HUMAN kind, Nietzsche was reported to have said, "has a bad ear for new music." It is thus expected that, in an underdeveloped economy, much concerted effort should be put in before any spectacular result in productivity is achieved. For, the task is not merely to get better results within the frame work of existing institutions but to mould and refashion these to obtain higher productivity which ultimately aims at realisation of wider and deeper social values. It is thus essential that effort should be directed at the basic issues which have inhibited or retarded the growth of productivity consciousness in an underdeveloped country.

To start with, the initial confusion between "productivity" and "production" should be dispelled. Workers and their immediate superiors need realise, in the language of H. D. Shourie, Executive Director of the National Productivity Council (NPC) that "productivity is not synonymous with production.....and productivity is the factor that takes into account economy in production together with quantitative results achieved. It is a method or approach to be adopted to achieve maximum output. Production is a measure of performance while productivity relates production to the effort involved."

Simultaneously, it is pertinent to bear in mind the formal definition of productivity which is the ratio between the "output" of wealth produced in the form of goods and services and the "input" of resources required in the process of production. The significance lies in the fact that, because of socio-economic reasons, in a country like India, undue emphasis is likely to be placed on the productivity of only one factor, viz, labour. Such emphasis may result in resistance from workers and trade unions. We need to realise that capital and initiative being scarce in underdeveloped economies where unskilled labour is abundant it is rather appropriate to emphasise on output per machine than on output per worker. Even in a mature economy as that of West Germany labour costs in manufacturing industries account for only about 15 per cent of total costs compared to 85 per cent a century ago. On the contrary, generally 50 per cent of the total assets of an average firm is tied up in inventory and it is thus essential that measures of stock control should be effectively implemented to show higher productivity. Thus the axe of economy should not be disproportionately directed against the labour. Emphasis should be on other factors as well.

The next step is to make the people realise the significance of higher productivity as a means of achieving such objectives as increase of national wealth and per capita income and improvement in the standard of living. Productivity drive has to be presented as the full, proper and efficient utilisation of resources of men, machines, materials, money, power, land, etc; as an attack on waste of every kind and in each sphere; as a frame of mind and a constant urge to find better, cheaper, quicker, easier and safer ways of doing a job, making a product and rendering a service.

Productivity consciousness started taking root in India with the visits of ILO Teams in 1952 and 1954. These teams showed how productivity and earnings of workers could be raised in selected plants by introduction of modern techniques of work study and plant organization. Productivity in respect of some individual items in engineering industries increased from 12.5 per cent to 116 per cent by utilising tools of method study, work measurement, lay-out of work places and material handling. In textile industry the teams showed productivity increases in stentering, calendaring, winding, carding and drawing. These increases were the outcome of method study, reorganization of work, process study, quality control and improved machine maintenance. The productivity centre set up in Bombay in 1954 carried out a number of useful projects. The impetus, however, to a comprehensive productivity drive came from the report of the Indian Productivity delegation to Japan in 1956. The report specifically recommended. the establishment of a National Productivity Council which as an autonomous body was set up in February, 1958. Thus in the course of six years sporadic and localised productivity campaign has evolved into a comprehensive drive for productivity pari passu with the intensification of efforts to make the Second Plan a success.

NPC, given the logic of circumstances, has enunciated the following principles upon which the productivity campaign will be based:—(i) In productivity drive the objective should be to increase production and improve quality by improved techniques. The movement does not seek intensification of labour's burden through increasing workloads and speed up; (ii) Increased productivity in a growing economy will ultimately help in increasing employment by stimulating development of industry. The government, employers and labour should take specific measures to obviate possibility of any unemployment; (iii) Benefits of productivity increase should be equitably distributed among capital, labour and consumers, and these should lead to renewal and expansion of plant, machinery and equipment; (v) A productivity drive may eventually be launched in all spheres of the nation's economy. It is of importance to achieve integrated improvement in productivity in all activities of the nation; (v) In order to carry through the productivity programme effectively it is necessary to create a climate for increased productivity by encouraging joint consultations and promoting mutual understanding between management and labour in each industry and in each individual enterprise.

Based on these objective principles the NPC accepted a comprehensive programme which included the following items:—(1) publication of a series of pamphlets, a journal, technical digest on various subjects relating to industrial productivity; (2) setting up of a library of productivity and related literature as also of productivity films; (3) A Technical Enquiry Service which will answer technical queries from industries and individuals and a Documentation Service which will collect technical information from books and magazines on different technical subjects; (4) training within the country by Indian and foreign specialists in the field of Industrial Management, Industrial Engineering and Industrial Relations and inter-plant visits for exchange of experiences and knowledge; (5) short-term study teams and long-term trainees to be sent abroad in various fields of industrial productivity; (6) stimulating productivity consciousness in industry and an urge to employ modern management techniques; (7) research in subjects associated with industrial productivity.

From the programme listed above it becomes apparent that agriculture, the most vital economy of the nation has been left out even though the objectives of the NPC include productivity drive in all spheres of nation's economy. Our continued shortage in and low yield of agricultural commodities particularly food grains, in the context of increasing population is well-known. One recent estimate shows that the index of productivity for all agricultural commodities has gone up by 7 per cent between 1949-50 and 1956-57, and that for food grains by 7.5 per cent (vide V. S. Menon's article in "Agricultural situation in India", July 1958). This is none too encouraging. Viewed in this perspective it is desirable that the NPC or some other similar organisation as in Denmark should take up the problem of agricultural productivity. It is true that the NPC is not technically and organizationally equipped to handle such a gigantic task concerning the most vital but unorganized sector of our nation's economy. Useful research work, no doubt, is being carried on in the chain of central research institutes under the aegis of the Indian Council of Agricultural Research. It is, indeed, imperative to carry the fruits of these researches to the field of agriculture in an appropriate institutional frame-work, which calls for deeper studies and insight into such issues as rural credit structure, role of service and farming co-operatives, economics of fertilizers and small irrigation projects and status of and opportunities for the share-croppers and landless labour and so on. No doubt some of these intricate problems are being handled by way of operational research by the Reserve Bank of India, Ford Foundation and other bodies. What is, however, needed is a co-ordinating body to collect and process all relevant data in the field of agricultural productivity and effectively disseminate them to all concerned.

The programme of the NPC includes trip to foreign countries by short-term study teams. One such team was sent out in 1958 for six weeks to visit West Germany, the UK and USA to make a general study of the processes and techniques which are conducive to the increase of productivity in large, medium and small scale industries. Such a visit is obviously inadequate as the team itself admitted in the report. The report although useful in certain aspects lacked in thoroughness and details which are so essential since the task committed to the team was to recommend techniques by which productivity could be increased in India. The limitation of a hurried trip is obvious from the fact that the team visited the Coventry works of the Standard Motor Car Co. in the UK and yet the most significant contribution of this factory to productivity technique was missed by the team. Workers in this undertaking earn a wage which is higher than what is obtaining in other factories of the same industry. This has not caused any distortion to the price of cars, the reason being, the higher productivity on account of reorganization of the workshops into gangs and reliance on the "disciplining effect of the workers' own organization at the production level to maintain co-operative effort within the limits of the gang system". (Seymour Melman: Decision Making and Productivity). It was proved in this unit that unilateral rule by management can be replaced by a form of bilateral decision-making consisting of formal and informal trade union agreements and further that given the proper atmosphere it was possible to maintain the tempo of productivity with lesser number of supervisory staff. This fact is mentioned not to criticise the team but to point out the defect in the scheme of sending teams to foreign countries for a short while with vague and generalised instructions.

In this context, it is pertinent to observe that NPC proposes to send abroad several teams for specialised study of productivity techniques in selected industries. Coal mining, cotton textile, plastics, small scale industries, Building Industry and Factory construction have been included in the programme. It may, however, be pointed out that, in view of their ever growing importance in national economy, small scale industries should get priority in the scheme and also that not one composite team consisting of representatives from several small scale industries but separate teams of such industries as machine tools, foundries, utensil making, railway signalling and equipment manufacture, boiler and locomotive components and accessories making, etc., should be selected for training in foreign lands.

One other comment is relevant. Some of the major export industries have not yet been accorded due weight. Tea, jute textiles, light electrical goods industries and so on need to introduce techniques to improve productivity in order to face the growing competition from other countries. Tea Board and Indian Jute Mills Association had sent in recent years a number of delegations to overseas countries to explore export possibilities. Such efforts in establishing useful overseas contacts have to be supplemented by proper and adequate attention to the problem of higher productivity in the domain of production, quality control and buyer satisfaction. In order fully to utilise the advantages offered by modernisation of machinery in some of these industries it is advisable to depute productivity teams consisting of trade union leaders, production managers and personnel officers to countries which have already achieved higher productivity in such industries. How important export goods industries are can be well understood from the experience of the Federal Republic of Germany. At present, only about 55 per cent of its population can be sustained by home grown food stuffs. To meet the situation, about 28 per cent of industrial employees are engaged in producing goods for export in order to import the balance of the food needed.

The main task, however, in the productivity movement is to allocate proper responsibilities to the three main organizations having a stake in the movement—Government, Employers and Trade Unions. The success of the NPC will, to a considerable degree, depend on its ability and resourcefulness in bringing these three agencies to the forefront of the movement by successfully marshalling their plans, objectives and activities to a common goal.

(To be continued)

Land Reforms and Foodgrains Target

THE Mysore Land Reforms Bill is the last in the series so far, and Madras will follow within a few days. The Congress High Command has ordained that Land Legislation should be finalised in all States before the end of the year. At this juncture, it devolves on all serious-minded citizens to consider the pros and cons of the proposed Reforms, particularly their helpfulness or otherwise in attaining the foodgrains target of 108 million tons by 1965.

CEILINGS HIGH AND LOW

At the very outset, it has to be pointed out that land ceilings vary very widely as among the different States. In one State, the ceiling is proposed to be placed at 30 standard acres meaning thereby land with perennial irrigation (yielding double wet crops). Seasonally irrigated area is to be calculated at 2 acres while dry land is to be considered equal to 3 acres. That is, 90 acres dry land, 60 acres seasonally irrigated area, or 30 acres with double wet crops, is to be the ceiling. This figure is rather extravagent compared to the net income of Rs 3,600 per annum in Bombay and Mysore, and Rs 5,400 in Andhra Pradesh. It is true that **de facto** standards of life vary widely even as among rural masses in different States, but it is quite another and very serious proposition to try to perpetuate such differences. On this issue, the Planning Commission have been deliberately silent, leaving each State to decide the land ceiling according to its own discretion.

SECURITY OF TENURES AND FAIR RENTS

Security of land tenures and fair rents are highly desirable. Practically in all the States, safeguards have already been provided against ejections and rack-renting. Even here, the provisions in different States vary widely. maximum rent payable ranging between 16.6 per cent and 50 per cent of gross produce. In Bombay, a field survey revealed that the actual rents paid were at the traditional 50 per cent while the legal maximum was much less. How far it would be useful to have a law on the Statute Book, which is largely evaded by the parties concerned by mutual collusion, should be duly considered, and the law should be amended if necessary in order to make it realistic and effective. In the Mysore State, for example, it is estimated that, under the proposed Bill, rents will be revised in 61.4 lakh acres, and agricultural land will be transferred from the haves to the have-nots to the extent of 34 lakh acres. The entire abolition of tenancy cultivation has not been contemplated in any State, continuance of tenants being allowed in cases of employees in defence services, minors, women and persons physically or mentally disabled. It is hard to understand why low paid civil servants of Government have not been similarly exempted: they are subject to transfers according to Government requirements. So long as tenant cultivation continues even on a smaller area, it is necessary to lay down maximum rents, but there should be at least approximation in the maxima in different States.

GAME NOT WORTH THE CANDLE

So far as land ceilings are concerned, it is much more a doctrinaire demand than a practical one. A complete land census was conducted in the erstwhile Hyderabad State, and, according to arithmetical calculations, one million acres were expected to be available as surplus land for distribution among tenants and landless cultivators. An experiment was made in Khammam and Aurangabad Districts, and it was discovered that the actual area under redistribution was quite nominal: the game was not worth the candle for the following reasons:

1. Numerous exemptions were allowed while enforcing the ceiling, like efficiently managed estates, sugarcane areas, holdings equipped with machinery, orchards and plantations, and areas under reclamation;
2. Practically in every case, the substantial holder surrendered the worst areas in his holding, located distantly from one another;
3. In a majority of cases, substantial holders sold away or partitioned their lands anticipating legislation, and thus ceased to own surplus lands;
4. Agricultural tenants were generally reluctant to take up marginal and submarginal lands in scattered bits, as owners;
5. Agricultural labour was not mobile and could not be persuaded to move bag and baggage to distant localities with uncertain futures; and
6. There was no agency ready to provide initial and circulating capital for the settlers.

In income-tax, world income is included for assessment, but world land-holding is impossible to get at. Village records are so voluminous and complicated that, if a man holds agricultural lands in different villages in the same taluk, in different taluks, in different districts, and in different States, he only can know where and how much land he owns. It would be idle to expect him to give an honest declaration of his holdings: hundreds of crores of income-tax have been evaded by assessees in some way or another. The situation being like this, for any State Government to take up the pointless task of acquiring surplus lands and distributing them among the landless would be probably the greatest disservice to the cause of promoting agricultural production. In fact, the entire rural area in this country is suffering from an atmosphere of uncertainty, ambition and frustration, and it would be very useful to launch some sample surveys in order to find out the area of fallow land due to disputes and litigation.

OTHER INCOMES NOT TOUCHED

Again and again it was stressed by the Indian Prime Minister that a ceiling on agricultural income was not intended, but only a ceiling on land holding. As such, he held that the idea of clamping a ceiling on non-agricultural incomes was not valid. For example, a person may be a cotton mill owner getting Rs 10 lakhs net per annum from his mill, and he may hold 3 times the family holding, in addition. In this case, his lands would continue with him provided he took to personal cultivation (which includes cultivation by hired servants). But if another person owned 4 family holdings with no other property that he could call his own, he would have to surrender one family holding even if he per-

sonally cultivated his lands. All this is mere argument. As a matter of fact, practically all agriculturists depend entirely on cultivation. Putting the strength of an average family at 5, the monthly income **per capita** would work out to Rs 60 while an ordinary unskilled worker in urban areas gets more than that. This figure of Rs 60 per month must spell disaster to agriculture because the cultivating landholder would have little or no margin for land improvement or cultivating richer crops which involve higher working expenses. The prospect of mechanisation or intensive cultivation should completely disappear. Of course, the Nagpur Resolution contemplates the replacement of personal farming by joint-co-operative farming, but any one who knows something first hand of the countryside realises that this is a mirage: a bird in hand is worth not only two but perhaps half-a dozen in the bush.

What about compensation to retiring landholders? For the whole of India, it is thought that compensation may be more than Rs 500 crores. In Mysore, the estimate is Rs 40 crores, but this is based on a very low average of Rs 150 per acre which is almost 25 per cent of the market value. These are days of writs in High Courts, and actual compensation may swell up to over Rs 100 crores. But what is the gain? We would have to begin experiments, the burden lying on the Government's shoulders. On the other hand, if only the same Rs 100 crores could be directly and immediately provided for agricultural development, that should lead to foodgrains out-turn increasing enormously. It is argued that the compensation amount would be collected from the tenant purchasers in instalments. Actual experience in the UP and Bombay shows that instalment payments generally disappear after one or two years, involving endless legal procedure. And, at the end of it all, the tenant purchaser might surrender his land, with no one else applying for it. The administrative staff required to deal with these endless transactions, complaints and counter-complaints, objections and counter-objections, should cost at least Rs 1 crore per annum in each State.

We cannot eat our cake and have it, too. If we want 108 or 110 million tons of foodgrains per annum by 1965, constructive measures should be organised and proceeded with: no hypnotism or mesmerism can act as the Wonderful Lamp. One is reminded of the well-known slogan "When Rome was burning, Nero was fiddling." It is a challenge to the Planning Commission: If land reforms in their present outlines should be persisted in, foodgrains production in India may go down from the 73.5 million tons raised in 1958-59. Rather, the opportune time for indulging in doctrinaire reforms would be after a decade by which time the country should become able to produce not 110 but at least 125 million tons of foodgrains. Social justice is very desirable, but reducing the size of the cake will result merely in more social injustice.

Discipline, Efficiency and Welfare

By A Special Correspondent

IN recent years, the Union Ministry of Labour has been making earnest attempts to improve industrial relations in India. The problem of maintaining harmony between management and workers is a difficult task, particularly in this country, where industrial labour is by and large, uneducated and trade unions are influenced to a great extent by poitical factors. Despite several obstacles, the Labour Ministry, has been trying to minimise industrial disputes and settle differences between capital and labour by negotiation, conciliation and by other methods. For facilitating this process, the Ministry has evolved the Code of Discipline which enjoins on management and workers certain rights and responsibilities. The Code has been in force over a year now and it has been accepted by the main organisations of employers and labour.

Although the Code of Discipline has not produced spectacular results, it appears to have had some healthy effect an industrial relations. An official review says as follows: "The observance of the Code seems to have had a perceptible influence on the trend of industrial relations as reflected in the statistics of industrial disputes for 1958 and part of 1959. Thus, in 1958, although there was minor increase in the number of disputes during the second half of the year, as compared with the first half, from 781 to 783, the number of workers involved and the number of mandays lost recorded an appreciable decline from 511,237 to 431,183 and from 4,519,087 to 3,073,516 respectively. Similarly, during the period January-April 1959, the total number of disputes and mandays lost were 565 and 1.22 million, as compared with 638 and 2.26 million, respectively, in the corresponding period of 1958".

However, employers do not seem to be satisfied with the way in which the Code is being worked. It is stated that, in the name of the Code, some trade unions are exercising coercive pressure on management and that different interpretations are being given to the provisions of the Code of Discipline mainly with a view to strengthening sectional interests. In the light of this experience, employers do not feel enthusiastic about accepting another Code, namely the Code of Efficiency and Welfare.

The Union Ministry of Labour has circulated the draft of the Code of Efficiency and Welfare for eliciting the opinion of employers and workers. So far as employers are concerned, they have pointed out that, apart from defective drafting, the Code imposes more obligations on management than on workers. The obligations of the management are imperative, those of the workers are not so. Moreover, the Code, it is feared, will considerably put up industrial costs. The following paragraphs summarise the views of the All-India Organisation of Industrial Employers to the proposed Code of Efficiency and Welfare:

SECTION I

Management and Union(s) agree—

(i) that they will strictly abide by the Code of Discipline and do all in their power to maintain a harmonious atmosphere wherein production can progress unimpeded;

Comments: If the Code of Efficiency and Welfare is to be a self-contained and independent Code, is the reference to the Code of Discipline in Industry necessary?

(ii) that they will immediately review all cases pending before Courts and withdraw as many of them as possible for mutual settlement;

(iii) that they will work out suitable incentive payment schemes which, while protecting the health and interests of the workers, will help maximise production;

Comments: In a number of industries "incentive payment schemes" cannot be introduced. This provision will, therefore, raise hopes in the minds of workers which cannot be fulfilled and thus create unrest.

(iv) that, wherever possible, they will set up Joint Production Committees either independently or as sub-committees of Joint Councils of Management; and

Comments: The Scheme of Joint Councils of Management is yet in an experimental stage. It is, therefore, necessary to await the results of this experiment before setting up Joint Production Committees.

(v) that they shall introduce, without delay, a Suggestion Scheme whereby suggestions made by workers to save wastage and improve output will be carefully considered and suitably rewarded.

Comments: The provision, though welcome, is liable to cause friction if incorporated in the Code.

SECTION II

Management agree—

Management agree—

(i) that, consistent with the interests of the undertaking/industry, they shall offer their employees reasonable wages and provision for economic security after retirement;

Comments: The term "reasonable wage" is vague. Wages are regulated by collective bargaining, agreements, adjudication awards, Wage Boards, etc. Who will determine the "reasonable wage"? The provision for economic security after retirement is also not necessary. It is regulated by legislation and is the responsibility of the State. Employers should not be held responsible for the economic security of workers after they have left their employment.

(ii) that they will afford reasonable prospects of promotion to workers by rationalising staff policy and by avoiding discrimination in implementing that policy;

Comments: The promotion of workers is a managerial function, and it is wrong in principle to seek to give to workers the right to question the reasonableness of the management's decisions in such matters.

(iii) that they shall provide (a) safe and healthy working conditions, (b) reasonable welfare amenities in the work-place and (c) wherever possible suitable housing and/or transport facilities.

Comments: Provision for safe and healthy working conditions and other welfare amenities in the place of work is regulated by legislation. The provision is, thus, redundant. Provision for housing, transport facilities etc., cannot be accepted by employers. It is the responsibility of the State.

(iv) that they shall maintain machinery and equipment in sound working condition and replace worn-out machinery and equipment at the earliest opportunity;

Comments: The employers themselves in the interests of the industry maintain the machinery and equipment in sound working condition and replace the worn-out machinery, equipment, etc., at the earliest opportunity and as soon as the circumstances permit them. The question of replacement of machinery, etc., is linked with the available finance for the purpose, import policy for capital goods, etc. This clause may be redrafted.

(v) that they will provide, independently or in association with managements of other undertakings, suitable training facilities for all workers, supervisors and middle-management personnel including apprenticeship training facilities for potential recruits; and

Comments: Employers cannot as a general rule undertake the responsibility of training workers, supervisors, middle-management personnel, apprentices, etc. Wherever possible, they are doing it voluntarity. This should, therefore, continue and no obligation should be placed on the employers.

(vi) that they will rationalise management apparatus to avoid waste and inefficiency and to give the workers a sense of belonging to the enterprise.

Comments: Rationalisation of the management apparatus is a managerial function. The clause should, therefore, be deleted.

There is a good deal of force in the arguments advanced by the employers. The need for the utmost harmony between labour and capital has never been felt more keenly than now. In the circumstances, Government should carefully consider the points raised by management and see to it that nothing is done which will inflate industrial costs and add to friction between employers and workers.

Deficit Finance and the Third Plan

By Professor S. KESAVA IYENGAR

BEFORE he left London for Washington, Mr Morarji Desai said that deficit spending during the Second Plan period might exceed Rs 1,200 crores originally provided under this head: during the first four years of the Second Plan, deficit spending accounted for Rs 1,122 crores. The size of the deficit spending in the Third Plan is still under discussion, and it may serve some purpose at this juncture to present some details of the origin and development of deficit finance. During World WAR I, the German paper mark lost so much in value that even one billion paper marks could not purchase one gold mark: that currency died with the Armistice on November 11, 1918. During World War II, gold reserves in Germany were so depleted that the ratio of gold to paper currency stood at 0.01 per cent (the present ratio in the United States is 40 per cent). That currency was also given up. In the 'thirties, the Depression was so severe and unemployment so high that the richest country in the world, the USA, faced deficit budgets continuously for 10 years: the late President Roosevelt made a fine art of deficit spending, and present-day prosperity in the United States can be attributed to a large extent to the unorthodox budgeting of Roosevelt. Guaranteed Corporations and Social Investment were for the first time conceived by him. A distinction is made between borrowing and deficit spending, the criterion being that borrowings are against marketable securities while deficit finance is against created securities (the Central Bank issues additional currency against such securities). An additional advantage claimed is that it is a variety of taxation: the loss of purchasing power to the holder is the gain of the Government, without the loser being conscious about it. For example, between 1947 and 1952, money supply in the United States increased by 19 per cent, and the consumer index rose by 24.4 per cent, while between 1953 and 1958, money supply was up by 9 per cent and the consumer index rose by 8.6 per cent. In India, deficit spending was of the order of Rs 286 crores during the first three years of the First Plan, but there was a more than proportionate increase in agricultural production, accompanied by a favourable balance of payments and higher exchange reserves. Deficit finance did not exert any inflationary influence; on the other hand, the wholesale price index went down from 100 in 1952-53 to 92.5 in 1955-56. Between 1956-57 and 1959-60, deficit finance is estimated to be Rs 1,122 crores, and the wholesale index has already shot up from 92.5 to 117.

EASY MONEY POLICY

The problem in the 'thirties was how to neutralise deflationary trends. An easy money policy was adopted all round: in the New York Federal Reserve Bank, the discount rate was ½ per cent while in the other eleven Federal Reserve Banks it was one per cent. The removal of quantitative controls on bank credits in Britain in 1958 marked a step toward reflation after a persistent anti-inflationary policy during two decades. At present, the United States Treasury is pursuing a programme of anti-inflation. Professors Pigou and Robertson are of the view that simple inflation is healthy and keeps the tyres of industry fit. But, once beyond control, galloping inflation like consumption leads to collapse. Deficit finance, like fire, is a good servant but a bad master. At present, foreign obligations of the Government of India stand at $1,740 million, and deficits in the 1959-60 and 1960-61 budgets are expected to stand at $305 million and $336 million. Where do we stand with regard to deficit finance during the Third Plan period? Timely and adequate response of production to deficit finance is determined by increase in agricultural and industrial production, particularly of consumer goods. So far, the bulk of Plan expenditure has been on producer goods industries which will begin yielding after several years, and consumer goods like cotton textiles are not showing satisfactory expansion. With regard to foodgrains, what counts is not the actual out-turn but the marketable surplus which is being influenced by all kinds of scares and threats. Secondly, plant capacity and man-power potential are idle to a large extent on account of several kinds of bottlenecks.

ECONOMIC CONTROLS

Controls should render the situation much more hopeful, but the administrative set-up is such that controls may make matters worse. The effectiveness of regulatory devices was very disappointing during the war and post-war years. Economic controls were scientifically developed in Germany during World War II, and the following steps taken there should be of high suggestive value to Indian planners, legislators and administrators: planning to be successful should be on a war-footing:

(1) All men and women were registered for national service, of course, by instalments.

(2) Employment Commissions combed out excess skilled workers and allotted them to line of production according to priority.

(3) Products were standardised with the result that there was improvement both in quality and quantity.

(4) Available material was based for the longest possible time, as for instance through freezing in the case of perishables and second hand exchanges for shoes, clothing, machine and constructional tools.

(5) Conservation and reclamation of raw material was another avenue for economy. Scrap relating to paper, rubber, oil, iron and copper was carefully collected and used for the concerned industries again. 25 per cent of used oil was claimed to have been collected.

(6) Overtime labour and intensive cultivation also helped in adding to output. 96 hours in any two consecutive weeks was the maximum.

(7) Subsidy was granted for ensuring the supply of necessaries of life either by local growth or by import.

(8) The "eat the surplus" campaign was organised by the Federal Surplus Commodities Corporation in the USA, by freely distributing perishable foods like fruit and milk among families on relief, thus helping toward a rise in the national standard of life.

(9) Rationing was taken to for enforcing a national maximum of consumption of the rationed goods.

(10) Non-rationed consumer goods heavily taxed.

(11) Regional Equalisation Bureaux worked with the object of making every region self-sufficient as far as possible, thus trying to conserve shipping and railway space.

The observance of the principle of priority to production quantitatively, and to the more intensive use of a given amount of products in numerous ways, among which were:

(1) "Old mens' corners": superannuated men and women were employed in kinds of work that could be done by them.

(2) Womens' Land Army increased female work on land, releasing men for heavier kinds of work.

(3) 3 million dogs ate 100,000 tons of bread: the use of bread grain for domestic animals was prohibited.

(4) Fodder was made available first for ensuring the milk supply, then for maintaining cattle and sheep for meat, then for pigs and poultry, and lastly for special forms depending entirely on bought fodder.

(5) Non-essential concerns were closed down and small payments made in order to keep them in bare entrepreneur's wage.

(6) Luxury goods were rare and heavily taxed.

(7) Substitutes: synthetic oil, egg, coffee, rice and pepper were manufactured to meet the shortage of natural supplies. Cloth was made out of wood-pulp and footwear out of paper.

These and such measures should bring about a larger amount of use from a given quality of goods and services.

OTHER FACTORS

Thirdly, the external balance of payments has a profound effect on the level of exchange reserves and the availability of consumer goods in the country, either made at home or imported. Unfortunately, the Indian balance of payments has been becoming more and more unfavourable, and the prospect of importing consumer goods either against local currency or on deferred payment is not bright. A fourth factor is the trend in private investment. Here again, the situation is despondent. On account of the current socialist industrial policy, private investment and import of capital on private account are going down, and to this extent the national income is being pushed down. It is rather paradoxical that, in 1957-58, the national income of India should have gone down compared to the previous year, in spite of several years of planning before that.

THE PRIVATE SECTOR

How are we to finance the Third Plan? The usual resources are all there, but which source should be expected to serve as the mainstay? Little can be expected from public enterprises, but some are infant and others inefficiently managed. Opinion is practically unanimous that, if anything, taxation should be reduced: taxable capacity is very low. Borrowings have proved better in 1959-60 than in previous years, but, even under this head, improvement may be only minor. Deficit finance has no scope whatever in view of facts and figures given earlier. Borrowing from abroad at Government level we have had in plenty nowadays, but the burden will grow as the years roll on. The only other two sources that hold out some promise are (1) free play of private enterprise and incentive in domestic investment, and (2) the import of private capital on joint share basis and consumer goods in sufficient quantities for augmenting production and meeting consumer demand which latter phenomenon must serve as an effective anti-inflationary measure. It is unfortunate that consumer goods industries (including agriculture) were not given due attention in this country, and deficit spending cannot square up with heavy industrialisation: ninety per cent of Plan outlay in Poland was on consumer goods; and, from all available accounts, planning has triumphed in that country.

EDITORIAL NOTES

Rajaji vs Foreign Aid

The Swatantra Party has promptly stepped on to the platform vacated by the Communists, for rousing opposition to a programme of economic development based on foreign assistance. So long as foreign aid came exclusively from western countries, the Communists had no problem; they could make out a logical case. But since Russia also entered the competition for the development of underdeveloped areas, and with Bhilai as a striking instance of Indo-Soviet cooperation, Communist opposition to foreign assistance is subdued and more selective. Their opposition has to be frankly based on political rather than economic arguments and naturally appeals only to those of their own way of thinking. But the Swatantra Party, which has been unleashed by Rajaji on the long-suffering public of a country already suffering from a multiplicity of parties, is not handicapped by any such dichotomy of its thinking apparatus. Its opposition therefore is more integrated, vigorous and packed with punch. The party has accepted the views of Rajaji that development based on heavy borrowing abroad will ultimately prove disastrous to the country. Opposition to borrowing for financing the Five Year Plans is included among the twenty-one points of the Swatantra Party. Addressing a recent public meeting in Madras, Rajaji pointed to the large number of children in the audience and said that it was these children that would have to repay the crores of rupees the Government were now borrowing for the Five Year Plans. Of course, he does not believe that the plans will help in any way to improve the economic status of the country or its capacity to repay the loans. On the contrary. He is convinced that the plans will only serve to impoverish the country by accelerating the working of Parkinson's law.

Those who are concerned with industrial development in the private sector cannot, of course, afford to take up the fundamentalist attitude which comes naturally to Rajaji. But many among the thoughtful leaders of industry are getting worried over the mounting obligations. For some time, spokesmen of private industry have been plugging the theme that foreign aid will be most fruitful and least onerous in respect of the attendant obligations, if it comes in the shape of equity capital for the establishment of joint enterprises. Such participation obviously involves no obligation for repayment of principal or interest. The question of transfer payments will arise only after the industry starts making profits thus adding to the economic strength of the country. The case for making conditions sufficiently attractive for foreign investment has been put forward with energy and persistence by the spokesmen of the private sector.

Steel in the Third Plan

The very brief reports of Sir Jehangir Ghandy's speech on "Steel in the Third Plan" at the Delhi Rotary Club convey a rather distorted impression. The reports would suggest the existence of fundamental divergence of views between Sir Jehangir and the experts of the Planning Commission regarding the future programme for expansion of the Steel Industry. This would, indeed, have been a matter of grave concern if such basic differences really existed between India's most experienced steel man and those drawing up the programme for the steel industry in the Third Plan. A perusal of the full text of the speech, however would show that such an impression is thoroughly misleading. What Sir Jehangir has done in his lucid address is to emphasise certain basic considerations that should govern future policy. The points he has made will be accepted by any competent person who has devoted thought to the subject and are bound to be taken into account by any planning authority worth the name.

There are differences among the agencies that have undertaken to assess the demand for steel in 1965-66. This is not surprising for, quite apart from the inherent difficulty of projecting demand trends during a period of intensive development, there is no reliable method of assessing even the current demand, as supplies are severely rationed. Nobody can be certain about the level of demand if supplies of iron and steel become freely available and this leads in turn to a building boom with all that it implies. In these circumstances, there is no reason for worry over the disparity in the different estimates of steel consumption, especially when the differences between Government estimate and that made by the National Council of Applied Economic Research is only about 1.5 million tons of ingot steel or a difference of one million tons in terms of the targets for finished steel.

Both estimates assume a sharp increase in consumption over the present level of 3.5 million tons. India has been short of steel for the last twenty years so that supplies had to be restricted to priority requirements. The need for control over distribution is likely to persist even if the higher of the two estimates is adopted. In the circumstances, the targets of production will be determined less by estimates of consumption under the operation of controls, than by the availability of resources in money, material and personnel.

The difficulties experienced during the last five years, which were the result of a serious underestimate of steel required for tasks of essential development, have made the Goverment anxious not to be caught napping a second time. In this context, Sir Jehangir has done well to emphasise that development of the steel fabricating industries should keep in step with the expansion of steel production. The prospects of steel exports are not very encouraging and in any case it will be far more profitable to export manufactured articles than steel as raw material.

The need for stepping up the targets for production of tool and alloy steels and the economies in investment that can be achieved through expansion of existing plants for the attainment of overall targets are other important points made in the address. And Government cannot turn down the plea for fixing retention prices at adequate levels when the Congress Planning body lists the profits of public enterprises among the resources for development under the Third Plan.

Role of DLF

The exponents of the case for joint enterprises can derive encouragement from what Mr Vance Brand, new head of the US Development Loan Fund, told the Far East-American Council meeting in New York a fortnight ago. Mr Brand explained the role he envisaged for the DLF in enlisting the participation of American private enterprise in helping to stimulate economic growth in foreign countries. The DLF was set up in 1957 with an initial capital of $300 million, later raised to $700 million, to work in areas not reached by institutions like the World Bank or the American Export-Import Bank. Unlike these organisations, it will accept repayment in local currencies and is prepared to make loans to private firms without Government guarantee. The DLF has extended credit to India totalling $175 million, mostly for development of railways, irrigation and power projects in the public sector.

The DLF has of late been running into trouble with the Congress over getting the appropriations necessary to carry on its operations. Last March, the House of Representatives rejected President Eisenhower's request for $225 million for the DLF and voted to provide just $100 million. The DLF can assist the underdeveloped regions more effectively by enlisting the cooperation of private businessmen than by making loans to Governments out of its limited resources. Mr Brand said that he looked forward to "seeing the Development Loan Fund work hand in hand with representatives of American industry in exploring investment opportunities in the underdeveloped and developing parts of the world". The role of the DLF would be to underwrite the unusual risks involved in such investments so that private firms could go ahead with confidence in developing the investment opportunities that present themselves.

US Soil Bank

Viscount Bryce said in his book, "American Commonwealth": "America has the glorious privilege of youth, the privilege of committing sins and not suffering for them". The problem in the United States today is to control production rather than to maximise it, particularly in agriculture. Under the Agricultural Adjustment Act, crop planning is going on rigorously. The acreage under wheat is limited to 55 million. The US Soil Bank makes a grant of $12.40 per acre of land certificated as idle, with the specific purpose of limiting agricultural production. Numerous farmers leave the worst lands fallow and get this grant, and also get $1.78 per bushel of wheat grown on the rest of their lands. Many cultivators get $12.40 on idle land, and also benefit by unemployment allowances. The annual expenditure on Farm Price Support Programme is $7 billion, and the Farm Block in the Congress is expected to safeguard the interests of farmers. In other words, if only all available resources were utilised, the United States should have been able to produce much more and to export much more, but so far as the past is concerned, racial and political barriers came in the way. The present situation of controlling out-turn is directly due to high level mechanisation: 7.5 million persons on the land feed and clothe the 180 million population of the USA and also provide large quantities for export. If only international trade was free, US national income could have reached even the high level mark of $500 billion, at the same time relieving about a thousand million people in under-developed areas from hunger and disease. The American situation points to one moral: if the agricultural revolution should spread all over the world, production of food and agricultural raw material may well exceed human demands in spite of the standard of life rising all round, and the population increasing at an accelerating pace.

The Radcliffe Report and Private Finance

The Radcliffe Committee Report, although meant specifically for Britain, contains several suggestions which should be of value to Indian planners. That Committee has suggested the provision of term loans to industrial customers in the place of demand overdrafts as at present: it would be a change in form because demand overdrafts are usually extended. Term loans should strengthen industrial concerns in their commercial transactions. An Industrial Guarantee Corporation has been suggested in order to enable small concerns to commercialise technical innovations, the actual financing to be done by the usual Issue Houses, etc. No special facility has been recommended for the farmer. As it is, 11 per cent of bank credit is being used by farmers while they contribute only 4 per cent to the national output. The Committee observes that, in addition to commercial banks, farmers resort to hire-purchase companies, private merchants' credits and the Agricultural Mortgage Corporation. Here in India, extra-special credit facilities are being provided for cultivators through special channels. It is a matter for consideration as to how far the State Bank of India and its numerous branches can or cannot cover the credit needs of the intelligent cultivator: The ignorant raiyat cannot benefit by cheap and facile credit under any arrangement. The Radcliffe Report points out how the Midland Bank Twenty Year mortgage loans are popular in Britain. Another important recommendation is that a semi-public Export Finance Corporation should be organised with a view to stimulating exports, provided that the Export Credits Guarantee Corporation co-operates with it, and finance is made available for periods longer than 5 years.

India's External Balance

An Esteemed Correspondent writes:

There has been a chronic unfavourable balance of trade: during the 13 years ending March 1959, our imports were worth Rs 8,083.8 crore and our exports (including re-exports) were of the order of Rs 6,984.2 crores, leaving at a collective deficit of Rs 1,099.6 crores; but prartically every Minister has been trying to recognise improvement here and there year after year, when there was no actual improvement on the whole. The trade deficit, during the 6 months ending June 1959, was Rs 180 crores while the corresponding figure was Rs 128 crores in 1958; and yet, Mr Lal Bahadur Shastri is gratified that exports of engineering goods, etc., rose to Rs 157 crores compared to Rs 130 crores (1958) and Rs 154 crores (1957). Out of this, Rs 36 lakhs worth was imported by the USA. Is this jubilation justified? Rs 36 lakhs transaction counts nowhere in international trade. Surely, this cannot be accepted as a harbinger of engineering goods exports worth hundreds of crores in the future. For one thing, local demand is so heavy that, for some years to come, our engineering goods need not hanker after foreign markets. For another, it would be quite unreasonable for India really to compete with the USA, the USSR or Britain in international markets for engineering goods. Our big exports are tea, cotton, cloth, jute products and manganese, but in the case of all these goods, exports are either stationary or going down. All that the Minister for Commerce and Industries could say was: "We are considering tax relief here, supply of subsidised fertilizers there, concessional railway freights elsewhere, etc." Exports of cotton cloth are expected to go up from 617 million yards (1958) to 750 million yards (1959), but this is still below the target of 800 million yards. The State Trading Corporation was responsible for handling 54 commodities, and Rs 20.8 crores exports up to the end of June, 1958, but this did not help much to improve our trade balance position. Manganese exports went down by 50 per cent and it is proposed, therefore, to encourage the private sector in this field. This kind of zig-zag as between the public and the private sector has been responsible for our export trade languishing. We have our Import and Export Advisory Councils, the Export Risks Insurance Corporation, Export Promotion Directorates and all such paraphernalia, but the bus is not moving forward. What is wanted is a declaration of basic policy evolved on the principles of absolute and comparative costs in international trade: the import of 3½ million tons of wheat per annum without a sense of humiliation, and rejoicing at Rs 36 lakhs worth of engineering goods exports to the USA, are indeed very difficult to reconcile. With minimum controls at key points, the forces of demand and supply should be allowed to operate, and the Indian balance of trade is bound to become favourable in the near future. Further, the balance of trade is but a segment of balance of payments, and the position of the former is immaterial so long as the latter shows a favourable position. What is more, in a democratic set up, individual initiative is mainly responsible for transactions, and consequently the flow-out cannot be expected to maintain any equilibrium even in the long run, and to cut out transactions in separate calender years and draw inferences would be most irrational. Transactions are generally under capital and current account, and mixing up both would be fallacious.

*

The West German Boom

On March 31, 1959, gold and dollar holdings of Federal Republican Germany stood at $4,063 million, larger than the reserve of any other country except the USA. During the current year, industrial orders from abroad are 24 per cent higher than in the previous year. Exports are 8 per cent higher (40,000 million marks) than last year and imports are 9 per cent higher. The Gross National Product is estimated to be 6 per cent higher. The strong gold and dollar reserve has been maintained in spite of heavy capital exports on deferred payment, heavier expenditure by German tourists abroad, and still heavier purchases of foreign shares. Here and there, there are signs of over production; 20 million tons of coal are laying at pitheads. But unemployment is extraordinarily low at 200,000 (consisting of the too old and the too sick) against 20 million employed. Rather, the problem is how to find the extra labour required for fast expanding production. The two possible alternatives are rationalisation and additional shifts. Labour Unions do not like the former process. Labour is demanding a 40 hour week, but, however much the authorities might like it, it may not be practicable in view of higher production targets.

Surplus in India's Foreign Trade During August

A surplus was recorded in India's foreign trade during August, after nearly a year.

Provisional figures released by the Department of Commercial Intelligence and Statistics show that exports, including re-exports, of merchandise and gold during the month exceeded imports by Rs 12 lakhs.

During the corresponding period last year, India has a deficit of Rs 6.02 crores.

Exports of merchandise during August this year went up to Rs 58.26 crores from Rs 48.77 crores in August 1958. Imports too rose to Rs 58.37 crores from Rs 55.92 crores.

The previous favourable balance was registered in September 1958 when exports and re-exports had exceeded imports by Rs 15 lakhs.

WORLD OF FINANCE

Gold for the IMF: Purchase Completed

NOW that the purchase of the gold for making over to the International Monetary Fund has been completed, a fresh assessment of the foreign exchange position of this country may be made. As a direct result of the enlargement of India's quota to $ 600 million, we may state at the outset that the size of the nest egg on which we may draw has been made correspondingly larger. At the present time, we have already purchased $ 200 million of currencies from the International Monetary Fund. The normal time within which repurchase is expected by the IMF to be made is three to five years. This will mean that, normally, the re-purchase of rupees from the IMF is a transaction that India should complete between 1960 and 1962. We are not sure whether this element of Rs 95 crores has been included by Government in their assessment of maturing foreign exchange liabilities during the Third Plan period. Our own view is that, as soon as possible, India should complete this transaction, and the intention should be to "raid" the IMF in more handsome fashion during the Third Plan, perhaps toward the end of it.

Meantime, the balance of payments has indeed turned favourable to India in recent weeks. As from the last Friday in March this year, the net decline in the foreign exchange holdings of the Reserve Bank has amounted to barely Rs 27 crores. And this, it may be borne in mind, includes Rs 25 crores utilised in the purchase of gold for fulfilling India's obligation arising from the enlargement of the quota with the IMF. This means that the actual decline in foreign exchange reserves, were it not for this special transaction, has amounted to a bare Rs 2 crores. What is significant is that it is particularly in the five weeks during which foreign exchange reserves were drawn upon to purchase the gold that exports have been making a brave showing. Even after accounting for this Rs 25 crores, foreign exchange reserves, over the past five weeks, have declined by only Rs 1 crore. Thus, the surplus of foreign exchange receipts over expenditures has been at a weekly average of Rs 5 crores. Regard must be had, naturally, for foreign assistance having contributed to the recording of such surplus in receipts. Nevertheless, it is clear, as a recent press communique indicated, that the balance of trade is itself resulting in a surplus. The figures for August 1959 vouchsafed a small surplus in the balance of trade, and it seems certain that the size of the surplus will be larger still in September. It is during the next six months that exports will continue at a high rate. Therefore, there seems to be a reasonable chance of, if not considerable, at least significant addition to foreign exchange reserves over this period. For our part, though perhaps it is foolhardy to make a prediction about such matters, we shall not be surprised if, by March next year, our foreign exchange reserves rise by Rs 50 crores.

If we are fortunate enough to experience such augmentation of foreign exchange reserves, we suggest that India should immediately plan upon the first tranche of re-purchase of rupees from the IMF. The peak year in regard to maturing foreign exchange obligations is 1962. Hence, if the way is to be cleared for further recourse to IMF assistance during the Third Plan, the monetary authorities in this country should seriously consider whether it will not be feasible, desirable and expedient for the re-purchase operations relating to the 200 million dollar transaction of 1957 to be completed by the fiscal year 1960-61.

The improved exports situation is, it is apparent, not a little due to the better performance of cotton textiles in export markets. This is a fact which must be said to be both encouraging and discouraging. It is encouraging because the export demand for Indian textiles, which had lagged during precisely that period when internal demand in India was also not picking up, can now be seen to have revived. But it is discouraging because the failure on the cotton textile export front appears immediately to affect rather adversely the Indian balance of payments. There are two lessons to be drawn from such situation. Firstly, the cotton textile industry must seize this opportunity to woo the affections of our foreign customers. Standards have to be scrupulously honoured, delivery dates must be meticulously kept. Secondly, an all out effort on the export front is necessary so that this overweening dependence on cotton textiles to bring about balance in payments is reduced, if not altogether eliminated.

Meantime, there is another development which has its significance for the Indian foreign exchange situation. This relates to the reported condition being imposed on all new assistance from the Development Loan Fund, that the loans are utilisable only in the purchase of American goods and services. There cannot be any objection to such a nationalistic policy being adopted by America, especially when it is realised that that country has had considerable depletion in its gold reserves consequent both on a high rate of imports as well as a high level of foreign assistance. But the fact remains that, for India, utilisation of DLF assistance will mean, in many cases, an increase in the costs to the exent of 20 per cent.

Nevertheless, much thought must be paid to drawing up a foreign exchange plan in respect of the Third Plan; and it is not too early to start at the present moment. One estimate of foreign exchange requirements, including maturing liabilities, puts our need during the Third Plan at Rs 2,500 crores. As Eavesdropper argued in last week's Clive Street Gossip, inescapably, part of this Rs 2,500 crores must be found by this country's own attempts. With the recent experience in exports, there is no reason why an export surplus cannot be planned. The other suggestion that was advanced was that gold bearer bonds must be issued. Even then, however, the considerable problem will remain of securing over Rs 1,500 crores. Undoubtedly, the World Bank will be good for something like Rs 300 crores; and another Rs 200 crores must be available from the IMF if, at the time of our securing that assistance, the re-purchase transaction relating to $ 200 million purchased in 1957 is completed. And, in such a situation, we would need assistance from friendly foreign countries as to Rs 1,000 crores.

+

Governmental Transactions

WHILE confirmation is now available that the transactions relating to the two re-issues of the Central Government for Rs 45 crores were completed and consolidated in the Reserve Bank return for October 9, one of our anticipations, our expectation that Scheduled Banks' Investments would show a rise during the relevant week, has been belied.

Outstandings of Treasury Bills as at October 9 marked a sharp decline of Rs 53 crores to Rs 1274 crores. This is mainly consequent upon the cancellation of ad hoc Treasury Bills by Government as to an element of Rs 45 crores against receipts from the Reserve Bank relating to the sale in favour of the central banking institution of the two new re-issues for Rs 45 crores. Also, as anticipated, during the week ended October 16, although it is during this period that the final tranche of gold purchase was made by the Central Government, Balances Held Abroad have shown a heartening rise of nearly Rs 8 crores. Again, it has been borne out that constituents made their month early and Puja disbursements, during the week ended October 9, by a combination of drawing down on their Deposits and resorting to larger bank credit.

The returns of the Reserve Bank for October 16 are noteworthy for the impress they bear of intergovernmental transactions, relating presumably to the monthly instalments against loans and grants, wherefor the Central Government have been compelled to have recourse to deficit financing on a very considerable scale. Meantime, with the temporary demand occasioned by Puja disbursements satisfied, the slack season continued.

In the week review, Notes in circulation contracted by Rs 5.47 crores to Rs 1681.06 crores. There was a return from circulation of Rupee Coin for Rs 0.53 crores and, in the result, the Reserve Bank's cash in the till rose by Rs 6.12 crores to Rs 16.60 crores.

In the Banking Department, Investments have been marked up by Rs 28.59 crores to Rs 246.72 crores. This, of course, would relate to deficit financing incurred by the Central Government. Such recourse to created money became necessary because of the obligation of the Central Government toward the State Governments. The Central Government's Balances have been denuded by Rs 3.10 crores to Rs 53.01 crores. Deposits of State Governments have risen smartly by Rs 23.66 crores to Rs 29.93 crores; and, the State Governments have besides been able to reduce their Ways and Means borrowings from the Reserve Bank by Rs 6.56 crores to Rs 18.24 crores. Thus, the measure of deficit financing during the week may be around Rs 30 crores.

The Reserve Balances of member banks also have recovered from the low level to which they fell in the wake of Puja disbursements, in rising by Rs 13.84 crores to Rs 81.00 crores; and, of this, Rs 10 crores is traceable to the State Bank. At the same time, the Scheduled Banks, which, in feeling the strain of Puja disbursements, had taken large scale central banking credit, have been able in the week under review to liquidate the bulk of such fresh borrowings. The Other Loans and Advances of the Reserve Bank have been marked down by Rs 5.12 crores to Rs 80.87 crores.

The Reserve Bank's portfolio of Treasury Bills purchased and discounted has risen for the third week in succession, in being marked up by Rs 6.38 crores to Rs 43.84 crores. This rise is very likely linked with the disinvestment in giltedged during the relevant week by the State Bank for Rs 4.56 crores.

Finally, as already noted, Balances Held Abroad, which, in the weeks during which gold has been purchased by the Central Government for being made over to the International Monetary Fund, had shown successive declines, have risen heartenings by Rs 7.97 crores to Rs 22.17 crores. While the possibility of external assistance contributing to this rise in Foreign Balances is not to be ruled out, there is nevertheless every reason to believe that the accretions, at least in part, represent an export surplus being experienced. The gold transaction was commenced by Government during the week ended September 18, and completed during the week ended October 16. In broad figures, the amount involved in the purchase of gold was Rs 25 crores. As between September 11 and October 16, the Foreign Securities held by the Reserve Bank in both departments show a nominal decline of Rs 1.08 crores. It, therefore, follows that the combination of export surplus and external assistance contributed Rs 24 crores to India's foreign exchange holdings over this five-week period. This is a very heartening sign indeed, if, as we hope it is, it is indicative of Indian exports finally, and consistently, exceeding imports which have not been covered by external assistance.

+

The return of the State Bank for October 16 shows that there has again been disinvestment in gilt-edged for Rs 4.56 crores, the portfolio now being placed at Rs 377.55 crores. We suggest that such disinvestment may have comprised holdings of Treasury Bills. But what is also clear is that the State Bank has not, apparently, as yet made any purchases of the two re-issues lying with the Reserve Bank. Deposits have been marked up by Rs 3.54 crores to Rs 570.36 crores. With Advances declining nominally by Rs 0.12 crores to Rs 159.26 crores, the State Bank's cash in hand and with the Reserve Bank has increased by Rs 10 crores to Rs 28.52 crores.

The return of Scheduled Banks for October 9 reveals the full impact of Puja and beginning of the month disbursements. Constituents drew down on their balances considerably, as suggested by the decline of Rs 19.67 crores to Rs 1840.17 crores in Deposits. And the total of Advances rose by Rs 7.44 crores to Rs 935.68 crores. While both these were expected, the sharpness of the decline in Deposits is perhaps surprising. Also, unexpected is the fall of Rs 8.33 crores to Rs 781.99 crores in gilt-edged investments of the banking system. In any case, in the face of such heavy drawals on Deposits and rise in the demand for credit, Scheduled Banks increased their borrowings both from the State Bank and from the Reserve Bank, from the former by Rs 1.58 crores and from the latter by Rs 2.32 crores. In the result, Cash Balances, due wholly to the State Bank, fell by Rs 10.84 crores to Rs 158.40 crores.

+

We may now attempt a reconciliation of the Reserve Bank returns of last week, in the light of what is now known about the position of Scheduled Banks. It may be recalled that Rupee Securities held by the Reserve Bank in both departments declined by Rs 21.64 crores. We had reasoned that this probably related to sales through the tap, both to the State Bank and to other Scheduled Banks, as also to other institutional investors. It is now known that neither the State Bank nor the other Scheduled Banks purchased securities from the Reserve Bank in the relevant week. It is also reasonable to suggest that, of the rise of nearly Rs 33 crores in the Reserve Bank's portfolio of Treasury Bills purchased and discounted, fully Rs 8 crores might have been on account of Scheduled Banks. This means that the balance of roughly Rs 25 crores represents the re-discount of Treasury Bills by other entities. Then, we had suggested that the Central Government would have instituted reverse ad hoes for Rs 45 crores; but, in fact, the relevant figure is somewhat higher at Rs 53 crores. Therefore, we may now reason that an element of Rs 8 crores against the decline of Rs 21.64 crores in the Rupee Securities of the Reserve Bank would have been on account of further cancellation of ad hoes by the Central Government. Thus, it would be the balance of Rs 13 crores which would relate to tap sales of the Reserve Bank during the week under review. Obviously, it is the entities other than the Scheduled Banks which have gone in for such fresh investments. Presumably, this means that roughly Rs 13 crores of securities of the re-issues amounting to Rs 45 crores have been sold as at the week ended October 9. We wish to suggest that the steepness of the decline in Deposits of Scheduled Banks during that week may be due in part to drawing on Deposits by such other entities as might have purchased securities through the Reserve Bank tap. One final conclusion has now to be drawn. That is, that the Puja demand for funds prevented the Scheduled Banks from purchasing heavily in the two re-issues, as they might otherwise have done; and this also means that it may take another three or four weeks before the Reserve Bank succeeds in disposing of the whole of the Rs 45 crores representing the re-issues of the 3½ per cent 1969 and the 3½ per cent 1974.

+

Revived Popularity of Government Securities

By Paul Einzig

FOLLOWING on the unexpectedly favourable result of the general election the Stock Exchange turned erratic with sharp ups and downs alternating frequently. There appeared to have been an unexpected degree of overbought position in equities, and spells of profit-taking followed each rise. Each setback frightened many genuine investors into realising their holdings in spite of optimistic forecasts of the long-range trend.

The equities of firms with co-partnership schemes involving the allocation of equities to employees came particularly under the influence of selling pressure. This was largely due to the fact that on the London Stock Exchange the markings do not indicate whether the number of shares involved in the transactions, so that the sale of a number of small holdings by workers wanting to snatch a profit of a few pounds conveyed an entirely misleading impression about the extent of the realisation, and induced many larger holders to follow the trend. Nevertheless, by the end of the week profit-taking appears to have come to a halt and investment demand caused a resumption of the firm trend, largely as a result of an optimistic report by the Federation of British Industries.

After its initial firmness following on the election result sterling too suffered a setback. Both Stock Exchange and foreign exchange market had anticipated the Government's victory, and there was an overbought position in sterling, so that the election result was followed by some selling. After a setback equilibrium was reached at a fairly high level.

The economic information that became available during the week was also on the whole disappointing. Admittedly, the index of the cost of living for September showed continued stability with a slight downward trend. But the trade returns showed a widening of the deficit on visible trade, even though the balance continued to be favourable on trade with the United States. Above all shortage of steel is beginning to cause embarrassment in the motor car industry. Socialists are now making extensive use of the argument that, after all, denationalised steel industry has been unable to plan its production adequately. It is a piece of luck that the inadequacy of steel supplies was not known before polling day. Of course no planning on this side could have foreseen such a prolonged steel strike in the United States which is partly responsible for the shortage in sheet steel in some motor car works usually depending on the United States for their supply of steel.

The after-effects of the election result have been more favourable in the Gilt-edged market than most people had anticipated. There was a marked revival of interest in Government loans. Independently of the ups and downs in equities, the Gilt-edged market showed a steady rise, regardless of the anticipation of early legislation authorising trustees to invest trust funds in equities. As a result of such a change hundreds of millions of pounds will be switched from Government loans into shares. Although the optimistic report of the Federation of British Industries about the position in capital goods industries has stimulated demand for equities, it has failed to check the demand for Government loans.

Among the reasons for this temporary preference for Government loans the disappearance of the threat of "backdoor nationalisation" through the investment of public funds into equities by a Labour Government plays a prominent part. Apart from the direct effects of such a policy, it would have gone a long way towards discrediting Government loans in the eyes of investors. If a Government does not trust its own bonds it could not expect other people to trust them. As a result of the Conservative victory, there is now no need to expect a switching of public funds into equities. This consideration has more than offset the anticipation of the switching of trustee funds.

But the most important consideration in favour of Government loans is the sharp decline in the yield on equities. The difference between their yield and that of Government loans is now about one per cent. The yield on first-class industries is now considered too low by many investors who have to live on their investment incomes. Recent financial troubles have deterred investors from risking investment in second-rate equities for the sake of higher yield. The alternative is to invest in high-yielding irredeemable Government loans.

The election result has gone some way towards strengthening confidence in the internal stability of sterling. There can be no doubt that a Socialist victory would have been followed by an acute wave of distrust in all fixed interest-bearing securities, because of the anticipation of inflation resulting from the implementation of various election pledges. That danger to the pound is now removed. The stability of the cost of living index for something like years has made many people waver in their hitherto firm conviction about the inevitability of perpetual creeping inflation. Having regard to the increase in the output by 8 per cent during the last 12 months, even the prospects of another round of wage increases are not viewed with undue pessimism, for it is hoped that the increased supplies of consumer goods would more or less offset the increases in consumer demand.

The possibility of a lower Bank rate resulting from the anticipated increase in the gold reserve constitutes another strong bull point for Government loans. At the same time, their rise will stimulate a further rise in equities, once the differential between the two sections has become less abnormally wide. In any case, the long-delayed expansion in capital expenditure is expected to reinforce powerfully the demand for equities.

To remove all doubts about prospects, all that is needed is the announcement of some substantial dividend increases. Political pressure to keep dividends down no longer operates, and many boards of directors will be inclined to treat shareholders more generously, in order to discourage take-over bids stimulated by large accumulated reserves. In spite of the switching of some funds into Government loans there is a good scope for continued rise in industrial shares.

WORLD OF JUTE

Impressive rise in US Burlap Consumption

The jute goods market has been ruling dull during the past few days despite encouraging news in the shape of a sizable rise in US burlap consumption during September. Presumably, the good tidings have generally been considered to have lost much of their value in the face of the severe setback caused to market sentiment by the receding hopes of an early end to the US Steel strike. It may be recalled that this time last week it was confidently expected that the steel strike would be called off in a week's time.

There is, however, no gainsaying the fact that the outlook for hessian continues to be good. Once the temporary obstacle of the steel strike is removed—energetic steps to end the strike at an early date are bound to be taken—the anticipated pick-up in buying will ensue. Figures for burlap consumption in the US during last month have further strengthened such a hope. Burlap consumption in September totalled 79.9 million yards. against 64.5 million yards in August and 75.7 million yards in September 1958. There has been an increase of 15.4 million yards in consumption in September over the previous month. September consumption has also been 4.2 million yards higher than in the corresponding month of the previous year. It will be seen that burlap consumption in US this year is well above that in 1958. Consumption for the first nine months of 1959 was 51 million yards higher at 668 million yards than during the corresponding period of last year when consumption totalled 617 million yards.

Another encouraging feature is the continued decline in burlap stocks. US end-September stocks totalled 254 million yards, comprising 153.7 million spot stocks and 100.3 million afloat, as against end-August total of 255 million yards comprising 162 million yards spot and 93 million yards afloat. But as compared with September 1958, stocks are high, for, at the end of that month, stocks totalled 222 million yards comprising 130 million yards spot and 92 million yards afloat.

As for the outlook for sacking in coming months, some apprehensions have arisen regarding the stock position from end-October onward. The main argument seems to be that demand is unlikely to be of such dimensions as to allow the downward trend in stocks of sackings to be maintained for long. For one thing, the Chinese offtake, which had made a big difference to the statistical position of heavy goods in the past few months, for all practical purposes has dried up. Australian offtake has also been at a disappointing level and indications are that our sacking goods are not making much headway in African markets in the face of competition from Pakistan.

The jute goods market opened last Thursday on an easy note especially round sacking and continued, throughout the week under review, rather listless. The hessian section was, however, initially steady on announcement of the figures of burlap consumption in the US during September; but, in later dealings, developed a sagging tendency following disappointment caused by prolongation of the Steel strike contrary to earlier expectations. Very little business had been reported during the past week in both hessian and sacking. In the absence of fresh enquiries sentiment was mainly influenced by the futures market. On last Thursday, B Twills met with heavy selling pressure and the quotation for October delivery was pushed to Rs 102.15. Hessian 40"×10oz however, was well maintained and closed at Rs 40.85. Reopening on Monday after the holidays, the market continued to follow the futures section. B Twills moved widely both ways due to speculative manipulations to be finally placed at Rs 102.35. Hessian again displayed a steady trend to close at Rs 40.90. The undertone was easier on Tuesday due to heavy selling pressure in hessian following adverse news about the steel strike in US. In the absence of fresh business, both sections closed on an easy note. B Twills October reached to Rs 102.25 while Hessian 40"×10 oz was finally placed at Rs 40.65. The reactionary tendency gathered further momentum on Wednesday in sympathy with the futures section with B Twills October pushed down to Rs 102.15 and Hessian 40"×10 oz October to Rs 40.50.

In the futures market, Hessian 40"×10 oz November opened on Monday at Rs 41.04 and, after moving within a narrow groove, closed the day at Rs 40.96. The opening on the next day was higher at Rs 41.06 but, by close, sentiment was depressed and the rate was finally placed at Rs 40.76 after touching a high of Rs 41.08 and a low of Rs 40.70. The opening on Wednesday was further easier at Rs 40.72. The higher levels could not be maintained as the general trend was toward lower prices. The closing quotation was lower on balance at Rs 40.60. B Twills November opened on Monday at Rs 101.60 but by close of transactions of the day was easier at Rs 101.25. Though the opening on Tuesday was higher at Rs 101.50, the undertone turned easier in later dealings to push down the quotation by close to Rs 101.20. Fluctuations were within a narrow groove on Wednesday and B Twills November closed the day at Rs 101.10.

The raw jute market has ruled steady during the past week with Assam Bottoms Oct-Dec well maintained at Rs 23.50 per maund. During the week, only small mill business was reported done, but as the week progressed some slight improvement in offtake was noticeable. It would appear that, even though no shortage of raw material is expected despite reports of damage to the crop due to this year's disastrous monsoon, there is a growing apprehension that quality might have suffered a setback due to the excessive rains.

WORLD OF TEA

Outlook for North Indian Tea

STRONG demand was in evidence at the export sale in Calcutta which was held on Monday after an interval of two weeks. The interruption was due to the Puja holidays. The extended interval between the last two auctions had been partly responsible for the active interest noticed on Monday. But it would appear that demand would have been strong anyway in view of the shortage in supplies of North Indian tea in London.

Indications are that auction results in Calcutta are likely to be satisfactory in the coming weeks also. For, the slack season which usually commences in September appears to have been indefinitely postponed this year. The optimistic outlook for North Indian tea also stems from its satisfactory statistical position. Messrs J. Thomas & Co have this to say in their latest monthly review: "As compared with the previous season, nearly 7 million lbs more have been disposed of in the Calcutta export sale to the end of September, which just about offset the uptodate increase in the North Indian crop figure. The shipments to the UK also showed an increase since the commencement of the season of some 13 million lbs over 1958." In the London Auction, as much as 1,150,672 chests of Northern Indian tea have been disposed of during January-September 1959 as compared with 831,332 chests in the corresponding period of last year.

At this week's export sale in Calcutta, offerings totalled 69,769 packages. Plain Brokens met with a strong general demand. An irregular trend prevailed in fannings in earlier dealings but the close was steady. Better Medium BPs were in request but Medium BOPs were easier. Better liquoring CTC teas advanced in price. While Medium sorts were about steady, lower mediums and secondary grades were dearer. Non wither leggcut Dooars, though a little irregular, fetched higher levels as compared with previous valuations. Although whole Leaf grades and Darjeelings were well absorbed, prices showed little improvement. Quotations: Clean Black Pekoes Rs 1.98 to Rs 2.02; Plain BP Rs 1.88 to Rs 1.92; Plain Fannings Rs 2.06 to 2.16; Medium BP Rs 1.94 to Rs 2.08; Medium Fannings Rs 2.16 to Rs 2.28; Best Assam CTC. BP Rs 2.60 to Rs 2.90; Best Assam CTC Fannings Rs 2.80 to Rs 3.20.

At this week's internal tea sales in Calcutta, offerings totalled 23,235 chests and there was a good general demand. While orthodox descriptions were at times 2 nP easier, Leggcut teas displayed a firm trend and sold at times at enhanced rates. An irregular tendency was noticeable in Darjeeling dusts. Although the price trend was irregular in Medium CTC, a broadening demand was in evidence for this type of tea. The interest was particularly strong for exportable grainy kinds. Satisfactory prices were obtained for the very best teas in this category. Quotations: Medium Dooars Dust Rs 1.94 to Rs 1.98; Medium Assam Dust Rs 1.90 to Rs 1.92; Medium Assam CTC Dust Rs 2.00 to Rs 2.15; Best Assam CTC Dust Rs 2.50 to Rs 2.70.

At last week's export sale in Cochin, about 13.5 lakh lbs were catalogued. The general trend was quiet with prices showing a declining trend. Nilgiri Brokens were done irregularly lower while their Fannings were lower upto 25 nP. Good Medium Brokens were easier from 5 to 10 nP. Similar Fannings met with some support but only at lower levels. Medium and Low Medium Brokens with quality met with support while Fannings in these categories eased from 5 to 10 nP. Plain sorts displayed generally a downward tendency. Black Leaf Brokens were barely steady but Middle East type Fannings sold at around previous rates. An irregular trend prevailed in whole Leaf grades. CTC and Legg-cut teas were marked slightly lower.

At last Thursday's internal sale in Cochin, a total of about 4.5 lakh lbs was on offer. There was a good general demand but prices were irregular. Mediums and Travancore met with strong demand at slightly higher rates than previous valuations. While dusts from Wynaad were often easier despite fair enquiry, milled and residual kinds fetched enhanced rates.

FOREIGN NOTES

Current Trends in East-West Trade

THE value of western European imports from the Soviet Union rose by about 20 per cent in the first half of 1959. The value of imports from eastern Europe also increased. At the same time exports from western Europe to the Soviet Union were lower than in the previous year and to eastern Europe were unchanged. A 5 per cent fall in the average export prices of western European countries in trade with the eastern European area offset the gain in their volume. These facts are revealed in a review of east-west trade in Europe contained in the latest Economic Bulletin for Europe, issued by the Secretariat of the United Nations Economic Commission for Europe (ECE).

Also discussed are Europe's trade with primary producing areas and recent developments in western Europe's trade and policies.

In general, says the report,* price movements in east-west European trade closely corresponded to those experienced in western European trade with other regions. The commodity composition of eastern European and Soviet exports to western Europe rendered them specially vulnerable to the keener price competition which accompanied the return of the buyers' market in 1958. On the other hand, during the year there was a certain shift in western European import demand from North American to eastern European and Soviet sources of supply. The rapid decline in maritime freight rates in the course of 1957 had largely benefited overseas suppliers: in 1958, freight rates remained low, but gave no additional advantage to overseas exporters and the eastern European countries, which had been slow to adjust prices in 1957 in line with the import prices quoted by overseas suppliers to western Europe, had made such changes by 1958. These price adjustments were probably influenced by the increased availability of exportable supplies in eastern Europe in 1958, making possible an expansion of sales to western Europe.

The drop which occurred in western European exports to the Soviet Union in 1958—and also in Soviet imports from western Europe, was the first since 1950. Czechoslovakia was the only other country to register a decline in the value of exports to western Europe. All other countries of the region increased their exports. Eastern German exports to Turkey and Yugoslavia (the latter largely on credit terms) rose steadily while Poland increased its total value of exports to western Europe by over 10 per cent in 1958, despite a $30 million decline in coal exports. Hungary, Romania and Bulgaria all sold larger quantities of foodstuffs to western Europe during the year; the former two countries also increased exports of steel. The major part of the increase in total eastern European exports of foodstuffs to western Europe in 1958 went to the United Kingdom and western Germany.

Trade of Western Europe with Eastern Europe and the Soviet Union

The tendency during the past few years for the share of east-west trade in the total trade of western European countries to rise persisted in 1958, notes the Bulletin. During 1958 the important place in east-west European trade of Finland and Yugoslavia was further consolidated, particularly in imports, and in spite of the cancellation of unused Soviet credits. In the first half of 1959, however, Yugoslav imports from eastern Europe fell sharply, having almost doubled in 1958. There was also a contraction in Finnish trade with the area in consequence largely of Finland's liberalization of trade with the OEEC countries, and of the cancellation of the triangular payments agreement with eastern European countries and the Soviet Union. Most of the "fringe" countries still outside the European trading groups of the European Common Market and the Free Trade Association continue to maintain a high level of trade with eastern Europe and the Soviet Union partly as a result of their weak trading position in western markets.

Of the prospective FTA countries, only Denmark and Portugal increased the value of their trade with the eastern European region in 1958. There was a substantial reduction (confined to the Soviet Union) in British exports to the area—but an increasing flow of Soviet orders to British engineering firms was reported prior to the signature of the Anglo-Soviet trade agreement in May 1959.

France and western Germany, of the EEC countries, increased the value of their trade with eastern Europe and the Soviet Union in 1958 and account for two-thirds of total Common Market trade with the area. The rapid growth of western German exports of steel, machinery and chemicals was accompanied by a rise in imports of foodstuffs and crude materials. The increase in French imports from the Soviet Union in 1958 (amounting to $30 million), the Secretariat observes, was the only really substantial expansion of imports from the Soviet Union recorded by any western European country during the year. So far the Soviet trade drive has by-passed Italy, but Italian engineering firms have recently started to explore the Soviet market increasnig vigour.

The Commodity Pattern of East-West European Trade

The most significant changes which, according to the report, took place between 1957 and 1958 in the commodity composition of east-west European trade were the following. The share of foodstuffs, beverages and tobacco in total eastern European and Soviet exports to western Europe rose from 18 per cent to 22 per cent; while the share of fuels and raw materials fell appreciably, from 61 per cent to 55 per cent. Both regions slightly increased the share of manufactures in their reciprocal sales (from 19 per cent to 20 per cent of eastern European and Soviet exports, and from 42 per cent to 44 per cent of western European exports). Allowing, however, for the comparative stability of the prices of manufactures, the composition of trade in quantitative terms may well have remained virtually unchanged.

East-west European trade in foodstuffs underwent only minor changes in composition in 1958. Eastern European exports rose in value from $300 million to $404 million and consisted mainly of animal products and sugar; the area's imports of the latter dwindled to negligible proportions. East-west trade in cereals and other foods continued to be small.

Soviet imports of fruit and tobacco from the southern European countries rose sharply from 1957 to 1958; but judged against the prospects of a large and growing Soviet market there is still great scope for further expansion. However, many products in this group are still treated as "luxury" consumption in the Soviet Union, and the greater part of the restricted import market is reserved for countries within the eastern trading region. Obviously, the Soviet Union and the other eastern European countries are a potential market of the highest importance to producers of fruits, coffee, cocoa, etc., but the realization of these possibilities will require changes in Soviet import policies, states the report.

Eastern European and Soviet exports were higher in volume in 1958 than in 1957, and consisted mainly of the following (in decreasing order of importance): coal, petroleum round and sawn soft-wood, base metals and crude minerals. Western Europe's exports were roughly maintained. Polish coal shipments benefited from the shift in demand from American coal and Soviet coal exports are now almost one-half as large as those of Poland. Though Polish production costs are relatively low, growing eastern European demand will continue to limit the available surplus of coking coals. Soviet coal exports have been increasing as a result of rising output of coal combined with higher output —and domestic use of fuel oil. However, the rate of coal output is lagging behind the rate of Soviet industrial growth, and higher production costs in the Donbas may limit the rate of expansion of output in that area in favour of more rapid exploitation of Asian deposits—which would hardly compete economically on west European markets in view of the transport costs involved. In any event, says the Bulletin, the outlook for east-west trade in coal is uncertain and will depend mainly on production and import policies in western Europe.

Attention is drawn to the increase in Soviet exports of crude oil to western Europe, from 1.1 million tons in 1957, to 1.6 million tons in 1958 (though it was confined to Italy, where no problem of marketing by international refinery companies arose). A further expansion of oil exports seems likely in the future.

During the year the Soviet Union continued to preserve a cautious policy in marketing timber in western Europe and is making slow progress towards regaining its former share of the western European market for sawn soft-wood.

Eastern European and Soviet exports of tin (apparently originating to a large extent in mainland China) increased appreciably in 1958 both in value and volume—amounting to 19,000 tons or 30 per cent of total western European imports in 1958.

The increase in eastern European and Soviet iron and steel shipments to western Europe flowed to only a small number of countries and consisted chiefly of heavier products, such as pig iron, cast-iron tubes, etc. Since western European exports include also the lighter varieties, such as tinplate, there is a certain division of labour between the two regions.

In 1958 western European exports of machinery to eastern Europe and the Soviet Union rose in value by one-fourth, but there was only a modest increase in imports in this category from the eastern European area. East-west trade in manufactured consumers' goods remained relatively small during the year, and eastern European and Soviet exports met keener competition in western European markets. In the chemicals sector, the value of western European exports was unchanged in 1958, but eastern European exports of basic chemicals and fertilizers rose by about 25 per cent in value and probably even more in volume. The most noteworthy development in road vehicles was the virtual cessation of Finnish imports from eastern sources in 1958, following liberalization.

Future Prospects:

The review of east-west European trade continues with an analysis of the implications of the movement towards economic integration within each area and points out that in the main geographical considerations appear to matter most in determining the importance of east-west trade for any given western European country. Thus, this trade is of greater importance for the countries bordering the eastern European area (Finland, Austria, Yugoslavia, Greece and Turkey) than for the others—Iceland being an exception.

In conclusion, the Secretariat points out that the rapid pace of Soviet economic development has created opportunities for a worthwhile increase in its east-west trade. The Soviet Union, it says, could reap appreciable benefits from an expansion of its imports from the industrial countries of western Europe and North America, at the same time raising exports to and imports from the overseas primary producers.

*"Economic Bulletin for Europe", Vol. XI, No. 2 prepared by the Research and Planning Division of the United Nations Economic Commission for Europe; Geneva, 1959. Approximately 80 pages including 18 tables and 1 chart. English edition available now, French and Russian editions will follow shortly. Available from Sales Section, European Office of the United Nations, Geneva, or may be ordered through Sales Agents for U. N. Publications. Price $0.50; 3/9 stg; 2 Sw.fr. or equivalent in local currencies.

"Tekhnoexport" and India

By IVAN CHERNYSHEV
Vice-Chairman of "Tekhnoexport".

Export and import operations in the Soviet Union are effected through a number of foreign trade organizations. "Tekhnoexport", one of those, exports Soviet machines and equipment to other lands.

The "Tekhnoexport" sends to India chiefly equipment for oil-prospecting. Among the things it has exported to India are self-propelled seismic stations mounted on special automobiles, automatic electrical coring and gas coring stations, hoists of various types, and also different geophysical instruments. At present there are four drilling machines of the URB-UPM type now working in India for structural drilling, 12 light self-propelled drilling machines, the URB-2A, for the drilling of wells during seismic prospecting, and three heavy drilling machines of the 'Uralmash 3D' type. The organization has begun sending to India 'Uralmash 5D' drilling machines for deep drilling (3,000 m.), made by the Urals Heavy Machinery Plant, and also a large number of other machines and mechanisms.

Soviet Producers of Equipment Exported to India Through Tekhnoexport

Besides the Urals Heavy Machinery Plant, orders for the production of machines for India are placed with many other enterprises, such as the Moscow Plant, "Neftepribor" (Oil Instrument), the Mytishchi Engineering Works and the Urals Engineering Plant—all in all, with more than 100 enterprises which are located in various parts of the Soviet Union. It needs to be added that the orders were by no means ordinary ones. The tropics require special equipment, such as is capable of working under conditions of high temperatures and great humidity, which hasten the process of corrosion. Many Soviet plants and scientific research institutes are doing a great deal of work to create improved parts adapted to India's peculiar climatic conditions. The engineers of the plants where such equipment is produced designed these machines especially for the purpose. Weather-proof dielectric materials of glass fibre, silicon organic compounds and epoxide resins are used in their production. Special "climatic chambers" have been constructed in which these articles are tested to check up on their suitability. In these chambers tropical climate is artificially created. Last year a special scientific technical conference was held in Leningrad to discuss questions of corrosion and the means of protecting equipment delivered to countries with a tropical climate.

Who Operates the Machinery Sold Through "Tekhnoexport"?

In the period 1956-58 Soviet engineers in India trained 100 Indian drilling specialists; 12 Indian specialists received training in the USSR.

Today Indian specialists who have successfully mastered Soviet technique, do most of the prospecting work independently, with the advice of Soviet engineers. The only exception is the drilling of deep wells, which is done by Soviet and Indian specialists jointly.

The work that has been done shows that India has industrial deposits of oil and gas in Cambay and deposits of gas in the state of Punjab. Thus the assertion of many foreign experts that except for the state of Assam the territory of India holds forth no promise for the discovery of oil has been refuted.

Terms Governing the Sale of Soviet Equipment

Soviet equipment is sold in accordance with a trade agreement and on the basis of Soviet long-term credits which, as is known, have been extended to India at an annual interest rate of 2.5 per cent. The volume of Soviet deliveries to India keeps rising all the time. The 'Tekhnoexport' alone will deliver to India this year drilling and geophysical equipment whose value is more than three times of that sold in the previous two years, taken together.

Soviet experts have acquainted themselves with the state of India's chemical and pharmaceutical industry and have submitted proposals for the construction of industrial enterprises in India so that it can produce its own medicines.

Last May an agreement was concluded on co-operation in the construction of state enterprises for the production of medicines, medicinal preparations and surgical instruments in India. These agreements provide for the building of five antibiotics plants with a planned capacity of 300 tons a year. One of these will be a plant for the production of penicillin with a capacity of 85 tons a year, a streptomycin plant for 95 tons a year, plants for synthetic chemico-pharmaceutical preparations and semi-finished products, medicinal preparations from herbs, surgical instruments and for endocrine preparations.

To finance their construction India has been granted credits on the usual Soviet conditions (2.5 per cent per annum). The Soviet Union will take care of the designing, technical documentation, delivery of equipment, and its assembling.

US Notes

IT was just about this time of year, three decades ago, that there began here that 1929 stock market collapse of bitter memory, the forerunner to the depression of the *early 1930's*. Yet, such has been the economic and financial transformation of the United States since then, that today Americans can view fluctuations in stock quotations with equanimity, if not always with satisfaction, secure in the knowledge that the 1959 market typifies a new and entirely different era.

An idea of just how far 1959 is from 1929, economically as well as chronologically, can be obtained from a report issued last week by the New York stock exchange, the nation's largest and most influential securities mart. Its findings are based on average trading patterns during a typical day.

From it came the following conclusions:

Today's stockholders is essentially a middle-income individual with "extra money—over and above this regular savings and such other reserves as life insurance holdings and pension rights—to put into the stock market. As the stock exchange report observes, this undoubtedly reflects, in part at least, the nation's "generally rising incomes."

Today's shareholder is investing, not speculating. Nearly two-thirds —actually 84.5 per cent—of the shares traded on a typical day can be classed as "long-term investments," held for more than six months.

Individuals still account for the *largest share*—some 53.5 per cent —of all stock trades. But institutions (pension funds, investment trusts, banks, insurance companies, etc.) account for 22.8 per cent, and stock exchange members and members firm for 23.7 per cent.

Little trading is done on margin, where buyers pay only part of the price initially. Margin transactions account for only 17.6 per cent of the total shares traded.

How difficult this is from 1929's. Then people of all income levels and occupations were gambling their all on stocks about which they sometimes knew very little, and often at a margin—or down payment—of only 10 per cent. When a serious decline hit, few of them had the financial reserves to meet the consequent cash demand. The inevitable result was a shift downward spiral.

Largely as result of this, the Federal Reserve Boards in 1934 was given the authority to set margin requirements, and today that requirement is a hefty 90 per cent. To all intents and purposes, the market today is on a cash basis.

In 1929, firms belonging to the New York Stock Exchange were borrowing at rate of $8,500 million a year, or close to 10 per cent of the total value of the stocks then listed. The turnover ratio reached an amazing 119 per cent—which means, in fact, that every listed share was traded at least once during the year.

Today, borrowing by stock exchange member firms is averaging $2,800 million a year, less than one per cent of the total listed securities value of more than $300,000 million. And the turnover rate is running about eleven per cent.

In 1929 institutional investor was all but unknown. Today, institutions have become a large and growing force. Lending additional strength and stability to the market. They are typically long-term investors, generally indifferent to temporary price fluctuations, and are unler no pressure to sell. They also are continuous buyers, investing funds as they receive them and purchasing securities during both price rises and price declines.

Above all, today's investor is far better informed and protected than was his 1929 counterpart. As an outgrowth of the 1929 collapse, legislation was passed requiring public reports of corporations, cursing excessive specualion and other abuses, and requiring certain operating standards of securities dealers. In addition the stock exchanges have introduced their own self-regulatory procedures.

Of course, there always are bound to be some "gamblers" seeking quick riches in the stock market. But today, unlike 30 years ago, they are the "fringe" rather than the dominating element in the stock market.

Of course, painful stock price drops still can and do occur in what is essentially a free, if supervised, market. But a temporary loss is quite another thing from a serious collapse in last month's break in stock price—the sharpest since 1931—is proof enough of this: the drop was taken in stride with little or no impact on the national economy. And has been followed by a firm and solidly based recovery.

*

Britain

The United Nations holds an annual conference today (October 8) at which member nations pledge their support for the operations of the United Nations Expanded Programme of Technical Assistance and Special Fund. At the pledging conference, member nations will announce the sums which their governments will subscribe for the coming year.

When the British Foreign Secretary, Mr. Selwyn Lloyd, addressed the United Nations General Assembly on September 17, he stated that, subject to parliamentary approval, the British Government would increase its contributions to both projects. The sum for the Special Fund would be raised from $1,000,000 to $5,000,000, and for the Expanded *Programme of Technical* Assistance from $2,240,000 to $3,000,000.

This year marks the 10th anniversary of the Expanded Programme of Technical Assistance,, under which by the end of this year more than $235,000,000 will have been spent to *meet thousands of* requests. Altogether, 140 countries and territories have received aid.

The Special Fund, which has not yet completed its first year of operations, has already received requests for assistance totalling $126,000,000. *The first 13* projects were presented for approval to the governing council in May, and another 30 are expected to be presented in December. The money made available at the pledging conference will enable the Special Fund to meet requests for additional projects to be inaugurated next year.

* * *

Britain's total output of goods and services—i.e., the gross national product—rose to the peak figure of £20,130 million in 1958, according to the National Income Blue Book prepared by the Central Statistical Office and published by the Stationery Office today (October 3) in London. The previous year's figure was £19,370 million.

Together with the rise in the gross national product, wages, salaries, and personal erpenditure were all rising in 1958.

Total personal incomes rose to £18,928 million—a rise of just over £1,000 million over the previous year.

But the gross trading profits of companies fell to just over £3,000 million. The gross trading surpluses of public corporations, on the other hand, were higher than in the previous year at £341,000 000, and the gross profits of other public enterprises rose to £151,000,000.

Personal savings declined in 1958 to £1,341 million, but this was a fall of only some £18,000,000 from the previous year's total, which had shown a sharp advance on the two preceding years.

Consumer expenditure in 1958 totalled £14,925 million—an increase of some £700,000,000 over the previous year.

* * *

The *Sterling Area's* gold and convertible currency reserves rose by £13,000,000 in September, and stood at £1,173 million on September 30, according to a *Treasury announcement* in London on October 2.

It is noted in London that September was another satisfactory month for the reserves, contrary to the normal seasonal trend, and that sterling continued in demand throughout the month. There were no special operations of note, so that the result is a direct reflection of the external financial transactions during the month.

For nine months of this year the reserves have shown a net gain of £77,000,000, having fallen in only two months—*viz.*, by £6,000,000 in March and £47,000,000 in May (when £58,000,000 was paid to the International Monetary Fund). They now stand at their highest point since the third quarter of 1951.

With the half-way mark now reached, British savings are well on the way to reaching the target figure of £250,000,000 set for the present financial year by the chairman of the National Savings Committee, Lord Mackintosh.

The half-yearly net total now stands at £180,441,000 (including interest), or about £81,000,000 more than at this time a year ago and less than £70,000,000 below the target. This figure is the best for the first-half of any financial year since 1946.

Commenting on this achievement, Lord Mackintosh said: "Since this time last year we have added nearly £400,000,000 to the public purse in national savings".

Examining the factors behind this continuing boom in national savings., an article in *The Times says:*| "Last year's target of £150,000,000 was more than doubled by the end of the financial year; and if the present rate of progress is maintained, the current target will also be well exceeded".

* * *

The fact that conditions are favourable for further expansion of Britain's economy is perhaps the main inference to be drawn from the course of events in September, writes Trevor Hughes. Sterling has remained strong and prices stable, and most sectors of demand have continued buoyant at a period when there is still some reserve capacity in industry.

Comparison with a year ago shows that exports in recent months have been running about 6 per cent higher; and while fixed investment by private industry and business has not shown much change, consumer demand has continued strong. The seasonally adjusted index of industrial production (1954 taken as 100) rose from 108 in the first quarter of this year to 111 in the second; and the most up-to-date information suggests that production is now at a level about 8 per cent above a year ago.

General confidence about business prospects has also been reflected on the stock exchange, where part of the rise in share values has been caused by expectations of increased earnings as a result of resumed economic expansion both at home and abroad.

The external financial situation was marked in September by the continued firmness of the sterling rate, and it seems clear that the main factors behind this were the confidence arising from the balanced condition of Britain's economy, the recovery in the earnings of the oversea Sterling Area, and the continued strength of the gold and convertible currency reserves. In September, *contrary* to the nominal seasonal trend, the reserves gained another £13,000,000, bringing the net rise so far this year to £77,000,000.

* * *

The strength of sterling abroad has been matched in September by the stability of prices at home. The index of retail prices (January 17, 1956, taken as 100) has now stood at 109 (the nearest whole number) for *four months.* In August it stood at 109.3, as against 109 in July and 108.3 in August 1958.

The wages front has also shown remarkable stability. The index of weekly wage rates (January 31, 1956, taken as 100) has been at 117 (the

UNDER SECRETARY'S DEPARTMENT 27 OCT 1959

nearest whole number) for seven months. In August it was 117.1, just over 2½ per cent higher than a year ago.

The first nine months of this year have, therefore, been marked by steady economic expansion at home and by satisfactory growth of oversea trade and of the gold an foreign currency reserves.

* * *

Britain's exports in September were seasonally lower than the average for July-August, while imports were at about the same level, according to provisional figures issued by the Board of Trade in London on October 12.

Exports in September totalled £246,700,000, and re-exports £11,200,000. Imports were valued at £330,200,000. As a result, the visible trade deficit in September increased to £72,300,000.

It is noted in London that exports usually fall in September for seasonal reasons, so that no particular significance attaches to the drop in exports. So far this year, the trend in exports has been upward. In the first nine months they were three per cent higher than in the same period a year ago.

Imports have remained near the July-August average, and in the first nine months of this year they were five per cent higher than in the same period a year ago.

Because of stability in imports and fall in exports, the visible trade deficit—or excess of imports (valued cif) over exports and re-exports (valued fob)—has shown a sizable increase in September over the average in recent months. In order to see how the basic trend is developing, it is, however, necessary to look at the earlier returns.

In the first nine months of this year, the average visible trade deficit was £43,200,000, compared with £33,600,000 in the same period a year ago. With the onset of expansion at home, it was to be expected that the visible trade deficit would increase as manufacturers began to rebuild their stocks of industrial raw material. In fact, the main feature of Britain's oversea trade this year has been the remarkable buoyancy of exports, particularly evident in the second quarter.

* * *

The Times (October 13) in an editorial says: "The vitality of British export trade has been one of the conspicuous features of this year's economic recovery: it has exceeded most people's cautious forecasts.

"A further fall in the September figures is not, in conflict with the general trend. Exports always fall in August and September seasonally, most of all in September, for the simple reason that production is then most affected by the reduction of output by holidafs. The fall this year is rather less than it was last year—which may be taken as confirmation of the general trend though it is always dangerous to make much of figures in a particular month.

"In the second quarter of this year, exports were 6½ per cent in volume higher than they were a year earlier. For the most part, the rise reflected the economic recovery in industrial countries—the United States and Europe—though exports to the Sterling Area also began to rise again; and textiles began to share in the rise.

"The September trade figures are in contrast with the August figures, inasmuch as imports have again risen—but the August figure was exceptionally low. The import trend is upwards—naturally enough in a period of expansion; and the expansion extends over most classes of goods, though it has been least in food, moderate in primary raw materials for industry, high in fuel (that is, in oil), and substantial in manufactures, especially in finished manufactured goods. For the whole year so far, imports have risen, on an average, faster than exports. In the second quarter, however, the balance shifted, and the prospects for this continuing are good."

* * *

Britain exported more cars to the United States in the first eight months of 1959, than in the whole of the previous year, it was officially stated in Washington on October 11.

Early in 1958, West Germany briefly gained the lead from Britain as the principal foreign supplier, but by the middle of last year Britain had regained the lead and has been well ahead ever since.

Imports from Britain this year stand at 190,000 cars worth about £87,000,000, compared with the total for the whole of 1958 of 156,500 cars worth nearly £70,000,000. The next largest supplier was West Germany, followed by France.

West Germany so far this year has exported to America 132,000 cars, compared with 134,000 the previous year. France has supplied just over 111,000 cars, compared with the 1958 total of about 90,000.

* * *

A continued general expansion of air traffic is indicated in the annual report, just published in London, of Britain's Air Transport Advisory Council. The report shows that BOAC carried over 470,000 passengers in 1958-59—an increase in the neighbourhood of 10,000. The BOAC freight figure exceeded 200,000,000 short ton-miles—an increase of roughly 11,000,000.

Traffic on inclusive tour services rose by about 43,000 passengers to 180,000.

*

Sweden

STOCKHOLM—Swenden's balance of payments on current account resulted in a surplus of Kr 148,000,000 (£10,207,000; $29,000,000) for the first half of 1959, compared with a deficit of Kr. 402,000,000—the lowest registered since 1950—in the same period of last year, according to a survey by Svensk Export, organ of the General Export Association of Sweden.

Exports rose from Kr. 5,098,000,000 to Kr. 5,426,000,000, while imports dropped from Kr. 6,115,000,000 to Kr. 5,628,000,000, resulting in a reduction in the trade balance from Kr. 1,017,000,000 to Kr. 402,000,000. Net revenues from shipping showed a minor decline from Kr. 600,000,000 to Kr. 590,000,000, while the net result of other services remained unchanged at a deficit of Kr. 40,000,000.

The foreign exchange reserve showed an increase of Kr. 43,000,000 during the first half of this year. This compares with a decline of Kr. 268,000,000 in January-June, 1958.

The engineering industry is Sweden's largest industrial branch and its annual output amounts to about Kr. 12,000,000,000 (£827,600,000; $2,400,000,000), or over 20 per cent of the country's gross national product, according to an article by Mr. Nils Lundqvist, head of the Federation of Swedish Mechanical Engineering Industries, in the Bultkoncernen house organ.

Of overall industrial production in Sweden, the engineering industry accounts for about 35 per cent. It employs over 30 per cent of all workers and 50 per cent of all salaried employees in industry.

About one-quarter of the engineering industry's output is exported and its share in overall exports amounts to 30 per cent. Last year, engineering exports exceeded the value of aggregate forest product exports.

The official forecasts for the development of Sweden's foreign trade in 1959—both the one submitted with the National Budget in January and the revised forecast later during the spring—have been completely upset, the Stockholm business weekly Affarsvarlden writes in its latest issue. While a trade deficit of Kr. 1,800,000,000—Kr. 400,000,005 more than in 1958—was foreseen for the whole of 1959, the actual deficit in the first eight months of this year was only Kr. 450,000,000.

An analysis of the country's foreign trade over two-month periods shows that most of the improvement over last year was registered in January-February and in March-April and, although on a minor scale, also in July-August. Exports showed the largest increase, 19.6 per cent, over last year in March-April, fell back to the 1958 level in May-June and exceeded the 1958 figure by 10 per cent in July-August.

As regards imports, only January-February this year shows a more noticeable decline compared with 1958, whereas the following months have witnessed a gradual increase over the 1958 figures. Over the entire eight-months perior exports are up 7.2 per cent in value over last year, while imports show a drop of 2.4 per cent.

The current trends in Sweden's foreign trade seem to indicate a continued growth in imports during the autumn months, Affarsvarlden says. At the same time it is unlikely that the accumulated lead attained by exports compared with 1958 will be retained for the rest of this year. There is reason to believe, therefore, that the outcome of this year's foreign trade will not show the same strong improvement as indicated by the January-August statistics, but nonetheless the improvement will be substantial.

*

France

During the first eight months of 1959, French oil output was 2,061,000 tons, compared with 1,511,000 tons during the same months of 1958, which is an increase of 36%.

The Sahara alone accounted for 476,800 tons of this total, compared with 254,800 tons last year (+87%), and Algeria accounted for 60,700 tons, compared with 51,500 tons last year (+17%). The countries of the French Community accounted for 492,300 tons, compared with 291,700 tons last year (68%).

Metropolitan French production increased 13%, with a total of 1,031,300 tons compared with 913,400 tons last year.

The total volume of gas extracted from the various deposits, increased 162% from 595,300,000 to 1,559,300,000 cubic meters. In this total, metropolitan France accounted for 1,528 million cubic meters compared with 578,500,000 cubic meters last year (+164%).

This year 729,800,000 cubic meters of gas were delivered for processing, compared with 379,400,000 cubic meters last year. Of this total, metropolitan France provided 720,800,00 cubic meters compared with 374 million cubic meters last year.

There was a 14% increase in the number of meters drilled, which increased from 499,400 to 470,700 meters from one year to the next. This increase was particularly noticeable in the Sahara, where 201,700 meters were drilled, compared with 139,900 meters in 1958 (+44%). Metropolitan France also registered a considerable increase of 24.5% (267,500 meters compared with 214,900 meters).

Prospecting was carried on during the first eight months of this year at 312 wells, compared with 237 during the same period of last year. Of these totals, 155 compared with 86 wells were located in metropolitan France, and 96 compared with 59 wells were in the Sahara.

During August alone, 44 wells were completed, of which 50% proved to be productive.

* * *

During July and August, the French jute industry produced a total of 9,350 tons of spun jute and 7,500 tons woven jute, compared, respectively, with 11,417 and 8,959 tons during the same months of 1958.

The output for the first eight months of 1959 was 51,354 tons of spun jute and 41,113 tons of woven jute, compared with 62,133 and 58,202 tons during the corresponding period of 1958.

* * *

French production of rayon (viscose and acetate) totalled 33,567 tons during the first eight months of 1959, compared with 32,167 tons during the corresponding period of last year.

The output of staple fibre decreased from 48,789 tons in 1958 to 32,167 tons this year.

During July and August of this year, French textile mills produced 5,851 tons of rayon, compared with 6,317 tons in July and August 1958, and 5,476 tons of staple fibre compared with 10,020 tons last year at the same time.

* * *

In August, French coal output totaled 4,177,000 tons, compared with 5,300,696 tons in August 1958. For the first eight months of the year the output totaled 39,293,823 tons compared with 39,696,829 tons during the corresponding period of 1958. It was the fourth consecutive month since the beginning of the year that the over-all output was more than 400,000 tons less than it was in 1958.

Following is a summary of the stocks on 30 August, and in parentheses are the maximum and minimum figures which differ from these latest results:

The total amount of coal on hand (including the stock piles of the mines and of their adjoining plans) is at a maximum level of 11,464,400 tons (5,372,000 tons on 2 March 1958).

* * *

According to estimates made in August by the Ministry of Agriculture, the wheat harvest will be approximately 100 million quintals, which is as much as last year. It should be a record harvest and be of an excellent quality.

The rye, barley and rice harvests will be approximately equal to that of last year.

The wine harvest will be average, with 55 million hectolitres, which is slightly less than the 1930-1939 average, but which is 14% more than last year.

Apples and pears used for cider will total only 15 million quintals; but 4 million quintals of eating apples and 1.7 million quintals of pears will be grown.

The peach and plum harvests are quite satisfactory.

Industrial beets, for which the surfaces planted were only slightly increased, lacked water in July.

Potatoes also suffered from the drought, but the plants are healthy.

* * *

France exported 228,314 million francs worth of goods in July (including 154,464 million francs worth abroad and 73,850 million francs worth to the franc zone). During the same month, 200,817 million francs worth of goods were imported (including 152,488 million francs worth from abroad and 48,329 million francs worth from the franc zone).

From these figures it can be seen that the covering percentage of imports by exports was 101% with foreign countries and 153% with the franc zone, and 114% for the total.

For the first seven months of 1959, exports totalled 1,518,391 million francs (of which 1,025,357 million francs were from foreign countries and 493,034 million francs were from the franc zone), compared with 1,229,645 million francs in 1958 (of which 776,123 million francs were from foreign countries and 453,522 million francs were from the franc zone).

The trade balance for the first seven months of the year show a debit of 44,431 million francs in commerce with foreign countries compared with a debit of 286,147 million francs in the corresponding period of 1958, and a credit of 122,105 million francs in trading with the franc zone compared with a credit of 48,642 million francs for the corresponding period of 1958. The over-all totals show a credit of 77,674 million francs this year, compared with a deficit of 237,505 million francs during the first seven months of 1958.

* * *

The following estimates for the sugar harvest have been released by official bureaux:

Estimated yield per hectare will be approximately 2 tons and, therefore, the 1959 beet harvest should be approximately 9 to 9.5 million tons compared with the 12 to 12.5 million tons of a normal year. Sugar production should be 1,100,000 to 1,200,000 tons; and beet alcohol production should total 1,000,000 hectolitres, both of which are 70 to 75 per cent of the objectives established for this year, which were 1,550,000 tons of sugar and 1,350,000 hectoliters of alcohol.

Sugar needs of the franc area are estimated as follows: metropolitan France: 1,300,000 tons; producing overseas territories: 45,000 tons; Algeria: 220,000 tons; Central Africa: 125,000 tons; Sahara: 12,000 tons; Sarre, Oceania: 50,000 tons; Tunisia: 50,000 tons; and Morocco: 35,000 tons, which totals 2,152,000 tons.

If metropolitan French production is 1,100,000 or 1,200,000 tons and the overseas production is 500,000 tons, the deficit will be approximately 450,000 tons which will have to be imported.

* * *

French steel output during the first seven months of 1959 totalled 7,129,000 tons, which is slightly less than that of the corresponding months of 1958, which totalled 8,682,000 tons.

However, there was a slight increase in the output of cast iron, with a total of 7,143,000 tons compared with 7,087,000 tons during the first seven months of 1958. If the present rate of production can be maintained, the French steel industry will register a substantial increase in output by the end of the year. It should be remembered that this industry is France's leading exporting industry.

Since June 1959, the monthly output has been higher than that of 1958: 1,326,000 tons of steel in June 1959 compared with 1,231,000 tons in June of last year; and 1,243,000 tons in July 1959 compared with 1,158,000 tons in July 1958.

In August, 1,019,000 tons of crude steel were produced, as were 904,000 tons of crude cast iron.

These figures for August are lower than those for other months due to the annual vacation period, but they are nevertheless 5.9 per cent higher for crude steel and 7.1 per cent higher for crude cast iron than in August 1958.

Although 1958 was a year of stabilization, the French steel industry nevertheless managed to register improvements. From 14,096,000 tons of steel in 1957, the output increased to 14,607,000 tons in 1958, while the output of cast iron increased from 11,915,000 to 11,970,000 tons between 1957 and 1958. The 3.6 per cent increase in the steel output was mainly due to the production of electric steel, and that of cast iron was mainly caused by the increased demand for Thomas processed cast iron.

Despite the fact that the increase in the production of French steel was less in 1958 than in previous years, it can nevertheless be considered as an extraordinary achievement if it is remembered that the steel industries in most Western countries had to reduce their rate of production compared with 1957.

*

Russia

Soviet industry topped by more than four per cent the nine-month overall production targets in 1959.

An official announcement of the Central Statistical Board under the Council of Ministers of the USSR says that the third quarter and nine months plan has been surpassed both in overall industrial production and in most of the essential items.

Compared with the period between January and September 1958, industrial production increased 12 per cent. Two hundred fifty new most important types of machinery, equipment, instruments and materials went into mass production.

Compared with the corresponding period of last year industrial labour productivity has risen eight per cent.

The Central Statistical Board has announced that over the past nine months the Soviet Union produced 31.8 million tons of pig iron, 44.4 million tons of steel, 34.7 million tons of rolled sections, 39.7 million tons of coke, 70.5 million tons of iron ore, 380 million tons of coal, 95.3 million tons of oil. Gas production reached 26.1 billion cubic metres. One hundred sixty-six billion kilowatt hours of electricity were generated.

Compared with the corresponding period of 1958 the margin of increase was: pig iron 2.7, steel 3.6, rolled sections 2.6, coal 8.6, oil 11.9 million tons. The output of gas has risen by five billion cubic meters and that of electricity by 18 billion kilowatt hours.

The chemical industry has also increased its output considerably.

As a result of measures in further practical application of the latest achievements of science and technology in the Soivet Union, within the last nine months approximately 1,500 new machines, mechanisms and apparatuses were developed and went into production.

Engineering plants modernised over 30,000 metal cutting machine-forged and press and other iron than in August 1958. equipment.

More than 1.4 million inventions and proposals for rationalisation of production have found practical application in the national economy which will yield a saving of seven billion roubles on a yearly basis.

Over the nine months savings in excess of the planned figure achieved through lowering production costs of the overall marketable produce exceeded seven billion roubles.

Between January and September 1959 the USSR manufactured 3.4 billion square metres of cotton textiles, 308 million square metres of woollen, 358 million square metres of linen and 509 million square metres of silk fabrics. Two hundred eighty-seven million pairs of leather footwear were produced.

Compared with the corresponding period of last year the margin of increase was: textiles—243 million square metres, leather footwear—24 million pairs, granulated sugar—372 thousand tons, fish—103 thousand tons, vegetable oil—291 thousand tons.

The Government has greatly increased its purchases of meat, milk, eggs and wool.

*

Australia

The opening level of prices at this season's wool sales now makes it virtually certain that Australia's exports in the current financiat year will rise well above £900,000,000, according to the AUSTRALIAN FINANCIAL REVIEW, which predicts a big boost in export returns.

The REVIEW says that last year's figures of nearly £810,000,000 followed an almost identical situation in 1957-58.

The expectation of such a level of exports carries with it the possibility of a substantial rise in Australia's international reserves during the year.

Even though imports, as a result of the recent relaxation of import controls, may rise to approximately £840,000,000 (last year's figure was £793,000,000), international reserves in the current financial year could show an increase of more than £50,000,000.

This will add further to the liquidity of the Australian economy which is already high, as shown by the remarkable lift in raisings of new money on the capital market in 1958-59.

The comments of the FINANCIAL REVIEW are supported by recent surveys made by the trading banks which express optimism on export prospects.

In its July survey the Australia and New Zealand Bank Ltd. also refers to improved conditions in those overseas countries which constitute the main markets for Australia's exports. It says that the banking system is in a liquid position and is thus better placed than for some time to meet demands made upon it.

Latest official figures show that new life assurance policies issued in

Australia are now averaging about £45,000,000 a month, compared with £39,000,000 a year ago.

Several British insurance offices are in the life field, and are in keen competition with Australian offices.

This has, no doubt, caused old established offices like the Australian Mutual Provident Society to seek additional sources of revenue by entering into the fire and general assurance business.

The life offices are receiving premiums of £9,000,000 a month and average monthly payments to beneficiaries and policyholders are close to £4,000,000.

Apart from their investments in gilt-edged securities and company shares, the life offices are lending an average of £6,000,000 a month on mortgages and on their own policies.

(These figures do not include the business transacted by Government insurance offices in New South Wales and Queensland).

* * *

Consolidated net profit of Broken Hill Pty. Co. Ltd. was £10,214,911 for the company and its subsidiaries for the year ended May 31, and represented an increase of £915,692 on earnings for the previous year.

* * *

That the leading Australian daily newspapers have successfully met the competition for advertising revenue encountered from television is shown by the record profit of David Syme & Co. of Melbourne.

This Company publishes THE AGE, one of the City's two morning newspapers. Profits, subject to minor adjustments, and subsequent audit, rose by 25 per cent. on the previous year to a record £467,564.

This profit is struck after increasing provision for taxation from £220,000 to £272,500, and lifting the depreciation allowance from £80,649 to £85,493.

After the profit a sum of £60,000 is again to be provided for plant replacement.

A table compiled by the Australian NEWSPAPER NEWS shows that the daily newspapers gained 10.75 per cent. in total inches of advertising obtained over the 1958-59 financial year. The Sunday newspapers gained 12.01 per cent. Small percentages were gained by women's and general magazines. Only the rural weeklies were down, by an average of 1.9 per cent. in their total advertising space sales.

* * *

Repco Ltd., of Melbourne, Australia's largest maker of replacement parts for motor vehicles, recently concluded agreements with several overseas companies to make components for the Australian market. One of these agreements is with Fichtel and Sachs, the German manufacturers of clutches, which Repco intends to make for Australian Volkswagens.

Brake assemblies and power braking equipment will also be made by arrangement with the Bendix Aviation Corporation, of the United States.

Repco has also acquired a 60 per cent. interest in the Australian subsidiary of the Coventry Tool and Gauge Co., England.

The Repco group comprises 11 manufacturing and four engineering and merchandising subsidiaries, as well as an export company and a research company.

Its last announced net profit was £670,293, and dividend is a steady 10 per cent.

Recently, the group made takeover proposals to five other engineering companies.

The Broken Hill group, which plays such an important part in Australia's industrial growth, has consistently increased its profits in recent years. In 1955-56 the increase was £2,187,912, in 1956-57, it was £854,289, and it rose by £1,915,924 in 1957-58.

Combined tonnage of ingot steel from all plants at 3,192,680 tons was 5.4 per cent. higher than the previous year's record. Additional steel-making capacity at Port Kembla, further improvements in plant efficiency and generally satisfactory industrial relations, were major contributions to the good results achieved.

Total assets of the Broken Hill group were £182,700,000 at May 31, representing a rise of £26,700,000 during the year.

Profit of B.H.P. itself, announced in July, was £7,203,889. The directors propose to increase nominal capital from £75,000,000 to £100,000,000 although an early issue is not contemplated. The Company has 58,057 shareholders and 35,323 employees.

Several commercial projects in the Northern Territory will eventually contribute to the prosperity and development of Darwin, Australia's northern tropical sea-port. Local shipping interests have asked the Federal Government to build a new bunkering and bulk-handling wharf.

The Director of Mines states that vast deposits of bauxite are known to be in Arnhem Land, in the Territory; there is every reason to believe that they will soon be worked. This could involve establishment of port facilities in Darwin and probably one or two town sites.

The expedition seeking oil on Portuguese Timor will purchase goods worth £20,000 in Darwin. There is also a strong demand for cattle from the United States of America, Hong Kong and the Philippines, which the industry is finding difficulty in meeting. If the cattle are available it is estimated that at least 25,000 could be shipped from Darwin this year.

The Commonwealth Scientific and Industrial Research Organisation is conducting important tests which could lead to opening up millions of acres of Territory land, and result in increased business in the despatch of cattle and locally-grown rice through Darwin. Investigations are being made into the possibility of grazing cattle on rice stubble.

Lister Blackstone Pty. Ltd., of St. Peters, New South Wales, recently began the manufacture of air-cooled diesel stationary and marine engines of the type produced by the Lister Group of companies at Dursley, Gloucestershire, England. The series range from 3 to 15 h.p. The Australian units are being made strictly to the British standard to ensure interchangeability of spare parts.

About 33 manufacturers make a wide range of engines for industrial, marine, and other purposes in Australia.

Products of the industry are two and four-cycle petrol and kerosene engines, up to 45 h.p., and four-cycle diesel engines up to 80 h.p. Both air-cooled and water-cooled types are made.

* * *

The manufacturing of hand tools is a thriving industry in Australia, where manufacturers number about 60 and employ together about 2,000 persons.

One of these companies, McPherson's Ltd. of Melbourne, reports sales worth £14,593,350 for the year to June last. Profit was £793,964. All of the manufacturers meet keen competition from imported products.

Major products of the industry are spanners and wrenches, files and rasps, vices, hammers, drills, braces and bits, chisels, spades and shovels, forks, rakes and hocs.

It is estimated that Australian manufacturers supply about 50 per cent. by value of the market for hand tools.

Like many of the other toolmakers, McPherson's are also active in production of heavier tools and larger engineering products.

* * *

Overseas industrialists were finding a profitable field for investment in Australia, and the country owed them a heavy debt of gratitude for this investment and the manufacturing techniques they had introduced, said the Premier of New South Wales, Mr. J. Cahill, recently when addressing the annual meeting of the Australia-America Association.

Mr. Cahill said that in the ten years to June, 1957, British companies had invested £450,000,000, in Australia and ploughed back £100,000,000 into their subsidiaries and branches in the country. United States and Canadian companies in the same period invested £76,600,000.

There were 252 British manufacturers and 136 subsidiaries of American companies operating in the State. A total of 427 local companies was producing American goods under licensing and royalty arrangements.

* * *

Expanded manufacture of pharmaceuticals in New South Wales will follow as a result of plans announced by two separate companies.

Cyanamid International, a United States company which has in hand a general $13,000,000 expansion of activities, has announced, through its director-general, Mr. C. S. Moody, that it is planning to make pharmaceutical and speciality chemicals in New South Wales. It already has an Australian subsidiary at Hurstville, an outer Sydney suburb, making surgical sutures and tennis gut.

Roussel Pharmaceuticals Pty. Ltd., a branch of Roussel Laboratories, with links in many countries, will set up a new drug-making plant at Caringbah, near Sydney. The company manufactures goods for doctors, hospitals and chemists, and intends to develop an export business with Asian countries.

* * *

Despite the growth of the plastics industry and other forms of competition, paper usage is soundly established in Australia. Australian Paper Manufacturers Ltd., reports record sales of £29,000,000 for the year. Net profits rose from £2,119,658 to £2,235,295.

A steady, although at present small, export market, was sustained.

A new mill site of 300 acres has been acquired at Perth, Western Australia, and the Company is negotiating with the Tasmanian Government for a large eucalypt forest in the Huon Valley.

* * *

Broken Hill Pty. Co. Ltd., shipbuilding yard at Whyalla, South Australia, is making extensions to one of the slipways to enable the yards to build ships up to 40,000 tons deadweight and 725 feet in length. A travelling crane with a 175-feet jib and costing £180,000, will service this slipway. The crane will be able to hoist into position, complete 40-ton sections prefabricated in a pre-assembly area.

A total of 32 vessels, with a deadweight tonnage of 250,000, has been constructed to date.

Work planned or in hand at the yard includes a second 19,000 ton ore-carrier, a second 14,000 ton ore-carrier, a 32,250 ton oil-tanker, and two 16,400 ton deadweight bulk ore-carriers.

Australia's leading tourist resort, the Gold Coast, Queensland, is about to be revalued by the Queensland State Government. Since the last valuation in 1955 land values have sky-rocketed, with demands for holiday blocks and plans for tourist hotels. In 1950, the capital value of estates on the Gold Coast was officially estimated at £1,700,000, and by 1955 had reached £6,000,000. Present valuations could easily double or treble this amount.

Development is concentrated in an area of about 20 miles along the coast, and the centre, also known as Gold Coast, was recently proclaimed a City. It issued building permits for constructions worth £5,500,000 in 1958-59.

* * *

Improvement in wool prices has brought a renewal of confidence in woollen goods, according to the directors of Federal Woollen Mills Ltd., of Geelong. Although the net profit of £37,667 is less than the figure of £39,584 last year, orders now on hand are considerably greater than at this period last year.

The Company is sending its manager, Mr. James Keddie, overseas to study the latest production methods in Continental mills.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

I AM under commitment this week to discuss the financing of development in the private sector during the Third Plan. Much as I may want to deal with specific figures, I am afraid that the conspicuous lack of relevent data does not allow of anything other than rather broad and general discussion of the question; but, to the extent possible, we shall call upon figures to guide and influence our thinking.

*

Investment in the private sector during the Second Plan is supposed to be of the order of Rs 2,400 crores. By all accounts, this is a target which will be reached, despite the likelihood that, in cement, capacity created by the end of the Second Plan will be rather lower than the target that was envisaged in this behalf. Where the money will have come from for putting through development on such a scale, it is impossible with any degree of accuracy to assess. However, it is interesting to find, in a study of 1001 public limited companies published in a recent issue of the Reserve Bank of India Bulletin, that the paid-up capital plus free reserves rose by nearly Rs 115 crores between the end of 1955 and the end of 1957. On this basis, the increase under the head of paid-up capital and free reserves during the Second Plan period of 1001 public limited companies, and representing perhaps half of the entire corporate business in the private sector in India, would amount to just around Rs 300 crores. That means that, for the whole of the corporate business in the private sector, as much as Rs 600 crores, or one-fourth of the total investment during the Second Plan in the private sector, will have been found from an increase in capital and free reserves. Then, Scheduled Banks' Advances have been rising by Rs 100 crores net a year, though it is only a part of the rise in Advances which goes to benefit industry and although, secondly, the Advances need not have been specifically in order to pay for development costs. Nevertheless, either as addition to working capital or as finance obtained against stocks and utilised in the purchase of plant and equipment, we may take it, broadly speaking, that the private sector will be benefiting at the rate of Rs 100 crores annually or something like Rs 500 crores during the Second Plan period. Thirdly, there are the advances of the Industrial Finance Corporation and the State Finance Corporations. At around the mid-way mark of the Second Plan, the Industrial Finance Corporation had increased, as from 1955-56, its loans and advances by Rs 19 crores; and the State Finance Corporations had shown an increase of nearly Rs 12 crores in loans and advances during this period. In broad terms, therefore, something like Rs 31 crores have been made available by the IFC and the SFCs. Almost certainly, for the whole of the Second Plan, the contribution to development of the IFC and the SFCs would work out to around Rs 70 crores. Adding the three together, we get a figure around Rs 1170 crores. And it is in respect of the balance of Rs 1200 crores that I at any rate can furnish no hypothesis of where it came from.

*

The Third Plan, I suppose, will envisage an effort in the private sector amounting to Rs 2800 crores. But recent experience, especially with the new structure of taxes for corporate bodies, does not seem to suggest that retained profits by companies will prove to be on the scale as heretofore. On the other hand, recent experience in the capital market has shown that there are funds enough with investors available for supporting worth while new issues placed on the market. However, in this last regard, I need to qualify the statement with the remark that the right issues of existing companies have come off rather better than any new issues as such. Nevertheless, the conclusion is clear that capital is not so shy as it has been made out to be in certain circles. And it is also clear that, ruinously high though the tax rate is supposed to be, savings have still accumulated with investors for supporting new enterprise. Whether or no the private sector will be able to command the Rs 2800 crores needed for development under the Third Plan, therefore, depends on a number of factors. It is these factors with which we should occupy ourselves, since, again, it will not avail us to start talking in specific figures.

*

The most important factor is, I suggest, not the tax policy of Government but, rather, the fact that theirs will be a development policy. The rate of governmental disbursements during the Third Plan will be rather higher than has been the case during the Second Plan. Such disbursements, in turn, will have a number of repercussions. Firstly, they will release mass purchasing power, even in cases where the new investment is in a capital intensive industry. Secondly, the newly formed purchasing power will need to be satisfied by the production of new consumer goods. Thirdly, with the Third Plan emphasis on agricultural production, mass purchasing power in this sector of the economy will also rise, and will also need to be satisfied with additional production of consumer goods. Fourthly, such disbursements on the part of Government will steadily be percolating into the banking system, causing Deposits to rise. Fifthly, this will enable banks to be in a better position to extend Advances to industry. Sixthly, if, as is likely to happen, the expansion in Advances is kept by official policy at a moderate pace, relative to the accretions to new Deposits, then, there will be a considerable demand for Government securities by the banking system. Seventhly, this heightened demand for gilt-edged will tend to push down yields. Eighthly, the lower yields obtaining on giltedged would cause a sympathetic rise in the prices of equities. Such boom or boom like conditions in the stock market, finally, will induce more funds from the investor in support of the capital market. This predominant factor is, thus, a virtuous cycle.

*

The tax policy of the Central Government will, in the second place, undoubtedly influence the course of private sector development during the Third Plan. For a start, I may mention that the new structure of corporate taxes appears to leave a smaller surplus with companies, smaller both for distribution and for retention. To that extent, some disincentive has been imparted to new development in the last Budget. I have hopes, however, that the Finance Minister will see his way clear to announcing some measure of relief in his budget for the last year of the Second Plan. But this will not be enough. After all, stress is to be laid on the development of small-scale industry, rather than on large industries; and, in this context, there is the need for personal as distinct from corporate incentive. That is to say, if development rebate and tax holiday for new companies seek to foster the growth of corporate entities, something more will be necessary in respect of small-scale industries, which quite often may not take the form of corporate bodies. So, relief in personal taxation would be desirable; and this is apart from any financial assistance that may be required by the small entrepreneur. To ask for reliefs during a time when Government needs are likely steadily to grow is, I realise, an almost futile case of wishful thinking. But realism in this regard demands the recognition that, without proper encouragement, the growth of small-scale industry is problematical. I am hopeful about Governmental enlightenment in the sphere of taxes, but I am by no means certain about it. What I am sure of is the fact that, whether or no there are reliefs, there must be a moderate voice on the part of ministers as to their tax intentions. What causes the investment climate to turn unfavourable is loose talk about the possible fresh impositions in the offing. We have had far too much of such psychological erosion of confidence by a multiplicity of

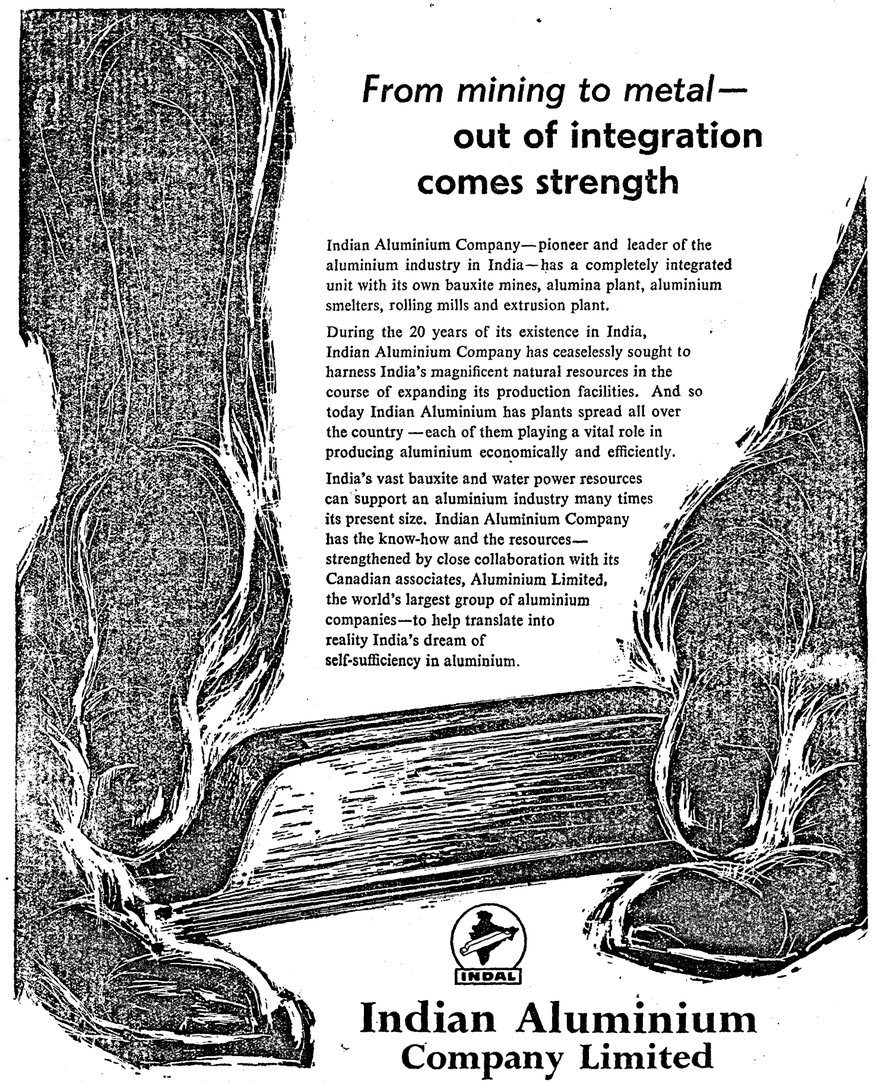
authorities talking in a babel of voices; and, if development in the private sector during the Third Plan is to be a success, we must forswear such loose talk.

✱

The third factor will be the availability of the raw materials. Small industries can even less afford a reduction in output because of lack of the requisite raw materials. On the one hand, the distributional system for such things as coal and iron will need substantially to be improved. On the other hand, there should occur no delay of consequence in allowing the import of such raw materials as cannot indigenously be found. The allocation of foreign exchange to the private sector needs, therefore, to be less reluctant and less dilatory. Foreign exchange will also have to be made available for the import of plant and equipment, without which, indeed, the basic raw materials produced by India by the beginning of the Third Plan may not become utilisable.



✱

We come, now, to what I consider to be the last factor, namely, the role of the special financial organisations. The IFC and the SFCs will inevitably need to step up the quantum of their loans and advances. The Scheduled Banks may be expected to be able to finance industry to the tune of, say, Rs 150 crores by way of an annual increase in Advances. The ICICI, I know, will continue to do its good work under the inspired direction of Mr G. L. Mehta. But what of the Re-finance Corporation, of which we heard so much for so long a time? It must necessarily start functioning vigorously. Last of all, I suggest that the new issue market's success must be vouchsafed by much more of underwriting facilities than we have had in the recent past. Here, too, the ICICI is doing its bit, though it should do more. I would call upon the LIC and the IFC to interest themselves more keenly in future underwriting tasks.

✱

To come back to the Rs 2800 crores of investment by the private sector during the Third Plan: the money will probably become available, but will the pre-conditions that I have listed be satisfied? For, money alone cannot bring about development; what is needed is the initiative of the individual entrepreneur, and the initiative of such breed depends on whether or no incentive is provided.

EAVESDROPPER.

From mining to metal—
out of integration comes strength

Indian Aluminium Company—pioneer and leader of the aluminium industry in India—has a completely integrated unit with its own bauxite mines, alumina plant, aluminium smelters, rolling mills and extrusion plant.

During the 20 years of its existence in India, Indian Aluminium Company has ceaselessly sought to harness India's magnificent natural resources in the course of expanding its production facilities. And so today Indian Aluminium has plants spread all over the country —each of them playing a vital role in producing aluminium economically and efficiently.

India's vast bauxite and water power resources can support an aluminium industry many times its present size. Indian Aluminium Company has the know-how and the resources—strengthened by close collaboration with its Canadian associates, Aluminium Limited, the world's largest group of aluminium companies—to help translate into reality India's dream of self-sufficiency in aluminium.

Town and Country Planning

BOMBAY REVIEW

ALTHOUGH increasing attention has come to be devoted to the problem of town and country planning in recent years, living conditions in both villages and towns have, by and large, continued to be unsatisfactory. This is largely due to the fact that it has not been possible to provide adequate housing for financial and other reasons. The problem of housing has become particularly acute in cities and towns because of the continuous migration of people from the rural areas. Despite strenuous efforts that are being made to rehabilitate the rural areas, the original attraction of the urban areas has continued undiminished with their growing importance as the hubs of industrial and cultural activities. Even after the initiation of planned economic development as envisaged in the two five year plans, it has not been possible to avert the concentration of industries in the urban areas.

But the cities have long ceased to be capable of taking in more residents. The result has been the growth of slums at their fringes and a terrible overcrowding in the built-in areas. Overcrowding has led to other problems besides housing. Transportation water supply and public health are some of the other problems that the town and city authorities have to grapple with.

The need for devoting concerted attention to the complex problem of urban development and re-development has been stressed by the Planning Commission in their report setting out the proposals for the Second Plan. They have warned that, "unless there is adequate forethought and planning, industrial progress will be accompanied by serious social and other problems in urban areas which may become increasingly difficult to manage". The Commission have suggested, therefore, that the future course of urban development should be viewed "from now on" by the Central and State Governments.

While it is true that appropriate organisations have been set up by the Centre and some of the States, the overall picture of the living conditions in our cities and towns is as gloomy as ever. How acute it has become now is borne out by the fact that Mr Y. B. Chavan, Chief Minister of Bombay, has characterised the overcrowding in cities and towns as a national problem which needs immediate attention. In his inaugural speech at the Seven-day Seminar on Town and Country Planning which is now in session in Bombay, he has stressed the need for close cooperation between the different agencies engaged in the task in order to relieve the congestion and make the urban areas better places to live and work in.

It would appear that urgent action is necessary to stop further ingress of population into our cities and towns. In his Presidential speech to the Seminar, Mr S. K. Joglekar, President of the Institute of Town Planners, India, has indicated how this can be done. He thinks that there should be a ban on the expansion of industrial capacity in the major cities where industrialisation has already reached a saturation point either through statutory prohibition or a judicious use of the Industries Act. Another effective way is to encourage the industrially under-developed States to set up development areas. Mr Joglekar has pointed out that there is need for some Central legislation on regional planning to supplement the town planning acts of the States.

The growing importance of the problem of town and country planning in our country has also been emphasised by Prime Minister Nehru. In a message to the Seminar, he says that, while it is bad enough to have old slums, it will be almost a crime to allow new slums to grow up.

It is, however, to be noted that the problem of a hazard increase of urban population is not peculiar to our country. Even in the industrially advanced countries of the West, overcrowding in cities is still one of the problems that the authorities have to grapple with in spite of prolonged and concerted efforts to relieve the congestion. In the UK, for example, the problem has come to be satisfactorily tackled only in recent years and town planning is still very much with the country since, with an expanding economy and rising standard of living, pressure on living space is continuously increasing.

In tackling the problem of increasing congestion in the urban areas in our country, we have first to take into account the fact that, for various reasons, economic and other, the cities continue to attract more people. By a judicious dispersal of new industries in the underdeveloped areas, a part of the further inflow of population in the old cities can be averted. But a lasting solution will have to be found in "balanced urban-rural regions."

The Planning Commission have indicated the principal directions in which action has to be taken in order to evolve such balanced regions. But it would appear that the States which have to be primarily responsible for this task have been acting only in a half-hearted way. One of the directions in which action has been indicated is that each State should have a phased programme for the survey and preparation of master plans for all important towns. Not many States seem to have taken up the work seriously yet.

Although rural planning in our country is now several years old, very little headway has been made in regard to improving the living conditions of the villagers. The Planning Commission have estimated that a large proportion of the 54 million houses in our rural areas need to be rebuilt or substantially improved. Such a gigantic task requires energetic action based on the prevailing conditions in the country. But it does not seem to be there. Referring to the problem of planning of the villages, Mr Nehru has pointed out that impractical standards are retarding the progress of rural housing. He has made a fervent appeal for the revision of the old expensive standards with a view to utilising locally available materials.

How banking serves the SPICES INDUSTRY

There is tremendous demand throughout the world for pepper and cardamoms, and South India produces the bulk of these spices. One-third of the entire world demand for pepper is grown between Karwar and Cape Comorin; and in 1951-52, India's exports earned more than Rs. 27 crores.

Within the last ten years there has been a remarkable increase in cardamom growing, particularly in the South Indian states of Mysore and Coorg, and the districts of Madura, Tinnevelly, Malabar and Coimbatore.

The Indian spices industry has a happy future, and banking will naturally help to expand and improve it. The facilities and guidance of a good bank, such as the availability of ready funds when needed and the collection of dues from any part of the country, have become part of efficient organisation in every industry.

We at Palai are proud that many spice growers of South India employ the *complete* banking service we offer:

Current Accounts—Demand Drafts—Telegraphic Transfers—Investments—Letters of Credit—Bill Collection—Deposits—Loans & Overdrafts—Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 25 branches are strategically located, 23 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns & have the amounts credited to their accounts at any of our branches.

PALAI CENTRAL BANK LTD.

Head Office: PALAI, KERALA STATE,
Branches at: Madras, Cochin, Quilon, Trivandrum, Alleppey, Mangalore, Panjalore, etc. *Also at:* Delhi & New Delhi.

BOMBAY REVIEW

Progress of India Reinsurance Corporation

Mr A. D. Shroff, the Chairman of the India Reinsurance Corporation Ltd in his speech at the Third Annual General Meeting held on Monday 28th September 1959, reviewing the progress made by the Corporation during 1958, pointed out that the year was neither innocuous nor quite favourable from the general insurance business point of view. The Fire Section Department sustained a heavy loss of about Rs 63 lakhs arising out of a serious fire in a textile mill in Bombay. Nevertheless, the Indian Fire claim ratio for the year was favourable. The business in the Maritime Section during 1958 was adversely affected by a fire in the Docks in Bombay and marine casualty at Eden Harbour which resulted in gross claims of about Rs 23 lakhs and Rs 26 lakhs respectively. The Miscellaneous Section, on the other hand, had another ordinary year.

The foreign markets, especially in the USA and in Canada, continued to be unpropitious as far as the Insurance business is concerned. Only the UK fire experience showed satisfactory results.

The total gross premium of the Corporation in 1958 reached a record level of Rs 2,83,94,000 as against Rs 2,29,44,000 in 1957. The net premium of the Corporation, in the year under review, rose to Rs 1,26,48,000 from Rs 93,79,000 in 1957. In the Fire department, the net premium amounted to Rs 56,37,000; the net premium in the Maritime department was Rs 30,16,000 and in the Miscellaneous department the figure reached Rs 46,85,000.

The aggregate reserves of the three departments during 1958 increased to Rs 55,15,000 from Rs 37,78,000. The total Funds of Rs 1,55,15,000 by the end of 1958, per se, indicates the sound position of the Corporation.

Adequate steps were taken to revise the underwriting pattern of the Corporation, in order to enhance the profits in subsequent years.

Necessary alterations made by the Corporation will enable the members to cede their full quota in future.

