must enclose a valid Income Tax clearance certificate with tender.

WORLD OF COTTON

Production of Cloth and Yarn

THE cotton textile mills' production for July 1959 amounted to 146 million pounds of yarn and 425 million yards of cloth, equivalent to about 2.83 lakh bales. At the end of July, the composite units of cotton textile mills carried a total stock of 4.12 lakh bales of cloth comprising 2.07 lakh bales of unsold cloth and 2.05 lakh bales of cloth sold but not lifted.

Total production, during the first seven months of the current year, is 987 million pounds of yarn and 2,870 million yards of cloth. The corresponding figures for the first seven months of 1957 and 1958 were 1,041 and 964 million pounds of yarn and 3·168 and 2,870 million yards of cloth respectively.

Production for August is provisionally placed at 141 million pounds of yarn and 403 million yards of cloth. The estimated stock of cloth with the mills, as at the end of August, works out to a total of 3.83 lakh bales consisting of 1.87 lakh bales of unsold cloth and 1.96 lakh bales of cloth sold but not lifted. This is due to excellent exports during the month under review, while production of cloth has gone down by 22 million yards, presumably on account of more holidays during August. Anyway, the cloth market is in good shape. It is, however, to be seen how far the recent heavy floods in several States affect the potential domestic demand, which is expected to pick up after a fortnight.

Exporters have reported a visible improvement with Singapore's interest in the Indian market during the past few days. They have already booked orders for 1,500 to 2,000 bales of longcloth for deliveries extending to December. Business with the UK has also been generally active. Sudan and Burma have been making routine purchases. The recent rise of five to seven per cent in the prices of popular qualities has made the other regular buyers, such as West Africa, Ethiopia and West Asian ports, somewhat hesitant.

Exporters, however, believe that this hesitancy will soon disappear, as the buyers realise the slender prospects of a major fall in prices. The fact that prominent mills have already sold out popular exportable varieties up to February or March 1960 is likely to expedite purchases by countries which have imported relatively small quantities in the recent past.

×

FUTURES MARKET:

The reports of damage to the new crop induced prices in the cotton futures market to forge ahead from last week's levels. It was believed that the crop in Surat, Broach, Khandesh and Malwa areas suffered heavily on account of incessant rains during the past few days, not to speak of the fact that the overall cotton crop for the current season was placed lower at around 47.50 lakh bales by the trade. Jharilla March contract moved between Rs 713 and Rs 719.25, to finish at Rs 719.

×

SPOT MARKET:

Conditions in the Spot section continued to remain active with prices showing a rise of about Rs 40 per candy in some varieties. All the early deliveries of the new cotton crop were in good demand by the mills, resulting in the "ceiling" levels being pierced.

Meanwhile, rumours are current that the Government of India are inclined to impose control over the distribution of indigenous cotton with a view to arresting the rising trend in prices. A section of the trade feels that imports will be liberalised to the extent of 10 lakh bales this season for meeting the growing needs of the mills.

While cotton trade interests are opposed to controls over the distribution of the commodity, the industry has generally welcomed the suggestion. Another measure, suggested by cotton mills to overcome the shortage of cotton, is larger imports. In this connection, the President of the Cotton Buyers' Association has suggested that the prevailing shortage of cotton can be solved only by liberalising imports. He considers it as the only natural remedy which can arrest the rising trend of domestic prices which, if unchecked, will make cotton exports very difficult apart from rendering exports of cotton piecegoods practically impossible in the face of severe competition.

The President adds that an interim import quota of two lakh bales should be fixed out of the 6-lakh bales for the current season in advance to actual and regular users whose consumption particulars are already with the authorities. This will give immediate relief to the needy mills and also help arrest, to some extent, the rising trend of prices in the domestic market..

×

IMPORT FRONT:

The consumption of foreign cotton by the textile industry, during the 1958-59 season, is estimated at 4.6 lakh bales of 400 pounds each. Actual imports are around 4.4 lakh bales. Accordingly, the carryover of about 1.5 lakh bales, as on 1st September 1958, is reduced to 1.3 lakh bales in the 1st September, 1959. Mills have pleaded that the import target of 6 lakh bales for the current season should be revised upward to 10 lakh bales.

×

EXPORT FRONT:

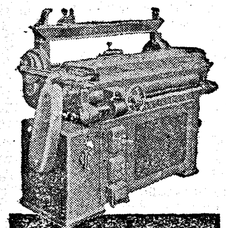
Rumours are current that the Government will reduce exports of cotton in view of the tight supply position in the country. Shippers have, however, pointed out that a reduction in exports cannot help appreciably to improve the supply situation. Besides, exports are making an important contribution to India's foreign exchange earnings.

Exports of cotton from the country, during the 1958-59 season, were estimated at 3.84 lakh bales as against 2.79 lakh bales in the previous season. Japan continued to be the main buyer, its purchases being estimated at 2.83 lakh bales against 1.90 lakh bales.

Regarding exports, the President of the Cotton Buyers' Association has suggested that the co-operative societies should be treated on the same footing as other shippers and, if the share provided to them remains unutilised, it should be distributed to the shippers.

×

NEW YORK COTTON MARKET



Price movements on the New York cotton futures market were confined to a narrow range. Nearbys showed small losses on additional October liquidation and light hedging; but eventually recovered on small trade buying and short-covering. Certificated cotton stocks fell by a further fifty bales to 1,833 bales for a new low. Switching operations were again a feature with a large Memphis spot house again buying December and selling October at three points difference.

×

LIVERPOOL COTTON MARKET

Prices on the Liverpool cotton futures market showed little change with mill fixations and local short-covering offsetting scattered hedging and commission house liquidation. The American contract closed steady, while Sudan futures were quiet.

BOMBAY REVIEW

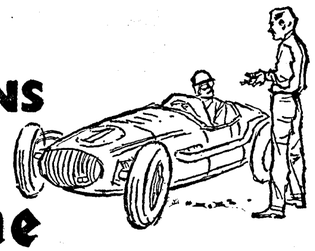
Export Outlook for Groundnut

THE latest turn in weather contions in the country has been viewed with concern. Fears are general that excessive rains in Gujerat, Sourashtra and Vidarbha may result in a significant decline in the new crop of groundnut, scheduled to be ready in November. Most observers now reckon the prospective supplies at around 23 lakhs tons of groundnut kernel. It is pointed out that this will mean a continuation of the tight supply position for several months. With the expected delay in the marketing of the main crop, the relief resulting from the arrivals of summer and Pollachi crops may also be negligible.



The recent improvement in the export outlook assumes a special significance against this background. Although the current foreign prices of groundnut oil are unremunerative, the disparity is expected to be corrected in the near future in view of the smaller world output of edible oilseeds. Consistently brisk overseas enquiries for groundnut oilcake and meal at gradually rising prices have helped the bullish atmosphere.

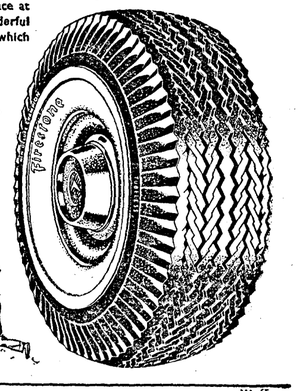
There are some reports that the validity period for the export of groundnut oil and HPS groundnut will be extended up to the end of March and that the incentive scheme for oil will be continued as at present. Groundnut extractions are also expected to be allowed for exports up to the end of September 1960.

Export houses have reported sizable business in HPS groundnut and groundnut oilcakes, both expellers and extractions. HPS groundnut fetched about £73/74, while expellers were sold upto £36 5sh. The rising trend in overseas prices hold out the prospect of further good business only if domestic prices are not rigged up too high. It is to be hoped that the opportunity offered by the revival of foreign demand is not missed.

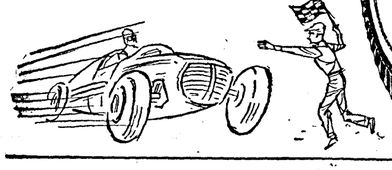
Trading in the Castorseed section remains dull in the absence of fresh development; but the overall tendency is mildly bullish in sympathy with the firm trend in other oilseeds. Export houses are inclined to view the future with subdued optimism. Against an exportable surplus of nearly 32,000 tons, India has already sold nearly 24,000 tons of oil. Reports about the Brazilian crop are by no means encouraging.

WORLD CHAMPIONS CHOOSE Firestone

..SO SHOULD YOU



because—in the world's foremost racing events, Firestone tyres prove their safety year after year in standing up to the tortuous twisting, pounding and heat without a single tyre failure. You, too, can have this same safety and dependability because the Firestone tyres for your car are built with the same safety construction features as racing tyres. Firestone tyres are Safety-Proved by performance.



Glen Roberts, winner of the Ninth Annual '500' race at Darlington, South Carolina, said that his wonderful performance was mainly due to his Firestone tyres, which had to withstand a track temperature of 121 degrees.

GATEWAY MARKETS

There has been little interest in the Linseed section, as the export trade in linseed oil is at a low ebb. Overseas rates, too, are lower, which again seem to be a technical reaction in a rising trend. The UK rate for linseed oil, which was marked up to £112 per ton, has now eased to £109 to £110. The price for Linseed oilcake, however, remains firm on shipper buying against outstanding commitments.

*

Gold & Silver

Thanks to renewed covering business, prices on the Bombay Bullion Exchange showed a further recovery from week-end levels. A leading "short" of Calcutta continued to cover his sales in Calcutta and so advices from that centre were very firm. A prominent bull operator subsequently supported here, with the result prices touched a new high.

Despite continued heavy receipts, Silver shot up by almost 2½ points over its previous level on buying by Calcutta and Akola operators. Arrivals amounted to as much as 30 bars, while the offtake was only nine bars. Unrefined metal receipts totalled 56 bars. Spot rates moved between Rs 203.62 and Rs 204.75, to finish at Rs 204.69.

Gold buoyed up mainly in the wake of the white metal. Delhi and other North Indian operators were the buyers, while sporadic selling by the spot houses was easily absorbed. Arrivals amounted to 4,000 tolas, while offtake was hardly 2,500 tolas. Spot rates moved between Rs 121.12 and Rs 121.81, to finish at Rs 121.72. Sovereign was quoted at Rs 78.

*

Yarn

Conditions in the Yarn market remained quiet with prices displaying an easier tendency following announcements pertaining to the allocation of art silk yarn from indigenous sources to the art silk powerlooms for the three months ending December, 1959 and the import of foreign yarn.

Apart from these, the yarn trade had an uneasy time on account of the heavy floods in Surat—an important consuming centre for art silk yarns—resulting in virtual disruption of the working of the factories there. Further, the demand from the weaving mills was also at a low ebb.

Staple-Fibre yarns continued to rule dull in the absence of encouraging reports from the consuming centres.

In contrast, the Cotton yarn section presented a firm front, thanks to restricted production and larger sales on export account. Moreover, the internal offtake of yarn was also better following the revival of demand from hosiery manufacturers.

OLYMPUS

Mini Car: Bajaj Tempo Project

OUTSIDE the Vigyan Bhavan in New Delhi today three small model cars, two of them from Germany and the third from Britain, were on display as the Ad Hoc Committee on Automobiles, headed by Mr L. K. Jha, Additional Secretary, Ministry of Commerce and Industry, were holding a remarkable public hearing inside. An automobile engineer of long standing told the Committee that a low-cost car should have an ex-factory price of not more than Rs 5,000. Only then, he said, would there be a large market for small cars and, consequently, economic production to keep down their cost to that level. Another engineer said that a low initial price alone would not suffice; in his view, a low-cost car should also have a low-cost of operation and maintenance. Not being an engineer, your correspondent was unable to figure out which one of the three types of mini-cars on display—the DKW which the TELCO have offered to produce for an ex-factory price of Rs 6,950, the Mini-Morris-Minor which the Hindustan Motors have offered to produce for an ex-factory price of Rs 6,350, and the Tempo Mini Car which the Bajaj Tempo Private Ltd, have offered to produce for an ex-factory price of Rs 4,950 to Rs 5,220—would satisfy the criteria suggested by the latter witness.

Since, however, your correspondent's enquiries revealed that the chances of the Bajaj Tempo project being ultimately accepted were rated pretty high, the details of this manufacturing scheme were fully ascertained for inclusion in this dispatch. These details and the merits claimed for the Tempo Mini Car are covered here without any comment.

At the outset the Bajaj Tempo Co, say that in planning the production of a small car "the economy in price, in maintenance, in operation and durability must have high preference over the streamline appearance, elegance, luxurious cushioning and chromium plating." Elaborating this, they continue that "the car must be sturdy and durable, cheapest in price, lowest in running costs and repairs and replacements and should cause the minimum drain on the foreign exchange resources of the country". Such a car could well be the Tempo Mini-Car which has been developed and produced by the Tempo Works (Germany) who have a 26 per cent capital participation in the Tempo Three-Wheeler Manufacturing Project of the Bajaj Tempo Private Ltd. It is further claimed that their scheme has the advantage of increasing the production of a vehicle already in the manufacturing programme and also of producing a mini-car which fits into the price range of Rs 5,000 to Rs 7,000 suggested by the Automobiles Committee. And important components such as engine, gear box, electrical system, brakes, battery and a number of small parts are also common in the Tempo Three-Wheeler and the Tempo Mini Car.

Based on a minimum production of 9,000 units a year and based on the present day prices of raw materials and labour, the price of the Tempo Mini-Car manufactured in India would be between Rs 4,950 (ex-works) and Rs 5,220 (ex-works to the dealer, and between Rs 5,400 (ex-works) and Rs 5,700 (ex-works) to the consumer. If this programme for the manufacture of the Mini-Car is accepted, the Bajaj Tempo Co, say, it would enable them to considerably reduce the price of the Tempo Three-Wheeler Transporters on account of the reduction in overheads and mass production.

The Company say confidently that they can commence the production of this car in India within about 15 months from the date of receipt of the manufacturing licence and the import licence for the additional equipment required and that the deletion (of imported components) percentage to commence with would not be less than 50. The Company can also undertake to increase the deletion percentage to the optimum level of 75 to 85 within less than two years from the date of commencement of production. The balance 15 to 25 per cent components are universally accepted proprietary parts such as electrical equipment, carburettor, dash board instruments, roller bearing, steering, etc., which can be obtained from indigenous sources whenever the necessary capacity is established in the country.

It is stated that there is a great possibility of export of such a mini-car inasmuch as, with the development of technical skill in India and with the full cooperation of Messrs Tempo Works, it can be produced at prices which can compete in the world market. The Tempo Works have given their consent to export this car to all countries in Asia and Africa and to all communist countries including East Germany, to Australia and New Zealand and to all South American countries. This aspect, it is stated, affords a special advantage, probably unsurpassed, and it will be a great asset to the smooth and economic establishment of this manufacturing project and to the country in general. The Tempo Works have also agreed to charge for the production of the mini-car only a small royalty of 2 per cent subject to Indian taxation on the F.O.B. price in Hamburg, which would be about DM 3,000. No royalty would be payable on the value of components that would be imported from or through Tempo Works in Germany.

The value of plant and equipment that would have to be imported for this mini-car project is as follows:—Set of dies for pressing components of the body—Rs 18 lakhs; additional machinery for the manufacture of engine, gear box and other components—Rs 48 lakhs; miscellaneous equipment such as measuring instruments, gauges, tools, etc,—Rs 6 lakhs. Out of the total of Rs 72 lakhs of foreign exchange required, Rs 39 lakhs would be needed in the first stage to enable commencement of the project with 50 per cent deletion. The balance of Rs 33 lakhs would be required in the year next after the commencement of production.

A general description of the proposed Tempo Mini-car has also been given by the Company. This car has accommodation for four persons. The engine is a two-stroke, two-cylinder, 398 c.c. water-cooled engine, developing 16 BHP and the gear box has three forward and one reverse gear. The car when loaded with four persons can take the maximum speed of 57 miles per hour and gives the petrol consumption of 54 miles per Imperial gallon. The construction of the chassis and the body shell is very sturdy. It is an all steel pressed body with two doors. The springing, shock absorbers and cushioning make the riding smooth and comfortable.

The merits of a two-stroke engine compared to a four-stroke engine are considered important in a small car. The two-stroke system extracts the maximum performance from as small an engine as possible. In the two-stroke engine, the working operation is divided into two strokes, out of which one stroke is holding power. In the four-stroke engine, however, out of four strokes, only one stroke is a power stroke. The two-stroke engine thus avoids the loss of power out of two working operations which is equivalent to one entire revolution of the crankshaft. Again, in the two-stroke engine, one explosion occurs at each revolution of the crankshaft, while in the four-stroke engine each second revolution is followed by an explosion. As a consequence of quick sequence of ignitions, a far greater elasticity and a greater pulling power result in a two-stroke engine.

It is further explained that the two-stroke engine operates without valves. These complicated mechanisms such as valves with timing gears, push rods, camshafts, rocker arms, etc., are eliminated in a two-stroke engine. These mechanisms not only consume valuable power but are liable to failures and require special skill for maintenance. The two-stroke engine is much simpler in design and more easy to operate. The reduction in the number of cylinders has also brought down the cost of manufacture of the two-stroke engine by about 50 per cent. Thus, the merits claimed for the two-stroke engine may be summed up as better performance at smaller stroke capacity, greater elasticity and pulling power, constant torque, low net weight, greater reliability and simpler operation, cheaper maintenance and 50 per cent reduction in manufacturing costs.

Finally, the Bajaj Tempo Company have claimed the following merits for the Tempo Mini-car project as a whole:—(1) Lowest in price; (2) simplest and sturdiest in design; (3) most economical in operation; (4) cheapest in maintenance; (5) largest franchise for export; and (6) smallest requirement of foreign exchange. These, the Company say, are not mere superlatives but demonstrable facts.

DELHI REVIEW

UP's Problem

While most of the State Governments are looking forward to faster progress under the Third Plan, the Uttar Pradesh seems to be confronted with a situation in which even the maintenance of the existing economic level looks an extremely formidable job. The main unsettling factor in this situation is the rate of population growth which, at 2 per cent per annum, is considered alarmingly high, calling for massive investment in the Third Plan period to keep the per capita income at the old level. The income of the State, estimated at Rs 1,756 crores in 1955-56, is expected to rise to Rs 2,000 crores at the end of the Second Plan. For keeping the economy at the existing level, the investment required during the Third Plan is estimated at Rs 2,000 crores. This is in excess of even the figure of Rs 1,750 crores, which is calculated to be the share to which the State could lay claim on the basis of a total Third Plan outlay of Rs 10,000 crores distributed among the States according to population.

The recent discussions of the State Planning Board have, beyond posing the problem involved in raising outlay of this size, not indicated definite ways for raising resources of this level. The Planning Board is, however, conscious of the impossibility of reaching such an investment target without wholehearted cooperation of the people in the form of voluntary contribution. The extent of such voluntary contribution that is considered necessary is estimated at Rs 1,000 crores. In terms of contribution per adult labour of the population, this works out to Rs 250 per head during the five year period.

But, the State Planning Board have not suggested the manner of organising the people in productive activities of a voluntary character to realise the contribution of Rs 250 per head. The Community Development movement remains the acknowledged means of mobilising people's support and enlisting their participation in implementing development programmes. But even this movement, it is now everywhere recognised, has failed in many ways even in its present limited programme. Whether the movement could be geared to realise a voluntary contribution of Rs 250 per head is a matter to be doubted. The village panchyats are only just finding their feet and spectacular results in the early periods are not to be expected. Thus, the prospects for a Plan which demands for its successful implementation massive voulntary participation, when people have not yet learnt to display an awareness of their responsibility in matters relating to their own welfare, cannot be considered bright.

In regard to distribution of investment between various heads in the Third Plan, the general view of the members was for giving prior attention to the needs of agriculture. At the same time, the scope for more industrialisation was also noted. In this connection, Dr Sampurnanand, Chief Minister of the State, pointed to the increasing recognition being accorded to the State not only for what the State has achieved but also in view of the potentialities for further growth. But the more important problem faced by the State in the industrial sector is to put the cotton and sugar industries which had been having a run of bad period on a sound footing.

*

Foodgrain Produetion

As the first step to tackle the food problem, Mr S. K. Patil, Union Minister for Food and Agriculture, has addressed a letter to the State Ministers of Agriculture with an appeal for an all-out effort to step up food production during the forthcoming rabi season. This perhaps symbolises the change from the controversial role in which the Food Ministry has recently figured to the constructive side of its work.

In calling upon the State to address themselves more vigorously and sincerely to implementing the Food Ministry's suggestions for the rabi campaign, Mr Patil has not sought to minimise the magnitude of the task involved in achieving self-sufficiency. He has not taken any risk of undertesimating the country's requirements of food. While the Ford Foundation Team had estimated the foodgrain requirements at the end of the Third Plan at 100 million tons, Mr Patil has put it at 110 million tons to provide for lean years. This, Mr Patil points out, is attainable on the basis of yearly increase of 8 per cent against the 3 per cent which had been the average rate of increase during the last ten years.

From 3 per cent to 8 per cent is a big leap which Mr Patil does not think impossible for the State Governments to make. The rabi campaign conducted during the last year has yielded encouraging results and 6 States out of 9 had registered more than 15 per cent of increase in production over the last three years' average. It is on the measures which were employed in the last rabi campaign that Mr Patil has advised the States to concentrate. Judicial use of fertilisers in combination with other improved practices such as plant protection measures and improved and treated seeds and concentration of efforts on the most promising areas have been suggested as measures of particular importance for increasing production.

The mere fact of a letter being addressed by the Central Food Minister to State Ministers is not significant since such exchange of letters is a routine affair. The letter must needs be followed up by steps to see that the suggestions given in the letter are properly implemented. It is here that Mr Patil's assumption of the Food Portfolio becomes significant. Since he is known to be an able administrator, it could be expected that Mr Patil would keep a vigilalnt eye on timely implementation of development schemes and see that progress is not retarded for want of inspiration or leadership.

*

Third Plan

In two speeches to the Allahabad University Planning Forum and the University Students Union, Mr Shriman Narayan, Member, Planning Commission, explained the prerequisites for progress in the economic development of the country. These he listed as increase in agricultural production, stability of price level, and adequate supply of technical personnel. The bulk of the increase in agricultural production will have to be in the form of foodgrain production. For, it is lack of adequate internal production and the consequent heavy imports that were responsible for most of the difficulties in which the Second Plan was entangled. Increase in production in other agricultural items is also required for ensuring raw materials for the agricultural-based industries.

Stabilisation of prices of certain essential commodities is, in the present conditions of scarcity, linked with increase in production. This is particularly true of food grains. However a price stabilisation policy will also have to take into account possible decline in prices resulting from increase in production. This inevitably entails a price support policy to keep prices within stable limits. Thus a price stabilisation policy involves the Government in oprations of purchasing from the market in conditions of glut and selling to the market in conditions of scarcity. This requires the maintenance of buffer stocks by the Government. It is this stability that is sought to be achieved by state trading in foodgrains. There could be no dispute with this limited objective of state trading. However, it is not such a limited role that is envisaged for state trading. On the other hand, it has been indicated that in its full-fledged form, state trading would invariably supplant all the existing channels of trade. Wholesale trade particularly would be replaced by cooperative organisations for the distribution of foodgrains. This is more than what is warranted by the mere attainment of price stability.

Mr Shriman Narayan has laid equal stress on the development of technical manpower. This, he says, calls for the multiplication of technical institutions and expansion of seats in existing institutions. While both diploma holders and graduates are required in increasing number, it is the supply of diploma holders that, according to Mr Narayan, would present difficulties in view of the present extreme inadequacy of their number.

*

Railway Programme in Third Plan

In a personal letter addressed to the staff of South Eastern railway Mr G. P. Shahani, General Manager has indicated the heavy programme that would fall upon the S. E. railway in the Third Plan. It has been pointed out, in this connection, that the railway will be called upon to carry as much as 80 million tons of traffic during the year 1966-67. This, according to him, would work out to an average daily loading of over 10,000 wagons.

Compared to the task of attaining a daily average of 10,000 wagons by 1966-67, the progress made by the railway under the Second Five Year Plan would appear to be meagre. There has been an increase of only about 807 wagons during the first three years of the Second Plan, which works out to a yearly increase of less than 300 wagons, while the target set for 1966-67 presupposes an annual increase of nearly 1,000 wagons.

A considerable increase in the freight is expected to be registered by the end of the Second Plan. Mr Shahani has calculated the likely load at over 6,000 wagons a day. A major part of this volume of freight traffic, Mr Shahani estimates, would go to meet the demands of the country's steel works.

Mr Shahani has left unanswered the question of the ability of railway in meeting the heavy load of freight traffic that will arise in the course of the Third Plan. However, he seems satisfied with the present progress made by the railway in bridging the gap of unsatisfied demand for wagons. In this connection, he refers to the decline that has occurred in the outstanding registered demand for wagons, from 22,750 wagons at this time last year to 4,000 wagons at present. The increase in wagons loaded as reflected in this has been mostly in respect of the demand of the steel works. While 500 wagons a day were loaded on an average with minerals to the steel plants last year, an average of nearly 1,000 wagons a day are today being loaded with minerals other than coal.

NORTH INDIAN MARKETS

Sharp Advance in Sugar Prices

IT would be recalled that, only in July this year, the Government of India assumed powers to allocate the entire sugar production of mills in the Northern region directly to dealers, introduced the system of licensing of dealers by State Governments and announced that the price to be charged by the licensed dealers would be controlled. Just after a week of this notification, the Uttar Pradesh Government announced "full control" over the distribution of sugar in the State. In spite of this, sugar is still being sold, in the open market, at a high of Rs 128 as against the controlled price of Rs 104.

Meanwhile, there is a proposal to take over sugar mills in the State during the Third Plan period. Close on its heels, the Bihar-Uttar Pradesh Joint Sugar Board has recommended that the minimum price of sugarcane should be fixed at Rs 1.75 per maund for the 1960-61 season, as the price of Rs 1.44 per maund, fixed for the 1959-60 season, is found to be inadequate. It is also suggested that even the price for the current season should be raised to the proposed level and that there should be control on sugar all over India and not only in Northern India.

According to the Indian Sugar Mills Association, total sugar production for the season 1958-59, as on the 31st August, was 19.07 lakh tons as against 19.72 lakh tons on the same date last season. The offtake of sugar from factories, during August 1959, was 1.66 lakh tons as against 1.84 lakh tons in the corresponding month of last year. This brings the total despatches from the factories, up to 31st August 1959, to 17.43 lakh tons as against 17.05 lakh tons in the corresponding period of last year. The closing stock with the factories, as on the 31st August, was 5.06 lakh tons as against 6.96 lakh tons on the same date last year.

A decision by the International Sugar Council that exporters may carry forward 10 per cent of their basic export tonnage for this year until 1960 without prejudicing their 1960 quota has lifted the world price of sugar from the August low of about 2.55 cents to 3.12 cents per lb. This is within reach of the 3.15 cents level which the Council like to see as a guaranteed minimum price.

*

Gur

In the Hapur market, Gur prices have improved fractionally as local stocks left are small at about 7,000 maunds. The prospects for the cane crop are reported bleak following the failure of monsoon over the major part of Uttar Pradesh.

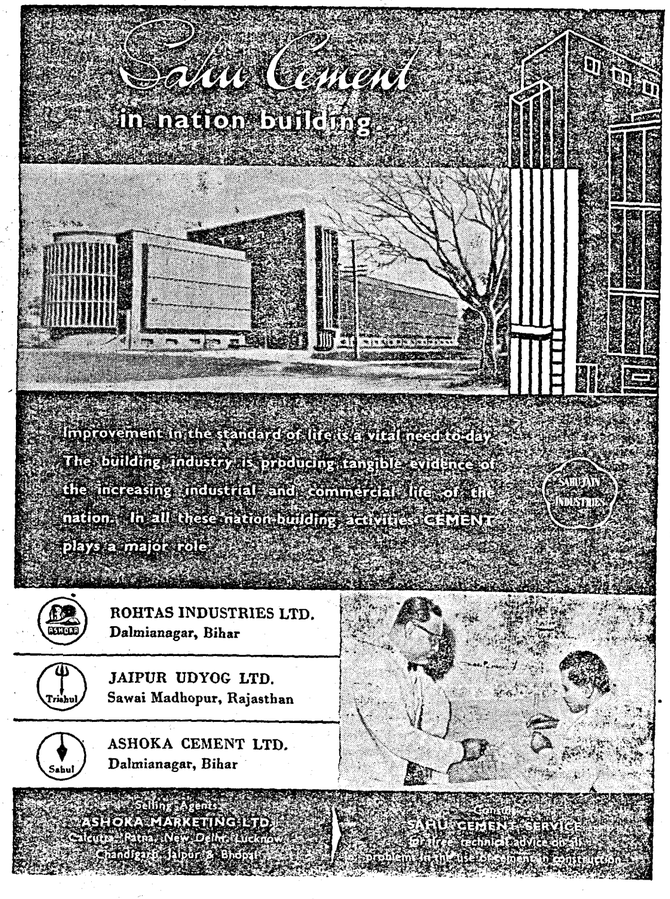
In the Muzaffarnagar market, Gur Chakku dry quality has advanced by 50 nP to Rs 25 a maund on demand from Gujerat and Madhya Pradesh.

*

Khandsari

Deshi Khandsari has registered a sharp advance of about Re 1 to Rs 2 a maund on rumours that restrictions on inter-State movement of the commodity would be removed shortly. Heavy stocks of about 10 lakh maunds are reported to be lying in the producing areas of the State and traders are naturally perturbed on that account, as the new season production will commence in November. The Uttar Pradesh Government have not yet announced their policy about Khandsari production in mill areas. Meanwhile, rates are moving between Rs 37 and Rs 42 a maund, according to quality.

Foodgrains



The recent upward trend in the foodgrains market has gathered fresh momentum during the week. The fresh strength in the market is attributed to the tightening supply position resulting from inadequate arrivals. Reports of drought conditions in East Uttar Pradesn and sub-normal rains over most part of the State, also contributed to the sustained strength of the market.

It is pointed out that the decline in arrivals is a sequel to the uncertainty over the Government's food policy. Most of the dealers are disinclined to order supplies in view of the strong feeling that restrictions on inter-zonal movement of grains may be removed. It is, however, felt that the situation will ease in a few days, since uncertainties regarding the Government's policy have disappeared for the time being.

In the Hapur market, wheat prices have improved further, the average quality quoting Rs 18 and the farm variety Rs 19.25 a maund. Arrivals of wheat in the open market are sparse and consumers are meeting their demand with difficulty from supplies received in private. Sales through fair-price shops are being continued.

Conditions in the Rice market have remained practically unchanged. Gram prices have been ruling firm on reports of damage to "khariff" crops and steady advices from the Punjab. New Maize arrivals are still small in the market and prices have improved by 25 nP a maund following consumer support.

DELHI REVIEW

MADRAS REVIEW

Industrialisation in Third Plan

ADDRESSING the members of the Mysore Chamber of Commerce, Mr Manubhai M. Shah, Union Minister for Industry, stated that the Third Plan so far as industrial development was concerned would be oriented to the development of heavy industries. This would be in accord with the broad strategy of the Third Plan drawing at the Congress Seminar at Ooty which, it might be recalled, envisages, along with priority attention to agriculture, large-scale investment on heavy industries. That the outlay for industrial development under the Third Plan would be substantially larger than that provided for in the Second Plan was inferable from the big scale in which the Third Plan is being conceived. But how large the outlay on industrial development in the Third Plan would be, cannot be known before the entire Third Plan is finalised to the last details. However, a general idea of the industrial development in the Third Plan could be had from the indications given by Mr Shah about the directions along which investments would be channelised.

The heavy industries listed by Mr Shah include steel, steel-making machinery, foundry forge, chemicals, fertilisers, electrical machinery, aluminium, etc. In respect of steel making in which a beginning has already been made in the Second Plan by the setting up of three new units in the public sector, the aim under the Third Plan would, according to Mr Shah, be to create capacity for the production of 10 to 11 million tons of steel by the end of the Third Plan. Towards this installation of new units, as well as expansion of some of the existing units is envisaged. The capacity of the Rourkela works is expected to be doubled. The steel machinery making plant to be located at Ranchi, is designed to produce every two years a complete finished steel plant for one million tons capacity. When completed, it would be the biggest steel machinery-making plant in the whole of Asia. The foundry forging plant is conceived on a similar colossal scale and a single piece to be cast would according to Mr Shah, be about 90 tons. So far as heavy electrical plants are concerned the Third Plan is expected to witness the erection of two additional plants over and above the one that is now being set up at Bhopal. One of them will be designed to make heavy electricals like Hydro turbines generator, etc., while the other would be for manufacturing steam turbines.

In respect of fertilizer production, which is of overriding importance for stepping up foodgrains production, the Government, Mr Shah disclosed, have decided that every State should have one project. Andhra Pradesh in the South has had its claims sanctioned quite recently. A fertiliser plant near Neyveli in Madras is in the process of erection. Mysore is also likely to benefit either by way of expansion of the existing Mysore Chemicals and Fertilisers or by having a new unit sanctioned for it. Aluminium production, it is expected, will receive a big fillip by the setting up of four big plants one of which, as disclosed by Mr Shah, would be located in the Mysore State. During manufacture is another field in which considerable activity is expected to be witnessed in the course of the Third Plan. The "amazing" achievement in this field in the past years notwithstanding, the country is far from being self-sufficient in pharmaceuticals. The objective under the Third Plan would, therefore, be to reach self-sufficiency in pharmaceutical production. For this purpose, a project has been finalised in the private sector for the manufacture of intermediaries for the drugs, plastics, and dyestuffs industry.

Though Mr Shah has disclosed only the bare outlines of schemes to be undertaken in the Third Plan, they are enough to make one dizzy with the vision of an industrially transformed India emerging at the end of the Third Plan. No side of heavy industry has been neglected. Steel making seems to have been given pre-eminence of place. This could be justified by the need to lay the base of heavy industries structure strongly. Along with heavy industries, the other established industries could also be expected to be allotted outlays larger than under the Second Plan, though not in exact proportion to the increase in overall Plan outlay.

The concentration of investment on heavy industries would involve considerable sacrifices by way of a heavy foreign exchange bill for imports of raw materials and machinery and lack of immediate return on investments. The experience of implementing the heavy industries plan of a much smaller dimension in the Second Plan was by no means pleasant. The foreign exchange scarcity which developed in the middle of the Second Plan was the most patent manifestation of the strains inherent in implementing a heavy industries programme. The heavy industries programme envisaged for the Third Plan would involve a substantially larger consumption of foreign exchange by the public sector alone. It is therefore necessary that, in proportion as outlay on industries is proposed to be raised, attempts are also made to step up exports. Mr Shah has indicated the importance of exports from the point of view of implementing a heavy industries programme when he pointed out that the Third Plan would, besides being heavy industries based, also become the export plan of India. In this spirit, he has appealed to the businessmen to increase India's exports. The Government have also an obligation to prepare export promotion plans capable of being put through to realise immediate benefits.

One inevitable result of implementing the heavy industries programme as it is now conceived would be to perpetuate regional differences in industrial development. For one thing, there is an inherent bias toward gigantism in a heavy industries programme. By virtue of the heavy nature of the raw materials involved in the process of manufacture, heavy industries are tied to places having advantage of easy accessibility to sources of raw materials and power supplies. For another thing, most of the projects listed for execution have been conceived on a big scale, without considering the scope for decentralisation. While Mr Shah has said that the possibilities for setting up of medium size foundry forges are being explored by the Government in collaboration with British and German interests, he is silent about the possibilities of setting up small steel plants even though the feasibility of small steel plants has been vouched by China's success with such plants. The project for making steel-making machinery which is designed to manufacture steel plants of one million tons capacity would seem to give room for genuine doubts whether the Government have given up considering the scheme for setting up small steel plants.

The scope for decentralised development in the industrial plan of the Government would thus seem to be confined to the sphere of small scale and cottage industries. Here, it is gratifying to note that the outlay for the development of the small-scale sector is to be raised to Rs 600 crores from Rs 200 crores under the Second Plan. But it cannot be overlooked that, however, much they stimulate industrial activity, promotion of small industries cannot make up for the imbalance that would result from concentration of heavy industries.

The implementation of the heavy industries programme as at present envisaged presupposes a sizable increase in power supplies. The target has accordingly been raised from 7.5 million k.w. to 15 to 20 million k.w. in the Third Plan. A simultaneous rise in expenditure on projects for training technical personnel is also inevitable. Facilities for such training will have to be provided after careful assessment of the requirements. There has so far been very little of participation by the private sector in this. This is deplorable considering the active interest displayed by their foreign counterparts.

THE PENINSULA

THE MYSORE SPINNING & MANUFACTURING CO. LTD.

NOTICE TO SHAREHOLDERS.

NOTICE is hereby given that the Sixty-Sixth Annual General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, Temple Bar Building, 70, Forbes Street, Fort, Bombay, on Tuesday, the 27th October, 1959 at 4-30 P.M. for the purpose of transacting the following business:—

1. To receive and adopt the Directors' Report and Audited Statements of Accounts for the year ended 28th February, 1959.
2. To declare a dividend.
3. To consider appointment as a Director of Mr. S. R. Koppikar who is the Chief Executive Officer of this Company and also an ordinary sitting Director of Messrs. N. Sirur & Co. Pvt. Ltd., the Managing Agents of this Company.
4. To appoint Directors in place of those who retire but are eligible for re-appointment.
5. To appoint Auditors for the current year and to fix their remuneration.
6. To appoint Messrs. B. K. Ramadhyani & Co., Chartered Accountants, Bangalore, as additional Auditors of the Company for doing the local statutory audit of the account books of the Company's Mills at Bangalore, for the current year commencing from 1st March, 1959.

The Transfer Books of the Company will be closed from the 28th day of September, 1959, to the 12th day of October, 1959, both days inclusive.

A Member entitled to attend and vote at the meeting is entitled to appoint a Proxy to attend and vote instead of himself and a Proxy need not be a member.

(The holders of the 4½% Cumulative Preference Shares of the Company have no right to be present or to vote either in person or by proxy in respect of their holdings of such Preference Shares at the above Annual General Meeting).

By Order of the Board,
N. SIRUR & COMPANY
PRIVATE LTD.,
Managing Agents,
N. D. SIRUR.
Managing Director.

Bombay,
31st August, 1959.

N.B.—The Dividend when declared will be made payable at the State Bank of India, Bombay, on and after Friday, the 6th November 1959 to those Shareholders whose names stand on the Register of Members on the 28th September, 1959. The Dividend Warrants will be made negotiable at par at the State Bank of India, Bangalore. Shareholders are requested to intimate change of address, if any.

SOUTH INDIAN NOTES

Mr Patil on Food

Mr S. K. Patil's announcement in Madras this week at a press conference that, if at all, he would try for bigger and natural zones instead of splitting up zones at present, seems to have given a reorientation of the Central Food Ministry's new policy. This was in reply to a question whether he would concede the request of Madras to be separated from the present zonal arrangement for its food requirements. Mr Patil was not categorical and, in a parliamentary way, he replied that the question was being considered.

Along with this, Mr Patil made two other announcement in regard to food prices and how to combat the rising trend. Firstly, he said that he would create a big buffer stock at pivotal centres in India. These stocks would help stabilise prices wherever there was scarcity, created either by natural or artificial causes. He would create this stock by importing from America. In his view, America's huge surplus foodgrains, wheat and rice, *sometimes lay in the* open. He had requested the United States to stock part of this surplus in India to the tune for five million tons; there could be no difficulty in persuading the US Government in acceding to India's request inasmuch as *Mr Patil felt that they had so far* helped India tide over India's food difficulties through their PL 480 programme by which their surplus foodgrains were sold to India for Indian rupees. Mr Patil seemed to have assured the US Government that India would build storage capacity for the surplus foodgrains. Whenever they drew from these stocks to combat rising prices, it will be on India's account, he said. Also, he would not *hesitate, he added, to import varie*ties of rice from Burma or Thailand, for supplying the rice needy regions.

Mr Patil said that, in respect of sugar, India's marginal existence should be the reason for the scarcity and, even in this commodity, he hoped to create a buffer stock of 2.5 laks tons to fight high prices in a similar way.

As for payment against the India-stocked American foodgrains, Mr Patil said that if there were to be withdrawals from that stock it should be on India's account. He did not, however, state whether India intended to buy outright such stock, and if America agreed to his proposal of having their storage in this country, who would pay for the transhipment; and if the foodgrains so drawn from American stocks would be paid in rupee, dollar or by replaced. But Mr Patil said that it was imperative to have a huge buffer stock to combat the present high prices, and he was bent upon having that stock anyhow. The conclusion, therefore is obvious, and probably Mr Patil is hopeful to have that stock from the US.

Mr Patil was of the emphatic view that there is enough food in the country, but today he believed there was "the crisis of confidence and fear complex", both of which created the steep spiral. The hoarding practised right from the producer to the housewife gecause of a fear complex contributed to the present situation. Therefore, he uttered a warning to the country's traders in foodgrains, wholesale and retail, that he would not allow any of their "hanky panky" business with people's food by creating a huge stock ready to be rushed to places where such high prices might rule. Nor was he utterly harsh to the 300,000 dealers in this trade who, he said, should be handled in a humane way. Otherwise, he was emphatically of the view that the price rise was "man made" and the defect, if at all, was due to defects of distribution.

As for the request of Madras State for a separate zone, it seems Mr Patil may not allow it. For, the demand for such a zone would become meaningless when Mr Patil had promised whatever foodgrains Madras might ask for distribution at reasonable prices through any number of fair price shops. Therefore, he had told the State Food Minister that there need be no procurement of foodgrains at State level or at any level. "God forbid", he exclaimed to the patiently hearing crowd of Madras pressmen, "Let us not think of going back to the days of requisition and rationing."

Therefore, a new policy seems to have been injected into the Central Food Administration with the advent of Mr Patil, who prefers to call himself Minister for Agriculture rather than Minister for Food. He welcomed the growing demand for sugar as a sign of India's improving standard of living.

He agreed that inflation and deficit financing also were responsible the rise in food prices, but averred that these were inevitable in a developing economy.

To the extent he said that he was not for any kind of austerity or tightening of belt, his statement should be welcome, though in actual *practice the lengthening queues* before sugar shops and rice stores drive the man in the street to utter depression and dejection. But as a man with a lot of punch and go-getting temperament, his Madras Press policy statement should have *been widely welcomed.*

When asked by a questioner about Kerala, he forthwith retorted: "It is you who could not have Kerala with you, and you could have, by retaining Kerala, avoided all the recent troubles." Mr Patil was obviously referring to Kerala State continuing with Madras before the State was created on linguistic basis.

As for short term projects to improve agriculture, Mr Patil said that small units of sugar mills north of the Vindhyas including Bombay State would be licensed during the rest of the present Plan and the Third Five Year Plan. He also thought fertilizer units with capital formation of the order of four to five crores rupees would be allowed to be started in the Southern region. South India, he said, produced 3 to 4 times sugarcane with more sugar content than North India, and he therefore believed a few more factories would help manufacture of sugar in ampler quantities.

Mr Patil said that the food-problem is a national problem and would have to tackled on a national basis with the Centre, the States, people and producers working in union. He was of the view that the fight on the food front with huge buffer stock would be necessary for the next four to five years during which the defective distributivee system would have to be rectified.

*

MADRAS REVIEW

More Water for Irrigation

The commissioning of the Pullampadi Canal Scheme and the new Kattalai High Level Canal Scheme, which was formally done by Mr K. Kamaraj, Chief Minister of Madras last week, reflects the continuous progress being made by the Madras State in extending irrigation in all areas of the State. These two projects were conceived and executed under the Second Plan, to benefit the cultivators of Tiruchirapalli district for whom, apart from the existing Uyyakondan Channel and the Kattalai High Level Channel, no other major irrigation works had been undertaken in the Plan period. Further, it was an anomaly that, though the Cauvery river flows through both Tanjore and Tiruchirapalli districts, the area under river irrigation was relatively smaller in the latter than in the former.

The New Kattalai High Level Canal scheme will utilise the surplus waters of the river Cauveri after meeting the demands of existing irrigation below the Mettur Dam and will fill the existing 110 tanks in Tiruchi and Tanjore districts during the period when the Mettur reservoir is surplusing or the Cauvery is in floods. The Pullambadi Canal Scheme consists of a canal about 54 miles long taking off from above the Upper Anicut across the Cauvery on the left side. The total extent of the area that would be irrigated by the Pullambadi Canal scheme is 22,114 acres.

Though the projects had been commissioned for irrigation, the full benefits of irrigation credited to them are not expected to be available now. The water from the Pullambadi Canal would be let in, at present, only for the first 30 miles out of the total length of 54 miles. Delay in the construction of a railway bridge across the Kattalai Canal has restricted present supply to 42 miles while the total length of the canal is 64 miles. The rest of the ayacut is expected to be provided with water by the end of this year. As a result of the completion of the two schemes, an additional yield of over 17,000 tons of rice is expected to be available. The total cost incurred in the implementation of the schemes is Rs 3¼ crores.

*

Fertilizer Plant

The element of uncertainty regarding the setting up of the fertiliser *factory in Andhra Pradesh* has at last been lifted, and Andhra Pradesh is to have its prized project. Central sanction to this project was announced by Mr Lal Bahadur Shastri, Union Minister for Commerce and Industry, while inaugurating the renovated *Government Handicrafts* and Cottage Industries Emporium in Hyderabad. Regarding foreign exchange, which was what delayed the Central sanction, Mr Shastri has said that they had found a way out and that it would be possible to provide foreign exchange for the project on the required scale.

Mr Shastri had more by way of good news than what the people of the State would have expected. For instance, he has revealed that he had discussed the possibility of setting up an additional paper plant in the State. Moreover, assurance of help has also been given for the expansion of the Rajmundry Paper Mills.

While indicating scope for the development of heavy industries in Andhra Pradesh, Mr Shastri has laid equal emphasis on the development of small-scale and cottage industries. In this connection, he explained the proposal of the Government to increase the outlay for the development of the small-scale sector from Rs 200 crores under the Second Plan to Rs 600 crores under the Third Plan. Mr Shastri expressed the view that development of the small-scale sector would not be retarded by lack of market for its products, and pointed out that there was tremendous scope for exports of the products of the small-scale sector. In this connection, he referred to the success achieved in the export of engineering goods produced in the small-scale sector. Prospects for export of cottage industry products were equally good as is testified by the voluminous order placed for handloom goods worth about Rs 50 crores at the Chicago. Fair Exhibition in which India participated. With further improvement in the designs to cater to the special and varying tastes of the foreign purchasers exports of handloom goods could be stapped up further.

Mr A. Bhagawantha Rao, Minister for Industries, in his welcome address, urged upon the Minister the need to consider the question of establishing a separate agency on the Japanese model for the supply of credit to the industrial cooperatives in the State covering a varied field of cottage industries and handicrafts. He also emphasised the need for giving in the Third Plan a more concrete recognition to the claims of Andhra Pradesh in the industrial programmes of the Government.

MADRAS REVIEW

Firm Trend in Groundnut

It was a very firm trend that was witnessed in groundnut oil and kernels during the past week and the firmness is expected to continue for some time to come due to high internal demand. Both in Ready and Forward positions, transactions spoke of an unusually firm character. The spot oil quotation reached the maximum of Rs 380 opening Tuesday. Today, the rates per candy were: Ready Rs 374-375; October Rs 362 and December Rs 323-8. Kernels Superior was quoted at Rs 210 and medium at Rs 202. While castorseeds were unquoted, castoroil was at Rs 320. Coconutoil too was high at Rs 39-8 per tin local.

Latest UK quotations in these commodities reflected the local trend, and in the UK market today's trend reportedly was firm and the quotations ruling there today were: (Quotations are per ton) Groundnuts September-October £65; Castorseed £57-2; Niger-seed, Nominal (February-March 1960) £54-54½; Groundnutoil September-October £108-18½; November-December £108 Castor BSS September-October £113½-114 Commercial variety £108½ to £109; Tobaccoseed oil (nominal) sellers £116; Coconutoil (Straits) September-October £130½-131; (Colombo quality) £136½ to £137; Groundnut oilcake (expeller) October-Novr. £36-5; groundnut oil-cake solvent October-November £34-5 to 34-10.

From the second fortnight of this month, the rate of groundnut-oil was expected to be toned down further due to increase in arrivals. But that anticipation was belied by the rapid increase in prices. Raw product demand in the market down the districts of this State continues very heavy and the 250-300 tons daily arrivals of Pollachi crop are quickly absorbed locally. Not an ounce of this Pollachi stuff has yet reached Madras. The local mills production in the Southern districts was quickly taken up by internal demand. Naturally, no business could be put through both on the accounts of the shippers and Calcutta interests, and it was but natural that no parity was workable with the prevailing Madras prices. But Burma is indicating a level around Rs 1580 per ton c.i.f. while UK and the continent around.

Thus, groundnut ganied Rs 18-20 per ton while oil about Rs 54-55 per ton over last closing.

In groundnuts, arrivals to the local market during the week were small. The average arrival daily would be about 25-30 tons, mostly from Cuddappah district. Superior oil variety of the summer crop was taken up early around Rs 202-203 per candy but Monday's rates shot up to Rs 209-210 and the medium varieties, which commanded buyers at the rate of Rs 195-196, also had gone upto Rs 202-203.

Turnover in actuals proved small in groundnutoil. Bazar interests did some, and almost 400-450 tons could have been the volume so turned up. With the early offers of Rs 364 for groundnutoil per candy, the persistent demand forced up the prices to Rs 377-378, but Monday's opening went high to Rs 380. It remained so the next day and closed at Rs 374. Today, the market opened at Rs 374-375 ready. Offerings at this rate were small and continue so. Naturally, this acted as a spur further to push up the price locally. Ceded district offered some quantity for Rs 355-360 per candy ex-mill and this softening tendency could not continue long.

Only in forward positions, a fairly large volume of business was put through. Shortcovering is expected to be over though dearth of offerings in actuals in expected to aggravate the situation. Monday's closing in Ready was Rs 377 and it opened Tuesday at Rs 380 and today it opened and closed around Rs 374 per candy.

September went up as to as high as Rs 380 per candy during the beginning of the week and continued so till last closing. Profit taking latterly produced some small recession in price levels and deals were put through toward the closing of the exchange around Rs 379. The Wednesday morning deals today were around Rs 374-375 per candy.

In October vadia, interest was shown only around Rs 328-329 today, but Monday closing was at Rs 356-357. Toward the middle of the transactions, the prices declined to Rs 356 but again went up to Rs 360-361. Today, it began at Rs 362 and remained at that level throughout.

December interest was shown early on around Rs 320; yesterday's closing also was firm at Rs 325, opening at Rs 328. At lower levels last evening, sizable quantities were lifted up. Improving latterly once more at the higher level of Rs 325-8, it opened at Rs 323-8 and closed at Rs 323-8.

Groundnut oil cake remained firm at Rs 27 per bag of 160 lbs with gunny exmill.

Upcountry markets: Arrival of summer crop in South Arcot market tuned out to be very small during the week. The average arrival daily was only around 160 tons per day. The price level rose from Rs 205 to Rs 208-210. In Pollachi, daily arrival was around 200-300 tons. These were absorbed readily by local interests and crushers in the Pollachi, Coimbatore, Virudhunagar, Madurai, Dindigul, Salem and Bhavani areas. Vanaspathi interests traded on small quantities around Rs 372 per candy for their factory delivery early on with seller quoting latterly only around Rs 370 per candy.

Prevailing prices of Groundnut oil in the following places today:

	(Rs per candy)
Guntur-Bezwada ..	370
Vriddhachalam ..	370
Nandyal	365
Villipuram	372
Cuddappah-Yarragantla	360
Pollachi	365
Tanjore	365
Tiruvannamalai ..	370
Salem	368

Following groundnut kernels prices prevailed today in these centres:

Guntur-Bezwada ..	200
Vriddhachalam ..	204
Nandyal	203
Villipuram	208
Cuddappah-Yarrangantla	192
Pollachi (Red) Superior	202
Tanjore	200
Tiruvannamalai ..	200
Salem	195

Gingelly seed and oil: Due to absence of any fresh arrivals consequent upon the floods and breaches in the communication line of the Southern and Central Railways main lines, arrivals had dwindled. Kelamangalam-Mysore-Chennapatna sent small quantities and the latest ruling levels are:

Gingelly Seed:

	(Rs per bag)
Chada/Warora quality, small stocks at ..	68.69
Tuni/Rahajmundry quality	65.66
Salem/Kelamangalam ..	62.63
Other local superior varieties	67.68

Gingelly Oil:

	(Rs per maund)
Wholesale basis ..	20.08
Retail	20.12

Castor oil: No large scale activity. Sellers' offer was around Rs 325 per candy for commercial grade. But buyers were interested at Rs 320 per candy.

Coconut oil: The West coast prices have gone up after Onam. At Cochin, the price was Ready Rs 635 per candy; September Rs 641 and October Rs 644. Local price was at Rs 39-8 per tin. At Quilon the price per tin was Rs 37-4.

*

Sugar

Madras market position today is very tight with only about 2,000 bags of sugar quoted at Rs 112 per cwt while the open market rate is Rs 165 per cwt. The breaches in the South and Central Railway lines added to the scarcity. Mr M. Bhaktavatsalam, Food Minister, said here this week that there was a shortfall in local production, and the difficulty in transport added up to the scarcity.

As a long term measure, the Government of Madras had relaxed their tightness on license issues for opening of more sugar mills by the private sector and cooperatively.

SOUTH INDIAN MARKETS

To enable consumers to obtain sugar at reasonable price, Madras Government have proposed tightening up of inspection of godowns for proper distribution. The approaching festival season has given rise to apprehension among the authorities whether stocks could at all be sufficient to provide for people's needs. Only a part of the Centre's 4,000 tons had been received by Madras.

*

Hides and Skins

The arrivals and clearances of tanned cow hides continued at the same rate as in weeks before. Shippers still stick to their prices. UK offer to Madras continues at the former's price, and business put through was not very much.

Premium mark 8-8½ lbs were sold at 62d, 59d and 56d for Run, fourths and Fifths.

Comparatively, tanned goat skins arrivals were poor with about 4,000 pieces cleared. Stock left was around 6,500. Prices, however, continued firm. In the C.I.F. section, goat skins demand was irregular. In all selections of light-weight an advance 3d per lb. was noted due to French offer, after the recent French Light Weight Fancy Leather Fair at Paris. Business was done upto 20 sh. for A class marks and 19 sh. 3d. to 19 sh. 6d. for B class marks. Run and Thirds were weak since UK spot parcels were quoted lower at a discount of 6d to 9d. per lb. In sheep skins, primes and semi-primes were steady. About 45,000 were cleared in sheep skin leaving about 25,000.

The following are the raw skins quotations: (Last week's prices shown in brackets): Bangalore Goat Rs 520-721 (Rs 585-675): White Wool Sheep Rs 500-590 (Rs 520-600): Black Rs 440-500 (Rs 430-495): Bezwada Raw goat Rs 610-620 (Rs 610-620): He Sheep Rs 530-535 (Rs 530-535); She Sheep Rs 380-395 (Rs 380-383).

*

Pepper

Pepper Export Council officially reported that export of black pepper was down by 50 per cent for the first four months of this year.

The Cashew and Pepper Export Promotion Council announced only 3,506 tons of pepper were exported from India during January-April of this year as against 6,563 tons during the same period last year.

The report stated: Export to Soviet Union of pepper decreased from 3,358 in January-April 1958 to 575 tons in the same period of this year: United States, Egypt, the Netherlands, Canada and Pakistan also imported much less than last year: Exports, however, to Rungary, Bulgaria, Czechoslovakia, Rumania and Poland had registered an appreciable increase.

Life Insurance Corporation of India

*

New Business of Rs. 1,000 Crores by 1963 Aimed

*

Mr P. A. Gopalakrishnan, Chairman Reviews Progress

Speech by Shri P. A. Gopalakrishnan, Chairman at the 42nd Meeting of the Life Insurance Corporation of India held in Bombay on 21st September, 1959 on the occasion of completion of three years of its working.

Gentlemen:

I have great pleasure in welcoming you all to the third anniversary meeting of the Corporation. We are meeting today mainly to consider the draft Annual Report and Audited Accounts for 1958. These have already been circulated to all the Members of the Corporation.

NEW BUSINESS

2. I may briefly summarize here the salient points in the Report. New Business in 1958 has increased to 9.35 lakhs of policies assuring a sum of Rs 343.07 crores as compared with 7.95 lakhs of policies assuring a sum of Rs 281.90 crores in 1957. The total business in force has increased to 62.30 lakhs of policies assuring a sum of Rs 1,681 crores as compared with 56.83 lakhs of policies assuring a sum of Rs 1,473 crores at the end of 1957. The net lapse ratio, i.e. the ratio of the sum assured lapsed less the sum assured revived in the year 1957 to the mean business in force during the year was 6.4%. Statistics of lapses for 1958 have been received from all Zones except one. The available statistics indicate that the lapse ratio in 1958 was of the order of 4.5%, showing a significant reduction over the ratio for 1957. The Life Fund has increased to Rs 447.81 crores from Rs 410.41 crores in 1957. The renewal expense ratio has fallen from 15.89% in the previous accounting period to 15.46% in 1958. These are indicators of the progress made by the Corporation during the year as well as of the economy achieved in the expenses of management. Tighter budgetary control, which has been introduced from 1959, will not only enable the Corporation to bring down the expense ratio within the statutory limit but progressively lower it in future years.

3. For the first eight months of 1959, the new business completed amounts to Rs 148.16 crores representing an increase of 23.0 per cent over the corresponding period of last year. If this rate of progress is maintained during the rest of the year, the Corporation should have no difficulty in realising its target of new business of Rs 415 crores fixd for the first year of its Five-Year Plan.

CORPORATION'S AIM

4. As you are aware, the Corporation aims at securing a new business of Rs 1,000 crores in the fifth year of its plan, viz., 1963. This involves further recruitment and training of officers and staff, selection and strengthening of the field force, opening of new offices beginning from branch and sub-offices upwards, market surveys and publicity and various other organisational improvements without which the Plan will merely remain on paper. All these details have now been worked out and will be presented to you for your consideration in the near future.

EXPANSION

5. Meanwhile, whatever possible with the existing organisation is being done to open out rural areas for the expansion of our business. 14 branches and 68 sub-offices were opened in different parts of the country in 1958 and one divisional office, 10 branches and 3 sub-offices have been opened during the current year. Some of these new offices are in remote corners of the country and field officers and agents attached to these offices are now working in inaccessible places which have hitherto not heard of life insurance at all. Besides, rural insurance in intensified form has been undertaken in certain selected Community Development Blocks of Rajasthan and Bihar. With the blessing of the State Governments concerned, the Block Development Officers are co-operating with the Corporation in this experiment and the rural panchayats, who are working as agents of the Corporation in these areas, utilise the commission received for development purposes in the villages. This experiment has been recently extended to some Community Development Blocks in Andhra Pradesh and Assam and the results of these experiments will be useful in intensifying the insurance programme in the rural areas of the country.

STAFF PROBLEMS

6. Most of the major staff problems of the Corporation have already been solved, including the categorisation of senior officers, the question of bonus to the clerical, subordinate and supervisory staff and the categorisation of field officers. The conclusion of a five-year agreement regarding bonus with the representatives of the administrative employees was one of the main achievements of the Corporation during the first eight months of this year. Agents who remain on our books without producing any business are gradually being weeded out and new agents with the requisite qualifications are being recruited. The quality of the agency force is thus being continuously improved.

7. As I have already remarked, in order to cope with the increasing business of the Corporation, an increasing number of trained personnel is necessary. The Corporation has already started 10 training centres which have so far trained 1500 field officers. Instructors are being sent out to visit the various branches and sub-offices to give short-term training to the agents attached to these offices. Preparations are also being made for opening training centres for administrative personnel, including officers and clerical staff, and these training centres are expected to be started during the next two or three months. With more and more trained staff becoming available, it will be possible for the Corporation to offer better service to its policyholders.

8. Allied to the programme for the expansion of the Corporation's business is the building programme for the Corporation's offices and staff quarters. Accommodation for our divisional offices is totally inadequate in many of our divisions and, even in divisions where it is at present adequate, it will become inadequate in two or three years. The Corporation has to speed up the construction of buildings with accommodation to meet the needs of expanding business for the next few years. Similarly, the construction of staff quarters has to be speeded up as without proper housing, it would be difficult for the staff to carry on. The Corporation's decision to grant loans to co-operative housing societies of employees at a concessional rate of interest has not produced any good response. For various reasons, employees find it difficult to form co-operative societies. Firstly, they are liable to transfer from place to place. Secondly, those who are serving away from their homes are not interested in owning houses at the places where they work. Thirdly, procedural delays are taking place in the formation of co-operative societies. After taking all these factors into account, I would urge that the Corporation should go ahead with the construction of staff quarters, wherever they are needed, whether co-operative housing societies are formed or not. If and when they are formed, the quarters can be handed over to them on agreed terms. I would like to emphasise the fact that unless our building programme keeps pace with the expansion of our business, our service to the policyholders is bound to suffer.

INVESTMENT ACTIVITIES

9. Turning to the investment activities of the Corporation, the investment rate of over a million rupees a day was maintained during the year and, in fact, improved upon. Investments are being made in accordance with the Investment policy approved by the Government in August 1958. On 31st December, 1957 the investments in the Public and Private Sectors were 77.4% and 22.6% respectively. At the end of December 1958, these percentages were 78.3 and 21.7 respectively. On 31st July this year, these percentages were 78.6 and 21.4 respectively. It is becoming increasingly difficult to make investments other than in Government and approved securities owing to the comparative short supply of sound scrips in the stock markets of the country. With the Corporation's recent decision to revive the grant of loans on the mortgage of properties, it should be possible to offset, to some extent, the shrinkage of investments in the private sector.

10. You will see from the Report that the rate of interest realised on the mean Life Insurance Fund in 1958, after deduction of income-tax at source and including the refund of tax received during the year, was only 3.52% as compared with 3.74% during the previous accounting period. The reason for this fall is that we have yet to receive a considerable amount by way of refund of tax relating to the year. Taking the anticipated refund into account, the rate of interest earned during the year would very nearly be the same as in the previous accounting period.

VALUATION

11. Lastly, I would like to say about the first valuation completed by the Corporation during the current year. The working out of differential bonuses on the policies issued by the old companies and those issued by the Corporation after the "appointed day" presented innumerable difficulties. It is a matter for satisfaction that the differential bonuses declared and the quantum of the bonus in the different cases were generally welcomed by the policyholders.

12. Summing up, I may mention that by and large the Corporation's efficiency has improved, most of the major staff problems have been solved and the stage has been set for further consolidation and progress towards realising the targets fixed in the first Five-Year Plan of the Corporation.

N.B.: This does not purport to be a record of the Proceedings of the above Meeting.

INDIAN COPPER CORPORATION LTD.

*

ANOTHER SATISFACTORY YEAR

The following is the address delivered by Mr Patrick E. G. W. Parish, Chairman of Indian Copper Corporation Ltd, at the Annual General Meeting of the company held on the 23rd September 1959:—

Gentlemen,

The Directors' Report and Accounts for the year ended 31st December 1958 have been in your hands for some time. I welcome this opportunity of giving you some further information and comments on the results of the working of your Company during the year.

GENERAL REVIEW

The price at which your Company's products are sold is, naturally, closely in line with the world price of metal, at which price imports of copper into India have, of course, to be purchased. It is, therefore, necessary to consider the trend of world copper prices during last year.

March 1956 saw the peak at £436.10s per ton on the London Metal Exchange, and from then until December 1957 the price gradually fell to under £180. In 1958 the price during the first six months fluctuated between £161 and £200 and then rose gradually to £261 in November, declining to about £220 at the end of December. Since the beginning of this year prices have again risen to over £250 and during the past month or so have been steady at around £230.

A further reduction in price due to world over-production has only been averted recently by strikes in various producing countries. It seems to me that when these strikes are settled it will be necessary for the big producers to curtail production, as they have done in the past; otherwise over-production will inevitably result in a downward trend in prices to unremunerative levels.

So far as India is concerned of course, we produce only a part of the country's total requirements and therefore there is no question of curtailment of output by us. On the contrary, it is our intention to increase production as much as possible within the limits of our capacity.

You will see from the Directors' report that on average all your Company's products have been sold at prices rather below the previous year and this has naturally affected the Company's results.

WORKING REVIEW

In 1957 copper production was a record at 7848 tons. This year although the ore milled rose from 440,671 to 442,088 tons, the amount of copper produced was 7 tons less than last year.

Total sales amounted to 10,966 tons as against 10,301 tons last year.

The demand for our products remains firm though one cannot help expressing some anxiety lest, owing to foreign exchange difficulties, import licences for Zinc, which is the complementary metal used for the manufacture of Brass, may not be issued as freely as required.

During the year prospecting was continued throughout our leased area in an endeavour to locate other economic ore bodies to replace those which are rapidly becoming depleted.

It is too early yet to say whether these prospecting operations can be considered successful and more work will have to be done before any final conclusion can be drawn. It is satisfactory, however, that the ore reserves at the end of the year stood at 4,034,174 as against 3,850,757 short tons at the end of 1957.

As regards costs, we are now mining at a deeper level where costs are naturally higher, and it is not possible to foresee any reason to believe that costs in the future can be reduced. On the contrary, they are likely to increase.

I am glad to say that during 1958, on the whole, relations with the workers remained fairly good, and as a result production during the year has been comparatively unaffected by labour disputes.

It cannot be said, however, that the situation is entirely satisfactory, as demands by Unions, of varying hues, continue to cause tension, not only to us but to many other industrial concerns on this side of India.

KYANITE

Sales of Kyanite during 1958 amounted to 14,649 tons as compared with 18,267 tons in 1957. The price has had to be reduced slightly in order to compete with synthetic materials produced in consuming countries which threaten the future of Kyanite exports.

It is hoped that sales can be maintained at roughly this level again in the present year and every effort is being made to preserve our present markets and to find new outlets.

I have no doubt that some of you have read in the newspapers about the suits in regard to your Company's Kyanite leases, which have recently been decreed in favour of the Bihar Government on appeal in the High Court after the original suits had been decreed in the Company's favour.

The position now is that the Company has applied to the Court for leave to appeal to the Supreme Court. I cannot, therefore, say more about this matter at present, except that it is the opinion of our legal advisers that we have a good case.

ELECTROLYTIC PLANT

Last year your Chairman told you that the Company has had under consideration for some time, in consultation with their technical consultants, a project to manufacture Electrolytic copper. Negotiations have reached an advanced stage and application has been made to Government for the release of the necessary foreign exchange. As matters now stand we are waiting for the final approval of Government, on receipt of which the whole project will be put in hand.

A considerable sum of money, amounting to approximately £700,000 will be required to finance this scheme, but it is expected that this can be provided within the Company's own resources.

ACCOUNTS

As you will see from the accounts which are before you, the profit for the year, before providing for taxation, depreciation and reserves, amounts to £997,848. Your Directors have decided to place £150,000 to Depreciation and £125,000 to General Reserve. Income Tax and Supertax on profits for the year amount to £439,856.

The Directors recommend that the Dividend of 18% should be maintained involving further taxation on this dividend of £27,426. It is proposed that £71,312 should be carried forward.

I think you will agree that on the whole we have had another satisfactory year and I am sure that I speak for you all in thanking Mr. N. A. B. Hill, the General Manager, and all his staff, for the excellent services they have rendered to the Corporation throughout the year.

Note: This is not a report of the Proceedings at the above Annual General Meeting.

JAIPUR METALS & ELECTRICALS LTD.

*

MARKED INCREASE IN PRODUCTION

Speech of the Chairman Shri R. H. Kamani, Delivered at the 15th Annual General Meeting at Jaipur on 19-9-59:

It gives me great pleasure to welcome you on behalf of my Directors and myself to the 15th Annual General Meeting of Messrs. Jaipur Metals & Electricals Ltd.

Before starting my speech, may I request you all to join me in paying our humble and respectful tributes to the late Shri M. G. Purohit who was a Director of the Company and who passed away on 24th April, 1959.

The Directors' Report and Audited Profit & Loss Account and Balance Sheet for the year ended 31st December, 1958 which shows a profit of Rs 9,76,663 after taking depreciation, Development rebate, Taxation, Managing Agents Commission, Bonus etc., allows to distribute 6% (against 5% previous year) to ordinary and 6% to preference shares. With your permission, I shall take them as read. There has been, as you would observe, an increase of profit of Rs 4 lakhs for the year as compared to the profit of last year. This is a remarkable achievement especially in view of the fact that the value of the overall total annual turnover is slightly less. Due to difficulties in Foreign Exchange position and consequent restrictions upon the import of essential raw materials, we could not increase our output and turnover to a desired level.

The working of the Company has been satisfactory during the year under review. There was a marked increase in the production of House Service Electric Meters, which was as much as about 25% higher than the previous year. Production of Metals Division was maintained almost at the level of the previous year, in spite of the difficulties in the way of important raw materials.

Consistent with the Government policy, allocation of Foreign Exchange was based on the Second Five Year Plan giving top priority to the Products required in fulfilment of the same. This had its own impact on the manufacturing industry with very limited Foreign Exchange available for the import of the essential raw materials and with the tax burden added, the industrial output in 1958, on a national scale came to an all-time low for the past five years. In the light of this situation, the progress made by your Company is encouraging and cheering.

The Nation is busy shaping the III Five Year Plan and it should cheer you to know that with our progressive outlook we are resorting to more and more indigenous components for our products, which should enable us to look to the future with pride.