The enlargement of the sphere of activity of the Corporation resulted in the furtherance of business in the Facultative Section.

The Reinsurance Exchange in Bombay enables a large number of companies to exchange a considerable amount of business every day. The Chairman struck an optimistic note that, in due course, the Reinsurance Exchange will assist in building up a sound reinsurance market in India.

Considerable profit is expected from the Hulling business, thanks to the additional participation of a number of member companies.

The Corporation found little difficulty in securing a few treaty participation in Fire and Accident departments from member companies. By giving business to the Corporation, they would enhance the strength of the Corporation and thereby increase the value of their shareholdings in the capital of the Corporation. Besides, they would also help save the drain on the national resources arising out of the foreign reinsurances.

*

Swatantra Party

The economic policy followed by the Congress Party has been severely criticised by Mr A. D. Shroff, in his address to the Bombay unit of the Swatantra Party. His main complaint against the Congress Party is that it is wedded to the outmoded concept of socialism. Whatever might be his attitude toward socialism, his apprehension that the techniques of the so-called socialism would ultimately lead to the establishment of a police state appears to be exaggerated.

He alleges that the Government have unleashed the inflationary spiral in the country by their policy of deficit financing. That some element of inflation exists in this country cannot be denied. However, it would not be entirely correct to ascribe the rise in the price level exclusively to deficit financing. The failure to step up production in our country is partly responsible for the present high level. What is required to bring down the prices is more production rather than scaling down of deficit financing.

GATEWAY NOTES

The economic policy of his party, Mr. Shroff observed, is fundamentally different from that followed by the Congress. His party stands for Gandhian democracy and individual freedom which, he says, are threatened by the totalitarian tendencies in the Congress on the economic side. He apprehended that India is fast becoming the bureaucrats paradise via the Five Year Plans, and stressed that state-sponsored joint co-operative farming is not going to solve the country's food problem. His attack on the State Trading in food grains, the comprehensive planning of the "Soviet type" and the practice of borrowing huge amounts from foreign countries, is understandable in the light of the principles of the Swatantra Party.

The present system of direct taxation, the sponsor of the Forum of Free Enterprise asserted, had been extended to such heights that it would bring into operation the law of diminishing returns. It will be appropriate, in this connection, to note that the dampening effects of taxation on business incentive and enterprise have been stressed in most of the recent company reports. In view of the growing financial requirements of the country, the temptation to resort to all measures of taxation without considering their repercussions on investment and production has to be guarded against.

Mr Shroff points out that corruption, nepotism and inefficiency are rampant in the public sector. That there is much scope for cleaning up the public sector would be accepted. But the scope for cleaning up the private sector is perhaps as great, which would be evident from the enormous amount of tax evasion; and the country would be a gainer.

*

Bhilai Steel Works

The second milestone on the road to completion of the Bhilai Steel Project was reached on October 12, when the first open hearth furnace of the Steel Works commenced production of steel.

The tapping of the first steel from the open hearth furnace was inaugurated in the presence of a huge gathering including a large number of Russians.

The open hearth furnace has a capacity of 250 tons.

The Bhilai Steel Works commenced production of pig iron on February 4, 1959, which was the first milestone on the project's road to progress.

There will be six open hearth furnace of 250-ton capacity each, at Bhilai, producing one million tons of ingot steel annually.

Two other open hearth furnaces of similar capacity are expected to be completed within the next three months. The remaining three furnaces will be completed next year.

JUST OUT

INVESTORS ENCYCLOPAEDIA

1959 EDITION

(TWO PARTS)

CONTAINS:

1. Details about a large number of Joint Stock Companies in India with full particulars about their working for the past few years.
2. Details about various Central and State Government Securities and Loans and Debentures issued by various Quasi-Government institutions like Port Trust, Improvement Trust, Municipal Corporations, Land Mortgage Banks and other public institutions.
3. Details about Income and Supertax, Capital Gains Tax, Wealth Tax, Death Duty etc.
4. Details of companies functioning in public sector—Names and Addresses of foreign Diplomats in India and our diplomats abroad and many other useful information.
5. A survey of almost all industries in India with coloured maps showing the location of various industries.

A political map of India (36" × 32") showing the latest political divisions, Railways and Important Towns.

Provided with Thumb Index for easy reference purpose.

About 3000 companies. **About 3000 pages.**

A BOOK MOST INDISPENSABLE FOR ALL CONNECTED WITH TRADE, COMMERCE AND INDUSTRY.

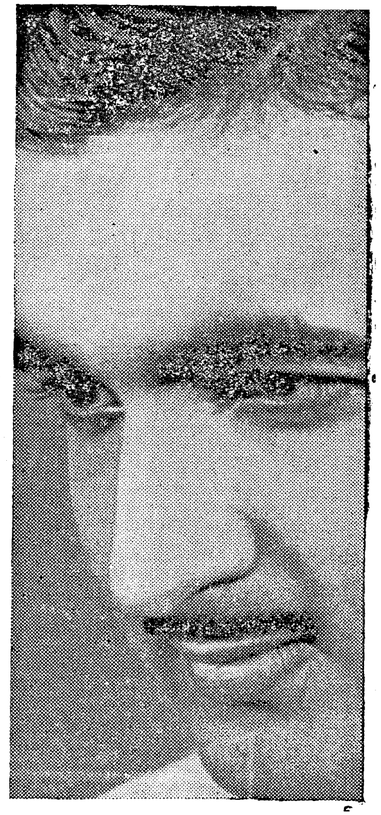
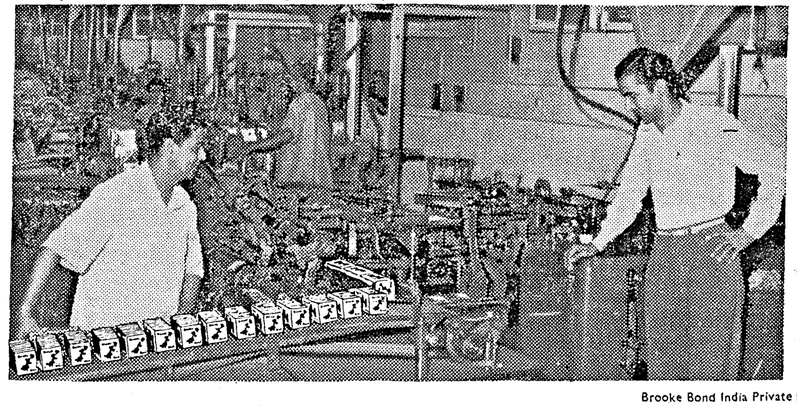
"No flies on Brooke Bond, my friend, or on their teas!"

You really mean, Bhai Sahib, that Brooke Bond produce over 144 crores of packets every year? Seems like a lot of unnecessary expense. Why can't they supply the shops in bulk?



For a number of reasons. The customers' convenience for one. Brooke Bond Tea can be bought, at fixed prices, in 1-lb., ½-lb., ¼-lb., 2 oz. and the popular "2 pice" packets which contain enough to brew three generous cups of tea. This way you are sure of the quantity you are buying.

True, but my shopkeeper could measure it out for me.



In which case, inevitably, the tea would be open to possible contamination. Because you always get Brooke Bond Tea in sealed packets and tins you can be 100% sure of its purity. Also, don't forget that tea is affected by atmospheric conditions and would rapidly deteriorate if it weren't adequately protected. Packets preserve and protect the freshness of tea.

Do you mean to say then that the Brooke Bond Tea I buy is untouched by hand?

I certainly do! In all the five Brooke Bond factories I have visited the tea is packed by automatic machines in spotlessly clean surroundings. This is only one of the many modern methods of production and rigid standards of quality control that Brooke Bond employ, with the object of serving their customers and giving them full value for their money. As leaders of the industry they can do no less!

Bhai Sahib and friend see Brooke Bond Tea being hygienically packed

WORLD OF COTTON

Prices ease on Improved supply Prospects

DESPITE the continued absence of a clear picture of the new crop, prices in the cotton markets had declined rather sharply last week. The reactionary tendency was largely due to renewed hopes about a good crop following reports of improved weather conditions in some of the growing areas. Information from regions like Vidarbha and Broach showed that earlier apprehensions about heavy damage due to the fall of fresh rains were highly exaggerated. Many seemed to believe that the crop might be much bigger than was estimated a few days ago. Operators' reluctance to extend commitments at the higher levels and the subsequent hammering down of the prices would appear to have partly stemmed from expectations of a liberal cotton import policy.

Reports from New Delhi indicated that the decision on the import of foreign cotton would have to await the return of the Finance Minister, Mr Morarji Desai. The reason for the delay was presumably some difficulties said to have been encountered in importing agricultural products from the USA under PL 480. The hitch was reportedly in regard to the import of wheat under that programme. It would appear that the USA was inclined to get the position clarified in view of the reported complaints from Canada and Australia. The two countries were said to have complained to the USA that due to the availability of large quantities of wheat under PL 480, their exports of wheat to India had dwindled. As far as India is concerned both cotton and wheat are urgently needed.

The cotton crop has sustained considerable damage due to the disastrous monsoon in some of the cotton growing areas and the situation in the cotton textile industry is such that unless substantial imports are made quickly there will be a severe setback which will have serious consequences to the country's economy as a whole. It is generally believed that Mr Desai would have impressed on the United States Authorities the urgency of cotton imports and that favourable news in this regard will come to the industry and trade soon after his arrival in New Delhi. Another contributory factor for the easy prices was the indication that new crop offerings would increase in coming weeks. The uptrend in arrivals was already noticeable in the case of Punjab, Uttar Pradesh and Rajasthan.

Cotton futures developed an easier trend on profit taking and in the absence of buying interest. Operators were inclined to await definite indications about the size of the new crop before entering into fresh commitments. In the meantime ideas about increased supplies dominated sentiment with the result prices moved down considerably during the past week ended Monday. Jharilla March lost more than 20 points to be finally placed on Monday at Rs 713.

In the spot section also sentiment was rather depressed in the absence of buying fervour. Even the rumour that Government would allow the export of one lakh bales of Bengal Deshi seemed to have engendered no interest. This was presumably due to the fact that a substantial portion of the previous export quota was yet to be utilised coupled with the lower price indications by Japan.

×

LIVERPOOL:

The Liverpool market ruled very steady in view of expectations of further shipment delays on account of the US dock strike. A wide variety of growths besides American cotton met with keen demand. Even though news had reached that the US dock strike had atleast temporarily ended, sentiment continued to be firm. It would appear that continued high levels had stemmed from the belief that in view of the improved offtake of textiles in world markets, the demand for raw cotton would continue to be brisk.

×

NEW YORK:

The New York market displayed steady conditions in later dealings as operators derived confidence from the higher advices from the home cloth market. Interest in new crop was also a contributory factor. According to official estimates the total supply of US cotton is put at 25.5 million bales.

×

PIECEGOODS:

The main factor responsible for the steadiness of the cloth market seems to be the fact that stocks with mills now stand a new low. A decline of over 10,000 bales is reported in the last month as total stocks at the end of September are placed at 3.73 lakh bales. The low level of stocks is perhaps responsible for the reserve noticed on the part of mills to sell in spite of the lack of enquiries during the past one or two weeks. The prevailing dull trend on the eve of Diwali is to be attributed to the dislocation caused to normal life by the disastrous floods in many parts of the country. It is too early to say whether lack of buying is due to the apprehended difficulties in transporting goods to the consuming centres or to actual disabilities on he part of a sizable portion of consumers to find the necessary funds. A more or less similar trend was noticeable on the export section also. However, moderate activity had been reported from the UK, Singapore and West Africa.

GATEWAY MARKETS

Sharp Rise in Bullion Prices

Indications of continued high offtake and receding hopes of improvement in the supply position pushed up prices in the silver section throughout last week. The Bull hold on the market was so strong that news such as lack of upcountry interest due to floods and rising stocks failed to halt the uptrend. With their efforts thwarted,, bears had no other alternative but to rush to cover. Although profit-taking was encountered at times at the higher levels, the general trend continued upward. The bears appeared to have gained the upperhand some time in later dealings following lower advices from Calcutta. But with the reports of fixation of a lower rate in Calcutta, prices in Bombay again firmed up on inter-market speculative activity. Earlier in the week margins on both bulls and bears were imposed in the Asho settlement. Kartick Silver which began the week at Rs 207-9 on a firm note was taken to Rs 209-8.

Gold followed a similar course with prices taken to higher levels on sustained bull support. The earlier quiet tendency was soon replaced by a firm trend on better advices from the commodity markets and in sympathy with the boom conditions in the silver section. Daily average arrivals and offtake were about equal. The stock in the market was placed around 80,000 tolas. Kartick Gold opened the week with a sharp rise in the rate to Rs 124-5. After meeting with some profit taking the rate recovered once again to be finally placed on Monday at Rs 125-2.

*

Oils and Oilseeds

The firm tendency noticed in the previous week in linseed was carried a stage further during the past week. Toward close, however, prices developed a reactionary tendency in the absence of continued good support. The earlier enthusiasm in linseed was largely brought about, as in the previous week, by the improved prospects for exports. The UK continued to indicate an advancing price level for the oil and the UK price showed at the end of the week a further rise of £6 per ton. Apart from the favourable UK price which encouraged operators to extend commitments on export prospects to that country, it was generally believed that in view of the reported small crops in Canada and the US, Indian linseed would be able to find wide scope for exports. The fact that there had been sustained demand for linseed oilcake from UK and continent coupled with steadily increasing demand from indigenous crushers for the seed accounted for the sustained interest in the futures section. The undertone was slightly easy on Monday following some selling induced by lower upcountry advices. Linseed May gained nearly a rupee at its highest level for the week before closing at Rs 35.12.

After ruling firm in the first half of the week under review Groundnut slowly lost ground to be pushed down below its opening level on Monday. Earlier optimism had stemmed from apprehensions about extensive damage to the new crop due to fresh rains in Gujerat, Saurashtra and other growing regions. Bull operators were also aided by reports about sustained UK interest in oilcake and oil. From around midweek however sentiment became first subdued and later on rather depressed. The reactionary tendency was touched off by reports of increased arrivals from Hyderabad. Later reports indicated that arrivals were getting bigger and bigger. With oil prices showing a declining trend and with vegetable ghee interest out of the market, prices declined rather sharply toward close. Groundnut February opened around Rs 178-10 and at one time was taken up to Rs 182. From midweek a declining trend developed and on Monday the reactionary tendency gathered momentum with the rate finally placed at Rs 176.37.

An easier tendency was noticeable in castor seed. In the absence of fresh buying interest, indications that the US might show interest in castor oil failed to impart any strength to the bullish sentiment. Castorseed May opened around Rs 165 and after having been done up to Rs 167-10 closed at Rs 164.

*

Art Silk Yarn

The artificial yarn market continued to report firm conditions on apprehensions of a shortage in supply. Rayon yarn firmed up further in view of the change in the import quota of this yarn. It is generally apprehended in the trade that under the amended import quota supplies would diminish and further, hopes of an improvement in the supply position as a result of additional licences to exporters receded because of the fall in exports of artificial silk goods.

*

Non-Ferrous Metals

Generally easy conditions prevailed in all non-ferrous metals during the past week. Brass sheets and copper sheets met with poor demand. The easier tendency noticeable in zinc was also caused by a similar factor. Lead prices have also eased during the week following some bulk selling by big holders. Expectations of easy availability of supplies are keeping tin prices at a low level.

DELHI REVIEW

Third Plan Target for Steel

IN a timely and masterly exposition of the development problems of the steel industry Sir Jehangir Ghandy, Director-in-charge of the Tata Iron and Steel Company, told the Delhi Rotarians last week that the annual demand for finished steel was not likely to be more than 7.1 million tons by 1965-66 and that, therefore, the Third Plan target should be no more than 9 million tons in terms of ingot production. The target suggested by him would represent a near-doubling of the likely actual production of 4.6 million tons of ingots in 1960-61. The target of 10 million ingot tons provisionally proposed by Government for the Third Plan would, in his view, divert to steel such a large proportion of the total resources that essential development in other fields would be starved of funds. He pointed out in this connection that each million tons of additional steel capacity would involve a capital investment of Rs 100 crores to expand an existing plant or Rs 200 crores to build one from scratch. Since, incidentally, the Government's present estimates set the possible production at about 3.5 million ingot tons in both the sectors after the expansion of the three public sector steel plants to their full capacity, Sir Jehangir Ghandy's demand projection for steel (based on the latest estimate made by the National Council of Applied Economic Research) would, in effect, mean that the proposal to have a fourth public sector steel plant at Bokaro during the Third Plan period itself could be conveniently deferred for the time being.

That Sir Ghandy had some such thing in mind could be inferred from his reference to the declared readiness of the TISCO and the IISCO to expand further. Speaking for the TISCO alone, he said that his company could undertake a further expansion of the capacity of its works at a very economic cost per ton inasmuch as most of the ancillary facilities already existed. For example, the fairly comfortable surplus of rolling capacity in the TISCO's expanded plant could be utilised by installing a skelp mill to produce the raw material from which tubes and pipes could be manufactured to meet the rapidly increasing demand for such lighter materials in structural and mechanical engineering. Apart from such possibilities of expansion of steel-making capacity in the private sector, there was the proposal to set up medium-scale plants (utilising non-metallurgical coal in such areas as Andhra Pradesh, Madras and Rajasthan) which, together with the existing or the projected electric furnaces, could contribute 600,000 tons of steel. In these circumstances, in Sir Ghandy's view, there was a case for phasing the proposed Bokaro plant over a longer period so as to allow sufficient time for preparatory work on the provision of a transportation network, the building of dams to impound sufficient water, the installation of capacity for power generation and the location and prospecting of raw material sources. The implication here was that the actual construction of the Bokaro plant need not be taken up during the Third Plan period.

After making out a case for going slow on new construction and thus for expansion of existing units, Sir Jehangir Ghandy logically dwelt on the question of how such expansion could be financed. It was his firm conviction that the ploughing back of profits alone could make growth a self-sustaining process. From this it followed that retention prices for steel, whether produced in the prviate or the public sector, should be so fixed as to permit ploughing back at a reasonably adequate level. His arguments in this connection could be known from the following passage quoted in extenso:

"Last time, when retention prices were fixed for the 1955-60 period, this was recognised by including a special element in the price to finance expansion. The yield from this element in our case is expected to be Rs 14 crores as against the capital expenditure of Rs 130 crores over the same period on expansion, renewals and replacements, and ancillary schemes. The price policy in previous years was not conducive to the accumulation of reserves. As a result, our expansion and modernisation has, in a large part, had to be financed through borrowings and a fresh capital issue, which will leave the company bearing an enormous burden of debts totalling Rs 80 crores. I feel, therefore, that there is a strong case for continuing to maintain an element in future retention prices to permit the liquidation of liabilities and also to finance future expansion. The political temptation to cut retention prices to such levels that expansion has to be financed mainly through borrowings must be resisted, because it violate the fundamental principle of self-generating development. In this connection, I may point out that the American steel industry has financed its expansion to the extent of 80 per cent from retained reserves. It is in this perspective that we must judge the economic validity of taxation policies in relation to corporate assets, and the disincentive these constitute in present conditions".

Sir Ghandy also dealt with the question of selling prices of steel in the context of his plea for expansion. The present distinction between selling and retention prices, he said, could be removed as Indian steel production increased and the volume of imported steel decreased, thereby obviating the need for the surcharge now levied on the producers to the extent of Rs 115 per ton and credited to the price equalisation fund. Steel prices could also be reduced further by reducing the excise duty which was increased two years ago from Rs 4 to Rs 40 per ton of ingots. A reduction in selling prices, in Sir Ghandy's view, would stimulate the consumption of steel within the country. An enlargement of the consumption potential was also necessary as a preparation for the expansion of the steel industry in the Third Plan. This, in turn, would call for the development of steel-using industries to their full stature.

Sir Jehangir Ghandy, therefore, pleaded for greater attention to secondary industries which are less capital-intensive. Quoting the Planning Commission's estimate that the capital investment per worker in basic industries like steel, fertilisers and heavy chemicals was Rs 80,000 as against Rs 15,000 in large-scale industries manufacturing consumer or producer goods and Rs 3,000 in reasonably productive small-scale industries, he emphasised that a given quantum of investment world generate far greater employment in these less capital-intensive fields. In particular he suggested that planning for steel production should logically be extended to cover the less capital-intensive engineering industries which would transform the steel, if supplied at lower prices, into usable products.

OLYMPUS

Thus far the main arguments in Sir Jehangir Ghandy's speech here have been covered without comment. But this correspondent would like to say that Sir Ghandy's plea for expansion of existing steel units in preference to new construction would be valid only if there were really insuperable difficulties on the score of foreign financial assistance for the proposed Bokaro plant. On the other hand, it looks as though both Japan and the United States, which are reportedly anxious to finance some spectacular projects in India in the same way as the Soviet Union has done, are interested in the Bokaro project. Whether Japan or the United States would ultimately come into the picture is not known at present.

In either case, there appears to be a great chance before the country if, as a part of the deal with Japan or the United States covering the Bokaro project, exports of iron ore from this country to pay, over a period of time, for its foreign exchange component could be negotiated. This should be possible as much in the case of the United States as in that of Japan because the opening of the St. Lawrence Seaway in North America has made it possible for its steel industry to get supplies of iron cheaply even from overseas mines instead of having to drift towards the east in view of the dwindling supplies of the Minnesota ores brought from Lake Superior. If, thus, financial aid for the Bokaro project could be tied to exports of Indian iron ore either to Japan or to the United States, there is no conceivable reason why this country should not confidently go in for a fourth new steel plant in the Third Plan period itself.

NORTH INDIAN NOTES

Foodgrains Production

The recommendations of the Ford Foundation Team have furnished the basis for the Government of India to draw up their plans for stepping up foodgrain production in the country. The Food Ministry's proposals and ideas are cast in the mould of a package programme to be implemented on a pilot project basis in selected areas, and particularly in promising areas. The scheme aims at stimulating intensive cultivation by provision of adequate and timely credit to all farmers, both credit and non-credit-worthy, based on production plans as also adequate and timely supply of others means of production such as improved seeds fertilisers, insecticides and farm implements, etc.

An important feature of the programme is that it envisages intensified education of farmers in the improved methods and practices through demonstrations and advice with the guarantee where necessary that any losses suffered in the adoption of measures recommended by scientists shall be made good. In so far as agriculturists had been reluctant to take up intensive methods because of uncertainity about the results, the guarantee now held out should instil a bolder attitude in them. The programme also promises fair return to the agriculturists in the shape of a reasonable floor price for selected foodgrains, which would be announced two seasons in advance.

The criteria for the selection of areas for the implementation of the pilot programmes lay down that the area should have good soil, assured water supply, progressive farmers, and well-developed village institutions like village panchayats and cooperatives through which the developmental efforts could be directed to reach the individual farmer.

Areas having problems requiring long term attention such as susceptibility to floods, lack of irrigation facilities and acute soil conservation problem, will not be considered for introducing the pilot project.

While underlining the requisites of intensive cultivation, the Ministry has also recognised the importance of providing all the facilities simultaneously and not in pieecemeal. The project is likely to be tried in fairly large areas such as seven districts—four growing rice, two growing wheat and one mainly pulses and millets. The sarting of the scheme in any particular area would be preceded by a crop cultivation survey.

*

Steel Production

Addressing the Rotary Club of Delhi, Sir Jehangir Ghandy, Director-in-Charge of the Tata Iron and Steel Company spoke on the need for reducing target for steel production from ten million ingot tons of steel, as is now envisaged for the Third Plan, to 9 million ingot tons. A nine million tons target appears to him to be adequate to the demand while a ten million tons target would involve diversion of a disproportionate share of the total resources to the steel industry.

In the planning of the additional capacity to reach this target of steel production, Sir Jehangir wants preference to be given to the expansion of the existing plants. In this connection, he points out that, while the building of a new plant with a capacity of one million tons would require nearly Rs 200 crores, expansion of existing plants to produce one million tons of additional steel would require only Rs 100 crores. In a reference to the Bokaro steel plant, Sir Jehangir admitted the need for a plant of that type, but at the same time he pointed out that financial considerations may well make it necessary to phase the plant over a longer period than the ones now being built.

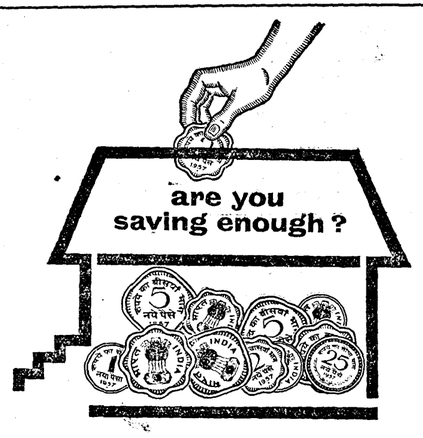
The plan for stepping up steel production if it is not to result in wasteful production requires to be matched by similar plans for the development of steel-consumption capacity in the country. This calls for the setting up of steel-using industries, and particularly the engineering industries which constitute the important segment of steel using industries. Sir Jehangir drew attention to the high prices of Indian steel which hinder the proper growth of the engineering industries. To bring down the prices, he has suggested that the present "price equalisation fund" should be abolished and that the distinction between selling and retention prices of steel should be done away with. To make growth a self-sustaining process, it is necessary to fix retention prices at a level such as would allow the industry to accumulate sufficient reserves.

In regard to alloy and tool steel, Sir Jehangir pointed out that it was necessary to plan for a much larger capacity than at present envisaged. A plant is projected in the State sector. Further, Tata Steel have expressed their willingness to set up a 100,000 ton plant.

The successful implementation of the steel projects now drawn up depends in no small measure upon the availability of adequate transport capacity to handle the increased volume of traffic both of raw materials as well as of the finished product. Sir Jehangir estimates that the creation of a further four million tons of steel capacity would require the movement of 24 million tons of freight traffic.

*

Women's Education



Much concern has been expressed in recent times at the lack of progress in women's education. The

DELHI REVIEW

National Committee on Women's Education that was set up some time ago and reported on the ways and means of improving women's education, has attributed the divergence between the boys' and girls' education to neglect on the part of the Government rather than to any unawareness of its requirements. The first effective step suggesting the end of this neglectful attitude was the settting up of the National Committee on Women's Education. Following the recommendations of the Committee the National Council for Women's Education was formed with a view to keeping close watch on the progress of women's education and to give exclusive attention to women's education which it needed. The inauguration of this council that was done by Dr K. L. Shrimali, Union Minister for Education, last week, is therefore an event that has great significance for women's education in the country.

Dr Shrimali in the course of his address dwelt upon the importance of women's education not only from the point of giving them equal opportunities but also for giving them identical opportunities. According to him, the problem facing them in the field of women's education was not one of lack of financial resources but that of wiping out the age-old prejudices against women's education. Dr Shrimali promised sympathetic consideration to the recommendations and suggestions that would be made by the Council for the progress of women's education.

Shrimati Durgabhai Deshmukh in her speech emphasised the urgency of the problem not merely as a matter of constitutional guarantee of equality between the sexes but as a need for giving full opportunity to women to play their role both in society and in the family on a footing of equal partnership. For a substantial measure of success it is necessary to concentrate mainly in the rural areas. It is however in spreading women's education in the rural areas that the greatest difficulties are encountered. Prejudices against women's education are more prevalent and more deep-rooted in the rural areas. For another thing, there is a shortage of teachers to serve in rural areas, nor could they be easily pursuaded to go to villages to take up educational work. The enrolment of all the girls of the rural areas in the primary schools has not proved less difficult. At the same time compulsion has to be ruled out. In this context, the only way open is to try steps like scholarships, allowance for books, and clothing, mid-day meals and such other measures that would have a pursuasive effect on the rural people in sending their children for primary schooling.

THE PENINSULA

Third Plan for Madras

OFFICIAL deliberations and discussions on the Third Plan have started in earnest in the Madras State. Much silent work is already being done by the various working groups set up to chalk out schemes in various fields. In one respect, the Madras State is favourably placed for the formulation of the Third Plan. The scheduled implementation of the development schemes under the Second Plan has created a climate in which it has become possible for the Government to enlist the co-operation of the opposition parties in the formulation of the Plan. The Government, for their part, also displayed a responsive attitude to the demand made during the last budget discussions for the constitution of an All-Party Committee to help in the formulation of the Third Plan, so that the Plan could reflect the viewpoints and suggestions of the entire political opinion of the State. The first meeting of this Committee, which consists of 21 members selected from both houses of Legislature, marks the formal inauguration of the discussions on the State's Third Plan.

Mr Subramaniam, the Finance Minister of the State, who presided over the meeting, pointed out that the final pattern of the Plan for the State had to be evolved before March 31 next year. However, the total outlay for the Third Plan has been tentatively fixed at Rs 250 crores. This information is contained in the review of the Second Plan of the State that was circulated to the members at the meeting. An outlay of this order would be more than double the size of the Second Plan outlay, which was around Rs 90 crores. The increased outlay would be justified not only by the requirements of the State but also as bearing a reasonable relation to the ambitious scale in which the Third Plan for the country is being conceived. When the overall outlay for the Third Plan is sought to be increased from Rs 7,200 crores under the Second Plan, to Rs 10,000 crores, a proportionate increase in the outlay for the States is but understandable. In the case of the Madras State, there is greater justification for an increase of this order in view of the high degree of success attained in the implementation of the Second Plan schemes. The Madras State is probably the only one which has a reasonable chance not only of covering the original plan outlay but also of exceeding it by a small margin. This consideration alone should entitle the State to a decent share of allotment out of the total plan outlay.

Mr Subramaniam, who was the main speaker at the meeting, gave a brief but comprehensive survey of the scope for development under the Third Plan in the State. At the outset, he stressed the need for an open approach to the formulation of the Plan irrespective of party differences. What was essential was that the best possible plan that would be suitable for the State having regard to the resources and other relevant factors should be evolved. A unanimous approach to the tasks involved in formulating the Plan would also be a helpful factor in its implementation.

The consensus of opinion at the meeting in regard to the question of priorities was that foodgrain production should be stepped up in the course of the Third Plan period so that the State could be made self-sufficient in the matter of food. The State has been none too happy with the near self-sufficiency which it enjoys at present since prospective surplus production could by the adverse effect of seasonal factors and conditions be changed into its opposite. In the Second Plan, the State targeted for an additional foodgrain production of nearly 12 lakh tons, which has failed of fulfilment, by nearly half. The test of self-sufficiency is the adequacy of foodgrain production in the adverse seasons. For this, foodgrain production has to be stepped up further. This is envisaged to be done in the course of the Third Plan mainly through the execution of minor irrigation works. Restoration of tanks alone would bring water to many a parched field. The number of such tanks lying untapped and unattended is more than 15,000.

Mr Kamaraj voiced the aspirations of the people for industrial development when he stressed the need for erecting a small steel plant in the State during the Third Plan. The Neiveli lignite plant has opened up the possibilities for small steel plants in the State which has iron ore in small quantities in the Salem district. Though the matter has been persistently brought to the attention of the Centre, no positive response had been available from that quarter. Referring to possibilities in this field, Mr Subramaniam said that an all-India Committee had been constituted for the purpose of recommending the location of steel plants and added that the State Government would give every help to the Committee on the question of setting up a factory with the ore available at Salem and the fuel from Neiveli.

Mr Subramaniam also referred to the key role of power for an accelerated rate of industrial development. Considerable headway has been made in the Second Plan in harnessing hydro-electric sources for generation of power. This has enabled nearly half of the villages in the State to be electrified an achievement for which there is no parallel in any other State. This progress notwithstanding, the supplies position is far from being stabilised and the dependence on seasonal discharge from the irrigation-cum-power reservoirs, makes drastic cuts in summer months inevitable. In view of the shortage of hydro-electric sources and the slender resources for thermal stations, expansion in the supplies of power to support a higher rate of industrial development would pose a difficult problem for the State.

A prominent role is envisaged for the private sector in industrial development. The note circulated to the members mentions consumer industries as contrasted with basic industries as the prospective field for private enterprise. In this connection, it is pointed out that all the necessary help should be given by the Government, both Central and State, to the private industrialists who venture into this field. The laying out of industrial colonies at centres with adequate transport, water and power facilities, provision of common servicing and repair facilities and the strengthening of the agencies for the supply of cheap credit are the planks in the programme for the development of small-scale and cottage industries.

The meeting also took into account the need for further development of transport of all types for industrial development. The schemes which could be singled out for their importance and immediate possibilities are the opening up of new railway lines around the Neiveli project to connect it with Bangalore, electrification of the Madras-Neiveli line, the development of Tuticorin port and the Sethusamudram project. The scope for development in various other directions such as education, including technical education, development of fisheries, setting up of an oil refinery etc., was also considered.

MADRAS REVIEW

THE INDO-BURMA PETROLEUM COMPANY LTD.

Notice is hereby given that the Board of Directors have declared an Interim Dividend of Re. 1/- (Rupee one) per share less tax to be deducted in accordance with the provisions of the Finance Act 1959, on the Ordinary Share Capital of the Company for the year ending 31st December 1959, payable on the 30th November 1959 to those members whose names appear on the Register on Members on the 9th November 1959.

The Ordinary Register of Members will be closed from the 9th November 1959 to 28th November 1959 both days inclusive.

By Order of the Board
Steel Brothers & Company Ltd.
Managing Agents.

Gillander House,
Neaji Subhas Road,
Calcutta.
20th October, 1959.

THE AMALGAMATED ELECTRICITY CO. LTD

The Registers of Members and Transfer Books of the Company will be closed from 23rd November to 6th December, 1959 both days inclusive, in connection with Final Dividend for the second half year ended 31st March, 1959, payable on or after 7th December, 1959.

By Order of the Board,

MADRAS REVIEW

Food Zones

Andhra's Chief Minister, Mr N. Sanjivi Reddi, is not quite sure whether the Planning Commission's suggestion to the Andhra State to bring the landholding ceiling from their decision to fix it at Rs 5,400 to Rs 3,600 is quite feasible. For, in his opinion, considering the cost of cultivation and other factors, the fixation of the ceiling at Rs 5,400 did not seem high. However, Mr Reddi stated here that the suggestion would have to be considered by the Andhra Pradesh Assembly during November when it meets.

During his short sojourn in Madras, Mr Reddi stated to newsmen that, for the landlord, the cost of educating his children, medical facilities and provision of other amenities all would have to be taken into consideration when fixing the land ceiling income. That was what the Assembly did before arriving at that figure, and if the ceiling of income was fixed lower at Rs 3,600, Mr Reddi believed this would not allow the honest landholder to discharge his responsibilities to his family. But he said the ceiling fixed in the Andhra State Land holding bill would be binding only on current holdings and not applicable to future holdings.

Not long ago, on another occasion in Madras city, Mr Sanjeevi Reddi pointed out in injured innocence that the Food Ministry of the India Government should concede the demand of both the Andhra and Madras Governments to make them separate zones. In a rather flamboyant fashion, he went on to declare that he would consider that Day as the Best Day when experts pronounced the favourable opinion on the feasibility of bringing the waters to of the Godavari down Madras. Again, Mr S. K. Patil, who was here to lay the foundation of the Madras State's Madhavaram Milk Colony's first unit, repeated his conviction of the desirability of bigger zones in respect of food. Bombay, Madhya Pradesh and Rajasthan would be an ideal zone involving not even a single naya paisa of expenditure to the Government of India. He also envisaged the Eastern Food zone as comprising Orissa and Bengal, despite Orissa's unwillingness. Orissa's surplus was twice the Bengal deficit, and, likewise, he believed Andhra, Madras, Mysore and Kerala could get on nicely. But he reiterated his intention of not forcing the view; and, unless he got hundred per cent consent of the federating states into food zones, he would not compel them. Ultimately, Mr Patil wished that the whole of India would become one food zone.

In this context, Mr Sanjeevi Reddi did not wish to controvert or comment on the suggestion of Mr Patil, but he once again repeated his suggestion for a separate food zone for Andhra, and contented himself with the remark that he did not want to start any controversy now.

Mr Reddi's expression over the sharing of the Andhra river surplus waters with Madras cooled off rather abruptly. Only a few weeks ago, he made the pronouncement with gusto at a public function, inaugurating the 272nd anniversary day of the Madras Corporation, that Andhra and Madras combined would become very prosperous. At present, Mr Reddi's icy attitude would be disappointing both to Madras Congress leadership and to the pro-Madras Andhra community in the City. But there is ample truth in Mr Reddi's indication of the factual conditions, namely, that, after seeing every inch of Andhra land got the benefit of its river waters, then only could they think of sharing the surplus waters with others. And even then, the cost involved would have to be met by the Central Government, he said.

He also referred to the Pochampad multi-purpose project on the Godavari in the Telengana region and said he expected Central sanction for Rs 10 crores to begin the first phase of the Rs 60 crore scheme. The River Godavari would thus be harnessed for the first time with a reservoir if the scheme is completed. Anyway, Mr Reddi did not expect to undertake any new project until they are through with the Nagarjunasagar project, which would continue even during the Third Plan in the State. For diversion of the surplus waters from Andhra to other States like Madras and Mysore, Mr Reddi envisioned an integrated scheme in combination with and with the cooperation of the beneficiary states. Srisailem hydel project in Kurnool district in the Third Plan would get the highest priority in Andhra since it would enable the State to get cheap power.

Mr Sanjeevi Reddi also told newsmen that, if the Nizamabad newsprint factory became not feasible, then the State would think of setting up an ordinary paper plant. This will be in the private sector. Though the Nizamabad sugar factory provided them with plenty of bagasse, Mr Reddi stated that there were still some technical difficulties. It was his belief that the proposed Andhra factory should be based on an all-India newsprint demand basis, and if the scheme was thought unworkable by the beginning of the next financial year, at least a paper factory would have to be started. He stated that, in Andhra, there were a number of industrialists who wanted to embark upon this venture. Proposals were also there to expand the Rajahmundry Paper mills.

At Kothokudem, a fertilizer factory would be erected, Mr Reddi stated, and added that the cost of this would be about Rs 27 crores. This scheme had become a **fait accompli.** Soon, the Board of Directors, who have not yet been nabed, would call for shares from the public. Half a dozen tenders from foreign countries have been received for erection of the factory. The State will take 51 per cent of the shares.

*

Cotton Textiles

About 690 textile designs exported to foreign countries from India were on display at the Madras Piecegoods Merchants Association premises early this week. This show will be open for a week here and it is intended to acquaint the business export houses with the competitive designs by rivals to Indian export. These designs also included non India exhibits competing with Indian Stuff in Aden, Ethiopia, Somaliland and other markets in Africa and Asia. The competitors are from Egypt, Japan, UK, Poland, Czechoslovakia, Hungary and Russia. Prints, haircords, organdies furnishings and flanne lettes are principal items which compete with Indian material.

Mr Babulal M. Mehta, President of the Madras Piecegoods Association, stated after the exhibition, that Indian manufacturers made types not manufactured here for export and succeeded in finding a market for these material. Cotton textiles, the biggest exportable foreign exchange earning item, however dropped in 1958 to 587 million yards, compared to 844 million yards in 1957. With the export promotion tion scheme, the 1959 prospects seemed bright. Judging by the shipments made in the last nine months, Mr Shah said the 1959 export would total about 750 million yards fetching foreign exchange valued at about Rs 60 crores of rupees. Mr Shah complained against high taxation, increasing production cost and old and outmoded textile fachinery all of which caused the fall in export. Competition from China, Poland, Hungary, Czechoslovakia, Pakistan and Japan also created dents in the export quantity of Indian textiles to foreign countries. Indian cotton textiles had lost ground in almost all the principal foreign markets in the African zone, Burma, Indonesia Aden, Hongkong, Malaya, Iraq and Singapore. China simply dumped its stuff here, and if India did not bestir itself betimes, the East Asian markets would be lost.

Mr M. Bhaktavatsalam, who opened the exhibition, said that Indian exporters should be ready to face a competitive market.

Mr M. V. Sitaram, Export Promotion Officer, stated that India's textile and yarn trade with Burma had shown improvement. Japan was the principal competitor to India in Burma. It was because Japan manufactured goods to the Burmese taste, he said.

SOUTH INDIAN NOTES

Rim Wheel Factory

India's first rim and wheel factory is to be set up in the Madras State. Two firms, Messers T. V. Sundaram Iyengar & Sons Private Limited and The Dunlop Rubber Company Limited, have, in mutual collaboration, worked out the project for which Central approval is reported to have been given. A new company is expected to be formed for which the capital would be subscribed by the two participating firms. Dunlop Rubber has undertaken to supply the necessary plant, this being its principal contribution to the new company's capital. Technical aid for the project has been arranged with the Dunlop Rim and Wheel Company Limited of Coventry. The company will have an initial capacity of over 200,000 truck wheels per annum.

The formation of the new company will be hailed as a timely step to fill up a vacuum in a field in which all round progress at an accelerated speed is a matter of great moment for the country's progress toward industrialisation. The automobile industry, while it has made commendable progress in increasing the percentage of indigenous components, yet to cover the entire ground of components for automobile manufacture. The weakness of the industry arising from this dependence was not felt as long as foreign exchange could be had in sufficient amount to import the components not manufactured within the country. It is this weakness again which is reflected in the current subdued activity of the industry. In the context, the project for the setting up of the rim and wheel factory, which would be the first one of its kind in the country, should be considered a significant development in the automobile industry.

*

Fisheries Development

Madras State probably is the only of its kind in India to closely pursue fruitfully the FAO's counsel in respect of fisheries development in South East Asia and record notable achievements.

The Fisheries Department's 1957-58 annual report makes encouraging reading in as much as the Department realised Rs 810 lakhs by sale of 1,07,840 tons of fish.

Research on the conservation, management, development, exploitation and utilisation of the marine and inland fisheries resources were continued at the Bilogical and Technological Stations at Tuticorin, Cape Camorin, Krusadai Island, Ennore and Bhavanisagar.

Good progress was made under the Marine Bilogical Station, Tuticorin, on the studies on the Plankton off Tuticorin, studies on the Biology of Pearl oysters, evolving a new technique for the estimation of oyster population in the Pearl banks, studies on the 'Biology and ecology of Chanks and Biological studies on the fishes, inhabiting the pearl banks.

27 OCT 1959 PUBLIC DEPARTMENT

SOUTH INDIAN MARKETS

Groundnut Prices Easier

Madras, Wednesday.

THE groundnut oil market today remained steady. The kernel position was easy. Shippers did not enter for actuals, though they negotiated for November and December vaidas. Even the lower prices of today seem to be high for them to enter into any commitments, and only short covering business was resorted to. United Kingdom price of groundnut oil today remained at £103/104, but Burma offered between Rs 1,400 and Rs 1,425 per ton of groundnut oil.

Today's closing price were: Groundnut oil: Ready Rs 362; October Rs 362; November Rs 347 and December Rs 336 per candy of 500 lbs.

Kernels prices were: Superior Rs 195 and medium Rs 190 'per candy of 531 lbs.

Castor oil remained steady at Rs 335 per candy.

Coconut oil remained steadier at Rs 41 to Rs 41.25.

Groundnut 'oil 'cake was in good demand at Rs 25 to Rs 25.25.

Arrivals of oil and kernels were both not much in the City.

Easier outlook was imparted in the supply position of groundnuts, however, due to the arrival of peanut new crop from Southern centres. Under its weight, the prices of oil and groundnut lost ground. Buyers restricted their transactions to small quantities. Bazar interests on whose fervour the market trend was kept up so long kept aloof as they had with them sizeable stocks to carry on for a few days more. Because of availability of oil at a lesser rate from the North, Calcutta trade remained away from Madras market last week-end and this week too. If the rates had to come down, it was dute to the absence of potential buying strength. Oil lost by about Rs 80/82 per ton while groudnnuts prices were reduced by Rs 35 per ton

Fairly good arrivals of the peanut averaged about 60 tons daily. It increased from last week-end to 80 tons. Crushers did not evince interest because of the decline in oil rates. Kernels were quoted at Rs 207 per candy of 531 lbs early last week-end, but declined to Rs 195 by Monday. It continued at the same rate Tuesday and closed at Rs 195 today. Medium varieties could command attention only around Rs 201/202 from beginning 'of this week, but even this rate declined to Rs 190. The arrivals were from Tiruvallur, Tiruttani, Pannur, all around the City, and also from Mysore State's Davanagere and Tumkur. Arrivals from these sources may increase by the end of the month.

In groundnut oil, Saturday's closing prices of Rs 385 per candy and nearabouts could not be maintained on Monday. It declined to Rs 370 the same day closing and on Monday trading was resorted to around Rs 367. Progressively Tuesday's closing came down to Rs 361. Only small coverage was done at this rate. Today the quotation went down still further to Rs 362.

In forward position also, there were good declines in prices. October vaida opened around Rs 375 last week-end. It declined to Rs 368 Saturday and Monday's rate was only Rs 361.50, but it slightly improved by 50 nP today and closed at that rate.

November vaida had to come down in sympathy with others. The early rate of Rs 358 did not bring in much transactions. There was a short-lived rally of the price to Rs 361, but went down again to Rs 352/353. Saturday's quotations were only Rs 349 to Rs 352/8, and Monday's rate was Rs 347. It was again depressed by one rupee and today's closing was at Rs 347.

Shippers were active in December vaida. They negotiated around Rs 340 last week-end. For a while, they even offered Rs 344 per candy. But the prices declined to Rs 338, but on Monday also the decline kept steady by another rupee. The opening rate of today at Rs 336 was maintained throughout.

*

Groundnut Oil Cake:

There is an easy tone in groundnut cake market. Buyers are not eager as they were during the previous weeks. The arrivals of stocks are from Gujerat and since the quality is fibrous the quotation could only be lower. Local crushers indicated a level around Rs 25 to Rs 25/4 per bag ex-mill with gunny. Today's rate was Rs 25 to Rs 25/4.

In Calcutta and Bombay, it is reported groundnut and oil markets continue easier in outlook.

*

Upcountry Markets:

In South Arcot, summer crop arrivals were very small. An average of 75 tons only are being received. All these were absorbed at Rs 203/204 per candy. No peanut was marketed in these areas, but Tirupathur and Tiruvannamalai reported negligible arrivals. Salem transactions in nuts were better. It took up about 150 tons daily at Rs 192/195 level per candy. The Pollachi market reported only 4000/5000 bushels daily of unshelled nuts, buying pressure was not there and consequently price declined to Rs 192/195 level. Superior red quality kernels were taken up at Rs 197/198 per candy. The white Coromandel quality was priced at Rs 192/194 per candy. In groundnut oil, vanaspati interests of the Southern side traded at Rs 378/381 per candy. This quotation latterly declined to Rs 370, to come still further down today to Rs 365.

Gingelly seed price maintained higher rate with Mysore sources as supplies. The prices ruling now were:

Chanda/Warora quality—No stock as on previous week.

Tuni/Rajamundry—Rs 70 per bag

Mysore side quality—Rs 68/69 per bag.

Local varieties—Rs 70/71.

Gingelly oil maintained the same price at Rs 21/4 per maund on wholesale basis and Rs 21/8 on retail basis.

Castor oil improved in price due to lack of supplies.

Castorseeds: Not quoted.

Foreign buyers are inclined, according to information available today, to offer £103/104 per ton for groundnut oil. The handicap, however, is shipping space in bulk for December shipments. The total commitments from India for November-December shipments are reported to be in the region of about 9,000 to 10,000 tons of groundnut oil.

Groundnut oil cake continues to command good support from United Kingdom and Continental buyers. The latest ruling rates in the foreign markets of Indian commodities are as follows:—

		per ton
Groundnuts Oct./Nov.	...	£64 to £64/5
Cartorseed	...	£57
Nigerseed nominal Oct./Nov.	...	£58
Groundnut oil Spot ...	...	£107 to £107/10
Groundnut oil Nov./Dec.	...	£103/104
Castor oil Oct./Nov. B.S.S.	...	£120
Castor oil Oct./Nov. Commercial	...	£113/114
Linseed oil November ...	...	£139
Cocnut oil Straits Oct./Nov.	...	£139/140
Coconut oil Colombo ...	...	£147/148
Groundnut oil cake (Expeller) 54%		O & A
Nov./Dec.	...	£38/10
Groundnut oil-cake Jan.	...	£38 to £38/5
Groundnut (Solvent) Nov./Dec.	...	£35/15 to £35/17/6
Cottonseed cake ...	...	£34/5

The following are the closing rates (Wednesday) in the Groundnut and oil centres in the South:

	Ground-nut kernel Per Candy of 531 lbs. Rs	Ground-nut oil Per Candy of 500 lbs. Rs
Guntur/Bezwada	200	370
Vriddhachalam	204	365
Nandyal	195	365
Villipuram	203	365
Cuddappah/Yerraguntla	194	360
Pollachi (Red) Superior	198	370
Tanjore	195	364
Tiruvannamalai	195	360
Salem	195	360

This is the latest report from the Cuddalore Groundnut market. With fair to average rains, condition of winter crop is expected to improve. It would, however take some weeks more for the winter crop to be harvested and move into the market. Kernels of the summer crop, available only in small lots, improved while oil also became high.

The prices of the commodity as obtained from Cuddalore market quotations were:

Groundnut kernels per 531 lb candy	Highest Rs nP	Lowest Rs nP
Vriddhachalam ...	211.90	150.90
Villipuram ...	208.00	142.90
Tindivanam ...	211.10	174.90
Tirukoilur ...	207.00	150.00
Cuddalore Old Town	212.37	130.00
Punruti ...	211.60	160.90
Chinnasalem ...	197.20	143.90
Ulundurpet ...	195.50	173.10
Kallakurichi ...	198.90	132.00

*

Hides and Skins

In the cow hides section, arrivals are reported to be fair. Prices today are in the declining phase. In export business, United Kingdom turned indifferent to Madras cabled quotations. Nevertheless, stray business in parcels of 5/5½ lb fifths were done at 64d/65d and 8/8½ fourths, and fifths were also lifted at 53d and 51d.

Tanned buffalo hides reported very little business with a decline in quotation by about 9 nP per lb Market for inferior fifths continued to be very weak with no outside enquiries.

Tanned cow calf and buffalo calf became dearer due to poor supplies.

Goat skins traded upon by the market upto Monday last were about 6,500 pieces of tanned goat skins, while 48,000 sheep skins changed hands. The market was left with the appreciable number of over 9,000 goat skins and 40,000 sheeps skins. Prices were unchanged in the market for quality tanned sheep and goat skins. Tanned goat skins had good offers for export. Light weights had very good demand. The 11/12 inferior fifths got good inquiries.

Tanned material prices: Avaram Bark Rs 90/105, Konam Bark Rs 70/72 Myrabolams Salem Quality Rs 115/120, Belgaum Rs 56/60 and Wattle Extract Rs 1010.

Raw Skin prices were: Bangalore Raw Goat Rs 640/750 (against last week's Rs 630/700); White Wool Sheep Rs 540/650 against last week's Rs 540/580; Black Wool Sheep Rs 430/500 against last week Rs 430 490; Bezwada Raw Goat skins Rs 655/675 against last week's Rs 645/655: He Sheep Rs 540/565 against last week's Rs 535/540; She Sheep Rs 395/415 against last week's Rs 400/410.

*

Pepper

In the Alleppey market pepper continued at Rs 800 per cwt for both good and inferior stuff. The average inflow of about 75 candies was readily absorbed. No fresh foreign inquiries were made this week. Fresh pepper was quoted between Rs 412.50 and Rs 462.50 according to quality.

THE CALCUTTA TRAMWAYS COMPANY LTD.

*

DIFFICULT OPERATING CONDITIONS

*

EFFECTIVE CONTROL OVER EXPENDITURE

*

Mr. DAVID WEBB ON COMPANY'S RESILIENCE

The Annual General Meeting of The Calcutta Tramways Company Limited was held on the 14th October at 30, Cursitor Street, Chancery Lane, London, E.C., Mr. David E. Webb, F.C.A., chairman of the Company, presiding.

Mr. B. H. Clark, representing the secretaries, Messrs Hays, Akers Hays, read the notice convening the meeting and the report of the auditors.

The Chairman said:—Your Company suffered a great loss in April of this year. Your agent, Claude Blease, while presiding at the annual general meeting of the Calcutta Club in his capacity of president, suffered a heart attack which proved fatal. He had been with the Company 33 years and had been agent since 1949. The decade during which he represented the Company in Calcutta was, without doubt, the most momentous in the history of the Company. Never a year went by without troubles, the magnitude of which would have broken a less stout-hearted man. Right until the end Mr. Blease was immersed in the manifold worries of a tribunal and it was typical of the man that, but for his devotion to your Company, he would have been on leave at the time of his death. He was always a tremendous believer in the happy relationship of Indians and Europeans and his life was reflected in the host of friends he has left behind him. Dum Dum Airport will not seem the same without the bulky, beaming figure of the agent in the fore-ground. Our deep condolences go out to his family in their great loss.

The Accounts

The accounts presented to you to-day reflect the conditions under which your Company has had to operate during one of the most difficult periods in its history. Much of what occurred you already know from my statement to you last year.

You will recall that we were faced with a strike of our employees from early August until late September and, as a result, the number of passengers carried decreased from 402 million in 1957 to 366 million in 1958. Traffic receipts fell from £1,950,000 in 1957 to £1,760,000 in 1958 and the balance on revenue account from £255,000 to £130,000. After charging London office expenses, development expenses and setting aside £80,000 to renewals and replacements account, there is left a surplus of £17,041 compared with £137,041 last year.

In the revenue appropriation account, Debenture interest has been charged and the shareholders' account credited with £87,457. The deficit of £94,922 has been charged against special reserve in accordance with the terms of our agreement of 1951 with Government.

Turning to the balance-sheet, the coditions existing during the year are reflected in the dwindling of our cash resources; current assets have fallen from £778,000 to £702,000 and cash and tax reserve certificates in particular, from £391,000 to £218,000. From these figures, shareholders will appreciate the repeated references of your board to the necessity to retain substantial cash resources in the Company.

The fact that the results are not worse is attributable to the first class control in Calcutta over every kind of expenditure. To have suffered a six weeks strike and yet to have traded at a small surplus, draws attention to the resilience of the Company and the ability of the executive staff to adapt themselves, at times on the shortest possible notice, from one set of circumstances to another. Of necessity, such a pruning of expenditure brings, in its wake, a backlog of maintenance, re-equipment and modernization, and this aspect is at last beginning to influence public opinion in Calcutta. Certainly we believe that the resistance to an increase of fares is now almost entirely political.

Period of Frustration

Last year, in my statement I traced the sequence of events through the strike period; the increase in fares, the offer of the Company to increase the wages of the men, the refusal of the union leaders to allow their members to accept increased wages as long as the fares were put up, and eventually a return to the old level of fares and wages while an independent Court of Inquiry examined the case. Then the final act of Government in appointing a tribunal under the Industrial Disputes Act instead of an independent Court of Inquiry. This tribunal sat until July of this year and we are now awaiting the award. This should be published in the near future, and when that happens, shareholders will be informed of its contents.

For more than a year the Company has been subject to all the frustrations of this Industrial Courts Tribunal. During that time nothing could be done to improve the position of our employees. Our revenue was frozen and all the many improvements and modernizations which are inherent in an undertaking of this nature have had to be postponed. We can only hope that in the very near future we shall return to more realistic conditions when once more we are in a position to look after our staff and render a service to the travelling public of Calcutta more in keeping with the great traditions of your Company.

New Agent

Our new agent, Mr. Turnbull, has taken over at a difficult time. Your Company was fortunate indeed to have such a man to call upon, and we, as a board, have complete confidence in his ability to represent the Company and handle the diverse situations with which he will be confronted. The executive staff have once more rendered excellent service and the tramway operational staff have shown commendable cool-headedness and sense in the recent riots.

The report and accounts were adopted.

The above statement is published for information and does not purport to be a report of the proceedings of the Annual General Meeting referred to.

INDUSTRIAL INFORMATION

OIL AND NATURAL GAS COMMISSION CONVERSION INTO STATUTORY BODY

The Oil and Natural Gas Commission has become a statutory organisation, according to a *Gazette of India* Notification issued by the Ministry of Steel, Mines and Fuel.

The Oil and Natural Gas Commission Act, 1959, providing "for the establishment of a Commission for the development of petroleum resources and the production and sale of petroleum and petroleum products produced by it and matters connected therewith" was passed in the last session of the Parliament.

Under the new Act, Shri K. D. Malaviya, Minister for Mines and Oil, has been appointed part-time Chairman with Shri P. C. Bhattacharya and Shri A. M. N. Ghosh as Members. Shri Bhattacharya will be Member (Finance) of the organisation. Under the Act, the Commission "shall consist of a Chairman and not less than two and not more than eight other Members appointed by the Central Government and the Members may be required to render whole time or part-time service as the Central Government may direct provided that one of the Members shall be a whole time Finance Member in charge of the financial matters relating to the Commission."

Set up initially as a Directorate under the then Ministry of Natural Resources and Scientific Research, the Oil and Natural Gas Commission was constituted on August 14, 1956.

The main task of the Commission has been to narrow down the gap between the demand for and production of oil and natural gas as much as possible by an early assessment of the country's oil resources and the discovery of new potential oilfields. Nearly 4,00,000 sq miles comprising parts of the Punjab, Ganga Valley Assam, West Bengal, Gujerat, Cutch, Rajasthan and the East and West Coasts are considered as areas deserving exploration for petroleum on geological, geophysical and other considerations.

For a quick assessment of the country's oil resources simultaneous operations have been undertaken in some of these areas. The main effort of the Commission is directed at locating and testing suitable structures for the accumulation of oil by geological mapping, geophysical surveys drilling.

Starting from a scratch the Commission has so far imparted training in oil exploration to a large number of science graduates fresh from the universities, arranged for the training abroad, secured the services of foreign specialists for geology, geophysics and engineering departments, procured precision and heavy equipment for drilling and established various laboratories and a huge library.

It has also arranged exploration work in parts of Himalayan foothills, Assam, Ganga Valley, West Bengal, Rajasthan, Cambay, Cutch and narrow fringes along the East and West Coasts.

Drilling operations were started in April 1957 in Jwalamukhi followed later by similar operations in Hoshiarpur, Cambay and Sibsagar in Assam. The efforts of the Commission have already been crowned with encouraging results at Cambay and Jwalamukhi.

LIMESTONE REQUIREMENTS OF STEEL PLANTS

The recent assessment has revealed that the annual requirements of limestones for the three plants in the public sector will be 23,92,000 tons a year.

The extensive prospecting at Purnanani area has revealed sufficient quantities of limestone for the Rourkela blast furnace, sintering plant, and the fertilizer plant.

This deposit, however, is not suitable for the steel melting shop which requires 170,000 tons per annum. Preliminary investigations in Satna area in Madhya Pradesh have revealed suitable deposits and a few mine owners have also assured that they would

be able to supply the requirements of Rourkela.

The Bhilai Steel Plant will need about 7,44,000 tons of limestone per year, which will be supplied from the Nandini reserves.

The need for limestone at Durgapur has been estimated at 7,08,000 tons. The supply for the first few years of operation will be drawn from the existing sources in the Birmitrapur-Hathibari area of Orissa. For future supplies, the Geological Survey of India are exploring the possibility of obtaining suitable deposits in the Shahabad District of Bihar. Some deposits in Assam are also being considered.

To produce one million tons of steel, about 2 million tons of iron ore, little less than 2 million tons of coal, half a million tons of limestone and half a million tons of other materials like Dolomite, Manganese ore and alloying elements are required.

LESS IMPORT OF STEEL IN 1958

India imported 1.17 million tons of steel during 1958 as against 1.67 million tons in 1957.

The quantities imported on Government account and distributed by Steel Controller amounted to 753,805 tons in 1958 as against 1,037,063 tons in 1957.

The total supply during the period was 2.47 million tons including 1.30 million tons from indigenous sources.

The supply position during the present year is likely to ease with the first saleable steel—billets and plates—expected from the public sector plants at Bhilai and Rourkela.

About 200,000 tons of steel is also being brought from the USSR. Arrangements are being made to purchase about 200,000 tons with funds coming from the US Government DLF Loan.

Substantial quantities of steel for Railways are being purchased by them, again out of funds coming from the US Development loan.

A few contracts for the purchase of steel against the export of scrap, iron ore and manganese ore have also been concluded.

Imports of steel were liberal till the beginning of 1957 when owing to foreign exchange difficulties, restrictions had to be imposed. No import licences were issued for prime quality mild steel on commercial account and imports were arranged by the Iron & Steel Controller directly.

The only item licensed were special categories of steel and some quantity of industrial and re-rollable scrap. The bulk of these licences were issued to actual users.

Even the comparatively smaller import of steel during the year as compared to previous years flowed to a large extent from outstandings of old orders placed earlier and the long-term contracts entered into in 1955-56 with USSR and West Germany.

IRON ORE PRODUCTION IN INDIA

The output of iron ore during the month of August, 1959, was estimated at 587,000 metric tons, according to the Indian Bureau of Mines.

The total production since the beginning of 1959 was 5,008,000 metric tons as compared with 3,997,000 metric tons in the corresponding period of 1958.

The largest output was reported from Bihar and Orissa being 267,000 metric tons and 193,000 metric tons respectively.

Among the minor producing States, Mysore, Madhya Pradesh and Bombay accounted for 57,000 metric tons, 28,000 metric tons and 17,000 metric tons respectively.

During the month despatches of iron ore to iron and steel plants and export market were 451,000 metric tons and 158,000 metric tons respectively.

I.T.I. SCHEME TO EXCEED SECOND PLAN PRODUCTION TARGETS

The annual production target of the Indian Telephone Industries was fixed at 65,000 telephones and 45,000 exchange lines at the end of the the Second Five-Year Plan (1960-61). Against this, the factory is now planning to produce 1,20,000 telephones and 71,000 exchange lines in 1960-61, thereby seeking to achieve an increase which represents 185 per cent. of the telephone production target and approximately 160 per cent. of the exchange lines target.

I.T.I. has already exceeded the annual production targets laid down for the Second Five-Year Plan in the production of telephones and exchange lines. During the Second Five-Year Plan it was envisaged that a total of 3,20,000 telephones and 2,15,000 exchange lines would be produced. Against these targets, in the first three and a half years of the Plan period (from April, 1956 to September, 1959), I.T.I. has already produced 2,37,000 telephones and 1,50,000 exchange lines. During the remaining year and a half of the current Plan period, it is estimated that I.T.I. will produce 1,75,000 more telephones and 1,00,000 exchange lines, thereby exceeding the Plan target by 92,000 telephones and 35,000 exchange lines.

In addition, I.T.I. has undertaken the production of various items for Railway Electrification Control, viz., wayside station telephone sets; control room equipment for train control; portable telephone sets for emergency control; control room equipment for emergency control; block filter units; terminal and wayside units for interwire telegraph, etc. The delivery of these items has already commenced. This equipment was not originally included in the production schedule. Apart from telephone exchange equipment, I.T.I. is producing transmission equipment and in this field considerable design and development work has been done. This process of continued development and research is an integral part of I.T.I. policy of constant improvement in tele-communication equipment.

GOVERNMENT PLANT FOR SPECIAL STEELS.

India spent nearly Rs 60 lakhs on the import of 1,121 tons of stainless steel in the first half of the year 1959. The quantity imported in the preceding year was 2,025 tons valued at Rs 1,10,85,407.

There is no capacity in the country at present for the production of stainless steel, excepting an annual production of nearly 2,000 to 3,000 tons of special steels including alloy steel, tool steel and die steel.

The import of tool and alloy steel during 1958 was 26,013 tons valued at Rs 4,74,79,849.

The demand of special steels, bulk of which has been met by imports, has been increasing steadily. The import of these categories was only 6,000 to 7,000 tons five or six years ago.

Judging by the likely tempo of development in the Third Plan the demand might grow over 50,000 tons by 1965.

The Government of India have already announced their decision to set up an alloy and special steel plant with a capacity of 40,000 tons of ingots per year in the public sector.

The plant to be put up in the public sector, is expected to yield about 25,000 tons of saleable special steel products with provision for expansion at a later stage to 80,000 tons of ingots.

The target of six million tons for steel, in the Second Plan, is primarily for ordinary steels produced by conventional processes in large integrated iron and steel works.

While the demand for such steels is large and production is generally undertaken in big integrated works, there are other steels usually called "alloy and special steels" which are required in relatively small quantities but in a variety of qualities. They generally have alloying elements other than carbon—e.g., nickel, chromium, vanadium—to give special properties to the steel.

Both because of the small quantities in which they are required and because of the high degree of quality control and finish which goes into the the manufacture of these steels, they are not convenient of manufacture in integrated iron and steel works. It is usual to make these steels in electric furnaces and to roll them in special rolling mills.

The Ordnance factories which at present manufacture certain grades of special steels have a proposal to modernise and expand existing facilities. It has been agreed that no wasteful capacity should be set up in the country but there is room both for the expansion of existing facilities. It has been agreed that no wasteful capacity should be set up in the country but there is room both for the expansion of existing facilities in the Ordnance factories and for a unit outside, primarily, to meet the demands of civilian industry.

The Oil India Private Limited—organisation set up to produce and transport crude oil from nearly 500 square miles area in the north-eastern region of India—have so far paid a sum of Rs 1,033.85 lakhs as compensation to the Assam Oil Company for the assets taken over by them.

The total value of the assets of the Assam Oil Company taken over by the Oil India Private Limited will be known after the receipt of the report of the Assessment Committee.

The committee, which consists of 4 members—two nominated by the Government of India and two by the Assam Oil Company—is expected to submit its report by the end of the month.

The Oil India Private Limited was incorporated on February 18, 1959 to explore and produce crude oil from Hoogrijan, Moran and Naharkatiya extension in Assam.

The Assam Oil Company, which is a major partner in the Oil India Private Limited, had been exploring for oil in the area for some time past. The compensation relates to the investment made by the company in the area.

The agreement for the formation of rupee company—Oil India Private Ltd.—for the exploration and production of petroleum and crude oil and for arranging for the construction in two stages and operation of a pipeline and other related facilities, was signed on January 14, 1958 between the Government of India and the Burmah Oil Company and the Assam Oil Company. The Government of India hold 33 1/3 per cent shares in the company which has an authorised capital of Rs 50 crores.

INDUSTRIAL RELATIONS DURING JULY

There were 93 fresh industrial disputes in July, 1959, bringing the total number of disputes current at any time during the month to 139 including 25 lock-outs. In the previous month, there were 102 fresh disputes out of 154 disputes current.

According to the Labour Bureau, Government of India, the average duration of disputes current at any time during July was 12.4 days as compared with 10.4 days in June.

One hundred and one disputes terminated during July. Of these, 66 lasted not more than 5 days each.

During July, Madras recorded each and 14 lasted more than 30

During the month, time-loss of 5,54,080 man-days out of a total of 6,85,279 i.e. 80.9 per cent was accounted for by the 'Manufacturing industry' group. 'Mining and Quarrying' and 'Commerce' followed next with time-losses of 66,832 and 34,676 man-days respectively i.e. 9.8 and 5.1 per cent of the total . Time-losses in other major groups of industries was comparatively low.

the highest time-loss (3,26,271) followed by West Bengal (1,50,979), Bombay (73,605), Madhya Pradesh (42,559), and Mysore (32,200). Compared to the previous month, time-loss increased in West Bengal, Uttar Pradesh, Delhi, Kerala and Madhya Pradesh, and decreased in all other States.

For the Manufacturing industry group, the index of industrial unrest (base 1951=100) for July was 179 (provisional) as compared with 228 (revised) for the preceding month.

PUBLIC AND PRIVATE ENTERPRISE IN INDIA

India was accustomed to think of a national or integrated economy where there was orderly progress with public and private enterprise, dovetailing into each other on a planned basis, Mr A. K. Roy, Secretary, Union Ministry of Finance, said here in his address at the annual meeting of the Governors of the International Finance Corporation.

Starting from the principle that the efforts of public enterprise and of private enterprise have to be used to stimulate and complement each other, India, Mr Roy continued, had undertaken to develop in the public sector, important sinews of growth which could not, without peril to the growth of enterprise, be delayed or done in an inadequate measure, or be left open to the element of chance on the subject of foreign private investment.

Mr Roy underlined the significance of such investment for growing economies and said that India had recognised this in her two Five-Year Plans by counting on a reasonable inflow of private investment funds. India was offering a number of incentives including those in the field of taxation for private investment and this matter of incentives had been engaging continuous attention of the Government of India, he added.

Concluding Mr Roy referred to the role of the International Finance Corporation as a catalytic agent for stimulating the flow of private investment and said that as part of its own growth, the Finance Corporation could undertake the work of factual compilation and presentation at periodic intervals of investment prospects in its member countries from time to time.

NEYVELI LIGNITE PROJECT

The entire quantity of 27 million cubic yards of earth burden over the Lignite reserves at Neyveli is expected to be removed by the end of March 1961.

The earthmoving operations were inaugurated by the Prime Minister on May 20, 1957.

In 1958 the target of 2.52 million cubic yards fixed for the removal of overburden was exceeded by 0.33 million cubic yards.

The integrated Neyveli Lignite Project envisages the mining of 3.5 million tons of lignite per annum and processing and utilisation for the generation of 2,50,000 kw of electricity, the production of nitrogenous fertilizers in the shape of Urea with a fixed nitrogen content of 70,000 tons per annum and the briquetting and carbonization of the remaining output to produce 3,80,000 tons of carbonized lignite briquetts per annum for domestic and other purposes.

The mining part of the integrated project is estimated to cost Rs 16.90 crores.

RECORD PRODUCTION OF LEAD-ZINC ORES

A record production of 79,152 metric tons of lead-zinc ores in India was achieved during the half year ending June, 1959.

Compared to the corresponding period of the preceding year, the production was higher by nearly 63 per cent.

The recovery of lead and zinc concentrates was also substantially higher being 3,229 metric tons and 4,677 metric tons respectively as compared to 2,139 and 2,668 metric tons in first half year of 1958.

The entire production was reported from the Zawar mines in Udaipur district of Rajasthan State.

Lead concentrates are sent to Tundoo smelter in Bihar State for extraction of refined lead while the zinc concentrates are shipped to Japan for smelting of zinc as there is no zinc smelter in India at present.

The production of refined lead during the period January-June 1959 was 2,063 metric tons as compared to the production of 1,510 metric tons in the corresponding period of the preceding year.

METRIC SYSTEM IN LEVY AND COLLECTION OF CUSTOMS DUTIES

The Government of India have decided to introduce from April 1, 1960 metric system with regard to the levy and collection of customs duties.

The introduction of metric system for levy of customs duties will mark another important stage in the country's switch over to the new system. It has been already introduced from October 1 last year in certain specified areas and in some major industries like cotton textiles, iron & steel, cement paper, salt, engineering, coffee, etc. In jute industry the metric system was introduced earlier in July 1958.

The sugar industry will adopt metric system from the beginning of their next crushing season, namely, November 1, 1959. Vanaspati, paint, biscuit and soap industries will adopt the metric system from April 1, 1960 and coir industry from October 1, 1960.

ELECTRICITY OUTPUT AND CONSUMPTION IN JUNE 1959

The total electricity produced by the public utility power station in India in June 1959 amounted to 1,200·3 million kwh., of which 963.3 million kwh. were sold to ultimate consumers.

Corresponding figures for June 1958 were 1,009.1 million kwh. and 810.7 million kwh. and June 1951 were 499.6 million kwh. and 408.8 million kwh., respectively.

These figures show that the annual increase in electricity production is 20 per cent. The consumption in the year also increased by 18 per cent.

The all-India electricity supply statistics for the month of June 1959 cover 813 public electricity supply undertakings.

Steady Trend

Watch-Dog writes:

Steady conditions have prevailed in the stock-markets during the past week. After a promising opening marked by advancing price levels, equities have tended to be irregular with the undertone turning somewhat hesitant.

The Calcutta Stock Exchange reopened after the Puja holidays on a steady note and continued to maintain this trend despite settlement considerations up to mid-week. In the second half buying interest slackened on adverse rumours.

The new account on the Bombay Stock Exchange commenced on a cheerful note, but the trend became irregular in later dealings on lack of fresh buying interest.

After earlier hectic activity characterised by widespread gains, the Madras Stock Exchange relapsed into a listless mood.

*

Calcutta

Calcutta, Friday Evening.

THE Calcutta Stock Exchange reopened after the long Puja holidays on a steady note. Such a promising commencement was generally expected in view of the higher levels reached by most equities in Dalal Street during the period the Calcutta Stock Exchange remained closed. The higher opening was also partly motivated by the slight change for the better noticeable in China's attitude toward the current border dispute. Good tidings for the bulls had also come from both the Prime Minister and the Union Finance Minister. While the former has made it abundantly clear that the private sector would continue to have vast scope in the industrialisation of the country, the latter had been paving the way for a larger flow of foreign private capital into India. The good prospects of adequate foreign aid for the Third Plan and indications of continued hefty doses of deficit financing were other favourable influences. Toward the close of the week, however, vague rumours about foreign aid prospects resulted in a lowering of the price levels, especially the more speculative scrip. Even so, demand continued to outstrip supply in most of the favoured investment counters.

Cotton textiles were a generally a steady market. Elgin was done upto Rs 16.75 before closing on Thursday at Rs 16.37. Jayshree Textiles was well maintained at Rs 10.25. Kesoram was in good request in earlier dealings upto Rs 19.37 but came back to Rs 18.78. Dunbar was wanted up to Rs 230 as against pre-puja closing of Rs 208.

Narrow fluctuations characterised trading in the coal section. Burrakur opened the week at Rs 16.37 and in later dealings steadily receded to be placed on Thursday at Rs 16. Central India came back to Rs 8.09 from Rs 8.31. Karanpura collieries declined to Rs 132 from Rs 137. Dhemo Main came to business after a fairly long interval to be placed lower at Rs 8.87. Raneegunge was a steady feature at Rs 17.

Jute shares were rather listless at the beginning but from midweek renewed interest pushed up rates in selected counters. The most outstanding feature was Howrah which advanced from Rs 23.59 to Rs 25.09 before closing on Thursday at Rs 24.87. Birla was a steady feature at Rs 25.37. Champdany gained 7 points to be quoted at Rs 142. Lawrence improved to Rs 134. New Central was placed at Rs 19.44 with National half a point higher on balance at Rs 24.50. Anglo India moved up from Rs 242 to Rs 248.

In the Engineering section Indian Iron opened higher at Rs 24.47 as against pre-Puja closing of Rs 24.08. Though the day's best levels could not be maintained, the scrip opened on Tuesday firm at Rs 24.59, but by close of the day again came back to Rs 24.34. The scrip mover narrowly on Wednesday which was the clearing day. The settlement rate was Rs 24.38. Opening steadier at Rs 24.47 on Thursday the scrip once again developed a sagging tendency to close at Rs 24.39. Friday's trading ended with the quotation at Rs 24.40. Among other Engineerings TEXMACO firmed up to Rs 24.65 from its opening level of Rs 24.20. Braithwaite advanced to Rs 26.31 from Rs 25.44. Guest, Keen, Williams appreciated to Rs 40.37 from Rs 39.62. Jessop was quiet at Rs 32.87 as was JK Steel at Rs 13.37.

Paper mills were generally a dull section. Orient Paper closed on Thursday at Rs 38.30 against week's opening rate of Rs 38.40. Sirpur moved within a narrow groove to be placed at Rs 14.44. Titaghur was maintained at Rs 45.12.

Selected sugar shares met with good enquiry. Ramnugger advanced to Rs 19.37 from Rs 18.87. SKG was wanted upto Rs 13. Carew was steady at Rs 10.56.

Interest in tea shares broadened in later dealings following improved trend at the week's auction. Brooke Bond was wanted upto Rs 18.19 from Rs 17.50. East India moved upto Rs 19.75 from Rs 19.31. Jayshree gained more than a point to be placed at Rs 15.50. Huldibari appreciated to Rs 19.75 from Rs 18.87.

Several bright features were noticeable in the miscellaneous section. Aluminium Corporation met with good support and advanced to Rs 16.12 from Rs 15.75. Indian Aluminium was done upto Rs 23.44 from its opening level of Rs 22.69 before closing on Thursday at Rs 23.12. Dunlop Rubper was in request upto Rs 35.75. Indian Cable was steady and closed at Rs 31.12 xd. Rohtas turned ex-dividend at Rs 24.75. Philips was steadier at Rs 21. Indian Oxygen was in request upto Rs 29.25. National Carbon changed hands higher at Rs 41. Hindusthan Lever was placed at Rs 32.06 while Hind Motors closed slightly lower on balance at Rs 13.31.

FOREIGN TARDE FIGURES FOR JUNE, 1959

Following is the break-up of total values of India's foreign trade in principal articles and with principal countries during June 1959:—

Supplementary Press Note on India's Foreign Trade (merchandise) during June, 1959.

(I) EXPORTS.

(a) In principal articles.

Description.	Value in Rs. (000) June, 1959	May, 1959	June, 1958
Food—			
Fish: salted, dried or smoked, but not further prepared	35,43	32,77	22,59
Fish: Crustacea and Molluses: fresh, chilled frozen, salted, dried or simply cooked)	10,25	7,81	16,27
Edible nuts (including fresh coconuts), other than nuts chiefly used for the extracting of oil	1,04,44	1,18,02	97,84
Beet sugar and cane sugar, refined	4,59	19,20	1
Coffee not roasted	68,76	76,93	13,89
Tea	6,60,49	5,58,72	6,03,51
Spices, pepper and pimenta whether unground, ground or otherwise prepared	5,57	14,17	5,81
Spices, except pepper and pimento, whether unground, ground or otherwise prepared	32,26	44,96	26,72
Oilseed cake and meal and other vegetable oil residues	1,30,73	1,08,97	16,81
Beverages and Tobacco—			
Tobacco unmanufactured (including scrap tobacco and tobacco stems)	73,57	1,60,46	1,22,19
Tobacco manufactured for human consupmtion (smoking, chewing, snuff)	4,87	6,75	8,96
Crude Materials, Inedible, Except Fuels—			
Goat skins and kid skins, undressed	73,24	84,84	33,32
Sawlogs and veneer logs—non-conifer (hardwood)	9,46	18,37	6,41
Sheep's and Lamb's wool, greasy or back washed	69,08	87,58	34,08
Horse hair and other coarse hair	7,22	6,04	2,35
Raw cotton, other than linters	1,00,19	82,52	1,35,20
Cotton mill waste, Devilled cotton waste, and cotton shoddy not further manufactured	44,10	39,13	34,79
ute including jute cuttings and waste	30,47	7,44	...
Hemp and hemp tow and waste (Cannabis sativa and crotalaria juncea)	4,87	7,59	3,08
Mica, uncut, or unmanufactured, in sheets or blocks, films and splittings: scrap mica, unground or ground	78,20	93,61	59,76
Iron ore and concentrates (except pyrites not roasted)	1,56,55	1,27,59	48,05
Iron and steel scrap	42,45	40,50	5,72
Manganese ore and concentrates	1,31,88	82,63	53,82
Chromium ore and concentrates	3,28	14,94	1,83
Bones, ivory, horns, hoofs, claws and similar products	26,78	19,10	6,46
Plants and parts of plants for use in dyeing and tanning whether ground or not	7,41	7,57	5,32
Natural gums, resings balsam and lacs	55,87	67,46	44,67
Mineral Fuels Lubricants and Related Materials—			
Coal (anthracite, bituminous, sub-bituminous, lignite)	41,16	45,91	39,31
Mineral jelly and waxes (including petroleum)	5,74	20,28	16,71
Animal and Vegetable Oils and Fats—			
Linseed oil (crude, refined or purified)	4,51	3,78	27,29
Groundnut (Peanut) oil (crude, refined or purified)	36,18	62,60	...
Castor oil (crude, refined or purified)	57,97	61,66	3,54
Hydrogenated oils and fats	1,94	2,34	1,05
Chemicals—			
Essentil vegetable oils	18,39	10,21	14,40
Manufactured Goods Classified Chiefly by Materials—			
Leather	2,60,20	2,42,06	1,24,20
Cotton yarn and thread, grey (unbleached) not mercerized	8,24	11,76	12,16
Cottn yarn and thread, bleached, dyed (coloured) or mercerized	12,07	14,56	7,94
Cotton fabrics, grey (unbleached)	1,79,54	1,99,80	1,06,72
Cotton fabrics, other than grey (bleached, dyed, mercerized, printed, or otherwise finished)	1,81,81	2,08,54	1,09,67
Fabrics of jute	4,88,37	4,95,58	2,96,80
Ribbons (other than of silk and of synthetic fibres) trimmings tapes and bindings of all fibres except elastic	7,81	6,04	6,29
Cordages, cables, ropes, twines and manufactures thereof (fishing nets, rope makers' wares)	8,50	10,85	7,88
Bags and sacks for packing, new or used	3,29,98	3,07,69	2,14,73
Blankets, travelling rugs and coverlets of all materials	11,01	12,70	4,70
Bed-linen, table-linen, toilet-linen and kitchen-linen	16,64	23,36	4,99
Carpets, carpeting, floor rugs, mats, matting and tapestries of wool and fine hair, excluding artware	37,76	40,18	32,01

EXPORTS—*Contd.*

Description.	Value in Rs. (000) June, 1959	May, 1959	June, 1958
Carpets, carpeting, floor rugs, mats, matting and tapestries of textile fibres, other than wool and fine hair	7,19	6,74	8,09
Cement, portland	9,00	10,16	26
Manufactures of mica (built-up mica product and articles made from sheet mica and built-up mica)	6,03	7,12	11,48
Jewellery of gold, silver and platinum group metals, and goldsmiths' and silver-smiths wares including set gem (except watch cases) other than artware	10,11	7,15	90
Pig Iron and sponge Iron including iron and steel powder	17,17	15	...
Miscellaneous Manufactured Articles—			
Footwear, wholly or mainly of leather (not including slippers and house footwear)	17,93	18,39	6,71
All other articles	4,86,49	6,65,56	3,10,36
Grand Total	42,32,85	44,30,84	27,77,65

(II) IMPORTS.

Food—			
Milk and cream (including butter milk, skim milk & whey) dry (in solid form such as blocks and powder)	44,43	49,02	3,63
Fish: fresh, chilled or frozen	27,38	12,32	14,86
Wheat and spelt (including meslin unmilled)	11,38,31	5,87,29	9,68,95
Rice not in the husk, including polished and broken rice	26,46	83,54	15,72,18
Edible nuts (including fresh coconuts), other than nuts chiefly used for the extracting of oil	30,14	39,22	76,99
Dried fruits, including artificially dehydrated	1,55	4,42	2,35
Spices, except pepper and pimento, whether unground, ground or otherwise prepared	17,63	6,16	19,37
Beverages and Tobacco—			
Tobacco unmanufactured (including scrap tobacco and tobacco stems)	5,46	6,93	24,12
Crude Materials, Inedible Except Fuels—			
Copra	51,82	33,45	17,61
Natural rubber and similar natural gums	44,63	27,66	28,72
Raw silk (not thrown) in hanks or in skeins	6,57	...	...
Wool or fine hair carded or combed, including tops	71,91	1,09,69	1,10,60
Raw cotton other than linters	4,40,20	4,98,98	3,95,55
Jute (including jute cuttings and waste)	5,68	13,26	59,40
Synthetic fibres in staple lengths suitable for spinning and waste	3,11	1,09	38
Fertilizers—Natural phosphate, ground or unground	18,99	5,60	...
Sulphur	17,77	20,29	6,65
Asbestos, crude, washed or ground	9,88	18,21	22,62
Non-ferrous metal scrap	15,35	19,25	4,68
Natural gums, resins, balsam and lacs	16,59	10,72	9,26
Mineral Fuels, Lubricants and Related Materials			
Motor spirit (gasoline and other light oils for similar uses), including gasoline blending agents	20,60	5	7,14
Lamp oil and white spirit (kerosene and illuminating oil)	75,15	1,07,89	1,06,17
Gas oil, diesel oil and other fuel oils	3,31,90	1,69,69	1,98,74
Lubricating oils and greases including mixtures with animal and vegetable lubricants	64,13	31,52	28,91
Animal and Vegetable Oils and Fats—			
Coconut (Copra) oil	9,72	...	15,51
Chemicals—			
Sodium hydroxide (Caustic soda)	1,07,24	65,64	18,64
Sodium Carbonate (Soda ash)	25,64	25,64	29,49
Coal tar dye stuffs and natural indigo (including artificial colour lakes)	54,89	61,60	34,13
Vitamins and vitamin preparations	22,00	12,95	7,75
Penicillin, streptomycin, tyrocidine and other antibiotics	18,52	13,08	9,49
Explosives—Propellent powders, prepared explosives and hunting or sporting ammunition	8,51	16,50	21,16
Synthetic plastic materials in blocks, sheets, rods, tubes, powder and other primary forms,	39,78	36,81	16,16
Manufactured Goods Classified Chiefly by Materials—			
Rubber tyres and tubes for vehicles and aircraft	2,11	5,16	8,36
Newsprint Paper	49,63	38,47	13,27

IMPORTS—*Contd.*

Description	Value in Rs. (000) June, 1959	May, 1959	June, 1958
Printing and writing papers in rolls and sheets other than newsprint	5,65	5,63	1,23
Common packing and wrapping paper	4,71	9,56	2,48
Yarn and thread of synthetic fibres and spun glass	1,51,57	1,32,17	51,40
Cotton fabrics other than grey (bleached, dyed mercerized, printed or otherwise finished)	10,08	13,07	4,50
Cement	21	59	52
Refractory bricks and other refractory construction materials	31,48	34,92	7,76
Pig iron and sponge iron (including iron and steel powder)	9	16,37	24,22
Iron and steel: Ingots, blooms, slabs, billets, etc.	45,06	36,77	10,75
Iron and steel: Joists, girders, angles, shapes, sections, etc.	1,26,56	1,00,14	87,27
Iron and steel: Universals, Plates and sheets uncoated	2,01,85	1,21,95	50,88
Iron and steel: Plates and sheets, coated	1,11,63	79,47	34,65
Railway rails	1,65,85	36,39	86,78
Railway track construction accessories to rails	1,42,51	1,56,82	36,02
Iron and steel: Wire rods and wire, coated or not	39,13	34,97	17,30
Steel tubes and fittings, welded or drawn	45,62	46,10	33,71
Pipes and fittings, cast, whether grey iron or malleable iron	10,33	8,93	90
Copper and alloys, not refined and refined, unwrought	79,01	65,00	1,10,18
Copper and alloys of copper worked (bars, rods, plates, etc.)	8,49	13,09	6,56
Aluminium and aluminium alloys worked (bars, rods, plates, etc.)	56,00	42,87	34,45
Lead and lead alloys unwrought	19,71	23,44	29,10
Zinc and zinc alloys unwrought	48,16	44,28	45,63
Tin and tin alloys (including tin solder) unwrought	41,07	32,58	10,39
Finished structural parts made of iron or steel, including assembled structures	1,34,52	1,44,96	7,69
Nails, bolts, nuts, washers, rivets, screws and similar articles of all base metals	7,16	5,82	3,80
Hand tools (including sets of hand tools), tools for machines and hand implements including agricultural	33,60	28,38	12,16
Machinery and Transport Equipment—			
Steam generating boilers	39,87	87,21	31,01
Internal combustion, diesel and semi-diesel engines, other than air-craft engines	74,72	56,62	30,49
Tractor other than steam	17,66	10,74	12,66
Machine tools for working metals (e.g. boring, drilling, milling, etc.)	89,83	1,00,98	63,16
Metal working machinery other than machine tools (e.g. rolling mills, forging, wire, drawing, etc.)	1,19,36	1,09,97	40,20
Pumps for liquids	17,69	18,82	12,65
Conveying, hoisting, excavating, road construction and mining machinery	1,30,42	2,15,72	1,04,84
Paper mill and pulp mill machinery and machinery for paper manufactures	17,32	28,04	17,58
Textile machinery and accessories (including bobbins, spools, etc.)	1,02,82	1,07,72	73,30
Mining construction and other industrial machinery-ball, needle or roller bearings parts	14,44	17,67	10,50
Electric generators and alternators motors and converters, etc.	2,36,61	1,77,38	1,57,82
Radio apparatus for telegraphy, telephony television and radar	19,46	18,62	26,11
Apparatus for measuring and controlling electric energy, electric signalling, etc.	14,92	12,24	6,17
Insulated cables and wire for electricity	54,71	39,34	51,30
Railway locomotives, steam (and tenders if shipper separately)	1,03,98	31,74	37,28
Railway locomotive, electric	11,54	20,88	1,81
Railway and tramway freight and maintenance cars without power equipment	26,68	12	22,54
Miscellaneous Manufactured Articles—			
Films (other than cinematographic) plates and paper for photography	14,58	12,54	2,05
Cinematographic films, not exposed	21,82	20,99	8,89
Watches, watch movements, cases and other parts of watches including marine chronometers, etc.	66	41	1,18
All other articles	22,39,60	21,57,88	11,18,58
Grand total	77,18,42	66,12,00	63,93,10

FOR THE INVESTOR

Improved Sentiment

Investment Gossip:

Since last week's notes for this column were written, the Indian stock markets have passed through a depression which, however, has proved shortlived. Last Saturday's recession in the more speculative counters followed the news of fresh Chinese outrage on our borders. Unlike the previous incidents, the one that took place in the Ladakh region was accompanied by fatal casualties on our side and it is not surprising that the new development has been viewed seriously by our marketmen. With the reiteration of the determination of the Government of India to continue to explore ways and means of settling all outstanding disputes with China peacefully despite the recent grave provocation, market sentiment rallied over the week-end to reopen on Monday on a confident note.

A closer look at the transactions especially on Dalal Street even prior to last Saturday would, however, reveal that sentiment was anyway tending to be subdued. Bears were active talking about the repercussions on the Government's fiscal policy on the basis of the rumour that Mr T. T. Krishnamachari was being invited to rejoin the Central Cabinet. After a few days the same rumour reached Calcutta market with the difference that Mr Krishnamachari was to join the Planning Commission and not the Central Cabinet as the Bombay rumour had it. Whether operators were influenced by these rumours, it is not easy to determine. For, at about the time the rumour was circulating in the market, Bombay operators were worried over the possible revision of the rules pertaining to margins. In Dalal Street at least, an influential section of marketmen seemed to have arrived at the conclusion that recent uptrend in equity prices had been overdone. Additional restraining influences in the Western market centre were the proximity of settlement and the impending closure of the market for the Diwali holidays.

It would appear that sentiment in the Calcutta market is comparatively more cheerful. Probable reasons are the encouraging developments as regards most groups of equities. The current week is perhaps unique in that that it has brought good tidings for almost all sections. The coal industry is mildly optimistic following reports of export enquiries from a number of overseas countries for Indian coal. Both jute and tea are active as will be seen from the increased interest that is being evinced in selected shares in the two sections. Sugar shares are almost buoyant because of better prospects on account of the incentive scheme announced for the industry. The fact that four more shares—Dunlop Rubber, Hindustan Motors, Rohtas Industries, and Sree Gopal Paper—have been placed in the Forward List has also contributed to the current enthusiasm on Lyons Range.

£R$

Investment Notes:

The Madras Government have taken up Rs 10 lakh shares in the privately-floated Madras Cements Limited, which has begun construction to house its plant with Czechoslovakian collaboration. The equity capital of Rs 40 lakhs had been subscribed fully. The preference capital is to be Rs 10 lakhs in 6½% preference taxfree shares of Rs 100 each. With the erection of the machinery with Czech help, production is to start by April next. The 600 tons per day output is only the optimum, and, initially, production would be between 200 and 250 tons daily. Madras Cements, however, are also going in for a loan of Rs 40 lakhs from the Industrial Finance Corporation, as the first stage cost of the plant would go up to Rs 95 lakhs. The availability of limestone and other raw materials has been investigated. The next stage of expansion costing about Rs one crore might be taken up shortly to make the plant work to the maximum efficiency for turnover of 600 tons daily.

£R$

Investment Forum:

"An Investor" Writes:

A disturbing feature which has tended to cause instability in Corporate enterprise in the recent months has been the self appointed role of the Bombay Shareholders Association as a crusader in support of issues unconnected with investor interest. Even more disturbing is the agitational approach of that Association to internal problems of corporate enterprise. These to mention a few, cover such grounds as Dividend policies of Company Boards, choice of plant and machinery for expansion of Industrial undertakings, and even selection of Directors to fill vacancies in Boards!

In any large organisation, it would not be difficult to unfathom "revealings". Any living organism encompasses within itself both the life force which keeps the wheels moving and waste matter which is but a bye-product of the living process. One finds what one seeks but the main thing is that when the better part dominates the scene one must take the shortcomings if any in one's stride.

The Mundra episode has left a painful legacy in the country and it has now become fashionable for individuals as well as groups to play the part of inquisitionists. It certainly does no credit to an organisation proclaiming itself to be a champion of the investing public to assume such a role, a development which would have shocked the redoubtable late Jagmohandas Kapadia.

Corporate enterprise by its very nature is obliged to function under public gaze all the time, which involves X-raying of policies by organs of public opinion. Having conceded this it is only proper to point out that a critic's role to be effective pre-supposes full understanding of the issues involved as otherwise one enters the realm of personal vendetta. To this if one adds the complications inherent in ill-informed agitation before statutory bodies—the Company Law Commission in this case—one can well visualise the difficulties which come to be placed before Company Managements mainly involving the majority being tyrannised by the minority.

One can, therefore, only hope that in the interest of stability the Company Law Commission and Government will view purely agitational approaches vis-a-vis Company problems in their proper perspective.

In the final analysis, all problems in relation to a Company's affairs come up for review before the Annual Meeting of the Shareholders, and there can be no substitute for the democratic process inherent in such review.

Indian Cable's Superb Results

Balance-Sheet Reviews:

THE INDIAN Cable Co Ltd has had a spectacular year in the twelve months ending March 1959. A smart rise in sales has been accompanied by a steep increase in the net profit.

Sales rose from Rs 6.89 crores to Rs 7.20 crores. Expenses have been kept well in check; for example, salaries, wages and bonus are higher only by Rs 14 lakhs at Rs 1.03 crores. Were it not for a charge of Rs 26.30 lakhs against

Water, water everywhere—

bad debts, costs and expenses as such would not even have shown the rise that has, in fact, been registered from Rs 1.81 crores to Rs 2.20 crores. In this connection, it may be pointed out that, in 1957-58, provision had been made in the profit and loss account for bad debts, at the much smaller amount of Rs 4 lakhs. Depreciation receives somewhat more at Rs 17.15 lakhs against Rs 16.99 lakhs. However, the provision for taxation is lower by Rs 7½ lakhs at Rs 45 lakhs, due presumably to the tax saving in respect of the considerable allocation to Development Rebate. The profit, after tax and depreciation, has jumped up from Rs 33.87 lakhs to Rs 52.26 lakhs.

The appropriation account shows that an amount of Rs 13 lakhs has been written back from the provision for bad and doubtful debts; the write off to costs and accounts of Rs 26 lakhs odd apparently making it unnecessary for such provision being continued to be kept on the books. Together with the amount brought forward of Rs 41.30 lakhs, the sum available for distribution is Rs 1.06 crores. They appropriations are as follows, figures in brackets indicating the previous year's provisions: Wealth Tax, Rs 3 lakhs (Rs 2.50 lakhs); Reserve for Replacement of Fixed Assets, Rs 5 lakhs (Rs 5 lakhs); Development Rebate Reserve, Rs 12.75 lakhs (Rs 1.25 lakhs); General Reserve, Rs 5 lakhs (Rs 3.75 lakhs); and Debenture Redemption Sinking Fund, Rs 3.05 lakhs (Rs 3 lakhs). The dividends, on the ordinary as well as the participating preference shares, have been maintained together with the cash bonus; but they are payable on a capital that has meantime increased by nearly Rs 83 lakhs, so that the amount absorbed has risen from Rs 24.87 lakhs to Rs 37.30 lakhs. The balance carried forward is slightly lower at Rs 40.01 lakhs.

Indian Cable's balance-sheet as at the end of March 1959 shows the reserves and surplus at Rs 2.25 crores against the subscribed capital of Rs 2.49 crores. Additions to block during the year have amounted to Rs 21.03 lakhs, and the gross block of Rs 2.76 crores has a book value of Rs 1.53 crores.

Mr B. J. Woodley, the Chairman, whose statement has been circulated with the accounts, has remarked that the company has "harvested the first fruits of the factory expansion schemes." However, the plant is not yet in full operation. But working to capacity necessarily takes time, and Mr Woodley finds cause for satisfaction in the fact that "current production is rising steadily and continuously towards fulfilment of planned targets."

Indian Cable's Chairman has also pointed out that the order book for all the company's products are full; but he goes on to warn that the company would be facing increasing competition, wiht two further major factories planned to come into operation in the near future. The optimistic note on which he ends has regard to his view that "competition is a challenge" which will act as the spur "to still greater effort."

£R$

Macneill & Barry

Were it not for a widening in the scope of agency business, Macneill & Barry Ltd may have fared badly in the year ended March 1959. Agency Commissions &Allowances fetched more than Rs 3 lakhs less at Rs 38.33 lakhs; earnings on the Barbour Boating Service declined by more than Rs 10 lakhs; dividends from subsidiaries were marked lower by Rs 1 lakh odd; and other interest and dividend income fell by another element of somewhat less than Rs 3 lakhs. Fortunately, all these declines were almost wholly offset by the fact that sales rose from Rs 88.04 lakhs to Rs 1.13 crores. With a tight rein kept on expenses, the profit and loss account shows a balance, subject to tax but after depreciation, of Rs 44.46 lakhs against Rs 46.40 lakhs in the previous year.

Appropriations include a marginally higher allocation of Rs 22.75 lakhs to tax; a transfer of Rs 1.86 lakhs to Capital Reserve; and a transfer of Rs 5 lakhs to General Reserve. The dividend on ordinary shares has been pruned, the amount absorbed declining from Rs 12 lakhs to Rs 10.50 lakhs.

Macneill & Barry's balance-sheet shows a paid-up capital of Rs 2.50 crores, of which Rs 1 crore is in 5½ per cent Taxable Cumulative Preference shares. Against this, the reserves and surplus are shown at Rs 89.87 lakhs. On the other side of the ledger, it is to be noted that quoted investments with a book value of Rs 1.28 crores have a market value of Rs 1.04 crores; and unquoted investments are shown at Rs 1.27 crores.

The Directors' Report points out that there has been an increase "in the manufacture in India of various products under arrangements with Principals overseas." It is thought that the new activities that the company, and its wholly-owned subsidiary, Kilburn &Co Private Ltd, have embarked upon will provide income to replace the traditional receipts on account of managing agency remuneration.

£R$

Delhi Cloth

A small increase in the sales of The Delhi Cloth & General Mills Co Ltd in the year to June 1959 has nevertheless enabled a more than proportionate rise in the net profit, that is, after tax and depreciation. Sales have gone up from Rs 29.42 crores to Rs 30.08 crores. The provision for tax is over Rs 9 lakhs higher at Rs 45 lakhs; and the tax provision in Pakistan shows a sharp rise from Rs 16 lakhs to Rs 50 lakhs. Depreciation appears to receive less at Rs 65.53 lakhs against Rs 88.91 lakhs, but, as the Directors' Report points out, the provision for 1957-58 was on the basis that additional depreciation could be provided; since this is inadmissible, the current year's appropriation account shows a write-back of Rs 30.03 lakhs being excess provision. The net profit carried down is Rs 62.75 lakhs against Rs 52.85 lakhs.

Appropriations include: Rs 10 lakhs as tax provision adjusment; Rs 18.13 lakhs as transfer to General Reserve; Rs 10 lakhs to Debenture Redemption; and Rs 16 lakhs to Development Reserve. The dividend paid absorbs Rs 38.21 lakhs, but this is subject to the new procedure whereby tax to be deducted.

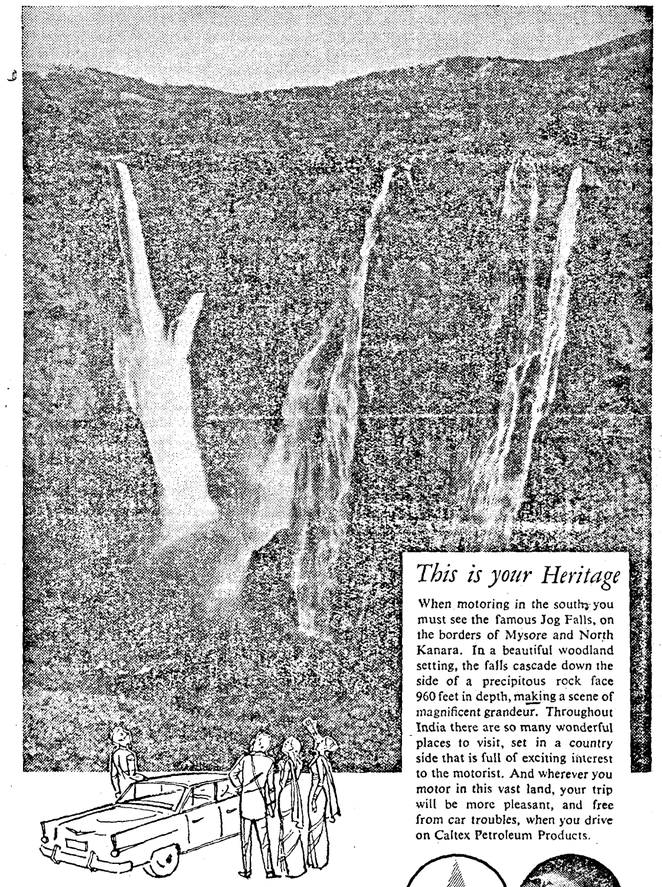
With the current year's transfers, the reserves and surplus, at Rs 4.14 crores, exceed the share capital of Rs 4.11 crores. Additions to block during the year have totalled Rs 73.28 lakhs, and the gross block of Rs 13.51 crores is shown as having a book value of Rs 5.70 crores.

One of the items to be considered at the annual general meeting of the company is the renewal of the managing agency agreement. The rates of remuneration envisaged are higher than postulated

Progress
is the sum of
KNOW-HOW plus RESOURCES

Regarded with little favour—even for household uses—
by the ordinary man-in-the-bazaar less than 20 years ago, aluminium
has today become the engineers' favourite light metal.
It is now fast replacing other metals and wood in the construction of
railway coaches, bus bodies, aircraft and ships.

The wide acceptance that aluminium has come to enjoy as a structural material is largely due to the ceaseless efforts of Indian Aluminium Company, which today accounts for over 90% of the country's total production. Pioneer and leader of the aluminium industry in India, Indian Aluminium Company has continuously sought to promote new applications of this versatile metal and has frequently expanded its production facilities to meet the increased demand thus stimulated.



To do this two-fold job of promotion and expansion Indian Aluminium has been uniquely well-placed. It has drawn fully upon the technical and research facilities of its Canadian associates, Aluminium Limited—the world's largest group of aluminium companies. And now, Indian Aluminium stands ready to contribute all its know-how and resources towards achieving India's self-sufficiency in aluminium.

by Government's recently declared views on the subject. It is, therefore, possible that the agreement which shareholders will be asked to approve will lay down rates on the lines recently indicated by Government. If so, there should be a corresponding increase in profits available for distribution; and, as such, DCM should be attracting the interest of the hawk-eyed investor.

£R$

Aluminium Corporation

1958-59 is the best year on record for the Aluminium Corporation of India Ltd. Sales have risen smartly, after providing for selling agents' commission, from Rs 96.25 lakhs to Rs 1.26 crores. The main item under which there has been a rise in costs is salaries, wages and bonus, which absorb Rs 3½ lakhs more. As a result, the balance carried to the appropriation account is higher by almost a third to Rs 35.90 lakhs from Rs 27.20 lakhs.

The provision for Depreciation, which includes an element in respect of arrears, is placed somewhat lower at Rs 10 lakhs against Rs 14 lakhs. But the provision for tax has risen steeply from Rs 3 lakhs to Rs 16.50 lakhs, so that the transfer to General Reserve is necessarily lower by Rs 3 lakhs at Rs 1 lakh. The results have been so satisfactory that the distribution to ordinary shareholders has been raised to 10 per cent, and the approval of the Industrial Finance Corporation was also obtained for payment of dividend at 7 per cent on the Cumulative Preference shares that carry a coupon of 6 per cent.

The IFC's approval was, of course, automatic, since the Aluminium Corporation vis-a-vis the IFC's is enviably good. Instalments have been repaid in advance, so that, of the original loan taken of Rs 50 lakhs, only Rs 20 lakhs remain; and no liability as to instalment exists before 1962-63.

The balance-sheet shows a subscribed capital of Rs 1.02 crores, which include an amount of Rs 2.50 lakhs capitalised from Premium on Shares Account and applied in extinguishment of deferred shares as from August last year. However, this information is conveyed in one of the Schedules—and the balance-sheet continues to show the subscribed capital at Rs 1 crore. The Premium on Shares Account is placed at Rs 5.74 lakhs. Reserves and surplus are almost double the capital at Rs 1.997 crores; but this includes Rs 1.74 crores as Capital Reserve, consequent upon revaluation of assets in 1956, which is not available for dividend. The gross block of Rs 3.90 crores (after revaluation) is shown at a net of Rs 2.80 crores.

Shareholders will derive pleasure not only from such a set of accounts, but also from the indication, in the Directors Report, that the programme for trebling the metal production capacity of the existing plant "is well advanced."

£R$

Kucheramala Plantations

For the year ended March 31, 1959, the Kuchermala Plantations Limited made a net profit, before providing for taxation and depreciation of Rs 2.04 lakhs against Rs 1.11 lakhs in 1957-58. The depreciation allocation is Rs 21,278 against last year's Rs 11,554 and taxation allotment is Rs 79,413 against Rs 37,226 in the previous year. The transfer to reserve for capital expenses is Rs 80,000 this year against Rs 30,000 last year. The ordinary dividend has been increased to 8% from 6½%. Tea crop made was 258,362 lbs in 1958-59 against 213,309 in the Kuchermala Estate and the Coffee crop was 149,001 lbs against 71,537 lbs in the Bethongode Estate.

£R$

Devangere Cotton

For the year ended March 31, 1959, the annual report of the Devangere Cotton Mills discloses much higher level of sales at Rs 1.35 crores against Rs 97.45 lakhs in the previous year. The net profit, before providing for depreciation and taxation, was better at Rs 16.36 lakhs than Rs 11.28 lakhs in 1957-58. Against Rs 4.88 lakhs depreciation provision in the previous year, the current allotment is Rs 7.20 lakhs and taxation is at Rs 1.85 lakhs. Development rebate is also higher this year at Rs 3.30 lakhs aganist Rs 1.30 lakhs. General Reserve gets Rs 25,000. Reserve for repayment for mortgage loan is Rs 1.20 lakhs against Rs 2.50 lakhs last year. The dividend is maintained at 9%. The Mills have under consideration many schemes to modernise their plant for increased and efficient output.

Putting Teeth into Pancha Sheela

THE savage attack by Chinese troops on the Indian patrol party in Ladakh is the People's Republic's cynical gloss on the friendly noises that emanated from Peking on the founding of the new Chinese regime. Even as Mr Ajoy Ghosh was unconvincingly trying to explain away the frosty treatment that his delegation received, Indian policemen were being brutally slaughtered with mortar and grenades. Those in India who were deluding themselves that recent incidents were temporary aberrations have now had their illusions rudely shattered. Hardly any one in India, not excluding Communists, has any faith still left in Communist's China desire to have the border problems settled by negotiations.

In retrospect, Red China's policy over the Himalayan border falls into a clear pattern of cynical opportunism and real-politik. The simultaneous publication of wrong maps and assurance that they were not to be taken seriously, the acceptance and subsequent equivocation of such acceptance, of the Macmahon Line, and more recently, border incidents increasing in frequency and violence are seen to be part of a preparation for territorial aggression against India. It is significant that the Chinese have not even now vacated Lonju despite Indian assurance that it will not be occupied by us, should the Chinese leave the place. Reports of extensive road building activity designed to cut across the Macmahon Line and increased troop activity along the same line have increased the ominousness of the Chinese threat in the North East. And last week, in Ladakh, (where about a year and a half ago, the Chinese built a road cutting through Indian territory), the Chinese have attempted to convert their fake maps into reality resulting in the loss of valuable Indian lives. The nature of the attack and the type of weapons and ammunition used show clearly that this is no mere border skirmish, but a premeditated act of aggression. It is also interesting that the customary accusation of aggression by India was a little too prompt. Even before our authorities got the information of the loss of lives of our men, we were told that they were killed in self-defence—with mortar and grenades! This is indicative of more than the excellence of the communication channels on the Chinese side of the border.

The latest incident makes it impossible to postpone fresh thinking on several aspects of our policy toward China. First and foremost, of course, is the practical question of defence of the border. The defence of the eastern frontier is already in the hands of the army and now it is inevitable that the defence of the western border will have to be taken over from patrol police by the army. It is true that the terrain is difficult and communications primitive, but in the context of the continued Chinese provocation, frequent references to them py authority sounds too much like making excuses for inaction. Thirdly, there is the question of vacating of existing aggression and prevention of any further incidents. These have occurred far too frequently for our comfort or self esteem. While everyone will agree that to talk of war with China is nonsensical, it is also necessary to see that the Chinese do not take advantage of that fact. Since Chinese thoughts are farthest from conference tables, we may as well face facts and prepare to find the answers that will fit Red China's.

In the sphere of foreign policy, it is necessary to spell out clearly and in practical terms our obligations to ourselves in our international conduct. It is now clear that the Chinese ruse consists in an unashamed exploitation of the minimum hypocricies involved in the conduct of world affairs. Itself recognising no obligations under Pancha Sheela or any other code, it is nevertheless able to play upon a variety of scruples and other considerations that India may have in forcing a showdown. These considerations may range from personal idiosyncracies to genuine moral dilemmas. It may be the personal vanity of the man who formulated the policy or his fear of inconsistency in seemingly departing from it when the crucial test arises in his own case. Or it may be his own aversions from the brutalities of the alternative of armed conflict. It may even be the agonising choice between constructive employment of funds and the diversion for defence which may conceivably be manipulated to make a country shrink from the unpleasant choice. China's 'dare' quite evidently proceeds from calculations of this sort about Mr Nehru's and India's reaction to its prosecution. There are precedents for this sort of international behaviour. It is absurd to talk of the imminence of an Indian Munich—if for no other reason, at least for that the European Munich is a parable whose morals have only too bitterly been learnt by mankind. But China's conduct seems to be based on the hypothesis of India inextricably tied up in the coils of its own highfalutin.

It is an urgent necessity to dispel this particular Chinese delusion. It is only too true that Chinese hostility is a set back for India's plans of development, and some of us even wonder whether the border incidents are not designed toward that end. But when it comes to the sticking point, the unpleasant choice for diversion of resources to the defence of the country will be unhesitatingly made. It is true also that there was a certain element of priggishness and wishful thinking in some at least of our neutralist stances in the past. The mystique of Bandung made our political eyes dimmer than they should have been allowed to get. But though we are as sensitive to ridicule as any other nation, we are not likely to allow that consideration to deflect us from the first duty toward our country. Our foreign policy, like that of any country's, places national interest first and therefore no amount of sophistry about our past preaching of peaceful settlement of problems to others can deflect us from the plain duties of patriotism.

It is likely that specific cases of our foreign policy in action may make the Chinese persist in their delusion. Goa, for instance, is an issue on which we have, for entirely unexceptionable reasons, held our hand. But the Chinese incursions are a different matter. Therefore, while it is unnecessary to allow ourselves to be rushed into any major conflict with China, it is imperative that we do show convincingly that no further act of aggression by China will be allowed to go unchallenged. This is not to abandon Pancha Sheela, but to put teeth into it.

Some Ideas from a Unique FAO Study

NO apology is required for returning here to the subject of integrated development of agriculture in relation to economic growth in the less-developed countries, for, an admirable occasion is provided by the report of the FAO Mediterranean Development Project which has just been issued from Rome. This is a unique study not only because it constitutes a new departure in the sense of going even farther than the earlier FAO missions did into the general problems of economic and social development, but also because it seeks to find, in the words of its distinguished Director-General Mr B. R. Sen, an effective answer to the fundamental challenge of our time—the challenge of self-sustained growth which few of the underdeveloped countries have yet succeeded in achieving. Mr Sen's own prefatory remarks, covering as they do the gamut of the problem, add up to a pragmatic though general statement which is marked by a certain depth of perspective.

The most telling points made by Mr Sen would need to be recapitulated here. In the first place, lack of resources, which is generally regarded as the major obstacle in the less-developed economics, is not the only one and perhaps not even the most important, for, whatever the total amount of resources available in a given situation, there must always be a way of using them to the maximum advantage. Secondly, action will yield the best results if it is directed toward those social and economic sectors which are most likely to respond positively. So, initial efforts might be concentrated on a few favoured areas in a country and be spread outwards with care, helped on the way by the increase in income, investment resources and taxable capacity of those "propulsive" regions. The propulsive sectors, however, should not be permitted to absorb the totality of investment resources; sufficient reserves must be left to enable the remainder of the economy to respond to the lead emanating from the sectors selected for initial action. Thirdly, in order to associate the rural underemployed with the reconstruction effort, the reorganisation of the institutional framework, such as post-land reform organization, cooperatives and community development, should be linked to public works. It is important that these public works represent essential investment in land use and infrastructure, so that they accelerate growth and provide the means of further expansion.

Fourthly, there is little justification for the belief that greater equality of income, or, rather, reduction of disparities of income, through taxation conflicts with economic progress; if the receipts from taxation aimed at reducing

income inequality are used for productive investment, there might well be an increase rather than a decrease in over-all investment capacity. According to a similar reasoning, if land reform is synchronised with the introduction of cooperatives and supervised credit, it would not necessarily decrease productivity and food supplies, for, only a few of the large estates are organised as large-scale operational units. Fifthly, all this cannot eliminate the need for outside help. While foreign aid and technical assistance through effective and far-sighted international action will reduce the immediate sacrifice involved in investment, not much reliance can be placed on private capital flow except in certain cases as, for example, oil or certain mines. Again, while the contribution of foreign aid is marginal, it must be recognised that its role is crucial, and so all efforts must be made to increase its effectiveness. But, lastly, neither foreign aid nor the most determined efforts of the poorer countries will succeed unless the latter are able to find profitable outlets for their produce. It is recalled in this connection that the recent decline in the prices of primary produce has caused losses to the poorer countries greater than all the foreign aid and technical assistance they received.

That this broad statement is applicable as much to India as to the Mediterranean region under study is obvious. But it would be even more relevant to know what ideas in the FAO's detailed approach to and programmes for self-sustained growth and balanced land use in the Mediterranean countries are applicable to Indian conditions. One basic idea is that an annual rise in national income of 5 to 6 per cent, if accompanied by adequate institutional improvements, can lead to self-sustained growth. Another basic idea is that increasing employment and productivity per worker with the ultimate aim of achieving full employment is virtually synoymous with economic development.

The third basic idea is that the achievement of a more even distribution of incomes, though essentially a political and social question, has important economic implications. Here, it is argued that a reduction in high individual incomes will release mobilisable resources for productive investment—because over one-third of private investment is luxury investment—and also help to save foreign exchange, because the consumption of higher income groups has a greater import content than the consumption of lower income groups; that reducing the gap between urban and rural incomes requires increasing the productivity of agriculture faster than that of other sectors, and shifting surplus workers from agriculture to non-farm employment; that, in contrast to the redistribution of incomes between individuals, the redistribution of incomes between regions can have a dampening effect on the rate of expansion and that, therefore, until a certain stage of development is reached, effort be concentrated in the richer areas; and that the gradual absorption of the underemployed will progressively reduce the inequality in the distribution of incomes between the effectively employed population and the rest of the labour force. And the fourth basic idea is that increased agricultural production needs to be dovetailed with the process of industrialisation through a combination of development projects which complement one another by a reciprocal provision of supplies and markets.

Specifically in regard to agricultural development, one of the ideas advanced is that the most important single contribution to an increase in production can come from the crop land now left fallow in rain-fed conditions. Here, it is considered desirable to replace the cereal|fallow system by more intensive forms of cropping wherever the mean rainfall is more than 350 mm and the greater use of fertiliser is possible. The best alternative to fallow suggested in this connection is a single rotation of cereals with pulse legumes in the light of experiments which have shown that, in the second five-year cycle, the yields obtained from both the pulse and the wheat crops are higher. As for irrigation, the finding is given that the total increase in crop production resulting from it largely depends upon the deficit in water which it corrects; the more arid the region the greater the increase in the yield which can be achieved. Apart from this "basic" improvement in yield, which is derived from the greater and more regular availability of water, there is an additional increase due to the fact that irrigated land is more responsive to some of the aids to higher output like fertilisers and improved seeds and farming techniques. And, thirdly, integration of livestock raising with crops would mean greater benefit to the cultivated areas from animal droppings. It is considered in this connection that mixed farming in both rain-fed and irrigated conditions is technically feasible.

Some of the foregoing ideas which have been selected for coverage in this review-article may not strike one as wholly new. Whether or not they are new, the detailed proposals for the practical application of those and other ideas in the conditions of the Mediterranean region may well be fruitfully studied by planners in this country if the goal is one of "increasing production while improving land and water use." Surely, this goal is not as simple as it may seem.

Managing Agents and their Remuneration

(Contributed)

THE proposal of the Government of India to reduce the remuneration of managing agents has come as a surprise to the business community. The surprise is due to the fact that there was no official indication, prior to Mr Lal Bahadur Shastri's announcement at the AICC session at Chandigarh, about the Government's intention in this regard. The report of the Companies Act Amendment Committee does not contain any recommendation in favour of the reduction of the remuneration of the managing agents. Actually, the Companies Act Amendment Committee had made the following remarks on this subject:

"A sliding scale according to the amount of the annual profits earned or alternatively an upper limit or ceiling of 5 per cent of the profits in the case of public companies which make large profits was suggested. We see no sufficient ground for reducing the percentage of profits fixed by the legislature so recently as in 1955 after prolonged discussion".

According to the Government's proposal, a managing agent will be entitled to commission up to a maximum percentage of 10 in respect of companies with an annual profit of Rs 10 lakhs. With the increase in profits the percentage of commission will decrease and it will be 4 per cent for companies which earn a profit of Rs 1 crore or more. The following table shows the details of the scale of remuneration envisaged in the Government proposal:

	For Managing Agents	For Secretaries and Treasurers
First Rs 10 lakhs ..	10%	7½%
Next Rs 10 lakhs ..	9%	6¾%
Next Rs 10 lakhs ..	8%	6 %
Next Rs 10 lakhs ..	7%	5¼%
Next Rs 10 lakhs ..	6%	4½%
Next Rs 25 lakhs ..	5½%	4⅛%
Next Rs 25 lakhs ..	5%	3¾%
Over Rs 1 crore ..	4%	3 %

Apart from the fact that the Government have chosen a purely political platform for making an important announcement without prior consultation with the spokesmen of industry, the proposal is objectionable from other points of view. It should be remembered that the Companies Act has already curtailed the remuneration of the managing agents considerably.

The study recently made by the Reserve Bank of India of 1,001 selected public limited companies reveals that the number of companies managed by managing agents in the sample had declined from 739 at the end of 1955 to 675 at the end of 1957. The remuneration paid to the managing agents by these companies declined from Rs 14.1 crores in 1955 to Rs 11.5 crores in 1956 and Rs 8.3 crores in 1957. Of the 675 companies which had managing agents at the end of 1957, tea plantations accounted for 117, coal 49, cotton textile 162, sugar 55, jute textile 40, machinery 32, paper and paper products 11, electric generation and supply 17 and the rest were in other industries.

It is thus seen that not only is the number of managing agents steadily being reduced, but the remuneration is also dwindling. Nevertheless, in the present context of the economy, managing agents do have an important part to play in sponsoring new industries and running efficiently the established industries. The funds provided by the managing agents form an important source of finance for industry, and it is not correct that they should be subjected to further discrimination in this manner.

As the Federation of Indian Chambers of Commerce and Industry has stated in a communication addressed to the Ministry of Commerce and Industry, the formula suggested by the Government is not a fair one in view of the fact that it gives no consideration to the managing agent of a company which had made losses for some years due to factors beyond the control of the managing agent and which he has been able to bring to the position when it makes profits. He will then be denied the legitimate return for his labours in the previous years. A pre-fixed formula, therefore, will not satisfy the circumstances of each case and much hardship and injustice may result.

The Federation has also pointed out that the new formula will adversely affect the managing agents of those companies which might have come into being recently, but whose contracts will come in for renewal. These companies perhaps have not made any profit so far or made very small profits. It will be patently unfair to their managing agents if they were to get their commission at a lower rate in accordance with the new formula. The position of those enterprises for which investment may not be readily forthcoming has also to be considered. The Federation suggests that such considerations have perhaps not been given due weight while framing the new formula.

The Government of India from time to time have stated that the private sector has got a very important part to play in the sphere allotted to it but the latest proposal of the Ministry of Commerce and Industry does not appear to be in keeping with the objective in view of the fact that any reduction in managing agency remuneration is likely to discourage enterprise and have harmful effects on company management and the procurement of finance for the private sector.

Productivity Campaign: An Assessment-II

By NITISH R. DE

EXPERIENCE of other countries in the field of productivity drive can offer us a wealth of information needed to frame our programme of action. We may learn from the cotton textile industry of Latin American countries that the causes of low productivity of labour could partly be eliminated by modernisation of machinery and enlargement of the mills and partly by proper administrative action of making a more efficient use of existing equipment. The experience in the USA suggests that industries should take immense care to educate, train and develop management officials of all ranks; that there should be a high degree of devolution of authority and responsibility; that there should be clear definition of jobs and responsibilities; that there should be a general willingness to exchange information and "know-how" even among competing firms; that there should be readiness to try out new ideas; that attention should be given to planning of production; that the management should effectively utilise the accountants and that importance should be attached to salesmanship and to the dovetailing of the work of the Sales Department with that of the Planning and Production Departments. It is indeed necessary to grasp that a relatively small number of concise routine cost reports, supplemented from time to time as occasion may demand by special investigations into other aspects of costs are likely to meet the requirements of management better than voluminous and detailed statements produced as a matter of routine. It is equally necessary to realise that simplification, standardisation and specialisation of products bring down wastage and increase productivity as in the engineering industry in Czechoslovakia.

METHOD STUDY

We may further learn that in West Germany adequate attention had all along been paid to the techniques of method study and work measurement and that REFA (a national organization for time and motion study and job evaluation) has established national standards for diverse manufacturing operations covering a large number of industries. In short, the NPC in order to set up a network of Productivity Councils on industry-wise basis to carry on a diversified programme of work must not only press into service such institutions as the Small Industries Service Institute, the Industrial Management Research Unit for Planning, the Productivity Centre, the TWI Centre, Indian Institute of Technology, Indian Statistical Institute, Indian Standards Institution, the Indian Council of Applied Economic Research and other research and professional organizations but should also enlist the active co-operation of both public and private sector employers, employers' organizations and trade unions.

GOVERNMENT ROLE

The role of the government is vital in the productivity campaign, partly because it can take positive steps to accelerate the pace of higher productivity in industries and agriculture and partly because it can adopt protective measures in the interest of the consumers and other weaker sections including the unorganized labour which have a stake in the benefits of higher productivity. Since productivity campaign in underdeveloped economies, where there is surplus man-power, is most certain to result in hardship to displaced labour, the government will have to ensure that measures taken in such countries to promote higher productivity should form part of a co-ordinated economic development programme designed to expand opportunities for employment as well as to raise output. In countries where handicrafts, cottage and small scale industries employ a large man-power an increase in productivity in modern industries which produce similar products may lead to considerable unemployment. The prospect of this technological unemployment brings to the fore the need to facilitate the occupational mobility of workers and their adaptability to changes in employment opportunities. The initiative should come from the government to promote measures to encourage various sources of alternative employment. In the UK for example, certain areas have been selected as development areas and special facilities are granted to employers establishing factories in these areas. Unemployment insurance can, at best, be a short-term relief and as such is no solution to the problem that arises as a result of unceasing effort to boost up productivity. It is almost certain that the fear of unemployment will impel the workers to resist productivity drive unless the State categorically assures to take measures to reabsorb the surplus labour. Mere provision for retrenchment compensation for redundant labour is hardly of any use.

MARKET STABILITY

Besides, the government has an important role in ensuring the stability of markets for raw materials as well as the finished goods. Violent fluctuation in the price of cash and food crops will affect their productivity. Intensive speculative activities will result in a highly unstable market requiring continual changes in the rate of production. The gunny market illustrates this point. The government can further help the movement by adopting appropriate measures to facilitate long and medium term credits at low rates of interest, making provision for depreciation and rehabilitation allowances and adjustment in corporate and income taxes, electricity, excise and export duties.

The government also shoulders responsibility in creating a climate which, in the short term, may not directly contribute to higher productivity, but nevertheless, considered in a larger perspective, will be favourable to productivity consciousness. Welfare measures for the employees will obviously increase cost instead of reducing it but measured in terms of employee satisfaction and decrease in absenteeism, these measures will create a better atmosphere to try out new ideas and innovations. In a Welfare State the government will have to initiate welfare schemes for industrial and agrarian labour and at the same time impress on the private sector to follow suit. Quality control is another such issue. "Although it is rarely possible to estimate the direct savings effected by quality control, what is significant is that it contributes to increased customer satisfaction, reduced service-after-sales costs, enhanced reputation and increased turn-over. At the same time production stoppages due to bad quality, higher scrap, friction between departments, short deliveries and reduced commercial margins on sub-standard goods, are avoided." (Report of the Indian Productivity Team to USA, West Germany and UK, p. 77). The difficulty, at times, lies in the fact that often the measures to maintain high quality of products include higher wages to workers whose productivity, however, continues to remain at a lower level, thereby causing wage-cost disequilibrium. Such a situation is a clear disincentive to quality control measures. Bombay Dyeing & Manufacturing Co. Ltd. is the country's foremost exporter of cotton textiles to competitive markets as its products have the reputation of being of high quality and today this firm accounts for 10 per cent of the total exports of cotton textiles from India. Unfortunately while wages have increased four-fold output per worker is still below the peak of 1945. In a situation like this the government should render help to such concerns with appropriate concessions, relief and incentives.

ROLE OF EMPLOYERS

The role of the employers and their associations in regard to productivity campaign can hardly be exaggerated. The NPC has an objective of carrying productivity drive to individual industrial units and encouraging establishment of productivity committees at the plant level with participation of management and labour. This objective assigns a positive role to the employers and they, by dint of their outlook, policies and initiative, make the Works Committees or the Joint Production Committees a success in productivity campaign as has been done in Israel and Scandinavian countries. The larger industries should also realise the importance of the development of feeder industries. The small feeder industries by obtaining assistance from larger manufacturers in technical know-how, credit facilities, tools, equipment and materials can specialise in their own lines and also get an urge to continuously improve the designs and products thereby promoting higher productivity in feeder as well as the parent industries.

ROLE OF RESEARCH

But a major task in this campaign should be to enlist the active assistance of the employers' organizations. The role of research and training in modern industry and technology is well known. Larger concerns in foreign countries like Uniliver, ICI, Du Ponts and General Electric etc can spend a huge sum of money on research and training. In underdeveloped countries it is beyond the capacity of individual industrial units to undertake anything of that magnitude. But it is possible for industries to organise research and training projects on a co-operative basis through the auspices of their associations. The NPC can stimulate various trade and industrial organizations to emulate the examples of Ahmedabad Textile Industries Research Association, South India Textile Research Association, Indian Jute Mills Association Research Institute and others. Pooling of resources will help research work as well as training facilities. The Institute of Jute Technology is a case in example. Employers' Associations, by expanding their scope of work, can take steps to devise detailed syllabus for the technicians and managerial personnel and can also effectively play the role of the co-ordinator between the industry and the research and training institutes. Dissemination of the new research findings is a vital requirement which the association can effectively do.

There is, in addition, another problem. It is usually found that, in an industry, a wide spread between the level of productivity in the most efficient and the least efficient establishments does exist. To a certain extent the reason is the ignorance on the part of the less efficient undertakings even of methods and techniques which are well known and have already proved their worth in the more efficient undertakings. One obvious solution is to arrange for inter-plant visit to foster exchange of experience. Employers Associations, once again, can play a constructive role in this matter. In the beginning, however, it is likely

that the undertakings will fight shy to divulge technical information as had been the experience in Europe.

In the USA, one may note, industries eagerly share their technical knowledge and production methods with others. This outlook is gradually gaining momentum in France, Holland and other countries. In India the whole scheme of exchange of information and technique can be focussed through the employers' organizations. Apart from inter-plant visits, inter-firm comparisons and circuit scheme may also be experimented upon. In the UK these schemes have met with success in productivity drive.

RESISTANCE

Resistance to the techniques of higher productivity from trade unions and workers is still in vogue in western countries where industrial relations are better than what we expect to have in an underdeveloped country. In the USA some industries still complain that the wage incentive measures tend to multiply employee grievances particularly when the schemes are not readily understood by all the employees. Complex plans tend to arouse employees' suspicions about management's intentions. Unimaginative schemes of work simplification were also resisted by workers as they were found to have hastened monotony in work and lowered employee morale. The AFL-CIO still maintain a rather negative attitude towards job evaluation as, according to them, it had been abused by the industrialists. Unfortunately the same has been the experience in the UK. The British Institute of Management has rightly pointed that, "Time study has in some instances earned itself a bad name, due entirely to the slipshod and sometimes dishonest manner in which it has been applied. Time studies cannot be made in a hurry.....The keys to satisfactory Time Studies are thoroughness, patience and honesty —thoroughness in taking every contingency into account, patience in carrying out long studies and honesty in the handling of results." (Works Study, p.17).

OBSTACLE

Thus, opposition to such vital productivity techniques as work study, work measurement, incentive schemes, modernisation of machinery and so on is likely to be a major obstacle in India where industrial relations are still far from ideal. Neither the workers nor the unions have any distinct grasp of these techniques. Although the task to gain their confidence is formidable, the government, we feel, can create a favourable environment by properly implementing the provisions of the ever-growing volume of statutes and regulations concerning labour. Even now, the implementation machinery of the government in regard to safety regulations, working hours and conditions, recreation facilities and welfare measures, housing provision and so on is far from satisfactory and workers in general suffer from a sense of disillusionment and discontent. In addition, a country where unemployment is a serious problem cannot accept the growing redundancy of labour unless steps to absorb surplus labour are taken in hand with a sense of urgency. The NPC will also have to launch schemes to impart training in technical processes of time and motion study and rate fixation to trade union personnel and workers. In the USA it normally takes two to three months to train a unionman in the techniques of time study purely for the specific purpose of verifying on behalf of the workers, the piece-rate, fixed by the plant industrial engineer, for a particular job. In the USA and the UK trade unions run courses on productivity techniques for the benefit of union personnel. In India, the NPC can render technical and financial assistance to the Central Trade Union Organizations to undertake such schemes.

What is, however, vital in the present stage of evolution of industrial relations in our country, is a definite re-orientation in the outlook of the managements at large if favourable response to productivity drive is expected from organized labour. The employers need realise that "if workers are to co-operate in a drive to raise productivity and to abandon any restrictive practices they may have regarded as safeguards in the past they will want, first, explanation, consultation and an opportunity for some degree of participation in the application of measures designed to raise productivity; secondly, a reasonable share in the benefits resulting from higher productivity; thirdly, safeguards to protect, so far as possible, their economic security; and fourthly, safeguards in connection with work-loads and work methods." (ILO Higher Productivity in Manufacturing Industries, p.22). The unions should not be dubbed as unreasonable if after having accepted productivity campaign whole-heartedly they express an eagerness to know as to how the gains resulting from such campaign are likely to be distributed.

BASIC CONDITIONS

There can be no two opinions about the basic conditions prescribed for the success of management-labour co-operation by a particular employer which are as follows:—"The first condition of success concerns the attitude of the higher management.....

"Unless management is imbued with respect for its people as human beings and with a genuine desire to carry them with it, institutions and procedures will prove sterile.

"Facilities for consultation should be approached not as concessions but as opportunities—opportunities to get at what their people are thinking and to put over the problems and point of Management. If the spirit is right the rest is a matter of organization and procedure." (C. G. Renold: Joint Consultation over Thirty Years, p. 120).

AHMEDABAD

Lastly, the instructive lesson derived from the epoch-making research on productivity and social organization carried out at Ahmedabad by Dr A. K. Rice should be borne in mind. The research is still being conducted and yet the findings so far published are so epochal and apposite that no productivity planning in India can ignore these. There was an agreement between Calico Mills and the workers' union that a weaver might work on multiple looms provided there was no compulsion and that there was no redundancy of labour.

The main task was, however, to devise means of giving shape to this agreement in the context of the social and psychological problems posed by the introduction of modern machinery and up-to-date working methods.

Starting with the premise that a production system or a sub-system is created to perform a "primary task", Rice comes to the finding that "the performance of the primary task is supported by powerful social and psychological forces which ensure that a considerable capacity for co-operation is evoked among the members of the organisation created to perform it, and that, as a direct corollary, the effective performance of a primary task can provide an important source of satisfaction for those engaged upon it." (A. K. Rice: Productivity and Social Organization—the Ahmedabad Experiment, p.33). His long, thorough and painstaking experiment with the working of multiple looms by a weaver as a part of the higher productivity drive in the automatic and non-automatic loom-sheds of Calico Mills brings to realisation the importance of the pattern of community and family life in India. "The family provides the individual with an important source of security and protection deriving from the membership of small, face-to-face, internally structured home—and work-groups. Working and social life provide a consistent pattern of status and authority that gives every body a place, a task and a defined role. Industrialisation and urbanization divide communities and families, and thus destroy a part, at least, of an important source of protection and security. It seems fair to conclude that the creation, in the automatic shed, of internally structured, internally led, relatively autonomous small work-groups replaced something of what had been lost—and that it was this replacement that the workers welcomed so spontaneously and worked so hard to retain.....Organizations that so arrange tasks that they can be performed by work-groups of such a size that their members can derive social and psychological satisfactions from their membership will be more acceptable than organizations which, by segregating individuals from each other, do nothing to compensate for isolation in other areas of life". (A.K. Rice, op. cit., p.107, 232). It thus becomes comparatively easy for Rice to explain such irrational phenomenon as the determined opposition of the workers to a technological innovation which is sure to result in higher productivity, lighter work and better wages. This unjustified opposition assumes a convincing logic only when it is realised that the workers' definition of their primary task is to preserve a social system giving them satisfaction and security and is no longer the accomplishment of the production process.

The Ahmedabad experiment thus offers a powerful tool to the NPC to utilise in its campaign for higher productivity. The effort to link up productivity consciousness to the age-old social habits, mores and customs is a sharp reminder to all those who in their eagerness to plan for rapid progress of the country almost uncritically recommend the courses of action found successful in a foreign land having a different social environment. We cannot, so it appears, get away from the main current of our socio-cultural history.

Internal Expansion has not Prevented External Balance of Payments Surplus

By W. T. C. KING

THIS letter is, perforce, being written just before, but will be read soon after, Britain's General Election. This may therefore be a good opportunity to turn aside from current issues and take a further look at the recently-published Radcliffe Report on the working of the monetary and credit system, which I mentioned briefly last month. First, however, there are some recent items of economic news that ought to be put on record.

The evidences of renewed expansion in Britain's economy have lately become still more pronounced. The official index of industrial production, seasonally adjusted, is now provisionally estimated for the month of August at 113-114 (1954=100), and previous estimates for the preceding four months have been revised upwards.

NEW HIGH LEVEL

There is no doubt, therefore, that industrial output is now running at a new high level, at some 7 to 8 per cent above the lowest level reached in the mild recession of 1958 and at perhaps 3 per cent above the point that had been reached by the time of the reflationary Budget of last April.

As expected, the movements in employment have not kept pace with this rapid growth, so that the average level of productivity—output per worker—also appears to have been rising, as it had been hoped it would do. The trend of unemployment has, however, been strongly downwards. After a seasonal rise in the four weeks to mid-August (in consequence of the inclusion of juveniles on leaving school), the total dropped sharply again by mid-September, to 465,000, at which it represented 1.9 per cent of the labour force, compared with 2.8 per cent at the seasonal peak about nine months ago.

A striking feature of this expansion of the domestic economy is that it has not prevented the maintenance of a good surplus on the external balance of payments. It had been taken for granted many months ago that this year there would be a substantial decline in the current external surplus from the record volume achieved in 1958; and the recently-introduced quarterly official estimates show that in the first quarter of 1959 there was a decline, from the wholly exceptional £152 millions now estimated for the first quarter of 1958, to £35 millions.

MARKED REVERSAL

But the second-quarter provisional estimates suggest a marked reversal of this swing. Thanks, in particular, to a rise in export earnings to £902 millions, compared with £836 millions in the second quarter of 1958 and £848 millions in the first quarter of this year, there was again an actual surplus on visible trade (which, for Britain, is extremely rare), and the current account as a whole showed a surplus of no less than £107 millions—a considerably larger one than that achieved in 1958.

It should be noted also, however, that the estimates for that year have now been revised downwards, as a result of a new detailed survey of the earnings of the shipping industry. The total "identified" current surplus for the first half of 1958, originally put at £327 millions is now estimated at £237 millions, and the surplus for the second half, originally £128 millions, is now estimated at £112 millions.

LITTLE DIFFERENCE

It is pointed out, however, that these revisions, though they reduce the estimates of net receipts from current transactions, identified as such, do not correspondingly reduce the estimates of Britain's total net receipts. The known increase of £284 millions in 1958 in the central gold and convertible currency reserves that Britain holds in its capacity of banker to the sterling area was accompanied by a net increase in Britain's short-term liabilities in the form of overseas-owned sterling balances, and the latest esitmates of this increase in 1958—£58 millions—is little different from the earlier estimates.

In the first nine months of the current year, the gold and exchange reserves have increased by a further £77 millions, to £1,173 millions after the making of several major capital payments, including repayments to the International Monetary Fund and provision of the gold portion of the new capital subscription. It is noteworthy that £13 millions of this increase occurred in September, normally a period of seasonal pressure, in spite of the high level of American money rates relative to London rates, and in spite of the uncertainties of the Election campaign. During the first half of the year the total overseas sterling balances rose by £95 millions, but only £9 millions of this was attributable to the holdings of countries; the change principally reflected the sterling portion of the new IMF capital.

MERITS CAREFUL STUDY

In consequence of the Election, the Report of the Radcliffe Committee seems to have attracted less public attention than might otherwise have been expected, which is a pity, for this is an important document that merits careful study. Interest in it should broaden, however, as more and more analyses and interpretations of it by economists and other experts become available to guide more general discussion.

Such guidance is certainly necessary, for all the experts are agreed that this is a difficult report to interpret, at many points, chiefly (it seems) because the Committee's desire to produce a unanimous report has militated against the reaching of clear-cut conclusions and has caused many of its findings, and much of its analysis, to be expressed tentatively, or subject to many qualifications.

NEGATIVE DEFINITION

On the central question of what can and should be the role of monetary policy the Committee's view has to be defined negatively rather than positively. It is quite clear, at one extreme, that monetary action cannot be the sole regulator of Britain's economy. At the other extreme, the Committee is equally clear that monetary action cannot be ruled out: there has to be a continuous monetary policy, and an active as distinct from a passive one. Any attempt to stabilise the rate of interest, the Committee points out, would "destroy all control over liquidity in the economy" by making the whole of the marketable National Debt "virtually as liquid as a bank deposit" and starting a dangerous "monetisation" of the debt of the kind that began to take place in the United States of America in 1945-51, when prices of government bonds were pegged by the operations of the Federal Reserve.

Similarly, since "rates of interest do enter into long-range capital planning", the mechanism of the capital market does tend to influence the allocation of resources "in favour of those projects which make the most of the real resources of the country"; it would therefore be "perverse" to try to keep rates stable in face of some major change in the attractions of capital development, and that would "invite a cumulatively excessive pressure or deficiency of demand and a wasteful allocation of the community's resources".

A CLASSICAL VIEW

In these passages, and in some others, the Committee seems to be taking a classical view of the role of monetary policy and of interest rates. But it never gives any precise statement of how it thinks the monetary mechanism should be operated in practice, though the principles it expounds differ both from the traditional ones and from those of the so-called "new orthodoxy" as practised in Britain in the past three years or so. Monetary policy in the past has been concerned primarily with the volume of money (especially the quantity of bank deposits), and, in recent years, also increasingly with the volume of bank advances, while clearly recognising that the relationship between either of these quantities and the effective level of demand is far from being a constant one.

The traditional method of influencing either quantity has been through operations in the short-term market—via changes in Bank rate and official dealings in Treasury bills or commercial bills.

NEW METHOD OF REGULATION

In recent years, as I have several times explained in these articles, a new method of market regulation has become increasingly important: since Treasury bills provide the basis for the bulk of the liquid assets of the banking system, the authorities have sought to regulate the fluctuations in the supply of such bills by direct action in other Government securities that do not rank as liquid assets in the technical banking sense.

When it has been necessary to tighten up bank liquidity, efforts have been made to minimise borrowings on Treasury bills by selling the maximum volume of non-marketable securities direct to the public (notably in the form of "small" savings securities) and by selling Government stock on the gilt-edged market. It is this "funding" policy, pursued with the object of controlling the volume of bank deposits, and possibly also bank advances, that has been called the "new orthodoxy".

The Radcliffe Committee, however, has shown relatively little interest in this line of approach. It is chiefly concerned, not with the relationship of the structure of interest rates to the volume of money, but with its relationship to what it calls the "liquidity" of the economy as a whole.

SINGLE MARKET FOR CREDIT

In Britain, it concludes, there is a single market for credit: all types of financial institutions come ultimately into competition one with another, and would-be spenders who cannot get finance from the big banks may get it elsewhere. The volume of spending, moreover, it regards as being influenced rather by the amount of money people think they can command than by the amount of money in existence. Therefore it thinks it much more important to regulate the general liquidity of the economy (and especially of the whole range of financial institutions) than the supply of money as such.

But, just because of the competitiveness and the constantly changing character of the different types of institutions, it would probably not be feasible or efficient to try to regulate them by direct administrative controls: "operations on the structure of interest rates.... should make it possible to avoid any such complex of direct controls".

ELUSIVE "CENTRE-PIECE"

But this concept of general liquidity is, not surprisingly, being regarded as a rather elusive "centre-piece" of monetary action. It is far from clear how the monetary authorities would measure it—or how, indeed, the Committee intends it to be defined. One expert commentator in this field who has lately examined this question in some detail—Professor Frank Paish, in the October issue of "The Banker"—has pointed out that the Committee appears to mean by liquidity neither the ease with which assets can be turned into cash nor the volume of realisable assets but some combination of both these qualities.

It is hard to see how such a concept could become the criterion for detailed action in practice. Perhaps it should rather be regarded as the background against which changes in the volume of money should be seen and appraised—leaving day-to-day (and perhaps even month-to-month) policy to be regulated by reference to that more tangible and familiar quantity.

EDITORIAL NOTES

Trade Expansion

Measures aimed at the expansion of world trade and elimination of trade barriers are likely to be carried a step further at the 5th session of GATT which has opened in Tokyo. In November last year, the Contracting Parties to the General Agreement on Trade Tariffs initiated the programme by setting up three committees to prepare the ground. The committees were asked to examine respectively the possibility of tariff reductions, the use of non-tariff measures for the protection of agriculture and the question of other obstacles to trade with particular reference to the problems of less developed countries. The reports of these committees will form the basis for the discussions at the current meeting of the Trade Ministers of the Contracting Parties. The first reports were already considered last May, when the Tariff Committee had recommended that a tariff conference should be convened in September 1960. The main task of the conference will be the renegotiation of agreements with the European Economic Community consequent on the establishment of a common tariff for the Community as a whole. Negotiations of new concessions are scheduled to be carried out during the second part of the conference beginning in 1961.

Measures for the elimination of trade barriers have gained added urgency from the anxiety of the United States to end discriminatory restrictions of imports from dollar area. The trends of international trade last year provides the justification for the move, which is strongly reinforced by the IMF. As pointed out in the last annual report on International Trade,* Western Europe's dollar problem began to vanish about that time. On the other hand, the share of the United States exports to the world total, which had increased from 11 per cent in 1938 to 24 per cent of the world total in 1948, slipped back to 16½ per cent in 1954. The increase that had occurred subsequently in US exports did not require payments in dollars and so did not create any balance of payments problems for the countries in the non-dollar area. The adverse trade balances experienced of late by the United States seems to have alarmed the Treasury and led to the decision to tie DLF loans to procurement in the United States. An improvement in trade balances brought about by removals of trade barriers may lead to the reversal of this unfortunate restriction which will create difficulties for developing countries.

These countries for some years have been piling up substantial trade deficits. While the exports of industrial to non-industrial areas have increased from 37.3 to 40.2 per cent of world exports, in the period 1953 to the second half of 1958, the exports from non-industrial to industrial areas have dropped from 26.6 per cent to 22.3 per cent over the same period. If the oil exporting countries, which have a substantial excess of exports, are excluded, the decline of exports from the remaining countries in this class will be seen in its catastrophic magnitude. The UN Commodity Survey has estimated that the decline in export earnings of primary producing countries in one year, 1958, was equivalent to one-sixth of the official gold and foreign holdings of these countries or to about six years' lending to them by the International Bank at 1956-57 rates. Their efforts to expand exports are frustrated by restrictive measures of importing countries. As a consequence, they are forced to cut down imports to bare essentials and curtail their development programmes. The need to help these countries to achieve balance in their trade with the rest of the world has been recognised. Measures that will achieve that end will be of basic importance to the success of the programme of trade expansion.

*

Jogjakarta Conference

The topics on the agenda of the GATT session in Tokyo are of vital interest to the conference of Colombo powers meeting simultaneously in Jogjakarta. The region, which is intended to be benefited by the Colombo Plan, comprises many of the primary producing countries which have been hard hit by the recession. It is estimated that this area has received external aid of about five billion dollars. But the trade deficits of the region are also of the same order of magnitude. Taking the semi-industrialised and non-industrial countries of the world as a whole, their trade deficits in 1958 totalled $6,400 million. The Colombo plan region countries, which produce the world's rubber, tin, jute and oil fats, account for nearly a third of this deficit. The conference has to decide whether the Colombo Plan of mutual assistance is to be continued and, if so, how best it can supplement national development programmes. Most of the countries in the region have felt the impact of the European Common Market on their exports. While drawing up a list of the economic needs of the region for the consideration of the "donors", the Conference might also with advantage devote attention to the problems of increasing the volume of trade within the region, so as to provide a steadily growing stimulus to economic development of the member countries. The question of regional integration of these countries having complementary economies merits greater attention than it has attracted so far. A South East Asian Economic Community will strengthen the security of the region more effectively than SEATO.

It is also not improbable that such a conference could usefully consider the possiblity of some method of stabilising prices of primary products. As the first note in this section points out, the loss in exchange earnings consequent to lower export prices of primary raw materials, on the one hand, and to the increasing capital machinery requirements, on the other hand, of the underdeveloped area has exceeded the foreign assistance that this region as a whole might have received. At least in experimental form, it may be desirable for the Colombo Plan countries in Jogjakarta to pay serious attention to drawing up a plan whereby export prices of primary produce can be made to fluctuate less widely than they have been known to in recent years.

*

Arable Waste Lands

At the recent meeting of Divisional Commissioners, the Revenue Minister of Mysore emphasised the urgency for distributing 15.5 lakh acres of arable waste lands in different parts of the State among landless cultivators. He pointed out that, during the past 4 months, 15,000 acres had been already distributed. This is typical of the doctrinaire way in which programmes are chalked out and achievements listed. The Revenue Minister obviously forgot for the moment that arable waste lands would not have been left uncultivated if cultivators found it worth while to occupy and cultivate them: they are all not marginal, but sub-marginal lands. Such lands could be cultivated under one or another special condition. Agricultural techniques should be improved, or capital investment per acre should increase substantially. As things are, agricultural techniques in villages, particularly among landless cultivators, are of the time-honoured type, and it would serve no purpose if cultivator "A" applied for and got a few acres this year, and resigned the area next year. Items like conservation of oil, contour bunding and chemical fertilisers cost a good deal, and the average raiyat has not got the money to arrange for them. Nor are there any financing agencies for such purposes. In the absence of advanced techniques, heavy capital outlay and mechanisation, it would be idle to expect the innocent cultivator to do the rest of the magic after the grant of land by the Government. Rather, the more economical way would be for Government to establish and run Government farms on such lands, demonstrate the practicability of commercial agriculture, and then sell them out to enterprising agriculturists. Unfortunately, such an idea does not seem to be there in authoritative circles, but it is worth while examining the proposition both from the viewpoint of employment and of agricultural out-turn. It is no use beating about the bush and riddling the press with boosted figures.

WORLD OF FINANCE

Treasury Bill Auctions Popular

THE giltedged market is quiet and inactive. Does this mean that the second tranche of the Central Government loan is to be deemed a failure? Yet there can be no doubt that, for the moment at least, buying pressure, both in Central and State Government loans, has eased. It is also possible that, when the 1959 slack season has merely a few more weeks of currency, giltedged will be a neglected counter for some further months to come. But the perspective of giltedged is being distorted by some other considerations, of which we may now take note.

It is clear that, except for the temporary strain that banks were put to early in October, the slack season continues its course with vigour. But what is also clear is that Scheduled Banks apparently apprehend that the demand for funds during the 1959-60 busy season may be quite severe. In such a view, they would be reluctant to take up parcels of giltedged which, they fear, they might be compelled to sell at a loss, when they need to replenish their resources. At the same time, the Scheduled Banks cannot afford to keep idle cash on hand. So, they have partly diverted their attention to Treasury Bills. For, investment in Treasury Bills results only in a relative loss. The loss consists in the fact that yield on Treasury Bills is more than one per cent lower than on giltedged securities as such. But, then, Treasury Bills acquired during the last three months of 1959 will mature during the first three months of 1960 and hence be available for being lent out to meet such enhanced demand for Advances as the 1959-60 busy season might experience. This explains the keen bidding that has of late been noticed at the Treasury Bill auctions, and it also explains the larger sales being made of intermediate Treasury Bills.

Meantime, however, it is noteworthy that, during the week ended October 23, the Reserve Bank appears to have sold Rs 15 crores of marketable securities through the tap. It is true, the bulk of this, or Rs 10 crores, is traceable to the State Bank. But the fact that the other Scheduled Banks have probably taken up Rs 5 crores is a significant indication that bankers are today tending to their giltedged portfolio with great care and efficiency. A balance is being struck between low yielding Treasury Bills and the relatively higher yielding marketable securities—the former becoming available for meeting the next busy season's needs, while the latter can be locked up for some time to come.

It is a very realistic attitude that bankers have taken toward giltedged investments. Such an attitude will undoubtedly result in bank profits during 1959 being rather better than they might otherwise have been.

+

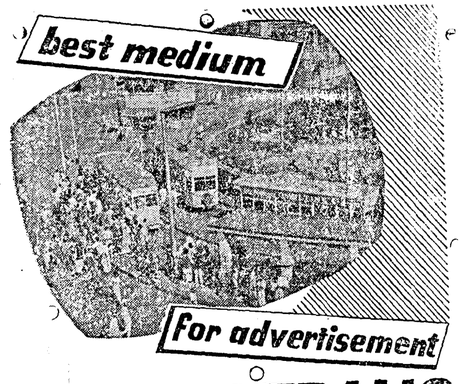
Foreign Balances Again Higher

CONTINUED slack season conditions, as well as the continued export surplus, are reflected in the returns of the Reserve Bank for the week ended October 23. Active Note circulation has fallen sizably by Rs 12.82 crores to Rs 1668.24 crores. Rupee Coin has returned from circulation for Rs 1.15 crores. As a consequence, the Reserve Bank's cash in the till has improved by Rs 14.15 crores to Rs 30.65 crores.

In the Banking Department, there are signs of inter-governmental transactions as also of some element of deficit financing. There has been a considerable fall of Rs 11.74 crores to Rs 18.19 crores in the Deposits of State Governments, with their indebtedness being meantime largely unchanged. There has, therefore, been some repayment of debt by State Governments to the Central Government, whose Balances have improved by Rs 14.38 crores to Rs 67.39 crores. However, it is to be noted that the Reserve Bank's portfolio of Treasury Bills purchased and discounted has marked a fall, during the week, of Rs 13.47 crores to Rs 30.37 crores. In order to meet this maturing liability, the Central Government would doubtless have had to incur some element of deficit financing. In this regard, however, since Investments are unchanged, it would appear as if no money was created during the week under review. But, then, the State Bank is known, in the week ended October 23, to have purchased Rs 10 crores of securities. Our view, therefore, would be that there has been deficit financing for, say, Rs 15 crores, which, however, has been concealed by sales of marketable securities by the Reserve Bank for a total amount around Rs 15 crores. It is thus that, even after meeting the maturing liability in respect of Treasury Bills purchased and discounted by the Reserve Bank, the Central Government's Balances have reflected the receipt of around Rs 12 crores from State Governments.

The status quo has apparently been maintained by the Scheduled Banks vis-a-vis the Reserve Bank. For, their Reserve Balances are merely a shade lower at Rs 80.91 crores, while the Other Loans and Advances of the Reserve Bank are also only very slightly lower at Rs 80.62 crores. But we have inferred that Scheduled Banks are likely to have purchased marketable securities from the Reserve Bank. Hence, Rs 15 crores of resources gathered under Reserve Balances have been utilised by Scheduled Banks in payment for the securities so purchased during the week.

Lastly, it is heartening to note that Balances Held Abroad have again risen by Rs 2.69 crores to Rs 24.86 crores. It is be hoped that the export surplus as measured by the holdings of foreign securities will steadily be maintained until the end of March next year.



+

According to the return of the State Bank for October 23, there has been an augmentation in the giltedged portfolio of Rs 10 crores to Rs 387.27 crores. This has not been reflected either in cash in hand or in other assets because the State Bank also experienced an increase of Rs 7.10 crores to Rs 577.46 crores in Deposits; and, besides, the Advances portfolio has dropped by Rs 1.62 crores to Rs 157.64 crores. It is, we may add at this juncture, the rise of Rs 10 crores in the State Bank's holdings of giltedged which led us to suggest that the Central Government could have had recourse to deficit financing during the week under review.

+

The return of Scheduled Banks for October 16 shows that they have recovered smartly from the ephemeral strain caused by the coincidence of beginning of the month and Puja disbursements. Deposit liabilities have almost fully recovered from the drain of the previous week, in rising by Rs 18.83 crores to Rs 1859.00 crores. At the same time, the total of Advances has been shaded by Rs 4.48 crores to Rs 931.20 crores; and, in both these respects, the contribution of the State Bank has been small. Such accretion to resources has been utilised by member banks to reduce their indebtedness to the State Bank from Rs 5.76 crores to Rs 4.20 crores; and to the Reserve Bank from Rs 10.20 crores to Rs 3.59 crores. Scheduled Banks also appear to have disinvested in giltedged, the portfolio showing a decline of Rs 1.84 crores to Rs 780.15 crores. But, if regard is had for the fact that, in the relevant week, the disinvestment of the State Bank amounted to Rs 4½ crores, it will be realised that the other Scheduled Banks will have, on the contrary, added to their giltedged portfolio. In the end result, Cash Balances marked an improvement from Rs 158.40 crores to Rs 171.67 crores, the State Bank's share being Rs 10 crores.

The return of Scheduled Banks for October 23 should disclose another sharp rise in Deposits, with Deposits thus touching a new high. Secondly, it is also to be anticipated that the Advances portfolio may touch a new low for the 1959 slack season. Thirdly and finally, it is not unlikely that the giltedged holdings of Scheduled Banks will, as at October 23, be very near the Rs 800 crores mark. In any event, we expect investments of Scheduled Banks, as at October 23 to exceed Advances, excluding inland and foreign bills, as on that date. If this should happen, it will be a new landmark in Indian banking, comparable to the overtaking of Notes in Circulation by Scheduled Banks' Deposits.

Future of British Exchange Control

By Paul Einzig

THE Government is widely credited with the intention of removing the remains of the exchange control inherited from the war and from the Labour Government. Indeed the first measure adopted after winning the election was virtually to remove the limits to tourist allowances. There is no doubt that other steps towards liberalisation will follow in due course. Even so it would be unduly optimistic to expect a complete restoration of freedom in the foreseeable future.

The next step towards freedom will probably be the removal of restrictions imposed in 1957 on refinancing credits and on overdraft facilities to foreign banks. Refinancing credits, used for financing exports or imports by foreign countries after the end of the period normally allowed for their shipment—for instance credits for financing the processing of imported goods—have been replaced to a large degree by facilities provided through re-lending dollar deposits accepted by London banks. As for overdrafts on "nostro" accounts, they are too expensive to be used except during acute speculative pressure on sterling when the discount on forward sterling exceeds the interest charged on such overdrafts. At present forward sterling is at a premium in most centres, so that the facilities would not be used in any case.

Another early step is likely to be the **de facto** convertibility of security sterling through an official announcement that the authorities intend to support the rate within the "support points of 2.78 and 2.82 to the dollar. In any case the rate is now quoted within the support points.

The same end could be attained through the development of a good forward market in security sterling. With official encouragement this could easily be accomplished. There is already a market in it, but rates are largely a matter of negotiation. There is no reason why there should not be a good market, such as existed in forward transferable sterling before it was abolished as a result of the liberalising measures early this year. Sooner or later security sterling, too, will be abolished, and holders of British securities outside the Sterling Area will be placed in the same position as exporters of goods to Britain. They will be able to dispose of the proceeds at the same rate as is paid for sterling in general.

Before long the last remains of discrimination against the import of goods from the Dollar Area will have disappeared. The United States attached great importance to this, in view of her own balance of payments difficulties, and there is every reason to believe that the British Government will comply with the American request to that end.

As for transfers of funds by residents in the United Kingdom and in the Sterling Area, that is another matter. Presumably there will be a certain extent of liberalisation, but a complete removal of restrictions is not envisaged for the time being. The limit to remittances will be increased in due course, and the Bank of England is likely to apply the limits more leniently. Also much of the control will be transferred from the Bank of England to the authorised banks who need not consult the authorities except in borderline cases.

But there is no justification to expect that we shall wake up one morning to find that we are at liberty to make unlimited capital transfers to countries outside the Sterling Area.

It is true, at present such a change would not necessarily lead to an outflow of capital on a large scale. Sterling enjoys general confidence both at home and abroad. Prospects of investment in Britain are favourable, and there is a good possibility of tax reductions. Even if many people would take advantage of a removal of restrictions, the pressure on sterling would be more than offset by the demand for sterling created through the increase of the influx of foreign capital.

However, it would be a mistake to assume that the existing favourable state of affairs will necessarily continue forever. The possibility of major strikes cannot be ignored. They may assume such dimensions as to induce many investors to seek safety abroad, at a time when the strikes would affect the balance of payments. Even though the international political horizon is improving, it would be unwarranted optimism to ignore the possibilities of war scares.

Moreover, even if the authorities felt they could afford to face the possibility of a drain on the gold reserve through transfers of capital by United Kingdom residents, they will think twice before they took an action that would enable all residents of the entire Sterling Area to draw on the British gold reserve by exporting their capital to countries outside the Sterling Area. As things are, the Governments of Sterling Area countries can draw on the British reserves, but generally speaking they have not misused those facilities. It might be a risky experiment at the present stage to give all residents of the Sterling Area free hand to transfer their capital to outside the Sterling Area.

Even now the gold reserve is on the small side. And its reinforcement through the influx of foreign capital is a source of potential weakness. It would be a mistake to spend the proceeds of that influx either by over-importing or by allowing over-liberal transfers of capital by Sterling Area residents, only to find that when foreign investors want to withdraw their capital the gold will not be available.

When swords of lightning no longer flash,
the roll of thunder loses its echo, the
pitch laden sky clears and the sun breaks
through wisps of cloud cotton-like
in the sudden blue—that is the time
of the harvest, and the year's work is done.

For this end; the effort, the toil. For a
world that offers a little more—
a little less of the care, a little more of the joy.

Today, as in the past, our products help to make homes cleaner, healthier, happier. But today we are also working for . . . **Tomorrow,** when the evergrowing urge for better living will demand still greater efforts. And we shall be ready with wider service, new ideas, new products . . .

Today and Tomorrow's Hindustan Lever . . . Serves the Nation

WORLD OF JUTE

Gunnies Dull on Lack of Interest

THE jute goods market has been ruling rather dull during the past few days. Although sentiment in both the principal sections has been somewhat aided by reports of fresh business, higher price levels have been found to be untenable. Hessians are comparatively steadier partly because of some business done with Russia and partly due to continued expectations of a pickup in the US offtake in coming weeks. Earlier in the week sentiment in sacking tended to improve but following announcement of a smaller—than—anticipated Government tender for B Twills the undertone became easier.

It would appear that the main impediment in the way of an expansion of activity in sacking is the belief that in coming months heavy-goods may not find as much support as until now. In the eight months ending August, clearances of gunny bags have been on a promising level. Total clearances upto end of August this year amounted to 311.9 million bags as compared with 294.5 million bags in 1958 and 299 million bags in 1957. It will be seen that clearances upto end of August this year have surpassed even those for 1957. The detailed figures for clearances countrywise throw interesting sidelights on the performance of htavy-goods on the export front in the current year.

Perhaps the most striking contribution is from China which has cleared 23.4 million bags during the 8 - months ended August. This country's offtake during the corresponding period in 1957 was nil and amounted to a paltry 2.4 million bags in 1958. Among the other countries which have increased their clearances are Indonesia, the continent, the UK, Russia, Turkey and Cambodia. Russia is showing increasing interest in Indian sacking during the past three years. The statistical position of this category of goods has been helped not a little by the high rate of clearances to Indian ports which accounted for 76.5 million bags as against 57.2 million bags and 37.5 million bags in the corresponding period of 1958 and 1957 respectively.

Although Australia has been taking bags at a slightly higher rate than last year, its offtake is still much below than in 1957. In the first eight months of this year Australia has cleared 26.5 million bags as compared with 25.7 million bags in 1958. This country had, however, cleared during the corresponding period of 1957 a total of 42.1 million bags. African countries are conspicuous this year by their particularly poor offtake.

After earlier steadiness the jute goods market closed the past week ended Wednesday on a dull note in the absence of fresh incentives. The opening on last Thursday was on a quiet note but sentiment became cheerful particularly with regard to sacking following rumours of good shipments during the month. Acording to Mr Kenneth E Tosh, Chairman of the IJMA, and leader of the two-man delegation which is now on a visit to USA, prospects for burlap in the USA are good. He said in New York last week that despite continued stiff competition from paper and cloth bags burlap had regained part of the market lost to multiwall paper bags in the past two years.

In the Calcutta market hessian though displaying a steady undertone was rather dull. Some cheer was imparted to this section in later dealings on reports of some business done with Russia. Even so, there was no appreciable broadening of interest presumably in view of the continued uncertainty about American purchases on account of the continuance of the steel strike. Last Thursday B Twills October improved to close at Rs 103. Hessian 40" × 10 oz October also closed steady at Rs 40.55.

Friday, however, witnessed selling pressure in both sections induced by a similar trend in the futures market. B Twills October reacted to Rs 102.40 while Hessian 40" × 10 oz also came back to Rs 40.45. The undertone was almost unchanged on Saturday with prices fluctuating within narrow limits to close as follows: B Twills October Rs 102.12 and Hessian October Rs 40.40.

Prices especially in the heavy-goods section steadied up in earlier dealings on Monday on reports of a substantial order for B Twills from Government. But when the actual announcement disclosed tender for only 6,000 bales, operators were disappointed and consequently prices reacted. Hessian was comparatively steady. B Twills October closed at Rs 102.55 with Hessian 40" × 10 oz October placed at Rs 40.70. It was the turn of hessian to get increased attention on Tuesday. The incentive for increased activity in this section was provided by the news of sizable business having been done with Russia. Prices, could not move up briskly presumably due to prevailing uncertainty about US offtake. B Twills October finished the day at Rs 102.30 with Hessian 40" × 10 oz October at Rs 40.75. In the absence of fresh foreign business prices moved narrowly on Wednesday to close as follows: B Twills October Rs 102.35 and Hessian 40" × 10 oz October Rs 40.60.

The raw jute market opened somewhat steady with small mill business reported done. Assam Bottoms was quoted at Rs 23.50 per maund. Although only scattered mill business was reported in the first two days, the undertone continued to be steady. There was practically no change in the pattern of trading on Monday and once again prices remained unchanged. The undertone, however, turned easier on Tuesday following reports of increased imports in agency centres. With mills continuing to show only scattered interest and that too at lower levels, prices receded and Assam Bottom was marked down to Rs 23.25 by close of the week.

WORLD OF TEA

Good General Demand

IF prospects for North Indian tea in the next few months are considered good, it is largely because of the uptrend in offtake that is evident in recent months. It would appear that the earlier anxiety about the increased output of North Indian tea has now been largely discounted in view of the pick-up in offtake. Shipments of tea grown in this region have recorded a steep rise in September thereby considerably narrowing the gap between the total for the first nine months of the year and that at the corresponding period of last year. Apart from the fact that the increase in output in North Indian tea has been more or less offset by the total exports up to the end of September, it is to be noted that the increase has also been offset by the fall in output in South India. The fact that Ceylon's output has also recorded a decline over the previous year is another favourable factor for North Indian tea. Further, the outlook for world consumption of tea also seems to be good and indications are that the current year will surpass the previous two years in this regard. Tea consumption in the Middle Eastern countries is on the uptrend and it is to be noted that Indian tea has been making good headway in this area this year.

Meantime, good general demand has been witnessed this week in Calcutta at the export sale. Rates however, were rather irregular as buyers were inclined to follow quality. An irregular price trend was anticipated in view of the fall in the quality of tea on offer. Although Plain Brokens and Fannings continued to be in good request, prices were sometimes 4 to 6 nP easier. The demand was particularly strong in Coloury Clean Black Fannings. A few good liquoring medium Brokens and PF's were fully firm but the more ordinary sorts were generally easier. Medium BOP's displayed an irregular tendency and proved a weak feature of the sale but OF's met with good request. The Best CTC teas met with a fair demand but prices were irregular and sometimes 10 to 20 nP easier, buyers paying more attention to brokens than Fannings. Strong demand with dearer rates characterised dealings in Coloury Secondary CTC's while demand was good in Leggcut descriptions. The poorer whole leaf grades were well supported and dearer but the higher priced sorts fetched only easier levels. Enquiry was better in Darjeelings but price realisations were lower than previous valuations. Quotations: Clean Black Pekoe Rs 2.00 to Rs 2.04; Plain BP Rs 1.88 to Rs 1.90; Plain Fannings Rs 2.04 to Rs 2.12; Medium BP Rs 1.92 to Rs 2.08; Medium Fannings Rs 2.14 to Rs 2.24 Best Assam CTC, BP Rs 2.60 to Rs 2.80; Best Assam CTC Fannings Rs 2.80 to Rs 3.00.

At the Internal Sale in Calcutta on Wednesday there was a good general demand. Offerings totalled 21,600 chests. While teas suitable for export were generally firm at times realising higher rates, Legg Cut types attracted sustained interest at advancing price levels. An irregular trend was noticeable in Medium CTC dusts with those suitable for export and the smaller stronger liquoring descriptions displaying a firm trend with the rest on offer selling 10 to 15 nP easier. Good support was forthcoming for the very best CTC teas. Quotations: Medium Dooars Dust Rs 1.96 to Rs 2.00; Medium Assam Dust Rs 1.90 to Rs 1.94; Medium Assam CTC Dust Rs 2.00 to ss 2.15; Best Assam CTC Dust Rs 2.50 to Rs 2.70.

There was good demand at the export sale in Cochin held on the 20th October. A total of 12.5 lakh lbs was on offer. Active support at fully firm to occasionally dearer rates was noticeable in the few best Nilgiris while lesser Brokens were about maintained at around previous levels; but their Fannings were easier. Good Medium Brokens came to an irregular market but similar Fannings fetched better prices. Medium and Low Medium descriptions and Plain sorts were dearer. An irregular tendency was noticeable in Black Leaf Brokens but their Fannings suitable for the Middle East were higher. Among whole leaf grades, Nilgiris were taken at improved levels.

At Thursday's dust sale in Cochin the quantity on offer was just under 5 lakh lbs. Here also there was a general good demand with prices tending to be irregular. Black grainy Nilgiri teas sold well at advanced prices but lesser kinds were easier. Good coloury mediums came to an active market but Travancore Mediums were irregular. Milled and Residual kinds fetched lower levels. While Legg Cut sorts were steady CTC showed an easier tendency.

Tea shipments from Cochin from 1st January to 17th September 1959 totalled 56,125,215 lbs as against the total of 72,328,191 lbs for the corresponding period of last year.

WORLD OVERSEAS

US Notes

Headline-making congressional invesigation are not unknown in this city. But one of the most significant inquiries—from an economist's viewpoint—has received relatively little publicity: the hearings conducted by a sub-committee of the Joint Congressional Economic Committee on the nation's energy resources.

It takes little imagination to realise the importance of this subject, what with economic and industrial expansion continuing at a lively pace.

Those who have been seriously concerned about US energy reserves can take heart from the hearings, especially from the findings of a non-profit research organisation which has been studying the problem for some time. (This is "resources for the future," set up in 1952 with the aid of the Ford Foundation).

Spokesmen for this group have told the Congressional Committee that the conventional fuel resources of the United States should easily meet estimated needs through 1975. A corollary to this is that the cost of these fuels are not likely to increase appreciably in the next 16 years.

This, of course, by no means implies that coal, oil, gas and water will become serious problems after 1975. The research group established a relatively short-term limit for its studies so that it could support its findings with facts and figures that are more realistic than conjectural. Indeed, the group has given the committee an advance look at data stemming from a major research project which is due to be published only next year.

Its figures cover the period 1955-75. They indicate that these *20 years will be marked by an in*crease of 120 per cent in the use of water power in the United States, of 107 per cent in natural *gas, 95 per cent in oil and 75 per* cent in bituminous (soft) coal. The only decline is expected in antracite (hard) coal, which already has lost most of its once-flourishing market.

This seems to be a realistic assumption. Distribution of electric power averaged more than 10,300 million kilowatt-hours per week during 1955, the base year for the study. It has increased steadily since then and in 1959, four years later, the weekly average has consistently exceeded 13,000 million kilowatt- hours.

One conclusion that can be drawn from the study is that the research experts foresee only a minor role for atomic energy as a power source before 1975. The same would apply to such other sources as solar energy and the nation's abundant reserves of oil shale.

One of the problems of energy reserves is, of course, the non-renewability of such resources as oil, gas and coal, But of these fuels, only oil is seen as possibly in a precarious position, with reserves estimated at about 12.7 times 1958 production. The comparable figure for gas is given as 22.9 and for coal as 2.200.

As the research experts point out, however, oil and gas reserves are "rigidly defined" by the industry as quantities known to exist and recoverable under present technological and price conditions. Past experience suggests that advancing technology and continued exploration could go on adding new reserves to the presently known reserves.

Interestingly enough, the research group's estimates are supported by the forecasts of another expert. Phillip Sporn, President of American Electric/Power Company, told the Committee that the year 1975 should mark the beginning of nuclear power's emergence as a major force in the competitive penergy picture.

Sporn also predicts that US electric power requirements will more than double by 1975. But he goes further. By the year 2000, he says, US electricity needs will be nearly ten times those of recent years, with nuclear energy meeting up to 20 per cent of the total demand as against an estimated 7.5 per cent in 1975.

*

Britain

Expansion over a wide front is expected to continue in the United Kingdom, according to the results of the sixth inquiry into industrial trends conducted by the Federation of British Industries (FBI), and published today (October 16) in London. Replies to the questionnaire, circulated among the FBI's member firms, relate to the position at the beginning of October.

The expected industrial expansion has, however, not yet led to a corresponding expansion in plans for capital investment.

Reported increases are offset by some decreases, but certain strong continuing trends and some important changes of direction emerge. Thus, in the fifth inquiry made in June an outstanding feature was the indicated increase in output. This has continued in the present inquiry: 53 per cent of the firms questioned report increases, and only a scattered 8 per cent decreases.

Both the numbers employed and the hours worked per operative increased more markedly than in June. The change of trend appears here: for the first time since the inquiry began, more firms find it harder rather than easier to get labour. But the trend is not marked.

The cause of the increased output has been a further rise in orders received; the indication in June of lengthening order books is, this time, more marked. Consistently with this, the earlier rise in stocks of finished manufactures (which were checked in June) have now changed to a significant fall.

Another reflection of increased output is that 50 per cent of those replying to the questionnaire are now working to capacity, compared with 20 per cent as recently as February.

The trend in raw-materials stocks, steadily declining in earlier inquiries; and which was checked in June, now shows signs of changing directly to an increase.

In general, the replies show an optimism for future activity which is justified by the continuing increase in orders and lengthening order books. The point, however, has not yet been reached at which there is widespread planning of new capacity. Trends differ between buildings, on the one hand, and plant and machinery on the other. The downward trend in the latter was checked in June (when higher and lower expectations were balanced), and the present inquiry shows another of the changes to an upward trend which are its most interesting feature. This is not the case for new building; the downward trend—which was lessening in intensity up to June—shows no significant change this time.

The *Financial Times* (October 16) comments: "A very buoyant picture of the economy emerges from the latest FBI inquiry into current trends. The buoyancy is far from universal, and some industries are still suffering from insufficient orders; but it is clear that the general level of demand for the final products of industry . . . is high and rising".

The *Daily Telegraph* (October 16), reviewing the picture of Britain's *economy facing the* Chancellor of the Exchequer, says that this year "the question is, properly, to 'maintain'—not, as it has usually been, to 'attain'. *Indeed, as he surveys the* statistics, the Chancellor may be pardoned for suspecting that they are too good to be true.

"Abroad, *exports have recovered* sooner than he expected when he made his forecasts six months ago. The prospect is good, too . . . . At home, production has risen fast. Unemployment has fallen while employment has increased; many of the *summer school-leavers* have been absorbed. Since last autumn there has been no major wage increase. At the same time, savings have gone from strength to strength.

"In its first half-year, the Budget has moved towards a lower deficit than was estimated. And, of course, the cost of living has been stabilized. By mid-September the index had fallen to almost exactly the same figure as that 12 months before".

* * *

Increased production and sales by the British cotton, wool, and plastics industries are reported in the latest *Board of Trade Journal* published in London.

Production in the cotton industry in August was 8 per cent higher than a year ago, and recovery has now reached the weaving section. Weaving production was 3 per cent more than in August 1958, and in the spinning section 13 per cent more.

The volume of wool textile production in August was 13 per cent more than a year earlier and about the same as in August 1957—which was immediately before the recession in the industry. In the first nine months of this year output was 9 per cent more than in the same period a year ago.

Statistics on plastics materials in the second quarter of this year show that not only have sales fully recovered from the slackness of a year ago but that, once again, they are expanding.

Net sales of 128,000 tons in the second quarter compared with 114,000 tons in the first quarter, and with 100,000 tons in the second quarter a year ago. Plastics exports in the second quarter of this year were a record, at 37,000 tons.

* * *

Retail prices in Britain have remained steady for another month. The official index figure, which measures changes in the average level of retail prices compared with the level at January 17, 1956 (taken an 100), was 109—the same figure as at August 18—the Ministry of Labour and National Service announced today (October 15) in London.

Calculated to one decimal point, the September index was 108.7, compared with 109.3 for August.

The official index of retail prices has now been steady at 109 (the nearest whole nnumber) for five months.

* * *

British steel production rose in September 1959 to a weekly average of 426,400 tons, according to figures issued today (October 15) by the Iron & Steel Board in London. This compares with a weekly average of 337,100 tons in August and with 368,600 tons in September 1958. Production figures in September show output running at an annual rate of 22,171,000 tons.

Steel production has now risen to within about three per cent of the figure for September 1957, which was the highest September figure on record.

* * *

A metallized fabric which can be used with the metal side outwards to repel heat in hot countries, and reversed to retain heat in cold climates, is among the new developments by the British Cotton Industry Research Association's Shirley Institute at Manchester.

Dr D. W. Hill, director of the institute, told the association's annual general meeting in Manchester today (October 22) that the new metallized fabric could not yet be produced commercially, but research was going ahead, and he felt it would be an import product in the future. The institute had recently developed a cotton cellular blanket which could be sterilized and which did not produce fluff. This was arousing interest in hospitals, and it was hoped it would result in increased trade for Lancashire.

Staff from the Shirley Institute have extended the investigations to take in the study of techniques and machinery in oversea countries. The institute, which handles

about 200 research problems and 2,500 technical inquiries a year, is anxious to keep abreast of new international developments.

* * *

United Kingdom import and export prices in general continue to be stable, according to statistics issued by the Board of Trade in London.

The index of export prices rose in September by one point to 109 (1954=100). As there was no change in the import price index, which remained at 98, the so-called terms of trade (or the import price index as a percentage of the export index) improved by one point, moving down to 90.

* * *

Opening the International Motor Show at Earls Court, London, on October 21, the British Prime Minister, Mr Harold Macmillan, described the United Kingdom motor-car industry as the "most vital and most buoyant in our national economy". He said the industry contributed over an eighth of Britain's foreign-exchange earnings from visible exports, and, referring to the record produciton so far this year of 800,000 passenger cars (apart from commercial vehicles and tractors), said more than half of them had been exported.

Mr Macmillan went on to say that the car industry depended on two things—a buoyant home market and expanding exports. This year exports were already up by 11 per cent, and in North America the British lead was well maintained.

"Nevertheless", he added, "competition is keen, and I know that the industry and its supplies are making, and will make, every effort to increase the production of British cars. They will succeed, as the September figures are an indication, but it will be a hard struggle to sell abroad, both in America and Europe".

* * *

United Kingdom import and export prices in general continue to be stable, according to statistics issued by the Board of Trade in London.

The index of export prices rose in September by one point to 109 (1954=100). As there was no change in the import price index, which remained at 98, the so-called terms of trade (or the import price index as a percentage of the export index) improved by one point, moving down to 90.

A £4,750,000 scheme of improvements to the King George Dock at Hull—Britain's third-largest port—including extension of three quays and provision of additional transit sheds, cranes, grain elevators, and silo accommodation, was announced by the British Transport Commission on October 21.

The port of Hull handles cargoes of wool, timber, grain, oil seeds, and ores from India, Australia, New Zealand, South and West Africa, and North America. In recent years, some £1,500,000 has been spent on improvements at the King George Dock.

From Hull, iron and steel, vehicles and parts, and chemicals are exported to all parts of the world.

* * *

Marconi's Wireless Telegraph Co. has announced an agreement with the Indian Ministry of Defence for the manufacture in India, under licence, of Marconi VHF multi-channel radio terminals and repeaters, and ancillary equipment. Under the agreement, Marconi's is to supply all necessary technical assistance.

A spokesman for Marconi's said in London that the agreement underlined the importance the Indian Government placed on the development and expansion of internal communications.

The multi-channel radio equipment to be manufactured in India are the HM 100 series used by telecommunication authorities in many parts of the world, including India, where they are used on the railway network. The series was developed by Marconi's for use in country unsuitable for the construction of line or cable routes. It is designed to carry up to 48 telephone channels, any one of which may be subdivided to give either 18 or 24 telegraph channels.

*

Russia

The report of the Central Statistical Board of the USSR Council of Ministers, published on October 15, 1959, has announced that the State Plan of industrial production for the third quarter and first nine months of 1959 has been overfulfilled both with regard to overall industrial output and with regard to most major items.

The gross industrial output plan of the USSR for the first nine months of 1959 has been overfulfilled by more than 4 per cent. Overall industrial production for the first nine months of the year has upped 12 per cent over the corresponding period of last year.

All the Union republics have fulfilled and overfulfilled the plan for the first nine months, both with regard to gross output and with regard to most major industrial goods. All the economic councils, with the exception of Kaliningrad, have fulfilled and overfulfilled the plan for the first nine months of 1959.

The expansion of gross output by the several branches of state industry is characterised by the following figures:

	(a)
Ferrous and non-ferrous metallurgy	109
Fuel and power industry ...	109
Machine-building and metal working	115
Chemical and rubber industry	110
Building materials industry ...	123
Timber, paper and woodworking industry	109
Light industry	108
Food industry	113

(a) The first nine months of 1959 in percentages of the corresponding period of 1958.

The production of some of the major industrial goods in the first nine months of 1959 is characterised by the following figures:

	(a)	(b)
Pig iron—mln tons ...	31.8	109
Steel—mln tons ...	44.4	109
Rolled metal—mln tons ...	34.7	108
Steel tubes—mln tons ...	3.9	114
Coke—mln tons ...	39.7	105
Iron ore—mln tons ...	70.5	106
Coal—mln tons ...	380	102
Oil—mln tons ...	95.3	114
Gas—billion m3 ...	26.1	124
Electric power (district electric stations and block stations)—billion kwh	166	112
Electric engines over 100 kw capacity—thousand	13.4	112
Electric engines up to 100 kw capacity—mln	1.9	114
Metal-cutting machine-tools—thousand ...	108	105
Automobiles—thousand including: ...	367	96
Lorries and buses ...	274	93
Passenger cars ...	93	103
Tractors—thousand (physical units) ...	159	96
Paper—mln tons ...	1.7	105
Cement—mln tons ...	28.6	117
Cotton textiles—billion m^2	3.4	106
Woollen textiles—mln m^2	308	108
Linen textiles—mln m^2	358	110
Silk—textiles—mln m^2 ...	509	99
Leather footwear—mln pairs	287	109
Wireless sets—mln ...	3.0	103
Television sets—thousand	924	130

(a) Prodection in the first nine months of 1959.

(b) The first nine months of 1959 in percentages of the corresponding period of 1958.

* * *

As compared with the corresponding period of last year production has increased: of pig iron—by 2,700,000 tons, steel—by 3,600,000 tons, rolled metal—by 2,600,000 tons, coal—by 8,600,000 tons, oil—by 11,900,000 tons, gas—by 5 billion cu.m., electric power—by 18 billion kwh. and cement—by 4,200,000 tons.

Production in the chemical industry has risen significantly; the output of synthetic resins and plastics has increased by 14 per cent, cellulose ethers—by 12 per cent, polyhlorvinyl resin and co-polymers—by 18 per cent; output of synthetic ethyl spirits rose by 47 per cent and of synthetic fatty acids—by 59 per cent.

The somewhat reduced output of lorries and tractors is due to a changeover to the output of improved automobiles and new models of tractors for work with suspended agricultural machines.

The plan for the output of gas, chemical equipment, electric engines of over 100 kw capacity, trunk-line electric locomotives, and trunk-line freight cars has fallen somewhat short of fulfilment, though the output of all these items, with the exception of freight cars, has increased compared with the corresponding period of last year.

The nine months' plan for the output of consumer goods—cotton, woollen and linen fabrics, leather footwear, clocks and watches, Tv sets, motorcycles and motor scooters, furniture, granulated sugar, meat, butter, vegetable oil, whole-milk products, soap—has been overfulfilled.

Compared with the corresponding period of last year output has increased fabrics by 243 million sq m; leather footwear, 24 million pairs; granulated sugar, 372,000 tons; fish 103,000 tons; vegetable oil, 291,000 tons.

The state animal products resources have grown considerably, which has ensured increased output by the food and light industries. In the first nine months of this year the state has purchased more than in the corresponding period of last year: meat by 43 per cent; milk, 15 per cent; eggs, 26 per cent; and wool 15 per cent; and compared with the corresponding period of 1953 meat purchases have risen nearly 3 times; milk, 2.3 times; eggs, 2.2 times; and wool, 1.8 times.

* * *

The pursuance of *measures to* further introduce the latest achievements of science and technology, industrial enterprises, scientific-research institutes and designing organizations have in the first nine months of the year developed and mastered some 1,500 new types of machines, mechanisms, apparatuses and other equipment. Quantity production has been launched of more than 250 new major types of machines, equipment, instruments and materials.

Machine-building enterprises have modernized more than 30,000 metal-cutting machine-tools, forge and press units, and other technological equipment. Work continued on further extending mechanization and automation of production, introducing integrated mechanization and automation of individual processes, sections, shops and enterprises, as well as on introducing new highly productive processes and improvements.

More than 1,400,000 inventors and rationalizers in all branches of the national economy submitted over 2 million proposals in the first months of this year. Upwards of 1,400,000 inventions and efficiency proposals, yielding an annual saving of more than 7 billion roubles have been applied in the national economy.

The targets for raising labour productivity in industry as a whole have been exceeded. In the first nine months of this year labour productivity has risen by 8 per cent over the corresponding period of last year.

The nine months' target for reducing industrial production costs has been topped. The above-target saving from the reduction of production costs for all commodity output has exceeded 7 billion roubles in the first nine months of the year. Production costs have declined for the major industrial commodities: oil, electric power, pig iron, steel, diesel locomotives, many types and models of machine-tools, automobiles, tractors, and other items.

WORLD OF BOOKS

BUSINESS ENTERPRISE: By Ronald S. Edwards and Harry Townsend. Published by Macmillan & Co Ltd, London. Price 60sh.

The problems of business enterprise, its growth and organisation, which are surveyed in this publication, are matters of topical importance in India where they arouse wide-spread interest. While there is controversy over the scope of State or private enterprise, exponents of rival schools of thought agree that the growth of the economy depends on the establishment of a large number of new business establishments and the creation of opportunities for their successful development. Spokesmen of private enterprise speak of ten thousand new industrial establishments during the Third Plan period. On the other hand, the interest taken by the Government in the development of small industries and the proposed scale of allocations under this head in the Third Plan do not make sense, unless the planners envisage a vast proliferation of business enterprise in the small scale sector.

The Business Conventions held in Bombay, Calcutta and Madras, in the course of last three years, have also served to focus attention on the factors which hamper business enterprise, while admonishing the middle-class unemployed to create jobs for themselves and others by entering business. The appeals to the unemployed, which invariably fall flat, would have been more realistic, if those who made them had taken the trouble to enquire into the complex conditions governess enterprises. The authorities responsible for planning have also a vital interest in the findings of ning the birth and growth of busi- such a survey. The economic climate and the skills and aptitudes of the population, it may be readily conceded, play an important part in determining the pattern of development. Both are affected by the intervention of the State in economic affairs.

State intervention in the field of economic activities can take diverse forms, ranging from the organisation of industrial research, through controls of production, prices, direction of the location of enterprises to State ownership and operation of business enterprises. Each of these presents an array of problems and it is seldom easy to determine where the disadvantages of State intervention begin to outweigh the advantages which originally prompted the entry of the State into the field. Organisation of research under Government auspices may appear to offer little room for controversy. But it has been found by experience that "concentration of research staffs in Government establishments deprives firms and universities of essential personnel." There is also the grave danger of inflexibility inherent in Government establishments. In India we have sufficient experience of the way ham-handed operation of controls, which in themselves are recognised as necessary, say import controls, can handicap industrial enterprises.

The achievement of regional balance in industrial development is one of the live issues of planning in India. But, against the social gains expected to flow out of location of industry according to Government directives, must be set the costs on the general public and on the firms affected. Nationalisation brings a new crop of problems, which come in handy as brickbats in the hands of Opposition politicians, when a country attempts nationalisation under a democratic framework. The pricing policy, the problems of organisation and control raise a host of conflicting considerations. Should prices be fixed at commercial rates, or should the goods and services be supplied at or below cost in the national interest? Should the state-owned enterprises be operated by Statutory Corporations or Government Departments? What are the responsibilities and powers of the Minister and how best may parliamentary control be ensured? The LIC's adventure with Mr Mundhra is sufficiently recent to invest these questions with topical interest.

Through the intricate maze of these problems of business growth, the publication under review offers reliable guidance. A series of fascinating profiles of British industrial undertakings provides answers to the questions posed at the outset.—How are firms born, how do they survive the teething troubles and reach the stage of uninterrupted growth. The first two parts, which run to 352 out of 582 pages of the text including appendices, deal with the ways in which firms are brought into being, the variety of organisations and the factors determining size and specialisation. Issues arising out of the relations between Government and industry are dealt with in the remaining two parts.

The basis for the survey was provided by the papers read at a seminar organised by the London School of Economics and the oral discussions on these papers. Over two hundred papers were read at the seminar by businessmen, civil servants, university teachers and post-graduate students. The professional background of the participants covered a wide range from science and technology to accountancy, economics, law, marketing and personnel management. The authors have made splendid use of the wealth of material at their disposal, in presenting a comprehensive survey of the growth and organisation of British industry. The book is intended to be useful not only to those who study industrial economics for professional and academic examinations but also practising businessmen. The discussions are always rooted in the ground and, without ceasing to be scholarly, carry the reader along for over five hundred pages of closely printed type.

The reader is warned in advance that parts three and four are more polemical in character than the earlier parts and that the conclusions and methods of presentation have not been unaffected by the authors' predilections. It will take very careful reading, indeed, to discover what these are and the discovery may turn out to be a reflection of the reader's own predilections from the surface of the objective discussions which constitute the subject matter of these chapters. The only predilection that is evident is a bias for objective analysis and balanced presentation. This must be exasperating to those who go to this publication for categorical answers to questions which do not admit of such treatment. Nor is this altogether surprising when we find that both the authors are from the London School of Economics, while Ronald S. Edwards, besides being Professor of Economics at the LSE, is also a Deputy Chairman of the Electricity Council.

The one inescapable conclusion which the survey rams into the head of the reader is the bewildering complexity of industrial organisation. From this it should follow that bias either for large or small scale will be singularly misplaced. The complexity of the activities in which it seeks to intervene should also indicate the scope for State action. Thus, State intervention "should, in general, avoid action and prevent action that would bring about rigidities in the industrial structure." And rigidities, as the reader has been told, can result even without Government intervention. "The most important requirement of industrial organisation is that it should provide for variety and change."

Some of the discussions have immediate relevance to topics which have attracted a lot of attention in current controversies in India. For instance, in the course of a discussion on Government control of nationalised undertakings we read: "Anyone who ten years ago had expected that the appropriate Ministers would issue a stream of general orders which would be publicly known and could be debated in Parliament and elsewhere would have been much mistaken. Directions (apart from purely formal ones) have been issued in only two cases. Ministers deal with boards on what Mr Herbert Morrison has called the 'old boy' basis—by informal meetings, telephone conversations and correspondence. There is consultation, influence and even pressure; but there are very few orders."

And, buried in the midst of scholarly discussion of the merits of large and small scale organisation, we come across nuggets like the following: "Moreover, the large firm is likely to suffer less than the small from the fortunately rare official who is actuated by 'a feeling of irritation that any member of the public should have the temerity to oppose or even question the acts or decisions of officials of a Government or State Department'." Indian readers might wonder if the species of official referred to, is after all so very rare.

KURUKSHETRA: Seventh Anniversary Number. Vol. 8 No 1. October 2, 59.

Started in 1952, the Community Development Movement has now entered into its eighth year. As a movement launched in the countryside, it has aroused great expectations of a silent revolution being worked out to raise the living standards in the rural areas. After seven years during which it went through various phases, the movement is still in its crucial testing time and has a lot more to do before it could have achieved a substantial improvement in the rural standards of life. The achievements and failures of the movement in the last seven years of its working, are presented in the Seventh Anniversary Number of Kurukshetra which is an open forum on Community Development.

THE INDIAN MARKET: Compiled and Published by J. Walter Thompson Company.

As the Introductory chapter makes it clear, the book is meant to furnish information to foreigners on India and to impress on them the growing potentialities of the Indian market. This it seeks to do by means of a brief survey of the economic resources of the country in the course of which the impact of the development plans is also traced. Extensive data have been given about population and its distribution as between urban and rural areas. The Chapter on the Indian consumer analyses the characteristics of the Indian market on the basis of its division into wholesale and retail trade.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

RAJAJI, I find, has not been slow to draw morals comforting to the Swatantra Party from the Conservative victory in the British general election. He apparently sees in it a symbol of a universal ennui with socialism. Equating unconsciously the Indian National Congress with the British Labour, he holds the British election as an omen for India. But so consummate a fabulist as he cannot fail to see that he is fitting the tale to the moral rather than let the fable naturally yield up its moral. And, as we have often found even with Panchatantra, a detailed examination of the fable will show the moral finally drawn somewhat equivocal and even non sequitur. Conservatism, even as a temperament, is a relative thing, and, as a programme of political action, there is hardly any ground for interpreting the results of the British elections as an endorsement of the Swatantra Party's ideas. It would be an exaggeration, not too grotesque an exaggeration, to say that, on a parity of reasoning, a Republican victory in the American presidential, or even congressional, election can offer similar delusory comfort to the Swatantra Party. I know that the differences that divide the British parties are more real than those that divide the American (though such differences are becoming increasingly difficult to define in an era of butskellism at home and summitry abroad). But the differences that divide the Swatantra Party from the Congress are far deeper than those that divide the British parties, and that is why the British electoral verdict, even when one assumes it to be homogeneous, is irrelevant in a reckoning of possible electoral behaviour here.

✱

But is it true that, except in a technical sense, Britain has turned conservative? Though the Conservatives have increased their parliamentary majority very substantially, it is necessary to remember that Labour has still as many as 258 seats. In terms of votes, the range of swing needed to put Labour back in power is narrow. A 2 to 3 per cent swing can make Mr Gaitskell the Prime Minister. And since the elusive floating vote is notoriously the determining factor, changes in electoral fortunes—provided an election takes place—are not ruled out. It is true that Labour has normally to wait for five more years for putting this to test. But the point I am making is not about who will rule Britain in the next few years, but about the alleged mood of the British electorate. It is certainly far too difficult to draw any firm conclusions about this from the announced results.

Modern elections tend ironically to be determined more by those who refrain from voting than by those who take the trouble of going to the polling booth. But, unless you equate political apathy with conservatism, (which may be true in backward countries, but not in Britain) it is difficult to conclude that the Conservative victory reflects a national mood of disenchantment with socialism. For instance, many who failed to vote may well have done so by imagining that their vote was not going to make any difference to the party. In the jargon of the pollsters, results of elections these days are determined by the "differential abstention rate". In other words, you win or lose an election depending upon the number of your own supporters that can be persuaded to go to the polls. This may sound a truism, but its implications are important. It may well be that the 2 to 3 per cent margin that Labour needed was lost this way. It is notorious that Labour's chief difficulty was in persuading its supporters to get to the polling station, despite the considerable streamlining of the machinery. Apart from those who, as I said earlier, might have failed to turn up on the assumption that the battle was already lost, there might have been abstentions from people who were opposed to specific points in the Labour programme. Thus, some of the nuclear disarmament campaigners may have silently protested against the Labour stand by abstaining. Indeed, readers may recall the controversy in the correspondence columns of the New Statesman some months ago, in which some extreme pacifists had started a hare by saying that a Labour candidate who does not favour unilateral renunciation of nuclear weapons should be denied the vote. Later squabbles about the non-nuclear club were apparently patched up, but electoral behaviour need not necessarily correspond to party compromise.

✱

All this is not, of course, to take away anything from the significance of the fact that Mr Macmillan has obtained a clear mandate for running Britain. Considering everything, it is a remarkable feat. There was much the Conservatives had to live down, the most difficult of which was the Suez episode. More recently, the Hola camp and the Devlin Report City were used by Labour as convenient sticks to beat the Conservatives with. But "MacWonder" was able to let them all slide as water off a duck's back. For, he was able to report to the nation considerable achievement to his credit. "Britain had never had it so good" was by and large true. Considering how precarious things were when Mr Heathcoat Amory took over as Chancellor of the Exchequer two years ago, the British economic recovery has been a considerable feat. Politically, too, Mr Macmillan had several triumphs. His persistent erosion of the opposition to summit-climbing has at long last started, conveniently for him, to yield results on the eve of the elections.

✱

Thus, Mr Khrushchev (who is reported to have said that he would have been a floating voter, possibly leaning toward the Tories) met Mr Eisenhower and learnt to say "Okay". Americans, on the other hand, shed some of their former reflexes to the word "summit"; and though Dr Adenauer and General de Gaulle are still unconverted, both probably would prefer Selwyn Lloyd to Mr Bevan at the Foreign Office. The Conservatives' record has been poorest, and even damaging, in colonial matters; but, even here, Mr Macmillan had his "Cyprus" feather in his cap. Cyprus being what India was once to British Labour, this particular achievement was certainly something that outweighed Conservative folly in Africa. Moreover, the British electorate was not apparently deeply stirred by colonial issues and neither the Hola camp affair nor the Devlin Report seems to have swayed electoral fortunes in any significant way.

✱

But the really interesting thing was not the Conservative victory (which was not wholly unexpected) but the sizable increase in the Liberal vote. Though the number of seats won remains what it was in 1951 and 1955 (i.e., six), and the Liberals won only one new seat (and lost an old one), the votes cast in their favour show a remarkable increase. Against a total of slightly over 720,000 votes in 1955, they polled a total of 1,642,000 votes this time. Per constituency, the Liberal vote rose by 1,062 votes as against the Conservative vote which rose by 620 and the Labour vote which fell by 324 votes. It is difficult to say whether the votes that Liberals gathered were those that would otherwise have gone to Labour. In any event, Liberals have emerged as an electoral imponderable source of worry for both the giants at the next general election.

✱

Some rather ironical, but not wholly unexpected, marginal sociological truths have been thrown up by the British election. One of these is that industrial workers who have moved into brand new council housing estates have voted for the Conservatives. We may

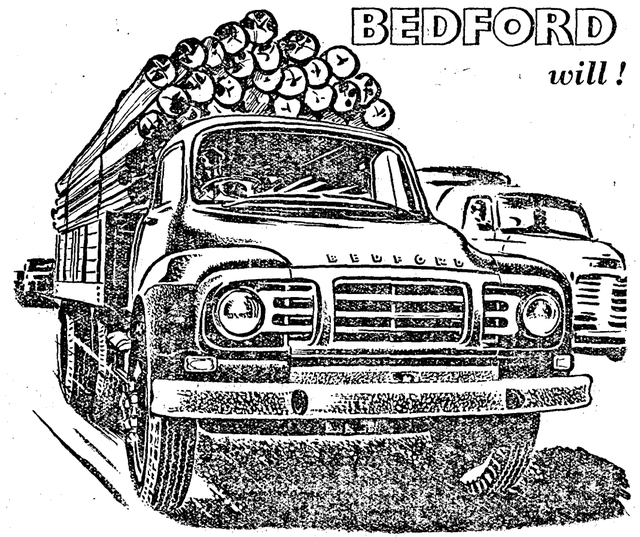
be sure that those who play the favourite British parlour game of speculating on class snobbery in that country will draw fresh confirmation for their theories. What is true is that welfare socialism is a self-defeating ideal in the sense that its most complete success involves its death. Insofar as it is possible to generalise on these matters, the Labour defeat may as well be due to the considerable success attending its ideals. The angry young men are angry because they feel that they have been cheated of causes and unless you go for the rather bogus thrills of the beatniks, you are bored. In any event, political emotion does not, as Kingsley Amis wrote in a Fabian tract some years ago, have the fulfillment it did in the thirties. As for the British working classes, they are more bothered about the instalment on the Telly than about politics. Readers of Richard Hoggart's brilliant book, "The Uses of Literacy", will find a graphic account of the profound changes that have overcome working class attitudes. An era of mass consumption and welfare makes the political game itself extremely boring to all except those who play it.

*

The Labour Party's electoral tasks were therefore more difficult than those of the Conservatives. Their traditional supporters had to keep alive an interest in politics that was waning. The percentage of poll to the total electorate was 82.6 in 1951, and this fell to 78.8 in 1959. The increase between 1955 and 1959 in the total number of voters was over a million. Most of these must have been people who have just qualified to vote by coming of age. And it is among the younger working class men that political apathy is most marked. So, the Labour Party has to fight against a combination of political laziness and absenteeism among traditional supporters.

*



One other difficulty that the Labour Party had was its equivocation about its real policies. Instead of making its choice and offering it to the country, it was too busy patching up its quarrels and presenting a seemingly united policy. The quarrel over a "non nuclear club" is an instance. This, though important, was not very decisive for election purposes. But the question of nationalisation was different. Steel nationalisation in the Labour programme was, to some sections of the party, a *concession to extremists*, but to others a symbolic assertion of the true faith. Now that the elections are over, the two sections are quarrelling furiously that a clearer assertion of their respective points of view would have won the party the elections. In fact, Douglas Jay has come forward with the suggestion that the party should even change its name to Labour and Reform party, thus indicating that the traditional connotations of class struggle may be given up as obsolete. Mr Gaitskell himself can hardly be called an enthusiast of nationalisation. His own preference is to reduce the State to the status of an equity shareholder—and a silent one at that—of major enterprises. The idea, as I have often argued in these columns, has obvious advantages. In any case, Labour, even in its demand for nationalisation, seems to be hopelessly out of date. In an interesting article in a recent issue of Encounter (written before the election) Andrew Shonfield has drawn attention to an area of activity—industrial research—which needs to be more extensively "nationalised". Even the traditional argument of exploitation by private interests is present in this case. Considering that the major portion of funds now used in research is provided by the State, the return it gets on its grants-in-aid to private firms (which is at present 20 per cent of the profits made) may in some cases be relatively small to what the firms themselves may reap by the exploitation of a basic discovery. This is the sort of thing that ought to make a socialist bridle.

*

There is no doubt that there is much that is obsolete in the Labour Party's basic thinking. What is even more of a nuisance is the pretence that it thinks it necessary to keep up in order to maintain the facade of unity—a facade that is wearing thinner every day. It is time that Labour set its intellectual house in order.

Progress of Paper Industry

BOMBAY REVIEW

THE present situation as regards supply of even writing paper, not to speak of special varieties, is hardly satisfactory. In the first place, one has to pay high prices for one's requirements. Secondly, even when one is prepared to pay the enhanced retail prices as indicated by manufacturers, one is not sure of getting the quantity one needs. I do not propose here to go into the charges and counter-charges that are heard in this connection, as my present purpose is only to draw attention to the difficulties in getting one's requirements of paper. It is, of course, true that part of the handicap stems from the fact that supply is lagging behind demand to the extent of between 20,000 and 30,000 tons. It is not possible to fill the gap by imports because of the stringency in foreign exchange. It is evident, therefore, that an improvement in the supply position can ensue either by way of addition to production or by a cut in consumption.

Taking consumption trends, it will be seen that demand is increasing both on account of civilian and Government needs. The rising trend in consumption in the country is by no means surprising. Consumption increased at an annual rate of 8 per cent during the First Plan and the Planning Commission have estimated that consumption will increase at an annual average of 10 per cent during the Second Plan period. The target set for paper production under the current plan is 350,000 tons to be attained by 1960-61. Although an installed capacity of 450,000 tons is adequate to achieve the targeted production, steps have been taken to increase the installed capacity sizably above the required level. But, with the emergence of an acute shortage of foreign exchange quite early in the Second Plan period, plans for the expansion of the paper industry have undergone revisions based on the availability of foreign exchange for the import of paper machinery. It is now believed that the target of installed capacity will not be reached by 1960-61.

But it is heartening to note that the paper industry has been making a good showing in the past few years notwithstanding its various handicaps resulting from the drastic import cuts and difficulties in getting raw materials. The industry has taken rapid strides since the inauguration of planned development in the country. From the low level of about 134,000 tons, production has reached, in 1958, a total of 253,011 tons in the course of the past six or seven years. The industry's performance last year has been exceptionally good as total production in 1957 amounted to only 210,126. Another significant feature of the working of the industry last year is that the high level of production has been obtained from a total installed capacity of 268,800 tons only. In other words, the ratio of production to installed capacity is about 93 per cent. The achievement of this high ratio has encouraged the hope that, despite the expected shortfall in installed capacity, the industry will be able to attain the target of production of 350,000 tons by 1960-61.

Going back to the question of the present shortage of paper, it will be seen that, if there is anybody to blame for it, it is not the industry. The paper industry seems to be doing its best to increase production and the fact that it is optimistic about attaining the Second Plan target is indicative of the strenuous efforts that it is putting forth to fulfill its obligations. As has been noted above, it is idle to expect the increase in production to take care of demand at least for some time to come. But, in the meantime, is there no other alternative but to suffer the inconvenience patiently? It is wrong to argue that, since paper is not an item of daily necessity, it matters little if the demand is not fully met. Paper may not be deemed to be as essential as food or sugar, but it is an important adjunct of modern civilisation. We cannot be speaking about the need for increasing literacy and the need for carrying on with a reduced supply of paper in one and the same breath. If it is noted that, even after the attainment of the Second Plan target of paper production, the *per capita* consumption of paper in our country will be less than 3 lbs as against 183 lbs in the UK, one can get an idea of the enormous leeway to be made up in India. The immediate problem, however, is to devise ways and means of making the available supplies of paper reach those who need the commodity most. It is here that Government should take note of the valuable suggestions made with regard to the supply of sugar. It seems quite possible that the present shortage in paper can be somewhat relieved if Government are able to reduce their offtake. According to Mr Hariprasad Singhi, President of the Indian Paper Mills Association, Government's offtake of paper in 1958-59 amounted to 74,472 tons. This works out to slightly more than a quarter of the total production of the paper industry in 1958. Mr Singhi has pointed out that the imbalance between supply and demand can be remedied to a large extent by effecting some economy in the use of white printing paper both by the educational institutions and Government. It is incumbent on Government to effect the maximum possible economy in the use of at least those varieties which are sorely needed by the general public. Perhaps, Government are the largest single consumer of the production of our mills and consequently this big cut in the supplies available to the public is contributing not a little to the present shortage. It is equally the duty of those who are in charge of prescribing text books to ensure first that, by revising the books almost annually, they will not be imposing an additional financial burden on parents by making them buy the revised text books year in and year out. Though selection of text books is no doubt a specialised job, it cannot be said that any great harm will be done to the cause of educational standards if the text books once selected are allowed to continue for two or three years as suggested by Mr Singhi. It cannot, however, be gainsaid that there is room for economy especially in the consumption of some special varieties of paper by the general public also.

The ideal solution is to increase indigenous production so as to meet the demand in full. For reasons of foreign exchange shortage, it has not been possible to attain the planned installed capacity during the current plan. The experience gained so far should help our planners in formulating schemes under the Third Plan in such a way that installed capacity at every point is adequate to meet the progressive increase in demand.

Mr Singhi is of the view that a target of an annual production of 7 lakh tons by the end of the Third Plan period will be essential. The installed capacity to attain this level of production will have to be of the order of 9 lakh tons. Taking into account the short-fall during the current plan period, it will become necessary to build an additional installed capacity of 5.4 lakh tons during the next plan period. Referring to the move to set up small paper mill units of 5 to 10 tons per day capacity, Mr Singhi has averred that considering the present position of pulp making facilities in the country, the only practicable way will be to allow the establishment of integrated plants which are of a minimum 50 tons per day capacity.

BOMBAY REVIEW

Modernisation of Indian Textile Industry

Never before in the history of the Indian Textile Industry was the importance of modernisation so urgently felt as it is today. In the teeth of the ever growing competition in outside markets, it has become imperative for India to modernise the Industry, to compete in foreign markets and also to stimulate domestic consumption. The appointment of the nine-member textile working group, with Mr D. S. Joshi, Textile Commissioner, as chairman, by the government of India on the recommendation of the National Industrial Development Corporation to suggest measures for an early and thorough modernisation of the Cotton Textile Industry, is a step in the right direction. The group is expected to lay special emphasis on modernisation of mill machinery and equipment. It will closely investigate, inter alia, the source of, and the procedure for, the provision of adequate finance required for the implementation of the renovation programme. Such a programme is sure to consolidate the position of the industry in the home and the world markets.

A four-member sub-committee of the group visited Italy, Switzerland, West Germany, and the UK in the course of a four week tour to study the latest equipment, techniques and workloads in the industry there. The committee, during its tour, visited textile mills machinery making plants, and discussed problems of modernisation with representatives of employers, labour and machine makers.

Mr Vasavda, General Secretary of the INTUC and a member of the special committee, revealed that speed and automation were the guiding principles in the modernisation of the industry in the countries they visited. Some of these countries have even installed new automatic machinery in order to meet the shortage of labour.

A noteworthy feature of the industry in those countries, he pointed out, was the work consciousness and discipline among the labourers. Elaborate provisions are available in those countries for training new recruits and old hands in handling modern machines. Mr Vasavda added that modern machinery and the modern worker are contributing to the progress of the industry there.

It is encouraging to find that about 40 per cent of the mills in India were already undergoing the process of replacement of machinery. The pace would have been rapid, had the Government taken the initiative and had the remaining millowners availed themselves of the financial facility provided by the NIDC. Whatever may be the cause for the slow process, every effort must be made to bring the machinery on a par with that of the modern mills abroad. It may be noted that a large majority of our textile mills, installed more than forty years ago, have outlived their usefulness. This backwardness had disastrous effects on the industry, in the form of low production, bad quality of products and high cost of production.

Along with the modernisation of the industry, proper measures must also be taken to modernise the workers by providing them with better working conditions, training facilities et cetera, for the progress of the industry.

The committee will submit its report by the end of this year. The findings of the working committee and the decisions the NIDC will take thereon, are destined to influence greatly the future of the Indian Textile Industry.

*

Export Risks Insurance.

The unfavourable balance of trade of India with other countries has become a matter of grave concern. The recent trends in the exports of our country have convinced those concerned that, in order to bridge the gap between exports and imports, adequate steps need to be taken. The restriction of imports to the barest minimum for sustaining the hard core of the Five Year Plan and for maintaining the economy of this country, has been a step in the right direction. In addition, the stimulation of exports has to be effected by persistent and sustained efforts, for, exports have to play a vital role in the process of the economic growth of the nation.

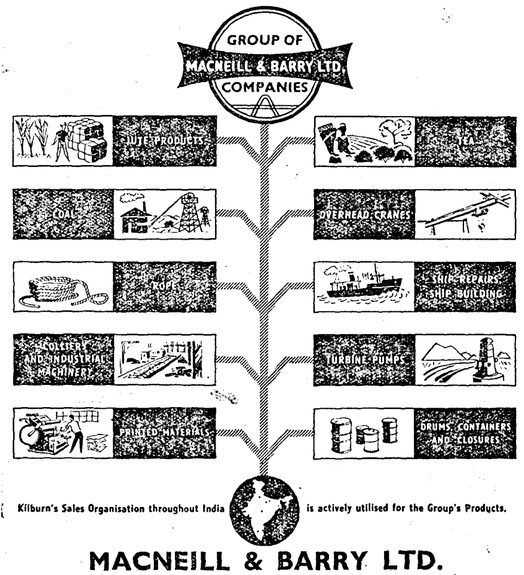
The Export Risk Insurance Corporation has taken a bold step to promote exports by consenting to issue policies to cover only political risks and not to enforce the rules regarding the "whole turnover" in such policies.

Mr T. C. Kapur, Managing Director of the Corporation, informed pressmen at Bombay that this concession was granted in response to the representations made by the exporters of Jute. He added that similar terms will also be offered to traditional commodities. It is pertinent to bear in mind that raw materials, the traditional items of our exports will continue to be the mainstay of our exports. But manufactured goods also provide potentialities for developing the country's export trade. The prevailing conditions in India, it is feared, might prove unfavourable and will bring in their wake more complications and new issues.

The functioning of the Corporation seems to be encouraging, for, it had insured two per cent of the insurable exports and, in its' second year of working up to the close of September last, it had issued 222 policies with a maximum liability of Rs 6.49 crores.

The declared exports of the Corporation during this period amounted to Rs 10.51 crores out of which Rs 4.80 crores was on the "credit basis". Premium income shot up to Rs 1.54 lakhs from Rs 43,000 in the first year, indicating an increase of 358 per cent.

The Corporation, in its endeavour to help the exporters, has reduced the new premium rates by 10 per cent from October 1, which will, it is expected, also result in the furtherance of export risk insurance. The Corporation transacted considerable business during the period under review; the insured exports have already covered 90 countries so far; and Mr Kapur hoped that, by the end of the year, at least one per cent of the total tea exports will be insured. Mr Kapur added that there were several enquiries from the shellac and mica markets and, in one year, engineering goods were covered to the extent of 15.5 per cent of the total exports.



He also stated that proposals for insurance would be favourably considered, even when exports to certain countries ought to be excluded, if the Corporation secures adequate spread of risks for the proposed transactions.

Apart from enhancing the business of the Corporation, the recent concession provided by it will prove beneficial to the exporters and also to the country in fetching a sizable quantum of foreign exchange.

GATEWAY NOTES

Macneills have been associated with India's commercial and industrial development for almost a century, and with the growth of the country's economy, Macneills' services to commerce and industry have grown.

Macneills today are owners and managers of an important group of companies engaged in the manufacture of Mining and Industrial Machinery, Turbine Pumps, Switchgear, Overhead Cranes, Ropes, Jute Products, Drums, Containers and Closures and other Light Industrial Products. Macneills are important producers of Coal and Tea and also operate the largest system of inland water transport in Asia and extensive Shipbuilding and Ship-Repair Workshops on the River Hooghly.

WORLD OF COTTON

Cotton Supply Prospects

CONDITIONS in the cotton market last week were easy with prices recording a sharp decline in later dealings. Toward close, however, sentiment seemed to have slightly rallied on emergence of some support at the lower levels. The reactionary tendency stemmed from changing ideas about both the size and prospects of movement of the new crop. It was evident almost from the beginning of the week that the bulls were finding it difficult to get their version about the crop accepted by a sizable section of marketmen. With the return of sunny weather fairly reliable reports were reaching the market and the picture that emerged proved to be greatly at variance with earlier versions. The latest assessment was that the new cotton crop had not suffered as much damage due to the rains as had been apprehended and the favourable weather conditions that were experienced in almost all the growing areas encouraged the hope that the new crop would be sizably higher than earlier estimated. The growing optimism was reflected in the upward revision of the estimate of the new crop. As against last week's figure of 46 lakh bales, the new crop was first put at 47 lakh bales and within the next two days the figure was marked up to 48 lakh bales and by the close of the week to 49 lakh bales. It would appear that the easier conditions were also induced by expectations that the cotton import policy would be based on the full requirements of the domestic cotton supply situation. Indications available showed that imports upto 8 lakh bales would be allowed. With the return of the Finance Minister attention shifted to New Delhi in regard to import of American cotton under PL 480. Expectations were that Government would be buying about 2 lakh bales and that the announcement in that regard would be made early next month.

The cotton futures market opened the week last Tuesday on an easy note with prices moving down on heavy selling from upcountry interests. Against growing optimism about the size of the new crop, bulls' attempt to push up rates on reports about heavy damage to the crop at particular areas proved unavailing. Jarilla March which opened at Rs 714 against previous close of Rs 713 after touching a high of Rs 715.75 reacted in later dealings to close at Rs 710.75. Bulls, however, seemed to have gained the upper hand the next day. The bullish sentiment was also helped by some buying support. Jarilla March after opening at Rs 713 moved up to close at Rs 715. Thursday also proved to be a favourable day for the forces electing to mark up prices. The undertone, in addition to buying support from upcountry interests in the futures section, was aided by the firmness in the spot section where prices moved up on mill interest. Jarilla March recorded a net gain of Rs 4.25 to be finally placed at Rs 719.25. The recovery proved shortlived as shortly after opening on Friday the market encountered heavy selling pressure induced by changed ideas of the new crop. Prevailing belief was that not only was the crop bigger than earlier estimates but also there would not be any delay in the movement of the crop. The sudden drying up of interest in the spot section contributed not a little to the depression in the futures section. Jarilla which opened somewhat subdued at Rs 718 was pushed down to a low of Rs 713 and by close the undertone continued to be depressed with the quotation only slightly higher at Rs 713.25. An attempt at rally in earlier dealings on Saturday proved unavailing and prices toppled down in later dealings following lower upcountry advices and reports of heavy arrivals from the Punjab. Jarilla March opened at Rs 711.25 and after moving up to Rs 712.50 closed at Rs 708.75. The market recorded some appreciable recovery on Monday on short-covering and Jarilla March gained more than five points to be finally placed at Rs 714.

In the spot market also sentiment remained depressed most of the time. In the absence of mill interest prices moved down to new low levels. Apart from expectations of a bigger new crop indications of heavy arrivals in coming days imparted a bearish trend which was further accentuated by the reluctance of buyers to extend commitments. The market opened on Tuesday on a steady note with business passing on an improved levels. With local and upcountry mills showing active interest prices displayed a hardening tendency. Wednesday conditions continued to be steady on Thursday also but beginning from Friday the undertone was easier in the next two days. As against a daily average of 5000 bales business dwindled to about 2000 bales toward close. Sentiment steadied up on Monday though prices generally remained unchanged from previous markings. Bengal Deshi however continued to be easy. Bengal Deshi encountered selling pressure throughout in the absence of interest from exporters who seemed to have lost enthusiasm for this growth in view of the continued absence of enquiries from Japan.

×

LIVERPOOL:

The Liverpool market ruled steady during the past week. Indications were that in view of the heavy buying noticed in the past few months interest would slacken in coming weeks. Purchases continued to be predominantly in American cotton though for higher grades mills showed a preference for other countries.

×

NEWYORK:

After earlier weakness brought about by reports about indications of lower support prices for the 1960 crop and easier supply position in spot cotton, Newyork cotton futures steadied up in later dealings on better advices from the domestic cloth market coupled with decline in selling pressure.

×

PIECEGOODS:

In the Bombay piecegoods market, although prices continued to be well maintained, offtake showed no marked improvement over the previous week in the domestic section. The export section also was rather dull with most importing countries accounting for only moderate offtake.

Silver in Strong Demand

BOMBAY REVIEW

FIRM conditions prevailed in the bullion market with the lead taken by silver. It would appear that the high price levels stemmed mainly from indications of the operation of a powerful bull syndicate in the white metal. Undaunted by possibilities of declining demand from upcountry centres on account of the recent disastrous floods in many parts of the country, bull operators continued to push up the price throughout the past week. The fresh deterioration in the relations between our country and China as a result of the latest Chinese outrage on the Ladak border only added to the bullish fervour which at one time took the price of Kartack silver to a high of Rs 211.37. Had it not been for the fear of margins beyond that level, prices would have soared very high indeed.

A similar trend was noticeable in the gold section also. Although reports about the bulls taking delivery of a large quantity of the Asho delivery which ended last Monday aided the uptrend in earlier dealings, sentiment in Gold was comparatively less buoyant than in Silver.

Silver Katak opened firm and continued to move upward after a brief setback. On last Thursday the rate touched a new high of Rs 121.37. Even so indications were for still higher levels, but fears of margin imparted a cautious tendency and after some profittaking on Friday, the rate closed on Saturday at Rs 210.31. Conditions were rather dull on Monday in view of increase in arrivals and decline in spot demand. Silver Kartak closed at Rs 210.42.

Kartak gold opened somewhat weak at Rs 124.75 on Tuesday. After moving both ways under alternate bouts of selling and buying, the quotation was finally placed at Rs 125 on Saturday. The highest level touched was at Rs 125.62. Toward close the yellow metal lacked interest and Kartak gold was finally placed on Monday at Rs 125.08.

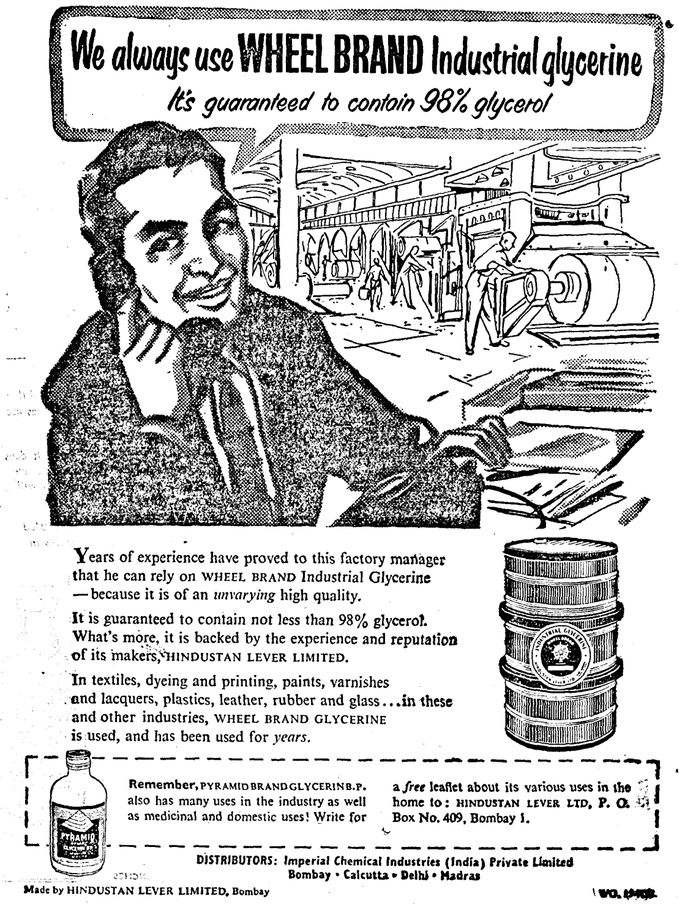
*

Oils and Oilseeds

Generally easy conditions prevailed in the oilseeds market in Bombay last week. While heavy arrivals coupled with lower overseas advices depressed groundnut prices, the reactionary trend in linseed seemed to have stemmed from selling pressure induced by a setback in overseas prices for the oil. The recession in castorseed was due to disappointment over earlier anticipated business with the US in castor oil. It would, however, appear that the current situation might turn out to be favourable for the export trade in oilseeds as it was believed that with a fall in domestic prices exporters would be enabled to get their rates accepted more freely than hitherto abroad where oilseeds prices were generally quoted below prevailing Indian prices.

The groundnut section ruled easier on persistent selling pressure. Apart from reports of heavy arrivals from centres within the Bombay State, large arrivals were also reported from Hyderabad. While this led to bull unloading, the resultant easy trend induced a cautious attitude in prospective buyers such as crushers and vanaspati interests who withdrew on ideas of further fall in prices. In the meanwhile, selling pressure further increased from upcountry interests who were influenced by indications that the crop would turn out to be bigger than earlier expected. The easier trend was further accentuated in later dealings on reports of a fall in the UK prices for oil and oilcake. Groundnut February opened easier at Rs 175-50 and after touching a low of Rs 174-12 closed on Monday steadier at Rs 175.62 on emergence of short-covering induced by reports of foreign demand in oil.

Linseed also displayed an easier trend most of the time. Toward close some improvement in sentiment was discernible on keen demand from export interests. The reactionary trend which prevailed for the best part of the week under review was the result of selling pressure which in turn was brought about by reports of a sharp decline in foreign prices for the oil. Linseed May which was quoting around Rs 35.25 this time last week came back to Rs 34.50 before recovering to Rs 34.94 on Monday.



The depression in castorseed was caused by the disappointment over the anticipated deal in the oil with the US. It was said that the US was keenly interested in buying castor oil at 14 cents per lb. and it was even rumoured toward the close of the previous week that some business was imminent at that level. The last week, however, failed to produce any such good news but on the contrary, rumour had it that the offers had been rejected. With no immediate prospects of foreign interest the rates fell following bull liquidation. Castorseed May was pushed down to Rs 159.36 from the opening level of Rs 164.25 to recover toward close to Rs 160.75 in sympathy with other sections.

Dull conditions prevailed in the cottonseed section but toward close a steady trend was noticeable in sympathy with other seeds. Cottonseed closed on Monday at Rs 126.

*

Yarn

Conditions in the yarn market were easy last week in the absence of fresh buying interest. Apart from the proximity of the new accounting period, business had been restricted due to lack of support from upcountry interests. In the artsilk section except nylon whose prices were marked up on expectations of a tight supply position for some time to come, prices generally were easier in the absence of sustained interest.

Years of experience have proved to this factory manager that he can rely on WHEEL BRAND Industrial Glycerine —because it is of an *unvarying* high quality.

It is guaranteed to contain not less than 98% glycerol. What's more, it is backed by the experience and reputation of its makers, HINDUSTAN LEVER LIMITED.

OLYMPUS

Finance for Oil Exploration

DELHI REVIEW

THE Union Minister for Mines and Oil, Mr K. D. Malaviya, who has built up a reputation for dynamism and daring in the matter of administering the country's oil policies, has been rightly congratulated on the skill and foresight with which he has negotiated with the powerful oil companies for securing a reduction in the prices received by them for the major petroleum products. His tactful handling of the companies, first by getting them to agree to a cost examination by a Cost Accounts Officer appointed by Government and now by persuading them to accept a further reduction in petroleum prices in the light of that examination, has throughout been leavened with a far-sighted calculation that the finances for his Ministry's oil exploration and exploitation programmes could be secured in considerable measure from the existing oil companies themselves. It is a measure of the deplorable fall in standards of public criticism that this particular Minister whose foresight has been considered inconvenient in some quarters has, in the last one year, come in for caricaturing as an 'irresponsible' man in power. One wonders if there is a comparable spending Ministry of the Government of India which has acquired, for its proposed expenditure, a better claim on the exchequer than the Ministry of Mines and Oil.

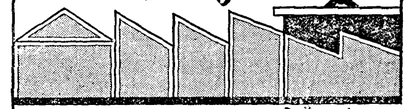
It is against this background that the latest agreement between the oil companies and the Government of India appears as a salutary development. Under this agreement covering the period to the end of March 1961, there will be a reduction at the rate of about Rs 15 crores a year in the prices received by the companies instead of the *ad hoc* rate of about Rs 10 crores which has been in force since 1958. In addition to the revised reduction of Rs 15 crores, there will be a reduction at the rate of Rs 4 crores a year due to the drop in the landed costs of petroleum, on the assumption that there will be no further upward or downward movements in landed costs. The immediate effect of the new agreement will thus be that from November, 1959, there will be a total net reduction at the rate of about Rs 19 crores a year. For the present this reduction in the prices to be received by the companies will not benefit the consumer. It may be taken as a certainty that the benefit of this reduction, like the *ad hoc* reduction in 1958, will accrue to the exchequer by way of appropriate increases in the excise duties on petroleum products.

Which means that the Oil Ministry's Second Plan expenditure on oil exploration and exploitation will have been more or less fully covered by this source of finance. This source, again, will cover more than half of the proposed Third Plan budget for the Ministry's oil programmes. In the light of the Minister's observation that there is a possibility of a further substantial reduction in prices with the expected evolution of a new price formula it is expected that the Third Plan's programmes for oil may even be wholly financed by this source. Where adequate finances for oil exploration are sorely needed, it is not likely that the consumer will get any benefit. In any case, whatever benefit to which the consumer may look forward will be so insignificant, according to Mr Malaviya, that he will not consider it worthwhile. A reduction by a couple of naya-Paisas per gallon, even if given, may in fact benefit the middlemen and the dealers and not the consumers, according to the Minister. The consumers may well console themselves with the thought that they are not being called upon to foot the bill of oil exploration by paying higher prices for petroleum products.

Now that the question of finding financial resources for the Ministry's oil programmes is as good as solved, it may be that the oil companies now look forward to some gestures from the Government for enabling them to participate in this immensely expensive work of oil exploration. It may be recalled in this connection that the Twenty-Second Report of the Estimates Committee of the Second Lok Sabha has recommended that "the co-operation of the private sector may also be obtained in the task of the exploration of oil within the framework of the Industrial Policy Resolution of 30th April, 1956". The Committee have also observed that "the question of exploration and prospecting and even mining of oil has to be viewed from practical considerations and expediency" and that "while direct exploration, etc. by Government Agencies should continue and in fact should steadily expand, for some years to come, private concerns should to the extent possible be given licences to undertake exploration work, with or without Government participation, depending on the avaliability of resources, subject, of course, to the requirement of the Industrial Policy Resolution". According to the Committee, even in regard to the exploration and prospecting work to be undertaken by Government, it might be advantageous to employ some contractors, particularly for drilling work, who have done such work in a number of countries and even in India are doing so for the Standard Vacuum Oil Company and the Assam Oil Company. It is thought that the employment of a number of such agencies would hasten the work of exploration and also enable proper comparisons to be made of the expenditure incurred by different agencies so as to control and minimise the cost.

If these recommendations are implemented, there will be a happy end to the cold war between the oil companies and the Government and both the parties will have achieved their respective objects. If the oil companies realise that they cannot indulge in politics with impunity, it will be a wholesome development not only from the point of view of their own interests but from that of the country's larger interests which require that their immense resources and experience be availed of in the work of oil exploration. That this work would have to be done on a far larger scale than is possible for the Oil and Natural Gas Commission with its limited resources should be apparent from the fact that as much as 400,000 square miles deserve to be explored for petroleum on geological and geophysical considerations. The following passage in the Estimates Committee's report also lends support to the view that unless the collaboration of the private oil companies is also enlisted, the Commission will get unduly over-extended in its operations without producing proportionate results:

"The difficulties in regard to exploration are particularly bad in this country where underground conditions over vast areas of the Ganga Valley, West Bengal, Rajasthan, Punjab and UP, Lower Himalayas, Cambay and even Assam are not known so far to geologists. Inadequacy of authentic geological and geophysical data regarding oil-bearing areas is highlighted by the fact commented upon by the Soviet oil experts that in 1956 only 61 per cent of the Indian territory had been covered by geological survey out of which only one-third had been covered by detailed mapping used in oil prospecting while the extent of the study of potentially oil-bearing areas covered hardly 17,126 square miles out of 370,000 square miles which works out to only 4.2 per cent".



Above all, the consideration of urgency is underlined by the following figures of anticipated imports of various types of petroleum products during the period 1959-62 indicating the difference between demand and indigenous production:

(In Rs. lakhs)

	1959	1960	1961	1962
Aviation spirit	337	337	330	329
Kerosene ...	2277	2563	2846	3146
High Speed Diesel Oil ...	503	823	1185	1606
Light Diesel Oil	162	170	178	186
Vaporising Oil	48	48	42	42
Jute Batching Oil ...	110	113	117	120
Mineral Turpentine ...	24	28	23	36
Solvent Oil ...	13	16	20	24
Bitumen ...	124	275	395	470

Of course, it is not to be expected that exploration, as distinct from exploitation, can be speeded up to the point of bridging the gap between demand and domestic production by 1962. But it can certainly be speeded up with the help of the oil companies so that the gap may be progressively narrowed at least from the first year of the Third Plan.

DELHI REVIEW

Tax Policy

Ever since the introduction of newfangled tax measures, the direct taxation policy of the Government have been under heavy fire from company chairmen and associations of business enterprise as hindering capital formation and industrial expansion in the private sector. Though some adjustments had been made in recognition of the claims for incentive, the tax measures have not evoked a complete reconciliation of the business interests. At a meeting of the Bharat Chamber of Commerce held at Calcutta, the harsh features of the present tax system were brought to the notice of Mr B. R. Bhagat, Union Deputy Minister for Finance, in the hope of a sympathetic consideration of the plea for milder tax impositions. The speech of Mr Bhagat, however, did not reflect any definite views on the subject, though, of course he pointed out that the rate of tax at 45 per cent under the new scheme of Company taxation was determined on the basis of calculations made by the Finance Ministry. The evasive attitude of Mr Bhagat is understandable in view of the fact that the Direct Taxes Enquiry Committee is in the stage of giving the final touches to its report which could, therefore, be expected to be published shortly.

Mr Bhagat also took up for answer the points raised by the Bharat Chamber of Commerce, regarding the present climate for investment and the symptoms of inflation. About the climate of investment, it was the view of Mr Bhagat that it had undergone a definite and significant change in recent years proof of which could be had in the emergence of Finance Corporations sponsored by the Government and in the continuing response from the public for investments in sound ventures, In regard to increases in the price level in the Plan period, he pointed out that such increase as had taken place was not serious. There was therefore, no need to create an impression of scare that there had been galloping increase in prices. The price increase in India was not greater than in other countries. It was even more commendable that the country had been able to keep the price line at a reasonable level, while maintaining at the same time a rising tempo of development.

Mr Bhagat also would not agree that the employment opportunities, particularly for the middle class, had shrunk. The growing number of unemployed would, however, seem to disprove Mr Bhagat on this point. But, his own argument was that the problem only looks magnified beside the backlog of unemployed persons and the new entrants in the employment market.

*

New Sugar Policy

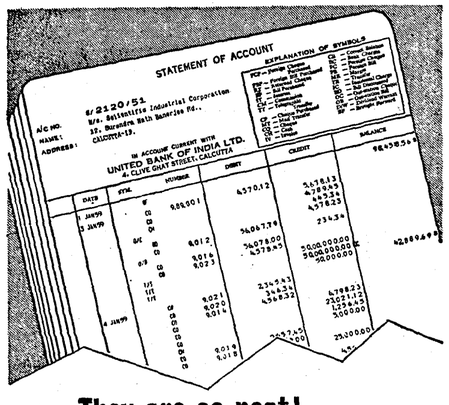
There seems to be hardly any consistency in the policy of the Government in regard to sugar. Though symptoms of scarcity and higher prices had been evident for a fairly long period of time, there was at no time any appreciation on the part of the Government of the real nature of the factors at work. Mr S. K. Patil, Union Minister for Agriculture has consistently refused to believe in the existence of sugar shortage and has been inclined to blame the trade for the present position in supplies. In a recent speech at Kanpur Mr S. K. Patil brought in the consumers also as a party responsible for the rise in sugar prices. It was his view that if the consumers had at least put up the semblance of a resistance by withdrawing from the market for purchase of sugar, prices could have been brought down. And on the plea of protecting the interests of consumers he expressed his own opposition to the demand of sugarcane growers backed by their State Governments for increase in the price of sugarcane.

The latest decision of the Government of India to increase the price of sugarcane as also of the price of sugar stands in complete contradiction to Mr Patil's earlier views on the sugar crisis. According to this decision, the minimum price of sugarcane has been raised from Rs 1.44 to Rs 1.62 per maund for delivery at the gate of the factory and from Rs 1.31 to Rs 1.50 per maund for delivery at purchasing centres connected by rail for the 1959-60 season's crop. As a consequence the controlled price of ex-factory sugar produced by vacuum pan factories has been raised from Rs 36 to Rs 37.85 per maund for factories in Uttar Pradesh and North Bihar and from Rs 36.50 to Rs 38.50 per maund for factories in the Punjab. Over and above the increase in price, the Government have also decided to allow rebate of 50 per cent in the basic excise duty which at present is Rs 11.25 per cwt on all sugar produced by factories during 1959-60 season in excess of their average production of the two seasons 1957-58 and 1958-59.

These price increases and rebate are intended in the nature of concessions to sugarcane growers and sugar factories to maximise output. It is the shortfall in production in sugar that had been at the root of the present troubles in the sugar supplies, and it was this need for taking measures for increasing production that the Government had all along failed to concede. The consumers would of course have to pay more for sugar. But then failure of production to rise for want of incentive for expansion would have even more disastrous consequences.

*

NORTH INDIAN NOTES



Oil Prices

Pending the evolution of a new formula for the fixation of oil prices the three oil distributing companies who have a monopoly of this trade in the country are understood to have agreed to a further reduction in the prices of petroleum products roughly amounting to Rs 5 crores a year with effect from November 1, 1959. This is in addition to the annual reduction of Rs 10 crores that had been agreed to by these companies and which came into effect from 1958. A further reduction to the tune of Rs 4 crores, over and above the Rs 5 crores reduction agreed to, has also been secured on account of the drop in landed cost subject to the fact that there is no further upward or downward movement in landed cost. The total reduction effected in the prices of petroleum products is, thus, of the order of Rs 19 crores a year.

That the latest reductions bargained by the Government did not represent the final prices to be paid to the foreign companies was made clear by Mr K. D. Malaviya, Minister for Oil, at a press conference held in Delhi. On the contrary, this, as Mr Malaviya made out, represented only a stage in the negotiations with the foreign firms. Conceding the scope for further reductions, Mr Malaviya, said that the reduction now agreed to had only served to reduce the disparity between the proposals of the Government and of the oil companies on the subject of price reduction. The reason for going slow in this matter was to facilitate negotiations and to create the proper climate of understanding in which there could be appreciation of mutual viewpoints. Mr Malaviya was of the view that the process of further reducing the prices of petroleum products would be facilitated by the coming into existence of the State-owned distribution Company.

The sole gainer of the reduction in prices that has been secured would be the Government. For it has been pointed out by Mr Malaviya that in view of the extremely negligible amount of consumer gain out of this reduction, it had not been passed on to the consumers and that it would remain as revenue to the Government.

Mr Malaviya said that the total revenue that would accrue to the Government consequent on this interim arrangement would be about Rs 40 crores in three years. This money shall be worthily utilised if at least a part of it is diverted for exploration work of the Ministry of Fuel and Oil. Though a decision on the final disposal of this surplus is yet to be made, Mr Malaviya has indicated that it would be a source of encouragement for his Ministry to ask for more funds for oil exploration programmes.

Expansion of Knowledge

MADRAS REVIEW

THE themes for university convocation addresses are, mainly in view of the national background, being increasingly sought in the problems which face the country from every side and with the solution of which the progress of the country and the future of the younger generation are connected. Invariably, the address is sprinkled with advice to the outgoing graduates in regard to the duties to which they have to be alive in their own and the country's interests. The address of Mr Humayun Kabir, Union Minister for Scientific Research and Cultural Affairs, at the Annamalai University *Convocation held* last week, was also of this character. It was upon the expansion of knowledge in the context of the present backwardness in education that Mr Kabir laid the prime emphasis: "India must receive freely the knowledge and science of the West and offer in exchange her own contribution to the people of the world. Similar exchanges must take place among the different units which together constitute the entity of India." It was this motto of expansion of knowledge on an intra-national scale that he advised the students to take to heart.

Mr Kabir elaborated this theme in the larger background of the country's history and its fall from the bright ancient days when it attained the heights of civilisation and when the countries which are the present leaders in progress were in the primitive stage of development. The present condition of the country, however, compares ill with the advantageous start it originally had and this covers a period when it slipped into many disasters consequent to lack of unity and cooperation and failure to keep abreast of the latest developments in knowledge. The social set up was also, according to Mr Kabir, far from being favourable to the propogation of knowledge among the whole population. The caste divisions created mental isolation and emotional distance among the people and knowledge became the exclusive preserve of a small minority.

Mr Kabir diagnoses the country's backwardness as arising from the underestimation, bred of the exclusiveness of mind, of the importance of science and technology, while the West has, by virtue of revolutionary developments in these fields, attained a high level of material advancement. If the objective of the country is to reach the same level of development and prosperity as the West, we have but to emulate their methods and, therefore, cannot escape from the impact of their science and technology.

Mr Kabir dilated at considerable length on the contribution made by South India and particularly Tamilnad to Indian culture. Whether it was religion, philosophy, literature, dramatic arts or architecture, the contribution made by the South was significant and profound. It was in the South that the three great world religions—Judaism, Christianity and Islam—first found a hospitable home and an honoured place in the Indian soil. The contribution to the evolution of Saivasiddhanta was particularly significant. Again, it was South India which gave to the world Sankara and Ramanuja. In the field of literature, Mr Kabir drew prominent attention to the Tirukkural and Kamba Ramayana which, he pointed out, were part of the national heritage of India. Bharatanatya, which today has become synonymous with Indian dance, was another proud national heritage which the country owes to Tamilnad. What is even more significant, some of the economic and political ideas which constitute, as it were, the very pith and essence of modern democracy were anticipated in the Tamil history of olden days. In this connection, Mr Kabir instanced the role ascribed to local assemblies and the stress laid on popular control of the administrative affairs of villages in the Chola inscriptions.

The motive in detailing the contribution made by Tamilnad to the culture of the country was evidently to stress the unity and integrity of what is at present represented by Indian culture. Though widely recognised and accepted, this fact has been sought to be distorted by cerain communal parties in the South which have been making claims in behalf of the separateness of the Tamil culture to serve as the basis for their claim for a separate Southern State to be called Dravidastan. In the background of the activities of such parties, which have a fairly large following among students, particularly in the Annamalai University, Mr Kabir's reference to the integrity of Indian culture was most relevant and apt. He has substantiated this theme with a wealth of facts drawn from Tamil history in various fields, in the light of which the idea of a Tamil culture distinct from the Indian culture could bear no scrutiny. The reference earlier in his speech to the harm done to the country in historical times by divisive forces was also not without present significance. It is such a divisive role which has been taken on by these parties. He was underlining the need for fighting such disruptive forces when he pointed out that one of the tragedies of Indian history had been the way in which fissiparous tendencies had weakened the national will to resistance when alien forces had sought to dominate the land. This, as he recognises, calls for the promotion of social cohesion by the obliteration of caste distinctions and the exclusiveness which it implies. It is in this sense that he warns against trying to resist the impact of Western science and technology.

JUST OUT

INVESTORS ENCYCLOPAEDIA

1959 EDITION

(TWO PARTS)

CONTAINS:

1. Details about a large number of Joint Stock Companies in India with full particulars about their working for the past few years.
2. Details about various Central and State Government Securities and Loans and Debentures issued by various Quasi-Government institutions like Port Trust, Improvement Trust, Municipal Corporations, Land Mortgage Banks and other public institutions.
3. Details about Income and Supertax, Capital Gains Tax, Wealth Tax, Death Duty etc.
4. Details of companies functioning in public sector—Names and Addresses of foreign Diplomats in India and our diplomats abroad and many other useful information.
5. A survey of almost all industries in India with coloured maps showing the location of various industries.

A political map of India (36" × 32") showing the latest political divisions, Railways and Important Towns.

Provided with Thumb Index for easy reference purpose.

About 3000 companies. **About 3000 pages.**

A BOOK MOST INDISPENSABLE FOR ALL CONNECTED WITH TRADE, COMMERCE AND INDUSTRY.

Price Rs. 30/- (Postage Rs. 7/- Extra)

For copies apply to:

SOUTH INDIAN NOTES

Irrigation Projects

MADRAS REVIEW

Since the beginning of the First Five Year Plan and uptil now the Madras State has expended Rs 33 crores on irrigation bringing under cultivation 3.20 lakhs acres. The target achievement is claimed to be 84% *excluding the* Parambikulam-project irrigated area.

This information is given in a review which the State Government have furnished to Members of the State Legislature at a Conference recently at the lower camp of the Periyar Hydel-project.

The projects were all carried out with the utmost economy after careful scrutiny, and eliminating the intermediary contractors, having the work executed either by piece-work or job work. It is also true, in the case of Madras, that ryots are anxious to contribute their own for getting such facilities. For the Manimuthar project, a sum of one crore of rupees was subscribed by them.

Up to March-end this year, the State had incurred an expenditure of Rs 36.5 lakhs on miner irrigation tanks. But progress in this direction has to be awaited in the coming months. It is known that the State had exhausted all its river-irrigation sources, and lagislators were informed that the State would have to look for an integrated development of large rivers in the neighbocring States on a zonal basis for food production increase.

Discussing the feasibility of exploiting further the existing sources of river waters, the report stated that, within Kerala limits, another dam on the Periyar river fifteen miles below the existing one is possible. This is called the Aladi dam, intended to store the runoff water below the present one. The rainfall in this region is very high, and the *catchment* area of the new dam is expected to be 127 *sq. miles.* The reservoir will be capable to store 29,000 million cft. of water by a 210 ft. high dam with a length of 1,500 ft. A six-mile tunnel would carry the waters to Madras State from the dam storage and about 200,000 acres in the backward Ramanathapuram and Madura districts could be converted into foodgrowing areas. Another point of utility of this dam is also the production of 116,000 kw of power on the Madras side. The schemers of this new dam hope that the entire runoff of the surplus Periyar lake would be utilised in this manner.

The Pambiar also would lend itself for further damming to store 11,480 million cft. across the three major tributaries, the Kakiyar, Anathodu and Pambiyar and inter-connect them by means of tunnels. Power could be generated to produce 177,000 kw on the eastern slopes where a 2,450 ft. falls is available by making the dammed water flow through a twelve-mile tunnel. Two other Western Ghat rivers, Chendurni and Kuluthupuzha, so far unexploited, could also be diverted by the Eastern slopes of the Hills near Shenkottah, and still further down in the Quilon-Trivandrum Road to store about 15,000 million cft. of water. Both of these could again be connected through a tunnel of nine miles before let into the Tambaraparani and the storage could benefit about 160,000 acres in Tirunelveli district.

As regards the use of the Andhra river waters for Madras, the note pointed out that there seemed to be no scheme in Andhra to utilise fully all the Godavari waters. In respect of the Krishna, there seems to be no surplus for Madras use. The point meriting examination was whether the surplus Godavari waters could be let into the Krishna and after meeting the demands in the Krishna Delta release the surplus of equivalent volume to Madras. This arrangement seems to be feasible, and could bring under cultivation 800,000 Madras State acres.

Thus, the irrigation potential of the inter-State river schemes would certainly be far in excess of the quantum envisaged by the Second and the Third Five Year Plans. And as regards Madras State, the irrigation potential of these inter-State rivers will be more than half of the potential created for the past so many centuries and the power developed by these projects will also be very considerable.

Whether or no the Government of India arrive at a favourable decision about taking up these inter-state river integrated systems, the Madras State is ready with a plan, at least for a preliminary investibation.

*

Protected Water Supply

That only a little over six per cent of the population of India is served by protected water supply is a condition that should be intolerable for a country which has set out to bring the fruits of freedom to every individual citizen irrespective of caste and creed. Planning is devoid of any significance or meaning to the common man if it is not to be reflected in the provision of this basic amenity. Lack of financial resources—estimated at over Rs 1,500 crores to cover the entire country with a scheme of protected water supply—retards speedy progress. The financial magnitude should, however, be no bar to treating it as a priority problem.

Local bodies upon whom devolves responsibility in this field have been disabled for want of adequate funds to take up any promising schemes. The very system of local finances, with its subventions and grants-in-aid, was hardly calculated to make local bodies effective agents in the provision of improved amenities of life.

While underlining the importance that should be given to the provision of protected water supply to the villages, Mr D. P. Karmarkar, Union Minister for Health, in the course of his speech at the fifth meeting of the Central Council of Local Government, also stressed the need for a realistic approach to the problem. This would necessarily call for giving up the old ideas as to the powers and functions of local bodies. Much decentralisation of power with local bodies having sole responsibility for local development is already conceived. A large part of the country has been covered by village panchayats which will constitute the agency for development at the lowest level. It is of even greater importance that these bodies should be assured of the revenue they require for the various schemes for which they have become responsible. Mr Karmarkar himself has suggested that the problem posed by meagre revenues to local bodies could not be tackled on the basis of giving grants-in-aid by Central and State Governments. On the contrary, he wants ways and means to be devised for stepping up the resources of local bodies. In this connection, he has endorsed the suggestion that local bodies should undertake such activities as would divert private profits into the municipal coffers—like municipal saving banks, printing presses, distribution of building materials, running of dairies, flour mills, hostels, etc. Such activities could, however, have value only as supplementary sources, while the problem faced by local bodies is that of finding out a few dependable sources which would provide them the bulk of their financial requirements. The vesting of more tax powers in the village panchayats, as is envisaged in some States, was a much-needed reform. An equally important means would be loans to be raised by local bodies who would have powers vested in them for the purpose. Mr Karmarkar has made this suggestion with particular reference to the problem of protected water supply.

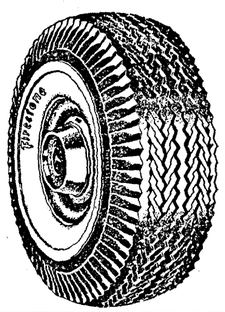
*

Role of Advertising

Either individually or jointly, advertisers in America and England have exerted great influence on editorial policies of the daily newspapers on burning questions. The evil was less apparent in England. But, in India, the advertising agents and business corporations and business organisations had not interfered with the editorial policy or the treatment by newspapers of great questions, 'even financial (and business matters. Thus pointed out by Sir C. P. Ramaswamy Aiyer, when he was entertained here by the Madras Advertising Club last week.

As heading the Press Commission, Sir C. P. Ramaswamy Aiyer went to England and America to interview leading Newspapers, advertising agencies and great business corporations. There was some justification in thinking that the great advertisers and business firms had some share in moulding the editorial policy. He came back and from that point of view went into the matter thoroughly in this country also. He said he had concluded, in the Press Commission Report, that the advertising agents and business corporations and business organisations in India have not interfered with the editorial policy or treatment by newspapers on important questions.

Sir C. P. disapproved of the role of the Government in purveying advertisements, especially with reference to their newly developed plans and commercial activities. He regarded this role of Government as an advertising agent as a misfortune and 'advised that the Government should keep themselves within certain bounds. He did not want them to enter into unfair competition with other professional bodies. There were already temptations before newspapers, big or small. The smaller ones, he pointed out, would easily fall victims, though the bigger ones need not be solicitious about the Government's views. To such small newspapers—with hand to mouth existence—the Government role as advertisement purveyors would compel this to toe the Government line, and thus the freedom of the press became a myth.



As far as State advertisements were concerned, the time had come in many countries where the Government themselves had become advertisers and dispensers of advertisements. This had to be borne in mind, he stated, and it was in this connection that the position of the newspapers became extremely difficult. The Government believed that the personality of the Government had to be advertised day in and day out. No more was propaganda looked down upon Government needed persistent propaganda on certain questions like the need to change food habits. For export, drives, for publicising their plans and such other activities, Government needed advertisement. Therefore, it had become the lifeblood of present Government activity. Therefore, it was better that they kept themselves within certain bounds. And it would be fair if they allowed the professional bodies fulfil their role without putting them to the stress of Government competition.

He advised the advertising profession to stick to a high standard of imparting information or stimulating curiosity. They should tell the truth pleasantly—but sometimes not wholly.

WORLD CHAMPIONS CHOOSE Firestone ..SO SHOULD YOU

Jimmy Bryan, winner of the world-famous 'Indianapolis' 500-mile race, paid a glowing tribute to Firestone tyres, which stood up so well to a speed of 180 miles an hour, subjected to brutal pounding, twisting and grinding on this exacting race track. You, too, can have this same safety and dependability because the Firestone tyres for your car are built with the same safety construction features as racing tyres. Firestone tyres are Safety-Proved by performance.

MADRAS REVIEW

Downward Trend in Seeds

Madras, Wednesday.

There was considerable weakening of the groundnut kernel and oil market in the Madras Oils and Seeds Exchange today. Both Bombay and Calcutta interests are not the usual Madras customers since they are hopeful of lifting good stocks from Saurashtra ports where prices are lower than at Madras. There is demand only for spot groundnut oil which today closed at Rs 360., while November rate remained at Rs 344 and December at Rs 321 (per candy of 500 lbs).

Kernel medium varieties were quoted at Rs 180 and bold at Rs 185 per candy of 531 lbs.

Winter crop arrivals of groundnut crop have become larger. From Andhra producing centres, Bombay seems to be fed considerably so that Bombay prices, too, seem a bit weaker compared to Madras.

Castoroil remained firm at Rs 330, while coconut oil was lower at Rs 40.75. There was poor demand for groundnut oil cake at Rs 25. Gingelly seeds went up to Rs 77 per bag while oil quotation per maund remained at Rs 21.25.

Because of Deepavali season spot groundnut oil was in good demand. Shippers and vanaspathi interests in the North were conspicuous by their absence in the trading at this centre.

Shipments too had to be done on the basis of plenteous kernel stock, but if it were to be immediate shipping groundnut oil per ton was quoted at Rs 1,575 for Burma and if it were to be December shipments the rate per ton was Rs 1,425/1,450.

The United Kingdom price for ton of groundnut oil today ruled today at £102/103.

The post-Deepavali market trend is anticipated to be considerably lower in all positions.

Arrivals of nuts in the City are in large quantities.

Beginning last midweek, groundnut oil and kernels maintained a quick downward trend. New crop arrivals were good from around the City centres. The orderly and timely squaring of October short positions added up to the downward tempo of prices. Considerable pressure on spot goods was relieved by the orderly clearance of October position. Shippers kept aloof from the market due to high prices. They have covered themselves adequately with December vaids. It is quite possible they may step in when they find the actual arrivals gain further momentum as to press down the prices still lower. Calcutta too could not take any quantity since the price line was very high. Andhra and Telangana, nearer Madras State, and Madhya Pradesh offered goods at attractive levels for the Calcutta and Bombay vanaspathi interests. Only local interests obtained from chekku or rotary crushers. The oil price has declined by Rs 30/32 per ton and kernels lost Rs 20/25 per ton over last week's rates.

From middle of last week and up to Tuesday close, groundnut arrivals stood at an average of over 50 tons daily. Madras State is having a vigorous monsoon and rains have interrupted the steady growing supplies. But stocks with local agents remained fairly high. Sellers dominated the market this week, and business reported is extremely dull.

Superior qualities of groundnuts were available at Rs 185 while the medium stocks could be bought at Rs 180. But in both these, business was not as large as in the previous weeks.

October short sellers went in for groundnut oil at Rs 365 during Monday. But Tuesday closing was considerably lower at Rs 362. The midnoon quotation on the same day was only Rs 360 at which some quantities were really available. Further on, sellers wanted to clear stocks even so low as Rs 357/358. From Chittoor side oil from new crop crushing was offered followed by similar offers from North and South Arcot districts. In both the districts price of nuts was high. Salem crop will take time yet to arrive in the market.

In forward positions, December vaida commanded most of the attention. Throughout Monday and up to the time of writing, the business done was mostly of the nature of covering up of contracts. November vaida naturally moved in line with the October quotations. At Adoni the ready and November price levels stood on par, and considerably lower than at Madras, and shippers who usually took December hedge vaida in Madras, decided to lift actuals from Adoni and unloaded their holdings in December in the market today.

October opened Monday at Rs 362 per candy of 531 lbs. It was remaining at the same level, with lower fluctuation. On Tuesday it closed at that rate, while today's closing too was nominally at Rs 360. It is possible for the rate to go down considerably further down despite Deepavali. If the mid-change in price to Rs 357/358 for ready goods was possible on Tuesday, still lower price is not ruled out in the oil exchange during coming weeks.

November vaida began at Rs 350/351 Monday. The short-covering price had dropped the next day to Rs 345/346, and again improved slightly to Rs 347 today to close at the same rate.

December vaida saw alternate bouts of short covering and profit-taking. Early inquiries in this position were at Rs 337, but later buyers were reluctant to offer more than Rs 334/335. Short covering at lower levels produced a small rally and support again was forthcoming at Rs 336. But Tuesday, the rate declined to Rs 333 at which it closed There was good selling pressure and though the rally was temporary, the price was maintained at that rate on Tuesday. Today the December position closed timely at Rs 332.

Groundnut Oil Cake: The market continues easier. There was not much local demand as most of the quantity offered was taken for export. The available quantity was priced at Rs 25 to Rs 25/4 per bag (of 160 lbs) ex-mill with gunny. Upcountry cake was available in good quantity at 4 to 5 wagons daily at Rs 23 to Rs 23/8 per bag.

Upcountry Markets: Since arrivals had not begun in large quantities, most of the crushing mills worked only for a few days in the week. Local retailers absorbed the quantity of the oil output from the mills. Madras arrivals of oil were from the new crushings from South Arcot. At Pollachi arrivals declined to Rs 4,000/5,000 from 10,000 bushels per day. With absence in competition, even superior red and Government varieties were quoted at Rs 195/196 per candy and Rs 190/191 respectively and were not attractive enough to buyers. At Salem too the position continued the same, with the price at Rs 195 per candy. In oil in these areas, sellers evinced interest at the rate of Rs 358/360 per candy. Southern side vanaspathi interests bought oil from these centres at Rs 359/360.

SOUTH INDIAN MARKETS

JARDINE HENDERSON, LIMITED

NOTICE IS HEREBY given that a general meeting of the members of the abovenamed Company will be held at the registered office, No. 4, Clive Row, Calcutta, on Thursday, the 19th day of November, 1959, at 11 a.m. to consider and if thought fit to pass with or without modifications the following Resolutions, which will be proposed as Ordinary Resolutions, namely:—

1. That with effect from the 1st April, 1957, Mr. John Douglas Keith Brown, a Managing Director of the Company, be and is hereby authorised to receive remuneration for his services as such Managing Director in accordance with the terms specified in the Agreement dated the twenty-fourth day of September, 1959 made between the Company of the one part and Mr. Brown of the other part.
2. That with effect from the 1st April, 1957, Mr. Girdharilal Mehta, a Managing Director of the Company, be and is hereby authorised to receive remuneration for his services as such Managing Director in accordance with the terms specified in the Agreement dated the twenty-fourth day of September, 1959 made between the Company of the one part and Mr. Brown of the other part.
3. That with effect from the 1st April, 1957, Mr. John Valentine Jardine Paterson, a Managing Director of the Company, be and is hereby authorised to receive remuneration for his services as such Managing Director in accordance with the terms specified in the Agreement dated the twenty-fourth day of September, 1959 made between the Company of the one part and Mr. Jardine Paterson of the other part.

A Member entitled to attend and vote at this Meeting may appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

By Order of the Board,
I. F. MORRISS,
Acting Secretary.

4, Clive Row, Calcutta—1,
24th September, 1959.

Note: The explanatory statement together with memorandum of interest and the abstract of each of the agreements in accordance with the provisions of Sections 173(2) and 302(2) and (7) of the Companies Act, 1956, have been annexed to notices despatched to Members.

The Aluminium Corporation of India Limited

Year's Working Results Best in its History

Expansion Programme to Treble Production

Need for Ensuring Raw Materials

Mr Lakshmipat Singhania's Review

The following is the address delivered by Mr. Lakshmipat Singhania at the 21st Annual General Meeting of the Aluminium Corporation of India Limited, held on Tuesday, October 27, 1959.

Gentlemen,

I have great pleasure in welcoming you to the 21st Annual General Meeting of the Corporation. Nearly quarter of a century ago your promoters started this industry and the Managing Agents of the Corporation have struggled through this long period to establish this highly technical basic industry in this country without any foreign collaboration or help. Your Corporation has to pass through lot of uneasy times but the fulfilment of the objective is a matter of great achievement for all our people. I have the additional pleasure of assuring you that today we possess sufficient technical knowledge and personnel to develop and to serve the country for the betterment of this basic industry. It may be old history, but I would like to repeat that your Corporation were the first producers of Aluminium metal in this country from Indian Bauxite. The actual fact of Indian production and its psychological effect immediately brought down the price of the metal to half its earlier price. Your Corporation has thus served the country continuously for over 15 years by supplying this important metal at a reasonably low price.

BEST RESULTS

This year your Corporation has achieved the best results in its history: the sales being Rs 1,28,75,543 against Rs. 98,60,772 last year and the profit being Rs. 35,89,864 against Rs. 27,20,461 last year. Another feature of the year is the declaration of a dividend of 10% on Ordinary Shares for the first time. A new feature is the re-organization of the capital structure of the Corporation by extinguishing the deferred shares thus bringing the new capital structure in conformity with the Companies Act, 1956. After 21 years the Deferred Shareholders after conversion have been able to participate in a dividend for the first time. You will notice from the Directors' Report and Accounts that due to the impact of taxation, the appropriation towards the reserve had to be reduced. The liquid assets position has further improved and the Corporation has paid back voluntarily in advance another Rs 15 lakhs towards the debenture liability and the Balance Sheet as it is presented shows a very healthy and sound position and the Corporation's scrip today can be truly termed as "blue-chips". For all these achievements the credit goes right through from the humblest worker in the factory to the team of technicians and Directors and Managing Agents and to the cooperation and patronage of our customers, who approved many of our products as the best in the country. The Corporation is proud of the team of skilled labour and technical personnel whom it has trained. In these basic industries such trained old workers play an important role and are in my opinion, as valuable as the technique or machinery and plant.

EXPANSION PROGRAMME

As indicated to you last year, the Corporation has gone much ahead with its expansion programme for trebling the production of the existing plant. For the first time we have entered into a technical collaboration agreement for a period of 15 years with Messrs Aluminium-Industrie-Aktien-Gesellschaft, Zurich. They have already sent a team of experts on each department to review the working and to advise us on improvements. Further they have undertaken the designing of the complete expansion scheme so that the plant would be most up-to-date and modern. The whole scheme is well advanced and arrangements are being made for foreign exchange and approval of the Government is being sought. I hope in a very short time the scheme will come in active operation and that the completely integrated plant at Jaykaynagar will be the most economic unit in the country.

It is necessary for me to give you a picture of the plants established in different parts of the world, their production as well as indigenous production.

Country	No. of plants	Production capacities *Long tons*	1958 production *Long tons*
U.S.A.	22	23,25,670	13,97,818
Canada	6	7,73,214	5,36,099
Brazil	2	20,964	11,698
Austria	2	62,005	55,996
Czechoslovakia	1	49,210	16,429
France	11	1,69,283	1,66,277
Federal Republic of Germany ...	4	1,60,425	1,34,604
Germany (East Zone) ...	1	29,526	33,482
Hungary	3	59,052	37,500
Italy	4	78,244	63,037
Norway	6	1,30,801	1,19,651
Spain	3	31,002	15,752
Sweden	2	14,763	13,484
Switzerland	2	32,479	31,002
Russia	13	8,41,495	5,45,535
U.K.	2	31,495	26,354
Yugoslavia	3	36,908	21,338
French Cameroons (Africa) ...	1	44,289	31,356
Tasmania	1	12,598	10,925
Japan	5	96,452	83,241
Formosa	1	7,874	8,441
Manchuria	2	29,526	29,465
	97	50,37,275	33,89,484
India	3	17,500	8,180
Grand Total ...	100	50,54,775	33,97,664

You will notice that the sizes of the plants are divergent and in most of the countries the sizes are on the smaller side but the plants in bigger producing countries like Canada and America are much larger. The world growth of Aluminium metal which is still young in comparison to steel and others, has been governed by a combination of many factors, i.e., availability of power and of raw material, technique available for such production and consumption of metal. The most important factor is the availability of power at suitable rate. Although bauxite is the physical raw material, yet because aluminium is a highly power intensive industry, the most important raw material is power. The establishment and growth of this industry is dependent on availability of power at suitable rate. In India, a number of hydro-electric and thermal schemes have been put up, but unfortunately the cost of installation being very high the cost of power is also high and it is therefore difficult to compare the cost of power available to this industry here with the cost of power in other parts of the world.