The production of House Service Electric Meters components is undertaken progressively. During the year under review, considerable progress has been made in the manufacture of indigenous components and the percentage of imported components has been reduced to the minimum.

I have the pleasure to state that we have entered into collaboration with Siemens Schukertwerke A.G., the well known House of Electrical Manufacturers in West Germany, for the manufacture of House Service Electric Meters according to their patents and designs. This will be in addition to our present activity and thus it would aim to double the production.

Note: This is not a report of the Proceedings at the above Annual General Meeting.

The Bharat Line Limited

*

Chairman, Mr C. R. Srinivasan's Review

The following is the speech delivered by Mr C. R. Srinivasan, Chairman of The Bharat Line Limited, at the Thirteenth Ordinary General Meeting of Shareholders held on the 23rd September, 1959:—

Gentlemen,

I am happy to extend to you a cordial welcome to this Thirteenth Ordinary Annual General Meeting of the Company. The Audited Statement of Accounts for the year ended 31st December 1958, and the Directors' Report thereon have been in your hands for some time now, and I hope I have your permission to take them as read.

It is a matter for regret that the working results of the year under Report have not been as satisfactory as that of the previous years. Inspite of utmost economy and fullest utilisation of available resources, owing to various factors which have been referred to in the Directors' Report, there has been a rather sharp decline in the earnings.

In their Report the Directors have stated that one of the factors which contributed more preponderantly to the unsatisfactory results than any other was the fixation of low and uneconomic rates for the transport of rice from Burma Ports to Indian Ports. The fixation of rates for Government owned cargoes involves issues of fundamental importance. When the charges for sea transport are allowed to enjoy the free play of the world market conditions, it would be reasonable for the Government to pay the market rate whether the rates rule high or low. The present policy of the Government would, however, appear to be to demand Liner rates when the world market rules in the upper register, and to insist that their cargoes be carried at world market rates when these are low without regard to the peculiarities of the trades concerned or the disabilities of Indian Owners who may often have to arrange ballast voyages for positioning their ships.

In these days of foreign exchange crisis, the large foreign exchange expenditure on shipping freights, particularly on the transport of foodgrains, has been a matter of great concern for the nation. It has been felt that the Country should increase its mercantile marine so as to reduce this expenditure as rapidly as possible. The present is an excellent opportunity to acquire suitable secondhand tonnage at most reasonable rates. This is possible because the tonnage market in consonance with the freight market, is passing through slump Government's policy in regard to conditions. Unfortunately, the fixation of freights does not encourage the Ship-owners, willing as they are, to go in for additional tonnage on a significant scale. The importance of Government utilising the immeasurable advantage of controlling a large volume of cargo moving on their account for the development of shipping has been emphasised in various quarters. It is to be hoped that Government will evolve a freight policy which will be satisfactory both to them and to the industry and at the same time promote more rapid increase of the national tonnage.

The year under Report has been a historic one so far as the Indian Shipowning Community is concerned. The Marchant Shipping Act, 1958, which provides for the first time for a separate Indian Register, was placed on the statue book. In my Speech last year I had referred to a Special Committee of the Indian National Steamship Owner's Association, who had submitted a Memorandum on the Bill, and had hoped that the recommendations of the Committee would register in the right quarters. I am happy to note that the definition of the 'Indian ship' has been modified on the lines proposed by the Indian Shipowners. Unfortunately, however, in the battle for the 'Indian ship', it would appear, it has not been possible to give adequate consideration to the rest of the recommendations made by the Association. Amongst a number of recommendations which have thus been overlooked I am sure there are many which could be resurrected to the benefit of all concerned. To-day, however, I would like to make a special plea in the case of one provision of the new Act, which if brought into force, might make it difficult for Indian Shipowners to obtain foreign exchange loans. I refer to Section 51 of the Act, which lays down that if a mortgagee desires to recover his dues, he can only do so through a High Court. So far such intervention of the High Court was not required. The provisions of Section 51 would make an Indian ship an unattractive proposition as a Collateral security against loans. I hope it will be possible to amend this Section of the Act so that the mortgagee has not to approach the High Court for permission to recover his dues.

Inspite of the anxiety of Government and the industry, the pace of expansion of Indian shipping has been slower than was hoped for. Whether the industry will expand rapidly, or will remain static, will depend upon the evaluation of various deterrents and disincentives which beset the industry today. Primarily the industry lacks capital resources. Although the Shipping Development Fund has been statutorily established, it has not commenced functioning effectively, and as a consequence, loan facility available to the industry is of a very meagre order. To add to this, there is now a chronic dearth of foreign exchange resources. I hope the suggestion of Shri G. L. Mehta to have a counterpart Fund in foreign exchange to the Shipping Development Fund will meet with the response from the Authorities which it deserves.

Proceeding from capital resources to taxation, I would like to invite the attention of the Government to the heavy burdens the industry is compelled to carry in the shape of the Capital Gains Tax, and the operation of the balancing charge in respect of the Depreciation as laid down in Section 10(2) (vii) of the Income-tax Act, both of which deprive the industry of valuable funds, which could be usefully ploughed back. Moreover, mostly all the Indian Shipping Companies do not get the benefit of Double Taxation Relief since they have no assessible income because of accelerated Depreciation, etc. granted to them. I would, therefore, suggest for the earnest consideration of the Authorities that either the tax paid to a foreign country be allowed as expense, as actually it is an expenditure incurred in earning freight from that country, or, in the alternative, profits earned in a foreign country and taxed by that country be not added to the profit made in India.

So far as the Coastal tonnage is concerned, it has remained static, and I shall be very much surprised if in the existing conditions it does not dwindle further instead of reaching the target of 4,12,000 tons laid down by the Rail-Sea Co-ordination Committee. The foreign exchange position has practically rendered additions to the fleet impossible. Besides, the competition of the Railways on the basis of their freight policy in respect of bulk commodities, like coal and salt, as also in regard to other commodities, is not conducive to expansion of coastal tonnage. If, therefore, in the interest of the nation, a coastal fleet is considered desirable, the recommendations of the Rail-Sea Co-ordination Committee submitted to the Government as early as 9th April, 1957, should be accepted and implemented without further loss of time, so that the Nation is assured of a Coastal Fleet Commensurate with its requirements and the Shipowners are assured of regular gainful employment in the trade for the tonnage employed by them.

On the Overseas sector, what is required is not only provision of cargoes, but also the fixation of economic rates. On the latter subject I have already spoken earlier at length. As regards provision of cargoes, it was a happy augury that the Government of India established a Shipping Co-ordination Committee in the Ministry of Transport. The Committee was to have a full time Secretary with necessary staff under him, and was

(i) to act as a Clearing House of information in regard to the availability of Government-owned cargo and shipping space in Indian ships with a view to making the most effective use of the available Indian tonnage:

(ii) to advise on the best and the most economical shipping arrangement possible for the movement of Government-owned cargoes when Indian Shipping is not available, i.e., whether non-Indian vessels should be chartered and, if so, whether on time basis or voyage basis.

(iii) generally to co-ordinate and advice on all policy matters relating to shipping, including the development of Indian Shipping.

Although the Committee exists today, I am afraid no Secrearist has been formed till date, neither has it functioned in the other capacities for which it was initiated. Recently an assurance was given on behalf of Government that they would undertake a review of the working of the Shipping Co-ordination Committee and effect necessary improvements. It is to be hoped that Government will take early steps to ensure that the Committee effectively performs the functions for which it was established.

The Third Five-Year Plan is taking shape. The Special Ad hoc Committee appointed by the National Shipping Board under the Chairmanship of Sir Ramaswamy Mudaliar will chalk out plans for the Shipping Industry. I hope the suggestions I have made in this connection will receive due consideration not only from this Committee, but also from the Government.

At a time when the Country is thinking in terms of increased industrialisation, increased all round production and export promotion, it is a matter for grave concern that Calcutta, one of our foremost Ports, is deteriorating, and that too at a rapid rate. Temporary solutions like the Anchorage at Haldia are of limited value, and an attempt to solve the problem piece-meal, I am afraid, will not serve the purpose. If the Country's eastern gateway is to be preserved and restored to its rightful position and usefulness, it is essential that improvement plans should be laid and executed on a war time footing. Government should also press

on with the Schemes for the development of the other major ports.

For a Country with a large Coast line like ours, and a growing economy and an expanding foreign trade, the existing number of Ports would require to be augmented. I am, therefore, happy to learn that the Government of India have set up the Intermediate Ports Enquiry Committee. I hope the Committee would be able to select Ports which would serve the growing needs of their hinterlands, and also be capable of being developed into major Ports, if and when the circumstances so demand.

Ships do not run themselves. They require men to sail them. I am happy to note that the Welfare of Seafarers is being paid increasing attention to. I hope the National Welfare Board will bring their deliberations to a successful close in the very near future. The Board is also considering the subject of Social Security for Seafarers, and I would like to suggest that in this respect it would be advisable if they are treated on the same footing as any other Indian national. Service conditions and welfare aspects apart there can be no possible justification for differentiating between Indians, seafarers on the one hand and workers employed in other industries on the other, in regard to the measure of Social Security to be enjoyed by both.

I am afraid I have taken up much of your time, and before I conclude I should like to take this opportunity of thanking the Ministry of Transport, The Director General of Shipping and their Officers and Staff for their wholehearted assistance. My grateful thanks are also due to my colleagues on the Board for the close co-operation I have received from them. I should also like to thank the Officers and Staff of the Company, ashore and afloat, for their good work on behalf of the Company.

I now formally move that the Directors' Report and the Audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1958, already duly sent to the Shareholders, be and are hereby adopted.

Note: This is not a report of the proceedings at the above Annual General Meeting.

STOCK EXCHANGES

Selective Buying Support

Watch-Dog Writes:

THANKS to the emergence of speculative support, stock markets have taken a slight turn for the better during the week under review. Turnover, however, remains restricted in the absence of any interest from investors.

Prices on the Calcutta Stock Exchange showed moderate gains, being encouraged by Bombay advices.

Bombay Dyeing and National Rayon provided highlights to trading on the Bombay Stock Exchange.

A steady trend and selective buying characterised the general pattern of trading on the Madras Stock Exchange.

An all-round but modest fall in prices was recorded on the London Stock Exchange.

Wall Street closed firm.

*

Calcutta

Calcutta, Friday Evening.

ENCOURAGED by better Bombay advices, the local Stock Exchange opened the week on a promising note and registered a gradual recovery in prices from the recent low levels following sustained speculative support. The main inspiration was derived from the denial by the directors of the Indian Iron & Steel Company Limited with regard to the rumours of the right issue and the statement made regarding the disposal of the company's shares in the Dalhousie Holdings.

Turnover, however, remained restricted, as operators were inclined to restrict commitments due to the approach of the Puja holidays. Moreover, investors were completely out of the market, being inclined to reserve their funds for the new capital issues. But an encouraging feature was the sustained support lent to a few selected scrip on reports of excellent working results. The market finished the week with major gains on balance.

Firm conditions continued to prevail in the Giltedged section where demand was mostly concentrated on short and medium-dated issues. As a matter of fact, stock was in short supply in many cases and some of the rises were sharp. There was a scramble for 3 per cent 1986 Conversion Loan, resulting in the price spurting to Rs 75.00 from Rs 73.75 quoted early on the opening day of the week.

Bank shares remained steady with price movements confined to a narrow range. Punjab National changed hands at Rs 20.75 to Rs 21.19 and United Commercial at Rs 61.25 to Rs 62.00.

Despite a further improvement in the statistical position of the industry, jute shares remained depressed on reported accumulation of stocks of heavy goods with the mills. Moreover, the recent floods in various parts of the country gave rise to fears with regard to the crop. But, an encouraging feature of trading was that no realising pressure of any sizable nature was witnessed. Alliance met with good support up to Rs 130 from Rs 127; Bally up to Rs 231 from Rs 224 and Ganges up to Rs 9.62 from Rs 9.44. Howrah moved narrowly between Rs 22.69 and Rs 22.81 and National between Rs 23 and Rs 23.50. Barnagore were a steady feature at Rs 160 with Birlas turning quiet at Rs 23.19 against Rs 23.31.

Coal shares were devoid of interest, partly due to the tendency on the part of certain companies to pay preference dividends after deducting tax and partly to a feeling that the working condition of the industry was not likely to improve with the recent increase in the price of the commodity. Bengal were unchanged at Rs 300 and so also Central India at Rs 8.00. Equitable came in for some enquiry up to Rs 34 from Rs 33.75 on reports of good working. New Beerbhoom hardened to Rs 20.31 from Rs 20. Burrakur fluctuated irregularly between Rs 16.19 and Rs 16.50 on alternate buying and selling, to finish the week at Rs 16.37.

Tea shares met with little or no interest and whatever business done was at much reduced levels. The obscure outlook for the industry for the current year and the reduction in dividends announced by certain companies in respect of the past year, were main contributory factors. Baghmari were offered at as low as Rs 19.37 against Rs 23.50 in the previous week; Grob at Rs 13.25 against Rs 17.81 and Methoni at Rs 20.19 against Rs 24. The only scrip which met with sustained enquiry were Brooke Bond, Eastern Cachar, Hasimara and Jayshree.

Sugar shares were also quiet due to the obscure outlook for the industry. Transactions were few and far between. Raza/Buland were done at Rs 12.50 against Rs 12.87; Belsund at Rs 12.87 against Rs 13; Carew at Rs 10.25 against Rs 11.12 and SKG at Rs 11.25 against Rs 11.31. Ramnugger Cane showed a drop of more than a point, at Rs 19.

In an otherwise dull session, Textile scrip fared better, thanks to the improved offtake in the cloth market. Higher level could not, however, be maintained till the close due to profit-taking, being induced by a steady rise in raw cotton prices. Dealings were very prominent in Elgins and Kesoram, which were pushed up to Rs 17.12 and Rs 18.44 from Rs 15.19 and Rs 17.87 respectively. Cawnpore hardened to Rs 5.19 from Rs 5.00, while Jayshree and New Victoria were rather quiet at Rs 10.15 and Rs 1.28 respectively.

In the Engineering section, price movements were mainly influenced by the speculative activity in Indian Irons which, in turn, were subjected to sustained speculative buying, resulting in a marked recovery in prices from the recent low levels. The main inspiration was derived from the statement made by the Chairman of the Company, denying the recent rumours that the company's application for a right issue had been rejected and that Dalhousie Holdings had sold a fair quantity of shares. After opening lower at Rs 23.42, Indian Irons were gradually pushed up to Rs 23.76, to finish the week at Rs 23.70 on profit-taking. In sympathy, TEXMACO were taken up to Rs 23.80 from Rs 23.65; Jessop up to Rs 29 from Rs 28.69 and Guest, Keen, Williams up to Rs 38.87 from Rs 38.37, to close finally at Rs 23.70; Rs 29 and Rs 38.87 respectively. Indian Standard Wagon were firm at Rs 86.75 with Britannia turning quiet at Rs 12.44 against Rs 12.75 on lack of fresh support.

Miscellaneous issues, after ruling initially quiet, firmed up gradually although profit-taking erased some of the extreme gains at close. Orient Paper changed hands at Rs 38.15 to Rs 38.70 (Rs 38.15); Indian Aluminium at Rs 21.06 to Rs 21.56 (Rs 21.31); Indian Cable at Rs 31.31 to Rs 31.75 (Rs 31.56); Indian Copper at Rs 4.02 to Rs 4.16 (Rs 4.15); Sirpur Paper at Rs 13.69 to Rs 14.12 (Rs 14.06); Hindustan Motor at Rs 11.91 to Rs 12.31 (Rs 12.06); Dunlop at Rs 33.50 to Rs 34.50 (Rs 34.50); BIC at Rs 5.00 to Rs 5.15 (Rs 5.06); Alkali Chemicals at Rs 22.31 to Rs 24.31 (Rs 24.31); Indian Oxygen at Rs 28 to Rs 28.25 (Rs 28.25) and India Steamship at Rs 13.37 to Rs 13.58 (Rs 13.44). Figures shown within brackets were the closing rates for the week.

*

Bombay

THE Bombay stock exchange ruled quite subdued in the first half, giving little indication of the change that was to be revealed after midweek. From Monday onwards, sentiment brightened up and selective support was in evidence toward the close of Wednesday. The improvement stemmed from the renewed interest evinced by marketmen in the textile section. Evidently, buyers had been encouraged by the continued higher advices from the goods market. It would appear that, if the current trend continued, mills might be talking about inadequate supplies instead of mounting stocks of unsold goods. The principal scrip, Tata Iron, and steel shares in general, however, ruled rather quiet presumably due to apprehensions about labour relations at the company's works.

In the steel section, Indian Iron displayed an uncertain trend on rumours about IISCO shares with a holding company. But following authoritative denial of any move to unload a large number of those shares in the market, sentiment revived. Trading in Tata Steel was also affected by adverse labour news but, by the beginning of the second half, the buoyancy in textiles exerted a sympathetic influence on the steel section. Even so, the undertone continued weak. Tata Steel gained 2 points on balance by close on Monday. After fluctuating both ways in the next two days, the scrip finally closed on

Wednesday at Rs 160.50. Indian Iron closed at Rs 23.68 xd.

Among Textiles, both Century Spinning and Bombay Dyeing met with spirited support most of the time. Renewed hopes of an early issue at par pushed up Century from Rs 566.50 to Rs 582 to be finally quoted on Wednesday at Rs 580 Bombay Dyeing on excellent export prospects advanced from Rs 64.50 to Rs 66.80 to close at Rs 66.60. Kohinoor advanced from Rs 301 to Rs 305 to close at Rs 303.00. Svadeshi moved up from Rs 243.25 to Rs 254 before coming back on profit taking to Rs 251.75.

In the Miscellaneous section, Bombay Burmah spurted to Rs 536.50. National Rayon was taken up to Rs 356.25 from Rs 340.50. TELCO gained nearly five points on balance to be placed at Rs 190. ACC was in request and advanced to Rs 149.75. Premier Construction was done upto Rs 362 but on bull liquidation on Wednesday reacted to Rs 355.50.

BENARES ELECTRIC LIGHT & POWER COMPANY LIMITED.

NOTICE is hereby given that an Extraordinary General Meeting of the Members of the abovenamed Company will be held at the Registered office of the Company, No. 12, Mission Row, Calcutta, 1 on Wednesday, the 21st October, 1959, immediately following the termination of the Annual General Meeting to be held on that day at 11-0 a.m. to consider, and if thought fit, to pass, with or without modification, the following subjoined resolution, namely:—

"That approval be and is hereby accorded to the re-appointment of Martin Burn Limited, as Managing Agents of the Company for a further period of 10 years with effect on and from the 16th August, 1960, on the terms and conditions contained in the draft agreement submitted to the Meeting and, for the purpose of identification signed by the Chairman thereof, and that an application to the Central Government for its approval to this proposal under Section 326 of the Companies Act, 1956 be and is hereby directed to be made".

By Order of the Board,
MARTIN BURN LIMITED
A. G. GIDLEY
Secretary,
Managing Agents.

12, Mission Row,
Calcutta-1.
24th September, 1959.

NOTE: (i) A Member entitled to attend and vote is entitled to appoint a Proxy to attend and, on a poll, to vote instead of himself. Such Proxy need not be a Member of the Company.

(ii) An Explanatory Statement is annexed to the Convening Notice issued to Members of the Company.

Madras

ENQUIRIES in Madras Stocks exchange today were diversified, with accent on more plantation scrip. While there was no interest in the fixed interest securities as well as in Banks, sugars were easier. Industrials were steadier.

Govt. Securities: There was small turnover in this counter. 4½% Madras Government 1970 were quoted at Rs 107 and 4% 1970 could be had for Rs 100. 4% taxable Mysore Government 1968 were done at Rs 100.25 and 4½% 1969 taxable loan were priced at Rs 101.90. 4½% 1970 loan were offered at Rs 101.80 while 4% 1971 could be had at Rs 99.85. In Kerala Government's loans 4½% 1970 were available for Rs 101.80 and 4% 1970 were at Rs 99.85. Andhra Government 1970 4½% were at the same level as last week at Rs 101.93 and 4% 1971 were offered at Rs 99.90.

Banks: There were no changes at all in the Banks shares. Rs 100 paid Mysore Bank xd were offered for Rs 322, and Rs 100 paid Indian Overseas remained at Rs 179. Pandyan Bank was steady at Rs 32. Punjab National Bank at Rs 20.80. Travancore Bank were quoted at Rs 24.65.

Electrics: Dullness was the feature in today's transaction in this counter. Cochin with 9% dividend were available at Rs 10.50, and Karaikal were at Rs 10.75. Kumbakonam xd remained at Rs 11.00 and Negapatam also xd at Rs 9.62. South Madras did not change at Rs 11.65 and Vellore 10% dividend at Rs 13.65. West Coast was easier at Rs 14.00.

Sugars and Breweries: Andhra was quoted at Rs 20.25, while Cauvery was lower at Rs 118.00. Deccan was fractionally down by one nP at Rs 12.07 as also E.I.D. at Rs 39.65. K.C.P. remained at Rs 16.75 and Travancore 10% cd was lower at Rs 12.00. United Breweries did not change at Rs 459.00.

Plantings: Though wider enquiries prevailed in this section, teas had better offers than others. Balmadies remained xd at Rs 3.01, Be Be at Rs 3.00. Blue Mountain slided down to Rs 3.35 and Chandramalai were offered lower at Rs 2.98. Cochin Malabar was steady at Rs 6.35. There was no change in Coffee Lands at Rs 23.40 but Cons. Coffee improved to Rs 21.85. Haileyburia was not affected at Rs 18.50 nor Highland at Rs 13.00. Kailas improved to Rs 4.85 and Kil Kotagiri maintained steady rate at Rs 6.05. Kumergode did not lose anything at Rs 6.05. Lucky Valley were available at Rs 12.20. Nalankara with 16% dividend cd were quoted at Rs 19.00 and Mercara maintained its level at Rs 9.15. Mysore Coffee were interesting at Rs 4.26. Nelliampathy improved to Rs 2.92. Non such was better and higher at Rs 29.25. Ouchterlony were quoted at Rs 5.40 and Ossoor 15% cd at Rs 3.90. Parkside were available at Rs 24.25 and Peermade at Rs 17.75. Periakaramalai 12½% cd were in the market at Rs 3.98. Pullangode did not attract at Rs 1.72. Rajagiri was sought after lower at Rs 18.55, and Puthuthottam 10% tf cd at Rs 2.90. Sangameswar were lower at Rs 2.80. Thirumbadi were negotiated at Rs 1.83. United Nilgiris were put through at Rs 21.87 (12% f cd) and some transactions took place. Wartyhully 15% cd was wanted at Rs 3.85 but Waterfall changed hands slightly lower at Rs 3.87.

Textiles: Enquiries were stray here. Adoni was lower by 25 nP at Rs 8.00. Cambodia improved on inquiries to Rs 13.00, and Cannannore remained at Rs 142. Coimbatore Cotton were available at Rs 143 and Coimbatore spinning were quoted at Rs 43,00 Dhanalakshmi jumped to Rs 203.00 on better offers and Hemalath were negotiated at Rs 8.70. Kasthuri were better at Rs 24.75. Lakshmi was best at Rs 119.15, and Madura did not alter Rs 29.10. Mettur also improved slightly to Rs 373.00. Ranga Vilas was at Rs 49, and Travanvore Rayon did not change at Rs 23.25.

Venla tesa remained at Rs 113.

Miscellaneous: Aluminium Industries had good offers at Rs 22.15 and Ashok Leyland at Rs 7.80, five nP better than the last closing. Dalmia Cement changed hands at Rs 10.40. Enfield remained at Rs 13.50 while F.A.C.Ts was better higher at Rs 6.25 and Indian Steel Rolling had enquiries at Rs 13.40. Kirloskar Electric again proved in demand though at a slightly lower quotation of Rs 12.50. Mettur Chemicals was at Rs 11.80. Mysore Electrical Industries were negotiated very much lower today at Rs 129 xd 15%. Orissa Cement was, however, better at Rs 16.60. Parrys Confectionary was at Rs 4.24. Rallis was lower at Rs 77.00, Textool improved to Rs 194.00 while Western India Plywood xd improved to Rs 202 from last closing of Rs 191.08.

*

London

DULL conditions persisted on the London Stock Exchange and further widespread but mainly small losses were recorded in almost all sections. Election uncertainties, the further developments in the Jasper affair and the renewed indecision on Wall Street were all restraining influences.

Fairly extensive small falls were recorded in the Industrial section. Steel shares were again an erratic market. Leading miscellaneous issues, recorded particularly those with an American following. Giltedged securities turned dull despite the fall in the US Treasury Bill rate and closed with numerous declines. In the foreign market, Greek Bonds lost ground, while German issues were firm.

*

New York

PRICES on Wall Street displayed generally a firmer tendency, although a few issues declined in late dealings. A lively rally developed under the leadership of Chemicals, Aluminiums, Cameras and Assorted Electronics.

Gulf Oil, which announced plans for a stock-split and increased dividend, showed a seven-point gain, though this was reduced by profit-taking at the close. Texas Instruments, Fairchild Camera and Bell & Howell showed a good advance over last week's levels.

BENARES ELECTRIC LIGHT & POWER COMPANY LIMITED.

NOTICE

Notice is hereby given that the Annual General Meeting of the Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Wednesday, the 21st October, 1959 at 11 a.m. for the following purposes:—

1. To receive and adopt the audited Accounts for the year ended 31st March, 1959, and the Reports of the Directors and the Auditors thereon.
2. To declare a Dividend.
3. To appoint Directors in place of those retiring.
4. To appoint Auditors and fix their remuneration.

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 14th October, 1959 to the 21st october, 1959 both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy, who need not be a member, to attend, and on a poll, to vote instead of himself.

By Order of the Board,
MARTIN BURN LIMITED
A. G. GIDLEY
Secretary,
Managing Agents.

12, Mission Row,
Calcutta-1.
24th September, 1959.

ISI SPECIFICATION MARKS FOR PESTICIDES TWO MORE LICENCES GRANTED

The Indian Standards Institution has granted two more licences for the use of ISI Certification Marks in respect of BHC and DDT dusting powders to Messrs East India Distilleries and Sugar Factories Ltd., Dare House, Madras.

The presence of the ISI Certification Mark on these pesticides is an independent third party guarantee that the pesticides have been manufactured under controlled conditions and conform to the requirements laid down in IS: 561-1958 and IS: 564-1955 respecitvely.

The standard marks printed on labels are applied to the containers of BHC and DDT dusting powders under the supervision of the Development Wing of the Ministry of Commerce and Industry, Government of India.

India requires large quantities of pest control products in combating disease, rearing of animals and saving plants from pest nuisance. The production of these products has been increasing considerably in the country.

Any complaint regarding the quality of the pesticides bearing standard marks may immediately be brought to the notice of the licensee, Development Wing as well as the Institution.

The lighting-up of the Coke Oven battery No.1 marks a new stage in the progress of the Durgapur steelworks

With the lighting-up of the Coke Oven battery No. 1 on 24th August, the Durgapur steelworks of Hindustan Steel Limited enters a new stage. ISCON is proud to announce that work on this battery has been completed nearly ten weeks ahead of schedule.

When the process of gradually heating up the battery to operating temperature is completed, the Coke Ovens will be ready to supply coke for the first blast furnace to produce Durgapur's first pig iron.

FOR THE INVESTOR

Remarkable Steadiness

Investment Gossip:

AS I write this column on Thurday afternoon, the stock market seems to be quite cheerful. This week's settlement has passed off well and the fact that there will be a settlement holiday, as it were, for the next three weeks seems to have been partly responsible for today's improvement in sentiment.

The bull operators have also other reasons for feeling better. The bears can no longer point to Jamshedpur and the labour dispute over bonus. For, the matter has been amicably settled now. Corporate news continues to be heartening and many an existing company is to embark on further expansion programmes. Industry-wise, textiles are happy and indications are that the situation represented by mounting stocks and declining overseas offtake has already been left behind.. In Calcutta, selected jute shares have again begun to attract attention with the improvement in sentiment in the goods section following further foreign enquiries in heavy goods this week.

The AICC session at Naveen Nagar has not brought any great jitters. Following the announcement of the scheme for revising the scales of commission of Managing Agents, however, there has been some depression, especially in Calcutta market, in earlier dealings. Dalal street seemed to be less concerned about this apparently adverse factor. It is undeniable that the sliding scale proposed by Mr Lal Bahadur Shastri, Union Minister for Commerce and Industry, will not be to the advantage of big managing agency houses. It is also arguable that the effect of this move will, in the long run, be to push such big houses out of the corporate sector —a contingency which cannot be said to be quite good because the rich experience of the managing agency houses will not be long available for private enterprise.

The general trend in the stock market is steady; but steel shares are rather subdued. Although one of the major uncertainties in the shape of a possible unrest over the bonus question has been removed now, operators are not keen to extend commitments in this section, presumably in view of the fact that the size of the steel retention price is yet to be made known.

I should say that the present steady trend is to be deemed quite remarkable considering the militating influences in the present situation. The Puja recess is just round the corner. The Calcutta Stock Exchange will remain closed for the Puja holidays from 7th October to 18th October. There is then the expectation that the coming one or two months will witness the floatation of a number of new issues. It would appear that the total amount involved in these issues both from the public and private sectors will be around Rs 50 crores. The usual caution whenever there is a big drain of funds from the public is in the offing is conspicuous by its absence in the stock markets. Certainly, there will be quite a few good ones, among the forthcoming new issues, which will be given enthusiastic support by investors. The fact that all these considerations have not been able to stifle the enthusiasm for existing shares is indicative of the investors' ideas about the current price levels in the stock markets.

A Press Release says:

For the first time in its long history, the Calcutta Stock Exchange has this year chosen a Marwari President and a Bengali Vice-President.

The new President, Mr C. L. Jhunjhunwala, is a well-known personality in the business world of Calcutta. A stockbroker of long experience, he had been the Vice-President of the Exchange for 14 years. He has travelled widely and has seen on the spot the working of the Stock Exchanges on the—Continent and in the United Kingdom. Mr Jhunjhunwala is also a distinguished writer on current economic problems, and has recently written a book on "The Stock Exchange in Modern Democracy."

Mr H. C. Chatterjee, who has been elected the new Vice-President, is one of the oldest members of the Exchange and its Committee. Noted alike for sagacity of counsel and suavity of manner he has always commanded the confidence of his confreres and had been the Exchange's Treasurer for many years.

£R$

Investment Exclusive:

The capital market is humming with activity. With the Central and State Government loans out of the way, a long queue of corporate borrowers have been making their demand upon the stock exchanges. Recent issues of Indian Finance have been drawing attention to various of such announcements.

I understand now that KCP Limited is likely to come on to the market for Rs 40 lakhs in the form of 6½ per cent tax free redeemable second preference shares. KCP is a sugar and cement combine which is also interested in the manufacture of cement and sugar machinery. Expectations are that the issue will be well received by investors.

RECORD OF ACHIEVEMENT

Sound underwriting and outstanding service to Policyholders are reflected in the rapid progress made by the ORIENTAL FIRE. Transacting Fire, Marine, Motor, Accident and all other classes of non-life business ORIENTAL FIRE also offers specialized cover against Machinery Erection and Breakdown and Boiler Explosion risks.

ORIENTAL FIRE AND GENERAL INSURANCE CO., LTD.

Head Office: Oriental Buildings, BOMBAY-1

The Textile Machinery issue of preference shares for Rs 1 crore is already public news, and the feeling in the market is that, after the existing shareholders exercise their right, the balance left over for new investors will be rather small.

Another company which is likely to come on to the market for upwards of Rs 40 lakhs is Mysore Cement Limited, which is putting up a cement factory with a capacity, in the first instance, of 100,000 tons.

There can be no doubt that the considerable support forthcoming for the new issues is due to the very good showing of companies which have been built up in recent times. For example, Anil Hardboards are said to have published a spectacular maiden report.

£R$

Enlistment Rules : Objections Examined

(Contributed).

Investment Special:

IN the issue of the 26th September of Indian Finance, a summary was given of the objections raised by the Federation of Indian Chambers of Commerce and Industry to the enlistment rules of the Calcutta Stock Exchange. Commenting on the observations made by the Federation, the Bombay Stock Exchange has pointed out that there is nothing wrong if the listing requirements exceed the provisions of the Companies Act. Quoting the view of the Cohen Committee, the Bombay Stock Exchange says that stock exchange listing rules necessarily go beyond the minimum standards laid down by the Companies Act, and, as they exercise a beneficial influence in the public interest, joint stock companies should comply with them. The Atlay Stock Exchange Inquiry Committee had expressed the same view which was subsequently endorsed by the Morison Stock Exchange Enquiry Committee.

It is further stated that the present listing agreement of Bombay Stock Exchange has been signed not only by new companies but also by all the old companies and, with two or three exceptions, none of them has experienced any special difficulty in complying with its provisions. The Madras Stock Exchange has adopted an identical listing agreement form and all Madras companies have executed the agreement without raising any objection. It is suggested that the Calcutta companies also should co-operate with the Calcutta Stock Exchange.

Dealing with some of the specilc objections raised by the Federation, the Bombay Stock Exchange says as follows:—

Clause 3(*b*):—This is a normal provision and it corresponds to Clause 2 in Part 1 of Schedule VIII to Appendix 34 to the Rules and Regulations of the London Stock Exchange. That Clause reads as under:

"To issue the Definitive Certificates within one month of the date of the expiration of any Right to Renunciation or the lodgment of

a transfer and to issue Balance Certificates without charge if required within the same period".

It is true that, under the Companies Act, certificates may be issued at any time within three months of the date of allotment, but that merely fixes the maximum period. If the issue of certificates is delayed for long, the investor who is in need of funds would be unable to dispose of his holding and would be penalised for no fault of his own. The provision is in the interest of shareholders because it imparts liquidity and negotiability to their investments. Listed Companies are therefore invited to co-operate and adopt practices which help in this direction. If it is not feasible for a company to issue certificates within a month as required, it is given the alternative of issuing pucca receipts so that the holders may be in a position to sell the shares in the market and complete delivery in time.

Clause 3(c):—This is not a new requirement. There is a corresponding provision in the London Stock Exchange listing requirements and it has been quoted above. It may again be pointed out that the Clause does not conflict with the Companies Act, which merely prescribes the maximum period within which a transfer must be effected. Under the Stock Exchange Rules, which have been in force for the last twenty years, sellers are required to give delivery to buyers within a fortnight of the date of sale. The Central Government have also insised on delivery being completed within this period when sanctioning the new Bye-laws and Regulations under the Securities Contracts (Regulation) Act, 1956. In order to comply with these Bye-laws and Regulations, the sellers must be placed in a position to complete delivery in the market in time and that can be done only if Companies cooperate by issuing certificates within two to four weeks of the date of lodgment. It is appreciated that, sometimes, preparation of share certificates requiring signatures of Directors may take time. In such cases, the Clause provides for an alternative and it would be enough if an endorsement were made by an authorised official of the Company on the reverse of the Transfer Receipt that the transfer has been duly approved by the Directors.

Clause 3(e):—Apparently, the Calcutta Stock Exchange has not made the amendment adopted by Bombay last year whereunder, instead of duplicates being issued forthwith, a period of six weeks is allowed after the loss of certificates is notified.

Clause 4(d): This Clause would come into operation only in those exceptional cases when Companies are unable or unwilling to close their transfer books in accordance with the Stock Exchange requirements and the terms of issue are such that the ratio of new shares per trading unit is other than an integer. For instance, a Company may close its transfer books before the shareholders in general meeting approve the bonus or rights issue or before the consent of the Controller of Capital Issues has been obtained. In that event, business in the market would have to continue on cum-right footing even after the closure of the transfer books and rights would have to be settled between cum-sellers and cum-right buyers [illegible] settlement, bonus or right shares have to be delivered in proportion to the trading unit, and when the ratio does not work out an integral number of bonus or right shares, there is no way of setting rights between cum-right sellers and cum-right buyers unless arrangements are made by the Company for issuing coupons or fractional certificates in the place of "whole" shares at the request of shareholders. The "right" or "entitled" shares are shares which shareholders have the right to subscribe to in terms of the Letter of Offer issued by the Company and coupons or fractional certificates are required to be issued at the request of shareholders in place of the "whole" shares before such "whole" shares are actually issued, i.e., before they become a part of the Company's share capital. As is apparent, the requirement contained in this Clause would come into operation only in special cases and would not take effect at all when Companies close their transfer books in accordance with the Stock Exchange listing requirements.

Clause 8(a): There seems to be some misunderstanding. Certificates are required to be issued without charging any fee only when they are in replacement of those which are old, decrepit or worn out or where the cages on the reverse for recording transfer have been fully utilised. The question of rough and careless handling of certificates does not arise in such cases. If the investment habit is to grow and the public is to become more stock-minded, it is necessary that shares and securities should become more easily negotiable and the incidental expenses should be as few and as small as possible. When a certificate becomes old, decrepit or worn out, or where the cages on the reverse have been all filled up, it is no more than an ordinary convenience that the new certificate should be issued in exchange free of charge. Psychologically, the investor gains thereby a sense of satisfaction that he is not burdened with unnecessary costs and that he is not penalised for something which happens through no fault of his own. The new certificate issued in replacement is not a luxury or extra facility enjoyed by the shareholder to please his whims or fancies. It is an unavoidable necessity. From this point of view, it is on the same footing as share certificates which are issued to shareholders free of cost in the exchange for Allotment Letters when a Company is floated or a new issue is made. The expense involved is nothing else but a part of the general over-head costs which every Company has to incur. Even so, where replacement certificates are concerned, the cost to the Company in the aggregate cannot but be relatively negligible. Moreover, the small free service is rendered only to the proprietors of the Company in relation to their proprietory rights. In the circumstances, it is difficult to appreciate why an objection should be taken on such a minor point, particularly when it is in conformity with good practice and calculated to encourage in a small way the habit of investing savings in stocks and shares.

Clause 8(b): It is the normal practice for most Companies not to charge any fees for registration of Powers of Attorney, Probates, Letters of Administration or similar other documents. The provision is in accordance with this general practice. In any case, what is stated above in regard to Clause 8(a) applies with equal force to this provision.

Clause 9: The Articles of Association of Companies generally prescribe the maximum fee that may be charged in cases covered by this Clause and it is open for the Directors of the Company to fix any reasonable fee within the maximum. The Clause does not prohibit Companies from charging any fees and there is no reason to fear that the Stock Exchanges would not agree to fees which are reasonable. The underlying object of the provision is to bring about, in course of time and by means of persuasion, a uniform scale of fees which would be generally acceptable to all listed companies. This would simplify the investment procedure and in the long run promote the investment habit and encourage investment in stocks and shares. The Clause merely deals with the quantum of fees and it is therefore difficult to understand the reference made in connection with Clause 9(a) to rules drawn up by Companies from experience and in consultation with lawyers.

Clause 10: Certification of signatures of shareholders on Allotment Letters, Split Receipts, etc., is necessary for the safety of investors and for the protection of brokers who guarantee to investors the genuineness, regularity and validity of documents delivered through them. The provision does not impose any unduly heavy burden on Companies as the verification has to be done not in all cases but only when so required. The Clause is essential as it safeguards the interests of those who invest and deal in stocks and shares.

Clause 14: The Clause would not come into operation in all cases but only in those few cases where the volume of business in the shares of the Company is very large and the Company's registered office is situate in an out-of-the-way place which is not easily accessible. No difficulty is therefore likely to arise.

Clause 15 *and* 16: These listing requirements are amongst the oldest, having been in force for the last forty years. They do not involve any hardship. Where Companies whose shares are settled through the Clearing House are concerned, what is required by the Stock Exchange under this Clause is that they may close their Transfer Books as from any convenient date provided at least twenty-one days' notice of such closure is given to the Exchange. When the closure is for purposes of a right or bonus issue, a similar notice is necessary but the condition then is that the Transfer Books should be closed only after the issue is sanctioned by the Company in general meeting (when that is necessary) and the consent of the Controller of Capital Issues has been obtained. Where Companies whose shares are settled through the Clearing House are concerned, settlement of rights and dividends is a complicated matter and it is therefore made incumbent on Companies to close their Transfer Books only from such dates as do not conflict with the Clearing Programme. On this point, it has been a long-standing practice with this Exchange to give detailed guidance to listed Companies well in advance through issue of periodical circulars containing schedules of suitable dates of closure of transfer books for purposes of dividends, bonuses, new issues, etc. The provision contained in these Clauses has been in operation for many decades and listed companies have always been co-operating with the Exchange by observing this requirement. It is possible that a Company may perhaps feel that it cannot simultaneously comply with the programmes of the different stock Exchanges where its shares are quoted. In that event, it is open for it to decide to have an official quotation on any one of the recognised Stock Exchanges so that no complications may arise. There is no compulsion on Companies that they should have their shares quoted in more than one market, though it may be noted that, in the case of Companies like Indian Iron and Indian Copper, which are concurrently quoted on the Bombay, Calcutta and London Stock Exchanges, it has always been possible by careful planning so to arrange the closure of Transfer Books as to satisfy the requirements of all the three Exchanges.

Clause 17: The Clause is clear that Companies should give effect to transfers that are lodged up to the date of closure of the Transfer Books and that in respect of transfers received after the closure the Company should defer registration till the re-opening of the Transfer Books unless it is otherwise arranged in agreement with the Exchange. The provision therefore does not involve any interference in the internal working of the Companies when their Transfer Books are closed and it is difficult to appreciate what is meant by this comment.

Clause 18: This is a forward-looking provision under which what is contemplated is that the Stock Exchange should seek to persuade Companies to issue periodical progress statements which would be helpful and instructive to shareholders and the general investing public. The Clause, therefore, imposes no mandatory obligation on Companies but merely provides for publication of such periodical reports as Companies and the Exchange may mutually "agree upon". In other words, the Clause invites the voluntary co-operation of Companies with the Stock Exchange.

Clause 20(b): There is an identical provision on the London Stock Exchange and it is not easy to understand what are the difficulties in the way of complying with this requirement. For instance, the Indian Iron and Steel Co Ltd, which is officially quoted on this Exchange, has always been furnishing the required information by telegram in spite of the fact that its Head Office is located in Calcutta. As will be appreciated, it is both necessary and desirable that the relevant information should be made promptly available to the market and investors in general so that inaccurate or unauthorised

information may not gain currency and mislead the public.

Clause 21: The Clause is not in breach of the Companies Act which merely provides that Companies must pay dividends at any time within three months of the date of declaration. The object underlying the Clause is that, within this statutory period of three months, Companies should fix in advance a specific date on and from which the dividends would be payable and that dividend warrants must be in the hands of all the shareholders by that date so that there might be no complaints of discrimination between one shareholder and another. It does not matter what practice is followed in the matter of fixing such a date so long as the underlying object is achieved.

Clause 23(a): It seems that the Calcutta Stock Exchange has not made the amendment adopted by Bombay last year whereunder the new issue is required to be offered not to all the shareholders but to equity shareholders only. As regards forfeited shares, the Clause specifically provides that they may not be offered to the shareholders in the first instance when the Exchange so agrees and the Exchange would in the ordinary course always so agree when the number of forfeited shares available is so small that a pro rata distribution to the shareholders would not be feasible.

Clause 32: There is some misapprehension when it is stated that thousands of extra Balance Sheets would have to be printed by each Company to meet the requirements of this Clause. The total membership of all the recognised Stock Exchanges put together is about two thousand and Balance Sheets are not to be supplied to all of them. Copies have to be given only to the members of the Exchange on which the shares are quoted. Here again, copies have not to be mailed broadcast to all the members but only to be supplied to those who make a special request. The Clause will not therefore prove burdensome. As will be appreciated, members of the Stock Exchange have to advise investors whether they should invest their savings in the shares of a particular Company and they can perform this essential function only if they are well acquainted with the financial position of the Company as reflected in its Annual Report and Balance Sheet. Companies should welcome such interest and the Clause therefore appears to be desirable from all points of view.

£ R$

Investment Notes:

THE Indian Aluminium Company, Limited proposes to carry out a substantial expansion of its bauxite, alumina, aluminium ingot, rolling mill and extrusion facilities. This plan represents an integrated programme—from bauxite through ingot into sheet and extrusions. When this programme is implemented, the company's new ingot smelter at Hirakud will be expanded from 10,000 tons annual capacity to 20,000 tons. The capacity of the company's alumina plant at Muri, Bihar, will be tripled from the present 18,000 tons to 54,000 tons. The company's rolling mill at Belur, West Bengal, will be expanded from about 9,000 tons of rolled products to 16,500 tons a year, which will enable the company to produce medium and strong alloy sheet, aircraft sheet, container stock and foil stock, by far the largest part of which is now imported.

The company also proposes to instal an additional modern extrusion press, at Alupuram, Kerala, with a ram pressure of 3,300 tons. The press will be powerful enough to handle extensive range of medium and strong aluminium alloys and will be capable of producing heavy and large extrusions, such as 6" diameter irrigation pipes. On completion of this expansion programme, the company will have a well-rounded aluminium industry of substantial size and flexibility. The output from the new facilities is expected to save a large amount of foreign exchange.

In carrying out its expansion programme, the company is assured of the full co-operation of Aluminium Limited, Canada. The cost of expansion is expected to be around Rs 11 crores. The estimated foreign exchange expenditure of about half the total cost is likely to be covered by the company's main shareholder in Canada. The remaining cost will be financed, partly by internal resources and bank loans. Market circles think that a portion of the finance may be obtained from the public. It remains to be seen whether the company will make a Debenture issue.

According to the statement issued by the Chairman of the Colour-Chem Limited, the production schedule of the company is upset due to Government not granting import licence for raw materials. He adds that the company has already lost about two months' production and a further loss of production for the next few months is bound to be, there even if licences are granted now. The shares are currently quoted around Rs 200.

The total subscription to the equity shares of the Cellulose Products of India Limited has amounted to 37 times the issue. It is understood that the allotment of the shares will be done by drawing of lots.

Cement shares have been in good favour in an otherwise dull market, thanks to the news that the manufacturers will soon approach the Government for an increase in the price of the commodity. Internal and export demand for cement is reported to be encouraging. The STC is said to have sold 52,000 tons to West Pakistan for October-November delivery. Persian Gulf and Hong Kong are also inclined to buy Indian cement.

The subscription list in respect of 60,000—6½ per cent taxable Debentures (1969—1974) of Rs 100 each, at par, by the Simplex Mills Company, Limited was closed, the issue being over-subscribed.

It is understood that details of a scheme for the manufacture of rubber tyres by a new company in India have been completed. The name of the company is Premier Tyres Limited and the managing agents will be The Indo-Orient Agencies Private Limited. The registered office of the company will be situated in Bombay and the factory will be in Cochin. The authorised capital will be Rs 4 crores, made up of Rs 3 crores worth of Ordinary shares and Rs 1 crore of preference shares. The ordinary shares are of the face value of Rs 100, while the preference shares are redeemable and cumulative, being repayable after 10 years at the company's option at Rs 102. They will carry an interest of 6½ per cent, tax-free.

Dhrangadhra Chemical Works' new caustic soda plant at Sahupuram near Attur in Tirunelveli district (South India) has started commercial production. Claimed to be the biggest and the most modern caustic soda plant in Asia, it has an annual capacity of 30,000 tons. This is expected to be raised to 55,000 tons in a couple of years.

The National Rayon Corporation of Bombay is expected to undertake the manufacture of rayon grade pulp. The managing director of the concern is reported to have gone abroad to seek foreign collaboration for this venture. A clearer picture is expected to emerge at the end of next month.

It is learnt that the Government of India have issued a licence for the manufacture of 1.2 million square metres of photographic paper to the New India Industries, Baroda. The company has already been permitted to produce cameras in collaboration with AGFA. The new unit, which will be situated in Bombay, is expected to produce 40 per cent of the country's requirements. AGFA, which is contributing nearly 50 per cent of the capital, will provide the technical know-how, free of charge, and has also allowed the use of its trade mark. The plant is expected to go into production early in 1961.

The Malabar Agricultural Company, Madras, has decided to change the financial year from 31st December to 30th June. It has been resolved to extend the financial year to 18 months ending 30th June, 1959.

£ R$

Investment Briefs:

Bengal Coal has announced an interim dividend of Rs 10 per share for the year ended 31st October, 1959.

Mysore Coffee has maintained the dividend at 15 per cent for the year ended 31st March, 1959.

T. Stanes of Coimbatore has recommended an interim dividend of 10 per cent, taxable, for the year ended 30th September, 1959.

Khatau Makanji Raises Dividend

Balance-Sheet Reviews:

THANKS to a better demand for the company's products and improved conditions in the cloth market, the Khatau Makanji Spinning & Weaving Company Limited has done much better in the year ended 30th June 1959. It is stated that the substantial sums spent in recent years on modernisation of plant and machinery have been helpful in improving the quality of the finished products.

The net profit, before providing for Depreciation and Taxation, has risen sharply to Rs 58.14 lakhs from Rs 27.57 lakhs in the previous year. The charge on account of Depreciation is Rs 14.73 lakhs (Rs 13.63 lakhs). There is no transfer to Development Reserve against Rs 1.17 lakhs formerly; but the transfer to Development Rebate Reserve is as much as Rs 5.28 lakhs (Rs 57,680). The provision for Taxation is much larger at Rs 18.90 lakhs (Rs 5.50 lakhs). The transfer to General Reserve is Rs 8 lakhs (nil). The Ordinary dividend is raised to Rs 16 from Rs 10.00 per share.

£ R$

Hind Cycles

A lower level of output and higher working expenses have been responsible for the loss incurred by Hind Cycles Limited in the year ended 31st March 1959. The loss, before providing for Development Rebate and Depreciation, amounts to Rs 4.92 lakhs against a profit of Rs 6.96 lakhs for 1957-58. Only the Development Rebate provision of Rs 64,600 is to be made, the Depreciation charge being omitted. On the last occasion, the amount set aside to depreciation was Rs 5.37 lakhs, while the transfer to Development Rebate was Rs 10,000. Taxation accounted for Rs 33,500. The dividend on the preference shares is to be paid with a transfer from the Dividend Equalisation Fund. The Ordinary dividend has been passed over. Sales are lower at Rs 2.06 crores against Rs 2.24 crores.

£ R$

Jost's Engineering

The working of the Jost's Engineering Company Limited, for the year ended 31st March 1959, has resulted in a profit of Rs 62,876 against Rs 52,096 in the preceding year after providing Rs 8,774 for Depreciation (Rs 6,581); Rs 45,000 for Taxation (Rs 77,000) and Rs 3,300 for Wealth Tax (Rs 3,200). The dividend is maintained at 10 per cent, free of tax.

£ R$

Mukund Iron

The Mukund Iron & Steel Works Limited has earned a profit of Rs 29.94 lakhs for the year ended 31st March 1959. Allocations include Rs 15 lakhs for Taxation —(Rs 8.80 lakhs); Rs 8 lakhs for General Reserve (Rs 4 lakhs); Rs 2 lakhs for Development Rebate Reserve (Rs 80,000) and nil for Rehabilitation and Development Reserve (Rs 1 lakh). The directors have recommended a dividend of Rs 2.50 and a bonus of Rs 6.36 per share on Deferred shares.

£ R$

New Standard Engineering

The working of the New Standard Engineering Company Limited has resulted in a profit of Rs 6.47 lakhs for the year ended 31st March 1959. The provision for Depreciation amounts to Rs 1.15

lakhs and that for Taxation Rs 1.75 lakhs. The directors have recommended a dividend of 9 per cent, free of tax.

The company was converted into a public limited company and its name changed from Messrs Burjorji Pestonji and Sons (Private) Limited to the New Standard Engineering Company with effect from May 20, 1959. During the year, the company took over the assets and liabilities of the New Standard Engineering Company as from 1st October 1958 under the scheme of amalgamation as sanctioned by the High Court.

The company has in hand an expansion programme. It has chosen an extensive site at Goregaon for setting up, in the first instance, a heavy manufacturing and processing unit capable of serving the requirements of the building industry, Indian railways and other industries requiring special types of structures as well as mild steel fabricated plant and equipment.

£R$

Poona Electric

The Poona Electric Supply Company Limited has earned a profit of Rs 4.28 lakhs for the year ended 31st March 1959 as against Rs 4.14 lakhs in the preceding year after providing Rs 4.27 lakhs (Rs 3.96 lakhs) for Depreciation and Rs 3.90 lakhs (Rs 1.60 lakhs) for Taxation. The directors have recommended a final dividend of Rs 3, making a total of Rs 8 per share, free of tax, against 7½ per cent in the preceding year.

Revenue from energy sales has gone up from Rs 56.77 lakhs to Rs 63.23 lakhs. Contingency Reserve absorbs Rs 74,016 against Rs 70,386 and a sum of Rs 76,186 has been set aside to Development Reserve against Rs 91,327. A sum of Rs 1.31 lakhs has been transferred from Tariffs and Dividends Control Reserve against Rs 1.29 lakhs.

£R$

Malankara Rubber

The net profit of the Malankara Rubber & Produce Company Limited, for the year ended 31st March 1959, is not very much changed at Rs 5.20 lakhs against Rs 5.34 lakhs for 1957-58. The provision toward Depreciation is Rs 31,719 (Rs 31,230) and Taxation Rs 2.39 lakhs (Rs 2.45 lakhs). The amount transferred to General Reserve is Rs 21,500 (Rs 34,430). The ordinary dividend is raised from 16 to 17 per cent.

The rubber crop harvested is 685,499 lbs against 684,116 pounds. The coconut and pepper crops are also satisfactory. The estimate for 1959-60 provides for a crop of 6 lakhs lbs.

£R$

Nilgiris Tea

In the year ended March 31, 1959, the Nilgiris Tea Estates Limited had earned less profit at Rs 1.98 lakhs. During 1957-58 their profit was higher at Rs 3.11 lakhs. Labour strikes were attributed for the smaller outturn at 9,75,117 lbs of tea and 2.150 coffee bushels. After providing for depreciation of Rs 49,035 against Rs 81,871 for last year, and taxation provision of Rs 63,000 against Rs 1.1 lakh of last year, the debenture redemption fund gets Rs 18,268 against Rs 25,000 of the previous year. The ordinary dividend has been reduced to 5 per cent.

Th eestimate for 1959-60 provides for a 10 lakh lb of tea crop and 2.500 bushels of coffee crop.

'The Wise Man in his attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right'—The Analects of Confucius.

The AICC Session

THE dominant impression of the Chandigarh deliberations of the All-India Congress Committee is unfortunately one of longwinded garrulousness. Reading through the dutifully reported speeches, one searches in vain for a really fresh or bright idea or even phrase. Principally convened to discuss the report of the Sub-Committee on planning, it nearly lost itself in a futile discussion on the private and public sectors. On the question of agricultural production, again, the usual cliches made their tired appearance. Almost the only question that seems to have stirred the delegates (which, in the circumstances, was hardly surprising) was the Chinese intransigence over the border. Three other questions, which aroused more than passing interest, were the future of the Bombay State, the safety of the Bhakra Dam, and the electoral alliance in Kerala. Indeed, many of the delegates were more anxious to visit the site of the dam than to listen to the speeches that were being made. After the question of Bombay's future was entrusted to a Sub-committee, it ceased to evoke any further interest. The electoral arrangement in Kerala was, understandably, discussed behind closed doors and one hopes that those who had their qualms about such marriages of convenience obtained the necessary unction to lay on their souls. But on the practical steps to be taken for carrying out the general tasks set for individual Congressmen, very little was said. There was much vague reference to the Mandal Congress Committees. But, as Mr Bhaktavatsalam from Madras pointed out, it is necessary that these committees get clear and unambiguous instructions about what they are to do and say. And of such guidance, as Mr Bhaktavatsalam complained, they get little. Part of the reason for this is that people at the top are themselves not very clear about the details of policies. Mr Bhaktavatsalam referred in this connection to state trading: the recent announcement of the National Development Council to have "ultimate full scale state trading" in foodgrains has "seriously handicapped procurement". Now, Mr Nehru was eloquent about the "100 per cent justification" of state trading but he himself conceded that it would be expedient to make the necessary preliminary arrangements for it if it is to be a success. It is difficult to see why the National Development Council should not have deferred its announcement until at least the minimum essential preliminary arrangements have been made. As it is, the announcement creates difficulties for carrying out the current duties of those who are in charge of food administration. And the Mandal Congress worker finds it difficult to explain in terms that make sense to the villager the raison de'etre behind these policy announcements.

The deliberations at Chandigarh have not significantly added to the public's understanding of the problems of planning. Mr Nehru praised the Planning Sub-Committee's report as an able document presenting an "integrated approach" and a grand strategy to attack that powerful enemy, "poverty". This is a fair enough description of the document, but what we expect from its discussion is not encomia, but the working out of implications of the report. Mr Nehru's speech itself contained a few such essays in elaboration, but, for the most part, it was more combative than elucidative. But he did indicate the narrow range of manoeuvre that was open to an underdeveloped country trying to achieve a higher standard of living by a process that does not involve regimentation. For instance, the difficulties in the way of having a wholly "employment-oriented plan" were indicated by him graphically when he said that, if we scrapped the railways and introduced the bullock cart, we might create enough employment but that would not constitute progress. But, as he himself realises, planning is a sort of trigonometry, involving the study of the relationship of three angles, one of which is the human angle, the other two being those of production and efficiency. Our quarrels can, therefore, not be on an "either-or" basis, but only on relative allocation of scarce resources for a thousand alternative urgencies. There can also be some argument on what constitutes the proper demands of the long-term and short-term requirements and the modes of their adjustments. Mr Nehru was in fact being more reasonable than what the more dogmatic parts of his speech would seem to suggest. For instance, he conceded that "the State has not the capacity to take over everything now". He also said that he was himself terribly afraid of "bureaucracy in industry", when the State did take over. He scoffed at the idea that "some kind of suppression of the private sector will suddenly bring about socialism in India". He also wanted the continuance of the private sector as there was the danger of the public sector getting "complacent" (from which complacency he was not himself free). The primary thing is, as he rightly emphasised, increase in production, and the creation of the physical, psychological and technological environment that will make this possible and on as wide a front as can be. The scope for this is limited by our scant resources and other demands on these resources, one of which is the provision of a "national minima of well being" wholly unrelated to immediate production. This last can be denied only by those who divorce planning from humanity.

The real hard thinking on the Plan is yet to commence for the simple reason that some idea of the extent of the resources that will be available is necessary before any final formulation can take place. Data on the subject are likely to be available only when the Finance Minister returns from his visit abroad. (In a sense, discussion of the Plan in the absence of Mr Morarji Desai was like Hamlet without the Prince of Denmark). Meantime, it would be better if the delegates returning home from the AICC session read those portions of the Sub-Committee's report in which the organisational tasks—many of them intangibles, like "building up loyalties to the values of the new social order" and the transformation of the apathy of the people into a dynamic interest in planned progress —are detailed. And having read them, they should address themselves, firstly, to the unspectacular task of giving direction and purpose to popular impulses. Secondly, they should think in concrete terms of organisational possibilities locally and nationally. One bright idea from each member would make an enormous difference to the returns on the investment under the Plan. An admirable example, which, alas, has not come from politicians, is the dovetailing of the idea of industrial estates with practical training for university students. The idea gives shape to several aspirations, and breaks new ground in educational policy. We need more such ideas, especially for one of the crucial tasks enunciated by the Sub-Committee—the conversion of idle manpower into socially useful assets. Local leadership is of the essence of this task as of the success of the Plan as a whole. Here, rather than in ideological claptrap, is work cut out for members of the AICC.

Complacent Anemia

By Professor S. KESAVA IYENGAR

MR MORARJI DESAI recently announced in London that the implementation of the Second Plan was a cent per cent success. This is bound to upset, if not shock, many. Everybody knows that the Indian Second Plan is not expected to reach a high level of success: the recent Report of the Central Board of Directors of the Reserve Bank of India has plainly stated that the targeted increase in national income of 24-25 per cent may not be realised. The Plan expenditure during the first four years (Rs 3,555 crores) has been less than proportionate to the total Plan outlay of Rs 4,800 crores or even Rs 4,500 crores. But there has been general jubilation at the recent Chinese admission that certain targets had not been reached and a downward revision was called for. Communist countries have been criticised for indulging in propaganda, but, just as in China, Premier Khrushchev admitted in Iowa recently that corn growing in the USA was about double that of the USSR. It is only a platform of strength and confidence that enables a Government to face the situation frankly and admit shortfalls. It is not as though attempts are not being made for upgrading the level of economic activity. The emphasis that is being laid on freeing the village level workers from election activities and the Small Savings Campaign, and the drawing up of village production credit schemes to be managed by village panchayats and village co-operatives, are instances in point. The Prime Minister's hint that Community Development workers should go into the villages with an attitude of sympathy and friendship and that work should be of a continuous and cumulative character has come

none too early. Mr A. D. Shroff's suggestion that the real remedy for educated unemployment in Kerala was the establishment of about six big industries in the State is another instance of the great lacuna we have in our programmes. Very recently, the Government of India have entrusted the National Sample Surveys with the work of assessing the areas of waste lands that can be brought under the plough. It is estimated that, while the present cultivated area in this country is 343 million acres, another 129 million acres could be made cultivable with the help of reclamation, afforestation and soil conservation. Similarly, the Central Arid Zone Research Institute at Jodhpur has been asked to proceed with plans and schemes for protecting agricultural areas against sand and wind, at a cost of Rs 87 lakhs.

All such constructive work pales into insignificance before the psychology of complacency reigning all round. The Dhebar Committee of the AICC wants an increase in national income at 6 per cent per annum, and the rate of investment at 13-14 per cent; and the Federation of Indian Chambers of Commerce and Industry has also indicated the same figures. On the other hand, a reference to previous figures shows that, during the past 10-12 years, the Indian national income increased on the average at 2.8 per cent per annum. Even in the USA the rate of rise was only 6.1 per cent. The latter body is content with 45 per cent of outlay for the private sector compared to 39 per cent during the Second Plan period: about 90 per cent of income flows in this country are from the private sector. On unemployment, the backlog in 1960-61 is expected to be 7 million, and with 14 million new entrants, 21 million would have to be provided jobs during the Third Plan: the backlog is put at 4-5 million at the beginning of the Fourth Plan period. Foreign capital imports are to be at Rs 2,400-2,500 crores and while such imports are being stressed, actually little has been done to facilitate such imports.

Our production levels are notoriously lower than in advanced countries, but some of our Union Ministers appear to be quite satisfied with what we have and what we may expect in the usual course. Mr S. K. Patil has proposed that the United States should establish a stockpile of 5 million tons of foodgrains in this country, to be drawn upon by the Government of India as and when required. Similarly, he wants another stockpile of sugar imported from abroad. It is surprising that Mr Patil did not consider questions like these: Will the United States Government agree to run all the risks involved in transferring its stockpile of foodgrains from that country to this? Who will bear the shipment charges? Who will provide warehousing and insurance facilities? What will happen to the United States' stockpile in India after this country become self-sufficient in foodgrains? Foodgrains production in India rose from 53.5 million tons in 1950 to 72.5 million tons in 1958 while in China the rise was from 122.72 million tons in 1950 to 225.0 million tons in 1958. But the target for India has been put at 110 million tons by 1965-66, and the Minister for Food and Agriculture thinks that, even at present, food supplies are adequate, in spite of steep rises in food prices. Another Union Minister, Mr Lal Bahadur Sastri, has recently congratulated himself on cement, sugar and textiles production being more or less sufficient to meet local requirement. The market price of cement is high and therefore the demand is limited. With regard to sugar, we produced 19 lakh tons but consumed 20 lakh tons, and the consumer demand should be expected to be higher year by year: the right step would be to establish more sugar factories and raise local production, instead of relying on fancied co-operative sugar mills and foreign imports of sugar. The per capita consumption of cloth in India is only 17.5 yards and our production of textiles went up from 3,650 million yards in 1950 to 4,925 million yards in 1958, while the corresponding figures in China were 2,940 million yards in 1950 and 6,250 million yards in 1958. To crown it all, the news item has just been flashed that 9,000 tons of pig iron left Bhilai for export! The US manufactures 125 million tons of steel per annum, but little is said about it in the press because everybody knows about it. Our unenviable position is that we export iron ore to Japan and to Central Europe, and import pig iron: we are anxious to export pig iron, and we are bound to import large quantities of steel until local steel production is raised to such an extent as to meet fully local requirements.

Planning and complacency are contradictory terms: planning implies accelerating improvements while a psychology of complacency connotes inertia and contentment, Anemia is a disease in which there is very gradual degeneration: the patient continues complacent because he is not able to notice the corroding advance of the disease. It is high time that this epidemic of complacent anemia is exterminated as quickly as possible and a new era is inaugurated of honest and enduring effort and more honest recognition and revelation of facts.

A Common Market for South Asia

'ANGA, Vanga, Kalinga,' etc., are the galaxy of 56 states that comprised India from ancient times. One of them, Gandhara, is the present Kandhar in Afghanistan. On account of political exigencies from time to time, India, Pakistan, Burma, Ceylon and Nepal became independent of one another. But, even to-day racial and cultural ties are at work as strong factors making for mutual affinity: it is common to hear hits by Indian stars from broadcasting stations in Ceylon and Pakistan. The Muslims in East-Bengal are more attached to Bengali than Hindus there. The difference between Hindi and Urdu is not wide, and there are Buddhist, Muslim and Sikh places of worship which attract pilgrims from across the frontiers among these five countries. Lakhs of Indian families have sons and daughters in one or another of the remaining four States.

DIVERGENCES WIDENING

Inspite of such a basic racial and cultural harmony, differences and misunderstandings are increasing, much more on account of imagined fears than real causes. The Partition Debt due from Pakistan, the Kashmir controversy, the Indus Waters dispute, Indo-Pakistan border raids, the problem of Indians in Ceylon, and US Military aid to Pakistan are only a few examples among many. Trade among these areas is languishing, fears of aggression are increasing, and the flow of labour, capital and goods among them is impeded by artificial barriers. Left unrestrained, the divergences are likely to widen, resulting in anxiety, and loss all round. The need for mutual good-will and co-operation is too obvious to need any stress.

THE EUROPEAN COMMON MARKET

The European Common Market, which began to function on January 1, 1958, covers West Germany, the Netherlands, Belgium, Luxembourg, France and Italy. The Organisation for European Economic Co-operation and the European Payments Union paved the way for the Common Market. The total population of the signatory countries is about 160 million, industrial production is as high as in the USSR, and foreign trade more than that of Britain and about the same as of the United States. The Common Market took the first step on January 1, 1959 by reducing customs barriers within the Common Market by 10 per cent, and complete free trade within the Area is expected to be achieved in the course of 12-15 years. The Common Market has as its executive one European Commission, a Council of Ministers, a Court of Appeal and an Assembly to ensure Parliamentary surveillance. Yet, these countries have their own currencies, National Banks and Budgets. The concept of the Common Market is based on an internal competitive economy, and separate interests and cartels are expected to be overcome gradually. As yet, the working of the Common Market is not quite smooth. For example, costs were high in Belgian coal, but they are being neutralised by Belgian Government subsidies, resulting in surplus coal. Miners in a French speaking area were asked to move to a flemish district, but they declined "for cultural reasons." The difference between West Germany and France with regard to establishment of US atomic bases is no secret. Britain has not been in favour of the Common Market although it would like to co-operate in Free Trade Area, including the Scandinavian countries. Two other similar European Organisations are (1) for coal and steel, and (2) for atomic energy. Experience so far shows that potentialities are greatest in the Common Market.

ADOPTION BY SOUTH ASIA

The creation of a similar Common Market for Pakistan, India, Nepal, Burma and Ceylon is not at all easy, but well worth considering. It is rather sad to think of a World Bank official presiding over a Conference on the distribution of Indus Waters. Recently, there was strong opposition in Nepal to an inter-state irrigation project to be shared by India. The Tamil language agitation is embarrassing in Bandarenaike Government. All this would not have happened if a free flow of labour, capital and goods had been accepted by all the five countries as a corollary of a Common Market. Costs and prices would have gone down and production increased, if raw jute from Pakistan, cement and coal from India, rice and timber from Burma had been given the same treatment as local products by the importing countries. Their economic viability would increase, and dependence on American and Canadian wheat would soon be reduced. Of course, the idea of complete merger or reunion is not there, but closer and hearty economic co-operation is bound to lead to lower defence budgets and higher national incomes facilitating an all round higher standard of life. As a matter of fact, the General Agreement on Trade and Tariffs, the Commonwealth Conference and the Colombo Plan were organised in the same spirit, but the South Asian Common Market should prove more useful and beneficial on account of physical contiguity (as in the case of the European Common Market).

Plan Progress in China

By a Special Correspondent

THE recent address by Prime Minister Chou En-Lai to the Standing Committee of the National Congress has brought forth a great deal of dismay and rebuke from different countries. The general comment is that the Communist countries in general, China in particular, have been advertising fanciful targets with little reference to actual resources, and the latest admission by the competent body in China of some targets not having been reached has been dubbed as a breakdown. Some quarters have attributed this so called failure in China to the persistence in small-scale steel making in addition to big steel plants, discontent among the workers in Communes, and a famine of consumer goods in urban areas. Particularly in India, many quarters have cried down Chinese techniques and publicity in spite of several Indian Committees going on pilgrimage to China. It is commonsense that an admission of a comparative failure is really based on a platform of strength and confidence, as for example, such admissions in the United States with regard to the launching of rockets. Independent of propaganda stuff, which obains more or less in every country, some academic studies have been made recently with regard to Plan progress in China. One such is "the India Project" by Professor Wilfred Malenbaum at the Massachusetts Institute of Technology. In that Study, Professor Malenbaum has voluntarily observed that accurate data were more easily available in "closed" China than in "open" India. He has also regretted that statistical methods persued in India with regard to Plan resources, outlays etc, are more backward than in China. The elaborate care with which he and his research staff boiled down Indian and Chinese figures, leaves no doubt about the fact that the data in that Study are predominantly accurate. One Chinese yuan is equal to two Indian rupees, and the tables I and II, comparing the improvement in Gross National Product and Gross Investment in the two countries, prove beyond all doubt that, in 1950, China was well behind India, but that, in 1958, much in advance. The Gross National Product rose in India from Rs 10,100 crores to Rs 13,000 crores while, in China, the rise was from Rs 11.004 crores to Rs 22,500 crores. Gross Investment rose in India from Rs 940 crores to Rs 1,750 crores while in China the corresponding figures were Rs 1,062 crores and Rs 5,170 crores (1952 prices in all cases). The Director of this piece of research observed that this comparative success of China was not due to the democratic and the totalitarian methods of approach in the two countries, but rather "Government in nations aspiring to economic expansion needs to define the tasks of growth realistically; more, government must implement them faithfully":

Tables III and IV show the progress in India and in China with regard to industrial and agricultural production. Here again, it is the same story: China satrted much behind India, but, by 1958, it was much ahead of India. The Index of industrial production during the 9 years rose in India from 85 to 137 (1952 base) while the rise in China was from 37 to 288 (1952 base). Foodgrains production showed in India a pedestrian rise, from 53.5 million tons to 72.5 million tons in the course of 9 years, while the performance in China was from 122.72 million tons to 225 million tons during the same period. The latter figure of 225 million tons for 1958 is a hard fact, and has nothing to do with the recent deliberations in China on Plan targets:

TABLE I

Gross National Product in India and in China during 1950—58.

Year	India: GNP in crores of rupees at 1952 prices	India: Ratio with 1952 as base	China: GNP in crores of rupees at 1952 prices	China: Ratio with 1952 as base
1950	10,100	93.7	11,004	81.2
1951	10.370	95.9	12,570	92.6
1952	10,810	100.0	13,572	100.0
1953	11,440	105.8	15,412	113.6
1954	11,780	109.0	16,384	120.7
1955	12,010	111.1	17,082	125.9
1956	12,610	116.7	19,442	143.2
1957	12,680	117.3	20,484	150.9
1958	13,000	120.3	22.500	173.2

TABLE II

Gross Investment in India and in China during 1950—58.

Year	India: Gross investment in crores of rupees at 1952 prices	India: Ratio with 1952 as base	India: Percentage of gross national product	China: Gross investment in crores of rupees at 1952 prices	China: Ratio with 1952 as base	China: Percentage of gross national product
1950 ...	940	88.7	9.3	1,062	52.6	9.7

EDITORIAL NOTES

World Bank Loans

While drawing attention to the adverse economic conditions which prevailed during the greater part of 1958 and which caused serious foreign exchange difficulties to primary producing countries, the World Bank report for year ended June 30, 1959 has also stressed the fact that the inflow of capital, both public and private, from the developed areas has been well maintained and this has helped "the less developed countries to avoid substantial curtailment of investment and to minimize reductions in their rates of economic growth." To this inflow of capital of round about five billion dollars, the World Bank and its associated institutions have made a substantial contribution. World Bank's lending during the year consisted of 30 loans totalling $703 million. The largest amount—$135 million was loaned in India. Japan comes second with five loans totalling $104 million. India also figures as the largest borrower in the list of loans made since the Bank started operations. Out of a total of $3,397 million of effective loans held by the Bank as on June 30, 1959, loans made in India amount to $444 million.

The regional distribution of the loans also indicates the growing interest taken by the World Bank in the economic growth of underdeveloped areas. The grand total of World Bank loans amounting to $4,426 million is distributed as follows: Asia—$1,297 million; Africa—$589 million; Australia—$318 million; Western Hemisphere —$934 million; Europe—$1,288 million. Electric Power development accounts for the largest share, $1,398 of the total. Next in order comes Transportation with $1,297 million. Lending for Industry and Mining account for $689 million, Agriculture for $316 million and Communications for $24 million. The same pattern has been maintained in the lending during the year under report, with loans for electric development amounting to $294 million, closely followed by transportation loans for a total of $257 million.

One result of the increased flow of loan capital to under-developed countries, to which the Bank's report has drawn attention, is the growing burden of debt service payments. It is estimated that the foreign public debt of the less developed countries among the Bank's membership has increased by more than $5 billion between 1955 and the end of 1958, while annual debt service obligations of these countries have risen by about 15 per cent over the same period. With export earnings reduced as a result of recession in America and the slowing down of rate of industrial growth in Europe, foreign debt service payments absorb an increasing share of export earnings of most of the less developed countries. The ratio has increased from 4.7 per cent in 1955 to 5.7 per cent in 1958. This should serve to drive home the point that the capacity of these countries to maintain the pace of economic growth, even on borrowed capital, depends on the strengthening of the world demand for their primary produce.

*

International Finance Corporation

The Third Annual Report of the International Finance Corporation is of particular interest to India, for, the first two loans made in India by the Corporation were made during the year under review. It may be recalled that it was only in September last year that Parliament passed legislation laying down the status, immunities and privileges of the IFC in accordance with agreements already entered into by India along with the other members of the Corporation. Among the privileges guaranteed to the Corporation, the most important are: (1) The archives of the Corporation in India will be inviolable; (2) Property and assets of the Corporation, wherever located and by whomsoever held, will be immune from search, acquisition, confiscation, expropriation or any other form of seizure by executive or legislative action. Following the enactment of the legislation, the first IFC loan to a concern in India, the Republic Forge Company Ltd, for $1,500,000 was announced in January 1959. This was followed by the announcement in April of the loan of $850,000 for Kirloskar Oil Engines Ltd.

The IFC, though an affiliate of the World Bank and set up by member Governments, functions on entirely different lines. It has been formed with the specific objective of dealing with private enterprise directly. It does not invest in enterprises which are Government-owned and operated or in enterprises in which the Government participate in management to any significant extent. It does not, at the same time, seek any Government guarantee for its investments. The IFC functions as an investing rather than lending institution, though, by its charter, it cannot invest in Capital stocks or shares. Its investments combine the elements of fixed interest loans and venture capital. Usually, they are long-term loans carrying a fixed rate of interest, with additional payments contingent on profits and an option on shares. The option rights are sold to private investors, as these cannot be exercised by the IFC. It is claimed that these terms represent "for the enterprise a reasonable minimum fixed charge, with additional benefits to the investor only in the event that stockholders receive even more attractive returns."

The rate of interest charged ranges between six and seven per cent. Together with the share in profits and the equity options, the terms have been criticised as too onerous. In answer, the report of the IFC points out that investment capital will not be attracted into developing areas except on terms considerably more attractive than are available in the capital exporting countries. The terms have been determined by what is considered necessary to interest private investors in development opportunities in these areas. While the pattern differs from that of most public institutions which provide finance for private business, the benefits of low interest loans given by these institutions are available only to relatively small number of sound enterprises.

Managing Agency Commission

It should be really surprising if any one with genuine claims to speak on behalf of the fraternity of managing agents was caught napping by the latest announcement regarding Government's decision to regulate payment of Managing Agency Commission on a sliding scale. The trend of official policy was already sufficiently clear by the time the new Companies Act came into force on April 1, 1956. The discussions on the Bill left no room for doubt about the official attitude to Managing Agencies.

While the Government were not for abolishing at one stroke this peculiar institution which had grown up on Inidan soil, they hoped that it would wither away in course of time. Section 324 of the Companies Act empowers Government to notify that companies engaged in specified classes of industry or business shall not have managing agents. The appointment of managing agents and their terms and conditions are also subject to approval of the Central Government.

The recommendation to fix managing agency remuneration on a sliding scale has been made by the Company Law Advisory Commission on which business interests are adequately represented. The more far-sighted among the Agency Houses have already adjusted their rates of remuneration to the prevailing wind.

Will the proposed restriction on managing agency remuneration accelerate the trend for the termination of managing agency agreements? It is understood that a number of applications for renewal of Managing agencies are now before the Government.. The powers of control vested in the Company Law Administration should be exercised with an eye to the requirements of industrial growth. There is a strong case for refraining from smoking out the managing agents from fields where their continued services will be manifestly in the national interest.

NOTICE

Owing to Puja Holidays, there will be no issue of Indian Finance for the week ending October 10, 1959. The next issue will be published on 17th October, 1959.

FOREIGN NOTES

Recovery in the United States

Gross National Product, national income and personal income estimates are made very efficiently and quickly in the USA, but, even there, figures are revised in the light of more exhaustive data. According to the **Federal Reserve Bulletin**, April, 1959, the national income was $364.0 billion in 1957 and it went down to $360.5 billion in 1958. But, according to the July number of the same Journal, the national income was put at $366.5 billion in 1957 and at $366.2 billion for 1958. The corresponding figures with regard to the Gross National Product were $442.5 billion (1957) and $441.7 billion. These revised figures reveal that the 1958 recession was relative and not absolute: the national income was more or less stationary instead of rising considerably as usual.

Figures available for 1959 prove that the 1958 recession has given way to the usual pace of progress year after year. In June 1959, the Personal income (annual rate) was $382.9 billion while the corresponding figure was $351.8 billion (annual rate) in June 1958, personal income working out to $354.4 billion for the whole year. Personal income figures for the first six months of 1959 (annual rate) were $376.5 billion, and $353.5 billion (annual rate) for the corresponding period in 1958, indicating a rise of 6 per cent. The improvement is due to additional salaries and wages ($20 billion), interest ($1.5 billion) and transfer payments ($1.0 billion). So far as personal saving is concerned, consumer expenditure appears to have more influence than the size of personal income: persinal saving was $23.1 billion in 1957, $23.5 billion in 1958 and $23.5 billion (annual rate) during the first quarter of 1959.

Here in India, the latest figures available are for 1957-58, indicating a small decline in national income from Rs 11,000 crores to Rs 10,830 crores, but what the trends are from April 1958 onwards, no one knows, not even the Central Statistical Organisation of the Cabinet Secretariat. But the Index of Industrial Production (base year 1951) was 137.3 in 1957, 155.0 in December 1958 and 150.0 in March 1959. Another difficulty in India is that different indicators have different base years, and adjustments in view of prices are more difficult. Indian national income figures in general are adjusted on base year 1948-49.

US Monetary Policy

A very interesting bill was before the US Congress. At present, there is a ceiling of 4.25 per cent as interest that may be paid on long-term Government borrowings with 5 years or longer maturity. The Administration wanted this ceiling to be removed so that more long-term debt could function as an anti-inflationary measure; but Congress said, "No". The Federal Reserve System controls inflationary trends by (1) open market operations, and (2) lowering or raising reserve ratio requirements of member banks. As a matter of fact, the Federal Reserve Banks are not resorting to much of open market operations; and, with regard to reserve ratio requirements, the tendency has been to reduce the ratio except in 1951; the ratio was reduced continually in 1953, twice in 1954, and four times in 1958. The new proposal was that, with the removal of the ceilings on the long interest rate, the Government should finance themselves primarily through balancing the budget, and additionally by selling securities directly to the Federal Reserve Banks. An amending proposal was that, as the commercial banks have been making good profits, $1,000 million per annum should be taken away by the Government as tax, for the next ten years, and this would prove an effective anti-inflationary measure. A Survey conducted by New York University shows that, as between 1947 and 1956, insured commercial banks in the US made an average profit of 8.12 per cent net while corresponding figures were: 14.74 per cent in the case of manufacturing industries, 8.5 per cent in the case of public utilities in general, 11.5 per cent in gas, 10.2 per cent in electric and 7.2 per cent in telephone companies. Thus, the alternative instruments under consideration to fight inflation in the United States are (1) balancing the Federal Budget, (2) the Federal Reserve Banks to purchase Government short-term securities directly, or (3) siphoning off $1,000 million per annum for 10 years out of commercial banks' net profits. In some quarters, the proposal to axe commercial banks' profits further by $1,000 million per annum is considered as blackmail against the Administration's recommendation for removing the interest rate ceiling.

*

Additional Bodyguard to King Dollar?

During 1958, the United States had a deficit of $3.4 billion in its balance of payments, and during 1959 the deficit has been running at an annual rate of $4 billion. The US gold reserve has gone down to $19.5 billion; $2.3 billion worth of gold left the country against the dollar holding by other countries during 1958. According to law, the statutory minimum to be held in gold against the currency (cash deposits in member banks plus paper currency in circulation) is 25 per cent, and the present ratio is about 40 per cent. The US Treasury is afraid that, if the deficits in the balance of payments go on unchecked, gold reserves may go down to 25 per cent or even less. Anticipating such a contingency, the Treasury has now proposed that all grants, aids, and loans by the US Government to other countries should carry with them an obligation to use the funds in purchasing US goods. The Export-Import Bank recently raised the margin of advances to exporters from 75 to 85 per cent. Till now, loans by the Development Loan Fund could be utilised by the borrowers for purchases in any market; and, under Public Law 480, purchasers of US commodities could pay in their own local currencies; but if the Treasury proposal should mature, borrowing countries would be hard hit because American prices are higher, and for this reason the net burden of debt would be heavier.

As against this, the Commonwealth Economic Conference in London has approved of launching the International Development Association with $1,000 million share capital, out of which the US Government have agreed to find one-third. Two peculiar features of this Association would be (1) interest rates to be lower than charged by the World Bank, and (2) repayment to be permitted in local currency. But the IDA will not be a domestic concern of the US, and India among a few other countries would be seriously handicapped in their estimates of plan resources and outlays. This is a point on which the Indian Finance Minister should make sure while he is in Washington.

*

US Budget Surplus?

One of the most dramatic turnabouts in the budgetary history of the United States is in prospect for the current, 1960, fiscal year that began July 1. After weeks of close and careful study, the budget bureau, in its annual mid-year review, confirms its earlier forecast of a small but significant surplus in the US Government's accounts.

The projected surplus is a precarious one, to be sure. It comes to a little less than $100 million out of a total budget of $79,000 million. But its significance lies in the fact that this is a vast improvement over the huge deficit of $12,500 million—the largest in US peacetime history—chalked up during the 1959 fiscal year that ended June 30.

This improvement is the result of the vigorous—indeed, stronger-than-expected—upsurge in business acticity. With the anti-recessionary measures adopted last year no longer needed, federal spending will be dropping from fiscal year 1959's $80,700 million to an estimated $78,900 million.

An even more sensational story, however, concerns the revenue side of the ledger. Estimated receipts for the 1960 fiscal year of $79,000 million are nearly $11,000 higher than were actual collections in the last fiscal year. Soaring corporate earnings and personal incomes have greatly enlarged the Government's tax take, even though basic tax rates have remained the same.

As a matter of fact, this revenue estimate is $1,900 million higher than the original projection made last January, when the 1960 budget was first drawn up. This, too, reflects the vigour of the economic upswing which is expected to continue into 1960, though perhaps a somewhat slower rate than the spectacular pace maintained so far.

But the economic upsurge has had an unfavourable, as well as a favourable, impact on the federal budget. Expenditures, like revenues, also are expected to rise some $1,900 million over the January estimate. The main reason is an anticipated $1,000 million boost in the cost of carrying the national debt, largely the results of rising interest rates generated by the competition for available funds in the thriving American economy.

By and large, the Government have made a valiant and generally successful effort to hold down expenditures in fields over which they have more direct control. But this policy has been selective, and has not been applied to all spending sources equally. Thus, there will be some increases in outlays over the January estimates, mostly in areas affecting the National Health and Welare—Medical Research, Educationaf Assistance to the States, Hospital Construction, Farm Housing Loans,, Rural Electrification and Soil Conservation, among others.

It should be emphasized, of course, that the figures presented in this mid-year budget review are still estimates, albeit they are based on reliable and informed projections of trends through next June. Budget Director Maurice Stans is among the first to concede that a surplus as narrow as $100 million could be wiped out by some unforeseen contingencies.

In fact, Mr Stans points out that the revenue assumptions behind the projected budget surplus imply that the nation-wide Steel shutdown, which began more than two months ago, will be over within a few weeks. Continuation of the stoppage beyond the time could lead to an impairment of the earnings potentials of affected Companies and individuals, and a consequent reduction in the Government's estimated tax receipts.

On the other hand, one must also take into account the distinct possibility that settlement of the steel shutdown, when it comes, could be followed by a renewed business upsurge so sharp as to more than make up for any shutdown-induced losses.

In any case, the current trend underscores one very important point: The US budget is a flexible fiscal instrument. It is abundantly clear that the budget for fiscal 1960 will not be an inflationary force. No longer will there be a huge deficit pumping thousands of millions of dollars into the business stream, as was the case in fiscal 1959, when the budget was a spur to the strong economic recovery from the brief 1957-58 business dip.

This means that the United States in effect is using the two most powerful of its traditional tools—a balanced budget and a restrictive monetary policy—to help keep economic growth on a sound and sustainable course.

WORLD OF FINANCE

Central Loan, Second Tranche?

With September having drawn to its close, some doubts might be entertained about whether or no the Central Government intend this year to put through a second tranche of their borrowing programme. For, in 1958, when the Government created Rs 60 crores of securities in the 3½ per cent 1967 and the 3½ per cent 1968, this programme had been got out of the way before the end of August. Therefore, there is some element of speculation that, with the 1959 slack season having only one more month's lease of life, the Central Government may choose not to come out on the market a second time as they have been doing in the last two years. Such an impression would, however, be wrong.

In the first place, when a special issue of Rs 30 crores was created in 1957, the month in which the relevant decision was taken was November.. Thus, October should by no means be construed to be too late. In the second place, if, in 1958, the second tranche had been completed by August, it was because the first tranche of the Central Government borrowing programme in that year was announced unusually early in May itself. Hence it was that the second tranche, too, could be announced rather earlier than might have been expected. In the third place, it has been a noteworthy feature of the last two years that busy seasons have tended to begin rather later than the customary beginning of November. In fact, in 1958, the money market did not begin to feel the pressure until well into December. Thus, though, for official purposes, the currency of the busy season may be said to be from the beginning of November until the end of April, for purposes of Government borrowings it would not be wrong to assume that the slack season continues into the month of November.

These three would be reasons enough to make out a convincing argument why October need not be deemed too late a month for the second tranche of Central Government borrowings. But there are two more reasons why such a second tranche may be said to be not only desirable but even necessary. The first of these is that, as shown by the behaviour of the giltedged market and as indicated by the weekly purchases of securities by Scheduled Banks, there is still left some considerable capacity on the part of the market to absorb new giltedged. The second of the compelling reasons, we believe, is that, in the 1959-60 borrowing programme, the Central Government have yet to come out with a loan directed specifically at the Scheduled Banks. We have argued often enough how, with Scheduled Banks having converted the bulk of their holdings in the 3 per cent 1959-61 loan into 3½ per cent 1969 and with Scheduled Banks furthermore subscribing heavily to the State Governments 1971 issues, giltedged investments of Scheduled Banks maturing after five years form an unduly large proportion of total investments. It would be desirable for the Government to ensure that Scheduled Bank holdings of short-dated do not become too small a proportion of their total investments. Therefore, we would suggest that the Central Government should, if at all possible, bring out a five-year loan for the Scheduled Banks. We realise that this suggestion of ours represents a reversal of our earlier view that, maturities in the Third Plan being heavy enough, no short-term or five-year loan should be issued. Nevertheless, we believe it desirable in the interests of the banking system that a five-year loan be announced; and we would suggest as an alternative, if a five-year loan is found impracticable, that a 3½ per cent 1966 be issued.

In brief, the second tranche of the Central Government loan intended mainly for Scheduled Banks should be announced in October. The amount involved should not be less than Rs 50 crores. The security should be either a 3½ per cent 1964 at a small discount or 3½ per cent 1966 at par.

+

State Bank Buys Rs 20 crores' Gilts

THE Reserve Bank, as disclosed by its return for the week ended September 25, has figured as a hefty seller of securities through the tap. Investments in the Banking Department are shown to be nearly Rs 25 crores lower, though it is true that the bulk of this, or Rs 20 crores, appears to be traceable to the State Bank. Nevertheless, that the other Scheduled Banks have been steadily adding to their giltedged portfolio, notwithstanding their considerable absorption of the Central and State Governments new loans this year, indicates clearly that investible funds of the banking system are embarrassingly large. (The implication of this continued interest on the part of the Scheduled Banks in giltedged is the subject of the leading article in this section). The present position of Scheduled Banks, in which gathering freed resources are compelling them to buy giltedged through the Reserve Bank tap week by week, is derived not a little from the considerably slack conditions of the current slack season. In the latest week, Active Note circulation has declined by Rs 15.81 crores to Rs 1642.00 crores; and, at this level, the total contraction since the peak touched on May 8 exceeds Rs 132 crores. Moreover, in the latest week, Rupee Coin has returned from circulation for Rs 0.59 crores, the total inflow since May 8 being of the order of Rs 7½ crores. In the result, in the Issue Department, the Reserve Bank's Cash in the till has increased by Rs 16.52 crores to Rs 37.37 crores.

In the Banking Department, as already noted, Investments are lower by Rs 24.39 crores at Rs 263.16 crores. That this is not due to reverse ad hocs instituted by the Central Government is suggested by the hefty purchase of giltedged by the State Bank in the relevant week. In purchasing these securities, Scheduled Banks have drawn down their Reserve Balances by Rs 9.07 crores to Rs 76.11 crores; however, since the State Bank shows its cash in hand and with the Reserve Bank as having declined by Rs 13½ crores, it follows that the other Scheduled Banks have added to their Reserve Balances by roughly Rs 4½ crores. (The small size of the decline in the State Bank's cash is due to the fact that there has also occurred a fall in Other Assets, to make up the Rs 20 crores which were utilised in the purchase of securities from the Reserve Bank). It would appear that, during the week ended September 18, Scheduled Banks were put to some strain by the demand occasioned by advance payment of tax and, hence, the banking system had increased its borrowings from the Reserve Bank by Rs 5.70 crores. In the latest week, the Other Loans and Advances of the Reserve Bank have been marked down by Rs 2.81 crores to Rs 78.04 crores, but the actual size of reduction of indebtedness by member banks might be found larger, since cooperative banks, etc., as has been their custom, might have had increased resort to central banking credit. Indeed, borrowings of Scheduled Banks against usance bills, which had been placed at Rs 1.89 crores, are shown nominally at Rs 1 lakh in the latest Reserve Bank return.

The Central Government's Deposits have been marked down by Rs 4.64 crores at Rs 59.70 crores; with no deficit financing having been instituted, this would clearly relate to a drawing upon their balances by the Central Government for the purchase of foreign securities from the Reserve Bank in order to pay for the gold which is to be turned over to the International Monetary Fund in consequence of India's enlarged quota with that insttitution. Indeed, the decline of Rs 2.13 crores to Rs 17.90 crores in Balances Held Abroad suggests that another instalment of gold purchase has been instituted in the latest week. Since the recent experience in foreign trade has been favourable to this country, it is possible to suggest that the actual amount involved in the purchase of gold in the current week may be in the environs of Rs 5 crores. This will at once confirm that the fall in the Centre's Balances is owing to utilisation of Rs 5 crores for gold purchase; and the inference is also clear that the export surplus, after allowing for the gold purchase, must have been in the region of Rs 3 crores.

There has been a small decline of Rs 2.31 crores to Rs 17.66 crores in the Balances of the State Governments; and their indebtedness to the Reserve Bank is also higher by Rs 0.32 crores at Rs 17.05 crores. It is interesting to find that, apparently, September is not a month in which inter-governmental transactions have taken place.

+

According to the State Bank return for September 25, there has been a hefty addition of Rs 20 crores to Rs 385.26 crores in its giltedged portfolio. But there are other interesting features as well, which we might dwell upon. In the first place, there has been a fall of Rs 10.62 crores to Rs 567.39 crores in Deposits. Could this conceivably relate to the making over of counterpart funds to the Central Government? And, if such is the case, why was it not reflected in the balances of the Central Government in the Reserve Bank returns? Furthermore, how is it that there was not a corresponding contra decline in investments? Finally, if this hypothesis is not correct, why should there have been such a sharp fall in the State Bank's Deposits—the sharpest such fall to have occurred since the week ended May 8? There is, unfortunately, no method of knowing what the facts might be. All that we can do is, therefore, to pose the question. In the second place, Other Assets have been marked down by Rs 12.37 crores and cash in hand by Rs 13.48 crores in order that the giltedged portfolio might be increased by Rs 20 crores. Clearly, the fresh investments of the State Bank would be related to—or could be related to—a fresh tranche being received of counterpart funds under Public Law 480. It would be useful if the State Bank would indicate periodically what the size of its special Deposits is. Finally, the slack season is seen to continue with undiminished vigour, with the State Bank's Advances declining by Rs 3.95 crores to Rs 157.04 crores.

The statement relating to Treasury Bills outstandings as on September 18, suggests that deficit financing instituted by the Central Government was in an amount of Rs 20 crores in that week. It may be recalled that, last week, we had put down possible deficit financing at only Rs 10 crores; but the latest return of the Scheduled Banks, for the week ended September 18, does not quite clear up the picture. After allowing for Rs 3 crores worth of securities purchased by other Scheduled Banks, we had put down deficit financing during that week at Rs 10 crores. But, if deficit financing was, in fact, for Rs 20 crores, the Investment portfolio of Scheduled Banks should have risen roughly by Rs 13 crores. Hence, one possibility is that the figure of investments in the return for September 18, is a typographical error, which shows investments to be Rs 10 crores lower than they actually were; and the second possibility is that the balance of, say, Rs 10 crores' securities was sold to institutional investors other than banks. Unless a correction is issued in regard to Scheduled Bank figures, we must presume that, perhaps, the LIC, or other entities, purchased securities from the Reserve Bank in the amount of Rs 10 crores during the week ended September 18.

+

The return of Scheduled Banks for September 18, shows that Deposits, in rising by Rs 6.86 crores, have crossed the Rs 1,850 crore mark, to be placed at Rs 1,854.26 crores. Persumably in connection with the demand for accommodation consequent on advance payment of income-tax, the total of advances of Scheduled Banks has contra-seasonelly risen by Rs 1.88 crores to Rs 928.55 crores. With the Investment portfolio showing a rise of a little under Rs 3 crores to Rs 759.85 crores, Scheduled Banks were compelled to increase their borrowings from the Reserve Bank by Rs 5.70 crores to Rs 7.49 crores. In the result, Cash Balances are higher by Rs 6.19 crores at Rs 174.04 crores.

-

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, the 29th September, 1959. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.390 were accepted in full. Total amount accepted was 2,00,00,000, the average rate of accepted tenders being Rs 2.440 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on Saturday, the 3rd October, 1959. Successful tenderers should make payment at Calcutta on Wednesday, the 7th October, 1959, at New Delhi, Madras and Kanpur on Thursday, the 8th October, 1959, and at other centres on Friday, the 9th October 1959. Other conditions are as usual.

Trade Unions and Communism

By Paul Einzig

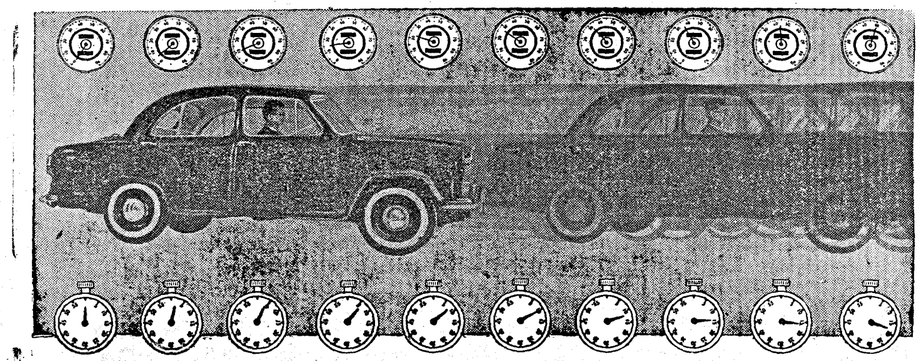
MR KHRUSHCHEV had recently a rough reception at the hand of American Trade Union leaders. The blazing row between them received much publicity in Britain where the "moderate" wing of the Labour Party had a similar clash with Mr Khrushchev on the occasion of his London visit in 1956. There is, of course, no love lost between moderate labour leaders and Communists, who regard the former as abject servants of capitalism. Nevertheless, the Soviet Government owe a great debt of gratitude to trade unionists in the United States, Britain and other countries for the service they have rendered and are still rendering to the Communist cause by holding up the expansion of production in their respective countries. That Mr Khrushchev was rude to the American Trade Union leaders, instead of conferring on them the Order of the Hero of the Soviet Union or some such decoration, is just another proof of Communist ingratitude.

Leaders of Trade Unions in the United States and Britain have done their utmost to assist the Soviet Union toward winning the economic contest against the free world that is now in progress. The British and American trade Unions have been primarily responsible for the setback in industrial expansion in the West during the last two years. While Soviet Russia and other Communist countries are forging ahead unhampered by trade union obstructionism production was lagging behind in the West. Trade Unions in the free countries are guilty of holding up industrial expansion and increase in productivity for the following reasons:

In many industries, restrictive practices prevent the increase of output to full capacity.

Trade Unions resist the adoption of labour-saving equipment for fear of redundancy.

They insist on terms of employment and dismissal which discourage automation by making its application too costly and reducing benefits derived from it.



When automation is adopted in spite of their resistance, they claim that the benefit from it should be distributed in high wages.

Their wage demands generate inflation and force the authorities to resort to credit restrictions, causing thereby a setback in expansion.

Trade unions exist in the Soviet Union, but they are not in a position to hamper production in any of the above ways. The Soviet Union is, therefore, at a considerable advantage in the economic race with the free countries. Any Soviet trade union leader who attempted to interfere with the expansion of production would find himself in some arctic labour camp, if not in some even worse place.

Trade unionists in free countries fail to realise that they are bound to benefit by an expansion of output. Indeed, the only way in which they can hope to achieve a higher living standard is through an expansion of production. No economic or social obstacles should be placed in the way of the progress of automation. There is none in Soviet Russia. There, the only limit to progress of automation is set by technological limitations.

The short-sighted trade unionists in the free countries, pursuing unenlightened self-interest, hamper the progress of automation, either by directly opposing it, or by insisting on terms which tend to make its adoption unprofitable, or by creating conditions in which restrictive monetary policies must slow down its adoption. Trade Unions prevent the consumer from deriving any benefit from automation in the form of lower prices, because they want to retain the

This is GOOD going:

entire benefit for themselves in the form of high wages. Being consumers themselves, they would stand to benefit through a decline in prices as an effect of increased productivity. But others besides themselves, too, would benefit by it, and that would never do. Trade unionists want to keep the entire benefit for themselves. In their short-sightedness, they go even so far that, instead of sharing the benefit with other classes, they prefer to forego any benefits by preventing automation.

The policies of American Trade Union leaders who were having a row with Mr Khrushchev help him and his Government in his effort to catch up and surpass progress in the West. Trade Unions both in Britain and in the United States are engaged in action that is bound to handicap production and will tend to narrow down the gap between production in Communist countries and in the West. In Britain, the Amalgamated Engineering and Shipbuilding Unions have just put in a demand for a big increase in wages and a reduction of the working week. British shipyards are already gravely handicapped by foreign competition, and if even a fraction of this new claim is met, many of them will close down. The claim will be resisted, there is bound to be a major strike in a few months, and production will fall in Britain. In the United States, the steel strike threatens to cause an all-round reduction of output. Trade Unionist greed is obviously helping the Soviet Union in the race for economic supremacy. In one respect, however, there seems to be little difference between Communist and Capitalist industrial countries. The working week is being reduced in Soviet Russia, and there are demands for its reduction in the West. That being so, is it logical to shed Hollywood tears about poverty in under-developed countries if workers in the East and in the West are to relax before the most elementary requirements in these causes are met?

Raw Jute Supply

IF, today, our jute mill industry is speaking in terms of profitable working, it is not a little due to the success of our efforts to attain raw jute self-sufficiency. Partition had placed our mill industry in the unenviable position of having to depend on Pakistan for our raw material requirements; but, thanks to the active interest evinced by Government in the promotion of jute production, our dependence on Pakistan has come to be progressively reduced and last year the eagerly awaited goal of self-sufficiency was attained. In a manner of speaking, the tables are turned now: Pakistan is worried about the sharp decline in the Indian offtake of jute.

Mr Bimal Singh Kothari, President of the Jute Brokers' Association, has referred to the alround benefits of the improved availability of raw jute. During 1958-59, production of raw jute reached a new record level of 51.78 lakh bales, registering an increase of 27.8 per cent over the production of the previous year. Production of mesta was placed at 16 lakh bales. There had also been an increase in the area under jute during the year from 17.42 lakh acres to 18.27 lakh acres. Yield also recorded some improvement from 2.33 bales per acre in the previous year to 2.8 bales in 1958-59. Mr Kothari has pointed out that the sizable increase in output is to be attributed partly to the intensive efforts made by Government under various jute development schemes initiated since 1948-49. With the steady increase in domestic production, imports from Pakistan began to dwindle. Against a total import of 6.72 lakh bales in 1957, our jute imports from Pakistan declined to 4.92 lakh bales in 1958. It would appear that imports would show a further sharp decline during the current year. For, during the first three months of this year, imports have amounted to 24,000 bales as against 1.02 lakh bales in the corresponding period of 1958. Mr Kothari thinks that the crop during the current season will be larger than in 1958-59.

It would be wrong to think that our problems have all been solved with the attainment of self-sufficiency in raw jute. From self-sufficiency to surplus is a natural step. Although self-sufficiency in the sense of producing a quantity adequate to meet the entire requirements of the mill industry in full working is yet to be attained, we have already begun exporting raw jute, removing the 10-year old ban on raw jute exports. The hard-won position in raw jute production may be seriously jeopardised if the important problem of ensuring an equitable price for the jute grower is not tackled satisfactorily. There is next the question of the quality and yield of raw jute that we produce. It is no use increasing raw jute output no matter what types go to make up the total. For, both from the point of domestic consumption and export, if is essential to produce good quality jute. Concerted attention needs to be paid to this aspect because, as Mr Kothari has pointed out, there is considerable room for improving the quality of the jute grown in India. A kindred problem is the need for increasing the yield per acre. While it is gratifying to note that steady improvement is being recorded in this regard, there is still large scope for improvement as in the case of quality. In nearby Pakistan, yield is considerably higher than in India. Moreover, a higher yield will go a long way in solving the problem of ensuring an equitable price for the cultivator.

* * *

The jute goods market, especially in heavy goods, ruled steadier during the past week than in the previous week. The welcome change was largely due to reports of fresh foreign interest. Earlier in the week, it was reported that business to the tune of 12,000 bales had been concluded with Egypt in heavy goods. In the following days, there were further reports of business, first from the Middle East and later from the Government of India. Hessian continued to be subdued but steady. Although reports of fresh business continued to be conspicuous by their absence, sentiment in this section is being sustained by hopes of some enquiries from America materialising in coming weeks.

Conditions in the heavy goods section were steady from the commencement of the week. Prices on Saturday rose sharply in sympathy with the futures section. B Twills September closed at Rs 100.30. Hessian, however, continued unchanged and was finally placed at Rs 40.00. Following reports of enquiries from Egypt, sacking prices looked up further on Monday to be placed by close at Rs 101.75. Hessian also improved in sympathy to Rs 40.35. The speculative interest continued unabated in B Twills on Tuesday with the quotation closing at Rs 102. Hessian was listless and moved back to Rs 40.25. The steady trend continued on Wednesday with B Twills moving up further on higher advices from the futures section. Wednesday's closing rates were: B Twills September Rs 102.50 and Hessian 40″×10 oz. Rs 40.30.

The raw jute market ruled rather quiet in the absence of sustained mill interest. It would appear that the lack of keen buying on the part of mills has stemmed from the general belief in the Indian World of Jute that raw jute supply in the current season will be plentiful. It is said that the 1958-59 crop will be bigger than in the previous season. Assam Bottoms closed slightly easier on balance on Wednesday at Rs 22.

Arrivals of raw jute into Calcutta and mill stations during August this year show a decline both in respect of the previous month and the corresponding month of the last year. August 1959 arrivals totalled 310,850 and compared with the previous month's total of 3,340,050 and the total of the corresponding month of 1958 of 356,090. Last month's arrivals of Indian origin jute as compared with the previous month were lower while those of Pakistani origin were higher. In the corresponding month of last year arrivals of Indian jute totalled 325,650 bales and those of Pakistani 30,440 bales. Total imports during the first two months of the current jute year were also lower at 644,910 bales compared to 675,560 bales in the corresponding period of last year. Imports of Pakistani jute fell to 34,150 bales from 78,580 bales while those of Indian origin jute increased to 610,760 bales from 596,980.

IJMA DELEGATION TO USA & CANADA

A two-man delegation of the Indian Jute Mills Association is to visit the US and Canada this month. Mr Kenneth E. Tosh, Chairman of the IJMA and Mr D. P. Goenka, the Vice-Chairman are the members of the Delegation. In an announcement the IJMA have said that the main purpose of the visit is to continue the policy of maintaining close contact with jute goods importers and consumers in these countries, to study the present market position in the light of current economic trends, to examine the success of the promotional activities of the Association in North America and to consider plans for the future form and scope of these activities.

WORLD OF TEA

Tea Shortage in UK

A BRISK and generally well-distributed demand has been evident in London Tea auctions during the past few weeks and prices of all grades have been moving up after a gradual fali that developed early this summer. This is mainly due to the fact that the amount of good quality Indian tea coming on to the London market is much smaller than expected and dealers are bidding keenly for the available quantities. Although overall supplies of tea this year may not be significantly different from last year's, there is clearly a shortage developing in good quality teas of the kind that blenders need to give taste to retail packets.

The quantity offered last week was 49,000 packages of North Indian, South Indian and other miscellaneous teas. Buyers followed quality closely. Among the North Indian offerings, Assams were sometimes dearer, where quality showed no decline. Brown Dooars Fannings were usually 2d to 3d per pound higher. British African teas were also well sought after, especially the better liquoring invoices, which recorded gains of 1d to 2d per pound. Ceylon teas were a bright section as well with improved quality Uvas well competed for. The South Indian offerings were generally dearer. With the seasonal North Indian quality on the wane, the price spread between the top and bottom qualities is beginning to narrow.

Indian tea is now arriving in London in quality and, by the middle of this month, 138,620 chests had been sold this year against only 54,135 chests at the same time last year. The average price paid for all Indian teas in London this year works out to 5sh 7¾d a pound, which is almost 3d below the average for 1958. The gap between the prices realised by North Indian and South Indian teas has widened most markedly at the recent sales, to about 2sh 5d per lb.

The crop figures available indicate that the good quality producing areas in North India have grown more tea so far this year than in 1958; but this increase has been offset by lower figures for Ceylon and South India, where most of the cheaper Indian varieties are grown. Production in North India up to the end of August is higher by 8.3 million pounds at 302.5 million pounds as compared to the corresponding period of last year.

Owing to the adverse weather which has hit South Indian producers badly, the total output in South India, for this season, is lower than last year by about 12 million pounds up to July-end. Among other major producing countries, Ceylon and Indonesia report lower output. The figures for Pakistan, Nyasaland and British East Africa account for moderate increases.

Ceylon produced only 251.4 million pounds in January/July 1959 against 260 million pounds in the corresponding period of last year; Indonesia (excluding West Sumatra) 47.1 million pounds in January/June against 50 million pounds; Pakistan 30.7 million pounds in April/August against 28.9 million pounds; Nyasaland 18.4 million in January/July against 15.8 million and British East Arica 26.1 million against 23.1 million pounds.

Meanwhile, in the Export Sale held in Calcutta this week, offerings amounted to 64,286 packages. There was a strong and general demand for all teas on offer. Plain and medium Brokens were 2 nP to 6 nP dearer, Fannings being fully firm to dearer. The brighter liquoring orthodox Assam BOPs and OFs were sold readily, OFs being occasionally dearer. The plainer sorts frequently showed an easier tendency. Good liquoring CTC teas were well supported, while the best were often dearer. The more ordinary medium sorts were irregular and sometimes easier; but the poorest types were sold well at full rates. Legg-cut teas were somewhat irregular, but generally showed a dearer tendency.

Medium Orange Pekoes were irregular and sometimes easier; but the lower-priced ones and Pekoes were strong and often dearer, especially the poorest types. There was a better enquiry for Darjeelings. Tippy teas were, however, again easier. Following rates were quoted:—

	Rs.	Rs.
Clean Black Pekoe ...	1·98	to 2.02
Plain BP	1.88	to 1.92
Plain Fannings ...	2.06	to 2.16
Medium BP ...	1.92	to 2.04
Medium Fannings ...	2.12	to 2.24
Best CTC Assam BP ...	2.30	to 2.75
Best CTC Assam Fannings ...	2.70	to 3.15

In the Cochin market, offerings were 1,030,000 pounds. There was a further improvement in quality. There was a strong general demand and prices were dearer for everything, particularly for all Fannings grades. Plain liquoring and low medium descriptions met with good enquiry and were sold at 5 nP to 10 nP per pound above last rates. Medium and better liquoring teas were in keen demand and dearer following an improvement in quality. Whole Leaf grades continued to be strong, particularly Orange Pekoes which were considerably dearer. CTC grades were firm around last week's rates. Following rates were quoted:—

	Rs.	Rs.
Low Medium ...	1.75	to 1.80
Medium	1.95	to 2.20
Good Medium ...	2.25	to 2.50
Quality	2.55	to 4·10

for the future

Under the furrowed brow, his aging eyes see
his child grow to manhood. He gives his all: care
and protection, knowledge culled from experience.
And prepares him to meet the future.

Soon the youth will learn from life.
Soon will come the struggle to achieve.
Soon he will be part of the striving . . .

The striving and effort for a better world.
A world that offers a little more—
a little less of the care, a little more of the joy.

Today, as in the past, our products help to make homes cleaner, healthier, happier. But today we are also working for **Tomorrow,** when the evergrowing urge for better living will demand still greater efforts. And we shall be ready with wider service, new ideas, new products . . .

Today and Tomorrow . . Hindustan Lever serves the home.

WORLD OF BOOKS

Underdevelopment

The Economics of Underdevelopment: Edited by A. E. Agarwala and S. P. Singh. Oxford University Press. Price Rs 17.50

The economics of underdevelopment is no longer an academic orphan. Within the last twenty years, significant theoretical work has been done and, with the accumulation of statistical and factual data gathered by the special agencies of the United Nations, the study of economic underdevelopment has emerged as a major academic discipline. Even before the second war was over, the theoretical preoccupation with the problems of development of the less fortunate nations (economically speaking) had begun. For instance, as early as 1943, P.N. Rosenstein-Rodan wrote an essay (included in this volume) on the problems of industrialisation of Eastern and Southern Eastern Europe, in which he applied the principles and tools of analysis that have since become familiar. (The essay, by the way, reads strangely, in the light of subsequent political history of at least part of region with which it concerned itself). The late forties and the fifties have seen an academic enthusiasm for the subject commensurate with practical zeal of human men, grappling with problems of arrested economic growth. The names of Nurkse, Myrdal, Lewis and a host of others occur readily.

In bringing together the scattered (and often fugitive) pieces of writings on the subject, the editors of this volume and the Oxford University Press have rendered an invaluable service. Here is, in a manageable compass, what might justly be described as a definite prolegomenon of the economics of underdevelopment, and the editors have gone far and wide for their material. The book includes a chapter from a book, two papers read at conferences and eighteen papers published in various learned journals. Its approach is not only academic, but largely theoretical. It is divided into six sections: the general approach, the historical context, the theoretical content, external economies and balanced growth, factor disequilibrium and models of development. Some are inevitably more technical (and jargon-ridden) than others, but all of them grapple manfully with elusive concepts and imperfect tools. But in their sum, they offer a most useful conspectus on the subject.

The book argues no particular thesis, but presents an interesting cross section of academic opinion on the subject. Though all the contributors are agreed that the economic underdevelopment in most parts of the world pose the most serious challenge to human ingenuity in this century, there are considerable differences in emphasis and approach. There is the near-Marxist approach of Paul Baran, who believes that the "keepers of the past cannot be the builders of the future" and that the political framework of their existence has to be "drastically revamped". On the other hand, there is a brilliant essay, "An interpretation of Economic Backwardness", by H. Myint, which, in a searching analysis of forty pages, undermines many of the fashionable concepts holding the field today. The rather oblique conclusion of Mr Myint's gentle exercise in debunking the line of thought worth pursuing "is the value of growth of individualism, and economic freedom". These will encourage "initiative, enterprise, thrift, industriousness and other qualities favourable to the dynamic expansion of the economy both horizontally, through international division of labour, and the extension of the market vertically through capital accumulation and technical innovation". (The Swatantra party will find considerable ammunition for their purposes in this essay.)

Likewise, there are significant differences in the approaches of those who advocate, like Nurske, "balanced growth" and those who want an international division of labour. Nurske places his case for balanced growth on the same footing as the case for "balanced diet" and says quite rightly that it does not constitute special pleading for autarky. The technique he advocates is the energetic use of external economies by a "more or less synchronised application of capital to a wide range of different industries." Viner, on the other hand, gives the advice (very unlikely to be followed by undeveloped countries) to stick to better agriculture and argues the rather unorthodox view that producers of primary commodities are not necessarily at a disadvantage in international trade. There are other interesting differences in general approach among the contributors. There is Colin Clark, exhilaratingly combative as usual, arguing that overpopulation is not India's problem, an assumption implicit in most of the other contributors.

As behoves academicians, there is much preoccupation with definitions and the interesting differences in definitions tell not only a great deal about the approaches of the different contributors but also illumine the problem from different angles. Mr Burton, in his essay, "Growth Models and Underdeveloped Economics", gives a fairly comprehensive list of criteria of a "representative" underdeveloped country. This list includes a low per capita income, and consequently low savings; significant disguised unemployment; a narrow range of output, mostly raw materials and agricultural product; low level of technology; entrepreneurial and managerial energy; and a tendency to trade with developed countries rather than with nearer though poorer, neighbours. Celso Furtado (one of the two economists belonging to underdeveloped countries represented in this volume, the other being V.K.R.V. Rao of India) defines underdevelopment negatively by saying that developed regions are those in which, "at a given moment, none of the factors of production are unemployed and it is possible to increase productivity only by introducing new techniques". Mr Myint, in the essay already referred to, makes some valid distinctions between the terms "underdeveloped" and "backward", from which flow a whole series of secondary sceptical inferences about the validity of considering the problem of development as a mere one of "allocative optimum of resources". Between the various contributors, almost the entire range of problems connected with underdevelopment is covered. A number of conceptual tools like "balanced growth", "derived development", "external economies" (relevant in the context allocating savings among alternative investment opportunities), "demonstration effect" (Duescenberry's term for "keeping up with the Joneses" which is playing havoc with the underdeveloped countries' already weak propensity to save) and a host of others are refined and applied.

Interestingly, the best summary of the problems of underdevelopment is that of J. S. Mill, which is quoted by Gerald M. Meier in his essay on the "Problem of limited development.'" Mill said, as early as 1842, "In countries where the principle of accumulation is as weak as it is in the various nations of Asia,....the desideratum.... economically considered, is an increase in industry and of the effective desire of accumulation. The means are....a better government, more complete security of property....a more permanent and more advantageous tenure of land ....improvement of public intelligence....the introduction of foreign arts which raise the returns derivable from additional capital to a rate corresponding to the low strength of the desire of accumulation and the importation of foreign capital which renders the increase of production no longer exclusively dependent on the thrift or providence of the inhabitants themselves, while it places before them a stimulating example, and by instilling new ideas....tends to create in them new wants increased ambition, and greater thought for the future". Much of the book is a commentary on this theme.

The final comments. One is that it would have been better if Nurkse had been represented by a contribution in which his germinal ideas on the mechanics of growth itself were elaborated. For instance, chapter one of his book, "Problems of capital formation in underdeveloped countries", would have been a better choice than the one actually included, which, excellent though it is, is limited in its scope. The editors may have thought that since there were other contributions (Mr Fleming's and Senor Furtado's, for instance) that discuss these ideas, there may be some duplication. Still, it would have made the book more complete if we had Nurkse's own formulations here. This, of course, is no criticism, but probably greed on the part of the reviewer.

The second comment is the comparative absence of contributors from the underdeveloped countries themselves. The not unreasonable suspicion is that not much work is actually being done on the subject in these countries. This, if well founded, is both a shame and a pity. There are aspects of even theory of which a student belonging to these areas will have a livelier awareness than one who looks at it from the outside. Secondly, it is humiliating that we should be letting others do the thinking for us all the time. It is very much to be hoped that the book under review will shame us into a greater sense of our own responsibilities in the matter.

PURCHASE OF STORES FOR BHILAI STEEL PLANT

Sardar Swaran Singh, Minister for Steel, Mines & Fuel, stated in the Lok Sabha that Hindustan Steel Limited followed generally the same procedure for purchase of stores both in India and from abroad for the Bhilai Steel Project as adopted by the Director General, Supplies & Disposals. Certain powers for purchase had been delegated to the various officers of the Project.

The Minister, who was replying to Mr Daljit Singh in the Lok Sabha, stated that the procedure was satisfactory.

He further added: Purchases are made on the basis of open tender or limited tender depending on the value and nature of stores and the urgency of the requirements. In case of proprietory articles, orders are placed directly with the Indian importers or indigenous manufacturers as the case may be. The project is on the rolls of the D.G.S & D as direct Demanding Officers. The facility of rate contract is availed of to the maximum possible extent. Bhilai Steel Project has no running contract directly with the manufacturers for any of the stores.

For imported items, tenders are invited from Indian importers or agents of foreign manufacturers. In selected cases of imported items, the assistance of the India Stores Department, London, is sought both in regard to locating supplies as also inspection. In regard to purchases from USSR., proposals are received from the Project, and the contracts are entered into with the respective Soviet organisations by the Head Office of the Company, with the approval of the Committee of Directors.

When the stores are required urgently, local purchase action on limited scale for meeting immediate needs is resorted to so that work does not suffer.

Under Article 98(a) of the Articles of Association of the Company, all proposals involving an expenditure over Rs 40 lakhs, are to be submitted to Government for approval.

For economical purchase of large quantities of raw materials and other stores common for all the three projects in the operation stage, it has been decided recently to establish a Central Purchase Organisation at Calcutta. The nucleus of this organisation has already been formed.

Regarding inspection, where orders are placed as Direct Demanding Officers, and also in certain special cases, the Inspecting Officers of the Project arrange inspection both at Bhilai and at the suppliers' premises if required.

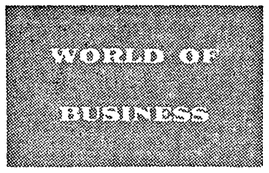
INDUSTRIAL FINANCE CORPORATION

In a written answer to a question by Mr Ram Krishna Gupta and Mr A. M. Tariq in the Lok Sabha the Finance Minister, Mr Morarji Desai, confirmed that the loan operations of the Industrial Finance Corporation of India had declined to some extent. However, he added, its other operations, namely, underwriting of capital and guaranteeing of deferred payments had increased appreciably. The IFC Act, he said, was amended in 1957 to enable the Corporation to guarantee deferred payments for import of machinery from abroad so as to stimulate investments with the assistance of the Corporation.

The Deputy Minister, Shrimati Tarkeshwari Sinha, replying to a question by Mr V. C. Shukla said that the matter regarding loss incurred due to disposal of land purchased for building the office of the IFC in New Delhi was still under consideration. Certain information supplied by the Corporation was being vetted by audit. When this was completed, she said, the question of fixing the responsibility for the loss would be examined.

PAPER MILLS FOR BIHAR

Replying to a question by Pandit D. N. Tiwary in the Lok Sabha Mr Manubhai Shah, Minister for Industry, stated that a Calcutta firm had been granted a licence for the establishment of a new industrial undertaking at Darbhanga, Bihar, for the manufacture of 15,000 tons of writing and printing paper and 16,500 tons of pulp per year. The undertaking, which would be known as "Ashok Paper Mills Ltd.", was likely to be established towards the end of 1961.



The Minister added that the imported capital equipment requirements were of the order of Rs 280 lakhs and it would be imported partly from USA under the Exim Bank loan scheme and partly from France under the French credit scheme. The French suppliers would participate in the capital structure of the scheme to the tune of Rs 30 lakhs.

HIGH GRADE COAL IN JAMMU

Sardar Swaran Singh, Union Minister for Steel, Mines and Fuel, stated in the Lok Sabha that as a result of intensive investigations carried out by the Geological Survey of India in the State of Jammu and Kashmir recently, a sizeable block of coal in the Bargon area of the Kalakot coalfield had been proved.

The Minister, who was replying to a question by Mr Ajit Singh Sarhadi and three others, said that the existence of coal deposits in Jangalgali-Kalakot area had been known earlier, but the intensive investigations had estimated the reserves to be of the order of 2.5 million tons down to a depth of 500 feet.

It was proposed to further intensify the current investigations with a view to exploiting the said deposits at an early date, added the Minister.

Economics of Low-Priced Cars

Since the Jha Committee commenced its public hearings, a number of manufacturers have supplemented proposals for the production of what is called a low-priced car with exhibitions of actual imported models. The stipulated price range is Rs 5,000 to Rs 7,000, and the Committee, having completed its labours, is expected to submit its recommendations to Government some time next month. Meantime, speculation is rife as to which manufacturer is going to get the sanction. Of course, it is assumed that Government are strongly in favour of the production of low-priced car.

Although all indigenous automobile manufacturers have vied with one another in extolling the virtues of the model each proposes to manufacture, given the sanction, an undercurrent of concern is discernible. For, if at all Government vote for a low-priced car, only one of them can be the recipient of the coveted order. With the production of a low-priced car, the other higher priced models now in production in the country will find their market shrinking. It is generally feared that the repercussions on the industry as a whole would be far-reaching.

Mr Lalchand Hirachand, President, Automobile Manufacturers' Association does not think that it is easy to find a solution to the problem of production of a low-priced car. Speaking in Calcutta this week, he has recalled the recommendations of the Tariff Commission on an identical problem. The Commission in their 1956 report had pointed out that the conditions were not conducive to the embarking upon a programme of manufacturing a small car. They had also emphasised the need for ensuring the smooth implementation of the projects already approved. Mr Hirachand avers that what had been true in 1956 is true in 1959 also. In his view, the aim of a low-priced car can be attained in course of time by allowing the present manufacturers to increase their production.

Indian Aluminium's Expansion Programme

The versatility of aluminium has made it the most wanted commercial metal in the world. But the privilege of producing it is only given to a few by virtue of the availability of the raw material and other facilities. It is, however, wrong to think that the production of aluminium can be undertaken straightaway in regions where the essential material prerequisites are available. For, for one thing, the industry is highly capital intensive and, for another, production of aluminium involves complex technical know-how which is not easily available.

It is in this background that one has to consider the programmes for the production of aluminium in India. We have only what may be called the material prerequisites. Yet the industry has made rapid strides in recent years. It is evident, therefore, that the aluminium companies in India have been able to obtain the other important prerequisites. A large part of the credit for the achievements in the sphere of aluminium production in India is to go to Indian Aluminium Company Limited. Thanks to the generous cooperation extended by Aluminium Limited, Canada Indian Aluminium has been able to embark upon the building of a 10,000 ton smelter at Hirakud which was commissioned early this year.

Indian Aluminium is, however, not to rest on its oars yet. Even as the Hirakud smelter was getting into shape, schemes for its expansion seem to have been on the anvil. The company has now announced its plan for a substantial expansion of its bauxite, aluminia, aluminium ingot, rolling mill and extrusion facilities.

When this programme is implemented, the company's new ingot smelter at Hirakud will be expanded from 10,000 tons annual capacity of 20,000 tons. The capacity of the company's aluminia plant at Muri, Bihar (and related bauxite facilities) will be tripled from the present 18,000 tons to 54,000 tons. The Company's rolling mill at Belur, West Bengal, will be expanded from approximately 9,000 tons of rolled products to 16,500 tons a year, which will enable the Company to produce medium and strong alloy sheet, aircraft sheet, container stock and foil stock, by far the largest part of which is now imported.

It is also proposed to instal an additional modern extrusion press at Alupuram, Kerala, with a ram pressure of 3,300 tons. On completion of this expansion programme, the Company will have a well-rounded aluminium industry of substantial size and flexibility. In carrying out its expansion programme the Company is assured of the full cooperation of Aluminium Limited, Canada.

US Notes

A new yardstick for measuring the performance of the American economy has come into prominence of late. It is the US Federal Reserve Board's system of national accounting, known as "flow of funds."

Where the new system differs from the Commerce Department's older and still generally accepted Gross National Product (GNP) statistical series is in its emphasis and approach. They both use the same basic data, but where the GNP measures the output of goods and services in terms of the money spent on them, the flow of funds method traces who spent the money and where it came from. Taken together, the two approaches promise to paint the most accurate picture yet of the actual workings of the American economy.

The Reserve Board, the nation's chief monetary and credit manager, began putting out flow of funds material on an annual basis about four years ago. A few weeks ago, however, it issued a new report representing a shift to a quarterly basis, and providing a closer look at the economy's financial record.

The latest flow-of-funds report presents a clear and revealing insight into several important monetary trends. Borrowing in the credit markets during the first half of this year, for instance, rose to a new high of $25,000 million. Moreover, more than half the funds were put up by "non-financial" groups—mainly businesses, consumers and the government. The fact that banks and other financial institutions played a somewhat smaller role than might have been expected in supplying money, is considered a reflection of the Reserve Board's "tight" money policy —characterized by comparatively high interest rates and a relatively strict control over the money supply.

The report also shows that total national savings by all groups have risen significantly. During the first quarter of 1959, savings came to $30,000 million, some 20 per cent above the level of the first quarter of 1958.

As for the nation's total financial assets, embracing holdings of all kinds (including corporate stocks), these now top the astounding $1,000,000,000,000 mark. The American people, in their role as consumers, own the largest share—an estimated $467,500,000,000.

The flow of funds method in effect gives the financial side of the economic picture. To the nation's money managers, this is as important as the production side when it comes to analyzing and formulating national economic policies, with emphasis on encouraging sound growth and controlling inflationary pressures.

The idea is not to supplant the GNP series with the flow of funds approach, but eventually to integrate the two. Much work still remains to be done, of course, in improving the refining flow of funds techniques. But there is some thinking that in about three years the Reserve Board and the Commerce Department may start issuing their reports together.

The stress being placed on flow of funds accounting is an outgrowth of recent economic developments, just as the GNP approach reflected the requirements of its day. The GNP series was set up in its present refined form early in the 1940's. But it actually had its beginnings during the 1920's, when the aim of national economic policy was to spur production, and more precise means were needed to measure just how much of what was being produced.

By the early 1950's, however, a new set of economic forces was at work. With the post World War II economy on a strong and generally sustained upswing and production setting all kinds of new records, emphasis had begun to shift to the use of central banking techniques as a means of holding inflationary forces in check. It was the view of monetary managers that the GNP approach, while basic and valuable, did not by itself offer an adequate appraisal of the new situation. This helped give rise to the Reserve Board's development of a useful flow of funds system.

It is interesting to note that United Nations economists have been among the strong supporters of flow of funds accounting. They consider it important in analysing international economic developments and in comparing the make-up and performance of various national economies.

*

Britain

Figures published by the Petroleum Information Bureau show that consumption of petroleum products in Britain in the first half of this year totalled 17,864,856 tons, or over 2,500,000 tons more than in the same period of 1958.

Fuel oil accounted for 1,800,000 tons of the increase, and demand was 36½ per cent higher than in the corresponding period of 1958. Higher deliveries for electricity stations were the major factor in the rise. Motor spirit consumption, at 3,351,390 tons, rose by 6½ per cent.

Further expansion of the domestic use of fuel for heating appliances resulted in a rise of about 10½ per cent for the half-year.

* * *

Seventynine grants and loans from the United Kingdom—including 22 for research—were approved during August under the Colonial Development & Welfare Acts, representing a total of £2,467,092. A Colonial Office statement in London says that of this sum, £785,961 was made up of grants and loans for 37 schemes in the Caribbean area.

More than £1,000,000 was made available for projects in Malta. Heading the list was a grant of £500,000 from which financial aid could be given to new and expanding industries. This will supplement the island's efforts under the Aids to Industry Ordinance, which is aimed at diversifying Malta's economy through rapid industrialization: it provides for tax "holidays" and Customs concessions for new industries, and for the expansion of those already in operation.

Other Colonial Development & Welfare aid approved for Malta in August included a grant of £280,000 for vocational and industrial training; a loan of £90,000 for the island's first modern industrial estate; and a grant of £140,000 for a scheme to eradicate tuberculosis and brucellosis from dairy cattle.

*

Italy

According to calculations by the Instituto Centrale di Statistica (I) ISTAT (Central Institute of Statistics), with 1953=100, the general index for the first nine months of 1958 was equal to 138.3, showing an increase of 1.3 per cent over the same period of 1957 (136.5).

Production of liquid and gas fuels rose by 6.9 per cent in relation to the first nine months of the previous year, while figures for coal dropped by 21.0 per cent, ores by 2.9 per cent and other minerals by 2.5 per cent.

Production of crude oil has marked a considerable increase. During the period January-October 1958, the crude product totalled 19,800,000 tons (17,073,000 tons during the same period in 1957), of which 12,400,000 tons were used for the home market, 4,860,000 tons for export and 2,540,000 tons refined under foreign agreements. Total production of crude oil in Italy in 1958 may be calculated at 1,700,000 tons, against 1,261,000 tons in 1957. The increase is especially due to exploitation of wells in Sicily.

In calculating the general situation in the manufacturing industries, seven branches which have been examined show improvements over the first nine months of 1958, when compared to the same period of the previous year. Such improvements are as follows: hides, leather, footwear: +7.1 per cent; timber: +3.0 per cent; automotive: +10.4 per cent; non-metallic minerals: +6.2 per cent; coal and oil derivatives: 14 per cent; cellulose for artificial and synthetic fibres: +3.9 per cent.

The following six branches, however, show indices which are lower than those pertaining to the first nine months of 1957: foodstuffs, drink and tobacco: —1.6 per cent; mechanical: —1.1 per cent; paper and board: —0.4 per cent; rubber: —3.7 per cent; textiles: —6.4 per cent; metallurgical: —6.5 per cent:

Under mechanical industries, the general index for January-September 1958, relating to the sub-item construction of non-electric machinery, shows a rise of 0.1 per cent. The average index for the construction of electrical machinery and steels structure and the like, over the same period, dropped by 1.0 per cent and 6.8 per cent respectively. On the other hand, this sector stands to the fore because of the rise in the production of motor vehicles, which reliable sources estimate at 400,000 for the whole of 1958. This figure includes 370,000 private vehicles and represents an increase of 13.7 per cent over 1957 (351,799 vehicles) and 414 per cent over the pre-war record. During the first nine months of 1958, production of motor vehicles totalled 306,382 units, of which 280,370 were private vehicles.

The production of electrical energy, during the first nine months of 1958, rose by 5.4 per cent over the same period of the previous year, while production of coal by-products dropped by 11.6 per cent over the same period. Figures for electrical energy were 32,988 million kW|h (26,441 million from hydroeletric sources and 6,547 million from thermoelectric sources), an increase of 1,682 million kW|h in relation to the January-September period of 1957 (31,306 million kW|h). The rise is due to production from hydro-electric sources, thermo-electric energy having dropped considerably. During the year under consideration, several new hydro-electric and thermo-electric power stations were completed and brought into operation, while fresh plans were approved and drafted.

The current plans for development of electrical energy are not, however, limited to the construction and operation of traditional forms of installation. The present situation in Italy has demanded extensive research into the possibilities of electronuclear energy and four definite projects have already been prepared. One has been drawn up by a company which groups all the electrical enterprises in northern Italy and concerns the building of a power station in that region with an output of 134,000 kW. A second has been drafted by industrial and electrical companies in central Italy and foresees the construction of a power station at the mouth of the Garigliano with an output of 150,000 kW. The third will be the responsibility of State controlled enterprises and covers the building of a power station in the Latina

(1) See also: *Industrial Production in 1955*—(Italian Affairs), Vol. V, No. 4, pp. 1309—1310.

zone with an output of 200,000 kW. The fourth project has been drawn up by two large industrial groups and deals with a further power station to be built in the northern regions. It is currently understood that the first of these plants will come into operation in 1962 to be followed by the others at yearly stages.

The steel industry contracted during the period January-October 1958 and only 5,257 thousand tons of steel were produced, against 5,649 thousand tons during the same period of 1957. The drop is equal to 6.9 per cent (1). Other products of this sector have also shown less encouraging figures (a drop of 0.92 per cent for cast-iron, 3.8 per cent for rolled steel and 16.7 per cent for alloy steels). However, the situation may still be considered satisfactory since the production level reached (estimated total of pig iron: 6,270,000, a drop of 500,000 tons when compared to 1957 which totalled 6,787,000 tons) is the maximum following the record of 1957. In earlier years, the figure of 6 million tons of pig-iron had never been approached.

Finally, examination of the textile industry over the period January-August 1958, brings to light a total production of 129,926 tons of cotton yarn and 102,693 tons of manufactures. Certain oscillations have also been noticed in this sector but they were not very marked.

(1) See also: *New Indices for Industrial Production*—(Italian Affairs), Vol. VII, No. 3—4, pp. 2217—2218.

*

Israel

Israel expects almost to double industrial production and more than double her exports in the next five years, thus reducing her trade gap by more than half. These are the main features in a "Prognosis of Industrial Development" for the years 1960-65 issued by the Ministry of Commerce and Industry.

The approach to industrial planning and development is a realistic one. It takes into account the prospect that:

*The population will increase by about 500,000 to 2½m.;

*The standard of living will continue to increase, though at a moderate rate of 2 per cent per year;

*Some of today's sources of capital imports, such as German Reparations, will come to an end.

These factors taken together would lead to an increase in the foreign trade deficit from $330 million to about $400 million.

On the other hand, it is expected that over half of this deficit can be wiped out by the continued growth of exports and the continued substitution of imports by local production. It is expected that an additional $245 million can be earned or saved by 1965: $40m. from agricultural exports, $35m. from services, $134 m. from industrial exports, and $36m. from import savings.

This means that there will still be a trade gap of $155 million in 1956, to be filled by continued capital imports, particularly by the influx of private capital for investment.

* * *

In order to achieve these objectives, production must be vastly increased to take care of higher local consumption, provide for increased exports and increase the output of capital goods. While during the past few years industrial output has risen by 11-13 per cent per annum. It is assumed that in the period up to 1965 the annual increase will average ten per cent. This means raising the total from about IL,1,700 million in 1958 to IL3,000 million in 1965.

Of the addtional IL 1,300 million worth of industrial production, a little over IL400 million worth will be derived from existing industrial equipment which is not fully employed, and from increases in labour productivity. The remainder, just under IL900 million, will have to come from investments in new factories and the extension of existing ones.

It is expected that a sum of about IL1,130 million will have to be invested in fixed assets and IL 475 million of additional working capital will be required. This leads to the considerable total of IL1,600 million of investments needed over the next six years.

The average investment that will be required per worker employed will be between IL13,000 and IL15,000, though this figure will of course widely vary from industry to industry. In the chemical industries it is expected to be as high as IL50,000 per worker and in the diamond industry as low as IL2,000.

* * *

The expansion of industry is not expected to be equal in all branches. In some fields, where the opportunities for exports are very limited, production will be expanded only to take care of the expanded home market. The largest expansion is foreseen in those fields where good opportunities exist for export developments.

Most important of these is perhaps the chemical industry, in which output will be more than doubled—from IL154 million at present to IL336m. in 1965. The exports of this industry will amount to as much as IL126m., with an additional investment of some IL227m.

The diamond industry is also marked out for rapid development. Output in 1958 amounted to IL66 million, of which 18 per cent were added value; in 1965 it is expected to reach IL112 million, while added value be raised to 30 per cent by working smaller stones, which require more labour.

Another fast-growing industry will be electrical equipment, including electronics. It has not developed very far in Israel, but it is expanding all over the world and there seem to be good opportunities for developing it here.

The basic statement of policy of the Ministry recognises the need for encouraging investment without any dogmatic preconceptions, and envisages the lining up of the industrial economy for an export drive. Though imports are to be increasingly liberalised, manufacturers would be protected in the home market against foreign competition.

An important function of the planning bureau will be to work out the criteria by which loans under the Development Budget are to be judged. This budget and the loans granted from its funds will continue to play a decisive part in encouraging the establishment of new enterprises and the expansion of existing ones.

Complementary to this development is an extensive program to develop the capital market at home and to encourage foreign investments. Legislative action in this field has already started, with the revised Law for the Encouragement of Capital Investment.

Intensified action will be taken to ensure that vocational training programmes remain in step with industrial development, and that sufficient skilled labour is available for the new enterprises, as and when required. This is not only a question of timing but also of location. The labour supply must be made available in the places where it is needed, and, on the other hand, the physical planning and location of industries will have to be carefully considered in the light of available labour, transport and other facilities.

* * *

The total effect of the program will be a profound change not only in the balance of payments but in the entire economic outlook of Israel. By showing in detail how the country can achieve economic independence without having to resort to measures that would be politically so unpopular as to be impracticable, the plan was given a new direction to economic discussions in the country. Its objectives are by no means easy to achieve, but they do not seem to be impossible. Output will have to continue increasing at the same rate as in the past five years—but no faster. In only two products does Israel hope to obtain for herself more than ten per cent of the world markets—in diamonds, where she aims at over one quarter, and in bromine products, where she aims at almost one-third.