There is a talk of establishment of aluminium plants in the country in practically every State and everyone is anxious to have an aluminium industry in his own State. The deciding factor however should be the competitive value of the metal produced at different stages and at different places as immediately the metal becomes costlier, the consumption pattern will change. It must be remembered that this metal has to compete with many other non-ferrous metals as well as steel and, here the cost is the most governing factor and if the cost of production is affected either due to heavy capital expenditure or due to higher power cost the consumption of the metal will also be affected accordingly. It is a well-known fact that consumption of aluminium is increasing because it has become a universal metal put into probably more numerous uses than any other metal and this has been possible only because of its being more competitive.

The typical pre-war and post-war pattern of world consumption of this metal is as under:—

		Pre-war %	*Post-war* %
1.	Transport—marine, land and air	29	37
2.	Cooking utensils	14	3
3.	Electric conductors	10	10
4.	Machinery and electrical appliances	15	20
5.	Architecture	8	8
6.	Packing and food industry	11	11
7.	Metallurgy—ferrous and non-ferrous and foundry	9	8
8.	Sports goods, jewellery, personal goods, etc. ...	...	3
9.	Unclassified	4	...
	Total	100	100

The total metal available for consumption in India from 1948 onwards is tabulated below:

	Indigenous production	*Import in all forms*	*Estimated secondary metal in the country*	Total
	T.	T.	T.	T.
1948 ...	3,372	9,327	2,539	15,238
1949 ...	3,516	8,300	2,363	14,179
1950 ...	3,590	5,767	1,871	11,228
1951 ...	3,876	8,677	2,510	15,063
1952 ...	3,566	5,833	1,879	11,278
1953 ...	3,759	5,360	1,823	10,942
1954 ...	4,882	10,614	3,099	18,595
1955 ...	7,225	11,746	3,794	22,765
1956 ...	6,469	14,887	4,271	25,627
1957 ...	7,728	23,146	6,175	37,049
1958 ...	8,180	17,288	5,093	30,561

About 10 per cent of the total metal in use comes back as secondary metal every year. As it is very difficult to estimate this quantity on the basis of total metal, I have assumed in the table that about 20 per cent of the total metal put into use during any one year will represent the total secondary metal returning to process that year.

The trend of consumption of primary metal has been as under:

	1946.	1951.	1955.	1958.
Utensils	10,000	12,000	8,000	8,000
ACSR cables (rods, wire rods, etc.)	...	...	5,000	11,000
Engineering and building and rods, etc.)	...	...	...	...
Foils and linings	...	1,700	2,000	2,500
Transport	...	...	3,000	4,000
construction	...	300	500	2,500
Others	1,000	1,000	1,500	2,000
Total ...	11,000	15,000	20,000	30,000

The pattern of the Indian consumption is gradually changing as the country is becoming more industrially developed and engineering industries are taking more important place. As in other countries, the consumption of this metal in India also will increase only in the direction of industrial and transport uses rather than domestic uses as it is evident that the domestic use of this metal is not keeping the pace with the increases in other uses. It is estimated that the annual consumption of primary metal alone will reach about 64,000 to 70,000 tons by the end of the Third Plan period. In other words consumption will go on increasing approximately by 12% every year and if the engineering industry's growth is more rapid, the consumption may also increase at a higher rate.

There is one very important feature of this industry which must be kept in mind, i.e., aluminium is a basic industry which every country desires to develop in the national interests. For this reason, the production in countries which had previously no aluminium plants, is increasing. In the big aluminium producing countries, though production is increasing, portions of plants are also idle. Again because of the national interests the industry is protected in almost every country whether it be a large producer or small producer. Even in America there is tariff protection. It is felt that in India also this industry may have to seek continuous tariff protection for a long period to come.

RAW MATERIALS

For future development of this industry in India some raw materials like Petroleum Coke for electrodes and Cryolite for electrolytic process are required. Petroleum coke is only available from the oil refinery at Digboi but the quantity is not sufficient and the inland carrying cost is high. The new refineries are not using this process and it is necessary that the Government should pay attention to the necessity of production of petroleum coke in the new refineries as a bye-product. As far as Cryolite is concerned, at the moment it is mostly imported from Greenland. It is necessary to pay attention for manufacture of synthetic cryolite in India. Commercial production of aluminium depends on cryolite, and dependence of the industry on such imports is not always desirable.

Due to the expanding economy of the country the price indexes have risen and thereby wages have also been necessarily increased. But there is real danger of these wages getting out of proportion to the income of majority of people in India who are either unemployed or underemployed. It is well to remember that the number of industrial workers total only about 7 million out of the total labour force of 154 million in our country. The majority therefore are dependent on agricultural income which is much lower as compared to that of the industrial workers. Such disparity is leading to a vast influx of persons from villages to the cities creating tremendous problems of housing and amenities, apart from unbalanced increased employment load on industries. The solution lies on the betterment of agricultural income and this can be achieved when crop yield per acre goes high for such high crop yield more irrigation, more fertilisers and more insecticides have to be provided. This means developing more balancing industries and thus the problem assumes a vicious circle.

INDUSTRIALIZATION

Therefore, rapid industrialization also assumes great importance. To facilitate quicker industrialization in the country and to achieve better and balanced economical conditions and employment entrepreneurs should be accorded better facilities and the procedure for disposal by Government should be more flexible. At present industrialization is dependent on the import of necessary equipments from foreign countries. Due to foreign exchange shortage the import of equipments has to be arranged either against loan in foreign countries or against deferred terms of payment from suppliers of equipment. The agencies from whom such loans can be secured are either in the United States of America like the Export-Import Bank etc. or in different Continental Countries who have accorded to India foreign exchange credit, or the different suppliers direct. Whenever help is taken from the Export-Import Bank of America, the plants have to be purchased in the U.S.A. Looking to the smaller size of the requirement of the plants in India in comparison with the U.S.A. in most of the cases the plants purchased in the U.S.A. cost more than the plants purchased from the Continent, and India has to pay this higher price along with high technical collaboration fee for developing such industries or in case of foreign collaboration profits have to be remitted for all time to come. In the Continent and other places outside the U.S.A. where plant requirements are similar to our requirements the price of such equipments are lower but the equipment has to be imported on deferred terms of payment which requires guarantee from suitable institution in India for the credit extended. Therefore, the whole process of piloting the scheme, viz, obtaining essentiality certificate from Government fulfilling and negotiating formalities for obtaining bank guarantee and final acceptance are subject to too much delay, thus rendering implementation of the scheme impracticable specially by new entrepreneurs. I wish to make a suggestion that suitable procedure be worked out for approving without much delay the scheme for expansion or for setting up a new plant after examination of its soundness financial as well as technical so that the necessary guarantee is available as early as possible.

Especially in a transitory period as the one through which we are passing, the problems have to be handled in a very balanced way so that while there is an all-round economic equilibrium there is also a rising economy for the progress of nation.

N.B.—This does not purport to be a record of the proceedings of the above Annual General Meeting.

THE BARNAGORE JUTE FACTORY COMPANY, LIMITED

(Incorporated in England).

LIABILITY OF MEMBERS LIMITED.

DIVIDENDS

The following Final Dividends have been recommended in respect of the year ended 31st March, 1959, payable on the 27th November, 1959:—

On the Preference Shares 5% (Five Shillings per share) less U.K. Income-tax of seven shillings and nine pence in the £ Sterling.

On the Ordinary Shares 10% (Ten Shillings per share) less U.K. Income-tax of seven shillings and nine pense in the £ Sterling.

Payment of any Dividend declared will be made only to those Members whose names are registered in the Books of the Company on the 17th November, 1959 or to their Mandatees.

Dividend Warrants to Members on the Calcutta Register will be made payable in Calcutta.

No applications for warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

The Share Transfer Books will be closed from the 4th November, 1959, to 17th November, 1959, both days inclusive.

By Order of the Board,
JARDINE HENDERSON, LIMITED.
D. FORDWOOD,
Secretary,
Agents.

4, Clive Row,
Calcutta,
27th October, 1959.

STOCK EXCHANGES

Irregular Price Movements

WATCH-DOG WRITES:

ALTHOUGH stock markets have been able to shake off the nervousness caused by the Chinese outrage on the Ladakh border, trading has been on an irregular pattern this week. Selected shares, however, have been in good request at advancing price levels.

In the Calcutta Stock Exchange, prices in earlier dealings displayed a rising tendency but toward close the more speculative counters turned somewhat subdued on adverse rumours. Apart from continued support for selected industrials, renewed buying was noticeable in picked jute and tea shares.

The Bombay Stock Exchange ruled listless throughout. Apart from the inhibiting influence of the fresh incidents on the border, the proximity of the Diwali holidays and settlement considerations seemed to have induced some caution in extending commitments.

Sentiment in the Madras Stock Exchange also turned cautious toward close though trading was on a steady note around midweek with Plantings in the forefront.

*

Calcutta

Calcutta, Thursday Evening.

After a steady opening, the Calcutta Stock Exchange ruled *irregular closing* the week on a subdued note. Sentiment showed considerable improvement when the market opened on Monday. In marked contrast to the nervous selling witnessed last Saturday, trading was on a confident note with most shares regaining their lost ground. From midweek, however, the undercurrents in the market appeared to have been disturbed as price movements became irregular. While the earlier anxiety over the fresh Chinese incursion seemed to have lessened somewhat, apparently adverse rumours claimed attention. It would appear bears had succeeded first in Dalal Street in getting their view conceded as regards the rumour of the return of Mr T. T. Krishnamachari to the Central Cabinet. When the rumour was relayed to Calcutta by the enterprising bears, Mr Krishnamachari's post was changed to the Deputy-Chairmanship of the Planning Commission.

In the Textile section, steady conditions were noticeable wih selected shares meeting with good support on prospects of improved working of the cotton textile industry. Bowrean moved upto Rs 151 from Rs 142. Jayshree Textiles was well maintained at Rs 10.25. Kesoram firmed up from Rs 18.75 at last week-end to be done upto Rs 19.37. Elgin *Mills was a steady spot at Rs 16.31.*

A broadening of interest was evident in the Coal section. It would appear that press reports that export enquiries had been received from some overseas countries was partly responsible for the revival of interest in the section. Amalgamated *was done at Rs 25.50.* Bengal was earlier done upto Rs 294, but toward close receded to Rs 289. Burrakur was done upto Rs 16.87 from last week's closing of Rs 16 before finally placed on Wednesday at Rs 16.50. Central India was slightly easier at Rs 7.87 as was East Indian at Rs 21.62. Dhemo Main steadied to Rs 10.69 as did Western Bengal at Rs 6.56.

Selected Jute shares continued to *meet* with support at advancing prices. *Prospects of satisfactory* Hividend distributions following indications of profitable working of mills coupled with the improved outlook for exports of jute goods imparted renewed interest. Anglo-India was steadier at Rs 254 and Barnagore appreciated to Rs 171.50. Birla was well maintanied at Rs 25.56. Howrah was done upto Rs 25.73 before closing on Wednesday at Rs 25.37. Alliance was done at Rs 136 and New Central at Rs 19.87. Kinnison gained more than ten points to be placed at Rs 212.50. Dalhousie advanced smartly to Rs 151 from Rs 136. Union moved upto Rs 242 from Rs 237.

In the Engineering section, Indian Iron opened steadier at Rs 24.08 and after touching a high of Rs 24.23 closed on Thursday at Rs 23.98. After having been done upto Rs 24.85, Texmaco was finally placed on Wednesday at Rs 24.50. Among *other Engineerings Jessop* was on request at Rs 32.69, Kumardhubi at Rs 6.81, Indian Standard Wagon at Rs 91 and Indian Steel and Wire Products at Rs 40.50. JK Steel was placed at Rs 12.94.

Among Paper Mill shares, Orient closed on Wednesday slightly lower at Rs 38.10. Shree Gopal was done at Rs 19. Sirpur Paper steadied to Rs 14.31. Titaghur moved upto Rs 44.69.

Sugar shares were in good request on ideas of improved prospects following announcement of incentive *scheme for sugar mills.* Belsund moved upto Rs 15.25 from Rs 14.31. Carew was wanted upto Rs 12.06 from Rs 11.19. Ramnugger Cane was steadied at Rs 19.50. SKG came in for good enquiry and appreciated to Rs 13.59.

The Tea section witnessed revival of interest in selected shares on satisfactory auction results. Baradighi advanced to Rs 22.37 from Rs 19.62, Bormah Jan to Rs 15.25 from Rs 14.25, New Terai to Rs 14.44 from Rs 13.25, Bateli to Rs 19.50 from Rs 18.50, Patrakola to Rs 166 from Rs 160.50, Hasimara to Rs 21.06 from Rs 19.37 and Huldibari to Rs 20.75 from Rs 19.75.

Selected shares in the Miscellaneous section continued to gain ground on sustained buying interest. Hindustan Motors was done upto Rs 13.19. Imperial tobacco was in request at Rs 11.06. Rallis advanced further to Rs 82.50. Rohtas Industries gained nearly 4 point to be quoted at Rs 25.44. Indian Aluminium closed steadier on Wednesday at Rs 23. Indian Cable was almost unchanged at Rs 30.87 as was Dunlop Rubber *at Rs* 35.62. Aluminium Corporation turned ex-dividend at Rs 15.31. India Steamship was finally placed at Rs 13.69 while Indian Copper was almost unchanged on balance at Rs 3.95.

*

Bombay

A subdued tendency prevailed on the Bombay Stock Exchange during the past week. Settlement considerations coupled with the fact that the market would remain closed from Thursday to Saturday for the Diwali holidays imparted some caution. The depression caused to market sentiment last Saturday on reports of fresh Chinese incursion into Indian territory had proved short-lived but higher levels proved untenable due to scattered bull liquidation. It would appear that prevailing rumour about Mr T. T. Krishnamachari being invited to join the Central Cabtnet and anxiety about the revision of rules governing margins were also partly responsible for the reluctance of operators to *extend* commitments.

After earlier steadiness, Steel shares steadily lost ground on selling pressure. Tata Steel regained part of the loss on Monday to be finally placed at Rs 157.50. But on Tuesday and Wednesday the scrip receded to close another three points lower at Rs 154.50. Indian Iron closed on Monday higher at Rs 24.12 as against previous closing of Rs 23.88. In the course of trading in the next two days the quotation slipped back to be finally placed at Rs 23.84.

In the Textile section, Bombay Dyeing ruled fairly steady in earlier dealings but toward close lost ground to finish at Rs 67.60 as against Monday's closing of Rs 68.50. Century moved up briskly on Monday to be done up to Rs 607.50. The scrip moved up further in early dealings on Tuesday but toward close reacted to Rs 603.75. A similar pattern was noticeable on Wednesday also and the scrip closed weak at Rs *600. Kohinoor was done* up to Rs 319.50 before closing the week at Rs 310.50. After moving both ways Svadeshi closed unchanged on balance at Rs 257.

Generally listless condition prevailed in the miscellaneous section. Groupwise sugar shares were a firm market. Belapur was done up to Rs 338.50 before closing unchanged on balance at Rs 331. Phaltan was wanted up to Rs 188 and closed the week at Rs 184. Elsewhere, National Rayon was an active counter in earlier dealings but somewhat subdued by close at Rs 375,50. Telco was done up to Rs 206.50 but closed lower at Rs 200.25.

THE INDIAN CABLE COMPANY LIMITED

NOTICE

NOTICE is hereby given that the Fortieth Annual General Meeting of the Shareholders of The Indian Cable Company Limited will be held at the Registered Office of the Company, 9, Hare Street, Calcutta, on Saturday, the 28th November 1959 at 10 O'clock in the forenoon, for the following purposes:

1. To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st March 1959.
2. To declare Dividends.
3. To re-appoint a Director who retires by rotation.
4. To re-appoint the firm of Messrs. Lovelock & Lewes of 4, Lyons Range, Calcutta, Auditors of the Company for the current year and to fix their remuneration.

As Special Business.

5. To consider resolutions in relation to the following matters and things—

(a) In pursuance of Section 228 (1) of the Companies Act, 1956, to appoint the firm of Messrs. A. F. Ferguson & Co. of Bombay for the purpose of auditing the Accounts of the Factory at Tatanagar and the Branch offices of the Company at Bombay, Ahmedabad, Jamshedpur, Kanpur, Nagpur, New Delhi and Secunderabad, and to fix their remuneration.

(b) In pursuance of Section 228 (1) of the Companies Act, 1956, to appoint the firm of Messrs. Fraser & Ross of Madras for the purpose of auditing the accounts of the Branch offices of the Company at Bangalore and Coimbatore, and to fix their remuneration.

(c) To determine that the accounts of the Branch Office of the Company at Karachi be not audited under the provisions of Section 228(1) of the Companies Act, 1956.

The Share Transfer Books of the Company will be closed from the 14th November 1959 to the 28th November 1959, both days inclusive.

Dividends, if any, declared at this meeting will be payable to Shareholders registered on the Company's Books on the 28th November 1959 or their mandatees.

By Order of the Board,
B. J. WOODLEY.
CHAIRMAN.

9, Hare Street,
Calcutta, 5th October 1959.

N.B.—A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

INDUSTRIAL INFORMATION

INDIA'S BALANCE OF PAYMENTS IN 1958-59

A large cut in imports accompanied by an increased inflow of foreign assistance, helped to relieve considerably the strain on India's balance of payments in 1958-59. The decline in the foreign exchange reserves during the year was only Rs 47 crores against Rs 260 crores in 1957-58. In fact, for the first time since the start of the Second Five Year Plan, there was even a seasonal increase in the foreign exchange reserves; between November, 1958 and March, 1959, the reserves rose by Rs 44 crores.

Imports:

Total imports at Rs 1046.5 crores in 1958-59 were Rs 157 crores lower than in the preceding year. While private imports dropped by Rs 177 crores, Government imports showed an increase of Rs 19 crores, thus becoming larger than private imports.

The largest fall in private imports was recorded in *capital goods*, (Rs 65 crores) followed by *intermediate goods* (Rs 54 crores) and *consumer goods* (Rs 40 crores). *Raw materials* showed the smallest decline (Rs 10 crores) as they were rather liberally licensed for the maintenance of the economy.

The biggest item in Government imports was capital equipment for Government projects; these showed a marked rise, over the year, of Rs 67 crores to Rs 154 crores. Food imports, which were the biggest item in the preceding year showed only a nominal decline.

Total machinery imports rose only a little during the year but iron and steel imports recorded a considerable fall as shown below:

Total Imports of Machinery and Iron and Steel

(Rs. crores)

Year	Machinery (Total)	Iron & Steel (Total)
1956-57 ...	207.9	133.4
1957-58 ...	252.2	132.0
1958-59 ...	263.4	79.6

Exports:

India's exports at Rs 576 crores during the year were Rs 19 crores lower than in the previous year and Rs 59 crores lower than in the year 1956-57. The recessionary conditions in the U.S. and West European countries seriously affected our exports of manganese ore and jute textiles, which declined over the year by Rs 16 crores and Rs 12 crores respectively. The fall in the export incomes of several primary producing countries in South East Asia and Africa caused them to curtail their imports from India, particularly of cotton textiles. Cotton textiles had also to face keen competition from China and Japan with the result that exports dropped by Rs 14 crores. The exports of vegetable oils declined by Rs 5 crores, mainly due to higher internal demand and prices. Partly because of the lack of an exportable surplus and partly on account of lower international prices, sugar exports fell by Rs 7 crores.

Invisibles:

Net invisibles were Rs 2 crores lower during the year. Receipts on account of official donations, however, at Rs 41 crores were Rs 8 crores higher than in the previous year, due to increased receipts from the dollar area. There was also an increase of Rs 15 crores under the item 'Government not included elsewhere', largely due to increased expenditure by the U.S. Embassy out of the P.L. 480 balances held by it in this country. On the other side, there was a decline in net receipts on account of private donations and transportation. The net outgoings on investment account showed an increase reflecting the reduced earnings from our investments abroad (mainly due to the fall in the foreign assets of the Reserve Bank) and increased payments for servicing a growing external debt. The current account deficit thus aomunted to Rs 339 crores.

Capital Account:

Official loans showed a significant increase during the year; they stepped up from Rs 92.3 crores in 1957-58 to Rs 216.7 crores in 1958-59. The major components were drawings on the IBRD (Rs. 74 crores), on the three steel credits for Bhilai, Rourkella and Durgapur (Rs. 96 crores), on I.A.T.C.A. (Rs 13 crores), on the Canadian Wheat Loan (Rs 15 crores) on the Development Loan Fund (Rs 6 crores) and on the ECGD. There were also other official capital receipts such as repayments by the U.K. under the *Sterling Pensions* Resettlement arrangement of 1955 (Rs 35 crores) and receipts under P.L. 480. After taking into account the small net inflow of banking capital and the small net outflow of capital in private sector, the net capital inflow amounted to Rs 320 crores. This necessitated the withdrawal of only Rs 47 crores from the reserves, to meet the current account deficit of Rs 339 crores after allowing for errors and omissions of Rs 28 crores.

JARDINE HENDERSON, LIMITED

Notice is hereby given that the Thirteenth Annual General Meeting of the Members will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta-1, on Thursday the 26th November, 1959 at 11 a.m. for the following purposes:—

1. To receive and consider the Audited Accounts for the year ended 31st March, 1959, the Balance Sheet as at that date and the Reports of the Board of Directors and the Auditors thereon.
2. To confirm the Dividends already paid on the Preference Shares and to declare a Dividend on the Ordinary Shares of the Company.
3. To appoint Directors in place of those retiring and in this connection to consider and, if thought fit, to pass the following resolution of which special notice as required by Section 281 of the Companies Act, 1956, has been received by the Company, viz.:—
"That pursuant to the provisions of Section 281 of the Companies Act, 1956, Sir Asoka Kumar Roy, who has attained the age of 73 years and who retires from the Board by rotation, be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for directors prescribed by Section 280 of the said Act shall not apply to him."
4. To appoint Auditors and to fix their remuneration.
5. To consider and, if thought fit, to pass the following resolution which will be proposed as a Special Resolution, viz.:—
"That pursuant to the provisions of Section 314 of the Companies Act, 1956, consent be and the same is hereby accorded to Mr. Surendralal Girdharilal Mehta, a relative of Mr. Girdharilal Mehta, a Managing Director of the Company, holding an office or place of profit as an Assistant to the Company on such terms as to remuneration or otherwise as have been or may be agreed from time to time between such Assistant and the Company."

Notice is also given that the Transfer Books of the Ordinary Shares of the Company will be closed from the 12th November to the 26th November, 1959, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member of the Company.

By Order of the Board,
D. FORDWOOD,
Secretary.

FOR THE INVESTOR

Investment Gossip:

Upsurge

Equity prices are showing a firm trend during the past few days. Although earlier in the week, sentiment appeared to reflect the impact of the bearish influences headed by the fresh Chinese incursion into our borders, trading in later sessions became cheerful with the more speculative counters in the forefront. In Calcutta it would appear that the renewed enthusiasm has partly stemmed from the addition of four more shares to the Forward list. Interest in these has considerably broadened during this week with their prices reaching new high levels. As against only nine shares in the Clearing, there are now thirteen and the enlargement of the list will contribute toward more active conditions than have been noticeable hitherto.

£R$

Investment Special:

KCP

There is always a type of investor who prefers preference shares. This, of course, is as it should be, since no investment portfolio can ever be balanced if it does not have a few fixed-interest bearing preference shares.

Announcement of a preference issue by KCP is published elsewhere in this week's Indian Finance. I will analyse, next week, the merits of this obviously attractive new issue For the Investor; and, meantime, the reader may study the announcement.

£R$

Hilla Tea

An uncommon new issue is being made available For the Investor: subscription lists are being opened next Monday in regard to Rs 6.50 lakhs worth of ordinary shares in The Hilla Tea Estates Limited; Rs 4 lakhs worth, over and above this, have already been agreed to be taken by the promoters and their friends.

What is uncommon is that it is a tea issue. True, there have been some cases of sterling gardens being acquired by Indian entities; but rarely was there a public limited company to take over the going concern.

Then, of late, I imagine that the monetary authorities have not exactly encouraged such acquisition of sterling gardens: the reason is, of course, the foreign exchange situation.

But, having regard to the soberly prosperous times that the tea industry has had in recent years, not to forget that glorious year, 1954, it seems to me that we could much earlier have had an eminently successful tea issue.

For, success certainly the new issue will prove to be. The Directorate includes such worthy and respected names as Sir Dhiren Mitra, who is to be Chairman, and Mr Ranadeb Chaudhuri. And the Indian consumption of tea is rising, if I may mix a metaphor, by leaps and bounds.

What is being acquired is the Hilla Tea Estate from Dooars Tea Co Ltd, and, as such, no financial data are available. It is, however, known that the crop manufactured at Hilla has not since 1954, except in one year alone, fallen below the 6 lakh lb mark. It is also known that a replanting and improvement programme has been carried out; and that, as a result thereof, the optimum crop should be around 8 lakhs lb.

It is good to see that, though the articles of association provide for minimum remuneration to the Managing Agents at Rs 50,000 annually, the proposed Managing Agents have indicated that they will agree to this minimum being placed at Rs 25,000.

All in all, the Hilla tea issue should prove to be something out of the ordinary, small though it is; not least because shareholders may expect to receive a dividend in the very first year.

£R$

Bird-Heilgers Jute Results

Balance-Sheet Reviews:

A flock of jute balance sheets, all of them save one of the Bird-Heilgers group, serves to attest to the trading conditions as well as the relative prosperity of the jute goods industry during 1958-59. Such results were partly owing to the achievement of near self-sufficiency in the indigenous production of raw jute and partly to the generally better labour situation during the year under review.

£R$

Auckland

The accounts of the Auckland Jute Company Limited for the year ended March 1959 show that sales have risen smartly from Rs 1.85 crores to Rs 2.28 crores. The higher sales were to some extent enabled by the purchase of loom hours from Lawrence Jute Company at a cost of Rs 3.76 lakhs as against no such utilisation in the previous year. Provision for Wealth Tax has been raised slightly from Rs 0.48 lakhs to Rs 0.52 lakhs. The net profit after depreciation and Wealth Tax has more than doubled from Rs 6.87 lakhs to Rs 14.63 lakhs. A nominal amount has been set apart for the statutory Development Rebate Reserve. Further, there are transfers of Rs 2 lakhs and Rs 3 lakhs to the Jute Stock Reserve and Machinery Replacement Reserve respectively. The ordinary dividend, including interim, has been quadrupled to 20 per cent.

The balance sheet of Auckland Jute shows that, as against a capital of Rs 65 lakhs, of which Rs 25 lakhs are in preference shares, the reserves and surplus amount to Rs 37.77 lakhs. The gross block of Rs 1.51 crores is shown at a net value of Rs 81.21 lakhs.

There are certain remarks upon the accounts of the year which have been made by the Auditors in regard to the accounts of Auckland Jute. These remarks relate to Pool Commission, interest paid on loans extended by Managing Agents, and depreciation. The Auditors are of the view that, although the arrangement whereby the company pays the Managing Agents a Pool Commission has been in force for many years, such contributions require the approval of shareholders in general meeting. Thereupon, the company has accordingly proposed a special resolution to be considered at the annual general meeting of the company for regularising the transaction in this regard in terms of the new Company Law. Similarly, though the Companies Act permits payment of interest on loans taken from the Managing Agents, the company, in view of the Auditors' observation, has drawn up another special resolution for securing the approval of shareholders to what is undoubtedly a service being rendered by the Managing Agents.

As for the fact that the amount provided for depreciation appears small as compared to the size of the block, this is explained by the fact that, in September 1948, the assets of the company were revalued as a result of which the assets of the company were placed at some Rs 24 lakhs higher. On this basis, clearly, the company would not, in terms of the Income-Tax Act, be permitted to provide for depreciation on the revalued block.

£R$

Dalhou

In the case of Dalhousie Jute Company Limited, as with all the other companies in the group, similar remarks or a combination of such remarks have been made by the Auditors. The action taken by the companies duplicates the resolutions proposed to be taken at the annual general meeting of Auckland Jute.

During the year ended March 1959, sales of Dalhousie Jute rose from Rs 1.55 crores to Rs 1.82 crores. With the decision of May 1958 to purchase loom hours and operate the mill one hundred per cent for Hessian, the company has been working satisfactorily. As such, cost of loom hours, as noted in the profit and loss account, has risen from Rs 0.58 lakhs to Rs 2.81 lakhs.. However, "go slow" tactics by labour were experienced in the mill and it was not until September 1958 that normalcy returned. It is against this background that the performance of Dalhousie must be considered particularly good. For, after providing Rs 0.40 lakhs for Wealth Tax, the company has earned a profit, after setting apart Rs 5.38 lakhs against Rs 5.73 lakhs for depreciation, of Rs 7.46 lakhs; in the previous year, there was a loss of Rs 3.43 lakhs.

After providing Rs 1 lakh for redemption reserve, the company proposes to pay a dividend on the preference shares for the half-year ended March 1956; and this is met out of transfer from general reserves, so that the debit balance carried forward stands reduced from Rs 12.92 lakhs to Rs 6.42 lakhs.

Against the capital of Rs 46.49 lakhs, of which Rs 15 lakhs is in 7 per cent cumulative preference shares, the reserves and surplus are placed at Rs 39.72 lakhs. Fixed Assets, whose original cost was, after revaluation, Rs 1.40 crores, are shown as having a book value of Rs 78.57 lakhs.

£R$

Lansdowne

Sales of Lansdowne Jute Company Limited rose from Rs 1.65 crores to Rs 2.08 crores, thanks to purchase of loom hours from Lawrence Jute at a cost of Rs 2.21 lakhs. The provision for Wealth Tax is Rs 0.32 lakhs, depreciation receives Rs 4.65 lakhs against Rs 5.29 lakhs and the net profit is Rs 1.85 lakhs as compared to the loss in the previous year of Rs 0.64 lakhs. The dividend on preference shares for half-year ended September 1956 has been paid from general reserves. The debit carried forward stands reduced from Rs 9.33 lakhs to Rs 7.58 lakhs.

£R$

Lawrence

Sales of Lawrence Jute Company Limited have declined sharply from Rs 1.49 crores to Rs 0.53 crores, but this, of course, is owing to the sale of loom hours. Thus, purchases are an item which cost only Rs 21.14 lakhs against Rs 90.54 lakhs, and salaries, wages and bonus stand reduced from Rs 31.30 lakhs to Rs 5.82 lakhs. On the income side, sale of loom hours fetched Rs 7.08 lakhs against Rs 0.44 lakhs, while hire of machinery accounted for another Rs 2.70 lakhs. There was further a profit of Rs 3.58 lakhs on sale of assets. The provision for Wealth Tax is Rs 0.32 lakhs, and the amount set apart for depreciation has risen from Rs 1.62 lakhs to Rs 3.58 lakhs. That the arrangement relating to sale of loom hours has been extremely satisfactory for the company is attested to by the fact that the company has earned a profit of Rs 13.40 lakhs as against a loss suffered in the earlier year of Rs 8.52 lakhs.

A transfer of Rs 2 lakhs has been made to the Stores and Spare Parts Reserve, of Rs 1.50 lakhs to Tax Contingency Reserve, of Rs 2.50 lakhs to Development Rebate Reserve and of Rs 1 lakh to General Reserve. The year's profit has been sufficient for the company to pay the preferential dividend for 1956-57, 1957-58 and 1958-59; and there was sufficient left over to allow of an ordinary dividend, though at a nominal rate of 2 per cent.

The paid-up capital of Lawrence Jute is Rs 40 lakhs, of which Rs 5 lakhs is in 7 per cent cumulative and Rs 10 lakhs in 5½ per cent cumulative preference shares. The Reserves and Surplus stand at Rs 24.29 lakhs. Fixed Assets, by virtue of the sale during the year, are shown to be sharply reduced; the book value of the block has declined from Rs 96.09 lakhs to Rs 50.75 lakhs.

£R$

Kinnison

An interesting fact about the Kinnison Jute Mills Company Limited is that, with the approval by the Calcutta High Court in March 1959,

Standard Jute Company Limited is now a subsidiary of Kinnison. The scheme of arrangement was for the issue of one share of Rs 100 each in Kinnison for every two ordinary shares of Rs 70 each in Standard. Thus, the final dividend paid by Standard for the year is on the capital as increased by shares given to the erst-while shareholders of Standard.

Kinnison Jute's sales rose slightly from Rs 3.41 crores to Rs 3.52 crores. Provision for Wealth Tax is slightly higher at Rs 0.68 lakhs, while the amount set apart for depreciation has declined from Rs 9.92 lakhs to Rs 8.88 lakhs. The profit for the year amounts to Rs 9.94 lakhs against a loss of Rs 0.30 lakhs.

After providing slightly more than half a lakh for statutory Development Rebate, a transfer of Rs 3 lakhs has been made to Machinery Replacement Reserve. Not only has the amount involved in the dividend risen, but the effective rate of dividend on ordinary shares is also higher. While ordinary shareholders received 5 per cent in 1957-58, the dividend proposed for 1958-59 envisages a payment of 5 per cent on the increased capital in addition to the 5 per cent interim paid earlier in the year on the original capital.

The capital of Kinnison Jute has risen from Rs 63 lakhs to Rs 72.59 lakhs. The reserves and surplus are slightly higher at Rs 81.37 lakhs against Rs 77.53 lakhs. The gross block of Rs 2.41 crores has a net value of Rs 1.24 crores.

£R$

Northbrook

Northbrook Jute Company Limited improved its sales from Rs 1.42 crores to Rs 1.82 crores, and, at the same time, received a larger amount by sale of loom hours at Rs 1.85 lakhs against a negligible sum in the earlier year. An amount of Rs 0.39 lakhs has been provided for Wealth Tax, and depreciation gets slightly more at Rs 5.68 lakhs. As a result, there is a profit of Rs 8.44 lakhs against a loss in the earlier year of Rs 2.53 lakhs. After providing for statutory Development Rebate, there is a transfer of Rs 3 lakhs to Machinery Replacement Reserve. The ordinary dividend is being paid at 12½ per cent.

The capital of the company is Rs 31.80 lakhs, and this is exceeded by reserves and surplus, which are placed at Rs 49.31 lakhs. The gross block of the company, at Rs 1.36 crores, stands reduced by depreciation to Rs 69.55 lakhs.

Union

Union Jute Company Limited, which has reported a small decline in sales from Rs 1.99 crores to Rs 1.88 crores, has also reported a considerable decline in the profit after tax and depreciation. But the severity of the decline is to be explained by the fact that, in 1957-58, a sum of Rs 19.32 lakhs represented the profit on sales of assets. Thus, in the current year, after providing a total of Rs 4.33 lakhs for tax and Wealth Tax, as against nil in the previous year, and after setting apart Rs 4.47 lakhs against Rs 4.92 lakhs for depreciation, the company earned a net profit of Rs 15.36 lakhs against Rs 29.53 lakhs. Transfers to funds are unchanged at Rs 1 lakh, Rs 2 lakhs and Rs 1 lakh in the cases of Jute Stock Reserve, the Tax Contingency Reserve and Development Rebate Reserve respectively. The provision for Stores and Spare Reserves, at Rs 2 lakhs in 1957-58, has been skipped. The transfer to General Reserve is lower by Rs 0.50 lakhs at Rs 3.50 lakhs. Ordinary shareholders had their dividend stepped up from 15 per cent to 20 per cent inclusive of the interim.

£R$

Champdany

The accounts of Champdany Jute Company Limited, under the Managing Agency of James Finlay, show that sales have declined somewhat from Rs 3.33 crores to Rs 3.05 crores. The company has earned a net profit of Rs 9.69 lakhs, as against the loss in the previous year of Rs 0.26 lakhs, after providing Rs 6.06 lakhs (Rs 8.53 lakhs) for depreciation. Inclusive of such items as profit on sale of machinery, the balance taken to the appropriation account is much higher at Rs 10.52 lakhs against Rs 1.78 lakhs. This has enabled the company to wipa out the debit brought forward of Rs 5.46 lakhs and to pay a dividend on the ordinary shares at 7 per cent.

Against the capital of Rs 59.16 lakhs, Champdany has reserves and surplus amounting to Rs 77.50 lakhs. The fixed assets of the company have a book value of Rs 94.23 lakhs as against Rs 1.04 crores in the earlier balance sheet.

The Directors' Report points out that, during the current financial year, the company has so far been operating profitably. As such, the guarded statement is made that "the outlook to this extent is not unsatisfactory."

THE HONGKONG AND SHANGHAI BANKING CORPORATION
(Incorporated in Hong Kong with Limited Liability)
Head Office: HONG KONG
Chairman and Chief Manager: The Hon. MICHAEL W. TURNER, C.B.E
Deputy Chief Manager: C. O. W. STEWART
London Office 9, Gracechurc Street E.C.3.

Capital Authorised - Hong Kong $ 100,000,000
Capital Issued and Fully Paid up - Hong Kong $ 62,311,375
Reserve Fund Sterling £ 8,000,000

Banking and Exchange Business of every description transacted with the principal commercial centres of the world.

A comprehensive service as Trustees and Executors is also undertaken by the Bank's Trustee Companies in Hong Kong, London, and Singapore.

"The Wise Man in his attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right"—The Analects of Confucius.

The New Eisenhower

A WARM and friendly welcome awaits President Eisenhower when he visits India next month. Indians have been long looking forward to this visit ever since Mr Nehru had extended the formal invitation in 1956. But the President's health and pre-occupation at home did not make possible earlier the fulfilment of this desire of many millions of Indians and Americans. But the last year has seen a remarkable improvement in Mr Eisenhower's health. One of the most interesting things in recent months has been the revaluation of Mr Eisenhower's personality during the last year or so. Many observers consider that there has occurred a sudden maturing of the President's own personality in the last year: others, more modestly, think that they had tended all along to underestimate him. In either case, until last year, the popular image of the President was of an amicable fuddy-duddy, with no egghead pretensions. Enviously, this is an image that Public Relations experts of the Republican party assiduously promoted for their own devious reasons. Latterly, to the image of the golf playing, perpetually vacationing President was added the image of a semi-invalid. The President's personal secretariat, consisting of Sherman Adams and others, tended, by the way they bore themselves, to deepen the impression of the President's ineffectualness. And when his heart attack rendered it necessary for him to reduce the burden of his office, there was even criticism that he was distorting the constitutional role assigned to the office of the President. By not resigning and letting the Vice-President take over, it was argued, the country was being ruled not by the President but by his advisers.

In retrospect, much of these animadversions may seem somewhat misdirected. It is quite conceivable that the President was in his own quiet good humoured way letting political pundits have their self-important fun or self-righteous thunder at his expense. Or it may be that the exit of Sherman Adams and the death of Mr Dulles made the President take the initiative into his own hands. And last year has seen him rise, for the first time, to his full stature. In either case, for the first time in the last few years, the impression of the West labouriously undoing the effect of Soviet Union's diplomatic coups has begun to yield place to one of a confident and positive foreign policy. President Eisenhower's handling of Mr Khrushchev's American visit, in which he gave nothing away without seeming ostentatiously on the defensive against Soviet wiles, has won him the praise of even those who had put him down as a well-meaning mediocrity. His subsequent visit to some of the Western capitals, during which he tried to infuse flexibility into French and West German rigidities, has been attended with considerable success. Between now and the Summit talks and his visit to the Soviet Union, the President has many crucial tasks and it is wonderful to be assured that the President is in excellent health.

Whether Mr Eisenhower has come into his own for the first time or whether he had been all along working for the tasks he is now vigorously pursuing, it is clear that he has come to the conclusion that the time has come for him to act. Estimable as Mr Truman is, he has failed to see the true-magnitude of the task before the President of the US in the nuclear age. That is why he is opposing Mr Eisenhower's calculated and measured steps toward the summit. President Eisenhower, on the other hand, has realised that it may be his lot to go down in history as possibly one of the greatest Presidents of the US. That there is nothing crudely personal or opportunistic about the sense of his destiny is proved by the fact that its realisation has come tardily to him. He seems to feel that it is a fate that has been thrust on him and it would be both unmanly and immoral to try to evade it. It is this consciousness or discovery (as the case may be) that has imparted a new dimension to Mr Eisenhower's personality.

His Indian visit occurs at a time when events along our border would seem to justify Mr Truman rather than Mr Eisenhower. But this would be a wholly wrong reading. As Mr Nehru remarked at his Press Conference, the basis for Mr Eisenhower's faith is left intact despite the People's Republic's truculence. There is doubtless an element of irony, in the situation: India has, in its own way, helped Mr Eisenhower and the US to shed some of their distrust of Communist intentions. And, at the very moment that our arguments have partially borne fruit, some at least of these arguments have been shown up to have been fallacious. But a sense of proportion is necessary, for, the fallacy was not in the principal argument, which is still valid. In their forthcoming talks, we may be sure of two things: both Mr Nehru and Mr Eisenhower would affirm this central faith for the need to work out a basis for Communism and the free world to live together. And, being men with a sense of the ludicrous, they may also savour the piquancy of the moment of their joint assertion of it.

The Case for Managing Agency

IT is, by and large, a powerful case that Dr P. S. Lokanathan, Director-General of the National Council of Applied Economic Research, has just put forward for the continuance of the managing agency system in a timely report which, understandably, does not commit the Governing Body of the Council to the views expressed therein. Dr Lokanathan's thesis, in short, is that there is continuing need in the national economy for the integrated functions discharged by managing agents in respect of 'promotion', 'financing' and 'management'. Here, at the outset, the thesis takes note of the appreciation that the managing agents have received for "their entrepreneurial skill in pioneering as well as in expansion and innovation, their competitive resilience, their identification of interests with the financial fortunes of the principal companies, and the continuity and integration of their management." How well the managing agency system with such distinctive characteristics has functioned is brought out in the analytical sections of the report.

In the first place, the part played by managing agencies in the promotion of new public companies (other than banking and insurance companies) since the beginning of the First Plan has been quite substantial, though not predominant. The following figures are relevant in this connection because the managing agency system now operate primarily in the management of public joint stock companies:

Year	(a)	(b)
1951-52	12.1	19.5
1952-53	14.4	21.2
1953-54	12.6	14.2
1954-55	10.5	9.8
1955-56	5.4	7.8
1956-57	7.3	32.9
1957-58	17.2	20.9
1958-59	5.2	52.0

(a) No. of public companies with managing agents as per cent of total public companies registered.

(b) Authorised capital of public companies with managing agents as per cent of authorised capital of total public companies registered.

Though this promotional role of managing agencies has been substantial, it has nevertheless been a minor one. But a different picture emerges when expansion which is deemed as significant as promotion in its contribution to the growth of the economy is taken into consideration. The position in this regard is that during the three years, from 1956 to 1958, the companies under the managing agency system have accounted for 69 per cent, 53 per cent and 56 per cent, respectively, of the total value of new capital issues sanctioned. It would thus appear that managing agents have been playing a more significant role in the expansion of existing enterprises.

As for the financing role performed by managing agencies, the analysis reveals an even more favourable picture. (The relevant statistics are given in the 'Olympus' page of this issue). Firstly, in the matter of contribution to equity capital, a sample survey covering 66 agency-managed public companies in the Bombay region shows that managing agents have contributed to the share capital of those companies a minimum proportion of 25 to 35 per cent of the subscribed capital, excepting in the case of the very large companies with subscribed capital of more than a crore of rupees. Secondly, in the matter of contribution to loans and advances, two sample surveys—one covering 84 large-sized agency-managed companies in all-India and the other covering 143 middle-sized agency-managed companies in West Bengal and Bombay—no doubt show that direct loans from managing agents are comparatively insignificant. But a better measure of the role played by managing agents is provided by the considerable extent to which they guarantee secured and unsecured bank advances for working capital and long-term loans from various financial institutions. Such contingent financial liability incurred by managing agents does amount to a financial service of no mean order rendered to industry. Thirdly, while it is recognised that loans given by Government and by various financial insti-

tutions have considerably improved the structure of the capital market, the need of the private sector for the financial services of managing agents continues because of the relative insufficiency of resources for that sector for expanding programmes of industrial development and the inadequacy of private institutional arrangements to compete with Government in collecting savings.

On the question of management, however, Dr Lokanathan's study does not throw much light because an attempt made to compare the perfomance of companies under managing agents with that of companies under other forms of management was given up as inconclusive in its results. It is stated that this attempted comparison which adopted the criterion of the proportion of net profits to total capital employed over a period of years as indicative of efficiency in management was vitiated by instances of very high and very low profit rates in both cases. However, the finding is given that where a managing agency is managing a number of companies, some economies accrue to the managed companies. Even in the case of that vast majority (just under 90 per cent) of managing agencies which manage only one company each and cover between them 70 per cent of all-managed companies, the personal stake of managing agents in the single company under their control and the linking of their remuneration with the net profits of that company, it is pointed out, do provide incentives for efficiency which are not usually available for salaried executives under other forms of management.

While the arguments thus far narrated establish in a way that the managing agency system has not outlived its usefulness, the statistical picture of the coverage of managing agencies and the functions discharged by them shows, at the same time, that their role in industrial organisation is currently not a major one. Recent trends also point to a possible diminishing role of the managing agency system. The three trends noted in this connection are that many new business are being set up outside the managing agency system, official policy in regulating the terms of appointment of managing agents is becoming stricter and many of the managing agents themselves in starting new companies in recent years have not considered it necessary to follow the managing agency system. There is also no tendency towards monopoly or concentration of economic power in the sense in which it is understood in Western countries. It is explained that such concentration of power as exists (vide: Tables at the end) is not unusual in other countries operating under different systems of management. In any case, shareholders' associations can be strengthened and encouraged to bring to light individual cases of malpractices. On all these counts, therefore, there is no real case for abolishing the managing agency system. This is the broad conclusion of Dr Lokanathan's study—a conclusion which is demonstrably convincing.

TABLE 1.

Industrial Concentration—Largest Percentage of Industry Total Controlled by one Managing Agency—1956.

Industry	Cotton textiles	Jute	Tea	Sugar
Largest number of cos. managed by a single agency ...	6	9	22	6
Highest percentage of paid-up capital of cos. managed by a single agency ...	7.1	9.9	13.3	7.9
Highest percentage of net fixed assets of cos. managed by a single agency ...	10.9	15.0	10.0	7.5
Highest percentage of total assets of cos. under a single agency ...	8.4	10.9	12.6	8.8

TABLE 2.

Industrial Concentration—index of Oligopoly—Percentage of Industry Totals Controlled by Three Largest Managing Agencies—1956.

Industry	Cotton textiles	Jute	Tea	Sugar
Total no. of cos. ...	213	62	155	81
No. of cos. under 3 largest agencies ...	13	23	47	15
Percentage of paid-up capital ...	14.7	27.0	25.5	21.0
Percentage of net fixed assets	19.0	31.7	18.9	18.5
Percentage of total assets	16.3	28.3	25.4	20.7

Case for the Consumer

By A Special Correspondent

IN the 'forties, a Medical Director in an Indian State went on declaring again and again that there was no Malaria in the state capital. Actually, Malaria was rampant, but, under his instructions, attending physicians diagnosed the illness as something else. Somewhat similar is the situation now with regard to Foodgrains and Sugar. The Union Minister for Food and Agriculture has said again and again that foodgrain and sugar stocks in the country are quite enough to meet the demand. He went further and said that, in the long run, forces of demand and supply should be allowed free play so that prices might be stabilised. Actually, long queues wait for long hours in important cities for securing small rations. The rationing is now through Co-operatives. What is the result? The well-to-do buy in the black market, as also Society families, at fabulous prices. The low income groups spend much time in search of the rations, and this means so much less work and correspondingly less wages. This in turn hits the National income adversely. The competitive retailer is sitting sullen, because he has been excluded from trade in Foodgrains and Sugar for no fault of his. In the Co-operatives, the turnover is much too large compared to the small and mediocre staff, and glaring corruption in the Co-operatives, burdened with distribution work, is much blacker than the over-abused black maket. As the national income figures for 1948-1959 show, the process of industrialisation has not yet had sufficient impact on the production of consummer goods including agricultural items. The purchasing power of the rupee is fast going down as also the real standard of life of the masses. At this juncture, it may be worth while examining a few economic indicators covering the last 4 years. The following table gives the relevant data.

ECONOMIC INDICATORS.

(in crores of Rupees unless otherwise indicated)

Items	1955-56	1956-57	1957-58	1958-59	1959-60

Overall balance of payments:					
Surplus (+) or deficit (—) ...	— 12.3	—312.3	—401.5	—338.8	...
Demand liabilities of Scheduled Banks	635.67	711.88	745.94	733.62	748.06
Investments in Govt. Securities by Scheduled Banks	359.90	347.18	440.45	613.37	735.56
Percentage of Bank credit to total deposit liabilities (%)	72.98	76.58	66.34	62.00	52.44
Index of wholesale prices (base 52-53)	99.2	105.1	106.1	111.7	116.5
Consumer price Index numbers (base 1949)	96	107	112	118	123

*Week ended July 31, 1959: excluding rupee and subsidiary coins.
**Annual rate.

MONEY RATES

The bank rate has not changed much, out it did have some influence on account of a policy of selective credit control. The general rate is 4 per cent, but short term and medium term advances to Co-operatives are charged 2 per cent, and loans to cottage industries 2.5 per cent. There is no close relation between institutional and personnal credit, and the bulk of moneylenders charge 12 per cent per annum on first class security. If any thing, money rates are rising sharply, adding to costs of production, and reducing the real income of consumers. Currency in circulation does not show much inflation, but a good deal depends on the rapidity of circulation for which no figures are available in India. So far as revenue receipts and expenditure of the Central Government are concerned, dficits appear to foreshadow a series. Deficits have to be covered by borrowing or through deficit finance, and both these techniques should mean less resources available both for the producer and the consummer. On Capital Account, deficits are heavy, but it could not be otherwise in our under-developed but planned economy: the surprise is, deficits have not been larger.

WHOLESALE AND CONSUMER INDICES

With regard to the Index of whole sale prices and the consummer price Index numbers, the latest is 116.5 (August) and 123 (July) but the base years are respectively 1952-53 and 1949. It is not at all intelligible as to why the wholesale price Index was not based on the same year as the consummer price Index. What is required is an adequacy of food stuffs and other consummer goods, whether produced at home or imported from abroad, in order to save the masses from the pinch of hunger and want which would reduce the efficiency of the average worker, telling heavily on the size of the national income. For this, fiscal and monetary discipline should be of a much higher order than at present: it is not a question of maintaining the rupee at its present value, but of restoring its vaule to the 1954-55 level when the wholesale price index was at 89.6. Our leaders, on the other hand, console their conscience by preaching "austerity", "change food habits", and "miss a meal", in effect trying to draw the belt too tight round the stomach.

Industrial Policy

By A Special Correspondent

SINCE the Industrial Policy of the Government of India was announced in 1956, important changes have taken place in the country's economy. The rate of increase in industrial production has slackened. Shortage of foreign exchange has become severe and we are confronted with an acute problem of unemployment. At the same time, we are thinking in terms of a bigger and bolder Plan involving an outlay of as much as Rs 10,000 crores. In these circumstances, it is necessary to reconsider the Industrial Policy and to modify it wherever necessary so that it will be possible to mobilise the nation's resources effectively and accelerate the pace of economic progress.

The Policy Resolution of 1956, it may recalled, divided industries broadly into three categories—the first, consisting of industries the development of which would be the exclusive responsibility of the State; the second, consisting of those industries which will be progressively State-owned and in which the State will take the initiative in establishing new undertakings but in which private enterprise will also be expected to supplement the effort of the State; and the third category would include all the remaining industries whose future development would be left generally to the initiative of the private sector. The first category consisted of seventeen industries like arms and ammunition; atomic energy; iron and steel; heavy plant and machinery; coal; mineral oils; iron ore, manganese ore, etc., aircraft; air and railway transport; ship-building; generation of electricity and others. The second category contained twelve industries.

The Resolution of 1956 greatly reduced the scope of the private sector. It is of course inevitable to some extent that, in an underdeveloped country, the State should play an active part in improving the economy. But the very fact that we are an underdeveloped country shows at the same time that the State should not spurn the efforts of those individuals who have given ample proof of their initiative and enterprise in the past and who are eager to contribute their mite to the country's progress provided unnecessary hindrances are not placed in the way. Unfortunately, in India, the industrial policy is being implemented from the political angle. An indiscriminate extension of the public sector is considered to be synonymous with economic progress and encouragement of private enterprise is looked upon as something reactionary.

It is not necessary to consider here the various allegations made by the spokesmen of the two sectors against each other. What is essential is that, in the first place, this cold war should cease. The private sector may of course point out the weakness of the public sector—but in a sympathetic and helpful manner; and the Government, too, should refrain from encroaching on the sphere of the private sector. A recent instance of the latter is provided by the Uttar Pradesh Government, which have set up a Committee to consider the nationalisation of the sugar mills. The Industrial Policy Resolution has left sugar in the private sector; and, surely, it should not be open to a State Government to consider the nationalisation of a major industry like sugar without consulting the Central Government, Parliament and the representatives of the industry. It may be that ultimately nothing will happen to the sugar industry even if the UP Committee favours nationalisation. But the very fact that a State Government can seriously consider such an issue will have undesirable repercussions.

Another instance of clear encroachment of the sphere of the private sector is provided by the activities of the State Trading Corporation. When this Corporation was set up a few years ago, it was specifically stated by the Government that it would confine itself to trade with Communist countries which preferred to negotiate only with Government Corporations. But we all know how the State Trading Corporation has steadily and rapidly expanded its sphere and how its operations have adversely affected the prospects of industries like manganese ore.

Government should not only refrain from ousting the private sector from the sphere allotted to it; they should also actively encourage it to come into those fields where it has not entered so far. For example, in the sphere of oil exploration, the private sector can do useful work. The Second Five Year Plan originally allotted Rs 11.5 crores for oil exploration; but, later, this was raised to Rs 30.5 crores. But the results so far are considered to be not gratifying.

The Federation of Indian Chambers of Commerce and Industry has suggested that the private sector should be permitted to develop oil resources with the collaboration of foreign entrepreneurs. If the Government are not obsessed with ideology, and if they are really serious in this matter, they should readily welcome this offer from the industrialists. If necessary, the Industrial Policy Resolution may be suitably changed for this purpose. In any case, this Resolution was prepared nearly four years ago and conditions, as pointed out earlier, have greatly changed now. In many countries like the United Kingdom and West Germany, the trend is definitely in favour of greater encouragement to private initiative and enterprise. If, in India also, official policy could be adjusted in a spirit of realism, it will greatly facilitate rapid industrial expansion.

GOVERNMENT OF INDIA, MINISTRY OF RAILWAYS (RAILWAY BOARD)

1. *Gross earnings.*—

The approximate gross earnings for September, 1959 showed an increase of 5.95 per cent as compared with the approximates for September, 1958. Compared with the actuals for September, 1958, however, the increase shown by the approximates is 0.23 per cent. The following statement compares approximate gross earnings for September, 1959 with both approximates and actuals for September, 1958.

(Rs. in crores)

Earnings	Approximates September, 1958	Actuals September, 1958	Approximates September, 1959
Passenger ...	8.52	8.28	8.82
Other coaching ...	1.72	1.79	1.80
Goods	17.45	19.12	18.68
Others	0.55	0.66	0.62
Total	28.24	29.85	29.92

The position of cumulatives to end of September, 1959 compared with the corresponding period of the last year is as follows:—

(Rs. in crores)

	Actuals April - September 1958-59	Approximate actuals* (actuals to end of August plus approximates for September, 1959) 1959-60
Passenger ...	59.32	63.47
Other coaching ...	10.74	11.27
Goods	1,13.40	1,22.84
Others	3.20	3.48
Total	1,86.66	2,01.06

*In making comparison with the actuals for the corresponding period of the last year, the likely variation between approximates and actuals for September, 1959 should be borne in mind. For instance, in the corresponding month of the last year viz., September, 1958 the actuals were higher than the approximates by Rs. 1,61 lakhs.

2. *Wagon Loading.*—

During the month the number of wagons loaded with goods traffic increased by 4.87 per cent, on the Broad Gauge and by 3.05 per cent on the Metre Gauge as compared with September, 1958. From 1 April to 30 September, 1959 the number of wagons loaded increased by 5.84 per cent, on the Broad Gauge and by 2.48 per cent on the Metre Gauge as compared with the corresponding period of the previous year.

The details are given below.—

Comparison of figures of wagon loading on Government Railways.—

(a) *Number of wagons* (in terms of 4-wheelers) loaded during the month of September, 1959 as compared with September, 1958.

	September, 1958	September, 1959	Percentage*
Broad Gauge ...	430,161	451,100	+ 4.87
Metre Gauge ...	243,370	250,803	+ 3.05

*Inc. (+) Dec. (—) in the current month as compared with the corresponding month of the previous year.

(b) Total number of wagons (in terms of 4-wheelers) loaded from 1 April to 30 September, 1959.

	1958-9	1959-60	Percentage*
Broad Gauge ...	2,680,187	2,836,766	+ 5.84
Metre Gauge ...	1,565,020	1,603,865	+ 2.48

*Inc. (+) or Dec. (—) in 1959-60 over 1958-9.

The details of wagon loading by different commodities are set out in the following table.—

Details of wagons (in terms of 4-wheelers) loaded on Broad and Metre Gauges from 1st April to 30th September, 1959.

	1958-59	1959-60	Percentage†	1958-59	1959-60	Percentage†
	I. BROAD GAUGE			II. METRE GAUGE

EDITORIAL NOTES

Indo-German Trade

All discussions of Indo-German Trade are brought up against the growing gap between India's imports from West Germany and exports to that country. Imports into India from West Germany in 1958 were valued at Rs 93.95 crores. Exports from India to West Germany amounted to only Rs 14.70 crores or less than one-seventh of the imports. India continues to be by far the best market for West Germany in the East. As supplier to India, Germany holds the third place after UK and the USA. But India's share of Germany's total imports is less than one per cent.

The main achievement of the trade delegation to Bonn led by Mr K. B. Lall, India's Director-General of Foreign Trade, is to highlight the fact that this imbalance cannot possibly continue over any length of time, and unless reciprocity is established, India cannot continue to import German goods on the same scale as in recent years. As a result of the discussions that the delegation had with their opposite numbers in West Germany, it has been decided to set up a Commission to examine the possibilities of stepping up Indian exports to West Germany.

The main reason for the uneven development in the trade between the two countries, it has been authoritatively stated is the lack of direct contact between Indian exporters and their customers in West Germany. It is estimated that over 55 per cent of goods of Indian origin reached West Germany, not directly but through the entrepot countries, principally the United Kingdom and the Netherlands. Even of the direct trade, only a fraction is handled by Indian merchants. The Bharat Ram Mission which toured West Germany last year had suggested that the Indian mercantile community should study the German markets, build a net-work of agencies throughout the country, ensure follow-up sale and make available the necessary commercial intelligence.

The points agreed to in the recent talks between the trade delegations of the two countries should be helpful in promoting closer contact between Indian suppliers and their German customers and more efficient conduct of their business by the former. The extension of the field of operations of the Indo-German Chamber of Commerce in India will also prove helpful in this respect.

*

Private Sector's Chance

The discussions which the Lall delegation had with political and commercial leaders in West Germany were principally concerned with the ways in which Indian exports could be stepped up in the course of normal trade to an extent sufficient to wipe out the adverse deficit. The commodities which were considered in this context were iron and manganese ores, textiles, tea, coffee and handicrafts. Except for handicrafts and coffee, all others are traditional items of export, though iron ore has grown in importance only in recent years. Scope for export of coffee has not hitherto been sufficiently exploited. Germany is mainly a coffee-drinking country, but India does not supply more than one-third per cent of German imports of coffee. Offtake of Indian textiles has slightly improved last year. Relaxation of quota restrictions may enable India to get a larger proportion of West German market for cotton textiles. At present the largest supplier is Japan with an export trade in piece-goods of about DM 20 million.

Disparities in trade with East European countries are sought to be balanced over a period of years, by conclusion of agreements which provide for opening of Rupee accounts which the proceeds of imports from these countries are credited. This device is applied on a limited scale to cover imports of foodgrains from the USA under PL 480 agreements. Obviously this method has not been found suitable in the case of West Germany. Special methods adopted to achieve balance in trade with countries where foreign trade is rigidly controlled by the State, have no place in the case of a country like West Germany having an economy which places the accent on freedom and enterprise. Over eighty per cent of the German import trade is stated to be free. Increase in the volume of exports to West Germany therefore depends on the quality of the enterprise shown by our businessmen, though the Government can also assist with timely guidance and an Administration which has a watchful eye for the difficulties of exporters. The problem of increasing exports to West Germany is a challenge to the exponents of the philosophy of Free Enterprise in our country who derive great support for their ideas from the 'West German Miracle' and the economic views of Dr Erhard. And the practitioners of free enterprise have the opportunity to justify the Swatantrite ideology, by showing that they can deliver the goods in West Germany.

*

Savings & Prices

The importance of the savings movement for the success of the Third Plan was underlined by the Finance Minister in his inaugural address to the National Savings Board. It would appear that this importance of small savings, both for providing the sinews of development as well as to counter inflationary pressures generated in the process is now generally recognised except by those who are expected to contribute to the success of the savings movement. Mr Desai therefore also emphasised the need for sustained propaganda for educating the masses on the importance of the Plan and their responsibility for providing the resources for investment, 'even at the cost of stinting themselves for a few years to come'.

Propaganda is certainly necessary and can be useful in boosting collection of savings. But without minimising the importance of an educational campaign, we may suggest that the price level is also an important factor in determining the total volume of small savings. Attention has been drawn to the gap between targets and achievements in this field. The short-fall will not appear surprising if set beside the increase in the cost of living that has taken place since the targets were fixed. Savings after all have to come out of minute surpluses in millions of domestic budgets, unless compulsion is used to extract savings. While it is possible that money incomes in certain sectors have increased as a consequence of expenditure on plan projects, the gains were wiped out last year by a bad agricultural output so that gross national output registered a decline. Moreover, the volume of additional employment created during the Second Plan so far has been far below the targets set. Shortage of foreign exchange has led to rephasing of the Plan and concentration on the 'core projects' with their limited employment potential. And since the Plan was inaugurated, prices have shown a steady upward trend. While the Plan targets were being fixed in 1955, the price situation was fairly encouraging. The general index of wholesale prices at the beginning of the year stood at about 90. Since then it has steadily increased to reach 117 in August 1959, an increase of nearly one-third. The actual prices paid by the consumer have increased to a greater extent. And rise in prices of essential food stuffs has been particularly sharp in recent months. Set against these adverse factors, the collection of Rs 70 crores in small savings last year is nothing short of a miracle.

The Finance Minister has referred in his address to the gap between the gross and net collections, and described it as the measure of the effectiveness of the Board. The gap also provides a measure of the undue pressure brought to bear by over-zealous officials, to help the areas under their jurisdictions to attain the predetermined targets. As the Finance Minister has stated, such unhealthy practices are suicidal and apart from the discredit they brought, they defeated the purpose of a continuously rising investment in small savings. It is to be hoped that State Finance Ministers and the officials concerned will heed the warning of the Union Finance Minister.

If the original target of small savings, namely Rs 500 crores in five years, is to be reached so as to provide the starting point for a larger effort in the Third Plan, Government should make a determined effort to hold the price line instead of shrugging off complaints regarding the rise in cost of living as the inevitable price of economic progress.

WORLD OF FINANCE

Requirements of Next Busy Season

THE banking returns for the week ended October 30 as well as the money market tightness during the last week have both been taken to connote, in some quarters, the start of the 1959-60 busy season. It needs to be realised that divali demand during the last week of October and beginning of the month disbursements during the first week of November have been responsible for the greater pressure upon the banking system, and that it is unlikely that the busy season as such has already commenced. Our view is that slackness will return temporarily to the World of Finance during the latter half of November, and that the real busy season pressure will begin to be felt only from December. Be that as it may, it is nonetheless an opportune moment for a broad assessment of what the needs of the next busy season are likely to be.

We fancy that the expansion in Advances of Scheduled Banks will be around the same level as in the 1958-59 season, or in broad terms, Rs 200 crores. This would be because (a) floods notwithstanding, present foodgrains crops seem satisfactory; (b) industrial production is headed steadily upward, and there is the prospect of considerable new steel production coming on the market; (c) the demand for and consumption of cotton textiles are at a high pitch; and (d) the export season is this year proving to be particularly vigorous.

In terms of the present ratio of Scheduled Bank Advances to Deposits, such expansion should prove easily manageable. But what confounds the picture is the spectacular new investment in giltedged. So, it would appear that, unless Scheduled Banks sell giltedged in considerable amount, they may not have the wherewithal for meeting the busy season demand for funds. But it would be most unfortunate if indiscriminate unloading of giltedged were permitted by the Reserve Bank, since the prices of gilts would show a perceptible drop, and banks might have to bear some element of capital depreciation.

Our sugggestions for the financing of the 1959-60 busy season are here presented in a brief form; we shall revert to them at some length on a future occasion.

(1) The busy season increase in Deposits should amount to not less than Rs 125 crores; the relevant figure for the 1958-59 busy season was around Rs 100 crores.

(2) The Reserve Bank should arrange for larger auctions of Treasury Bills duing November/December, so that the accruing Deposits of Scheduled Banks in these two months may be invested in them and become available for financing the busy season during February/March 1960. The amount involved in this regard should be, we fancy, around Rs 25 crores.

(3) The Reserve Bank should indicate that, for genuine needs, it will follow a liberal policy of providing central banking credit. The expansion in Scheduled Banks borrowing from the Reserve Bank amounted to Rs 30 crores (in round figures) during the 1958-59 busy season; and the relevant figure for 1959-60 should, we suggest, be around Rs 50 crores.

(4) This will still leave an element of Rs 50 crores. (Increase in Deposits minus investment in Treasury Bills plus higher borrowings from Reserve Bank). We suggest that the Reserve Bank should be prepared for a series of "badla" transactions in respect of giltedged, with banks selling ready and buying, say, 6 months forward.

\+

Impact of Divali Disbursements

WHAT should traditionally be taken to be the last returns of the Reserve Bank in respect of the 1959 slack season are distorted by the divali demand for funds which was experienced during the week ended October 30. However, if the past two years have been any guide, it is not at all unlikely that, although the slack season has "officially" drawn to its close, banking indicators during November will continue to reflect relatively slack money market conditions.

The return of the Issue Department discloses a rather sharp increase of Rs 17.96 crores to Rs 1686.20 crores in active note circulation. That the expansion in currency circulation has been due mainly to widely dispersed divali demand is confirmed by the outflow of rupee coin in the considerable amount of Rs 2.06 crores. Both these are reflected in a drawing down in the Reserve Bank's cash in the till by Rs 19.96 crores to Rs 10.69 crores.

The divali demand has also placed some strain upon Scheduled Banks. This is obvious from the fact that their Reserve Balances are marked lower by Rs 7.47 crores at Rs 73.44 crores. What is more, resort has been had on a considerable scale to central banking credit, as witness the sizable rise of Rs 11.85 crores to Rs 92.47 crores in the Other Loans and Advances of the Reserve Bank. It is therefore to be anticipated that the return of Scheduled Banks for October 30 will reveal both a decline in Deposits and a rise in Advances.

The position of the Central Government is somewhat intriguing. Their balances are lower by Rs 12.39 crores at Rs 55.01 crores, but this was clearly owing to some payments to the State Governments, whose Deposits have improved by almost exactly the same figure of Rs 12.07 crores to Rs 30.26 crores. But, then, Investments of the Reserve Bank, as shown in the Banking Department, are lower by Rs 5.89 crores at Rs 240.64 crores; and Government Treasury Bills purchased and discounted by the Reserve Bank are marked down by Rs 6.80 crores at Rs 23.57 crores. It is improbable that the decline in Investments is symptomatic of tap sales; indeed, the State Bank figures during the week as a small net disinvestor in giltedged; and the decline in the Treasury Bills portfolio can only mean that Government would have had a maturing obligation to meet. On the face of it, there appears to have been reverse ad hocs instituted for Rs 12 crores, but this would imply that the Centre's net receipts during the week were very satisfactory.

The State Governments have obviously received payment from the Centre, though they have nevertheless somewhat increased their indebtedness to the Reserve Bank by Rs 1.70 crores to Rs 20.25 crores.

The most striking and heartening change in the Reserve Bank returns is the sharp rise of Rs 10.33 crores to Rs 35.19 crores in Balances Held Abroad. No doubt, this is due to a combination of export surplus and foreign assistance receipts. With the current week's accretion, Foreign exchange holdings of the Reserve Bank, in both Departments, exceed Rs 198 crores. Our expectation, therefore, of a rise of Rs 50 crores by the end of March 1960 may be more than fulfilled. We repeat here our suggestion that, if foreign exchange reserves should, by the end of the export season, exceed Rs 225 crores, part should be utilised in the repurchase of currency from the International Monetary Fund, so that we may bring about the position in which we could have larger recourse to the IMF during the fag-end of the Third Plan period. It would also be desirable for an analysis expeditiously being made by the Reserve Bank of the balance of payments figures, so that, to the extent possible, a continuance of trends is facilitated during the slack season in exports by suitable and appropriate governmental measures. We would here like to remark that the trade surplus is possibly also in part due to a still lower level of imports, presumably as a result of improved industrial production at home. It would be helpful if the Reserve Bank could from time to time indicate the extent to which foreign assistance has contributed to any rise in exchange reserves. Overall, it is clear that the foreign exchange situation is rather less bleak than it has been for a long time.

\+

The return of the State Bank for October 30 confirms that considerable strain was imposed by the divali demand for funds. Constituents have apparently financed their divali expenditure by a combination of drawing on their Deposits and increased resort to bank credit. The Deposits of the State Bank, in the latest week, have declined by Rs 7.80 crores to Rs 569.66 crores; and, meantime, the total of Advances has risen by Rs 3.66 crores to Rs 161.30 crores. There has been disinvestment in giltedged for Rs 1.42 crores, but this may relate only to maturing treasury bill holdings not renewed by fresh purchases. Other Assets have been "encashed" for Rs 5.30 crores. In the end result, cash in hand and with Reserve Bank shows a fall of Rs 4.76 crores to Rs 23.78 crores. The next return of the State Bank, reflecting as it will month-early disbursements, may mark further rise in Advances.

\+

The return of Scheduled Banks for October 23 has largely confirmed our expectation of last week, though Advances have not shown a perceptible decline. Deposits, in rising by Rs 15.85 crores, are at a new peak of Rs 1874.85 crores. It is not to be doubted that, by the second week in November, the Rs 1900 crores mark will be pierced, despite the likelihood of Deposits being drawn during the week ended October 30 for meeting divali disbursements. Also as expected, Investments are sharply higher by almost exactly Rs 15 crores at Rs 795.13 crores. But it may take another two weeks for the Rs 800 crore level to be touched, since divali as well as month early disbursements thereafter will reduce banks' appetite for fresh investment. In any event, Investments as at October 23 exceed Advances, excluding inland and foreign bills; however, this state of affairs may be reversed from next week, and conceivably until the end of the 1959-60 busy season. Cash balances are slightly lower by Rs 2.20 crores at Rs 169.47 crores.

The return of Scheduled Banks for October 30 may show a drop in Deposits as well as a rise in Advances and in borrowings from the Reserve Bank and the State Bank. The situation in regard to the investment portfolio is not quite clear; if tap purchases have been made, they should be reflected in a rise in giltedged, nothwithstanding disinvestment during the week by the State Bank; on the other hand, as is more likely, some element of sales would result in a somewhat denuded giltedged portfolio. These trends should all continue to be reflected in the return for the first week in November as well, since the impact would then be felt of beginning of the month disbursements.

Hongkong & Shanghai

The Hongkong and Shanghai Banking Corporation, Calcutta, have sent the following communication:

The Boards of the Hongkong and Shanghai Banking Corporation and the British Bank of the Middle East announce that agreement has now been reached, subject to formal contract, under which the Hongkong and Shanghai Banking Corporation will make an offer to the shareholders of the British Bank of the Middle East to acquire their shares in exchange for new shares of the Hongkong and Shanghai Banking Corporation to be issued, credited as fully paid, on the basis of one new share of the Hongkong and Shanghai Banking Corporation for every 14 shares (ex interim dividend to be declared on 10th November 1959) of the British Bank of the Middle East which it is anticipated will be unchanged. The new shares of the Hongkong and Shanghai Banking Corporation will rank pari passu in all respects with the existing shares and will be registered on the London register. The Directors of the British Bank of the Middle East have agreed to recommend this offer for acceptance. Shareholders of the British Bank of the Middle East who do not wish to receive shares of the Hongkong and Shanghai Banking Corporation are to be given the option of taking cash at the rate of £3-17-6 per share (ex interim dividend declared on 10th November 1959) of the British Bank of the Middle East. The offer will be conditional (inter alia) upon acceptance in respect of 90 per cent (or such lesser percentage as the Hongkong and Shanghai Banking Corporation may decide) of the shares of the British Bank of the Middle East and upon permission to deal in and quotations for the new shares of the Hongkong and Shanghai Banking Corporation to be issued in exchange being granted by the Council of the Stock Exchange, London.

If the offer is successful, it is the intention of the Hongkong and Shanghai Banking Corporation to be retain the separate identity and management of the British Bank of the Middle East operating in accordance with its Royal Charter which provides for its Board meetings to be held in England. Full details of the offer will be communicated to shareholders of the British Bank of the Middle East as soon as possible.

S. E. RLY TENDERS

Sealed tenders are invited for (1) Tender No. PB|14|59|GM|1020|HD for CBP(59) for supply of 37 Nos. Train Lighting Dynamo complete with fittings conforming to specification IRS—No. E1-48. Earnest money is Rs 3,854/-. Tenders will be opened on 7-12-59 at 3 P.M. (2) Tender No. CON|COS|94|F1|59 for supply of 7466 Rft. pipe soil 4" dia Hand Cast Iron 6' long. Specification BSS 416 medium grade. Earnest money is Rs 425/-. Tenders will be opened on 23-11-59 at 12 noon. (3) Tender No. CON|COS|93|F2|59 for supply of 1521 Nos. point slide joint screw 1 or 2 way Butt End. Specification IRS Drawing No. SA5813A. Earnest money is Rs 300/-. Tenders will be opened on 23-11-59 at 12 noon.

The cost of the tender form for item No. (1) is Rs 5/- per tender and Rs 2/- per tender for items Nos. (2) and (3) which are not refundable. Tender forms are obtainable from the office of the undermentioned, S. E. Rly., at Garden Reach, Calcutta-23 on remittance of the cost of tender form or by money order to him direct in the case of outside firms and on production of cash receipts from this Rly's Chief Cashier at Garden Reach by local firms. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate along with the Earnest money deposit receipt with the tender.

British Debt Repayment to the US

By Paul Einzig

THE announcement of the British Government's decision to repay $250 million to the Export-Import Bank before maturity came as a welcome surprise, because it indicates the Government's confidence in the strength of sterling. It is also a gesture of goodwill and cooperation. Political circles are puzzled about the timing of the operation for after the general election. It would have been to the advantage of the Conservatives if the repayment had been made in time to influence the election result. The announcement of the decision shortly before polling day would have induced many floating voters to vote Conservative. Since the Government has increased its majority anyhow, this aspect of the matter is of no practical importance. Anyhow, it would not have been fair to weaken the defences of sterling on the eve of the election, because in case of a Labour victory the new Government would have needed the $250 million and a great deal more to face the resulting pressure on sterling.

All experts agree that the reduction of the gold and dollar reserve by some £85 million makes no difference from the point of view of the prospects of sterling. The autumn season is now fairly advanced, and yet sterling is still at a premium. The authorities continue to be able to increase their gold reserve month after month. Although the influx of capital from abroad for investment following on the election result is believed to have been less than expected, in the course of the next year or so it is likely to attain a considerable amount. The current balance of payments, too, is viewed with optimism: It is hoped that the gold reserve will be replenished in due course.

This repayment of the $250 million before maturity is believed to have been only the first step in Britain's effort to repay in kind the invaluable assistance received from the United States over the last two decades. It may be considered certain that the Government will do away with the remaining discrimination against dollar imports in the near future. It is true, a removal of the quota on American car imports may not be of immediate practical significance, seeing that at present American cars are not sufficiently competitive on the British market to reach even the existing quota. But the possibility for expansion is a matter of some importance.

Britain will help the United States also by increased assistance to underdeveloped countries. This would enable the United States to reduce their share in the assistance without thereby risking an economic setback in the underdeveloped countries or their political reorientation resulting from aid they might receive from the Communist Bloc.

Another direction in which Britain is likely to be helpful to the dollar is by the removal of the remaining exchange controls on sterling, as far as non-residents are concerned, and by a relaxation of that control for United Kingdom residents. If the dollar remains the only major currency that is convertible it is bound to bear the main burden of international pressure, but if there are several convertible currencies that burden is more evenly spread amongst them. Admittedly, immediate benefit to the dollar is likely to arise from the progress toward sterling convertibility. But it will be a change in the right direction in the long run. Under the gold standard in the old days when only one gold currency was genuinely on the gold standard it was bound to be exposed to shocks, while when there were several of them the system was apt to operate more satisfactorily.

The British gesture is liable to help the United States by providing an example for other free countries to follow. Many of them are in a position to help, and now that Britain has given a lead they are more likely to do their best. All are under a debt of gratitude towards the United States for help received, and now that Britain has shown the way to discharge this debt other countries will feel morally bound to follow the lead.

Western Germany is well in a position to do so. France in particular is likely to be in a position to prove its gratitude for American aid received. If and when the Algerian problem is solved there is bound to be a wholesale repatriation of French funds from the United States. Then it will be for the French authorities to ensure that this movement should not result in a pressure on the dollar and a large-scale outflow of gold from the United States. It is true, the gold is there and the United States could well afford to pay out all foreign holders of dollars. Nevertheless a large-scale withdrawal might be embarrassing. It is for the French authorities to acquire and hold the dollars sold by French private holders.

The history of 1926-28, when the repatriation of French funds from London resulted in a strong pressure on sterling and was largely responsible for the eventual suspension of the gold standard in 1931, must not be allowed to repeat itself. At that time the French authorities made use of their increased financial power over sterling to bring political pressure to bear on Britain, thereby undermining confidence in sterling. This history at any rate must not repeat itself. The French Government must be fully aware that the economic strength of the United States and the technical strength of the dollar are a matter of vital interest to the democratic countries.

Although we are still a long way from a settlement of the Algerian problem, there are already repatriations of French capital as a result of the increased stability of the French Government and the revival of prosperity in France. It is necessary to envisage a substantial increase of this movement. France will want to increase her gold reserve to a level that would impress the world with the changed economic position. Much of the additional gold would have to come out of the United States gold stock. It is to the interest of the free world that neither France nor any of the Western countries should draw extensively on that gold reserve for the sake of building up their own reserves.

Recent official pronouncement in favour of removing discrimination must be followed by action on the part of all free countries. Technically the United States Government would have been in a position to insist on non-discrimination under the Bretton Woods rules, until recently there has been no such insistence. Most coutries could now well afford, however, to abandon discrimination. Action to that end would be welcome not only as a means for relieving pressure on the balance of payments of the United States but also as a gesture of solidarity. It should be made evident that economic assistance is of reciprocal character. Even though the United States remains by far the strongest economid unit in the free world, other units have become strong enough to be able to reciprocate past assistance.

—(Copyright).

WORLD OF JUTE

Raw Jute Supply

AN irregular trend prevailed in the jute markets during the past week. While hessian remained inactive with a quiet undertone throughout the period, both sacking and raw jute developed a hardening tendency toward close. It would appear that sentiment in hessian had been adversely affected by the continuance of the US Steel strike. One of the main contributory factors for the steadiness of hessian in recent weeks was the expectation that with the early end of the steel strike, industrial demand for burlap would pick up. The sacking section tended to be easier in earlier dealings in the absence of overseas support. In later dealings prices in this section developed a hardening tendency in sympathy with the futures market. The raw jute market also commenced the week on a quiet note but toward close became steadier following improvement in sentiment in the futures section.

The jute goods market opened last Thursday on a quiet note in the absence of overseas interest. B Twills Oct closed at Rs 102.20 with Hessian 40"×10oz finally marked at Rs 40.55. Conditions continued unchanged on Friday also despite some Diwali business reported done. B Twills Oct receded to Rs 102 while Hessian also came back further to Rs 40.35. The downtrend became well pronounced on Monday especially in the sacking section, but in the next two days sacking prices gained ground and B Twills Ready was finally placed on Wednesday at Rs 103.25. The steadiness noticed in the section toward close stemmed mainly from the trend in the futures market as business passing continued to be at a low ebb. Hessian, however, showed little change and Hessian 40" x 10 oz Ready closed on Wednesday at Rs 40.65.

After ruling unchanged most of the time, the raw jute market steadied up toward close. Assam Bottoms which was quoting at Rs 20.25 earlier in the week moved up to close at Rs 20.50. The improvement in sentiment followed the trend in the futures market where Assam Bottoms December which opened the week at Rs 23.78 was taken to Rs 24.16 by close on Wednesday on heavy bear covering.

Although mills had shown some buying interest during the week, the quantities involved were not large. It would appear that the lack of sustained interest stemmed from the fact that mills are already in possession of sufficient stocks to meet their requirements for about three months. Stocks of raw jute with mills at the end of September 1959 were placed at 1,143,000 bales. Though there had been a decline of 165,000 bales as compared with the previous month, September-end stocks were larger than those at the corresponding date of last year. For, stocks of raw jute with mills at the end of September 1956 were only 711,000 bales.

Apart from their satisfactory stock position, mills seem to hold the view that the supply position in raw jute in the current season will be comfortable. This assessment has issued from the belief that the large carry over from last season together with the fairly large size of the current season crop will be more than enough to meet the requirements of domestic consumption and export. Raw jute interests, however, seem to think that a lower outturn this season has been further reduced by damages due to the floods. In support of this theory it is pointed out that raw jute arrivals so far this season in Calcutta and mill stations have been on a much reduced level as compared with the corresponding period of last year.

Raw jute arrivals during the first three months of the current season have amounted to about 10 lakh bales, some 87000 bales less than the total for the corresponding period of last year. Arrivals in September this year, though bigger than in the previous month, are considerably lower than in September last year.

It is, however, pointed out that it would be wrong to base calculations as to the availability of raw jute this season on the trend of raw jute arrivals so far. For, in the first place a major portion of the crop was out of the fields before the floods came. Secondly, the movement of the crop has been severely retarded by the disruption of communications due to the floods. With the return of sunny weather and the consequent improvement in communications, arrivals in coming months will show a sizable improvement.

* * *

IMPROVING YIELD & QUALITY OF JUTE: NEW METHODS FOUND BY ICJC.

Increased yield and improved quality of fibre resulting from the treatment of jute seeds with a new nitrozen-fixing strain of Azotobacter bacteria was reported to the Agricultural Research Sub-Committee of the Indian Central Jute Committee which met in Calcutta on November 4, under the chairmanship of Dr S. M. Sikka, Additional Agricultural Commissioner, Government of India.

The Jute Agricultural Research Institution of the ICJC, it was stated, was now conducting extensive field trials to obtain further data on economic utilisation of these bacteria.

The use of *shoti* (Curcuma sp.) leaves as covering for jute plants during the retting process was found to have improved the quality of fibre under Assam conditions. The Sub-Committee noted that similar results had been obtained in Uttar Pradesh by the use of *sarkanda* or *kans* (*Saccharum spontaneum*).

Among other important research findings reported to the Sub-Committee was the evolution of jute strains resistant to stemrot, the common disease of the crop, and similar disease-resistant strains of mesta (*Hibiscus cannabinus*) obtained by crossing the cultivated variety with a wild species.

The crop rotational trials conducted by the Jute Agricultural Research Institute, it was revealed, had indicated a positive response in the yield of paddy to the fertilizing effect of the fall of jute leaves. A paddy crop following jute was found to have yielded 26 maunds per acre against 23 maunds obtained from paddy alone.

WORLD OF TEA

Indian Tea in US Market

IT is now generally accepted that if our exports of tea have to be maintained at a satisfactory level, we have to develop new markets as competition from other tea producing countries has greatly increased in our traditional markets. The outlook in this regard is considered good in view of the increasing popularity of tea as a beverage in a number of countries where till recent years it commanded little attention from the general population.

One of the important countries where tea is gaining ground is the USA. It is but natural, therefore, that India should take concerted measures to improve its position in the US tea market. But it would appear that efforts in this direction have not been such as to yield the desired results. For, our tea exports to this country do not seem to be making much headway. For instance, in the first seven months of the current year, supplies from India have amounted to 17.86 million pounds out of the total imports of the US during this period of 66.11 million pounds. It is to be noted that imports of tea in US are showing an uptrend for during the corresponding period of last year imports totalled only 62.63 million pounds. Against this increased imports, India's share during the first seven months of the current year has decreased as during the corresponding period of last year supplies from India were of the order of 19.83 million pounds. Mr M. Gopala Menon, India's Counsul-General in New York, has this week referred to the worsening of India's position in the US tea market during the last five or six years. Speaking at a convention of the US Tea Association, Mr Menon has pointed out that despite the fact that tea consumption has been increasing in US, imports of Indian tea into the country during 1953-58 do not reveal a rising trend.

At Monday's export sale in Calcutta, there was again a good general demand. A firm trend developed in Plain teas but some "teas for price" and those with a stalky and fibrous appearance were slightly easier. While Medium Brokens and Fannings ruled generally steady, dearer rates were paid for any bright liquoring teas. Black clean BOPs and OFs both from Dooars and Assam were well supported and those with bright liquors were dearer but the plainer liquoring sorts and those with inferior leaf were easier. CTC teas met with good request with buyers showing more interest in BPs and some of the cheaper varieties, while the best were steady. An easier trend prevailed in Fannings and the plainer liquoring medium BPs. Legg-cut Dooars were well supported with the brighter liquoring sorts often dearer. The plainer or more fibrous sorts were slightly lower than previous valuations. While Whole leaf grades generally sold well Darjeelings met with better demand at about previous rates. Quotations: Clean Black Pekoe Rs 2.04 to Rs 2.08; Plan BP Rs 1.88 to Rs 1.90 Plain Fannings Rs 2.04 to Rs 2.12; Medium BP Rs 1.90 to Rs 2.08; Medium Fannings Rs 2.14 to Rs 2.24; Best Assam CTC, BP Rs 2.60 to Rs 2.80; Best Assam CTC Fannings Rs 2.60 to Rs 2.90.

A good general demand was witnessed at this week's internal sale in Calcutta. As the sale progressed buyers evinced keen interest in most types and teas suitable for export received a good deal of attention. Offerings totalled 21,788 chests. Orthodox teas came to a firm market while Leggcut teas also met with good request. An irregular trend again prevailed in Medium CTCs which sold generally up to 10 nP and sometimes 15 nP below last valuations. Good support was also forthcoming for the few lines of the very best CTC. A generally irregular tendency prevailed in Darjeeling teas but at times they fetched rates higher than at the previous sale. Quotations: Medium Dooars Dust Rs 1.98 to Rs 2.02; Medium Assam CTC Dust Rs 2.00 to Rs 2.10; Best Assam CTC Dust Rs 2.50 to Rs 2.80.

Offerings totalled 12.5 lakh lbs. of leaf tea at the export sale held on 27th October in Cochin. There was a good general demand with low medium broken teas irregularly 5 nP per lb easier. Fannings grades were, however, firm. Medium and good medium sorts were fully firm while high-grown brokens were considerably easier. Similar fanning types were dearer while whole leaf teas displayed an irregular trend.

At the Export sale held in Chittagong this week there was a strong demand with best liquoring teas getting a good deal of attention. A total of 14,740 chests were on offer. Leggcut Fannings especially those with brighter liquors were in good demand and sold two to four annas higher than previous valuations.

WORLD OF BUSINESS

The Calcutta Tramways Company Ltd.

The year 1958 was for the Calcutta Tramway Company a period of frustration and it had to face adverse operating conditions. The company suffered a severe set back arising out of the August-September strike which resulted in the decrease in the number of passengers carried from 402 million in 1957 to 366 million in 1958. Consequently the traffic receipts of the company also dwindled to £1,760,000 in the year under review from the previous year's £1,950,000. The strike also affected the Company's balance on revenue, for it fell to £130,000 as against the previous year's £255,000. After setting apart £80,000 for replacements and renewals and charging London office and development expenses, the surplus left for the year was only £17,041 compared with £137,041 last year. These facts were revealed by Mr David Webb, the Chairman of the company in his address to the company's Annual General Meeting.

The balance sheet of the company recorded a drop of £76,900 in its cash resources in the current year. The Chairman drew pointed attention of those present in the meeting to the need of maintaining a substantial cash resource in the company to face all future crises.

The Chairman informed the shareholders that in the revenue appropriation account, Debenture interest has been charged and the shareholders' account credited with £87,457. The signing of an agreement in 1951 with the Government enabled the company to charge the deficit of £94,922 against special reserve.

It must be noted that but for the efficient handling of the company's affairs, the results would have been more disheartening. Due praise has been given to the executive staff of the company by Mr Webb, for their ability to tackle even unexpected situations. He further added that due to the resistance of Trade Unions the company was forced to keep in cold storage its proposed increase in fares and the enhancement of wages. This matter was referred to a specially constituted Tribunal for adjudication. The delay in giving a final verdict prevented the company from initiating any move for the betterment of its employees. The Chairman also lamented that the company's revenue was frozen and all suggested improvements and modernisation had to be postponed.

The long awaited award of Mr G. N. Das, the special Tribunal has appeared at last. Though it affords some immediate benefits to workers it is clear that the company's stand has been vindicated by the Tribunal. The workers are to get the benefit of 5 per cent increase in basic wages, subject to a minimum of Rs 5. The Tribunal stated that "the increased benefit on retirement should be in the shape of a retiring gratuity of half a month's pay (basic wages) for every completed year of service in case of retirement and/or resignation (55 years or over) and retirement on medical grounds and/or death".

The Tribunal found that the existing resources of the company are inadequate for meeting the additional liability of increased wages and retirement benefits .On the issue of raising the existing fares by one naya paisa, the Tribunal was not able to take a decision since the Advisory Committee is responsible for settling the issue.

*

Aluminium Corporation

With the holding of its 21st annual general meeting last week, Aluminium Corporation of India Ltd has come of age; and the address delivered on the occasion by Mr Lakshmipat Singhania, its Chairman, demonstrates clearly that the company is in process of coming into the possession of stalwart strength. For, the last year's results (which were analysed in last week's Indian Finance, in the section, For the Investor) are the best in the company's history and disclose that, as Mr Singhania said, the company is in "a very healthy and sound position". How powerful a youngster Aluminium Corporation is going to prove to be is indicated by its expansion programme to treble the existing production capacity; and, for this purpose, the company, which had been built up in the past without any foreign collaboration whatever, is seeking the technical assistance of a Germany company. Mr Singhania hopes that, in a very short time, "the scheme will come in active operation".

ACI's Chairman has then gone on to analyse the aluminium industry's general condition; and he has drawn attention to the need for ensuring that production must be at an economic cost, since otherwise there is the danger of declining consumption. In this context, he has stressed that regard must be had primarily for the availability of power as well as its cost, since, for aluminium, power is the "most important raw material."

Mr Singhania has finally proceeded to the difficulties experienced by this country to procure the assistance necessary for industrialisation. He has given reasons why the purchase of plant and equipment, and the securing of technical assistance, from America usually is disadvantageous. His suggestion is that red tapism in Government has to be reduced to the minimum, if quicker industrialisation is to be facilitated.

WORLD OVERSEAS

US Notes

On the basis of credits being made available by banks here, it seems certain that US merchandise imports will continue to run ahead of last year's pace right through the rest of this year. And it should be remembered that the fourth quarter of 1958 represented a rising import trend, with December showing the largest monthly total for the year.

Actual 1959 statistics, of course, are available only for the first eight months. But they tell a remarkable story. With US imports close to the $9,900 million mark, they have risen nearly 20 per cent from the same period of 1958. The figures clearly point to a 1959 import total of some $15,000 million or more, compared with last year's $12,800 million and 1957's $13,000 million, the annual high so far.

But these totals by themselves tell only part of the story. The other part lies in the impact of this soaring trade on American buying habits, and vice versa. Reports from all over the US indicate that the volume of foreign merchandise sold by American department stores, mail order houses and speciality concerns is rising sharply. This Christmas season American shoppers will have a wider range of imported items to choose from than ever before.

Among these are such "unusual" items as bird cages, maps, native art, and all kinds of exotic foods. These are in addition to the rising sales of "established" import items, such as clothing, toys, lingerie, linens, glassware, furniture, rugs and radios.

Foreign retail wares have been coming into the United States in quantity for many years, of course. But the increase during the past few years has been truly phenomenal. In the first six months of this year, US imports of finished consumer items alone, excluding food, totalled $1,099 million, up a hefty 47 per cent from the same period of last year. And it should be noted that the 1958 total was more than triple the amount brought into the US as recently as 1950.

Importation of foreign consumer products is not only increasing in volume, but also is spreading to companies and retail outlets which have handled few, if any, imported goods, in the past.' One large company, which operates hundreds of stores from New York to California, has sent 14 buyers to the Far East and Europe this year, compared with only one or two in the past. Another major concern has about two dozen buyers travelling abroad this year, double last year's number.

American Merchants see several factors behind this tremendous growth of imported consumer merchandise. An obvious one, of course, is the gowing number of American travelling abroad, a trend which has heightened American interest in foreign goods. Another is price; some goods often can be purchased abroad cheaper than in the US. A third is the desire of American companies to keep up with the competition; as more and more American merchants find a profitable market in selling imported wares, others must follow suit if they are to maintain or enlarge their clientele.

Equally significant factors are to be found in the vast changes taking place abroad—an expanding industrial development and a growing foreign interest in the thriving American market. This has been manifest, first of all, in a greater availability of foreign products, and second of all, in a foreign willingness to adapt these products to the practicalities of the American market. As an example, a number of clothing manufacturers in other lands have studied American fashions and sizes to overcome the style and fitting difficulties they otherwise might encounter in selling to the US.

This does not mean that there are no problems involved for American retailers handling foreign merchandise. They have to be sure, for instance, of having adequate stocks on hand. Then again, quick reorder of fast-selling merchandise is not always possible with imports. And in some cases, difficulties have been encountered in maintaining a desired uniformity of the imported product.

Despie these drawbacks, however, Americans—merchants and consumers alike—continue to show a strong and growing interest in foreign merchandise. And from present indications, at least, no end to this trend appears in sight.

■

France

The over-all index of French industrial production, excluding construction and calculated on a base of 100 in 1952, was 152 last July, which was 11 per cent lower than in January 1959 (169), but 2.7 per cent higher than in July 1958 (148).

Including construction, the production index was 148, which is 9 per cent lower than in June, but still 2.7 per cent higher than in July 1958.

The decline in industrial output between June and July is largely due to the summer vacation period. Considering the relation between output and the number of working days, which means allowing for the reduced potential caused by the holidays, the production index, including construction, was 161 which was practically the same level as in June. (the index adjusted for seasonal variations).

* * *

During the first half of 1959, 22 million dollars were invested in France by foreign interests. Only 56 million dollars were invested during the first half of last year, and the total for all of 1958 was only 140 million dollars. Approximately 60 per cent of these investments were in the form of purchases of personal property. The increase in foreign investments this year is due to measures which liberalized trade regulations at the end of last year.

* * *

Electricite de France has just published a report on its activity for the last year. According to the report, the increase in demand which had been noted during the last few years continued in 1958. Total French consumption, including losses, was 62,044 million kWh, which was an increase of 7.5 per cent over the preceding year.

The installations fed by high tension used 45 millard kWh, compared with 42.2 milliard in 1957, and the consumers of low tension used 10.9 milliard kWh compared with 9.95 milliard in 1957.

Due to these increases, 52 per cent of all consumption was covered by energy from hydraulic sources and 48 per cent by energy from thermal sources. The output of the hydraulic power plants (EDF and others combined) was increased from 24.8 milliard kWh in 1957 to 32.2 milliard kWh in 1958; and the output of the thermal power plants increased from 22.6 milliard kWh in 1957 to 23.4 milliard kWh in 1958.

In 1958, the hydroelectric power plants of Electricite de France produced 23,850 million kWh, which was an increase of 24.6 per cent compared with the preceding year. This output represents 74 per cent of the total French hydraulic output.

The thermal power plants supplied 12,450 million kWh. (14,100 million kWh in 1957), which was 42 per cent of the total French thermal output. The thermal power plants of Electricite de France mainly served to supply the difference beween supply and demand in the hydraulic sector. Consequently, their output varied from 593 million kWh. in August to 1,732 million kWh in January.

Average consumption of fuel per kWh. continued to improve; from 3,280 calories per kWh in 1957 it dropped to 3,060 calories per kWh in 1958, which is a 6.7 per cent decrease. In 1958, the thermal power plants of Electricite de France consumed approximately 5,818,000 tons of coal, 742,000 tons of lignite, 594,000 tons of oil and 23 million cubic meters of gas from Lacq (used by the Nantes-Chevire plant beginning on 16 November).

In 1958, Electricite de France sold (not including foreign transactions) 43,700 million kWh which was an increase of 8.3 per cent compared with 1957. The sales of high tension current increased 8 per cent and totaled 33,500 million kWh. Sales of low tension current totaled 10,210 million kWh, which was an increase of 9.7 per cent,

Electricite de France sent 646 million kWh to neighbouring countries, and in return received 1,062 million kWh., compared with 677 million kWh exported and 920 million kWh imported in 1957.

* * *

According to official American statistics, French imports into the United States, which have increased considerably this year, have greatly exceeded American exports to France. This changes the mutual trade balance.

During the first seven months of 1959, French exports to the United States totaled $257,700,000 compared with $156,800,000 during the same period of 1958. American exports to France, excluding products in a special category, totaled $178,500,000 compared with $271,600,000 last year.

The American steel strike and the larger American market for small cars have favoured the importation of French products into the United States.

* * *

A manufacturing contract has just been signed between the French company Surmelec and the Zohar Ing. Company of Tel Aviv (Israel). This company, which has received the necessary approval of the government of Israel, will manufacture under license "Vedette" washing machines which it will distribute in Israel. Surmelec will supply the parts of the machine for an initial series of 1,000. The conditions of the contract signed between the two companies fixes the price of the use of the patent, a royalty and the initial orders from the French company. The contract is valid for 10 years with a five year renewal clause.

A similar contract is now being studied with a Spanish company.

* * *

The Nino Motors Company which is manufacturing automobiles in Japan under a Renault patent has asked the Japanese Ministry of Commerce for permission to extend for two years the seven year contract which it has with the Renault Company and which will expire on 6 March 1960.

According to the terms of the new agreement negociated between the two countries, the royalty paid by Nino Motors, now fixed at L. 25 per car will be lowered to L. 15. Production at present totals 550 to 600 cars a month and will soon be increased.

*

Britain

The British Government on October 29 repaid in full the principal amount of $250,000,000 advanced to it in October 1957 by the US Export-Import Bank, plus the interest due, amounting to $5,500,000. This news was given by the Chancellor of the Exchequer, Mr Derick Heathcoat Amory, in a written reply to a parliamentary question.

He said: "I have arranged to repay the loan in full today. Under the terms of the agreement, repayment was due to begin in October 1960 and to end in April 1965, but I felt able to make the repayment in full, in advance of the due dates, in view of the more favourable financial position of the United Kingdom. The Export-Import Bank has declared its willingness to reinstate, on request, such part of the $250,000,000 loan as would not, at the time of the request, have been repaid under the original agreement, and to do so on the terms of the original loan".

Several British newspapers today (October 30) comment on the advance repayment of Export-Import Bank loan.

The Times, commenting that the money was lent to Britain at a time when the gold and dollar reserves were under strain, says: "It is hard to remember how much and how quickly conditions have changed in the past two years. When the money was drawn, sterling was under severe pressure. The Bank Rate had been raised to the almost unprecedented level of 7 per cent, and a whole range of restrictions had been imposed on the economy. Now sterling is fully convertible on external account, the gold reserves have been rising persistently month after month, and the dollar itself is having more than its share of trouble.

"Had it not been for the elections, there seems little doubt that the Government would have taken further measures to remove some of the remaining restrictions on dollar imports into this country The statement by the leader of the British delegation to the GATT (General Agreement on Tariffs and Trade) meeting in Tokyo yesterday (October 29) that there were 'very good hopes' for substantial progress in lifting dollar import restrictions 'at an early date' is significant and welcome.

"In recent months, one economic control after another has been removed. On the oversea front, the removal of restrictions seems to have had two aims in view—to ease the burden of our measures on other countries, and to give some of the benefit of our prosperity to people at home. It is a matter of keeping the two aims in balance.

"The move to external convertibility last December hardly affected the man-in-the-street at all, whereas the recent freeing of oversea travel expenditure will benefit a growing number of people. The repayment to the Export-Import Bank, while having no direct effect on anyone here, will not only be seen as a friendly gesture by the American authorities but will be a material contribution to the United States Budget".

The Financial Times reviews the post-war problems which faced Britain and says: "On the one hand, there was the steady outflow of long-term capital to the Commonwealth, which could not have been arrested without grievous political and economic damage to all concerned; on the other hand, this standing obligation meant that, at times of stress, Britain herself had to borrow large sums abroad, thus entering into heavy additional obligations for the future.

"So far this year, the United Kingdom has repaid $200,000,000 of the International Monetary Fund (IMF) drawing made at the time of the Suez crisis. It has now wiped the slate clean with the US Export-Import Bank. It has also had to make a £58,000,000 gold payment to IMF when the Fund quotas were increased, thereby incidentally greatly strengthening the 'second-line reserves'. At the same time, the flow of long-term capital to the Commonwealth has been maintained, thus compensating to some degree the Commonwealth countries which suffered as their export prices fell—to Britain's immediate benefit".

The Financial Times goes on to say that it is true "that, with prices stable, the terms of trade favourable, the reserves strong, and the load of short—and medium-term debt substantially lightened, this country's external situation is far better than even confirmed optimists would have believed possible three years ago.

"The Government has recently demonstrated its confidence by a wide range of measures—one instalment of dollar liberalization this summer with another one due very shortly, advance repayment of debts, and ending of restrictions on foreign travel. This country has also been able to show gratitude to the United States for past help in the way in which gratitude should be shown. The position of the dollar is by no means as weak as some would make it out to be. But the trend has given the United States justified cause of concern. Anything that can be done to lessen this concern, and—more important still—the cause of it, should be done."

The Daily Telegraph comments: "The Chancellor has done very much what he was expected to do in announcing yesterday the repayment, in a lump sum, of $250,000,000 advanced by the Export-Import Bank two years ago, instead of waiting a year from now for the first instalment of repayment to fall due. The country has made such great financial strides since the money was borrowed to fortify sterling in October 1957 that its repayment now virtually removes the last vestiges of that crisis. It must come at an acceptable moment, too, for the United States, now that her balance of payments may, in turn, come under pressure".

Stating that this is by no means the only good item to chalk up on

Britain's balance-sheet this year, the newspaper echoes the Financial Times reference to the repayments to IMF and the additional subscription to the Fund. The Telegraph concludes that by these payments "we considerably enhance our drawing rights with IMF. Altogether the prospects for sterling loom promising enough".

The Daily Mail says the repayment "coincides with the tremendous burst of confidence at home and abroad in the present and future of Britain".

* * *

India was the leading buyer of British aircraft and parts over the nine-month period January to September 1959, according to figures just issued in London by the Society of British Aircraft Constructors (SBAC). During this period, total British aviation exports amounted to £121,294,252—some 7 per cent up on the total for the corresponding period of last year.

The main overseas purchasers were: India (£13,195,997), Switzerland (£7,420,642), the Federal Republic of Germany (£5,483,234), and Argentina (£4,520,727), followed by the United States and Australia, each which bought more than £4,000,000 worth.

This year's nine-month total of British aviation industry exports exceeded every preceding such total except that for 1958, SBAC points out. It represents an annual figure of more than £161,000,000, compared with last year's record £154,000,000. These figures, states SBAC, bring the amount earned by Britain's aircraft industry since the war to £907,000,000.

India, with purchases valued at £994,348, was second on the list of Britain's aircraft customers during the month of September. She follows the United States, with over £1,513,000. Britain's September sales total was £9,646,677.

* * *

Britain earned a balance-of-payments surplus on current account of £142,000,000 in the first half of this year, according to provisional estimates made by the Treasury and published in London on October 27 as a White Paper.

The surplus compares with the revised estimates of £112,000,000 for the second half of last year and £237,000,000 for the first half.

There was a surplus on visible trade in the first half of this year of £23,000,000—which, says the White Paper, although £70,000,000 less than the exceptionally big surplus earned in the first half of last year, showed an improvement over the £5,000,000 surplus in the second half.

The invisible surplus in the first half of this year amounted to £119,000,000, compared with £107,000,000 in the second half of last year.

The White Paper also deals with long-term capital account. This included a number of special transactions in the first half of this year. By far the largest was the additional subscription of £232,000,000 to the International Monetary Fund (IMF), which also shows as a reduction of £58,000,000 in the reserves for the 25 per cent paid in gold, and an increase of £174,000,000 in the Fund's sterling holdings for the 75 per cent paid in sterling.

The net result of movements in the long-term capital account in the first half of this year was an increase in the assets of £268,000,000, largely because of the increased United Kingdom subscription to the IMF.

Rootes Motors, a British company, announced in New York on October 27 that advance orders worth about £8,500,000 had been received in the United States for its new Sunbeam Alpine sports car.

The company's managing director for North America said orders had been placed for 9,000 cars—virtually a full year's production.

* * *

Any person in the United Kingdom wishing to obtain foreign currency for travel abroad will be automatically allowed up to £250 worth a year after the end of the present travel year on October 31, the British Treasury announced on October 19.

If an additional amount is required for travel, it will be authorized by the Bank of England on an application through the traveller's bank. This arrangement was necessary, the Treasury said, not to limit the amount granted for travel but as a precaution against the unauthorized export of capital.

In effect, the new arrangements mean that there will now be no limit on the amount of foreign currency that anybody in the United Kingdom can obtain for *bona fide* travel abroad.

* * *

The Duke of Edinburgh declared in London on October 20 that 1959 would go down as one of the great years for the British motor industry. He was addressing the Society of Motor Manufacturers & Traders at its annual dinner on the eve of the International Motor Show at Earls Court.

British cars were improving all the time, the Duke said. Production had doubled in six years. Half the entire output (worth about £500,000,000) was exported, and Britain exported more cars last year to the U.S.A. than to any other country.

Hand in hand with commercial success went the tremendous sporting successes of British cars and drivers in international competitions.

* * *

On their way to India by sea from the Bedford (England) works of Brookhirst Igranic Ltd. are magnets designed specially for the lifting of railway lines and steel bars. They are destined for the Tata Iron and Steel Co.'s mills at Jamshedpur.

Used in pairs on a 30 ft. spreader bar, the magnets will lift up to 17 light rails at a single hoist. They can deal with up to 160 lb. per yard if the rail lengths are up to 45 ft, the company states; or 120 lb. per yard if they are up to 60 ft. long.

The company adds that a rail-lifting magnet of this pattern has deeper magnetic penetration than the standard rectangular magnet; both poles of the magnet run the full length of the magnet itself.

A company within the Metal Industries group, Brookhirst Igranic manufactures a wide range of products. A magnet made by the company which can lift up to 65 tons is claimed to be the largest in the world.

*

Australia

The General Manager of the Bank of Baroda Ltd., Bombay, Mr N. M. Chokshi, who recently visited Melbourne on his way to the United States of Aferica, told the press that he expected an enormous development of trade between India and Australia within the next 10 years.

He said that India was industrialising rapidly, and had a huge demand for industrial machinery. As its importing power increased there would be a greater demand for this machinery from Australia. Within 10 years, India would also be a buyer of Australian raw wool and metals.

Mr Chokshi's Bank last year lent £1,250,000 towards financing Indian-Australian trade.

Some of Australia's exports in 1957-58 were cheese, fruit, flour, wheat, wool tops, iron and steel, jams and jellies, meats, milk and cream, tallow, and zinc.

Indian exports to Australia were cotton, hides and skins, jewellery, edible nuts, linseed, petroleum and shale spirit, teas, bags and sacks, flour coverings, canvas and duck piecegoods, hessian, and jute.

*

Germany

The Federal Republic's foreign trade with the Near East has in the first half-year of 1959 shown further expansion. In comparison with the corresponding period last year the exports from the Federal Republic to these countries show an increase of approximately DM 85 million—from DM 1.28 thousand million to DM 1.37 thousand million.

The chief purchaser of West German goods was Iran, making purchases to the value of DM 277 million. Deliveries to Turkey and Egypt also increased considerably in volume, Turkey buying to the value of DM 231 million and Egypt to the value of DM 153 million. Purchases by all other countries lay well under DM 100 million.

Imports by the Federal Republic from these countries increased from DM 924 million to DM 1.12 thousand million. Here the Near and Middle East Society point out that the increase in imports is almost entirely limited to oil. Since the Federal Republic's large purchases of crude oil are delivered by the large oil companies in London and New York, these exports count in the countries concerned only to a limited extent as deliveries to the Federal Republic.

How strongly the oil deliveries influence the import figures can be seen from the fact that from an import total of DM 1.12 thousand million only DM 438 million represented direct purchases. Imports from Iran for example amounted to DM 191 million but only DM 53 million worth was delivered directly. The difference was more extreme in the case of Iraq where only DM 1.2 million from a total of DM 175.8 million represented direct imports. Direct imports from Turkey, however, were DM 166 million from a total of 193 million.

*

Sweden

It seems probable that Sweden's imports will show a considerable rise in 1960, while the prospects for a continued heavy increase in exports are far more uncertain, the Swedish Institute of Economic Research says in its autumn report on the economic situation. With price stability maintained at home a deterioration of the balance of payments on current account would hardly be too strenuous, but the added effect of internal inflation might lead to an excess drain of foreign exchange reserves.

The Institute says that the underlying causes of the improvement in the economic climate in Sweden in 1959 are the rise in exports, reduced personal savings and higher public activity with a resultant increase in liquidity in the private sector. Partly, however, the upward trend has been counteracted by the depletion of stocks in industry.

The total export volume in 1959 is likely to be about 7 per cent larger than that of 1958 and the increase in the value of exports 5 per cent higher, following a 2 per cent drop in export prices. Imports may be about 1-2 per cent larger in volume. Since import prices have fallen by about 1-2 per cent the terms of trade will be approximately unchanged between 1958 and 1959. From 1957 to 1958 the terms of trade improved by 3 per cent.

Private consumption, at current prices, will probably be 4 per cent larger this year than in 1958, the increase at constant prices being 3-4 per cent. As personal incomes after taxation are likely to rise by only 3 per cent, this would denote a continued decrease in personal savings.

Overall investments, including repairs and maintenance, are estimated to rise by 7-8 per cent from 1958 to 1959. Within this total private investments are likely to increase by 5-6 per cent, or somewhat less than in 1958, while Government investments may rise by 12-13 per cent, which is considerably more than in the past few years.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

THE Communist Party of India is at the moment clumsily trying to extricate itself from the coils of its own deception and self-deception. It is not a pretty sight, and there is little disposition in the country to feel sorry for it for the predicament in which it finds itself: on the other hand, there may be some, down Kerala way, who may see the hand of God, up to a point, in the Chinese depredations. For, these incursions have led the Indian Communists to such equivocations and internal dissensions as to endanger the very future of the party. When these ugly incidents came to light during the last session of Parliament, the Communists found themselves caught on the wrong foot. The situation created by the Tibetan incidents was embarrassing enough, but there, at least, it was possible to dissociate demands of patriotism from the obligation to internaional Communism. But the Chinese acts of aggression against India put them irretrievably "on the spot". At first, they said they would wait for the Chinese version before deciding on the rights and wrongs; later, they talked airily of "disputed Territories" and border misunderstandings; and, subsequently, when they were told that, as far as the MacMahon line was concerned, it was a case of going back on solemn assurances, the first serious internal crack began to show itself. Some—these include Mr Dange—felt that the Chinese should be told firmly that, as far as the North-Eastern border was concerned, the starting point for any negotiation should be the MacMahon line, subject to any minor readjustments. But the party itself continued to equivocate with disastrous results to party morale. It was hoped by the executive that the Communist delegation to Peking on the anniversary of the founding of the Chinese Republic would be able to persuade their comrades to a more reasonable frame of mind. But, at Peking, the Indian Communists appear to have been ostentatiously cold-shouldered. This, according to reports, led Mr Ajoy Ghosh to taking his complaint to big brother K, who apparently told him not to come to him every time he had a problem. (It is only fair to add that Mr Ghosh denied that this was how things happened. But, then, he also assured us of the peaceful intentions of the Chinese, and, even as he was expatiating on it, Chinese soldiers were murderously attacking Indian policemen in Ladakh). Back home, the latest Chinese outrage, together with more detailed information of Chinese military activity across the border, have but brought to a boil earlier dissensions. Mr Dange, who has been most outspoken in his condemnation of the Chinese acts, has, probably deliberately, forced the hand of the official leadership by making the Maharashtra unit of the party come out clearly against Chinese acts of aggression. The more "international" among the executive, Mr Joshi, for instance, would not bring themselves to condemn Chinese actions. On the contrary, they are demanding to have, metaphorically speaking, Mr Dange's head for indiscipline. (Mr Joshi, who controls the party organ, The New Age, gave an interesting example of freedom of discussion within the party by not reporting the Maharashtra unit's views on the question). The Kerala Communists, who have electoral stakes in the near future, would like the party to show a greater sensitiveness to the national mood. The West Bengal Communists, on the other hand, are still smarting under the foiling of their food agitation, which they had planned to groom to the proportions of a "mass upsurge". Since, in their case, no election is in the offing, isolation from popular feeling has no immediate terror. Therefore, unlike the Kerala Communists, they feel under no compulsion to dissimulate.

*

Thus, the party is riven by a crisis that threatens to end it. Unless the party executive, meeting shortly at Delhi, or the National Council, meeting immediately thereafter at Meerut, produces a policy that is more in accord with national sentiment, such political respectability as it now possesses will be irretrievably lost. There is evidence that the rank and file of the party, always less securely anchored in the faith that transcends national frontiers, are bewildered and feel let down. Spontaneous patriotism naturally asserts itself, and if the CPI continues to make excuses for China, it will have no following left. And if the executive commits what seems at the moment an incredible act of folly, and takes disciplinary action against Mr Dange, it may split the party beyond redemption.

*

Though not many will find it in their hearts to sympathise with the Communists at the moment, it does seem a little tough that the Chinese Communists should have chosen to make their aggressive designs more explicit at a time when the Indian Communists were trying desperately to rehabilitate themselves after the Kerala episode. (Of course, there may be a hard core of anti-Communist minority which holds the rather bizarre view that the border incidents are international Communism's way of getting even with the Government of India for getting rid of the first Communist Government in India. According to this reading, all the internecine quarrels among the Communist leadership are elaborate pretence. Fantastic as it sounds, this is as good a hypothesis as any about the "motiveless" malignity of the Chinese exacerbation of Indian feeling!)

*

As I said, the Communists were making an attempt to appropriate the martyr's halo after they were relieved of power in Kerala. Of course, in West Bengal, they tried, rather half-heartedly, to repeat Kerala with dismal results. But the general strategy was to give the impression that they were more sinned against than sinning. Indeed, in one of their recent resolutions, they even confessed contritely to "mistakes" in Kerala. It may be that, in Kerala itself, these amends may fail to impress, but, elsewhere, it may stir a dormant sense of guilt about the mode of the Communist Government's exit. But, whatever the chances the Communists had of winning the people's sympathy have been completely set at naught by their failure in an important test of their patriotism.

*

The Communist party of India has had other crises in its history. During the war years, and in the years after independence, it made crucial anti-national choices, and is still living to tell the tale—or, rather, not to tell the whole tale. But the current crisis is entirely different. Normally, the Communist party's fatal fascination arises in moments when the zig zag of its involved motivation and pretence coincides with genuine popular aspirations. At such moments, the inner discipline of its doctrine and the outer discipline of its adherents seduce alike the intellectual and the masses by giving coherent meaning and direct purpose to one's actions. But, as social democrats all over the world have learnt only too bitterly from the days of Spain onwards, the moment the coincidence of the two ceases, Communism drops all pretence. Thus, pundits of the true faith in West Bengal are reportedly overawing the rank and file with doctrinal sophistries.

*

But the pundits are allowing ideological blinkers to shut their eyes to what is happening around them. They are unaware of the changing nature of Communism itself. In the first place, there is evidence of Russian disapproval of Communist China's policy over the border disputes with India. At all events, these disputes are the first instance in which Russia has not automatically declared its sympathy for China. We may not pay much attention to reports of Russian

coolness toward China or of Chinese fomenting of trouble against Mr Khrushchev. But it is now plain that there is no single Communist Delphi. Mr Ajoy Ghosh's running from Chinese pillar to Russian post, seeking counsel, is but a symptom of the rift in international Communism itself. This rift has been manifesting itself since the days of Poland's successful bid to shape its Communism as it likes. All available evidence points to Mr Khrushchev's willingness and Mao's unwillingness to let this happen. Something like a Byzantine Communism is being evolved in the East, and the internationalists among Communists will have henceforward to look not to Moscow but to Peking.

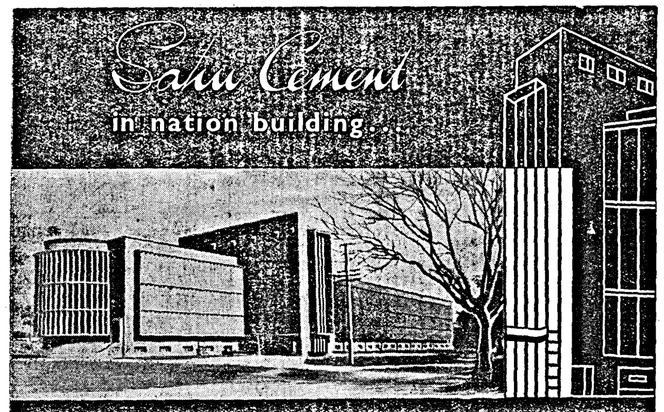
*

This fact has its own geopolitical implications for India. What is at stake is not some subtle points in doctrine and ideology, but the very territorial integrity of the country. With Peking as the Mecca of international Communism, Bandung discussion of forms of imperialism other than the traditional western kind assumes an oppressive reality. It is of ominous significance that the section of Communist leadership that equivocates on the border issues is precisely the section that is also committed doctrinally to Communism. Some of the reported views of this section make shocking reading. A "Statesman" report of what some West Bengal Communists think and say is a revelation of how disreputable their politics have become. According to these people, what has appeared in the press—and this includes what the Prime Minister has said on the subject—about the Chinese violation of our territory "is after all the reactionary machinations of the comprador bourgeoisie". The adjective chosen and the context in which it has been chosen show the depths to which these people have sunk. (Comprador is a word with exclusive Chinese association and means "the chief native servant in European house of business". It is possible that they are merely repeating what their Chinese masters have told them to repeat: otherwise it is difficult to understand why this not particularly familiar expression should have been used). Dialectical analyses, it seems, have been offered to the bewildered followers to show that the party cannot shed its "proletarian internationalism to appease local popular feeling". What is even more portentous is the fact that the pattern of behaviour held up for emulation is that of the Finnish Communist Kusinen "who defended the Soviet march on Finland in 1939". The rank and file were perhaps too numbed by the assaults of jargon to point out that, if reports of Chinese violation are "lies", it is a little premature for the party leadership to ask us to welcome, as Kusinen did, Communist troops marching into the country. This last sophistry has given the whole game away. He would be a purblind man who fails to see the significance of these attitudes.

The time has come for the party leaders to indicate whether the reported views of some West Bengal Communists represents their considered stand on the whole question. It is no longer possible to hide these ugly mental reservations behind wishy washy resolutions about party attitudes. The crucial choice is between patriotism and international Communism. For the sake of its own political future, it is to be hoped that it will make the right choice.

*

Considering that Dr John Matthai's academic life as a professor was but a short interlude in a variegated life, it is remarkable how the donnish air clung to his personality. He had the scholar's objectivity and detachment and what some might consider fussy concern for accuracy. I recall an occasion when he took the trouble of pointing out that his name was misspelt in one of the issues of Indian Finance—a "t" had been left out. This was not a piece of inanity, as was shown by another incident in which we had occasion to point to an error in the report of the Taxation Enquiry Commission. The Report had described the Development Rebate as a sort of "gift of interest" on capital employed for expansion. We wrote to Dr Matthai that it was more than that and was really a gift of part of the capital itself. Shortly thereafter came a characteristic reply from him saying generously, "As usual, you are right." Dr Matthai carried his many endowments lightly, and his integrity and idealism shone through his warm humanity. A good Christian and great Indian has passed away, and India is poorer for it.



*

The local agent of the Indian Overseas Bank Ltd called me the other day, because the bank's assistant general manager, Mr G. Lakshminarayanan, was in in town, and a few friends had been invited to get together. I did not realise, when the phone call came, how many the few could become. Nevertheless, it was an enjoyable evening, and more cosy than I thought it might be when I first got to the Great Eastern. Mr Lakshminarayanan told me with some pride that his Chairman, Mr M. C. T. Muthiah, had been re-elected to the Board of the Industrial Finance Corporation as representing the Scheduled Banks. The pride is perfectly understandable, for, Indian Overseas has been growing swiftly in size, and what Mr Muthiah achieves is no doubt an achievement for Indian Overseas as well.

*

I read somewhere that, in golf, the odds against a hole in one are something like 8,000 to 1. Well, I was in the company of a friend, Joe Mathias, when the 8,000 to 1 chance came off, with Joe executing the shot at the short fourteenth. No use envying him, I suppose; and, anyway, I got my consolation prize at the long nineteenth.

EAVESDROPPER

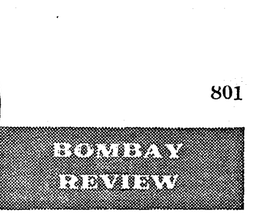
GATEWAY GOSSIP

MR SHRIMAN NARAYAN told the Asian Young Workes Seminar at Ahmedabad that India's initiative in undertaking economic planning had not only silenced critics of planning in under-developed countries but had also evolved the technique of planning in a democratic set up. If today India's prestige is high in the comity of nations, it is largely because of its firm faith in democracy and the concerted efforts it is putting forth to strengthen its economy by dint of hard-work. Within a decade of its political independence, it has successfully conducted two general elections based on thoroughly democratic principles. With commendable expedition it has embarked upon economic planning and is already actively engaged in drawing up its Third Five Year Plan. These big achievements have earned for it worldwide praise and today India is like a beacon for other underdeveloped countries to guide them to the path toward stability and prosperity.

Great though its achievements so far undoubtedly are, in terms of amelioration of the conditions of its people, India has still to go a long way before it can declare that living standards comparable to those of the developed countries of the world have been achieved. So, the work of economic development has to go on unceasingly for many a five year plan period to come. The powers-that-be in the country as representing the wishes of the majority of the people are understandably impatient to wait too long to reach the goal devoutly wished. But mere enthusiasm alone will not suffice. There should be the various requisite resources. In an underdeveloped country like India the task of putting to productive use the resources in order to achieve quick results is wrought with difficulties which are not met with in the more advanced countries for various reasons. Since we have elected to follow the path of democracy nothing can be done without popular sanction. The problem has been rendered further complicated by the fact that we have first to create conditions necessary to give momentum to the development of the country. The available resources have been found inadequate for initiating the growth of the economy at a rapid pace. The solution has been sought in planning and planned endeavour has became the order of the day.

In the past seven or eight years of planned endeavour as embodied in the First and Second Five year plans, much progress in many directions has been made. The pictures of the country a decade ago and today will bear eloquent testimony to the rapid transformation that is taking place. It needs hardly to be proved that the long strides that the nation has made in such a short time have been made possible by economic planning which has enabled us, in the words of Mr Shriman Narayan, to utilise our limited material and financial resources in the most economical and rational manner for achieving a quick rate of development.

Mr Narayan has pointed out that economic planning as applied to underdeveloped countries necessarily involves hardwork and privations for the people concerned during the period of development. It would be impossible to these countries, he says, to plan in a big way if there is no systematic attempt to tap fully internal resources. The emphasis should necessarily be on the mobilisation of domestic resources to the maximum possible extent because he finds that too much reliance on foreign aid will be economically difficult and politicaly hazardous for the under-developed countries.



Latterly there is discernible a certain lack of enthusiasm even in official circles in India for the method of implementing plan programmes through the mechanism of foreign aid. This reluctance to extend foreign loan commitments seems to have stemmed from the realisation of the huge magnitude of the problem of repayment of the loans already contracted. It is now estimated that by the end of the current plan, we will have taken foreign loans to the tune of about Rs 1500 crores. A goodly portion of these loans will fall due for repayment in the next few years. In the meantime we will have reached the threshold of the Third Plan which will inevitably involve the expenditure of a large amount of foreign exchange. From tentative estimates it would appear the foreign exchange requirements of the Third Plan will be in the environs of Rs 2000 crores. It is rightly apprehended that if this process of depending on foreign aid is continued, the increase in national income will be absorbed for servicing the foreign loans which will be accumulated at one five year plan period after another. The argument, that unless the present generation agrees willingly to suffer privations of all sorts and leads a simple and austere life, there will be no hope for the coming generations, cannot be advanced too long. An indication of a possible popular reaction will be found in one of the resolutions at the recent Swantantra Party Convention in Madras which describes planning in India as one of creating "misery for the present generation for the sake of the remote likelihood of benefit for posterity". If the only tangible result of the five year plans is going to be the diversion of additional wealth created to foreign countries in the shape of repayment of loans, it is unlikely that the generality of the people in the country may continue to have faith in a programme which is all work and no play, as it were.

Referring to the next plan, Mr Narayan has admitted that if we want to have a plan of about Rs 10,000 crores, the task that faces us is not an easy one. For, it will be necessary to achieve a rate of growth of about six per cent per annum and a rate of investment of about fourteen per cent. In view of the difficulties involved in accumulating foreign loans, the brunt of the burden is to be borne by internal resources. But the problem of mopping up domestic resources is becoming increasingly difficult as the various levies on the population have already reached the saturation point. The fact that Small Savings have so far failed to make much headway indicates that the capacity for saving among the common people is not much. People are being hard put to it to meet their daily needs by the failure of the Government to hold the price line and they are not to be blamed if the idea of saving finds no place in their thinking. The enormous burden that another ambitious five year plan will bring in its wake has resulted in a demand that the Third plan be within manageable proportions.

It is to be remembered, however, that the Planning Commission have pointed out that the current and the next plans represent important stages in the planned development of the country. The rate of increase in investment in the Second and Third Plan periods is to be relatively larger than what is considered necessary in subsequent plan periods. The Commission have, therefore, said that the ten-year period as represented by the Second and Third Five-Year Plans may be regarded as the most crucial determinant of the future course of economic development in the country. The need for strenuous national effort in the shape of a big plan effort is emphasised by the fact that the current levels of living in the country are very low. It is to be noted that even after twenty years of planned endeavour the per capita income is not expected to reach anywhere near the levels obtaining in the developed countries of the world. There can, therefore, be no dispute as to the importance of proceeding fast with development activities. But an essential prerequisite to the success of the plans is the realisation by the people at large that the efforts put forth are for their alround improvement.

BOMBAY REVIEW

Industrial Finance

The recent discussion of the Committee of the Indian Merchants' Chamber, with Mr K.R. K. Menon, Chairman of the Industrial Finance Corporation, on the various aspects of industrial finance, with particular reference to the vital role of the IFC, has revealed the urgent need for long-term assistance to the industries to meet their growing needs. It cannot be denied that the various financial institutions like the IFC were rendering valuable help to the industries by granting industrial loans. But, as Mr Lalchand Hirachand, President of the IMC, observed, the quantum of funds that could be made available by the Corporation would be only a very small percentage of the total requirements of private industry and the procedure adopted by the Corporation did not provide for long-term industrial loans. Moreover, the pattern of distribution of loans followed by the Corporation was not favourable to many industries, for, it had been assisting mostly the well established industries. The Committee drew the attention of Mr Menon to the need of the IFC taking a more active part in the development of industries by relaxing the rigidity in the allocation of loans and in providing easy instalment facilities.

Discussing the non-utilisation of the credits of Export-Import Bank, the Committee suggested that at least part of these loans should be made available to the private sector. It was admitted that the lack of foreign exchange handicapped the Corporation in its normal and effective role in financing industries. The Committee observed that it would be profitable for the Corporation to explore ways and means for obtaining foreign funds directly and formulate a new scheme to assist more effectively in industrial growth. The necessity of the Corporation paying more attention to providing loan capital and underwriting new issues was also brought to the notice of Mr Menon.

In the course of his speech, the Chairman of the Corporation assured the Committee that the rigidity in the procedure of granting loans would be removed and that no discrimination would be made between industries. He added that the Corporation would endeavour to break new ground and undertake fresh lines of business in future.

S. E. RLY TENDERS

Sealed tenders are invited for tender No. CON|GM|59|Handling/NMP-KGP/60-61/59 for handling of Railway materials at Nimpura and Khargpur construction and Track depots of the S. E. Rly. from 12-1-60 to 31-3-61 as per schedule works enclosed in this tender. Tenders will be opened on 27-11-59 at 3 P.M.

Tender forms are obtainable from the Controller of Stores (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs 5/- (not refundable) per copy by money order to him direct in the case of outside firms and on production of cash receipt from this Rly's Chief Cashier, Garden Reach by local firms.

Tenders should accompany the receipts for depositing the earnest money of Rs 1,000/- with this Rly's Chief Cashier without which the tender is liable to be rejected. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certifiate with the tender.

GENERAL MANAGER

S76

✱

Prevention of Road Accidents

THE traffic problem and the insecurity of the pedestrian on our highways have aroused great concern among both the public and the authorities. The accidents on our roads are increasing at an alarming rate as is evidenced from the fact that, after the war, about 72,000 people have been killed and more than 3 million injured in our country. The responsibility of developing highway safety programmes rests on the Central and State Governments as also on the public. A systematic and scientific approach is necessary for tackling the problem of highway traffic and for reducing accidents on property and human beings. It is hoped that, though not yet finalised, greater emphasis will be given in the Third Plan on finding an early solution to this problem.

The ECAFE study week on Traffic, Engineering and Highway Safety held at Bombay has received interested attention from all sections of the people. Inaugurating the Study Week, Mr Sri Prakasa, Governor of Bombay, stressed the need for constructing the roads on a modernised scale so as to provide more comforts to the common man and to the motorist.