*

Australia

A massive expansion of Government spending on Australian capital works, and services, business undertakings, defence services and grants to the States, forecast in the Federal Budget for 1959-60, is seen by reliable observers to offer a stimulus for private expansion, as well as providing the climate necessary for private development.

The budget, described generally as a holding budget, was introduced to Parliament by the Federal Treasurer, Mr Harold Holt, on August 11. The estimated total revenue for 1959-60 is £1,385,-263,000. Expenditure from consolidated revenue is expected to rise by £97,381,000 on the actual expenditure for 1958-59.

Overall tax concessions amounting to £25,000,000 a year included a five per cent cut in personal income tax. Advances in social services included increased pensions, and liberalised health benefits, but the budget also announced increased charges for postal and telephone services.

Points of interest to industry were an increase from 25 to 35 per cent in the minimum retention allowance from private company profits, before tax, to cater for development costs, and the introduction of a Withholding Tax system for overseas shareholders in Australian companies. The proposed rates of the Withholding Tax, which will not operate until July 1, 1960, are three shillings in the £ for investors in Britain, Canada, and the United States of America, (countries which have reciprocal taxation agreements with Australia) and six shillings in the £ for others.

It is thought that the new measure will simplify the collection of dividends by overseas shareholders, and further stimulate the inflow of portfolio capital.

An important development in the short-term money market, which began operating in Australia during the last financial year, is the proposal to institute "seasonal Treasury bills" for issue to the public at interest rates in line with current market conditions.

National income and expenditure statements tabled by the Treasurer showed that Australia's National Income, estimated at £5,021,000,000 last year, was £86,000,000 better than in 1957-58.

Farm income, at £408,000,000, showed an increase of £73,000,-000. Company income rose by £22,000,000 to a new peak of £630,000,000, while dividend payments to Australian shareholders are estimated to have risen by £10,000,000 to £160,000,000.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

IN his farewell message to the Americans, Mr Khrushchev said, "I hope in the relationship between our two countries, we will be able to use more and more often that good short American word, 'Okay'." That seems to me remarkably gracious leave-taking at the end of a tour that was attended with many contretemps and verbal brushes. The same cannot probably be said of Mr Khrushchev's arrival, which was heralded by Lunik pyrotechnics and much naive braggadocio about Soviet might. On the other hand, there has been much that was uncharacteristic in the American hospitality. The icy formality of the welcome from the world's most warm-hearted people must have struck even a less extroverted man than Mr Khrushchev. There have been complaints of State Department briefing in the "correct but cool" welcome accorded: and in his address to Muscovites on his return Mr Khrushchev himself referred to a car that preceded him carrying a placard asking people to greet civilly, but not applaud. All this sounds so un-American that it can be explained only by a morbid fear of being outsmarted by Communism. As the tour progressed, there was both an improvement and a deterioration. We read of cheering crowds and friendly handshakes, but we also read of needling of the Soviet leader by local functionaries, and his own tantrums. Mayors who dropped bricks, labour leaders who were argumentative and pressmen with inconvenient questions soon became a serious embarrassment to the President himself, who was obliged to make a public appeal for greater courtesy to the guest.

*

How much of the rudeness, on the one hand, and ill-humour, on the other, was premeditated? As far as American behaviour is concerned, there have been reports that the State Department had a hand in the heckling of the Communist leader. The motive seems to have been not to allow Mr Khrushchev to make propagandist capital out of this visit. There also seems to have been some fear of "softening up" of the American attitude toward Communism, if the Soviet leader was to be allowed to fraternise too freely and switch his "charm" on the people. It would seem that people were "quietly tipped off to avoid being photographed with the visitor in smiling or handshaking poses". It has also been reported that a list of embarrassing questions for springing on Mr Khrushchev was prepared and passed on to some correspondents covering the tour. If this were true, it shows the ridiculous lengths to which one can go in these matters. Whether the State Department had anything to do with these things or not, the object of at least some of the questions asked of Mr Khrushchev was not a desire for information or enlightenment. The first question that was put to him at the National Press Club luncheon, for instance, could hardly be called innocent. The President of the NPC, Mr William H. Lawrence of The New York Times, asked the question; and he wanted, he said in effect, to check up on a story that is circulating about what happened at the famous Twentieth Congress of the Soviet Communist Party, when Stalin's idol was knocked off the pedestal. The story was this: when Mr Khrushchev was detailing Stalin's crimes, some one in the audience sent up an unsigned question asking comrade Khrushchev what he was doing when Stalin was committing these crimes. Mr Khrushchev noted that the question was unsigned, and suggested that the comrade who sent the query should stand and identify himself. No one stood up. "Well, comrades", Mr Khrushchev is reported to have said, "now you know what I was doing when Stalin was committing these crimes". Mr Khrushchev was asked to comment on this story. "If it is not true", said Mr Lawrence, "we might just as well forget it for all time".

*

Mr Khrushchev was, not unnaturally, furious. On the face of it, it is a piece of journalistic virtuousity. As every journalist knows, such stories are made up by the hundred in editorial backrooms as a sort of joie d'esprit. Their truth is poetic and not factual. Factually, nothing could be more unlikely; and, even poetically, this story, good as it is, is not strictly truthful. The point is, in the set-up imagined, none would dare send up a communication, even an anonymous one, to the leader. I can best illustrate the point by quoting another "story", whose poetic truth hits you in the eye. Stalin, according to this story, used to go about incognito in the streets of Moscow, much as Harun al-Raschid used to in the streets of Baghdad, to find out what his subjects were thinking about him. (The comparison is somewhat unfair to the Khalif, whose cruelty was as casual as his impulses were generous, but let that pass). In one such nightly expedition, Stalin found himself at a party. He fell into conversation with one of the guests, and asked him, after a while, what he thought of Stalin. His companion, of course, did not know that he was speaking to Stalin. He considered the question, and, after a while, drew Stalin aside to a lonely corner, looked furtively this way and that, and finally whispered into his ear, "Comrade, I think Stalin is the greatest man that was ever born!" The point of the story, of course, is that, under totalitarian regimes, even anonymous letters would be in praise of the regime, for the simple reason that there is no anonymity under a dictatorship, and hence no security behind it. The story that Mr Lawrence wanted to get checked was, therefore, both factually and poetically untrue, and Mr Khrushchev was being truthful when he denied it.

*

I cannot for a moment imagine, therefore, that the question was asked seriously. The most charitable interpretation would be that it was a rag, though many may wonder whether the occasion was the most suitable one for invoking the comic spirit. Mr Khrushchev was a guest, and was entitled to the comforting hypocricies of a formal occasion. Moreover, politicians cannot afford the luxury of a sense of humour, and it is not Mr Khrushchev alone who would have considered the question provocative.

*

But it seems to me that both the State Department and the correspondents, not to speak of the small town mayors, may have spared themselves the trouble. If their fear was that Mr Khrushchev would have displaced favourite TV stars in the affections of the populace as an amiable fuddy duddy, it was grotesquely misconceived. For, paradoxically, Mr Khrushchev himself had his own notion of what constitutes an interesting personality. His preference was for the prickly and naively boastful, and the person he wanted to project was that of a tough, if possible a jolly tough, but a tough all the same. If you will recall the effect that Malenkov had on the British, the self-conscious performance of the "smooth guy" act by Mikoyan in the US last year, you will see that Mr Khrushchev's tastes were Texan (of the tall tales, of course). Indeed, as a public relations job, Mr Khrushchev seems to have conceived his visit in terms that did not differ from what the State Department seems to have feared it would not be. He timed the launching of the Lunik on the eve of his visit to the US. On arrival, he boasted about it, and presented his host with its model. Less childishly, but hardly less crudely, he boasted of the superiority of the Communist system—(he had written an article about it in the American journal, Foreign Affairs, on the eve of his visit)—and talked incessantly about "burying you", catching up and whistling and flying past the Americans in economic achievement. He jeered at the can-can (though he was earlier reported to have joined the dancing crowds himself) and twitted American businessmen who said, "Sure", when he suggested trading, but did nothing about it. The image he was projecting was of a bluff and hearty chap, but one that would take no lip from any one. This is not exactly a new image, for, we have read of Mr Khrushchev doing precisely the same thing at diplomatic dinners, and his famous television encounter with Mr Nixon seems to have more or less set the tone for his US visit.

*

But, behind all this was a more serious purpose. We can argue endlessly about the precise motivation behind Mr Khrushchev's desire for the exchange of visits between him and President Eisenhower without

. . . the synthesis of elegance and utility

AJAX

ALUMINIUM COLLAPSIBLE AWNINGS & FOLDING ROOFS

CALCUTTA MADRAS NEW DELHI

coming to any satisfactory conclusion. The answer is complicated further by the two voices he seems to speak with. On the one hand, he goes on ecstatically about the "sacred cause of Communism"; but, on the other, he coos about coexistence. But if the Americans would only stop worrying about being outsmarted by Mr Khrushchev if they negotiated with him, it is possible to get somewhere. And this is a most uncharacteristic fear. Walter Lippmann, commenting on this, says that it is necessary for Americans to recapture some of their early spirit of venturesomeness. "The true inwardness of Khrushchev's challenge is aimed directly at the critical weakness of our society. . . . For the time being, our people do not seem to have the great purpose. . . . . We talk about us these days as if we were a completed society, one which has achieved its purposes and has no further great business to transact. Become once again, the confident and purposeful people which, except when we have doped ourselves, we really are."

Here is not merely a stirring call to duty but acute analysis. The affluent society has become conformist and timid, and, when haunted by insecurity, reaches for the tranquiliser. It should be made to look the enemy in the eye, and not shy away from an encounter with him. After all, despite the fact that Mr Khrushchev was boasting, his boast, significantly, was that his system was productively the more efficient. Put this way, the boast is really very American, since competition is all the time claimed to be the essence of the American way of life. The prospect of increased Communist productive efficiency need not frighten any one, so long as such efficiency is not tied up with the prospect of war. Curiously, it is classic Communist analysis of Capitalism that, in its later stages, only being geared to the prospect and even actuality of war can support a capitalist economy. Therefore, a similar fear about Communist economy would only seem to justify the feeling that maturity of an economy rather than its nomenclature would seem to determine the nature of its warlike or peaceful ambitions. Since Mr Khrushchev has formally put forward proposals of total disarmament within the next four years, he is renouncing at least formally the tie-up between a mature economy and intention to make war. Now, either this offer is genuine or it is propaganda. Assume that it is genuine; then, it is clear that the Russian economy will have to seek alternatives for deployment of its productive power other than war. This is a prospect that should please every one. If, on the other hand, it is hypocritical, it is elementary that we should convert to our advantage this very sanctimonious humbug. If hypocricy is, as La Rochefoucauld averred, homage by vice to virtue, then, it is open to virtue to make vice hoist itself with its own petard. It is no use saying that it is the the same as the Utopian proposals that Litvinov thought up in 1932, and would lead to the same blind alley. Surely, the West has enough ingenuity to devise the kind of guarantees and safe guards to obviate any possible act of bad faith. In any case, it is worth considering. It is true that a world in which "the general staffs and war ministries will be abolished, military educational establishments closed" seems to be too good to be true. But, short of an almost perverse faith in original sin, the vision cannot fail to fire the imagination. Already, you might say, the propaganda effect is working. But it is possible to keep your eyes on the star firmly, and your feet firmly on the earth. In other words, do by all means look for all the hidden snags—and there are plenty—but keep talking and, if possible, outsmart him.

*

If nothing else, the Khrushchev visit has made the ice of the cold war crack, as he himself put it. Mr Eisenhower (and his grand children) is to pay the return call. Meantime, despite frayed tempers, the visit has rubbed some of the sullenness off the hostility. Mr Khrushchev has said "Okay" and "Sure" a number of times, and, with practice, may say them oftener. And Americans may learn the Russian equivalents for them, and practise mouthing them. For, as that remarkable man, Monsieur Coue, said, "If you don't think you can't, you can do what you want." So don't think you can't think you can.

Expansion of Shipping

BOMBAY REVIEW

AT the fag end of the fourth year of the Second Five Year Plan, hopes seem to be at a low ebb as regards the attainment of the shipping target of 9 lakh GRT. Till recently, Government spokesmen were talking hopefully about the successful implementation of the expansion programme and it was even said that the target might be overreached. Perhaps because the last year of the Plan is round the corner, as it were, there is a general tendency to refer to attainments and the trend of progress in more precise terms. A sifting of the reports about the progress of Indian shipping will yield the conclusion that even the modest target of 9 lakh GRT is unlikely to be attained. It would appear that the shortfall may be of the order of 2 lakh GRT, which may not be made good in view of the stringency of the foreign exchange situation.

That the target set for the Second Plan will not be reached with the outlay provided under shipping has, however, been generally known for a considerable time now. The provision of Rs 35 crores had been spent in full quite early in the current plan period and the addition to the tonnage was expected to be much smaller than the quantity required to reach the target. Around about the time the current Plan reached its half way mark, it became clear that the attainment of the target depended on the availability of additional foreign exchange. Authority, however, had declared its determination to find the needed resources. The drive seems to have added so far only about 50,000 GRT, thanks to the yen credit that Japan agreed to provide.

There is no gainsaying the sustained interest evinced by Government to quicken the pace of expansion of the industry and to enhance its prestige among the world shipping community. The Merchant Shipping Act, 1958 has been rightly hailed as a significant landmark in the history of Indian shipping as it has not only provided for the first time a separate Indian Register but also restored full meaning to the word "Indian" in the expression, Indian Shipping. A preferential Development Rebate has also been granted to the industry with a view to accelerating its expansion. Further, Government have established a Shipping Development Fund to extend loan facilities to the industry. A separate committee called the Shipping Coordination Committee has been set up in the Ministry of Transport to deal with the problems of Indian Shipping with particular reference to the allocation of Government owned cargoes.

It would appear that, although a good deal has been done to foster the growth of the industry, Government cannot justifiably claim that everything possible has been done. Speaking at the annual meeting of the Bharat Line Limited, Mr C. R. Srinivasan, Chairman, has pointed out that the slower-than-hoped-for pace of expansion of the industry is largely due to the deterrents and disincentives that still beset it. In his view, the rapid expansion of the industry depends on a proper evaluation of these deterrents and disincentives.

It is unfortunate that the industry is not able directly to take advantage of the present slump conditions in the world shipping market, due to non-availability of foreign exchange. But is there no other way of meeting the situation? The fact that Government are now importing quite a good deal of cargo offers a splendid opportunity for accelerating the expansion of our merchant shipping tonnage. On the transport of foodgrains alone, enormous sums of foreign exchange are being spent. Other Government owned cargoes are also of a considerable volume involving large expenditure of foreign exchange for freight. If these cargoes are carried by our ships, the foreign exchange expenditure on freight can be saved. It is inconceivable that Government are unmindful of the great benefit that will accrue to the Indian industry and to the nation by the diversion of as much of their cargo as possible to our ships. Where then is the hitch?

The trouble seems to be in the manner in which Government go about the work of fixing the freigh rates for cargoes. Shipowners complain that the rates of freight are fixed at such an uneconomical level that Indian companies find acquisition of additional tonnage not a profitable proposition.

It would appear that, in the matter of transport of their cargoes, Government have deemed it fit to act as any big businessman who will extend his patronage to those who can offer the best possible terms. It is easy to see that our shipping will come off poorly in the resulting unequal competition with the powerful shipping interests of the world, especially at a time when the freight market is extremely dull. Far from meting out preferential treatment, Government seem to be particularly keen on cutting down the freight rates when they come to deal with our shipping. In this regard, Mr Srinivasan says: "When the charges for sea transport are allowed to enjoy the free play of the world market conditions, it would be reasonable for the Government to pay the market rate whether the rates rule high or low. The present policy of the Government would, however, appear to be to demand Liner rates when the world market rules in the upper register, and to insist that their cargoes be carried at world market rates when these are low without regard to the peculiarities of the trades concerned or the disabilities of Indian Owners who may often have to arrange ballast voyages for positioning their ships."

It is said that the procedure followed by Government is not calculated to help our shipping in the matter of obtaining cargoes. The complaint is that that purchases from foreign countries on C&F basis on considerations of lower freight rates is tantamount to denying their rightful cargoes to Indian shipping. Government, it is pointed out, do not seem to realise that the lower rates are quoted by foreign countries with a view to encouraging their own shipping. But it is not to be forgotten that the question of deciding how and at what cost Government cargoes should be transported is not a simple matter. For, it is not as though our Government are making their purchases overseas on a cash basis. Very often, quite complicated processes are involved and there may be equally important considerations besides the prosperity of our shipping.

Even so, it should be possible for Government so to arrange matters as to allocate a goodly portion of their cargoes to our shipping. At the same time, it is incumbent on them to ensure that their freight rates are such as to encourage the acquisition of additoinal tonnage by our shipowners. The matter cannot brook delay because, for one thing, the present slump conditions in the tonnage market may not continue for ever and, for another, Government may not be having under their control for long as much cargo as at the present juncture.

The position of coastal tonnage also does not seem to be quite satisfactory. The prospects of reaching the target of 4,12,000 tons laid down by the Rail-Sea coordination Committee are rather gloomy. Paucity of foreign exchange has only been partly responsible for the static conditions in coastal tonnage. As in the case of overseas shipping, in coastal trade also conditions are not conducive to expansion due largely to the competition from the Railways. The remedy lies in the implementation of the recommendations of the Rail-Sea Coordination Committee. It may be noted that similar complaints about competition from the Railways are heard from road transport operators. It is high time Government considered the problem as a whole and instituted appropriate remedies so that there is no unhealthy competition.

MOISTURE CONTENT OF TEXTILES.

The Shri Ram Institute for Industrial Research, Delhi, has developed SRI Electric Moisture Meter, a device to determine accurately the moisture content of materials, such as textiles and paper etc.

The instrument—a significant improvement on imported products—gives steady and accurate results; there is no drift in the meter readings even after prolonged use. It is also capable of being used for determining moisture content of materials in bulk like CMC, pulp, soils, grain, etc., by suitably modifying the plates of the electrodes.

Moisture content in textiles, paper and similar materials plays an important role because the amount of residual moisture has an important bearing on the physical characteristics such as elasticity, rigidity and swelling. The measurement and control of moisture content is, therefore, of fundamental importance for textile, paper and other similar industries.

For measuring moisture content, the material is introduced between the plates of electrode system forming a condenser, resulting in a change in the capacity which in turn affects the resonant frequency of the crystal oscillator resulting into variation in the reading of the indicating meter. As the instrument has already been calibrated and a linear relationship obtained between the moisture determined by-oven-drying method and readings on the indicator, the moisture content can be directly read from the scale.

The instrument has been tried in leading textile mills and results obtained compare favourably with the performance of imported meters.

Parties, particularly firms engaged in the manufacture of electronic goods and similar other equipments, interested in taking up the manufacture of this instrument may correspond with the Secretary, National Research Development Corporation of India, Mandi House, Lytton Road, New Delhi—1.

BOMBAY REVIEW

Sugar Supply

The information vouchsafed in Poona last week, by Mr A. M. Thomas, Union Deputy Minister for Food, that Government have decided to start advance licensing of additional capacity against the target of sugar production for the Third Plan, will be welcomed both by the industry and the consumer in that it shows authority's determination to achieve one of the most important prerequisites for increased sugar production. Experience during the current Plan period has been that the acute shortage of foreign exchange has seriously interfered with the programme of building additional installed capacity with the result that the achievement has fallen short of the quantum planned.

An adequate increase in installed capacity alone, however, will not bring the desired result. Production will primarily depend on the availability of good quality sugarcane and in the requisite quantity. It cannot be maintained that the problem of sugarcane supply to the mills is of a variety that should cause little worry. For, it would appear that the present unsatisfactory turn in the sugar situation in the country is not a little due to questions relating to sugarcane.

For instance, this year's shortfall in sugar production is attributed among other things to the considerable fall in the area under sugarcane in Uttar Pradesh and the diversion of cane to the production of gur and khandsari. It is pointed out that the position of suagr supply could have been much better had there been a stoppage of supplies to khandsari production, for the simple reason that, in khandsari production, there is much waste.

Mr Thomas himself has admitted that the sugar situation depends largely on the availability of an adequate quantity of sugarcane of a high quality to the mills. His appeal to the sugar technologists to strive hard to increase production in the coming season may result in some increase in production as there is scope for reducing loss in the mill sector also.

The present sugar situation is succinctly indicated by Mr D. R. Narang, President of the Sugar Technologists Association of India. Although the manufacturing capacity of the industry has increased, production has dropped. The current year's production is short of the Second Plan target by 3 lakh tons. Sugar export has also been adversely affected as the export quota fixed at 100,000 tons had to be reduced to 25,000 tons in view of the cumulative effect of a shortfall in production, mounting internal consumption and unfavourable world prices.

A few days ago Mr S. K. Patil, Union Minister for Food, made a passing reference to the sugar supply position in the country. He said that the shortage was only five per cent and averred that, if consumers cut down their consumption a little, the situation would improve in no time. But all is not as simple as the Food Minister would have us believe. The fact of the matter is that there is scarcity of the commodity in varying degrees throughout the country. Reports from the Southern States tell of acute shortage reminiscent of the old rationing days. In Bombay, the position is by no means satisfactory inspite of the strenuous efforts taken by authority. Periodic scarcities in one or another of the essential commodities has become the order of the day in the country for the past few years. People do not have much use for the explanations offered by Government spokesmen. If the powers—that-be do not take concerted measures to ensure the easy availability of essential commodities of life at equitable prices, their explanations will lose their significance.

*

Non-ferrous Metals Industry

The non-ferrous metals industry suffers from the serious handicap of depending on foreign sources for most of its raw materials. The indigenous supply of the three metals, copper, zinc and lead, used by the industry is meagre, and the bulk of the requirements has to be obtained from imports. Perhaps, this large dependence on imports is mainly responsible for its continued weakness, though it has expanded considerably during the past ten years or so. It cannot be gainsaid that Government have been sympathetic to the needs of this industry. For, from 1948, it is enjoying tariff protection. The claim of this industry to protection was first examined by the Tariff Board in 1946. Since 31st March 1950, the end of the first period of protection, there have been two extensions. In the 1957 enquiry, the Government accepted the Commission's recommendation that protection only to lead and zinc sheets and strips and brass and copper sheets, rods, pipes and tubes be continued up to 31st December 1959. The Tariff Commission are presently conducting an enquiry into the question of protection to the non-ferrous metal industry beyond December of this year.

In asking for extension of protection for a further period, the industry has pointed out that, apart from the major drawback of its heavy dependence on imported raw materials, the fact that it is of recent origin, as compared with similar industries elsewhere in the world, should be taken into consideration. It is still deficient in technical know-how and there is also lack of adequate skilled labour and raw materials.

The raw material situation of the industry can be roughly assessed from a comparison of the domestic consumption of the three metals and their indigenous production. The Tariff Commission have noted that, on the basis of indigenous production and imports, the domestic consumption of the three metals in 1958 has been as follows: Copper 57,874 tons, Zinc 57,339 tons and Lead 14,510 tons. As against this total requirement, indigenous copper production is represented by the output from Indian Copper Corporation which has an installed capacity of 7,200 tons per annum. This company has also made arrangements for setting up a plant with a capacity of 8,400 tons for the manufacture of electrolytic copper. There are plans for the manufacture of electrolytic copper from imported blister copper by three other concerns. As for the other two metals, there is only one company engaged in the production of virgin lead with an annual capacity of 6,000 tons. This firm also produces zinc concentrates but has to depend on Japan for converting it into metallic zinc as there are no smelting facilities in India. The firm, however, has plans for putting up a smelter for the production of lead. Its scheme for a zinc smelter is already under execution.

It would appear that, though the non-ferrous metal industry has made considerable progress, thanks to tariff protection, it has yet to record improvement in regard to the quality of its products. This has been referred to in his speech on the occasion of the opening of the public enquiry into the question of protection to the industry this month in Bombay, by Mr K. R. P. Aiyangar, Chairman, Tariff Commission.

*

Cooperative Policy

The view that some of the recent changes in Government's co-operative policy will retard the growth of the movement has been expressed by Mr R. G. Saraiya, Chairman, Bombay State Cooperative Bank, at the Bank's annual meeting held early this week. Two of the changes are the decisions to limit the cooperative to the village community and that the village cooperative will have no State aid in the matter of their share capital. Mr Saraiya has averred that, if the cooperative movement is to grow rapidly in this country, it is essential to have economically viable units at the base of the cooperative structure, and such units can be had in an undeveloped country like India only through active State participation.

GATEWAY NOTES

If, as Mr Saraiya has pointed out, the reasons for the reversal were the grouping of a large number of villages without regard to any other consideration except that of viability or the dominance of the State to the extent of stifling cooperative initiative, the proper thing to do is to try to remedy the defect and not abandon principles which have been found essential for the very growth of the movement. It is to be hoped that the committee that is presently engaged in re-examining the cooperative policy will be able to indicate how State participation can be made available without jeopardising the cooperative initiative.

A clear-cut co-operative policy is also essential in view of the vital role that cooperation can play in stimulating the economic growth of the country. In the first place, a correctly conceived cooperative policy will go a long way in increasing food production which is the basis of all development activities. Mr Saraiya has referred to the experiment made in Bombay State with the Japanese method of paddy cultivation with the assistance of cooperative financing agencies, and the Cooperative and Agricultural Departments. The conclusion derivable from this experiment is that, given technical know-how, an adequate supply of water and fertilisers and supervision over the use of timely credit, "the grower has responded splendidly to stepping up the output of paddy by anything between 20 and 40 per cent." The same scheme implemented elsewhere with only an increase in the quantum of credit has not produced a comparable result.

The requirements for achieving the aim of an increase in food production are, as Mr Saraiya has stated, intensive effort, increase of productivity, extension services, adequate and timely credit, a rational land and agricultural price policy and a fair market at a reasonable price for the agriculturist. The list will, however, be quite incomplete if it does not include another important item, namely, the abandonment of pet fads about the necessity or efficacy of which there is no incontrovertible argument.

*

Shortage of Cotton

It would appear that if there is no immediate improvement in the cotton supply position, partial or full closure of some textile mills is inevitable. The Indian Cotton Mills' Federation have issued an urgent appeal to Government to take steps to increase the supply of cotton. The federation have asked the Government to expedite the allocation of foreign cotton to mills out of the quantity recently released for import and to permit further imports of three lakh bales for the next import period. It is pointed out that traditional users of foreign cotton have almost completely exhausted their stocks.

WORLD OF COTTON

Likely Increase in World Production

THE current cotton season may well mark the beginning of a new trend in the world cotton situation. Stocks, which were reduced to 17.6 million bales at the beginning of the current season from 22.1 million bales on August, 1956, may rise again.

According to the International Cotton Advisory Committee, the cotton production potential during the current season is, however, by no means as great as many people thought. What is more significant, the opinion of the Committee is that any increase in production is likely to be offset to a greater or lesser extent by increased domestic and export offtake.

With more freedom for farmers to produce cotton, the US output is placed at 14.67 million bales against the final outturn of 11.51 million bales in 1958-59. Total production of cotton in Mexico is provisionally estimated lower at 1.7 million bales against 2.34 million bales in 1958-59. A sizable reduction in the outturn in Central American countries is foreseen even if there is some offsetting improvement in yield per acre. Production in the Middle East is also likely to be somewhat lower in 1959-60 than the previous season.

With small crops last season and an expanding demand, India and Pakistan, which together account for nearly half the total cotton acreage outside the USA, will probably aim to maintain acreage at last season's level. A preliminary conclusion is that total acreage outside the USA will be somewhat lower than the 1958-59 record of 47 million acres; but will probably be larger than in either of the two previous seasons. Including the USA, however, total acreage will probably increase from 59 million acres in 1958-59 to 61 million acres in the current season.

Meanwhile, unconfirmed reports from Gujerat indicate that the new cotton crop there has suffered to the extent of 25 per cent on account of incessant rains. The crop in Vidarbha has been damaged to the extent of 20 per cent. Bright weather has come too late to effect fully recovery of the crop. Rains are still reported in some areas. With the result, the overall crop in the country is now estimated at only 47 lakh bales.

×

FUTURES MARKET:

The cotton futures section has indicated the traders' anxiety over the damage to the crop. Prices, therefore, firmed up on large Ahmedabad buying and bear-covering by local spot houses. Following unfavourable weather reports from Ahmedabad, Khamgaon and Pachora, operators from Ahmedabad are reported to have bought about 15,600 bales, while spot houses in Bombay are said to have purchased about 5,000 bales. Although Jharilla March delivery started lower at Rs 722.25, it rose steadily to Rs 727.50 at the close.

SPOT MARKET:

In the Spot section, the trend was on the whole steady. Staple varieties, however, have presented a firm front and have shot up further by Rs 20 per candy. Mills are eager buyers for all ready and nearby deliveries and all offerings have been quickly absorbed. Leading mills are reported to have purchased about 1.5 lakh bales of the new cotton crop for deliveries extending up to January, 1960.

The start of the marketing season for new crop has told adversely on the export business. Shippers complain that overseas buyers, particularly from Japan, are reluctant to augment their purchases from India, as many of them expect a further fall in prices.

On the import front, conditions are listless. Business continues to be restricted due to uncertainty about the import quotas. The allocation to actual users and needy mills, out of the quantity of up to 1 lakh bales reserved for them, is still not made. According to a notice issued by the Joint Chief Controller of Imports and Exports, licences to import foreign cotton, which were announced to "non-actual user" mills, will be issued on the strength of the allotment letters issued by the Textile Commissioner in favour of the mills. The notice further adds that importers of Egyptian cotton should register trade contracts with the State Bank of India within 15 days from the date of entries into contract. The import licences will be valid for shipment up to February 29, 1960.

Traditional users of foreign cotton have almost completely exhausted their stocks and are eagerly awaiting import allocations against the recent quota of 1.40 lakh bales. Unless the Government allocate this quota and announce another quota of 3 lakh bales for September/February period, it is feared that some mills will be compelled to close down, either fully or partially, for want of foreign cotton. As such, only few transactions have taken place in the import section. Spinners of fine and superfine counts of yarn are eager buyers of Egyptian and Sudanese cottons for January/February 1960 delivery.

×

NEW YORK COTTON MARKET:

The cotton futures market in New York ruled generally dull with prices showing a slightly easier tendency under light hedging and selling following favourable crop news. Even the October delivery fluctuated narrowly, falling a few points on the circulation of three October notices. Middling spot is quoted at 32.90 cents per pound.

×

LIVERPOOL COTTON MARKET:

A steady undertone was maintained in the Liverpool cotton futures market. Some mill hedging was absorbed in the American contract; but trade calling supported the American type contract and the close was quietly steady. Sudan futures were quiet.

×

CLOTH AND PIECEGOODS:

Conditions in the Bombay Piecegoods market have further improved, thanks to active demand for all varieties of cloth.

Conditions on the export front, too, have much improved. There have been usual exports to Singapore, Bangkok, Iraq, East Africa, Persian Gulf, Aden, Sudan and Australia. Prospects are that cloth exports to Singapore will gather momentum. Exports to Britain have been better; but the rise in prices stands in the way of exports.

BOMBAY REVIEW

Over 10 years ago, the TISCO Research and Control Laboratory at Jamshedpur, illustrated above, was Shalimar Tar waterproofed and is, today, still waterproof.

Proof enough that Stp bituminous proofing is the best.

Throughout India, crores of rupees worth of Government property, industrial establishments and private homes are protected from dampness of ceilings, walls and floors, from acid and alkali action by Shalimar Tar Stp bituminous based protective materials.

BOMBAY REVIEW

Oils and Oilseeds Firm

PRICES of both Oils and Oilseeds have displayed generally a firmer tendency, thanks to frantic short-covering. North Indian operators, who had built up an extensively bearish position in commodity markets in Bombay, were keen to retrace following persisting reports of severe damage to "khariff" crops in various parts of the country on account of the recent adverse weather. Bull operators were, therefore, eager to exploit this opportunity to push up rates to higher levels.

The spurt in Groundnut prices is attributed to the acute paucity of stocks, resulting from smaller arrivals. On the other hand, crushers are keen buyers due to brisk export business in groundnut oil-cake and meal. Reports of foreign enquiries for groundnut oil and a better response to offers of HPS groundnut have also aided the bullish sentiment. In this connection, it may be added that the Government of India have announced that established shippers of groundnut oil will be given a further allotment, for export up to the end of October 1959, equal to 15 per cent of their basic year exports after they have completed shipment of groundnut oil quotas to which they are entitled at present.

Castorseed remains on the forefront of advance with reports of a favourable turn in the outlook for exports of castor oil providing a powerful stimulus. A section of the trade has claimed Communist enquiries for nearly 1,000 tons of castor oil. The USA is stated to have raised its bids for commercial oil from 13 cents a pound to 13.50 cents and the UK is said to be a steady buyer of modest lots.

It is significant, however, that, even if upward revision in America's price ideas proves true, India cannot effect sales without a loss in view of the latest spurt in domestic prices. The current UK prices of £107½ per ton for commercial oil in bulk reflect a modest disparity and it remains to be seen if the Communist countries will be prepared to follow the latest advance in India. Observers, therefore, feel that the present strength in the market is purely of a speculative character.

In line with the bullish trend in castorseed and goundnut, prices in the Linseed section have remained firm. Reports, that Australia has bought about 200 tons of linseed oil from Bombay and an equal quantity from Calcutta at about £114½ per ton have aided the bullish sentiment.

The bullish fervour in cotton has provided a powerful stimulus to cottonseed prices.

Meanwhile, the Agricultural Sub-Committee of the Indian Central Oilseeds Committee has considered the target of production to be achieved at the end of the Third Five-Year Plan. The following targets have been fixed for various oilseeds crops:—

	(In lakh tons)
Andhra Pradesh ..	18.00
Bombay ..	18.50
Madhya Pradesh ..	7.00
Madras ..	12.65
Mysore ..	8.50
Uttar Pradesh ..	14.75
Total ..	91.58

*

Yarn

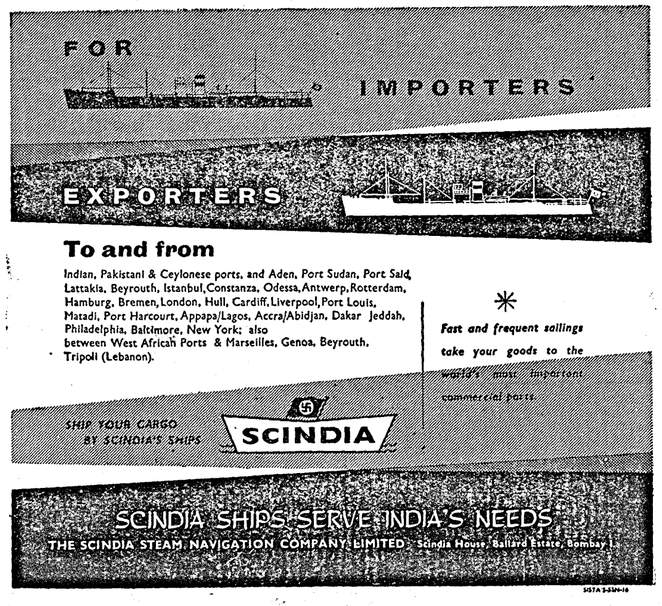
Conditions in the Bombay Yarn market remained distinctly firm. The only exception was Cotton yarns, which were easy.

The firmness in Art Silk and Staple-Fibre yarns is attributed to reports that the Continental manufacturers have raised the prices of yarn and that they are trying to form a cartel with a view to maintaining prices at high levels. The local trade is, however, sceptical about the idea of the revival of the cartel for the reason that several of the manufacturers do secretly sell yarn below the prices fixed by the cartel. They, therefore, feel doubtful about the success in its attempts to maintain the high level of prices.

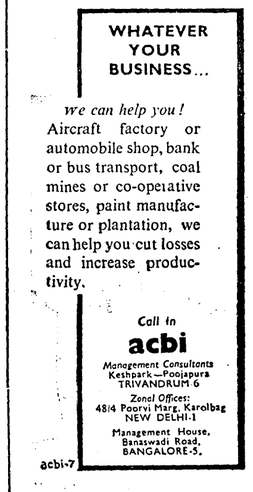
Cotton yarn prices have displayed an easier tendency in spite of the fact that raw cotton prices have remained very firm. This is attributed to the lack of demand from handloom weavers.

According to a Press Note, issued by the Joint Chief Controller of Imports and Exports, a licensed holder can import synthetic yarns such as Nylon, perlon, etc., to the extent of 50 per cent of the face value of the licence against licences issued for art silk yarn under the export promotion scheme. Acetate rayon yarns of 120 and 150 deniers, both dull and bright, can also be improved to the extent of 50 per cent of the face value of such licences.

*



Gold & Silver



Conditions on the Bombay Bullion Exchange remained distictly firm. Sentiment was aided by persistent firmnes in commodity markets and the sustained support lent by the Calcutta operators.

Despite unpromising ready advices, Gold crept forward on short-covering and professional support in sympathy with its counterpart. Ready rates moved between Rs 121.28 and Rs 121.62, while Sovereign remains firm at Rs 78.25.

In the Silver section, ready rates moved between Rs 203.75 and Rs 204.31. Stocks are estimated to be much higher than in the previous week.

IFC Loans to Industry

DELHI REVIEW

THE substantial extent to which planned industrialisation, particularly in new lines, has been assisted by institutional finance is mirrored in the annual report, just released here, of the Industrial Finance Corporation of India for the year ending 30th June, 1959. This report contains a general review of industrial development, especially in the fields in which the IFC has advanced loans during the eleven years of its functioning. It is seen from this review that the loans sanctioned by the Corporation to the group of food manufacturing industries, barring beverage industries, have amounted so far to Rs 20.7 crores (sugar alone accounting for Rs 20.6 crores) distributed over 46 units, out of which 27 units, established on cooperative lines, have accounted for Rs 14.7 crores. Twenty-eight out of the 33 units, all of the sugar industry, whose loans are outstanding, have already gone into production with an output of just under 300,000 tons during 1958-59.

In the group of industries covering spinning, weaving and finishing of textiles, the cotton textile and art silk industries together have accounted for Rs 9.9 crores (covering 41 units) by way of loans from the Corporation. Out of the 41 units, 25 have availed themselves of the loans to the extent of Rs 5.8 crores. One of them has repaid the loan. Twenty-two out of the 24 units whose loans are outstanding have produced, during 1958-59, 48 million lbs of cotton yarn, 120 million yards of cotton cloth, 3.8 million lbs of staple yarn and 5.9 million yards of art silk cloth. In the same group of textile industries, the wool industry has accounted for Rs 35 lakhs (covering 3 units) by way of loans from the IFC. Two of these woollen textile units have already availed themselves of the loans to the extent of Rs 32 lakhs and their output, during 1958-59, was composed of 5.2 lakh lbs of woollen and worsted yarn, 6.9 lakh yards of woollen and worsted cloth and 1.6 lakh pieces of blankets, shawls and rugs.

In the industry relating to the manufacture of artificial fibres, only one concern has so far been sanctioned loans to the extent of Rs 1.1 crores out of which only Rs 50 lakhs has been availed of. Even this amount has been repaid.

Nine units in the industry relating to the manufacture of paper and paper products have been sanctioned loans aggregating Rs 5.7 crores. Eight of these units have till now availed themselves of the loans to the extent of Rs 3.5 crores and one of them has repaid the loan to the extent of Rs 9 lakhs. The Corporation has also, with the prior approval of the Central Government, agreed to guarantee deferred payments in connection with import of capital goods by two units (one of whom has also been sanctioned a loan of Rs 1 crore) to the extent of Rs 3.6 crores. In the case of a third concern, the Corporation has also agreed, with the approval of the Central Government, to underwrite the issue of preference shares to the extent of Rs 50 lakhs. The seven units whose loans are outstanding have produced, during 1958-59, nearly 68,500 tons of paper and 7,600 tons of boards.

Eight units belonging to the group of basic chemical and fertiliser industries have been sanctioned loans aggregating Rs 7.7 crores. Out of these, six have availed themselves of the loans to the extent of Rs 3.7 crores. The five units which have already gone into production have produced, during 1958-59, nearly 21,000 tons of sulphuric acid, 32,000 tons of soda ash, 1,750 tons of liquid chlorine, 10,000 tons of caustic soda, 3,800 tons of sulphate of alumina, 51,000 tons of fertilisers and 1,100 tons of hydrochloric acid.

Six units of the glass and glass products industry have been sanctioned loans aggregating Rs 1.3 crores. All of them have availed themselves of the loans to the extent of Rs 1.2 crores. The factory of one of these units has been sold by the Corporation in part realisation of its dues and two units have repaid the loans. The remaining three units have produced, during 1958-59, nearly 3,600 tons of glassware and 26 million sq. ft. of sheet glass.

In the cement industry, seven units have been sanctioned loans aggregating Rs 6.2 crores. Six of them have availed themselves of the loans to the extent of Rs 3.6 crores. The Corporation has also agreed to guarantee deferred payments to the extent of Rs 35 lakhs in connection with the import of capital goods by one of the units, which has also been financed by way of loans. The six units whose loans are outstanding have produced, during 1958-59, nearly 1.5 million tons of cement and 6,000 tons of cement products.

Three units of the non-ferrous metals industry have been sanctioned loans aggregating Rs 1.2 crores and all of them have availed themselves of the loans. These units have produced, during 1958-59, nearly 2,500 tons of aluminium ingots, 5,800 tons of lead concentrates, 8,100 tons of zinc concentrates and 4,000 tons of non-ferrous metals and alloys.

In the group of industries covering the manufacture of metal products except machinery and transport equipment, 14 units have been sanctioned loans aggregating Rs 2.9 crores. Eight of them have availed themselves of the loans to the extent of Rs 1.5 crores, and two of them have repaid the loans aggregating Rs 12.5 lakhs. The more important products manufactured by the units which have been assisted with loans by the Corporation are steel bars and rods, wood screws, steel castings, sewing machines, hurricane lanterns, enamelware, safety stoves, steel structurals, hacksaw blades, electric copper rods and wires and brass rods and wires.

In the group of industries covering the manufacture of textile machinery and diesel engines and pumps, five units have been sanctioned loans to the tune of Rs 1.4 crores, most of which have been availed of. The units whose loans are outstanding have produced, among others, nearly 13,000 oil engines, 300 numbers of tea machinery and 63 numbers of jute mill machinery (spinning frames and conversion) during 1958-59.

Thirteen units of the group of industries covering the manufacture of electrical machinery, apparatus and appliances have sanctioned loans to the tune of Rs 1.8 crores, of which just under Rs 1 crores has been availed of by nine units. One of the units has repaid the loan and another has stopped production. The units whose loans are outstanding have produced, among others, nearly 21,000 electric motors, 1,250 transformers 78000 motor batteries, 16,000 train lighting batteries 3,800 radio sets, 26,000 motors control gears, 3.3 lakhs of electric fans and 94,000 house service meters during 1958-59.

In the group of industries covering the manufacture of motor vehicles and ancillaries, four units have been sanctioned loans to the tune of Rs 1.7 crores. The issue of debentures to the extent of Rs 1.6 crores by one of these units has been underwritten by the Corporation jointly with two other institutions. This concern has repaid the IFC loan from the proceeds of the debenture issue. Another unit has also repaid the loan. In respect of one of the two remaining concerns, the Corporation has agreed to guarantee deferred payments to the extent of Rs 28 lakhs in connection with the import of capital goods. These two units have produced, among others, nearly 7,300 scooters, motor-cycles and 3-wheelers and more than one lakh pieces of clutches and brake parts.

As for other groups of industries like wood and cork, rubber products, vegetable and animal oil and fats, miscellaneous chemicals, pottery and earthenware, iron and steel, rail-road equipment, bicycles, miscellaneous manufactures and electric light and power, it is seen that 33 units have been sanctioned loans aggregating Rs 5.3 crores. Twenty-six of these units have availed themselves of the loans to the extent of Rs 3.7 crores.

The consolidated figures for all the groups of industries show that 190 units in all have been sanctioned, up to 30th June 1959, loans aggregating Rs 66.7 crores, of which Rs 42.3 crores have been disbursed and Rs 10.5 crores have been declined or are not to be made available. The total paid-up capital of the units concerned is Rs 56 crores and their total net sales in 1958-59 have been valued at about Rs 109 crores; here, the two totals do not include the figures in respect of concerns which have repaid the loan in full, which have declined the loans sanctioned to them, to which loans have not been made available, which have not gone into production, whose factories have been sold by the Corporation, or which have stopped working.

A state-wise break-up analysis of loans sanctioned for the 190 units reveals the following position:

	Rs crores
Bombay ..	19.5
Madras ..	9.5
West Bengal ..	6.3
Uttar Pradesh ..	5.6
Mysore ..	5.1
Bihar ..	5.0
Kerala ..	4.3
Orissa ..	3.3
Andhra Pradesh ..	3.1
Punjab ..	3.0
Rajasthan ..	0.7
Assam ..	0.6
Delhi ..	0.2
Madhya Pradesh ..	0.4
Total ..	66.7

A break-up analysis of loans according to size reveals that 90 concerns have been sanctioned loans of up to Rs 20 lakhs to an aggregate extent of Rs 9.5 crores; that 54 concerns have been sanctioned loans of more than Rs 20 lakhs and up to Rs 50 lakhs to a total extent of Rs 18.9 crores; and that 46 concerns have been sanctioned loans of more than Rs 50 lakhs to an aggregate extent of Rs 38.3 crores.

It is again noteworthy that, if the long-established sugar and textile industries are excluded, the industries which have been significantly assisted by the Corporation are found to be the younger and the newer industries. When it is also remembered that, for its lending activities, the Corporation has borrowed directly from the Government Rs 18 crores (of which Rs 5 crores have been repaid) and borrowed, with Government's concurrence and help, nearly Rs 17 crores from the public, how much the new and ancillary industrialisation owes to the Government, both directly and indirectly, becomes apparent. The conclusion, then, is that the private industrial sector, like the cooperative sector, is not in a position to stand entirely on its own legs. Perhaps, this is as it should be in an under-developed economy.

DELHI REVIEW

IFC's New Role

The Industrial Finance Corporation as an institution for rendering financial assistance to industries was the first one of its kind to be set up in the country, though, following it, a few other institutions with similar purpose have been set up and have been working successfully. In its activities, the IFC figured mainly as the provider of credit through direct loan assistance, while the Industrial Credit and Investment Corporation of India, which is a sister institution, has been concerned both with the provision of industrial credit as well as the promotion of capital formation through underwriting of new capital issues. This limitation of the IFC role to the mere provision of direct credit in exclusion of promotion of capital formation through underwriting of issues in the share market was justifiable in view of the need to minimise the risks to the Corporation in the early period of its working. By the same token, the fact that the Corporation has now taken upon itself the new task for the promotion of capital could be taken as a measure of the confidence felt by the management in the Corporation's ability to take more risks.

Referring to this new role of the Corporation, Mr K. R. K. Menon, Chairman, observed that, with the assumption of responsibility for underwriting of issues, the Corporation would play effectively that role which institutions of its kind in other foreign countries are fulfilling. Mr Menon has also reported fair progress in this new line of activity of the Corporation. The Government's decision to let the Corporation use foreign credit, including dollar credit from the Export-Import Bank, would also make it a more useful body.

The decision to enter into this line of activity could also be taken as proof and sign of the steady progress maintained by the Corporation in its main line of business. This is borne out by figures of loans sanctioned to industries. Such loans sanctioned by the Corporation to various industries during the last 11 years of its working have been placed at Rs 66.69 crores. New undertakings had benefited to the extent of Rs 44.23 crores while 115 old concerns have received Rs 22 crores as loan assistance for renovation, modernisation and expansion. Bombay State has received the largest amount of Rs 19.5 crores from the loans sanctioned by the Corporation, while Madras comes next with a share of Rs 9.47 crores.

The Corporation has been inclined in its programme of loan assistance to throw its weight on the side of cooperative undertakings. Of the Rs 3.79 crores sanctioned during 1958-59, Rs 1.70 crores was for such cooperative undertakings, mainly in the sugar industry. The satisfactory working of the Corporation is borne out by the rise in its gross income from Rs 154.91 lakhs in 1957-58 to Rs 203.38 lakhs in 1958-59.

*

Panchayat Legislation

Measures seeking to provide for the creation of local units of administration, such as the village Panchayats have formed one of the important subjects of recent legislation in many States. These measures were necessary in view of the objective of democratic decentralisation laid down in the Constitution as the ultimate pattern of administration for the country. However, the element of urgency was supplied by the compulsions of planning, particularly the need to mobilise the voluntary efforts of the people for nation building activities of a local character. This idea to canalise the voluntary efforts of the people found expression in the community development movement which was initiated in the First Plan. Such a movement was bound to be hampered without effective units at the village level to assume responsibility for execution of development schemes. It was to supply such leadership in local developmental activities that the village panchayats were conceived by the Government.

Most of the State Governments are already engaged in framing legislation aimed at democratic decentralisation with the village panchayats as the unit of village administration. However, by virtue of the varying scope of such decentralisation envisaged by different State Governments and also reflecting the pressure of other legislative business, the progress of such legislation has not been uniform everywhere. Rajasthan has, by passing the Panchayat Samitis and Zila Parishads Act 1959, become the first State to implement the recommendations of the Balwantrai Mehta Study Team. The Act provides for the setting up of Panchayat Samitis in all the 122 existing Community Development Blocks and the 110 shadow blocks, i.e., areas not covered by the CD Programme, and Zila Parishads in all the 26 districts.

The Bill provides for the replacement of the Block Development Committee at the block level by the Panchayat Samiti, which has also more powers vested in it than the Block Development Committees. The Samiti is also to be provided with such funds from the Government as would enable it to carry out its obligations. While the Samiti has been vested with powers to levy taxes to augment its resources for undertaking other developmental activities, such taxes have been kept separate from those to be levied by the village Panchayats. The Act also envisages full freedom for the Samiti in framing its budget and formulating its plans for development.

The activities of the Samitis would be supervised and coordinated by the Zila Parishad, the house of elders of the district. This body would examine the budgets of all the Panchayat Samitis and distribute among the Samitis in the district the ad hoc grants allotted to the district by the State Government.

*

Waste in Education

The secretaries of Secondary Education Boards meeting in Delhi to discuss measures to check the large failures in secondary public examinations were not considering a new problem. For, the all-India Council for Secondary Education had already gone into the question previously, and had suggested some measures calculated to produce better results in the school final examination. These include better balanced syllabi and coordination of teaching techniques, examination procedures and educational objectives.

While expressing agreement with the findings and recommendations of the All-India Council for Secondary Education, the Conference of Secretaries has stressed the need for improvement of teaching with particular reference to Mathematics and English. Poor performance in these subjects is considered to account for quite a large proportion of failures. These are subjects the study of which is important for progress of scientific and technological education. The Conferences recommendations in regard to English teaching include planned and concerted efforts to improve the language competency of the teacher and adoption of a syllabus in English based on controlled vocabulary and graded structures. Similarly, with regard to mathematics, provision of in-service training to teachers in the lowest classes so that they could stimulate children to study mathematics from the beginning has been suggested.

While the Conference has expressed concern at the large number of failures in the school final examination, it has also expressed doubts about the adequacy of the present system of examination from the point of view of testing the merit of the students. This question of reforming the examination system was also considered by the Secondary Education Commission which had expressed itself in favour of internal assessment of student's worth. The defect of the present system of examination, according to Dr K. L. Shrimali, was that it provided a test only for the verbal ability of the students and overlooked manual and aesthetic ability. This, however, is as much the result of defective syllabi as of a defective system of examination. The chief objection against the internal assessment is that it places undue reliance on the judgement of teachers, some of whom as Dr Shrimali pointed out, were unlikely to be partial.

NORTH INDIAN NOTES

S. E. RLY TENDERS

Sealed tenders are invited for (i) Tender No. CON|COS|88|F2|59 for supply of 12,000 Nos. Pulley wire 2 way swing as per IRS Drawing No. SA. 3057. Earnest money is Rs 350/-. Tenders will be opened on 2-11-59 at 12 noon.

(ii) Tender No. CON|COS|89|P&M|B|59 for supply of 2 sets Electrical driven vertical spindle deep well turbine pump capable of delivering 12,000 GPH of reasonably clear water against a total head of 160 ft. from all causes complete with a Motor and Starter suitable for 400 volts, 3 phase 50 cycles, 1450 RPM. The equipment should comply with the covering specification attached. Earnest money is Rs 450/-. Tenders will be opened on 2-11-59 at 12 noon.

(iii) Tender No. CON|COS|90|F2|59 for supply of 146 Nos. circuit controller rotary actuated, 4 way, with slotted arm for signal to I.E.W's Cata. Ref. 12T|4-S or similar. Earnest money is Rs 350/-. Tenders will be opened on 3-11-59 at 12 noon.

Tender forms are obtainable from the office of the undermentioned (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs 2/- (not refundable) per copy per tender by money order to him direct in the case of outside firms and on production of cash receipt from this Rly's Chief Cashier at Garden Reach by local firms.

Tender should accompany the receipts for depositing the earnest money as stated above with this Rly's Chief Cashier without which the tenders are liable to be rejected. Approved contractors having a permanent deposit of Rs 1,000/- with the undermentioned are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

NORTH INDIAN MARKETS

Sugar Prices at New High

SUGAR prices have recorded fresh higher levels for the week despite the release of 1.75 lakh tons by the Government. This is mainly due to the fact that the supply position has not yet eased, especially as there is a seasonal increase in demand for the ensuing festivals. Moreover, prospects of an early resumption of crushing do not appear to be bright. For obvious reasons, the rate for the commodity has hardened further to Rs 128 from Rs 124 per bag quoted in the previous week.

If present indications are any guide, not much reliance can be placed on an improvement in the next season's production, especially in Northern India. Although the supply-demand position does not justify the present dearness in prices, it looks as if artificial shortages have been created by speculative manipulations. Whether the blame is to be placed on the industry, the Government or the distributors, the fact remains that consumers are showing increasing concern about the steady rise in prices. Unless vigorous steps are not taken, supplies may not be available at reasonable prices.

It is, however, encouraging to note that a halt has been cried to the rising trend in sugar prices on the London market. Indeed, the New York market, which determines the world trend, has at times shown a slightly easier tendency. The beet crop in Europe has quite definitely been affected by the prolonged period of drought this summer; but whether the fall in output has been great enough to push prices up any further is another matter. There has been talk that Russia may be buying more sugar on the world market soon.

*

Gur

In sympathy with crystal sugar, Gur prices have developed a hardening tendency in the Hapur market, where the rate is quoted at Rs 23 per maund. New gur has started arriving in the market in a small quantity, which is being lifted by local consumers. Old gur arrivals have, therefore, increased to a daily average of 100 maunds out of stocks retained by producers, who are expecting fancy prices at the fag-end of the season. Stocks are estimated at 40,000 maunds.

Large-scale crushing is expected to begin after a fortnight's time. Rainfall for the cane crop is still deficient and a sub-normal crop is reported.

In the Muzaffarnagar market, prices have shown a rise of 25 nP to 50 nP per maund following good demand from Gujerat in the face of the declining stocks, which have fallen to 15,000 maunds.

*

Khandsari

Khandsari prices have also developed a hardening tendency due to good demand in the form of Boora. The trade and the industry are keenly awaiting the Uttar Pradesh Government's new policy about khandsari production in the mill areas. Rates are moving between Rs 37 and Rs 41 a maund, according to quality.

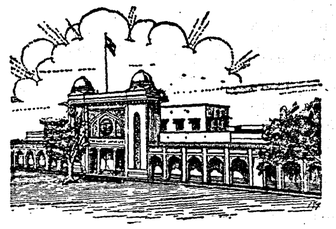
*

Foodgrains

Conditions in the Hapur Foodgrains market have remained generally steady on disquieting news of the failure of monsoon in East Uttar Pradesh and sub-normal rain in other parts of the State, resulting in damage to paddy and late maize and bajra crops. Wheat prices have remained almost unchanged and arrivals in the open market are almost nil. But, the commodity is reaching the market from private hands at a daily averagee of 100 maunds. There has been slight rainfall in Hapur and surrounding areas; but it is still deficient for the "rabi" sowings. Harvesting of paddy has begun and the new grain is expected in the market in about a fortnight.

Gram prices have registered a rise of about 75 nP a maund on reports of damage to the "khariff" crop and steady advices from the Punjab. New Maize arrivals have increased to an average of about 100 maunds a day and prices are ruling steady due to good consumer demand. The Government have stopped the purchases of Barley and Bejhar, which continue to rule steady. Prices of other grains have remained unchanged.

In the Delhi grains market, Rice prices have shown small losses as arrivals, at about 6,000 maunds, are considered to be satisfactory. Wheat arrivals have totalled 11,500 maunds. Reports of delay in new crops are responsible for a small rise in maize prices. Jowar rates have gone up by Re 1 a maund on reports of shortage of stocks. In the Pulses market, Urad and Moong are in good demand for festivals and stocks are lacking, which have resulted in a rise of about Rs 1.50 a maund.



*

Wool

With the pre-Puja demand from Bengal, Bombay and Assam and some Bihar markets, activity in the Amritsar Wool market has broadened considerably during the week under review. Punjab traders have shown interest in coarse qualities.

THE PENINSULA

Stanmobile

"STANMOBILE", the low-priced small car of the Standard Motor Products Madras Ltd, was press-shown here early this week. It is an austere two-door version of the existing Standard Ten. Its accommodation capacity, including the driver, is 4/5 persons. The front seat can be folded flatly so that rear-occupants could easily step in and out of the car. The car's mileage per gallon is claimed to be around 46, while its minimum speed is the same as that of Standard Ten, 80 miles per hour. Ex-factory price of this vehicle will be Rs 8,000, and, including the dealers' commission, it would be Rs 8,500.

Judged from the specifications laid down by the Government for a low-priced car, neither of the present models—the DKW contemplated for manufacture by Messrs. Tatas and the Morris Mini Minor by the Hindusthan Motor Limited—could be said to approach the price level of Rs 5,000/7,000. Whatever the other two manufacturers may have in their mind, so far as the Standard Motor Products Company is concerned, they think that only the purchasing power of the people should be the determining factor regarding the type and price of the vehicle. In the United Kingdom, it is reckoned that, to buy even the cheapest car, on hire-purchase, the owner should earn £900 a year. In the U.K, the average earning of an industrial worker ranges between £15 and £20 a week; in America the average yearly earning of a car-owner is approximately 6,480 dollars or Rs 30,000 approximately.

In India, there are 189,300 persons whose income is above Rs 10,000 yearly, according to a publication of the Central Board of Revenue for 1956-57. In the income-group, Rs 5,000/10,000, the number of persons is estimated at 261,000. The total number of cars on the road at the end of March 1959 is 204,557. Apart from the difficulties of capitalising the necessary funds to purchase a car, it costs about Rs 200 a month to maintain a car. Necessarily, therefore, the purchasing power is limited to the first category of persons with income above Rs 10,000 yearly. People within the income group of Rs 5,000/10,000 form another, necessary element who purchase second-hand cars: if second-hand cars are not sold, it will reflect on the sale of new cars.

There is now a sudden spurt in the demand for automobiles, and it is estimated that there is a backlog of 16,000 vehicles on the order books of car distributors throughout India. This demand is due to the vacuum created during the years 1957/1958 as a result of import restrictions. There is also an element of fear regarding the possibility of getting a new car. According to Standard Motor's Managing Director, Mr K. Gopalakrishna, the majority of people waiting for new cars are already car-owners, and they would like to utilise the opportunity to cash in on their existing vehicles at inflated prices and acquire new cars. He could not say whether this present rush for cars would continue when supplies become normal.

As to the feasibility of making a car within the price range of Rs 5,000/Rs 7,000, Mr Gopalakrishna feels that, at the present industrial development of our country, the cost of components of a car manufactured in India is 100% more than the imported components. He affirmed that the greater portion of the value of the car represents the cost of components. The margin left for the manufacturers, representing cost of production, overheads, etc., is within a limit of Rs 1,000 per car and, unless the price of components could come down, the total value of the car cannot be reduced.

Mr Gopalakrishna stated that several schemes have been submitted to the Government for the manufacture of a low-cost car. Most of these cars have not been tried and proved successful under the road conditions in India. He added that most of the continental cars today were useful for urban transport purposes where roads are of excellent condition and the vehicles are not subject to overloading and misuse—which is not an uncommon feature in our country.

Analysing the repercussion of the introduction of the small-car at this stage of the Indian automobile industry in India, Mr Gopalakrishna said that the small car would naturally step into the place of the sale of used cars, thereby reducing the volume of sales with respect to established makes at present, viz., Hindustan Ambassador, Fiat and Standard. He is also of the view that the majority of the buying public demand a car well-finished and well-equipped and reliable in its performance. How could a cheap car satisfy the general demand, unless it is so regimented that there would be no option but to purchase the cheap car that is available?

So far as the protype of the Stanmobile is concerned, Mr Gopalakrishna stated that, if the Government of India could allow a price revision of bigger car from the Standard Motor Plant (called Pennant Deluxe), it would be possible to subsidise the small car and reduce the price by about Rs 500

The Stanmobile is being railed to New Delhi for being shown to the Jha Committee and also for public preview, just as the other two models have been exhibited in India's capital.

There was an undercurrent of anxiety among the Standard Motor people here that, possibly, the Government of India might license someone and bring a new entrant into the field for the manufacture of the so-called low-priced car. If such a one was so licensed, who might be expected to be an aggressive type of industrialist with greater resources at his disposal than his other compeers, there is the undoubted possibility of the industrialist's new version killing the others in the market, including the Standard Ten or the proposed Pennant Deluxe.

In the course of his talks with Pressmen, Mr Gopalakrishna did not indicate what the Government of India had in view and whom they had in view to be encouraged in the manufacture of the small car. But it was gathered unmistakably that Standard Motors, a pioneering industrialist venture in the South, are in legitimate and avoidable anxiety about their future. For, as pointed out by Mr Gopalakrishna, the so-called cheap cars could not be really cheap as long as components made in India remain at the present high prices. Nor could he—or any manufacturer, for that matter—do anything against inflationary tendencies which the country has been progressively facing due to large deficit financing.

This is a point which has to be guarded against because, so far as industrialist ventures in the Southern Region are concerned, there is the genuine apprehension that the ultimate step, if it means the introduction of another powerful party, would be only to jeopardise the progress hitherto achieved by Standard Motor Products.

MADRAS REVIEW

BANGALORE SILK:

During the week ended 24-9-'59, there was no material change in the demand and supply of raw silk in the Bangalore Silk market. Prices, in general, continued to reflect a more or less steady trend.

Actually, there was a slight rise of 25 nP. in 2nd Quality Charka Silk as also in the case of Cottage Basin, the prices of filature silk remaining unchanged. Superfine and 1st Quality Charka silk registered a decline of 25 nP. to 50 nP.

As regards Reeling Cocoons, while Sidlaghatta showed a tendency to move up, both Mugur and Channapatna tended to decline.

THE UNITED PROVINCES ELECTRIC SUPPLY COMPANY, LIMITED.

NOTICE is hereby given that an Extraordinary General Meeting of the Members of the abovenamed Company will be held at the Registered Office of the Company, No. 12, Mission Row, Calcutta, 1 on Friday, the 30th October, 1959, immediately following the termination of the Annual General Meeting to be held on that day at 11-0 a.m. to consider, and if thought fit, to pass, with or without modification, the following subjoined resolution, namely:—

"That approval be and is hereby accorded to the re-appointment of Martin Burn Limited, as Managing Agents of the Company for a further period of 10 years with effect on and from the 16th August, 1960, on the terms and conditions contained in the draft agreement submitted to the Meeting and, for the purpose of identification signed by the Chairman thereof, and that an application to the Central Government for its approval to this proposal under Section 326 of the Companies Act, 1956 be and is hereby directed to be made".

By Order of the Board,
MARTIN BURN LIMITED
A. G. GIDLEY
Secretary,
Managing Agents.

12, Mission Row,
Calcutta-1.
3rd October, 1959.

NOTE: (i) A Member entitled to attend and vote is entitled to appoint a Proxy to attend and, on a poll, to vote instead of himself. Such Proxy need not be a Member of the Company. (ii) An Explanatory Statement is annexed to the Convening Notice issued to Members of the Company.

THE UNITED PROVINCES ELECTRIC SUPPLY COMPANY, LIMITED.

NOTICE

Notice is hereby given that the Annual General Meeting of the Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Friday, the 30th October, 1959 at 11-0 a.m. for the following purposes:—

1. To receive and adopt the audited Accounts for the year ended 31st March, 1959, and the Reports of the Directors and the Auditors thereon.
2. To declare a Dividend.
3. To appoint a Director in place of the retiring Director.
4. To appoint Auditors and fix their remuneration.

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 24th October, 1959 to the 30th October, 1959 both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy, who need not be a member, to attend, and on a poll, to vote instead of himself.

By Order of the Board,
MARTIN BURN LIMITED
A. G. GIDLEY,
Secretary,
Managing Agents.

3rd October, 1959.

SOUTH INDIAN NOTES

The Seminar on Women's Education, organised by the Madras State Branch of the Indian Conference of Social Work, has drawn attention to the lagging pace in women's education in the State and has called for special measures to bridge the gap. It was pointed out by Mr Subramaniam, Madras Minister for Education, that, while enrolment in respect of children between the age group of six to eleven had reached the figure of 72 per cent, only 50 per cent of the girls of the age group were in schools. It is thus clear that the formidability of the task involved in attaining the objective of universal education for the age group six to eleven before the end of the Third Plan period arises principally from the side of women's education. It is only in the measure in which progress is assured in women's education that the objective of universal compulsory primary education could also be attained.

The National Committee on women's education, which went into this question, had recommended high priority to women's education. Special measures were also recommended the most important of which was that the Centre should assume greater responsibility for guiding the States actively in formulating special schemes for the expansion of girls' education.

While expansion of facilities is the prime requirement for expansion of women's education, it is not the disparity of facilities that is reflected by the present gap in girls' education. As pointed out by Mr Subramaniam, the main cause for the lower figure of enrolment of girls in the primary stage of education is the pressure of domestic service on girls. In this connection, Mr Subramaniam said that girls between the age group of six to eleven are prevented from attending schools by the need to look after the home and the small children when the women of the house went out to work. So, unless measures are devised to relieve girls from domestic duties, complete enrolment of the girls of the age group six to eleven for primary schooling could not be secured. Toward this, Mr Subramaniam has suggested the provision of creches in the villages to look after the babies now left to the care of girls of primary school going age.

Mr V. V. Giri, Governor of Uttar Pradesh, who presided over the seminar, stated that the education of the mother should be the starting point in their programme of spreading girls education. Such a scheme, by its very nature, cannot bring about a spectacular expansion in girls' education in the short-run. It could only be part of a long-term approach to education in general.

Women's Education

Labour Productivity

Presiding over the symposium on productivity held under the auspices of the Madras Productivity Council, Sir S. V. Ramamurthi, Advisor to the Planning Commission, spoke on the role of labour in increasing productivity in an under-developed country like India. The American participant in the symposium, who included Mr Harry H. Pollak, International representative of the American Federation of Labour, Mr John E. Cullerton, President of the Hotel Service Workers, and Mr James H. Holleran, Chief of Trade Union Programme Division of the US Department of Labour, explained the American achievements in this field. While explaining the American approach, which was essentially based on improvement of technology, the speakers took care to point out the unsuitability of the American method to India. In America, the stimulus to productivity drives was provided by the challenge of increasing wages. It was inevitable in the circumstances that the movement should be directed along technological lines. The adverse effects in the form of large-scale displacement of labour could be disregarded in view of the opportunities existing in that country for alternative employment for the workers. In India, the existence of the unemployment problem of massive dimensions rules out recourse to technological improvement. The problem in India is to raise the individual output of workers and this has to be done on the basis of more intensive utilisation of the labour force at present working in industries.

The immediate significance of productivity in the country, as pointed out by Mr Gurumurthi, one of the labour representatives present at the meeting, lies in the reduction of wastage, better handling of materials and toning up of efficiency. Even in this limited scope there are misgivings and prejudices on the part of workers against productivity schemes which are not all related to fears of retrenchment. The opposition of labour, according to Mr S. C. C. Anthony Pillai, MP, is partly attributable to the lack of democratic traditions among the trade unions and the consequent lack of discipline among the workers. The creation of a proper climate in the minds of workers is, therefore, the most important of the tasks in launching productivity campaigns. The labour representatives who spoke listed two essential conditions for labour participation in productivity schemes guarantee against retrenchment following increase in productivity, and guarantee against unfair increase in workload. There is also need for evolving proper criteria for assessing the contribution made by various factors to increase in production and for sharing the benefits arising out of increased productivity.

Provision of Funds

(Mr K. V. Iyer writes from Madras)

In a note which appeared in your esteemed journal some years ago under the above heading over my signature (since reprinted in "Stray thoughts on Indian companies"), I observed as follows:—

"To put it diagramatically, the ordinary share capital of a company should be like the broad base of a pyramid with preference share capital and debentures on the top of it, making a well proportioned whole. Any other arrangement would be like a pyramid standing on its apex, resulting in a state unstable equilibrium."

This generalisation is largely sustained by practice of companies, both Indian and English. An analysis made from the recent reports of a few companies brings out the picture given below:—

English Cos.—	per cent
Equity capital ..	82.5
Pref: capital ..	17.5
Total capital ..	100.0
Debentures .. of total capital	65.3
	per cent
Indian Cos.—	
Equity capital ..	92.7
Pref: capital ..	7.3
Total capital ..	100.0
Debentures .. of total capital	38.0

Of late, this healthy and conservative practice has frequently been disregarded. The steady, though slow, progress of the recent past does not satisfy our entrepreneurs during the present times; a sort of megalomania has crept into this field. Here is an instance which has been dealt with by one of your contemporaries. The equity capital of the company will be of the order of Rs 60 lakhs, preference capital Rs 110 lakhs making in all Rs 170 lakhs of capital. Loan from IFC is Rs 100 lakhs and the foreign suppliers of capital equipment have agreed to take deferred payment to the extent of Rs 165 lakhs. That is, what may be called debentures total Rs 265 lakhs, i.e., 150 per cent of the capital or one half as much again as the capital.

MADRAS REVIEW

SAUGOR ELECTRICITY SUPPLY COMPANY, LIMITED.

NOTICE is hereby given that an Extraordinary General Meeting of the Members of the abovenamed Company will be held at the Registered Office of the Company, No. 12, Mission Row, Calcutta, 1 on Friday, the 30th October, 1959, immediately following the termination of the Annual General Meeting to be held on that day at 11-15 a.m. to consider, and if thought fit, to pass, with or without modification, the following subjoined resolution, namely:—

"That approval be and is hereby accorded to the appointment of Martin Burn Limited, the present Managing Agents of the Company as Secretaries and Treasurer for a period of 10 years with effect on and from the 16th August, 1960, on the terms and conditions contained in the draft agreement submitted to the Meeting and, for the purpose of identification signed by the Chairman thereof, and that an application to the Central Government for its approval to this proposal under Section 326 of the Companies Act, 1956 be and is hereby directed to be made".

NOTE: (i) A Member entitled to attend and vote is entitled to appoint a Proxy to attend and, on a poll, to vote instead of himself. Such Proxy need not be a Member of the Company. (ii) An Explanatory Statement is annexed to the Convening Notice issued to Members of the Company.

This announcement is not an invitation to subscribe for shares but is issued for the purpose of giving information concerning the Company. The formal Prospectus dated 17th September, 1959 has been delivered to the Registrar of Companies, Calcutta, for registration as required under Section 60 of the Companies Act, 1956. Copies thereof can be had from the Registered Office of the Company or from the Banks and Brokers named below:

TEXTILE MACHINERY CORPORATION LIMITED

(Incorporated under the Indian Companies Act, 1913)

ISSUE OF

1,00,000—6¼% (Free of Income-tax) Cumulative Redeemable Preference Shares of Rs. 100/- each at par

Payable Rs. 50/- per share on application and Rs. 50/- per share by one or more calls as may be made by the Directors by giving three calendar months' notice of each call. Redeemable at par on 31st December, 1970.

SHARE CAPITAL

AUTHORISED: - - - -	**Rs. 5,00,00,000**
SUBSCRIBED & PAID-UP:	
15,00,000—Equity Shares of Rs. 10/- each - - -	**Rs. 1,50,00,000**
10,000—5½% (Free of Tax) Cumulative Pref. Shares of Rs. 100/- each -	**Rs. 10,00,000**
30,000—5½% (Subject to Tax) Cumulative Redeemable Pref. Shares of Rs. 100/- each—(Redeemable at the option of the Company at 3 months' notice) - - -	**Rs. 30,00,000**
	Rs. 1,90,00,000

LOAN CAPITAL:

The Company has 4,000—6% Debentures of the face of Rs. 40 lacs secured against fixed assets. They are redeemable on 31st December, 1960. The company has cash credit arrangements with the State Bank of India, Calcutta, and has also obtained unsecured loans and advances from other banks.

FIXED ASSETS & RESERVES:

The written down value of the fixed assets as on 31st December, 1958 amounts to Rs. 219,34,595/-. As at the said date the Reserves of the Company (including Development Reserve of Rs. 22,90,000/-) amount to Rs. 51,20,855/-.

PROFITS:

Report of the Auditors of the Company shows that the average profit of the Company for the five years 1954 to 1958 inclusive, before depreciation and taxation amounts to Rs. 70,18,683/-, and the average net profits (after depreciation and taxation) amount to Rs. 26,20,657/-.

DIVIDEND PAID:

The Company has paid dividends on Equity Shares as under during the last five years:

Year	Rate of Dividend.	
1954 ...	Re. 1/-	on 6,00,000 Shares
1955 ...	Re. 1/-	on 6,00,000 Shares
1956 ...	Rs. 1/25 nP.	on 15,00,000 Shares
1957 ...	Rs. 1/50 nP.	on 15,00,000 Shares
1958 ...	Rs. 1/50 nP.	on 15,00,000 Shares

OBJECTS OF THE ISSUE:

The proceeds of the issue will be utilised for the expansion of the various activities of the Company such as manufacture of Water Tube Boilers, Sugar Mill Machinery, setting up of a Re-Rolling Mills, etc., etc.

UNDERWRITING:

The entire issue has been underwritten by the Central Bank of India Ltd. for an underwriting commission of 3% (including 1% brokerage).

BROKERAGE:

Brokerage of one per cent will be paid by the underwriters from out of the commission of 3% payable to them, to recognised Bankers and/or Brokers on allotments made in respect of applications from the public bearing their stamps (i.e. on allotments other than those against applications from members of the company and/or their nominees for shares offered to the members).

PROSPECTUS & APPLICATION FORMS

Copies of the Prospectus, on the terms of which alone applications will be considered, and Application forms may be obtained from the Registered Office of the Company or from the following Bankers at their Calcutta, Bombay, Delhi and Madras Offices or from the following brokers or from the Underwriters at their important branches.

Bankers:

The State Bank of India,
3, Strand Road, Calcutta.

The Central Bank of India Ltd.,
33, Netaji Subhas Road, Calcutta.

The United Commercial Bank Ltd.,
2, India Exchange Place, Calcutta.

The Bank of Baroda Ltd.,
4, Brabourne Road, Calcutta.

The Union Bank of India Ltd.,
6, Clive Row, Calcutta.

Brokers:

6, Lyons Range, Calcutta—1.

M/s. G. M. Pyne,
14, India Exchange Place, Calcutta—1.

M/s. Navalchand T. Shah & Co.,
120, Stock Exchange New Building,
Dalal Street, Bombay—1.

M/s. Mahadevia Brothers,
Stock Exchange Building,
Dalal Street, Bombay—1.

M/s. Batlivala & Karani,
Union Bank Building,
Dalal Street, Bombay—1.

M/s. Harikisondass Lukhmidass,
5, Hamam Street, Fort,
Bombay—1.

M/s. Paterson & Co.,
22, Errabalu Chetty Street,
Post Box No. 48,
Madras—1.

M/s. Harbans Singh Mehta & Co.,
33, Regal Buildings,
New Delhi—1.

SUBSCRIPTION LIST:

The subscription list will open at the commencement of banking hours on 30th September, 1959 and will remain open until the close of banking hours on 20th October, 1959.

TEXTILE MACHINERY CORPORATION LTD.

Belgharia, 21st September, 1959.

The Imperial Tobacco Company of India Limited

*

Speech by the Chairman, Mr G. H. J. Clarke, at the Forty-eighth Annual General Meeting of the Company on the 25th September 1959.

Ladies and Gentlemen:

I have much pleasure in welcoming you to this the Forty-eighth Annual General Meeting of the Company.

The Notice convening this meeting, the Report of the Directors and the Accounts have been circulated, and with your approval we shall take them as read. I will now ask the Secretary to read the Report of the Auditors.

Board of Directors

At the end of May 1959, Mr. J. K. Hill retired from the Board. Mr. Hill first joined the Company late in 1926, and his long service ended with nearly four years on the Board. We wish him health and happiness in a well-earned retirement.

Accounts

The Balance Sheet and Accounts have been in your possession now for some time and I hope are largely self-explanatory. However, you may welcome comment on some of the more important items.

On the Assets side of the Balance Sheet, you will see that the value of Fixed Assets less depreciation shows a slight reduction this year. Details are given on pages 16 and 17 of the Report, from which you will see that the net additions to Fixed Assets are only Rs. 33 lakhs. Last year the comparative figure was Rs. 76 lakhs, and although this reduction reflects partly the fact that the Company's modernisation programme is nearly complete, it also high-lights the stringency of import control on capital goods.

During the year, Rs. 40 lakhs of the Company's holding in Government paper matured and this accounts for the reduction in Investments.

The stock of Raw Materials shows an increase of Rs. 67 lakhs. This represents increased stocks of leaf tobacco, a large part being American tobacco purchased under American Public Law 480. Such purchases are paid for in rupees, no foreign exchange being involved.

The reduction in stocks of Manufactured Goods has been brought about by increased use of road transport, the more expeditious delivery enabling us to reduce stock holdings and at the same time ensure that the consumer receives fresh stocks.

On the Liabilities side of the Balance Sheet, you will see that a further sum of Rs. 17½ lakhs has been added to the Fixed Asset and Stock Replacement Reserve. There is a reference to this transfer in the Directors' Report and I would add only that the need to retain in the business sufficient funds to cover the present cost of replacing fixed assets and stocks at today's higher prices is becoming increasingly widely recognised.

Turning now to the Profit and Loss Account, you will see that the value of sales shows an increase over last year of nearly 5%, though the increase in volume was only a little over 1%. You will recall that, in December 1957, Sales Tax on tobacco products was withdrawn and replaced by additional Excise Duties. The effect of this, which applied only to three months of the previous year but to the whole of the year under review, was of course to inflate the value of sales to the extent to which it was possible to pass on this additional taxation to the consumer.

The last items of the Accounts to which I shall make reference are the profit for the year and the rate of dividends—the items with which I know you are most concerned. You will have seen that the profit has dropped from Rs 132 lakhs to Rs. 115 lakhs. This has been caused mainly by increased costs of Raw Materials and increased Excise Duties. You will all be aware of the continued upward trend of costs, and the materials which we use for making and packing our products are no exception. In certain instances, it was deemed wise to absorb part of the Excise increases rather than risk loss of volume of business by increasing retail prices by the full amount.

Your Board remains firmly of the opinion that dividends should be paid only out of current profits, after setting up adequate reserves. We have, therefore, transferred to Fixed Asset and Stock Replacement Reserve Rs. 17½ lakhs, which we consider no higher than prudence dictates, and recommended the payment of a final dividend of 2%.

Raw Materials

When I addressed you last year, I stressed the fact that the Company relied on Indian resources for most of its leaf tobacco and all its requirements of cigarette paper, printing board and papers, aluminium foil and packet wrappings. We are now going further and are considering extending the manufacture of spare parts and encouraging the manufacture in India of fibreboard containers.

In addition to the commodities I have mentioned, we are also encouraging the erection of a factory in India to produce cigarette filters. Throughout the world, the filter-tipped cigarette is gaining in popularity and there are now some filter-tipped cigarettes on the Indian market. The filters are imported, just as they were when your Company first made such cigarettes in this country some years ago. If, as we hope, our plans fructify, our previous experience will enable us to give the Indian consumer a quality cigarette of this type without any appreciable use of foreign exchange.

Competition

This has been a year of exceptional activity throughout our industry and competition has been intense. Repeated increases in Excise Duties, and consequently in prices, in recent years have to some extent upset the established pattern of consumer preference not always in favour of your Company's products, and some competitors have benefited thereby. The building up of consumer loyalty to new products is expensive of both time and money but provided no further adverse circumstances supervene, we are confident that your Company will maintain its leading position in the trade.

Exports

Your Company's main contribution to India's balance of payments position has hitherto taken the form of conservation of foreign exchange by the substitution of indigenous for imported raw materials. We are making every effort to find an outlet for exports of tobacco goods and a member of our staff has recently made an extensive tour of West Asian countries to this end. Although, in the last two months, we have been able to make some modest export shipments, it would be wrong to raise false hopes. The export of manufactured tobacco goods from one country to another continues to decline throughout the world as one country after another establishes its own industry and raises tariff walls to protect it, as this country has effectively done, and though we anticipate obtaining a share of any export business which offers, we cannot reasonably expect to obtain from this source either important additional profits or any major contribution to the country's foreign exchange.

Staff Training

On pages 6 and 7 of our Report, we have reproduced photographs of our residential training centre near Calcutta. This venture is proving of great benefit and during the year under review, 105 members of the staff attended residential courses. In addition to these training courses, senior members of our staff have attended sessions at the Administrative Staff College of India at Hyderabad, of which the Company is a patron. Where necessary, special tours for technical duty abroad are arranged in order that our staff can keep abreast with the latest developments in the industry.

Labour Relations

During the year, the Company has, in co-operation with the Union, experimented at one of its factories with Workers' Participation in Management. It is a little early to draw any conclusions but there are indications that this scheme is creating better understanding between workers and management. As a further step towards promoting mutual understanding, the Company is arranging a number of industrial tours for its workers to enable them to see at first hand some of the developments taking place in this country as a result of the 5-year plans.

The Company's terms and conditions of service for its workpeople are among the best in the country; the wage scales are scientifically based and the dearness allowance scales are linked to published cost of living indices. Together they provide an adequate level of reward in present day conditions.

Production and employment at all your Company's cigarette factories has been reasonably satisfactory except at Monghyr. The Monghyr operation has been unsatisfactory for a number of years, due largely to the labour force being greater than was justified by the output required for this factory. This position is likely to deteriorate further in the coming year if, as expected, orders for Nepal, which represent an important proportion of Monghyr production, are lost because that country becomes self-sufficient and ceases to be a customer. We are anxious to avoid a complete shut-down and there is still a hope, provided the full co-operation of all is assured, that a future can be given to this factory, albeit a limited one.

Although on occasion there has been some difference of outlook between management and workers, I am certainly not unmindful of the hard work put in by the Company's employees during the year, and once again I should like to thank them for their co-operation.

Taxation

When I addressed you last year, I expressed the hope that further imposts on the tobacco industry would not be forthcoming. The 1959 Budget shattered those hopes by imposing a further burden on the industry in the form of sub-

stantially increased Excise Duty. As a result, the Company had to make further changes in its selling prices, this being the fourth change in two years. As I have already indicated, such changes have a disrupting influence on trade and cause a number of smokers to look eleswhere if their favourite brands are placed out of reach of their pockets. This incidence of taxation is probably the greatest single factor which handicaps the private sector at the present time. The general rise in prices of raw materials and services is usually gradual and part of a nation-wide tendency affecting all industry alike. Changes in Excise are arbitrary and may affect one section of industry alone. They cannot be foreseen and are therefore the more difficult to deal with when they occur. When this form of taxation constitutes the largest single element in the cost of production, as in the cigarette industry, you will readily understand the magnitude of the difficulties which face the Management when the Government decides to revise the rates of Excise.

These difficulties are further enhanced by the continued and increasing activities of municipalities in raising revenue from tobacco products by octroi and terminal taxes. The effect of these is that either retail prices are forced higher in some places than in others, with a deleterious effect on the flow of trade, or your Company has often to contribute towards these taxes with a consequent immediate reduction of your profits.

In the field of direct taxation, we welcome the removal of Wealth Tax on Companies and Super Tax on excess dividends announced in the last Budget. We also welcome the simplification in the system of dividend taxation, coupled with a revised rate of Income Tax and Super Tax on Companies, but it should be noted that the implied rate of a total tax on Company profits of 45% will not be confirmed until the 1960 Budget is passed, and does not affect the accounts under review.

Prospects

The Company's sales during the five months to August 1959 show an improvement in total volume over the same period last year, but I must tell you that the general trend continues whereby there is a decline in the return to shareholders in relation to volume of sales. I therefore cannot anticipate with confidence an improvement in the final results in the coming year. Your Board, however, felt justified in declaring an interim dividend of 2½%, subject to tax, in respect of the year to 31st March 1960.

(Note.—This is not a report of the proceedings of the Annual General Meeting).

The General Assurance Society Limited

More Stable Economic Situation

Slow Expansion in General Insurance Business

Statement of the Chairman, Mr B. L. Jalan

The following is the extract of Chairman's address of Sri B. L. Jalan at the Annual General Meeting of THE GENERAL ASSURANCE SOCIETY LIMITED held on 30th September 1959:

Gentlemen,

On the economic front, better and more stable conditions have returned in the world markets and particularly in the United States. While the steel strike has been prolonged, the U.S. economy presents all the signs of good health and vigour. The aggressive and extra-economic market manoeuvres by the Chinese continue but have subsided a little. It may be recalled that the earlier claims of a very spectacular advance both in agricultural and industrial production have been recently discounted officially by the Chinese authorities. How the earlier estimates were arrived at remains a mystery behind the iron curtain. Nevertheless, the new pattern of tactics of the Communist countries to disturb and weaken free economies should be recognised.

Consistently with the current situation in the world markets, the position of our cotton and jute textile industries has also improved. But the export position does not seem to have improved to the desired extent. Thus while dispatches for exports of jute goods from the mills have improved, they were still low at 91,397 tons in July, 1959, as compared to 102,087 tons in July last year. The cotton textile exports improved from 278 million yards in the first half of 1958 to 309 million yards in the same period of this year. If the present improvement is maintained it is expected that exports of cotton textiles will reach a figure of 700 to 750 million yards against 587 million yards in 1958. It will still be low, however, as compared to 840 million yards of exports in 1957.

The **per capita** availability of cotton textiles in the country increased by about a yard during the last 5 years owing to increased production and fall in exports, offset to a small extent by the rise in population. The problem of economic disposal of increased domestic supplies became acute owing to rise in food prices and the consequent fall in the surplus purchasing power available for clothing, etc. While the efforts of the Government in aiding the jute and cotton textile industries to modernise the mills must be greatly appreciated, one would feel that more effective steps will have to be devised to increase the export potential. I would venture to suggest that conditions should be created so that every mill should be able to export at least 10 per cent of its production, while others which are exporting more are further encouraged. We should achieve the minimum export target of 1000 million yards a year. Increased exports will help to keep up internal prices by reducing domestic supplies and thus the industry will continue to function in an atmosphere which would ensure prosperity. Exports could be encouraged directly by granting extra quotas for imports of better varieties of cotton, essential stores of the industry or even other commodities against increased exports of individual mills. It is only through increased exports that we would be able to rehabilitate the industry fully and at the same time help cover the country's overall foreign exchange requirements.

It is, indeed, a disquieting feature of our economic operations that while, as a consequence of very substantial restrictive measures, our imports have shown a downward trend, exports are also declining. While during the last three quarters of 1958-59, the payments position has slightly improved, thanks to the generous credits made available by the World Bank and certain friendly countries, the foreign assets of the Reserve Bank at Rs. 213 crores at the end of March, 1959, had decreased by Rs. 54 crores from Rs. 267 crores at the end of March, 1958. The improvement in recent months has been very negligible and unless the export position improves very substantially, we will have to secure external assistance on a much larger scale as otherwise serious shortages would be created within the country. This is not a happy position in view of our expanding economy. In the face of rising money incomes, shortages would lead to a rise in price levels. At the same time these will act as a great damper on our industrialisation programmes. While we are committed to the objective of a more ambitious industrial advance, we should frankly confess that many industrial projects had to be abandoned or postponed owing to non-availability of foreign exchange. A proposed industrial project today has to prove—and prove to the satisfaction of the administration—that it would not involve foreign exchange commitments for a given period and that during the subsequent period it would do so under given limitations. We are fully aware of the absence of producer goods industries in the country. A new industrial project has, of necessity, to depend invariably on foreign supplies of capital equipment and technical know-how. These supplies, it must be recognised, do involve foreign exchange payments, partly now, partly after some time. I am not suggesting or even indirectly implying that these controls are unnecessary or redundant. All that is intended to be expressed is that such conditions are not propitious for an expanding economy and in the context of bolder industrialisation programmes. Let us hope that with better food production, a more tactful handling of the food supply situation and commissioning of the new and expanded steel plants supported by subsidiary machine building and fabrication industries, the position will greatly improve and that conditions will be created so that any proposal acceptable within the framework of the Plan or Plans will not be turned down only because of foreign exchange shortage.

There cannot be two opinions about a bold approach to our problems of industrial and economic growth. The principal points at issue are as to how the requisite resources are to be raised, how they are to be channelled into desired directions and how optimum allocations are to be made between various sectors of the economy. I am afraid while a lot of attention has been paid to certain overall estimates of outlay, the more vital questions of methods of mobilisation of resources have been rather overlooked. There is also too much debate, less warranted

than ever before, on the talk of comparative value of different sectors of the economy. This emphasis has generally led to unnecessary and avoidable controversies on vague ideas about the functioning of this or that sector. An attempt has also been made to see that targets fixed for one sector are fulfilled at any cost irrespective of its effects and impacts on other sections of the economy. Thus while the targets for additional revenues through taxation have been exceeded, there have been shortfalls in other sources. The increased doses of taxation have been imposed at a time when major industries of the country were facing crisis. I wonder if at this stage it may be possible for us to learn from the economic experiment of Western Germany which achieved such spectacular revival in so short a time. In spite of its wholesale devastation during the War, Western Germany today is by far the strongest economy of West Europe and has emerged as a capital exporting country. This near-miracle has been achieved by Dr. Erhard's policies of restrained administrative expenditure, increased revenues through lower rates of taxation on expanded production achieved with the aid of economic incentives and fuller and free play of competitive forces and supply of easy industrial finance. While I admit that conditions as prevailing in India today would not be propitious for adopting the German system in its entirety, there does not seem to be a plausible alternative to its basic approach if our desired objective is to achieve an accelerated rate of growth under stable conditions.

Coming to our own General Insurance industry, one has the uneasy feeling that much remains to be improved. A glance over the Indian Insurance Year Book, published by the Controller's Office only early this month, shows that the business has not been expanding at a rate which would be commensurate with the increase in industrial production and in national income in the country. Between 1951 and 1957 the gross business in India of all insurers, Indian and non-Indian, increased by less than Rs. 4 crores or by 16 per cent only while industrial production and national income rose by 37 and 20 per cent respectively. One would certainly expect that the rate of business in insurance should have far surpassed the rate of growth in the economy owing to adoption of more progressive and modern methods in business and industry and spread of education and social consciousness. I believe that an average annual rate of 10 per cent increase in volume of business is the minimum target the industry must set for itself. With increasing cost in consequence of more liberal terms granted to employees, voluntarily, as a matter of collective bargaining or by way of liberal awards, it is essential for economic operations of the industry that such rate of increase in business should be secured.

It is also necessary, one would feel, that a stage has come when an assessment should be made of the results achieved by the new Code of Conduct promulgated by the General Insurance Council. I understand that the insurers have generally followed the code. The question which, therefore, arises is, whether the code has achieved the results for which it was introduced. The consensus of opinion is that the same chaotically competitive conditions continue to prevail in the industry today as they did before the new code was enforced. This is a serious question as many marginal insurers are passing through a period of uneasy suspense. How things have deteriorated would be at once evident from a comparison between the rates of marine insurance in 1950 and in 1959. These are also reflected in the consequent deterioration in the claims experience in marine business of all companies, big or small.

I wonder why this kind of wild competition should not give way to mutual cooperation and understanding in the industry. Such cooperation is not unknown to private business; nor is such understanding a new discovery. Even in our country, the industry has not hesitated to transfer control and direction of essential functions of individual units to collective guidance. Why can't we follow the example of the working time agreement in the Indian jute and hydraulic press industries and introduce some kind of collective self-control? To me, it appears, that it is only such kind of self-government which can ensure healthy and smooth functioning of this industry.

N.B. This does not purport to be the proceedings of the Annual General Meeting.

Orissa Cement Limited

Production Target in Third Plan

Need for Realistic Approach

Mr J. DALMIA, Chairman, on Problems of Cement Industry

Speech of Shri J. DALMIA, Chairman Board of Directors of ORISSA CEMENT LIMITED, delivered at the Ninth Annual General Meeting of the Company held at Rajgangpur (Dist. Sundergarh, Orissa) on Wednesday, the 30th September, 1959.

Gentlemen,

I welcome you to the Ninth Annual General Meeting of your Company. It is a matter of great pleasure that every year we meet once on this occasion to review the working and progress of the Company. The accounts for the year 1958 have been circulated. The Directors' Report which accompanies the accounts, gives a brief review of the main features of the working of your Company during the year under report. I need not discuss them, and with your permission, the Accounts and the Report will be taken as read. I am sure you will regard with satisfaction the working results of your Company for 1958.

EXPANSION PROGRAMME

The production of cement in the country is gradually rising. The plant at Satna in Madhya Pradesh has gone into production. Some other plants are in advanced stage of construction. The expansion programmes of existing factories are also in progress. By 1961, the installed capacity is estimated to touch 9.95 million tons. The demand for cement, which had greatly slackened last year and had entailed curtailment of production, is showing signs of improvement. It is, however, difficult to say how far this improvement would be maintained and keep pace with increasing production. In the case of your Works, some difficulties are being experienced presently in maintaining full despatches but I am hopeful that these will soon be overcome.

The experience gained during the Second Plan period should serve to underline the importance of setting realistic targets of investments and production. Failure to do so leads to lopsided development and can endanger the Plan itself. In the case of cement industry, the production target was revised and placed at 16 million tons. Last year with an installed capacity of about 7.00 million tons, the industry was faced with the problem of disposal of stocks and several cement kilns had to be slowed down or even closed. As I mentioned earlier, the installed capacity at the end of the Second Plan period, it is now estimated, will be 9.95 million tons as against the target of 16 million tons. The explanation sometime given is that the set back in cement consumption has resulted from shortage of steel and slowing down of various government projects. This may be true. But in planning all these factors have to be anticipated to a reasonable extent.

I am surprised, therefore, to learn that a target of 35 million tons cement production is being contemplated for the Third Five Year Plan. This would mean a 250 per cent increase over the capacity which will have been installed by the end of the Second Plan period, and will require an additional investment of the order of about Rupees 250 crores. I do not think that even with reasonable optimism about the increase in cement demand, it is possible to justify the proposed target. I suggest that the industry should be consulted before the plans in this respect are given a final shape. I would also urge that expansion in the capacity should be carefully planned to take place in areas where demand potentials exist or are anticipated.

DIFFICULTIES OF CENTRAL SALES TAX

Inspite of enactment of the Central Sales Tax Act, the difficulties and uncertainties of sales tax levies have not been fully resolved. Sales Tax Officers of the States come forward with all kinds of ingenius interpretations and spare no effort to tax even inter-state sales. Recently, the Government abolished sales tax on a few commodities substituting the same by additional excise duties. I would request the Government to extend this system to the cement industry also. Excise duty is already being recovered on cement. The duty can be suitably increased and the additional revenue distributed among the States on any agreed basis. This would stop evasion of sales tax payment as well as double imposition in certain cases. The process of recovery will also be simplified. This suggestion is a convincing example to show

that people do not mind paying the taxes if legitimately assessed and recovered.

LABOUR SITUATION

This year, we have sent a brief note to you about the labour situation at Rajgangpur Works. The strike which was started in March this year lasted for over four months and was ultimately called off unconditionally. The strike was both illegal as also in violation of the Code of Discipline in industry. This Code was accepted by common agreement at the Sixteenth Indian Labour Conference and it is intended to ensure better discipline and peace in industry. Under the Code certain obligations have been cast upon both management and trade unions. As the Code has no legal sanction and depends for its success on the extent to which it is observed and enforced by the parties, it was agreed by the Central Organisations of management and trade unions that they would without hesitation censure any violation of the Code on the part of their constituent members. The Central Labour Minister, Shri Gulzari Lal Nanda, who sponsored the idea is also very keen on the acceptance and adherence to the Code. In practice, however, it would appear that the trade unions show scant regard for the Code and their Central Organisations appear none too anxious to discipline their member unions. Even though the strike at Rajgangpur was prolonged and accompanied by several violent and disruptive activities, it is to be regretted that the Central Organisation to which the trade union concerned is affiliated, did not care to condemn the strike.

Apart from being illegal, the strike was directed against the payment of wages on piece-rate basis, a system which directly benefits the worker himself, provided of course, he is willing to do a fair day's work. Incentives were afforded for better outputs. In other words, the workers were given the opportunity to work and earn more. The importance of relating wages to production both as a means of increasing productivity as also improving standard of living of the working calss is being increasingly recognised in our country. At the Fifteenth Session of the All-India Congress Committee, one of the important resolutions stated:

> "Wages and salaries should be increasingly dependent on work done and on production and should be related to the conditions existing in India."

More recently, the Planning Sub-Committee of the AICC while dealing with the Third Five Year Plan has observed that "wages must be linked to productivity. Norms of productivity should be laid down and incentives (such as piece-rates) should be offered to workers to increase their productivity". The Central Wage Boards set up by the Government of India for some of the major industries in the country have also been specifically asked to bear in mind while recommending a wage structure, the desirability of extending the system of payment by results.

No sensible person having the good of workers at heart can possibly oppose the piece-rate system of wage payment which, as I have shown, is beneficial for the worker and accords with national planning and the drive to increase productivity. But, we have often seen, how outside elements forget the interests of the workers, and in their selfishness and arrogance, create discord between labour and managements. The earlier association of outside elements with trade unions is prohibited, the better it will be for the healthy growth of trade union movement in our country and cordial labour management relations. At the Seventeenth Indian Labour Conference held at Madras in July 1959, this question came up for consideration but I regret to find that the Conference allowed status quo to continue inspite of the recommendation in the Second Five Year Plan that a decline in outsiders managing trade unions should be encouraged. A letter which we have received from a shareholder is typical of the reaction in public mind to the activities of these outside elements in the trade union movement:

"You have done well to distribute with it the leaflet exposing the reprehensible activities of the Company's Mazdoor Sangh and its President. As stated in the leaflet, the latter appears to have incriminated himself more than once, and unless stern and deterrent action is taken at a suitable opportunity against the President, who, according to you, is at the bottom of all the mischief, the Sangh may prove a real menace to the working and prosperity of the Company."

As mentioned in the Directors' Report, inspite of the long strike, production practically remained unaffected. There are instances, however, in the country of serious losses of production resulting from illegal strikes. In the interests both of discipline and greater and efficient production, illegal strikes should be put down with a strong hand. Those instigating or participating in such strikes should not only be prosecuted but should also be required to pay adequate compensation to the employers for the losses suffered by them as a result of such strikes. Unless this is done, there will be no curb on these undesirable and irresponsible activities which are undermining industrial peace. I am glad that the arbitrators in the recent case of Rohtas Industries Ltd. awarded Rs. 6.90 lakhs to that Company as compensation against the workers for the losses arising from an illegal strike. The arbitrators, who were former members of the Labour Appellate Tribunal have given a bold decision recognising for the first time that employers, too, need to be protected against the misguided activities of trade unions.

REFRACTORY INDUSTRY

Since I addressed you last year, the refractory industry, under the impact of the increasing demand for high quality and special refractories has come to realise the need to gear itself to meet the requirements of India's rapidly expanding steel industry. The necessity has been recognised not merely of expansion but of developing and maintaining a positive advance on the technological front. Your Company is fortunately placed in this regard as it has incorporated in its composite refractories plant a certain measures of flexibility which can permit of progressive steps being taken to improve its manufacture and to diversify its scope of production.

Simultaneously there has been an appreciation of the importance of standardizing, as far as possible, the different specifications adopted at the moment by various units in the steel industry for certain refractories so as to allow the refractory industry to cater more effectively to those requirements. It is to be hoped that close collaboration in this field between the steel industry and the refractory industry will lead to a solution of certain porblems to their mutual advantage and to ultimate benefit of the country.

I am glad to inform you that normal conditions now prevail at Rajgangpur Works and I hope this will continue bringing prosperity to all including the workers.

I must express, on your behalf and on my own, our thanks and appreciation to the executives, staff, and workers who have worked loyally through the year. It is due to their determined efforts that despite serious and sometimes dangerous attempts to disrupt it, production was maintained.

N.B. The above extract of the speech does not purport to be the report of the proceedings of the Ninth Annual General Meeting of the Company held on the 30th September, 1959.

S. E. RLY TENDERS

Sealed tenders are invited for Tender No. CON/GM/55/HE(b)59 for supply of 2 Nos. Generating Plant, Petrol or Diesel Driven Capacity, 30 KVA, 230/400/440 Volts 3 phase, 50 cycles per specification. Earnest money is Rs 800/-. Tenders will be opened on 28-10-59 at 3 P.M.

Tender forms are obtainable from the office of the Controller of Stores (Construction Section), Garden Reach, Calcutta-23, on remittance of Rs 5/- (not refundable) per copy by money order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, S. E. Rly., Garden Reach, by local firms.

Tender should accompany the receipt for depositing the earnest money as stated above with this Rly's Chief Cashier without which the tender is liable to be rejected. Approved contractors having a permanent deposit of Rs 1000/- with the Controller of Stores are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

GENERAL MANAGER

S67

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED

(Incorporated in England)

Notice is hereby given that the Board of Directors of this Company have declared payment of a Supplementary Preference Dividend for the year ended 31st March 1959 of £2-11-5.1/7% less Income Tax at 7/9d in the £ equal to £1-11-6% net which dividend together with the Interim and Final Dividends already paid for the same year will make a total dividend of 5% net to which the stockholders are entitled under Article 5 of the Articles of Association as it is now estimated as a rseult of a very recent decision in connection with the Company's Income Tax appeals that the combined effective rate of British and Indian Income Tax for the year ended 31st March 1959 will not exceed 6s. in the £. Payment will be made on 27th October 1959 to those stockholders whose names are registered in the Company's Stock Register on 12th October 1959.

Applications for transfer received in this office before 12 O'clock noon on Monday, 12th October 1959, will, if otherwise satisfactory, be registered at that date for the purpose of participation in the above dividend.

BY ORDER OF THE BOARD
H. C. BOWKER
ACTG. AGENT.

STOCK EXCHANGES

Pre-Puja Lull

Watch-Dog Writes:

THE pre-Puja lull appears to have descended on Lyons Range much earlier than usual. Dealings are restricted and price movements are confined to a narrow range. Thanks to encouraging advices from Bombay, a steady undertone has, however, been maintained.

Activity on the Calcutta Stock Exchange was uninspiring and operators were inclined to restrict commitments in view of the approaching holidays for the Puja festival.

After a hesitant start, prices developed a firmer tendency on the Bombay Stock Exchange where Textiles led the upward movement.

Energetic trading coupled with enthusiastic following led to a general buoyancy on the Madras Stock Exchange.

Unsettled conditions prevailed on the London Stock Exchange.

Wall Street closed firm.

*

Calcutta

Friday Evening.

PRE-PUJA precautions characterised trading in the local Stock Exchange. Although advices from Dalal Street were encouraging, operators locally were not willing to extend commitments. In addition to the approaching Puja holidays, conditions on the economic front were not considere to be very encouraging. The decisio made by the Government to reduce managing agency commissions gave rise to a fear that this might well imperil the institution itself. It was also felt that the considerable damage done to crops and property by the recent floods would involve sizeable expenditure for (rehabilitation. Moreover, it was evident from the recent speech of the Chairman of the LIC that the Corporation's support for equities would not be forthcoming in the near future when a number of new issues were expected to absorb large funds. Some even predicted that there might be a certain amount of liquidation of the present holdings in order to apply for the new issues. All these considerations made operators very cautious in their dealings.

The Giltedged market was, however, exceptionally firm with prices recording further rises over last levels. Demand was concentrated upon the short and medium-dated issues; but the scrip was in short supply. The upward trend was accentuated by the decision of the authorities to step up the selling rates of some of the loans. 3 per cent 1986 Conversion Loan, after touching a fresh high of Rs 75.25, finished at Rs 74.90 quoted last week.

Bank shares ruled quiet with price movements confined to a narrow range. Punjab National were enquired upto Rs 21 and United Commercial upto Rs 61.

Trading in the Jute section, was rather restricted on fears of a substantial rise in stocks of jute goods at the end of the month due to poor shipments. But a few selected scrip were well maintained around previous levels on better advices from the jute goods market and due to the healthy statistical position of the industry. Howrah were depressed at one time to Rs 22.62 from Rs 22.75; National to Rs 22.94 from Rs 23; New Central to Rs 17.87 from Rs 18.25 and Birlas to Rs 23.94 from Rs 24.12, to recover at the close to Rs 22.87; Rs 24; Rs 18.87 and Rs 24.06 respectively. Among higher-priced scrips, Bally turned quiet at Rs 229 against Rs 231, while Anglo-India improved to Rs 242 from Rs 239 and Kanknarrah to Rs 114 from Rs 108.

Except one or two scrip which met with good enquiry on reports of excellent working, trading in the Coal section, was generally dull on the feeling that the working condition of the industry was not likely to improve with the recent increase in the price of the commodity. Bengal recovered partially to Rs 298 from the recent low of Rs 295, while Equitable were wanted upto Rs 33.87 from Rs 33.62 and West Bengal upto Rs 6.25 from Rs 6.06. Burrakur, however, fluctuated irregularly between Rs 16.19 and Rs 16.31 on speculative activity, to close finally at Rs 16 xd. New Beerbhoom were firm at Rs 20.37 against Rs 20.25.

Tea shares were practically neglected in view of the obscure outlook for the industry and the absence of the expected improvement in the prices obtained at the recent auctions. Transactions were few and far between. The only scrip, which remained steady were Baghmari having support upto Rs 20.12 from Rs 19.37; Eastern Cachar upto Rs 1.62 from Rs 1.31; Grob upto Rs 13.62 from Rs 13.37 and Jayshree upto Rs 14.28 from Rs 14.19. Patrakola remained almost unchanged at Rs 140.

Sugar shares were a neglected counted on the move to nationalise the industry in the Third Plan period and suggestion to import sugar to meet the internal shortage. The only exceptions to the general trend were Raza/Buland having buyers upto Rs 12.81 from Rs 12.50; Belsund upto Rs 13 from Rs 12.87 and SKG upto Rs 11.44 from Rs 11.19.

In the Engineering section, price movements were mostly influenced by the speculative activity in Indian Irons which in turn, were subjected to settlement considerations till Wednesday. After starting the week lower at Rs 23.57 against the weekend closing of Rs 23.67, Indian Irons receded gradually to touch at one time Rs 23.46 at which some replacement buying caused a marked recovery to Rs 23.72 at the close. TEXMACO moved between Rs 23.57 and Rs 23.85; Jessop between Rs 29.25 and Rs 30.25; Indian Galvanizing between Rs 20 and Rs 20.37; and Guest, Keen Williams between Rs 39 and Rs 39.12, to finish the week at Rs 23.85; Rs 30.25; Rs 20.37 and Rs 39.12 respectively. Indian Standard Wagon were a steady feature at Rs 85.50 with Kumardhubi hovering narrowly around Rs 6.69.

The Miscellaneous section provided a few firm spots on special considerations. Indian Aluminium were keenly supported up to Rs 21.81 from Rs 21.19 following the news of the company's expansion programme. National Carbon had buyers at Rs 38.25 to Rs 38.56 on reports of the proposal to raise fresh capital. Hindusthan Motor were wanted up to Rs 12.81 from Rs 11.97 on expectation of better results for the current year. Alkali Chemical were in demand at Rs 23.62 to Rs 23.94 on the belief that the company's earnings might improve with the expansion scheme. Rohtas forged ahead to Rs 26 from Rs 24.75 on rumours of the possibility of a right issue. Indian Copper met with steady support up to Rs 4.10 on reports of the proposal to manufacture electrolytic plant. Dunlop Rubber hardened further to Rs 35.06 from Rs 34.50 in view of the encouraging outlook for the rubber industry.

Dealings in other scrip were rather restricted. Orient Paper changed hands at Rs 37.70 to Rs 38.15 (Rs 37.95); India Steamship at Rs 13.51 to Rs 14.00 (Rs 13.87); Kharagpura Development at Rs 14.44 to Rs 14.75 (Rs 14.62); BIC at Rs 5.15 to Rs 5.19 (Rs 5.19); Indian Oxygen at Rs 23.75 to Rs 28.87 (Rs 28.87); Sirpur Paper at Rs 14.25 to Rs 14.50 (Rs 14.44) and Indian Cable at Rs 31.25 to Rs 31.75 (Rs 31.75). Figures shown within brackets were the week's closing rates.

*

London

VERY unsettled conditions prevailed on the London Stock Exchange. Sentiment was disturbed by the latest public opinion poll, showing the Conservatives less favourably-placed. Steel shares were among the chief sufferers and showed losses extending to nearly two shillings. Property shares also came under selling pressure, which were concentrated on the newer companies. Engineering, Motor, Textile and Newspaper shares lost ground, while Stores were dull.

Among the Miscellaneous shares, Imperial Chemicals eased on some end-of-account profit-taking. Oil shares were quiet and easier, while Rubbers and Teas showed no definite trend. Gold shares were depressed due to occasional sales in a market lacking support. Giltedged securities showed widespread small losses owing to an absence of support. Dollar stocks were irregular.

*

New York

PRICES on Wall Street showed a mixed trend. Numerous operators were inclined to curtail commitments, pending more fresh domestic and international developments. Some quarters felt that the protracted steel strike and spreading supply problems might cause the Taft-Hartley Act to be invoked this week. Thus, prices remained irregular although gains out-numbered losses.

General Tyre was a good spot on nine months' earnings of 3.79 dollars a share against 91 cents in the same 1958 period. Studebaker-Packard issues were in demand in response to good earnings. Other firm features included Texas Instruments and Polaroid.

INDUSTRIAL INFORMATION

FOREIGN TRAINING OF MINING ENGINEERS

The National Coal Development Corporation have drawn up a scheme for training of over 400 mining engineers and officers in foreign countries.

So far, 15 officers have been sent abroad. Of these, 13 were sent to the UK and one each to the USA and West Germany.

Another 42 trainees are likely to be sent soon under different foreign aid programmes.

Four training schools have also been set up by the Corporation to meet the demand for junior technical personnel. The schools were opened in 1956 with an annual recruitment of over 400 students.

BANKS TO ASSIST IN SMALL SAVINGS

With a view to increasing the sale of Ten-Year Treasury Savings Deposit Certificates with effect from 1st October, 1959, it has been decided to utilise the services of the scheduled banks and of cooperative banks having paid-up capital and reserves of Rs 5,00,000 and over on brokerage terms. Brokerage at Re 0.12 per cent will be paid on applications for the purchase of Ten-Year Treasury Savings Deposit Certificates received through these banks and bearing their stamps. No brokerage will, however, be payable on applications received through authorised agents under the Small Savings Scheme who earn their usual commission. Further particulars in this behalf can be obtained from the Reserve Bank of India.

PROVIDENT FUND BENEFIT FOR COLLIERY WORKERS

Prividnt Fund benefits were provided to 3.42 lakhs of colliery workers in Assam, West Bengal, Bihar, Madhya Pradesh, Orissa, Bombay, Andhra Pradesh and Rajasthan during 1957-58, according to the annual report on the working of the Coal Mines Provident Fund Scheme.

During the year, contributions to the Coal Mines Provident Fund exceeded Rs. 3.40 crores. Thus the contributions per month, on an average, amounted to Rs 28.34 lakhs as compared with the monthly average of about Rs 22.71 lakhs for the previous year. The members of the Fund contributed at the rate of 6¼% of their total emoluments and the employers also contributed an equal amount.

A sum of Rs 20.40 lakhs was refunded to the outgoing subscribers and nominees of the deceased subscribers during the year.

The accumulations in the Fund were invested in Government securities, as usual. Till the end of March, 1958, a sum of Rs 12,02,66,785 had been invested in Central Government securities.

The lighting-up of the Coke Oven battery No.1 marks a new stage in the progress of the Durgapur steelworks

With the lighting-up of the Coke Oven battery No. 1 on 24th August, the Durgapur steelworks of Hindustan Steel Limited enters a new stage. ISCON is proud to announce that work on this battery has been completed nearly ten weeks ahead of schedule. When the process of gradually heating up the battery to operating temperature is completed, the Coke Ovens will be ready to supply coke for the first blast furnace to produce Durgapur's first pig iron.

How much
$C_6 H_{10} O_5$
do you use
in a month?

TITAGHUR PAPER consists like all paper, mainly of cellulose for which the chemical formulae is $C_6 H_{10} O_5$. You, the consumer, are now using every month more Titaghur paper than at any time since our Mills were founded 77 years ago. Continuous research during those years has helped us to produce the widest range of quality paper and you can rely on Titaghur to give you the right paper for the job. Today, the Titaghur Mills produce more bamboo pulp and paper than any other mills in the world.

FOR THE INVESTOR

Prospects

Investment Gossip:

The fact that one of the major stock markets in the country remains closed for its longest recess of the year has not deterred operators and investors from recording their reaction to recent developments that have a bearing on the investment situation in the country.

Dalal Street has been buoyant for nearly a week before it has developed the comparatively slow pace noticeable for the past four five days. Whlie textiles have naturally been in the forefront, prominent shares all along the list have participated in the upsurge. In Madras investors have been showing keen interest in textiles, sugar and plantation shares.

It is evident that marketmen have found it difficult to restrain their enthusiasm in the face of a crop of favourable developments. It is, of course, to be noted that but for the political developments both inside and outside the country, the investment situation has been of a variety for some time now that should encourage investment in equities. The factors that make equities attractive investment propositions are, in brief, the great strides that the corporate sector has made in the shape of addition to installed capacity and the establishment of multifarious new industries and the assured market for their products.

After the latest letter of Mr Chou En-lai to Mr Nehru in reply to his greetings to the Chinese people on the occasion of the tenth anniversary of the Chinese Republic, there is a general tendency in the country to feel less anxious than a few days ago, about the deterioration in the relations between the two countries. If the depression in the Indian stock markets had been deemed quite proper following the news of the Chinese incursion on our borders, it is argued, it should be equally correct on the part of investors to feel cheerful when there are indications that the dispute between the two countries is unlikely to lead to any serious conflict.

In the meantime, staunch support has been given to the investors both by the Prime Minister and Mr Morarji Desai. Mr Nehru has made it quite clear in his recent speeches in Bombay that a very wide field remains and will continue to remain open for private enterprise. Although this is what he has all along been saying, the way in which he has expressed it this time seems to have banished all lingering doubts about his attitude toward private enterprise. Even though he has not been waxing eloquent about the efficiency or necessity of private enterprise, Mr Morarji Desai has been telling his foreign audiences that the private sector has vast scope and that both indigenous and foreign private capital will be allowed to function smoothly, efficienty and profitably, in India.

With the major uncertainties thus banished, investors have been enabled to see clearly the picture of industrial development. The picture that is revealed is indeed good to behold. Almost all industries, old and new, are doing well. The textile industry, according Mr Manubhai Shah, Union Minister for Industry, has now definitely turned the corner. Statistics as to production and offtake are of a variety that engenders optimism. And the hectic rise in the generality of textile shares in the course of the past few days gives an indication as to the current opinion among operators about the outlook of this industry. Engineering industries are in excellent shape and now that steel production has commenced in the public sector steel plants very soon steel shortage for the engineering industries will be a thing of the past. With adequate steel, these industries will be able to work to capacity and consequently record higher earnings.

£R$

Investment Notes:

The Directors of National Carbon Company (India), Limited on 30th September, 1959, announced that an application had been submitted to the Controller of Capital Issues for consent to issue 800,000 ordinary shares (par value Rs 10) at Rs 12.50 per share. Subject to consent being obtained, the shares will be offered in the first instance to the shareholders on the basis of two new shares for every five ordinary shares held (fractions of new shares being disregarded) with the right to renounce in favour of a person or persons approved by the Directors. It is proposed to make the issue in the early part of 1960 in which event the new shares will rank for dividends declared out of the Company's 1960 earnings, but will not rank for any dividend declared in respect of 1959 operations. During 1957-58 the Company established dollar and sterling credits equivalent to Rs 1,25,00,000 to cover the foreign exchange requirements of the polyethylene and chemicals plant now under construction at Trombay. To partially finance this and several other expansion and development schemes in which it is engaged, the Company issued in March 1958, Rs 1,00,00,000 of 15 years 6½ per cent Debentures. The new capital now sought to be raised will be used to complete the financing of new undertakings and to repay in part the foreign credits mentioned above. The present authorised capital of the Company is Rs 2,50,00,000 consisting of 25,00,000 ordinary shares of par value Rs 10 of which 20,00,000 shares have been issued and are fully paid. Prior to the new issue it is proposed to hold an Extraordinary General Meeting of shareholders to increase the authorised capital of the Company to Rs 6,00,00,000 by creation of further 35,00,000 ordinary shares of Rs 10 each.

For the manufacture of high tension and low tension insulators, transformer bushings and pressed porcelain ware, the Seshasayee Industries Limited have formed a new concern with an issued capital of Rs 30 lakhs made up of Rs 21.6 lakhs of equity shares and Rs 8.4 lakhs of preference shares each of Rs 10 denomination. The shares have been fully subscribed as early as March, 1959. The subscribed capital includes Rs 1 lakh by the Madras Government, which is itself a recognition by the State of the importance of this kind of industry. This industry is located at Vadalur, South Arcot District, close to the mining works of the Neiveli Lignite Corporation. Thus, the Company can take fullest advantage of the availability of the superior clays from the mine workings. The Products proposed to be made include: High tension insulators of the pin, post and strain types, transformer bushings, low tension insulators and pressed porcelain wares like fuse units, etc., together with associated hardware. Design specification and Layout construction and production are under the supervision of Dr. Ing. K. Draeger, a West German expert.

Ancilliary industries to the Automobile industry in Madras are well under progress. Motor truck wheels will be manufactured by a noted firm in Madras. In collaboration with a United Kingdom concern, this firm will bring out from its new factory lines about 100,000 wheels annually. Yet another firm in Madras has been licensed to manufacture radiators with a capacity of 600 per month. Dynamos and voltage regulators would be produced by still another concern in Madras. Dash board panel instruments for all cars and trucks produced in India would be manufactured in Madras from 1960 onwards. A West German firm will help this firm to produce 50,000 sets of panel instruments a year.

£R$

Fine Year for Rohtas Industries

Balance-Sheet Reviews:

Rohtas Industries Ltd has had a superlative year in the period ending March 1959, although it is not possible to offer a comparative assessment of its working since the accounts for the previous period covering seventeen months.

Sales were placed at Rs 15.11 crores, and the magnitude of new production is suggested by the fact that this figure for a 12-month period exceeds the Rs 14.90 crores of sales in the earlier 17-month period. Closing stocks have been placed at Rs 3.72 crores and, inclusive of other adjustments in income, the gross income for 1958-59 is placed at Rs 19.14 crores.

The provision for depreciation for the 12-month period is gone higher than the earlier 17-month period. The relative figure rising from Rs 83.31 lakhs to Rs 86.06 lakhs. The provision for taxation has been sharply raised and is placed at Rs 55 lakhs. The development rebate reserve also gets a larger allocation of Rs 16.30 lakhs against Rs 13.15 lakhs. The Contingency Reserve receives Rs 0.43 lakhs, and there is furthermore a transfer of Rs 47.27 lakhs to General Reserve No. 1. Moreover, from the current year's profit a provision of Rs 28.50 lakhs has been made for bonus, this, however, including Rs 13.50 lakhs in respect of previous years. The proposed dividend, at 15 per cent, absorbs a smaller amount at Rs 47.27 lakhs, but it must be remembered that the dividend for the previous period had covered 17 months Thus, in fact, the dividend recommended for 1958-59 represents some small increase in the dividend on a capital which had meantime been increased.

The Directors Report points out that overall production in the different manufacturing units has gone up, despite a decline in cement output due to the inability of the State Trading Corporation to arrange despatching orders for keeping the plant in full production. It is also noteworthy that, after completion and the modernisation and expansion programmes, Rohtas "has been able to achieve production of paper and boards and of caustic soda equivalent to the rated capacity in the very first year". Rohtas is now the largest producer of papers and boards in this country.

A rather intriguing item brought out in the Directors Report is that an award has been made consequent to arbitration in the wake of the illegal strike in 1957, in terms of which the Company's claim for compensation has been upheld, and the company is therefore entitled to recover Rs 6.90 lakhs in any manner it thinks fit from the employees concerned. However, the Patna High Court has given an interim order staying the implementation of the Award. Lastly, the proposed increase in wages suggested by the Central Wage Board for the sugar industry will not affect Rohtas, "as the wages and salaries paid are already higher".

The balance sheet of Rohtas as at the end of March 1959 shows a higher capital of Rs 3.56 crores, of which Rs 23 lakhs represent bonus shares issued during the year, by capitalisation of Rs 16.20 lakhs standing to the credit of the Share Premium Account, and Rs 6.60 crores utilised from General Reserve No. 2:—The reserves and surpluses mark an increase over March 1958 by as much as Rs 56½ lakhs. The General Reserve No. 1 is now placed at Rs 1.14 crores, while General Reserve No. 2 is shown at Rs 67 lakhs. Development Rebate Reserve is placed at Rs 29.45 lakhs, and a Contingency Reserve has been created, mainly by transfer from General Reserve No. 2 to the tune of Rs 10 lakhs.

On the other side of the ledger, additions to block during the year amounted to Rs 71.20 lakhs. The gross block at the end of March 1959 at Rs 14.55 crores had a book value of Rs 9.02 crores.

Morarjee Goculdas Spinning

The Morarjee Goculdas Spinning and Weaving Company Limited has reported an increase in sales from Rs 3.66 crores to Rs 3.75 crores. With a tight rein over expenses, the profit for the year ending June 1959 shows a smart rise. The provision for depreciation stands reduced at Rs 5.25 lakhs against Rs 17.25 lakhs, but this was because in the earlier year, a provision for special depreciation to the tune of Rs 6.33 lakhs was not permissible. For the same reason, the provision for taxation, at Rs 10.35 lakhs, includes an element of Rs 1.40 lakhs in respect of the earlier year. The balance of profit has, thus, risen from Rs 11.21 lakhs to Rs 17.17 lakhs.

The transfer to Development Rebate Reserve is Rs 1.50 lakhs, while the transfer to General Reserve is a shade lower. The dividend has been raised to 21½ per cent, and the balance carried forward, at Rs 2.38 lakhs, is rather higher than the Rs 0.22 lakhs brought in.

The balance sheet of Morarjee Goculdas, as at the end of June 1959, shows reserves and surplus at Rs 47.56 lakhs against a capital of Rs 69 lakhs, of which Rs 17.25 lakhs is in 4½ per cent cumulative preference shares. The gross block of Rs 1.83 crores has a book value of Rs 74.91 lakhs.

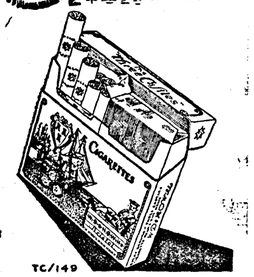
£R$

Anglo-India Jute

Though trading conditions in 1958-59 were none too satisfactory in the jute goods industry, Anglo-India Jute Mills Company Limited, under the managing agency of Duncan Brothers and Co. Ltd., has done well, during the year ending March 1959. Sales rose from Rs 5.93 crores to Rs 6.29 crores. This, however, is presumably due to the larger purchase of loom hours, which has cost the company Rs 3.16 lakhs against Rs 0.36 lakhs. However, such purchase has been exceedingly remunerative, with the net revenue profit rising from Rs 26.46 lakhs to Rs 38.19 lakhs. Together with other items, the profit and loss account shows a total credit of Rs 41.68 lakhs. Herein, however, though allocation for depreciation is unchanged at Rs 12 lakhs, a rather sharp rise in the provision for income-tax, from Rs 0.75 lakhs to Rs 16.88 lakhs, as also a provision of Rs 1.90 lakhs in respect of taxation for previous years, has reduced the balance carried down from Rs 13.52 lakhs to Rs 10.14 lakhs. The Appropriation Account shows that there has been a transfer of Rs 2 lakhs from Contingency Reserve. The Development Rebate Reserve recieves Rs 0.40 lakhs and the transfer to Investment Reserve is Rs 3.00 lakhs. The ordinary dividend has been raised to 12½ per cent, and the amount absorbed is Rs 6.15 lakhs. The balance carried forward at Rs 2.16 lakhs is slightly lower than the amount brought in of Rs 2.37 lakhs. The Reserves and Surplus of Anglo-India amount to Rs 74.77 lakhs against the capital of Rs 89.21 lakhs, of which Rs 40 lakhs is in 7 per cent cumulative preference shares. The gross block of Rs 3.10 crores has a net value of Rs 82.84 lakhs.

£R$

Burmah-Shell



In addition to and quite distinct from the accounts of Burmah-Shell Refineries Limited, Burmah-Shell Oil Storage and Distributing Co. of India Ltd publishes yearly a Survey of Activities. Heretofore, financial data were also provided in this publication, but we have been vouchsafed in the latest Survey that, since negotiations are still in progress as to drawing up new price formulae, "it would be unrealistic and incorrect to attempt to produce the usual financial figures." Nevertheless, there is much in the Survey that is interesting.

Oil consumption in 1958 in India rose by 6.1 per cent, and the rate of growth in this regard has somewhat slackened. However, Burmah-Shell's internal sales rose by 3.5 per cent to 2.9 million tons. In inland trade, per capita consumption of all oil products has risen, in the decade between 1948 and 1958, from 1.74 imperial gallons to 3.80 imperial gallons. The demand for petroleum products as such has risen over the same period from 2.2 to nearly 6 million long tons. Kerosene represents the largest single petroueum product, but trade in this commodity, for the first time, fell by something less than one per cent, and the Survey points out that this decline is due entirely to import restrictions. Similarly,

In the same year when Mr. Dave Carson was touring the country with his amazing company, the famous The "Three Castles" cigarettes were first introduced.

In 1958, they came out in the flip-top 20's packet, changing their looks with the times. The "Three Castles" are as modern today as they were 80 years ago—and as satisfying.

WILLS' **The "Three Castles"**

Issued by The Imperial Tobacco Company of India Limited.

TC/149

consumption of Motor Spirit also shows a fall of 6.1 per cent. On the other hand, sales of High Speed Diesel Oil have risen again by 26.9 per cent. The general level of prices was, the Survey states, high throughout the year, whereas prices of petroleum products remained relatively static. What is more, if the fact is realised that the price paid to the companies manufacturing the oils has been reduced, normally there should have been a decline in the prices of petroleum products. But, it may be recalled, Government decided that this concession need not be passed on to the consumer.

£R$

West Coast Electrics

For the year ended March 31, 1959, the West Coast Electric Supply Corporation Ltd reported Rs 3,67 lakhs profits against Rs 3.57 last year. The income could have been higher but for the increased electricity duty levied by the then Kerala Government. The Company is to revise its own tariff to consumers to obviate the rise in duty levied by the State Government. Depreciation allotment for the year is Rs 1.34 lakhs against last year's Rs 1.14 lakhs, taxation allocation is Rs 81,000 against Rs 85,000 last year, development reserve allocation is Rs 51,632 as against Rs 23,029. The dividend is maintained at 10%.

£R$

The Mysore Coffee

For the year ended December 31, 1959, the Mysore Coffee Curing Works Ltd, reported a gross profit of Rs 375,005 as against last year's Rs 151,752. With a carry over of Rs 1,154 a sum of Rs 139,270 is available for appropriation. Depreciation allotment is Rs 39,665, taxation allotment is Rs 196,221. An increase of 2½% apart from the 7½% already given in dividend for the year has been recommended, apart from transferring a substantial amount to Dividend Equalisation Fund.

£R$

Mysore Spinning

For the year ended February 28, 1959, the Mysore Spinning and Manufacturing Company has reported a net profit before providing for taxation depreciation Rs 5.02 lakhs. Last year's account showed a loss of Rs 34,210. The sum set aside towards depreciation this year is Rs 5,000 against last year's Rs 3.64 lakhs. Wealth tax was higher at Rs 29,611 against last year's Rs 26,500. Gratuity provision is at Rs 1,22 lakhs against Rs 1.23 lakhs in the previous year. Development reserve is Rs 64,053 against Rs 945 last year. The ordinary dividend is maintained at Rs 5 per share.

£R$

Mysore Tobacco

For the year ended March 31, 1959, the Mysore Tobacco Company Ltd had reported that it had been enabled to cure larger quantities of leaves from out of its barns due to adoption of improved methods of curing. During the year, it cured 15,96,104 lbs against 14,51,712 lbs in 1957/58. The provision for depreciation is Rs 66,547 against last year's Rs 52,662 and development rebate allotment is Rs 11,884 against nil last year. The Company has maintained its dividend of 12½% on ordinary shares. The Company has acquired a new building in Bangalore for location of the registered office of the company. The suitable amendments in the re-drying plant at Whitefield will increase the output by 50%.

£R$

United India Fire

The United India Fire and General Insurance Company Limited, for the year ended March 31, 1950, has made a profit of Rs 83,845. A dividend of 60 nP per share, the same as in the previous year, has been recommended. This works out to 8% free of income tax. The profits were arrived at after strengthening the

DURGAPUR

IS GETTING READY

At the Durgapur steelworks at this moment, nearly ten weeks ahead of schedule, the first Simon-Carves coke oven battery is being gradually and carefully heated up to operating temperature.

When this highly skilled process is finished, the coke ovens will be ready to supply coke for the first blast furnace to produce Durgapur's first pig iron.

Simon-Carves, a leading member of the British consortium ISCON which is building the Durgapur steelworks, are privileged to be the first contractors to put their plant into service—plant which is vital to Durgapur's coming production of another million tons a year of Indian steel.

business reserves by the addition of about Rs 1,30,000 and after making other adjustments. The business reserves amount to 50% of the year's net premium income in Fire and Miscellaneous sections, while in the Marine Section the reserve represented 100% of the premium income.

£ R$

Mysore Spinning

For the year ended March 31, 1959, the Mysore Spinning and Manufacturing Company Limited has reported a profit of Rs 2,82 lakhs. Wealth tax provision is Rs 29,611, depreciation allotment Rs 4,999, provision for gratuity Rs 1.21 lakhs, and for Development Rebate Rs 47,900. With Rs 27,617 brought in and Rs 5,857 excess profit tax returned added on, there is Rs 3.15 lakhs available for distribution. After income tax deduction, the dividend recommended is Rs 5 per ordinary share. The Company reported increased sales during the year under review at Rs 1.97 crores against last year's Rs 1.80 crores. Stocks are valued at Rs 34.92 lakhs against last year's Rs 58.34 lakhs.

£ R$

Dalmia Cement

The accounts for the year ended June 30, 1958 show a surplus of Rs 4.10 crores, which is reported to have been remitted to the Government of India. The company have entered into two-third partnership with Messrs. Dalmia Magnesite Corporation and it has now begun production of burnt magnesite. Supplies of this are being made to steel and refractory industries. Exports are also being developed.

£ R$

Cochin Power & Light

The company has reported, for the year ending March 31, 1959, a 14% increase in the gross revenue from the power sales of the Cochin State Power and Light Corporation. The revenue reported was Rs 11,51,882 against last year's Rs 10,03,830. After various allocations and inclusion of the amount brought forward, the net profit is Rs 1,47,365. The balance after adjustments and transfer from tariff and dividend control reserve is Rs 1,36,674. The directors have recommended a dividend of 90 nP per share working out to 9% for the year free of income tax.

£ R$

Vellore Electric

During the year ended March 31, 1959, the Vellore Electric Corporation Ltd has reported substantial progress notwithstanding handicaps including lack of capital fund, and scarcity of material. Extensions were made to benefit agricultural consumers. The reported gross revenue for the year was Rs 13,71,797 against last year's Rs 13,05,080. The company's profit this year is Rs 63,997, after provision for depreciation and taxation and transfer to the development and contingency reserves. The amount brought forward is Rs 2,25,579 and closing balance is Rs 2,67,421. The directors have recommended a dividend of 6% less tax on preference shares and 10% tax free on ordinary shares.

£ R$

Balmadies Plantations

For the year ended May 31, 1959, the Balmadies Plantations Limited report a profit of Rs 43,450. This includes the amount brought forward. The allocations are: Taxes Rs 22,874, dividend equalisation fund Rs 10,000. Dividend at 6% per annum tax free on preference shares for the year absorbs Rs 6,428; dividend of 7½% on ordinary shares absorbs Rs 22,500.

The Achilles Heel of Developing Economies

Indian Finance
Established 1928
October 17, 1959

"The Wise Man in his attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right"—The Analects of Confucius.

THE picture of world agriculture presented by the Food and Agriculture Organisation of the United Nations in its latest annual review* is at once heartening and depressing. It is heartening because the preliminary estimates for the world (excluding Mainland China) have set the volume of agricultural production as a whole in 1958-59 at anything between 4 and 5 per cent higher than in either of the two preceding years and five major foodgrains alone—wheat, barley, oats, maize and rice (milled)—have accounted for a combined output of 476 million metric tons in the world (excluding U.S.S.R., Eastern Europe and Mainland China), representing an increase of 36 million tons over their combined output in 1957-58. And yet the picture is depressing because the economically less-developed countries, with their continuing difficulties on the score of provision of credit and investment resources and technical knowledge, have made no significant contribution to that expansion while North America alone, accounting for an absolute production of 175 million tons in 1958-59, has been responsible for nearly three-fourths of the increase of 36 million tons in foodgrains output. It would thus appear that, in the larger part of the non-communist world, there has been very little dynamism in the growth of agricultural production, particularly covering foodgrains. The FAO report has, therefore, rightly turned the spotlight on the agrarian conditions and growth problems of the less-developed countries which, with some exceptions, are also developing economies.

A broad statement of conditions in backward agrarian economies, according to the findings of the FAO study, would be that average farm incomes are appreciably lower than average incomes in towns. In many countries, the gap is of the order of 25 to 50 per cent. This finding is based on the "disparity factor" which expresses the proportion of income originating in agriculture, as per capita of the population dependent on agriculture, over income originating in other industries, as per capita of population dependent on other industries. In the case of India, the disparity factor is 0.4 when estimated from national income data and 0.3 when estimated from wage rates in agriculture and in manufacturing. There is, of course, nothing startling about this finding which is only a statistical confirmation of the obvious. Nor is there anything surprising about the finding that low agricultural incomes reduce the funds available for investment to improve agriculture and also the incentives for investment.

But what is surprising, as far as India is concerned, is that, in spite of these unfavourable factors, the average annual growth rate of agricultural product (at constant prices) in the period 1950-56 has been as much as 3.3 per cent as against 4.0 per cent which is the average annual growth rate of non-agricultural product (at constant prices) in the same period. If allowance is made for three factors, namely, imperfect crop estimation, incomplete coverage and understatement of production in years of monopoly procurement at controlled prices, which together were responsible for some downward bias in the statistics of foodgrains output in 1950-51 and 1951-52, it may be that the growth rate of agricultural product during the period 1950-56 has actually been considerably less than 3.3 per cent. It may be recalled, by way of comparison in this connection, that in Pakistan the average annual growth rate of agricultural product (at constant prices) during the period 1950-57 has been just 1.5 per cent as against 4.4 per cent which is the average annual growth rate of non-agricultural product (at constant prices) in the same period in that country.

There is, perhaps, not much warrant for the belief, based though it be on statistical calculations, that agricultural growth in India has been more than twice as fast as in Pakistan in virtually comparable periods. In any case, as far as this country is concerned, in the context of the accelerated demand for food (based on an income elasticity coefficient of 0.8—0.9 for food expenditure) arising from additional incomes generated by heavy public expenditure, the most that can be said about the situation is that the rate of growth in the agricultural sector has been just sufficient to cover the annual increase in population although marginal fluctuations in marketed supplies from year to year have indeed created situations of relative scarcity or of relative plenty for the non-producing consumers. This, however, is no flattering state of affairs in a developing economy like India's.

That the situation calls for some reorientation of planning policies is generally recognised. There is need for such reorientation not only in India but in other less-developed countries also, and this is underlined in the following passage quoted in extenso from the FAO reports:—

> "'Balanced development' does not preclude selecting some key sectors, e.g., steel, chemicals, for special attention in the expectation that if these develop, progress in other sectors will follow. Agriculture itself, however, appears to be a key sector. It is especially important in less-developed countries, where food is the largest item (more than half and up to three-fourths) of expenditure in family budgets and the cost of food is a prime factor in the production cost of all industries. If agriculture has not always been accorded such high priority it is perhaps because it has always been there, and tends to be regarded as a reserve of finance and manpower rather than a key sector in its own right."

And Mr B. R. Sen, Director-General of the FAO, has clinched the whole issue by pointing out that "there has been more than one example in post-war history of over-all economic development being hamstrung by inadequate attention to agriculture".

Given the recognition that agriculture is a key sector in its own right and should be developed as such, the rest is a practical matter of channeling more financial and technical aids to farmers through credit institutions and extension agencies and of greater public investment in that sector and its more judicious allocation among the various factors making for higher production and productivity. Here, the FAO's own recommendations are on familiar lines with the emphasis on three basic conditions—reasonably stable prices for agricultural products at a remunerative level, adequate marketing facilities and security of tenure on the basis of reduced rents—in the absence of which, "other efforts to increase production may prove fruitless, or at best yield only a fraction of their intended benefits;" on resources development by way of large-scale irrigation, land reclamation and resettlement projects; and on the provision of credit on reasonable terms to small farmers in particular for improved methods of farming, of production requisites like fertilisers, pesticides and improved seeds and implements at reasonable prices and of education, research and extension services to spread the knowledge of improved methods of cultivation and to encourage local cooperative action to improve production, marketing and other facilities.

Some of these recommendations which are broadly applicable as much to India as to all other less-developed economies have, however, been modified in the light of development experience in recent years in a number of countries. For example, in the matter of investment, while it is recognised that some net flow of funds out of agriculture is inevitable in less-developed countries in the earlier stages of economic growth, it is considered equally important that sufficient investment funds should be retained in (or returned to) agriculture. This, by implication, would call for a limit to the incidence of land taxation and indirect taxes and for price subsidies to agricultural requisites. Secondly, in the matter of agricultural credit, the accent is now placed on supervised credit (which can be organised through the cooperative movement or linked with the extension service where it is already in existence) so as to render the technical supervision of agricultural operations more economical. Such supervised credit which cannot entirely replace normal credit operations is, however, well adapted to improving methods of cultivation in selected areas by stages. And thirdly, in the matter of irrigation, there is now a greater emphasis on small-scale projects because large-scale projects are often a serious financial commitment for the limited resources of less-developed countries and take a long time (five to ten years for construction and up to 20 years for maximum utilisation of their irrigation potential) for completion, thereby tending to increase inflationary pressures. A greater portion of public investment in irrigation could be used fruitfully in financing, wholly or partly, minor irrigation works such as tanks and wells which are bound to yield much earlier returns by way of additional production.