Nearly 150 highway experts from India and abroad attended the conference, and they would study the "black spots" on the highways and would evolve measures for tackling the problem. Their efforts would not be in vain if they succeed in formulating a satisfactory solution to this social evil and prepare a plan for the future so that the coming generation would be safer from these road hazards.

It will be appropriate, in this connection, to remember that traffic in almost all the Eastern countries has been increasing by leaps and bounds and that the measures adopted for ensuring road safety have not received proper attention. The absence of a planned pattern was a serious handicap for these countries for in the way of the systematic development of their transport system and was responsible to a large extent for the high rate of road accidents. The tracks traditionally meant for the slow moving bullock carts and other vehicles were found unsuitable for the introduction of modern vehicles. Moreover, the increase in the traffic volume and the conglomeration of traffic, both slow and fast, created a bottleneck on many of these roads.

The three main factors that came into play in traffic accidents, namely, the road, the vehicle and the road user, have to be thoroughly studied and efforts should be made to create congenial atmosphere which will surely reduce the number of accidents. A fresh and scientific approach should be made to remove the defects in the existing roads and to build new ones on modern lines. Besides, steps should be taken to inculcate the observance in letter and spirit of the rule by the road users.

The allegation that the increase in the number of motor vehicles on the road was entirely responsible for the increase in accidents is rather exaggerated, for if that were so, the rate of accidents in the highly developed countries of the world would have been the highest, which was not so. But it is true that the increase of motor vehicles requires controlled traffic and that with the technological advancement all round the existing roads were fast becoming narrow lanes.

The ECAFE conference on roads is significant for more than one reason. It is claimed to be the first of its kind in India. The accidents on our roads are mounting up at an alarming rate. Naturally, the findings of the conference will provide some food for thought to the Centre for implementing the programme for constructing better roads in our country. Unless the authorities are in a mood to realise the urgency of the problem and speed up the improvement programmes, such activities as the ECAFE conference will only add to popular cynicism.

✱

Additions to Indian Merchant Fleet

Eight vessels totalling about 39,000 gross tons have been acquired by Indian shipping companies in the last four months. One of them is a newly built tanker and the rest are secondhand dry cargo vessels.

GATEWAY NOTES

During the same period, two old vessels totalling 6,365 gross tons were disposed of and, after taking into account changes in tonnage of existing vessels due to survey and alterations, the strength of the Indian merchant fleet has gone up from 149 vessels totalling 683,500 gross tons as on 30th June 1995 to 155 vessels totalling about 720,000 gross tons as of today.

Among the recent purchases is by the Scindia Steam Navigation the "Sitanja", a motorship bought by the Scindia Steam Navigation Company, which, with its deadweight tonnage of 14,040 tons as a closed shelter decker, will be the largest vessel in the Indian fleet.

The Indian Shipping Companies have in addition about 84,000 tons of shipping under construction or on order in the Hindustan Shipyard and abroad, expected to be delivered before the end of March 1961.

They are further negotiating for the purchase of ten second-hand vessels of recent build totalling some 28,000 tons. When all these vessels are delivered, the Indian tonnage will go up to 832,000 tons, leaving some 70,000 tons to be acquired for attaining the Second Five-Year Plan tonnage target of 900,000 tons, not taking into account replacements.

S. E. RLY TENDERS

Sealed tenders are invited for tender No. CON|COS|97|P&M|110|EMP|59 for supply of (a) 14,000 Rft. wire rope ⅝" dia.; (b) 8,000 Rft. wire rope ¾" dia. and (c) 5,000 Rft. wire rope ½" dia. as per specification shown in the tender. Tenders will be opened on 27-11-59 at 12 noon.

Tender forms are obtainable from the office of the undermentioned (IB SECTION), Garden Reach, Calcutta-23 on remittance of Rs 2|- (not refundable) per copy by money order to him direct in the case of outside firms and on production of cash receipt from this Rly's Chief Cashier, Garden Reach by local firms.

Tenders should accompany the receipt for depositing the earnest money of Rs 600|- with this Rly's Chief Cashier without which the tender is liable to be rejected. Approved contractors having a permanent deposit of Rs 1000|- with the undermentioned are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

WORLD OF COTTON

Irregular Price Movements

THAT the vagaries of the weather could continue to affect trading in the cotton market was again demonstrated last week. The almost settled fact of a new crop of 49 lakh bales was simply brushed aside time and again during the period under review to resuscitate the bogey of damaged crops. At one time it was pests and on another occasion, the unfavourable weather. The attempts at whipping up bull enthusiasm were only temporarily successful. Although bears offered little resistance when bulls were in command, they too had their own days of undisputed influence. By Saturday when moorat trading took place bears had wrested control deriving encouragement from reports of improvement in weather conditions in the Punjab and an impending release of import quota for 3 lakh bales of cotton.

The Cotton Advisory Board is of the view that the production of cotton during the current cotton season will be of the order of 48 lakh bales. At its meeting on November 3 in Bombay, the Board has recommended that in addition to six lakh bales of stapling 1 1/16 inches and above, the Government should permit import of one lakh bales of cotton of stapling below 1 1/16 inches, but not below 15/16 inches, from any area. The Board has also recommended to the Government they should permit export of additional quantity of 75,000 bales of Bengal Deshi cotton. The suggestion to permit import of cotton below stapling 1 1/16 seems to have stemmed from the fact that there is a shortage of medium staple cotton during the current season. In the opinion of the Board all decisions in regard to import and export of cotton should be taken by Government after taking into consideration the Board's estimate of the new cotton crop.

The cotton futures market opened the week on a subdued note in the absence of sustained interest. Apart from a general reluctance to extend commitments in view of the approaching Diwali festivities, operators were inclined to await a clearer picture of the crop in some of the growing areas whence reports were rather confusing. The stagnant conditions deteriorated into an easier trend on Wednesday last following higher indications about the size of the crop and improved arrivals. In the next two days the undertone perceptibly improved on bear-covering and upcountry support. It would appear that the recovery was partly due to the general expectation that moorat trading would strike a confident note. The hopes, however, were falsified as in moorat trading sentiment was far from confident. Even the bullish factor of higher advices from the cloth market failed to instil enthusiasm. It was evident that moorat trading in cotton was no exception to the general trend in the share and other markets during the day. Although Monday witnessed some recovery the undercurrents continued to be rather subdued. Jarilla March opened the week at Rs 712.75 as against previous week's closing of Rs 714. After touching a low of Rs 707.75 the rate was taken to Rs 719.50 before pushed back to Rs 713.50 at the close of moorat trading. Reports of cloudy weather in some producing areas helped bull sentiment in earlier dealings and the quotation was taken to Rs 716.50 by close on Monday.

In contrast to the futures section, the spot market ruled steady except for an earlier easy trend. As the week progressed prices steadied up on sustained mill interest in selected growths.

×

LIVERPOOL COTTON MARKET

Conditions were rather quiet in the Liverpool futures market in the absence of sustained buying interest.

+

NEW YORK COTTON MARKET:

The New York cotton futures market witnessed almost unchanged price levels on balance over the week's trading. Near December was in good request but hedge selling was encountered in later months. However, with mill and commission house buying, the distant positions also retrieved part of the loss to close only slightly lower in comparison with the previous week.

×

PIECEGOODS:

The cotton piecegoods market reported more active conditions than had been witnessed in the past two, three weeks. Apart from some actual improvement in demand, the undertone was aided by expectations of a broadening of interest in coming weeks Offtake by most consuming centres showed a moderate increase with interest mainly confined to fine and superfine qualities. Conditions in the export section were also better with most of the consuming countries evincing keen interest. Prominent among the week's enquiries were those from the UK and Indonesia.

It would appear that the supply position in cotton in the 1959-60 season will be more or less on the same pattern as in 1958-59. Tentative total mill requirements are placed at around 47 lakh bales. Some estimates place the size of the new crop as high as 52 lakh bales. But as pointed out at the outset the majority seem to favour the estimate of 49 lakh bales.

GATEWAY MARKETS

Artsilk Yarn in Demand

Trading in the two sections of the bullion market were on a quiet note throughout the past week. The previous week's sustained interest in silver yielded place to a tendency to liquidate holdings. It would appear that operators' ideas last week were largely governed by prospects of heavy arrivals in most of the centres. Spot market advices were lower while Calcutta indications also remained easier most of the time.

From the very commencement of the week, silver developed an cutta indications also remained easier tendency on lower advices from Calcutta. In later dealings the reactionary tendency became well pronounced as bulls started selling Kartak Silver opened at Rs 209.11 as against previous closing of Rs 210.7 and after fluctuating both ways closed at Rs 209.10. Narrow fluctuations characterised trading last Wednesday in the absence of much interest and Kartak Silver closed at Rs 209.4. Although business continued to be at a low ebb the undertone showed some improvement in the next two days and Kartak Silver closed on Friday rather steadier at Rs 210.6. Saturday's moorat session failed to impart much enthusiasm and Kartak Silver closed unchanged on balance at Rs 210.6. Listless conditions continued to prevail in the section on Monday also with Kartak Silver closing at Rs 210.13.

In the gold section the undertone was easier in earlier dealings but toward close rates regained part of the lost ground on bear covering. Kartak Gold opened the week at Rs 124.12.6 as against previous closing of Rs 125.0.6 and at one time came back to a low of Rs 123.10. In the second half a slight improvement was noticeable and the rate was finally placed on Friday at Rs 124.5. The moorat trading was featureless with the closing rate on Saturday placed at Rs 124.4. Kartak Gold continued to fluctuate within a narrow groove on Monday in the absence of fresh interest to be finally placed at Rs 124.4.

✱

Oils & Oilseeds

Easy conditions were again witnessed in the oils and oilseeds market in Bombay last week. The main limiting factor in the groundnut section was the heavy arrivals reported in Hyderabad and in local markets. While the pressure of stocks was largely responsible for the depression of groundnut prices, sentiment as a whole was adversely affected by a comparative increase in oil supplies due to a sizable increase in the output by crushers. Pressure of supplies also accounted for the lowering of the price levels in oils despite good business having been reported done in oil with the UK. Groundnut February reacted to Rs 173.4 from Rs 176.8 before recovering to Rs 175.12.

The trend in castorseed remained quiet most of the time but toward close some improvement was discernible on renewed hopes of overseas enquiries. Castorseed May after having been done up to Rs 158.2 from previous closing of Rs 160.6 recovered toward close to Rs 159.31.

Prospects of good business with foreign countries in linseed oil imparted a steady trend in linseed. This was the only section which reported increasing activity during the past week. The undertone here firmed up in moorat trading on Saturday on sustained bull support. Linseed May was done up to Rs 35.37 before closing at Rs 35.12 Cotton seed May followed the general trend to be finally placed at Rs 125.50.

ALEXANDRIA

Generally steady conditions prevailed in the Alexandria futures market. The spot section was also active on export enquiries.

✱

Yarn

In the yarn market interest was concentrated in art silk and nylon yarns. This was due to the fact that marketmen expected sustained demand for these types in view of the pick-up noticed in the export of rayon goods as well as improved offtake of goods of this category in the domestic market. Increased buying from manufacturing centres like Surat also contributed to the uptrend in the prices of nylon and artsilk yarns. Staple yarn was neglected and consequently developed an easier trend as buyers were reluctant to extend purchases presumably in views of the reports that there would be a plethora of goods in the markets in coming weeks.

✱

Non-Ferrous Metals

Although copper prices in India still continue to show no big variation either way, it is believed that an increase in prices may not be far away. This expectation seems to have stemmed from the steep rise in prices that have taken place recently in the international market. Reports from overseas markets indicate that against a scarcity of supplies and continued high demand, copper prices are daily moving up. It would appear that the present boom in the metal has stemmed from the strong demand for copper in the US where the stock of the metal has dwindled due to the strike in the industry. The spurt in the international price is bound to be reflected in higher cost of supplies of the metal in India as the bulk of the imports are likely to be made in coming weeks.

DELHI REVIEW

Facts about the Managing Agency System

OLYMPUS

THE National Council of Applied Economic Research has just released here a report reviewing the working of the managing agency system in India and examining the prospects of its future. The report is particularly notable for the interesting facts it has assembled about a system which has not ceased to be a hot subject of controversy. The basic facts relating to the position of managing agencies during 1954-55 have been taken from the first round of a study made by the Research and Statistics Division of the Department of Company Law Administration. According to this study, there were 3,944 managing agencies managing 5,055 joint stock companies, or, 17.1 per cent of the total number of joint stock companies in the country. The total paid-up capital of the companies under the managing agencies amounted to Rs 465 crores which was 48 per cent of the aggregate paid-up capital in the entire corporate sector in 1954-55. If certain classes of companies that are legally prohibited from being under managing agents, such as banking and insurance companies and Government enterprises, are excluded from the total, the proportion of the paid-up capital of companies under managing agencies goes up to 50.4 per cent. In terms of the breakdown between public and private companies, the position was that of the total paid-up capital of all public companies (excluding banking and insurance companies), 71.2 per cent belonged to companies under the managing agency system while only 8.6 per cent of the total paid-up capital of private companies was controlled by managing agents. And, of the total paid-up capital of all agency-managed companies, private companies accounted for only 5.6 per cent.

As many as 3,526, or 89.4 per cent of the total of 3,944 managing agencies, managed only one company each. At the other end, only 17 managing agencies managed 10 and more companies each, the largest number of companies under a single agency being 40. Between them, the 17 leading managing agencies managed 359 companies with an aggregate paid-up capital of Rs 114 crores or 25 per cent of the total paid-up capital of all companies under the managing agency system. Though the leading managing agency with regard to the number of managed companies was Bird & Co. Ltd., with 40 companies under its control, it was Tata Industries Ltd., that had the greatest influence in terms of the paid-up capital of managed companies, followed by Birla Bros. Ltd. The influence of the 17 leading managing agencies was most evident in the jute, iron and steel, cement, paper, coal and tea industries where they held 25 per cent and more of the total paid-up capital of all companies in each industry.

The managing agencies are concentrated principally in the three States of West Bengal, Bombay and Madras. There were 1,601 managing agencies in West Bengal, 835 in Bombay and 437 in Madras; these together controlled about 30 per cent of the total number of agency-managed joint stock companies. The industries in which the influence of managing agencies was most pronounced were jute, cement, cotton textiles, electric generation and supply, iron and steel, coal mining, paper and matches; in each of these industries, the paid-up capital of the companies managed by agencies ranged between 80 and 94 per cent of the total paid-up capital of the industry. In the case of certain other industries such as manganese ore, mica, dairy products, power alcohol, stainless steelware, etc., the paid-up capital of agency-managed companies was less than 50 per cent in each industry. The industries in which the control of managing agencies was not significant were petroleum and natural gas, footwear, fertilisers, asbestos, printing and publishing, etc., where the paid-up capital of the managed companies was less than 10 per cent of the total paid-up capital in each industry.

As for the structure of managing agencies themselves, the facts are that of the total of 3,944 agencies, 2,522 were unincorporated firms, 1,238 private companies and 184 public companies, as of 1954-55. Unincorporated firms had under their management 2,771 joint stock companies whose aggregate paid-up capital was 20 per cent of the total paid-up capital of all the companies under the managing agency system. Of the other two types of managing agencies, public companies managed only 504 companies accounting for 25 per cent of the total paid-up capital of agency-managed companies, while private companies managed 1,780 companies with 55 per cent of the total paid-up capital. As it is a fundamental feature of the system that the control of the agencies over the companies under their management is not primarily of a financial nature, the fact is not surprising that the total paid-up capital of the public and private managing agency companies was Rs 76 crores while that of the companies under their management was as much as Rs 370 crores.

Besides giving the above facts contained in the Company Law Administration's study, the National Council has assembled further interesting facts from its own sample enquiries. The Council's analysis is confined to 66 public limited companies (as in March 1958) located in the Bombay region and forming a large majority of the more important public limited companies in different industries and of different sizes, in terms of paid-up capital. The results of the Council's investigations are given in the following table:—

VALUE OF SHARES HELD BY MANAGING AGENTS IN MANAGED COMPANIES.

Range of subscribed capital (Rs. lakhs).	No. of companies in each group.	Total subscribed capital of companies in each group (Rs. lakhs)	Value of Shares held by Managing Agents (Rs. lakhs).	Percentage of total subscribed Capital held by Managing Agents. (4) as % of (3)
(1)	(2)	(3)	(4)	(5)
Upto 10 ..	10	37.4	10.1	27.0
10—20 ...	12	185.7	45.3	24.4
20—30 ...	10	253.2	89.7	35.4
30—50 ...	14	591.8	157.7	26.7
50—80 ..	7	466.7	134.0	28.7
80—100 ..	8	732.1	188.3	25.7
Above 100 ...	5	1,891.4	72.0	3.8

The Council has also given an analysis of the relative contribution of managing agents in the provision of both long-term and short-term loans and advances to managed companies. The data relate to the accounting year of the respective companies ended any time during the calendar year 1956. For this purpose, two samples of public limited companies (excluding banking and insurance companies) have been selected on the basis of size, in terms of paid-up capital. One of these samples included all the 84 largest managed companies, each with paid-up capital of Rs 75 lakhs or more in 1955. The paid-up capital of these 84 companies totalled Rs 181 crores, accounting for about 41 per cent of the paid-up capital of all public limited companies, excluding banking and insurance companies, under the management of agencies. The results pertaining to this sample are given in the following table:

LOANS TO LARGE-SIZED COMPANIES MANAGED BY MANAGING AGENTS.

Description of source or item.	Total amount (in Rs crores)	Percentage of total loans and advances.
Debentures	29.7	25.4
Fixed deposits	2.9	2.9
Secured loans from banks	38.4	32.2
Unsecured loans from banks	4.4	3.4
Loans from World Bank	5.8	5.1
Loans from Central and State Governments and statutory financial corporations	30.7	26.9
Direct loans from Managing agents	1.5	1.3
Other loans and advances, including those from subsidiary companies	4.6	3.9
Total ..	118.1	100.00

The Council's analysis further shows the extent to which some types of loans were guaranteed by managing agents; the position in this regard is brought out in the following table relating to large-sized companies:—

Source.	Total amount (in Rs crores).	Amount guaranteed by managing agents (Rs crores).	Percentage of total guaranteed by managing agents.
Secured loans from banks ...	38.4	27.2	70.8
Unsecured loans from banks ..	4.4	1.4	31.5
Loans from Government and finance corporations	30.7	2.5	8.2

The Council's second sample included 143 middle-sized companies in West Bengal and Bombay in the range of paid-up capital from Rs 10 to Rs 25 lakhs as in 1955, accounting for 45 per cent of the total paid-up capital of all managed companies in this range of paid-up capital in the two States. The results pertaining to this sample are given in the following table:—

LOANS TO MIDDLE-SIZED COMPANIES MANAGED BY MANAGING AGENTS.

Description of source or item.	Total amount (Rs lakhs)	Percentage of total loans and advances.
Debentures	237	8.2
Fixed deposits	269	9.2
Secured loans from banks	1494	51.6
Unsecured loans from banks	255	8.8
Loans from Central and State Governments and financial corporations	186	6.4
Direct loans from Managing agents	202	7.0
Other loans and advances	255	8.8
Total ...	2897	100.0

NORTH INDIAN NOTES

Flood Control

The problem posed by floods has never become so serious as this year when unprecedented floods occurred in many parts of the country causing severe damage to crops not to speak of the destruction to human life it brought in its wake. More than any other State it is West Bengal which has the highest stake in devising proper measures to abate the adverse impact of floods. This year's unprecedented floods have alerted the Government to the importance of flood control measures and a Committee at the State level has been appointed to make a thorough study of the problem with a view to devising both long-term and short-term measures to mitigate the rigour of floods.

The West Bengal floods have raised a lot of criticism against the DVC dams. The view has been expressed that it was unwarranted release of water from DVC dams which, in combination with unprecedented rain, led to the floods. That most of such criticisms overlook the technical difficulties involved in a scheme of large-scale flood control was pointed out by Dr B. C. Guha, a former member of the Damodar Valley Corporation, in a press interview early this week. Referring to the release of water from Durgapur Barrage which many believe to have caused the floods, Dr Guha observed that this could not be helped so as long as the weather forecasts cannot give notice of storms well in advance.

Dr Guha admits the inadequacy of the present capacity of the DVC dams to moderate a design flood of more than 6,50,000 causecs. And it was unusual discharge of 800,000 causecs which occurred this year. However, Dr Guha is of the view that the damage would have been greater but for the moderating influence of Maithon and Panchet dams.

Dr Guha has pleaded for an integrated approach to flood control and has made a few suggestions which include the building of the Aiyar dam on the Damodar and Bulpahari on the Barakar, improvement of the drainage system and maintenance of a constant minimum flow in the natural river channels, greater speed in afforestation, improvement in weather forecasts with reference to particular catchments and artificial precipitation in the Bay of West Bengal when exceptional storms are apprehended.

The cost involved in a scheme of large-scale flood control must needs be huge. But in view of the fact that one flood alone may cause an economic loss far greater than the cost of the flood control projects, the heavy costs involved should not be a deterrent. The economic loss this year alone owing to floods has been estimated at about Rs 70 crores.

*

Export of Engineering Goods

Export of engineering goods during the month of September 1959 amounted to Rs 61.76 lakhs against Rs 34.39 lakhs during the same month of the previous year. The exports for the first 9 months of the current year have exceeded the total exports for the whole of the last year by Rs 77 lakhs. The cumulative exports during the period January-September 1959 are valued at Rs 4.86 crores.

It should however, be noted that the above figures are based on the daily lists of exports published by the Customs which are confined to exports by sea only. Export is also taking place through land frontiers and the figures relating to such exports are now under compilation.

A commendable feature of the export trade is that both commodity groups and country groups have registered increase barring South America and Australia in the case of the latter. Export of base metals of Iron and Steel has risen from Rs .02 lakhs to Rs 89.52 lakhs, non-ferrous items from Rs 38.48 lakhs to Rs 46.97 lakhs, light engineering goods from Rs 1.39 crores to Rs 1.91 crores and heavy engineering goods from Rs 80.63 lakhs to Rs 1.91 crores.

With regard to country groups the export to South East Asia has increased from Rs 85.69 lakhs to Rs 1.72 crores, West Asia from Rs 94.95 lakhs to Rs 1.17 crores, Africa from Rs 43.98 lakhs to Rs 57.35 lakhs, North and Central America from Rs 51.73 lakhs to Rs 1.07 crores and Europe from Rs 13.54 lakhs to Rs 21.79 lakhs.

The individual countries to which exports have registered appreciable increase are Ceylon with an export rising from Rs 25.48 lakhs to Rs 40 lakhs, Japan from Rs 25 lakhs to Rs 59.84 lakhs, Malaya from Rs 6.61 lakhs to Rs 11.10 lakhs, Pakistan from Rs 8.24 lakhs to Rs 12.27 lakhs, Philippines from Rs 1.31 lakhs to Rs 4.22 lakhs, Singapore from Rs 9.91 lakhs to Rs 14.73 lakhs, Bahrain from Rs 11.50 lakhs to Rs 14.56 lakhs, Dubai from Rs 3.63 lakhs to Rs 5.15 lakhs, Kuwait from Rs 29.24 lakhs to Rs 48.60 lakhs, Eritrea from Rs .16 lakhs to Rs 10 lakhs; Sudan from Rs 1.85 lakhs to Rs 2.42 lakhs USA from Rs 50 lakhs to Rs 1.06 crores, Belgium from Rs .17 lakhs ot Rs 1.06 lakhs, Nethelands from Rs .2 lakhs to Rs 1.3 lakhs and UK from Rs 3.42 lakhs to Rs 9.78 lakhs.

THE PENINSULA

Mysore's Third Plan

IN the preparation of the Third Plan which is the current subject of preoccupation for all the State Governments, progress achieved has, reflecting the differences in the techniques of approach, differed from State to State. That the Mysore State is in an advanced stage in the formulation of her Third Plan was revealed at the meeting of the Development Council held last week. A Plan with provisional allocations among various heads of development has already been formulated and released to the public.

The total outlay envisaged is Rs 279 crores while the targeted outlay under the Second Plan was Rs 145 crores. However, in view of the scaling down of the All-India Plan outlay from Rs 4,800 crores to Rs 4,500 crores, the Second Plan outlay for the State is also expected to suffer a corresponding reduction to Rs 136 crores. The total outlay for the Third Plan would, thus, work out to slightly more then double the total Second Plan figure.

The Third Plan of the State as it is drawn at present, follows closely the Second Plan in important details and allocations for most heads of development have been, corresponding to the doubling of the total plan outlay, increased nearly two-fold. As in the Second Plan the largest allocations have been made for irrigation and power. For irrigation the outlay envisaged is Rs 60 crores while the Second Plan outlay was Rs 33 crores. For Power, the outlay has been fixed at Rs 50 crores against the Second Plan outlay of Rs 27 crores. Other important heads of allocations are Agricultural Production Rs 11.42 crores, Community Development Rs 19.84 crores, Large and Medium Industries Rs 6.98 crores, Village and Small-scale Industries Rs 13.20 crores, Roads Rs 14.32 crores, Education Rs 22.32 crores, Health Rs 26.44 crores, Housing Rs 8.13 crores etc. The outlays for most of these heads are double their Second Plan size, and thus bear a proportionate relation to the increase in the overall outlay.

The main stress in the Plan is on agriculture and apart from the specific heads such as agricultural production and irrigation, this bias could be traced in such other heads as minor irrigation, soil conservation, cooperation, etc. The Community Development Movement is mainly oriented toward agricultural development. If these diverse heads are to be taken together the allocation for agriculture would come to more than Rs 100 crores. The chief aim in agricultural production would be to step up foodgrain output to make the State self-sufficient in food supplies. For this, foodgrain production is envisaged to be increased from 35 lakh tons at the end of the Second Plan to 42 to 43 lakh tons by the end of the Third Plan. The chief means proposed for this is increase in irrigation. Raising of the irrigation potential from 23 lakh acres at the end of the Second Plan to 33 lakh acres by the end of the Third Plan is therefore suggested. The schemes for improving agricultural productivity include besides extension of irrigation, also proposals for setting up of fertilizer factory and a programme of large-scale soil conservation.

The important feature of industrial development under the Third Plan is the proposal to introduce the cooperative pattern on a wider scale than was attempted in the Second Plan. Under this scheme, three cooperative sugar factories and two cooperative textile mills are proposed to be set up in the State. The other major scheme in the industrial sector relates to the setting up of an aluminium factory.

Education is a major head of allocation and claims more than Rs 22 crores, the important scheme

Analysing the export of individual items, it may be observed that the following increases have been recorded:

	Rs lakhs
Pig Iron and Steel ...	89.50
Metal Artware ...	31.72
Electric Fans and Parts ...	11.47
Textile Mill	7.49
Sewing Machines ...	7.27
G. I. Products ...	7.00
Aluminiumware ...	6.23
Hand Pumps	3.83
Cutlery and E.P.N.S. Ware	3.60
Steel Furniture ...	3.36
Oil Mill	1.51
Centrifugal Pumps ...	1.51
Electrical Accessories ...	1.50

Now that the licences under the barter agreement with Burma have been issued and the stalemate in the India-Egypt Agreement resolved, export to these countries may well be expected to make a recovery.

for implementation in this field being the introduction of free and compulsory primary education for all children in the age group 6-11. Other proposals include expansion of engineering education by starting one or more of engineering colleges, introduction of post-graduate courses in all the medical colleges etc. Schemes for improvement of public health include establishment of 116 additional Health units of the Government of India pattern and 175 dispensaries and 10 cottage hospitals.

A fairer deal for the downtrodden classes is one of the objectives of the Third Plan. The implementation of the Land Reforms Bill which has already been introduced in the State Legislature, is one of the important measures in this field. Special facilities have also been promised to the Depressed and Backward classes who labour under social and economic disadvantages. Welfare schemes for industrial labour and the weaker sections of society are also contemplated. The provision of important and basic amenities like schools, drinking water wells, and roads also find a place in the objective of the State's Plan.

Both with regard to the basic objectives and heads of priorities the Third Plan of Mysore is but an extension of the Second Plan. The lines of divergence are of minor importance and relate to the development of forests, fisheries, mineral resources and ports for which more attention is sought to be given in the course of the Third Plan. Outlay for forest development has been raised from Rs 6.5 millions under the Second Plan to Rs 3.24 crores in the Third Pan. Similarly the outlay under the head 'Ports and Harbours' has been raised from Rs 1.8 million to Rs 7.5 million. By way of justification for the variation in emphasis, it is explained that the States reorganisation scheme has considerably increased the resources of the State in these fields.

The summary of the Plan frame that was released also takes note of the need to raise additional resources for implementing a Plan of larger size than the Second Plan. Under the Second Plan, the outlay which the State was expected to raise as part of its contribution, was Rs 50.1 crores. The quantum of investment that the State has to make in the Third Plan has been provisionally placed at Rs 75 crores. This amount is sought to be raised in the following ways: (a) additional taxation Rs 25 crores (b) market borrowings Rs 40 crores and (c) small Savings Rs 10 crores. The Working Group on Resources has indicated practical ways of raising the additional resources of Rs 25 crores which include removal of exemptions as well as stepping up of rates of Sales Tax, imposition of a temporary surcharge on land revenue imposition of betterment levy on areas brought under cultivation.

SOUTH INDIAN NOTES

Mysore's Balanced Development

The Mysore State Government have planned for an outlay of Rs 279 crores for the Third Five Year Plan. This was placed before the State's Development Council by Mr B. D. Jatti, the Chief Minister. The outlay for the Third Plan is almost double that of the Second Plan, which wsa only Rs 145.12 crores.

Mr Jatti hopes that, wherever there is a gap between the targeted outlay and the local resources, the Centre would help. Thus, Mysore's resources for the Third Plan would be Rs 80 crores to be raised under the following heads: Additional taxation Rs 25 crores; Public borrowing Rs 45 crores: and Small savings Rs 10 crores.

Actually, the Working Party on the schemes had planned for Rs 400 crores for the Third Plan, but it had been trimmed to the present Rs 279 crores.

Mr Jatti is happy over the continuance of the food zone comprising Madras, Mysore, Andhra and Kerala. Evidently, his happiness is due to having been left carefree about the food needs of the State which the Centre would have to take care of. It was his hope also that the Central Government would reimburse the State against its deficit rice needs.

The drafters of the Third Plan for Mysore hold that this is more or less the first plan for the State. It is true in a way, because, when the reorganisation of States was put into translation, many of the States like Mysore had the Second Five Year Plans already under progress. Agricultural production gets the priority in consonance with the New Delhi Food Ministry's slogan. The Mysore Draft Plan seeks to balance agricultural development with a corresponding development of medium, small-scale and large industries in the State. To utilise fully the State's man-power, the plan would seek ways and means.

For the current year, the provision of Rs 35 crores on Plan expenditure may be slightly increased. Mr Jatti told the Development Council that, if there had been a slowness in the utilisation of the allotment made under the current plan, it was due to certain difficulties when there was agitation to reorganise the State on the linguistic basis. Mr Jatti told the Council that they should fully use the funds for the current plans as otherwise their capacity to utilise the Rs 279 crores for the Third Plan would be doubted.

The emphasis on irrigation and power in the current plan will continue. Mysore is below all-India level in the irrigation average, and the proposal is to raise the irrigation potential to 23 lakh acres at the end of the Second Plan and again to step it up to 33 lakh acres by the end of the Third Plan. Under power also, the resources of the State will be raised to 160.5 M.W. at the end of the current plan and to 776 M.W. by the end of the Third Plan. A fertilizer factory and a large scale soil conservation programme would be included. The augmenting of the State's foodgrains production by these means would be to the tune of 35 lakh tons by the end of the present plan and by the end of the next plan further to 43 lakh tons. An aluminium factory is proposed to be established. Stress would be on cooperative methods in establishment of more sugar and textile mills in the State.

In other fields, the Mysore State has an elaborate housing programme to build 24,000 houses for various categories of people and 10,000 rural houses at an expenditure of Rs 813 lakhs. The current plan's allotment for this field is Rs 419 lakhs.

The draft had stated that the Third Plan is likely to be of the order of Rs 9,900 crores. It may be assumed that Rs 6,500 crores to Rs 7,000 crores out of this may be in the public sector. The size of the Mysore plan would have to be determined on the needs and potentialities of the State. Large areas are comparatively underdeveloped in the new Mysore and it would be profitable to utilise large untapped resources.

The quantum of the State's investment, as already pointed out, would be only Rs 75 crores. As for the debt position, by March 1961, it would be likely to be Rs 162.93 crores. Therefore, there was need for the closest scrutiny of the plans, which on inclusion in the Plan should be capable of giving adequate returns.

Irrigation and Power will claim 44% of the total outlay in the Third Plan, Community Development 19%, mineral development, large, medium and small scale industries 8% and social services nearly 24%.

The actual total outlay contemplated is Rs 278.97 crores against the current plan's Rs 145.13 crores. Agricultural production is allotted Rs 11.42 crores against the current plan's Rs 5.54 crores. Minor irrigation gets Rs 8.70 crores against the current plan's Rs 3.30 crores (revised). Irrigation gets Rs 60 crores against Rs 32.99 crores in the current plan. Community Development is allotted Rs 19.84 crores against Rs 10.22 crores. Village and small industries have been allotted Rs 13.20 crores against the current plan's Rs 6.80 crores. Road Development gets Rs 14.32 crores against Rs 7.38 crores. Education is also a major head to which has been allotted Rs 22.32 crores against the Second Plan's Rs 11.50 crores. Community Development also claims a sizeable share of Rs 19.84 crores against Rs 10.22 crores. Large and medium industries are allotted Rs 6.98 crores against the current plan's allotment of Rs 3.59 crores.

Thus, almost every one of the thirty heads of development gets double the amount in the Third Plan and that is why the Third Plan's outlay may become doubled.

*

INS Darshak

At Vizagapatam's Hindusthan Shipping Yard early this week, the first Indian naval vessel constructed at the yard was launched. The new vessel, INS Darshak, had to be built mainly dependent upon foreign supplies. As Commodore B. N. Lele, Managing Director, told the gathering, vital supplies had to come from foreign countries and the designers of this vessel were resident in France while supplies had to come from the UK and other European countries.

Commodore Lele's optimism that the management was looking forward to a better output needs to be shared by other shipping concerns in as much he himself had vouchsafed to the truth of the still underdeveloped stage of our shipping industry depending upon foreign resources to complete any shipbuilding scheme. It is therefore natural that he should have suggested, obviously with a view to focussing sharply the difficulties the Vizagapatam Yard is facing, a permanent body of experts to whom the work of shipbuilding, repairs and maintenance could be entrusted for assessing properly the need of the industry. He stressed the need for standardisation of items of machinery, encouraging local industries by supplying them with drawings and specifications and guiding manufacturers as to particular aspects of items that should be improved. He stated that the present personnel of the shipyard had not time enough to spare for this task.

This is a confessed avowal of the real handicaps the shipbuilding yard in Vizagapatam. His complaint about standardisation is more or less similar to that of the automobile industry, though this does not experience so much of below-standard parts of machinery.

Another point which worked against the ship-building industry is that, in the development of the indigenous industry, the demand when compared to the demand for non-shipping items, the requirements of individual ship-builders and ship repairers were not large enough to induce local venture to undertake a competitive supply. It was therefore that Commodore Lele suggested the compilation together of the requirements of individual shipbuilders and ship repairers and companies when probably private interest could be induced to supply such items.

Vice Admiral R. D. Katari, Chief of India's Naval Staff, launching the INS Darshak, described the achievement of one lakh tons of shipbuilding by last year by the Yard as a landmark in the Indian shipbuilding industry. He wanted a complete survey of the Indian coast, which had not been done for the last century. He said that this could be done with the help of the Darshak which he had launched. It was the Vice-Admiral's hope that the Indian Navy would continuously associate itself with the Hindusthan Shipyard and secure more ships from it, including warships with electronic equipment.

INS 'Darshak', when completed, will be one of the most modern vessels afloat in the Indian Navy. She is designed to be an ocean survey vessel and will have upto-date equipment for survey work of all types, such as oceanographic, thermographic and hydrographic. With an over-all length of 321 feet, breadth of 44 feet, she is designed to develop a maximum trial speed of 16 knots. Her special equipment includes a helicopter for aerial photography, a jeep and a trailer, six launches for survey work and a crane to handle the survey launches.

INS 'Darshak's' displacement is 2,750 tons.

Amenities provided for in the ship are for 250 officers. These facilities do not exist in any other vessel of the Indian Navy. She has complete air-conditioned living and working quarters, provision of fluorescent lighting throughout and has automatic telephones.

*

Development Rebate

Buses and lorries should be taken as plant and machinery with a right to claim development rebate in the course of income-tax assessment. This important judgment by the Madras High Court should come as a great relief to fleet owners in this State.

A private motor firm claimed Development Rebate in respect of new buses and lorries they had put on the road. The income-tax officer disallowed the claim on the ground that buses and lorries could not be said to be "installed" so as to qualify for relief under the relevant section of the Income-tax Act. An appeal was made to the Income-Tax tribunal, which gave a favourable finding to the assessees. The Commissioner of Income-tax referred this again to a full Bench of the Madras High Court.

Mr Justice P. Rajagopalan and Mr Justice S. Ramachandra Aiyer, who heard the reference, held that buses and lorries came within the scope of the statutory expression "plant" and it could not be disputed. Therefore, their Lordships held that, in view of the extended statutory definition of the term "plant", it was clear to them that the expression "installed" in relation to machinery or plant must be considered to mean such installation as that plant or machinery was capable of. Their Lordships, in their interpretation of the relevant section applied to buses and lorries, said the word "instal" should be taken "to place an apparatus in position for service or use." The bus or lorry had been "set up for use or service" when it was put on road and in that sense it was "installed". Their Lordships also compared a Bombay High Court judgment in the Saraspur Mills Ltd, and held finally that the assessees were entitled to Development Rebate.

This decision apparently means that even a non-industrial company can claim development rebate on the office cars that it maintains. Indeed, all office equipment, such as typewriters and calculating machines and the like, would impliedly be eligible for development rebate. If such is the case—and it may have to be tested out in the courts—then the concession of development rebate as recorded in the income-tax law is a most valuable and considerable gift to industry. Would, we wonder, air conditioning equipment be permissible for development rebate? There is not reason why it should not be, and one of the consequences of the high court decision may be to spur companies more expeditiously than they might otherwise have done, air-condition their offices.

(See Investment Gleanings, page 711, in Indian Finance of October 24, 1959).

THE EAST INDIAN COAL COMPANY, LIMITED

(Incorporated in England with Limited Liability)

NOTICE is hereby given that the One Hundred and Seventh Annual General Meeting of the Company will be held at the Head Office of the Company, 4, Clive Row, Calcutta, on Wednesday, the 16th December, 1959, at 11 o'clock a.m. for the following purposes:—

(1) To receive and consider the audited Accounts for the year ended 30th April, 1959, the Balance Sheet as at that date and the Reports of the Board of Directors and the Auditors thereon.

(2) To declare a Dividend.

(3) To appoint a Director in place of the one retiring.

(4) To fix the Auditors' Remuneration.

Notice is also given that the Share Transfer Books of the Company will be closed from the 2nd December to the 16th December, 1959, both days inclusive.

A Member of the Company who is entitled to attend and vote may appoint a proxy to attend and vote instead of him. A proxy need not be a Member of the Company.

By Order of the Board,

JARDINE HENDERSON, LIMITED,
D. FORDWOOD,
Secretary

Managing Agents and Secretaries.

4, Clive Row,
Calcutta—1.
23rd October, 1959.

SOUTH INDIAN MARKETS

Declining Trend in Seeds

Madras, Wednesday.

Groundnut oil and kernels market today remained steady though price decline seemed to have stopped a bit with the last-week end. New arrivals of peanut crop in moderate quantities had a sobering effect on the market. On the export side, immediate Burma shipments of groundnutoil remained at Rs 1,550 to Rs 1,575, while December shipment was quoted at Rs 1,400 per ton.

Today's closing rate of groundnut oil per candy of 531 pounds: Ready Rs 334; November Rs 344; December Rs 332.

Kernels bold per candy of 500 lbs Rs 175. Superior not quoted.

Castor oil per candy of 551 lbs Rs 322.

Coconut oil per tin Rs 3/12.

Gingelly oil per maund Rs 21/4.

Groundnut cake per bag Rs 25.

United Kingdom demand was poor; but at £100 per ton interested in in spot. Supplies were moderate and the following were the foreign rates today:

	Per ton
Groundnut oil per ton	£100
Groundnuts, January/February	£65/66
Castorseed November/December	£57/15 to £58
Nigerseed nominal December/January ...	£59
Groundnut oil spot Rotterdam	£106/10
Groundnut December	£100/101
Castor oil BSS November/December ...	£117/118
Castor oil Commercial	£112/113
Coconut oil Straits November/December ...	£141/142
Coconut oil Colombo November/December ...	£146/147
Groundnut oil cake (Expeller) December/January	£36/10 to £36/15
Groundnut oil cake (Solvent) December/January	£35/10 to £35/15

Sizeable declines obtained in both groundnut oil and kernels since the last week-end. New crop arrivals from Madras and Andhra centres provided the base for the price decline. The Diwali season alone held spot quotations at higher rates which otherwise would have fallen very much. Shippers and Calcutta interests continue to lift their actuals from Adoni, Nandyal, Dhone, Kurnool in Andhra where prices rule lower than in Madras. Fairly large quantities were contracted by these parties at Madras parity price of Rs 342 per ton for November first half delivery. Even local vanaspathi bought from Prodattur and Yerraguntla area where prices remain lower.

Oil thus lost by Rs 35/40 per ton while kernels shook off Rs 22/25 per ton.

Despite rainly condition in the interior, groundnut arrivals were only moderate. Local stocks with commission agents still continue to be very large. Their anxiety to liquidate stocks before a further fall in price is registered had a depressing impact on the market. This week's dealings in kernels were in the lower grade quality with only 40/42 per cent oil content and with 2 to 10 per cent driage. These were taken up at a pucca parity around Rs 180 and later on even at Rs 185 per candy, but in small lots.

In oil, the Deepavali festive season's demand from wholesalers was responsible only for a small turnover. Spot was taken at Rs 326/360 per candy, but towards last week-end delivery could be obtained even at Rs 355 per candy.

There was a bearish tendency in forward positions. Bombay was recording a decline daily. Adoni, the large supplier, now also is at lower rate, and therefore support did not come from buyers. Only short coverings from now and then were witnessed but even these did not bring about any appreciable rallies.

November, which was quoted at Rs 348 last week-end declined further to Rs 345 Monday. It remained at the same rate yesterday too. Today's closing rate was Rs 344 per candy. This forward position even went down to Rs 341/8 per candy toward the fag-end of last week, but improved to the present level due to short covering.

December vaida had a large turnover. Beginning at Rs 334 per candy at this week's beginning, it did not continue at that rate on Tuesday when the close was placed at Rs 332.50. Toward the close of last week it went lower down to Rs 328/330. It rallied later in the market and today it closed at Rs 332.

Upcountry Markets:

In southern districts oil markets, price levels continue high still. New crop arrivals here are not sizeable, even from the peanut growing belt of the North Arcot district.

Tiruvannamalai and Tiruppattur and other centres in this district received small supplies in the market. Even at Salem, the arrivals were disappointing. The Pollachi season is drawing to a close. Summer crop supplies in the market of South Arcot have considerably dwindled. Crushing activities in these centres were dull.—

All areas in South and Coastal Andhra had good rains during the week, benefiting the coromandel crops.

No large-scale offering of groundnut oil can be expected from the Southern centres till the middle of this month.

The total All-India crop in groundnuts for the year 1959/60 is expected to be in the region of 22,00,000 to 23,00,000 tons, according to trade interests here.

*

Oils and Oilseeds

There is no change in gingelly seed or oil rates. Last week's rates prevail today.

Castor Oil:

There was a small decline and sellers were inclined to trade at Rs 322 per candy.

Coconut Oil:

West Coast market maintained a steady level. At Madras, today's price was Rs 39/12 per tin. At Cochin, November was quoted at Rs 649 per candy and December Rs 648 per candy.

In the foreign market, there is large scale offering from India both in groundnut and oil. Burma is not showing any inclination, having taken only small quantities of November shipping.

The following are today's prices, obtaining in the southern centres, of oil and groundnut kernels.

	Kernels*	G. Nuts†
Guntur/Bezwada ...	190	360
Vriddhachalam ...	190	355
Nandyal ...	180	330
Villipuram ...	190	360
Cuddappah/Yerraguntla	180	335
Pollachi (Red) Superior	192	347
Tanjore	185	355
Tiruvannamalai ...	185	354
Sales	180	352

†Oil per candy of 500 lbs.
*Per candy of 531 lbs.

Hides and Skins

The price of cowhides was 6 to 12 nP lower today in the market. Arrivals continued to be fair. Shippers are still holding back.

London inquiries for light weight fifths for semi-premium and premium marks at 62d to 65d were fulfilled. Traders from the North are operating in the Madras market for the last week or so, and there is no chance of prices going further down in inferior fifths of 5/5½ lb average.

Tanned cow buffs and tanned buff calf clearances were slow with stocks accumulating. There was a decline in price by 6 nP to 10 nP per lb for cow and 6 nP for buffs. Buffalo hides had a fair clearance.

Tanned goatskins and sheepskins noted moderate activity. In these prices were 18 nP easier.

On the export front, the kip market proved nervous, with London's unwillingness to buy even at reduced quotations from Madras. World prices in hides are reportedly on the decline. UK quotation was 4d per foot less on finished leather.

Premium quality kips had business at a reduction of 3d in all selections. Common weights were also less by about 3d. 8/8½ fifths were lower also by 3½d.

The following are the prices of tanning materials here today:

Avaram Bark Rs 90/105; Konam Bark Rs 67/70; Myrobolams Salem Rs 115; Bombay Rs 75 to Rs 77.50.

Raw skin market in Bezwada and Bangalore is doing practically no business while the following were the quotations: (Rates of previous week in brackets): Bangalore Raw Goat skins Rs 625/700 (Rs 650/800); Whitewool sheep Rs 530/600 (Rs 530/625); Black wool sheep Rs 440/530 (Rs 430/500); Bezwada Raw Goat skins Rs 665 (Rs 690/700) He Sheep Rs 590 (Rs 575/580); She sheep Rs 430 (Rs 430/440).

THE JAY ENGINEERING WORKS LIMITED

EXPORTS ALMOST DOUBLED

Sir Shri Ram Reviews Progress

Addressing the Shareholders of The Jay Engineering Works Ltd., at its 22nd. Annual General Meeting held on 23rd October, 1959, Sir Shri Ram, Kt., Chairman of the Company, said:

Ladies and Gentlemen,

The Balance Sheet and Profit & Loss Accounts and the Directors' Report have been in your hands for some time and these with your permission I will take as read.

The comparative figures of sale etc. between the year ending 31st March, 1958 and the year ending 31st March, 1959, are:—

	For the year ending 31-3-1958	31-3-1959
Sales ...	4,71,60,120	5,23,24,107
Profit before providing for Income-Tax ...	38,52,326	44,22,192
No. of Sewing Machines made	1,57,945	1,97,126
No. of Fans made	1,99,073	2,70,807
No. of Schools ...	386	547
No. of Students ...	30,000	40,000

This will show an all round improvement.

I told you last year that we have got arrangements for the sale of our Sewing Machines and Fans at 1200 places. The arrangement now is at 1500 places.

Although we are having stiff competition from Japan, and other countries in exporting our Sewing Machines and Fans, but you will be glad to know that our exports up to 31st March, 1959, was of the value Rs. 45,10,776|- as compared to Rs. 24,96,270|- up to the year ending 31st March, 1958, in otherwords an increase of over 80%.

I told you last year that our agents had started showrooms in Singapore and in Bangkok. Both the places, I am glad to say, are doing well. They have now also opened showrooms and offices at Kualalampur and Penang and I hope our sales in those countries will also increase much more.

I take this opportunity of conveying our appreciation of the staff, who go out of India to study foreign markets and their needs, and popularise our goods there; in particular Shri Ravindranath.

FAN FACTORY

During the year we have been able to produce in the Fan Factory, Air Circulators of good quality and performance, and hope this will be a good additional line of our products. The prototypes for exhaust fans are also ready, and if not in the current year, we will be able to put them in the market early next year.

I am sorry to say that due to various difficulties the production of the Zig Zag Machines has not been taken in hand, as our staff have been kept busy with the designing and producing the new type of streamlined machines specially for the American market. The first lot of the machines will be despatched by the end of this month, and we hope that they will give satisfaction to our buyers. Once we produce an article to the liking of our American friends, we hope good business would be possible in that country.

I told you last year, how in a very few years, we brought down the price of our machines from Rs. 220|- to Rs. 160|- in three stages, but now we find it very difficult to reduce the price any further.

The high price of food stuffs, and all the other articles of cosumption of the lower middle class, leave very little margin with the poor tailors and middle class housewives, (and they are our biggest customers) to be able to buy sewing machines, although these machines help the tailors and poor middle class families, in earning their livelihood.

After all sewing machines would only be used if there is cloth to sew. While in 1950 the cloth consumpion per capita was 9.7 yds., in 1951 11.7 yds., in 1952 14.4 yds., in 1953 and 1954 15 yds., in 1955 15.3 yds., in 1956 16.4 yds., since then approximately the figures are 16.2 for 1957 and 1958. So long as the consumption of cloth was going up, our sale of sewing machines were also going up. Now that the cloth consumption has become static so has the sale of machine and we are finding a little buyers' resistance, which can be well appreciated.

I told you last year that a beginning has been made, in selling machines on hire-purchase systems and this is gradually but slowly catching.

Last year we held an exhibition of All-India Sewing & Embroidery exhibition at Calcutta. Since then one more was held at Madras which was opened by the Chief Minister Shri Kamraj Nadar. And another was held in Colombo, this was opened by Mrs. Bandaranaike, the wife of the then Prime Minister of Ceylon. In both places literally thousands of people saw the exhibition every day, and it has helped a good deal in popularising our machines.

CAPACITY TO BUY

There is one other point which I made some years back when speaking to you. After all the people in a country can buy things, made in the country by the people, whose remuneration has some relation with the per capita income of that country. While in India in 1952 the industrial workers got 419% of the per capita income, it has gone up to 448% in 1957. On the other hand, in France in 1952 it was 116%, it has come down to 110% in 1957. In Japan it was 263% in 1952 and 255% in 1957, and after all Japan is the country who is our biggest competitor. It will not be out of place to say that even in 1952 the percentage of wages of an industrial worker in India was almost twice as high as the highest in any country in the world. In 1952 the lowest in France was 116% of the per capita income and 263% the highest in Japan while as in India, these were 419% of the per capita income. It is also well known that the per hour output in India is lower than all industrially advanced countries. These figures do not include in our case either heavy losses we suffer in the food we provide to our workers or the provident fund amount or the payment for the State Insurance etc. The loss on a meal having gone up from 37 naya paise in 1952 to 62 naya paise in 1959 and over 50,000 meals are supplied in a month. The loss which was less than Rs. 7,000|- per mensem has gone upto almost 36,000 per month.

Every effort is being made to bring down the cost of production without affecting the income of the workers on the one hand, and the quality of the machines on the other, but it is an uphill task, and while in the past I have always been optimistic, I am sorry to say that with the buyers' resistance, the high cost of labour and food etc., I am not sure whether we will be able to sell all our products even at the present low price; and as I have told you, it is not possible for us to further reduce the price. If unfortunately we are compelled to do it, it will certainly affect very highly the limited profits that we have made this year.

I do not want to be pessimistic but I have to put the situation as it is before you. I however hope and pray that things may turn out in a way that we may be able to keep up our progress.

THE METAL BOX COMPANY OF INDIA LIMITED

NOTICE TO ORDINARY SHREHOLDERS

Notice is hereby given that the Ordinary Share Transfer Books will be closed from 23rd November 1959 to 30th November 1959, both days inclusive, for the purpose of the rights issue that is to be made in December, 1959.

As shareholders have already been advised, Provisional Allotment Letters will be posted on 1st December, 1959.

By Order of the Board
F. P. GILBERT
Secretary

Calcutta
27th October, 1959

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

This announcement is not an invitation to subscribe for shares but is issued for the purpose of giving information concerning the Company. The formal Prospectus dated 29th October, 1959, has been delivered to the Registrar of Companies, West Bengal, for registration as required under Section 60 of the Companies Act, 1956. Copies thereof can be had from the Registered Office of the Company or from the Bankers and Brokers named below.

THE HILLA TEA ESTATES LIMITED.

(INCORPORATED UNDER THE COMPANIES ACT, 1956).

ISSUE OF 1,25,000 Equity (Ordinary) Shares of Rs. 10/- each at par. Payable in full on Application.

The Subscription List will open at the commencement of banking hours on 9th November, 1959 and will close at the close of the banking hours on 14th November, 1959, or sooner or later as the Directors may decide.

SHARE CAPITAL

Authorised:	Rs. 5,00,000/-	divided into 5,000—7½% Tax-free Cumulative Preference Shares of Rs. 100/- each, redeemable at a Premium of 5% on or after the 1st April, 1968 at the option of the Company, either in whole or in part.
	Rs. 20,00,000/-	divided into 2,00,000/- Equity (Ordinary) Shares of Rs. 10/- each.
	Rs. 25,00,000/-	
Issued:	Rs. 12,50,000/-	divided into 1,25,000 Equity (Ordinary) Shares of Rs. 10/- each.
	Rs. 12,50,000/-	

No Shares will be issued for consideration other than Cash.

Of the above Issue 10,000 Equity Shares of Rs. 10/- each are reserved for issue to the Promoters, Directors and their friends and associates at par, out of which 20,000 fully Paid-up Equity Shares at par have already been subscribed and paid for by the Directors and their friends being more than 15% (Fifteen per cent) of the present issue of 1,25,000 Equity Shares. The balance 20,000 Equity Shares of Rs. 10/- each are agreed to be taken up at par by the Promoters, Directors and their friends and associates following the issue.

LOAN CAPITAL.

The Company has created no Mortgages, Debentures or other Loan Capital.

FINANCIAL REQUIREMENTS.

The Financial Requirements of the Company are comprised of:

(1) Purchase price of the Lands, Plantations, Buildings, Machinery, Motor Vehicles, etc. of Hilla Tea Estates ...	Rs. 10,00,000/-
(2) Preliminary expenses including Commission, Brokerage and expenses of the Issue	Rs. 75,000/-
(3) Working Capital	Rs. 11,25,000/-
	Rs. 22,00,000/-

MINIMUM SUBSCRIPTION

The minimum amount which, in the opinion of the Directors, must be raised by the issue of Shares in order to provide the sums required to be provided as per paragraph 5 of Schedule II to the Companies Act, 1956, upon which the Directors will proceed to allot shares presently offered is 80,000 Equity Shares of the nominal value of Rs. 8,00,000/- being only a part amount of the present Issue, out of which Rs. 7,25,000/- shall be the part purchase price of the Lands, Buildings, Plantations, Machinery, Motor Vehicles, etc., of the Hilla Tea Estate including the earnest money of Rs. 1 Lakh (Rupees One Lakh) paid in cash by Shri B. N. Sen Gupta, Director, and adjusted against subscription of 10,000 fully paid up Equity Shares of Rs. 10/- each in the Capital of the Company in favour of the said Shri B. N. Sen Gupta as hereinafter mentioned, and Rs. 75,000/- shall be for preliminary expenses including commission and brokerage and expenses of this Issue.

CHAIRMAN

Sir Dhirendra Nath Mitra,

(e) The export quota rights and internal quota rights in relation to sale or production of tea which have been or may be allotted or granted to or in respect of the said Tea Estate.

The crop manufactured from Hilla Garden leaf during the years are as follows:

1954	6,50,326 Lbs.
1955	6,67,850 Lbs.
1956	7,05,402 Lbs.
1957	6,49,553 Lbs.
1958	5,96,242 Lbs.
1959 (upto 14th October as per report submitted by Mr. Crowley, Manager of the Garden) ...	5,17,776 Lbs.
Expected yield at the end of this year ..	6,40,000 Lbs. (approx)

REPORT ON THE GARDEN

The Garden has total area of 1,640.29 acres of which 763 acres are licensed for tea and the balance acreage utilised for grazing, khets, thatch, bamboos, fuel and buildings. Rainfall averages about 160" annually.

Some 550 houses accommodate the settled labour force and there are 14 Staff Quarters as well as Manager's and Assistant's Bungalows, also a Dispensary and nine creches. All buildings are in good repair.

The Factory is a pucca structure of adeqcate capacity with ample withering accommodation and is run by water power with a stand-by steam plant.

Six 36 inch Rolling Tables and three Legg Cutters together with necessary sifters are sufficient to deal with the leaf plucked on the peak days and two 6' and one 4' oil-fired dryers can easily cope with the output. The sorting arrangements were reorganised this year and teas are now graded by Myddleton Sorters fed by Conveyors from the Cutters, which gives a very high percentage of Pekoe Fannings and a minimum of Broken tea. The factory is generally well found for machinery which has been maintained in very good condition.

The planted area consists of an Upper Division of about 400 acres and a Lower Division of about 360 acres. The tea is well drained, fairly well shaded, green cropped as necessary and annually manured. Average out-turn over the past three years was 15.18 maunds per acre on the Upper Division and 10.15 maunds per acre on the Lower Division, giving an overall 12.52 maunds per acre. The replanting and improvement programme is now coming into effect and a crop exceeding 6,40,000 lbs. is anticipated this year, and it will increase to an optimum of about 8,00,000 lbs. when the young tea is in full bearing.

The Garden produces legg cut teas of a good standard which are classified by the Brokers as above average for the Districts, and the Directors feel that at the present price level, the Company should earn substantial profits and can expect to pay dividends from the very first year if there be no unforeseen circumstances and the present yield of this garden can be increased further in the early future.

PRESENT ISSUE

Out of the Authorised Capital, as per the resolution of the General Body, dated 30th March, 1959, the Directors decided on 20th May, 1959 to issue 43,287—6½% tax-free Redeemable Cumulative Second Preference shares of Rs. 100/- each at par. 3,287 shares out of them were reserved to the holders of the 5% Tax-free First Preference shares, who were given the option to convert their 5% Tax-free First Preference shares into 6½% Tax free Second Preference shares. To the extent that the holders of the First Preference shares opt to convert in such manner, the number of First Preference shares having priority over the Second Preference shares, including the present issue thereof, will diminish.

Out of the balance of 40,000—6½% Tax-free Redeemable Cumulative Second Preference shares, the Life Insurance Corporation of India, Bombay and the Central Bank of India Ltd., Bombay, have agreed to subscribe for 10,000 shares of the total value of Rs. 20/- lakhs. The balance of 20,000 shares are now offered to the public for subscription at par.

TERMS OF PAYMENTS.

Payment for the shares issued hereunder should be made at the rate of Rs. 50/- per share along with the application. The balance of Rs. 50/- is payable within a month of the allotment of the share. If it is not so paid, the balance will have to be paid with interest thereon at 10 per cent per annum from the date of allotment to the date of its receipt by the Company and the Shares will become liable to be forfeited after notice.

The said Preference shares shall be entitled to the payment of the Cumulative tax-free dividend of 6½% per annum on the capital paid-up for the time being proportionately for the period commencing from the date of allotment of each share.

TERMS OF REDEMPTION OF THE SHARES ISSUED HEREUNDER.

The Board may redeem at their discretion on the 1st July of any year commencing from 1st July, 1970 to 1st July, 1974 (both dates inclusive), the whole or any part of the said Preference shares for the time being issued and outstanding, out of any moneys which may lawfully be applied for the purpose, at par, together with the fixed dividend due thereon down to the date of redemption thereof, upon giving to the holders of the shares to be redeemed not less than 3 months previous notice in writing.

Any of the Preference shares not previously redeemed under the foregoing provisions shall be redeemable on 1st July, 1974.

HISTORY AND DEVELOPMENT OF BUSINESS.

The Company was registered under the Indian companies Act, 1913, on 3-7-1941. It obtained its certificate of commencement of business on 21-9-1942 and has been doing business ever since then.

The company took over the sugar factory of the Vuyyuru Co-operative Agricultural Industrial and Credit Society Ltd., (V.C.A. I & C.S. Ltd.) at Vuyyuru, by purchase under a sale deed dated 9-3-1943 for Rs. 22,74,000/-.

The original Authorised Capital of the Company was as follows:

		Rs.
6,000	5% Tax-free Cumulative Redeemable Preference shares of Rs. 100/- each ...	6,00,000
13,000	7½% Tax-free Ordinary shares of Rs. 100/- each ...	13,00,000
30,000	Deferred shares of Rs. 10/- each ...	3,00,000
	Total ...	22,00,000

Out of the above, Rs. 16,68,090 was subscribed and paid up as under:—

		Rs.
3287	5% Tax-free Cumulative Redeemable Preference shares of Rs. 100/- each (of which 3,000 shares were allotted as full paid up pursuant to the sale deed dated 9-3-43 mentioned above.) ...	3,28,700
10522	7½% Tax-free Ordinary shares of Rs. 100/- each ...	10,52,200
26719	Deferred shares of Rs. 10/- each ...	2,87,190
	Total ...	16,68,090

The Company, at its class Meetings and Extra-Ordinary General Meeting held on 30-3-1959, cancelled the 2713 Cumulative Redeemable Preference shares not taken up and increased its Authorised Capital to Rs. 3,00,00,000, which was reorganised as under:—

	Rs.
(a) 3,287 5% Taxfree Cumulative Redeemable First Preference Shares of Rs. 100/- each	3,28,700
(b) 96,713 6½% Taxfree Cumulative Second Preference Shares of Rs. 100/- each	96,71,300
(c) 20,00,000 Equity Shares of Rs. 10/- each ...	2,00,00,000
	3,00,00,000

Under the above reorganisation, the subscribed and fully paid up 3287—5% tax-free Cumulative Redeemable Preference shares were termed as 5% tax-free Cumulative Redeemable First Preference shares. The Ordinary shares and Deferred shares became Equity shares with equal rights from 29/7/1959 and for this purpose, the 13,000 Ordinary shares of Rs. 100/- each were sub-divided into shares of Rs. 10/- each in the proportion of ten shares for every one old Ordinary share and the provision for a fixed Preferential tax-free dividend of 7½% per annum in respect of those shares was abolished. To equate the Deferred shares with the Ordinary shares which were being quoted at about the same in the share market, Rs. 25,84,710 from out of the General Reserves was capitalised and applied in payment in full for 2,58,471 Equity shares of Rs. 10/- each of the Company which were allotted to the holders of Deferred shares in the proportion of nine Bonus Equity shares of Rs. 10/- each fully paid up for every Deferred share and the Deferred shares, after the above allotment of Bonus shares, were termed equity shares. After the said reorganisation of the Capital structure, the Company has recently issued 1,96,205 Equity shares of Rs. 10/- each which have been offered as 'Right' shares to the existing holders of Equity shares in the ratio of 1 : 2 increasing the total Equity capital of the Company to Rs. 58,86,150. The shares so offered are due for acceptance by the Equity shareholders on or before 14th December, 1959.

DEVELOPMENT PROGRAMME AND PROSPECTS.

The Company is engaged in the business of manufacture of (1) Sugar, (2) Spirits, (3) Confectionery, (4) Cement and (5) Heavy Industrial Machinery. When the Company took over the sugar factory of V.C.A.I. and C. S. Ltd., at Vuyyuru as mentioned above, its crushing capacity was 800 tons of sugar cane per day. The crushing capacity was increased to 1,200 tons in 1951 and 1,800 tons in 1952. It has now been further expanded to 2,500 tons of sugar cane per day. The Board have under consideration plans for further expansion of the sugar factory to a crushing capacity of 3,000 tons per day.

For the utilisation of the bye-products of the sugar factory, a distillery with a capacity of 1,500 gallons of Industrial Alcohol per day was erected in 1945, where Industrial Alcohol is being produced. A confectionery section was started in 1951 and equipped with modern automatic machinery and confectionery of high quality is being manufactured.

For the manufacture of most of the items of plant and machinery required for the sugar factory at Vuyyuru and for other industries, a Central Workshops was established at Tiruvottiyur near Madras. This workshop is manufacturing Heavy Industrial Machinery and is now being expanded and equipped with up-to-date machinery for the manufacture of four complete sugar plants of 1,000 tons daily capacity each and two complete cement plants of 300/600 tons daily capacity each per annum, as also superphosphate and sulphuric acid plants.

The Company has completed the First Stage of a Cement factory at Macherla in Guntur District with an annual capacity of one lakh tons of cement which is supplying cement to the Nagarjunasagar Project. It is now being expanded so as to manufacture 2,50,000 tons of cement per annum in the second stage, which is expected to be completed in 1960.

The Industrial Finance Corporation of India has already advanced to the Company two loans amounting to Rs. 87/- lakhs covered by a Mortgage Deed dated 5th August, 1957 for the expansion of the sugar factory at Vuyyuru and the Cement factory at Macherla under which Rs. 70/- lakhs is now outstanding.

When all the above projects are completed, the total fixed Assets of the Company will be over Rs. 400/- lakhs as against the outstanding mortgage loan of Rs. 70/- lakhs, Preference Capital of Rs. 43,28,700/- (inclusive of the present issue) and Equity Capital of Rs. 58,86,150/-.

The Company with its Sugar Factory at Vuyyuru, a Cement Factory at Macherla and the Central Workshops at Thiruvottiyur is estimated to earn a profit of not less than 50 lakhs per year from 1960 onwards. The total amount required for payment of dividends on the entire Preference share capital is about Rs. Four lakhs as against the estimated annual profit of Rs. 50/- lakhs. The Preference shares may therefore be considered well covered both as regards capital and also earnings.

UNDERWRITING.

The present issue has been underwritten by the following for the amounts set out against them at an underwriting commission of 2½ per cent on the value of the shares underwritten by them respectively:—

	Rs.
1. The Andhra Bank Ltd., Masulipatam	5 lakhs

STOCK EXCHANGES

Cheerful Trend

WATCH-DOG WRITES:

STOCK markets in India displayed a steady trend last week on revival of buying support in a number of selected equities on good corporate news. The more speculative counters were also quite active with the price levels showing fresh gains following indications of firm action on the part of the Government of India as regards the Chinese incursion into our territory. Prospects of increased money supply and improved corporate working imparted added strength to the bullish trend.

In the Calcutta Stock Exchange, the inclusion of four more shares to the clearing list resulted in a broadening of activity with the newly added shares coming in for sustained support at daily enhanced price levels. Expectations of an early announcement of a favourable retention price induced revival of support for Indian Irons which recorded sizable gains during the week's trading.

Cheerful conditions developed on Dalal Street in later dealings with most sections participating in the uptrend. Higher production figures contributed to the improvement in sentiment in steel shares while textiles benefited from continued good advices from the cloth market.

In the Madras Stock Exchange active conditions prevailed with textile and plantation shares in the limelight.

*

Calcutta

Friday Evening,

TRADING was on a cheerful note on the Calcutta Stock Exchange during the past week. With the announcement of their decision by the Calcutta Stock Exchange to include four more shares, namely, Dunlop Rubber, Rohtas Industries, Hnidustan Motors and Shree Gopal Paper, bringing the total of the shares in the Clearing to 13, activity broadened in these shares with their price levels pushed up to new highs. Selected shares all along the list were also keenly sought after and later on Indian Irons also joined the upward movement. The absence of further disturbing news from the India-China border contributed to the revival of interest while higher advices from the cloth market. Cawnpore Textiles was done at Rs 5.31 Jayshree Textiles hardened to Rs 10.55. Kesoram was a bright feature and improved to Rs 20.25 from Rs 19 earlier in the week. Bowreah was marked at Rs 153 with Dundar done at Rs 230. New Victoria were placed at Rs 1.28.

Though activity was on a restricted scale selected shares in the coal section continued to be in good request. It would appear that investors had derived considerable encouragement to extend commitments in view of the recent enquiry received for Indian coal from a number of Overseas countries. Bengal advanced from Rs 294 at the commencement of the week to be finally placed on Thursday at Rs 312. Burrakur opened at Rs 16.75 and closed on Thursday at Rs 17.50. Raneegunge was placed at Rs 17.06 from Rs 16.37. Central India was done at Rs 7.81. Bharat Collieries at Rs 6.94, New Beerbhoom at Rs 20.69, Union at Rs 14.19, South Karanpura at Rs 12 and Western Bengal at Rs 6.62.

The Jute section started the week on a subdued note but in later dealings witnessed a broadening of interest with selected shares changing hands at enhanced price levels. Barnagore gained nearly 10 points to be done at Rs 186. Howrah moved up from Rs 24.62 to close at Rs 25.12 on Thursday. New Central was a prominent feature and was taken to Rs 22 from Rs 20.62 on Monday. Northbrooke was well maintained at Rs 20.87. Union was steady at Rs 242. Nuddea appreciated to Rs 61.25 from Rs 58.50. Birla moved upto Rs 26 from Rs 25.44. Goureepore firmed upto Rs 447. Ganges was done at Rs 10. National gained 1 point on balance at Rs 25.50.

The revival of interest in tea shares noticed since last week was well maintained on indications of sustained good demand at the auctions. Birpara advanced to Rs 157. Bishnauth was steady at Rs 19.62. Basmatia improved from Rs 25.50 to Rs 27.06. Hantapara was done upto Rs 140. Hahimara was steady at Rs 23. Hattikhira moved up from Rs 12.94 to Rs 13.12. Haldibari was wanted upto Rs 21.87 from Rs 20.37. Jayshree was taken to Rs 15.56 from Rs 15. Tezpore moved up to Rs 18.81 from Rs 18.

Most paper shares displayed an uptrend on good corporate news. Orient paper advanced from Rs 38 to Rs 38.30. Shree Gopal Paper opened at Rs 22.75 and in subsequent dealings was pushed up to be finally placed on Thursday at Rs 24.81. Sirpur Paper steadied up to Rs 14.50. Bengal was placed at Rs 109, with India Paper coming business at Rs 21.62. Titaghur Paper was done upto Rs 45.12. West Coast moved up smartly from Rs 162 to Rs 180. Mysore Paper was done at Rs 22.75 and Star Paper at Rs 19.12.

Sugar shares continued to be a steady market. Belsund was well maintained at Rs 15.87. Carew was placed at Rs 12.06. Ramnugger was done upto Rs 20.75 from Rs 19.37. Champaran was marked at Rs 19.87. Cawnpore was taken to Rs 14.06. Darbhanga was done at Rs 18.75; Dyer Meakin at Rs 18.12, Samastipur Central at Rs 13.87 and UP at Rs 17.81, SKG attracted attention in later dealings to move upto Rs 14.06.

In the Engineering Section Indian Irons opened at Rs 23.92 and after moving both ways in a narrow groove closed on Monday slightly easier on balance at Rs 23.85. Tuesday again witnessed narrow fluctuations with the scrip closing the day at Rs 23.36. The undertone was slightly steadier on Wednesday with the scrip opening at Rs 23.91 and closing at Rs 24. After opening further higher on overnight support on Thursday at Rs 24.20 the scrip closed at Rs 24.30. Friday witnessed further improvement in sentiment with the quotation taken to Rs 24.40 by close. Among other Engineering TEXMACO were a strong feature closing on Thursday at Rs 25.10 as against the week's opening of Rs 24.40. Jessop advanced to Rs 34.12 from Rs 32 before finally placed at Rs 33.87. Burn & Company was marked at Rs 447. Britannia Engineering was done upto Rs 13, while Indian Galvanizing was done at Rs 20.37. Indian Standard Wagon marked at Rs 92.50. Braithwaite was almost unchanged at Rs 96.81 JK Steel moved upto Rs 13.62 from Rs 12.87. Kumardhubi was transacted at Rs 6.56. Guest. Keen. Williams was done at Rs 40.

In the Miscellaneous section Hindusthan Motors was an active counter and moved upto Rs 13.75 from Rs 12.94. Indian Aluminium opened at Rs 22.87 and closed at Rs 23. Indian Cable on publication of excellent report was wanted upto Rs 31.44. Dunlop Rubber was well maintained at Rs 37.75. Rohtas Industries advanced from Rs 26.31 to Rs 27.69. National Carbon was placed at Rs 40.50. National Tobacco was steadier at Rs 18.50. Straw Products was done upto Rs 12.44. Indian Copper moved upto Rs 4.01 from Rs 3.92 following indications of higher price for the metal. Alkali Chemical was on request upto Rs 23.87. Among Cements Ashoka was unchanged at Rs 9.37, and Dalmia was steadier at Rs 10.50. Orissa was in request and moved upto Rs 14.31 from Rs 13.25.

*

Madras

Madras, (Thursday).

IN the Madras Stock Exchange today, industrials ruled firm while coffee plantation shares were very much active. Textiles continued to be steady and there was no change in banks. Moderate turnover was reported today in Government securities.

Government Securities: Madras Loan 4% 1967 were bought at Rs 100.30 and 4% 1971 Madras loan changed hands at Rs 100.12. 4% Andhra State Loan were traded at Rs 100.00 and 4% Mysore State Loan 1953/63 were sold at Rs 101.85.

Banks: Indian Bank Rs 100 paid improved by 50 nP to Rs 178.00. Travancore Bank came in for inquiries at, Rs 25.62 and transactions took place at that rate. Pandyan bank did not change at Rs 34.25, and Punjab National too at Rs 20.50. Indian Overseas Rs. 100 paid remained unchanged at Rs 177.50 and the Rs 75 paid also at Rs 145.00.

Electrics: Vellore shares appreciated to Rs 13.00. There were no changes in other shares in this section. Karaikkal continued at Rs 10.75 Negapatan at Rs 9.75, Kumbakonam at Rs 10.60 and South Madras at Rs 11.40.

Sugars & Breweries: Business was reported in this section at improved rates. Deccan was at Rs 13.80, the only lower share to be offered for sale, while E.I.D. and K.C.P. improved to Rs 43.00 and Rs 19.00 respectively. Business was done in Kirlampudi at Rs 78.00 which was unchanged. Cauvery continued at Rs 137.00 and Andhra at Rs 23.00; Mysore sugars were quoted at Rs 54.00 and Travancore was firm at Rs 11.70 xd.

Plantings: Coffee shares were in the forefront. Tea shares were a bit depressed. Blue Mountain was quoted at Rs 3.30, Be Be at Rs 3.25 and Chembra was lower at Rs 3.80. Cochin Malabar was unchanged at Rs 7.00. Business was done in Coffee Lands at Rs 26.25 and Cons. Coffee at Rs 25.35. Cottaned remained quiet at Rs 16.25. Haileyburia was unaffected at Rs 16.35 as also Highland at Rs 14.25. Kil Kotagiri had not altered also at Rs 8.90. Lucky Valley at Rs 11.75, Malankara at Rs 17.65 and Manar at Rs 2.57 were also unchanged. Mercara reported buyers at Rs 9.50. Neelamalai improved to Rs 4.75 and Neneny to Rs 15.75. Nonsuch was lower today at Rs 27.00. Ouchterlony shed 2 nP at Rs 5.50. While Peermedu was at Rs 18.10, Peninsular tea shares improved to Rs 22.25. Rajigiri and Rajendra were quoted at Rs 19.00 and Rs 17.75 respectively. Tirumbadi was fractionally lower at Rs 1.89. Travancore Rubber & Tea shares improved today on buying at Rs 6.95.

Textiles: This was also a steady section with good business passing. Bangalore Woollen and Buckingham remained at Rs 206.00 and Rs 205.00 respectively. Coimbatore Cotton declined to Rs 163.00. But Coimbatore Murugan made gains at Rs 95.00. Coimbatore pioneer was quoted at Rs 335.00 and Janardhana at Rs 63.00. Business was done in Kothari textiles at Rs 11.75, Lakshmi was unchanged at Rs 137.00. Madura was lower at Rs 29.70. Mettur textiles continud at Rs 407.00. Travancore Rayon was quoted today at Rs 25.90. Virudhunagar saw improvement at Rs 40.25.

Miscellaneous: Aluminium Industries was better at Rs 22.70. Ashok Leyland had dealings at Rs 7.70. Binny was at Rs 154.00. FACTs did not move from Rs 9-30. India Cement was quoted higher at Rs 6.60. Indian Steel Rolling was at Rs 13.40. KIC was at Rs 12.50, but Marikar's improvement was exceptionally good at Rs 52.00 from last closing of Rs 48.50. Mysore Paper gained at Rs 23.50. Orissa Cement too had been fancied at Rs 13.65 Parry's Confectionery looked up at Rs 4.37. Rallis was at Rs 88.00, and Spencer at Rs 19.70. Textool continued unchanged at Rs 197.00. Travancore Ogale did not change at Rs 7.50. W. I. Plywoods could be got for Rs 240.00.

INDUSTRIAL INFORMATION

INDIA'S PRODUCTION AND EXPORT OF TOBACCO

About 100 million pounds of unmanufactured and manufactured tobacco valued at Rs 14 crores was exported from India during 1956-57, according to "Tobacco in India", a publication just issued by the Directorate of Economics & Statistics of the Union Ministry of Food & Agriculture.

The contribution of this important cash crop to the National Exchequer by way of excise duty was about Rs 37.46 crores. Additionally, an income of Rs 9 lakhs was derived through agricultural cess levied on the export of unmanufactured tobacco at ½ per cent ad valorem.

The sixth revised edition of the publication which gives important statistical data on tobacco production, distribution and export during 1956-57 puts the acreage and production at 10.22 lakh acres and 3.06 lakh tons (or 685 million lbs.).

Andhra Pradesh, the leading tobacco producing State in the country, accounted for about 38 per cent of area and 43 per cent of production of the All-India Crop: next in order were Bombay, Madras, Mysore, Uttar Pradesh, West Bengal and Bihar.

Among the measures taken by the Government of India for developing export of tobacco, the most important were the fixation of Agmark grade standards, appointment of Tobacco Sales Officers at London, Hong Kong and Antwerp, inclusion of tobacco among the items of exports in the trade agreements entered into with foreign countries and the creation of an Export Promotion Council for Tobacco.

For improving the quality of tobacco, the Indian Central Tobacco Committee has been conducting research through its Central Tobacco Research Institute at Rajahmundry and five other research stations. Several improved varieties of seed have been evolved and they are being multiplied. For training the tobacco growers in the proper methods of cultivation, curing and handling, a Tobacco Extension Service is functioning in Guntur District (Andhra Pradesh).

The hand-book emphasises the need for improving the quality of tobacco and says that with concerted drive in research and extension and consequent improvement in quality Indian tobacco should become increasingly popular in world markets.

HANDLOOM CLOTH PRODUCTION IN 1958-59

Production of handloom cloth in the country during 1958-59 totalled 1,865 million yards. Production in the two previous years amounted to 1,714 million yards in 1957-58 and 1,599 million yards in 1956-57.

The 1958-59 production was higher by more than 25 per cent when compared to the handloom cloth production of 1,471 million yards at the end of the first Plan (1955-56).

During the first three years of the second Plan, the Government of India incurred a total expenditure of about Rs 17 crores on various development schemes for handloom industry. Of this, about Rs 11 crores were given in the form of grants and the balance in the shape of loans. The grants were utilised for the supply of improved equipment, organising training facilities for weavers, opening of dye houses, sales depots, etc., and for rebates on sales of handloom cloth. The loans were for financing the share capital and working capital of the weavers' cooperative societies, industrial cooperatives and apex societies and for common service facilities.

Handloom Co-operatives:

The number of handloom in the cooperative sector has been progressively rising. Out of about 27 lakhs looms in the country, nearly twelve lakhs were in the cooperative fold at the end of 1958. In September 1953, when the Handloom Board initiated the programme for financing development schemes, the number of looms in the cooperatives was less than seven lakhs. There were about 9,900 handloom cooperative societies with a total membership of about 11.75 lakh weavers at the end of 1958.

The progress made in regard to schemes for improved techniques in the handloom industry has also been considerable. By the end of 1958, 382 dye houses and 51 pattern-making factories had been opened. Seven calendering and finishing plants had also been set up.

Exports:

More than 35 million yards of handloom cloth valued at about Rs 5.23 crores were exported in 1958. Ceylon was the most important customer and imported about 14 million yards of Indian handloom piece goods. Other major importers were Malaya, Nigeria, Singapore and Aden. The United Kingdom, Sudan, Ethiopia and Saudi Arabia also imported sizeable quantities of Indian handloom cloth.

EXPORT OF COAL

Industrial and commercial interests in Japan are reported to have made enquiries relating to the export of coal from India, it is learnt here. Similar enquiries have also been made by Yugoslavia.

The enquiry from Japan, which was first addressed to the State Trading Corporation of India, was later taken up by the Goodwill Delegation which was here earlier this year.

Japan is interested in the superior grades of metallurgical coal out of additional quota of 0.5 million tons per annum which Government of India had declared for export during 1959 and the next two years. According to present indications some quantities of this amount would be taken in 1960. In the meantime 35,938 tons of Grade II (Rajhara) coal has been agreed to for shipment upto April 1960. The export is underway.

A trial shipment of 4,500 tons of metallurgical coal has been made to Yugoslavia.

The production of coal in 1958 was 45.3 million tons while the forecast for 1959 is between 48 to 49 million tons. The production is considered sufficient to meet existing requirements.

A target of 60 million tons of coal production has been fixed for achievement to the end of the Second Five Year Plan. Production upto August 1959 was 31.4 million tons.

EXPORT PROMOTION OF IRON AND STEEL ARTICLES

In view of the price concession, allowed since 1957, on raw materials used for the manufacture of articles for export and the consequent reduction in the value of finished goods, the Government of India have now decided to reduce the ceiling from Rs 1,000 to Rs 800 per ton in the case of steel articles and from Rs 600 to Rs 500 in the case of pig iron articles.

It was announced on August 7, 1957 that additional allocation of iron and steel will be made under the export promotion quota only in respect of articles of iron and steel, the export price of which is not less than Rs 1,000 per ton; and in the case of pig iron articles not less than Rs 600.

In viving effect to these revised prices, the Engineering Export Promotion Council will, no doubt, satisfy themselves that the export of goods, on which the iron and steel quotas are being granted, are processed goods and not merely pig iron or steel with little processing.

DRAWBACK OF DUTY ON IMPORTED TERYLENE YARN

Draft rules providing for drawback of Customs Duty paid on imported Terylene yarn, used in the manufacture of mixed fabrics, have been published in the Gazette of India today.

The rates of drawback, applicable to the products of individual manufacturers, will be determined on application and communicated by the Government of India. Interested manufacturers and exporters are advised to address the Ministry of Finance, Department of Revenue, New Delhi.

Objections or suggestions, if any, regarding the draft Rules, received before November 4, 1959, will be considered by the Government of India before they are finalised.

FOREIGN TRADE OF INDIA IN AUGUST 1959

The provisional figures of foreign trade of India by all routes (i.e.) sea, air and land, on private and Government accounts during August, 1959, according to information available to-date in the Department of Commercial Intelligence and Statistics, Calcutta, are given below:—

Merchandise, excluding overland trade with Nepal, Tibet, Sikkim and Bhutan: Exports Rs 58.26 crores, re-exports Rs 26 lakhs, imports Rs 58.37 crores. The import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment.

Treasure: Exports (including re-exports) of currency notes Rs 39 lakhs, gold nil and current coins (excluding gold coins) negligible. Imports of currency notes Rs 2.10 crores, gold Rs 3 lakhs; current coins (excluding gold coins) negligible.

Balance of Trade: Subject to the limitation in import figures mentioned above, the total value of exports (including re-exports) of merchandise and gold exceeded imports by Rs 12 lakhs.

A comparative table showing the trade in August, 1959; July, 1959; August, 1958, and the eight months ended August, 1959 and 1958, is given below:—

(In lakhs of rupees)

Foreign Trade in	Month August, 1959	Month July, 1959	Month August, 1958	Eight months ended August 1959	Eight months ended August 1958

INDIAN STANDARDS FOR SUGAR INDUSTRY

The Indian Standards Institution has published two Standards for use in Sugar Industry (IS: 499-1958 and IS: 1162-1958). The first prescribes the methods of test for vacuum pan sugar (Plantation White and is intended for the introduction of uniform methods of its analysis.

The second is a specification for cane molasses which prescribes its requirements and methods of test.

Copies of the standards, published in English, are available from the Indian Standards Institution, New Delhi or from its branch offices at Bombay, Calcutta and Madras.

STORES PURCHASE FROM SMALL INDUSTRIES

The National Small Industries Corporation has so far secured orders worth about Rs 4.2 crores for small industrial units from the Directorate-General of Supplies and Disposals, Government of India.

During the first half of the current financial year alone, contracts worth nearly a crore of rupees were secured by small units with the Corporation's assistance.

Over 4,800 small units have so far been enlisted by the Corporation for participating in the Central Government's purchase programme. Whenever the Directorate is in the market for stores, these small units are supplied with tender sets free of cost. They are also not required to furnish security deposits: instead a Competency Certificate issued by the NSIC will suffice.

To assist the small-scale industries in the execution of their contracts, a separate division is already functioning in the Corporation.

RESERVED ITEMS

In respect of 27 items, purchases have to be made only from the small scale units. These include several kinds of leather products, metal boxes, some types of padlocks, cutting scissors, washing soaps, cotton and woollen hosiery etc. Additions to the Reserved List are made from time to time, depending on the capacity of the small-scale units to cater fully to Government requirements.

OVER 200 ITEMS FREED FROM EXPORT CONTROL IN 1958-59.

Over 200 items were freed from export control during 1958-59; 30 other items were placed on the Free Licensing list, says the Annual Report of the Import and Export Trade Control Organisation for 1958-59.

The Report, which has just been published, points out that exports of only a few essential items, largely of strategic value, are prohibited.

Fresh restrictions on exports were imposed during the year in respect of three items. In four other cases, the existing controls were further tightened.

Import Trade Control:

The import policy during 1958-59 continued to be directed towards the achievement of the twin objectives of maximising indigenous industrial production and conserving foreign exchange resources for essential imports.

During the year, higher foreign exchange ceilings were allocated for certain essential industrial raw materials. Under this arrangement, an attempt was made to sustain higher levels of production in the essential industries. For this purpose, licences for additional imports were granted on a selective basis.

In regard to capital goods, the Report observes, a rigid and austere policy was continued and licences were granted only in cases where imported machinery would be export-earning or import-saving. Licences were also issued where import of machinery was required for balancing industrial undertakings or financed by foreign aid, loans or long-term overseas investment.

Export Promotion Schemes:

The scope of the Export Promotion Scheme was further widened during the year and the list of items importable under the Scheme was considerably expanded. In some cases, procedural simplifications were introduced to facilitate export of finished goods and allow the import of raw materials under the Scheme. At the same time, certain steps were also taken to ensure against misuse or profiteering of raw materials imported under the scheme.

Balance of Trade:

The Report points out that India's exports including re-exports declined by 8 per cent from Rs 619 crores in 1957 to Rs 568 crores in 1958. Imports also substantially declined by 19 per cent from the peak level of Rs 1,068 crores in 1957 to Rs 864 crores in 1958, thanks to the severely restrictive import policy adoped since 1957.

Speedy Disposal of Applications:

The disposal of applications for import licences, the Report observes, continued to be satisfactory during 1958-59. A total of 3.15 lakh applications for import licences was received. The disposals kept pace with the inflow and the carry-over at the close of the year was just 792 applications or 0.5 per cent of receipts. In the case of applications for export licences, almost all the applications received during the year were disposed of before the end of the licensing period.

STEEL WIRE FOR MANUFACTURE OF MACHINE SCREWS

The Indian Standards Institution has drafted a specification for steel wire used for manufacturing machine screws. The draft covers the requirements for cold drawn mild steel and free cutting mild steel wire suitable for the manufacture of machine screws supplied in the 1/4 hard and 1/2 hard conditions.

While recommending the continuance of the protection to the machine screw industry, the Tariff Commission had recommended inter-alia that the ISI should give high priority to the formulation of standards for iron or steel rods and wire for the machine screw industry.

Comments on the draft standard may be sent to the Indian Standards Institution; New Delhi before December 21, 1959.

INDUSTRIAL RELATIONS DURING AUGUST

There were 98 fresh industrial disputes in August, 1959, bringing the total number of disputes current at any time during the month to 141 including 25 lock-outs. In the previous month, there were 93 fresh disputes out of 139 disputes current.

According to the Labour Bureau, Government of India, the average duration of disputes current at any time during August was 6.2 days as compared with 12.4 days in July.

One hundred and fifteen disputes terminated during August. Of these, 74 lasted not more than 5 days each and 19 lasted more than 30 days each.

During the month, time-loss of 2,50,047 man-days out of a total of 3,96,789 i.e. 63.0 per cent was accounted for by the 'Manufacturing Industry' group. 'Mining and Quarrying' and 'Electricity, Gas, Water and Sanitary Services' followed next with time-loss of 1,00,950 and 14,862 man-days respectively i.e. 25.4 and 3.7 per cent of the total. Time-loss in other major groups of industries was comparatively low.

During August, West Bengal recorded the highest time-loss (1,12,641), followed by Andhra (93,409), Bombay (78,187), Madras (31,177) and Mysore (24,832). Compared to the previous month, time-loss increased in Rajasthan, Punjab and Assam, and decreased in all other States.

For the Manufacturing industry group, the index of industrial unrest (base 1951=100) for August was 71 (provisional) as compared with 175 (revised) for the preceding month.

REMUNERATION FOR MANAGING AGENTS GOVERNMENT FIX SLIDING SCALES.

On the advice of the Company Law Advisory Commission, Government of India have decided that the remuneration of Managing Agents and Secretaries and Treasurers should ordinarily be fixed according to a sliding scale of commission on net profits of the managed companies.

Under the Companies Act, 1956, Government of India have to satisfy themselves that the conditions of the agreement to be entered into between the managed company and the Managing Agents or Secretaries and Treasurers are fair and reasonable. While considering applications in this behalf, therefore, Government have to determine what would be a fair and reasonable remuneration and tenure within the maxima permissible under the Act in the circumstances of each case. This matter was recently given very careful consideration and the Government have fixed the remuneration and tenure for Managing Agents or Sercetaries and Treasurers.

The scale of commission for Managing Agents will be 10 per cent on the first Rs 10 lakhs or fraction thereof, 9 per cent on the next Rs 10 lakhs or fraction thereof 8 per cent on the next Rs 10 lakhs or fraction thereof, 7 per cent on the next Rs 10 lakhs or fraction thereof, 8 per cent on the next Rs 10 lakhs or fraction thereof, 5½ per cent on the next Rs 25 lakhs or fraction thereof, 5 per cent on the next Rs 25 lakhs or fraction thereof and 4 per cent on any sum over one crore of rupees.

The scale of commission for Secretaries and Treasurers will be 7½ per cent on the first Rs 10 lakhs or fraction thereof, 6¾ per cent on the next Rs 10 lakhs or fraction thereof, 6 per cent on the next Rs 10 lakhs or fraction thereof, 5¼ per cent on the next Rs 10 lakhs or fraction thereof, 4½ per cent on the next Rs 10 lakhs or fraction thereof, 4¼ per cent on the next Rs 25 lakhs or fraction thereof, 3¾ per cent on the next Rs 25 lakhs or fraction thereof and 3 per cent on any sum over one crore of rupees.

The Government have also decided, on the advice of the Commission, that the term of office should ordinarily be 10 years, when a company appoints Managing Agents or Secretaries and Treasurers for the first time and five years on reappointment or successive appointments.

These decisions have since been enforced and the Department of Company Law Administration have already decided as many as 70 applications on this basis.

APPOINTMENT OF MANAGING DIRECTORS AND MANAGING AGENTS.

Under the Companies Act, companies seeking Government approval to the appointment or re-appointment of managing directors, managing agents and secretaries and treasurers, have to furnish particulars as prescribed in the Company (Central Government's) General Rules and Forms. Government of India have now revised the form of application to be filled by companies for such approval and asked them to furnish additional information in certain respects to provide the Government with complete particulars of the persons or bodies proposed for appointment as managing director, managing agents, etc.

Under the revised procedure, companies have to furnish details regarding the nature of services, managerial or otherwise, rendered or proposed to be rendered by the managing agents and others who are sought to be appointed. Details of any loans advanced by the managing agents to the company and the interest charged on them are also *inter alia* to be furnished.

Companies are also required to send to the Registrar of Companies copies of the notice published by them in the newspapers regarding their applications along with all the material particulars. Such notices when concerning changes in the constitution of the managing agents or of the secretaries and treasurers if issued to members of the agency companies have to be addressed to the members of the managed companies as well. Persons having any objection to the company's proposal may communicate the same in writing to the Central Government within 30 days of the publication of the notice.

Companies are also required to forward to Government seven copies of their applications and of all the documents accompanying it.

Need for Fresh Assessment

Investment Gossip:

THE slow tempo of activity noticeable in the stock markets in the past week has been the result of the interplay of a number of fresh influences which in their totality have called for a reassessment of immediate prospects.

There is first the political development. No one in the country will be prepared to assert that the dispute between India and China, even after the latest communication from the Chinese Government, has moved appreciably toward an amicable solution. The consensus of opinion in the country seems to be that, even if there is a settlement between the two countries tomorrow, there will be need for considerable time to come to keep our border defences in a state of preparedness for any emergency. Our recent experience of the calibre of the powers-that-be in China leaves no room for complacency on the basis of paper agreements.

The implication of the need for a state of national preparedness with particular emphasis on the defence of our long borders is too obvious to need elaborate exposition. Defence expenditure will have to be sizably heavier than now. This point is to be noted by all those who base their calculations on the Union Budget. But it is also to be noted that defence expenditure may also help boost production in sections of the economy. In this regard, it may be interesting to note that, in one of his references to the defence of the counry, Prime Minister Nehru has said that the real defence is in the rapid industrialisation of the country. In any event, therefore, industries in general will receive added attention.

Secondly, the market is now deprived of the element of speculation ere long provided by the size of the increase in the steel retention price. At long last, the Government have announced that they have decided to increase the steel retention price by Rs 5 per ton for the period 1955-56 to 1959-60. Initially, market sentiment was happy in Dalal Street on the calculation that TISCO had been given the increase with retrospective effect though it had asked for an increase only for 1958-59. Further calculations, however, seem to have shown that the net effect of the increase in the retention price, as far as TISCO is concerned, will be that the company will be just compensated for the increased cost of production. It would appear that the calculations made on the basis of the increased retention price show that Indian Iron may derive a slightly higher benefit than TISCO. This perhaps explains the comparative steadiness of Indian Iron. As far as the speculative fraternity is concerned, the size of the steel retention price is of little interest now.

A possible reason for the disinclination of operators to extend commitments is the apprehension that some sort of curb may be imposed on over-enthusiasm in the stock market. Imposition of heavier margins in Ahmedabad has induced caution in Bombay. Indicative of the apprehension that some fairly strong bearish influence is in the offing is the rumour about a supplementary budget heard in the market places this week. It is also not improbable that marketmen are saving up for subscription to the new issues.

£ R$

Hindustan Aluminium

Latest reports about the new Aluminium plant to be put up by the Birlas show that a number of preliminary arrangements have been satisfactorily completed. The company—Hindustan Aluminium Corporation Limited—has signed an agreement for the supply of power for 25 years from Rihand Power House with the UP Government. According to this agreement power upto 55,000 Kw would be available to the company from early 1962 at Rs 175 per Kw a year on the basis of energy consumed. This rate is firm for the first sixteen years while for the rest of the period, the rate can be raised by mutual consent or arbitration which would not be more than 10 per cent of the rates fixed now. The rates are inclusive of all taxes and the maximum energy that the company would be allowed to consume shall be 433,620,000 Kw hours per year (the maximum in any quarter not more than 110,000,000 Kw hours). The company has also finalised an arrangement for the supply of bauxite with M/s Minerals & Minerals Ltd., from their mines in Lohardaga area in Bihar. The bauxite that will be supplied will contain 52 per cent alumina and silica contents will not be more than 2 per cent. The Government of India have now formally approved the appointment of Birla (Gwalior) Private Limited as the Managing Agents of the Company for ten years and the remuneration payable would be four per cent.

£ R$

Calcutta Steel

Calcutta Steel is to be an essentially steel rolling plant. A significant feature of this company is that the required machinery, equipment, land, buildings, etc.,—in short, all the facilities needed to establish a steel re-rolling mill—are already there and, what is more, the mill is in full working. The mill is situate in Khardah near Calcutta and belongs to the well-known engineering firm of Bhartia Electric Steel Company Limited. Calcutta Steel will acquire the Khardah works of Bhartia by a scheme of arrangement sanctioned by the Calcutta High Court for payment in cash in book value. The total outlay required in terms of the scheme is estimated at about Rs 70 lakhs. The company has a bright future because, for one thing, the factory it is acquiring ready-made is both well equipped and modern and, for another, with the increase in the indigenous production of steel, its re-rolling mill will be enabled to utilise its installed capacity more fully than has been possible hitherto due to the acute shortage of steel in the country.

The entire 5 lakh equity shares of Rs 10 each are offered at par to the shareholders of Messrs Bhartia Electric Steel Co Ltd as on the date of this issue or their nominees in the proportion of one share in this company for each share held in Bhartia Electric Co Ltd. Such shares as are not taken by the shareholders of Bhartia will be available for allotment by the directors at their discretion and the same will be offered to public. Subscription lists will open (on 16th November and will close on the 15th December, 1959.

£ R$

KCP

Investors who are inclined to have regular fixed return on their investments may find the new preference share issue of KCP Limited (the announcement in this regard was published in Indian Finance dated November 7, 1959) an attractive proposition. The issue of 20,000—6½ per cent tax free redeemable cumulative Second Preference shares of Rs 100 each is actually an issue of 43,287 shares. 3,287 of these shares were reserved to the shareholders of the company's 5 per cent tax free first preference shareholders and, of the balance of 40,000 shares, the Life Insurance Corporation and the Central Bank of India have each agreed to subscribe for 10,000 shares of the total value of Rs 20 lakhs. The present offer represents the balance of 20,000 shares. This is a significant feature of the new issue.

KCP has multifarious activities. It is engaged in the business of manufacture of sugar, spirits, confectionary, cement and heavy industrial machinery. The company as a whole is expected to earn a profit of not less than Rs 50 lakhs per year from 1960 onwards. As against this profit, the amount required for payment of dividends on the entire preference share capital is about Rs 4 lakhs. The statement that the preference shares may be considered well covered both as regards capital and also earnings will be readily accepted by those who have made a careful study of the announcement.

£ R$

AII

Speaking at the annual general conference of Air India's regional and district managers in Bombay early this week, Mr J. R. D. Tata said that 1959 had been the best financial year for Air-India ever since it started its international operations in 1948. He looked forward with a great deal of confidence to the year commencing 1960 because Air India would then be introducing the giant Boeing 707 International Jet, powered with the Rolls Royce Convay Engine. AII have scheduled 5 flights a week to London and one flight to Tokyo commencing April, 1960.

£ R$

Dividend Doubled By Jardine Henderson

Balance-Sheet Reviews:

JARDINE Henderson Limited has produced excellent working results for the year ended 31st March, 1959. The improvement in the working of the jute mill companies under the company's management was maintained throughout the year and certain of these companies resumed payment of dividends, which is reflected in the increased income under this head in the accounts. But, the earnings from the tea companies showed little improvement over the previous year and the directors continue to view the future of this industry, so far as it concerns companies having estates in the Cachar and Dooars districts, with some concern.

The company's earnings from the coal and coke companies have been restricted. In the case of the coal company because of the difficulties and delays involved in preparing for a substantial increase in output, and in the case of the coke company by losses arising from a failure to secure an increase in the controlled selling price of coke to compensate for successive increases in costs apart from the cost of coal.

The other agency activities of the company show little variation in earnings apart from the shipping agencies, where a substantial increase in earnings reflected the companys appointment in May 1958 as agents for the Central Gulf Steamship Corporation, which provides a service between India and the United States of America. The net result of the working of the company's subsidiaries has shown some improvement over the previous year, although the investment-holding companies are still affected by the small amounts of dividends received from the jute mill companies.

Thus, the net profit for the year, after providing for Depreciation and Taxation, amounts to as much as Rs 14.86 lakhs as against only Rs 7.55 lakhs in the previous year. Apart from providing Rs 2,100 for Development Rebate Reserve, the directors have raised the Depreciation amount from Rs 1.32 lakhs to Rs 1.36 lakhs and Taxation provision to Rs 11.30 lakhs from Rs 6.20 lakhs. General Reserve is maintained at Rs 2.50 lakhs. Even after these increased allocations, the directors have found it possible to double the dividend on the Ordinary shares to 5 per cent.

Indian Finance is published weekly on Saturdays by Indian Financial Journals Private Limited from 116 Lower Circular Road, Calcutta. All contents copyright 1959 by Indian Financial Journals Private Limited. Reproduction in whole or in part or in any form is strictly prohibited. Prior permission in writing may be obtained.

Subscription rates: (Inland) Rs 48 per annum, Rs 25 for six months. (Foreign) Rs 55 per annum, Rs 30 for six months. All subscriptions are payable in advance. The subscription entitles the subscriber to a free copy of all Supplements issued by Indian Finance, including the Yearbook, which is published in the last week of December and distributed in the first week of January. Single copy price of Yearbook: Rs 10.

Advertisement rates: 1" to 75": Rs 10, 76" to 150": Rs 7.50, over 151": Rs 6, all per single column inch. Casual advertisements are chargeable at Rs 10 per column inch. Prospectuses and Chairman's speeches: Rs 10 per column inch. Balance-sheets: Rs 8 per column inch. Material for advertisements should reach the office by the preceding Wednesday of each week.

Special: The advertisement rate for Supplements is Rs 500 per full page and Rs 300 per half page. Colours extra, at Rs 100 per colour. Booking for the Yearbook may be made from July 1, 1959.

Other information: concessional subscription rates are available for bona fide college students on recommendation by Heads of department. Research students may obtain the loan of Indian Finance files on payment of a deposit, or on guarantee by Heads of department.

Manuscript: unsolicited material will not be returned unless accompanied by a self-addressed stamped envelope. Accepted articles will be paid for at the usual rates.

According to the directors' report, the working of the jute mills for the current year continues to be generally satisfactory and it is possible to a further improvement in earnings under this head. Having regard to the disappointing showing of the new season's teas on the market, it seems unlikely that there will be any improvement in earnings from the tea companies.

£R$

Gillanders Arbuthnot

The import restrictions, which were increased so drastically in the previous year, continued unrelaxed and this had an adverse effect on the trading activities of Gillanders Arbuthnot & Company. Total turnover in the Sales organisation has recorded a decline from Rs 1.93 crores to Rs 1.88 crores for the year ended 31st March, 1959.

The revenue from "Commission and Allowances" is lower at Rs 32.50 lakhs against Rs 35.92 lakhs, mainly due to a general reduction in commission earnings from managed and agency companies, notable exceptions being the tea and pigment companies under the company's management. A substantial improvement is, however, recorded in "Income from Investments", which are shown at Rs 13.11 lakhs against Rs 8.40 lakhs.

The net profit, after providing for Depreciation and Taxation, amounts to Rs 11.06 lakhs against Rs 9.25 lakhs in the previous year. The directors have provided Rs 2.48 lakhs (Rs 2.33 lakhs) for Depreciation; Rs 12.01 lakhs (Rs 10.13 lakhs) for Taxation; Rs 20,000 (nil) for Development Rebate Reserve; Rs 2.00 lakhs (Rs 1.00 lakh) for General Reserve and Rs 1.00 lakh (Rs 72.003) for Contingency Reserve. The dividend on the Ordinary shares is just maintained at 10 per cent.

The directors have, in their report, stated that they are 'investigating several new projects which, it is hoped, may be included in the company's activities shortly. Two of these involve co-operation with manufacturers abroad, who are willing to put their experience at the disposal of new companies, which will be formed jointly between them and the manufacturers. Both these new companies will manufacture, in India, products which, at present, have to be imported.

£R$

India Steamship

The conditions of general recession in international trade are fully reflected in the working results of the India Steamship Company Limited for the year ended 31st March, 1959. Although income from freight is higher at Rs 8.04 crores against Rs 7.75 crores, the net profit, after providing for Depreciation and Taxation, is substantially lower at Rs 60.67 lakhs as against Rs 162.97 lakhs in the previous year, mainly due to the increase in port expenses from Rs 2.10 crores to Rs 2.81 crores.

In respect of allocations, the Depreciation amount is raised to Rs 75.56 lakhs from Rs 59.37 lakhs and Development Rebate Reserve to Rs 69.67 lakhs from Rs 53.37 lakhs. In this connection, it may be added that the Development Rebate, allowable for income-tax purposes, will be about Rs 1,53,91,000. But, since the profits fall short of the statutory requirement, the entire amount of the profit of Rs 60.67 lakhs is transferred to the Development Rebate Reserve account.

The directors have, therefore, decided to transfer Rs 20 lakhs from the Dividend Equalisation account which, together with the balance of Rs 8.09 lakhs brought forward, will enable the company to pay a dividend of Re 1 per share, same as in the previous year.

While the directors do not take an unlikely pessimistic view of the freight earnings in the current year, they feel that the conditions still continue to cause some anxiety.

£R$

Britannia Engineering

Despite a reduction in earnings, the Britannia Engineering Company, Limited has maintained the Ordinary dividend at 6 per cent for the year ended 31st March, 1958. The net profit is lower at Rs 2.61 lakhs against Rs 3.58 lakhs in the previous year. Apart from setting aside a sum of Rs 1.06 lakhs for Development Rebate Reserve, the Depreciation amount is raised to Rs 5.23 lakhs from Rs 4.92 lakhs; Taxation provision to Rs 3.95 lakhs from Rs 70,000 and Wealth Tax to Rs 45,000 from Rs 43,000.

According to the directors' report, every effort is being made to increase the scope of the company's activities. A collaboration agreement with Messrs Dawson Pyne Elliot Limited, Otley, England, for the manufacture of printing machinery in India has been finalised and approved by the Government of India. Planning has already been taken in hand and production is expected to commence in the near future.

The Negotiating Camel

WE do not know which to "admire" more—the cool affrontery or the bland disingenuousness of Mr Chou En-lai's most recent letter to Mr Nehru on the border disputes. And that is not the only thing which the letter has caught us in two minds about. Almost every sentence in the letter contains snags and snares that need to be carefully examined before the Government of India send their reply. The situation is in some respects novel. The Arab in the fable was not confronted with a proposal from the camel, and it would go a little nearer the mouth of the tent in order to show its friendly intentions toward him.

Again, the timing of the letter leaves us wondering. If this letter had been received as recently as before the Ladakh incident last month, it is not inconceivable (though improbable) that the earlier aggression on the Eastern border might have been condoned to the extent of our wishing to talk matters over. For, as Mr Chou himself says in commendation of his present proposal, he is merely extending to the entire border what the Government of India wanted done to Longju, so that talks may be made possible. On the other hand, by delaying this suggestion till after last month's aggression in Ladakh, the Chinese might have sought to ensure time to consolidate their hold in the West. This is highly probable because negotiation with the People's Republic is, as every one knows by bitter experience, a leisurely affair. As Mr Nehru complained, even minor disputes, like the one over Bara Hoti, go on endlessly and inconclusively. Meantime, the Chinese have their opportunity not only to stay in territory that is undisputedly Indian, but to make such military use of the time and space available to them.

The disingenuousness of the proposals stands out even more clearly when we isolate the political from the military implications of the proposals. China knows there is sore temptation to do precisely such a thing in this country. References to people "who are hostile to our friendship and their sinister objectives" and the desire of the "people of our two countries that we act promptly" are directed at the less strenuous and less demanding points of our neutralism. Again, by suggesting negotiation and throwing the onus of refusing it on us, the Chinese Republic is playing on a variety of psychological stops: for instance, recollection of our own advice to others to keep on negotiating even though the proposals are thought to be full of snares is one of the spectres with which we are haggridden. But, as we said some weeks ago while on this subject, the time has come for us not to be overawed by the hobgoblin of seeming inconsistency. For, even politically, the Chinese proposals are unacceptable. They also involve an abandonment, however temporarily, of a view of the extent of our frontiers, which even the Communist party of India has come to accept. By asking for moving twenty kilometres away from the Macmahon line, China is indirectly asking us to rub that line away from the maps.

But were the military implications not so completely disadvantageous to us, we might even have considered Mr Chou's suggestions. But, militarily, there is hardly any conceivable advantage to India in accepting the suggestion. On the other hand, there are innumerable disadvantages and what is even more objectionable, the proposals confer vital military advantage on the Chinese. Since negotiation with the Chinese is bound to be a prolonged affair, it is clear that the Chinese have all the time to do what they wish in portions of India in which they now are and stay in which we cannot object to after accepting the proposals now made. Taking the North-West first, the ultimate Chinese purpose would seem to be to keep not the entire area claimed or taken, but to keep those portions in which China has surreptitiously built roads and perfected communications. This being the ultimate purport, withdrawal of 20 kilometres makes no difference. Moreover, according to experts, our withdrawal beyond twenty kilometres on our side would make the only air strip (Chushul, within 15 kilometres of advanced Chinese position) unavailable to us. Considering that our side of the border is the more difficult and less developed from the point of view of communications, the abandonment of the one mode of transport available to us will leave us hopelessly vulnerable should China go back on its assurances.

Secondly, both in the North-East and in the North-West, the acceptance of these proposals would involve the abandonment of such military measures as we have recently taken. A good deal remains to be done not only in the matter of deployment of troops but also of improving communications and transport. Moreover, what the Chinese want is the giving up, in the twenty kilometre strip, of even such policing as we had and which we found so tragically inadequate. The policing of this "demilitarised" area is to be done by "unarmed police", which means that we shall be even more at the mercy of the Chinese good faith and peaceful intentions. With a vast road system completed on its side of the border (which has the added advantage that its terrain is less difficult), China has nothing to lose and probably a good deal to gain by these proposals.

It is not without significance that the only room for manoeuvre available in Mr Chou's proposals is about increasing the distance of the demilitarization. This can hardly be interpreted to mean that the Chinese would go so far back as to restore the status quo as we understand it. For, that is to be the subject matter of discussion between the Prime Ministers, after demilitarization. Nor can this be interpreted to mean that, at least as far as the Eastern frontier is concerned, the Chinese would agree to our staying up to the Macmahon line, for, this would involve not only "decreasing the distance", but "accepting the Macmahon line". These things may be unimportant if we can have some assurance of Chinese good faith. Nothing in recent behaviour of the People's Republic or in the latest letter of Mr Chou En-lai gives us cause for even a glimmer of hope in this regard.

The Great Challenge

THE supreme question, whether a less developed country can achieve "the break-through from economic stagnation to economic development within the political context of a free society" continues to be debated with not a little anxiety throughout the non-communist world. A substantial contribution to this debate has just been made by Dr V. K. R. V. Rao, Vice-Chancellor of the Delhi University, who has had the distinction of being the first eminent Asian ever to be invited to deliver the Dyason Memorial Lectures in Australia. It is gratifying to find that Dr Rao has handled the challenging theme of these lectures this year not only with a degree of political perspicacity, which is normally not associated with the generality of economists, but with a deal of intellectual courage where he firmly rejects the familiar definition of a "free society"—a definition emphasising those aspects of freedom which concern the class of employers who accumulate and invest capital and involving, logically, the acceptance of the institutional **status quo** in all its fundamentals. As a discerning observer of political trends, Dr Rao appears to be on sure ground where he redefines the "free society" as one which "should deal with those aspects of freedom which concern the common man in the most important and pervasive aspects of his daily life, and not merely the small section which constitutes the upper class of society." This definition is fundamental to Dr Rao's analytical approach to the problems of economic development in non-communist countries with particular reference to India.

First and foremost in the chain of arguments advanced by Dr Rao is the historical interpretation that in the existing advanced countries of the West, the industrial revolution which effected the break-through from economic stagnation to economic development had preceded the political revolution which ushered in the democratic freedoms. In other words, "the free society did not exist when economic development took place, it followed when the economic take-off had been completed." That take-off, in turn was financed by a process of capital accumulation which was based on exploitation of labour in the sense of denying to it its legitimate share in the "potential developmental surplus" resulting from the application of new methods of production. Here, Dr Rao has used the concept of potential developmental surplus "in the very narrow sense of the difference between the value added by production on the basis of the new methods and the sum total of incomes accruing to labour and enterprise on the basis of the old methods of production, the latter being modified and reduced by the initial contributions of capital for embarking on the new methods of production." As the bulk of this surplus was appropriated by enterprise and continuously reinvested, the economic break-through was accomplished and it

was possible afterwards to give labour some share of the increased surplus resulting from the increased volume of production. It thus happened that, in the Western democracies, the free society in which labour has the fundamental right "to safeguard its levels of consumption from involuntary reductions and get an adequate share in the increased production resulting from expanded economic activity" emerged only after the economic break-through had been completed.

What is in evidence in India today is the very reverse of that process, for, here the free society has already emerged from a political revolution and is now desperately trying to achieve the economic break-through from stagnation to development. **Ipso facto,** this free society cannot accomplish the economic break-through by an exploitative process of capital accumulation in the face of that continuing assertion of their newly-won democratic rights by large numbers of industrial labour, poor peasants and agricultural workers who constitute the vast majority of the electorate and of those actually voting. How else can the rate of saving and investment be raised sufficiently (that is, to between 12 and 15 per cent) to take the Indian economy into a stage of self-sustaining and self-accelerating growth? According to Dr Rao, the trend disclosed by the experience of the Second Plan provides no encouraging answer for the simple reason that, in spite of an increase in income, the increase in the size of that Plan has been accompanied by a smaller proportional contribution by domestic resources to its financing. It is, of course, theoretically conceivable that the economic break-through can be effected either by expropriating *all surplus elements in private incomes* and socialising the entire economy or by giving incentives and large incomes to private enterprise, lowering wages, exploiting the peasantry and stopping welfare expenditure. But either method would involve the abandonment of democracy itself and cannot, therefore, be contemplated with equanimity.

The great challenge of the economic take-off thus remains in India as it remains, in a greater or a lesser measure, in many other underdeveloped countries which have been liberated in recent years from colonial rule. In a free society, this challenge can be met, if at all, only by "getting by consent a much higher rate of saving and harder work than is spontaneous on the part of the people." This is, of course, easier said than done because the price that has to be paid for the economic take-off would be beyond the current capacity of the masses of the Indian population. Dr Rao, therefore, lays emphasis in this connection on a twofold strategy—the provision of a materialist motivation to the masses in terms of the future, clothed simultaneously in terms of an emotional stimulus which the ideology of democratic socialism can provide, and, as a corollary, the elimination of a situation where incentives for the classes-entrepreneurs, managers, engineers, technicians, bankers, civil servants, etc.,—constitute a disincentive to the masses. The classes, too, would have to pay the price *voluntarily for at least a generation*, impelled by the traditional Indian values of sacrifice, service, and giving rather than receiving.

It is here that Dr Rao's argument seems to be weak because, while the masses can be conceivably enthused by way of a certain vicarious satisfaction on their part at possible restraints, on the incomes and consumption levels of the classes, it is extremely doubtful if the latter can be persuaded to make voluntary sacrifices in the current climate of crass materialism and self-aggrandisement. A degree of compulsion may, therefore, come to be deemed politically expedient and psychologically necessary in the case of the classes. While this element of statutory compulsion is foreseen, it may also be reasonably assumed that the strategy suggested by Dr Rao for enthusing the masses can be worked out in all its details and successfully implemented. India's efforts alone would still not be sufficient. Unless the advanced democratic countries of the West decide to play a much more decisive role by spending 3 to 5 per cent of their *national incomes, as suggested by Dr* Rao, supporting the economic development of the underdeveloped world, the economic take-off in India is bound to be unduly protracted in point of time. But, then, what is open to an Indian is only to hope and pray for universal disarmament which alone could release resources on the scale required to face the challenge of the economic take-off in free but undeveloped societies.

Britain Reorganises Cotton Textile Industry

By M. SUR

THE cotton textile industry in the UK has recently been forced to put its house in order. An old industry, like jute in India, many of its mills were very old fashioned and uneconomic, and ruthless action was required if the industry was to continue to compete with its newer competitors in other countries. Since the peak of the post-war revival of the industry cotton has been passing through the doldrums. More than 450 mills have closed down; there has been much short-time working, and employment in the industry is down by about one third. This is largely due to the growth of the cotton textile industry in other parts of the Commonwealth and to the policy of free trade within the Commonwealth. The U.K. Government has been unwilling to impose restrictions on Commonwealth trade, and instead has been working to bring about voluntary agreements on the limitation of exports of textiles to the U.K.—a policy of which the recent Indian agreement is an example. This, however, is not enough to save the industry.

In May this year a special committee set up by Government published its Report on the Reorganisation of the Cotton Industry. It recommended wholesale reorganisation in order to achieve a compact, up-to-date and efficient cotton industry, and as a first step the elimination of excess capacity. The Cotton Board, a joint body set up in 1947, had already made an assessment of the exess capacity in the various sections of the industry, and it is expected that something like 16% of the present looms will be scrapped. This reorganisation, the committee considered, could not be carried out without financial assistance from Government, and it was estimated that it might cost the Exchequer £30 million over the next five years, but the committee was strongly of the opinion that the actual reorganisation should be achieved by voluntary methods:

> "It would be a great mistake to force upon an unwilling industry an outside body with power to give directions as to the capacity which must be closed down, or to decide in detail what re-equipment particular firms must undertake if they are to qualify for financial assistance. To do so would contribute neither to the efficiency nor to the self-confidence of the industry. It could only be damaging to both."

As a result the Cotton Industry Act passed in July is a typically British compromise. It enables the Cotton Board, in consultation with other representative bodies in the industry, to prepare schemes for the elimination of excess capacity, and to raise funds for re-organisation by levies on the industry, but it also authorises the Board of Trade to pay partial compensation The scheme prepared by the Cotton Board are to be submitted to the Board of Trade, which must be satisfied that the schemes are adequate, that a majority of the persons employed in the sections concerned have given their approval, and that adequate arrangements have been made for compensation for loss of employment. The Board of Trade may then pay the Cotton Board two-thirds of the amount required for compensation, and the Board must defray the remainder of the cost by means of levies on the employers in the sections. Reorganisation schemes may also include excess capacity which has already been eliminated before the scheme comes into force. The Board of Trade may further make grants not exceeding a quarter of the cost of re-equipment, i.e. purchase and installation of new machinery and equipment, or modernisation, so long as it will be completed within five years. It is estimated that the levies on the industry will cost less than one farthing per yard of woven cloth.

Fortunately the chances of re-employment of redundant labour from the cotton industry are quite good, and retrenchment compensation does not present such a problem as in India, so it should not be difficult to reach agreement on the amount of compensation, but it is interesting to note that Government is prepared to pay two-thirds of the cost of compensation.

Thus Government and the Cotton Industry in the U.K. have combined to plan a reorganisation, the cost of which the industry could not have borne alone, and at the same time they have preserved the British principle of voluntary action, but, as the Report puts it: "the use of the voluntary method places upon both sides of the industry, the Cotton Board and the Government, the responsibility of meeting each other's point of view and relating individual interests to a definite objective of national importance, namely a compact, up-to-date and efficient cotton industry."

Indo-American Society

THE progress of the recently formed Indo-American Society will be watched with keen interest by all those who desire the growth of understanding between the two countries. The main point about this organisation, sponsored by a number of distinguished citizens of Calcutta, is that it is not a political organisation or one with political affiliations. Nor is it just another cultural affair. The programme of activities chalked out by the sponsors covers a wide range, extending from organisation of sports meets to art exhibitions. Publication also finds a place in the Society's list of activities and a start has already been made with the first numbers of the "Newsletter", which sets out the aims of the organisation. The Society has plans for a building which, besides housing its headquarters, will also contain club rooms, lounges, exhibit space, a library and reading rooms, a few apartments for visiting guests, a lecture hall, recreational facilities and office space. The first General Assembly, tentatively scheduled for November 20, will be inaugurated by Ambassador Ellsworth Bunker.

EDITORIAL NOTES

World Food Bank

IN his address to the FAO conference in Rome, Mr S. K. Patil has stressed the importance of maintaining adequate reserves in deficit areas and in this context has suggested that a World Food Bank is "not only feasible but essential". The formation of such a Food Bank, which will maintain reserves in vulnerable areas liable to be hit by seasonal shortages, will not only act as a disincentive to hoarding and profiteering, but also help the big producing countries to dispose of their embarrassing surpluses without trading on each other's toes. But if any such organisation is to be successful, it should have a larger membership than the International Wheat Agreement, and should include all the important food exporting and importing countries.

While, in India, we think of food mainly in terms of rice or wheat, cereals account for only a part of the international trade in food stuffs. To keep the programme within manageable limits and to avoid complexities at the outset, it may be advisable to start with a World Wheat or Cereal Bank and extend it by stages to cover other items like meat and dairy products. On the analogy of the currencies in which the International monetary institutions deal, Rice will be a "hard cereal" as far as the World Food Bank is concerned.

Need for Reserves

The precarious balance in production and requirements of food grains in India underlines the importance of maintaining easily accessible reserves in this country. The increase in production that has been achieved in the last ten years is by no means negligible, though the rate of increase in food output has only just managed to keep step with increase in population. The experiences of the last three years when set against the figures of output of food grains (including rice, wheat, barley, millets as well as pulses) for these years will show how adverse seasons can upset the food economy and push up prices. Total production, which was 68.7 million tons in 1956-57, declined to 62.5 million tons in the succeeding year and again increased to 73.5 million tons in 1958-59. The rising trend of food grain prices which set in even as early as 1956-57 was further aggravated by the deficit of 1957-58. The effects of the shortfall of last year are still being felt in spite of what has been described as a record yield of 73.5 million tons in the 1958-59 crop season.

As far as we can see ahead, any dramatic increase in food production which will leave the population far behind may be ruled out. The limits to the results that may be expected from application of modern techniques in the shortrun must be kept in mind. This means that, in a good season, there may be a small surplus over requirements, while in a bad year there will be a shortage and spiralling prices. The existence of an adequate reserve will help to even out the differences and keep prices steady.

Though the proposal of building up buffer stocks was made as early as September 1943 by the Gregory Committee, the Ministry of Food so far has not been able to implement that decision. When all available resources had to be diverted to meet current requirements, it was not easy to make provision for the future. The indications are that building up of an adequate reserve stock from internal procurement will not be a practical proposition and we do not now have the foreign exchange to pay for a buffer stock of adequate size. The Food Minister has at any rate got hold of the right end of the stick in dealing with the menace of food prices, and the constructive proposal he has put forward will help to get round this difficulty.

*

Textile Prospects

The Chairman of the Bengal Millowners' Association, in his presidential address to the third quarterly meeting of the Association, has drawn attention to some of the handicaps that threaten the prospects of the cotton textile industry. The performance of the industry in terms of output, stocks and exports is not unsatisfactory. In his inaugural address to the conference of textile technicians held in Bombay early last month, Mr Manubhai Shah had also indicated the improvement registered by the industry. Production, quality and exports, he said, were now better and prospects brighter. Though falling short of targets, the estimated exports of 750 million yards for the current year should be considered satisfactory. But the problem is whether the improvement can be maintained unless at the same time action is taken to remove the handicaps under which the industry is labouring.

Mr D. N. Bhattacherjee has analysed the cotton supply position which has deteriorated as compared with last year and suggested that adequate provision should be made for imports in order to ensure supplies of raw material. Evidently, the Ministry of Agriculture has not moved in step with the Ministry of Commerce and Industry. Food production rightly has priority in the programmes of the Ministry of Agriculture. But it should be possible to implement programmes for increased production of cotton without prejudice to food output.

The ability of the industry to cater to the requirements of the domestic as well as of the export market depends on its ability to keep costs down. What Mr Bhattacherjee has observed in this context about the adverse effects of the tax on power and the proposal for enforcement of the decisions of Wage Boards deserves careful scrutiny.

*

Cooperation

Even without the celebration of the Co-operation Week, the subject has been attracting more than its normal share of attention. For, the Nagpur resolution has made Co-operation a controversial word. The co-operative form of organisation has now been put forward as the permanent solution of the economic ills afflicting the country—from food shortage to administrative deficiencies. Food production and distribution have already been marked out as the proper sphere of co-operative enterprise. It has also been stated on the highest authority that, in due course, industry will also be taken over by co-operatives.

The vast expansion of co-operative societies both in number and in operations envisaged in this policy raises the question whether the framework in which the movement functions is suited for the tasks assigned to it. The proof of the co-operative movement is in its working. On this score, devoted co-operators appear to have been greatly disillusioned.

This disillusionment finds expression in the report of the Seminar on Co-operation organised by the Indian Co-operative Union. The review of the present state of the movement, which forms part of the report, points out that, while the movement in India displays impressive statistics regarding the number of societies, membership, etc., it suffers from excessive State interference and bureaucratic control. Though a co-operative is supposed to be a self-governing and democratic institution run by an elected management, "in India, there are instances where the management is appointed or directed by the Registrars without reference to the General Body. The Registrars are also empowered to suspend, remove or change the management arbitrarily." And Mr Jayaprakash Narayan, who presided over the Seminar, regretted that the Co-operative Law Committee had brought out a report "which tended further to officialise the movement and made the Registrar its dictator."

The Co-operative movement was originally conceived as a means of providing credit on easy terms to small cultivators and artisans who would not be considered creditworthy by commercial institutions. It was built up by the pioneering enthusiasm of the founders of the movement and their earnest disciples. The type of management provided by honorary, part-time workers, which was adequate for the limited purpose of the early societies, will not do for the vastly enlarged functions which the movement has taken up. The problem of societies has always been that of finding ressonably efficient and honest management. The personal stake of the management in the success of joint-stock ventures, which is the incentive to efficiency, is absent in the case of co-operative societies. This weakness is a standing invitation for official intervention. That is especially the case in our country, where the movement is State-sponsored and the societies have been formed not "by but for the people."

WORLD OF FINANCE

Small Loans

THE Reserve Bank has done well, by calling a conference last week in Bombay, to consider seriously how steps may be taken to finance not merely small scale industries, but small scale business as well. Under its auspices, a scheme has been prepared whereby loans extended by approved banks to small industries and businesses will in part be guaranteed. The scheme is only in its embryonic form and it is understood that an amendment of the Reserve Bank of India Act may be necessary before, in fact, the central banking institution proceeds to give a guarantee against specified proportions of loans granted to small scale industries. As such, although the general feeling is that the scheme for the guarantee of small scale loans should be brought into operation with the beginning of the new year, it may not be practicable for a start to be made in this connection before, say, the end of March. Nevertheless, there is reason to be gratified that, well in advance of the commencement of the Third Plan, strenuous and well advised measures have been taken so as to ensure that, to the extent possible and as safely as may be practicable, the financing of small scale industry is to be actively fostered.

As at present envisaged, the position is that the guarantee will cover 50 per cent of the loss or more so long as the loan in question does not exceed Rs 2 lakhs. Thereafter, the proportion that the lending bank will be able to recover by means of the guarantee will progressively decline. A number of interesting questions arise in this regard, none of which, we believe, has yet been decided upon and all of which, we suggest, are of immense significance to the success or otherwise of the guarantee scheme.

In the first place, is the guarantee to be in relation to the limit that may be sanctioned against particular loan applications? Or will the mount of guarantee payable depend upon the outstanding debit balance as on the day on which the bank in question invokes the guarantee? The argument in favour of holding the former procedure to be adopted is that the lending bank will, in many instances, seek to ensure that the debit balance of an unsatisfactory constituent be brought down, and hence the outstanding balances should be rather lower when the guarantee is invoked. On the other hand, the fear may be that a particular bank will have no compunction in extending a rather higher credit limit than might be necessary so as to ensure that it is in a position to recover the maximum possible amount in terms of the guarantee. It seems to us that the solution in this respect is very simple. What ought to be the guiding principle is the maximum debit balance that has been recorded in the case of any particular loan. In such wise, the particular bank which by its prudence reduces the size of a doubtful constituent's debit balances does not get penalised for that very prudence; and, at the other extreme, the unscrupulous bank that might set a limit which was not necessary would gain no benefit therefrom.

The next question that we have to consider is whether provision has at all to be made under the guarantee scheme in respect of loans exceeding, say, Rs 2 lakhs. Now, it requires a considerable stretch of imagination to define an enterprise which involves more than Rs 2 lakhs as small scale. Since, undoubtedly, the lending banks will satisfy themselves that the loans that they give are secured, any enterprise which seeks a loan under the scheme of Rs 3 lakhs may be expected to have a margin of another Rs 3 lakhs in the form of already existing assets. Thus it is that we would suggest that the guarantee scheme be restricted to a limit, say, of Rs 2 lakhs.

We have next to consider whether the extent of guarantee is sufficient. At the lowest slab, the losses to be borne as by guarantee and as by bank is in the ratio of 60 per cent to 40 per cent. Guarantee schemes of this nature in other countries exist whereby the whole of such loans is, as it were, ensured. But, then, it is not at all likely that the guarantee scheme would be able to cover one hundred per cent of the loans; indeed, such full guarantee may even be undesirable. For, if, in the lower echelons, the whole of a loan is guaranteed, there would be nothing to prevent a bank from taking much less care than would have been its wont in the acceptance of loan proposals. Banking is competitive, and the guarantee scheme must leave some room for that competition to continue. That is to say, each bank must decide upon the merits of individual loan applications. We may add here that the guarantee scheme is necessary, because many of the loans now sought to be undertaken may not strictly be bankable. Some modicum of enterprise on the part of the lending banks is called for. May be, it is the reputation and integrity of a particular would-be borrower, may be, in another case, it is the soundness of scheme that he offers. In another case, there will be circumstances, we presume, where banks are not fully secured in the loans that under the scheme they will be enabled to approve.

By the same token, it needs also to be made clear that the proportion of guarantee will not be attractive if it also involves considerable red-tapism. By all means, let the ratios of guarantee be kept at their proposed levels; but let it also be made clear that the statements of banks as to loans advanced under the scheme and losses experienced will be taken without undue harrassment as to their correctness. Otherwise, the bother of correspondence will far outweigh any additional earnings that the bank may expect as a result of extending loans under the guarantee scheme.

For the short-term, thus, provided red-tape is kept to a limit, the guarantee might succeed in providing fillip to the growth of small scale industry. In the long run, however, the Reserve Bank authorities would be wise to recognise that real expansion in the finance of small scale industry can be achieved only if the guarantee scheme is supplemented by the insurance of losses in respect of small loans to industry and business.

+

Foreign Balances: Near Rs 200 Crores

The considerable impact of month early disbursements is revealed in the returns of the Reserve Bank for November 6, whereas the return of Scheduled Banks for October 30 bears testimony to the great demand for funds occasioned by Dewali disbursements. It also needs to be remarked, however, that the Scheduled Banks apparently, if the return of the State Bank for November 6 may be taken to be a pointer in this regard, were not unduly strained by beginning of the month disbursements.

The return for the Issue Department of the Reserve Bank for the week ended November 6 shows a sharp expansion of Rs 18.07 crores to Rs 1704.27 crores in Active Note circulation. Furthermore, there has been outflow of Rupee Coin for Rs 1.32 crores. With expansion of currency for Rs 20 crores against Rupee Securities, the Reserve Bank's cash in the till is shown fractionally higher at Rs 10.81 crores.