In highlighting these and other recommendations contained in the FAO report, the purpose here is to suggest a practical crash programme for Indian agriculture covering a short period of, say, three years. The main elements of such a programme could conceivably be:—

(1) Mobilisation of surplus rural labour, at wages which would be a third more than the

*The State of Food and Agriculture 1959 (FAO).

prevailing agricultural wage rates in the respective localities, (i) for completing the construction of canals, distributaries and field channels in the commanded areas of all major and medium irrigation projects, (ii) for renovation of all older irrigation tanks which have silted up and for transfer of as much of the silt as possible to the fields in the surrounding villages, (iii) for construction of new tanks, wherever possible, without detriment to the flow of rain water into existing tanks, (iv) for construction of tens of thousands of small masonry wells and big or small kutcha wells wherever sub-soil springs are copious at depths ranging up to 50 feet, (v) for planting widely certain varieties of quick-growing trees (taking no more than three years) which can supply green manure as well as firewood and for planting on the fences certain varieties of green manure plants which can grow luxuriantly within a year or two and (vi) for work on the making and burning of bricks required for masonry wells.

(2) A scheme to bring about the cultivation of green manure crops on all irrigated lands and lands well watered by rain, either on the bunds of fields during the crop season itself or as catch crops in the off-season.

(3) Concentration of resources in chemical fertilisers and heavy-yielding strains of seeds in irrigated areas in judicious combination with organic manures in the form of cowdung, green manure and compost.

(4) A scheme for the supply of improved implements, locally made plunger pumps, persian wheels, etc, on the basis of instalment credit.

(5) A scheme for expeditious distribution of credit for short-term and medium-term cultivation expenses directly through the agency of extension services wherever supervised credit through cooperatives is not possible.

(6) A scheme for renovating old weirs or constructing new ones along with the take-off channels, wherever possible in the river systems.

(7) For the exclusive purpose of supporting this short-term programme, a fresh deal to be negotiated with the United States (which, this year, has all-time record stocks of 35 million tons of wheat and 63 million tons of coarser grains) for securing, over the three-year period, six million tons of foodgrains for distribution to selected retail shops, cooperative stores and fair price or informal ration shops.

(8) Payment of wages to the labour force working on this programme in the form of grain coupons to the extent of 60 per cent, handloom, khadi or mill cloth coupons to the extent of 10 per cent and cash to the extent of 30 per cent.

(9) A policy declaration to the effect that there will be no increase, during the three-year period, in the combined incidence of land revenue, agricultural income-tax and cesses, water rates, commodity taxes and betterment levies.

(10) A scheme for the indigenous production of chemical fertilisers on the required scale.

The implications and potentialities of this 10-point agricultural programme which, **mutatis mutandis**, may be found applicable to other developing economies also are not analysed here. They may as well be figured out by the readers themselves.

"Workers' Paradise or Communist Hell?"

By Professor S. KESAVA IYENGAR

STATISTICAL tables issued by the United Nations do not include data relating to the USSR. Otherwise, newspapers and journals occasionally publish literature, sometimes painted bright, sometimes black. It is rarely that research workers are able to get at accurate data first hand, of course subject to limitations of statistical methods employed in the USSR. An attempt is made here to put in narrative form the history of the standard of life in the USSR during the last four decades. The Bolsheviks inherited a backward country devastated by World War I and Civil War. By 1921, the cultivated area in Russia had gone down by 50 per cent compared to pre-war times. "Collectivisation wrought more damage in the countryside than any armed conflict had done." Heavy industrialisation was given the first priority in the earlier Five-Year Plans, but the Second World War broke out, and it was not until 1950 that Russia was able to breathe freely and look around calmly. Once again, heavy industries became the main pre-occupation; and, because of scarce means, light industries could not progress. While striking power is strengthened by heavy industrial advancement, the substitution of butter for guns, and well-filled refrigerators for rockets, depends largely on the expansion of light industries. Malenkov started a drive for more attention to consumers, but his fall symbolised a return to heavy industry. During the last few years, a pro-consumer policy has come to stay, and "the consumer is no longer the planners' Cinderella."

AGRICULTURE

It is claimed that the USSR produced 375 million tons of foodgrains in 1958, the target for 1959 being 525 million tons. The foodgrain production in China was 225 million tons in 1958 and in India 73.5 million tons. Although, under the Khrushchev regime, individual incentive is being stimulated, the disparity in incomes is not much, and the stage has now come for the Soviet citizen to shift from "filling the stomach" to taste, variety and freshness. The average menu comprises more of meat, vegetables and dairy produce than of bread and potatoes. The following table shows that, while the present food standards are much higher than a decade ago, the 1965 targets are much more ambitious, the annual production targets for 1965 per head standing at 1,000 lbs against 420 lbs in 1953 (milk and dairy produce), and 165 units against 80 in the case of eggs: it is significant that foodgrains are not included, obviously counted as not of importance:

*not available.

OTHER CONSUMER GOODS

The standard of life in the USSR has made equally conspicuous progress in the case of consumer goods other than durable. In clothing, there has been satisfactory progress, consumption per head standing at 23 yards in 1950, 30.6 yards in 1958, the target being 38 yards for 1965: in India, the present per capita consumption is 17.5 yards and the Third Plan target is 20.3 yards. About a generation ago, most Russians walked barefoot, but nowadays they have each three pairs of shoes for a couple of years. There is greater interest now in silk, brighter patterns, better-cut, better-finished and ready-made clothes than 5 years ago. It is for this reason that Premier Khrushchev is interested in foreign synthetic fibres and plastics. "Drabness rather than shortage may be tomorrow's trouble" in the case of these commodities. Table II shows the rapid advance made by consumer goods industries in the USSR between 1928 and 1958, also showing the 1965 targets:

TABLE II.

Consumer Goods: Soviet Output Per Head.

	Unit	1928	1940	1950	1958	1965 planned

Paper	lb	4	9	13.5	23.5	33.5

n.a.=not available.

DURABLE CONSUMER GOODS

With regard to durable consumer goods, progress has been much slower. Two reasons were: (1) the competition with producer goods industries for scarce means was hard, and (2) even for available durable goods, household accommodation was a hurdle. Between 1926 and 1958, urban population increased by 70 million, but corresponding housing schemes were not taken up because most of the investment was eaten away by heavy industries. In city life, average covered space per head is 9 square yards, about the same as in the Tsarist days, and by 1965 it is expected that this will increase to 12.5 square yards. At present, there are three persons per room; the number may be reduced to two by 1965; and ideal of one man per room will have to be worked for in the next Plan. So far as sewing machines, watches, wireless and television sets are concerned, there has been and will be rapid progress. Sewing machines are fairly common now, and there will be on the average one in every household by the middle of the next decade. Even 5 years ago, watches were rare and the common slogan in the army was "Davai Chassy" (give me your watch). But, last year, 25 million watches and clocks were produced, a third having been wrist-watches. Radio receivers are quite common, and the 1965 target is one for every household. One million television sets were produced in 1958, and by 1965 a third of the households should be able to view at home. The story is different with regard to motor-cycles and cars, refrigerators, vacuum cleaners and washing machines. As table III shows, even by 1965, only the uppermost quarter of the population will be able to command these facilities: only one out of every fifty will be able to own a motor-cycle by 1965; motor-cars are quite rare: the annual production is 6 million automobiles in the USA while the 1965 target in the USSR is 1.76 million.

TABLE III.

Sales of Durable Goods in the Soviet Union.

	(in thousands) 1952-58	1959-65	Annual average 1952-58	Index 1959-65	1959-65 (1952-58 =100)

SERVICES

In social services, the Soviets are in the vanguard. The health services are free to all, and have been responsible for raising the average span of life from 44 in 1927 to 67 in 1958. Soviet education is free at all stages, and books, papers, theatres or cinemas are plentiful and promise to expand at a faster rate. Social insurance is comprehensive, and at 60 every citizen gets automatically half his wage (of course low compared to American standards) as pension. While social services are efficient and universal, private services like laundries, hairdressing saloons, repair shops, efficient snack-bars and general shops are too small in numbers to meet the growing demand. Realising this, Premier Khrushchev has begun a programme of improving amenities for the average citizen. The recent US Exhibition at Moscow, which drew a huge number of visitors, proved that, whatever the political set-up may be, the Russians have made up their minds for easier and more comfortable lives. Certainly, Mr Khrushchev ought to know that better living standards must lead to radical political demands by workers, but he appears to be convinced that the case for Communism would become weaker if the consumer was ignored.

The Food Problem

SAMPLE Surveys conducted by the Agro-Economic and Farm Management Units under the Ministry of Food and Agriculture, and by the Programmes Evaluation Organisation of the Planning Commission, have revealed a sorry state of affairs not usually acknowledged by Food Ministers. Market arrivals of rice and wheat were smaller than before in spite of good crops, because cultivators expected higher prices, and in many cases held back more foodgrains in order to make sure against scarcity. Procurement prices actually turned out to be floor prices, market prices ruling higher. The ban on inter-zonal movements of foodgrains resulted in prices below cost in surplus States, and prices beyond the consumer in deficit States as for example between Orissa and West Bengal in the case of rice, and MP and Bombay with regard to wheat. The Reserve Bank directive prohibiting advances against foodgrains was not respected by commercial banks (according to the Reserve Bank's own admission), and cheap credit provided by the Reserve Bank added to the holding capacity of growers. Internal procurement, compared to foodgrain imports, was very poor in results as shown by the following figures:

Year	Rice	Wheat
1956-57	150,000 tons ...	...
1957-58	0.5 million tons ...	...
1958-59	1.24 million tons ...	190,000 tons

Procurement was largest in Madhya Pradesh and Orissa in 1959. The latest announcement of a new food zone comprising Orissa and West Bengal should improve matters, although the surplus in Orissa is expected to be much smaller than the deficit in West Bengal.

In this connection, some decisions taken by a recent meeting of the Agricultural Panel of the Planning Commission deserve special notice. With 1949 as base, the index of agricultural production was at 117 in 1959, showing a less than 2 per cent increase per annum on the average. The Panel recognised that the increase in foodgrains production should overcome two special features, namely, population growth at 2 per cent per annum, and inflationary pressures on account of accelerating pace of investment. Yet, the target for the Third Plan has been put at 110 million tons. The Panel appears to have forgotten for the moment that food includes not merely foodgrains but more nourishing items like vegetables, fruits, milk and milk products, meat and fish. Reliable statistics are not available in this country with regard to the annual production of these food items. Nutrition experts believe that as the standard of life rises, there is a shift from starchy stuffs to meat, milk, fruits,: our schemes for cattle farms, dairy farms orchards and fish culture are scanty.

Another strange opinion of the Agricultural panel is that mechanisation does not suit Indian conditions although co-operative joint farming has been accepted as the monolithic type. While due weight should be given to the present fragmentation of holdings, it would be unwise to perpetuate small-scale farming in any country; of course, due care would have to be taken to obviate difficulties and hurdles in the transition from peasant economy to machine-economy. Automation without ceiling is the most effective means whereby production is to be stepped up rapidly both in the USA and in the USSR. With acreage restricted to 55 million, wheat production in the USA is estimated at 1,182 million bushels in 1959, not only meeting domestic needs and stockpiles, but also making possible loans and grants of wheat to 38 countries. With 7.5 million people on the land, the USA population of 180 million is sustained, together with huge surpluses for exports. All this has been due to mechanisation. With the perpetuation of bullock power, India cannot even dream of adequacy in foodgrains and other agricultural products. The less of sentiment on this issue, the better.

The Prospects After the Election

By PAUL EINZIG

ON the eve of the general election, Conservatives were hoping that they might be returned with a reduced majority. Instead, they came back with their majority nearly doubled. For the next five years, Britain will be safe from nationalisations, vindictive taxation of profits and of higher income, and other anti-capitalist measures. It might even mean that another five years in opposition would split the Labour Party, and that its moderate elements would form some sort of middle party with the Liberals. In that case, the extremists would stand no chance of ever winning an election.

For this season, there is a widespread feeling that, for the next few years at any rate, the British nation can forget about politics and concentrate on economic affairs. Hence the violent reaction of the Stock Exchange to the election result. Possibly, the record rises in many equities were exaggerated, and, after a few hours of excited dealing, a marked reaction set in as a result of profit-taking. In the long run, however, British equities are still relatively low in spite of their rise just before and immediately after polling day. All figures published during recent weeks indicate progress in production and consumption. Recovery from the recession of 1957-58 is now accomplished, and we are witnessing the beginnings of a boom which might well continue for some time to come.

Sterling responded to the election result by a sharp rise. Its firmness must have been accentuated by the influx of American and continental capital to take advantage of the good prospects on the London Stock Exchange. Many foreign exchange dealers anticipate a revival of the dollar scare during 1960, in which case substantial international balance are likely to be transferred from New York to London. This would increase the British gold reserve and would tend to reduce British money rates. The possibility of a reduction of the Bank rate and of a further relaxation of exchange control can no longer be excluded.

There appears to be no further justification for the discrepancy between yields of British and US equities. Wall Street appears to be reasonably steady, so that the discrepancy is likely to disappear through a decline in yields on British equities. This would mean a very substantial rise on the London Stock Exchange. Of course, the possibility that, in the meantime, Wall Street might weaken should not be ignored, in which case a smaller rise would level out the yields. Barring a setback in Wall Street, the next twelve months or so are likely to witness a very marked appreciation of British industrial shares.

It is true, the British economic horizon is far from clear. A number of important wage disputes are likely to arise in the near future. Some important wage claims are likely to be rejected, so that the possibility of major strikes early in 1960 must be envisaged. Trade Unions, under the influence of the defeat of the Labour Party, are likely to be very truculent in the course of the coming wage negotiations. The evidence of fortunes being made on the Stock Exchange considerably lessens the chances of a conciliatory attitude on the part of organised workers. But, given the boom-like conditions, it seems on balance probable that most strikes will be averted or settled, even at the cost of inflationary wage increases. The chances are that labour troubles will not unduly hinder the progress of production, and that any setback will be followed by fresh progress.

It is a widespread belief that a further rise in interest rates in the United States might interfere with the expansion of production and consumption in Britain, by forcing the Bank of England to protect sterling from the effects of high interest rates in the United States. It is widely anticipated that, if high Treasury Bill rates or time money rates in New York should attract large funds from London, the resulting decline in the gold reserve might have to be arrested by means of high interest rates and credit squeeze in London. This is expected to be all the more necessary if, as a result of a further relaxation of exchange control, it should become easier for British funds to be transferred to New York.

No undue importance should be attached to such fears. For I am satisfied that the British authorities have decided to adopt a device by which it would be possible to protect sterling and the gold reserve against the effect of higher interest rates in New York, without having to resort to the orthodox device of high interest rates. This device is the official intervention in the forward exchange market to eliminate the profit on transfers of funds from London to New York. Arbitrageurs usually want to cover the exchange risk on such transfers by selling forward dollars at the same time as buying spot dollars. Now if the discount on forward dollars is at least as wide as the differential between interest rates in London and New York, it wipes out the profit on the higher New York interest rates. Thus, the Bank of England is in a position to bring about this situation by selling forward some of its holdings of dollars, thereby widening the discount on forward dollars.

The volume containing the evidence given before the Radcliffe Committee is expected to indicate the official British attitude toward the application of the device described above. I have every reason to believe that the memorandum submitted to the Committee by the Bank of England, and also verbal evidence given by officials, will confirm that the authorities are in principle in favour of that device. And it would be difficult to imagine a situation when the case for its application could be stronger than in the case of a drain on sterling resulting from high New York money rates. I think it is safe to assume that the forthcoming British boom will not be allowed to be checked by high money rates in New York.

EDITORIAL NOTES

Steam-roller

Many thoughtful observers have in the past drawn attention to the trend towards centralisation of power in India. Even while the Constitution was being framed, Sir A. Ramaswami Mudaliar had warned about the tendency which could create difficulties in future. Recently, the Swatantra Party has made opposition to the growing power of the Centre one of the principal items of its programme, which is so largely made up of negative attitudes. Mr Manubhai Shah has not said anything new in his address to the Harold Laski Institute at Ahmedabad about the Centre becoming a steam-roller. His observations appear surprising only because they come from a Union Minister. What he has said may not reverse the established trend. But it might provoke speculation regarding his future plans, particularly in the context of the imminent bifurcation of the State of Bombay.

The trend toward expansion of the functions of the Central Government, which Mr Shah deplored, is the result as much of the subjective preference of politically effective sections of the population as of the compulsions of economic development. The former, which was very strongly in evidence when the Constitution was being framed, was a reaction to the tactics pursued by the Muslim League before partition was decided upon, to reduce the powers of the centre to the barest minimum. When the opposition put up by the Muslim League to a "strong Centre" was removed, it was easy to confuse the strength of the Central Government with the range of its administrative functions. The inauguration of planned development, especially in the field of heavy industries, led to further expansion of functions of the central Government and strengthened its control over resources and their allocation. Without such control, it would not have been possible to establish the steel plants or the multi-purpose projects, like the DVC or the Bhakra Nangal, each of which involves heavy investment beyond the resources of the States where these projects are located, if the total available re- had been allocated among the States on an equitable basis. Having established these projects with the resources to which the whole country has made a contribution, central control has to be continued to ensure that the benefits are equitably shared.

Centralisation of responsibility goes along with centralisation of power and it is not unlikely that the burden has become too heavy for the Ministries which are less concerned with control than with execution. For instance, the foreign exchange shortage and stringent control of imports and of allocation of materials have placed a heavy curb on industrial activity. Many promising ventures have to be strangled at birth. Mr Shah naturally would like to share this unpleasant job with his opposite numbers in the States. The proposal for decentralisation of the responsiblity for economic development may not be unacceptable to those States which have already reached a fairly high level of industrialisation. But the less developed areas would prefer that the responsibility should remain with the Centre until such time as regional disparities are less glaring. The centralisation of authority has been brought about almost automatically without any deliberate design. But the reversal of the process would require careful preparatory groundwork.

*

Tory Hat-trick

The magnitude of the Conservative majority in the last British elections would not have been so surprising, but for the forecasts put out by pollsters up to the date of voting. Except for the fact that the Conservatives were in power for eight years running, there was no particular reason why the British electorate should desire a change, especially with a Summit meeting round the corner. In the field of domestic policy, Labour had little to offer to improve the Tory record. It should not be surprising if many voters, who in the past supported Labour in order to usher in the Welfare States, decided that the Conservatives would be better able to conserve the gains.

American commentators who have declared the end of the Labour party have been rather hasty, but the defeat, the third in a row and by such a large margin, is likely to be disastrous for the labour leadership. It is clear that, for all the streamlined efficiency of its election machine, the party has misjudged the mood of the electorate. To raise the issues of African policy and Suez and Cyprus was a serious tactical mistake. The attack on the handling of the African and colonial affairs by the Conservative Government appealed to an idealism which clearly was not widespread. Labour could have taken warning from the racial rioting in North Kensington. And the majority of the British people naturally resent any reminder of the Suez debacle. The offer of increased old age pensions also belongs to this category of misdirected appeals. Most of the old age pensioners in any case would have voted Labour. More likely the younger generation, who have to foot the bill, were antagonised by the proposal which threatened to bring in its wake higher taxes and higher prices.

More than the defeat itself, the alienation of youth from the party's programme should be a matter for anxious concern to Labour leadership. Those voting for the first time, estimated at over a million, have played a crucial role in returning the Conservatives back to office in greater strength. Old habits die hard. And Labour has not cared to recognise that slogans based on traditional class conflict have a false ring in the Welfare State. The younger generation, have no recollection of the dark days of depression, unemployment and the Means Test. They grew up during a time of full employment when labour was laying the framework of a Welfare State. Austerity, high taxes and inflation are the three things which are associated in their minds with the policies of the Labour Party. Labour will not find it easy to break this crippling association of ideas, unless the Tories come to their assistance with some disastrous mistake.

*

The Private Sector in Third Plan

In the First Plan, the private sector was not taken into consideration at all. In the Second Plan, Rs 2,400 crores were alloted (50 per cent of the public sector), but more than Rs 3,000 crores are estimated to have been contributed by that sector. Actually, this contribution must have been more than Rs 6,000 crores, but figures with regard to small and hand industries and services are not available. What should be the allotment to the private sector in the Third Plan? The deliberations at Naveen Nagar have almost created a cold war climate; with adjectives like "sharper claws", "fiercer teeth" and "the law of the jungle" and reduction of managing agents' remuneration from a ceiling of 10 per cent to 4 per cent. The Dhebar Committee has suggested an allotment of Rs 3,000 crores (out of Rs 10,000 crores) to the private sector; Mr B. K. Madan recommended Rs 4,000 crores; and the Federation of Indian Chamber of Commerce and Industry has proposed Rs 4,500 crores, keeping the ratio of private investment at 45:55 of public investment. Actually, private investment during the Third Plan period may well exceed Rs 10,000 crores, with more private capital imports on joint share basis and more accurate statistics. The plea of the Federation that taxation should be reduced by Rs 1,000 crores in order to enable private enterprise to utilise this amount for investment is strongly supported by commonsense. In the long-run, competitive conditions, and not preferential treatment, will stimulate incentives and raise production per man-hour. But reference to incentives at the Chandigarh AICC meeting resembled those made by Mr Khrushchev in the USSR during the last two years. The definite leftist trend at Chandigarh can possibly be explained only in one way: the Swatantra Party, it is feared, will gain popular support for safeguarding property and inheritance rights, and freedom of contract and compensation.

It has been suggested that the only way the Congress could hold on to its dominant position is to rally all the non-communist leftist forces on a common platform.

WORLD OF FINANCE

Second Tranche of Central Loans

A SIGN of strength, yes, but the Government announcement of the second tranche of the Centre's borrowing programme for 1959-60 is, to us at any rate, not without its disappointing aspect. Strength lies in the fact, of course, that the two issues are a medium dated and a long dated. A re-issue of 3½ per cent 1969 for Rs 25 crores at Rs 99.40 has been sold in favour of the Reserve Bank, as also a re-issue of 3¾ per cent 1974 at Rs 99.65 for Rs 20 crores. The total amount sought at Rs 45 crores is not far from the Rs 50 crores that we had considered to be the minimum. In fact, there appear to be signs that it is a conservative target that the Central Government have aimed at, since there is reason to believe that, during the week ended October 9, the Reserve Bank had already sold through the tap some Rs 20 crores worth of securities. In such a case, undoubtedly, well before the slack season ends, the whole of the Rs 45 crores should have been placed on the market. If this were to happen, there would be the continuing purchase of such marketable securities that the Reserve Bank then might possess. But, in view of the considerable purchase through the tap during the 1959 slack season so far, it is extremely doubtful that the Reserve Bank has parcels of securities available for the market and which the market is prepared to absorb. For, we presume that the Reserve Bank will not emerge as sellers of short dateds; which, we believe, would be a pity.

For, our disappointment lies in the fact that no loan has been issued this year, either by the Central Government or by the State Governments, which could at all be construed as being apposite for the investment portfolios of Scheduled Banks. In the result, with the considerable conversion effected from the 3 per cent 1959-61 into the 3½ per cent 1969, the investments of Scheduled Banks may be said to be top heavy. They are top heavy, because securities maturing between five and ten years will form by far the largest proportion of their holdings. Indeed, it is not improbable that such class of investment exceeds 50 per cent of total holdings. Surely, prudent banking requires that, as far as possible, investments should mature in shorter rather than longer periods. This was not observed prior to 1950, and the result of it was that, when Bank Rate was raised in India in 1951, many a bank found that its depreciation in giltedged quite wiped off accumulated reserves. It is the fact that, in such a situation, banks have to carry capital depreciation on their investments until maturity that it is not very prudent for banks to have large holdings in medium or longer dateds. But what Government borrowing policy this year has done is precisely to compel banks to go in for longer dateds, because the state of the money market has been such as to leave them no alternative other than to invest their gathering resources in giltedged. However, the task of the Reserve Bank has in no sense been easy, since, with a view to containing the inflationary pressures that might result from the accretion of large new Deposits, it would be prudent policy on its part to ensure that as much as possible of such new resources is, as it were, deactivated by being invested in longer dateds.

While, therefore, we appreciate the problem that faces Government in this regard, we are still convinced that it would be strongly desirable for the Reserve Bank, perhaps at terms favourable to itself, to permit some extent of switch transactions with banks whereunder banks will be able to acquire shorter dateds against their present holdings of, say, 3½ per cent 1969.

+

Impact of the Two Re-issues

THE returns of the Reserve Bank for October 2 and October 9 reflect, firstly, the considerable expansion in currency circulation occasioned, on the one hand, by beginning of the month disbursements and on the other hand, by the payments connected with Puja festivities in Calcutta. Secondly, the Reserve Bank figures also reflect changes in connection with the re-issues of the existing 3½ per cent 1969 and 3¾ per cent 1974 for a total of Rs 45 crores, which, in the first instance, were sold to the Reserve Bank. Thirdly, the denuded state of State Government balances has compelled the States to re-discount part of their holdings of ad hoc Treasury Bills. Lastly, the Scheduled Banks have themselves felt somewhat the drain of both Puja and month early disbursements.

Active Note circulation rose successively by Rs 7.24 crores and Rs 37.28 crores to be placed at Rs 1686.53 crores on October 9. That it should have been Puja disbursements which caused the expansion in Note circulation to be so large is suggested by the considerable outflow, in the latest week, of Rs 2.30 crores in Rupee Coin. The hefty expansion in currency circulation, in the latest week, has been as to Rs 20 crores against Rupee Securities, the balance having been drawn down on the Reserve Bank's cash in the till, which has declined by Rs 19.58 crores to Rs 10.48 crores.

During the week ended October 2, it is to be presumed that a further tranche of gold was purchased for making over to the International Monetary Fund, this being indicated by the fall of Rs 1.92 crores to Rs 57.97 crores in Balances Held Abroad. However, it would appear that the Central Government were not embarrassed; no evidence is there of deficit financing, the decrease of Rs 3.39 crores to Rs 259.77 crores in Investments being due presumably to sales through the tap to Scheduled Banks. On the other hand, Balances of State Governments show a precipitous fall of Rs 7.80 crores to Rs 9.86 crores while, at the same time, their Ways and Means borrowings rose by Rs 2.26 crores to Rs 19.31 crores. The pinch was not quite felt by Scheduled Banks during the week ended October 2, since their Reserve Balances actually rose by Rs 5.44 crores to Rs 81.65 crores though, in this context, we may remark that it is the State Bank which fully accounts for such rise as there occurred in Deposits of banks with the Reserve Bank. However, it is also clear that Scheduled Banks did have recourse to Reserve Bank credit, the latter's Other Loans and Advances rising by Rs 5.97 crores to Rs 83.11 crores.

It is in the week ended October 9 that changes in the Banking Department are both intriguing and interesting. At the outset, it may be stated that very nearly the last tranche of gold purchases has been made, with Balances Held Abroad declining by a further Rs 1.78 crores to Rs 14.02 crores. If this presumption is correct, then, between September 11 and October 9, foreign exchange expenditure totalling Rs 20 crores has been incurred on the purchase of gold. But, over this period, Foreign Balances are lower only by Rs 9 crores odd. This would mean that there has been a satisfactory export surplus experienced over this period. However, at this stage, we have to note that the weekly average purchase of gold has been of the order of Rs 5 crores and, in such case, there would be a balance of Rs 5 crores. But, then, the Central Government had in their possession gold that had been confiscated from smugglers as also gold produced at the Kolar goldfields. So, some small element of gold may still have to be purchased during the week ended October 16. But, if the export surpus persists, as it should, then, the return for October 16 should record an increase in Foreign Balances.

We may now turn to the transactions connected with the two re-issues sold, in the first instance, to the Reserve Bank. As a result of these transactions, the Reserve Bank's holdings of Rupee Securities should, in the week ended October 9, have risen by Rs 45 crores. In fact, the relative figure, for both departments, has been marked down by Rs 21.64 crores. Moreover, to this we have to add Rs 5 crores odd of securities which have been sold by the State Bank during the relevant week, almost certainly to the Reserve Bank. Thus, we have to account for a net decline in Reserve Bank's holding of Rupee Securities to the extent of roughly Rs 25 crores. As far as the Rs 45 crores of securities sold by Government to the Reserve Bank are concerned, we may take it that there has been countervailing cancellation of ad hoc Treasury Bills. This would mean that the Centre's Balances, which should have risen by Rs 45 crores, have not done so because ad hocs have been cancelled in that amount; and, automatically, the Reserve Bank's holdings of Rupee Securities, which should have been higher by Rs 45 crores, in this regard are unchanged, because Rs 45 crores worth of Treasury Bills held by the Reserve Bank have been cancelled. But what has happened to this element of Rs 25 crores to which we have referred? Furthermore, why has the Reserve Bank's portfolio of Treasury Bills purchased and discounted risen unusually steeply by Rs 32.78 crores to Rs 37.46 crores? Our hypothesis is as follows:

(1) Part of the increase in Treasury Bills re-discounted may relate to the attempt by the State Governments to replenish their waning balances which, in the week ended October 9, declined by Rs 3.58 crores to Rs 6.28 crores.

(2) Another moiety of the increase in Treasury Bills re-discounted may relate to disinvestment in giltedged for Rs 5 crores shown by the State Bank in the relevant week.

(3) The balance of rise in Treasury Bills discounted may relate to rediscount effected by other entities, such as LIC, which customarily have a portfolio of Treasury Bills.

(4) It would follow that marketable securities sold by the Reserve Bank during the week would have been in an amount of Rs 20 crores, because we have presumed that the State Bank's sales related to Treasury Bills rather than marketable securities.

(5) Scheduled Banks other than the State Bank may have purchased securities worth, say, Rs 5 crores; the State Bank, which shows a rise of Rs 7.71 crores in Other Assets during the week ended October 9, may account for such figure of marketable securities purchased from the Reserve Bank; and, in such case, the balance would relate to purchases made by the LIC, etc.

(6) In broad terms, this means that, as against the two re-issues amounting to Rs 45 crores, the Reserve Bank had already sold Rs 20 crores worth of securities during the week ended October 9.

We shall know next week the magnitude of securities purchased by Scheduled Banks, and we would then be able to discover the size of purchases effected by other en-

tities. However, during the week ended October 9, Scheduled Banks were put to some strain, as suggested by the fall of Rs 14.49 crores to Rs 67.16 crores in their Reserve Balances. Furthermore, the Other Loans and Advances of the Reserve Bank also rose by Rs 2.88 crores. The return of Scheduled Banks for October 9 should, therefore, include a reduction in Cash Balances and an increase in borrowings from the Reserve Bank.

The return of the State Bank for October 2 shows a rise of Rs 7.00 crores to Rs 574.39 crores in Deposits. Neither Puja disbursements nor month early demand for funds had much of an impact, since Advances are higher only by Rs 0.88 crores at Rs 157.92 crores. The rise of Rs 2.10 crores to Rs 387.36 crores in Investments probably relates to subscriptions to Treasury Bills. In the result, cash in hand and with the Reserve Bank is shown higher by Rs 7.75 crores at Rs 32.23 crores.

That Puja disbursements were met by constituents by a combination of drawing on their Deposits and by resort to bank credit is confirmed by the return of the State Bank for October 9. Deposits have been marked down by Rs 7.57 crores to Rs 566.82 crores. The total of Advances has risen by Rs 1.46 crores to Rs 159.37 crores. As already noted, and for reasons given, Investments are lower by Rs 5.24 crores at Rs 382.12 crores, while Other Assets are higher by Rs 7.71 crores at Rs 22.01 crores. Consequently, cash in hand and with the Reserve Bank is lower by Rs 13.71 crores at Rs 18.52 crores.

The return of Scheduled Banks for September 25 is noteworthy for the lowest level so far touched in the total of Advances during the 1959 slack season. During the week under review, Advances fell by nearly Rs 7 crores to Rs 921.63 crores. Another interesting feature of the return is the rise of Rs 24.61 crores to Rs 784.46 crores in Investments; Rs 20 crores of this was attributable to the State Bank. Thus it is that, though Deposits rose by Rs 3.68 crores to Rs 1857.94 crores, Cash Balances stand reduced by Rs 7.65 crores at Rs 166.39 crores. And, meantime, the Scheduled Banks had reduced their indebtedness to the Reserve Bank by Rs 4.35 crores to Rs 3.14 crores.

The return of Scheduled Banks for October 2 shows part of the impact of Puja and month early disbursements. The total of Advances has risen by Rs 6.61 crores to Rs 928.24 crores. Nevertheless, Deposits have made some headway, in rising by Rs 1.90 crores to Rs 1859.84 crores. (The returns for the latest two weeks of the Scheduled Banks are also significant in that the Advances/gross Deposits ratio is in each week lower than 50 per cent). The Investment portfolio has marked a rise of Rs 5.86 crores to Rs 790.32 crores. Of this, Rs 2.10 crores on account of the State Bank presumably relates to Treasury Bills, whereas the balance would presumably be as a result of tap purchases from the Reserve Bank by other Scheduled Banks. Nevertheless, Scheduled Banks at the same time increased their borrowings from the Reserve Bank by Rs 4.74 crores to Rs 7.38 crores. In the result, Cash Balances are slightly higher by Rs 1.85 crores at Rs 169.24 crores. Conceivably, the return of Scheduled Banks for October 9 will show increases in Advances and Investments, as well as in borrowings from the Reserve Bank, and declines in Deposits and Cash Balances.

Economics of Election Result

By Paul Einzig

UNTIL a few weeks ago, most people were inclined to assume that a Conservative victory was a certainty. Meanwhile, however, public opinion surveys showed a noteworthy decline in the Conservative lead over Socialists. Most people are now inclined to admit that the chances are about equal. That being so all I can do is to express my views about economic and financial prospects according to whether the election will result in a Conservative or a Socialist Government.

The immediate reaction to the emergence of a working majority for Mr Macmillan's Government, would be a firm trend in sterling, regardless of the seasonal factor. It is known that in recent weeks American banks, discounting a Tory victory, have been buying forward sterling for delivery on October 9, the day when the election results will become known. There is bound to be a demand for sterling as soon as the election results make it clear that the Conservatives would continue in office until 1964.

In addition to the psychological effect of such a result, there would be a strong demand for British securities by American and other overseas investors outside the sterling Area. For in recent weeks almost all economic indices were pointing towards an expansion and the only consideration which prevented investors at home and abroad from buying equities on a large scale was the fear that the Labour Party might win the election. The moment that fear is removed there is likely to be a boom on the London Stock Exchange, and many investors abroad would hasten to take advantage of it while there are "bargains" available.

This would mean a sharp increase in the gold reserve which has been creeping up gradually during recent months. The strengthening of the technical position would enable the authorities to lower the Bank rate, all the more so since the payment for the increased gold reserve would be accompanied by an expansion in the volume of Treasury Bills, which again would tend to increase the liquidity of the banks and would stimulate a credit expansion, leading to a decline in money rates and discount rates.

Would such expansion lead to a resumption of the rise in prices? It would depend entirely on the outcome of the pending wage demands. The chances are that under the influence of a Conservative victory, industrial employers will stand firm against the unwarranted demands, preferring a major showdown to a resumption of the wage-price spiral. Even so, since, under the stimulus of the expansion of production, overfull-employment would be bound to reappear, competitive demand for labour would make it difficult to prevent substantial wage increases. Judging by past experience, it seems probable that wages would rise faster than the output, so that prices would resume eventually their rise. In due course this would affect the balance of payments, which has been remarkably favourable since 1957.

A Socialist victory—that is, the emergence of a working majority for a Socialist Government—is bound to react unfavourably on sterling. At the moment, the anticipation of a Tory victory has resulted in an over-bought position, which means that there is likely to be some realisations of sterling by overseas holders in case of a Labour victory. What would be much more important, there would be a flight of capital. And judging by public statements by the prospective Socialist Prime Minister and Chancellor of the Exchequer, they are under the illusion that they would be able to restore effective exchange control at a moment's notice. But the relaxation of exchange control in recent years has been accompanied by the dismantling of the big administrative machinery that is needed for running controls efficiently. Such a machinery cannot be restored in a matter of hours or days, and inevitable delay in its restoration would mean heavy pressure on sterling and heavy gold losses.

The effect of a Labour victory on the Stock Exchange is bound to be adverse. Fear of anti-capitalist measures would induce a great many investors at home and abroad to liquidate their holdings. Threat of "creeping nationalisation" of hundreds of the biggest industrial firms by means of the purchase of their shares in the open market would induce genuine investors to realise their commitments, for as minority shareholders in firms controlled by a Socialist Government, their position would not be enviable.

In the long run, persistent purchase by a Labour Government would tend to cause a rise in equities, and this rise would be stimulated by the certainty of a creeping inflation. Socialists have made during the electoral campaign costly promises to the electorate, larger expenditure and cuts in taxation. Indeed, they pledged themselves not to raise Income Tax "in normal peacetime conditions." Although the term "normal" is open to interpretation, there would have to be a fairly advanced degree of inflation before a Labour Government could claim that conditions are now sufficiently abnormal to justify an increase in Income Tax.

The return of a Labour Government, would encourage excessive wage claims because employers, knowing that the official dice would now be loaded in favour of employees, would not be in a mood for top firms resistance. So most wage demands would be conceded, and before long the wage-price inflation would be once more proceeding. Its effect on the balance of payments would reinforce the pressure on sterling and on the gold reserve. Even though this would tend to cause a contraction of the credit base, through reducing the volume of Treasury Bills a Socialist Chancellor of the Exchequer, pledged as he is to maintaining full employment at all costs, would have to ensure adequate credit for financing the expansion by some reasons or other.

1960 is lately to be, therefore, a year of inflation in Britain, even though the degree of inflation would be incomparably higher in case of a Labour victory than in case of a Conservative victory.

This expert has won the trust of millions in the label *'Sanforized'*

Meet our American-trained expert who makes sure that any fabric marked 'Sanforized' won't shrink. Every day, all through the year, he tests fabrics bearing this international label; so that your clothes won't shrink out of fit—even after many, many washings!

This is how he does it:

Travelling from mill to mill, he advises and helps them with their technical problems; and makes on-the-spot tests that ensure value in the cloth you buy labelled 'Sanforized'.

Whenever he visits the mills, he takes at random several samples from their godowns as well as off the processing machine. These samples are first measured, and then given a standard wash test.

And then, the samples are re-measured. This is the first stage of ensuring quality. All fabric must meet the Company's strict anti-shrinkage specifications *before* it can use the label 'Sanforized'.

These tested samples are sent to the New York office for re-checking, and with them goes the expert's detailed report. These documents record the progress and prosperity of each individual mill.

The New York office checks thousands of samples from all over the world. This is your assurance that fabric labelled 'Sanforized' is of a uniformly high standard, and is welcomed *everywhere* in the world!

Look for SANFORIZED REGD TO MK *on the label*

and your clothes will never shrink out of fit!

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

For information: 'Sanforized' Service, 95, Marine Drive, Bombay-2

WORLD OF JUTE

Need for Maximising Gunny Exports

IT is accepted on all hands now that our national emancipation depends almost entirely on our ability to pay for our exports of capital goods and industrial raw materials which are essential for imparting the needed momentum to our growth into an economically strong unit. In this view, the emphasis is correctly laid on the development of new lines of exports, especially of manufactured articles. Thanks to concerted efforts both on the part of the Government and private enterprise, commendable results have already been obtained. But there is no gainsaying the need for intensifying these efforts because no amount of foreign exchange will be surplus for some considerable time to come. We are still a long way from meeting our entire foreign exchange requirements from our export earnings.

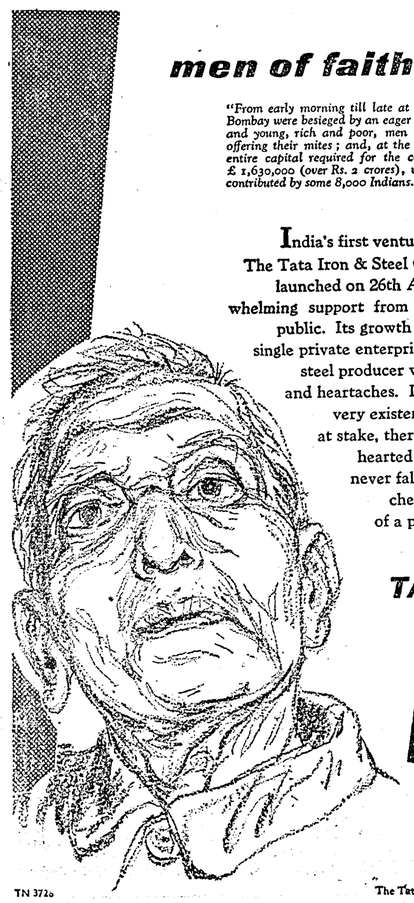
In the enthusiasm for the promotion of exports of new products, the contribution and potentialities of traditional items should not be ignored. For instance, jute goods' share of export earnings is quite considerable. They accounted in 1958-59 for slightly over Rs 100 crores out of India's total export earnings in that year of Rs 576 crores. Their share was Rs 107.7 crores in the previous year when total earnings amounted to Rs 595 crores. It will, however, be noted that earnings from jute goods exports are not very encouraging in the sense that the trend seems to be downward. As a result of a growing tendency in consuming countries to minimise reliance on imported jute goods for various reasons, our jute goods exports are not moving overseas as fast as they used to. Hence, renewed efforts are needed to promote our jute goods exports also. The task facing us in this regard is rendered somewhat difficult by the fact that substitute materials and bulk handling methods have made serious inroads into the packaging field where jute goods once reigned supreme. The emergence of Pakistan as a jute goods exporter has further intensified the competition in a shrinking world market.

A redeeming feature, however, is that, thanks to the abiding interest evinced by Government, our jute goods industry has now reached a position wherein it can address itself to its task untroubled by some of the basic disabilities which were dogging its steps till recently. The attainment of self-sufficiency in raw jute and the steady progress of its modernisation programme have placed it in a commanding position among jute goods industries of the world.

It is up to the industry and Government to take full advantage of the present opportunity to strengthen the position of jute goods in its traditional markets as well as to explore new markets.

The work of export promotion in jute goods is largely in the hands of the Indian Jute Mills Association and it may be said that the IJMA is doing a good job of it. It is gratifying to find that a two-man delegation of the IJMA has now undertaken a tour of the USA and Canada with a view to continuing its policy of maintaining close contact with jute goods importers and consumers in these countries, to study the present market position in the light of current economic trends, to examine the success of the promotional activities of the Association in North America and to consider plans for the future. On the eve of the delegations departure from Calcutta, Mr Kenneth E. Tosh, Chairman of the IJMA and leader of the delegation, pointed out that burlap had immense industrial possibilities in the United States. While in the US, the delegation will study at first hand the expansion of existing uses of burlap and also the question of developing new uses. In the Us, burlap is being used for various purposes, besides packaging. These include use in the automobile industry as covering for seats and brake linings, extensive utilisation in the furniture industry and use as canal linings. Mr D. P. Goenka, Vice-chairman of the IJMA and the other member of the delegation, pointed out that the Indian jute industry was very much concerned to see how far it could take full advantage of its newly won position of raw jute self sufficiency to work its present idle capacity of 10 per cent looms by expanding the export market.

The need for making strenuous efforts to develop those of India's jute goods consuming markets which have still considerable scope for expansion has been stressed by the Chairman of the East India Jute and Hessian Exchange. Speaking at the annual general meeting of the Association early this month, Mr N. L. Kanoria said that export promotion activities could do much profitable work in Argentina which was a big market for Indian hessian. There was also much scope for increasing our jute goods exports to several other countries. Mr Kanoria is of the view that many of the underdeveloped regions in Africa, the Middle East and Near East may become consumers of jute goods. An important advantage in these regions is that there is no early possibility of the introduction of bulk handling methods or substitutes. A suggestion made by Mr Kanoria is that, in view of the emergence of Russia, certain East European countries and China as consumers of Indian Jute goods recently, the requirements of the Communist countries should be studied as far as possible in order to have a properly planned production.



The jute goods market reopened after the holidays on a firm note. The main incentive has been provided by the stock figures as at the end of September 1959 published last week. The report that the end of the steel strike in US is in sight has revised confidence in hessian while

men of faith

"From early morning till late at night the Tata offices in Bombay were besieged by an eager crowd of investors. Old and young, rich and poor, men and women, they came offering their mites; and, at the end of three weeks, the entire capital required for the construction requirements, £ 1,630,000 (over Rs. 2 crores), was secured, every penny contributed by some 8,000 Indians."

—Axel Sahlin

India's first venture into heavy industry, The Tata Iron & Steel Company, was thus launched on 26th August, 1907, with overwhelming support from investors and the public. Its growth into the country's largest single private enterprise and the principal steel producer was not without struggles and heartaches. In the 1920's when the very existence of the Company was at stake, there were many stout-hearted investors whose faith never faltered, and who cheerfully accepted the risks of a pioneering enterprise.

TATA STEEL

79-year old Mr. Rash Behari Law of 13-B Cornwallis Street, Calcutta-6, one of the first shareholders, who still holds stock in the Company.

The Tata Iron and Steel Company Limited

sacking continues to attract support on expectations of further overseas business, especially from the Middle East.

Stocks of jute goods at the end of September 1959 are placed at 78,600 tons compared with 81,200 tons at the end of August. Thus, there has been an overall decline of 2,600 tons over the previous month. The decline, however, is not shared by all categories. While Sacking and other varieties are lower by 3,100 tons and 200 tons to stand at 42,600 tons and 10,500 tons respectively, hessian are up by 700 tons to be placed at 25,500 tons. A year ago, the stock position was quite different. At the end of September 1958, total stocks were 109,000 tons comprising 17,000 tons hessian, 80,200 tons sacking and 11,800 tons other varieties.

How good conditions in the jute goods industry and trade had been during September will be fully seen if stock figures are read together with the figures for jute goods production during the month. According to the production figures published on Tuesday this week, total output during September amounted to 92,600 tons, mills having worked for 209 hours. Working 200.5 hours, mills produced in August a total of 86,900 tons. The higher output in September is, therefore, partly due to increased number of hours worked and partly to the fact that throughout September mills have worked with 2½ per cent additional looms while the benefit of the additional looms had accrued to the extent of hardly one week's working as the additional looms were opened with effect from 24th August only. The entire additional capacity has been utilised for the production of sacking goods. For, output of hessian had remained almost stationary at 37,500 as compared with August when output was 37,600 tons. There has been a decline in the output of other varieties to 6,300 tons from 7,000 tons. Production of sacking has increased to 48,800 tons from 41,900 tons.

From the two sets of figures, it would appear that despatches of jute goods during September have been on a satisfactory level. About 95,000 tons should have been despatched and this quantity compares with the actual despatches during August of 98,200 tons. A break-up of the figures will reveal that, while despatches of hessian have been lower, those of sacking have been slightly higher than during August.

The statistical position of jute goods is very good indeed. Though hessian stocks are tending to be irregularly high from month to month during the past few months, its position cannot be deemed to be unsatisfactory. Even now, hessian stocks are much below one month's production of this category of goods by mills. It is generally expected that, with the end of the steel strike —it is to end in a few days—demand for hessian will pick up. It is quite possible that the pent up demand may be reflected in a spate of enquiries from the US in the coming months. The indication that output of hessian will be pegged around current levels as the additional capacity is to be fully utilised for the production of sacking goods will continue to ensure that heavy accumulation of this category of goods does not happen.

The jute goods market displayed a firm trend during the past three days in respect of both the principal varieties of manufactures. Apart from the fact that total stocks have recorded a decline in September also, the continued fresh enquiries for sacking and the expectation that demand for hessian from US will pick-up in coming weeks have helped keep undertone very steady. Indications are that buying by US may pick-up following the announcement of the end of the steel strike. Such expectation stems from the fact that consumption of burlap in US is running ahead of last year. It is to be noted that in addition to the burlap market being maintained, substantial recovery has been shown in yardages for industrial uses. The improvement in the industrial consumption is substantiated by trade reports which indicate wider interest among industrial textile users in jute fabrics. Though there is still no indication as to the time or quantity of offtake from the Argentine, it is generally believed that country would soon find a way of out of its difficulties to find the necessary exchange for the purchase of its requirements in hessian. The outlook for sacking is considered quite bright atleast for a few months to come. The news about the Australian crop is not of a variety that will endanger optimism. Even so market expectation is that the increased demand from other areas will take care of the increase in output of this category of goods.

The goods market reopened after the holidays on Monday on a firm note sentiment having been helped by the satisfactory stock figures and the news that the US steel strike was to end shortly. Sacking ruled strong on reports of further enquiries. Hessian 40"×10 oz. November futures opened at Rs 41 and at one time was done upto Rs 41.10. The lowest level touched was Rs 40.90 and the closing rate was placed at Rs 41.06. Hessian February opened at Rs 40.46 touched a high of Rs 40.54 before closing at Rs 40.54. B Twills November opened at Rs 102.25 and after moving within a narrow groove closed at Rs 102.80. In the spot market Hessian October closed at Rs 41.05 with B Twills marked at Rs 103.80.

Conditions continued to be firm on Tuesday. Though no fresh enquiries were reported bear covering kept prices high. Sentiment was rather quiet on Wednesday especially round sacking following the publication of the output figures for September. It was generally believed that in view of the interruptions to mill working during the month on account of the disturbances production would not reflect the effect of the reopening of the additional looms. But it is clear now that mills' working has not been adversely affected. The large increase in sacking output seems to have unnerved operators who expected that the effect of the additional capacity would not be reflected in the September production. B Twills October closed on Wednesday at Rs 103. Hessian was comparatively steady at Rs 40.85.

The raw jute market ruled steady on sustained mill support. Assam Bottoms was at one time done upto Rs 24. Toward close, however, sentiment was slightly easier in sympathy with the goods section and Assam Bottoms was placed on Wednesday at Rs 23.75.

"Lost your shirt, Parameswar?"

"Don't remind me of shirts! One dozen shirts, made just 6 months ago, returned from the dhobi 'phut'!"

"Tut, tut! You must have been so busy hunting for fancy cloth that you haven't heard of BINNY'S! BINNY'S Quality Control* their production, you know..."

"What is this Quality Control?"

"Modern machines process yarn and cloth so fast that often defects, invisible to the naked eye, creep into the cloth. Quality Control is laboratory testing to root out defects at every stage of production. That's why BINNY'S fabrics last so long."

"Your words give me courage, brother. Lead me to the nearest BINNY'S shop."

BINNY— a great name in textiles

BY 504a

*Testing the uniformity of cotton fibres

Durability of cloth depends on the strength of the yarn used. This, in turn, depends on the uniformity of the fibre in the cotton. Only specially selected cotton goes into BINNY'S fabrics. That's why BINNY'S cloth lasts so long.

BINNY'S manufacture nearly 90 million yards of cloth every year. Here are some of the varieties they make:

Shirtings - Khaki Drills - Bleached and Dyed Drills - Towels - Anticrease Suitings - Tussores - Union Fabrics - Silk Sarees - Rugs - etc etc

WORLD OVERSEAS

Britain

The provisional total of world paddy production (excluding China and the USSR) for 1958-59 is given as 131,000,000 tons in the latest Rice Bulletin issued in London by the Commonwealth Economic Committee. This compares with a total of 121,300,000 tons for the previous year.

The provisional total of paddy production for India in the current year is given as 43,707,000 tons, well above the figure for 1957-58 —36,502,000 tons.

In its general review of paddy production, the report notes that the Japanese crop, despite unfavourable weather, is now expected to be little smaller than last year's. The floods in Formosa, are estimated to have lost the island 50,000 tons of rice for export, the report states. In Burma, the Government proposes to concentrate this season on increasing the yield in the more fertile areas of Lower Burma.

Ceylon similarly plans to substitute more suitable crops for Yala rice in the dry zone, and to raise the yield of paddy elsewhere by better methods of cultivation and the use of improved strains, says the report.

In the Middle East, Iran is reported to have a satisfactory crop, but the harvest in Iraq shows some reduction, necessitating the import of substantial quantities.

In the United States, the report continues, the September forecast is 2,300,000 tons of rough rice, as against 2,100,000 tons last year. In Egypt, the area under paddy has risen from 540,000 acres in 1958 to nearly 780,000 acres, and harvest of 1,575,000 tons is forecast. The harvest in Nyasaland promises to be excellent.

Trade in rice showed some recovery during the second quarter of 1959 from the low figure of 1,100,000 tons in January-March, the report adds.

Exports from Burma increased by about one-quarter; shipments from Cambodia rose sharply in May and June, while those from South Viet-Nam were also larger than in the first quarter of the year. Exports from Thailand, however, showed little change in the quarter. Consignments from the United States during the quarter reached the high level of more than 197,000 tons, as against about 114,000 tons in January-March 1958.

The report says that total exports so far this year are estimated at 2,400,000 tons, as against 3,200,000 tons a year earlier. In Asia there has been a falling-off in the level of trade which is common to most countries, but most marked for Thailand; United States shipments have shown a recovery, while in the Commonwealth both Australia and British Guiana have made increased exports.

* * *

Industrial production in the United Kingdom continues on an upward trend, and reached a new record level in August, according to the latest index of industrial output, issued on September 30 by the Treasury in London.

On the basis of information so far received, the index for all industries is expected to be 98-99 (compared with 90 a year ago), 1954 being taken as 100.

In the first eight months of this year, the index averaged 108, compared with 105 in the same period a year ago.

Mr I. H. Hedley, of Hackbridge & Hewittic Electric Co. Ltd., of Walton-on Thames, Surrey, who is also a director of the British company's assoicate, Hackbridge-Hewittic and Easun (Private) Ltd., is due in Madras soon for a six months' stay.

Mr Hedley, who is an electrical Engineer, will supervise the extension of the company's factory in Madras and also the manufacture of the larger transformers there. The Madras factory has been engaged since 1956 in the manufacture of transformers in capacities up to 750 kW, and the extensions now in progress will allow—the company states—both greater production and the manufacture of medium and large power transformers.

* * *

India once again appears as the leading buyer of British aircraft—in figures just published in London by the Society of British Aircraft Constructors— both for the month of August, and for the eight-month period January-August this year.

The total of the British aircraft industry's exports during the period January-August is a record £111,644,249—five per cent up on the total for the same period last year. India, whose purchases of British aircraft and parts totalled £12,413,386, bought nearly twice as much as the next purchaser on the list—Switzerland. Figures were: Switzerland, £6,473,002; Federal Republic of Germany, £5,439,051; United States, £4,194,548; and Australia, £3,928,643.

During the month of August, total exports of British aircraft and parts were valued at £12,171,098. India was the leading buyer, with a total of £1,416,116, followed by Switzerland (£698,529), the United States (£376,135), and Canada (£127,358).

* * *

Seventynine grants and loans from the United Kingdom—including 22 for research—were approved during August under the Colonial Development & Welfare Acts, representing a total of £2,467,092. A Colonial Office statement in London says that of this sum, £785,961 was made up of grants and loans for 37 schemes in the Caribbean area.

More than £1,000,000 was made available for projects in Malta. Heading the list was a grant of £500,000 from which financial aid could be given to new and expanding industries. This will supplement the island's efforts under the Aids to Industry Ordinance, which is aimed at diversifying Malta's economy through rapid industrialization: it provides for tax "holiday" and Customs concessions for new indutries, and for the expansion of those already in operation.

Other Colonial Development & Welfare aid approved for Malta in August included a grant of £280,000 for vocational and industrial training; a loan of £90,000 for the island's first modern industrial estate; and a grant of £140,000 for a scheme to eradicate tuberculosis and brucellosis from dairy cattle.

* * *

The new agreement on United Kingdom cotton imports from India and Pakistan was described on September 29 by the President of the Board of Trade, Sir David Eccles, as an "outstanding example of inter-Commonwealth co-operation" in the interests of all the parties concerned.

Under the agreement—announced by the Cotton Board, Manchester—ceiling figures for imports of cotton manufactures from the two countries for retention in the United Kingdom home market had been decided in principle. The agreement, a three year one, comes into effect on January 1, 1960.

A Cotton Board spokesman explained that the ceiling figures were equivalent to 175,000,000 square yards of imports from India and 38,000,000 square yards from Pakistan. He pointed out that the agreement is subject to the existence of arrangements for ceiling figures for cotton manufacture imports from Hong Kong.

Welcoming the successful outcome of inter-industry negotiations between the Cotton Board and the textile industries of India and Pakistan, Sir David Eccles said that, with the arrangements already in force for Hong Kong, this will "assure Lancashire of a period of stability as far as Asian Commonwealth imports are concerned". The success of the negotiations, he added, "should add greatly to the confidence with which the cotton industry tackles the problems of re-equipment and modernization. Production can now be planned ahead with much greater security".

* * *

Figures published by the Petroleum Information Bureau show that consumption of petroleum products in Britain in the first half of this year totalled 17,864,856 tons, or over 2,500,000 tons more than in the same period of 1958.

Fuel oil accounted for 1,800,000 tons of the increase, and demand was 36½ per cent higher than in the corresponding period of 1958. Higher deliveries for electricity stations were the major factor in the rise. Motor spirit consumption, at 3,351,390 tons, rose by 6½ per cent.

Furher expansion of the domestic use of fuel for heating appliances resulted in a rise of about 10½ per cent for the half-year.

An order worth over £1,000,000 for hundreds of tons of stainless steel has been placed with Firth-Vickers Stainless Steels Ltd., of Sheffield, by the Chinese Government the firm announced on October 7.

Deliveries under the order, obtained in the face of world competition, will start at the end of this month and will go on until next April.

* * *

A big increase is estimated to have taken place in the number of persons in civil employment in the United Kingdom during August—viz., by 108,000 to a total of 23,162,000. These figures were issued by the British Ministry of Labour & National Service in London on October 6.

The increase took place in all manufacturing industries, and in most seasonal industries such as building and contracting, distribution and agriculture.

There is normally an increase in employment in August, but this year it is bigger than usual, reflecting the upward trend in industrial production; and the fact that the increases occurred in all manufacturing industries makes it clear that the present phase of industrial expansion is broadly based.

The number of operatives working overtime in the manufacturing industries in August was 45,000 more than three months ago and over 300,000 more than a year ago.

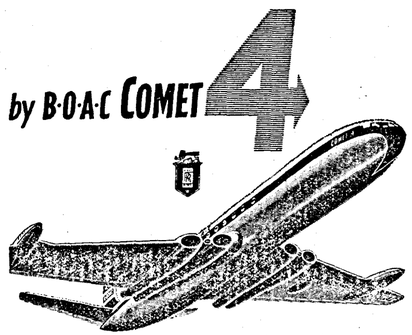
*

France

In July French crude steel output totaled 1,243,000 tons and French pig iron output totalled 1,010,000 tons.

Despite a seasonal drop due to the vacation period, the output of crude steel for July was 6.42 per cent higher than during July 1953; and pig iron output was 3.80 per cent higher than during July 1958.

The average for the first 7 months of 1959 show a slight increase over the average for the same period of 1958.



* * *

Before the closing of French shipyards for the annual vacation period in August, three ships were delivered, all three of which were for French companies. The Forges et Chantiers de la Meditorranee delivered to the Ministry of Public Works the meteorological ship, France II, which it built in its Graville shipyard; the Chantiers Dubigeon delivered the 4,250 ton freighter, Dahra, to the Societe anonyme de Gerance et d'Armement(Saga); and the Chantiers de la Manche delivered the trawler, Si-Ro-Ma-Mau, to the Sergent Company.

The following ships were launched: three tankers: the 48,390 ton d'Artagnan for Mobil Transport at the Ateliers et Chantiers de France; the 20,580 ton Montestoril for the Panamanian firm, the International Mercantile Navigation Company at the Forges et Chantiers de la Gironde; and the 18,000 ton Caltex Strasbourg for the Outremer de Navigation Petroliere at the Ateliers et Chantiers de la Seine Maritime; and three freighters: the 13,200 ton North Queen for the Panamanian company, Panatlantica Cia Naviera at the Chantiers Reunis Loire-Normandie, Grand Quevilly; and 19.5 knot Mauricien for the Messagerie Maritimes at the Chantiers Navals de La Ciotat; and the Chilian coastal vessel, Calbuco, for the Empressa Maritima del Estado at the Chantiers Navals Franco-Belges.

In addition, the Chantiers Dubigeon launched the 850/1.040 ton submarine Daphne, which is the first of a series of 8 submarines for the French Navy. Three will be built by the Anciens Chantiers Dubigeon and five at the Cherbourg arsenal.

Other launching will soon take place, including those of the 47,000 ton tanker Centaure being built at the Chantiers Navals de La Ciotat for the Messageries Maritimes; and the 46,500 tons Polaire, one of five sister ships ordered

by the Compagnie Navale des Petroles from the Chantiers de l'Atlantique Penhoet-Loire. Two 16,700 ton freighters will also be launched: the Jacques d'Anglejan for the Union Industrielle et Maritime at the Chantiers de Provence, and the Vulcain for the Soflumar Company at the Forges et Chantiers de la Gironde. In addition, the Forges et Chantiers de la Mediterranee will launch the 17,500 ton mineral freighter at La Seyne for the Chargeurs de l'Ouest.

The keels of three ships are being laid: the freighter Martiniquais, a sister ship of the Mauricien, whose launching was mentioned above, at the Chantiers Navals de La Ciotat; the refrigerated liquid gas carrier, Descartes, for the Societe Gazocean also at the Chantiers Navals de La Ciotat; and the 3,500 ton freighter ordered by the Schiaffino Company of Algiers at the Anciens Chantiers Dubigeon.

* * *

During July, French electrical production totalled 4,891 million kWh, including 2,794 million kWh produced by hydraulic plants and 2,097 kWh produced by thermal plants. Consumption totalled 4,916 million kWh. For the first seven months of 1959, consumption totalled 35,657 million kWh compared with 34,698 million kWh during the same period of 1958.

* * *

French oil production which increased 40% in July compared with July 1958 totalled 295,556 tons compared with 210,999 tons in July 1958. Total production for the year beginning 1 August 1958 was 2,864,501 tons compared with 2,004,000 tons during the corresponding period of the previous year, which was an increase of 32.9%.

Of this total, metropolitan French production accounted for 144,919 tons compared with 119,028 tons in July 1958, which was an increase of 21.8%. Sahara production increased 76.3%; and production in Central Africa increased 64.3%.

The production of natural crude gas in France totalled 270.3 million m3 during July compared with 85.4 million m3 during July 1958, which was an increase of 217.1%.

During July, 65,300 meters were drilled compared with 66,400 m. during July 1959, which was a decrease of 1.7%. During the year beginning 1 August 1958, 833,700 meters were drilled compared with 668,700 meters during the same period of the previous year.

Compared with the same month of last year, drilling activity decreased 3.8% in France and 39.6% in Central Africa. However, it increased 37.6% in the Sahara.

* * *

According to the Economic Observation Centre of the Paris Chamber of Commerce, which made a summary of French economy during recent months, the slow upswing in the industrial output is continuing. The ratio of jobs offered to jobs demanded improved during the second quarter of 1959. At the present time, the general index of electrical consumption shows an increase of 5 per cent compared with last year, which means that there is probably a general economic expansion of around 2 or 3 per cent.

This economic revival was particularly favourable in the steel industry, with an increase of 7 per cent in June this year compared with June a year ago, and with 10 per cent in July this year compared with July 1958. There was also a continuous improvement in deliveries to domestic markets (+3 per cent from May to June), which, however, still remained 5 per cent under what they were a year ago, particularly concerning small metal beams. Deliveries to foreign markets, which account for nearly 35 per cent of the total output, remained high, in regard to the countries in the European Coal and Steel Community and to other foreign countries. It was noted that slightly more time was being allotted between the time of the order and delivery, and that there was an increase in precautionary orders, particularly prior to the August vacations. The margin of unused production capacity was reduced, and shortages of certain products on the market (thin sheet metal) were even caused.

Aluminium production, which increased from 10 to 13 per cent in April and May compared with 1958, only increased by 1 per cent in June (which meant that it dropped 4.5 per cent from May to June). On the other hand, however, deliveries to both domestic and foreign markets continued to increase, and were 20 per cent higher than they were a year ago.

The upswing appeared to be quite general in the primary transformation industries connected with the steel industry (+12 per cent for deliveries of steel tubes in June), largely due to a considerable increase in exports. The situation also appeared to have improved in the non-ferrous metal industries. On the other hand, foundries and large forges continued to suffer from a decline in activity due to a corresponding decline in shipbuilding and railway construction.

The chemical industry registered a slight upswing compared with its figures at the beginning of the year.

The glass industry appeared to be undergoing a period of stabilization, undoubtedly due to the improvement of exports. However, the increase in the production of crude glass was continuing at an astonishing rate (almost 40 per cent more than last year).

There was a slow and regular improvement in the output of the paper and carton industry, and the demand seemed to be increasing slightly. It also appeared that reserve stocks were at a better level.

The output of industrial vehicles remains slightly less (around 5 per cent) than in 1958. The rolling mills engaged in making leaf springs for commercial vehicles are not very active, and there are no immediate prospects for improvement.

An attitude of uncertainty characterizes the agricultural machine industry, and this will probably continue until the end of the harvest. The relative production stability in June seems to have resulted in the increase of available stocks.

The level of activity remains very low in the shipbuilding industry.

In June, the output of pleasure vehicles remained approximately the same as the record level registered in April. The increase compared with 1958 was slightly less than 25 per cent. Exports increased slightly compared with May 1959, and they accounted for 44 per cent of the output. However, domestic sales were somewhat less than in 1958.

Concerning the general economic activity during the second quarter of the year, figures for turnover and sales showed that there was a considerable increase compared with last year; but it should not be forgotten that June 1958 was one of the worst months of the year because of internal political circumstances.

In June 1959, compared with the same month of 1958, the cost of living increased from 4.5 per cent (the INSEE index) to 6 per cent (IOE index), and the cost of food increased from 1 to 3 per cent.

Further studies show that there was an excess in the trade balance as well as an abundance of liquidated stock.

The improvement in foreign trade during the second quarter and the general economic situation do not, however, allow any excessive optimism for the results of foreign trade for the whole of 1959. At the end of June, the cumulative foreign trade figures for the first half of the year showed that there was a deficit of approximately 50 milliard francs (which means that there was a slight excess, due to the CAF import figures in the customs statistics).

*

Sweden

The number of automobiles in Sweden has more than doubled over the past five years and according to a survey totalled about 1,150,000 on July 1 this year. By 1965 the figure is likely to have risen to 1,600,000, and a total of close on 2,500,000, or one for every three inhabitants, is estimated to be reached by 1975.

Motor-cycles have shown a declining trend in recent years and dropped from 265,000 in 1957 to 240,000 in 1958. Now they are likely to number 225,000. There are furher some 600,000 powered bicycles, which would make a total of 1,975,000 motor-driven vehicles, not including some 165,000 tractors. This corresponds to one motor vehicle per 3.75 inhabitants, which makes Sweden probably the most motorized country in Europe in relation to the population.

Though traffic accidents have increased, this rise has not been proportional to the increase in traffic intensity. In 1958, there were 56,629 traffic accidents compared with 52,480 in 1957. Persons injured or killed increased from 20,800 to 20,892.

* * *

Sweden's exports of chemical pulp in the first seven months of the year were about 20 per cent larger than in January-July 1958, according to a survey by the Swedish Timber and Wood Pulp Journal. Shipments totalled 1,279,800 tons as against 1,073,100 tons a year ago.

Breakdown statistics show a minor rise of about 1,000 tons to 181,500 tons for exports of sulphite dissolving pulp. Other bleached sulphite pulp went up by 39,000 tons to 254,700 tons and unbleached sulphite by 15,000 tons to 240,700 tons. Bleached sulphate rose by 67,000 tons to 313,000 tons and unbleached sulphate by 85.000 tons to 290,000 tons.

Exports of mechanical pulp, at 205,000 tons, were 40,000 tons larger than in January-July 1958 but 17,000 tons smaller than in the same period of 1957.

The geographical distribution of Sweden's foreign trade over the first half of the year shows an improvement vis-a-vis practically all trading areas. Thus, last year's deficit in trade with the Six-Nation-Group was reduced by 25 per cent to Kr 744,000,000, while the dollar trade deficit declined by over 60 per cent to Kr 160,000,000. In trade with sterling countries the deficit showed a minor decline from Kr 65,000,000 to Kr 52,000,000.

* * *

Sweden's foreign trade in August resulted in a trade deficit of Kr 44,000,000. Imports dropped by Kr 30,000,000, as compared with July, to Kr 901,000,000 and exports by Kr 83,000,000 to Kr 857,000,000. The corresponding figures for August 1958 were Kr 888,000,000 for imports and Kr 785,000,000 for exports. The trade deficit for the eight-month period January-August shows a marked improvement, totalling Kr 443,000,000 (£30,000,000; $88,000,000), as compared with Kr 1,120,000,000 in the corresponding period 1958.

* * *

The wholesale price index of the Swedish Board of Trade rose by one point to 144 points in August (1949=100). In August last year the index stood at 143. This was the first time since September 1957 that the index was higher than in the same month a year earlier.

Price increases during the month totalled 1.1 index point, while price decreases amounted to 0.4.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

I AM gratified to find that an anxious interest is being shown generally in the formulation of the Third Plan. From time to time, ministerial pronouncements chalk out particular targets to be kept in view for particular sectors of the economy. Then, you have had the Ooty seminar which, even if you do not agree with its views, has certainly provided a lead to thinking on the Third Plan. As if in rebuttal, we were then vouchsafed what the Federation of Indian Chambers of Commerce and Industry considers the Third Plan should constitute. Even in so far a place as America, the Indian Finance Minister, Mr Morarji Desai, begins broadly to suggest that considerable foreign assistance would be required for the next quinquennium of planned endeavours. So, it would seem you have no legitimate grounds for complaining that the Third Plan could ever be charged with being drawn up in haste. But what puzzles me is that, so far, there has been no direction evidenced in thinking; we have had generalisations, we have had indications of what targets should be. But how is it that so little of attention has been paid to what should be the most important aspect of planning, namely, resources?

*

I do not intend, at this stage at any rate, to go into detailed figures, but I do have some idea of where attention needs must be focussed, if we are to avoid during the Third Plan, the sort of revision that was forced on us because resources in sight were thought to prove insufficient. Let us take some broad figures. I think it is generally agreed that, provided we can raise the necessary resources, the Third Plan should aim at an expenditure of around Rs 10,000 crores. But the comparative figure in respect of the Second Plan is, not Rs 4,800 crores, but Rs 7,200 crores. It is thus that, relative to what has been undertaken in the Second Plan, the figure of Rs 10,000 crores is not too high.

*

Then, in the light of the experience of the Second Plan, I suggest it will also be agreed that the foreign exchange requirement during the next five years of planned development, inclusive of repayment liabilities during the period, would work out to around Rs 2,500 crores. There can, of course, be no question of drawing down our exchange reserves—we probably sha'n't have any to speak of by that time. There can, equally, be no question of foreign assistance being made available to us in such abundant measure. This is a fact that we need fully to realise. For, it means that the Third Plan must also plan on a steadily increasing export surplus. It is all very well to say that, never before in history has there been an industrial revolution without external assistance. But it is wise to recognise that the assistance we have so far obtained has itself been of gigantic proportions; and also that, however generous our foreign friends may be, what they can afford to give or lend cannot be sufficient to meet the whole of our needs. What is more, self-respect requires that we make strenuous attempts to help ourselves, instead of fatalistically waiting for foreign aid. Thus, the export surplus we must aim at must be between Rs 500 crores and Rs 1,000 crores! Secondly, we cannot any longer afford to toy with the idea of raising a gold loan by the issue of bearer bonds. I know there are some practical difficulties, but none of these is insurmountable; and what plan was there that could proceed without a hitch? In the more than merely short-run, it would surely pay us to allow import of gold; with smuggling made unremunerative, the price of gold could gently be persuaded downward; and it would become that much easier to plan a gold bearer bond. Thirdly, we must stop thinking that, just because we could earn more by export of pig iron, we shall be indifferent to iron ore. I am convinced that iron ore can be exported in such considerable quantity, that it could contribute extravagantly to exchange earnings.

*

So far, so good; we next come to the ticklish subject of taxes. I must stress emphatically that there is no scope at all for an increase in the rates of taxes, direct, I mean. If anything, if small scale industry is to thrive and is to be encouraged, some measure of relief will undoubtedly be necessary. The figure talked of in this regard is usually Rs 2,000 crores. What has not been made clear is that this figure is not the target of the sum to be obtained by additional taxes. Just as, in the Second Plan financial data, credit was taken for some Rs 350 crores as surplus on the basis of the then current taxation, even so this figure of Rs 2,000 crores includes the surplus from taxes as they will obtain on the eve of the Third Plan. What can this surplus be, and what will determine it? First of all, we must make sure that the additional revenues raised are not frittered away on non-developmental expenditure; as indeed happened during the Second Plan, when, despite the target of additional taxation being exceeded, the surplus available was denuded. This is the negative aspect to it. Then, because of a dynamic economy implicit in development, tax revenues may be expected to rise both because of newly created tax-payers and because of additional profits or earnings of the existing assessees. Again, at existing taxation, the revenue from excise duties should rise considerably, because of the expected much higher level of production. I may be optimistic, and I must stress the figure I now give is only a hunch, but the surplus as defined might contribute anything like Rs 1,000 to Rs 1,500 crores. The task of raising Rs 500 crores to Rs 1,000 crores, which would be the balance, would not be difficult; new products manufactured would attract new excise duties being levied; the check to tax evasion inherent in the new tax structure would contribute something; and the State Governments should certainly raise something by taxes on land revenue. Viewed in this perspective, the tax effort for the Third Plan has no reason to make us shudder.

*

Agreement, again, there is on the need for the public sector enterprises to yield profits in behalf of resources for the Plan; and the Railways, of course, will be expected to offer up a surplus, larger, if possible, than was the case during the Second Plan. It seems to me that we should be able to hope for some Rs 500 crores as surplus from railway working: but it is unlikely that, at any rate until the closing stages of the Third Plan, public sector profits will amount to anything much. Thirdly, provident funds and other deposit heads may fetch somewhat more than the Rs 250 crores for which credit was taken in the Second Plan. Taking the three together, you would get a figure of around Rs 800 crores, representing an increase of Rs 400 crores under this head over the Second Plan.

*

It may be recalled that the Second Plan anticipated that Rs 800 crores would be obtained externally; and also that, as early as November 1956, Indian Finance had suggested that resources raised externally would be nearer Rs 1,200 crores. It now appears certain that the Indian Finance figure will prove to be the nearer approximation. In this light, what can we count on for the Third Plan? Well, to work at the figure another way, we have seen that the foreign exchange needs will be in the environs of Rs 2,500 crores; and we have called for an export surplus of at least Rs 500 crores. I rather fancy that gold bearer bonds could yield us something like Rs 300 crores; and so, resources to be raised externally would be of the order of Rs 1,700 crores —a not impossible enterprise, since Second Plan realisations in this context would have been, I repeat, in the vicinity of Rs 1,200 crores.

*

What about deficit financing? Here, too, the unanimous verdict is that we cannot afford to rely too heavily on created money.

While we were similarly reluctant to persist with *deficit financing* during the Second Plan, the fact remains that the original figure of Rs 1,200 crores postulated for created money is certainly likely to be reached, if not exceeded. So, too, we fear that an equal amount of deficit financing during the Third Plan is likely to prove impossible to avoid. Judiciousness on the part of the authorities will be necessary, so that, at signs of relentless inflationary pressure, deficit financing can, perhaps temporarily, be abandoned. But, just as created money during the Second Plan cannot be held to have been unduly mischievous, so, too, we may hope that we will be able to take in our stride created money for Rs 1,200 crores in the Third Plan period.

*

I have saved for the last a discussion of the borrowing effort to be made. Leaving out, for the present, the contribution of small savings, the target, it may be recalled, for the Second Plan was Rs 700 crores net of maturities amounting to some Rs 430 crores. With the completion of the second tranche of borrowing of the Central Government for 1959-60, it is clear that realisations will substantially exceed the original target. I think it will be admitted that the brave showing of market borrowings is due substantially to the large new Deposits which have been accumulating with the banking system. As such, during the Third Plan, if banks should continue to experience a worth-while rise in Deposits, it is certain that new investment in giltedged by banks will be as spectacular as in recent years. So, after taking credit for Rs 300 crores to be raised by a gold loan, I would suggest that the minimum to be sought by market borrowings other than small savings should be Rs 1,500 crores net.

*

It is in such broad terms that I envisage the financing of the Third Plan to be practicable—in the public sector, that is. But what I am more concerned about is the securing of the necessary capital for the private sector; and this is a subject that I shall keep over for the next week. EAVESDROPPER.

Progress
is the sum of
KNOW-HOW plus RESOURCES

Regarded with little favour—even for household uses—
by the ordinary man-in-the-bazaar less than 20 years ago, aluminium
has today become the engineers' favourite light metal.
It is now fast replacing other metals and wood in the construction of
railway coaches, bus bodies, aircraft and ships.

The wide acceptance that aluminium has come to enjoy as a structural material is largely due to the ceaseless efforts of Indian Aluminium Company, which today accounts for over 90% of the country's total production. Pioneer and leader of the aluminium industry in India, Indian Aluminium Company has continuously sought to promote new applications of this versatile metal and has frequently expanded its production facilities to meet the increased demand thus stimulated.

To do this two-fold job of promotion and expansion Indian Aluminium has been uniquely well-placed. It has drawn fully upon the technical and research facilities of its Canadian associates, Aluminium Limited—the world's largest group of aluminium companies. And now, Indian Aluminium stands ready to contribute all its know-how and resources towards achieving India's self-sufficiency in aluminium.

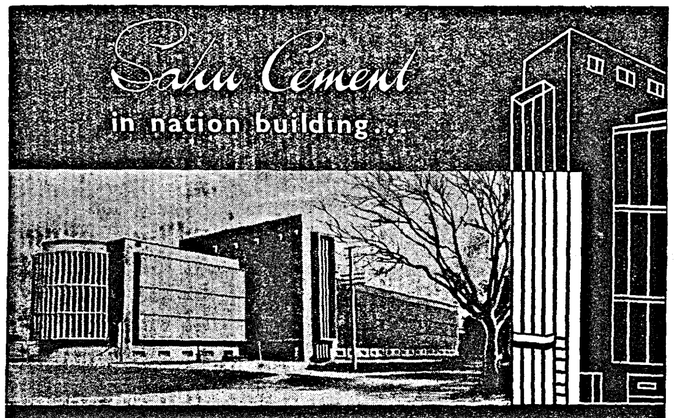
Decentralisation of Administration

BOMBAY REVIEW

ALTHOUGH the need for decentralisation of power has long been accepted in our country, serious efforts in this direction have come to be taken only recently. Even so the headway made so far in actual devolution of power to the people at large is of a halting nature. Considerable rethinking on this subject has ensued in the past one year or so following the appraisals made by expert committees of the progress of the Community Development and National Extension programmes. The Bhalvantrai Committee has come to the conclusion that the success of these programmes depends largely on the autonomy enjoyed by village communities. Thus renewed efforts are now being made to establish true panchayat raj.



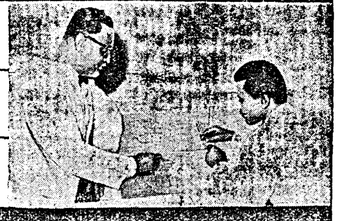
The progress of democratic decentralisation of power is not uniform in all the States. In Bombay, State Chief Minister Chavan inaugurated on the birth anniversary day of Mahatma Gandhi the village panchayat mandals in all the districts of the State, except Vidarbha. There are 56,000 villages in the State and the new scheme covers the people of nearly 44,000 villages. It is expected that by the end of the next financial year all villages in the State will have been covered by a network of panchayats. Mr Chavan has rightly described the step his Government has taken as a revolutionary measure toward the economic and social improvement of the people of the State. As noted by him, even though the panchayat idea is nothing new to our people, the pattern that is being evolved differs in many vital respects from the old concept. The Panchayats that are being inaugurated in the country will not only have wide powers but will also have to shoulder the responsibility of looking after the various needs of the people under their jurisdiction.

In the neighbouring State of Rajasthan, however, the complete pattern of panchayat raj has been evolved and taken up for implementation. The scheme which was inaugurated by Prime Minister Nehru in Nagaur on October 2, confers the power of self-government on the people of the villages in the whole of the State. The Panchayat Samiti and Zilla Parishad Act of Rajasthan provides for the establishment of three categories of panchayats, the Village Panchayat, the Panchayat Samiti comprising representatives elected by the panchayats in a block, and Zilla Parishad comprising representatives of the Samitis and MLA's and MP's from the district. The actual work of the administration of the area concerned is now vested in the village panchayats. The Panchayat Samitis have wide powers and responsibilities. They are entitled to collect tax and can also make suitable arrangements for raising funds through borrowing. The Zilla Parishads are more or less supervisory bodies establishing effective liaison between the village panchayats and the State Government. They are also responsible for the proper distribution of grants from the State Government, coordinating the activities of the various samitis, etc.

It is true that the Rajasthan Act has only given content to a principle which has been already accepted by the country as a whole. Even so, the systematic manner in which the administrative decentralisation below the district level has been worked marks a big step forward which has not been attempted so far elsewhere in the country. The Rajasthan experiment in democratic decentralisation will be watched with keen interest by other States which are either thinking on similar lines or have already made a beginning in this direction.

While there is a general consensus on the need for vesting the village people with real powers of self-government, opinion is by no means uniform as to the methods by which this can be achieved. It is doubted whether in the present context of widespread illiteracy among the village population, any system which gives the rural people wide powers will work satisfactorily.

An essential prerequisite for the success of the Panchayat Raj is the realisation on the part of the people concerned that the right of self-government is to be used for the good of the community. Experience in the working of panchayats in certain parts of the country has shown that struggle for power often becomes the dominant factor. In Rajasthan the Panchayats have now become powerful bodies as they will have almost absolute control over the areas under their responsibility. Under the new Act the services of a large number of State Government employees have been transferred to the panchayat samitis and zilla parishads. It is undeniable that the vesting of such wide powers will render the various offices coveted positions. It is also quite on the cards that the panchayats may interpret their independence as meaning the right to act in any manner they like. These are some of the drawbacks in the system. The scheme of decentralisation of rural administration can work at the present juncture in our country only if the panchayats allow themselves to be guided by well-trained personnel provided by the State Government.



Improvement in the standard of life is a vital need to-day. The building industry is producing tangible evidence of the increasing industrial and commercial life of the nation. In all these nation-building activities CEMENT plays a major role.

GATEWAY NOTES

Export Promotion

Though the critical phase of the foreign exchange shortage is over, continuing imbalance in the mutual trade with some countries is a matter which should cause concern. An even greater cause for anxiety is the fall that has been reported in some of the traditional items of the country's exports. For example, export of cotton textiles was slightly lower during January-June 1959 as compared to the corresponding period of the last year. In respect of tea, which has been the single biggest foreign exchange earner, the decline in exports in the first half of 1959 is even greater. Against 198 million lbs valued at Rs 47.42 crores during January-June 1958, the export of tea has declined to 147 million lbs valued at Rs 36.7 crores in the corresponding period of 1959.

Referring to these trends in the exports of the country, Mr Satish Chandra, Union Deputy Minister for Commerce, has stressed the need for sustained and persistent efforts to bridge the gap between imports and exports. Import restrictions have value only for emergency situations that might develop in the course of implementing the development Plans. Further, they conflict with the objective of expediting development which calls for large-scale expenditure of foreign exchange for the import of capital goods as well as raw materials for industrial progress. Already, imports have been restricted to the barest minimum for the maintenance of the economy and for sustaining the projects in the hard core of the Plan. Without concentrated efforts toward export promotion, implementation of the Third Plan as it is conceived at present may well become well nigh impossible. Moreover, the foreign exchange requirements are likely to grow in the years to come due to more ambitious development in future and the liabilities already incurred in respect of the servicing charges and the repayment of loans. Mr Satish Chandra, therefore, wants export promotion to play an increasingly important role in the process of the economic growth of the country.

Mr Satish Chandra has laid down two essential conditions for the success of export promotion schemes, namely, quality and price. Action along both lines is necessary for improving the competitive position of Indian exports. The objective should be not only to step up exports of traditional items but also to explore markets for new products which are being produced in the country at present.

*

Plastics Industry

The plastics industry is one of the post-war entrants into the industrial field, and notwithstanding what the figures of production or investment might reveal in view of its importance as an intermediate product in the manufacture of heavy chemicals so essential for the defence of the country, the progress made by the industry cannot be considered satisfactory. This view was expressed by Mr K. R. P. Aiyangar, Chairman of the Tariff Commission, while opening the public inquiry into the question of continuance of protection to the plastics industry. Elsewhere, Mr Satish Chandra, Union Deputy Minister for Commerce and Industry, inaugurating the twelfth conference of the All-India Plastics Manufacturers' Association, stressed the need for accelerating the pace of growth of the plastics industry so that it could take its rightful place in the overall industrial development of the country.

The main weakness of the industry arises from its continuing dependence on imports for important raw materials needed for the manufacture of phenol formaldehyde moulding powder. It was to stimulate the indigenous production of these raw materials that the plastics industry was granted protection in 1949 by levying a protective duty of 30 per cent *ad valorem* on phenol formaldehyde moulding powder. Though protection has been continued uptil now at altered rates, progress has been disappointing both in respect of production of raw materials from within the country as well as in respect of manufacture of special grades of phenol formaldehyde.

Faced with a growing demand for its products, the industry will have to take up expansion plans to raise the production capacity. In this connection, Mr Satish Chandra pointed out that the future development of the industry would, in addition to expansion of the existing plants, require the establishment of a large number of new units. The requirements of mechanics, equipment and tool for the development of the industry in the course of the Third Plan are estimated at several crores of rupees. Foreign exchange will, therefore, be a bottleneck. Promotion of exports with a view to paying for the imports of raw materials and other equipment becomes, therefore, important. Though exports have been upward, in view of their meagre quantity, there has been no substantial improvement in the gap between the import bill of the industry and its export earnings. While the present import bill is of the order of Rs 3 crores a year, the export earnings are only about Rs 50 lakhs. The industry should, therefore, lose no time in exploring ways and means of stepping up its exports to earn as much foreign exchange as will be necessary to meet its import bill.

Protection to the industry is due to expire on December 31, 1959. Mr Aiyangar has, in his speech, said nothing about the continuance of protection to the industry beyond this date. This, of course, would depend on the appraisal by the Tariff Commission of the position and potentialities for growth of the industry. In its recommendations, the Commission will have to reconcile two rival considerations, namely, the need to reduce the cost of production for the consumer and the need to step up development of the industry by stimulating the indigenous production of raw materials which are at present obtained through imports.

GATEWAY MARKETS

Firm Trend in Linseed

AFTER displaying an irregular trend most of the time, linseed prices spurted toward close on emergence of vigorous bull support coupled with short covering. On Monday prices moved up rapidly to quote above the marginal level of Rs 35 with the result the penalty of Rs 2000 per 25 tons was imposed. The present firm phase stemmed from the fact that UK marked up its price toward close of the week to £115 from its earlier indication of £111 per ton following higher overseas advices.

In the groundnut section of the Bombay Oilseeds market conditions continued to be firm throughout the week on sustained demand in the spot and export markets. With reports of fresh rains in Saurashtra and Gujerat buyers became aggressive. Apart from apprehension of a diminution in supplies due to the fresh rain fall, indications were that movement of the new crop would be further delayed. On the export front also news was quite encouraging. Shippers' reports indicated sustained Continental demand for oilcake and meat. Overseas offtake of groundnut oil was also reported to be good. Increased buying was also reported from vanaspati interest.

Castorseed which was ruling rather easy most of the time steadied up at close in sympathy with groundnut. Around midweek, however, a recovery seemed to be in the offing following higher Calcutta advices based on reports of increased UK interest at advancing price levels. The improvement proved shortlived as later reports indicated that UK buyers were not interested in higher levels. A contributory factor for the failure of the market to maintain the recovery was the continued lower price indications in the spot market which seemed to be worried over the high level of available of raedy stocks in important centres.

Monday's closing prices in the futures market were: Groundnut February Rs 181.37, Castor May Rs 166.37, Linseed May Rs 35.12, and Cottonseed February Rs 131.75.

*

Gold & Silver

The gold market was quietly steady in earlier dealings but toward close developed a fully steady trend on buying support. The earlier listlessness was, caused by poor spot demand coupled with reports of increased arrivals. On Monday, however, the undertone improved following increased buying from upcountry interests. Kartick Gold which was pushed down to Rs 123.31 at one during Monday recovered in later dealings to be finally placed at Rs 123.94.

An irregular tendency prevailed in the silver section during the past week, though now and then abortive attempts at rally were noticeable. The main inhibiting influence seemed to be the lack of interest from the spot section coupled with intermittent selling from Calcutta interests. Some scattered support from upcountry centres was noticeable but that proved to be too feeble to sustain higher levels. The market made a bid for higher levels with some success early in the proceedings on political news regarding our relations with China but in the absence of sustained support at the higher levels and on reports of selling by spot interests prices reacted in later dealings. Kartick Silver opened on Monday on a subdued note at Rs 206.31 but later improved in sympathy with gold to close better at Rs 206.94.

*

Yarn

Conditions in the yarn market were steady during the past week. The main contributory factor for the improvement in sentiment was the fact that Government had by an amendment to the recent import policy pertaining to import of foreign art silk yarn reduced the quota to 2½ per cent for the whole year. It would appear that the change has been decided upon because Government expect a sizable increase in domestic supplies as a result of increased output from indigenous industry. But in view of the fact that the trade is yet to get a proportionately increased allotment from indigenous production, it is apprehended that as a result of the reduction in the import quota the supply position would become very tight. A redeeming feature is the reported receipt of export promotion quotas by some of the weaving mills. Although this may be expected to relieve the prevailing shortage, it is generally believed that the available supplies would not be sufficient to meet the demand in full. Scarcity condtions are also expected to develop in regard to staple fibre yarns as demand is fast outstripping supply.

*

Non-Ferrous Metals

Quietly steady conditions prevailed in the principal non-ferrous metals during the past week. Copper sheet prices were sticky around previous levels in view of the poor demand from untensil manufacturers who seemed to be going through a period of lean offtake. Though there is not much selling pressure in evidence in Zinc, the prices in this section remain almost stagnant despite steady advices from Calcutta. Lead prices have been displaying a reactionary tendency lately as tired bulls have begun to load their holdings. Expectation of a comfortable supply position has kept tin prices at a low level.

WORLD OF COTTON

Outlook For New Crop

The outlook for the new cotton crop, which appeared to be brightening only a few days ago following reports that the damage due to the rains would not be as heavy as earlier feared, has again been clouded as news of further rains in some of the growing areas has been received. Although there is renewed anxiety, there is no tendency in any quarter to take up a definite stand as regards the prospects of the new crop. The subdued undertone noticed in cotton futures in the early part of the current month had stemmed from the belief that, with the return of sunny weather, movement of the crop would be facilitated. Moreover, reports that damage to the crop would not be very heavy had also somewhat reduced the anxiety to extend commitments. This attitude was further strengthened by the fact that mills generally were not hard-pressed for immediate supplies.

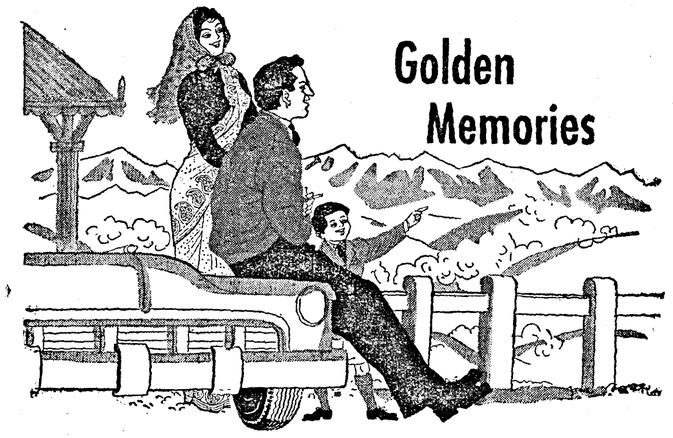
The revival of confidence, however, seems to have been rudely shaken by further rains in some of the growing regions. For, it is apprehended that the crop might not be able to escape severe damage a second time. Even if there is no further deterioration in the crop position, considerable delay in crop movement has to be reckoned with. It is such a line of thinking that has been largely responsible for the renewed spurt in cotton futures during the past week.

As pointed out above, not many are inclined to estimate confidently the size of the crop in view of the unreliable weather conditions still prevailing in some of the growing areas. The few estimates that have been made put the size of the crop between 45 and 47 lakh bales. Indications are that the crop in Vidarbha and Madhya Bharat will turn out to be considerbaly smaller than last year. It is, however, likely to be sizably bigger than last year in the Muglai districts. It may be noted that consumption of Indian cotton during last season has recorded a marked increase over the previous season. Consumption of Indian cotton is now provisionally placed at 46,11,933 bales as compared with 44,33,239 bales in 1957-58. Foreign cotton consumption, on the other hand, stands reduced to 452,523 bales showing a decline of 113,027 bales. The decline in this category is largely to, be attributed to the import restrictions and the consequent greater reliance of our mills on domestic cotton. Total consumption of all cotton by Indian mills during 1958-59 is placed at 50,64,456 bales against 49,98,889 bales in 1957-58.

Though Government's announcement that the new cotton import quota will be for one lakh bales to actual users and that the release of a further 2 lakh bales of American cotton will depend on the finalisation of agreement on PL 480 has been initially received with disappointment, hopes have revived following reports of a successful negotiation regarding the PL 480 programme. The cotton textile industry expected the sanction of a quota of 3 lakh bales in view of the very tight supply position as regards foreign cotton. The Indian Cotton Mills' Federation had issued an urgent appeal early this month to Government to take steps to increase the supply of cotton. The Federation asked the Government to expedite the allocation of foreign cotton to mills out of the quantity recently released for import and to permit further imports of three lakh bales for the next import period. It was pointed out that traditional users of foreign cotton had almost completely exhausted their stocks and that if there was no immediate improvement in the cotton supply position, partial or full closure of some mills was inevitable. It would appear Government are not also unmindful of the difficulties of the industry. For, reports have it that efforts are being made to import cotton from Pakistan. Mill circles, however, do not seem to have derived much encouragement from these reports as it is feared that Pakistan may not be interested in diverting supplies from its regular buyers to India.

The outlook for the world supply of cotton seems to be bright. According to the International Cotton Advisory Committee, world cotton supplies will be higher this season. The increase will be in US stocks of cotton and the forecast is that the US exports in 1959-60 will be around 5.5 million bales. It may be noted that last year exports of American cotton dropped sharply to 2.8 million bales from 5.7 million bales in the previous season. The probale reason advanced by the Committee for its forecast of a higher US export is the expectation that supplies of cotton outside the US will be smaller.

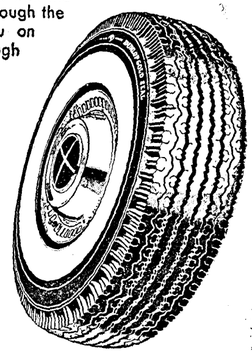
BOMBAY REVIEW



NEW YORK COTTON MARKET:

In the New York market, an irregular trend was noticeable with prices moving both ways though within a small range. Fluctuations were based on crop reports which tended to be unfavourable.

×



CLOTH AND PIECEGOODS:

Conditions in the piecegoods market were subdued during the past week. This is in marked contrast to the trend in the previous week when trading was on a brisk note both on the domestic and export fronts. It would appear that the decline in activity, especially in the domestic sector, is largely an aftermath of the recent disastrous floods in many parts of the country. In the export section, the slow trading is to be attributed to the fact that the immediate requirements of the important importers seem to have been satisfied by recent heavy offtake.

Your happiest motoring memories will be linked with the new Dunlop Gold Seal Tyre. It will see you through the routine of everyday motoring, go with you on delightful holidays, and stand by you on rough roads and wet. Years later you will remember the happy thought which made you pick on Dunlop Gold Seal.

It's a new car tyre — and better than ever

DELHI REVIEW

Industrial Research in National Laboratories

IN an effort to find out the extent to which India's newer and younger industries have been assisted by industrial research in the national laboratories, your correspondent has just made some enquiries in the Council of Scientific and Industrial Research here. These enquiries show that out of the 80-and-odd new processes so far leased out on royalty basis to interested parties, only eight processes or products—nicotine sulphate from tabacco and tabacco wastes, composite protein food, mica insulating bricks using mica wastes, carbions from Indian coals for softening water for industrial use, lisasorb-absorbent for carbon dioxide, new foaming agents for production of low density foamed concrete, bhilawan stoving enamels, dulcitol and pristimerin—have by now been taken up for commercial exploitation by 13 industrial concerns in all in the country. Dozens of other new processes which have attracted a number of industrialists to the point of paying for them have not been taken up for commercial exploitation on account of some difficulties which, it is stated, are remediable.

One of these difficulties is that some industrial concerns are reluctant to take up the new processes on the strength of laboratory or semi-pilot plant results, this can be remedied by providing adequate pilot plant facilities at the national laboratories. The second practical difficulty is on the score of procuring specialised equipment from abroad and of fabricating components indigenously; this can be removed, if at all, only by the appropriate agencies of the Commerce and Industry Ministry. And the third difficulty is that some industries are unable to size up the possible demand for some of the new products developed by research and so are reluctant to produce them; this can be overcome only by somebody or other manufacturing the product concerned and placing it on the market either to create the demand for it or to ascertain the extent and volume of demand therefor. Of course, this would call for some enterprise and risk-taking on the part of industry.

Where such enterprise is lacking, it is understandable that the Council has decided that the laboratories concerned should themselves give the lead, wherever possible, and produce the new articles for the market, thereby setting an example for others to follow. This decision which is being implemented in two cases—the National Physical Lagoratory producing ceramic capacitors for the radio and electric lamp industries and the Central Leather Research Institute producing fat liquors from fish oil for the market—is, in the opinion of your correspondent, no answer to the problem as it will be physically and financially impossible for the laboratories to do that kind of thing in most cases. Perhaps, more effective co-ordination of activities between the Council and the Small Industries Corporation may lead to some tangible result in this regard.

As for the 500-and-odd new processes so far released free of cost to industries in the country, the Council is not in a position to say how many of them have found practical application in commercial production. It is possible that a good number of such processes may have come in for exploitation, especially in the small industries sector. However, there are bound to be legitimate doubts on this score so long as the industrial extension services are in an inchoate stage and there is no follow-up or liaison machinery of any consequence with the Council to ascertain the benefits derived by big and small industries alike. Even if this lack of relevant information with the Council is taken to mean lack of significant achievement in the field, it in no way detracts from the wide range and quality of current applied research to which the latest available technical report of the Council bears ample testimony. It may have to be recognised in this connection that if the results of research are not being effectively extended to the industrial field, it is not due to any fault on the part of scientific workers who, by any standard, have begun to do in the field of industrial research what their counterparts have always done with distinction in the field of agricultural research in this country.

This logically leads on to a brief narration of some significant research achievements in 1958-59, as distinct from innumerable research projects under way. For example, the Central Glass & Ceramic Research Institute has succeeded in producing optical glass from indigenously available raw materials by utilising equipment designed and fabricated at the Institute. The National Metallurgical Laboratory has developed, besides nickel-free stainless steels, nickel-free coinage alloy compositions based on indigenously available elements like chromium, manganese and copper; some other notable achievements of this Laboratory are the making of steel from Indian pig iron in one-step in the L. D. converter designed by it, the processes developed for the production of insulation mullite refractories and magnesite refractories, the development of suitable blends of coal for obtaining metallurgical coke, the conversion of low-grade high-ash coals into synthetic gas and synthetic oil and the discovery of the usefulness of Assam coals for reclamation of alkaline soils. The Central Food Technological Research Institute has developed, besides the process for manufacturing protein-rich biscuits, methods for the production of active dry yeast from cane juice molasses. The National Physical Laboratory has developed an electronically operated automatic traffic control device. The Central Electronic Engineering Research Institute has fabricated prototypes of magnetrons comparable in performance to imported models and suitable for use in radar equipment; this Institute has also designed and constructed prototypes for high quality microphones utilising indigenously available materials. The Regional Research Laboratory, Hyderabad, has developed, besides the processes for the production of calcium gluconate and dehydrated castor oil, enamel compositions for textile bobbins comparable to the best varieties of imported enamels.

What is noteworthy in this research performance is the accent on new processes utilising indigenously available raw materials and on new products which can be good substitutes for imported materials. That most laboratories have been energetically working on some research or other connected with materials substitution with a view to saving some foreign exchange on imports, is a fact of no mean significance. It is in the context of this continuing research on materials substitution that the present assignment of some UNTAA experts for the same purpose may be expected to have a catalytic effect in some laboratories, particularly if due recognition is accorded to the Indian scientific workers who have already distinguished themselves in that field.

Incidentally, the materials substitution project on which the UNTAA experts are to work will cover the following fields:—Recovery and use of linters cottonseeds; recovery and use of caustic soda in paper manufacture; recovery of sodium sulphate in rayon manufacture; use of indigenous metals in industry through substitution of copper, lead, zinc, tin and nickel; graphite electrodes; insulation for electrical equipment; use of Pectin; and rationalisation of packaging material. As an example of the potentialities of this materials substitution project for saving foreign exchange, it is mentioned that the simplest field, the recovery of caustic soda in paper manufacture, may reasonably be expected to cut down imports by Rs 50 lakhs annually. This project, it would appear, is calculated more to bring about material economies in certain lines of manufacture than to stimulate the indigenous manufacture of substitute materials as such.

In the latter field, the work being done in the national laboratories may have greater potentialities, given adequate financial assistance not only by Government but increasingly by industry also as in the United Kingdom and the United States. That the supposedly liberal financial support at present for scientific and industrial research in this country represents so much money down the drain, is only a species of ill-informed criticism. Scientific experiments cost a great deal before results can be achieved, but when results are achieved and applied in the field the cost will have been repaid many times over. It is not unoften that this simple fact is forgotton by lay critics who lack the requisite technical competence and objectivity to judge the results of applied research independently of the consideration whether or not they find immediate and spectacular application in industry. While the adage that the proof of the pudding is in the eating does not always apply here, it may have also to be recognised that some amount of wasted effort is unavoidable in scientific and industrial research which is now called upon to meet the new, sudden and exacting needs of hectic industrialisation. At the same time, the possible recognition that the challenge of industrialisation is bound to operate as a relentless driving force in the field of applied research should be sufficient consolation to critics for the time being. Carping criticism, after all, is more likely to discourage than to stimulate the scientist's creative mind which is as sensitive as the balance he uses. There is here for us a great lesson from the USSR.

NORTH INDIAN NOTES

Port Development

The National Harbour Board, meeting at Calcutta, considered a number of proposals calculated to expedite development and expansion of major ports in the country. It was recommended that the provision of Rs 78 crores for the development of major ports under the Second Five Year Plan should be utilised to the maximum possible extent. The Board also accepted a proposal to constitute a cadre of Consulting Engineers in India. In regard to the question of creating a Port Development Fund by the levy of a special surcharge on imports and exports, it was recommended that, in view of the meagre amount of revenue expected and the adverse effect which the proposed surcharge may have over the export trade, the proposal should be dropped.

Presiding over the meeting, Mr Raj Bahadur, Minister of State in the Union Ministry of Transport and Communications, dealt with the problems faced by each of the major ports in the country. He pointed out that the maintenance of adequate depths in the navigable channel from sandheads to Calcutta jetties in the Hoogly river remains a continuous struggle against nature. This problem is sought to be tackled along three lines, namely, intensive dredging, river training works, and restoration of adequate headwater supply. For intensifying dredging operations, a new dredger is expected to be pressed into service and, for this, Mr Raj Bahadur disclosed, global tenders have been called for.

The extreme congestion in the Calcutta port and the inability of the port to receive deeper-drafted ships have raised the question of developing another port in the West Bengal coast to deal with the growing volume of sea borne traffic. Haldia is being considered for development as a subsidiary port to Calcutta. In this connection, Mr Raj Bahadur disclosed that as a first step in the development of the port, an anchorage has been set up at Haldia and that, during the next fair weather season commencing from November, the port will be used for off-loading of foodgrains ships.

The other measures which Mr Raj Bahadur disclosed are provision of additional harbour craft and equipment including a 60-ton and a 30-ton crane, diversion of the railway lines in the Budge Budge area, reconstruction of the Majerhat Bridge, expansion of the marshalling yard, construction of two general cargo berths in King George's Dock, construction of a new tea warehouse, reconditioning of the quay walls in Kidderpore Dock, and electrification of cranes in that dock, purchase of additional mechanical cargo-handling equipment and diesel locomotives, improvement of ship-repair facilities and improvement of water supply to shipping.

Mr Raj Bahadur expressed satisfaction at the progress made by the Kandla port. In 1958-59, the port handled a traffic of 1.07 million tons. Against this, the traffic that was expected to flow through the port in the first five-year period after completion of the first stage of development was only 8.5 lakh tons. The revenue earned by the port has also exceeded original expectations. At the time of sanctioning of the project, the port was expected to earn an annual net revenue of only Rs 12 lakhs during the first five years and no payment toward depreciation and interest charges was envisaged during the first 20 years. Against this, the financial working shows that, after incurring a running expenditure of Rs 16.86 lakhs, Rs 36.64 lakhs and Rs 39.73 lakhs excluding payment on account of depreciation and interest charges on capital outlay, there were surpluses of Rs 12.66 lakhs, Rs 11.22 lakhs and Rs 28.34 lakhs respectively during 1956-57, 1957-58 and 1958-59.

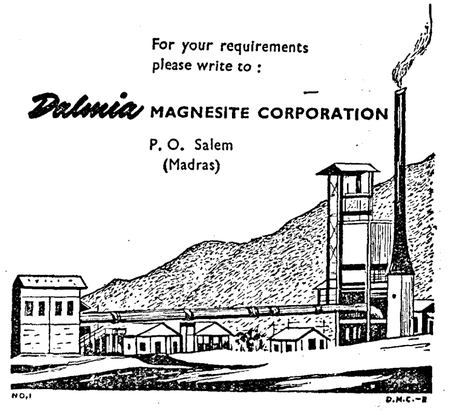
Mr Raj Bahadur also traced the progress made in the implementation of development schemes in the other major ports. As regards Minor Ports, Mr Raj Bahadur pointed out that the question was being considered by the Intermediate Port Development Committee and assured that the recommendations of the committee would be given due consideration while framing the development schemes for ports other than major ports in the Third Five Year Plan.

Mr Raj Bahadur also reported satisfactory progress in the execution of development schemes in the other major ports such as Madras, Cochin, and Visakhapatnam. Madras has embarked on an ambitious project known as the 'Wet Dock Scheme' which is intended to add to the berthing capacity of the port. The Cochin port is making satisfactory progress in the construction of four additional wharf berths in the Ernakulam channel. The scheme is designed to afford the much needed relief to Cochin port. In the Visakhapatnam port, the Government are thinking in terms of constructing four additional berths at an estimated cost of Rs 4.5 crores.

*

Small-scale Industries

Presiding over the 14th meeting of the All-India Small-scale Industries Board at Puri, Mr Manubhai M. Shah, Union Minister for Industry, explained the measures the Government have in mind for promoting the development of small-scale industries. These include the provision of liberal credit, introduction of credit guarantee scheme to be operated by the Reserve Bank and the redefinition of the term small-scale industry.



Under the new definition, the restriction regarding the number of workers employed would be removed and the only limiting factory for an industry to be called small-scale industry would be in regard to the capital investment which should not exceed Rs 5 lakhs including the cost of land, machinery, building and other materials. The removal of restriction regarding employment would enlarge the scope for financial assistance to small industries.

Credit liberalisation will be mainly in the shape of different rates of interest based on a slab system, the rate of interest being in inverse proportion to the amount of credit. Thus, in the case of credit of less than Rs 25,000, the rate of interest would be three per cent. For credit between Rs 25,000 and Rs 2 lakhs the rate of interest would be 4 per cent while for credits of more than Rs 2 lakhs the rate would be 5 per cent.

Under the credit guarantee scheme which will be implemented from January 1 next, the Government of India would guarantee credit upto Rs 25 crores. This amount, Mr Shah said, would flow into different units in 42 selected districts in the country. Mr Shah also stated that the Government had decided to attach an Economic Survey Division to the Small-scale Industries Corporation which would help in the evaluation of the progress in different units. The equity capital of the Corporation is also sought to be raised from Rs 50 lakhs to Rs 2 crores. With a view to expediting the development of small-scale industries, Mr Shah suggested that each State should have its own small-scale industries corporation, which could undertake management of industrial estates, indenting of raw materials from the Central pool and supplying them to industrial units and marketing products.

In line with the new definition of small-scale industry, the definition of medium industries is also proposed to be changed. Though no definite decision has been taken in regard to the new definition, Mr Shah said that there was a proposal to definite medium industries as those having an investment of not more than Rs 50 lakhs.

DELHI REVIEW

Foodgrains Quiet

Quiet conditions were witnessed in the foodgrain prices during the past week. While prices of wheat and rice were mostly stationery, prices of course gains recorded a downward tendency. Pressure of good maize crop had been the main influencing factor. Rains received last week, though belated, had done immense good to late kharif crops and timely sowings of rabi crops would now be possible. Preparation of land for rabi sowings is in full swing and, in some areas, sowings of gram and peas have begun.

Wheat prices at Hapur continued quietly steady during the week to be quoted on Monday at Rs. 17.62 for average quality and Rs 18.75 for farm produce, while some superior quality was quoted upto Rs 19.25 a maund. Daily arrivals of wheat in the open market were sparse as under the wheat levy scheme of the State Government, half of the arrivals have to be delivered to the Government at the controlled price of Rs 13 to Rs 15 a maund. Arrivals in the open market were reported at about 100 maunds daily. Demand for wheat has gone down as seasonal demand has been shifted to maize. Harvesting of paddy has finished, but munji crop is still in the fields. Rice prices continued steady to be quoted now at:—sela basmati Rs 32 to Rs 35, mainpuri Rs 24, raimunia Rs 25, ramajwayan Rs 24.50, gadda Rs 22 a maund.

After early fall, gram prices ruled steady in the week-end due to revival of demand for seed purposes. Local stock is comfortable at about 50,000 maunds. Barley and bejhar prices ruled quiet in the absence of ready demand. Although maize arrivals in the market were not heavy, at an average of 150 maunds daily, but prices eased fractionally in the absence of demand which is being met in villages where large quantity has been retained by producers. Harvesting of bajra has also begun. Prices of other grains were quiet to be quoted on Monday at:—(in rupees per maund) gram 12.75 to 13, barley 12.75, bejhar 11.62, maize 11.12 to 11.75, jowar 12 to 14, guwar 11 to 13, bajra 13.12. Stocks: gram 50,000, barley 4,000, bejhar 1,000, rice 5,000, jowar 500 maunds.

Prices of pulses ruled quiet during the week in the absence of new influences. Peas are not attracting good outside demand and local stock ran down by only 3 khatties during the week to 4, 4 khatties. Arhar prices and local stocks were almost stationery. Crop prospects of urd and moong have improved following last week's rains. The final report of all-India production of rabi pulses is as follows:—(in thousand of tons) gram 6,826; tur 1,662; urd 172; moong 38; massor 245; peas 711; kulti 73; kismi 226 and others 713; total 10,666 as against 8,117 last year. Prevailing prices here were:—peas dara Rs 11.75, farm Rs 12.50, pasdal Rs 13.25, arhar Rs 17, moong Rs 16 to Rs 18, urd Rs 17 to Rs 19, massor Rs 14.25 to Rs 16, arhardal Rs 21.75 to Rs 23; stocks peas Rs 44, arhar Rs 30 khatties.

NORTH INDIAN MARKETS

*

Sugar

Sugar prices continued steady to firm due to tight supply position. In order to check the rising trend in prices, the Central Government are contemplating building up a reserve of 2.5 lakh tons and the possibility of imports for that purpose was not ruled out. Rationing arrangements were not complete as ration cards were not yet issued to all consumers and as the supplies at 1¼ seers per unit per month are insufficient, the consumers have to supplement these from the open market, where it is being quoted at Rs 1.25 per seer as against the controlled price of 97 nP per seer. The wholesale price is Rs 130 per bag.

Sugar prices were also steady to firm in the Muzaffarnagar market where supplies in the open market were sparse and latest prevailing prices were Rs 130 to Rs 132 per bag as against the controlled price of Rs 104 per bag. Non-issue of permits to all consumers is responsible for not lifting of all sugar from Government nominees. Open market prices were quoted at Rs 1.25 to Rs 1.31 per seer as against controlled price of 96 nP per seer. Crystal sugar continued to attract good demand in the Kanpur market where prices had established a new peak at Rs 138 a bag, but business passing was negligible due to absence of supplies.

Khandsari prices, after recording a sharp rise of about Rs 10 per maund in the last two weeks, eased slightly by about As 2 per maund in the week-end owing to buyers' resistance at higher levels. The UP Government have now extended the scope of the UP Khandsari Manufacturers Licensing Order to the whole of the State as against the assigned or reserved areas of sugar factories and only those units would be given permission which were established before February 1959. Prevailing prices here were:—Rs 44 to Rs 52 according to quality, Boora Rs 50 to Rs 52 a maund.

New gur arrivals have mounted to an average of 200 maunds daily and prices stayed steady due to good festive demand from consumers. With the clearing up of weather, more of crushers and kolhus were functioning and gur arrivals will further mount. Prevailing prices were:—new gur Rs 25 to Rs 27, old Rs 21 to Rs 23, stock old 2,500 maunds.

Years of experience have proved to this factory manager that he can rely on WHEEL BRAND Industrial Glycerine —because it is of an *unvarying* high quality.

It is guaranteed to contain not less than 98% glycerol. What's more, it is backed by the experience and reputation of its makers, HINDUSTAN LEVER LIMITED.

In textiles, dyeing and printing, paints, varnishes and lacquers, plastics, leather, rubber and glass...in these and other industries, WHEEL BRAND GLYCERINE is used, and has been used for *years*.

Remember, PYRAMID BRAND GLYCERINE B.P. also has many uses in the industry as well as medicinal and domestic uses! Write for a *free* leaflet about its various uses in the home to: HINDUSTAN LEVER LTD, P. O. Box No. 409, Bombay 1.

THE PENINSULA

Electronics Components

Attesting to the concern evinced by the Government in making the country self-sufficient in all the materials and equipment needed for the defence of the country, the defence industry has, since the advent of Independence, made commendable advances along many directions. The important developments in this field include the setting up of the Hindustan Aircraft Factory, the Indian Telephone Industry, and the recent entry of the Government into the field of truck manufacture. While some of these, and particularly the Government's entry into the field of truck manufacture, have provoked controversy about the propriety of the policy underlying them, the need for self-sufficiency in any one of these can hardly be questioned.

Electronics components constitute yet another item of requirement for the defence industry for which internal sources of production had to be established. These components find a wide range of uses for defence equipment.

It is not too soon that the Defence Department of India had come to realise the importance of the electronics components production on which such mighty progress is reported in the United States and the United Kingdom, not to speak of the astounding development made by Soviet Russia. And the four-day convention at Bangalore, which began early this week and in which 350 delegates from the public and private sectors participated, should prove the first public co-operative effort among the technical minded people to discuss freely the possibilities of Indian improvement and how fast they are to be applied to peaceful industrial progress.

Maj. Gen. B. D. Kapur, Chief Controller, Research and Development Wing of the Union Defence Ministry, inaugurating the convention observed that the total electronics production, including research and development, in America was of the value of Rs 6,000 crres and Rs 600 crores in the United Kingdom. Fifty per cent of the total output was intended for defence and professional purposes. The target for military electronics in the United States for 1959 was expected to exceed 5 billion dollars.

Maj. Gen. Kapur said that research and development constituted the natural mediator between the operational planners and the production agencies. The leadership in the two older fields, that is, military and production, was apt to resist the acceptance of research and development as a new independent military field of action. He hoped time and goodwill would establish this new field in its proper perspective.

Stress was also laid on the close relationship between the staff laying down the qualitative requirements and working level engineers, who specified the design details of the systems and equipment. He urged the need for close association of the user with development of equipment and even before the military characteristics were finalised. This approach, he thought, would bring about the production of the best equipment at the cheapest cost and in the speediest manner an ideal worthy to be aimed at.

He referred to new fields of research and development in electronics and said that instrumentation is an important adjunct to research and development. Guided missiles and space research have opened up another field for instrumentation. In addition to sophisticated equipment, there was a large variety of simple instrumentation which required consideration by the manufacturers. Hence a great field existed for establishing an electronics components industry in India.

Maj. Gen. Kapur said that the Light Electrical Development Council had formed a committee with Col. Mehta as Chairman, to make a survey of components requirements and to assess the potential for their manufacture.

He was also of the view that, for the establishment of a components industry, it was essential to set up a Radio Industry Council, because the industry could never progress without co-ordinate action by someone who could be given official recognition by the Government. He said the Chief Inspectorate of the Production Department would offer all guidance and assistance in the production of components for military purposes.

A certain expansion programme in research and development organisation had been planned because the establishment had to grow many times before it could fulfil its role. The other nuclei establishments being built up in the electronics group of the organisations were Radar Research and Development Establishment and Electronic Research Laboratory.

With the establishment of the Bharat Electronics and other associated industries, such as Indian Telephone industries, the production of defence electronic equipment had been initiated. But, to meet the full defence requirements in the whole field of electronics, many organisations would be required to support even Bharat Electronics.

There is an exhibition in which main participants are: Bharat Electronics, the Inspectorate of Electronic Equipment of the Defence Ministry, the Indian Telephone Industries, Associated Instrument Manufacturers, AMCO Batteries (Bangalore), Air Force Technical College, Toshiwal Brothers, Bombay, Institute of Armament Studies (Kirkee), and General Radio and Appliances.

Major General Kapur also laid stress on miniaturisation and subminiaturisation of electronic instruments which also included transistorisation. All these were the new kinds of trends in military equipments. In this connection, the history of Bharat Electronics should be found interesting. This was started with the intention of making India self-sufficient, and possibly take to exporting, to India's neighbours. This industry has on hand projects for 1959-60 to make equipment worth Rs 1 crore. Last year's production reached Rs 65 lakhs against 1956-57 production of the value of Rs 26 lakhs.

Bharat Electronics had entered into an agreement with Pye Telecommunications, the noted Cambridge precision instruments makers, for the manufacture of a wireless set called T62. This model is a mobile high trans-receiver. This is intended for the Defence services. Valves are to be manufactured with collaboration with Phillips. These would be standardised by the Radio and Cable Board and on acceptance by the Radio Manufacturers Association in India production will be taken up in 1961 beginning with 1.8 million units. The production could be doubled if demand warranted. In money value, the turnover would be to the extent of Rs 40/50 lakhs annually.

Piezo electric crystals are also produced by Bharat Electronics. These are required for stabilising frequency for all types of electronic equipments. The Transformer section is equipped and designed to produce a wide-range of high quality transformers and chokes, including power transformers and soothing chokes.

Barely three years ago, production was started by Bharat Electronics. The development by the factory of a twin-channel trans-receiver for air-to-ground communication for the Air Force has been a major achievement. This was intended to be fitted to the HT-22 aircraft trainer made from the Hindusthan Aircraft Factory. So long, the HT-2 was without this equipment. This has gone through stringent tests and been accepted by the Air Force. Bharat Electronic will manufacture this instrument and would go on producing a developed single and ten-channel operation equipments.

Mass production of a hearing aid from this factory will begin soon. This one experimented upon has been found satisfactory and cheaper than imported ones. An electronic megaphone will also be made at this factory. This is named "belhailer" and is of utmost necessity to the railways, the Police and defence establishments. This loudspeaker is an electronic devise with self-contained power supply. The factory also turned out this year 10,000 "Belwin" transmitters for upper air-observation. It is likely that foreign markets could be found for this equipment.

The convention has focussed attention on all the important aspects of electronics components production in the light of which future production will have to be planned. Bharat Electronics, notwithstanding its proud record, has not been without its defects on the manufacturing and organisational sides, defects which are inconsistent with principles of economical and efficient working. Prior attention should, therefore, be directed to the rectification of these defects.

MADRAS REVIEW

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED

(Incorporated in England)

Notice is hereby given that the Board of Directors of this Company have decided to recommend to stockholders at the forthcoming Annual General Meeting that a Final Dividend for the year ended 31st March 1959 on the Company's Ordinary Stock at the rate of £3½ per cent net (Tax applicable at 7s. 9d. in the £) be paid on the 16th November 1959 to those stockholders whose names are registered in the Company's Stock Register on the 31st October 1959.

Applications for transfers received in this office before 12 O'clock noon on Saturday, the 31st October 1959, will, if otherwise satisfactory, be registered at that date for the purpose of participation in the above Dividend.

By Order of the Board
D. H. P. HENDERSON
Agent

MADRAS REVIEW

Industrial Establishments in Madras

Coimbatore District continued to be the most highly industrialised district in Madras State. Cotton Mills and Engineering works predominate in that district, states the Government Worker's Wage Report for 1958. It adds: Madras City continued to figure prominently in Textile Mills, Transport industry, Railway Workshops, Printing Presses and Engineering Works.

In the year 1958, there were 5,343 factories employing 3,19,056 workers in the private sector, 150 factories in the public sector employing 44,129 workers and 1,76,026 business establishments employing 2,18,040 persons. The payment of Wages Act was made applicable to 9,210 establishments which included factories, plantations and bus services, of which 4,855 or 53 per cent of the establishments submitted reports about the number of employees and wages paid.

These returns showed that the gross wages paid in these 4 ,855 establishments came to Rs 35.49 crores, showing an increase of 21 per cent. Similarly, the average annual wages of a worker went up from Rs 868 in 1957 to Rs 1,025 in 1958. Of the gross wage bill of Rs 35.49 crores, a sum of Rs 3.04 crores was received by the workers as bonus and the money value of certain concessions availed by them came to Rs 35.3 lakhs; the bonus and other concessions thus amounting to 10 per cent of the wages.

There has been a steady increase in the average wage of workers during the last 10 years. The percentage of temporary labour has been on the decrease. The largest labour force was employed in the textile industry, with 1,18,580 persons working in 463 cotton mills including ginning factories. The factories in Coimbatore continued to employ the largest number of workers.

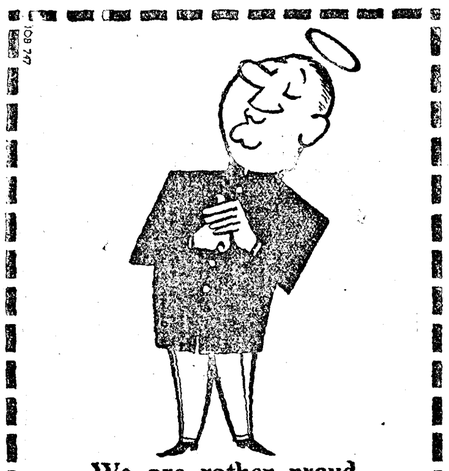
At the end of the year 1958, there were 5,343 factories in the State of which 5,103 factories were in commission as against 4,941 factories in commission during 1957. There has thus been an increase of 162 factories in commission during 1958. Out of the factories in commission, 3,469 were using power, 967 were not using power, and 667 were notified as factories under relevant rules. The number of workers employed in these factories at the end of the year was 3,19,056 as against 3,19,396 workers at the end of 1957.

In the Public Sector, there were 150 factories employing 44,129 workers as against 125 factories employing 40,197 workers during 1957. There has thus been an increase of 25 factories in the Public Sector during 1958.

The rice mills continued to occupy a dominant position in the industrial structure of the State, but they employed only 14,097 workers while 463 cotton mills including Ginning Factories employed the largest number of workers, viz., 1,18,580.

The largest number of factories are concentrated in Coimbatore, Madras, Salem, Madurai and North Arcot Districts. The factories in Coimbatore employ the largest number of workers and the Districts of Madras. Madurai, Tirunelveli and Tiruchirapalli come next in the order mentioned.

Coimbatore district continued to be the most highly industrialised district in the State. Cotton Mills and Engineering works predominate in that district. Textile Mills, Transport Industry, Railway Workshops, Printing Presses and Engineering Works figure prominently in the industrial set up of Madras City. Cotton Mills, Rice Mills and Handlooms predominate in Madurai District, Cotton Mills and Match industries in Tirunelveli District and Railway Workshops, Cotton Mills and Handloom Factories in Tiruchirapalli district.



The report stated that the percentage of temporary labour has been on the decrease. Daily allowance etc., are paid to them as for permanent workers. There has been no discrimination in any of the units in which casual workers are employed in regard to the extension of other benefits such as leave with wages, maternity benefits, etc.

There were 16,571 accidents during the year as against 13,420 during 1957. Of these accidents, 23 proved fatal. The number of accidents has been on the increase.

Maternity Benefit Act:

The average daily number of women employed in 2,022 factories during the year was 47,647. 1,872 claims were made for the grant of maternity benefits during the year as against 2,315 in 1957. 1,093 claims were paid and the total amount of maternity benefit paid exclusive of benefits paid by the Employee's State Insurance Corporation was Rs 78,253 as against Rs 1,20,908 in 1957. The Madras Shops and Establishments Act, 1947 was in force in the City of Madras, in the Municipal areas, in Class I Panchayats and also in areas notified by the Government.

Out of the 9,210 factories, industrial establishments, plantations and omnibus services in the State covered by the Payment of Wages Act, 4,855 or about 53 per cent of them submitted the prescribed annual returns in time. As already noted, the average annual wage of a worker increased from Rs 868 in 1957 to Rs 1,025 in 1958. There has been a steady increase in the average wage of a worker during the last 10 years. During the year, a sum of Rs 30,235 as fine, Rs 6,467 for damage or loss and Rs 30,733 for breach of contract were deducted by the employers from the wages of workers. The corresponding figures for the previous year were Rs 16,878, Rs 4,729 and Rs 8,268 respectively.

We are rather proud of ourselves

TODAY, banking is almost a public utility. Its success depends on its ability to give friendly and helpful service.

We modestly believe that our progress shows that our clients, whether they are industrialists, exporters or just men who want to deposit Rs. 5/- in a Savings Bank account, realise that in IOB they have an institution that has made friendly service the basis for all their activities.

SOUTH INDIAN NOTES

Glass Industry

THE glass industry has made significant progress in the Madras State in the last two decades and there are now seven factories engaged in the manufacture of glass chimneys tumblers, bottles, etc. Foreign collaboration has been an important factor in this progress. For example, vacuum flasks are being produced by one firm with Japanese collaboration. Manufacture of bottles and containers is also being contemplated by another firm with Czechoslovakian aid. The machinery which has already been imported from Czechoslovakia is expected to be erected shortly. Another factory in the Industrial Estate at Guindy is engaged in the production of scientific and laboratory equipment in glass. A good part of the requirements of educational and research institutions is expected to be met by this factory.

But the glass industry has by no means exhausted the potentialities for further growth. The Salem District in the State is rated to contain large-scale supplies of almost all the materials needed for the glass industry and their quality is also considered very good. The district has raw materials eminently suitable for the production of optical glass. If the collaboration of Japan which has made considerable progress in the production of optical glass, could be secured, prospects for early materialisation of the project could be considered bright.

Two more factories for the manufacture of sheet glass are to be set up shortly near the city each with an initial investment of about Rs 50 lakhs. One of these will be located in Tiruvottiyur while the other one will be set up in Sembium with Belgian collaboration. This factory is expected to adopt what is known as the "Pittsburg process" for the manufacture of sheet glass which, according to technical experts, produces better quality glass. The licensing and other preliminaries for the setting up of these factories are reported to have been already completed.

Apart from these two factories, which are in the private sector, arrangements are also being made to establish another factory in the public sector in Salem district for the production of standardised raw materials required by the glass industry. Such a factory will give considerable fillip to the production of glass products in the State.

SOUTH INDIAN MARKETS

Firm Trend in Groundnut

Madras, Wednesday.

With poor arrivals from upcountry producing centres where the kerneis and groundnut oil are absorbed at a high rate, prices of groundnut oil today went high here in the groundnut and groundnut oil market. Other oils in sympathy also registered higher prices. Groundnut oil per candy of 500 lbs ready was quoted today at Rs 385 ready, Rs 375 October, Rs 359 November and Rs 341 December. Groundnut kernels per candy of 531 lbs were quoted higher today at Rs 207 superior and Rs 202 medium quality. Castoroil was priced at Rs 352 per candy of 500 lbs. Coconut oil was too higher at Rs 40/12 per tin. Groundnut oil cake remained steady at Rs 26 per bag.

U. K. demand on oil was only nominal in that the Madras price remained higher than the price of £102½ to £103. But in combination with cake, the prospects of oil transaction are moderate this week and about ten to fifteen tons may be transacted.

Actually United Kingdom offered higher price towards last week end when as much as £105 per ton C.I.F. was offered and some transaction also took place. Burma is cautious this week, but towards the beginning of this week a small quantity was put through on basis of shipment in tins around Rs 1,620 to Rs 1,625 per ton. What was of interest however was that groundnut oil cake which was quoted high in London at £38 per ton c.i.f. At a slight recession of £37 to £37/10 for near shipments and at £36/10 per ton for distant shipments some more transactions were made possible. Solvent cake continues to command steady level. For October/November sales were done around £35/10 to £35/12/6 per ton C.I.F.

Even at the higher price of Rs 365 groundnut oil continued steady and took up a higher trend towards the week end. An all-round bullish outlook was imparted by the Government's decision to extend their incentive measures for the groundnut oil export for a further period. Shortage of local stock added up to this bullish tendency.

Shippers also took the necessary cover in December hedge contract in groundnut oil at £105 to £105/10 per ton C.I.F. destination. Shop and bazar interests absorbed spot stocks due to Dusserah last week, though Calcutta came on the scene earlier to take away all absorbable stocks at higher biddings. Oil thus moved about by Rs 35 per ton while groundnuts about Rs 13/14 per ton over Saturday's closing levels.

Though arrivals of groundnuts continued steady fairly last week at an average of 50 tons daily, they had become thinner from the beginning of this week. Almost nothing came yesterday and today into the market. Only some peanut variety from the surrounding districts arrived in doublets and rains hindered further arrivals of this commodity which came in the restricted quantities of 20/25 tons daily. Crushers wanted to go in for them but they were able to absorb only a small quantity at Rs 205 per candy of 531 lbs. Medium varieties were booked at Rs 202 per candy. Continuing even upto Monday last the price quoted for these was Rs 207 per candy superior and Rs 202 for medium. The new peanut crop was quoted and bought at Rs 197/198 per candy pucca basis.

About 600 to 800 candies of groundnut oil were absorbed on spot transaction by local bazar interests. To a small extent Calcutta operators also bid their needs in the spot market. The price offered by Calcutta was around Rs 375 per candy for oil last Saturday and it went up higher on Monday last to Rs 383/385. Even at Pollachi the price quoted was Rs 382 per candy and was absorbed locally at that level. Last closing quotation on Tuesday was Rs 375. October while Ready remained at Rs 385.

Upcountry Markets:

Only small arrivals were had during this week in summer crops. About 80/90 tons daily were received in the South Arcot markets. Local crushers took up this quantity at Rs 205/207 per candy. Pollachi arrivals declined considerably last week end and also beginning this week. The quantity of 10,000 bags of unshelled of weekly delivery dwindled to 6,000 bags at Pollachi. In the midweek last week some decline in price was observable and the superior red variety was taken up at Rs 200 per candy while the white (coramandel) quality was sold at Rs 193/195 per candy.

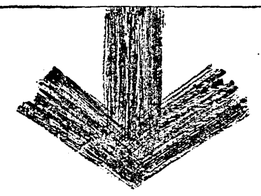
Hides and Skins

In tanned cowhides there is only very moderate interest. Lightweights were unchanged in prices. Tanned buff calf was easier slightly. Despite several Madras cabled offers, United Kingdom did not respond due to high prices. 5/5½ lb and 8/8½ lb were transacted in smalls less one penny. Practically no offers were made for 10/12 lb. Other prices remained the same in Madras.



Inferior fifths were available at 1 penny per lb less. Even then foreign buyers notably from U.K. are not interested. Even in tanned buff skins for which there were no inquiries prices should have to go down to attract transactions.

With meagre arrivals cow calf skins were absorbed locally. Tanned buffalo calf too were in short supply and prices ruled firm. In this section Madras cabled 2/3 d higher to London than last week's quotations.

In tanned goatskins there was normal transactions with 7100 goat skin pieces and 25,000 sheep skins having been disposed. A considerable quantity of these were left in the market, 10,000 goat and 30,000 sheep skins. In both these market quality skins are holding firm. Very keen demand was observed in export section of these skins. Prices were unchanged.

The following are today's prices of raw skins (last week's prices are shown within brackets): Bangalore raw goatskins Rs 630/700 (Rs 620/700): Whitewoolsheep Rs 530/580 (Rs 510/590): Bangalore Raw blackwool sheep Rs 430/490 (Rs 430/490); Beswada Raw Goatskin: Rs 640/650 (Rs 630/645): Bezwada Raw He Sheep Rs 535/540 (Rs 530/535) Bezwada She Sheep Rs 400/410 (Rs 380/390).

MADRAS REVIEW

How to get the most out of your Bank

Do not regard your bank merely as a convenience for depositing and withdrawing money. There are extra services available to you.

When you have a *current account* with State Bank, you can ask that commercial bills and pay or pension bills be collected and credited to your account; you can also instruct the Bank to pay periodically on your behalf house rent, school fees, club subscriptions, insurance premia, etc. and thus save yourself a lot of bother.

A *savings bank account* enables you to earn interest. It permits the facility of withdrawal once a week; at some offices the system of withdrawal by cheque is already in force.

For full particulars of these and many other facilities State Bank provides, please consult or write to the nearest office.

The State Bank with its background of years of sound banking traditions is waiting to solve your problems. Why not have them solved for you?

STATE BANK OF INDIA

INDIA'S LEADING BANK

SISTA'S-SB-16

This is only an Announcement regarding issue of Prospectus and not a Prospectus

No subscriptions are invited on the basis of this Announcement. Intending subscribers are requested to obtain from the Registered Office of the Company or any one of the Bankers or Brokers referred to hereunder, copies of the Prospectus to which are attached forms of application. A formal Prospectus has been filed with the Registrar of Companies, Bangalore. Some of the particulars contained in the Prospectus are set forth hereunder.

Consent of the Central Government has been obtained to this issue of Capital by an order of which a complete copy is open to Public inspection at the Registered office of the Company. It must distinctly be understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to it.

A licence has been obtained from the Central Government for the establishment of this new Industrial undertaking of which a complete copy is open to Public inspection at the Registered Office of the Company. It must be distinctly understood that in granting this Licence the Government of India does not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

Applications have been made to the Madras Stock Exchange and to the Bombay and Delhi Stock Exchanges, for permission to deal in the whole of the issued Preference and Equity Shares and in the course for an official quotation.

The list for Public Subscription will open at 10.30 a.m., on Monday the 12th day of October 1959, and will close on Saturday the 24th day of October 1959.

OBJECTS

The Company was incorporated on 7th November 1957 to set up in Mysore State a Paper Mill having an initial production capacity of approximately thirty-five tons per day and to carry on the business of manufacture of high grade writing and printing paper. The main objects of the Company are contained in the Company's Memorandum of Association which is open to inspection at the Registered Office of the Company.

PROSPECTS

India's present 'per capita' consumption of paper is less than 2 lbs. as against 384 lbs. in U.S.A., 165 lbs. in U.K, 150 lbs. in Sweden and 46 lbs. in Japan. The Planning Commission has estimated the annual demand for paper and paper-board by the end of the Second Plan at 350,000 tons. Even with the record production of paper and boards of 250,000 tons in 1958, the need for additional production is obvious. The demand for paper is bound to increase still more during the Third and subsequent plan periods.

SITE

The Paper Mill will be located near the Krishnarajasagar Dam (Mysore State). The factory site is adjoining Bangalore-Krishnarajasagar Road and Mysore-Belagula-Mercara main road as well as Mysore-Arsikere railway line.

RAW MATERIAL

High Grade printing and writing papers will be produced using sugar can bagasse as the primary raw material. Ample quantities of bagasse will be made available for the proposed paper mill by the Mysore Sugar Co., Ltd., Mandya, which yields about one lakh tons of bagasse annually.

PLANT AND MACHINERY

Negotiations have been completed for purchase of first-class, most modern equipment and technical services, from Messrs. Parsons & Whittemore, Lyddon Organisation, New York, London, Paris and their Associates. They have also agreed to supervise the erection and start-up of the Paper Mill and have guaranteed the due performance of the plant. In addition to supplying equipment and technical services, this Organisation has subscribed Rs 62,41,500 to the Equity Capital, and shares of the face value of this amount have been allotted to them in full.

MANAGING AGENTS

With the consent of the Central Government, the Company appointed Messrs. Bedi & Co. Management Private Ltd., as the Managing Agents for a period of 15 years by a Managing Agency Agreement effective from 24th October 1958.

NOMINATION OF DIRECTORS

The Government of Mysore, and the Mysore Sugar Co. Ltd., are each entitled to nominate a Director on the Board of the Directors by virtue of their holdings in the Share Capital of the Company. The Industrial Finance Corporation of India is also entitled to nominate a Director on the Board of Directors.

INTEREST OF DIRECTORS

Sardar Maluk Singh Bedi and Sardar Anup Singh Bedi and Mr. H. L. Nathan, Vice-President of Messrs. Parsons & Whittemore are also Directors in the Managing Agency Company and as such are interested in the Managing Agency Agreement referred to above. Mr. H. L. Nathan is also interested as a Representative of Messrs. Parsons & Whittemore, who have agreed to supply the necessary plant, and machinery and Technical services to the Company.

Save as above, no other Director has any financial or any other interest in the promotion of the Company or in any other property acquired or proposed to be acquired by the Company.