It is to be noted, in the return of the Banking Department, that both the Central and the State Governments were put to considerable strain by month early disbursements. For, with Investments showing a drop of Rs 11.08 crores, it can be inferred that deficit financing undertaken during the week by the Central Government has been for an amount around Rs 10 crores. (There should also have been countervailing deficit financing for Rs 8 crores odd in respect of Treasury Bills held in the Reserve Bank's portfolio of Bills Purchased and Discounted, which would have come up for maturity during the week). Notwithstanding such deficit financing, the Central Government's balances are shown to have declined by Rs 2.26 crores to Rs 52.85 crores. Similarly, in the case of the State Governments, their Deposits are seen to have fallen sharply by Rs 16.34 crores to Rs 13.92 crores, despite an increase of Rs 4.58 crores to Rs 24.83 crores in their Ways and Means borrowings from the Reserve Bank. It may be that the sharpness in the decline of State Governments' balances could have been due partly to some element of payment to the Central Government.

Reserve Balances of member banks show a fractional rise to Rs 73.61 crores. On the other hand, the Other Loans and Advances of the Reserve Bank have fallen by Rs 2.48 crores to Rs 89.99 crores, this despite the State Bank figuring, in the latest week, as a borrower from the Reserve Bank for Rs 4.50 crores. It is thus clear that other Scheduled Banks, whose borrowings from the Reserve Bank had been placed at Rs 13.85 crores at the end of the previous week, will have substantially reduced their indebtedness to the central banking institution. Such improvement in the position of Scheduled Banks vis-a-vis the Reserve Bank would suggest, we repeat, that they were not put to much strain by month early disbursements.

Finally, it is heartening to record a still further rise of Rs 1.76 crores to Rs 36.95 crores in Balances Held Abroad. The Reserve Bank's holdings of foreign securities have thus risen in every week since October 9. The present week's level of the foreign exchange holdings of the Reserve Bank is just below the Rs 200 crore mark.

The return of the State Bank for November 6 shows that, for the first time in some months, the State Bank figures as a borrower from the Reserve Bank. However, such resort to central banking credit was not as a result of the State Bank feeling any strain in meeting the month early demand for money. On the contrary, Deposits have staged a small rise of Rs 2.27 crores to Rs 571.92 crores and Advances have nominally declined to Rs 161.23 crores. It is, we fancy, the intention to purchase some securities from the Reserve Bank, as indicated by the rise of Rs 6.46 crores to Rs 22.86 crores in Other Assets, which has compelled the State Bank to seek the Reserve Bank's assistance for Rs 4.50 crores.

The statutory statement of the Scheduled Banks for October 30 bears the **sharp impact of Dewali** disbursements. In the first place, gross Deposits have declined by Rs 22.03 crores to Rs 1852.82 crores. In the second place, the total of Advances has risen by Rs 9.10 crores to Rs 940.04 crores. In the third place, borrowings from the State Bank have gone up by Rs 3.68 crores to Rs 5.22 crores. In the fourth place, indebtedness to the Reserve Bank has more than quadrupled from Rs 3.03 crores to Rs 13.85 crores. As a result of these, Cash Balances have declined by Rs 10.70 crores to Rs 158.77 crores.

We may remark, however, that part of the decline in Deposits is owing to a reduction in borrowings from banks as included in Deposit Liabilities. In this respect, the decline traceable to this head exceeds Rs 4½ crores; and, in turn, such decline in borrowings from banks is reflected in a drop of Rs 3.60 crores to Rs 33.13 crores in money at call and short notice.

It is likely that the next return of the Reserve Bank should witness a return of slack season conditions. Contraction in currency is possible, some element of tap sales of securities is not to be ruled out, and an increase in Foreign Balances, passing the Rs 200 crore mark, is highly probable. The return of the State Bank for the next week may show the liquidation of the borrowings from the Reserve Bank as well as an increase in the investment portfolio. The first return of Scheduled Banks for November, while it will doubtless record some increase in Advances, is likely to show that the strain of month early disbursements upon the banking system was not too great.

Dollars in London

By Paul Einzig

LONDON has always been by far the most important international market for dollars. This is partly due to its geographical position which predestines London to the role of intermediary between the United States and the greater part of the Eastern Hemisphere. But the organisation of the London financial markets has also attracted a large volume of transactions in dollars. It is very easy to deal in the London foreign exchange market in large amounts of dollars, both for spot and for forward delivery up to twelve months. Even for longer period, up to four years, it is now possible to negotiate terms in the London market. During the hours when London is closed it is not nearly as easy to transact business in New York in sterling as is to transact business in dollars in London when London is open.

During the last two years or so, a dollar market of a different kind has developed in London. For some inscrutable reason it has almost entirely escaped attention. Yet it has assumed first-rate importance. It is a market in dollar deposits and loans. Many London banks have always accepted deposits in terms of currencies other than sterling. But since 1957 the volume of such deposits—not only in dollars but to a much less extent also in Deutschmarks, Swiss francs and Dutch guilders—has undergone a spectacular increase. The currencies received by London banks accepting such deposits are not as a rule invested or deposited in the United States or in the other countries concerned but are re-lent in the form of dollar loans for the duration of the deposit arrangements.

The origin of this development lies largely in the restrictions adopted in 1957 to defend sterling against speculative pressure. Among other measures the banks were instructed to discontinue sterling credits for financing trade between two foreign countries and for re-financing goods after their arrival in their countries of destination. The former ban has since been removed, but the latter continues to operate. There is nothing to prevent British banks, however, from granting such credits in terms of foreign currencies obtained in the form of deposits. This is in fact what is being done on a very large scale.

Most of the dollars thus employed are owned by continental residents who want to keep their money in dollars in a liquid form but want to earn reasonably high interest. Since under Federal Reserve regulations American banks are only allowed to pay relative low interest rates on such deposits, their holders prefer to deposit them with London banks which are able to pay higher rates. London simply acts as intermediary between a continental holder of dollars and a continental borrower of dollars.

Another reason why a great many continental holders prefer to deposit their dollars in London is that they are afraid of being charged American Income Tax on interest paid by American banks. While there is an agreement against double taxation between Britain and the United States, there is no corresponding agreement between the United States and many continental Governments. In any case, most continental holders of dollars would not want to declare their earnings to their own taxation authorities, so that they would not be in a position to benefit by the provision of agreements on double taxation, whereas London banks obtain a deduction of British Income Tax on any amount paid in the United States.

Even many American residents deposit dollars with London banks, to take advantage of the higher deposit rates paid by these banks. The American banks are not allowed to pay higher rates than those determined by their regulations, but they can act as intermediaries through which American business firms can deposit dollars with British banks.

Admittedly, the restrictions on sterling credits to which this traffic owes its existence are liable to be removed any moment. Even so it is possible that the system will continue to operate. For the rates quoted by London banks on dollar loans to continental and other borrowers compare favourably with the cost of London acceptance credits, allowing for commission charged by the London bank and by the foreign bank. Even a further increase in money rates in New York would not necessarily check the traffic, because higher interest rates in New York would affect the discount on forward dollars. By selling the spot dollars borrowed for three months from a London bank and re-purchasing it for delivery in three months, a Belgian firm stands to benefit by the swap margin, and this goes a long way towards reducing the cost of the dollar loan.

Not all dollar deposits are re-lent by London banks to foreign borrowers. Whenever money is tight in London the London banks holding such deposits can always convert the dollars into sterling by selling the spot dollars and re-purchasing the forward dollars. A great deal of this is in fact being done for short periods. This means that the new market in dollar deposits is in a sense a competitor not only of the market in sterling acceptance credits but also to the London Money Market.

The popularisation of dollar facilities tends to reduce the use of sterling in international trade. But this does not matter so long as the business is done by London banks. The profit made on the transactions adds to Britain's invisible exports to the same extent as if the facilities had been granted in sterling.

WORLD OF JUTE

Sacking Stocks Decline Further

AS has been generally anticipated, the figures for stocks of jute goods with mills as at the end of October released this week show that the good business that had been done in heavy goods with a number of countries in recent months had had delivery dates for substantial quantities during last month also. Stocks of Sacking cloth and bag show a decline of 9,800 tons over the previous month. Hessian stocks, however, have increased by 3,700 tons while there is a very small decline in other varieties of 100 tons. Total stocks at the end of October are placed at 72,500 tons comprising 32,900 tons sacking, 29,200 tons hessian and 10,400 tons other varieties as compared with the previous month's total stock of 78,700 tons comprising 42,700 tons sacking, 25,500 tons hessian and 10,500 tons other varieties. At the corresponding date of last year, total stocks were 107,400 tons made up of 77,500 tons sacking, 17,800 tons hessian and 12,100 tons other varieties.

Compared to the corresponding date of last year, the over-all statistical position at the end of October this year is very encouraging. Stocks of hessian are displaying an irregular trend this year and the position in this regard as at the end of last month is not as satisfactory as at the end of the previous month. The fact that the increase has occurred although there has been no further addition to the output of this category of goods due to the recent unsealing of looms is indicative of the absence of overseas interest, especially that emanating from the USA. The disappointing performance of hessian is, however, largely to be attributed to the lack of active interest from the USA due to the four-month long steel strike. Now that the US steel industry has started working with the return of the workers, the coming months may witness a pickup in the demand for hessian. As regards sacking, the situation has been quite encouraging and it is significant to note that the sizable decline in stocks has occurred in October despite the fact that, during the month, there has been an additional 2½ per cent of looms in the sacking section of mills. Although present stocks of sacking are less than a month's production, it is rather doubtful if the stock position of sacking at subsequent month-ends will be as encouraging as it is at the end of October. From the only moderate increase in the price of heavy goods in the market on the publication of stock figures, it would appear that marketmen do not rate high the prospects for continued strong demand for sacking goods.

The jute goods market opened the week on a steady note but in later dealings developed a sagging tendency. Hessian 40"×10 oz November closed at Rs 40.70 B Twills at Rs 102.75. The undertone on Friday was steadier but during Saturday's trading sentiment again became somewhat weak due to profit-taking at the higher levels. Hessian 40"×10 oz November closed at Rs 40.60 while B Twills for the same position was finally placed at Rs 103.15. The feature of Monday's trading was the greater interest evinced at advancing prices in distant delivery positions, than in near positions. It would appear that this is largely due to the apprehension that raw jute supply might become tight in coming months in view of indications of a reduced jute crop. The publication of the stock figures induced only a temporary buoyancy in the market on Tuesday and B Twills closed at Rs 103.90. Hessian, however, continued to be uninteresting and closed at Rs 40.48.

Raw jute prices have firmed up during the past week with Assam Bottoms November-December delivery advancing sizably from last Thursday's closing level. The improvement in sentiment would appear to have stemmed mainly from indications that the current season's jute crop may not be as big as earlier estimated. According to Dr M. S. Randhawa, Vice-Chairman, Indian Council of Agricultural Research, and Additional Secretary, Union Ministry of Food and Agriculture, indicaitions so far for the current season from the tentative estimates of the jute growing States are toward a general decline in the acreage under jute, which is, with the exception of certain areas where the weather was not initially favourable, almost entirely due to the very low price for jute prevailing at the sowing time. An estimate of the current season's jute crop has placed the quantity some six lakh bales lower than that for the last season. While referring to the contention that the activity of the State Trading Corporation has been restricted to the few centres and that the volume bought by it was too small to make any effective impact on prices, Dr Randhawa has also ruled out the possibility of over-supply from the current season's production of jute.

The raw jute market opened the week on a quietly steady note with Assam Bottoms quoting at Rs 23.50 in earlier dealings. Following indications of a smaller than-expected crop in the current jute year, sellers became reserved, and, with mills evincing more interest than before, prices started moving up steadily.

WORLD OF TEA

Need for an Aggressive Sales Policy

THE fact that Indian tea has not been able to derive much profit from the increasing consumption in some of the importing countries seems to have resulted in a reappraisal of efforts toward promotion of tea exports. It was noted in this column last week that Indian tea has not made any headway in the USA during the past five or six years despite the outlay of a sizable amount of money on popularising tea in that country. During the period, however, consumption of tea in USA has shown an uptrend. The benefit of increased offtake has evidently accrued to our competitors in the field. It has pertinently been asked why, when the exporting countries are jointly conducting propaganda for tea, Indian tea has stagnated while Ceylon has been able to increase its share. The reasons for Ceylon's success and our poor show have been indicated last week in Bombay by Mr Satish Chandra, Union Deputy Minister for Commerce and Industry, while addressing the Bombay Tea Merchants Association. According to him, Ceylon has been able to boost up its exports of tea because this country has tackled its task in a practical manner. India, on the other hand, approaches the problem in a theoretical way. Explaining further, he has pointed out that Ceylon shippers are obviously more active than their counterparts in India in following up the propaganda efforts in foreign countries in a practical way. In other words Ceylon is following an aggressive sales policy.

Referring to the tea trade in general in our country, Mr Satish Chandra has emphasised the need for concentrating attention on exports. The attempt to bring about a stable home market to take care of tea production during lean export years has succeeded so well that if the present trend in internal consumption continues without a comparable increase in production, there will be little tea left for export in a few years. During the past five years domestic consumption has steadily increased from 100 million pounds to 200 million pounds at an average annual rate of 15 million pounds.

It would appear that the steady expansion of the domestic market and the lack of an aggressive sales policy in overseas markets bear some relation to the tea policy of our Government. Mr Satish Chandra has himself admitted that the taxes now being levied on tea both by the Central Government and States have been partly responsible for the slower tempo of our tea exports. It has also been pointed out by the trade that tea merchants in Bombay are faced with some additional problems. It is, therefore, evident that if their call for maximising tea exports is to bear fruit, Government should take early steps to remove the obstacles in the way of making our tea as attractive as teas of our competitors, if not more attractive.

Demand continued to be on a satisfactory level again at the export sale held in Calcutta this week. Offerings which amounted to 72,144 packages met with a strong and general demand. Though an irregular tendency developed in plain brokens and fannings with the poorer sorts fetching slightly lower rates, the majority realised rates that were close to previous levels. Good support was forthcoming for the better liquoring medium Assam brokens and Fannings. BOPs and OFs were sometimes above previous valuations and low medium BOPs gained increased attention. Considerable attention was bestowed on best CTC teas while secondary broken grades were bid up to 20 nP above previous rates. Strong demand was seen in Legg cut teas. Leaf grades were in good demand with Darjeelings selling around last rates. Quotations: Clean Pekoe Rs 2.04 to Rs 2.10; Plain BP Rs 1.86 to Rs 1.90; Plain Fannings Rs 2.04 to Rs 2.10; Medium BP Rs 1.90 to Rs 2.08; Medium Fannings Rs 2.12 to Rs 2.20; Best Assam CTC, BP Rs 2.60 to Rs 2.80; Best Assam CTC Fannings Rs 2.60 to Rs 2.80.

There was a good general demand at the export sale held in Cochin on 3rd November. Most of the offerings totalling nearly 12 lakh lbs showed a slight falling away in quality. Nilgiri Brokens were steady while their Fannings were slightly easier. An irregular trend prevailed in Good Medium Brokens and Fannings while Medium and Low Medium descriptions were a strong feature. Good demand was noticed in Plain sorts which realised higher rates. A firm market developed for Black Leaf Brokens with Fannings suitable for the Middle East frequently realising dearer rates. At the internal sale held on 5th November, offerings totalled about 3,96,000 lbs. There was a strong general demand with Coloury Good Mediums, Mediums from Travancore and Wynaad, Fine Dusts, and Black grainy descriptions and CTC and Legg cut teas getting increased attention at improved levels.

WORLD OVERSEAS

US Notes

A subject that has been receiving increasing attention in Washington is the sizeable and persistent deficit in the international balance of payments of the United States.

Last year's deficit, representing the net total of gold and dollars that other countries accumulated as a result of their transactions with the United States, came to $3,400 million. This was well in excess of the usual post-war annual range of $1,000 to $2,000 million.

This year, instead of declining, the deficit has been running at an even higher rate. Estimates place it at about $4,000 million or more for 1959 as a whole.

It is not surprising, then, that US Government officials have been studying ways in which dollar expenditures abroad can be reduced and the balance of payments situation eased. It should be emphasized that no immediate emergency threatens, and no "crash" programmes which involve precipitate changes in the traditional liberal trade and aid policies of the United States are contemplated.

The US economic position, after all, is basically strong. Gold reserves, while drawn down noticeably in the past two years, are still high. International confidence in the dollar remains firm.

Nevertheless, the payments question does involve, in the final analysis, the value 'of 'the dollar and fiscal stability. Nor are these matters of small moment internationally in view of the important position of the US in the world's economic and trading picture. The aim, therefore, is to take precautionary measures to keep the imbalance of US payments from getting out of control.

Involved in the large payments deficit is the fact that the US is paying out substantially more to the other countries than it is receiving from them. This is due, in the main, to three factors.

1. The failure of US exports to keep pace with the soaring and record rate of US imports;
2. The continued large outflow of US economic aid to other countries, particularly in developing areas; and,
3. Heavy US military expenditures abroad.

The biggest corrective toward easing the deficit obviously would be a marked step-up in US commercial exports, and a relaxation of foreign exchange regulations by other nations. To this end, the US Government has been urging other countries to liberalize their restrictions against the US dollar and dollar goods. This has been done through diplomatic channels and in representations before such international forums as the recent meetings of the General Agreement on Tariffs and Trade (GATT) and of the World Bank and the International Monetary Fund.

Some liberalizing moves in this direction already have been made by a number of countries. On the basis of the communique issued at last week's GATT meeting in Tokyo, more such moves can be expected. It is generally conceded that many other countries, the industrial nations in particular, have now built up their gold and dollar reserves to the point where such restrictions, which helped to conserve needed foreign exchange in the earlier post-war period, are for the most part no longer necessary or justifiable.

This same strengthening of economies and foreign exchange positions in other lands is a factor in the recent decision to alter the terms under which the US Development Loan Fund (DLF) operates. With other industrial countries now able to finance more of their own exports, primary emphasis will be on the use of DLF funds to procure supplies and equipment in the United States.

This policy is not being extended to the International Co-operation Administration (ICA), the major mutual assistance agency of the US Government, if the US balance of payments situation were to become much more serious, however, it is not beyond the realm of possibility that the US Treasury Department, obviously concerned with such a development, might seek application of the new DLF principle to ICA expenditures.

Another way in which the US gold and dollar drain could be reduced would be through the reduction of military expenditures abroad. Since US military aid spending amounts to about $3,500 million a year, it is only natural that it should come under scrutiny.

Here again, it should be stressed that no decisions have yet been made, nor does any action in this direction appear imminent. Thinking on this matter is essentially in long-range terms. Certainly, the US has every intention of living up to commitments to its allies. There is, of course, no disposition here to impair the North Atlantic Treaty Organization (NATO) or to relax the defence posture of the free nations.

None of this represents a retreat from basic principles, as witness the consistent stands which the US has continued to take in favour of trade expansion and aid to developing lands. It has, for instance, been not only a supporter of such stimulants as the Inter-American Development Bank and the projected International Development Association (IDA), but a prime mover in their establishment.

In the case of IDA, moreover, there is the frank recognition that other industrial nations have progressed economically to the point where they, too, can be important contributors of needed capital to developing areas.

What is evidently under way here, then, is a study of how to adjust to the changes that have taken place in the international economic situation—changes due in no small measure to the liberal trade and aid policies which the US has consistently pursued.

This situation is not one that necessarily will result in a reduction of US foreign aid outlays. But much will depend on how the foreign aid is used. If US dollars are going to be hoarded everywhere, the US will naturally be put in a more difficult position.

It is a fair assumption that members of Congress, always subject to protectionist agitation, also are aware of the changed situation. It is possible that the action of DLF outlays may have the effect of forestalling Congressional pressures not only for this, but perhaps for even more restrictive measures.

There is reason to hope that the present condition will prove to be temporary. Pick-up in US exports in recent months, for instance, has begun to cut down somewhat on the outflow of gold and dollars. A continuation of this trend, coupled with a significant improvement in the US balance of payments position, could help ease the situation.

It still remains to be seen, however, what the actual developments will be. Meanwhile, the US Government is continuing its careful scrutiny of current conditions and its study of ways in which the balance of payments situation can be improved.

*

Britain

The latest economic indicators show that, with demand rising sharply, Britain's industrial production has continued to advance, reaching in August-Septemger a scale between 6 and 7 per cent. above that a year earlier.

Most of the rise in production has come from higher output per man. Although employment in industry had been rising this year, by August it had only just overtaken last year's level. There has, therefore—with this year's industrial production well up on 1958 and employment not much changed—been a considerable gain in productivity: in the first half year the rise was about 4 per cent. on a year earlier, with the most notable gains in chemicals, the timber and furniture industries, vehicles, and clothing and footwear.

In September, industrial production (seasonally corrected) is provisionally estimated to have been 7 per cent. above a year earlier: in August-September it was one-half per cent. higher than in June-July, and 5 per cent. up on the first quarter.

The upturn was first apparent in cars and other consumer goods and in chemicals, but later spread to a wider range of finished manufactures and to intermediate products. The weekly rate of output of passenger cars in September was again nearly up to the record level of April, and output of commercial vehicles reached a new peak.

Within certain industrial sectors, the increase on a year earlier has been considerably more than the overall 7 per cent. recorded in the index for all industries. In Parliament, the new President of the Board of Trade, Mr. Reginald Maudling, has quoted figures showing that, compared with a year ago, cotton textiles are up 4 per cent., wool textile 14 per cent., made-up clothing 14 per cent., motor-cars 19 per cent, and commercial vehicles 44 per cent. Output its more than 15 per cent. up in steel and chemicals, both basic industries.

At the same time, industrial capacity in the United Kingdom is by no means over-stretched as a result of the increases which have taken place this year. It is the Government's view, as expressed by Mr. Maudling in Parliament, that there is still room for growth of demand and growth of employment within the capacity available to industry. Industrial equipment is available, there are no artificial controls on production, and the United Kingdom has access to raw materials throughout the world on the best possible terms.

* * *

The expansion of Britain's exports, which for the past six months have been 6 per cent. higher, on an average, than a year earlier, is likely to be continued, says the Bulletin for Industry published by the Treasury in London.

This is suggested by the good prospects in North America and Europe, and the fact that the primary producing markets are now contributing to the general improvement in British exports.

The Bulletin says it is now possible to form a provisional picture of how Britain's accounts with the rest of the world are moving this year. Thus, the gold and foreign-currency reserves have risen by £77,000,000 in the first nine months (including an increase of £40,000,000 in the third quarter, which is normally an unfavourable one for the reserves).

While the figures for the reserves are known accurately, they tell only part of the story. To complete it, it is necessary to know what happened to the other monetary items.

Taking into account these items—such as oversea sterling holdings and other monetary movements—the oversea monetary position improved by just over £50,000,000 in the first quarter.

In the second quarter there was an adverse movement in the oversea monetary position of £149,000,000. But had it not been for the payment by the United Kingdom of the additional sterling subscription to the International Monetary Fund of £174,000,000—which represents no real burden on United Kingdom resources until the sterling is drawn from the fund—the external monetary position would have improved by £25,000,000, making more than £75,000,000 for the half-year.

* * *

The Sterling Area's gold and convertible currency reserves fell last month by £93,000,000 and stood at £1,080 million on October 31, it was announced by the Treasury in London on November 3.

It is noted in London that the figure of £93,000,000 was reached after the special payment to the U.S. Export-Import Bank on October 29 of £91,000,000 in dollars to cover the repayment of the $250,000,000 borrowed in October 1957, together with $5,500,000 accrued interest. There were payments of £4,500,000 in settlement of United Kingdom bilateral debts to creditors of the European Payments Union, and of £1,000,000 to the European Fund.

United States imports from the Commonwealth increased by $1,900 million—or 65 per cent.—between *1948 and 1957*, it is shown in a report published by the Commonwealth Economic Committee in London today (November 4).

The report says that in recent years the United States has taken 38 per cent. of its merchandise imports from Commonwealth countries, and has found a market in the Commonwealth for 35 per cent. of its exports.

In 1957, Commonwealth countries supplied virtually all the United States' imports of newsprint, jute and whisky, about 90 per cent. of the wood-pulp and sawmill products, about 50 per cent. of the wool and non-ferrous metals, and about 40 per cent. of the machinery and vehicles.

Commonwealth countries, the report says, took more than 50 per cent. of United States exports of tobacco, machinery and vehicles and over 30 per cent. of petroleum and chemicals, as well as substantial shares of grain, other foodstuffs, and cotton.

United States exports to the Commonwealth rose in value from $3,819 million in 1948 to $6,410 million in 1957.

Marconi's Wireless Telegraph Co. has announced an agreement with the Indian Ministry of Defence for the manufacture in India, under licence, of Marconi VHF multi-channel radio terminals and repeaters, and ancillary equipment. Under the agreement, Marconi's is to supply all necessary technical assistance.

A spokesman for Marconi's said in London that the agreement underlined the importance the Indian Government placed on the development and expansion of internal communications.

The multi-channel radio equipment to be manufactured in India are the HM 100 series used by telecommunication authorities in many parts of the world, including India, where they are used on the railway network. The series was developed by Marconi's for use in country unsuitable for the construction of line or cable routes. It is designed to carry up to 48 telephone channels, any one of which may be subdivided to give either 18 or 24 telegraph channels.

Rolls-Royce is supplying more engines for the international airliner market than all its competitors put together, it was announced by the Society of British Aircraft Constructors. Of 1,454 jet and turbo-prop airliners on order or in service in the world (outside the Soviet bloc), 56 per cent., or 817, have or will have Rolls-Royce engines.

The overall British share is 62 per cent., or 986 out of the 1,454 aircraft. This represents 3,130 engines out of a total requirement of 5,362.

All airliners of British, Canadian, French, and Dutch design have British power-plants as standard fitting, while 38 American-designed aircraft have been ordered with Rolls-Royce engines.

* * *

Thirty-two Indian engineers arrived in London on November 2 to start courses of from three months to one year which will train them for executive posts at the steelworks at Durgapur, West Bengal.

The Indians, whose training has been arranged under the Colombo Plan, are spending a few days in London before going to centres in many parts of the United Kingdom where 19 different companies will co-operate in their training.

The new arrivals represent the seventh group of Durgapur trainees to go to the United Kingdom. Before them, 150 had arrived since November 1957, when the training scheme commenced. Of these, all of the sixth group, and most of the fifth group, are still studying in the United Kingdom. In all, 350 Indians will receive steelworks training in the United Kingdom.

In the face of keen competition from all types of jet and propeller aircraft, Britain's de Havilland Aircraft Co. has secured a $14,000,000 order for three Comet 4C airliners and associated equipment from Mexican Airlines, an affiliate of Pan American World Airways. The first two Comets will be delivered in December, and the third next year.

The Comet 4C has a take-off capability and rate of climb which enables it to comply easily with stringent anti-noise regulations. Mr. Max Healey, general manager of Mexican Airlines, says the aircraft "is particularly well suited because of its performance into and out of Mexico City", which is at an altitude of 7,350 ft.

In addition to 10 Comet aircraft of Royal Air Force Transport Command and two Comet 1A of the Royal Canadian Air Force, there are now 39 Comet 4B and Comet 4C airliners in service or on order. Up to the end of October, the 31 Comets so far put into service had flown about 53,000 hours, covering 24,000,000 miles.

A panoramic view of the Burnpur works of The Indian Iron & Steel Company Limited

This is the town that never sleeps—the town of steel. Night and day, the vast works throb with activity as men and machines labour to feed the iron and steel-hungry industries of the nation. Using the most modern production technique the Company manufacture, under a system of rigid quality control, a wide range of products including rails, structurals, blooms, sheets, billets, slabs, pig iron, spun iron pipes, vertically-cast iron pipes and iron, steel and non-ferrous castings.

IIC-71

Japan

THE Japanese economy has witnessed three waves of business recession since the outbreak of the Korean War; the first in 1951, the second in 1954 and the third in 1957-58.

Recovery from the third slump was remarkable, so much so that today fears are expressed that the economy is "overheated," that is, business boom is beyond normal.

With this situation in the background the Economic Planning Agency announced its monthly report on June 30 based on economic activities in the month of May.

The report remarks that the Japanese economy is steadily expanding; production increases while commodity prices and industrial profits are stabilized, banking credit is normal and favorable balance is shown in the international payment accounts. A note of warning, however, is given by the agency regarding the tendency of importation and capital investment.

In short, the national economy is on the smooth road of "volume prosperity," i.e., neither deflationary nor inflationary. The phrase "Volume Prosperity" was first used in the Economic White Paper of 1956, explaining the prosperity which lasted over a year from March, 1955. Why the government calls the present business recovery the second "volume prosperity" will be explained by the following economic figures and data.

Supported by the increase of consumption and other final demands, the industrial production showed its steady recovery from the recession which hit the bottom in March last year.

Significant increases in production in May took place in the manufacture of such durable goods as automobiles (due to consumption increase), construction materials including cement (due to construction boom), iron and steel (due to increase of export and domestic demand), pulp and soda. Production of the last two items increased due to the lift of self-restrictions of the production of chemical fibres.

The steady increase in production brought about recovery in the rate of operation in the manufacturing industry. For example, the rate of operation for December last year was 72.1 per cent but this went upto 76.1 per cent in March this year. This is about the same level as the rate of operation of the second half of 1955, a period of economic boom. Supported by the recovery of the rate of operation and the stabilization of commodity prices, the enterprise profit margin also increased to a good degree.

According to an announcement of the Ministry of Finance, the profit rate against the total capital of the manufacturing industry in the March term this year is 8.6 per cent. This is an increase of approximately 20 per cent compared with the September period last year.

Reflecting the brisk business, bank loans in May increased for small and medium-sized enterprises, trading firms and booming big industrial companies. However, on the whole, the money market is on the soft side. The Bank of Japan loans are below the level of £300 billion registering the lowest lending since the introduction of the tight money policy of 1957.

The employment situation has considerably brightened as a result of the increase in industrial production. The employment in April was 43,930,000 persons which was approximately 1,500,000 more than the preceding month. The index of regular employment (1955—100) is 128.6 or an increase of 3 per cent over the previous month. With allowances of recruitment season made, it is still 1.4 per cent increase.

Except for employment in the mining industry, which has been slow in recovery and showed a decrease of 5.8 per cent in April compared with March, all other fields of industry showed an increase in the employment; an increase of 4.2 per cent in the manufacturing industry, 8.4 per cent in the wholesale and retail business, while the transportation and communication industries, electrical and gas industries all showed an increase in employment. Particularly significant is the increase of workers in the machinery, metal and textile industries.

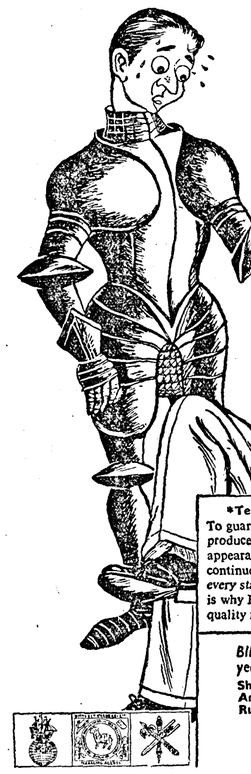
With the favourable turn in the employment situation, the wages of workers also increased. In fact the real income of workers in urban districts increased by 6.6 per cent compared with same month last year. This is due to the spring seasonal raise of pay basis coupled with regular raise of the salary basis, the enforcement of which was long overdue because of recession. This increase in income was reflected in the steady growth of urban consumption and created a strong pillar to support the so-called "volume prosperity".

Notwithstanding the increase in productions and spending, commodity prices are stabilized. The wholesale commodity price index for the first week of June (with the index placed at 100 for June 24, 1950, excepting foodstuffs) is 159.7 compared with the 159.5 registered in the first week of May. There is practically no change in the commodity prices. The price indices of textiles, chemicals and machinery were stationary while those of metals and construction materials showed a slight 0.1 to 0.2 per cent increase.

The consumers' price index in May was 105.4 (on basis of 1955 Tokyo index), a drop of 0.5 per cent compared with the preceding month. This was attributed to the seasonal decline in the prices of vegetables and fish and other foodstuffs as well as fuel. There was a slight increase in housing and clothing expenses.

As a result of the speedy expansion of industrial production, a big increase in imports was marked in May. According to customs clearance statistics, imports in May amounted to $322 million, a rise of 8 per cent compared with the preceding month. This is the first time in 18 months since October' 1957 that imports has exceeded the $300 million mark on the customs clearance figures.

Looking at the comparison of imports of raw materials with the industrial production, the increase in imports was below the increase in production in the period of October-December last year, while imports began to show in excess of the expansion of production since the beginning of this year.



On the other hand, exports also continued to increase. The customs clearance statistics show that exports in May reached $278 million, a rise of $17 million over the preceding month and an increase of $46 million compared with the corresponding month last year.

Although the foreign exchange balance showed $39 million in the black the actual balance was some $5 million in the red when considered the payments deferred such as usance bills. It is the first time in twenty months since August, 1957, that the real foreign exchange balance has turned unfavourable to Japan.

However, when we consider the factor that a considerable amount of foreign exchange due in May is carried over to June, the real position will not be in the red.

Foreign exchange holding in May was $1,073 million in total, showing an increase of $64 million over the preceding month.

"Why this fancy dress, Ram Gopal?"

"No more suits for me. After three washes, my suits get as limp as wet blotting paper. This outfit may be cumbersome, but it certainly retains its shape."

"What a pity! But, surely you've heard of BINNY'S? BINNY'S cloth retains its new look even after repeated washing. They Quality Control* their production, you know..."

"Quality Control? What's that?"

"Modern machines process yarn and cloth so fast that often defects, invisible to the naked eye, creep into the cloth. Quality Control is laboratory testing to root out defects at every stage of production. That's why BINNY'S fabrics retain their shape even after repeated washing."

"Is the suit you are wearing made of BINNY'S cloth?"

"It certainly is"

"Then show me the nearest BINNY'S shop, my friend."

BINNY _a great name in textiles

*Testing defects in processing

To guarantee that the yarns BINNY'S produce are uniform in strength and appearance, processing defects are continuously checked and remedied at every stage of their manufacture. That is why BINNY'S are able to supply quality fabrics to their customers.

BINNY'S manufacture nearly 90 million yards of cloth every year. Here are some of the varieties they make:

Shirtings - Khaki Drills - Bleached & Dyed Drills - Towels - Anticrease Suitings - Tussores - Union Fabrics - Silk Sarees Rugs - etc etc

The Buckingham & Carnatic Company Limited
The Bangalore Woollen, Cotton & Silk Mills Company Limited
Managing Agents: Binny & Co. (Madras) Ltd.

BC-1514-AG

France

French steel output in September totaled 1,293,000 tons and pig iron output totaled 1,054,000 tons.

These figures, which are higher than those of August 1959, a month which is traditionally affected by the vacation period, show an increase of 3,5 per cent in the production of steel and an increase of 7.5 per cent in the production of pig iron compared with September 1958. If the first three quarters of 1959 are compared with the first three quarters of 1958, one sees an increase of approximately 132,000 tons (+12 per cent), although during the first quarter of 1959 the production of crude steel was slightly lower than that of the first quarter of 1958.

Crude steel production during September was as follows: Thomas steel: 304,000 tons; Martin steel: 364,000 tons; and Electric steel: 116,000 tons.

Industrial Production in August:

The industrial production index, excluding building, calculated on a base of 100 in 1952, was 108 in August, which was 29 per cent less than that of July (152), but 7 per cent higher than in August 1958.

Between July and August, the drop in production is explained by the vacation period.

Iron Prospecting in Mekambo:

Since March 1956, the prospecting effort made by the Societe des Mines de Fer of Mekambo (Semifer) has been extended to the region known as Babiel Nord. All prospecting has been halted on the Boka-Boka range, whose contents can now be evaluated with certainty at a total of 250 or 300 million tons of iron ore with a tenor of more than 60 per cent. Any signs of ore with a tenor of less than 60 per cent were discarded as being insufficient.

The Babiel structure makes up part of the Belinga range, which basically includes five mountains extending for a distance of 35 kilometers. This Precambrian plain covered with forests is the only place where iron ore has been noted. The valleys in this plain are swampy, making the region particularly difficult to penetrate.

In Babiel Nord, six transversal shafts varying in length from 20 to 150 meters have been dug, and three others are at present being dug. Practically horizontal in the side of the mountains, and grouped according to the location of the vertical strata, these transversal shafts had all struck ore bearing deposits between 14th April and 18th September, 1959, during which time 573 meters of shafts were dug. At the present stage of development, it is thought that Babiel Nord is one of the important ore regions in the Belinga range. It is located fifty kilometers by plane from Boka-Boka, but this region in between is almost impenetrable.

Automobile Production:

During September 1959, the production of the Simca Automobile Company totaled 21,090 vehicles, including 19,854 pleasure cars, 544 Unic-Saurer trucks and 692 Someca agricultural tractors compared with a total production in September 1958 of 19,280 vehicles.

The production at Citroen for the first three quarters of 1959 totalled 206,882 vehicles, including 154,036 pleasure cars, and 52,605 trucks and buses. Production at Berliet totaled 7,930 vehicles including 6,173 trucks, 550 tractors, 459 buses and 748 special vehicles.

* * *

Sweden

Estimates for the increase in Sweden's gross national product in 1959 indicate a rise of at least 3 per cent, the Institute says. Industrial output may increase by 3 per cent, agricultural production by 1 per cent—entirely accounted for by vegetable products—and construction by 8-10 per cent.

On the labour market, employment is estimated to rise by about 0-5 per cent of the total labour force, which would imply an aggregate productivity increase of 3-5 per cent. At the same time, however, the large number of youths now entering the labour market may result in the number of those available for work becoming somewhat larger than the rise in employment.

Reviewing the prospects for 1960, the Institute recalls that industry has adopted an optimistic attitude and is expecting a rise in both production and investments. New orders are developing favourably, particularly those of the export industries.

While private consumption will largely be dependent on the development of personal incomes, the Institute says, a return to a more "normal" savings quota after the drop in 1958 and 1959 may also have a decisive influence and probably make the rise in consumption in 1960 relatively moderate.

Considerable increases in stocks are likely in 1960. It is obvious that stocks have declined both in 1958 and 1959—compared with a normal increase of Kr 500,000,000 Kr 750,000,000 per annum—and, further, the high liquidity may induce the companies to build up their stocks.

Commenting on the Government's economic policy as expressed in the recent proposal for a 4 per cent turnover tax, the Institute says that an unusually moderate adjustment of wages and salaries will be necessary in order to avoid an inflation caused by increased demand and higher costs. Considering that even in periods of "equilibrium" certain non-contractual wages increases occur, it might be questioned whether a prolongation of the 1959 wage agreements would not be required in order to avoid inflation, the Institute says.

The Bill is accompanied by a survey of Sweden's economic position. The survey emphasizes that Sweden's exports and her balance of payments have shown a much more favourable development than could be foreseen this spring. Exports in the first half of the year showed an increase in value of 6 per cent and in volume of 10 per cent on the figures for January-June 1958, the average increase in July-August being still higher.

Imports, on the other hand, dropped by 5 per cent in value and 1 per cent in volume. For the second half of the year imports are likely to rise by a few per cent over the gures of July-December 1958.

The overall foreign exchange holdings have risen by Kr 313,000,000 to Kr 3,185,000,000 over the past twelve months. The balance of payments is estimated to result in a surplus of some Kr 200,000,000 for the whole of this year.

Total investments, previously estimated to rise by 6 per cent this year, are likely to show a somewhat larger increase following an upward adjustment of industrial investments.

Private consumption is estimated to have risen by 3 per cent in value and 2½ per cent in volume from the first half of 1958 to the same period of this year.

Consumer prices, and also wholesale and import prices, have remained largely stable so far this year. It is likely that the consumer price index by the turn of the year will have risen slightly above the August level.

Industrial production in the first half of the year was only slightly larger than a year ago. The increase during the second half is estimated at a minimum of 4 per cent, which would mean an overall increase of about 3 per cent compared with 1958.

The situation on the credit market has been characterized by a heavy increase in liquidity both on the part of the commercial banks and the public. On the labour market the situation has improved throughout 1959, although the unbalance between supply and demand due to geographical and other causes calls for special measures even in a forthcoming period of economic upswing, it is emphasized in the Ministry of Finance comments.

Sweden's overall industrial production in August this year was about 3 per cent larger than in the same month of 1958. The output of capital goods was up by 2 per cent and that of consumer goods by 3 per cent.

The production index of the Federation of Swedish Industries was registered at 245 points (1935=100) as against 239 in August last year. The seasonally adjusted index for August was 254 compared with 250 for July this year.

While iron-ore mining remained smaller than a year ago, the favourable development at the steel and other metal works continued, although at a somewhat slower rate of increase than before. Employment in the engineering industry for the first time this year showed a rise on the 1958 level. Production in the pulp and paper industry and the food industry was 6 per cent larger than a year ago, whereas there was a continued decrease in the output of the timber industry and the leather and shoe industry.

The SKF Group of industries, comprising five factories in Sweden and 19 factories abroad, with a total staff of some 45,000, at present accounts for 15-20 per cent of the world's output of ball bearings, the Soviet Union excluded, according to a recent statement by Mr Joel Larsson, managing director of the Swedish parent company. Of total exports of ball bearings for the world market the SKF Group accounts for 30 per cent, 20 per cent of which comes from the Swedish manufacturing company. During the past year the productive capacity of the company's Gothenburg factory has increased by 15-20 per cent.

A general 4 per cent turnover tax as from January 1, 1960, to be levied on consumer goods, certain investment goods and services, plus an increase in the special energy tax on heating oil, petrol, coal and coke was proposed by the Swedish Government on October 20. The new tax proposals are expected to yield a gross total of Kr. 1,625,000,000. The net will be about Kr. 1,200,000,000 (£77,700,000, $233,000,000) a year, since compensatory measures, including higher child allowances, old-age pensions, State income tax reduction etc will cost approximately Kr. 400,000,000.

The proposal provides for a number of exemptions from the turnover tax. Thus, industrial raw materials and semimanufactures as well as agricultural raw materials will be excluded, as will also vessels, aircraft, rents, daily newspapers, transport and export products.

Services liable to the new tax include repair and maintenance, restaurant bills, etc, but not "hygenic" services such as doctors and dentists' fees.

The new tax is likely to affect consumer prices by an average of 3 per cent, which would mean a 5 point increase in the cost-of-living index. In order to counteract price increases higher than those motivated by the new tax, measures will be taken to strengthen the price control supervision.

The Bill now presented by the Social-Democratic Government is likely to come up for voting in the Riksdag towards the end of November. Both the three non-socialist parties and the Communists have opposed the turnover tax scheme, but since the Communists are believed rather to abstain from voting than vote with the opposition, the Bill would be passed by the Riksdag.

In presenting the Bill, Finance Minister Gunnar Strang said that the deficit under the current total budget is estimated at Kr. 2,900,000,000 as compared with Kr. 1,400,000,000 for the fiscal year 1958-59. A net addition through new taxation of Kr. 1,200,000,000 would reduce the Government's need for supplementary borrowing to a volume that will not have a direct inflationary effect, he said.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

MR G. D. BIRLA has always had an uncanny sense of timing. Again and again, he will anticipate what, in the economic sphere, will be the topic of the hour. This, of course, has served him well in the growth of his industrial empire. You have only to consider the many-sided expansion programme of Texmaco, the branching out into new fields of endeavour and the ever-present reports of new schemes being examined and studied to realise that he proves to be a clear step ahead. (The one exception is steel: Mr Birla, one imagines, sorely desired to include a steel company in his group: but he was just a shade late, and though Durgapur might once have been the third steel plant in the private sector, it has turned out, in the event, to be the third steel plant in the public sector). So, you would not go far wrong in describing Mr Birla and his utterances as being the barometer of industrial activity in India, although he has modestly ascribed this role, in a speech delivered to the members of the Indian Chamber of Commerce last week, to the Stock Exchanges. You have the graphic example, in this context, of rumours of Birla purchases in the Calcutta Stock Exchange immediately leading to buying pressure. What, we may see for ourselves now, does this human barometer show? Fair weather ahead, or foul?

✱

It is intriguing to find that Mr Birla considers that the Third Plan, on which obviously thinking has yet to crystallise, is already in need of revision! Such is the starting point for him to discuss broadly the role of socialism as also the role of the State in the Third Plan; and the conclusions he comes to are a strange amalgam of optimism and pessimism. Fair weather is ahead as far as industrial growth and assurance of foreign assistance is concerned; but unsettled skies is the forecast in respect of the administrative ability to take on a large Third Plan. I fancy that the two readings are somewhat contradictory, especially if the lesson to be drawn from the latter is that a larger segment in industrial growth should be left to the private sector. For, I think it wise to recognise that inadequacy in administrative capabilities is likely to beset the private sector as much as it is known to be true of the public sector. But, of this, more later.

✱

The Third Plan's revision has become necessary, because of China's activities on the Indian border. We now need a plan, says Mr Birla, "not only for creating prosperity in this country but also for the purpose of security". Therefore, the measures to be taken in the field of planned endeavour have to be such as "will lead to better defence of the country". Does this mean that the bias in favour of small industry, with which thinking on the Third Plan was originally concerned, is now to be scuttled? I hope not. Instead, what would be necessary, I suggest, is a clarification of the tasks to be undertaken by each of the two sectors. For example, Mr Birla believes we will need "to build more roads, more strategic railways, more wagons, more heavy industries"; and all these, undoubtedly, will fall within the scope and competence of the public sector. For the first desideratum of creating prosperity, we would still have to depend upon small industry for the employment opportunities it will throw up and for the use that can be made of the basic raw materials for industry which should be in production by the beginning of the Third Plan. In other words, I don't see that the "revised" Third Plan will see substitutions being made; rather, there have to be strategic addition to it. Whether it is doubling of steel capacity, or more concentrated development of the "heavy" Government projects such as electricals or machine making, there is naught that can be shelved for the next five years. Equally, we have to persist with small scale industry as well. (Mr Birla thinks we will have a million public companies within the next five or ten years; the operative word, "limited", has been left out; but, even then,—look at the number of zeroes—1,000,000 seems too much like wishful thinking). To put it pithily, China has so far disillusioned us by its recent activities and attitudes, that we shall have to bear a larger defence—direct or indirect—burden. It does not matter whether defence projects are included under the Third Plan; what, I think, Mr Birla implies is that a larger proportion of resources will need to be dissipated on defence and defence industries than, perhaps, has been the case during the Second Plan.

✱

The linking of prosperity with defensive strength is something that Mr Birla, after Mr Nehru, has done. Abruptly, you then find a link between Mr Birla and the Swatantra party. For, India's elder industrialist has proceeded to speak of socialism being out-of-date; and the evidence that he adduces in this behalf includes a reference to the Labour party's defeat in the UK general elections last month. After posing the question, "Is the world moving away from socialism?", Mr Birla tries to answer it in the following manner:

> "I cannot say definitely. But it looks as if, like Marxism, the so-called socialism, as it is understood in the Western countries, also may be getting out of date....Naturally the man in the street is not interested in socialism or capitalism. He is interested in his own prosperity."

✱

Lest we think that Mr Birla's words are directed specifically at the Indian Government's avowed objective, he is careful to add that we should not mix up socialism with the welfare state. There is nothing wrong with the latter—America is the greatest welfare state. (What is good for America is good for India?) I suspect there is some element of splitting of hairs in this kind of argument. If the masses become prosperous enough, and if they know what prosperity means, then they achieved the welfare state, and then they are chary of expropriatory measures implicit, perhaps, in the kind of socialism we have experienced—and they reject socialism. But a "Labour" sort of Government has, it seems to me, quite often preceded the achievement of welfare state. True, Japan, Germany and Britain have all disavowed socialism. But can't you reason that a period of socialistic regime paved the way for socialism to be rejected? In other words, that socialistic policy best succeeds which in due course will have no use to serve. (In Germany's case, the advance was not under the socialistic badge; but, Mr Birla has himself noted, "I always find it difficult to make distinction between Stalin or Hitler because in both the cases authority was centralised.")

✱

Mr Birla urges that an underdeveloped country should be as wary of importing discarded ideas as of discarded goods. (Don't import socialism!) I am afraid, however, that socialism in India will prove, as in other parts of the world, the vehicle that will take us to prosperity; and it is only then that we shall be able to look upon that vehicle as obsolete and no longer necessary. What we have to guard against is the possibility of individual freedom being quite stamped out while taking a ride in the socialistic car. So long, therefore, as democratic ideals are cherished,—and the Indian Government firmly do so—a bout of socialism is not only inescapable but may even be deemed necessary and desirable. Mr Birla is himself, I think, convinced of this truth. See what he considers to be the pattern of the Indian economy:

> "I think the pattern of the Indian economy will depend very much on the circumstances.... India is a poor country, India is a backward country, India is a different country. We have to devise our own methods, our own pattern, our own economics. All this is very nice. But, in actual practice,....we have set up all sorts of industries and we have discarded primitive methods of production....therefore, the fu-

ture pattern of the Indian economy is bound to take the same route which has been taken by many other countries which have become prosperous."

*

It is here that Mr Birla waxes optimistic about India's future. Don't worry, he says, "India's future is bright because India wants it to be bright." Industry is flourishing, businessmen and entrepreneurs exert every effort to expand production and "Government is helping industry to grow and to expand." I hope Mr Birla's enthusiasm will be infectious. There can hardly be any doubt that the successive plans, and the large governmental disbursements thereon, are greatly increasing the scope for private sector activity. True, taxes are today somewhat of a disincentive. Nevertheless, expansion in the private sector can clearly be seen to depend upon individual initiative and resourcefulness.

"Our whole administration would appear to be cracking today," says Mr Birla. It is not that the officials are inefficient, but that the system is at fault. After detailing the difficulties of officers, he repeats the words: dolefully. But let us remember that administration in and of the private sector is but little better. The trouble is, we are not yet equal to the tremendous demands that a forced pace of industrialisation implies. "We have not enough engineers," says Mr Birla, "we have not got enough of other technical personnel." But what has the private sector done, anything significant or considerable, by way of providing facilities for training raw graduates? What is necessary, both on the part of the private sector and on the part of Government, is that they become aware of the role of administration in planning.

WORKING TOGETHER
to help build Durgapur for India

A PARTNERSHIP of Indian and British skills is building a great new steelworks where sparse jungle lay at Durgapur. It is a project that will produce more than a million tons of steel for the nation every year.

Helping to build this giant of concrete and steel are the men of CEMENTATION-PATEL—13,500 Indian and 75 British engineers, technicians and workers. Together they have laid the foundations for most of this project's buildings and plant. Together they are building one hundred and forty miles of roads, railways and pipelines.

CEMENTATION-PATEL, the project's civil engineers, were first to arrive at Durgapur. In three years, they have moved enough earth and used enough concrete to raise a small city—three years that crown THE CEMENTATION COMPANY'S 30 years of service in India.

S. E. RLY TENDERS

Sealed tenders are invited for (1) Tender No. CON/COS/96/P&M/B/59 for supply of 2 sets electrically driven vertically spindle deepwell turbine pump capable of delivering 15,000 G.P.H. of reasonably clear water etc. as per specification. Earnest money is Rs 600/-. Tenders will be opened on 30-11-59.

(ii) Tender No. CON/COS/98/P&M/B/59 for supply of 1 No. pneumatic power hammer motor driven, 2 cwt size as per specification. Earnest money is Rs 550/-. Tenders will be opened on 30-11-59.

(iii) Tender No. CON/COS/99/D/59 for supply of 1500 Nos. Bearing plate Anticreep cast iron specification BS 90 RFF, BSS to drawing IRS T237. Earnest money is Rs 240/-. Tenders will be opened on 1-12-59.

(iv) Tender No. CON/COS/100/HC/59 for supply of (a) 2 tons wire hard drawn bare copper No. 3 SWG specification BSS 125/1954 and (b) 3 tons wire hard drawn bare copper No. 8 SWG. Specification BSS 125/1954. Earnest money is Rs 650/-. Tenders will be opened on 1-12-59.

(v) Tender No. CON/GM/61/H(C)/59 for supply of 2,442 Nos. Power & Guard Bracket 6 pin. Specification ELS Drg YO-226. Earnest money is Rs 725/-. Tenders will be opened on 30-11-59.

The cost of the tender forms for item Nos. (i), (ii), (iii) and (iv) is Rs 2/- per copy per tender and Rs 5/- per copy per tender for item No. (v) which are not refundable. Tender forms are obtainable from the office of the undermentioned, S.E.Rly., at Garden Reach, Calcutta-23 on remittance of the cost of tender form by money order direct to him in case of outside firms and on production of cash receipts from this Rly's Chief Cashier at Garden Reach, Calcutta-23 by local firms. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate along with the earnest money deposit receipt with the tender.

PSP and Congress

BOMBAY REVIEW

THE general opinion in the country about the outcome of the Silver Jubilee Conference of the Praja Socialist Party is that the PSP has once again failed to provide a convincing reason why it should be preferred as an alternative to the ruling party. Its 1300 word resolution on the national situation is merely a catalogue of the errors of omission and commission of the Congress Party and a repetition of the measures already adopted by the party which it wants to replace. Although the resolution says that, "so long as differences on policy and implementation remain as before, cooperation with the Congress cannot help the nation, but will merely strengthen the disruptive forces and deepen the frustration of the people," the conference has not shown how socialism can be brought in the country rapidly without seriously interfering with the domestic way of life. One would not have been surprised if the PSP set out to prove the Congress has failed to deliver the goods and how the PSP policy and programme are designed to achieve results which the Congress has failed to show in the past twelve years it has been in power. But the six-day conference seems to have mainly concerted itself with impressing upon the people its claim that the political creed of socialism was planted in Indian soil by the PSP.

This claim of the PSP as the custodian of Socialism in India has been challenged by Mr Morarji Desai, Union Minister of Finance. Speaking at the Harold Laski Institute in Ahmedabad last week, Mr Desai has pointed out that the basic idea of socialism has been given to the nation long before the Congress Socialists formed their own section within the Party. Mr Desai has further averred that Mahatma Gandhi was the greatest socialist the world has ever seen and the Indian National Congress is based on the socialism of the Father of the Nation. Congress policy even now is fashioned by the type of socialism which allows full play for a democratic way of life. It would appear that Mr Desai is not even prepared to give any credit whatever to the PSP for the concept of socialism. In his view, the Communist idea of socialism is *the best. He has* no hesitation in saying that the Congress is in full agreement with the communists as regards the goal to be attained. The difference between the Congress and Communists is in the way to be adopted to attain the desired objective, and such difference is vital. For the Congress, the means and the end are equally important. That is the supreme lession taught by Mahatma Gandhi. In other words, socialism should be established only through democratic means. Mr Desai had, however, admitted that, although Gandhiji's basic principle that the end should be reached only through pure means still governs the Congress Party, its actions have not been always above reproach. This is inevitable in a big organisation shouldering heavy and varied responsibilities. But Mr Desai has pointed out that attempts are constantly being made to purify the organisation.

If the man in the street in India thinks that the PSP is a part of the Congress trying to keep its identity for some mysterious reason, he cannot be blamed. For, during the Silver Jubilee Session of the party, the issue of merger with the Congress loomed large. Delegates charged the party that it took its cues from the Congress. Speaking on the resolution on the national situation, Mr N. G. Goray, General Secretary, referred to the fact that, year after year, the charge was heard that the leadership wanted to merge with the Congress. The very fact that the resolution has to make it specifically clear that a merger with the Congress is out of the question would seem to indicate the presence of a sizable volume of opinion within the party with strong leanings toward the parent organisation. It has also become clear during the conference proceedings that there is a sizable section in the party which does not share the view that the Congress is a reactionary organisation.

Mr Jaiprakash Narayan has also advised the party against merger with the Congress. The reasons advanced by him for the need for keeping its identity are rather amusing. Mr Narayan argues that the Congress as a political force in the country will begin to distintegrate after Mr Nehru; and who would lead the socialist elements in that organisation if the PSP is not there? He has, however, not cared to explain why he thinks that the socialists in the Congress, in case the PSP decides to lose its identity in the Congress, will be rendered powerless to take up the leadership of the Congress after Mr Nehru or, for that matter, even now. When Mr Narayan begins to talk about the Congress and Mr Nehru, he seems to get confused. He agrees with the founder of the Swatantra Party that the Congress is predominantly conservative. What is making the congress socialist is the presence of Mr Nehru who is a socialist. Take away Mr Nehru, and the Congress becomes reactionary. In the same breath that he characterises Mr Nehru as a socialist, Mr Narayan calls him a roadblock in the nation's path toward socialism and a democratic dictator.. This logic on the part of Mr Narayan is difficult to comprehend.

It is interesting to find that Mr Nehru appears to the Swatantra Party as one who has bartered away the Congress party to the Communists. Mr C. Rajagopalachari's charge against Mr Nehru is that he has already drunk deeply of the heady wine of Communism. The two revered leaders' descriptions should be of great help to the layman to arrive at his own assessment of his beloved leader. To Mr Narayan, Mr Nehru is a radical, at heart but conservative in deeds. According to Mr Rajagopalachari, he is more radical than the Communists. May be, the common man and woman in the country are satisfied that their interests are safe in the hands of Mr Nehru and the Congress he leads for the simple reason that he is both radical and conservative.

BOMBAY REVIEW

The New Trade Marks Act

The absence of a well regulated and systematic trade mark policy in our country resulted in the flooding of our markets with spurious substandard products using deceptive trade marks. To root out this evil, the Government of India enacted in 1958 a new Trade and Merchandise Act. But, unfortunately for both the public and the upright businessmen, the enforcement of the Act was delayed. Naturally, the fraudulent malpractices thrived, particularly in respect of essential commodities like drugs and pharmaceuticals. Mr Asoke Sen, Union Law Minister, the other day at Bombay assured the Trade Marks Owners Association of India that the new Act would be enforced very shortly and that the Government would not hesitate to effect relevant amendments in the provisions of the new Act if found necessary. There would be no harm at this juncture in expecting considerable improvement in the existing situation when the Act was effectively enforced. It cannot be denied that only the effective administration of the new law would safeguard the interests of the consumers as well as those of the owners of the industrial trade marks.

Referring to the suggestion that India should adhere to the International Convention on industrial property, the Law Minister asserted that there was reasonable grounds for India not joining the convention so far. He added that the principles of the International Convention were sound and unobjectionable but there were various other factors which ought to be studied thoroughly before accepting the international obligations. The Minister also apprehended that the development of the nation in the industrial field would be seriously affected if we were to join the International Convention.

GATEWAY NOTES

Levy of Beggar Tax

THE Indian Conference of Social Work, which in 1957 undertook the research project, "Beggar Problem in Greater Bombay", has recently released its report reviewing the various problems related to beggary. The report deserves special study in view of the fact that it has revealed some interesting facts about the beggars of the city. The largest number are found to be South Indians, the majority are able-bodied and the disabled and invalids form only 10 per cent of the beggar population . Even persons having regular income have accepted beggary as a part-time job as is evidenced from the fact that a Unani doctor and a typist were found begging in the city.

The Committee suggested several methods for raising money for the maintenance of beggar houses to look after the disabled and the rehabilitation of the able-bodied members of the group. The report stressed the importance of launching an early vigorous and systematic campaign to bring home to the public the dangers and wastes of indiscriminate charity. The research group found that the problem has become so grave that only a multilateral and integrated approach can be successful in this regard.

The expenditure involved in a scheme for establishing houses for the disabled, health centres to provide free and expert medical aid to the sick, educating the orphans, finding suitable employment to the healthy and the like, must indeed be great. But greater will be the relief to the public and the beggars in general if such a scheme is efficiently carried out.

One of the means for raising money recommended by the Conference was the levy of a small tax on every one arriving in the city. The tax would be collected either at the time of the travellers starting for Bombay or at the time of their arrival in the city. What procedure would be adopted to realise the amount was not yet decided. The report also suggested the levy of a similar tax on the receipts of hotels, restaurants and on entertainments in the city.

The report is the result of a pilot survey based on a number of case studies of beggars in the receiving centres in the city and on the opinions of experts and a test census survey of the Fort Area.

*

Foreign Exchange Reserves

The Reserve Bank of India, in a recent bulletin, announced an overall rise in India's Foreign Exchange Reserves of Rs 12 crores in the first half of 1959 as against the decline of Rs 28 crores in the second half of the previous year. This improvement was attributed to a variety of reasons such as a narrowing down of the trade gap, an increase in net receipts under invisibles and a substantial rise in the net receipts under the capital transactions and other official loans. Anoher encouraging aspect the report revealed was a small but distinct rise in the income from exports, which during the period under review rose to Rs 297 crores, seven per cent higher than that of the corresponding period in 1958. The report recorded a marked reduction in trade gap from Rs 265 crores to Rs 212 crores. The surplus on invisible accounts reached an all time record of Rs 55 crores.

WORLD OF COTTON

Cotton Supply Situation

THE cotton futures market displayed a firm undertone during the past week with Jarilla March gaining sizable ground over the week's trading. The bullish reaction to the Cotton Advisory Board's recommendation favouring an additional import quota of one lakh bales of cotton stapling between 15/16 inch and 1 1/16 inches seems to have stemmed from a belief that total availability of the raw material to the mill industry may not be sufficient to meet the demand in full as it is doubtful if the new crop will come up to the expectations of the Board. According to the Chairman of the Cotton Advisory Board, however, the supply position should be deemed to be comfortable as a result of the Board's recommendations. He has pointed out that there is no difference between the recommendations of the Indian Cotton Mills' Federation and those of the Cotton Advisory Board as regards import of foreign cotton. The ICMF had asked for an import of a minimum of 10 lakh bales, and that quantity was based on the assumption that the new crop would be 45 lakh bales. The Cotton Advisory Board's suggestions are that one lakh bales of cotton of stapling between 15/16 inch and 1 1/16 inches and 6 lakh bales of cotton of stapling 1 1/16 inches and above should be imported. These imports are exclusive of 140,000 bales, the import of which was announced on September 1. This quantity will be received during the current cotton year. Thus the total quantity of imported cotton that will be available during the current cotton year will amount to 840,000 bales and it is to be noted that according to the revised estimate of the Board the new cotton crop will be 48 lakh bales, that is 3 lakhs more than the estimate of the ICMF.

The cotton futures market opened the week last Tuesday on a rather uncertain note following the announcement that the Cotton Advisory Board had recommended to the Government the import of an additional one lakh bales of medium staple cotton but as the session progressed sentiment brightened on reports of unfavourable weather conditions in most of the growing areas. Favourable reports from the cloth markets also induced a bullish trend. The belief seemed to be gaining ground that in view of the indications of higher consumption of the raw material by mills, supplies would be found inadequate during the current cotton year. Jarilla March opened higher and after having been done up to Rs 721.50 closed steady at Rs 719.25. The market remained closed on Wednesday and the undertone continued to be constructive on Thursday though in later dealings the higher levels could not be maintained. Jarilla March was done up to Rs 722.25 before finally placed at Rs 719. Reports about unfavourable weather conditions in some of the growing areas coupled with overnight support put the price of Jarilla March at the opening on Friday at Rs 722.50. During the day's trading, however, price movements were confined to a narrow range in the absence of fresh buying interest and the quotation was finally placed at Rs 723.25 after having been done up to Rs 723.75. The uptrend gathered further momentum on Saturday following reports about fall in arrivals and further deterioration in weather conditions in growing areas. Jarilla March after opening steady at Rs 727.50 was taken at one time to a high of Rs 731.25 before profit taking brought the quotation back to Rs 729. Steady conditions continued to prevail on Monday though higher levels could not be maintained due to profit taking. Jarilla March closed at Rs 732 after having been done up to Rs 734.50 in earlier dealings.

Conditions in the spot market remained generally steady with mills evincing interest in popular varieties.

The cotton Advisory Board's recommendation for a further export quota of 75,000 bales of Bengal Deshi seems to have stemmed from indications of larger availability of this growth coupled with good prospects for foreign offtake. It would appear that the previous quota for a like quantity has mostly been exhausted by exporters. The crop in the present season is said to have shown an increase of over one lakh bales over that in the previous season.

×

LIVERPOOL COTTON MARKET

The undertone in the Liverpool futures market was steady following mill covering and only scattered hedge selling. In the spot market a broadening of demand was witnessed on improved offtake in the domestic textile market. The trend of sales disclosed that buyers were concentrating attention on American cotton.

+

NEW YORK COTTON MARKET:

In the New York futures market new December and May positions ruled steadier in short covering but sentiment in new crop was rather easier. In its October review, the International Cotton Advisory Committee admitted that the long staple cotton situation was puzzling and said that contrary to expectation the consumption of long staple cotton last season had increased. The ICAC further pointed out that the rise was due to demand from the Communist countries. According to it, the Communist countries remained a key factor in the cotton trade this year also.

×

PIECEGOODS:

Though as yet no definite indication was available as to a marked expansion in consumer interest, the offtake of dealers from mills was reported to have shown a sizable improvement last week. The reason for the dealers' active interest was presumably the expectation that consumer demand would increase in the immediate future. On the export section most importing countries again showed active interest with the UK and Saudi Arabia concluding a good volume of business.

BOMBAY REVIEW

Smart Uptrend in Bullion

GATEWAY MARKETS

FIRM conditions prevailed in both sections of the bullion market in Bombay on sustained buying and vigorous bull support. The main incentive seemed to have derived from the border developments.

In the silver section the proceedings were largely influenced by speculative elements with the bulls dominating the scene most of the time. Against the aggressive support forthcoming from the bulls, bears were left with no other alternative but to rush to cover. Indications that the bull syndicate would not hesitate to take deliveries further unnerved bears.

Silver futures opened the week last Tuesday on a firm note on political news with buyers evincing keen interest at advancing prices. Kartak Silver opened almost unchanged on balance at Rs 210-15 and moved up to close firm at Rs 211-4. Intense speculative support induced by higher upcountry advices accelerated the uptrend the next day and prices moved forward quite briskly. Silver Kartak closed at Rs 212.4. On Thursday jobbers refrained from doing business as a protest against the undue spurt in prices but that factor did not seem to have had any effect on the bullish fervour, for, Kartak Silver closed the day very steady at Rs 212.4. Jobbers kept away from the market again on Friday. The undertone however continued to be firm with Silver Kartak quoted at Rs 212.50. With the Bullion Association's decision to impose a higher margin, the rate declined on Saturday to Rs 211.50 but the hesitation proved only shortlived as on Monday bullish forces again reasserted themselves to take the rate by close of the day to Rs 212.11.

The gold section also displayed a firm trend during the past week partly in sympathy with silver and partly due to bull interest. In earlier dealings, prices recorded some setback due to spot house selling but later on the bullish grip became well pronounced. Last Tuesday Gold Kartak was rather subdued at Rs 124.4.6. Values improved on Wednesday on buying support and Kartak Gold closed higher on balance at Rs 125.1.6. Though the opening on Thursday showed substantial loss in Kartak Gold at Rs 124.15, the rate moved up in later dealings to be done up to Rs 125.6 before closing firm at Rs 125.3. Conditions were almost unchanged on Friday with the quotation at Rs 125.5 largely because of the fact that jobbers continued to abstain from business for the second day. Kartak Gold declined sharply on Saturday to Rs 124.7 following the decision of the Bullion Association to enforce higher margin. But Kartak Gold recovered on Monday largely in sympathy with silver to be finally placed at Rs 125.6.

The Board of Directors of the Bombay Bullion Association decided at an emergency meeting held on Saturday last to impose a margin of Rs 1000 per bar in silver and Rs 10 per tola in gold in Kartak settlement and Rs 500 per bar in silver and Rs 7 per tola in gold in Magsar settlement. The emergent meeting was held in response to a representation made by some members asking for effective steps to curb unhealthy and unwieldy speculation.

*

Oils & Oilseeds

The oilseeds market ruled steady last week with all the sections gaining ground under renewed support. Groundnut prices improved on ideas of larger crusher interest and the possibility that the crop might turn out to be smaller than earlier estimated. The improvement in castorseed stemmed from expectations of business with USA around 14 cents for commercial oil. Hopes of increased exports were again responsible for the uptrend in linseed prices. Cottonseed too developed a steady trend on upcountry interest.

Trading in groundnut was influenced largely by crop reports and indications of improved overseas offtake. In Tuesday's dealings Groundnut Feb. reacted to close at Rs 175.62 on profit-taking. The trend continued to be easier next day also but on Thursday sentiment improved on hectic bull activity brought about by indications of good export business in groundnut oil and apprehensions about the early movement of the crop due to untimely rains in some of the growing areas. Groundnut Feb. moved to higher grounds in the course of the day to be placed at Rs 177. Prices made further handsome gains on Friday on bear covering and shipper interest. Groundnut Feb moved up to Rs 178.25. The quotation was taken up to Rs 179.25 before closing at Rs 178.25. On Monday Groundnut Feb steadied up on shortcovering in earlier dealings but owing to lack of follow through support and profit-taking closed lower at Rs 179.12.

Sentiment in castorseed was helped by brightening export prospects especially from the communist countries. Castorseed May advanced from Rs 159.2 to Rs 163.8 before closing finally on Monday at Rs 163.50 Linseed May was done up to Rs 35.12 from Rs 35.2 to close the week at Rs 35.44 Cottonseed May was wanted up to Rs 130.4 to close at Rs 129.75.

*

Yarn

An irregular trend was noticeable in the yarn market in the absence of sustained interest. It would appear sentiment which seemed to have been much impressed by export prospects for rayon-goods only a few days ago lost interest in that incentive as current trend in cloth offtake was not satisfactory. While art silk yarns were generally irregular with most types showing a declining tendency, nylon yarns which were a firm market toward the close of the previous week, became weak with price levels recording sizable losses.

*

Non-Ferrous Metals

Non-ferrous metal prices developed a hardening tendency during the past week and Zinc was particularly firm. Zinc ready which was quoting at Rs 112 per cwt last Friday moved up smartly to be placed at Rs 115.25 on Thursday this week. It would appear that the sharp increase in the price of this metal mainly stemmed from indications of a shortage of supply due to some anticipated delay in arrangements regarding the issue of supplies from imported stocks to non-scheduled users. The current tightness in supply would appear to have been accentuated by recent sizable offtake from the open market that had been completed on behalf of some consumers. A contributory factor for the uptrend might have been the firmness of the metal in the London market.

Copper scrap ready also steadied up to Rs 224 from Rs 221 earlier in the week Lead was fractionally higher at Rs 77 while Tin showed a gain of one rupee to be quoted at Rs 141.

An announcement by the Joint Chief Controller of Imports and Exports in Bombay on November 6 says: It has been decided to distribute the stocks of non-ferrous metal scraps—copper scrap, brass scrap, German silver/nickel silver scrap and zinc unwrought imported against quota licences to non-scheduled actual users situated within the jurisdiction of the States of Bombay, Punjab, Uttar Pradesh, Rajasthan Jammu and Kashmir, Delhi and Kerala, through the Bombay Metal Exchange on the basis of the recommendation by the Director of Industries of the States concerned.

SOUTH EASTERN RAILWAY

Sale of condemned Launches Ex. Shalimar

Sealed tenders are invited for the sale and removal of five condemned launches lying at Shalimar. Tender No. GM/S-235/S/13 in this connection is obtainable from the Office of the Controller of Stores (Sales Section), South Eastern Railway, Garden Reach, Calcutta-23 on producion of Cash Receipt of Rs. 5/- from the Chief Cashier, South Eastern Railway, Garden Reach, Calcutta-23 by local firms and on remittance of Rs. 5/- by Money Order to the Controller of Stores, South Eastern Railway, Garden Reach, Calcutta-23 by outside firms. The cost of tender (Not transferable) form is not refundable.

The materials may be inspected at Shalimar on application to the Chief Operating Superintendent, South Eastern Railway, Garden Reach, Calcutta-23.

The tenders will be opened in public at 3 P.M. on 4-12-59.

Cooperative Farming Still Under Study

DELHI REVIEW

THE Government of India have just sent out a delegation under the leadership of Mr B. D. Pande, ICS, to study cooperative farming in Israel and Yugoslavia. This is the fourth in the series of delegations the Government have sent to foreign countries over the last 13 years to study agricultural cooperation. The first, under the leadership of Dr T. G. Shirname, reported in 1946 on cooperative farming in Palestine; the second, under the leadership of Mr M. V. Krishnappa, Union Deputy Minister of Agriculture, reported in 1957 on agricultural planning techniques in the context of cooperative farming in China; and the third under the leadership of Mr R. K. Patil reported later in 1957 on Chinese cooperative farms just at the stage when they were being transformed into collectives, and on service cooperatives in Japan. The latest delegation to Israel (then Palestine) and Yugoslavia, it is hoped, may be the last in the series.

The fact that the Government (in the sense of permanent administration) have been seized with the idea of cooperative farming and been learning from the experience of foreign countries and experimenting with it in some places in India, is not without some significance, for, it proves in a way that the Nagpur Congress resolution on cooperative farming is only so much old (official) wine in new (political) bottles. That the Government approach to cooperative farming in the last years of British rule was one of broad approval of that method of farming in certain circumstances is a historical fact which is unfortunately forgotten in the heat of current controversy over the Nagpur resolution. It may be recalled in this connection that, as early as in 1945, the Cooperative Planning Committee of the Government of India reported favourably on cooperative better farming as well as on cooperative joint farming, specifically saying in regard to the latter that "the benefits will flow from the greater economic use of land and from the employment of more efficient technique". The purpose in recalling this fact is to show that Mr Nehru has merely been trying to get political and popular acceptance for what has always been an element of administrative policy. To say that the Prime Minister has some mysterious ideological preference for cooperative farming would, therefore, be wide of the mark.

It is all a practical question of how best the innumerable small (sub-marginal) farms in this country can be organised for greater and more economic production. Here, in the context of the latest Indian study, under way, of cooperative farming in Israel, the recommendations of the 1946 delegation made in the light of the successful working of cooperative farms (other than collectives) in that country are recalled in the following passages:

"India is a country of very small farms and each farm hardly consists of one compact block of land. The small farmer has his small holding constituted of a number of fragments situated at a distance from one another. Cooperative farming would, therefore, mean bringing together an adequate number of such small farmers, as owners of land and workers, to form themselves into a cooperative society with the object of (i) physically pooling together their small parcels of land, (ii) the members themselves working the land so pooled as the enterprise of the cooperative society and (iii) every member sharing in the society's output in accordance with his contribution (a) of labour and capital and (b) of area and quality of land, to the society. The essence of real cooperative farming, therefore, is the pooling of small and scattered individual holdings and cultivating the land so pooled as one unit by the owners of the holdings. This pooling of economic resources can be done either completely or partially in respect of any one or more of the various lines of farming activity.

"Cooperative or joint effort in regard to a particular line of farm activity is known to Indian agriculture since long before the cooperative movement, as now understood, was started in any part of the world and even now examples of informal cooperation of this type can be seen almost all over India. The joining together of neighbouring farmers for finishing up harvesting and sowing operations during the short time at the disposal is quite common in many villages, though the system is fast dying out due to growth of individualistic attitude amongst Indian farmers, which in itself is very largely due to disputes resulting from extreme sub-division and fragmentation of land holdings. Instances can also be quoted where farmers pool together their resources of land, labour and equipment for growing an expensive crop like sugarcane, but without forming themselves into a cooperative society. Sometimes in such cases the land may be taken on lease and farmers join together to work the land on the basis of one share per one man labour unit or one bullock labour unit (e.g. growing of sugarcane in the Warna river valley of Kolhapur State in Bombay Province).

"Recently, a few attempt have been made to organise cooperative societies for production in farming, though most of them cannot be called cooperative farming societies in the real sense of the term.... These efforts, however, have not had, nor is there any reasonable possibility of their having, any wider applicability of cooperation in farming....It is, therefore, suggested that experiments on cooperative farming should be taken up on a wider and intensive scale where the members can form a commune of their own not only for joint agricultural production but also for marketing and undertaking other social and economic activities for the commune as a whole. The current of thought on the problem is already moving in this direction. The Bombay Plan of Economic Development emphasises the importance of cooperative farming by recommending even some measure of compulsion for joint farming by pooling land without at the same time causing any dislocation in the individual ownership of land."

The delegation which reached those conclusions in 1946 also summed up the important benefits which had accrued by then to Jewish agriculture from cooperative farming of different types, as under:

(i) Optimum exploitation of the land resources.

(ii) Larger output per unit of land, livestock and poultry.

(iii) The system has resulted in adopting, to a considerable extent, rationalisation in the methods of production, sale and purchase and in the opening of lucrative sidelines or industries.

(iv) The system is better fitted to cope with common problems like plant pests and diseases, health and sanitation, etc.

(v) The drudgery so prominently noticeable on private farms worked without cooperation is reduced to the minimum.

(vi) It is a great institution for training in agriculture.

(vii) Any large-scale expansion of agricultural production with relatively unskilled or indifferent labour would be greatly facilitated by adoping methods of cooperative farming as practised in Palestine.

(viii) Smallholders' cooperative farms (in which the major part of the farming activity is done by the individual farmer and his family on individually allotted land) are in a better position to withstand adversity as compared with individual farms.

Thirteen years have elapsed since those findings were given about Jewish cooperative farming. It would be interesting to watch what the present delegation is going to say on the same subject. That it is likely, in the opinion of this correspondent, to be again favourable may be inferred from a report jointly prepared this year by the Ministry of Agriculture of the Government of Israel and the Bank of Israel. The following brief description of the cooperative set-up covering smallholders in that country is a pointer in this connection:

"Cooperative smallholders' village, settled on national land. Individual farms in the one village are of equal size and get the same initial capital. Sizes of farms may, however, vary from one settlement to another according to agricultural resources and type of farming. Every farmer works his own land to the best of his ability. In principle no hired labour is employed. Each settler is responsible for the property of his own farm, but at the same time his economic and social security is ensured by the cooperative structure, which touches nearly every aspect of his life. The village cooperative is involved in all economic and social affairs, for it handles the marketing of the farm produce and the purchases of farm and household equipment, and acts as a credit agency. Among the many other services it provides are water supply and insurance. It enters into municipal functions, and sometimes even into certain fields of production such as tractors and machine stations, cooperative incubators, gain crop production and orchards. Mutual aid services, also rendered by the village cooperative, prevent special hardships due to illness or other causes wholly or partly beyond the farmer's control. About 40% of the agricultural population live in cooperative smallholders' settlements. Most of the new settlers in the last decade have turned to this form as it combines in an easy and useful way the individual and cooperative elements of life."

DELHI REVIEW

Slum Clearance

The progress of the slum clearance scheme seems to bear out the woeful underestimation by the authorities of the importance of slum clearance and slum improvement schemes. Both in regard to financial expenditure and physical achievement, performance has fallen short of targets. The Second Plan laid down a target of 52,000 tenements against which only about 10,200 tenements have been made available during the last four years. The principal reason for such slow progress was failure to utilise the funds allotted under the Second Plan. This is reflected in the fact that during the last four years, only Rs 9.64 crores had been spent on schemes connected with slum clearance and slum improvement out of a total provision of Rs 15 crores. It might in this connection be interesting to note that the original allocation for slum clearance work was Rs 20 crores. At the rate of expenditure in the last four years, a shortfall in expenditure even out of the reduced allocations of Rs 15 crores looks inevitable.

The Planning Commission's working group on social welfare has, while expressing dissatisfaction with the current pace in the implementation of slum clearance scheme, pointed out that at this rate, it would take 110 years to clear slums in the country. It is the view of the working group that this progress could be telescoped into half the period provided the pace of implementation could be stepped up and also if Rs 60 crores could be spent on the programme from the Third Plan onwards. The working group has, therefore, recommended a total allocation of Rs 4.5 crores in the Third Plan—Rs 32 crores by the Centre and Rs 12 crores by the States—for slum clearance, slum improvement and slum prevention projects. The basis of expenditure on slum eradication and improvement programmes as proposed in the Third Plan is: slum improvement—Rs 14.66 crores by the Centre and Rs 5.34 crores by the States; slum clearance—Rs 14.66 crores and Rs 5.34 crores; and slum prevention Rs 8.68 crores and Rs 1.32 crores.

The working group has made some recommendations for expediting progress in slum clearance work in the Third Plan. It has, for instance, been suggested that Central loans and subsidies for slum improvement and prevention schemes should be granted to corporations and municipalities on the same basis as for slum clearance projects at least during the Third Plan. Further it has also been suggested that all those areas which cannot be included in the eradication programme should be covered by improvement schemes.

*

Steel for Engineering Industries

The fact that the engineering industry provides the major outlet for steel consumption makes progress in these two sectors of industry mutually interdependent. Coordinated development is a factor of importance for mutual progress. Planning for steel has mainly to take into account the requirements of the engineering industries which account for nearly 50 per cent of the total steel consumption in the country. The absence of such coordination in the steel plan of the country alleged by Mr R. K. Rajgharia, President of the Engineering Association of India in the course of a press interview last week, is a drawback which will hinder the proper development of the engineering industries.

It is another drawback in the steel plan of the Government that while on the one hand a high target of nearly 10 million steel ingots has been envisaged by the end of the Third Plan, no consideration has been given to the question of disposing of this production. It is the view of Mr Rajgharia that at the present prices for steel which are very high, the country would not be able consume the quantity of steel that is targeted for production at the end of the Third Plan. It is the excise duty and surcharge that constitute the inflationary element in the Indian steel prices which according to Mr Rajgharia are higher than those of United Kingdom and continental manufacturers. He has urged the need for suitable revision of steel prices to promote both internal consumption as well as exports. He considers the reduction granted in steel prices for exports as insufficient. Considering that Indian engineering goods have been meeting with increasing demand in neighbouring markets, it is necessary that the industry's claim for reasonable prices for steel should be considered so that the industry could be helped to maintain and even improve its exports.

Mr Rajgharia has also urged the need for correctly estimating the requirements of steel for the engineering industries. For 1958-59, the demand for steel for the engineering industry has been placed by Mr Rajgharia at about 12.7 lakh tons. Considering that steel production is proposed to be stepped up to nearly 10 million tons by the end of the Third Plan period, the scope for expansion of the engineering industry has also to be explored with a view to facilitating absorption of the increased steel production.

*

Sugarcane Cultivation

The progress of the sugar industry under both the First and Second Plans seems to have been confined mainly to the factory side. Apart from increase in sugar production, no tangible improvement has been registered in the yield of sugarcane. This could only be attributed to failure to implement development schemes for raising sugarcane output; for, the scope for increasing the sugarcane yields is being continually demonstrated by the results of the prize competitions held in various parts of the country. In some of these competitions, yields as high as 66 tons in the northern region and 115 tons in the southern region have been obtained.

What is therefore needed is intensification of the work under the sugarcane development scheme so that the standard of cultivation could be raised substantially higher. This was emphasised by Dr Punjabrao S. Deshmukh, Union Minister for Agriculture, while inaugurating the 28th meeting of the Indian Central Sugarcane Committee at New Delhi. With the fall in sugar production and the resultant scarcity of sugar, which are the manifestations of the lack of progress in sugarcane cultivation, the need for utmost attention being paid to implementing development schemes has become all the greater. Dr Deshmukh has pointed out that such simple measures as deeper ploughing and sub-soiling and top-dressing of sugarcane would raise sugarcane yield substantially in the course of one season.

Dr Deshmukh has expressed himself against increasing the area under sugarcane. This is against the national interest since it would encroach upon the area under food crop. It would confer greater benefit on the country, if, by improving the per acre yield, the areas at present wastefully locked up in sugarcane cultivation could be released for foodgrain production.

Mr Ameer Raza, President of the Committee, in the course of his speech, stressed the need for improving the recovery percentage of sugar. In this respect also, the scope for improvement appears great, particularly in the norther region. While sugar technology also enters as a factor in higher recovery, the more important determinant of higher recovery is improved quality of sugarcane. This could be done only by proper manuring and irrigation. Proper protection against the attack of insect pests is another important consideration in raising the quality of sugarcane grown.

NORTH INDIAN MARKETS

Wool Prices Steady

Wool prices in the Indian market remained steady over the last fortnight, but demand from the home trade has slackened, and particularly for Deep Yellows for which the season is in full swing. Tinged White and Pale Yellow are still well sought after, however.

The foreign market is weaker. The heavy covering for the October/November shipment for Russia seems to be completed.

Daily arrivals in the Delhi market total 150 maunds, and the present off-take is about 100 maunds.

The following were the quotations in the Delhi market on 6th November:

1st White Rs 2.81 nP to Rs 3.06 nP per lb.

Tinged White Rs 2.63 nP to Rs 2.81 nP per lb.

Pale Yellow Rs 2.31 nP per lb.

Yellow (Delhi, Beawar & Panjab) Rs 2.00 nP to Rs 2.19 nP per lb.

Greys Rs 90.00 nP to Rs 98.00 nP per maund.

WOOL MARKET ABROAD

At least 250,000 bales of Commonwealth wool have passed under the auctioner's hammer this week in the principal selling centres, states the I.W.S. Special News Service. The total is one of the largest weekly aggregates yet offered this season. Importers in Britain and Continental Europe are agreed that wool has withstood this substantial test in a manner calculated to promote confidence in prices.

As often happens, the larger offering has attracted wider general competition and the Australian market has closed firm with a tendency against the buyer, some firms having to increase their buying limits to maintain market contact.

The London sales furnished an almost unexpectedly strong opening, providing a general endorsement of primary market values and a spot premium on some urgently needed types. This was especially noticeable in finer merinos.

New Zealand provided a firmer market for both fine and medium crossbreds, quotations for which ranged from 1d to 2d per lb (clean) dearer than at the previous New Zealand sale. South African merinos ruled steady at late rates.

AVERAGE QUOTATIONS FOR TOPS AND YARNS.

From Bradford UK:

Based on average UK home-trade rates, with nothing added for freight, insurance, packing etc., for export. In pence per lb.

Exports of home grown wool from India rose appreciably in the first quarter of 1959 when they amounted to 9.4 million lb, actual weight; this was 29 per cent higher than in the previous quarter and 16 per cent up on a year earlier. Compared with October-December shipment to the United Kingdom rose by 39 per cent to 4.2 million lb. By contrast exports to the Soviet Union fell from 1.5 million lb to nil between the two quarters.

*

Foodgrains

In the Hapur foodgrains market a quietly steady trend prevailed. Wheat prices remained unchanged over the week due to lack of interest Average quality and Farm produce wheat were quoted at Rs 17.25 and Rs 18.50 per maund respectively. Rice prices also displayed a sagging tendency on improved arrivals. Lack of interest characterised trading in gram due presumably to heavy stock. Local stocks were estimated at around half lakh maunds. While barley and bejhar were also quiet due to paucity of buying, maize was well maintained around quoted rates on improved demand.

An easier tendency was noticeable in sugar prices. It would appear that the reactionary trend was brought about by improved supply position. A similar pattern was evident in Khandsari also. The rather sharp decline in prices stemmed from the anxiety of stockholders to dispose of their stocks.

MADRAS REVIEW

Peninsular Plan

THE PENINSULA

WITH the publication of the Third Plans for Andhra Pradesh and Kerala, the Third Plan for the Peninsular region seems to be complete. The Madras and Mysore Governments have already prepared their plans which are presently in the nature of tentative estimates. Not until the Third Plan for the whole country is prepared and approved could these States plans be considered final.

The Third Plan for Andhra Pradesh envisages an outlay of Rs 485.86 crores which, incidentally is the largest outlay to be provided by a State in the Southern region. This compares with Rs 175.74 crores that was provided in the Second Plan and Rs 96.49 crores in the First Plan. Considering that Rs 160 crores of this outlay represents spillover expenditure required to finance schemes of the Second Plan, and further that another Rs 40 crores is accounted to be the share of centrally sponsored schemes, the State's outlay on new plan schemes as such would amount only to Rs 285.86 crores.

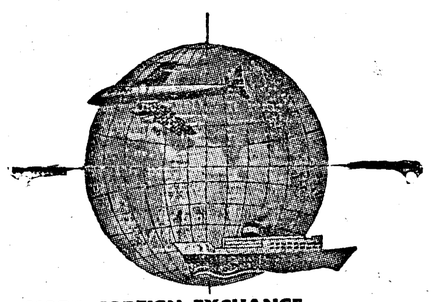
The distribution of this outlay between different heads of expenditure follows the pattern set elsewhere in the neighbouring States. Irrigation receives the largest allocation with Rs 120.32 crores. If to this is added Rs 90.16 crores that has been allotted for agricultural programmes, agriculture could be considered to account for nearly half of the total Third Plan outlay.

The agricultural programmes would mainly be oriented to stepping up foodgrain production, for which the target has been set at 97.81 lakh tons as against 70.64 lakh tons at the end of the Second Plan. The agricultural programmes also envisage the stepping up of sugarcane production to 63 lakh tons, of cotton to 35 thousand bales and oilseeds to 4.5 lakh tons by the end of the Third Plan. The chief means proposed for this is increase in irrigation. The Nagarjunasagar multi-purpose project is the major scheme awaiting implementation in the course of the Third Plan. Apart from this, 57 new medium irrigation project costing about Rs 18 crores are also proposed to be taken up. These projects are expected to irrigate nearly 9 lakh acres of which the Nagarjunasagar will alone account for 4.50 lakh acres. The spill-over schemes of the Second Plan will also take up a large share of the irrigation outlay proposed for the Third Plan.

After irrigation, social services account for the next largest share, namely, Rs 95.85 crores, which is thrice the outlay under the Second Plan. The reason for such a large allotment for social services is explained to be the commitment under universal and compulsory primary education which is set for implementation in the course of the Third Plan. This alone takes away Rs 24 crores out of Rs 35 crores allotted for education. Other heads of allocation under social services are medical facilities Rs 12.5 crores, public health Rs 5 crores, housing Rs 13 crores, welfare of backward and scheduled classes Rs 9 crores, etc.

Supply of cheap electricity for industrial development is one of the important aims of the Third Plan for the State. The Plan allocates Rs 90 crores for power. Industries as such receive Rs 57.20 crores of which large and medium industries claim Rs 35 crores. The important schemes in the industrial sector include the establishment of a fertilizer factory, a wire rope factory, a low temperature carbonisation plant, an agricultural implements factory, etc. In the co-operative sector for industrial development, six co-operative sugar factories, a cigarette factory, a fruit canning factory, cold storage plant and a medium size fertilizer factory, etc., are proposed to be taken up. For development of small-scale industries, Rs 7.5 crores are proposed to be set apart, in addition to Rs 2.5 crores for the establishment of industrial estates.

The Kerala Plan provides for an outly of Rs 180 crores, which is more than double the size of the Second Plan outlay of Rs 87 crores. The State's contribution toward this outlay has been provisionally fixed at Rs 70 crores which is proposed to be raised in the following ways: Rs 11.36 crores under revenue and capital account, Rs 30 crores by loan! Rs 10 crores by loans under the scheme of sharing small savings collections, Rs 4.65 crores by resources available for financing the Electricity Board's capital schemes, Rs 5 crores by additional taxation, and Rs 10 crores by loans to be floated by the State Electricity Board in 1961-66.



The increase in the total outlay over the Second Plan outlay, it is explained, is more than proportionate to the increase in the State's contribution which works out only to 50 per cent. The size of the Plan, on the basis of this relation, would work out to no more than Rs 140 crores. But a higher outlay at Rs 180 crores has been preferred in view of the backwardness of the State, the need for stepping up foodgrain production, and for providing employment opportunities to its vast educated population.

Power and Irrigation together account for nearly half of the total proposed outlay, the respective figures being Rs 45 crores and Rs 38 crores. Agricultural production, which includes soil conservation, gets Rs 10.60 crores, while industries, large and small, have been allotted Rs 14 crores. Other important heads of expenditure are education Rs 12 crores, medical and public health Rs 9 crores, and Community projects Rs 6 crores.

The Third Plan for Peninsular area would thus work out to a total of Rs 1,194 crores while the total Second Plan outlay for the region as a whole was of the order of Rs 488 crores, which is the size of the Third Plan proposed for Andhra Pradesh. In both Mysore and Kerala, a doubling of the total Second Plan outlay has been proposed, while in the case of Andhra Pradesh and Madras the outlays work out to nearly thrice as much as the Second Plan figures. In the case of Andhra Pradesh, the spillover of expenditure on Second Plan schemes accounts for more than Rs 150 crores, while Madras has drawn up its plan on the basis of its performance under the Second Plan. In both Mysore and Kerala, implementation of Second Plan schemes had lagged behind targets, attributable in the case of Mysore to the interference of the States Reorganisation scheme, which considerably enlarged its territories, while in Kerala the unsettled political situation was a factor which hindered scheduled implementation of Plan schemes.

The distribution of expenditure between different heads in all these plans reveals a similarity in respect of priority allotment. Almost everywhere, irrigation and power account for the largest allocations. This, but expresses the aspirations for accelerated progress in both industrial and agricultural sectors. Excepting in Kerala, in all the other three States, the Third Plans envisage development of the heavy sector of industry. In Madras, the setting up of small steel plants on the basis of lignite from Neiveli and the iron ore of Salem district is envisaged. The Mysore Plan mentions the possibility of establishing an aluminium factory, while in Andhra Pradesh, the prize project of a fertilizer factory is being assiduously pursued. It may not be too much to hope that, by the end of the Third Plan, the Peninsular region may have the nucleus of the heavy sector that might transform the industrial outlook for the entire region.

All the State Plans, without exception, give priority to increase in foodgrain production. Andhra Pradesh is already self-sufficient, and is exporting rice to neighbouring States. Ir Madras foodgrain production has fluctuated between a small surplus and a small deficit depending on the seasonal conditions. The point of stable self-sufficiency is far from benig reached, and is set for attainment in the course of the Third Plan. Kerala has been perennially deficit in her foodgrain production and has been depending on supplies from Madras and Andhra Pradesh. Large-scale diversion of rice from Madras and Andhra Pradesh to Kerala has been the most unstable element in the successful working of the South food zone and has led to the demand on the part of the Madras and Andhra Pradesh Governments for the dismantling of the zonal arrangement for the movement of rice. More than any other State, it is Kerala that has the greatest stake in increasing her foodgrain production.

MORE FOREIGN EXCHANGE FOR THE NATIONAL PLAN

Extensive international trade is essential for the development of national economy. A country's foreign trade largely depends on efficient banking service.
With a network of correspondents at all important trade centres of the world the United Bank is equipped to render adequate service and give expert guidance in matters of foreign trade.

HEAD OFFICE: 4, CLIVE GHAT STREET, CALCUTTA

SOUTH INDIAN NOTES

Housing

MADRAS REVIEW

AT the three-day conference of the Housing Ministers recently held at Hyderabad, the seriousness of the housing problem was conceded; but no answer is available for the reason why, in the first two Plans, this fact did not reveal itself to the Ministers. If the sums allotted to the States for this specific purpose have not been utilised, what were the contributory factors for such inability to make use of the funds, which were allowed to lapse?

A new scheme was announced by Mr K. C. Reddi, Union Minister for Housing. Large funds would be made available to the States for acquisition, in bulk and in avance, land which would be required in the foreseeable future for the housing needs of a whole city, town or community. Thus, Mr Reddi hopes to secure land at reasonable prices. In such acquired land, house sites will be allotted to all sections of the people with provision of other amenities like parks, playgrounds, educational centres and so on. But, actually, such efforts have been going on in Madras, as also in Mysore, through the respective City Improvement Trusts. These Trusts do acquire land for house-building. But the question of cost seems to go beyond their control, and while those with some money ready to invest reap the benefit, the proper sections are no better off. Even those who build house with resources drawn from such allocations ultimately enter into the racketeering competition of renting the houses. While it has become a proven fact that the long backlog of housing shortage would take a very long time to be cleared at the present rate of rapid urbinisation, the question of rack renting in Cities like Calcutta, Bombay and Madras should not have escaped the attention of the Hyderabad Conference.

The suggestion of land acquisition well in advance is no doubt sound. It is not only necessary but imperative to arrest the cost of house sites. In the past four years, site value in the city of Madras has gone by about 250 per cent. At such prohibitive cost, the task of getting a house site, of the lowest size permissible, becomes such a formidable Job to the small salaried group of employees in the City that they are scared away. If statistics of house built through such housing schemes are to be taken, it would be seen that more than fifty per cent of them would have been rented at unconcionably high rentals.

Now, not only is the cost of land a factor to be reckoned with, but also the cost of the housing materials. It is also necessary, as the Union Housing Minister stressed at Hyderabad, that the State Governments should address themselves to the problem of speedy acquisition by reasonable compensation payment to the land-owners. If, instead of concentrating on old cities, steps could be taken to build up satellite owns, it would help to disperse the population, who may be promised more facilities and better hygienic living than in the Cities, whose drainage, water and public-health problems have already become too unwieldy for the Civic authorities to attack. This solution seems cheaper in the long run. Dispersed towns with good transport facilities to the place of work should be the motto. This was insisted upon during the war as a strategic measure of dispersing the population; now also, it seems to be an ideal solution for minimising the pressure on civic authorities to find, for the growing cities, water, hospital facilities, educational centres and other amenities.

So far as Madras is concerned, the necessity to diversify the industrial activities of this State has been acknowledged. With electrification of the railway line upto Villipuram, the problem for office-goers would be solved even if they live more than 30 miles away from the city. On the western side, investigation is being made on the possibilities of electrifying the rail road upto Jalarpet, 135 miles from Madras. This electrification should become feasible, because fatories to be located in this section would be assured of good rail points and communication lines as also in the South along the Madras-Villipuram line. Thus, the possibilities of having townships on these lines should not be left unexplored. But the one factor that should be noted is that such lands released for either house-building or location of industries, should be leased only to the genuine interests and not to speculators who might just sit tight and put up prices through speculative transactions.

Mr Reddi announced at the Conference that the Life Insurance Corporation had agreed to increase its quantum of loan from Rs 3 crores to Rs 5.5 crores to middle income group housing, and for rental housing scheme to low-paid employees from Rs 1 crore to Rs 1.75 crores. Mr Reddi hoped that the LIC could be persuaded, in the future, to allot more funds if needed.

The details of the new scheme announced by Mr Reddi for getting rid of the housing shortage were: State Governments would be enabled to acquire in bulk and in advance land which they thought would be required in the foreseeable for housing needs for a whole ciy, town or community. This would eliminate speculation, Mr Reddi said. It would also enable the State to plan such housing schemes in a way satisfying all categories of people. State Governments should invoke whatsoever authority or powers that exist with them today for effective implementation of the existing housing and slum clearance schemes. The States would incur an expenditure of Rs 2.9 crores for acquisition and development of land besides committing themselves to another expenditure of Rs 15 crores. Mr Reddi promised the States a much larger allocation for land acquisition and development schemes.

*

Problems of Export-Import Trade

Problems relating to the export-import trade were discussed by the City's various Chambers of Commerce with Mr K. T. Satarawala, Chief Controller of Imports and Exports, Government of India, last week-end.

Mr Satarawala told the Southern India Chamber of Commerce that the availability of foreign exchange this year was the same as last year. Availability of non-ferrous metals was of considerable importance to small-scale industries. He also pointed out that prototypes were allowed to be imported liberally. The question of granting back-period quotas was being considered.

Mr Satarawala said that the import of camphor at present was being done by the State Trading Corporation, which would channelise distribution through the States.

As regards the increased freight rate on groundnut oil, Mr Satarawala agreed that the matter presented some difficulties and should be referred to the recently constituted Freights Committee. Licenses for import of wrapping paper had been considered on the basis that certain industries had been deemed essential for supply of wrapping paper.

Reference was made by one of the Chambers to the necessity to import "Bible printing paper" for printing of commercial directories. Mr Satarawala stated that this would be considered after a discussion with the Commerce Ministry's departmental heads.

Mr Satarawala's problem, however, was about the genuine fear of handloom dealers in Madras about losing the traditional markets for the export of what is called Madras Handkerchiefs (lungis) to Africa, Malaya, Ceylon, Burma and Middle East countries. Undoubtedly, there is now a boom for handloom export from Madras. A weaver engaged on the weaving pattern for special export to the United States, who had indented on a very huge quantity of handloom from Madras, today gets unexpectedly both wages. Computed on a monthly basis, many of these would even get into the category of income-tax payers. Naturally, there has to be a diversion of jobs to the making of the special varieties for the United States. The makers for the traditional markets had dwindled because of the wages disparity. Not only have weavers more or less "migrated" to the US export section, there is also no cloth made for the traditional markets. Will Madras lose them? It has to in the long run, because, if continued Japanese and Chinese competion captured the market in the absence of Indian supplies, then the chances of reviving interest in them would be very poor indeed.

The American demand has been there for quite a few years. American trade delegations also did not disguise the fact that, so long as the Indian handloom manufacturers did not choose to manufacture shoddy stuff, but altered their patterns of length and breadth to suit their trade consistently with good quality, then there are reasonable chances of the American demand continuing for a while. But so far as the traditional markets of export are concerned, loss of these markets would be a loss of a long-standing cultural link, as it were, between India and these countries.

MADRAS REVIEW

Large Arrivals Depress Oilseeds Prices

SOUTH INDIAN MARKETS

Madras, Wednesday.

GROUNDNUTOIL and groundnut kernel prices are on the downward trend today with oil arrivals averaging 70-80 tons per day in the City's oil exchange. Equally fair are arrivals of newly harvested kernel crop from southern and northern producing centres. This price is showing a tendency toward a further drop judging from the weakening of the rates since the beginning of Tuesday session of the oil exchange.

Today's closing rates of groundnutoil per candy of 500 pounds were: Ready Rs 352; November Rs 348; December/January Rs 336 to Rs 336-8. *Kernels per candy* of 531 lbs: New Crop Rs 175. (There is no old crop in the superior variety and no quotations were offered for this commodity). Groundnut cake was steady at Rs 25 per bag.

Castoroil per candy of 531 lbs Rs 325 (local). Gingelly seed local per bag of two cwts Rs 65/66; *Gingelly oil per two cwts* Rs 21-4-0.

Burma showed no interest for shipment of Indian groundnut oil. But United Kingdom shipment for December showed keenness at £103 per ton. Weakening trend in the market was an alround phenomenon due to further possibility of larger bulk arrivals of both seeds and oil.

Foreign market prices as offered from Madras were also lower and today's quotations are:

Groundnuts, Nigerian January-February, £66 per ton; Castorseed November-December, £57/57½ per ton; Nigerseed January (nominal), £51/52 per ton; Groundnut oil UK and Continent, £103 per ton; Castoroil BSS, November-December in bulk £115/116 per ton; Castoroil BSS Commercial £110/111 per ton; Coconut oil Straits November-December £139 per ton: Coconut oil Ceylon £144½/145 per ton; Groundnut oil cake (Expeller) December £36|5|0 to £36|7|6 per ton; Groundnut oil cake (Expeller) January £35/15 per ton; Groundnut oil cake (Solvent) December Nominal £35/10 per ton; Groundnut oil cake (Solvent) January £35/10 per ton.

Since last week-end, due to larger arrivals of new crop, considerable decline has been recorded in the price levels of groundnuts. But oil prices maintained steady. New crop, however, had not lent itself for immediate conversion by crushing due both to the weather and needed driage of the seeds. And also oil content of the crop is reportedly lower. Naturally millers found the cost to be higher than the prevailing market rate. That is one main reason for the oil price not to have come down in consonance with that of the seeds. Towards last week-end the price of oil per candy stood at Rs 360. No large scale offering was seen. As usual in the past two weeks both shippers and Calcutta buyers did not evince very much interest in Madras stocks which they used to negotiate from Khandesh and Andhra centres where lower rates prevail. Even local requirements did not very much materialise and all this maintained oil prices at the level as it stood last Saturday. With practically no loss in the oil front, groundnuts lost by Rs 20/25 per ton today over last week's price levels.

Arrivals averaged in groundnut at about 90/95 tons daily. Only part of this is being absorbed by local crushers at Rs 175 per candy. This peanut variety has comparatively lower oil content than either the Coromandel or the Pollachi red variety.

In groundnut oil only small quantities were absorbed by bazar interests. Cuddappah district producing centres became a scene of groundnut oil negotiating activities for both local and Calcutta shipping interests. Spot goods were absorbed early at Rs 354 and with little diminution in offerings. later in the week, the price went up by another rupee per candy. Spot was today offered at Rs 352. This quotation is one rupee higher than Tuesday's closing.

In forward contracts both November-December maintained steadiness. There were early deals at Rs 342, Rs 342/8 and even Rs 343 per candy. It went down due to profit taking, again short coverings put up price to Rs 348. It remained nominally at Rs 351 yesterday going down again to Rs 348 today towards closing.

In December vaida the speculation was around Rs 332/333 per candy. Later on last week-end in line with Bombay sentiment the rate improved to Rs 336/337. Tuesday's closing was Rs 337. Today it closed at Rs 336 to Rs 336/8.

The January vaida was marked by good inquiries at Rs 334 per candy. It improved towards Saturday's closing to Rs 336/8 But Tuesday's offerings did not warrant any more higher rates and it stood then at Rs 336/8. It also closed at the same rate today.

The groundnut oil cake continued steady. Local product was quoted at Rs 25 per bag of 160 lbs ex-mill with gunny. Cake from northern centres were on offer around Rs 23/12 to Rs 24 per bag F.O.R. Royapuram Railway Station.

In the upcountry markets, South Arcot, North Arcot and Salem areas are not yet having a good daily arrivals. Rains had retarded digging operations there. Arrivals during the same season last year were for better.

In Arni, Arcot and Tirupattur, new crop arrivals are expected to be very good. This would materialise next week or ten days. Salem too reported only discouraging receipts. At Pollachi also the same story is reported, but stockholders were ready to release stocks in small quantities. Oil price remained high in these centres. It was around Rs 350/- per candy. Local Vanaspathi interests have taken small deliveries mid-November delivery.

Cresent rains areo good for the standing coromandel crop. This harvest will arrive after mid-December in certain Southern as well as Andhra centres.

*

Other Oils and Seeds:

Gingelly seed arrivals were poor due to rains. Mysore area offered some small quantities. Following are the current price.

*

Gingelly Seed:

Chanda-Warora white varieties, Unquoted; Mysore produce, Rs 66/67 per bag; Punasa from Vizagapatam produce, Rs 65/66 per bag; Other local produce, Rs 65/66 per bag.

\+

Gingelly Oil:

On wholesale basis Rs 21/4 per maund and Rs 21/8 on retail basis.

*

Coconut Oil:

At Cochin Ready was quoted at Rs 647 per candy. December was quoted at Rs 642. Madras rate was Rs 44/- per tin with container, ex-godown.

The following rates prevailed in groundnut oil and groundnut seed in other Southern producing centres today:

	Oil per candy of 500 lbs.	Kernels per 551 lbs candy.
	Rs.	Rs.
Guntur/Bezwada	340	180
Vriddhachalam	350	178
Nandyal	332/8	170
Villipuram	350	180
Cuddappah/Yerrangantla	340	175
Pollachi (Red) Superior	345	192
Tanjore	348	175
Tiruvannamalai	348	180
Salem	343	180

*

Hides and Skins:

Though arrivals of tanned cow hides in the market were fair, poor clearance resulted in the lowering of prices by 12 nP per lb. From last week this downward trend continues. On a basis of reduced price inquiries were faced from United Kingdom for inferior fifths. Even at a still lower price some transactions on the export side were dealt with. Semi prime fifths of 5/5½ lb were offered at 60d to 62d and ordinary fifths 5/5½ lb were sold at 58d to 59d per lb.

In Run, fourths and fifths some transaction took place, though at a reduced price. The larger number of enquiries from United Kingdom may help in price steadiness, but it is not hoped it would ever materialise. Ordinary market quality inferior Fifths were offered at 43d for 5/5½ lb average.

Tanned buffalo hides were fair in supply but again clearance was negligible. Prices in tanned cow calf and tanned buffalo calf remained unchanged. There has been a reduction in price in the premium marks of buffalo calf.

In the tanned skins section, market quality goat skins sold numbered over 7,000 and tanned sheepskins lifted was about 5,000. There were, however, about 32,000 tanned leftover sheepskins in the market. The price of goatskins was 18 nP lower today. In tanned sheepskins also prices ranged lower between 20 to 25 nP per lb. Prime sheepskin was quoted 3d lower per lb.

The following are the local prices of raw skins. Last week's prices are given in bracket: Bangalore Raw goatskin Rs 550/575 (Rs 625/700); Whitewool sheep Rs 545/580 (Rs 530/600); Blackwool sheep Rs 460/480 (Rs 440/500); Bezwada raw goatskin; Rs 550/560 (Rs 665); He sheep Rs 555 (Rs 590); She sheep Rs 425 (Rs 430).

October shipments from Madras have been higher than September export. The following are the details: United Kingdom imported during October: 3868 bales tanned cowhides; 242 bales of cow calfskins; 70 bales buffalo hides; 222 bales of buffalo calf skins; 799 bales of goat skins; and 739 bales of sheep skins. Shipments to the Continent were: 15 bales of cowhides; 81 bales of calf skins; 5 bales of buffalo hides; 760 bales of goatbales goatskins; 9 bale sheepskins. To USA 60 bales buffalo hides; 18 bales calf skin and 194 bales of goatskins. To Japan: 72 bales of sheep skins. Eastern Europe (Yugoslavia) 341 bales of cowhides. Aden 2 bales goatskins; 1 bale sheepskin to Australia; To New Zealand;; 5 bales cowhides; 10 bales goatskins; 9 bales sheepskins.

THIS IS ONLY AN ANNOUNCEMENT REGARDING ISSUE OF PROSPECTUS; IT IS NOT A PROSPECTUS.

No Subscriptions are invited on the basis of this Announcement

Intending subscribers are requested to obtain from the Registered Office of the Company copies of the prospectus to which are attached forms of application. A formal prospectus has been filed with the Registrar of Companies, Calcutta. Some of the particulars contained in the prospectus are set forth hereunder.

1. Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent, the Government of India do not take any responsibility for the financial soundness of any scheme or for the correctness of any statements made or opinions expressed with regard to them.
2. Subscription list will open at the commencement of Banking hours on 16th November, 1959 and will close at the close of the Banking hours on 15th December, 1959.

CALCUTTA STEEL COMPANY LTD.

(Incorporated under the Companies Act, 1956).

AUTHORISED CAPITAL :
Divided into 10,00,000 Equity Shares of Rs. 10/- each .... Rs. 1,00,00,000.

PRESENT ISSUE OF :
5,00,000 Equity Shares of Rs. 10/- each at par .... Rs. 50,00,000.

It is proposed to issue 5,00,000 Equity Shares of Rs. 10/- each at par out of which 3,500 Shares have already been subscribed by the signatories to the Memorandum. These 3,500 Shares will be adjusted against the shares becoming due to be allotted to the signatories in terms of this issue.

SHARES OFFERED AT PAR FOR SUBSCRIPTION

In terms of the scheme hereinafter referred to the entire lot of Shares is being offered to the Shareholders of Messrs Bhartia Electric Steel Co. Ltd., a Public Limited Company as on the date of this issue or their nominees in the proportion of one share in this company for each share held in Messrs. Bhartia Electric Steel Co Ltd Such Shares as are not taken by the Shareholders of Messrs. Bhartia Electric Steel Co. Ltd. or their nominees in terms of the said scheme will be available for allotment by the directors at their discretion and the same will be offered to public.

No shares will be issued for consideration other than cash.

DIRECTORS

1. Sri DEBI PRASAD GOENKA, Industrialist, 9, Brabourne Road, Calcutta-1.
2. Sri GOURI SHANKAR NEVATIA, Industrialist, 9, Brabourne Road, Calcutta-1.

SOLICITORS

Messrs. KHAITAN & CO., 1-B, Old Post office Street, Calcutta-1.

REGISTERED OFFICE

4, Old Court House Street, Calcutta-1.

PROSPECTS AND OBJECTS OF THE COMPANY

The Company has been promoted with the object of acquiring fixed assets, lands, buildings, railway siding, machinery, furniture, fixtures, stores and stocks of raw and finished materials, rights, privileges, quota rights, etc., appertaining to the business of steel re-rollers and manufacturers now carried on in their Khardah Works by Messrs. Bhartia Electric Steel Co., Ltd.

As is well known, Bhartia Electric Steel Co., Ltd., is the owner of two Engineering factories, one situate at Ballygunge and the other at Khardah, both in the District of 24-Parganas near Calcutta in the State of West Bengal The factory at Ballygunge produces steel castings and ingots and the factory at Khardah is a Rolling Mill. The Khardah factory started operation in April, 1955. Both the units are more or less independent of each other. The Khardah factory is situate on land comprising about 24 acres with permanent rights. By a scheme of arrangements sanctioned by the Calcutta High Court on 11-8-1959 the fixed and other assets of Bhartia Electric Steel Co., Ltd., appertaining to and/or located at its Khardah factory, including land, buildings, machinery, furniture and fixtures together with the railway siding etc., stocks of stores, raw materials and finished or semi-finished goods situated at Khardah and all other rights, privileges including quota rights and benefits of existing contracts and properties whatsoever of the company situated in or appertaining to Khardah Works and the tenancy rights in respect of the Head Office and the furniture and fixtures are to be transferred to and vest in this company for payment in cash at book value.

The Re-Rolling Mills plant of Messrs. Bhartia Electric Steel Co., Ltd., which is proposed to be acquired by this company is well equipped and modern. The products of this plant are in great demand and the demand is continuously growing and is also expected to continue to grow for a long time. Increased supply of billets from the major Steel Works will help greater utilisation of the capacity of the plant.

TOTAL OUTLAY AND MINIMUM SUBSCRIPTION

The total outlay required in terms of the said scheme is estimated at about Rs. 70,00,000/- as follows:—

1. Land	...	Rs. 3,40,000/-	approximately
2. Building	...	Rs. 11,50,000/-	—do—
3. Plant and Machinery	...	Rs. 25,00,000/-	—do—
4. Stores etc.	...	Rs. 10,00,000/-	—do—
5. Working Capital ...	...	Rs. 20,00,000/-	—do—
6. Preliminary Expenses	...	Rs. 10,000/-	—do—
		Rs. 70,00,000/-	

In the opinion of the Directors Rs. 30,00,000/- is the minimum amount which must be raised by issue of shares hereby offered. The balance amount required will be met out of the balance of the said shares, if subscribed and credit facilities from directors and their friends and from Company's Bankers.

STATUTORY AND GENERAL INFORMATIONS

UNDER-WRITING AND BROKERAGE

The shares offered have not been under-written. The company will not pay any brokerage on this issue.

MANAGEMENT

The company has no Managing Agents and will be managed under supervision of Board of Directors. One or more of Directors may be appointed as Managing Director or Managing Directors at a later date.

CONTRACTS

The company has not entered into any contract except that this company will implement the terms of the scheme above referred to sanctioned by the Calcutta High Court.

INTEREST OF THE DIRECTORS

Sri R. L. Bhartia and Sri B. P. Khaitan are also Directors and Shareholders of Messrs. Bhartia Electric Steel Co., Ltd., the proposed vendors of the assets of business. Being Shareholders in Messrs. Bhartia Electric Steel Co., Ltd., they are entitled to allotment of shares in this company. Sri R. L. Bhartia is also a Managing Director of Messrs. Bhartia Company, Ltd., who are entitled to allotment of shares in this company as Shareholders in Messrs. Bhartia Electric Steel Co., Ltd. He is also a Director of and a Shareholder in Messrs. Ranken & Co., Private Ltd., landlords of the premises No. 4, Old Court House Street, Calcutta, where the Registered and Head Office of the company is situated. Sri B. P. Khaitan is also a Partner of Messrs. Khaitan & Co., the Solicitors to the Company.

DIRECTORS' QUALIFICATIONS & REMUNERATION

The qualification of a Director shall be the holding in his own right Equity Shares of the company of the nominal value of not less than Rs. 5,000/-.

Each Director will be paid out of the funds of the Company Rs. 100/- for every Board Meeting he attends and shall also be paid his share of 1 per cent Commission on nett profits payable every year to all directors jointly.

EXPENSES

Preliminary expenses payable by the company inclusive of stamp duty printing charges, law charges, registration fees, are estimated at Rs. 10,000/-. Part of this amount has been paid by Messrs. Bhartia Electric Steel Co., Ltd., which is recoverable from this company.

APPLICATION FOR SHARES

Each application other than an application in terms of the said Scheme must be for a minimum of 100 Equity Shares or in multiple thereof.

The full value of shares applied for is payable with application.

Applications for shares must be made on the application form specified for the purpose and available from the Registered Office of the Company. Applications and money payable with them should be delivered at the Registered Office of the Company. Letters of renunciation (executed in favour of another person, if any) should also, together with the application be sent to the Registered Office. Cheques and Drafts should be crossed "Account Payee" only and made payable to Messrs. Calcutta Steel Co., Ltd. or order. All cheques and drafts must be payable by a Schedule Bank in Calcutta. Any non-resident persons, firm or company applying for shares must first of all apply for and obtain sanction of the Reserve Bank of India

If no allotment is made the full amount received on application and if a partial allotment is made the unutilised balance of the application money will be refunded to the applicant within 2 months of the date of application through Registered Post at the risk of the applicant and the company will not pay any interest on the amount so refunded.

INSPECTION

Copies of the Memorandum and Articles of Association of the Company and the Consent Order of the Controller of Capital Issues and the Scheme sanctioned by the Calcutta High Court may be inspected at the Registered Office of the Company during usual business hours until subscription list has been closed.

Copies of the prospectus and forms of application etc., can be obtained from the Registered Office of the Company.

STOCK EXCHANGES

Cautious Trend

WATCH-DOG WRITES:

ALTHOUGH a steady undertone was discernible, stocks markets in India during the past week displayed a rather subdued tendency with the more speculative shares showing an irregularly lower trend. It would appear that the lack of vigorous support for the pivotal shares stemmed from continued anxiety over the border situation and the consequent apprehension that the tax burden in the country might be increased in order to meet the high defence expenditure. The uniformly good news from the corporate sector had, however, contributed to the steady undertone which was clearly noticeable in most popular investment counters. The calculation that the increase in the steel retention price would not result in any sizable increase in the profits of the steel companies had foiled the attempts at a rally noticeable immediately after the announcement of the Government award in that regard.

In the Calcutta Stock Exchange, tea shares came into the limelight with a large number of them coming to business at enhanced levels. In later dealings, selected jute shares were also in favour. Selective interest was noticeable in the miscellaneous section. But the more speculative shares developed a sagging tendency under selling pressure.

The trend in Dalal Street was toward lower levels. Even the textile section failed to maintain a steady front despite higher advices from the cloth market. With Tata Steel coming under pressure in later dealings following the calculation that the increase in steel retention price would confer no extra benefit on the company, sentiment was depressed.

Lack of buying interest characterised trading in the Madras Stock Exchange where in later dealings textiles and sugars eased on profit taking.

*

Calcutta

Calcutta, Friday Evening.

AN irregular trend was noticeable in the Calcutta Stock Exchange last week. While the more speculative counters lost ground the generality of shares kept steady. Sectionwise teas were an active market with a number of shares changing hands at steadily higher levels. Some interest was also noticeable in the jute and miscellaneous sections. Apprehensions about increased tax burden and a general tendency to await further indications about the investment outlook also contributed to the operators' reluctance to extend commitments.

Despite continued good advices from the cloth market, cotton textile shares failed to attain higher levels. Jayshree textiles was, however, an exception moving up to Rs 11.19 from Rs 10.81. Kesoram moved down to Rs 19.25 from its opening level of Rs 19.87. Elgin was maintained at Rs 16.19 while Dunbar was done at Rs 229.

Although there was an expansion of activity in Coals, price changes did not record much alteration from previous rates. Burrakur at one time was done up to Rs 18.06 after having opened at Rs 17.94. By close, however, the scrip lost ground to be placed at Rs 17.62. Newbeerbhoom was slightly better at Rs 21.50 while Ranigunge was steady at Rs 17.75. Bengal was placed at Rs 304, while Central India after having been done up to Rs 8 came back to Rs 7.81.

Selected jute shares met with support in later dealings though most of *the time transactions in this section* were put through around previous levels. The revival of interest stemmed from the fact that as at the end of October total jute goods stocks showed a reduction over those at the end of the previous month with sacking stocks recording a sizable decline. Among the shares that were in request were Nuddea which improved to Rs 62.50 from Rs 60.75, Northbrook moving up to Rs 23.62 from Rs 23 and New Central appreciating to Rs 21.75 from Rs 21.62. Kinnison was better at Rs 214. Dalhousie was marked at Rs 146. Howrah eased to Rs 24.87 from Rs 25.25. Among others, Auckland and Budge Budge were almost unchanged at Rs 202 and Rs 158 respectively.

Perhaps the most active section in the market was tea. Sustained interest was noticed throughout the week with the volume of business showing sizable expansion in later sessions. The continued good demand met with in the auctions coupled with the general expectation that offtake would be maintained at a high level imparted strength to the section. The fact that satisfactory prices were realised for common teas seemed to have revived optimism in tea shares. During the week's trading, Hantapara was a prominent spot moving up smartly from Rs 128 to Rs 146. Hasimara was wanted up to Rs 24.06 from Rs 23.87. Hattikhira was taken to Rs 14 from Rs 12.75. Birpara firmed up to Rs 175 from Rs 162. Bishnauth advanced to Rs 20.37 from Rs 19.50. Sungma was in request up to Rs 16.75 from Rs 15.81. Tezpore was an active counter and was pushed up to Rs 19.31 from Rs 18.87. New Dooars and Brooke Bond were steady at Rs 298 and Rs 19.94 respectively.

Sugar shares were generally unchanged. Ramnugger was done at Rs 20.50 *with Cawnpore* slightly better at Rs 14.87. Carew weakened to Rs 11.94 while SKG was sticky around Rs 13.37. Belsund was better at Rs 15.20.

In the paper mill section, India was in favour in earlier dealings and was taken up to Rs 24.75. The higher level, however, attracted profit-taking and the scrip came back to Rs 23.50. Both Orient Paper and Shree Gopal Paper eased to Rs 38.35 and Rs 24.12 respectively. Sirpur was steadier in earlier dealings but closed slightly lower. West Coast continued to rule steady and was placed at Rs 176. After earlier steadiness, Titaghur eased to Rs 44.87.

In the Engineering section Indian Irons opened steady at Rs 24.48 but closed lower on balance at Rs 24.22. Guest Keen Williams was steadier at Rs 40.25 as were Indian Standard Wagon at Rs 96, Indian Galvanizing at Rs 21.81, Bhartia Steel at Rs 17.65 and Braithwaite at Rs 26.75. Texmaco eased to Rs 25 as did JK Steel to Rs 13.

In the miscellaneous section Angelo Bros. was in good request and moved up to Rs 20.12 from Rs 19.62. All the forward shares in the section were easier on balance.

*

Bombay

AN irregular trend was noticeable in the Bombay Stock Exchange during the week ended Thursday. The improvement in sentiment that was in evidence in earlier dealings yielded place to a comparatively quite pattern of trading during the second half. The announcement of the steel retention price engendered only momentary enthusiasm as buyers once again relapsed into a cautious mood. It would appear that the political developments had regained their influence over the stock market as operators seemed to be concerned about the possible repercussions of a firm attitude toward China on the Central Budget.

Tata Steel opened on a steady note last Friday and moved up to Rs 158.25 before closing at Rs 157. Opening higher on Saturday at Rs 157.75 the scrip once again moved up to Rs 158.80 before pushed down to Rs 157.75. Narrow fluctuations characterised trading on Monday when the scrip opened on overnight pressure at Rs 157. At one time, however, the rate was taken to Rs 158 but the higher level could not be maintained and the scrip closed unchanged on balance at Rs 157. Operators were inclined to lighten commitments following renewed anxiety about the political situation. After opening steadier at Rs 157.25 the scrip lost ground in later dealings on Tuesday to be finally placed at Rs 155.75. Sentiment was better on Wednesday and the quotation was placed by close of the day at Rs 156.25. Though immediately after the announcement of the steel retention price Tata Steel steadied up somewhat, the improvement proved shortlived as operators later revised their opinion about the effect of the retention price on the finances of the company. By close on Thursday the quotation came back to Rs 155.50. Indian Iron started on a subdued note at Rs 24.32 but moved up last Saturday to Rs 24.56 before closing the day at Rs 24.44. The scrip, however, lost ground in early dealings in the second haif of the week to be pushed back to Rs 24.16 by close on Tuesday. Wednesday witnessed narrow fluctuations with the rate closing at Rs 24.20. The announcement of the retention price initially took the rate upto Rs 24.32 but by close on Thursday it was back at Rs 24.12.

Despite continued good advices from the cloth market and indications of further improvement in the working of the cotton textile industry in general, the textile section developed a quiet trend in the second half. Kohinoor, however, was a bright feature in later dealings and advanced to Rs 326.50 before pushed down on Thursday to Rs 321. Century moved up from Rs 624.50 to Rs 635 but closed unchanged on balance. Bombay Dyeing was in good request in earlier dealings but turned quiet toward close to be placed at Rs 68.10. Svadeshi closed lower on balance at Rs 260.50.

In the Miscellaneous section, Premier Construction was a bright feature on favourable corporate news and advanced to Rs 368. During Thursday's trading the scrip lost ground in company with the rest of the market to be placed by close at Rs 362. National Rayon was in request in earlier dealings but closed on a subdued note at Rs 377.50. Tata Locomotive was likewise somewhat easier by close at Rs 200. Among sugar shares Belapur was marked down sharply on disappointing dividend announcement to Rs 320 from Rs 339 at this time last week.

*

Madras

Madras, Thursday.

SELLERS dominated the Stock Exchange today, and the market was a bit dull. Transactions were based mostly on lower rates due to unloading. Business in the industrials continued to be fair, though even here the dulltone was reflected to some extent.

A new share has been added to the list of the Madras Stock Exchange. It is the Tube Investments of India Ltd. On the first day the Rs 100 paid share was quoted at Rs 230.00 and the Rs 50 paid share rated at Rs 175. There were sellers but no business in this was transacted. The Directors of this Company have recommended a dividend at the rate of Rs 10.00 on fully paid Rs 100 shares and Rs 2.50 on partly paid shares of Rs 25 for the year ending July 31, 1959.

Government Securities: There has been no change in this counter and 4% Andhra Government loan was transacted at Rs 99.98. The 3% 1986 Conversion Loan of the Government of India was put through at Rs 74.50.

4% Madras Government loan of 1971 were sold at Rs 100.12. 4% 1971 Mysore Loan was quoted at Rs 100.10 and 4% 1971 Kerala and Andhra Loans were respectively quoted at Rs 99.90 and Rs 99.98. The same denomination Orissa Government loan was available at Rs 99.95.

Banks: Banks continued to be dull. Indian Bank Rs 100 paid share was higher at Rs 178.00 and the Rs 80 paid share remained unchanged at Rs 150. Punjab National were sold at Rs 20.40 lower by 10 nP than last closing and the Travancore Bank was bought at the unaltered rate of Rs 25.92. Pandiyan continued at Rs 34.25. Others showed no change.

Electrics: Karaikal was offered at Rs 10.75. Kumbakonam too were sold unchanged at Rs 10.60. Negapatam was on par at Rs 10 only with sellers dominant. South Madras continued steady at Rs 11.40. Vellore and West Coast both were quoted at Rs 13.00 each.

Sugars and Breweries: This section remained steady today. Cauvery was transacted at Rs 136.00. Deccan improved fractionally at Rs 13.55 with good buyers. E. I. D. was unchanged at Rs 43.75. K. C. P. was at Rs 21.00. Mysore was good at Rs 55.50. Travancore and United Breweries were respectively available at Rs 11.70 and Rs 465.00.

Plantings: These were lower today than usual. Amalgamated were sold at Rs 14.50. Bababuddin at Rs 9.25 was not fancied. Be Be maintained its rate at Rs 3.25 and Blue Mountain was not lower than Rs 3.33. Cochin Malabar lost fractionally at Rs 7.08. *Coffee Lands* did not go down at Rs 25.75 and Consolidated Coffee shed its value lower to Rs 24.45. Coonoor was available unchanged at Rs 24.35. Corcoody, however, was fancied at a quotation at Rs 6.70, higher by 15 nP than its last closing. Haileyburia and Highland shares maintained values at Rs 16.35 and Rs 14.50 respectively. Kailas on demand improved to Rs 4.97. Kil Kotagiri did not alter at Rs 8.95. Kumergode was stationery at Rs 6.20, but Kurchemala was up at Rs 8.05. Midland continued to be steady at Rs 12.40 and Mlamally at Rs 40.00. Neelimalai had buyers at the improved rate of Rs 4.92. Mysore Amalgamated too was fancied at Rs 5.50. Nonsuch continued without change at Rs 27.00. But Nilgiri tea shares lost a little being quoted at Rs 7.65. Osoor however moved up to Rs 4.13. Parkside shed value at Rs 25.60, but Peermade gained at Rs 18.50. Periakaramalai remained at Rs 3.73. Rajgiri improved to Rs 19.25. Rajendra was available at the same value of Rs 17.75 but Sangameshwar was lower at Rs 2.75. Savamalai's gain by a single nP attracted attention at Rs 4.01. It was also the case with Talayar which at Rs 1.73 had consistent demand. Travancore Rubber came to be sold at Rs 14.62 with no alteration. Tropical could be had at Rs 20.12, Twyford at Rs 13.00 United Nilgiri was consistent at Rs 20.30, but Vaikindam want down to Rs 27.62 from the previous closing of Rs 28.50. Likewise Velimalai also shed points at Rs 6.35, fifteen nP lower than the last closing. Others were at the marked prices.

Miscellaneous: A steady tone was maintained in this section. Aluminium Industries attracted attention still at Rs 22.60. Ashok Leyland was down by five nP at Rs 7.65. A. V. Thomas did not improve at Rs 20.25. Binmy had enquiries only at Rs 154.75. Dalmia Cement could not progress beyond Rs 10.40 today. Enfield had enquiries at Rs 13.50. F.A.C.Ts. was better at the slightly altered quotation of Rs 9.45. Forest Industries had buyers though at the slightly lesser rate of Rs 3.00. Hindusthan Lever manitained steady value at Rs 32.25. India Cement gained only one nP quoting at Rs 6.53. Investment Trust of India could be had at Rs 174.00. Marikar was today priced at Rs 52.00.

INDUSTRIAL INFORMATION

INDEX NUMBER OF WHOLESALE PRICES IN INDIA.

Review for the Week-ended October 17, 1959 (Asvina 25, 1881).

The official wholesale price index (with the year ended March 1953 as 100) stood at 120.0 during the week-ended October 17, 1959 as against 119.9 (revised) for the earlier week. The index was higher by 2.2 and 3.1 per cent respectively when compared with the corresponding weeks of the previous month and of a year ago.

The index for 'Food Articles' worked out to 125.0 as compared with 125.1 (revised) for the previous week. Items which showed noticeable variations during the week were: wheat at Dhanduka (+15%) and at Bombay (+7%), jowar at Jhalawar (+13%), rice at Calcutta (+8%), and at Hailkandi (+5%), urad at Delhi and Chillies (+6% each), potatoes (+5%), bajra, eggs and gur (+4% each), arhar (+3%), gingelly oil and fish (+2% each), oranges at Madras (—20%), jowar at Rohtak (—17%) and at Hyderabad (—5%), rice at Nagpur (—7% and at Imphal (—5%), wheat at Hapur and Bahraich and urad at Bombay (—6% each), coffee (—5%), maize (—4%), barley, meat and black pepper (—3% each).

The index for 'Tobacco' remained stationary at its previous week's level of 98.7.

The index for the 'Fuel, Power, Light and Lubricants' group also stood unchanged at the previous week's level of 116.3.

The index for 'Industrial Raw Materials' rose by 0.7 per cent to 123.7 as compared with 122.9 (revised) for the earlier week due to an increase in the prices of linseed (+4%), groundnuts and rapeseed (+2% each), raw silk and gingelly seed (+1% each), although the prices of green bamboos (—4%), lac (—3%) and tanning materials (—1%) showed declines.

The prices of linseed oil (+3%) and cotton yarn and rayon yarn (+1% each) moved up, while copper (—2%) and brass (—1%) showed a fall and the index for 'Intermediate Products' advanced by 0.6 per cent to 115.2 as compared with 114.5 (revised) for the previous week.

An increase of one per cent in the prices of cotton mill cloth raised the index for 'Finished Products' by 0.3 per cent to 110.7, as against 110.4 (revised) for the last week. The prices of general chemicals (—2%), however, moved down.

MOVEMENT OF COMMODITY PRICES (REVISED SERIES).

Review for September, 1959.

Wholesale prices as measured by the official index (with the year ended March 1953 as 100) stood unchanged in September, 1959 at the earlier month's level of 117.1. The index was higher by 0.5 per cent when compared with 116.5 for September, 1958.

During the month under review, 'Tobacco' went up by 1.6 per cent to 98.1, 'Fuel, Power, Light and Lubricants' by 0.6 per cent to 116.1, 'Industrial Raw Materials' by 2.1 per cent to 121.9 and 'Manufactures' by 0.5 per cent to 110.0 while 'Food Articles' declined by 1.0 per cent to 120.5.

'Food Articles'

Lower prices of all the cereals except wheat which showed a rise, brought down the index for 'cereals' by 1.6 per cent to 107.6. Prices of gram, mung, masur and urad witnessed a fall and in consequence the index for 'pulses' drifted down by 2.9 per cent to 89.9. The index for 'fruits and vegetables' receded by 8.5 per cent to 139.1 owing to a fall in the prices of oranges, bananas and cashewnuts, notwithstanding an increase in the prices of potatoes and onions. A fall in the price of milk caused a decline of 0.3 per cent to 113.6 in the sub-group index for 'milk and ghee' despite an advance in the price of ghee. Prices of all the edible oils except vanaspati (dalda) which witnessed a decline, were marked up and in consequence the index for this sub-group advanced by 0.8 per cent to 127.6. A decline in the prices of fish and eggs brought down the index for 'fish', eggs and meat' by 4.0 per cent to 112.1; the prices of meat, however, showed a slight rise. An advance in the prices of gur raised the index for 'Sugar and gur, by 0.1 per cent to 148.2. The index for 'other food articles' also increased by 1.9 per cent to 168.6 due to higher prices of tea, coffee, black pepper, chillies, cloves, turmeric, cardamoms, betelnuts and salts.

'Tobacco'

The index for 'tobacco' moved up by 1.6 per cent to 98.1 owing to an increase in the prices of raw tobacco.

'Fuel, Power, Light and Lubricants'

The index for 'Fuel, power, light and lubricants' advanced by 0.6 per cent to 116.1 owing to higher average prices of coal.

'Industrial Raw Materials'

The index for 'fibres' went up by 0.5 per cent to 110.1 due to an increase in the prices of all the constituent items. A similar rise of 3.3 per cent to 136.1 occurred in the sub-group index for 'oilseeds'. A slight rise of 0.1 per cent to 98.3 in the index for 'minerals' was caused by an increase in the prices of manganese ore. The sub-group index for 'other industrial raw materials' also moved up by 2.4 per cent to 119.1 owing to a substantial increase in the prices of raw hides and raw skins, supported by higher prices of tanning materials and lac.

'Intermediate Products'

An advance of 1.9 per cent to 111.3 in the index for 'intermediate products' was caused by an increase in the prices of linseed oil, cotton yarn, coir yarn, zinc brass and tin, notwithstanding a fall in the prices of rayon yarn, aluminium, copper and lead.

'Finished Products'

There was an increase in the prices of cotton manufactures (+ 0.9 per cent to 114.0) and the index for 'textiles' rose by 0.3 per cent to 105.2 despite a fall in the prices of jute manufactures (—1.0 per cent to 89.4) and silk and rayon manufactures (—0.3 per cent to 92.0). Among cotton manufactures, mill-made cloth witnessed a further rise while handloom cloth again exhibited a decline. The sub-group index for 'metal products' went up by 0.1 per cent to 143.5 due to a rise in the prices of aluminium utensils. An advance in the prices of general chemicals' dyeing materials and drugs and medicines pushed up the sub-group index for 'chemicals' by 1.1 per cent to 108.3. 'Oilsakes' declined by 0.4 per cent to 141.6. The sub-group index for 'machinery and transport equipment' recorded a rise of 0.1 per cent to 105.9 owing to an increase in the prices of cycles. The index for 'other finished products' witnessed a fall of 0.1 per cent to 113.7 as a result of a fall in the prices of bricks and

---

Mysore Paper improved to Rs 24.10 and Mysore Tobacco xd was very much lower at Rs 12.87 with its previous closing rate at Rs 14.12. Sen Raleigh was quoted higher at Rs 20.00. Standard Motors was obtainable at Rs 17.00. Textool was lower also at Rs 189.00. Travancore Cements was one those shares appreciating in value at Rs 10.60 Vanguard Fire was also lower at Rs 3.50.

tiles and glass. On the whole, the *index for* 'finished products' advanced by 0.3 per cent to 109.8 during the month under review.

INDEX NUMBER OF WHOLESALE PRICES BY GROUPS AND SUB-GROUPS OF COMMODITIES

(Base: 1953=100).

CONSUMER PRICE INDEX NUMBER FOR SEPTEMBER.

The consumer price index numbers for working class (base shifted to 1949=100 except where otherwise indicated) *increased* at three centres, declined at two and remained stationary at seven during September 1959, according to the *Labour Bureau*, Government of India.

The *maximum* rise of three points was recorded by the index number for Cuttack, which stood at 121. The index number for Ajmer and Mercara (base 1953=100) appreciated by one point each to 106 and 130 respectively.

In this group of centres, the food group index numbers appreciated at all the three centres, the fuel and lighting group index numbers at two centres, the clothing group index numbers at two centres and the miscellaneous group index number at one centre.

Fall at Two Centres:

The index number for Satna (base 1953=100) declined by three points to 99 mainly due to a recession in the food, fuel and lighting and miscellaneous group index numbers. The index number for Tinsukia receded by one point to 120 due to a fall in food group index number.

Stationary at Seven Centres:

The index numbers for Delhi, Gauhati, Monghyr, Dehri-on-Sone, Kharagpur, Bhopal (base 1951=100) and Beawar (base August 1951 to July 1952=100) showed only fractional variations and stood at 113, 102, 99, 101, 115, 115 and 103 respectively.

The provisional *indices for Jharia*, Berhampur, Silchar, Akola and Jabalpur stood at 103, 118, 112, 115 *and* 107 respectively.

All-India Average:

The provisional all-India index number remained stationary and stood at 125 during September, 1959. The final all-India index number for *July* was 124.

GOVERNMENT PURCHASES OF INDIGENOUS PRODUCTION RISE BY 400 PER CENT.

The Government of India is helping indigenous production by arranging inflow of raw materials and extending technical assistance at all stages, in addition to making larger purchases. The total value of purchases made by the Directorate of Supplies and Disposals from indigenous sources rose by about 400 per cent in the last five years. This organisation purchased goods worth Rs 161.38 crores in 1958-59 against Rs 38.09 crores in 1953-54 from such industries.

This was disclosed by Mr V. N. Rajan, Director General of Supplies and Disposals, while presiding over the third meeting of the Regional Purchase Advisory Council for Calcutta region here. The meeting was attended, amongst others, by representatives of the Federation of Indian Chambers of Commerce and Industry, Associated Chambers of Commerce, Indian Engineering Association, Calcutta, Engineering Association of India, Calcutta and All-India Manufacturers' Organisation, Calcutta.

In reply to suggestions made by members, Mr Rajan stated that purchases were always being made from indigenous sources and imports were made when unavoidable, against urgent *demands. This would* be clearly borne by the fact that while this organisation purchased indigenous productions *amounting to Rs 161.38* crores in 1958-59, value of imports in that year was only Rs 43.95 crores.

In pursuance of Government's *policy, he said,* his organisation was doing everything possible to encourage cottage and small scale industries. A price preference up to *a maximum* of 15 per cent was allowed to products of the small-scale industries on merits of cases. Purchases from this source rose from 1.05 crores in 1953-54 to 5.18 crores in 1958-59.

Referring to the complaints regarding payment of bills, issue of test certificates and inspection of stores, Mr Rajan assured the members that the organisation would adopt all necessary *steps wherever* possible for the expeditious disposal of bills. To help the supplying firms, he said, defects if detected in the Government Test House, would be conveyed to them with suggestions for improvements.

The next meeting of the Council would be held in March at *Shillong.*

BOKARO AND CHIRIMIRI COALFIELDS AREA.

The existence of two new workable seams of coal in the *Jarangdih* colliery area, east of Bokaro and Chirimiri Coalfield in Madhya Pradesh, has been proved by the Indian Bureau of Mines.

The Jarangdih seam, containing reserve of 0.33 million ton, is spread over an area of half square mile, with its workable portion confined to 0.6 sq. mile only. The quality of the coal ranges between selected A to II B Grade.

The second new seam named as Sonawani was proved to exist over an area of 0.042 sq. mile and is estimated to contain a coal reserve of 2.17 million tons of average Grade II.

The Indian Bureau of Mines has submitted necessary plans and detailed *information to the National* Coal Development Corporation for exploitation of the seams.

During the last four years the Bureau has carried detailed prospecting in 9 coalfields of India in the states of Madhya Prodesh, Bihar and Orissa and has proved 1,100 million metric tons of coal.

Prospecting and proving of coal in the Korba Coalfields of Madhya Pradesh for development in the public sector was also undertaken by the Bureau.

PAYMENT OF WAGES ACT

The Government of India have decided to extend from November 1, 1959, sub-section (4) of Section 8 of the Payment of Wages Act, 1936, in regard to payment of wages to mine workers. Consequently, there will be a limit on the fine that an employer can impose on a worker for such acts and omissions on his part as may be specified by notice.

The Payment of Wages Act seeks to ensure that wages are disbursed to workers within the prescribed time limit and that employees get their full wages without any deduction which are not authorised.

With the exception of sub-section (4) of Section 8, all provisions of the Act were made applicable to mines some time ago. While Section 8 provides for the imposition of fines, sub-section (4) of that Section restricts the limit of fines to an amount not exceeding half anna in a rupee of the wages payable. With the extension of Section 8 (4), a limit will be placed on the fines that can be imposed on mine workers.

PETROLEUM PRICES

As a result of further discussions between the Petroleum Oil Companies and the *Government of India*, an agreement has been reached by which the Companies will further reduce their prices.

With the object of mopping up the amount which will result due to this reduction, a notification is being issued under the Mineral Cils (Additional Duties of Excise and Customs) Act, 1958, increasing to the extent necessary the rates of additional duties.

The consumer prices of these petroleum products will, however, remain unchanged.

GRADING OF CUT-SIZES OF TIMBER

The Indian Standards Institution has drafted standard rules for grading of cut-sizes of timber. The standard has been drafted to help the stockists in suitably separating and grading the cut sizes already available. It will also help consumers in making their demands more specific.

Copies of the draft are available from the Indian Standards Institution, New Delhi or from its branch offices at Bombay, Calcutta and Madras. The last date for receipt of comments is December 24, 1959.

USE OF LIMESTONE FOR CALCIUM CARBIDE PRODUCTION

The Central Electrochemical *Research* Institute at Karaikudi, Madras, have successfully investigated into another outlet for the utilisation of crystalline limestone deposits of Tinnevelly and Salem Districts as a raw material for the calcium carbide industry. There is a big demand for calcium carbide in India where its annual rated capacity is to be raised to 40,000 tons by 1960-61. The present production is about 5,000 tons per year.

Calcium carbide is the main source of acetylene, used for welding and metal-cutting, and is the basis of synthetic organic chemicals.

These findings are reported in the Kartik (October-November) issue of the Vigyan Pragati, a Hindi Monthly published by the Council of Scientific and Industrial Research. This issue also carries an illustrated article on the Hindustan Machine Tools Factory, Bangalore, and the use of flavouring agents in pharmaceutics.

In the notes and news section, the process for the small-scale production of washing soap from neem oil is explained. The use of baby coupola in metallurgy has been also indicated.

CALCINING PLANT AT ROURKELA GOES INTO OPERATION.

The first mixed gas-fired dolomite kiln of the lime and dolomite calcining plant at the Rourkela Steel Project was lighted up by the Resident Director, Shri M. Ganapati, here this morning.

The plant, which consists of three lime kilns and two dolomite kilns, has been designed, supplied and erected by Messrs. Friedrich Siemens of Dusseldorf, West Germany. A team of 15 German technicians and 200 Indian erection workers are working on the erection of the plant.

Calcined dolomite is used regularly for making up the banks of the open hearth furnaces and lining the L. D. Convertors. The daily output of each dolomite kiln will be 50 tons and of each lime kiln 120 tons.

The plant is fully automatic and specially designed to meet the requirements of L. D. Convertors and other steel-making furnaces. When completed it will not only meet the requirements of the Rourkela Steel Plant but also be able to supply calcined dolomite and lime to other steel plants.

Rajendra Kumar
and his
colleagues are
being trained
for Durgapur
steelworks

Twenty-three year old Rajendra Kumar Bhandari is a long way away from his home in New Delhi. He is in the U.K. at the Abbey Melting Shop of the Steel Company of Wales, taking drilled samples of metal from the ladle trunnion and casting. Rajendra is one of the 300 young trainees taking specialised courses in various steel factories in the U.K. Upon completion of their training, the Indian technicians will come back to India, fully equipped to shoulder their responsibilities in the steelworks at Durgapur. In addition to technicians, ISCON is also helping to train up managerial personnel, who are given advanced management courses in the U.K. before they assume their positions at Durgapur.

INVESTOR'S SUPPLEMENT

Stock-Market Rules Steady in October

STOCKS markets ruled generally steady during October as sentiment was aided by indications that conditions would be conducive to a smooth and active working of the corporate sector. In the Calcutta Stock Exchange conditions were cheerful in early dealings despite the proximity of the long Puja holidays. (The market remained closed for the Puja holidays from 7th October to 18th October). It would appear that both the speculative elements and the investors had reasons to feel satisfied with the turn of events as far as they affected the investment climate in the country. The immediate incentive for the uptrend was derived from the fact that the differences between labour and management over bonus both in Jamshedpur and Kulti had been amicably composed. Secondly, corporate news continued to be good. Industry-wise, the cotton textile industry was doing well and indications were that the situation of mounting stocks had already been left behind. Speaking in Ahmedabad during the month, Mr Manubhai Shah, Union Minister for Industry, stated that the industry had definitely turned the corner. In Calcutta Jute shares were in request at advancing price levels on the calculation that with the attainment of self-sufficiency and the rapid progress that had been made in Mills' modernisation, Indian jute goods would be better-placed than jute goods from its competitors in overseas markets. While the heavy goods were in good demand from most of the consuming countries, it was expected that with the ending of the US steel strike, demand for hessian from that country would record a sizable improvement in view of the rising trend in burlap consumption in that country.

One of the important factors that contributed toward steadiness during the month was the absence of much dampening news from Naveen Nagar where the AICC session was held. However the announcement by Mr Lal Bahadur Shastri that Government would be revising the scale of commission of Managing Agents continued to wield an inhibitory influence on sentiment. The move was interpreted as an attempt at a fresh assault on the managing system as a whole. Second thoughts on the proposal seemed to have largely removed the earlier apprehension that the move would in the long run push big managing houses out of the corporate sector.

Contrary to the usual pattern the Calcutta Stock Exchange closed on the eve of the Puja holidays, on a steady note. The cheerful sentiment had stemmed partly from the reluctance of both operators and investors to lighten their portfolios in view of the growing scarcity of good shares on offer and partly from the higher advices from Dalal Street. Despite the fact that one of the major stock markets in the country remained closed, conditions in Dalal Street during the Puja holidays were almost buoyant. Presumably indications of a turn for the better in political developments concerning India and China were largely responsible for the revival of confidence in equities. It may be recalled that the Chinese aggression on our northern borders and the serious shift in the food agitation in West Bengal had exerted their restraining influence on market sentiment during September. Marketmen were very much concerned over the developments in the Nefa area. However, with the Prime Minister's statement that he did not at all expect any sudden development that would lead to any kind of conflict, even a small one, the anxiety somewhat lessened. But in view of the need for maintaining continuous vigilance on our border areas against fresh incursions, it was believed that defence expenditure of the country would record a further sizable increase. The expectation in the stock market during September was that the repercussions of large defence expenditure would be felt in the general tax level. The new factor when taken with the Planning Commission's suggestion that the gap in the internal resources for the current plan should be filled by internal effort exerted a restraining influence on sentiment. With the receipt of the letter from the Chinese Premier in reply to the Indian Prime Minister's greetings to the Chinese people on the occasion of the tenth anniversary of the Chinese Republic, however, there was a general tendency in the country to feel less anxious than before about the border question.

The broadening of interest in equities was also the result of the growing confidence that Authority would not be unduly harsh on the private sector. It was generally considered that the recent speeches of both the Indian Prime Minister and Finance Minister indicated that the corporate sector would be given necessary facilities to function efficiently. In his speech at Bombay Mr Nehru had said that a very wide field remained and would continue to remain open for private enterprise. Similarly, Mr Morarji Desai had assured entrepreneurs in the US that the private sector had vast scope and that both indigenous and private capital would be allowed to function profitably in India.

The Calcutta Stock Exchange commenced its post-Puja trading on a cheerful note on bull support and absence of selling. The generality of holders were reluctant to book profits even at the prevailing high levels. It was evident that holders were encouraged to hold on because of growth prospects and in view of the increasing money supply in the country. Other contributory factors were the good prospects of adequate foreign aid for the Third Plan. On his return from his foreign tour, Mr Morarji Desai indicated in New Delhi that conditions abroad were quite conducive to a broadening of interest in our country's development plans and that the climate for aid was good in US. The satisfactory outcome of the talks between India and Pakistan over disputes regarding the eastern border also accelerated uptrend in prices.

Toward the close of the month, prices, especially in the more speculative counters declined sharply following the news of fresh Chinese aggression on our borders. The outrage induced renewed anxiety because the Ladak incident had been accompanied with bloodshed. The depression was, however, shortlived as the Government of India reiterated their determination to explore ways and means of settling the dispute in a peaceful way.

Sectionwise on the Calcutta stock Exchange, Coal shares were a dull market most of the time. It would appear that the reluctance of investors to extend commitments in the section was the result of a feeling that the financial position of the industry was not likely to improve in view of the increase in the price of the commodity. Toward close, however, a broadening of interest was noticeable in the section. Presumably the revival of support stemmed from press reports that export enquiries for coal had been received from a number of overseas countries.

Selected jute shares were in good request in later dealings on prospects of satisfactory dividend distributions. Investors seemed to have been encouraged by the good statistical position of the industry. Although offtake of hessian had not shown any sizable increase, it was felt that with the end of the steel strike US buying of hessian would pick up. The fact that, the recently unsealed looms were allotted for the production of heavy goods would offset the temporary slackness in hessian offtake, also aided sentiment. Though hessian stocks were tending to be irregularly high from month to month during the past few months, the overall position was not considered to be unsatisfactory. For even at the end of September, hessian stocks were much below one month's production. As for sacking, demand continued to be satisfactory although the requirements of some of the erstwhile active buyers appeared to have been satisfied. Even so, it was generally believed that since the higher output through the unsealing of additional looms would obtain upto next January only, there was no cause for worry as regards sacking.

The tea section also witnessed revival of interest on satisfactory auction results. The prospects of North Indian tea especially were considered to be good. Upto end of September this year offtake of North Indian tea showed a substantial increase over that in the corresponding period of the previous year. The earlier anxeity about the increased output of North Indian tea was largely discounted in view of the increased output in offtake that was evident in recent months. Shipments of North Indian tea recorded a steep rise in September thereby considerably narrowing the gap between the total for the first nine months of the year and that at the corresponding period of last year. Apart from the fact that the increase in production of North Indian tea had been more less offset by the total exports up to the end of September, the increase had also been offset by the fall in output in South India. Further indications were that world consumption of tea would surpass that in the last two years.

Sugar shares were a steady market on ideas of improved prospects for the industry in view of the announcement of the incentive scheme for sugar mills.

Selected shares met with demand at advancing prices in the cotton textile section. Advices from the cloth market indicated a broadening of interest both on the domestic and export fronts.

Engineering shares were an active sector during the month on reports of increase in the exports of engineering goods. Moreover, with the bright prospects of increased availability of steel from indigenous production, it was generally expected that engineering companies would be enabled to work to full capacity.

In the miscellaneous section many bright spots were noticeable. Automobile and paper shares were in the forefront on expansion prospects.

(a1) Includes Rs 668,325 being amount drawn from extra excess provision made for depreciation on plant and machinery for the year ended 31-3-53.

(a2) After transferring Rs 9,00,000 from Reserve for taxation.

(a3) After transferring Rs 2,50,000 from General Reserve.

(a4) After transferring Rs 350,000 from General Reserve and Rs 165,000 from Machinery Rehabilitation Reserve.

(a5) After transferring Rs 4 lakhs from Reserve for fall in price.

(a6) After transferring Rs 109,648 from General Reserve.

(a7) After transferring Rs 255,000 from General Reserve.

(a8) After transferring Rs 882,000 from General Reserve.

(a9) After transferring Rs 2,300,000 from Dividend Equalisation Reserve and including Rs 665,246 being profit of previous years on sale of Govt. Securities.

(a10) After transferring Rs 250,000 from General Reserve No. 1.

(a11) After transferring Rs 300,000 from General Reserve and Rs 1,428 from Dividend Equalisation Reserve.

(a12) After transferring Rs 320,000 from Contingencies Reserve.

(a13) After transferring Rs 150,000 from General Reserve.

(a14) After transferring Rs 100,000 from Dividend Reserev and Rs 163,764 from Taxation Reserve.

(a15) After transferring Rs 200,000 from Dividend Equalisation Reserve.

(a16) After transferring Rs 300,000 from Reserve and Rs 100,000 from Dividend Equalisation account.

(a17) After transferring Rs 470,000 from Dividend Reserve.

(a18) After transferring Rs 425,000 from General Reserve.

(a19) After transferring Rs 393,860 from General Reserve.

(a20) After transferring Rs 772,517 from General Reserve and Rs 78,483 from Development Rebate Reserve.

(a21) After transferring Rs 460,000 from General Reserve.

(a22) After transferring Rs 355,000 from General Reserve.

(a23) After transferring Rs 714,000 from General Reserve No. 1.

(a24) After transferring Rs 110,000 from Dividend Equalisation Reserve.

(a25) After transferring Rs 1,700,000 from Dividend Equalisation Fund. (a26) After transferring Rs 110,000 from General Reserve. (a27) After transferring Rs 550,000 from Machinery Reserve asd Rs 400,000 from Dividend Equalisation Reserve. (a28) After transferring Rs 240,000 from General Reserve and Rs 500,000 from Dividend Equalisation Reserve. (a29) After transferring Rs 325,000 from General Reserve. (a30) After transferring Rs 656,935 from General Reserve. (a31) After transferring Rs 100,000 from Dividend Equalisation Reserve. (a32) After transferring Rs 1,034,256 from Engine and Machinery Fund Rs 316,025 from Building Fund Rs 246,800 from Dividend Fund and Rs 50,000 from Reserve Fund. (a33) After transferring Rs 150,000 from General Reserve. (a34) After transferring Rs 1,070,571 from General Reserve.

(a35) After transferring Rs 137,557 from Contingency Reserve and Rs 117,601 from provision for refund of taxes.

(a) After writing back Rs 60,000 from provision for Taxation.

(b) After transferring Rs 1,08,000 from Dividend Equalisation Reserve and Rs 19,068 from Provision for taxation.

(c) After transferring Rs 65,000 from General Reserve.

(e) After transferring Rs 125,000 from Reserve.

(f) After transferring Rs 50,000 from Building and Machinery Reserve.

(g) After transferring Rs 60,000 from Revence Reserve.

(h) After transferring Rs 25,000 from Revenue Reserve; Rs 72,597 from Depreciation Reserve and Rs 46,794 from Building and Machinery Reserve.

(i) After transferring Rs 25,000 from Revenue Reserve; Rs 121,000 from Building and Machinery Reserve and Rs 15,000 from Hall Reserve.

(j) After transferring Rs 77,795 from Building and Machinery Reserve.

(k) After writing back Rs 2,75,000 from provision for taxation.

(l) After transferring Rs 55,000 from Revenue Reserve; Rs 96,181 from Depreciation Reserve and Rs 23,386 from Building and Machinery Reserve.

(m) The Indian Estates of The Patrakola Tea Co., Ltd. were transferred to this company at book value as on 1-12-1954.

(n) After transferring Rs 30,000 from Revene Reserve; Rs 71,688 from Building and Machinery Reserve; Rs 27,445 from Replanting Reserve and Rs 10,000 from provision for taxation.

(o) After writing back Rs 20,000 from excess provision for taxation and Rs 34,250 from excess provision for liabilities.

(p) After transferring Rs 68,450 from General Reserve and Rs 50,000 from Tax provision.

(q) After transferring Rs 40,000 from Building and Machinery Reserve.

(r) After transferring Rs 50,000 from Revenue Reserve and Rs 45,000 from Building and Machinery Reserve.

(s) After transferring Rs 70,539 from Depreciation Reserve and Rs 5,000 from Development Reserve.

(t) After transferring Rs. 1,00,000 rom Revenue Reserve and Rs. 1,20,000 from Building and Machinery Reserve.

(u) After transferring Rs 151,220 from Depreciation Reserve; Rs 60,000 from Replanting Reserve; Rs 25,000 from Development Reserve and Rs 20,000 from General Reserve.

(v) After transferring Rs 55,223 from Building and Machinery Reserve and Rs 18,000 from provision for taxation.

(w) After transferring Rs 145,000 from Revenue Reserve and Rs 5,000 from Development Rebate Reserve.

(x) After transferring Rs 30,000 from General Reserve and Rs 50,000 from provision for taxation and including Rs 88,623 being dividends forfeited.

(y) After transferring Rs 298,792 from Building and Machinery Reserve and Rs 175,000 from Revenue Reserves.

(z) After transferring Rs 110,000 from Revenue Reserve.

FOR THE INVESTOR

Tax Fears

Investment Gossip:

The return of the frontier patrol men, far from reviving confidence in an early amicable settlement of the dispute between India and China, has resulted in renewed anxiety about the real motive of the Chinese. The treatment meted out to our men and the methods reported to have been adopted by the Chinese to extract a statement from the leader of the party have filled the entire nation with consternation and have smashed the lingering hope about a reasonable Chinese attitude. So the dispute between us and the Chinese is, and will continue to be, the main preoccupation of marketmen as it is that of the nation as a whole.

But this week something else seems to have gained the pride of place in the calculations of operators. It will be recalled that, a few weeks ago, I referred to a Dalal Street rumour about the possibility of a supplementary budget in the near future. I must say that, in the matter of rumour-mongering of a variety that will gain quick credence, Dalal Street is unbeatable. Some time ago, a few made their pile by successfully circulating a rumour about the possibility of the re-entry of Mr T. T. Krishanamachari into the Central Cabinet. The rumour about the supplementary budget is holding the field. This week seems to have chosen for intensifying the whispering campaign about the supplementary budget and it is no longer a vague report. Some of the articles which will bear additional excise duty have been named and Friday's sudden slump after what looked yesterday like a recovery movement is said to be due to the fact that news has come from Dalal Street specifying the date of the Supplementary budget.

Earlier in the week, the more speculative counters in Calcutta, under the leadership of Indian Irons, were already rather depressed. This was presumably due to some disappointment felt in certain quarters over the accounts of Indian Iron. According to the figures made available, profit for the last accounting year has shown only a slight increase even though production of all items has been substantially higher. This feature has led to the apprehension that prospects for next year on the basis of last year's working cannot be considered to be very good.

It would appear that, while the reactionary trend has stemmed partly from apprehensions of further tax levy, either direct or indirect, the undercurrent of fear regarding official-inspired curb on excessive speculation, has also something to do with the unloading noticed in the more speculative counters. In this regard, it may be noted that reports have it that the LIC's lack of interest in equity shares has steammed from a feeling that most shares are too overvalued to attract the attention of genuine investors having an eye on yield.

While it is undeniable that the recent upsurge has put most equities at quite high levels, it is not unreasonable to expect the stock market to continue to display a steady trend. For, the outlook for the corporate sector is good and, if anything, will be better in the coming months. Mr. Morarji Desai has pointed out in the Lok Sabha this week that prospects for foreign aid both for the current Plan and the next Plan are good. He has also made it abundantly clear that all reasonable facilities will be given to foreign capital for participating in the economic development of the country. It is to be expected, therefore, that industrial activity of every kind will expand.

A Right Issue?

Investment Special:

An impending rights issue that has touched off a controversy is that of Straw Products Limited. The controversy centres round this simple point: Does an existing company have the right to ask existing shareholders to cough up new capital in the proportion of 25 ordinary shares for every three held, as well as one preference shares of Rs 100 each for every two ordinary shares held?

The answer clearly depends upon whether or no such rights issue will have the effect of causing a depreciation in the worth of investors' holdings.

It is undoubtedly true that many an investor may not be able to muster the resources necessary to exercise his right fully. It is equally true that such investor may face a temporary fall in the prices of ordinary shares. And it is undeniable that he will have to go without dividend for a short period.

But is the game worth the candle? It seems to me, if recent new issues are any sign, that investors are well content to subscribe to new offers which have no chance of giving a return for years to come. This is because, may I suggest, the investor of today is first and foremost interested in the growth element of his shareholding. (The fact that capital gains attract a lower volume of tax than dividends may have something to do with this preference).

You have, in Straw Products, a paper company already established in the line. You have an ambitious expansion programme, whose soundness is attested to by the underwriting of the new issue as to Rs 1 crore by the ICIC and the IFC. Having regard to the high popularity of paper shares, you have the reasonable certainty of Straw Products, upon going into production by early 1962, quoting at considerable premium. And, finally, you have the fact that the company law requires such issues by existing companies being offered in the first instance to existing shareholders.

Of course, JK as an industrial group could have brought a new company into being for this project. But the fact of Straw Products already being in the line apparently influenced JK to take the decision that they in fact have taken.

I leave it to the reader. Is it a disadvantage to be offered a rights issue which has every favourable chance of quick and early growth?—Or is it advantageous, this offer to Straw Products' shareholders,

£ R$

Investment Notes:

THE shares of Amar Dye-Chem. have been ruling very firm at Rs 295. It is expected that the working of the company will show improved results for the current year. Market circles are confident that, as the arrears of dividend on the Preference shares have already been wiped off, the company will be in a position to declare a maiden dividend.

Straw Products Limited has proposed a rights issue of the value of Rs 2 crores for raising a part of the finance for setting up a paper mill in Orissa. Existing shareholders are offered 25 new ordinary shares of Rs 10 each, at par, for every three shares held and, in addition, to a preference share of Rs 100 for every two ordinary shares held.

The recent proposal for a rights issue by the Century Spinning and Manufacturing Company is not expected to be made before the close of the year as per the terms of sanction of the Controller of Capital Issues. In this respect, an extraordinary general meeting has been convened on the 1st December, 1959. Meanwhile, the directors have decided to pay the dividend to the preference shareholders immediately after the close of the year as it is, after all; a fixed contingent liability which the company can well pay without having to wait for the accounts to be finalised. The entire preference dividend for 1959 will be paid on or after January 15, 1960.

Brooke Bond Raises Dividend

Balance-Sheet Reviews:

THANKS to a substantial rise in profits, Brooke Bond Estates India Limited has raised the Ordinary dividend from 10 to 12½ per cent for the year ended 30th June, 1959. The crop of tea manufactured is higher at 3.20 million pounds against 3.00 million pounds, while the average price realised, after deducting all tea sale charges and cost of export rights, is Rs 2.29 per pound against Rs 2.10 in the previous year.

The net profit for the year, after providing for Depreciation and Taxation, amounts to Rs 6.81 lakhs as against Rs 3.90 lakhs in 1957-58. Except for Taxation provision, which is raised to Rs 9.03 lakhs from Rs 4.79 lakhs, all other allocations have been reduced: Depreciation amount from Rs 2.44 lakhs to Rs 2.38 lakhs; Capital Reserve from Rs 17,424 to Rs 3,214 and Development Rebate Reserve from Rs 42,500 to Rs 20,000.

As regards the new season 1959-60, the prices to date have been at a lower level than last year; but there is some indication of an improvement in the market in the remaining part of the season.

Indian Iron

According to a short report issued by the directors, the Indian Iron & Steel Company Limited has made a net profit of only Rs 1.17 crores for the year ended 31st March 1959 after providing Rs 2.00 crores for Depreciation; Rs 18.63 lakhs for Taxation and Rs 3.11 crores for Reserves. The net profit for the previous year amounted to Rs 1.18 crores after a provision of Rs 1.40 crores for Depreciation; Rs 2.03 crores for Taxation and Rs 2.12 crores for Reserves. No further is recommended, as the directors had already made it clear on the 11th August 1959 that the interim of Re 1 per share would be final for the year. The annual general meeting will take place on the 21st December, 1959.

An encouraging feature is the increased production during the year under review. The outpu of pig iron has increased from 733,945 tons to 959,933 tons; Steel Ingots from 507,580 tons to 608,205 tons and Saleable Steel from 410,558 tons to 496,217 tons.

£ R$

Tube Investments

The accounts of Tube Investments of India Ltd have been made up for thirteen months ending July 31, 1959 to bring them into line with the United Kingdom Tube Investments. The accounts are also of the two units merged together, viz., The T. I. Cycles Ltd and Tube Investments Ltd in January 1959. Thus, the Balance Sheet total has increased to Rs 4.67 crores from Rs 2.59 crores. Fixed assets are higher at Rs 2.76 crores against Rs 1.24 crores.

There was difficulty in obtaining raw materials and the working results naturally were adversely affected. The Tube Investments of India Ltd had to remain closed due to the handicap of nonavailability of raw materials. Due to unchanged selling prices and higher working costs, the net profit for the 13 month period, before providing for taxation and depreciation, was Rs. 69.54 lakhs in 1957-58. The T. I. Cycles alone earned a net profit of Rs 72.99 lakhs. Depreciation allocation is at Rs 14.26 lakhs and taxation Rs 23.00 lakhs. General Reserve transfer amount is Rs 5.50 lakhs and dividend equalisation reserve gets Rs 2 lakhs. The Development rebate reserve allotment is Rs 8.17 lakhs. A dividend of Rs 10 per share taxable is to be paid on increased capital of Rs 1.63 crores. The T. I. Cycles had declared for 1957-58 a dividend of 10 per cent tax free on its old capital of Rs 70 lakhs.

The Directors' report also refers to the considerable expansion that has taken place in the factory. Besides the Hercules cycles, another brand also has begun to be manufactured. A second mill is to be put into commission. In the near future, a second plant for cold rolling mill is to be installed. Cycle chains and industrial chains are to be produced before long. The saddle factory plant will be shortly installed.

£ R$

KCP

The KCP, Ltd's annual report for the year ending June 30, 1959, places the profit, before providing for taxa-

tion and depreciation, at Rs 34.11 lakhs against Rs 30.73 lakhs in 1957/58. Depreciation amount set apart is Rs 13.36 lakhs against previous year's Rs 9.9 lakhs. Development reserve transfer is lower at Rs 2.25 lakhs against last year's Rs 12.50 lakhs. Equalisation reserve gets Rs 5 lakhs. General Reserve allotment is at Rs 24 lakhs against Rs 9 lakhs in the previous year. A taxable dividend of 15% is declared to be paid on the reconstituted capital (Deferred shares having been extinguished).

Among the sugar production concerns, KCP's progress appears to be very good. It has also other lines, as the Macherla cement factory with production of 58,027 tons in the year under report. The expansion of the cement factory is under progress. The Tiruvottiyur (near Madras) factory has been expanded with modern plants for manufacture by four complete plants at the daily rate of 1,000 tons, two other cement plants with 300/600 tons daily capacity, 4 sulphuric acid plants with 50 tons daily outturn and four superphosphate plants with 150 tons daily each. The recent issue of preference capital to the tune of Rs 40 lakhs, it is reported, has been considerably oversubscribed.

£R$

Waterfalls Estates

The annual report of the Waterfalls Estates Limited for the year ending June 30, 1959 shows a net profit of Rs 6.2 lakhs against the previous year's Rs 8.49 lakhs. Managing Agency commission is at Rs 1.2 lakhs. Depreciation allocation is Rs 1.09 lakhs, taxation allocation is at Rs 4.5 lakhs. The allocation for general reserve is Rs 2 lakhs. Dividend on ordinary shares at 12½% absorbs Rs 3.93 lakhs, and the Preference dividends Rs 42,850. The carry forward is Rs 1.17 lakhs against Rs 1.34 lakhs brought in. The tea crop yield was 11,30,431 lbs as against 12 lakh pounds in the previous year.

£R$

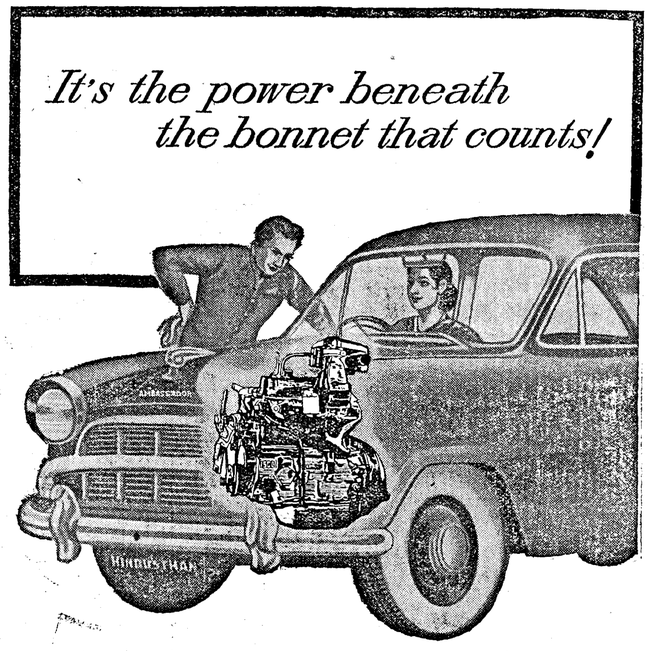
Marikar Motors

The annual report of the company for the year ended 31st March, 1959, after providing for all changes, shows a net profit of Rs 1,39,933 against Rs 1,09,909 in the previous year. Along with the amount of Rs 1,119 brought forward from last year, the available sum is Rs 1,41,052. Taxation reserve gets Rs 80,000, Rs 7,500 is provided for Doubtful Debts Reserve, and the dividend on preference shares absorbs Rs 12,555. A dividend of 9 per cent is recommended on ordinary share. The same dividend was declared last year also. This absorbs Rs 38,887. The carry forward is Rs 2,110.

The capital of the company is Rs 6,44,806 and the General Reserve stands at Rs 4.02 lakhs. Sales during the year amounted to Rs 62.39 lakhs against Rs 68.13 lakhs during the previous year.

£R$

Central Scientific Supplies



The annual report of the company for the year ended 31st March, 1959 shows a profit of Rs 1,03,671 after providing for depreciation and all other charges. The profit for the previous year was Rs 83,405. Along with the previous years brought forward of Rs 5,452, the total available amount for distribution is Rs 1,09,123 The participating preference dividend of 6 plus 2 per cent absorbs Rs 12,000. A dividend of 10 per cent has been recommended on ordinary shares including 5 per cent interim dividend already declared. This absorbs Rs 15,000. Tax allocation is Rs 50,000. Dividend Equalisation Reserve is Rs 70,000. A sum of Rs 15,000 has been transferred to General Reserve making the total under this head Rs 1,65,000. The company's profits are an alltime record. The aggregate of the reserve stand at Rs 2.42 lakhs against the paid-up capital of Rs 3.00 lakhs.

£R$

Amalgamated Coffee

The profits for the year ended 31st March, 1959, amounted to Rs 1,22,508 against the previous year's Rs 2,08,306. Provision for depreciation is at Rs 70,622, Debenture interest and tax thereon is Rs 40,752, provision for Kerala Agricultural Income-tax Rs 97,507. The profits along with the carry forward sum of Rs 1,21,432 make available a sum of Rs 2,43,939. The 6 per cent preference dividend absorbs Rs 36,000. A dividend of 7½ per cent has been recommended on the ordinary shares absorbing Rs 50,625. Deveolpment Rebate is allotted Rs 1,00,000. The balance of Rs 57,314 has been carried to the current year.

During the year, the company realised 130 tons of coffee and 72,117 lbs

Yes, there's power beneath that bonnet all right—the kind of surging power you need for a quick pick up, safer overtaking and faster cruising. of cardamom. Last year's harvests were 5,580 cwts of cured coffee and 35,076 lbs of cardamom.

£R$

Nonsuch Tea

For the year ended 30th June, 1959, the company's profits after providing for taxation amounted to Rs 6,92,982 against the previous year's Rs 8,23,795. The profits, along with Rs 56,591 brought in from the previous year and Rs 2,655 transferred from the provisions no longer required, make the total sum available Rs 7,52,228. April last's interim dividend of 10 per cent absorbed Rs 2,31,000. The additional labour bonus for 1957 and balance bonus and commission for 1957-58 absorbed Rs 25,051. Previous year's sales tax absorbed Rs 27,172. Development Rebate transfer amount is Rs 11,430. A final dividend of 10 per cent has been recommended. This will absorb Rs 2,31,000. Development Rebate Reserve transfer amount is Rs 1,00,000; Rs 50,000 has been set apart for contingency reserve. Current year's carry forward is Rs 35,375.

Reduced profits had also reduced the dividend from 35 per cent tax free dividend to 20 per cent taxable this year. The tea crop realised during the year under report was 10.20 lakh lbs against 12.20 lakh lbs last year. For 1959-60, the estimated crop is 10 lakhs lbs.

Peninsular Plantations

The profits of the company for the year ended 28th February, 1959, after providing for income-tax and Development Rebate, are reported at Rs 2,01,156 against last year's Rs 1,05,562. Along with last year's carry forward of Rs 43,071, the sum available for allocation is Rs 2,44,227. The Directors have recommended a dividend of 20 per cent free of agricultural income-tax. This includes the 12½ per cent interim dividend already paid. The dividend absorbs Rs 1,20,000. A sum of Rs 60,000 is transferred to the General Reserve and the balance of Rs 64,227 is carried to the current year. The previous year's dividend was 15 per cent.

The Company's rubber crop was 341,789 lbs against 271,910 lbs in the previous year. Revenue derived from the Company's coconuts and arecanuts in the year under report was stated to be Rs 48,647 against the previous year's Rs 38,545. The cardamom crop marketed was 16,042 lbs against the previous year's 6,725 lbs.

£R$

Karanpura Collieries

The Karanpura Collieries Limited has reported a slight decline in earnings despite a rise in sales from Rs 31.21 lakhs to Rs 34.75 lakhs for the year ended 28th February, 1959. The net profit works out to Rs 1.95 lakhs against Rs 2.13 lakhs in the previous year. The directors have provided a sum of Rs 1.75 lakhs (Rs 1.52 lakhs) for Depreciation; Rs 2.30 lakhs (Rs 1.74 lakhs) for Taxation; Rs 17,000 (Rs 30.000) for Wealth Tax and Rs 48,000 (Rs 4.200) for Statutory Development Rebate Reserve. No provisions are, however, made for Taxation Contingency Reserve and Development Rebate Reserve against Rs 32,600 and Rs 29,000 respectively in 1958. The dividend on the Ordinary shares is maintained at 5 per cent.

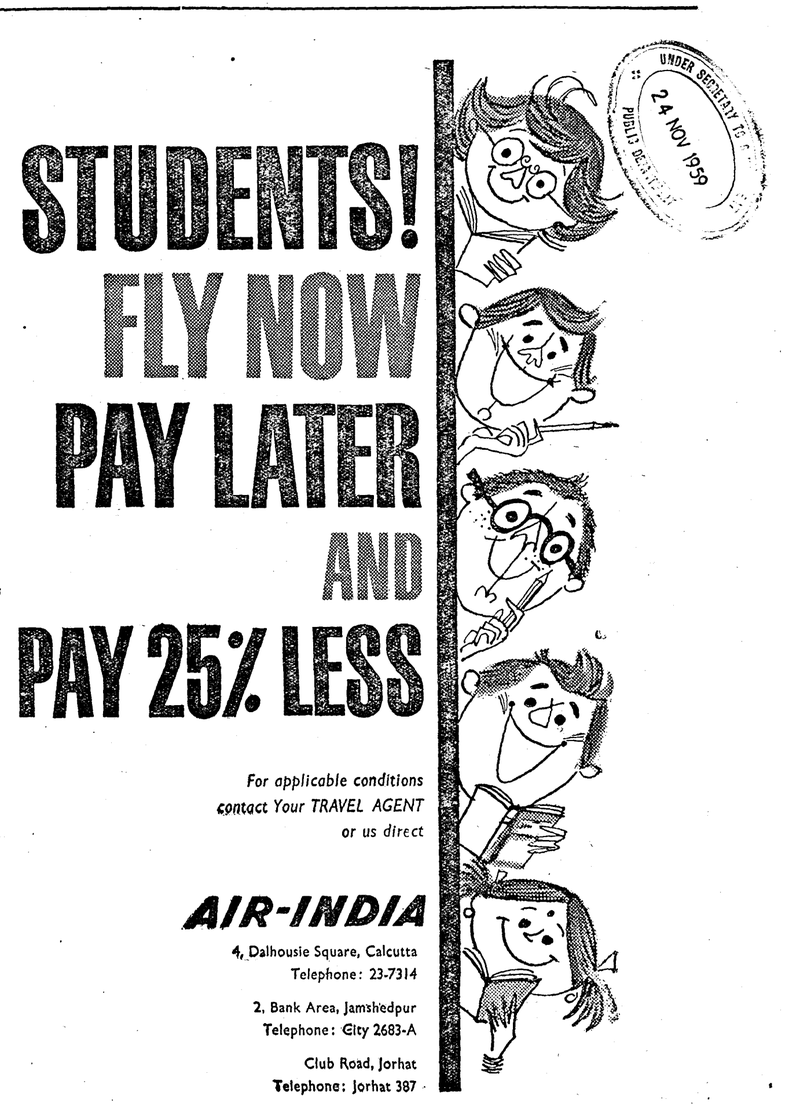
Raisings have risen to 171,391 tons from 167,051 tons. while despatches are lower at 172,923 tons against 164,095 tons.

£R$

Western Bengal Coalfields

Western Bengal Coalfields Limited has earned a net profit of Rs 2.82 lakhs for the year ended 31st March, 1959 as against Rs 2.19 lakhs in the previous year. Sales have risen to Rs 49.05 lakhs from Rs 40.04 lakhs.

In respect of allocations, the Taxation provision is raised to Rs 2.45 lakhs from Rs 1.25 lakhs; Wealth Tax to Rs 23,237 from Rs 23,239 and Development Rebate Reserve to Rs 82,171 from Rs 22,500. The Depreciation amount is, however, reduced to Rs 2.78 lakhs from Rs 3.06 lakhs. The dividend is maintained at 40 nP per share.



According to the directors' report, working at the Samla Manderboni Colliery continues to be difficult due to various troubles in sand-stowing; and it may not be before December 1959, that full normal working can be resumed.

In further development programmes, the directors have included the opening up of the Jambad seam at the Moira Colliery. The progress of this scheme is satisfactory so far, as sinking has reached a very advanced stage. Initial production from this seam will be available some time by the middle of next year.

from freight amounts to only Rs 2.04 crores against Rs 2.87 crores, while the net profit, after providing for Depreciation and Taxation, is substantially lower at Rs 31.76 lakhs Rs 73.32 lakhs.

In respect of allocations, the Depreciation amount is raised to Rs 50.99 lakhs from Rs 36.60 lakhs, while no provision is made for Taxation against Rs 10.50 lakhs. After transferring a sum of Rs 15.00 lakhs from General Reserve, the directors have been able to set apart Rs 29.50 lakhs (Rs 28.65 lakhs) for Development Rebate Reserve. No provisions are, however, made for General Reserve and Dividend Equalisation Reserve against Rs 14.00 lakhs and Rs 10 lakhs respectively allocated against these items in 1958. A dividend of 15 per cent is recommended, both on the fully and partly paid up ordinary shares.

The Jagat Trading Company (Private), Limited, a subsidiary of this company, is in the process of being wound up. The share capital has been returned to the shareholders. The small surplus left will be distributed to the shareholders on finalisation of income-tax assessment for the accounting year 1958-59 and the winding-up will thereafter be completed.

£R$

Mukand Iron

The Mukand Iron & Steel Works Limited has reported encouraging results for the year ended 31st March, 1959. The gross profit has risen from Rs 24.42 lakhs to Rs 37.21 lakhs, while sales are substantially higher at Rs 3.56 crores against Rs 3.03 crores. After providing Rs 3.40 lakhs for managing agents' commission (Rs 2.21 lakhs); Rs 3.86 lakhs for Depreciation (Rs 2.86 lakhs) and Rs 15 lakhs for Taxation (Rs 8.80 lakhs), the net profit amounts to Rs 14.94 lakhs against Rs 12.55 lakhs in the previous year.

The directors have provided Rs 8 lakhs for General Reserve (Rs 4 lakhs); Rs 2 lakhs for Development Rebate Reserve (Rs 80,000) and Rs 20,261 for short provision of taxation for previous years. A dividend of 80 nP per equity share plus 20 nP a share as bonus, free of tax, has been recommended. The dividend on the Deferred shares is Rs 2.55 and the bonus is Rs 6.50.

Production in the steel rolling mills has moved up from 33,982 tons to 38,966 tons. The output at the steel foundry has, however, declined to 4,351 tons from 4,869 tons.

The company has received permission from the Government to increase substantially its steel-making capacity. A new electric furnace with a roughing mill will be installed at a new site to be acquired. With this expansion, the company's dependence on outside sources for the supply of billets will be less.

The company has also been permitted by the Government to increase its steel foundry capacity to 7,800 tons per annum. Foreign exchange to the value of Rs 19.8 lakhs has been allocated to the company for the import of machinery from the USA under the Export-Import Bank arrangement with the Government of India.

Community Development

OF all our endeavour of development, none has been so continually under scrutiny as our Community Projects. Conceived in a somewhat paradoxical spirit of enthusiasm and humility some seven years ago, the experiment itself simultaneously provided for periodical introspection. The Programmes Evaluation Organisation was the agency devised for the purpose and its annual reports have provided an "achievement audit" of a rigour that hardly any other activity of Government has had to undergo. There were other investigations, notably one by the Balwantrai Committee, which made important recommendations. Side by side with these assessments, there were others by "outsiders" who saw in the Indian experiment a hope for the entire underdeveloped area of the world. The Government of India, with commendable public spirit, have themselves asked for such critical estimates of the experiment. The latest such appraisal is by a mission under the auspices of the UN Technical Assistance Administration which toured the country early this year and has now made public its report. Besides these reports, there are the various seminars organised by the Ministry of Community Development which have acted as useful clearing house of ideas on the subject. Thus, an impressive body of literature has grown around the subject.

The trends are clearly discernible in all the evaluations. One is the almost unanimous conviction that the idea is fundamentally sound and that its long term implications make it a genuinal social experiment. In the words of the UN Mission, "The Community Development Programme is one of the major experiments of the Twentieth century the results of which are of world wide interest. It represents an effort of unprecedented magnitude to establish a progressive system of agriculture in a land of impoverished soil and a more democrative social structure in a hierarchical society." This view is accepted by even the most unsparing critics of actual performance in particular directions. The second trend is the disappointment over the chasm that still divides the promise from the fulfilment of the idea. There are, of course, degrees of disappointment; on the whole, it is an interesting fact that foreign observers, even when keenly aware of particular deficiencies, are less doleful than our own evaluators. This difference tells us less about the relative rigour in standards of expectations than about the relative involvement in the experiment. Our own impatience is a measure of our hopes from the idea, whereas the outsider's curiosity is less burdened with aspirations. Moreover, our preoccupation is more narrowly technical than that of the outsider. In such evaluations, the question is not whether the experiment is at all worthwhile (which proposition is taken for granted) but whether it cannot be made to yield better results.

There is, however, the danger that these exercises in retrospection may quite conceivably be destructive of morale. The widespread apathy—of which evaluation reports themselves often complain—is in some measure due to the impression that the projects are not working as well as they should and, therefore, not worth while. Since the most fundamental change sought to be effected by the experiment is in regard to the attitudes to rural development, an affirmation, in non-propagandist contexts, of the basic soundness of the idea and of the success attending it would seem to be as much a necessity as unsparing self-criticism. Moreover, most evaluations, being statistical, seem to bring to their tasks a measure not entirely suitable for the purpose. Community development is not a hardy annual. It is more like the village banyan tree, whose full stature is reached after long years of growth.

A certain amount of responsibility for this distortion of emphasis in evaluation has to be borne by the original conception of the Community Projects. In somewhat excessive zeal, it was thought that the fruits of conscious community development could be gathered if the entire country was somehow brought under the project administration. Thus, as originally planned, the Second Five Year Plan was to witness the covering of the entire country by these various blocks. The Balwantrai Committee saw that this "target-orientation" was making us clutch at the shadow of the idea while the substance was slipping by. The UN Mission, too, advocates an even slower pace of expansion and suggests a period of consolidation of such achievement as has already taken place. The notion that a few years of intense community development at the block stage would be sufficient to release self-sustaining forces of development led to the creation of the so-called post-block areas with disastrous results. These areas, suddenly thrown back on their own resources, reverted to an earlier apathy. It may be righteously felt that it would be wrong to pamper people for too long and defeat the very purpose of self-reliance by postponing the date of "normalcy". But, in the conception of community development, the normal state is one in which the village is provided with a minimum of technical and managerial skill represented by what is now provided at the block level. This does not mean indiscriminate continuation of assistance for ever. Indeed, the UN study team finds that there is a paradoxical situation in which there is both over-staffing and under-staffing. About 25 per cent of existing personnel could be weeded out without any noticeable difference to achievement, whereas about 25 per cent of posts are still unfillled. The problem of staff is peculiarly difficult, for, the duties demanded of the personnel are particularly exacting, and therefore training and orientation are necessary besides aptitude and even idealism.

The UN study team has given detailed practical advice on all aspects of rural development. On an endeavour in which evaluation has been so continuous, advice given cannot be startlingly original, but it is nonetheless important. The central finding, already hinted at, is that it is easier to open new blocks at the rate of 300 a year than to consolidate the 2,700 and odd that already exist, but that the easier task is not worth attempting if we have the long term objectives of the experiments in view. This was also the view of the Balwantrai Committee, though the Committee suggested the postponement of the covering of the entire country by community projects only up to 1963. *It is necessary* that rigid commitment to targets does not make us lose sight of the essential objectives.

The Mission has also much practical advice to give on agriculture, which it rightly considers to be the principal preoccupation of community development. On the larger question of decentralisation, as a prerequisite of changes in attitudes, it states the case for and against without committing itself. The Balwantrai Committee had firm views on the subject in favour of decentralisation and certain States like Rajasthan have already launched on further decentralisation. The experiment will be watched with much interest and some misgiving. While the institutional changes necessary for the change in human attitudes must be made side by side, it is also necessary to see that there is at least a partial readiness for the responsibilities implied. But community development is an act of faith in many ways and it may well turn out that the confrontation with responsibilities will bring forth the best in our rural population.

The Plan Debate

THE great debate on the Third Five Year Plan was formally inaugurated last month with the discussions on the Congress planning body's report by the *All India Congress Committee*. And, very properly, the debate has been taken up in other forums. For, as the Prime Minister told the AICC, a report of this kind could not be an inflexible document. "It only indicated the lines of thinking, the lines of basic approach and strategy of approach, in which, largely speaking, there would be changes." The tentative nature of the planning body's proposals is further emphasised in a note circulated by the AICC office to Pradesh Congress chiefs asking for their views on the report and on the discussions thereon at the last session of the AICC.

Three points emerging from the discussions as set out in the note deserve special attention. Firstly, the Congress is no sect with a rigid dogmatic approach to the problem of India's development. This can be fairly regarded as a hint that the energy wasted in sterile debate on the Socialist pattern could be diverted to more fruitful channels. Secondly, it is pointed out that the estimated outlay of Rs 10,000 crores for the Third Plan is not any settled figure. This is an invitation to independent assessment of the scale of effort required for achieving the take-off stage of the national economy, the resources required for the purpose, the resources in sight and the measures necessary to close the gap. The third important conclusion emerging from the discussion is the suggestion that the political climate in the country and the economic and other forces should be taken into account in any workable programme of planned develop-

ment. It has also been made clear in the Circular that the Congress approach to planning will not be finalised without taking into account the views of the Pradesh Congress committees and others. The reference to others is not without its significance.

As the guiding lines for the work of the Planning Commission are bound to be drawn by the Congress, there is an obligation on every one in a position to influence the course of economic development to speak out on the programme as a whole, or on particular aspects. The responsibility of the spokesmen of the private sector in this respect is all the greater, for, whatever the allocation of outlay between the public and the private sector, latter will have the crucial role of translating the total outlay in concrete terms of consumption units. And until that is done, planning will have no meaning for the common man and will not, therefore, be successful in maintaining the tempo of enthusiasm necessary to see the Plan through.

The Federation of Indian Chambers of Commerce and Industry has already given an indication of its approach and is engaged in drawing up a draft outline. Now is the time when the different units which together constitute the private sector can make the most effective contribution to the debate on the programmes of development. Their contribution will be fruitful to the extent that they are more practical than philosophical. It is against this background that we welcome the views expressed by Mr M. L. Shah in his presidential address to the Second Quarterly meeting of the Indian Chamber of Commerce.

Mr Shah has confined himself to the definition of attitudes on some of the major issues instead of going into the details. He has underlined the importance of a Plan of adequate size to ensure a rate of economic growth which will overtake the growth of population. In this context, he has made the very relevant point that we should not overemphasise the limitation of the resources now available and "overlook the possibilities of developing the resources further". He has also drawn attention to the creditable record of the private sector under both the First and Second Plans and the greater contribution it could make to the success of the Third if given the chance to "operate under conditions which are less rigid and free from restrictions". He might have avoided dragging in the West German Miracle, for, this particular horse has been ridden to exhaustion and is entitled to rest. But he has done well to join issue with those who raise the bogey of monopoly which has been exploited to the detriment of economic progress. The greater danger is the concentration of economic power and the responsibility for economic decisions in the hands of the Government. As Mr G. D. Birla warned in his address to the Chamber last week, the administration is already showing signs of breaking down under the strain.

While recognising that "the public sector is a desirable and a necessary part of the country's economic growth", Mr Shah has pointed out that "it must operate in a sphere where it could augment the national income rather than replace the existing channels of production and trade." And he has discussed the performance of the STC to reinforce this conclusion.

It was inevitable that Mr Shah should refer to the burden of taxation which has led to disinvestment and to the change in the terms of remuneration and tenure of managing agents which he fears will have a disincentive effect "which cannot but have repercussions on the further industrialisation of the country". We rate the patriotism and public spirit of the Indian business community too high to agree readily with this gloomy forecast.

Are Weak Finances a Cause of Trade Union Irresponsibility?

By M. SUR

THE last Indian Labour Conference discussed to some extent the problems of trade union organisation and finance, and it was decided to make legal provision for a minimum union membership fee of 25 nP per month, and to give the Registrars of Trade Unions authority to inspect account books and registers of trade unions. The collection of trade union fees was apparently not discussed, but it is one of the fundamental weaknesses of the trade union movement in this country that it is chronically short of funds and therefore is not only precluded from developing the kind of activity which has been so helpful in other countries in welding union members together, but is also forced into spectacular action as much for financial reasons as for any other. Payment of trade union subscriptions is partial and irregular, and their collection is difficult. A dispute which looks as if it may lead to adjudication, therefore, provides a good opportunity to collect funds which would otherwise come in slowly and spasmodically. Money can be obtained for a "fighting fund", while it is very difficult to obtain for ordinary administrative purposes. Direct action may increase membership, whereas steady day-to-day work to improve conditions of employment through negotiation may lack the lustre that draws in both members and cash. Lack of a continuous feeling of solidarity weakens the union's control over its membership and is likely to lead to irresponsible action.

Despite the efforts of the various central bodies, the majority of trade unions remain fragmentary in growth, and therefore at the best have only limited funds. We have still to see a single industrial union in most of the major industries. What we see is a series of local unions usually affiliated to the INTUC or the AITUC, but not a single strong union covering a whole industry. In the West, unions like the Amalgamated Engineering Union in the UK and the Automobile Workers' Union in the United States can undertake development work through workers' education programmes and training courses in negotiation and collective bargaining, or run convalescent and holiday homes for their members; but, in India, no union, except perhaps in the railways, is large enough or stable enough for such activities. Even for training, they mostly look to Government to sponsor it.

Our trade unions are now part of the democratic set-up of the country; the central bodies form part of the normal tripartite machinery consulted by Government on all major problems of industrial relations. Yet it cannot be denied that the movement as a whole remains weak, despite all the efforts of the Government to establish it as a "third estate". This weakness can be attributed to the intervention of political factors and the unfortunate rivalries between unions of different political ideologies, but that is not the whole story. They are essentially weak because their growth has been spasmodic and because they are financially unstable. The time is long past when employers could feel it was an advantage to keep trade unions weak and fragmentary. The policy which they adopted at one stage of preventing industrywise or national build-up of trade unions by giving recognition only to those which had no outside affiliation, has now had a boomerang effect, for the very weakness of the majority of unions has made them the more aggressive and irresponsible. Loyalty to a union is not built up easily. It is noticeable in this country how, after four or five years, even the apparently stable union begins to crack. That is the moment for a rival to step in, when employees begin to think that they have got all they can out of the old union and a new union may be more aggressive and wrench further concessions from the employer. It then becomes apparent that the loyalty to the original union was not based on conviction of a common purpose, but on the hope of material gain. Unions have got to build a deeper sense of loyalty if they are really to be effective. They must develop other activities which will interest their members, and which will draw in the employee who is not keen on "union politics". They have to make their members feel that membership is an act of solidarity and that the union can provide much more than mere leadership in a dispute, just as the professional man joins his professional association, not for any personal gain, but for the common purposes of the profession. In its present state of financial weakness, it is doubtful whether the trade union movement in India can ever achieve this.

Can anything be done to strengthen trade unions financially beyond laying down a minimum membership fee and providing that the Registrar of Trade Unions shall inspect the account books? The time seems ripe to consider whether it would not be in the interests of all in industry to arrange collection of trade union dues by deduction from wages. This idea had its birth in the United States where it is known as the check-off system. It was the United Mine Workers of America who pioneered the system, making automatic deduction of union dues a provision of their contracts with mining employers. John F. Lewis in his book has explained how it came about:—

> "The system is the traditional way for the miner to pay any debt he owes. It started with the operators who checked off money for rent, insurance, house coal, taxes, the company store bill, hospital charges, etc."

The automatic check-off of union dues from wages became a feature not only of collective agreements negotiated by miners, but among teamsters and some other unions; but, in 1947, the Taft-Hartley Act prohibited automatic check-offs and made the system only lawful where the individual employee had executed a written assignment of his wages for this purpose for not longer than one year or for the duration of the applicable union contract, whichever was shorter. Since then, Taft-Hartly Act check-off provisions have become fairly common in American labor-management contracts. Today it is included in most of the contracts made by the United Automobile Workers.

It is argued in the States that, in a large plant, employing 10,000 workers or more drawn from a wide area, it is only at the place of work that the union officers can collect dues, and this may not be suitable from the employer's point of view. It is certainly difficult from the trade union side. To the company the actual process of check-off presents little difficulty, for, they already make similar deduction for taxes, house rent, doctors' fees and so on. Some on the other hand argue that the system widens the gap between union officials and members, but against this can be set the advantage that the energy previously spent in collecting subscriptions can be used in more constructive ways.

In the UK, neither employers nor workers favour the system. The Trades Union Congress are opposed to it so far as Britain is concerned, but they recognise that the position may be very different in underdeveloped countries, and they are therefore not averse to its adoption in some of the colonial territories.

In West Africa, the check-off system is regarded by many nowadays as a means to strengthen the growth of a responsible trade union movement. The United Africa Company, subsidiary of Unilever, and the largest employer of plantation and factory labour, has had a voluntary check-off system operating for some years in Ghana by agreement with its union. Special provision for the check-off system has been made in the Industrial Relations Act passed in Ghana this year. It provides that any certified union can make an application through the TUC for collection of union dues by deduction from wages and the employer is bound to agree. The dues are paid over by the employer in the proportion of 40 per cent to TUC and 60 per cent to the trade union. The deduction is compulsory for all the union members covered, unless they individually contract out by notice to the employer.

In India, so far as the writer is aware, the check-off system has only been seriously discussed by management and labour in the Tata Iron & Steel Company, who in their last collective agreement gave adherence to the principle and promised to introduce the system provided necessary amendments were made to the current law. At present, for an employer to deduct trade union subscriptions from wages would be illegal because it is not one of the deductions permitted under the Payment of Wages Act. Various other deductions are allowed, e.g., for house accommodation and certain other amenities provided by the employer, and for contributions to co-operatives and national savings, and it would be a simple matter to amend the law to include deduction of trade union dues.

The Ghana system of compulsory check-off with voluntary opting out is not likely to appeal in India and would certainly raise difficulties where there are conflicting claims to membership from rival unions, but the voluntary check-off to which the individual employee agrees in writing, as in the USA, would be practicable and in line with the present procedure under the Payment of Wages Act.

What are the benefits that would accrue? First, from the trade union point of view, it would introduce an element of stability into their organisation, and an opportunity to develop further activities. It would undoubtedly increase their revenue, for there is no doubt that at present payment of dues is partial as well as irregular. From the worker's point of view, it would avoid the temptation of putting off payment of dues because of other pressing demands on the purse. It would be comparatively painless, since money not received is parted from with less regret than money deliberately handed over. But more important than these, it would be a protection for the individual worker against intimidation from the officials of a rival union. This all too frequently occurs, although it may not be admitted by the unions concerned. An instance is within the writer's knowledge, where the unfortunate employees were paying dues to two rival unions simultaneously for the sake of peace. They were pursued by a very genuine fear, for, some of their number had been beaten up by members of "the other side", and forcible collection of subscriptions was the normal procedure.

Employers' reactions are normally against the whole idea of check-off. Naturally, they feel that the unions should manage their own affairs and that an organisation is pretty feeble if it cannot collect its own dues. But this is to shut one's eyes to the very real difficulties, especially in the large or dispersed company, of collecting union dues. A railway or an inland water transport worker, for instance, may be always on the move, or a unit of a company may be far removed from its headquarters. Collection of dues under such conditions is not only time-consuming, but may be costly to the trade union organisers. There are, however, real benefits that the employer may gain under the check-off system, as found by the United Africa Company. Failure to abide by an agreement on the part of the union would entitle the employer to refuse to make the deductions. This makes a union check its actions against its written obligations. In West Africa, both Government and TUC officials have used this sanction to discipline intransigent local unions.

There is, therefore, something to be said on all sides for a move toward making the system of check-off legal in India so that experiments can be made through collective agreements. Tatas have already committed themselves to such an experiment and doubtless other enterprising companies would also be prepared to try it out. The idea is new to India, but it is worth consideration.

A Burning Question

IN more than one sector, the Indian economy continues to present a weird picture of resources—human and material—being wasted or under-utilised, misused or excessively exploited. It is in this context that the consumption pattern of domestic fuels acquires the character of a burning question which, for the first time, has come in for systematic quantitative assessment in a survey report prepared by the National Council of Applied Economic Research for the Union Ministry of Commerce and Industry. The Council's overall estimate is that the energy used as domestic heat amounts annually to about 97 million tons of coal equivalent, of which cattle and dung cakes account for 39 million tons and firewood and agricultural wastes for 55.5 million tons. In the light of the elaborate enquiries made by the Council, this estimate may be taken as more reliable than the former guesses made by other authorities.

It would appear from the statistical dimensions of the problem that cattle dung, which is so very sorely needed for the semi-starved soils, represents as much as 40 per cent of all domestic fuels. In terms of wet dung weight, this loss amounts to 390 million tons, representing, in turn, anything up to 45 per cent of the entire out-turn of wet dung by the country's cattle population; in terms of additional foodgrains production which could be had from the application of that much dung, the loss represents 9 million tons. This, however, should not be taken to mean that the remaining 55 per cent of the total out-turn of wet dung is made entirely available for manuring, for, there is no reliable estimate of dung used as fuel in cremation and in village brick and pottery kilns. The loss should be even greater because the agricultural wastes which are burnt away as fuel instead of being converted into compost manure represent as much as a fourth of all domestic fuels. While, thus, so much that is taken from land by way of cattle dung and wastes is not returned to it, the goal of soil management is well nigh unattainable unless, of course, substitute fuels are found. Such substitute fuels might have to replace firewood also in the coming decades at least in the urban areas, if the alarming trend of deforestation is to be checked or if there is going to be no extensive afforestation to restore the delicate natural equilibrium which seems to have been upset by excessive felling of trees. It is here that the National Council's report acquires greater significance. Although the Council's recommendations, based as they are on intensive sample studies in the three cities of Calcutta, Bombay and Delhi, cover mainly the urban areas of the country, the suggestions for the rural areas, though not based on equally intensive studies, are nevertheless realistic.

Incidentally, it would be relevant to have a picture of the present pattern of consumption of domestic fuels in the said three cities. In Calcutta, the general fuel pattern is comprised of soft coke (64 per cent) combined with firewood (17 per cent); the average monthly expenditure on domestic fuels is estimated to be about Rs 10 per household. In Bombay, the common pattern is found to be kerosene (23 per cent) and charcoal (51 per cent); the average monthly expenditure on domestic fuels is estimated to be about Rs 18 per household. In Delhi, the general fuel pattern is comprised of soft coke (51 per cent), charcoal (14 per cent) and firewood (14 per cent); the average monthly expenditure on fuels is about Rs 15 per household.

In the light of these and other results of the city surveys, the National Council has come to the conclusion that a coal-based domestic fuel programme would be most suitable for urban areas and that this should be gas-oriented. It is, however, recommended that, initially, provision should be made for simultaneous manufacture of soft coke and expansion of gas supply. The progressive energisation programme, beginning with an aggregate plant capacity of 2.5 million tons of coal in 1961-62, would have to be expanded to 5.0 million tons in 1966-67, to 12.5 million tons in 1971-76, to 25.0 million tons in 1976-77 and to 50 million tons in 1981-81. If this suggested programme is implemented at an estimated capital cost of Rs 25-30 crores per year over the next two decades, it will have fully met the estimated demand of 50 million tons of coal equivalent for domestic heat by 1981 in urban areas. There is no reason why this capital outlay should not be made if the objective of domestic fuel policy is laid down as one of elimination of cattle dung, firewood and agricultural wastes from the urban fuel economy.

The rural fuel economy, it is recognised, cannot be so transformed for the simple reason that primary fuels can be used more easily only in an urban milieu. As the demand from urban areas for dung and firewood progressively decreases with the possible implementation of a carbonisation and gassification programme, the dependence of rural areas on dung and agricutural waste will be correspondingly reduced. But, then, the demand for domestic heat in rural areas will also increase with the increase in population in the next two decades and so a phased land transformation programme based on afforestation is suggested for releasing, through substitution by firewood, all the dung for non-fuel purposes by 1981-82. This is an eminently worthwhile recommendation if the objective of domestic fuel policy is laid down as one of elimination of cattle dung from the rural fuel economy. It needs to be added that the afforestation programme could be usefully oriented to suplying green manure also. For this, varieties of trees which can supply both green manure and firewood would have to be planted extensively in the rural areas. This, again, would mean a healthy revival on a wide scale, of a traditional practice which is still being followed in some parts of the country.

EDITORIAL NOTES

Industrial Production

After the apparent set-back to industrial growth experienced in 1958, the progress achieved during the current year is definitely encouraging. Mr Manubhai Shah, who analysed the record of the current year in his address to the Standing Committee of the Central Advisory Council of Industries, has emphasised the fact that "the rate of increase has recovered from the somewhat steep reduction in 1958". Last year, the rate of increase in the index of industrial production fell to 2.4 points from 4.7 points in 1957. While the index (base 1951) had increased from 132.6 in 1956 to 137.3 in 1957, it only increased to 139.7 in 1958. On present indications, the index this year is expected to rise by nine or ten points; the rising trend in the current quarter might even carry it further.

In evaluating the significance of the increase as an indication of future trends, it will be necessary to go behind the changes recorded by the overall index. Changes in the production of heavy weightage industries can give a distorted picture of the experience of industry as a whole, if only the overall index is taken into account. The major factor responsible for the decline in the rate of increase in the overall index last year was the reduced output of the cotton textile industry. As Mr Shah has pointed out, the improvement in the index of industrial production during the current year is partly due to the recovery in the major industries like textiles. The record foodgrain crop of the 1958-59 season may be expected to keep up the level of textile production during the current year, for, good agricultural seasons are followed by increased demand for cloth. The poor harvest of the 1957-58 season was followed by the slump in the textile industry last year. In spite of floods, crop forecasts for the current year are encouraging and we may expect that the Cotton textile industry will help to maintain a steady rise in the rate of increase of industrial production. By itself, this would not be a reliable indicator of industrial progress. But, fortunately, industry is not so abjectly dependent on the monsoon as the foregoing analysis might suggest. The most hopeful feature of industrial statistics is the substantial contribution made by the engineering industries, especially those engaged in the manufacture of machine tools, industrial machinery and machine building as well as those manufacturing consumer goods for export. Other manufacturing industries, like chemicals, cement, ceramics, synthetic fibres and pharmaceuticals, also report increased production. With increased availability of iron, and now steel during the current year there are bright prospects of a rapid expansion of engineering industries. The difficulties created by import restrictions are sought to be reduced by the elimination of administrative bottlenecks. Several industries have already reached or exceeded the Second Plan targets, so that Mr Shah was on strong ground when he forecast that practically all the industries would be able to show a similar performance by the end of the Plan period.

Credit for Tax Spared

THE Indo-US Agreement for avoidance of double taxation, signed last week in Washington, was aptly described by Mr Christian Herter, one of the signatories thereto, as "a further indication of the interest of the United States in the healthy development of business and cultural institutions both at home and abroad". It is from that angle that the significance of the agreement can be most clearly appreciated.

There is now widespread recognition in India of the fact that foreign aid will be more helpful if it comes in the form of private investment. This has been one of the recurring themes in the speeches of prominent spokesmen of Indian industry. Action has been taken by Governments, both in India and in the United States, to encourage such investment. The US Government's guarantee against expropriation of investments made by its nationals abroad has been extended to India in terms of an agreement between the two Governments. The Government of India would indemnify the US Government for any payments made in fulfilment of the guarantee obligations. The ratificaion of the double tax avoidance agreement will mark another significant step forward in removing disincentives to investment in India.

The United States has entered into such tax agreements with twenty-one countries, under which credit is given for taxes paid by American concerns in the countries where they operate. The agreement signed with India includes an important new provision which widens the scope of the tax credit. Under this provision, the US Government will give tax credit to American concerns not only for tax paid in India, but also for tax exemptions granted by India.

The tax concessions given by India for stimulating industrial development are available to American investors equally with others. The most important of these are the five-year tax holiday for new undertakings under Section 15C of the Indian Income-tax Act and the benefit of Development Rebate. But as the concessions given by the Government of India are taxed in America, the major beneficiary was the US Treasury and not the American investor. The new agreement will enable the latter to derive the full benefit of the concession.

The agreement is designed to foster not only the flow of trade and investment but also the exchange of technical, educational and research services. It may be mentioned in this context that, under the Indian Income-tax law, remuneration received from a foreign Government by persons coming here under technical cooperation progammes is exempted from taxation. Similarly, the list of exemptions also includes remuneration of foreign technicians employed in private enterprises in India for limited periods. These categories of tax-payers will also benefit equally with the American investors from the new "Credit for Tax Spared agreement.

*

Larger Exports

The most convincing and, at the same time, the most heartening indication of the country's industrial progress yet to hand is the estimate of the exports of engineering goods during the current year. The exports of these categories of goods, which was roundabout Rs 4.50 crores during the past three years is expected to reach Rs 6.00 crores during the current year. Heartened by this experience, the Engineering Export Promotion Council has fixed a target of Rs 8.00 crores for 1960 and Rs 12.00 crores for 1961. Mr B. S. Agarwal, Chairman of the EEPC, who gave these figures at a press conference that he addressed in Madras, considers that, if Government adopt a vigorous policy of export promotion, the volume of engineering exports could be raised much higher, and has suggested in this connexion that the Government could with advantage follow the example of advanced industrial countries like Germany and Japan in providing incentives to enable exporters to meet competition in foreign markets. As far as Indian engineering industries are concerned, the most helpful inducements the Government could offer would be the supply of steel and pig iron at retention prices, income-tax relief and provision of cheap credit for financing exports.

Exports of engineering goods are important not so much for the size of their contribution to the earnings of foreign currency as for the indication they afford of the country's industrial progress. It will take many years before engineering goods could displace tea or jute or cotton textiles in the export lists. But the fact that Indian engineering products are now being exported, not only to neighbouring countries which have yet to develop their industries, but also to countries in the forefront of industrial progress, like the USA. Canada and the UK, is certainly encouraging. For, it is an assurance that the essential technical skills are being built up in the country, which, properly mobilised, can take the national economy to what is called the "take-off stage" much earlier than envisaged in calculations of resources for investment.

WORLD OF FINANCE

The 1959 Slack Season

AT first glance, it would appear as if the 1959 slack season has proved to witness money market tendencies that have, as it were, been not so easy as in the two previous years. (The monetary indicators in respect of slack seasons during the Second Plan so far are given in the form of a table at the foot of this page). However, the figures for 1959 do not give the full picture of the slack season for the reason that, in the ultimate week, disbursements connected with Dewali affected the monetary indicators contra-seasonally and have, therefore, served to make the 1959 slack season appear less slack than it really was. It was during the week ended October 30 1959 that the following contra-seasonal movements in the monetary indicators took place:

(1) Active Note circulation expanded rather sharply by Rs 17.96 crores.

(2) Reserve Balances of member banks were drawn upon to the tune of Rs 7.47 crores.

(3) The Other Loans and Advances of the Reserve Bank expanded by Rs 11.85 crores.

(4) Deposits of the State Bank were drawn down by Rs 7.80 crores.

(5) Advances of the State Bank rose by Rs 3.66 crores.

(6) Deposits of other Scheduled Banks declined precipitately by Rs 15.42 crores.

(7) Borrowings of other Scheduled Banks from the Reserve Bank rose by Rs 10.82 crores.

(8) Advances of other Scheduled Banks expanded by Rs 5.44 crores.

It will thus be seen that the distorting impact on the 1959 slack season and the changes consequent on Dewali disbursements during the week ended October 30, 1959 have been considerable. On the other hand, it is undeniable that the increase in the investment portfolio of Scheduled Banks, including the State Bank, is somewhat short of the relevant figure for the 1958 slack season. What, then—always keeping in mind the distortion as a result of Dewali disbursements—are the highlights of the 1959 slack season, and what are the lessons that we can learn therefrom?

In the first place, a rather lower volume of decline in Balances Held Abroad has nevertheless produced an adequate contraction in active note circulation. In this sense, it is arguable that a more favourable experience in foreign exchange reserves will have had less of a contractionary influence on note circulation. That, despite the fact of an actual increase in Foreign Balances, Active Note circulation has contracted considerably can be taken to offer proof of the attempt by the monetary authorities to stem as far as it lay in their power the pressure of inflationary conditions.

The increase in the Deposits of the other Scheduled Banks has been larger than the rise recorded in the case of the State Bank; and this would indicate that it is not counterpart funds alone which have been contributing to the spectacular rise in the deposit resources of Scheduled Banks. The decline in Advances has been rather lower, even after taking account of the rise during the last week of the slack season; and this may mean no more than that the rise in the level of industrial production, as well as a satisfactory food crop, have both entailed a larger volume of bank credit. The normal slack season contraction was, therefore, partially offset by the demand arising from increase in the industrial demand arising from increase in the industrial activity.

Banks have clearly not been able to afford to keep idle cash on hand. What is more, in spite of the very much larger level of Deposits, the size of their balances with the Reserve Bank has gone down. The first charge on new and released resources was a reduction in the borrowings from the Reserve Bank. The only other direction in which the new accruing or released resources have been utilised is in adding to the gilteged portfolio. For the second year in succession, the new investment in giltedged of Scheduled Banks has been in a spectacular amount. The slack seasons since 1957 confirm that the increase in deposit resources of the banking system was no flash in the pan but, rather, a steady trend to be expected as a result of the heavy governmental disbursements. Therefore, we wish to suggest that the large scale investment in giltedged is also no accident, but likely to form a definite pattern of such utilisation of resources by the banking system during a slack season.

Attention may also be drawn to the fact that, whereas, at the beginning of the slack season in 1956, borrowings of Scheduled Banks from the Reserve Bank accounted for Rs 73 crores of the total of Rs 88 crores shown under the Reserve Bank's Other Loans and Advances, the position as at the end of the 1959 slack season is that, as against a level of Rs 92 crores representing the Reserve Bank's Other Loans and Advances, no more than Rs 14 crores can be traced to borrowings by the Scheduled Banks. The inference is that the other entities entitled to borrow from the Reserve Bank, and shown under this head, have had much larger resourse to the central banking institution.

We may also note that Scheduled Banks have, since the end of the 1957 slack season, reduced their reliance on the facility of borrowing against usance bills to negligible proportions. This, we may presume, is directly consequent upon the fact that borrowing against usance bills is more expensive.

Then, the sluggish increase in industrial production during 1958 is suggested by the fact that, as between the end of the 1957 and 1958 slack seasons, Advances of Scheduled Banks were actually lower by some Rs 25 crores. By the same token, the revival in the rate of growth of industrial production during 1959 is suggested by the net rise of over Rs 100 crores in the Advances of the banking system as between the end of the 1958 and 1959 slack seasons.

The most important lesson that the 1959 slack season offers us is in respect of the preparations that have to be taken in hand so that the banking system may be in a position to meet the demand for funds that will arise during the 1959-60 busy season. For, the figures relating to Scheduled Banks other than the State Bank make it abundantly clear that they have precious little by way of free resources which can be utilised in an expansion of the Advances portfolio. This is a subject on which we have touched on an earlier occasion, the fact being that the bulk of accruing and freed resources have already been "used" in adding to the giltedged portfolio. Thus it is that we fancy that large-scale resort to central banking credit will become necessary, if the 1959-60 busy season is to be successfully tided over.

It is, we repeat, up to the Reserve Bank to make the necessary arrangements so that productive finance is not found wanting. In this regard, one of the first things that have to be done is to have the banking system know that, for its part, the Reserve Bank would be granting liberal lines of credit. The other important suggestion is that the Reserve Bank should signify itself as being prepared to enter into a number of badla transactions, whereby banks could sell securities on "spot" basis on their undertaking, simultaneously, to repurchase after, say, six months.

If such measures are not instituted, the danger is that considerable selling pressure in giltedged may be in evidence in the money market during the 1959-60 busy season.

+

Foreign Balances: Over Rs200 Crores

CONTINUANCE of slack season conditions is suggested in the returns of the Reserve Bank for the week ended November 13. Active Note circulation has declined by Rs 8.25 crores to Rs 1696.02 crores.

Total of Advances ...	628.59	630.38	+ 1.79	725.76	698.81	—26.95	749.50	676.79	—72.71	819.64	778.74	—40.90

There has been an outflow of Rupee Coin for Rs 0.56 crores. In the result, the Reserve Bank's cash in the till has improved by Rs 8.83 crores to Rs 19.64 crores.

In the Banking Department, there is a clear hint that the Central Government have instituted deficit financing for, perhaps, Rs 15 crores. The fact that Deposits of State Governments have risen by Rs 4.93 crores to Rs 18.85 crores would suggest some element of payment received from the Central Government. And hence the deficit financing. Investments have been marked up by Rs 13.73 crores to Rs 243.29 crores. The Centre's Balances are shown lower by Rs 2.41 crores at Rs 50.44 crores. It may be noted that the State Governments, despite receipts from the Centre, have increased their Ways and Means borrowings from the Reserve Bank by Rs 1 crore to Rs 25.83 crores. The return of slack season conditions, after the interruption afforded by Dewali and then beginning of the month disbursement, is shown clearly by the fact that the Reserve Balances of member banks have risen substantially by Rs 12.94 crores to Rs 86.55 crores; practically half of the increase is traceable to the State Bank. Similarly, there has been a reduction in the indebtedness of member banks to the Reserve Bank, since the latter's Other Loans and Advances are lower by Rs 8.51 crores at Rs 81.18 crores. The State Bank, in the relevant week, has liquidated borrowings from the Reserve Bank to the tune of Rs 4.50 crores.

The rising trend in Balances Held Abroad remains unbroken with an increase in the latest week of Rs 2.93 crores to Rs 39.88 crores; the latest week's level of the foreign exchange holdings of the Reserve Bank exceeds Rs 200 crores.

The return of the State Bank for November 13 shows that an increase in Deposits, to the extent of Rs 4.19 crores to Rs 576.11 crores, and a decline of Rs 2.61 crores to Rs 150.63 crores in Advances have enabled the institution to liquidate its borrowings of Rs 4.50 crores from the Reserve Bank. There has been disinvestment in giltedged for Rs 1.44 crores and, in consequence, cash in hand and with the Reserve Bank has gone up by Rs 6.71 crores to Rs 30.94 crores.

The return of the Scheduled Banks for November 6 indicates that member banks were able without strain to meet the demand occasioned by beginning of the month disbursements. Indeed, it is worth while noting that, in every respect, except for a small element of disinvestment in giltedged, the Scheduled Banks have improved upon their position as compared with October 30. Firstly, Deposits have risen by Rs 8.29 crores to Rs 1861.11 crores, the share of the State Bank being Rs 2.27 crores. Secondly, the total of Advances has actually fallen by Rs 5.31 crores to Rs 934.73 crores, the State Bank's share being negligible. There has been an inflow of the State Bank are lower by more than Rs 1 crore. Fourthly, if regard is had to the fact that in the relevant week, the State Bank borrowed Rs 4.50 crores from the Reserve Bank, it will be seen that the indebtedness of the other Scheduled Banks to the central banking institution was reduced, during the week ended November 6, by over Rs 7½ crores. Fifthly, Cash Balances have improved by Rs 6.18 crores to Rs 164.95 crores. Lastly, the giltedged portfolio has been marked down by Rs 1.35 crores to Rs 792.75 crores.

It is to be anticipated that, in the returns for November 20, the Reserve Bank will continue to offer evidence of slack season conditions. This is also true of the return of the State Bank for the same week. In the case of the return of Scheduled Banks for November 13, we expect to see the near liquidation of borrowings from the Reserve Bank as well as, perhaps, a further sizable decline in the total of Advances.

×

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, the 17th November 1959. Total amount offered was Rs 5,45,00,000. Tenders at Rs 99.405 were accepted in full and those at Rs 99.400 were allotted approximately 19 per cent. Lower tenders were rejected. Total amount accepted was Rs 2,00,00,000 the average rate of accepted tenders being Rs 2.388 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on Monday, the 23rd November 1959. Successful tenders should make payment on Friday, the 27th November 1959. Other conditions are as usual.

During the week ended the 12th November 1959 Government of India Treasury Bills for Rs 63,70,75,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 18th November to 12st November 1959 at Rs 99.421 per cent. Sales can be stopped at any time without notice if Government think it necessary.

91 days' Intermediate Treasury Bills sold from the 11th November to 14th November 1959 amounted to Rs 1,60,00,000.

+

Who can help The Backward Peoples?

By Paul Einzig

THERE is a growing realisation in the Western world of the need for assisting underdeveloped areas to raise their standard of living. It has come to be considered imperative from an economic, social, political and humane point of view to accelerate the pace of progress in such areas. One of the main arguments in favour of economic aid to backward peoples is that unless the democratic countries see their way to grant effective assistance it will be done by the Soviet Bloc. But so far the actual extent to which aid has been forthcoming from East of the Iron Curtain has been negligible. And the recent announcement of a drastic reduction of working hours in the Soviet Union seems to rule out the likelihood of a really effective economic drive in underdeveloped areas. Even allowing for technological progress, the volume of industrial output in the Soviet Union has surely not risen to a level at which it is possible to relax productive effort and at the same time increase unrequired exports to backward countries.

Reduction of working hours augurs badly for increased aid not only on the part of the Communist countries but also on the part of Western industrial countries. There, too, the output is not sufficiently large to leave a huge exportable surplus after satisfying domestic requirements. It is a matter of simple arithmetic that if the Amalgamated Engineering Union in Britain, for instance, has its way and the working week is reduced to 40 hours, it would mean that the output of capital goods available for domestic and overseas requirements would become reduced by some ten per cent. The general acceptance of the 40 hour week would mean an all-round reduction of the total output by about ten per cent.

It is often argued that the demand for a shorter working week are really a concealed demand for higher pay, for in practice most industries would maintain the number of actual working hours around the present level and would pay overtime for the work done in excess of 40 hours. But this would only mean that the purchasing power of millions of consumers in Britain would be increased by, say, ten per cent. Since the volume of the output would remain unchanged this would mean a drastic reduction in the volume available for export to backward countries or elsewhere. It makes very little difference whether the adoption of the 40 hour week would mean a reduction of the output with consumer purchasing power remaining unchanged or whether it would mean unchanged output with consumer purchasing power increased. The net result would be the same —less goods would be available for underdeveloped countries.

It stands to reason that, in order to assist backward peoples effectively, the British worker would have to increase his output without at the same time increasing his consumption. Instead his Trade Union wants to reduce his output or to increase his consumption.

Is it not high time for plain speaking on the part of underdeveloped peoples? In Western countries the spokesmen of organised industrial workers have been all along in the forefront of the agitation in favour of economic assistance for backward countries. But if they really mean what they say they have to agree to provide the only possible means to the end they advocate. It is not good enough to demand aid for backward peoples and to hope for the best that someone else would provide it. The higher income groups in Britain as in other democratic countries are already over-taxed. There is very little that could be gained for the benefit of backward peoples if the consuming power of, say, five per cent of the population of Britain is drastically reduced. Large-scale aid could only be made available if the large majority of the peoples enjoying a relatively high standard of living were to agree to a temporary lowering of their standard of living, or at any rate to a stabilisation of their consumption in face of increasing productivity.

The realisation of the above elementary facts is liable to be deferred for some time as a result of the efforts to bring about an all-round disarmament. Even if the Soviet Union sincerely wished to achieve that end, the democratic countries would be very foolish indeed if they were to yield to the temptation to disarm so long as Communist China remains in her present mood of imperialistic aggression. A weakening of the armed power of the West would encourage Chinese invasion of the countries of Southern Asia. To try to raise the standard of living at home or abroad at such a risk would be the height of folly. It seems unlikely that the Western statesmen would lend themselves to it.

Nobody with any sense of reality should assume, therefore, that the problem of backward peoples could be solved as a result of a spectacular disarmament. The only solution lies in the willingness of the great masses of peoples in the wealthy countries to practice self-restraint and to be willing to work hard for the sake of making available the goods needed for a really substantial increase in the standard of living of the backward peoples.

It is only the underdeveloped peoples themselves who are in a position to drive home the above truths. The leaders of Trade Unions in countries with a high standard of living should be told in no uncertain terms that they and they alone are in a position to help their less fortunate fellow-men to any substantial extent. And if they prefer 40 hour week to assistance for backward peoples then let them discard all hypocritic pretence and stop shedding Hollywood tears over the fate of those whom they refuse to help.

WORLD OF JUTE

Raw Jute Production: Emphasis on Yield

THE indication that the current year's jute crop may be lower than the production last season need not cause any undue concern as to prospects of jute supply either during this year or in coming years. For, unless the weather turns out to be extremely unfavourable, the steps that have been taken in the past few years and the continuing attention that is being bestowed on the promotion of jute production in our country will ensure a progressive improvement in jute output.

The decline in the acreage under jute this season has stemmed largely from the adverse weather conditions during the sowing time in jute growing areas and to some extent from the lower prices obtaining for jute at the commencement of the season. Leaving aside the weather, the next important factor which plays a vital role in determining the size of the jute crop in any particular year is the return that the jute cultivator thinks he can get for his produce. The cultivator's ideas in this regard are generally moulded by the state of the jute market at the sowing time. It is long a well-known feature of the jute acreage that it is larger when prospects for profitable cultivation seem to be good and smaller in the year immediately preceding the commencement of which raw jute prices have displayed a declining trend.

About this time last year the question of ensuring an equitable return for the jute cultivator was prominently in the news and the Indian Central Jute Committee was of the view that fixation of floor price for jute was essential if the programme of jute production was not to get a setback. The need for ensuring a reasonable price to the jute grower has again been emphasised by the ICJC. Speaking at the annual general meeting of the Committee last week in Calcutta, Dr M. S. Randhawa has revealed that in view of the heavy investment involved in fixing a floor price, Government have not been able to accept the ICJC's recommendation. However, Government are ready to take all other measures. The ICJC has now recommended a four-fold measure to achieve the objective of stabilising raw jute prices. The steps are to be taken when prices show signs of sagging. They are (1) The IJMA be requested to encourage the mills to store up their raw fibre requirements up to a period of five months. If the mills have any difficulty regarding storage, they should be asked to improve their storage facilities. (2) A reasonable quantity of raw jute must be exported after studying the requirements of the jute industry. (3) The Government of India must time their purchase of jute manufactures in such a manner that "price support" is provided by such purchases, particularly at a time when the prices of raw jute are sagging. (4) Warehouses and godowns should be constructed in the main production centres of raw jute as early as possible.

Dr Randhawa has rightly pointed out that the declining trend in jute acreage is in itself nothing to be worried about. On the contrary, he feels that this is a shift which is in keeping with the aim of placing increasing emphasis on the yield. On the basis of the yield in nearby Pakistan, we can obtain the Second Plan Target of 5.4 million bales of raw jute from a much reduced acreage than we already have under the crop. The use of high-yielding seeds, fertilisers, improved implements, double cropping, correct retting and timely application of insecticides are the steps that have been indicated by Mr Randhawa for reaching higher yield. He is confident that when all this is done it should not be difficult for us to reach our goal of self-sufficiency in jute well before the end of the Second Five Year Plan.

Thanks to the sustained efforts that are being made for the past few years to grow jute by improved methods of cultivation, there is now an increasing awareness among jute cultivators of the profitability of taking advantage of the many facilities now available. It is gratifying to hear that jute growers are getting fertilizer-minded. But much work still remains to be done by Authority too. Even now the general complaint is that fertilisers are not made available to the cultivators in sufficient quantities and at the right time. The importance attached to this aspect of the jute programme by the ICJC is brought out in the following passage in Dr Randhawa's speech: "There should be no occasion in the future for the complaint, now almost general, that fertilisers did not reach the jute growers in time". With regard to another important item in the programme, production of improved seeds, the progress is not quite satisfactory. Since improved seeds can give an increase of 10 per cent in fibre yield, the question of the supply of improved strains of jute seeds cannot brook much delay if the objective of maximising jute production from minimum acreage is to be reached. The Committee set up to go into the question has recommended inter alia that State Governments may take steps so as to arm fully the jute development staff with power under which they can force the use of seed of improved varieties and can also take effective measures for eliminating non-descript seed. Apart from these developments, research is also contributing toward increasing yield. Seed inoculation studies have indicated a method by which better quality and higher yield of fibre can be realised. The scope for increasing yield is clearly brought out by one of the investigations of the ICJC's Economic Research Section. According to it an additional outlay of about 24 per cent on the improved methods of jute cultivation is found to have taken the yield 40• per cent higher and the cost 10 per cent lower.

The jute goods market ruled rather quiet with prices especially in the hessian section showing a sagging tendency. The reactionary trend in hessian stemmed mainly from the news that burlap consumption in US during October had recorded a sharp decline as compared with the previous month. Burlap consumption in October this year is placed at 69 million yards as against 80 million yards in the previous month and 79 million yards in the corresponding month of the last year. The report depressed sentiment and hessian prices were marked down. Hessian 40" x 10 oz November which closed at Rs 40.30 last Wednesday came down to be finally placed at Rs 39.45 this Wednesday. Sacking prices were also initially easier in sympathy with hessian but in later dealings recovered due to support from the futures market. B Twills November after declining to Rs 101.85 last Saturday was quoted at close on this Wednesday at Rs 102.50.

Production of jute goods during October was 4700 tons lower at 87,900 tons as compared with the previous month. The decline is due to the fact that mills worked in October 200.5 hours as against 209 hours in September. Output of hessian is placed at 36,400 tons against 37,500 tons, that of sacking at 46,000 tons against 48,800 tons and that of other varieties at 5,500 tons against 6,300 tons. During the corresponding month of last year, production totalled 81,800 tons with mills working 192 hours. The total comprised 33,300 tons of hessian, 43,000 tons sacking and 5,500 tons other varieties.

The raw jute market ruled quiet'- steady with the quotation for Assam Bottoms coming down to Rs 23.75/ It would appear that holders who were reluctant to discount rates last week presumably on indications of a tight supply position found their position untenable in the absence of sustained mill interest at the higher levels. It is evident that the view is gaining ground that notwithstanding a decline in jute acreage, production would not show any sizable reduction from last season in view of the concerted efforts that have made to increase yield.

★

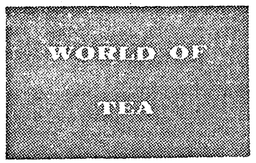
STEADY INCREASE IN WORLD JUTE PRODUCTION

World production of jute and allied fibres reached the record total of some three million tons in 1958/59, and the 1959/60 crop is expected to be a fraction higher still. IndianJute production is up by more than 80 per cent over the past five years, reaching the normal crop level of Pakistan, hitherto the main source of supply Mainland China has almost trebled its jute crop in the past five seasons to reach the 1958/59 total of 325,000 tons. On the other hand, Pakistan's share of world production has fallen from 48 to 41 since 1955/56, though quality has lately improved.

There are some of the more striking facts contained in a commodity note on jute in the October issue of the FAO Monthly Bulletin of Agricultural Economics and Statistics, published last week.

The report says that crops have increased by 75 per cent since the 1953/54 setback and 17 per cent in the past season, in spite of a sharp contraction in Pakistan. This increase represented some higher yields, but was mainly accounted for by expanded cultivation in India, Mainland China and some other Far Eastern countries—Nepal, Thailand, Burma, Taiwan, North and South Vietnam and Cambodia. Thailand's production rose, the report says, from "negligible proportions to 10,000 to 15,000 tons in 1958/59".

Despite this increase in production, best-quality jute was a smaller proportion of the total supply and the past two seasons had brought wider gaps between prices for high and medium grades.



According to the note, more countries are now reaching the goal of self-sufficiency in their jute production. India achieved this in 1958/59 and had now raised its export ban for the first time since 1950. Though so far India had exported only 10,000 tons, an export surplus of possibly 90,000 tons this season was envisaged.

Though Pakistan planned no expansion, it was still expected to have an export surplus (including carry-over) of 850,000 to 900,000 tons next year. Burma and Thailand were exporting small surpluses of high-grade jute to Italy and the United Kingdom.

Mainland China has remained an important market for raw jute from Pakistan and India, says the note, and, Burma and Thailand are still importing inferior grades of raw jute while the U.S.S.R., is depending upon imports of raw jute from Pakistan and jute goods from Eastern European countries and India.

The slightly bigger jute crop estimated for 1959/60, says the report, will be partly the result of expected expansion of production in Mainland China, where a larger crop is anticipated in spite of unfavourable conditions. Though the crop might not reach the original estimate of 450,000 to 500,000 tons in 1959/60, the government aimed to reach 514,000 tons by 1962 and so to achieve self sufficiency. Other countries where expanded production is expected in the coming season, says the report, are Nepal (estimated at 20,000 tons), Burma (similar figure, one-third for export), Thailand (with a long-term goal of 100,000 tons, mainly for export), Taiwan (23,000 tons, nearly all for domestic consumption) and North and South Vietnam, which will be producing small quantities for export.

The U.S.S.R. also plans to double its output of jute and konaf by 1960, says the Bulletin, and other non-Asian countries where increased jute and konaf output is expected are Brazil, Guatomala and Haiti. The note says that konaf crops may be expected to be larger in Cuba, Mexico and Africa.

World Tea Crop

DETAILS on the Tea crops of the major producing countries to date have been published by the London offices of the Indian Tea Association, the South Indian Tea Association and the Pakistan Tea Association. The production in North India, during the period April to October this year, amounted to 490.50 million pounds as against 486.20 million pounds in the same period last year. In South India, the production during the period January to September was 107.60 million pounds against 119.20 million pounds in the corresponding period of last year. In Pakistan, production during the period April to October was 47.40 million pounds against 46.10 million pounds. In Ceylon, production during the January/September period was 307.30 million pounds against 311.80 million pounds. In Indonesia (excluding Sumatra) production in the period January to July was 54.00 million pounds against 58.00 million pounds.

Judging from the supply side, it appears that this season's tea will be sold without difficulty. Speeches by leading personalities in the tea industry have already emphasised the rise in tea consumption, which has been taking place in recent months in the tea producing countries. This is regarded in London as the crux of the matter. Dealers in London have not forgotten that the surplus of 60 million pounds, epected last season, simply did not materialise, having apparently been absorbed elsewhere.

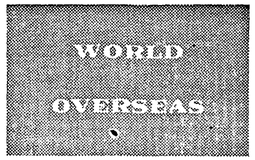
As a matter of fact, nearly 20 million pounds in excess of the 1958-59 season has been sold in London and Calcutta. Moreover, the demand from most out-markets has improved during the past few auctions held in Calcutta, especially when the UK, Sudan, Egypt and Russia have bought considerable quantities. As stocks in London have moved down further from 113.65 million pounds to 110.48 million pounds at the end of the week ended November 4, it appears that the present demand will likely be maintained. It is even hoped that, if the sales continue at the present rate, the entire North Indian crop will be sold quicker than the case in the 1958-59 season.

No sales, both export and internal, were held in Calcotta this week, as buyers did not show any interest, pending some clarifications with regard to the new amendment of the Sales-tax by the West Bengal Government.

Tea exports from North-East India, in October, were higher at 45.64 million pounds against 39.38 million pounds in the corresponding month of last year. The improvement in exports was mainly due to increased offtake by European and Middle Eastern countries. In the first ten months of the current year, exports of North-East Indian tea were higher at 279 million pounds as compared to 276 million pounds in the corresponding period of last year.

Arrivals of tea in the Calcutta Port were well maintained at 2.83 million chests in the seven months ended October 1959 as against 2.89 million chests in the corresponding period of 1958.

In the Cochin market, offerings were twelve lakh pounds of Leaf tea. The quality of teas, in general, was well maintained. There was good support for Common and Low Medium descriptions, which advanced by 10 nP per pound. Buyers showed keen interest for medium and good medium teas, which were irregularly dearer by 15 nP to 20 nP per ib Better liquoring high-grown teas, especially Broken grades, met with irregular support and were easier. Whole Leaf grades remained steady. Low Medium quality was quoted at Rs 1.90 to Rs 2.00; Medium at Rs 2.05 to Rs 2.30; Good Medium at Rs 2.25 to Rs 2.50 and Quality at Rs 2.50 to Rs 4.05.



Four lakhs pounds were offered for internal consumption. There was a strong general demand and prices were irregularly 5 nP to 10 nP per pound dearer for all descriptions. which were the strongest feature of the sale. There was a useful enquiry for high-grown dusts, which were quoted steady. A small selection of CTC dusts met with a useful demand. The next Dust Sale will be held on the 19th November, 1959.

The UAR Government has offered to supply Ceylon with rice in exchange for tea. At the moment, the UAR Trade Delegation is buying Ceylon tea at the Colombo auctions with Ceylon rupees, which the UAR Government had collected from Ceylon canal tolls. When this money is over, the UAR may not be able to buy any Ceylon tea unless a trade agreement is signed between the two countries. The UAR now buys its tea mainly from India, which is selling tea in exchange for cotton.

In the Internal Sale held in Chittagong, offerings were 3,941 chests of Dusts and 13,246 chests of Leaf grades. There was a very strong demand for Leaf grades from the start and prices generally showed an advance of 6 to 8 annas per pound. Whole Leaf and off-grades met with less competition than the remainder of the offerings; but were 4 to 5 annas dearer. Legg-cut Fannings were a strong feature of the sale and were quoted at Rs 3.3.0 to Rs 3.4.0

Dusts also met with active support from buyers and prices were generally As 6 and sometimes even As 8 per pound dearer. Plain Sylhet was quoted at Rs 2.13.6 per pound. Offerings of Green Teas were keenly competed for, the polished grades being sold at As 4 to As 5 over last rates. Orange Pekoe was quoted at Rs 2.12.6 and Pekoe at Rs 2.10.6.

The total quantity to be landed in London, as on the 6th November, was 12.49 million pounds. Total afloat was 41.61 million pounds including from Calcutta 25.41 million pounds; from Chittagong 2.29 million pounds; from Cochin 3.67 million pounds; from Ceylon 9.06 million pounds; and from other Ports 1.18 million pounds The average price realised was 60.75d per pound against 62.73d in the previous week and 53.27d a year ago.

US Notes

GOVERNMENT officials, private businessmen and economists seem to have lost little of their confidence in the United States' economic oulook despite the adverse and still widening short-term effects of the work stoppage in the steel industry. This stoppage, longest in the industry's history, reached the 116-day mark Saturday when the Supreme Court approved an injunction for an 80-day "cooling-off" period and calling for the workers to return to their jobs.

As was to be expected, the economy's sharp upward movement, so much in evidence earlier this year, has obviously been slowed down by the steel situation. Yet the total output of goods and services—the gross national product —fell by one $3,500 million during the third quarter of the year. Moreover, at an estimated $481,000 million, it was still a full $37,000 million ahead of the third quarter of 1958.

Lost steel output—production for for the past several months has hovered at about 12 per cent of capacity as a result of the shutdown—shows up most strongly in a marked drop in the general investment. But outside of the area of steel and inventories, business volume during the third quarter was growing at a heartening rate.

Particularly encouraging were developments in two areas. For one thing, consumer spending continued to rise despite the shutdowns limiting effects on the income of striking steel workers and of workers in other industries laid off in the wake of the strike. For another, exports finally began to show the the improvement that had long been expected.

The extent of the current confidence in the economy can be seen in last week's discussions at Pebble Beach, California, among more than 160 businessmen, financiers and economists who make up the Business Advisory Council of the Department of Commerce. The group spent two days discussing domestic and international commerce and hearing reports from technical committees on various industries.

The sessions, as is the custom, were closed to the public. But judging from informal talks by those who were present, the group foresees a sharp rebound in business activity following settlement of the steel labour-management dispute and a continued high level of production for all of 1960. Increased output is expected in a broad range of industries, with automobiles, rubber manufacturing, and retailing leading the way.

Economists advising the panel estimate that the gross national product will hit a $500,000 million annual rate by next June, if not before. Achievement of this oft-mentioned goal could have been expected sooner, of course, if the shut-down in the key steel industry had not slowed up the pace of economic activity. By the same token, a number of experts believe that the steel shut-down in the final analysis may result in a somewhat steadier if slower economic advance.

There are, of course, several assumptions inherent in this appraisal. One is that the economy will hold inflationary forces in check—most particularly, that costs will not outrun the rises in productivity. Another is that the steel controversy will be settled before the 80-day "cooling-off" period ends and that the strike will not be resumed next year.

A third assumption—one that has received particular stress from Commerce Secretary Frederick H. Mueller—is that the United States can improve its international balance of payments, which has been running a deficit of more than $4,000 million this year. The main answer to this problem, as Mr Mueller and other experts see it, is to increase exports of American products and thus build up U.S. receipts as against payments.

These views of the business Advisory Council are supported by the independent judgments of other prominent experts. Last week, the F.W. Dodge Corporation, a leading business research company, released the results of its annual opinion survey among the nation's leading economists in government, business and universities. The consensus of these 273 experts is that business activity in 1960 will attain new highs.

As do the members of the Commerce Department panel, they too anticipate a strong upturn after the end of the steel shut-down. While some disagreement is apparent over how long the upturn will last, the majority also subscribes to the view that it will continue uninterrupted throughout 1960, barring resumption of serious labour difficulties or other unexpected contingencies.

*

Britain

60 PER CENT OUTPUT RISE WITH SAME ACREAGE

THE historian of British agriculture would record that the past 20 years showed an unrivalled rate of progress, Sir James Scott Watson told a meeting of the members of the Farmers' Club in London on November 11. Sir James, 70-year-old son of a Scottish farmer, was formerly Professor of Agriculture at Edinburgh and Oxford universities and was Chief Scientific and Agricultural Adviser to the British Ministry of Agriculture.

He said that since 1939 the net farm output of the United Kingdom had increased by nearly 60 per cent while the farmed acreage had remained almost unchanged. This great expansion had been achieved without any significant increase in the labour force, whose members were today toiling less arduously and for shorter hours than at any time in history.

Sir James said: "A major factor in the acceleration of progress has been the increasing rate of scientific discovery and invention. The most important aim must be to attract into agriculture young people of first-rate ability with a sound foundation of knowledge of chemistry, biology, physics and economics. The number of awards of research scholarships granted by the Agricultural Research Council to honours graduates has progressively increased from about half-a-dozen annually in the early forties to 20 or 30 annually in the past few years".

Sir James added that since 1939 six new research centres had been created, including those for grassland, glass-house crops. and poultry. A large number of research units had been set up and financed, each covering a relatively narrow field, and in addition many grants had been made to universities and colleges.

* * *

For the past 12 months, the national bill for these services totalled more than £5,000,000. State-sponsored research did not by any means represent the whole effort. Most of the great developments in the way of farm mechanization had been made by many large business concerns at home and abroad. Also, most of the newer farm chemicals—fungicides, weed-killers, and insecticides—and animal medicines had been produced by the research divisions of large and progressive business concerns.

Developments in breeding pasture plants had led to increased rates of stocking, and to the extension of the grazing season at both ends.

* * *

United Kingdom exports in October were valued at £306,000,000, imports at £360,200,00, and re-exports at £14,600,000. These provisional figures were issued by the Board of Trade in London on November 11.

After allowing for the normal seasonal variation, United Kingdom exports in the three months August-October were 3½ per cent more than in the three months May-July. The seasonally adjusted average of exports in the first 10 months of this year was 4 per cent greater average for 1958.

On the same basis, imports were 4 per cent more in August-October than in May-July, and the average for the first 10 months of this year was 5 per cent more than the average for a year ago.

The seasonally adjusted monthly average of re-exports in August-October amounted to £12,000,000, compared with £10,000,000 in May-July. The monthly average for the first 10 months of this year was £11,000,000, compared with £12,000,000 a year ago.

* * *

The Guardian (November 12) in an editorial says: "The big leap upwards in October has carried exports above the previous monthly record. This is most welcome. Coming after the rising trend of exports over the last six months, it should dispose of all immediate qualms about the balance of payments and about the wisdom of shedding dollar restrictions.

"Imports have also been increasing steadily from month to month, as is only to be expeteed when output is expanding and industry's demand for raw materials is rising. But, in the circumstances, for the rise in exports to have almost kept pace with the growth of imports is a considerable achievement. The Government's hope of a substantial balance-of-payments surplus this year to follow the record surplus of 1958 has proved to be well founded".

* * *

United Kingdom steel production last month averaged 441,400 tons a week and was the highest October figure reached, according to figures just released by the Iron and Steel Board in London.

This figure is only slightly below the record weekly average production figure in May 1957 of 443,200 tons, and compares with 363,500 tons in October last year and 437,800 tons in October 1957.

The percentage of steel-making capacity worked during the month averaged 92.

* * *

The high activity in retail trade in the United Kingdom shown in the second quarter was well maintained in the third quarter of this year, according to statistics issued by the Board of Trade in London on November 9. The boom in sales by durable-goods shops also continued in the third quarter.

Retail trade in September recovered from the slight slackening in August, and was 5 per cent above a year ago, as compared with the increases of 4 per cent in August and 5 per cent in July.

Sales in the third quarter were also 5 per cent up on a year earlier —an increase similar to that shown in the previous three months. Prices in September (covering retail trade) were practically unchanged on a year earlier, so that the increased turnover was wholly attributable to the greater volume of sales.

In a statement refuting Mr Geijer's criticism the head of the Economic Research Institute, Prof Bent Hansen, says that the Institute cannot pay consideration to the fact that objective information on the prerequisities for and consequences of wage developments may influence wage negotiations.

Sweden

A heavy increase in imports and a reduction in exports compared with a year ago made Sweden's foreign trade in September result in the next largest deficit for the year, Kr 161,000,000. Imports totalled Kr 1,064,000,000 as against Kr 988,000,000 in September last year, while exports amounted to Kr 903,000,000, compared with Kr 1,008,000,000.

The decrease in the value of exports is largely accounted for by ships, which in September last year totalled Kr 190,000,000 as against only Kr 12,000,000 this year.

Over the first three quarters of the year imports totalled Kr 8,729, 000,000 (£602,000,000; $1,695,000 000), which is Kr 114,000,000 less than in January-September 1958. Exports went up by Kr 380,000,000 to Kr 8,123,000,000 (£561,200,000; $1,577,000,000). This means a decrease in the trade deficit from Kr 1,100,000,000 to Kr 507,000,000 (£42,000,000; $118,000,000) from 1958 to 1959.

* * *

The turnover of Sweden's industrial enterprises, which in the years 1954-57 showed an annual rise of 7-9 per cent, increased by only 1 per cent in 1958, according to a survey by the Central Bureau of Statistics. The survey includes close on 1,500 companies with over 400,000 workers. Their turnover in 1958 was Kr 31,608,000,000 (£2,250, 000,000; $6,160,000,000).

Gross profits, which in 1954-57 showed a similar development as that of the turnover, fell by 1 per cent to Kr 3,432,000,000 in 1958. Net profits declined by 7 per cent to Kr 881,000,000. The decrease is largely accounted for by higher transfers to investment funds, up Kr 187,000,000 over the figures for 1957, whereas transfers to pension funds dropped by Kr 39,000,000.

Taxes dropped by Kr 215,000, 000, partly as a result of the abolition of investment duties as from Jan 1, 1958. Dividends decreased by 17 per cent of Kr 535,000,000, or by Kr 112,000,000. However, one single company, the State-owned LKAB iron-ore mining company, which is included in the survey, lowered its dividend by no less than Kr 117,000,000 to Kr 60,000 000.

Investments in industrial plant rose by Kr 248,000,000 or 15 per cent, while stocks, which in 1957 went up by Kr 700,000,000, remained more or less unchanged in 1958.

Wages showed an increase of 2 per cent to Kr 4,462,000,000. At the same time the number of industrial workers dropped by 2 per cent.

*

France

In September 1959 French automobile manufacturers produced 118,039 cars compared with 102,773 in September 1958.

Production was as follows:—

Pleasure vehicles: 100,329 compared with 85,091;

Commercial vehicles: 17,520 compared with 17,451;

Buses: 190 compared with 231.

Between 1st January and 30th September, 922,038 vehicles were produced.

* * *

Total production of motorcycles for the first 8 months of 1959 was 615,021 units compared with 679,031 units in 1958, which was a decrease of 664,010 units or 9 per cent.

This represents a general improvement, since in April the loss was 18 per cent, in May 13 per cent and in June 10.5 per cent.

In August, more than half of the production was produced by the following manufacturers.

* * *

During the first nine months of 1959, French production of rayon totaled 38,269 tons compared with 37,211 tons during the same period of 1958. Staple fibre production fell during these same months from 54,723 tons to 37,269 tons.

In September production totaled 4,702 tons of rayon compared with 5,044 tons in September 1958 and 5,462 tons of staple fibre compared with 5,934 tons in September 1958.

* * *

In September, the production of French jute factories totaled 7,700 tons of spun jute and 7,232 tons of woven jute compared with 9,447 tons and 7,819 tons during July and August and 8,610 tons and 6,819 tons in September 1958.

For the first nine months of 1959, production totaled 59,151 tons of spun jute and 47,232 tons of woven jute compared respectively with 70,743 tons and 55,021 tons during the same period of 1958.

This decline in activity is due to the agricultural situation which is poor, especially in relation to the potato and sugar crops, as well as to a fall in exports, especially to the franc area.

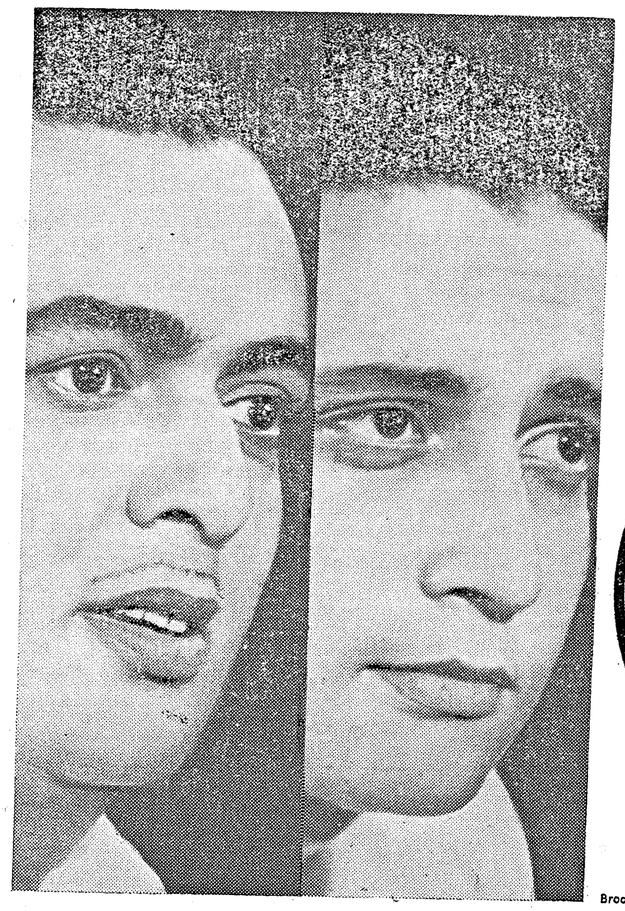
* * *

In September French coal production totaled 4,970,000 tons for 25 working days compared with 4,954,855 tons for 26 working days in 1958. For the first nine months of 1959, production totaled 44,261,690 tons for 226 working days. For the fifth consecutive time since the beginning of the year, total production was less than that of 1958.

Following are the figures of the existing stocks of coal as of 29 September and the corresponding figures for 1958. The maximum or minimum figures are in parentheses.

Total coal stocks (mines and annex plants): 11,497,500 tons maximum (5,372,000 tons on 2nd March, 1958).

* * *

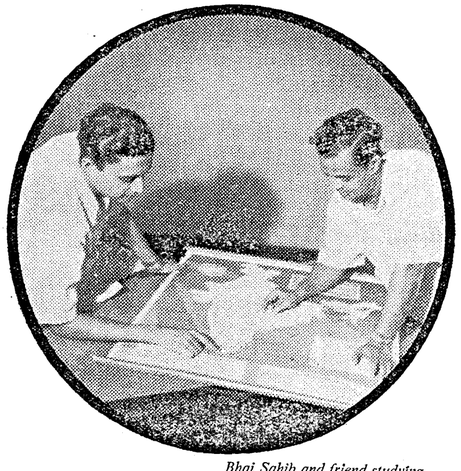


A training car specially built to be used to teach prospective conductors how to handle French electric locomotives as shipped, via Dunkerque, along with one of the 22,200-series electric locomotives. This is the first of an order of forty such locomotives (built by the Ateliers Alsthom, in Belfort) which will be shipped to India for use by the Indian Railways.

"Same price everywhere"

It really is true then, Bhai Sahib, that Brooke Bond Tea is available everywhere?

It certainly is, my friend. No matter where you are in this vast country of ours you are sure to be able to buy a packet of Brooke Bond Tea—fresh, pure and at the same price everywhere, except of course for local taxes.



It sounds quite fantastic, Bhai Sahib—Tell me, how do Brooke Bond do it?

Basically, by operating on the simple principle that Brooke Bond Tea must move from factory to consumer within the shortest possible space of time. To put this in practice Brooke Bond employ almost every means of transport in order to reach such remote regions as the deserts of Rajasthan or the villages situated at 10,000 feet on the old Hindusthan-Tibet trade route from Theog to Chini, north of Simla. Camels and mules, trains and bullock-carts, boats, elephants and cycle rickshaws all play their part in the distribution of Brooke Bond Tea.

But surely this involves tremendous organisation and expense, Bhai Sahib?

True—but only by careful organisation and going to all this expense can Brooke Bond make sure that they give consumers full value for their money. Brooke Bond's unique system of direct distribution means there are no hold-ups at intermediate depots or godowns. That's why Brooke Bond Tea is always fresh. It means that there is no tampering with the Company's products, and so the tea the customer buys is always fresh and good. And, finally, direct distribution guarantees that the selling price can be determined by the Company and not by speculators and middle-men.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

IF there is an impression abroad that US diplomacy is flat-footed, it is largely the creation of its own Secretaries of State. At any time, Mr Christian Herter's reported reaction to the Sino-Indian border disputes would have sounded odd, but on the eve of President Eisenhower's visit to India, it sounds odder. As it happens, we have the strange consequence of the Communist party of India being able to quote, of all people in the world, the US Secretary of State for justifying its stand! In fact, Mr Herter has gone farther than even the CPI. After a lot of humming and hawing, the official attitude of the CPI is that, as far as the North Eastern border is concerned, the Macmahon Line is the dividing line. But Mr Herter "does not know if the US Government had ever backed the Macmahon Line", as though any Government publishes a list of approved international frontiers in advance. The other dicta of Mr Herter are equally puzzling, even though subsequent clarifications have gone some way in removing misgivings.

*

At his press conference, he seems to have made the following points: He did not think that the United States took any sides at all in the dispute. The border had been pretty "ill defined" and he did not think that the United States had any first hand knowledge with respect to a definitive border that could rightly be claimed by either side. As regards the Macmahon Line, he did not think the US ever backed it. And when a reporter pointedly asked whether Mr Herter wanted to leave the impression that the United States had no views whatsoever as to rights and wrongs of the disputes between India and China, Mr Herter replied that he thought that was "probably correct". He also doubted whether any American had ever been on the border to see whether the particular boundary had been properly delineated. 'They naturally assumed that the claims made by India were entirely valid. though "we have only the word of a friend" for it. And, finally, Mr Herter was asked whether and in what respect the border situation might affect US economic aid to India. Mr Herter replied that he did not think that it need necessarily affect in any way the policy of aid to India unless at some later stage—which certainly did not look probable now—they were making a determination as to whether some nation was at fault with respect to the border situation.

*

In his later clarification, Mr Herter said that he was merely discussing the legalities of the issue during the Press conference and that he considered the Chinese use of force as wholly abhorrent and that he sympathised with India's attempts to resolve the present issues with China peacefully. Subsequent explanation by the State Department said that the US "had a deep and abiding interest in the independence and territorial integrity of the Indian people".

*

I am only too ready to accept the explanations and reassurances. For, the evidence of America's heart being in the right place is as substantial as that for its diplomatic accident-proneness. The US is always putting its foot in it, as a friend not unkindly put it. Comparisons are misleading, but Mr Dulles' famous gaffe about Goa and its timing (B and K were on their triumphal progress through India then) occurs readily. But Mr Dulles had, in his narrow legalistic way, an arguable case perhaps, though why he should have chosen that particular moment to advance it is still a mystery. But Mr Herter's excursion into "legalities", as he calls them, was not only inopportune but consisted merely in saying that he did not know the "facts". If that were indeed the position, I am mystified why Mr Herter did not politely refuse to be drawn into the discussion. Considering that Mr Khrushchev was walking on a far tighter rope than Mr Herter in this case, the Russian leader's aplomb and sureness of foot can hardly be over praised. Surely, Mr Herter could have said something about "hoping for peaceful settlement", "watching the situation" or some such triviality. Instead, he answers a loaded and shamelessly leading question about the US not having any views about the rights and wrongs of the dispute.

*

Considering the question as a problem in personal tact, of two disputants, one is your friend and on whom you are calling shortly to show what buddies you both are. The other is one whom you have steadily refused to be even seen with because he is a bad character: and let us also assume that you really do not know about the rights and wrongs of the disputes. But you do know that the tough has knocked your friend down once or twice recently entirely without provocation. And nothing that you say about the dispute is likely to make the assailant like you more or even take a more reasonable view of this very dispute. It is in such a context that you hold the scales even and imply, like Sir Roger de Coverly on a famous occasion, that "much can be said on both sides". You can hardly blame your friend and prospective host if he does not shout "Daniel come to judgment!"

*

I know Press Conferences are "difficult" and you are asked questions that you should not be asked and you say things you shouldn't. Earl Attlee, for instance, was asked the other day questions that I should have thought impertinent; and, instead of refusing to answer them, he said some foolish things about Mr Eisenhower and later complained querulously about reporters who make trouble. One need not follow the example of Theodore Roosevelt who used to tell importunate reporters: "No comment". and, after a split second, added: "and don't quote me". But, unless you are asked for facts, and facts that you can reveal, I do not think that it can be held against you that you are needlessly uncommunicative. After all, the obligations of the press, as Delane of the Times said in the last century, are "not to share the labours of statesmanship. The duties of the two powers are constantly separate, generally independent and sometimes diametrically opposite". Fair enough. But if the press cannot share the burdens of political office, no more can a statesman be expected to provide the Press readable copy. If, therefore, a politician refuses to answer questions, answering which he considers "inopportune", the Press cannot legitimately complain. (In practice, however, the press is not always as forbearing). Ultimately, it is a question of personality. Mr Krishna Menon, for instance, is magnificent at press conferences for the simple reason that he matches rudeness for rudeness and is never afraid of being considered prickly. The way he dealt with a reporter from the Daily Express, who asked him whether he was a Communist, is an instance. He led the poor chap on, asking him about the paper for which he worked and finally crushed him with the question whether Lord Beaverbrook was a Fascist. That, I think, was a snub most richly earned.

*

But to get back to Mr Herter. It is not as though that such a "suspension of judgment" is very characteristic and that America makes no distinction between "friends" and "enemies". Nor is this "technical" approach uniform. For, ironically, in the very case of the People's Republic, the US is persistently applying wider "moral considerations". It is preventing the Chinese Communist regime from getting seated in the United Nations, as though a seat in the world body was a good conduct prize. (Indeed, as Mr Rajagopalachari has shrewdly pointed out recently, the best way the US can help us over the border dispute is to let the People's' Republic join the UN. We can then deal with it as one within "the pale of law"). Again, for a man who wishes to be technical, Mr Herter has not acquainted himself with such evidence

. . . the synthesis of elegance and utility

AJAX

CALCUTTA MADRAS NEW DELHI

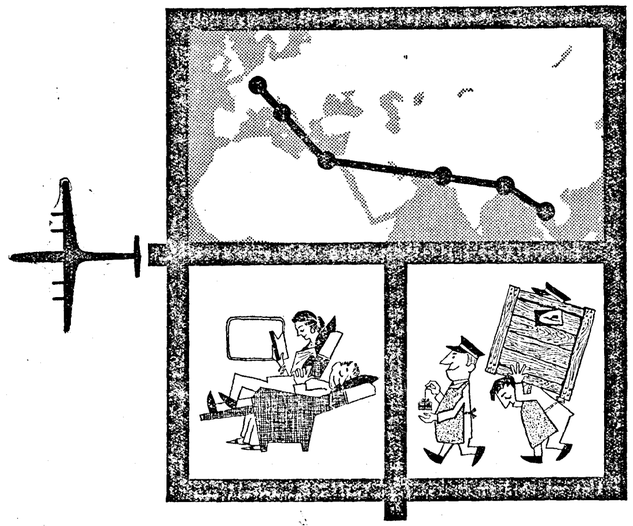
about facts as there is. The Government of India have published a white paper giving the entire background to the dispute. At least as regards the Eastern frontier, there is no doubt about the legal position. Mr Herter also seems to have an odd notion that some kind of American inspection is necessary before international boundaries fixed by treaty, history, usage or convention are accepted by the US. I should have imagined that, when disputes about boundaries arise, the relevant inquiry is whether they are obligations of the sort alleged and not whether some sort of fence has been put up. This is true of even private quarrels: and in the case of an international border, especially in regions like the Himalayas, to go looking for physical delineation is a futile irrelavance.

*

What prompted Mr Herter to go on as he did? As usual, everybody is ready with an explanation. One view is that far from wishing to "let us down", he was trying to do the reverse. Mr Balaraman of The Hindu reports from New York that "what Mr Herter was actually trying to do apparently was not to commit the United States on the legality of the Sino-Indian border and, secondly, not to put the United States squarely on India's side lest it should embarrass Mr Nehru in his efforts to work out a settlement with the Chinese. State Department experts figure that Mr Nehru would baulk at any outside meddling in this affair and would prefer to be left to himself to settle it. They also fear that, if the United States came out strongly in favour of India, it might make India's position more difficult by injecting cold war tones to the disputes". In other words, Mr Herter was trying to do vis-a-vis India what Mr Khrushchev did vis-a-vis China! But how much more neatly did Mr Khrushchev do it! He did not say, for instance, that he believed that Chinese claims were valid, though he had only China's word for it. Nor did he say that it was "probably correct" that he did not have any views on the rights and wrongs of the dispute. And above all, he did not wait for a subsequent occasion to clarify that Chinese violence was reprehensible, but pointedly referred on the first occasion itself in suitably unctuous tones about the killing.