CAPITAL REQUIREMENTS

	Rs.
Land & Buildings etc.	24,90,000
Plant and Machinery (including freight, insurance, customs duty, erection, technical services etc.) ...	2,90,62,000
Preliminary and Administrative Expenses upto start of production	14,70,000
Contingencies	14,78,000
Interest on Deferred Payments	37,00,000
Total ...	3,82,00,000

SOURCE OF FUNDS

The total requirements of Rs. 3,82,00,000 will be met as follows:—

	Rs.
(a) By the issue of Equity Shares	1,40,00,000
(b) By the issue of 7% Tax-free Redeemable Cumulative Preference Shares	60,00,000
(c) Through Deferred Payments arranged with Suppliers of Machinery	1,82,00,000
Total ...	3,82,00,000

ESTIMATE OF PROFITS

The Directors expect a substantial margin of profit after meeting establishment charges and Managing Agents' Commission on the basis of the normal selling price of paper. The Company will enjoy the special benefits under the Income-tax Act as regards development rebate and depreciation and exemption from income-tax on profit up to 6 per cent on the capital employed for the first five years of the Company's operation. The Company will not be liable to pay tax for the first three or four years of its operation, and that after providing for depreciation and preference dividends as well as deferred payments on machinery, etc., the Company expects to pay dividends after the first three years' operation of the plant. Copies of all the contracts, made with and by the Company, Memorandum and Articles of Association, Government consent for the issue of capital, Government permission for establishment of the Industrial Undertaking etc., are all open to inspection at the Company's registered office.

UNDERWRITING

The entire Preference Share Issue has been underwritten, the names of the Underwriters and the number of Shares underwritten by them being as stated below:—

	Preference Shares of Rs. 100 each
The Industrial Credit and Investment Corporation of India Limited	30,000
Life Insurance Corporation of India	15,000
The Union Bank of India Limited	14,987
...	59,987

The Directors are of the opinion that the resources of the Underwriters are sufficient to discharge their obligations.

UNDERWRITING COMMISSION

Underwriting commission at the rate of 2½% of the nominal value of the shares underwritten is payable to the Underwriters, The Industrial Credit and Investment Corporation of India Ltd., the Life Insurance Corporation of India and the Union Bank of India Ltd., respectively, in accordance with the terms and agreement contained in letters dated 22nd September 1959, from the said Underwriters and the Company's acceptance of each of them of the same date.

BROKERAGE

A brokerage at the rate of 15 nP. per Equity Share and Rupee one per Preference Share will be paid on allotments in respect of applications bearing the stamp of a Bank or a member of a Recognised Stock Exchange. Brokerage on the same basis will be payable to the Underwriters, in addition to the underwriting commission, on allotments in respect of applications made or procured by them, provided that the relative forms of application bear their respective stamps.

Messrs. Harbans Singh Mehta & Co., New Delhi and Messrs. Batlivala & Karani, Bombay, are the Managing Brokers of this Issue and will be in addition entitled to a brokerage of 50 nP. per Share, on 59,987 Preference Shares offered for Public subscription.

All applications for shares must be made on forms accompanying the Prospectus, copies of which may be obtained from the Registered Office of the Company or from the offices of the Company's brokers, bankers or underwriters. The application form together with the remittance for the amount payable on application must be sent to the Registered Office of the Company at 4/3, Kensington Road, Bangalore 1, or any one of the Bankers of the Company at their Head Office or any of their principal branches.

PERSONNEL FOR THIRD PLAN

The Manpower Committees of the five Zonal Councils, northern, southern, eastern, western and central, have nearly completed the study of personnel requirements for the Third Plan.

The studies generally relate to the assessment of men required for engineering, agriculture, medicine, health, education, industry, administration, etc.

Along with such studies, the State Governments of a particular zone are cooperating among themselves to assess the training facilities of the technical personnel required for the region. The purpose is to arrange for the necessary training within the zone itself.

For instance, the Manpower Committees are finding out if a State which has no technical school of its own can send its trainees to a neighbouring State. Already the inter-State cooperation has been effected in various areas. Jammu and Kashmir and Himachal Pradesh, for example, have arranged to send their farm trainees to the agricultural school in Punjab. Punjab, in turn, is sending Gram Sevaks from its hill areas to Himachal Pradesh for a basic agricultural course.

As decided by the Cabinet in September 1956, a Directorate of Manpower was constituted and located in the Union Ministry of Home Affairs in November, 1956. The Directorate provides the Secretariat for the Cabinet Committee on Manpower, and is concerned generally with the coordination of manpower policies and programmes whose implementation is done by the Ministries and other agencies concerned in the light of the decisions of the Committee.

The Directorate works in close cooperation with the Divisions of the Planning Commission dealing with manpower, and the Council of Scientific and Industrial Research, and maintains liaison with the Ministries at the Centre through officers nominated by them to deal with their manpower problems. There is also now a Manpower Officer in each State who looks after manpower work in his State and keeps the Directorate informed of developments.

INDIA STEAMSHIP COMPANY, LIMITED.

Annual General Meeting

NOTICE is hereby given that the Annual General Meeting of the Members of the abovenamed Company will be held at the Registered Office of the Company, "India Steamship House", 21, Old Court House Street, Calcutta on Friday the 27th November, 1959 at 4-00 p.m. in order to transact the following business:—

(1) To receive the Directors' Report and Audited Balance Sheet and Profit & Loss Account for the year ended 31st March 1959.

(2) To sanction payment of dividend on Preference Shares as recommended by the Directors for the year ended 31st March 1959.

(3) To sanction payment of dividend on Ordinary Shares as recommended by the Directors for the year ended 31st March 1959.

(4) To appoint a Director in place of Sir B. P. Singh Roy, K.C.I.E., who retires by rotation and is eligible for re-appointment and to consider and if thought fit to pass the following resolution of which a Special Notice as required by Sec. 281 of the Companies Act, 1956, has been received by the Company and the relative Explanatory Statement concerning which is annexed hereto as required by Sec. 173 of the said Act.

RESOLVED that pursuant to the provisions of Section 281 of the Companies Act, 1956, Sir B. P. Singh Roy, K.C.I.E., who has attained the age of 65 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for the Directors prescribed under Section 280 of the said Act shall not apply to him.

(5) To consider and if thought fit to pass the following resolution as Special Resolution in respect of Sir B. P. Singh Roy, K.C.I.E., a Special Notice for which as required by Section 261 of the Companies Act, 1956, has been received by the Company and the relative Explanatory Statement concerning which as required by Section 173 of the said Act is annexed hereto.

RESOLVED that pursuant to the provisions of Section 261 of the Companies Act, 1956, Sir B. P. Singh Roy, K.C.I.E., a Director of the Company who is also the Managing Director and Member of Messrs. Lionel Edwards, (Private) Limited, the Managing Agents of the Company and thereby an associate of the Managing Agents, be and is hereby re-appointed a Director of the Company.

(6) To appoint a Director in place of The Rt. Hon'ble Lord Sinha of Raipur, who retires by rotation and is eligible for re-appointment and to consider and if thought fit to pass the following resolution of which a Special Notice as required by Section 281 of the Companies Act, 1956, has been received by the Company and the relative Explanatory Statement concerning which is annexed hereto as required by Section 173 of the said Act.

RESOLVED that pursuant to the provisions of Section 281 of the Companies Act, 1956, The Rt. Hon'ble Lord Sinha of Raipur who has attained the age of 72 years and who retired by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for the Directors prescribed under Section 280 of the said Act shall not apply to him.

(7) To appoint a Director in place of Dr. S. C. Law, M.A., Ph.D., who retires by rotation and is eligible for re-appointment and to consider and if thought fit to pass the following resolution of which a Special Notice as required by Section 281 of the Companies Act, 1956, has been received by the Company and the relative Explanatory Statement concerning which is annexed hereto as required by Section 173 of the said Act.

RESOLVED that pursuant to the provisions of Section 281 of the Companies Act, 1956, Dr. S. C. Law, M.A., Ph.D., who has attained the age of 67 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for the Directors prescribed under Section 280 of the said Act shall not apply to him.

(8) To elect Mr. L. T. Gholap, I.C.S., a Director of the Company, who retires by rotation and is eligible for re-election.

(9) To appoint Auditors and fix their remuneration.

The Share Transfer Register of the Company will be closed from Thursday the 12h November, 1959 to Friday the 27th November, 1959 both days inclusive.

By Order of the Board,
A. MUKERJI
Assistant Secretary.

INDIA STEAMSHIP CO., LTD.
CALCUTTA,
The 30th September, 1959.

The dividend, if sanctioned, will be made payable to those Shareholders whose names stand on the Register of the Company on the 12th November, 1959, and the Dividend Warrants will be posted from 15th December, 1959 onwards.

N.B.—Member entitled to attend and vote is entitled to appoint a Proxy and the Proxy so appointed need not be a member of the Company.

EXPLANATORY STATEMENT AS REQUIRED BY SECTION 173 OF THE COMPANIES ACT, 1956:

1. In respect of Item No. 4 of the Notice of the Annual General Meeting, Sir B. P. Singh Roy, K.C.I.E., has attained the age of 65 years and hence this needs approval by a resolution of the shareholders in respect of which a Special Notice has been received from a Shareholder in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. Sir B. P. Singh Roy joined the Board of Directors of the Company in 1945. During the long period of his association with the Company he has rendered very valuable service to the Company and it is in the interests of the Company that the Board should avail itself of his valuable advice which is a great asset to the Company, by retaining him as a Director of the Company.

2. In respect of Item No. 5 of the Notice of the Annual General Meeting, a Special Notice has been received from a Shareholder of the Company as required by Section 261, proposing that the appointment of Sir B. P. Singh Roy, K.C.I.E., as a Director, be made and/or be approved in accordance with the provisions of the Companies Act. The Managing Agents of the Company, Messrs. Lionel Edwards, (Private) Limited, have the right to appoint two Directors as ex-officio Directors of the Company. Mr. G. K. Khemka and Mr. K. M. Naik are the two ex-officio Directors of the Company. Sir B. P. Singh Roy, K.C.I.E., became a Director of the Company in the year 1945, and has for the last several years been associated as one of the Directors of the Managing Agents, who are entrusted with the management of the affairs of the Company and of which he has been Managing Director since 1st June 1958. As it is in the interests of the Company that it should continue to receive the benefit of his valuable advice and guidance, it is desirable that his appointment as a Director be made and/or approved by a Special Resolution in accordance with the provisions of Section 261 of the Act.

3. In respect of Item No. 6 of the Notice of the Annual General Meeting, The Rt. Hon'ble Lord Sinha of Raipur, who retires by rotation and is eligible for re-appointment has attained the age of 72 years and hence this needs approval by a resolution of the shareholders in respect of which a Special Notice has been given in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. The Company has received such Special Notice from a Member, notifying his intention to move the resolution as set out in the said item. The Rt. Hon'ble Lord Sinha of Raipur joined the Board of Directors of the Company in 1947. During the long period of his association with the Company he has rendered valuable service to it and it is in the interests of the Company that it should continue to avail itself of his valuable services and advice by retaining him as a Director of the Company.

4. In respect of Item No. 7 of the Notice of the Annual General Meeting, Dr. S. C. Law, who retires by rotation and is eligible for re-appointment has attained the age of 67 years and hence this needs approval by a resolution of the Shareholders in respect of which a Special Notice has been given in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. The Company has received such Special Notice from a Member, notifying his intention to move the resolution as set out in the said item. Dr. S. C. Law joined the Board of Directors of the Company in 1944. During the long period of his association with the Company he has rendered valuable service to it and it is in the interests of the Company that it should continue to avail itself of his valuable services and advice by retaining him as a Director of the Company.

THE INDIAN CABLE COMPANY LIMITED

The Directors have decided to recommend at the next Annual General Meeting of the Shareholders, Dividends for the year ended 31st March 1959 as follows:—

(a) Dividend on Cumulative Participating Preference Shares @ 12½% free of Income Tax.

(b) Cash Bonus on Cumulative Participating Preference Shares at 2½% free of Income Tax.

(c) Dividend on Ordinary Shares @ 12½% free of Income Tax.

(d) Cash Bonus on Ordinary Shares @ 2½% free of Income Tax.

By Order of the Board,
B. J. WOODLEY,
Chairman.

Calcutta,
5th October 1959.

Dalmia Cement (Bharat) Limited

Improved Production and Despatches

Chairman, V. H. Dalmia's Review

162852

Speech of Shri V. H. DALMIA, Chairman Board of Directors of DALMIA CEMENT (BHARAT) LTD., delivered at the Seventh Annual General Meeting of the Company held at Dalmiapuram (Dist. Tiruchirapalli—Madras) on Wednesday, the 30th September, 1959.

Gentlemen,

I welcome you to the Seventh Annual General Meeting of your Company. As evident from the audited accounts for the year 1958, the working results during the last year received a set back and the profit declined compared to the performance in 1957. The reasons for this decline have been explained in the Report of the Directors which along with the accounts, has already been circulated. During the current year, however, there is improved production and despatches in all Departments. I am also glad to inform you that the installation of the third cement kiln is practically complete. Last year I had indicated that the expansion will be completed in early 1960. The commissioning of the new kiln well ahead of the schedule is a matter of great satisfaction and the credit goes to the officers, staff and workers, whose sustained efforts has made this possible.

For several years, we have been making efforts in collaboration with influential business friends in Japan to develop the export of very high grade iron ore from the rich and extensive deposits in your Company's mines in the Bellary-Hospet area. As you are, perhaps, aware the exports of iron ore have since July 1956 been canalized entirely through the State Trading Corporation of India Limited and we have since then endeavoured to the best of our ability to assist the Corporation in such exports. As mentioned in your Directors' Report, over one lakh tons of iron ore from our mines have been shipped since December 1958 to Japan and further orders are in process of execution. I would add that our efforts in this matter have been directed essentially towards a target for a long term arrangement for the additional exports of high grade iron ore over a period of several years and thus towards the furtherence of foreign exchange earnings.

I made a mention last year regarding the plant which was then under installation at Salem for the manufacture of dead burnt magnesite. Your Company has entered this business by becoming a two-third partner in the firm M/s. Dalmia Magnesite Corporation, which has undertaken this project. Orissa Cement Limited and Dalmia Cement Limited, two of the former partners of this firm have retired from the partnership. I am glad to inform you that the plant went into production in January this year. Sales of dead burnt magnesite have commenced and supplies are being made principally to the steel and refractory industries. Some export has also taken place and efforts are being made to develop an export market with a view to possible expansion of the production by installation of a second kiln.

The announcement about the revision in the ex-Works price of our cement is overdue and is expected any time. The increase will not in any way affect the public selling price of S.T.C. When the new price is notified, we might be required to submit supplementary bills to the S.T.C. for the past period in case, as is likely, the increase is allowed by Government with retrospective effect.

In my speech last year, I had referred to the surpluses which are being earned by the S.T.C. over the sale of cement. The accounts for the year ended 30th June, 1958, show a further surplus of Rs. 4.10 crores, which is reported to have been remitted to the Government of India. These surpluses should be used for the benefit of the cement industry. We were told once that these amounts will be utilised on the development of national highways. Very little appears to have been done in this respect. These monies should be available to subsidise export of larger quantities of cement, which not only mitigate the problem of surplus production but also earn much needed foreign exchange. There is considerable demand for cement in the neighbouring countries but we have to bring down our export prices if we are to compete in the world market and make a headway. I hope every effort will be made to augment the exports of cement. You will be glad to know that your cement is being regularly exported to Ceylon and has established a distinct reputation for itself in that country.

There is an important point connected with income tax assessments, to which I would like to refer. Under the Law, as it is at present, the Income-tax Officer while computing the taxable income has wide powers to hold that a particular expenditure was not commercially expedient and to disallow it for the purposes of tax assessment. This power is being exercised in assessments of business incomes, in a very arbitrary manner causing hardships as well as harassment to the tax-payer. Whether a particular expenditure is commercially expedient or not, can be best judged by the person running the business and there should be no question of the income-tax department sitting in judgment over it. The main purpose of the taxing authorities is to check any evasion of taxes and in keeping with this objective, if any expenditure is found to be in the nature of tax evasion, the assessing authority may have the power to question such expenditure. Their authority should be limited to this extent. No expenditure should be disallowed unless the assessing authority clearly comes to the conclusion that the said expenditure is not a bonafide expenditure but a device to evade tax. An amendment of the law is necessary to protect the tax-payer from avoidable harassment and from taking recourse to appeals thus wasting time and money, which can be better utilised in other productive work. Numerous instances have occurred where assessees have been subjected to such harassments and in some cases even double taxation has been resorted to on the same income, once by taxing the amount by disallowing the same in the hands of the payer and at the same time taxing the recipient also on the same amount. This is grossly unfair. Even expenses and arrangements which are accepted by specialised price fixing authorities like the Tariff Commission are disallowed and ignored and the relative amounts added to the income and taxed. Items not forming part of revenue are treated as revenue and taxed. The Finance Minister has recently spoken strongly against harassment of the tax-payer, whether intentional or unintentional. He has also said that where Rules and Regulations are such that they cause harassment to the tax-payer, such Rules should be reconsidered and changed. People do not mind paying the taxes if legitimately assessed and recovered. I hope that the difficulties to which I have referred will be duly considered and the relevant Rule suitably revised.

I made a mention at the last annual general meeting about the serious labour troubles in 1957/58 at Dalmiapuram arising from inter-union rivalries. The result has been less production and loss of profits. It is your Company which has suffered most. In 1957, when we entered into a three year agreement with the labour, we agreed to pay three months basic wages as bonus for each of the three years 1957, 1958 and 1959 on the understanding given by the union that industrial peace will be maintained. The workers have been demanding that even though they did not maintain peace, production suffered and the Company was put to heavy loss of profits due to their inter-union conflicts, they should be paid full bonus for 1958. The Company is resisting this demand, which on the face of it is most unfair, and the matter is now pending before the Madras High Court. During the current year, by and large, peaceful conditions have prevailed except for a brief strike in February.

In the end, I wish to thank you for coming and hope that you will continue to take active interest in the affairs of your Company and give us the benefit of your views and suggestion. The accounts and Directors' Report, having been circulated will, with your permission, be taken as read and the meeting will now proceed to transact the business on the agenda.

N.B. The above extract of the speech does not purport to be the report of the proceedings of the Seventh Annual General Meeting of the Company held on the 30th September, 1959.

THE INDIAN IRON AND STEEL COMPANY LIMITED

NOTICE is hereby given that the Board of Directors has sanctioned payment of dividend on the 5% Cumulative tax free Preference Shares in the Company for the half-year ended 30th September, 1959, in accordance with Section 18(3E) of the Indian Income Tax Act.

The Preference Share Transfer Books and Register will be closed from the 21st October to the 24th October, 1959, both days inclusive. Payment will be made after deduction of tax at the prescribed rates on or after the 1st November, 1959, to those Preference Shareholders whose names appear on the Register of Preference Shareholders on the 24th October, 1959, or in accordance with their instructions.

By Order of the Board,
MARTIN BURN LIMITED,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

12, Mission Row,
Calcutta 1.

Industrial Finance Corporation of India

*

Lack of Foreign Currency—A Serious Handicap

*

Rise in Gross Income and net Profit

*

Chairman, Mr K. R. K. Menon on New Field of Activites

Speech delivered by the Chairman, Industrial Finance Corporation of India, at the Eleventh Annual General Meeting of the Corporation held on the 26th September, 1959.

Gentlemen,

I have pleasure in placing before you the annual Accounts of the Corporation and the Report of the Board of Directors for the year ending 30th June 1959. Printed copies of the Accounts and of the Report are before you. These have also been circulated to all the shareholders. I shall, if you agree, take them as read.

2. You will observe that in the year under report, our net profit, after making a provision of Rs. 37.71 lakhs for taxation, amounted to Rs. 35.37 lakhs, as against Rs. 28.20 lakhs of the previous year, even though the interest charges that we had to pay on our loan funds increased from Rs. 86.85 lakhs to Rs. 115.75 lakhs. This very satisfactory position has enabled us to enhance the amount of repayment to the Central Government on account of the subvention received from them in past years for payment of our guaranteed dividends, from Rs. 5.45 lakhs, as it was last year, to Rs. 10 lakhs this year, bringing down our net liability to Government on this account to Rs. 38 lakhs. We have also transferred a sum of Rs. 14.12 lakhs to our General Reserve Fund this year, as against Rs. 11.50 lakhs transferred last year, resulting in this Fund now standing at a little over Rs. 31 lakhs.

3. Some other aspects of our working have also been equally satisfactory. Firstly, our gross income exceeded Rs. 2 crores in the year under report, registering a substantial increase from the previous year's figure of Rs. 1.55 crores, and of Rs. 0.96 crores of the year prior to that. Secondly, the percentage of defaults in the payment of instalments of principal declined from 6.1 in the year 1957-58 to 5.4 in the year under report, and, even in the case of those very few concerns which did default none of these defaults has been of a nature which has led us or our Auditors to consider it necessary to make any fresh provision for bad and doubtful debts in our accounts for the year under report. Thirdly, the percentage which our administrative expenses bore to our gross income in the year 1955, viz. 15.65 has come down to 5.11 in the year under report. Fourthly, the pace of disbursement of loans has continued to remain at the high rate which has been a noticeable feature of the previous two years' working, and interim loans continued to be granted in appropriate cases to a liberal extent.

4. Shareholders will no doubt have also noted with satisfaction the very warm response that came from investors to the issue of our bonds in the course of the year. Our resources position, so far as internal finance is concerned, may now be said to be comfortable, but, as and when money market conditions become easy enough to justify our going in for the issue of more bonds, we shall do so in order that we may be able to meet the demands likely to be made on us during the remaining portion of the Second Plan and the Third Plan period.

5. Internal resources, by themselves, have, however, not proved to be a solution to our real difficulties in the matter of going ahead with our normal function of granting long-term industrial loans. Our main difficulty in this matter has been lack of foreign currency funds to meet the situation created by the stringent measures that have had to be introduced by Government during the last couple of years curtailing the import of capital and other goods from abroad. During this period we have found that only such industrial concerns as could at least hope to get the necessary import licences from Government, in spite of the severe restrictions imposed in regard thereto, applied to us for long-term loans, and in the result there was a steep fall in the number of loan applications from 48 of the previous year to 26. The total amount of loans sanctioned in the year also registered an even steeper decline, going down to Rs.3.79 crores from Rs. 7.79 crores of the previous year. Applications for loans to the tune of Rs. 6.15 crores had to be withdrawn by the applicants concerned in the course of the year as they could not obtain the necessary import licences which they had hoped to get. In addition, we had on hand at the end of the year loan applications aggregating Rs. 6.30 crores which it had not been possible to take up for scrutiny for want of the requisite import licences which were still awaited by the respective applicants.

6. The solution to this difficulty lies undoubtedly in our being enabled, through the good offices of the Government of India, to obtain a substantial foreign currency loan from financial institutions like the World Bank or from Government-sponsored organisations like the Development Loan Fund of the U.S.A. We had applied for a loan from the World Bank but, I regret to say, we have had no success so far. Another proposal that we have recently put to the Government of India is one which will, if it materialises, enable us to participate in the current scheme for the utilisation of the dollar credits placed at the disposal of the Government by the Export-Import Bank of the U.S.A. This scheme, which is now under active consideration by Government, has the advantage that unlike in the case of deferred payment arrangements, it does not relieve the applicant industrial concern from the necessity of raising the rupee equivalent of the foreign currency portion of the finances required for its scheme. This is specially important, as internal credit institutions like ours have now the means at their disposal for assisting intending applicants with the necessary rupee finance to enable them to obtain foreign currency credits placed at Government's disposal by the Eximp Bank, Development loan Fund and other such bodies. The proposed scheme involves the acceptance by us of a somewhat smaller margin for our loans, but it is hoped that, in view of the considerable advantage which will accrue under this scheme, Government's approval to this proposal will soon be forthcoming.

7. Though, as I have said, lack of foreign currency funds has proved to be a very serious handicap to us in the matter of sanctioning fresh loans, shareholders will, I hope, have noted with satisfaction, from the report before them, that we have commenced making fair progress in a comparatively new line of activity, namely, underwritting of issues in the share market. This augurs well for the future, inasmuch as our success in this new line should enable us eventually to play the fully effective role in industrial financing that institutions like ours fulfil in most other countries. Though the particular preference issue that we underwrote in the year under report was oversubscribed, we have not been unmindful of the fact that in the event of our having been left with any shares we could not have held them, under a provision which exists in the I.F.C. Act, for more than seven years without the prior permission of the Central Government. This provision, coupled with the fact that we are not authorised, under the I.F.C Act to invest directly in the equity or preference capital of any industrial concern has meant the closing to us of a profitable line of investment for our surplus funds. This has particular significance now in the context of the current difficulties that I have mentioned we are experiencing in the matter of investing our funds in direct loans. A possible solution to this lies in our being enabled to participate in the equity and preference share capital of approved industrial concerns through direct subscription as well as through the exercise of conversion rights. This matter is being examined by me.

8. Another comparatively new field of our activities has been the guaranteeing of deferred payments, on behalf of industrial concerns, to foreign manufacturers of capital goods. In the context of the increasing restrictions which have had to be imposed by the Government of India on the issue of cash import licences, this should ordinarily have proved a fruitful field for assistance by us. We have a fair number of applications on hand at present, but judging from the number of fresh applications coming in, it looks as though we cannot look to this particular line of activity for any considerable expansion in the near future. This is due no doubt to the restrictions that are being imposed by Government on the issue of import licences based on deferred payment terms referred to by me earlier, in view of the cumulative strain that is likely to be caused thereby on our foreign exchange position a few years hence.

9. I am glad to say that, taken by and large, most of the concerns which we have financed did extremely well in the quantum of production as well as sales during the year under report. Quite a number of them made very handsome profits too during the year, and were not only able to declare dividends, with our prior permission, in excess of the standard rate of 6% but also to make successful appeals to the investment market. Shareholders will no doubt have read with interest the review that we have given in an appendix to the Annual Report of the progress made in the course of the year by the various industries to which we have advanced loans. It is gratifying to note that, generally speaking, most of these industries have thrived, and that the particular units of these industries, whom we have assisted with loans, have contributed their share to making the picture of the industry as a whole as rosy and hopeful as it is.

10. Loan assistance to Co-operative Societies has been a marked feature of our activities during the past four years, and, in the year under report, a sum of as much as Rs. 1.70 crores was accounted for under this head, out of a total amount Rs. 3.79 crores sanctioned. Our sanctioned loans to co-operative societies alone upto the end of the year under report aggregated Rs. 14.94 crores out of a total of Rs. 66.69 crores. This sum is distributed among 28 societies all of whom except one, are engaged in sugar manufacture. Out of the loans we have sanctioned to 27 sugar co-operatives 24 have already been or will in due course be guaranteed jointly by the Central Government and the State Governments concerned, 16 out of these 24 societies have actually started manufacturing. We have been conducting periodical inspection of these factories and of their accounts and we have kept the guarantor Governments fully informed of any special features, in connection particularly with their management and finance that have come to our notice and which we have considered merited the attention of the Governments.

11. Industry-wise, the most significant advances in the course of the year under report were made in the Sugar and Cement industries, these two together accounting for as much as 67% of the total amount of loans sanctioned in the year. In the case of sugar, the entire amount of loans sanctioned in the year under report was for co-operative societies.

12. It is my very pleasant duty before I conclude, to convey my hearty thanks to my colleagues on the Board of Directors for their very valuable co-operation and wise counsels. Our thanks are also due to the members of our Advisory Committees and also to the non-officials who have functioned on the Boards of our loanee concerns as our nominees for their unfailing assistance and advice. Finally, I have also great pleasure in conveying the thanks of the Board of Directors, as well as my own, to the General Manager and the entire staff of the Corporation for another year of loyal and devoted work on their part.

THE CHAMPDANY JUTE COMPANY, LIMITED.

NOTICE is hereby given that an Annual General Meeting (being the Sixty-ninth Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, 2, Netaji Subhas Road, Calcutta, on 10th November, 1959, at 11-30 a.m. for the following purposes:—

(1) To receive and consider the Audited Accounts for the year ended 31st March, 1959, the Balance Sheet as at the date and the Reports of the Board of Directors and the Auditors thereon.

(2) To confirm the Interim Dividend paid on 29th May, 1959.

(3) To declare a final Dividend.

(4) To appoint Directors in the place of those retiring.

(5) To appoint Auditors for the current year and to fix their remuneration.

The Share Register of the Company will be closed from 26th October to 10th November, 1959, both days inclusive.

Dividend Warrants will be issued and posted to Registered Shareholders only. Persons holding shares on blank transfer are advised to effect registration of scrip in their names before 26th October, 1959.

By Order of the Board,
JAMES FINLAY & CO., LIMITED,
Managing Agents.

2, Netaji Subhas Road,
Calcutta. 5th October, 1959.

Note:—

(1) A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself, and the proxy need not be a member.

(2) dividend, if declared, will be paid on or after the 10th November, 1959, to those shareholders so entitled, whose names appear in the Company's Books on the 10th November, 1959, or to their mandatees.

STOCK EXCHANGES

Steady Trend

Watch-Dog Writes:

Trading was on a cheerful note most of the time during the past fortnight ended Wednesday. Evidently encouraged by the improved outlook for equities following favourable political developments coupled with expectations of the establishment of a better climate for private enterprise, operators pushed-up prices to new high levels all along the list. In the past two, three days the buying spree seemed to have somewhat slackened in the absence of fresh incentives.

In the Bombay Stock Exchange, conditions akin to a boom prevailed during the best part of the period under review. Textiles, miscellaneous industrials and even the erstwhile dull steels participated in the upsurge and significant gains were recorded in a number of counters. In later dealings the bullish activity seemed to have lost some of its earlier fervour.

Conditions were somewhat irregular in earlier transactions in the Madras Stock Exchange but later dealings witnessed improved sentiment especially round textiles, sugars and plantations.

The Calcutta Stock Exchange remains closed for the Puja holidays and will reopen on the 19th October.

*

Bombay

Transactions on the Bombay Stock Exchange reflected the revival of confidence in the future of equities Both operators and investors vied with each other in entering into fresh commitments an enhanced levels. It would appear that enthusiasm had stemmed from the fact that recent developments were such as to remove some of the uncertainties in the investment situation. After the Chinese Premier's latest letter, anxiety regarding Sino-Indian relations has considerably lessened and the stock market is inclined to relegate the border dispute to the background. The references of Prime Minister Nehru and Finance Minister Morarji Desai to the private sector have engendered the feeling that Authority's attitude toward corporate enterprise will be more sympathetic than htiherto. Moreover, the continued higher advices from the cotton piecegoods market and the encouraging reports from the corporate sector have provided the needed incentives for increased activity.

The pace, however, has tended to be somewhat slow during the last three days presumably due to a general feeling that the recent hectic activity has taken most equity prices to levels which do not allow much further scope for improvement. Even so, selected share continue to meet with good request at daily advancing levels.

In the Steel section, prices hardened despite adverse news. Production in September of both Tata Iron and Indian Iron was lower than in the previous month. The figures for TISCO show that output of saleable steel has declined to 93,100 tons from 97,100 tons in the previous month. Semis have also recorded a decline to 29,300 tons from 35,800 tons. Finished steel, however, show a rise to 63,800 tons from 61,300 tons. The figures for IISCO too are not very encouraging. Output of pig iron is sharply down at 78,615 tons as compared with 94,830 tons in the previous month. Steel ingots are also lower at 60,701 tons as compared with 68,644 tons. Saleable steel are placed at 49,428 tons as against 57,556 tons. Tata steel was taken to a high of Rs 166 from Rs 163 in the course of the first half but in later dealings price fluctuations were confined to a narrow range. The scrip closed on Wednesday at Rs 164.75. Indian Iron too came in for support and was done upto Rs 24.36 before closing at Rs 24.24.

Textiles were generally in good demand on improved prospects of the industry. Century was a bright feature throughout the period under review on reports of early announcement of the proposed right issue of two for every three shares. The scrip gained nearly 20 points at one time to be, however, finally placed slightly lower than the best level touched during the period at Rs 597. Svadeshi was in enquiry around Rs 262. Bombay Dyeing advanced from Rs 68.10 cd to Rs 69.20 xd. Central India after having been upto

JESSOP & COMPANY, LIMITED

NOTICE IS HEREBY GIVEN that an EXTRAORDINARY GENERAL MEETING of Members of the Company will be held at its Registered Office, 63 Netaji Subhas Road, Calcutta, on Friday the TWENTIETH day of November, 1959, at 11.00 a.m. to consider and, if thought fit, to pass, with or without modification, the following as a Special Resolution:—

THAT the Authorised Capital of the Company be increased, by the creation of 11,00,000 new Ordinary Shares of Rs. 10 each, to Rs 4,10,00,000, divided as follows:

		Rs.
1,00,000 Cumulative Preference Shares of Rs. 100 each	...	1,00,00,000
31,00,000 Ordinary Shares of Rs. 10 each	...	3,10,00,000
		4,10,00,000

EXPLANATORY STATEMENT:

1. Equity capital of the Company is Rs. 2 crores, divided into 20,00,000 shares of Rs. 10 each, out of which 10,20,000 shares have been issued. As it is intended to make a further issue of 10,20,000 shares, it has become necessary to increase the authorised capital.

2. The number of authorised shares of Rs. 100 each is 1,00,000, out of which 20,000 shares have been issued as Cumulative Preference Shares. The shareholders' approval is requested to define the unissued 80,000 shares of Rs. 100 each as Cumulative Preference shares.

DATED the Fifteenth day of October, 1959.

By Order of the Board of Management.
D. D. MARKAN
Secretary

63, Netaji Subhas Road,
Calcutta.

NOTE: A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself. A Proxy need not be a member of the Company.

Rs 119 from Rs 110 closed at Rs 115.50. Kohinoor was nearly 10 points up on balance at Rs 318.50.

In the Mining and Engineering section, prices showed sizable improvement on sustained buying interest. Alcock Ashdown moved up smartly to be done upto Rs 265 from Rs 253, but in later dealings dropped part of the gains to be placed at Rs 260. Hindustan Motors was a firm feature at Rs 13.85. Mukand Iron met with good enquiry and closed at Rs 21.60. Premier Construction gained more than Rs 20 to stand at close at Rs 390.50. Tata Locomotive met with spirited support on rumours of the company getting sanction for the manufacture of small cars and was finally placed at Rs 206.

There were many bright features in the Miscellaneous section. Sugar shares were generally firm. Belapur closed at Rs 332. Phaltan after having been done upto Rs 182 closed at Rs 179.50. SKG was done at Rs 12.08. Cement shares were also a steady market. ACC was done upto Rs 153.50, but receded by close to Rs 152. Ashok Cement was well maintained at Rs 9 as was Orissa Cement at Rs 15.36. Hindustan Lever was a firm feature and was done upto Rs 31.50. National Rayon recorded strident advance on Wednesday to be taken upto Rs 383.50. Sirpur Paper was in the limelight recording a sharp advance to Rs 15.52 but following the announcement by the company that the interim dividend was also the final, the scrip reacted to Rs 14.52.

*

Madras

Madras, Thursday.

A cheerful tone marked today's transactions in the Madras Stock Exchange. Textiles were firm. Both Coffee and tea shares came in for good trading. There was good support for electrics. Enquiries were very well spread over the Miscellaneous section.

Sugars and Breweries:

Deccan changed hands at Rs 12.85. EID was traded at Rs 43.80 better than its previous closing at Rs 42.25. Cauvery improved to Rs 130.00, India Sugars did not alter at Rs 13.13. Mysore Sugars also was inquired after at the higher rate of Rs 52.00.

Plantings:

Alageswar was at Rs 2.87, Anandam was steady at Rs 15.50. Anapari improved to Rs 5.15. Athimattam shed value to Re 0.95. Bababuddin was quoted at Rs 9.15 and Badra at Rs 3.95. Balanoor was sold at Rs 18.75. Be Be was at the same rate of last closing at Rs 3.40. Blue Mountain was a bit higher at Rs 3.39 on inquiries as also Chembra too higher at Rs 3.98. Coffee Lands did not change at Rs 24.12. Trading was done on Cons. Coffee at Rs 22.70 on good demand, but Coonoor did not move up beyond Rs 23.25. Coorg went at Rs 4.95, and Cottanad 15 per cent tf.cd was lower at Rs 15.60. Cowcoody improved to Rs 6.25. Devashola was available at Rs 29.00. Heileyburia's quotation today was the same as last closing at Rs 16.37. Highland also was at Rs 14.00. Kailas was available for Rs 5.12. Kil Kotgiri increased its value at Rs 8.25. Malankara was as Rs 19.00. Manar increased to Rs 2.55. Trading was done in Mercara at Rs 9.45. Mlamallay was quoted at Rs 40.00 and Mysore Amalgamated at Rs 6.00. Mysore Coffee 15 per cent cd was higher at Rs 4.40. Nenmeny did not show change at Rs 12.80. Nilambur was lower at Rs 16.15.

Textiles:

Textiles too had broad enquiries and good buying resulted in a firm and improved tone in this counter. Anglo-French improved to Rs 86.00 from Rs 83.50. Balasubramania went upto Rs 52.00. The Registered Shareholders as on 30-9-1959 can also apply for additional shares on special application form, the allotment of which will be at sole discretion of the Directors out of the unsubscribed shares by Right holders, if any.

The last date for receiving application by the Company's Bankers or by the Registered Office against Right shares is 31st October, 1959. The application for additional shares can be made only to the Registered Office of the Company by 31st October, 1959. Fractional Share certificate application can be made only to the Company upto 16th November, 1959.

The Letters of Right and forms of additional share application along with circular of instruction will be posted to all share-holders in such time so as to reach them by 14th October, 1959 along with Dividend Warrant for the accounting year 1958. If any person does not receive these forms in time he should immediately send a complaint to the Company with a request to send him duplicate forms giving an undertaking that if originals are received one set will be returned to the Company unutilised.

EXPORT POLICY FOR MANGANESE ORE

The Government of India have been concerned about the continuing decline in the export of manganese ore, which seems to have been largely due to continuous sluggishness in the ore markets of the world. Although there are some signs of revival of buying activity in foreign markets, it seems clear that owing to growing competition from new areas of supply determined efforts will be called for if the exuort of manganese ore is to be maintained and extended.

The efforts so far made by shippers, mine-owners and the State Trading Corporation to keep exports moving during a period of declining demand have been reviewed in consultation with the interests concerned. While it is clear that each shipper can, in his own way, help to stabilise exports, it is considered that only coordinated and concerted endeavours on their part can help to augment the country's exports in the near future. Government expect that the State Trading Corporation and established exporters and mine-owners will, in cooperation with one another, be able to devise ways and means so as to fortify the goodwill of our traditional buyers and inspire confidence in regard to our ability to maintain and develop an even flow of supply and to enter into long term forward bulk contracts at competitive prices.

Government are keen to ensure that the country's export policy is so designed as to promote maximum cooperation between all categories of shippers, facilitate bulk and long term contracting, and ensure smooth implementation of contracts and secure maximum utilisation of available rail and port capacity. Keeping these objectives in view, it has, after consultation with the trading and mining interests concerned, been decided that during the current year, ending September 30, 1960, export of manganese ore shall be regulated as follows:

(i) The established shippers and mine-owner exporters and the State Trading Corporation will be given an allotment of quota for a quantity equal to the quota for 1957-58.

(ii) Firms and parties, whose individual allotments are small, are advised to form cooperatives or limited companies.

(iii) In order to encourage small quota holders to form themselves into cooperatives or limited companies, it has been decided that where the total of the individual allotments of the firms and parties joining a particular cooperative or company aggregates to 25,000 tons, a bonus allotment of 20 per cent of the total will be given to the company or cooperative concerned.

(iv) Quota holders with past performance during the period 1957-58 in more than one sector will be given movement facilities pro rata to their past performance on each sector. In the event of availability of wagons in any particular sector falling short of the total movement quotas, preference will be given to requests from parties having firm sales contracts registered in advance with the Joint Chief Controller of Imports and Exports concerned. In the event of the availability of wagons being in excess of the total of movement quotas in any particular sector, wagons will be allotted freely on demand, made against firm sale contracts.

(v) Exports of low grade manganese ore from Garividi, Srikulam, Bobilli, Salur, Raigada areas will be licensed freely on production of foreign sales contracts as hitherto and of manganese ore analysing 40 per cent and below from loading stations of Dohad, Shivrajpur Nathpuri and Pani in Panchmahal District of Bombay and Rajasthan States. Performance on these sectors will not qualify for movement facilities on sectors on which the railway capacity available is already fully extended.

(vi) Barter transactions or compensation deals shall be serviced by the State Trading Corporation on such terms and conditions as may be mutually agreed upon between the Corporation and its business associates, who shall be drawn, to the extent practicable, from amongst exporters and mine-owners. Where the business associate's individual movement quota is not sufficient to cover the commitments under barter transactions, the State Trading Corporation will make its movement quota freely available for this purpose.

It has been represented that uncertainties in regard to quota policies or export duties make it extremely difficult for buyers and sellers to enter into forward contracts. Further, individual parties may not find it too easy to enter into forward contracts for bulk sales for deliveries extending over a number of years to producers or to big buyers pursuing a common purchase policy. Government have accordingly directed the State Trading Corporation to co-ordinate its activities with those of experienced exporters and to evolve, in consultation with them, as its business associates, marketing and production programmes extending over three to five years in an effort to take full advantage of such business opportunities as may present themselves, and to develop enduring relationship with leading users and importers of manganese ore Government propose to give full facilities for the due performance of overseas contracts entered into by the State Trading Corporation or its business associates in pursuance or such co-operative marketing programmes.

INCREASED EXPORTS OF ENGINEERING GOODS

Exports of engineering goods during the first seven months of 1959, recorded an increase of 60 per cent over exports during the corresponding period of last year.

Exports during January-July this year were valued at about Rs 3.70 crores, as against Rs 2.29 crores during the same period in 1958.

Exports to South-East Asian countries increased by nearly 100 per cent and amounted to Rs 1.26 crores, about one third of the total exports. Exports to USA recorded an impressive rise from about Rs 32 lakhs last year to about Rs 78 lakhs this year. Exports to West Asia, Africa and Europe also were higher than during last year.

Some of the items where exports increased substantially were sewing machines, electric fans, steel furniture, textile machinery, aluminium ware and diesel engines.

NEW IMPORT POLICY FOR IRON & STEEL

The new import licensing policy for iron and steel for the period October 1959-March 1960 which was announced by the Iron & Steel Controller here to-day included some new items like alloy and tool steels (except stainless steel sheets) and wire of all types which were not permitted during the last two licensing periods.

In a public notice issued to-day, the Iron & Steel Controller says that in order to meet the growing needs of industry and to ensure increased supplies of steel items of which there is no production or inadequate producion, import licences will be issued to established importers for (i) industrial scrap, (ii) alloy and tool steels excluding stainless steel sheets, strip and circles; and (iii) wire of all types, to the extent of 7½ per cent of the base quota.

Imports will be allowed to be made by actual users for the following eleven categories: (i) tinplate—prime and secondaries, (ii) terne plate—prime and waste waste, (iii) wire (all types), (iv) box strappings, (v) steel strips, tapes, etc., (vi) tool and alloy steels (except stainless steel sheets). (vii) stainless steel sheets, (viii) industrial scrap, (ix) castings and forgings—unmachined, (x) re-rollable scrap, and (xi) mild steel items not normally roled in the country (to be defined by the Iron & Steel Controller).

In regard to these eleven items, allocations will be made to various states on the basis of foreign exchange available and the State Directors of Industries will sponsor applications within their respective ceilings.

Import licences will be issued for all categories in respect of the eleven items mentioned above to actual users on the basis of sponsored recommendations. But, in regard to (i) tinplate—prime and secondaries, (ii) skelp and strip, (iii) sheets for automobiles, drum-making and electrical steel sheets, and (iv) wire rod and fire, it is the intention that the requirements of the larger units, borne on the Development Wing's list, and of the oil industry will be imported and distributed by the Iron & Steel Controller. Actual users, the public notice advises, borne on the Development Wing's lists should, therefore, submit indents in the prescribed form to the Development Wing by October 30, 1959.

As regards tool and alloy steel, except stainless steel sheets, licences will be issued for double the quantity sponsored by the appropriate sponsoring authority in the April-September 1959 period, with a view to meeting the requirements of industrial units until September 1960. If this quantity is considered inadequate, actual users may submit supplementary demands after they are sponsored by the appropriate sponsoring authorities. The quantities so sponsored will be licensed in full.

The Notice directs that applications from established importers should reach the Iron & Steel Controller or his Regional Offices by October 30, 1959 while those from actual users should reach the sponsoring authorities by October 30, 1959. The sponsoring authorities are required to forward the same with their recommendations to the Iron & Steel Controller or his Regional Offices by November 30, 1959.

INDIA TO IMPORT 1.5 LAKH TONS OF RICE FROM BURMA

The trade delegation from Burma led by U. Thi Han, Minister for Trade Development had discussions on Monday and Tuesday with Mr S. K. Patil, Union Minister for Food and Agriculture and officials of the Government of India.

The two delegations reaffirmed the principle that the trade between the two countries should expand and steps should be taken to achieve as near a balance in the trade as may be possible. It was felt that it would be desirable to try to conclude a long-term

agreement between the two countries providing for a mutually advantageous level of imports of rice from Burma to India and for an increase in Indian exports to Burma, so as to reduce the present imbalance in the trade between the two countries.

The Burmese delegation offered to export up to 150,000 tons of rice out of 1959 crop, over and above the 350,000 tons already contracted for. The Burmese Delegation agreed that the payment for the rice will be made in non-convertible Indian rupees and that it would be used for the purchase of additional goods on a mutually agreed basis.

The Indian Delegation agreed that subject to satisfactory arrangements being made to ensure that the exports financed out of the sale proceeds of the additional quantity of rice now offered would, in fact, constitute a net increase in India's exports to Burma, India would buy up to 150,000 tons of rice of acceptable quality.

As regards 1960 crop, there was a firm commitment for the purchase of 350,000 tons of rice. If the total quantity of rice to be purchased by India was increased substanially above 350,000 tons, both the delegations agreed to hold further discussions.

ENGINEERS FOR STEEL PLANTS

Out of 923 engineers sent abroad by the Hindustan Steel, 636 have returned after completion of their training.

Those sent to the USSR numbered 311, to USA 299, UK 151, West Germany 100, Canada 1 and Australia 52.

Training facilities in the UK, Canada and Australia have been arranged under the Colombo Plan. The training programme in the USA is being financed by the Ford Foundation and the TCM.

Expenses on account of the training in the USSR will be paid in 12 annual instalments according to agreement entered into by the Government of India.

Besides deputing for training abroad, the Hindustan Steel is also arranging training at the existing steel works in the country.

The total number of engineers required for the operation of the three steel plants in the public sector is about 2,000.

IMPORT OF ART SILK YARN ON RUPEE PAYMENT.

The State Trading Corporation of India had earlier made arrangements for supply of viscose art silk yarn on rupee payment from German Democratic Republic, Hungary and Egypt. It is now permissible to import from these countries against the rupee payment quota, all types of art silk yarn allowed to be imported by actual users.

Prospective importers may book orders for import of art silk yarn through the authorised agents of the foreign suppliers concerned against 24 per cent of their quota licences.

This will be subject to observance of the face value restrictions on import of certain special types of yarn such as viscose, acetate and certain types of deniers of synthetic yarn.

IRON ORE PRODUCTION IN INDIA.

The output of iron ore during the month of July, 1959 was estimated at 635,000 metric tons according to the Indian Bureau of Mines. The total production since the beginning of 1959 was 4,420,000 metric tons as compared with 3,549,000 metric tons in the corresponding period of 1958.

The largest output was reported from Bihar and Orissa with 294,000 metric tons and 195,000 metric tons respectively.

Among the minor producing states, Mysore, Madhya Pradesh and Bombay accounted for 58,000 metric tons, 34,000 metric tons and 19,000 metric tons respectively.

During the month despatches of iron ore to iro and steel plants and export market were 437,000 metric tons and 140,000 metric tons respectively.

ALL-INDIA INVESTMENT CENTRE

The announcement today of an initial grant from the U.S. Technical Co-operation Mission signals the first step in the Government of India's plans to establish an All-India Investment Centre to increase the flow of foreign private capital investment to India.

The agreement between the Government of India, the T.C.M. and the Governing Council of the Investment Centre. The promotion specialist will analyse the organisational and operational requirements of the centre and make recommendations for the implementation of this project.

The Government of India plans to focus continuing efforts to attract foreign capital through the establishment of the investment centre which will function as an independent, private, governed by a Council whose members will be the members of the Board of Directors of the Industrial Credit and Investment Corporation of India, Bombay. It is expected that, if properly developed, the centre will bring together, in one organisation, the diverse technical facilities for locating and attracting foreign capital and providing advice to foreign and local private investors.

USE OF SAMPLING TECHNIQUE IN COLLECTION OF ASIAN STATISTICS.

Many countries of the ECAFE region "do not have basic statistics sufficiently reliable to be fully useful as basis for economic development", declared Mr U Nyun, Executive Secretary of the United Nations Economic Commission for Asia the Far East, in Bangkok on Monday morning. He was speaking to a group of about twenty experts who have been brought together in Bangkok under United Nations auspices to delve deep into the question of how to apply the newly developed technique of sampling to population and agricultural censuses in Asia and in collecting the much needed statistics for drawing up economic development plans.

Mr U. Nyun added that the convening of the group marked "a new phase in the work of statistical development in the region". Its immediate task is to make recommendations to the Asian countries on how to make the best possible use of the important tool of sampling in their efforts to bridge the gaps presently found in their statistics information. Mr U. Nyun expressed his confidence that the report of the Working Group would give valuable guidance to the countries of the region in adopting the sampling technique to suit their needs, particularly in respect of their programmes for censuses of population and agriculture.

Sampling has proved very useful in removing deficiencies in the available statistical information and is being used by an increasing number of Asian countries. This technique, if scientifically applied, make it possible, Mr U. Nyun stated, "to obtain reliable statistical information" in the required fields without having to undertake a complete counting in most cases, and it "offers considerable advatnages in the form of economy, speed and improved quality of data" so collected.

The Working Group has been sponsored by the United Nations Statistical Commission, the Economic Commission for Asia and the Far East (ECAFE) and the Bureau of Technical Assistance Operations. Its members have been chosen for their wide experience of sampling operations in the countries of the region and they will continue their deliberations until 25th September.

The convening of the Working Group was recommended by the Conference of Asian Statisticians as an instrument for a thorough discussion of certain technical aspects which it was not possible to have in the main conference itself. The present Working Group is expected to be the first of a series of similar groups to be convened in the years to come.

Raisings and despatches of coal during July, 1959, from all fields in India, were 3,842,516 and 3,626,208 tons respectively. The corresponding figures for June, 1959, were 3,814,752 and 3,355,692 tons respectively.

Total production up to July, 1959, was 27.675 million tons as against 26.367 million tons for the corresponding period of 1958.

The daily average loading for the month of August, 1959, from the West Bengal and Bihar fields was 4,241 wagons as against 4,231 wagons in the month of July, 1959.

The highest loading on any day during the month of August, 1959, was 5,415 wagons as against 4,864 during the preceding month.

FOREIGN TRADE OF INDIA IN JULY 1959.

The provisional figures of foreign trade of India by all routes, i.e., sea, air and land, on private and Government accounts during July, 1959, according to information available to-date in the Department of Commercial Intelligence and Statistics, Calcutta, are given below:—

Merchandise, excluding transit traed of Pakistan and other overland foreign countries, viz., Nepal, Tibet, Sikkim and Bhutan: Exports Rs 51.20 crores, re-exports Rs 26 lakhs, imports Rs 63.11 crores. The import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment.

Treasure: Exports (including re-exports) of currency notes Rs 9 lakhs, gold nil and current coins (excluding gold coins) negligible. Imports of currency notes Rs 15.45 crores, gold Rs 2 lakhs, current coins (excluding gold coins) Rs 28 lakhs.

Balance of Trade: Subject to the limitation in import figures mentioned above, the total value of exports (including re-exports) of merchandise and gold fell short of imports by Rs 11.67 crores.

A comparative table showing the trade in July, 1959; June, 1959; July, 1958 and the seven months ended July, 1959 and 1958 is given below:—

(In lakhs of Rupees)

Foreign Trade in	July, '59	Month June, '59	July, '58	Seven months ended July, 1959	1958

For thousands of young men a new life

begins at Durgapur Training completed, this young apprentice in Durgapur is on his first practical survey job in the field. When he becomes an experienced hand, efficient at his work, he will command a good salary and will have a future ahead, bright with promise.

In Durgapur today, ISCON, who are entrusted with the construction of the giant one million ton steel plant, have already helped to train up a large group of young Indians in the technical field. This is part and parcel of the ISCON scheme of collaboration—to work side by side with Indian technicians and workers, to instruct them on the spot and in steel factories in England so that in the future India will have, not only her steel plants but also technicians to run them.

Helpful Factors

Investment Gossip:

Although stock market sentiment is not as cheerful toward the end of the week as it was at its commencement, the undertone has continued to be steady throughout.

Even the fact that the market had to face the settlement at midweek after a long interval caused by the Puja holidays failed to deter enthusiasm.

Apart from the continued bull dominance in the more speculative counters, the reluctance of the generality of holders of popular industrial equities to liquidate even at prevailing high levels had resulted in a further enhancement of price levels. It is evident that holders are encouraged to adopt such an attitude at a time when equity price levels are generally considered to have risen too high in relation to yield, partly because of growth prospects and partly because of the growing money supply in the country.

Higher price levels have also been helped by various other favourable factors. In the first place, the prospects of adequate foreign aid for the Third Plan are believed to be good following the visit to a number of countries by the Finance Minister. Mr Morarji Desai who is now back in India is said to have indicated that conditions abroad are quite conducive to a broadening of interest in our country's development plans. He is understood to have informed the Cabinet that the climate for aid is good in US.

Operators have naturally derived considerable satisfaction from the trend of the present series of talks between India and Pakistan over disputes regarding the eastern border. The continued good showing by the cloth market is contributing to the expansion of activity in the cotton textile shares.

The upward movement in jute shares which is noticeable from mid-week is presumably due to expectations of fresh foreign enquiries for gunnies. The statistical position of jute goods is quite good and if the burlap consumption in September in US (it has risen by over 15 million yards over the previous month) is any indication, hessian is in for considerable enquiry.

All along the list selected shares are in good request either because of good corporate news or brightening prospects of the industries concerned.

Investment Gleanings:

(Two recent judgments on the definition of development rebate, references in respect of which were made to the Bombay High Court, are of significance to the investor. The extracts that follow are reproduced from the September issue of the Monthly Bulletin published by the Bombay Chamber of Commerce.)

THE INDIAN INCOME TAX ACT, 1922 —*Section* 10 (2) (vib)-*Development Rebate—Motor Cars, Bicycles Etc. whether Machinery installed*—Reference was made in the July 1959 Bulletin to the judgment of the Bombay High Court in the Saraspur Mills' case, wherein the Court held that Motor Cars and Bicycles purchased by the assessee Mills for use in their business fell within the meaning of the word "plant" in Section 10 (5) of the Income-tax Act, and the assessees were entitled to development rebate for the purchase of the same under Section 10 (2) (vib) of the Act. This judgment was delivered by the High Court on 16th June 1959.

On 17th June 1959, the High Court decided a similar reference in which Lever Brothers (India) Ltd., Bombay, were the respondents. In this case the Court has held that in addition to Motor Cars and Motor Lorries, Office appliances are also admissible for development rebate under Section 10 (2) (vib) of the Income-tax Act. The full texts of both the judgments are reproduced below.

Income Tax Reference No. 39 *of* 1958

The Commissioner of Income-tax (Central), Bombay

Vs.

The Saraspur Mills Ltd., Ahmedabad (Assessees)

Mr. G. N. Joshi for the Income-tax Department, Mr. N. A. Palkhivala with Mr. Dwarkadas for the assessees.

Coram: Shah & S. T. Desai JJ.
16th June, 1959.

Oral Judgment (Per Shah J):

The assessees are a limited company carrying on the business of manufacturing cloth. In the year of account 1954-55 the assessees purchased certain motorcars and bicycles for use in their business and claimed in the year of assessment 1955-56 development rebate under Section 19 (2) (vi-b) of the Income-tax Act. The Income-tax Authorities allowed the assessees the normal depreciation on the motor-cars and bicycles under Section 10 (2) (vi). The Tribunal also allowed to the assessees development rebate in respect of the motor-cars and bicycles, holding that the motor-cars and bicycles were "plant" within the meaning of Section 10 (2) (vi-b) of the Income-tax Act and that the same had been "installed" after 31st March 1954 and had been wholly used for the purpose of the business carried on by the assessees.

In this reference, Mr Joshi for the Department contends that even though within the definition of the expression "plant" in Section 10(5) of the Income-tax Act vehicles may be included, for the purpose of Sub-section (2) (vi—b) of Section 10 of the Act, vehicles are not included in that expression. Mr Joshi contends that the Legislature has advisably used the expressions "installed" and "installation" in Sub-section (2) (vi—b) of Section 10 and that those expressions postulate that the "plant" must be fixed in position when it is being worked or used, and if a plant is, from its nature or otherwise, incapable of being fixed in position when it is worked, it cannot be regarded as included within the expression "plant" as used in clause (vi—b) of Sub-section (2) of Section 10. We are unable to accept that contention. The Legislature has given a special definition of the expression "plant" in Sub-section (5) of Section 10 of the Act and by that definition vehicles, books, scientific apparatus and surgical equipment purchased for the purposes of the business, profession or vocation are expressly included within the definition; and, in the absence of very strong indication to the contrary in Sub-section (2) (vi) of Section 10, we will not be justified in holding that notwithstanding the definition which is specially devised for Sub-section (2), the expression "plant" will not include vehicles, books, scientific apparatus and surgical equipment some of which by their very nature are incapable of being fixed in position at the time when they are worked or used. The assumption made by Mr Joshi that the expression "installed" must necessarily mean "fixed in position" at the time when the plant is worked or used does not, in our judgment, seem to be justified. The expression "installed" is also used in the sense of "inducted or introduced", and if that be the sense in which that expression is used, there is nothing inconsistent in the context in which that word is used which will justify us in holding that the word "plant" in Section 10, Sub-section (2), Clause (vi—b) of the Income-tax Act was not intended to include vehicles.

We therefore proceed to answer the question referred to us for decision in the affirmative. The Com-

Mr N. A. Palkhiwala with Mr Writer for the respondents.

Coram: Shah & S. T. Desai, JJ

7th June, 1959.

Oral Judgment: (Per Shah, J.)

In Income-tax Reference No. 39 of 1958 we had occasion to consider whether motor-cars and bi-cycles were plant "installed" within the meaning of Section 10(2) (vi—b) of the Income-tax Act so as to make the price paid for them admissible for development rebate, and we were of the view that motor-cars and bi-cycles were plant installed within the meaning of Clause (vi—b) of Section 10, Sub-section (2) of the Act read in the light of the definition given in Section 10, Sub-section (5). In this reference, the question which fails to be determined is whether the price paid for motor-cars, motor-lorries and office appliances is admissible for development rebate under Section 10(2) (vi—b) of the Income-tax Act.

Our judgment in Income-tax Reference No. 39 of 1958 will govern this case in so far as it relates to motor-cars and motor-lorries. It is true that in the definition of the expression "plant" given in Section 10(5) of the Act, Office appliances are not included. But under Clause (vi—b) of Sub-section (2) of Section 10 development rebate is admissible in respect of machinery or plant provided it satisfies the other requirements of being new and being installed after 31st March, 1954. In the present case, it was conceded before the Tribunal that office appliances are machinery or plant, and the only question which was canvassed before the Tribunal was whether motor-cars, motor-lorries and office appliances being not fixed to the ground the price paid for the same was admissible for development rebate. If office appliances are machinery or plant within the meaning of Section 10(2) Clause (vi—b) of the Act, as conceded before the Tribunal, for reasons which we have given in our judgment in Income tax Reference No 39 of 1958, we are of the view that the price paid for the same is admissible for the purpose of development rebate.

We, therefore, proceed to answer the question referred for decision in the affirmative The Income-tax Commissioner to pay the costs of the reference-

Investment Notes :

The British-made David Brown 2-D agricultural tractor is to be manufactured in India. Approval has been given by the Indian Government to a scheme formulated by the David Brown Tractor Division, Meltham, Yorkshire, and their Indian concessionaries, Mahindra & Mahindra Ltd., of Bombay, says a statement issued by David Browns.

It states that a new company, Daid Brown-Mahindra Ltd., has been formed to implement the plan, which covers the progressive manufacture of the tractors in Bombay. During the last three years there has been a constant interchange of technicians between Britain and India, and over the next four years it is planned progressively to manufacture up to 66 per cent of the components in India. A higher percentage of indigenous manufacture may be possible in the later stages of the scheme, provided ancillary industries develop as anticipated. The Government's manufacturing licence allows for the production of 1,250 tractors a year.

Extensive use is to be made of manufacturing facilities already existing with the Mahindra & Mahindra group of industries in Bombay State. Some additional plant is to be supplied by the David Brown Company, which will also provide all the tooling and technical aid required.

The 2-D is the smallest of the David Brown range of tractors. It is powered by a 14 h.p. rear-mounted two-cylinder Diesel engine, which is air-cooled, and carries most of the tools and implements on a mid-mounted toolbar. The machine is claimed to be exceptionally economical to run, easy to operate and maintain, and is considered ideal for use in India, particularly on small holdings.

To increase the production of sugar during the next month, the Government of India have decided to allow the factories which start crushing on or before November 4, 1959 in Western Uttar Pradesh a concession of 31 nP per maund of cane crushed by them from the date of start to November 15, 1959.

This concession will also be allowed to all such factories in Eastern Uttar Pradesh and North Bihar which start crushing on or before November 10, 1959 on all cane crushed by them from the date of start upto November 21, 1959.

South Indian Results

Balance-Sheet Reviews :

A large batch of company results pertaining to South India are dealt with this week. At the head of the list is the performance of the Mysore Spinning & Manufacturing Co. Ltd., in the year to February 1959. The company has reported a profit, after tax and depreciation, of Rs 2.82 lakhs as against a loss in 1957-58 of Rs 5.49 *lakhs. Contributory* to such satisfactory results is the smart rise in sales from Rs 1.80 crores to Rs 1.98 crores. The dividend declared on the ordinary shares is at the rate of 10 per cent per annum.

Decade Growth of National Income

THE Central Statistical Organisation has just made a welcome departure from its usual procedure by releasing a 'quick' estimate of National Income in 1958-59. Though tentative, this estimate for the year at fixed (1948-49) prices may be deemed broadly valid for the purpose of studying the growth of real national income over the decade 1949-59 which has the added merit of being a decade of planning inasmuch as development schemes had been taken up for execution two or three years earlier to the first year (1951-52) of formal inauguration of the First Plan. When 1948-49 is thus appropriately taken as the base year with its national income of Rs 8,650 crores at that year's prices, it is seen that it has increased by about a third over the decade. But in per capita terms, the increase, in national income over the decade has been just under 18 per cent. The year-to-year position is presented in the following index numbers of national income and of per capita income, both at 1948-49 prices:—

Year	Index Number of national Income	Index Number of per capita Income
1948-49	100.0	100.0
1949-50	102.0	100.7
1950-51	102.3	99.8
1951-52	105.2	101.3
1952-53	109.4	103.9
1953-54	116.0	108.8
1954-55	118.8	110.1
1955-56	121.2	110.8
1956-57	127.2	114.8
1956-57	125.2	111.6
1958-59	133.8	117.7

Further calculations, based on the above index numbers, show that the average annual rate of growth of national income in real terms over the decade has been 3.4 per cent while the average annual rate of growth of per capita real income during the same period has been 1.8 per cent. Broadly speaking these growth rates convey that about half of the increase in national output is being swallowed up by the increase in population. As far as the future is concerned, no attempt is, however, made here to project these last decade trends.

Next to be considered here are the relative contributions of the agricultural and the non-agricultural sectors to national income over the last decade. It may be noted in this connection that in 1948-49 the contribution of the agricultural sector to national income was of the order of Rs 4,250 crores while that of the non-agricultural sector was to the tune of Rs 4,400 crores. The year-to-year position in this regard over the decade is presented in the following index numbers of sectoral contributions at 1948-49 prices:

Year	Contribution of agricultural sector to national income	Contribution of non-agricultural sector to national income
1948-49	100.0	100.0
1949-50	102.6	101.4
1950-51	102.1	102.5
1951-52	104.5	105.9
1952-53	108.2	110.5
1953-54	117.2	114.8
1954-55	118.4	119.3
1955-56	118.1	124.1
1956-57	123.5	130.7
1957-58	116.0	134.1
1958-59	129.0	138.4

Further calculations, based on the above index numbers, show that the average annual rate of growth of agricultural product in real terms over the decade has been 2.7 per cent while the average annual rate of growth of non-agricultural product during the same period has been 4.1 per cent. Broadly speaking, these rates convey that agricultural growth over the decade has been considerably less than what is suggested by the rate of 3.3 per cent during the period 1950-56 (**vide:** Leading article in this issue entitled 'The Achilles Heel of Developing Economies') and that the non-agricultural sector as a whole has maintained a distinctly faster rate of growth. If the agricultural sector had registered a faster rate of growth over the decade, there might have been, in consequence, a still faster rate of growth in the non-agricultural sector. Conversely, if the non-agricultural sector had registered a still faster rate of growth over the decade, there might have come about a faster rate of agricultural growth. Which broadly means that industrialisation has still to go a long way before it can have a massive dynamic impact on agriculture as in the United States or in Japan.

Population Control and Planning

IN its laudable anxiety to bring about, by stages, a reduction of 50 per cent in the present birth rate of about 40 per 1,000, the Central Family Planning Board has recently constituted a committee under the chairmanship of Shrimati Dhanvanthi Rama Rau to suggest proposals for the Third Plan. It is good to find the Committee bracing itself for the task. But it is amazing that, instead of adopting suitable sampling procedures for examining a representative cross-section of the population, the Committee has ostensibly proceeded to sound 'public opinion' on a whole range of controversial proposals such as legalisation of abortion and compulsory sterilisation by issuing a long questionnaire which only a few educated or rich persons with pre-conceived notions are likely to have answered within the allotted time of about three weeks. This is, indeed, regrettable because on this supremely important, but socially explosive, question of effective population control as an organic part of economic planning public opinion, especially the opinion of women, would necessarily have to be sounded in a more systematic, leisurely and confidential manner. It is all the more regrettable because, in the absence of such public opinion reckoning, the heavily biassed opinions of some privileged classes to whom the poverty-stricken masses are a perpetual nightmare are likely to exert a disproportionate influence on the labours of the Committee.

But it may also be that the Committee will ultimately recommend a cautious, balanced and generally acceptable programme of population control in the peculiarly complicated social and political milieu of this country. If that happens it would be very good indeed, for there is certainly no such note of urgency in the population situation as would call for any drastic remedies with their religious and moral implications. This observation is supported by some of the findings of two American research scholars who have thoroughly studied the trends relating to population growth and economic development in India. One of these findings is that India's projected national income in 1966 at 1952-53 prices will be 138 per cent of the 1956 national income on the assumption of a high fertility rate, 138 per cent, again, on the assumption of a medium fertility rate and only 139 per cent on the basis of a low fertility rate; in terms of real national income per equivalent adult, the position will be that in 1966 it will represent 113 per cent of the 1956 amount on the assumption of a high fertility rate, 113 per cent, again, on the assumption of a medium fertility rate and only 116 per cent on the assumption of a low fertility rate.

Another finding is that the projected outlays (public outlays and private investment together) per equivalent adult in 1966 will be 125 per cent of the 1956 amount on the assumption of a high fertility rate, 125 per cent, again, on the basis of a medium fertility rate and 134 per cent on the basis of a low fertility rate. Perhaps the most important finding is that the projected real national income per equivalent adult will begin to decline only after 1976, accounting in 1986 for 114 per cent of the 1956 amount on the assumption of a high fertility rate. But it will increase from 125 per cent in 1976 to 149 per cent in 1986 if the fertility rate is medium and from 140 per cent to 192 per cent if the fertility rate is low.

It would appear from these findings that a family planning programme, even if designed and executed to bring about a low fertility rate, is hardly likely to have any significant impact in terms of real national income per equivalent adult by the end of the Third Plan. If, however, family planning is designed as a long-term programme to bring about a medium fertility rate through education and persuasion (which are necessarily slow processes), it may be that after 1971 it will begin to have a perceptible and tangible effect by way of a betterment in the standard of living of the average Indian. In the context of the expected decline, thanks to public health campaigns, in the rate of mortality, anything more than a medium rate of effective fertility cannot be hoped for as a feasible objective for the next 20 years, especially where there is no better alternative to persuasion. After that, it may be that medium fertility will become low fertility, for the experience of a number of countries which have been largely industrialised suggests that there will then be a more or less natural decline in fertility rates in India.

It is also not inconceivable that a labour-intensive programme of production may well be increasingly in operation in the next ten

years alongside of the basic capital-intensive projects. In which case, more resources will be released for investment in basic industries, thereby increasing further the growth potentials of the economy as a whole. Where, thus, economic development gets accelerated through a judicious reallocation of projected outlays without prejudice to recognised priorities in planning but with a view to bringing about greater production even in the short or the medium term by tapping the vast reservoir of surplus labour in the country, the stage at which economic development will bring about a consequential decline in fertility rates may even be advanced by some years.

Where such a situation can be reasonably foreseen, there is currently no need to hurry through a family planning programme either in the matter of its evolution or in the matter of its execution. As a matter of fact, its execution which will cost a good deal of money in the years to come may be rendered easier if its evolution is preceded by a thorough study of fertility conditions and trends. In particular, sample studies of the correlations between economic status and fertility, between manual work and fertility, between intellectual work and fertility, etc., are called for in different regions if vague and unsubstantiated generalisations are not to gain currency. Especially the generalisation that the lower classes have higher fertility rates would need to be statistically established or refuted before an appropriate family planning programme is evolved. In the meanwhile, the Central Family Planning Board would do well not to think in terms of greatly expanding its current operations except in tried and demonstrably harmless lines.

Productivity Campaign: An Assessment-I