*

There are other hypotheses of Mr Herter's performance, some of them quite fantastic. For instance, one view is that Mr Herter was really safeguarding the rights of the Formosan regime, when it finally recovers mainland China! Another theory is that Mr Herter was giving Mr Nehru a taste of his own neutralist medicine. According to the Washington correspondent of the London Times, "The immediate interpretation in Washington was that Mr Herter had decided to open the way for some sort of neutral investigation, while at the same time raising the price of American support and perhaps, incidentally, giving Mr Nehru some idea of what it feels like to be at the receiving end of a policy of non-alignment".



*

I do not know how far this interpretation, especially that bit about prices, is true. But a short answer may as well be given in case it is true: "We are not in the market for horse-trading".

*

The Indo-American Society is, of course, non-political. By all accounts, it has had an extremely successful launching ceremony. The American Ambassador in India, Mr Ellsworth Bunker, was persuaded to feel that the occasion was important enough to merit a flying visit to Calcutta; and his own view of the probable future role of the Society was indicated by the very careful summation he gave of US foreign policy relating to the question of disarmament. I fancy that the Society is beholden to Dr Emrich, cultural attache to the USIS, for the rousing and energetic start in life it has had. Perhaps it will be the seeking of cultural affinities which, by creating better understanding between our two peoples, will prevent—or at least reduce the frequency—of diplomatic gaffes on either side, which till lately have every so often produced unnecessary friction.

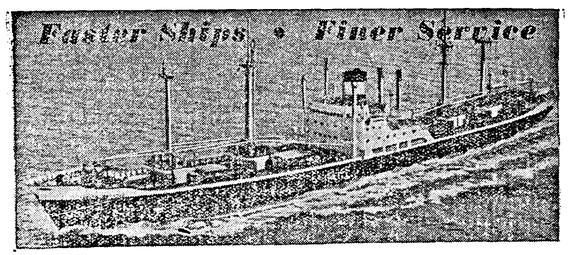
BOMBAY REVIEW

THE fact that the Second Five Year Plan began to experience rough weather before it could cover a sizable portion of its course provided the go-slowers in our midst with a good talking point. Their armoury was further augmented by the sharp decline in the rate of increase in industrial production during last year. The rate of increase in 1956 was 10.2 but it fell to 4.7 in 1957 and was further lower at 2.4 in 1958. The index of industrial production (base 1951=100) stood at 139.7 in 1958 as compared with 137.3 in 1957 and 132.6 in 1956. An analysis of the figures for the year 1958, however, would have revealed that the decline has been brought about by the steep fall in production of one or two important industries. A leading article in Indian Finance published a few weeks ago has shown that, but for the disappointing performance of the cotton textile industry, the rate of increase in industrial production would work out to be quite comparable to, if not better than in, 1957.

It will be evident, therefore, that, despite the multifarious difficulties that they have to encounter, our industries have been successful in keeping up a high tempo of activity. It is not surprising to hear now from Mr Manubhai Shah that industrial production during the current year will record considerable improvement because, for one thing, some of the new enterprises which were under construction till last year have since been commissioned and, for another, the import policy has been made somewhat liberal especially with regard to industrial raw materials, equipment, spares, etc.

Mr Shah, who was speaking at a meeting of the Standing Committee of the Central Advisory Council of industries, pointed out that it was expected that, in the current year, the index of industrial production would be 148, a rise of about 8 points over 1958. He has also noted that the upward trend of production in the last quarter of the current year may further help to carry forward this rate of increased growth. The rise is due partly to the recovery in some of the major industries like cotton textile, steel and automobile and the great rise in the production of machine tools, industrial machinery and machine building in the engineering industries. Increased production of chemicals, synthetic fibres, ceramics, cement and pharmaceuticals has also contributed to the higher general trend.



The current trend, together with the increased tempo of licencing and import of capital goods, has led to the confident expectation that practically in all industries the Second Plan targets will be fully covered. Most industries already are within reach of their targets and Mr Shah is so optimistic that he thinks that many targets may even be exceeded. It is a tribute to all concerned that, notwithstanding severe handicaps, a high tempo of activity in the industrial sector has been kept up. This remarkable recovery in industrial production has been made possible as much by the concerted efforts of private enterprise as by the abiding interest and active help evinced by authority. The go-slowers may not find the present situation quite to their liking, and that it as it should be.

While it is true that industrial production should maintain a high rate of increase from year to year if our plans for economic development are to be fruitful, it is also of vital importance to ensure that such advancement is achieved without detriment to our democratic way of living. The concept of a socialistic pattern of society has been successfully fitted into the democratic way of life in our country. But this synthesis is yet to be correctly understood not only by important sections of the people but also by the powers-that-be themselves. The growing importance of the public sector and the various restrictions that have come to be imposed on the private sector have raised the apprehension, quite genuine in many cases, that the State would ultimately swallow the private sector. That such fears are unfounded has been stated authoritatively, and if some spokesmen of private enterprise still express concern about the future of their sector, it is largely because taxation has made it increasingly difficult for the entrepreneur to persuade the investor to come forward readily to invest funds in undertakings in the private sector. It is true that Government have set up a number of institutions to help private enterprise get the requisite funds, apart from giving guarantees so that private enterprise could raise loans from international organisations like the World Bank. But it cannot be gainsaid that the private sector's mainstay is the investor. From the revival of confidence in the stock market, and the thumping success that has attended new capital issue floatations in recent months, it would appear that, even in this regard, Government policy has been considered to have become helpful or that it will become more helpful in the future than it has been till recently.

In assessing the state of the corporate sector in the country, the periodical statistical information made available by the statistical department of the Reserve Bank of India is of great help. The latest series of index numbers of industrial profits, published in the October issue of the Reserve Bank Bulletin, will go a long way toward making available a reliable picture of corporate working in recent years. The present series pertains to the year 1957, and is given in three sets of tables. Table 1 gives index numbers of gross profits including depreciation, gross profits excluding depreciation, profits before tax, profits after tax and distributed profits. Table 2 gives index numbers of profitability based on the ratio of gross profits to total capital employed, while Table 3 gives index numbers of profitability based on the ratio of profits after tax to net worth.

The index number of profits before tax of all industries during the period 1951-57 (base 1950=100) shows only a small increase from 132.4 in 1951 to 133.7 in 1957. It was, however, quite high at 150.1 in 1955 and further higher at 167.2 in 1956. The index number of profits after tax for all industries during the same period has declined to 116.4 in 1957 from 131.6 in 1951. Here again, 1956 has recorded the high figure of 158.3. The index number of distributed profits of all industries has increased from 114.4 in 1951 to 146.4 in 1957. But when we come to the index of profitability based on the ratio of gross profits to total capital employed, we find that there has been a steep decline from 118.9 in 1951 to 82.2 in 1957. A few industries, however, have recorded an increase. The index number for the sugar industry has increased from 131.6 to 140. There has been a slight increase in coal from 95.7 to 99.6. Silk and wollen textiles show a marked improvement from 50 in 1951 to 162.6 in 1957. Engineering has moved up from 101.6 to 142.6, as also chemicals from 109.6 to 144.1. The other notable increase is in shipping whose index number has increased to 328 from 282.2.

It will be evident from the above that taxation is taking away a big slice of the earnings in the corporate sector. The index number of profitability as measured by the ratio of gross profits to total capital employed for 1957 has been vitiated by the slump conditions prevailing in some of the major industries as well as by the fact that, in some other important instance like that of the Iron and Steel industry, the emphasis continued to be on expansion of plant rather than on increased production.

BOMBAY REVIEW

Master Plan for Bombay

BOMBAY has prepared a bold and ambitious Master Plan for the rapid industrial development of the State in a properly dispersed manner. Although Bombay State is highly industrialised when compared with other states in the country, it was only recently that the authorities recognised that the industries being concentrated in a few areas, the natural resources were not properly utilised to the advantage of the state. It was anticipated that, under the new plan, the pace of the industrialisation in the state would be accelerated through the effort of the industrialists and the authorities and that the cooperative venture would go a long way toward eradicating poverty and leading the state to prosperity.

Mr Y. B. Chavan, Chief Minister of the state, in his inaugural address to the second meeting of the State Advisory Council of industries, assured the entrepreneurs that the bifurcation of the state would not in any way obstruct the implementation of the plan, considering the fact that the new plan contained in assessment and recommendation for each division of the state separately and there would be no difficulty for the authorities to select relevant information about the proposed states separately. But it would not be legitimate to consider as sacrosanct the recommendations contained in the plan on the possibilities of the industrial development of the state. There might be many lines of manufacture which escaped the notice of the planners. However, there were adequate reasons to expect that the draft plan would not be substantially altered.

A special feature of the plan was the greater emphasis laid on the proper dispersal of industries. The difficulties to be faced in this field would be many and varied. The Chief Minister's assurance to supply power, water and the means of communications to improve the places selected for new industrial enterprises would necessarily encourage the industrialists to start new industries away for from the congested areas. The process of dispersal of industries in the state had already started and the Government had evinced keen interest in steering the movement away from the already congested places. It would be legitimate to expect that, with the completion of the Koyna project and the expansion of the grid systems in Gujerat and Vidarba, the pace would gather sufficient momentum. The Government would also consider the proposal to start an aluminium plant in the southern Maharashtra region, a pig iron plant in the Vidarbha region, solvent extraction plants in the Sourashtra region and the setting up of a special board for economic development.

*

NCAER on Handloom Industry

Once again, the National Council Of Applied Economic Research has been engaged, and this time by the All India Handloom Board and the Ministry of Commerce and Industry, to do a bit of sleuthing on the ails that afflict the Handloom Industry. The survey under this joint sponsorship was restricted to only five areas in Karnadak-Bijapur, Belaum, Dharwar, N. Kanara and Sholapur.

The defects, or rather the difficulties, which the NCAER has attributed to this industry are in fact the same faced by other cottage and small-scale industries throughout the country. Though it might sound redundant to classify them again, it must be conceded that, whatever has been pointed out is nonetheless true, and such surveys can be regarded as a memo to those who can help alleviate these shortcomings.

A nut-shell summary of the findings reveals that the progress of the handloom industry is being hindered by idle capacity, lack of finance, and an almost complete stagnation where technological ameliorations are concerned. The Council has drawn attention to the fact that, though the master weavers' (who own weaving establishments or who employ weavers) influence is quite ubiquitous, the establishments are small and their organisational setup leaves much to be desired. It is little wonder, therefore, that the handloom units have never rallied effectively against the onslaught of mill competition. The smallness of the units is manifest from the value of the fixed capital per establishment, which was shown by the Council to be Rs 380 per person employed. The data revealed on the asset output ratio (.5 on the average) adds little colour to an already bleak picture. Other points highlighted by the recent survey include under capitalisation—even though the existence of a plethora of bank money is evident; idle capacity—perhaps due to defective marketing arrangements, while a possibility exists for this latent potential to be converted to export earnings; and, finally, the chronic debt of the weavers which gives them little, if any, bargaining strength with middle-men-cum-loan-sharks when the sales of their products arise.

The Council suggests, even through the strong arm of legislation if necessary, the introduction of incentives in wages, enhancement in bonuses, and betterment in conditions of work. To ensure a steady flow of production, regular supply of yarn being essential, provision should be made therefor.

*

Import Policy for Stainless Steel

The Government of India's new procedure in supersession of the one announced in January last, for the import of stainless steel articles like sheets, strips, wires and rods under the export promotion scheme, has made an attempt to take note of the changing requirements of the steel industry in our country. It also recognises the need for fuller utilisation of our capacity for production, so that the shortages precipitated in manufactured goods can be overcome or minimised. In framing the new policy, due emphasis has been laid on the maintenance of economy, import of raw materials for the industry and export promotion. It is expected that under the new scheme the production of watch straps and other products predominantly made of stainless steel sheets, rods wires, etc., will be increased to a great extent.

A remarkable feature of the new import policy is the simplification of procedure to expedite the licensing work. Licences will be issued, under this scheme, to those manufacturers who have duly registered with the "port registration authorities" in Bombay, Calcutta, Madras and New Delhi, provided they undertake to export during the period commencing from the date of the issue of import licences and ending on the date six months after the import of the licensed articles, finished products and earn foreign exchange equal to 150 per cent of the Cost Insurance Freight value of the licensed raw materials in the case of stainless steel utensils exported and no less than 133.5 per cent of the CIF value of licensed raw materials or half the value of manufactured goods made from the imported materials, whichever is higher, in the case of finished goods other than the utensils exported.

The "port registration authorities" will recommend import licences against firm orders for utensils, watch straps and other articles made of stainless steel received from foreign buyers by a registered manufacturer. In order to ensure continuity of operation, the same manufacturer can avail himself of the added facility of receiving further licences even before the discharge of the bond against an earlier licence provided he has physically exported at least 50 per cent of the value of the finished articles which he is bound to export and the payments of the foreign exchanges against such exports are guaranteed by a policy of the export risk insurance corporation or by other substantial and acceptable coverage.

Another encouraging feature of the new import procedure is that the exports made against an order by an exporter other than a manufacturer of the products of the registered manufacturer shall also be computed as the exports of the manufacturer if he produces relevant testimonials in support of his claim.

The trade notice issued by the Joint Chief Controller of Imports, announcing the new import policy, assured the manufacturers that the aggregate value of that part of all import licences issued to the registered manufacturer against which physical exports (covered by a policy of export risk insurance corporation or other acceptable coverage) have not taken place, shall not, at any point of time exceed Rs 75,000.

WORLD OF COTTON

Setback in Cotton Prices

AN easy sentiment prevailed in the Bombay Cotton futures market where prices developed a reactionary tendency on reports of good arrivals at the upcountry centres. The trend was further accentuated on rumours of an expected release of a sizable import quota. At the higher levels, the mills resented to make their purchases in the spot market and this reacted unfavourably in the futures section. Turnover was, therefore, moderate. Jharilla March delivery closed at Rs 731.25 against Rs 738.25 touched at the previous week-end.

In the ready section, reduced demand was noticed in only quality growths. Kalyan, Laxmi and CO2 varieties were in some demand. In the specific delivery contracts, Bengal and Kala improved by about 2 to 3 points per candy, while Kalyan and Waged declined by about Rs 5 per candy.

On the export front, business in Bengal Deshi was reported as shippers were looking forward to buying enquiries from Japan as they were likely to get the foreign exchange allocation shortly. It is now taken for granted that the Government of India will be announcing, in the next few days, a further announcement of 75,000 bales for export.

In the foreign section, there was sustained enquiry from mills for East African cotton. Prices at Kampala have improved by about 15 to 20 points over the past few days. Similarly, there has been a rise of 50 points in the prices in the new Egyptian crop. Sellers are hesitant in offering new crop Sudan since the marketing policy for this crop is yet to be announced by the Sudan Gezira Board. A significant development with regard to Egyptian cotton during the past week was the reduction in the discount rate to 21 per cent from the current week.

In general, the behaviour of the cotton futures market was comparatively satisfactory and gave no cause for anxiety during the year 1958-59. In this connection, the President of the East India Cotton Association has placed the total availability of cotton, during the 1959-60 season, at 74.07 lakh bales This he has arrived at by estimating the current crop at 48 lakh bales. to which is added the carry-over of 20.07 lakh bales and an import of 6 lakh bales. According to him, mill consumption is likely to be 52.50 lakh bales and that of Ambar Charka, etc., 6.50 lakh bales.

With exports likely to be around 3 lakh bales, a smaller carry-over of 17.92 lakh bales is expected against 20.07 lakh bales left at the end of the last season. The President of the EICA has strongly urged that the cotton output should reach 72 lakh bales by the end of the Third Five-Year Plan. He feels that, in view of the likely deficit and the Cotton Advisory Board's recommendation about import of one lakh bales of cotton stapling 15/16" and 1 1/16", the Government should implement the recommendation without any further delay.

Meanwhile, an effective movement of new crop is likely only after the middle of December. Because of damage to quality and the delay in the movement of the crop following the transport bottle neck as a result of the recent floods, sellers may not be in a position to effect deliveries in the December delivery contract, particularly when it will be difficult to obtain fine cotton. The result will be that the mills will be obliged to accept whatever quantity and quality of cotton is offered as they need cotton for maintaining production. On an average, it is stated that cotton stocks with the mills, at present, will last just for a month.

×

COTTON CONSUMPTION

According to the provisional figures released this week, consumption of indigenous cotton, in the first month of the current season, shows a rise of as much as 6,000 bales over the corresponding month of 1958 and is next only to the highest figure of 399,125 bales in September, 1957. In other words, the consumption in September this year is the second highest figure in the post-independence period.

At the above rate, the overall mill consumption of Indian cotton in 1959-60 will probably be around 47 lakh bales. The consumption of foreign cotton in September is the lowest compared with that in the same month during the past 12 seasons. From 148,025 bales in September 1947, mill consumption has moved down to as low as 41,953 bales in the first month of the current cotton season, thanks largely to the impressive rise in the production of long-staple cotton in India.

×

CLOTH AND PIECEGOODS

While appreciating that the Government's export incentive have been an important factor in bringing about a distinct improvement in textile exports, the Chairman of the Delhi Cloth & General Mills Company Limited has pointed out certain other factors, which hold out a threat to India's exports. He says that the current high prices of indigenous raw cotton, which are over 20 cent more than those at this time last year and are completly out of parity with world cotton prices, are the main handicap the industry is facing today. He has, therefore, asked the Government to license immediately the import of 3 to 4 lakh bales of cotton of the staple length 7/8" to 15/16" over and above the normal import quota for higher staple cotton.

Cloth production in October stood at 412 million yards—a million yards less than in the previous month. A similar trend is seen in the production and stocks of yarn. Yarn output in October stood at 145 million pounds as compared with 148 million pounds in the previous month. Unsold stock of yarn last month was 27,000 bales (bales of 400 lbs each)—2,400 bales lower than in the previous month.

According to official sources, exports of mill-made cotton piecegoods have shown a steady improvement in recent months. Shipments from the Bombay Port rose sharply to 71.53 million yards in September from 63.74 million yards in August and 60.22 million yards in July this year. Exports compare particularly favourably with those in September last year when shipments were only 42.55 million yards.

The improvement in exports was shared by all varieties, particularly in the case of grey cotton piecegoods, which accounted for 46.31 million yards in September against 24.26 million yards in the corresponding month of September last year. Thus, there was a rise of almost 100 per cent in shipments of this variety.

Again, the outflow of cotton piecegoods, in recent months, has been impressive. Shipments, in the third quarter, are estimated at 216 million yards against 154.89 million yards and 150.70 million yards in the first and second quarters respectively.

The entry of comparatively new buyers, such as Holland is wecomed, especially against the background of recent apprehensions about the effect of the European Common Market on India's cotton exports. Of about 150 million square yards imported by Holland every year, India's share has never exceeded 2.20 million linear yards—the figure attained in 1958.

Another country to which India can export a much larger quantity of cotton textiles is West Germany. Trade circles expect that a substantial share of West German purchases will go to India, particularly in view of the efforts made by the Lall mission.

May we help you to export your goods?

TODAY, the word "Export" is very much in the air. But you need full details of your market before you can take any risk. Perhaps, our branches in Bangkok, Colombo, Hong Kong, Ipoh, Klang, Kuala Lampur, Malacca, Rangoon and Singapore may be in a position to assist you.
Why not look us up?

BOMBAY REVIEW

Copper and Zinc Harden

GATEWAY MARKETS

PRICES of Non-Ferrous Metals, especially of Copper and Zinc, have been displaying a firmer tendency during the past few weeks, thanks to sustained demand on reports of shortage of supplies. In the Bombay market, Copper Scrap is quoted higher at Rs 222 per cwt.

On the London Metal Exchange, a strong demand for copper during the past few months has pushed up the price to well over £245 and traders now expect it to reach £280 before long. Much of the present strength is due to a shortage of immediately available supplies in most consuming countries. But the ending of the strike in Chile has failed to have much effect on the the price of spot copper.

Reports from the USA say that consumers there have been drawing heavily on the stocks accumulated during the period preceding the strike and some of them are running short. In consequence, American buyers of the metal have appeared on the London market and it is their intervention that has pushed up prices to their present levels.

The rate for Zinc is quoted at £94¾ per ton, while, in Bombay, the metal has firmed up to Rs 122 per cwt due to higher advices from Calcutta. The firmness in prices is attributed mainly to the acute paucity of supplies in the open market. The trade has been nursing sizable stocks imported under licences for the past period. But, in the absence of arrangements for their distribution, the pressure on the open market has tended to increase.

It is pointed out that the supply position will continue to be tight in the near future. The Government have now entrusted the Bombay Metal Exchange with the distribution of supplies imported in the past and the current periods. But the actual issue of supplies to the non-scheduled industries will take some time, pending the completion of formalities. The demand will, therefore, continue to be good for some time. On the basis of the current levels ruling in the London market, the landed cost of fresh supplies will amount to about Rs 67 per cwt.

*

Mercury

The markets for Mercury, both in Bombay and London, are reporting steady prices and a generally better demand after a long period of weakness. In Bombay, the rate is quoted at Rs 2,750 per flask and the current price in London is £72 per flask, which is 10sh 6d higher than the year's low recorded in August. At this level, the London market is still below the levels ruling in the United States where a minor shortage developed last month.

Traders say that the significance in recent developments in th quicksilver market lies in the genuine increase in demand in America. They attribute this to an increased activity in the oil industry, which is a major consumer of quicksilver for use in some parts of the oil-refining process.

*

Oils & Oilseeds

Prices on the Bombay Oilseeds Exchange have displayed a firmer tendency due to higher advices from London, improved demand in the ready section and speculative buying in castor and groundnut.

Sentiment in the Castorseed section has taken a bullish turn on a favourable reassessment of the outlook for exports of castor oil. The improvement in prices is inspired mainly by the reported booking of shipping freight for about 1,000 tons for the UK. The upward trend in prices has been accelerated by claims of business in commercial oil with the USA at 14.10 cents per pound against 13.75 cents in the previous week. It is stated that the US buyers have been more responsive lately on account of smaller offerings from Brazil which has been indicating a nominal rate of 15 cents per pound for its first pressure oil.

In the domestic market, the concern over the pressure of spot supplies persists with the bears emphasising the existence of a substantial discount for ready castorseed over the futures. But, castor oil has improved noticeably on covering against export commitments. This, in turn, is expected to broaden crushers' interest in seeds. Castor ready is quoted at Rs 32.12 and Castor Oil, commercial quality, at Rs 17.50.

Although the outlook for exports of groundnut oil is fairly good with the UK indicating £104 a ton, operators are cautious in view of the reported increase in the arrivals of the new crop. But, the overall tendency is steady in sympathy with higher castorseed prices. Ready groundnut Bold is quoted at Rs 35.35 and Groundnut oil at Rs 19.37.

Buying interest in the Linseed section has been at a low ebb. Prospects for exports of linseed are not considered to be encouraging due to the easy trend in foreign prices and the difficulties in securing adequate freight. Linseed ready is quoted at Rs 35.25 and Linseed Oil at Rs 17.37.

*

Gold & Silver

Prices on the Bombay Bullion Exchange have been advancing gradually to close around the top levels for the week. A leading Madras operator was a buyer in Gold and about 15,000 tolas are said to have been purchased by Madras. Arrivals amounted to 3,500 tolas as against an offtake of 2,500 tolas. Unrefined metal receipts amounted to 4,000 tolas. Ready rates moved between Rs 124.12 and Rs 124.81, to finish at the last quoted level Sovereign is ruling firm at Rs 80.75.

Silver prices have been pushed up by local bull operators. Arrivals amounted to as much as 70 bars against an offtake of 10 bars. Unrefined metal receipts were heavy at 57 bars. Ready rates moved between Rs 210.31 and Rs 210.94, to finish at Rs 210.75. There are indications that the demand for the white metal may not broaden appreciably for another fortnight.

*

Yarn

Extremely dull conditions in the Yarn market and price movements were confined to a narrow range. Even Nylon and Artsilk yarns, which were more active of late, were dull. The setback in spot prices was attributed to poor local and upcountry demand. Whatever cloth the stockists had purchased prior to Diwali in anticipation of improved demand, was dumped on a dull market, resulting in the prices drifting to lower levels.

The market for Staple-Fibre yarns was also dull, although there was practically no change in prices, thanks to better demand for cloth.

Among Cotton yarns, 20s and 24s ruled steady, while those of coarse counts were neglected, mainly due to poor export demand.

Safe Custody and Management of Shares and Securities

To those who buy and sell securities and shares, their safe-keeping and management is often a source of worry.

For a very small cost the State Bank of India undertakes to relieve you of this burden and to provide you with (a) safe custody for your Government securities and share and debenture scrips, (b) a prompt and efficient service for the collection of interest and dividends, and (c) other services connected with the buying, selling and transfer of the scrips.

This Safe Custody service of the State Bank is one of the many banking services the Bank renders to its clients. It may be worth your while to know how the Bank can be useful to you by calling on any of the local head offices or branches of the Bank.

OLYMPUS

The State of Woollen and Jute Industries

DELHI REVIEW

THE Standing Committee of the Central Advisory Council of Industries has just been apprised of the state of woollen and jute industries and of the prospects for their expansion. As far as the woollen industry is concerned, the position in its organised mill sector (covering 144 spinning and weaving units) is that production of woollen/worsted yarn and woollen/worsted cloth has been 22.2 million lbs. and 11.0 million yards respectively in the period January-September 1959 as against 29.1 million lbs. and 19.1 million yards respectively in the whole of 1958. It is estimated that the present installed capacity of the organised woollen mill sector is quite sufficient to meet the demand of the country and even to produce a sizable quantity for export; no further expansion is therefore considered necessary. The more urgent problem is on the score of modernisation for the production of quality goods.

In the woollen hosiery sector (with about 900 to 1,000 small-scale units, the majority of them being located at Ludhiana), the position is that Ludhiana alone has sold hosiery goods to the tune of Rs 3.3 crores in 1958-59 as against Rs 3.8 crores in 1957-58. It is stated that the quality of indigenous woollen hosiery goods is quite satisfactory and the industry has practically captured the whole of the domestic market. About a crore of rupees' worth of woollen hosiery per annum is being exported, generally through post parcel, to countries in the Middle East. There is also a good prospect for an increase in their export, and this is engaging the attention of the Woollen Development Council.

In the cottage industry sector of the woollen industry, the existing pattern is mostly hand-spinning and hand-weaving. It provides employment to about 5 lakhs of people. The woollen carpets produced in this sector are also partly exported, the value of such exports being Rs 4.5 crores in 1958-59 as against Rs 4.3 crores in 1957-58.

The shoddy yarn spinning sector of the woollen industry is only of recent origin. It is stated that shoddy yarn is the cheapest raw material for woollen manufacturers because it is produced from wastes such as rags, mungo, old clothing, hosiery cuttings, noils and other wastes produced in the mills. It is used for the manufacture of very cheap types of blankets and rugs which are generally made on handlooms. In view of the increase in demand for shoddy yarn a revised target of 10 million lbs per annum by the end of the Third Plan has been fixed. For the production of this quantity of yarn on double shift basis, about 21,000 shoddy spindles will be required, of which nearly 13,000 spindles have already been installed.

The present state of the woollen textile industry as a whole in so far as exports and imports are concerned is as under:—

	(Value in Rs Crores) Exports (1958-59)	Imports (1958-59)
Raw wool ...	8.7	0.8
Wool tops ...	...	9.2
Shoddy wool ...	...	0.4
Carpets and rugs ...	4.5	...
Woollen yarn ...	...	0.3
Piecegoods ...	1.0	0.2
Total ...	14.2	10.9

The Commerce and Industry Ministry has also reviewed the progress of the woollen industry toward the Second Plan targets and referred to the Third Plan targets. It is stated that the Second Plan target of 20 million yards per annum for the organised woollen mill sector may even be exceeded by one million yards. The details of production, imports, exports, total availability for domestic consumption, etc., in recent years are as under:—

	1955.	1956.	1957.	1958.
Production (million yards ...	15.0	16.3	18.5	19.1
Import (million yards)	2.3	2.3	0.9	0.2
Exports (million yards)	0.6	0.5	0.3	0.4
Total availability (million yards) ...	16.6	18.2	19.1	18.8
Per capita availability (million yards)	0.04	0.05	0.05	0.05

The estimated demand for yarn by the end of the Second Plan is 32 million lbs composed of 16.5 million lbs of worsted yarn, 10.5 million lbs of woollen yarn and 5 million lbs of shoddy yarn. The requirement, in terms of wool tops, will be 19 million lbs by the end of the Second Plan.

The targets of capacity and production for the Third Plan are as under:—

	Capacity	Production
Wool tops (m. lbs) ...	30	26
Shoddy wool (m. lbs)	15	11.5
Worsted, hosiery and knitting yarn (m. lbs)	26*	22
Woollen yarn (m. lbs)	24*	13
Shoddy yarn (m. lbs)	10	10
Worsted-Woollen fabrics (m. yards) ...	36	30

*Existing.
†On 3-shift basis.
(Year: July-June)

It is estimated that export of woollen fabrics would come to about 2 million yards by the end of the Third Plan period.

As for export targets, carpets and rugs are to earn Rs 5.3 crores and other woollen manufactures Rs 12.0 crores of foreign exchange by the end of the Second Plan. As for the Third Plan's export target, an increase of 5 per cent per annum of the preceding year's exports is laid down. The licensed capacity (except for wool-combing and shoddy wool making) is considered sufficient to meet the internal as well as the export requirements of woollen/worsted yarn and cloth by the end of the Third Plan.

The Jute Industry.

The state of the jute industry in recent years is presented in the following table:—

(Figures in '000 tons)	1956-57	1957-58	1958-59	1959-60 (upto Sept.)
Production	1025	1056	1040	269
Exports	859	828	836	279
Internal consumption	179	198	220	42
Stock at end of period	116	134	95	79

India's exports of jute goods to the United States have been 121,000 tons in the first half of 1959 as against 187,000 tons in the whole of 1958. Exports of hessian to the USA and Canada in the first half of 1959 have been the highest since the end of the war. But exports to Australia, Burma, East Africa, West Africa, Thailand, Philippines, Viet Nam and Egypt have fallen due partly to increased competition from Pakistan and partly to the establishment of jute mills in some of those countries. So, exports at the end of the Second Plan to all countries are likely to be 875,000 tons only as against the target of 900,000 tons. But internal consumption in 1960-61 is estimated at 275,000 tons.

India has attained quantitative self-sufficiency in raw jute for the first time in 1958-59. After about ten years, it has now become possible to resume exports of raw jute, although in very limited quantities, through the STC.

The following table compares the net operating profit before taxation and appropriation made by the jute mills during 1955 to 1958. The results for the years 1955 to 1957 represent 97 per cent of the industry while the figures for 1958 represent 47 per cent only of the industry. All the accounts published during the period July 1955 to June 1956 are covered by the year 1955 and similarly for the other years.

Year	Mills which made profit No.	Amount in Rs '000	Mills which incurred loss No.	Amount in Rs '000
1955	49	29450	23	11329
1956	34	21282	43	33877
1957	42	31726	35	17949
1958	33	28464	5	940

It may be seen from the above figures that while the returns were very low in 1956, they showed considerable improvement in 1957. Although the accounts for 1958 are incomplete, clearly profits were much higher than in 1957. The results for the year 1959 are expected to be still better.

The progress of modernisation of the jute industry has also been reviewed by the Commerce and Industry Ministry. It is calculated in this connection that 55 per cent of the installed looms are now being fed by yarn from the newly installed sliver spindles. The Ad Hoc Committee appointed to assess the requirement of modern jute mill machinery has already reported that the spindle requirement of the looms working at present would be fully modernised by the end of the Second Plan. Progressive unsealing of the sealed looms has been anticipated by the Committee, and the modern spinning machnery requirement for these additional looms would be met during the subsequent Plan period. The Committee has also recommended that, with the commencement of the Third Plan, the industry should take up the weaving sections including possibly the installation of shuttleless looms. These recommendations are now under Government's consideration.

Mahindra-Sintered Products

As a result of negotiations, which have been conducted in this country and in England, an agreement has been reached between Messrs. Mahindra & Mahindra and a prominent UK engineering group represented by Messrs. Birfield Industries Ltd., covering participation in the formation of a new Indian company, to be known as Mahindra-Sintered Products Private Ltd. The main production objective of the new company will be to manufacture a wide range of self-lubricating bearings in a factory, which is to be installed in Pimpri, Poona. According to the Mahindra-Birfield agreement, the British group will supply the necessary machinery, tooling, and technical "know-how" and the UK contribution will comprise 49 per cent of the new company's capitalisation.

The project is of special interest inasmuch as the production of self-lubricating bearings is representative of advanced manufacturing techniques in Western Europe and these items are utilised by a substantial number of engineering industries in India. Approval has been received from the Government of India, covering the Mahindra-Birfield collaboration proposals, and licensing the manufacture of the self-lubricating bearings. The project is now being actively implemented and it is anticipated that manufacture will commence by the latter half of 1960.

DELHI REVIEW

Warehousing

Setting up of warehouses forms an important part of the agricultural programmes under the Second Plan and is aimed at setting right a deficiency that has made the marketing system for agricultural produce a veritable chaos. The primary purpose is to protect the producer from the oscillations in prices for which the lack of warehousing facilities was in no small measure responsible. The first step the Government took was to set up a Central Warehousing Corporation to implement a warehousing programme. This was followed by similar corporations at State levels. The target under the Second Plan was to create capacity for 2 lakh tons by the end of the Plan. The opening up of 350 warehouses by State Corporations and 50 by the Central Warehousing Corporation was also envisaged. The Plan target touched only a fringe of the potential demand for warehouses. The increasing demand for warehousing facilities is testified by the rise in the advances given by scheduled banks against warehouse receipts. The advances totalled a little less than Rs 1½ crores in June this year against slightly over Rs 10 lakhs in the same month last year. The present average is estimated at a little over Rs 1½ crores.

In the context of the increasing demand, creation of more capacity seems warranted. The demand at the end of the Third Plan has been estimated at about 1.5 million tons and therefore a target 1.5 million tons has been laid down for the Third Plan. This, however, covers only the routine anticipated demand from private traders and to some extent from the Government. The proposal for a food bank of five million tons now being considered by the Union Ministry for Food and Agriculture would, if it materialises, make it necessary to provide for further expansion of warehousing. The Third Plan target includes the opening of 250 warehouses by the State Corporations and 40 by the Central Corporation. Implementation of this programme, it is expected will enable the Corporation to reach every district and larger town in the country.

The Third Plan programme for warehousing also envisages a beginning to be made with specialised warehouses for cold storage and for handling products such as gur and tobacco. 20 such warehouses are to be set up according to present calculations.

The warehousing programme under the Third Plan would, it is estimated, call for an outlay of Rs 15 crores including Rs 10 crores in the States where the State Warehousing Corporations will handle it. This, however, would cover only the programme to meet the normal anticipated demand. Additional funds would have to be found for the project of the Union Food and Agriculture Ministry to create the food bank.

NORTH INDIAN NOTES

Panjab's Second Plan

While preparation for Third Plan is in full swing in most of the States, the preoccupation of the Punjab Government at the moment seems to be with programmes of developments for the last year of the Second Plan. A meeting of the State Planning Board held last week considered proposals of outlays for various heads for the last year of the Plan.

Discussions at the meeting revealed shortfalls in expenditure in various spheres. The Agricultural department, for example, had a budget allotment of Rs 1.19 crores for the current year. An assessment of the actual expenditure incurred revealed a shortfall to the tune of Rs 14 lakhs. The discussions now being held on outlays for the last year of the Plan will, it is expected, facilitate advance planning and avoid possible lapses in expenditure. New financial procedures have been evolved to facilitate fulfilment of Plan commitments.

For agricultural schemes for 1960-61, which is the last year of the Second Plan, a provision of Rs 1.35 crores has been made, this including the preparatory scheme to the Third Plan. A major project under this head is the opening up of an Agricultural University for which an outlay of Rs 5 lakhs has been made. The allocation for animal husbandry has been fixed at Rs 42 lakhs against 61.9 lakhs proposed by the Agricultural Department. Soil conservation schemes have been given prominence and a total provision of Rs 15.2 lakhs has been made. Among the schemes, highest priority has been given to the Bhakra catchment area.

The allocation for road development has been raised to Rs 2.22 crores against the budget allotment of Rs 1.72 crores for the current year. An additional amount of Rs 50 lakhs provided in the budget for the current year was not approved by the Planning Commission. The allocation for 1960-61 thus only covers the additional amount that was provided in the budget for the current year and that was not approved by the Planning Commission. The important feature of the road development programme in the last year of the Plan would be that attempts would be made to make up the shortfalls of districts where progress had been comparatively slow during the first four years.

The allotment for housing has been fixed at Rs 80 lakhs though original proposals were for Rs 1.2 crores. The budget allocation for the current year was also Rs 80 lakhs.

Outlook for Turmeric

LATEST trade estimates of the 1959-60 Turmeric crop suggest that, although the crop might be bigger in certain areas, the overall output will be smaller by about 40,000 maunds, at around 1,915,000 maunds against 1,955,000 maunds in 1958-59. The carryover from the 1958-59 season is also considerably smaller at 90,000 maunds against 750,000 maunds. It is estimated that, against a normal annual requirement of 2,615,000 maunds (2,375,000 maunds for domestic needs and 240,000 maunds for export), the quantity that may be available will be only about 2,005,000 maunds.

Details of the trade's estimate of the crop in different areas indicate that the crop in Duggirala and Nizamabad areas will be larger by 100,000 maunds and 25,000 maunds respectively. But the crop in Sangli-Karad, Cuddappah-Nandyal, Erode-Salem-Karur and Bettiah-Brahmaputra areas will all be smaller.

Fears of reduced supplies in the new season have, therefore, encouraged thoughts that prices may record moderate gains quite soon. In the absence of any evidence to suggest any improvement in the size of the crop, it is said that prices in Sangli may rise, at least to Rs 105 — the limit for the operation of margin in the forward market. In the Delhi market, the rate for the Bombay quality is quoted at Rs 46; Erode at Rs 51 and Nizamabad at Rs 45 to Rs 50 (all per maund).

*

Sugar

Sugar prices have been showing an advancing tendency and have improved by Rs 2 a bag following tight supply position and brisk consumer demand. In the Muzaffarnagar market, the demand for crystal Boora is encouraging on account of large despatches from Uttar Pradesh to other States. The rate for crystal sugar is quoted at Rs 134 per bag.

It is reported that the cane crushers in the Muzaffarnagar area are able to obtain sugarcane at Rs 1.12 to Rs 1.31 maund against Rs 1.62 a maund for delivery at the factory gate and Rs 1.44 for delivery at the factory's purchasing centres fixed by the Government.

*

Gur

Steady conditions have continued to prevail in the Gur market. There has been a good demand from the consuming areas. At Hapur, arrivals averaged 5,000 maunds a day, which are lifted for outside despatch. Balti quality is fetching a premium of about Rs 2.50 per maund over Pansera quality, thanks to good support from North Gujerat.

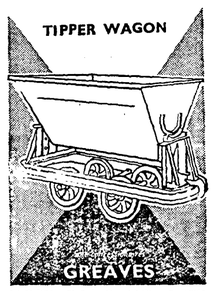
In the Muzaffarnagar market, gur prices have registered an all round rise owing to brisk demand from the consuming centres.

After an early fall of Rs 3 to Rs 4 a maund due to anxiety on the part of stockists to sell stocks before new production commences, Khandsari prices have improved by about Rs 1.50 a maund during the week under review.

Railway stations in the Moradabad division are reported to have been asked not to book Khandsari for exports to places outside Uttar Pradesh. It is, however, not known whether a ban on such exports has been enforced. Inquiries reveal that no such order has so far been issued by the Government.

*

Foodgrains



Prices of Foodgrains have shown a mixed trend. In the Hapur market, Wheat prices have remained unchanged at Rs 17 a maund for the average quality and Rs 18.50 for the farm variety. Rice prices have eased by Rs 2 to 3 maund under the pressure of arrivals of the new paddy crop. The market for Gram is ruling quiet, while Barley and Bejher are depressed in the absence of ready demand. Prices of Maize and Bajra have improved fractionally on good seasonal consumer support. Among Pulses, Peas and Arhar have attracted some support in the form of dal at unchanged prices.

According to the latest reports, the total damage to crop due to the devastating floods this year will not exceed 5.17 lakh tons of rice. Even then, the crop prospect is better than that of last year. This is believed to be the assessment made at a conference of the District Magistrates of the nine flood-affected districts of West Bengal.

MADRAS REVIEW

Tourism

THE third meeting of the Tourist Development Council held at Trivandrum last week, underlined the importance of promoting tourism both foreign and internal. Apart from the places of historical and cultural interest, relics of the country's ancient glory and civilisation and varied flora and fauna, which constitute the country's major attractions the tourist interest derives also from another source, namely, developments associated with planning. India offers the only outstanding example of a young and large democracy striving to reach higher standards of living basically through democratic means. All these point to the great potentialities of the tourist industry for which the growing volume of tourist traffic that has been witnessed in recent years would furnish positive evidence.

The Government have an interest in promoting tourist traffic especially foreign which is not exclusively based on economic or financial considerations. Without detracting from these gains, it should be recognised that tourism fosters international goodwill and understanding which should therefore be worthier motives to its promotion. The country has built for itself a high reputation in the international field by means of its foreign policy. While this in itself would seem to account for the greater inflow of tourist traffic, promotion of tourism would in its turn facilitate better and more vivid appreciation of the country's policies.

The economic aspect of tourism could not, however be overlooked in the present situation of foreign exchange shortage. Tourism has already proved itself to be one of the important sources of foreign exchange and holds out even greater possibilities in this direction. It was, therefore, only legitimate and right that the conference of the Tourist Development Council at Trivandrum should have thought fit to accord greater importance to foreign tourist traffic.

As Mr Raj Bahadur, Union Minister of State for Transport, who presided over the conference observed, promotion of tourism requires action along two lines, namely, 'publicity' and 'facility' in respect of both of which, it will have to be conceded, much remains to be done. Inadequate transport continues to be the major bottleneck to the development of the tourist industry and requires prior attention. This was recognised at the conference and it was agreed that in the Third Plan greater emphasis should be laid on transport.

So far as foreign tourism is concerned, an important consideration should be the creation of facilities for proper boarding and lodging. This calls for the development of the hotel industry to suit the requirements and tastes of the foreign visitors. The Government took an important step in this direction when, on the recommendations of the Committee set up to report on the hotel industry, the Government recognised the claims of the industry for financial assistance under the Industries Development and Regulation Act. The decision of the Government to leave the hotel industry in the private sector was also calculated to facilitate rapid development of the hotel industry.

As a corollary to the decision to give preference to the requirements of foreign tourism, it was also decided to give greater attention to the provision of more varied facilities than mere basic ones in the Third Plan. Such facilities particularly if they were of the recreational type on which emphasis has been laid by Mr Raj Bahadur should act as great inducement to the foreign tourists.

The prior claims of foreign tourism did not, however, preclude consideration of the need to encourage home tourism in the country. Side by side with foreign tourist traffic, home tourist traffic had also shown a remarkable increase in recent times which is to be attributed to the developments that are taking place in the social and economic planes. The heavy crowding in railways is one clear symptom of the growing travel-mindedness of the people. Besides the gains that accrue by way of more employment opportunities, home tourism as pointed out by Mr Raj Bahadur engenders and fosters a sense of oneness and unity in the country and for this reason, should have more attention devoted to its promotion. Apart from recommending that home tourism should be encouraged, the conference also made various suggestions toward it. Greater publicity, better coordination between the activities of the Centre and the States, construction of youth hostels with a view to encouraging travel among the younger generations, provisions for specialised groups of travellers, were some of the important suggestions made at the conference. A suggestion for promoting subsidised travel or what had come to be called 'social tourism' was also made. These suggestions indicate the almost unlimited scope for promoting internal tourism in the country.

There are, however, in the present situation of limited resources, definite limits to the scope for the development of the tourist industry. It was in recognition of this, that Mr Raj Bahadur advised the Tourist Development Council to concentrate on the creation of the basic amenities for the tourists. It was for the same reason, that he was reluctant to make a commitment in respect of social tourism which would make heavy demands on the financial resources of the Government. However, in view of the growing tourist traffic, it should be possible for the Government to make larger allocations than had been provided so far for the development of the tourist industry. One of the recommendations of the Tourist Development Council related to this need for larger allocations in the Third Plan.

It is a sad commentary on the interest taken by the State Governments in promoting tourism that while the development of the tourist industry warrants unstinted expenditure, they should have let projects in the State sector fail through for no plausible reasons. That many such projects in the State sector remain untouched was vouched by Mr Raj Bahadur. Surely, there would be no justification for drawing grandiose plans for developing the tourist industry if such plans were to be treated with scant regard and interest. As Mr Raj Bahadur observed it would be better to have less number of projects in the Plan which could be implemented than to have far too many plans which remained untouched.

There is another matter in respect of which a clarification of policy seemed called for. This concerns the questions of responsibility for implementation of tourist projects. That there is no unanimity in this regard at present was evident from the proceedings of the conference. Mr Raj Bahadur, for example, expressed the view that the initiative should be more and more assumed by the State and local Governments. This also seems to be the rule in almost all countries. It was however, disclosed by Mr Raj Bahadur that the State Governments favour a plan consisting of two parts, one to be financed entirely by the Centre and the other by the Centre and States jointly. In this scheme the major responsibility would rest with the Centre. In the interest of timely implementation of projects, an early decision on this disputed question is called for. That the attitude of the Centre in this matter is not inflexible was made clear by Mr Raj Bahadur and he expressed his readiness to consider alternative suggestions which would make for more rapid progress of the tourist industry.

SOUTH EASTERN RAILWAY

TENDER NOTICE

The General Manager, Garden Reach, Calcutta-23 invites sealed tender for supply the following materials:—

Tender No.	Opening date	Material	Quantity	Earnest money
1. CON/GM/65/H(D)/59 ...	10-12-59 at 3 P.M.	(a) Casing teakwood 1¼"×13/16" as per item 6 of CME's Drg. No. 3358A.	3,00,000 Rft.	Rs 1000/-
		(b) Caping teakwood 1¼"×¼" as per item 5 of CME's Drg. No. 3358A.	5,00,000 Rft.	
2. CON/GM/66/D/59 ...	14-12-59 at 3 P.M.	M. S. Bearing Plate 13"×8"×½" as per CSO Drg. No. C-1819.	20,000 Nos.	Rs 1000/-

Tender forms are obtainable from the Controller of Stores (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs 5/- (not refundable) per copy by money order to him direct in the case of outside firms and on production of Cash Receipt from the Chief Cashier, S. E. Ry., Garden Reach, Calcutta by local firms.

The tenders should be accompanied by a receipt from this Railway's Chief Cashier for the amounts towards earnest money as above without which the tender is liable to be rejected.

Firms not on this Railway's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

S 80 GENERAL MANAGER

SOUTH INDIAN NOTES

Food Prices

The Madras Food Minister, Mr M. Bhaktavatsalam, as usual repeated himself on the food situation when he declared that there was plenty for people's consumption. However, he expressed his concern at the soaring prices of various commodities. He pleaded for the co-operation of the country's economists in order to solve the problem of rising food prices by the practical application of their knowledge in respect of land reforms and co-operative methods to improve agriculture. Mr Bhaktavatsalam was addressing an audience of economic students.

Elsewhere, addressing the Madras Rotarians, Mr C. Ramasubban, till recently Chairman of Tariff Commission, expressed his horror at the increase in prices of commodities. He accused the distributing middlemen as wanting in honest practice, and stated that soda ash, caustic soda, bleaching powder and sugar were being sold at prices that could never be justified.

If Mr Ramasubban did not refer to the rise in the prices of the daily food articles like tamarind, coriandur seeds, turmeric and chillies, it was probably because his audience consisted only of businessmen dealing mainly in the commodities mentioned by him. Businessmen dealing in the former category of commodities state that, due to producers switching over to crops fetching higher prices, there is really a short supply of these articles and so the prices are going up. Guntur chilli growers had reduced their chilli acreage to switch over to tobacco, even though in this commodity there has been a glut waiting to be lifted by foreigners. The daily "must" in the poorest daily died, tamarind, for instance, had gone up 300 to 350 per cent higher in price. The cause for this high price seems to be speculation by Andhra merchants who have cornered almost all of the Bangalore stock and prevented it reaching the traditional Madras market.

The Chief Minister of Madras State had made the suggestion that people should not cut tamarind trees, but should begin to grow them. Perhaps he does not know that a tree takes fifteen years to begin to yield.

If it is one or two commodities that rule high in the market today, the next day many more are attracted into the spiral, and thus there is a progress of continually high prices. That would have led Mr Bhaktavatsalam to the conclusion that the practical application of economists' knowledge to these problems should prove helpful. He confessed to the audience of economic students, holding their ninth convention, that merchants were asked to sell at fair prices, but they never did so. That was why the Madras Food Minister thought of a blending of the administrative and practical experience for finding solutions to the very disturbing problems of high prices despite plentiful stocks.

Mr Ramasubban's complaint was that everyone seemed to resign himself to the rise in prices on the plea that this would be only a passing phase. But he wanted inflation to be countered and observed that action should have been taken well in advance. In respect of the commodities to which he had referred it was his opinion that such action had not been taken. It was because of the absence of such action, that the gap between the capacity to produce and demand remained unbridged.

Mr Ramasubban touched on the role of free enterprise and stated that there was no future for any kind of enterprise unless there was competition. By 'this, he probably meant competition by fair means, leaving in the field only the fittest. In other words, he argued that, today, the trade was controlled by those middlemen whose only interest in trade was to reap high profits.

To state that there is lack of resources to esablish the capacity to produce is to close one's eyes to the fact that there has not been enough of an attempt to do this. Rather, there is no thought at all being paid to evaluating problems relating to food commodities. The present crisis in the food front should open the eyes of the authorities to the need to make a start at least from now.

Merchants themselves complain of black-marketing, and ascribe this to Government intervention. It is, in this connection, pointed out that, instead of leading to lower prices, State intervention had resulted in high profiteering. Foodgrains trade is taken as an example of "profiteering" by the State.

Mr Ramasubban cited the case of steel, about which there was a complaint of the supply being too much in excess of the country's demand. But why should the price of steel rule so high? he asked. Likewise, in other commodities, he felt that the distributing system was extremely wanting in fairness. He also deprecated the private industries' demand for higher profits and allowances as distressing trends. When these industrialists asked for rehabilitation allowances, they should remember that the consumers had to pay for it. When his attention was drawn to the big difference in the cement price offered to the manufacturer and to the consumer, Mr Ramasubban said that, there was the solace that the difference in this price went to the Government who acted as middlemen. If private enterprise had managed distribution well, the State Trading Corporation would not, he believed, have seen the light of day.

He also disclosed that the Tariff Commission's recommendation on the sugar price had not yet been acted upon.

Whatever might be the facts now operating on the prices front, an economist of known ability like Mr Ramasubban, and a State Minister of food with so much of experience, had both agreed that something is rotten in the State of Denmark; and it was ime that the counry's experts come together to forge good plans both in the interests of the consumers and the producers.

★

Shipping

Mr Raj Bahadur, Union Shipping Minister, commended the progress made by the private and public sectors in shipping during the First and Second Five-Year Plan. He was opening the second coal berth at the Willingdon Island in Ernakulam. The deficiency in the planned target at present was only 116,000 tons. He hoped that this gap would be filled before the Second Plan period ended.

The cumulative capacity of India's six major ports would go up to 40 million tons by the end of Second Plan, the Minister said, and expressed the hope that plans for the developments of these ports would be completed. He had no doubt that all these would by then be able to handle all exports and imports they would be called upon to handle. For another ten years, the country's needs would continue to be 40 million tons.

He called for a friendly rivalry among the ports to increase their handling capacity. The directly administered ports of Cochin, Vizag and Kandla topped the list of high traffic, but he hoped Vizag would get ahead of Cochin now because of the petrol oil cargo it had to deal with.

A new four-berth wharf now under progress in Cochin is expected to be completed ahead of schedule.

Minor port development was also stressed by the Minister. These handled about a million tons of cargo annually, but he hoped that, at least in the future, the Government would be able to pay more attention to their improvement. He said a minimum of 500 tons should be assured from a minor port of calling by the cargo vessels. These ports did not vouchsafe this tonnage presently, but ways and means would have to be found to enable the ports to put out their maximum capacity. Small vessels construction for coastal trade was also necessary, and he called for an association of small sailing vessels which he thought would give a fillip to the development of minor ports in the country.

THE BENGAL FLOUR MILLS COMPANY LIMITED.

NOTICE is hereby given that an Interim Dividend on the shares of the above Company of 12½% for the year ending 31st December, 1959, was declared by the Board of Directors on 13th November, 1959, payable on or after 7th December, 1959, to those members whose names are registered in the Register of Members of the Company on the 7th December, 1959. Dividend Warrants will be despatched to Members and no application to the Company is necessary.

Tax will be deducted from this Dividend in accordance with the provisions of the Finance Act, 1959.

The Register of Members of the Company will be closed from 23rd November, 1959 to 7th December, 1959, both days inclusive.

By Order of the Board,

Notice of Final Dividends.

The Board of Directors of the above Company has recommended payment of the following Final Dividends in respect of the Company's Financial year ended 31st March, 1959, without any deduction for Income Tax payable by the Company:—

On 1st Cumulative Preference Shares—8% per annum.

On 2nd Cumulative Prefrence Shrares—4½% per annum.

On Preferred Ordinary Shares—10% per annum.

On 'A' and 'B' Ordinary Shares—Dividend—87 nP. per. Share and Bonus—50 nP. per Share.

By Order of the Board,
F. W. HEILGERS & CO.
(PRIVATE) LTD.
Managing Agents.

Chartered Bank Buildings,
Calcutta, 12th November, 1959.

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED

(Incorporated in England)

Notice is hereby given that the Board of Directors of this Company have declared payment of an Interim Dividend on the Company's Preference Stock for the year ending 31st March 1960 at the rate of £2.15.11-1/49d. per cent less Income Tax at 7s. 9d. in the pound equal to £1.14.3d. per cent. Payment will be made on 9th December 1959 to those stockholders whose names are registered in the Company's Stock Register on 3rd December 1959.

Applications for transfers received in this office before 12 O'clock noon on Thursday, the 3rd December 1959, will, if otherwise satisfactory, be registered at that date for the purpose of participation in the above dividend.

By Order of the Board,
D. H. P. HENDERSON,
Agent.

Victoria House,
Calcutta,
the 18th November, 1959.

MADRAS REVIEW

Buoyant Tone

Madras, Wednesday.

IN the Oils and Seeds Exchange a buoyant tone prevailed today. The sagging prices from last Monday bucked up due to enquiries. Today's rising price ranges in the oils and seeds sections began from Tuesday evening. Arrivals of kernels too had increased averaging to about 80 tons daily in the City market. Castoroil, however, looked down with practically no operations. Coconutoil went up due to poor stock of copra. Demand was poor in gingelly oil. But groundnut oil cake improved in price with better turnover and increased demand, too.

Groundnut oil prices were quoted as follows at today's close: (Per candy of 500 lbs.)

Groundnut oil Ready Rs 346 (last closing Rs 344); November Rs 345 (last closing Rs 343); December Rs 339 (last closing Rs 337); January Rs 337 (last closing Rs 335.)

Kernels per candy of 531 lbs: Rs 172 (last closing Rs 170).

Castor oil per candy of 551 lbs (Nominal) Rs 325. Coconut oil per tin of 37½ lbs Rs 40 (last closing Rs 40). Gingelly oil per maund Rs 21 (last closing Rs 21). Gingelly Seed per bag Rs 66/66 (last closing Rs 65/66.) Groundnut oil cake Rs 26/- per bag of 160 lbs (Previous closing Rs 25 per same.)

Today's London rate of groundnut oil was £103/10 to £104/-

Approved shippers' rate to Burma of groundnut oil November was Rs 1530 per ton and December Rs 1475. Others were quoting Rs 50 less per ton.

It was with a firm undertone that the seeds and oil market opened today. Weather helped crushers to a great extent. Offerings in the market centres were better. Since the last few days, there has been a regular flow of groundnut oil from Andhra centres to Madras. These factors imparted an easier outlook. Spot offers stiffened from Monday itself, but it is only today that the appreciation in quotation began to be witnessed. During the last week-end, forward positions declined following Bombay and Calcutta sentiments, but even in these today's tone changed. They improved by a couple of rupees with firmer tone probably yet to be reached.

Groundnuts maintained a fairly steady level. There was only a small decline towards the last week-end, but it also firmed up and today the quotation improved to Rs 172 from Rs 170, the previous closing.

As of the past few weeks, both Calcutta interests and shipping parties were lifting their needs from Andhra and other northern crushing centres where prices were lower than at Madras. The spot commodity registered a decline of Rs 40/45 per tons while the December and January vaidas lost between Rs 12 and Rs 14 per ton.

The average arrival of about 80 tons daily in the form of new peanuts got readily absorbed locally. It was at first taken up at a better price of Rs 175, but declined by Monday to Rs 170. Tuesday it was fluctuating between Rs 170 and Rs 171. On Tuesday the closing rate was only Rs 170, but today it bucked up early and closed steady at Rs 172 per candy.

There was an intriguing position for local bazar interests in respect of their groundnut oil requirements. Though this is still cheaper in the Andhra centres, these traders could not buy their stocks due to the operation of the 3 per cent sales tax payable to the Andhra Government. Therefore, these interests took up small quantities from the local chekku or rotary crushers. But Vanaspathi interests and exporters were exempt from this tax and this preference made them free to buy their needs from those cheaper areas. Spot oil was taken up early at Rs 356 per candy. It went down to Rs 345 on Monday and the quotation closed on Tuesday at Rs 345. Even at Rs 344 per candy some quantities were bought.

In forward positions, there were considerable activities. Shorts took good cover in the November vaida in good quantities at the lower quotation of Rs 342/8. The price appreciated to Rs 343 Monday, and closed on Tuesday at Rs 343. Today it closed strong at Rs 345.

In December vaida the quotation of Rs 338 brought forth good inquiries. It went down on Monday to Rs 337 and closed at the same rate Tuesday evening. Today, opening at this rate, it also closed firm higher at Rs 339.

January vaida did not command much interest last week-end. Monday's rate was Rs 335, but it went up to Rs 336 the next day, and closed higher today at Rs 339.

The following rates prevailed today for foreign markets:

Groundnut oil ready £103/10 to £104 per ton; Groundnut oil November £104 per ton; Groundnut oil December £103 per ton; Groundnut Jan/Feb £66 per ton; Castorseed Nov/Dec £57/10 per ton; Niger seed (nominal) Dec/Jan £59 per ton; Castor oil BSS Bulk Nov/Dec £119 per ton; Castor oil BSS Commercial Nov/Dec £112/113 per ton; Coconut oil Straits Nov/Dec £134/135 per ton; Coconut oil Colombo Nov/Dec £140/141 per ton; Groundnut oil cake (Expeller Dec/Jan £36/5 to £36/10 per ton; Groundnut oil cake (Solvent) Dec £35/10 per ton; Groundnut oil (Solvent Jan. £35 per ton.

Upcountry Markets:

Into the principal centres of the South Arcot and North Arcot districts, reports of only small arrivals were made. Only Madras City has been receiving a good supply. City arrivals were only adequate fo the local chekku or rotaries interests. A couple of expeller factories began operation last week and were in a position to market small quantities late in the week. Meanwhile, the price of groundnut in the producing regions of the South was around Rs 175 per candy. Salem, however, quoted Rs 180 and Pollachi quotation was still higher at Rs 186 per candy. Shippers lent good support, and the Andhra oil improved slightly, but even then price was below the Madras rate. In groundnut oil, Shippers took up good quantities around Rs 330/332 per candy.

Other Oils and Seeds: Gingelly seed was neglected as also the oil. Prices in today's market were.

Gingelly Seed:

	Per bag
Arisikere (Mysore) ...	Rs. 66/67
Vizianagram ...	Rs. 65/66
Local varieties ...	Rs. 65/66

Gingelly oil: On wholesale basis Rs 21 per maund, and on retail basis Rs 21/4 per maund.

In Castoroil there is no activity though sellers are vainly bidding at Rs 325 per candy for commercial quality.

Coconut oil: West coast product has improved due to shortage of copra. December position looked easier. Better copra supplies are expected at Kozhikode and other centres. At Cochin the ruling prices were: Ready Rs 660 per candy; November Rs 662/8 per candy; December Rs 654/ per candy.

The Madras price of coconut oil per tin today is Rs 40.

The following are the rates today in the upcountry market of groundnutoil and groundnut:

	Groundnut per candy of 531 lbs Rs.	Groundnut oil per candy of 500 lbs Rs.
Guntur/Bezwada	175	345
Vridhachalam	178	348
Nandyal	170	335
Villipuram	178	348
Cuddappah/Yerraguntla ...	175	340
Pollachi (Red) Superior ...	185	346
Tanjore	175	346
Tiruvannamalai	175	345
Salem	180	344

Hides and Skins

Prices of tanned cowhides in the market declined by about 9 nP per lb. Fair quantities of these were left uncleared though arrivals maintained the same pace as last week. There was very poor response from United Kingdom though offers were made even lower than last week. However, some stocks were lifted in semi primes on the basis of 77d to 79d for 5/5½ lbs ordinary marks. 8/8½ ordinary lbs average ordinary marks were sold on the basis of 54d to 55d per lb. Prime 8/8½ lbs Fifths was very weak being quoted at 43d to 45d.

There is a quiet undertone in inferior fifths. Some marks were negotiated in 5/5½ lbs at an average of 43d, while 8/8½ lb average at 39d. 10/12 lb average were quoted at 36½d. Still, UK buyers showed hesitancy, expecting further lower rates.

There was no change in the tanned buffalo hides prices. Arrivals were reported good.

In the tanned goatskin section quality skins 4,000 in number were cleared. About 25,000 tanned sheepskins were sold. The market still had 6,000 pieces of tanned goat and about 40,000 of tanned sheepskins. There was further lowering down of prices of these by about 6/12 nP. per lb. Lightweight sheepskins were hard to obtain.

On the export side, tanned goatskins were offered at a reduced price of 6d per lb.

JESSOP AND COMPANY, LIMITED.

Notice is hereby given that the Members having passed the Special Resolution to increase the Authorised Capital of the Company and to create 11,00,000 new Ordinary Shares of Rs. 10 each at the Extraordinary General Meeting held on 20th November 1959, and the consent of the Controller of Capital Issues having been received to the issue of 10,20,000 Rights Ordinary Shares of Rs. 10 each for cash at a price of Rs. 12 per share, the Board of Management have decided to issue and offer 10,20,000 Ordinary Shares at the price of Rs. 12 per share to the existing Ordinary Shareholders, whose names appear on the Register of the Company on 5th December 1959, in the proportion of one new Ordinary Share to every share held.

The Ordinary Share Transfer Register will be closed from 30th November, 1959 to 5th December, 1959 both days inclusive.

By Order of the Board
of Management,
D. D. MARKAN
Secretary.

Dated the Twentyfirst day of November 1959.
63, Netaji Subhas Road,
Calcutta.

Calcutta Electric Supply Corporation

Greater Flexibility in Generating Capacity

Increased Sales of Energy

Sir Harry Burn Reviews Results and Operations

FINANCE SECRETARY T. 24 NOV 1959 RECORDS DEPARTMENT

The Sixty-second Annual General Meeting of the Calcutta Electric Supply Corporation, Ltd., was held on November 12 at Victoria House, Vernon Place, Bloomsbury Square, London, W.C.

Sir Harry Burn, K.B.E., A.C.A., the chairman, presided.

The following is his statement, which had been circulated with the report and accounts:—

It is with deep regret that I have to record the death on February 9, 1959, of Mr. J. H. Waters, who had been a member of the board since 1952. He had served with the Company in India for 28 years, and was Chief Engineer when he retired from Calcutta. He was a valued colleague, and his experience and knowledge enabled him to give sound opinions and advice on many aspects of the Corporation's activities. We shall greatly miss his kindly presence. For some time prior to his death he had suffered from ill health, but this did not deter him from fulfilling his duties on the Board.

In April last Mr. I. A. Macpherson joined the Board. He has been with the Company for 24 years, and retired from Calcutta at the end of last year, after completing six years as our Agent, an office which he filled with outstanding ability. We are happy to welcome Mr. Macpherson as a member of the Board, and thus have available his wide knowledge and experience.

Distribution and Demand

There is attached to the Accounts a map of the Company's area of supply which shows that two important sections of the distribution system have been commissioned during the year. First, a third 33 kV feeder from Mulajore to Barrackpore and two 33 kV feeders from Barrackpore to Agarpara; this has resulted in greater flexibility of our generating capacity; secondly, two further feeders from Howrah Receiving Station to Fort Gloster in the Bauria Area, thus fortifying our system in that new and important area. I would again emphasize that the high tension industrial load is not confined to Calcutta and Howrah, but covers the whole of the Licensed Area in which industry continues to expand.

During the year ended March 31, 1959, there were increased sales of energy to all classes of consumers with the exception of traction, to which reference is made later in this Review. For the most part the increased demand was from industrial consumers. The total energy sold increased from 1,501 million units to 1,677 million units, an increase of 176 million units which compares with an increase of 107 million units during the previous year.

Power Sales

Sales for Power Purposes are mainly for industry, but also include public water works and domestic power, such as airconditioning and refrigeration. Industrial demand covers 90 per cent. of these sales which, with a few small exceptions, have increased with every class of consumer. The principal consumer is the jute industry whose consumption during the year increased by 50 million units to 412 million units. Trading conditions for the Jute Industry still continue to be difficult, but for the season 1958-59—July to *June—the off*-take for both export and internal consumption of jute products has improved, the increase in the former being mainly accounted for by hessian. Sales of energy have been helped by a better load factor resulting from the policy of rationalization and modernization of mill machinery and by the benefit of a full year's consumption from the mills fed by the Bauria Electrification scheme to which reference was made in my last Review. Next in importance are Rolling Mills and Engineering Workshops; sales increased by 25 million units to 211 million units. Their consumption should expand further when the present shortage of steel ceases after the steel projects sponsored by the Government of India come into production. Cotton Mills, Chemical Works, and Paper Mills are also large consumers and it can be said that our high tension power consumers cover almost every type of industry.

There was again an increased demand for low tension industrial power, sales increasing from 91 million units to 99 million units and the number of consumers increasing by over 1,000 to more than 14,500. Of these consumers the most important are Engineering Workshops manufacturing components for the larger concerns and here again their demands have been depressed by the shortage of steel. Public water works and sewage Pumping Stations consumed 82 million units, an increase of nine million units. Half of this increase came from the Calcutta Corporation and the remainder was equally divided between the Howrah Municipality and the State Government's Sonarpur|Arapanch Drainage Scheme. Domestic power sales showed a further large increase, rising from 50 million units to 56 million units. Much of this is due to air-conditioning units reflecting an improved standard of living of many middle-class families.

Sales of energy for lights and fans again showed a satisfactory increase of 14 million units, consumption rising from 213 million units to 227 million units. Increased demand is in general due to an improvement in the standard of living resulting in greater use of fans and more plentiful illumination.

Public Lighting consumption increased by two million units; this was almost entirely due to the Calcutta Corporation, which continues to improve its Street Lighting.

The Calcutta Tramways Co. Ltd. is the sole consumer for traction purposes. The large decrease in sales is due to the six week's strike by tramway employees in August and September, 1958.

Bulk supplies are given to seven distributing undertakings; sales to these consumers increased by 19 million units from 44 million units to 63 million units. The most important supply is to the North Calcutta Grid of the West Bengal State Electricity Board, which takes more than three-quarters of the total sales under this head.

Of the sales under Special Contracts some 65 per cent. is at our special tariff for owners of large buildings. Sales under that tariff increased by six million units. The remaining consumers under Special Contracts are the Central and State Governments, the Calcutta Port Commissioners, and the Calcutta Corporation; consumption improved in each case.

Revenue Account

Reference to the revenue account shows how the growth in demand is reflected in the Receipts from the sales of current which rose by nearly £800,000 to over £8,000,000. Miscellaneous receipts declined by £40,000; hire charges for one of our jetty cranes unloading steel for the extensions to the Tata Iron & Steel Co., an exceptional item of income, ceased in the early part of the year now under review.

The cost of Generation and Distribution and larger purchases of power from the Damodar Valley Corporation by reason of the higher demand on the system are reflected in an increase in expenditure of £776,000 under these heads. Generation and Distribution cost over £4 million and of that sum more than £2,250,000 was spent on coal, which cost £315,000 more than in the previous year. This major item of expenditure represents 72 per cent. of the total generating cost. Coal prices and railway freights were further increased though not to the same extent as in the previous year and the average cost of coal per ton delivered to our stations showed an increase of 4 per cent. Additional Power Purchased accounted for over £200,000. Increases in basic pay and dearness allowances and higher costs in respect of materials and various services affected Generation, Distribution, and Administration expenditure. The Depreciation charge also rose by £57,000. Finally, I must mention the Wealth Tax of £109,000 which was £35,000 greater than for the previous year. I am glad to say that the Government of India has decided to abolish this tax and no charge will arise under this head in the accounts for the year ending March 31, 1960.

The Net Revenue, after taking into account the Depreciation charge, is £82,000 less than that of the previous year which included the item of £43,000 for the hire of one of our jetty cranes to which I have already referred. I am glad to report that sales of energy for the current year show a satisfactory expansion and conform with our forecasts of future demands.

Net Revenue Account

I will now deal with the Net Revenue Account. In so far as the Indian Tax position is concerned considerable progress has very recently been made towards a settlement of the Appeals which were pending a year ago and to which I made a reference in the 1958 Review. In consequence of this the Board are now enabled to adjust the Indian tax element as it affects the Preference Dividend for the year ended March 31, 1959, and a payment in the form of a supplementary dividend will short-

ly be made. This payment will bring the dividend for the year up to 5 per cent. (net) and provision in respect thereof has been made in the Net Revenue Account. In view of the Indian Income Tax position it cannot be assumed that the rate of the Preference Dividend for the current year, will be the same as that now being paid for the year ended March 31, 1959.

The charge for Indian taxes appearing in the Net Revenue Account covers tax on the items of expense still remaining under appeal and conforms with the provisions of the Electricity (Supply Act). The charge for United Kingdom Tax of £150,068—as affected by double taxation relief—to which I also made a reference in last year's Review has also been adjusted to meet the United Kingdom and Indian tax position as it rests at present pending the final outcome of the Appeals which I trust may soon be resolved.

The statutory allocation to Development Reserve of £11,412 takes into account the current Indian tax position and the Reasonable Return of 6 per cent. permitted on the Capital Base.

The Clear Profit for the year falls short of the Reasonable Return to which the Company is entitled by the sum of £106,247, and this has been made good by a transfer from the tariffs and dividends control reserve as permitted by the Electricity (Supply) Act, 1948.

The allocation for the Contingency Reserve Fund has been made as required by the Act and it is proposed to make the usual contribution to the Retiring Gratuity Fund. Provision has been made for the interest and sinking fund charges in connexion with the Debentures. In order to conserve our finances for the continued expansion of the Company's operations the Board have deemed it advisable to appropriate a sum of £525,000 to Special Appropriations for Plant Expansion and Replacements. Dividends on the Preference Stock amounting to £65,075 have been paid and, as I have already indicated, a further payment of £29,925 will shortly be made bringing up the dividend to 5 per cent. (actual) for the year. It is proposed to pay a final dividend of 3½ per cent. (actual on the Ordinary stock making 7 per cent. (actual) for the year. The balance left to be carried forward on Net Revenue Account is £122,137.

Balance-sheet

It will be seen from the Balance-Sheet that the bank overdraft has been cleared. Capital Expenditure during the year amounted to £1,365,000 and was again almost entirely for our distribution system. More than half the expenditure was on Mains and Service Connexions. As a provision for capital expenditure during the year, and pending at March 31, 1959, there was available the sum set aside for depreciation of £900,000 and the allocations to Special Appropriations for Plant Expansion and Replacement and Development Reserve amounting to £535,000, thus making a total provision of £1,435,000. Between January 1, 1951, and March 31, 1959, capital expenditure amounted to £10,765,000 and the depreciation provision, together with Revenue Reserves and Special Appropriations during the same period, amounted to £10,635,000. I give these figures—which follow on those given in the 1958 Review—to demonstrate what has been done during recent years within the limits permitted by the Reasonable Return on the Capital Base to provide internal finance for the expansion of the Company's undertaking.

Chairman's Visit to Calcutta

During December and January last I visited Calcutta and went over all sections of the Company's organization and saw ample evidence of the care and attention which our staff devote to their work in maintaining efficiency and promoting the interests of the Company. I toured Calcutta and Howrah and the outlying areas where industrial and housing developments are still in progress. During the latter course of my visit I had the pleasure of the company of Mr. Gauntlett, a member of the Board.

Our relations with the Authorities continue cordial. I was afforded the pleasure of meeting Dr. Roy, Chief Minister, and discussed the affairs of the Company with him. Dr. Roy and his officials continue to take a great interest in the Company's activities and appreciate fully all our problems and the service we give to the industrial and residential communities. I also met leaders of commerce and industry in Calcutta. I had meetings with the Chairman and officials of the Damodar Valley Corporation and discussed matters concerning our mutual interests.

Technical Training scheme

Under our technical training scheme we have at present five trainees in the United Kingdom. During the next few months six more young Indian graduates will be coming from India for training and also several more of our permanent Indian staff for refresher courses. We are grateful to the Electricity Council, the Area Boards, and the various manufacturing companies that provide facilities for this training.

Tribute to Staff

I wish to express our thanks to the staff in Calcutta. The expansion of the Company's operations and the progress made in implementing same demonstrate the interest, efficiency and zeal which the members of the staff and employees devote to the Company's affairs. Mr. Macpherson, our Agent in Calcutta during 1958, carried out his onerous duties with ability in all respects, justifying the confidence which the Board reposed in him. Mr. Henderson, our Chief Engineer, took over the post of Agent as from January 1, 1959. He has a wide experience in the Company's affairs and has been with us since 1929 and is well qualified to carry out the duties of the Agent. To them and all members of our organization we express our high appreciation for the services rendered during the year. I also desire to record the Board's appreciation of the able manner in which Mr. Colley has discharged his duties as secretary.

The report and accounts were adopted.

The above statement is not a report of the proceedings of the Annual General Meeting referred to.

SOUTH EASTERN RAILWAY

TENDER NOTICE

Sl. No.	Tender No.	Brief Description	Specification	Quantity	Due date of Opening	Earnest Money	Cost of Tender Form
1.	PC/COS/6/36CS/C/59 ...	Segments for 30" dia. circular saw (24 segments).	L. O. Drg. No. 485	700 Nos.	9-12-59	Rs 357/-	Rs 2/-
2.	CON/GM/60/GB10/59 ...	Tarpauline 30'×15' Khaki as per specn. shown in the tender.	...	189 Nos.	4-12-59	Rs 100/-	Rs 5/-
3.	CON/GM/62/P&M/C/59 ...	"Murex" or similar single operator Diesel Engine driven Portable Arc welding set as per specn. shown in the tender.	...	4 sets.	7-12-59	Rs 1000/-	Rs 5/-
4.	CON/COS/101/HE(a)/59 ...	Teak wood Board double Panel 15½"× 7"×1½".	ELS Drg. No. W. O. 240/A Part B	2977 Nos.	4-12-59	Rs 350/-	Rs 2/-
5.	CON/COS/102/HE(a)/59 ...	Control Test Panel for way stn. set complete with 3 D.P. DT switches gas type arrestor 30 amp—fuses with cover.	...	10 Nos.	4-12-59	Rs 350/-	Rs 2/-
6.	CON/COS/103/F2/59 ...	Pulley, supporting Bracket 20 way (Double tier).	IRS Drg No. SA7378E (Adv)	600 Nos.	4-12-59	Rs 250/-	Rs 2/-
7.	PC/COS/7/72/WSP/1668/B/F2/59	Burner Lamp without collar & fount.	IRS Drg No. S5761 (Alt No. 7).	8028 Nos.	16-12-59	Rs 270/-	Rs 2/-
8.	CON/GM/63/F2/59 ...	Block Instrument Single line neale's tablet tcken type 'A' complete.	...	10 Nos.	8-12-59	Rs 750/-	Rs 5/-
9.	CON/GM/64/F2/59 ...	Lamp, signal fixed type with lamp top.	IRS Drg No. SA5685 (Adv) SA5700 (Current) to IRSS S10.	1304 Nos.	9-12-59	Rs 900/-	Rs 5/-

Tender forms are obtainable from Controller of Stores, South Eastern Railway, Garden Reach, Calcutta-23 on remittance of cost of tender form (not refundable) by Money Order direct to him in case of outside firm and on production of cash receipt from the Chief Cashier, S. E. Ry., Garden Reach, Calcutta-23 by local firms. Firms not on the Railway's list of approved contractors must enclose a valid Income Tax Clearance Certificate along with the Earnest Money receipt with the tender.

STOCK EXCHANGES

Sharp Setback in Equity Prices

WATCH-DOG WRITES:

TRADING in stock markets has been marked by indecision, and heavy selling pressure has brought down equity values all round. Even the slight recovery in prices, noticed on Thursday, proved short-lived due to heavy liquidation on rumours of an interim budget and the consequent fears of fresh levies.

After a steady and sharp decline in prices, the Calcutta Stock Exchange witnessed a revival of buying interest on Thursday. Toward the close, however, there was again a setback.

Active buying in selected scrip led to a fair recovery on the Bombay Stock Exchange.

The general trend on the Madras Stock Exchange was rather subdued and investment buying continued to be selective.

The main feature of trading on the London Stock Exchange was the strength and activity of industrial equities.

Wall Street closed barely steady with a majority of fractional losses.

*

Calcutta

Calcutta, Friday Evening.

CONFLICTING trend in prices characterised the week's trading on the local Stock Exchange. Bull support looked halting in view of the uncertain border situation, as operators preferred to await the Ghinese reaction to India's reply. Again, rumours of a supplementary budget to be presented on the 29th November with some fresh levies served as an additional damper.

Above all, the release of the profit figures of Indian Iron & Steel Company Limited for the year ended 31st March 1959 disappointed the marketmen, who had all along been expecting that the company would have made a record profit in view of the production for the year being exceptionally good.

But the fall in profits set the shareholders seriously thinking on the matter. For, they feared that the company had to bear the extra burden of not only paying dividends on the bonus shares, but also of meeting the 30 per cent tax on dividends if the dividend was allowed to remain unchanged. The market finished the week on a hesitant note.

The Giltedged section continued to remain dull with restricted turnover. Even with a comfortable supply of funds, institutiional investors seemed to be keeping off the market, probably with a view to remaining prepared to meet the expected demand for funds in the busy season, which is only round the corner. 3 per cent 1986 Conversion Loan opened at Rs 74.50 and, after improving at one time to Rs 75.00, receded gradually to Rs 74.15, to finish the week better at Rs 74.20.

Bank shares continued to rule quiet with price movements confined to a narrow range. Punjab National changed hands at Rs 20.56 to Rs 20.62 and United Commercial at Rs 62 to Rs 62.50.

In the week's dealings, price movements were mostly influenced by the speculative issues under the lead of Indian Irons which, in turn, were subjected to renewed selling pressure on reports of lower profits for the year ended 31st March, 1959. There was a general disposition to await the annual report of the company, before extending commitments. Indian Irons opened steady at Rs 24.18 at which level renewed selling pressure brought down the scrip to Rs 23.74 at the close. TEXMACO were pushed down to Rs 24.50 from Rs 24.95; G. K. Williams to Rs 40 from Rs 40.44 and Jessop to Rs 33.62 from Rs 33.94, to close finally better at Rs 24.50; Rs 40.00 and Rs 34.50 respectively. Braithwaite were, however, maintained at Rs 26.75 and so also Britannia at Rs 13.00.

Tea shares, which had been keenly sought after at advancing levels during the past few weeks, came in for a good deal of profit-taking, resulting in a marked contraction in the volume of business. There was, however, no sharp recession in prices as operators continued to lend support to a few selected scrip on the belief that, with the steady increase in exports as well as internal consumption, the demand for the commodity might improve further in the coming weeks. Brooke Bond changed hands at Rs 19.37 to Rs 20.12 (Rs 20.12); Bishnauth at Rs 20.12 to Rs 21 (Rs 20.62); Grob at Rs 14.44 to Rs 15.25 (Rs 14.81); Hantapara at Rs 149 to Rs 154 (Rs 156); *Hattikhira at Rs* 13.62 to Rs 14.12 (Rs 14.19); Huldibari at Rs 24.75 to Rs 25.50 (Rs 25.25) and Methoni at Rs 23.37 to Rs 24.00 (Rs 23.50). Figures shown within brakets were the rates quoted at the end of last week

Jute shares were rather sluggish *due to lower advices* from the gunny market following the news of a sharp fall in US burlap consumption last month. Howrah were marked down to Rs 23.94 from a high of Rs 24.87; Birlas to Rs 25 from Rs 25.94; Lawrence to Rs 148 from Rs 155 and National to Rs 25 from Rs 25.50. New Central closed at Rs 21.19 after touching a high of Rs 21.56 and a low of Rs 21. Nuddea were quiet at Rs 60 against Rs 61.25.

Coal shares, especially of those companies having expansion programmes, met with fair support on the assumption that the prospects of exports had improved. Bengal had buyers at Rs 304 to Rs 306; Amalgamated at Rs 24.87 to Rs 25.06 and Western Bengal at Rs 6.37 to Rs 6.56. Burrakur moved rather erratically between Rs 17.31 and Rs 17.69 on speculative buying and selling, to finish the week at Rs 17.37. Central India remained almost unchanged at Rs 7.84.

Excellent reports of conditions prevailing in the piecegoods market induced a mild rally in textiles, although higher levels cnuld not be retained till the close due to general profit-taking. Kesoram were at one time taken up to Rs 19.62; Jayshree up to Rs 10.81 and Elgins up to Rs 16.00, to recede toward the close to Rs 19.00, Rs 10.62 and Rs 15.69 respectively. Cawnpore, however, continued to receive good support, having forged ahead to Rs 5.75 from Rs 5.44.

Thanks to higher advices from the commodity market, Sugar shares remained generally steady. Raza/Buland had buyers at Rs 12.87 to Rs 13.25; Cawnpore at Rs 14.81 to Rs 15.06; Carew at Rs 11.62 to Rs 11.87; Champarun at Rs 20.31 to Rs 20.87 and SKG at Rs 13.31 to Rs 13.56. Darbhanga eased off to Rs 19.50 after being done upto Rs 19.75.

Although price movements were irregular, selected Miscellaneous issues received fair support at every setback in prices due to the belief that many companies might be benefited from expansion schemes. The only weak spot were the Paper shares, which were subjected to a good deal of profit taking on reports that the Government might reduce paper prices in view of the rercommendations recently made by the Tariff Commission. Following were the price trends of a few selected scrip:

*

Bombay

THE stock market in Bombay displayed marked irregularity during the week under review. Movements one way or the other were undecisive; but the tendency was for prices to sag slowly due to tired liquidation, although the emergence of *buying enquiry* for a few selected scrip at lower levels led to a fair recovery toward the close.

Textiles: Textile shares accounted for good activity in the initial stages of the week. The firmness, especially in Century Mills, was more pronounced than in other scrip. This was attributed to the meeting to be held in connection with the right issue of the company. But, the disappointment over the postponement of the issue to early next year induced heavy liquidation in the scrip, resulting in the rest of the list losing substantial ground with some significant declines in prices. Ceutury, after dropping down to Rs 613 from Rs 629, improved at the close to Rs 622. Kohinoor were, however, in the limelight, having support up to Rs 329 from Rs 322 on expectation of encouraging working results for the current year. Bombay Dyeing were enquired up to Rs 68.60 from Rs 68.10 and Simplex upto Rs 168 from Rs 162 on bids from influential quarters. Svadeshi were done at Rs 260 with Central India ruling unchanged at Rs 112.

Steels: Steel shares fluctuated both ways; but the trend was downwards. This was mainly due to the fact that sellers were in evidence on every small rise in prices. With the result, higher levels could not be sustained till the close. Tata Ordinaries moved irregularly between Rs 152.75 and Rs 156.75, to finish the week at Rs 154.75. Mukund Iron changed hands at Rs 17.96 to Rs 18.16.

Miscellaneous: This section provided a few bright spots on special considerations. Bombay Burmah spurted to Rs 552 from Rs 542.50 on reports of encouraging working results. National Rayon, however, met with heavy selling pressure presumably due to rumours about excise duty on rayon yarns. The scrip, ater opening at Rs 375.50, receded gradually to Rs 363.50, to finish better at Rs 369.

In the Cement group, ACC had buyers at Rs 153.25 to Rs 154.25 and Ashok at Rs 9.60 to Rs 9.76. Digvijay were a steady feature at Rs 149.

Of the Sugar shares, Belapur were pulled up appreciably to Rs 329 from Rs 322.25 on bear-covering, while Phalton were nearly maintained at Rs 181. Walchandnagar were quiet at Rs 315 against Rs 316.50.

Shipping shares were a steady feature with Scindia Steam closing better at Rs 16.92 against Rs 16.76. Great Eastern were nominally quoted around Rs 19.08.

In the Automobile group, Hindustan Motor changed hands at Rs 13.36 to Rs 13.64 with *Premier having* buyers up to Rs 142.50 from Rs 141.

Engineering shares fluctuated both ways. Premier Construction moved between Rs 355 and Rs 365, while Voltas were well maintained at Rs 179.

*

Madras

Madras, Thursday.

THERE was listless trading in the Madras Stock Exchange today. Following weakness in the Bombay market quotations, an alround dropping of values was witnessed. The only outstanding feature was that some of the recently dividend declared sugar and coffee shares proved worth while. Consolidated Coffee has declared a 25 per cent dividend for the period ending 30th June, 1959. Consequently, this share was marked up in the day's transactions.

Government Securities: 4 per cent Government 'of India 1960-70 Loan was traded at Rs 100.40. 4 per cent Madras 1968 proved dull at Rs 100.30. 4½ per cent Madras 1970 was quoted at Rs 102.00 and 4 per cent Madras 1971 was available at Rs 100.12. There was no change in Mysore Government loans. While 4½ per cent Kerala 1970 was marked at Rs 100.97, that of Andhra's similar denomination was featured at a higher rate of Rs 101.95. Orissa State's similar loan was priced at Rs 101.75.

Rs 100 paid Indian Bank was quoted at Rs 179.50 and Rs 80 paid at Rs 150.00. Rs 100 paid Indian Overseas remained at Rs 175.00 and Rs 75 paid at Rs 145.00. Pandyan Bank was priced at Rs 34.25 and transactions were effected in 'Punjab National Bank at Rs 20.62.

Electrics: There was no change at all in this section. Cochin fetched only Rs 10.00 and Karaikkal Rs 10.75. Kumbakonam remained at the previous day's closing of Rs 10.60 as also Negapatnam at Rs 10.00. South Madras 4½ per cent itcd was quoted at Rs 11.40.

Sugars and Breweries: Cauvery did not change at Rs 132. In Deccan Sugars there were transactions at an enhanced rate of Rs 13.72. In EID also on demand the rates went up to Rs 44.50. KCP was steady at Rs 17.68. Travancore was today lower at Rs 11.50. United Breweries was the bright spot at Rs 475.00, being quoted at Rs 10 higher than the previous closing.

Plantings: Trade in this counter was diversified with accent on those with ex-dividends. Amalgamated did not change at Rs 14.50. Bababudin was available at Rs 9.25. Balanoor was quoted at Rs 18.75. Blue Mountain was marked at Rs 3.45. Transactions were made in Cochin Malabar at Rs 7.15. Coffee Lands was unchanged at Rs 25.10. Consolidated Coffee went up to Rs 24.60. Coonoor and Coorg were available at Rs 24.40 and Rs 4.95 respectively. Cowcoody was higher at Rs 6.92. Devashola also was quoted better at Rs 30.62. Emerald Valley remained at Rs 7.90, and Haileyburia was steady at Rs 16.25. Kailas was priced at Rs 5.10. Karikode was unattractive at Rs 10.00. Kil Kotagiri went down to Rs 4.50 from Rs 8.92. Transactions occurred in Lucky Valley at Rs 11.75. Mercara was quoted at Rs 9.50 and business took place in Midland at Rs 12.50. Mysore Coffee continued at the previous closing rate of Rs 4.95. Quite a few shares changed hands in Nellimalad at Rs 4.88. Nelliampathy was unaffected at Rs 3.03. Nilambur and Nilgiri were also in the list unaltered at Rs 16.25 and Rs 7.16 respectively. Nonsuch was quoted at Rs 27.00. Ouchterlony's quotation was Rs 5.50. Parkside was dealt in at Rs 25.58 and Peninsular was unaltered at Rs 23.00. Periakaramalai was lower at Rs 3.73. Rajagiri drew attraction at Rs 19.50, higher by 25 nP as also Sangameswar which changed hands at Rs 2.80. Thirumbadi too was noted at a fractionally higher price of Rs 1.93. Transactions occurred in T. R. & T. at Rs 7.45. United Nilgiri was unaffected at Rs 20.40. Velimalai went down to Rs 6.30. Waterfall nd Woodcott were priced at Rs 3.80 and Rs 1.70 respectively.

Textiles: Only restricted turnover occurred today in textiles. Adoni went down to Rs 9.00. Asher remained at Rs 217.00. Bangalore Woollen had buyers lower at Rs 197.50. Buckingham too was quoted lower at Rs 199.00 at which transactions were effected. Coimbatore Pioneer shed its value to Rs 322, with buyers at this rate. Dhanalakshmi was unaltered at Rs 223.00. Janardhana also maintained level at Rs 59.00. Kothari was stationary at Rs 11.50. Lakshmi was quoted at Rs 143.00. Madura at lower rate of Rs 29.75 proved attractive today. Mettur was available at Rs 407.00. Rajalakshmi was bought at Rs 64.50. Rajapalayam was quoted at Rs 113.50. Ranga Vilas improving to Rs 45 had many buyers. Also Travancore Rayon at the slightly diminished value of Rs 26.00 attracted buying attention.

Miscellaneous: In this section prices went down to some extent, and only meagre business was done Aluminium Industries remained steady at Rs 22.55. At Rs 7.55 Ashok Leyland was fancied. Binay proved stable at Rs 154.75. F.A.C.T.s was dull at Rs 9.45. India Cement continued to be quoted at Rs 6.50. Indian Steel Rolling was available at Rs 13.40. Marikar was still at Rs 52. Mettur Chemicals was quoted at Rs 12.62. Mysore Chemical and Fertilisers fractionally improved to Rs 10.45 on buying. Mysore Lamp was quoted at Rs 20.52. Mysore Paper too was in the limelight to be bought at Rs 24.25, improving by 13 nP on the previous closing. Mysore Tozacco was marked at Rs 13.25. Sen-Raleigh was quoted at Rs 20.00, Spencer at Rs 19.40, Standard Motors were bought at Rs 13.68. Textool went down to Rs 185. Tube Investments ex-dividend for Rs 100 paid shares was quoted at Rs 223 and the Rs 50 paid shares also ex-dividend remained at Rs 173.25.

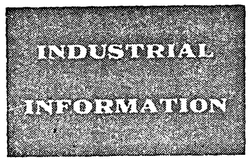
*

London

THE main feature of trading on the London Stock Exchange was the strength and activity of Industrial equities. Investment and speculative buying was on an increased scale, stimulated by the excellent October export figures, the near-record steel output and good company news. Gains wre numerous and, in many instances, substantial.

Among the leaders, Ford Motors were outstanding on brisk demand, while Courtaulds and Imperials reached new peaks.

*



New York

TRADING on Wall Street was brisk in the early part of the week when the high-speed ticker fell behind floor transactions on two separate occasions. Steels led the advance which got under way shortly after the opening. The shares were aided by reports that basic steel operations were recovering faster from the effects of the steel strike that had been expected.

Toward the close of the week, however, the trading pace slowed down due to the emergence of profittaking at the higher levels. Steels, however, held firm and there was no change in the overall pattern.

Rails moved up initially; but later ran into resistance, which, Wall Streeters said, was attributed to the feeling that the railroads were headed for a showdown over work rules. Motor shares met with early support before reacting somewhat. This was attributed to a report that retail sales of US cars, in the first days of November, fell to 129,500 units as compared with 163.000 units in the same period last month.

Banks: Andhra Rs 100 paid up did not change at Rs 103.00. Mysore Bank remained quiet at Rs 327.50.

INDEX NUMBER OF WHOLESALE PRICES IN INDIA

Review for the Week Ended October 24

The official wholesale price index (with the year ended March, 53 as 100) receded by 0.3 per cent to 119.4 during the week ended October 24, 1959 as against 119.8 (revised) for the earlier week. The index was higher by 1.2 and 2.9 per cent respectively when compared with the corresponding weeks of the previous month and of a year ago.

The index for (Food Articles' declined by 0.4 per cent to 124.5 due to a fall in the prices of rice at Imphal (—11%) and at Ranchi (—6%), fish (—8%), bajra at Agra and gram at Delhi and Moga (—6% each), gur (—4%), jowar and groundnut oil (—3% each) maize, ragi, urad and gingelly oil (—2% each) and wheat, barley, bananas, milk, coconut oil and coffee (—1% each) although the prices of oranges (+19%) bajra at Anakapalli (+18%), rice at Nandgarh (+10%), at Raipur (+8%), at Kanpur (+7%) and at Contai (+6%), onions at Nagpur (+10%) and at Delhi (+5%), chillies (+7%), gram at Patna (+6%), black pepper and betelnuts (+4% each), mung and mustard oil (+3% each), cardamoms and salt (+2% each) and potatoes, ghee and eggs (+1% each) showed advances.

The index for 'Tobacco' moved up by 2.4 per cent to 101.1 due to the reappearance of Pollah and Motihar tobacco at higher levels in Calcutta.

The index for the 'Fuel, Power, Light & Lubricants' group remained stationary at the previous week's revised level of 116.4 despite a fall in the prices of castor oil (—1%).

The prices of groundnuts (—4%), lac (—3%) and raw jute, rapeseed, and copra (—1% each) showed declines while linseed at Calcutta (+7%), tanning materials and green bamboos (+5% each) and castorseed, gingellyseed and cottonseed (+1% each) moved up and the index for 'Industrial Raw Materials' declined by 0.9 per cent to 120.8 as compared with 121.9 (revised) for the previous week.

The index for 'Intermediate Products' also fell by 0.3 per cent to 114.9 as a result of a decline in the prices of linseed oil and copper (—1% each). The price of zinc (+2%), however, moved up.

The index for 'Finished Products' worked out to 110.6 as against 110.7 for the previous week. Items which showed variations during the week were: jute manufactures (—2%), oil cakes (+3%) and bricks & tiles and glass (+1% each).

INDUSTRIAL PRODUCTION IN 1959.

"A steady increase in industrial production has been maintained during this year and the rate of increase has recovered from the somewhat steep reduction in the rate of increase in 1958", said Mr Manubhai Shah, Union Minister of Industry, while addressing a meeting of the Standing Committee of the Central Advisory Council of Industries.

Mr Shah said that this favourable trend in industrial production was partly due to the recovery in some major industries, like cotton textiles, steel and automobiles and partly due to the very great rise in the production of machine tools, industrial machinery and machine building in the engineering industries as also in the production of chemicals, synthetic fibres, ceramics, cement and pharmaceuticals.

The rate of increase in industrial production, the Minister observed, was 2.4 in 1958, as against 4.7 in 1957 and 10.2 in 1956. The index of industrial production (base 1951=100) had stood at 139.7 in 1958 as compared with 137.3 in 1957 and 132.6 in 1956.

In the current year, it was expected that the index would be 148, a rise of 9 to 10 points over 1958. The upward trend of production in the last quarter of this year might further help to carry forward this rate of increased growth.

The Minister said that it was gratifying to note that the index of machine tools industry for the current year stood as high as 896, industrial machinery and machinery manufacture at 429, general engineering at 278 and electrical machinery at 302.

Coming to specific industries, Mr Shah pointed out that production had increased 'in 'machine tools, sewing machines, diesel engines, electric motors, electric fans, bicycles, caustic soda, sulphuric acid, paper and paper board and tyres and tubes. The cement industry had recovered from last year's stagnation and the rate of production showed an increase of about six lakh tons, 10 per cent over last year's production. The consumer goods industries were also showing better performance all round.

Mr Shah said that excepting solitary items like bleaching powder, refractories, oil pressure lamps, enamelled ware and twist drills, practically all the other industries had shown a rise from mild to very rapid rate of increase. In the case of sugar, while production had not fully recovered from the loss sustained in the previous year, it was hoped that with the new measures now being taken sugar production would catch up with the general trend. With the present tempo of licensing and import of capital goods, Mr Shah said he had no doubt that the Second Plan targets practically in all the industries would be fully covered and even exceeded. Actually in several industries the Second Plan targets of capacity and production were being reached and even exceeded.

Referring to the progress made in consideration of proposals for licensing industries, the Minister said that only 600 to 700 applications were now pending. Simplification of procedure had resulted in speedy disposals. In regard to agreements with foreign firms for technical collaboration, Mr Shah said that 467 cases had already been finalised and only 90 cases were pending examination at present.

Mr Shah said that difficulties of foreign exchange particularly in respect of import of raw materials, components and producer goods were, however, continuing. Licensing of the import of capital goods, machinery and equipment could be done satisfactorily, on account of technical and economic cooperation programmes entered into with foreign countries. Foreign credits made available in these agreements generally did not cover the expenditure on imports of raw materials and components.

The only solution, the Minister said, was the promotion of experts to be undertaken by the manufacturing industries. Industries should endeavour to export at least so much as to meet the cost of imports of raw materials and components required by them. Unless this was done, it would be difficult to finance the import of these raw matrials out of our traditional exports which did not have a very elastic market abroad, the Minister concluded.

FOREIGN TRADE OF INDIA IN SEPTEMBER, 1959

The total value of exports (including re-exports) of merchandise and gold, during the month of September this year, fell short of imports by Rs 9,12 lakhs, according to provisional figures of foreign trade of India, available to-date in the Department of Commercial Intelligence and Statistics, Calcutta. The import figures are, however, exclusive of the value of certain consignments of Government stores awaiting adjustment and of private merchandise under reference to Customs for verification.

The figures show that the value of merchandise exported, excluding overland trade with Nepal, Tibet, Sikkim and Bhutan, was Rs 60,11 lakhs and that of re-exports Rs 16 lakns. The value of merchandise imports, subject to the limitation mentioned above, was Rs 69,83 lakhs.

During this month, currency notes and current coins (excluding gold coins) of the value of Rs 6 lakhs and Rs 1 lakh respectively were exported. Imports of currency notes and gold were of the value of Rs 1,05 lakhs and Rs 6 lakhs respectively.

VALUE OF MINERALS PRODUCED DURING FIRST HALF OF 1959

The total value of minerals produced during the first half of 1959 is estimated at Rs 72 crores as against Rs 72.2 crores in the corresponding period of 1958, according to the latest bulletin issued by the Indian Bureau of Mines.

The fall of Rs 20 lakhs in the total value was caused by the steep fall in the production of salt and manganese ore.

The period was, however, marked by significant increase in the output of coal, iron ore and lead and zinc concentrates.

Coal, with an output of 23.75 million metric tons, recorded an increase of 850,000 metric tons and was valued at Rs 47.3 crores which is about 66 per cent of the total value of mineral production.

The increase in coal output in public sector was nearly 4 lakh metric tons which accounts for 47 per cent of the total increase in coal output.

Next in order of value were manganese ore Rs 5.1 crores, salt Rs 4.8 crores, iron ore Rs 3 crores, gold Rs 2.6 crores, mica Rs 1.2 crores, copper ore Rs 1.1 crores and ilmenite Rs 0.8 crores.

The overall position is indicated by the index of mineral production which stood at 97.3 in the first half of 1959 (base first half of 1958=100).

CLAY DEPOSITS IN INDIA

Results of the preliminary examination of more than 200 samples of clay deposits collected from ten States during 1953-55 have now been published in a monograph "Indian Clays—Part II".

The monograph gives information on the location, extent of deposits, visual and washing working characteristics, behaviour on drying and firing, refractoriness and suitability of the different clays for use in ceramicware.

In collaboration with the Geological Survey of India, the Central Glass and Ceramic Research Institute, has been engaged in the survey and examination of clay deposits occurring in different parts of India with a view to their utilization in the manufacture of ceramics. Results of a preliminary examination of 500 samples of clay carried out in 1950-52 were published last year.

COMPANY REGISTRATION IN NORTHERN REGION

Sixty-five companies and five non-profit making Associations with total authorised capital of about Rs 2.41 crores were registered in the Northern Region during the three months, July-September, 1959.

The Northern Region comprises the States of Punjab and Himachal Pradesh, Delhi, Uttar Pradesh and Rajasthan.

Of the 65 companies, 4 were public and 61 private limited companies. During the period, 25 companies went into liquidation and the names of 93 companies were struck off the Register under Section 560 of the Companies Act.

In the Punjab and Himachal Pradesh, 10 private companies and 2 non-profit making Associations with authorised capital of Rs 29.05 lakhs were registered. Four companies went into liquidation and the names of three companies were struck off the Register.

Eighteen fresh prosecutions were launched by the Registrar against the defaulting companies. Out of the cases decided during the quarter, 10 cases resulted in conviction and a total fine of Rs 4,210 was imposed on the accused in these cases.

In Delhi, 3 public and 31 private limited companies with total authorised capital of Rs 1.72 crores were registered. Nine companies went into liquidation. The names of 51 companies were struck off the Register.

157 fresh prosecutions were launched by the Registrar. Of the cases decided, 40 cases resulted in conviction and a total fine of Rs 2,950 was imposed on the accused in these cases.

In Uttar Pradesh, 16 private limited companies and 3 non-profit-making Associations with authorised capital of Rs 24.85 lakhs were registered. Ten companies went into liquidation. The names of 37 companies were struck off the Register. The number of fresh prosecutions launched by the Registrar totalled 220. A fine of Rs 690 was imposed in 23 cases which resulted in conviction.

During the period, one public and 4 private limited companies with authorised capital of Rs 2.5 lakhs and Rs 12 lakhs respectively were registered in Rajasthan. Two companies went into liquidation. The names of two companies were struck off the Register.

RETENTION PRICES OF TATAS AND IISCO STEELS

The Government of India have decided that the retention prices payable to the Tata Iron and Steel Company and the Indian Iron and Steel Company be increased by Rs five per ton for the period 1955-56 to 1959-60 for all categories of steel taken together.

The Indian Iron and Steel Company had represented to the Government in December 1958 that their costs had risen as a result of increases in wages, railway freight, prices of coal etc. A similar representation was made by the Tata Iron and Steel Company in January 1959. The two representations were considered by the Government and the matter was referred to the cost accounts branch of the Ministry of Finance in April this year for examination who recommended:

(i) The average retention price payable to the Tata Iron and Steel Company and the Indian Iron and Steel Company for the period 1955-56 to 1959-60 on all categories of steel taken together should be increased by Rs seven per ton, if negotiated labour settlements are to be accepted and Rs 5 per ton if such settlements are not accepted.

(ii) The 1954-55 retention prices for the Indian Iron and Steel Company as adjusted from time to time, should be increased by the same amount as mentioned in (i) above and consequently, the average amount per ton to be credited by the company to its development fund during the period 1955-56 to 1959-60, shall remain unchanged.

(iii) As the 1954-55 retention price for Tata Iron and Steel Company has increased only by Rs four per ton against the present increase of Rs seven per ton in the retention price if negotiated settlement is to be taken into account and Rs 5 per ton, if negotiated settlements are to be ignored, the average amount to be credited by the Tata Iron and Steel Company to its development fund during the period 1955-56 to 1959-60, should be increased by Rs three per ton, if negotiated settlements are admitted and Re one, if they are not accepted.

The Government of India are examining separately the question of admitting increases in labour costs due to negotiated settlements.

The present increase in the retention price will enable the Tata Iron and Steel Company to increase its contribution by Re one to its development fund, i.e. to the level of Rs 50 per ton and the Indian Iron and Steel Company to maintain its contribution of Rs seven per ton.

The present retention price of Tatas and IISCO is Rs 419 per ton excluding the excise duty of Rs 45.75 per ton.

PHILAI STEEL PROJECT

With the regular operation of the blooming mill of Bhilai Steelworks after the successful completion today of a series of trial tests, the construction of the steel project has entered its third and final stage of completion.

The first stage was reached last February when the pig iron production was inaugurated by the President of India; the second on October 12 last when steel production was commenced at the first 250-ton capacity furnace which has so far produced 6,800 tons of steel ingots. These ingots will now go to the blooming mill for being rolled into blooms.

The billet mill of steelworks is expected to be commissioned about the middle of December, marking completion of entire metallurgical cycle for rolling out commercial productions before the end of this year.

Steel is produced in a steel melting shop in forms of ingots. These are taken to rolling mills for conversion into marketable forms like

rails, heavy structurals, bars and billet for rolling.

There will be four rolling mills in Bhilai Steelworks e.g., blooming mill, continuous billet mill, rail and structural mill and merchant mill. The blooming mill is the first of these four to be completed. Continuous billet mill is expected to be completed before the end of the year. The remaining two will be completed next year.

The Bhilai Steel Plant is designed for annual production initially of 1 million tons of steel ingots. The Works will have 6 open hearth furnaces of 250 ton capacity each for steel making.

PRODUCTION OF STEEL AT BHILAI.

The Bhilai Steelworks produced 3,156 tons of steel ingots during October 1959. Steel production began here on October 12 when the first open hearth furnace was commissioned.

Steelworks produced 34,582 tons of pig iron during October bringing aggregate pig iron production to 253,544 tons. Some 38,483 tons of pig iron were despatched from Bhilai during the month bringing total despatches to 220,334 tons. About 17,600 tons of pig iron have so far left Bhilai for export.

Production of coal tar during October was 1,399 tons. About 2,500 tons of coal tar were despatched during October bringing the total coal tar despatches to 8,069 tons.

IMPORT OF IRON AND STEEL

The last date for the submission of applications for the import of iron and steel during the period October 1959/March 1960 by actual users has been extended till November 30, 1959.

Announcing this, a Public Notice issued by the Iron and Steel Controller here today says that licences for six different varieties of mild steel will be issued during the current licensing period. These are: (i) cold rolled and deep drawing sheets of any gauge, black and galvanised plain sheets thinner than 26 gauge; (ii) aill high tensile steel plates, structurals and bars with tensile strength of 37-43 tons/square inch; (iii) M.S. plates over 7 feet wide or 50 feet long; (iv) boiler quality plates; (v) Swedish charcoal iron bars, Yorkshire iron bars and other wrought iron bars, faggot steel bars (with less than .065 per cent carbon), cold or bright drawn bars of various sections which are not licensable under shafting category and free cutting steel black bars in "as rolled" condition; and (vi) nose bars for ring frames for textile and jute industries.

The above mentioned list is illustrative, but not exhaustive, adds the Public Notice. Applications from actual users for items not spicifically included in the list may be considered on merits in case they submit documentary evidence from the indigenous suppliers regarding their non-availability, the Public Notice concludes.

DEVELOPMENT OF IRON AND STEEL INDUSTRY.

The Government of India have decided to constitute an Iron and Steel Advisory Council to advise on all matters of a general character relating to iron and steel, and in particular to problems pertaining to production, distribution, transport, research import and export.

The Minister for Steel, Mines and Fuel, Government of India, will be the chairman of the Council, which will include the President, Federation of Indian Chambers of Commerce and Industry, or his nominee and the President, Associated Chamber of Commerce of India, or his nominee, as ex-officio members. The Government of India will nominate not more than 21 members who, in their opinion, are capable of representing the interests of the producers, consumers, the trade and mining and allied interests. There will be eight representatives of various Ministries in the Government of India on the Council. The Secretary, Department of Iron and Steel of the Ministry of Steel, Mines and Fuel, will be member of the Council. The Iron and Steel Controller of the Government of India will be the Member-Secretary of the Council.

The chairman may also specially invite any other person for persons to represent the iron and steel industry or trade or consumers to attend the meeting of the Council.

The Council, which has been constituted for a term of two years, will meet at least twice a year.

RETENTION PRICE OF PIG IRON PRODUCED BY HINDUSTAN STEEL LTD.

The Government of India have decided that the prices of pig iron manufactured at the Burnpur Works of Indian Iron and Steel Company shall apply provisionally to the corresponding grades of pig iron produced by the Hindustan Steel Limited, according to a gazette notification issued today.

Increase in retention prices of pig irons manufactured at the Indian Iron and Steel Works and TISCO have also been announced in the same notification.

The Tariff Commission had recommended a price increase of Rs 10.04 per ton on a weighted average basis for the period from August 1, 1954 to March 31, 1960 for pig iron produced by the Indian Iron and Steel Company. The Government of India while accepting the recommendations of the Tariff Commission in regard to the actual increases in costs do not consider that the increases should be given a weighted average basis. An increase of Rs 17.23 per ton has been granted from July 8, 1957. The existing retention price of IISCO pig iron is Rs 141.5 per ton.

The pig iron production at Burnpur Works not being separately costed, the Government have decided that increase in prices recommended by the Tariff Commission and accepted by Government should be applied to the Kulti pig iron till the Kulti Plant ceased to operate and to the corresponding grades of pig iron produced at the Burnpur Works up to the end of March 1958 finally, and thereafter provisionally, with the intention that the prices of pig iron produced at Burnpur after April 1, 1958, should be examined separately and adjustments based on costings made later.

The increase of Rs 12.92 per ton in the retention price of the pig iron produced by Tatas for the period 1958-60 has been granted by the Government of India. The existing retention price of Tatas is Rs 128 per ton.

The Tata Iron and Steel Company represented to the Government that they were incurring increases in costs in the manufacture of pig iron. The Tariff Commission recommended a price increase on a weighted average basis of Rs 9.54 per ton for the period 1955-56 to 1959-60. The Government accepted the recommendation on the basis of actual increases instead of on a weighted average basis.

SPECIFICATION FOR COTTON CLOTH

The Indian Standards Institution has circulated three draft standards relating to cotton cloth and sewing thread for eliciting comments of producers, consumers, and others concerned.

The draft Standards for bleached or dyed cotton calico and dyed cotton lining cloth prescribe constructional details and general and specific requirements for these two types of cloth. The specification for bleached or dyed cotton sewing thread lays down requirements for the count of thread, twist, length per kg, breaking load, olour fastness, etc.

Comments on these draft standards may be sent to the Indian Standards Institution, New Delhi, before December 17,1959.

STEAM TURBINE LUBRICATING OILS.

The Indian Standards Institution has published a specification for steam turbine lubricating oils (IS 1012—1958). The standard has been prepared to facilitate the supply of quality material most suited for use under Indian climatic conditions to large and small scale consumers.

Modern practice requires the use of oils containing additives which are designed to inhibit corrosion of plant and to retard oxidation of the oil in service.

Copies of the Standard are available from the Indian Standards Institution, New Delhi or from its branch offices at Bombay, Calcutta and Madras.

SURVEY OF AGARWOOD OIL INDUSTRY

The present state of the agarwood oil industry in Assam is described in a leaflet—the first in the series on Indian essential oils published recently by the Council of Scientific and Industrial Research.

The leaflet, prepared by Shri B. C. Gulati, describes the collection, production, grading and uses of agarwood as well as the indigenous method of distillation, properties, production and cost of agarwood oil.

Agarwood, the basis for the popular agar-batties has been valued from ancient times as an incense. On distillation, the wood yields an oil which is one of the highly-priced essential oils. The industry is of economic importance and is the monopoly of Assam.

A survey of Indian essential oils has been undertaken by the Essential Oils Research Committee of the CSIR.

JALDHAKA PROJECT

An agreement has been concluded between India and Bhutan on the Jaldhaka Hydo-electric project to be undertaken by the Government of West Bengal, under which Bhutan will receive 250 kw. of power free of cost.

The West Bengal Government would also pay an annual royalty of Rs 8/- per kw. to the Bhutan Government for the rest of the power generated from the 1st stage of this project, and consumed by it.

Jaldhaka, a small river rising from the Himalayas in Sikkim, flows alongside the river Teesta, and ultimately joins the Brahmaputra.

Draining a catchment of about 455 sq kilometers (172 sq miles), the river constitutes the boundary between West Bengal and Bhutan for about 19.31 kilometers (12 miles). The bed level of the river within this stretch drops sharply by about 250 meters (810ft), and it is proposed to install hydro-electric works in stages at two suitable places.

The firm power potential of the first stage of the project has been estimated at 18,000 kw at 50 per cent load factor.

PIPELINE FROM NAHORKATIYA OILFIELDS TO NUNMATI AND BARAUNI

An agreement providing for the designing and construction of the pipeline from Nahorkatiya oilfields in Assam to Barauni (in Bihar) via Nunmati (near Gauhati in Assam) between the Government of India and the Burmah Oil Company was signed here to-day.

Shri S. D. Bhambri, Deputy Secretary, Ministry of Steel, Mines and Fuel, signed on behalf of the Government of India and Mr. A. N. C. Lothian, on behalf of the Burmah Oil Company.

Under the agreement, the Burmah Oil Co. Pipe-lines—a subsidiary organisation of the Burmah Oil Co.—will design and construct a pipeline from Nahorkativa oil-fields to carry not less than 2.7 million tons of crude oil per annum to Nunmati refinery owned by the Indian Refineries Ltd. and from Nunmati to Barauni refinery not less than 2 million tons per annum of crude oil.

Throughout its entire length— 720 miles—the pipeline will be so designed and constructed that as and when required, the total throughout can be economically expanded to four million tons per annum upto Nunmati and 3.25 million tons per annum between Nunmati and Barauni.

Now—a 55% increase in India's aluminium production

INDALUCO'S Hirakùd Smelter—it's capacity is being doubled to 20,000 tons

Indian Aluminium announces fully integrated expansion plans

	Today	1962
Ingot	15,600 tons	25,600 tons
Alumina	18,000 tons	54,000 tons
Rolling Mill	9,000 tons	16,500 tons
Extrusions	1,200 tons	3,700 tons

IN EARLY 1960, Indian Aluminium Company proposes to launch the biggest integrated expansion scheme it has yet undertaken. A comprehensive programme to increase production of aluminium ingots by 10,000 tons a year will be initiated... within a year of the opening in February 1959 of the Company's Hirakud Smelter which, at one stroke, more than doubled India's production of aluminium. The 1960 Expansion will increase the country's ingot production by another 55% and make substantial increases in semi-fabricating capacity.

This rapid expansion in a vital sector of the aluminium industry is based on the mounting importance of this metal in modern everyday life. Barely 16 years ago India produced no aluminium, and its consumption was restricted to diffident users of domestic utensils. Ever since Indian Aluminium installed their first aluminium smelter in 1943 at Alwaye, the rise in demand has been little short of phenomenal... today it is estimated at over 50,000 tons a year, or nearly three times the country's present production of 17,500 tons.

NEW EXPANSION IS IN GOOD HANDS

Appropriately enough, the present effort to catch up with demand is being made by India's pioneer in the aluminium industry—Indian Aluminium Company—which has done the most to give the country a reliable and vigorous aluminium industry. Indian Aluminium has extended its facilities almost continuously since it began operations and today produces over 90% of the country's ingot output. It is by far the largest manufacturer of sheets, circles and extrusions.

INDIA MUST PRODUCE MORE ALUMINIUM

India's developing economy warrants a substantial expansion of the aluminium industry—and the country's large bauxite and water power resources makes this a practical proposition. The sanction for Indian Aluminium's 1960 Expansion Scheme is as much an evidence of Government's recognition of the country's needs as it is an expression of faith in the Company's resources and know-how. Indian Aluminium is fully geared to meet the challenge of the years ahead when India will find a position on the world map of major aluminium producers.

This expert has won the trust of millions in the label *'Sanforized'*

Meet our American-trained expert who makes sure that any fabric marked 'Sanforized' won't shrink. Every day, all through the year, he tests fabrics bearing this international label; so that your clothes won't shrink out of fit—even after many, many washings!

This is how he does it:

Travelling from mill to mill, he advises and helps them with their technical problems; and makes on-the-spot tests that ensure value in the cloth you buy labelled 'Sanforized'.

Whenever he visits the mills, he takes at random several samples from their godowns as well as off the processing machine. These samples are first measured, and then given a standard wash test.

And then, the samples are re-measured. This is the first stage of ensuring quality. All fabric must meet the Company's strict anti-shrinkage specifications *before* it can use the label 'Sanforized'.

These tested samples are sent to the New York office for re-checking, and with them goes the expert's detailed report. These documents record the progress and prosperity of each individual mill.

The New York office checks thousands of samples from all over the world. This is your assurance that fabric labelled 'Sanforized' is of a uniformly high standard, and is welcomed *everywhere* in the world!

Look for SANFORIZED REGD TO ME *on the label* ——— *and your clothes will never shrink out of fit!*

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

For information: 'Sanforized' Service, 95, Marine Drive, Bombay-2

FOR THE INVESTOR

Fresh Doubts

Investment Gossip:

STOCK MARKET MEN are assailed by fresh doubts this week.

Some of these have arisen from the statement of the Chairman of the Indian Iron and Steel Company which has been circulated to the shareholders along with the accounts for the year 1958-59.

The accounts, however, disclose a satisfactory position as far as the company's working is concerned. Profit is higher and there has been an alround improvement in production. The expansion programme of the company is making good progress.

It is evident that operators' anxiety has stemmed from some of the observations made by Sir Biren Mookerjee in his statement. In his comprehensive review of the working of his company, he has touched upon some points which are common to the corporate sector as a whole and some other points which are of special concern to the steel making companies.

In the first place Sir Biren has expressed his inability to give any sort of assurance as to the return for the ordinary shareholder in view of the complications created by the Finance Act 1959.

In the second place he is not at all confident that, unless some radical changes are made in their tax-policy by Government, we will be able to dispose of the increased production that will be available in coming years in the country. Selling our steel abroad is going to be extremely difficult because of excess supply in world markets and the rising trend in the cost of production in our country. To the contention that due to the rapid progress of industrialisation in the country and the increase in the national income, there will be no need to look for export markets to dispose of the 4½ million tons of steel that will be available only by the end of the current plan period, his answer is that due to excessive taxation and inflation there is very little purchasing capacity either in the corporate sector or among the people at large.

It would appear that even before the publication of this statement, marketmen were not quite enthusiastic about the immediate outlook for equities. It may be recalled that I had pointed out that the developments regarding Sino-Indian relations had emphasised the need for re-assessment of equity prospects as our defence expenditure were likely to go up. This week's Lok Sabha debate has removed all doubts in this regard. It is from this possibility of increased outlay on defence that the rumour of a supplementary budget seems to have originated. The prevailing opinion this week, however, seems to be that additional levies, if any, will be announced at February-end rather than in the shape of a supplementary budget at the present juncture. But many seem to be convinced that an increase in the tax burden is in the offing sooner or later. In one of his recent speeches Mr Nehru has made it clear that the Chinese threat to the integrity of our territory has emphasised the urgent need for building up heavy industry. This he has pointed out should be accomplished even if it means the curtailment of some of the comforts of the people.

While it cannot be gainsaid that the fresh developments call for a reassessment, it is to be noted that the long-term prospects of equities cannot be deemed to have undergone any radical change. For even supposing that there would an addition to the tax burden, there is every reason to expect that the increase will be more than compensated by the increase in earnings. With regard to Sir Biren's contention about the capacity of the country to absorb the increased steel production there can be more than one opinion. In the first place the full production of steel will be available if everything goes according to schedule only by 1961. In the meantime there is every indication that the absorption of steel will steadily increase with the increase in the tempo of building and other activity in the country.

IISCO Results

Balance-Sheet Points:

IT would be recalled that the preliminary figures, released by the directors of the Indian Iron and Steel Company a week ago, disclosed lower profits for the year ended 31st March, 1959 as compared to the previous year. But the detailed report and accounts, released this week, are found to be encouraging. Sales are higher at Rs 38.99 crores against Rs 30.10 crores, while the item "Departmental orders and items used in work" is shown at Rs 6.03 crores against Rs 695 crores. Although manufacturing expenses have risen to Rs 7.20 crores from Rs 4.94 crores and "salaries and wages" to Rs 9.00 crores from Rs 7.94 crores, the net profit for the year, after providing for Depreciation but before Taxation, amounts to as much as Rs 5.63 crores against Rs 5.46 crores in the previous year, thanks to the increase in production of all categories of steel resulting from the effects of the big expansion schemes which the company has undertaken.

In respect of allocations, there are two notable features. One is the provision of as much as Rs 3.15 crores for the Development Rebate Reserve (Statutory) as against only Rs 1.05 crores reflecting the progress of the expansion schemes. The other is that there is, accordingly, no provision for taxation against Rs 1.34 crores. Wealth tax provision is reduced to Rs 18.63 lakhs from Rs 27.40 lakhs and Extensions Special Reserve to Rs 24.79 lakhs from Rs 26.13 lakhs. The Depreciation amount is raised to Rs 2.00 crores from Rs 1.40 crores, while the Plant Rehabilitation Reserve and General Development Reserve are maintained at Rs 45.10 lakhs and Rs 1.00 crore respectively. No provisions are, however, made for Taxation Contingencies Reserve and General Reserve against Rs 41.00 lakhs and Rs 32.97 lakhs respectively in 1957-58. A sum of Rs 42.50 lakhs (nil) is set apart for Steel Prices Equalisation Account. The directors have, as indicated in their earlier report, not made any further distribution. The amount carried forward to next year is higher at Rs 10.27 lakhs against Rs 9.94 lakhs brought in.

There is an all-round increase in production despite the fact that the main plant installations, during the last two years, are as yet working to a part only of their capacity output. Production of Pig Iron has risen to 959,933 tons from 733,945 tons; Castings to 147,325 tons from 115,969 tons; Steel Ingots to 608,205 tons from 507,580 tons and Saleable Steel to 497,551 tons from 412,042 tons. Despatches of steel are also higher at 506,141 tons against 403,978 tons.

According to the directors report, the new steel foundry, which was commissioned on the 11th August, 1958, is now in regular operation. The 1953 Extension Programme has been completed, while good progress is being made with the 1955 Extension Programme which is expected to be completed about the middle of next year.

Calcutta Stock Exchange Defends Enlisting Rules

(*Contributed*).

SOME time ago, the Federation of Indian Chambers of Commerce and Industry had expressed disagreement with the enlisting rules of the Calcutta Stock Exchange Association. The Federation had pointed out that some of these rules were not well conceived and that they were causing inconvenience to many companies. The Calcutta Stock Exchange Association has now answered in detail the points raised by the Federation. The Association has stated that the listing regulations

ORISSA CEMENT LIMITED

Bringing greater prosperity to INDIA

As one of the thirteen British companies forming ISCON, Davy-United are responsible for all the Rolling Mills, the Wheel and Axle Plant, the Central Engineering Maintenance Shops and the Foundry of the great new Durgapur Steelworks from which will emerge the steel that is to be part of India's industrial future. Durgapur will produce over a million tons a year, enabling the Government of India to reduce considerably the yearly expenditure on foreign steel imports. It will provide the steel and pig iron for new industries and for urgently needed railways, hospitals and schools. And it will create nationwide employment for thousands of people. Davy-United are proud to be undertaking a major part in a project which will help to build a new and flourishing India.

DAVY-UNITED

a member company of the ISCON CONSORTIUM

DAVY AND UNITED ENGINEERING COMPANY LIMITED, SHEFFIELD, ENGLAND

ONE OF THIRTEEN BRITISH COMPANIES WORKING FOR INDIA

are meant to protect the interest of the shareholders and to impart liquidity and negotiability to their investments. The shareholders are the ultimate proprietors of the companies and as such anything which is conducive to their interests should not be resented by the managements. The Association has appealed to the Federation to persuade its members to accept the enlisting rules of the Calcutta Stock Exchange. The Calcutta Stock Exchange has clarified the points raised by the Federation in the following manner.

Clause 3(b): This provision, which corresponds to Clause 2 in Part 1 of Schedule VIII to Appendix 34 to the Rules and Regulations of the London Stock Exchange, is intended to save the investor from the sad predicament of being unable to dispose of his holding when he is in need of funds on account of the delay in the issue of certificates by some companies. On the contrary, it imposes no hardship on the companies. For, where a company would find it difficult to issue certificates within a month as required, it can adopt the alternative process of issuing pucca receipts, so that the holders may be in a position to sell the shares in the market and complete delivery in time.

Clause 3(c): This also corresponds to a similar provision in the listing regulations of the London Stock Exchange. This is intended to facilitate business on the Stock Exchange. Under long-standing rules of the Stock Exchange, a seller is required to deliver the shares to the buyer within a fortnight from the date of sale. A listed company should, therefore, co-operate with the Exchange in this matter by issue of certificates within the required time, so that the seller in his turn, can also complete delivery within the due date. Lest it imposes any hardship on the companies, in this case, too, an alternative has been prescribed. Thus, where the signing of the certificates by the Directors may take time, an endorsement by an authorised official of the company on the back of the transfer receipt that the transfer has been duly approved by the Directors will do. It should be pointed out in this connection that this clause does not conflict with section 113 of the Companies Act, for the Act merely prescribes the maximum period within which the transfer is to be completed.

Clause 4(d): This clause does not come into operation in all cases. It comes into effect only when a listed company in violation of the listing regulations closes its transfer books before the shareholders in general meeting approve the bonus or right issue or before the consent of the Controller of Capital Issues is obtained. This clause is also intended to facilitate business on the Stock Exchange, for, in a case of the kind stated just now, transactions in the market would continue to be done on cum-right footing even after the closure of the transfer books, and rights have to be settled between cum-right sellers and cum-right buyers. If the deliverable ratio does not work out to a whole number of bonus or right share, there cannot be any settlement between such a seller and such a buyer at the time of delivery. It is to obviate this difficulty that the company may be required to issue coupons or fractional certificates, several of which may later be converted into a whole share.

Clause 8(a): The circumstances under which the company is required to replace a certificate free of charge are specifically stated in the clause. The question of the Company being required to replace it free of charge in any other circumstances does not, therefore, arise. It is indeed fair and natural that a certificate should be replaced when it has become old, decrepit or worn out or where the cages on the reverse have been all filled up. Free replacement of such certificates is not likely to prove onerous to the companies, in view of the fact that, within any particular financial year, such replacements will be few and far between and whatever expenses are involved, the same will be a part of the general overhead costs which every company has to incur. Moreover, the benefit is being rendered to the shareholders or proprietors of the Company, and as such it would be a worth while practice on the part of the managements of companies to earn the goodwill of the proprietors in this small and inexpensive way. Furthermore, elimination of such incidental charges will popularise investment in stocks and shares.

Clause 8(b): The observations in the previous para also apply in this case. Most companies do not charge any fees for registration of powers of attorney, probates, letters of administration or similar other documents. This good practice should be followed by others.

Clause (9): There seems to be some misunderstanding. This clause does not prohibit companies from charging any fees within the maximum as prescribed by their Articles of Association. If such fees be reasonable ones, the Stock Exchange would always agree to them. This clause has the underlying object of bringing about in course of time uniform scale of fees for all listed companies, so that investment procedure may be simplified and thereby the cause for promotion of investment in stocks and shares may be served.

Clause 10: Inasmuch as the companies will have to verify signatures of shareholders only when required to do so, and not in all cases, the provision as enjoined in this clause is not likely to place the companies in a position of hardship. It is to be noted that this clause is intended to safeguard the interests of the investors. In view of the fact that, in recent times, some spurious shares have got their currency into the market, it is essentially desirable that the companies should help the investors to get delivery of only genuine shares by verifying the signatures on them.

Clause 14: Most companies which have their registered office at a distant place are now co-operating with the Exchange in this regard by establishing arrangements for receipt of shares for transfer at Calcutta. Only very few companies are involved who have no such arrangements in Calcutta, and, it is believed, that they would experience no difficulty in following the practice of others.

Clauses 15 & 16: These are very old regulations, and most companies are following them without feeling any hardship. These regulations are intended to help the holders of shares in blank to get them transferred in time so that they may be entitled to the proposed dividend or rights or bonuses. In the absence of such advance notice the Exchange may find difficulty in fixing ex-dividend, or ex-right or ex-bonus dates. It may also upset the Exchange's Clearing them as to proper dates when it is consulted. In the case of cleared securities, the Exchange insists that such information must be made available to it at least a month in advance. Again, it insists that, in the case of right or bonus shares, the transfer books should be closed only after the consent of the Controller of Capital Issues has been obtained. Where a security is quoted on two Exchanges, and it is found that it is difficult for the company to comply simultaneously with the clearing programmes of both the Exchanges, the difficulty would be obviated if it decides to have official quotation only on one Stock Exchange. Some companies have followed this procedure in recent months. Of course, the Exchange feels that the difficulty visualised here may not occur in reality if the companies approach the problem in a co-operative spirit. Thus, the Indian Iron & Steel Company Limited and the Indian Copper Corporation Limited, which are quoted on several Exchanges, have never experienced any difficulty in this regard by careful planning of their book-closing in consultation with the Exchange.

Clause 17: This is a normal thing. A company should accept shares for transfer up to the date of closing of the transfer books. The clause does not impose any obligation on the companies to accept shares for transfer after the closing of the transfer books. So, the Exchange fails to perceive how this provision may interfere with the internal working of the companies.

Clause 18: This is a practice normally followed by the companies in the countries of the West. Many of the companies in this country, too, like Indian Iron, Indian Copper, some of the tea companies, etc., also make available to the shareholders periodical information about working results. Publication of such information, helpful both to the shareholders and the investing public, cannot impose any hardship on the companies, as the clause clearly provides that such information will be of the type as may be mutually agreed upon by the company and the Exchange.

Clause 20(b): Many companies officially quoted on this Exchange comply with this regulation. Prompt availability of such information is essential for the healthy function of the Stock Exchange, for, in its absence, canards and rumours may dominate the scene and lead to undesirable developments. To counter such undesirable developments, it is expected that the companies will cooperate with the Exchange in this matter.

Clause 21: The misapprehension that this clause conflicts with section 207 of the Companies Act stems from misinterpretation of it. What the clause really means is that, within the statutory period of three months as prescribed by Section 207 of the Companies Act, the company should fix a date and start sending the dividend warrants from that date so that there may not be any complaints of discrimination between one shareholder and another. As the clause does not impose any obligation on the companies to fix any particular date within the statutory period, there is no reason to suppose that it causes any hardship to the companies.

Clause 32: The contention that thousands of extra copies of the Balance Sheet will have to be printed by the companies to comply with the provision of this clause is not correct in view of the fact that the total membership of this Exchange is only a few hundred. Even where a company is quoted on several Exchanges, the number so required would not be a heavy one in view of the fact that the total membership of all the recognised Stock Exchanges in this country is only about two thousand. Compliance with this clause is essential to enable the members of the Exchange to impart to their clients correct information about the listed companies. Instead of resenting it, the companies would welcome this provision, for, it would help them to secure publicity about the affairs of their companies.

Clause 3(e) and 23(a): These clauses may be modified shortly, and the modifications when effected will be communicated to all companies listed on this Exchange.

Investment Notes:

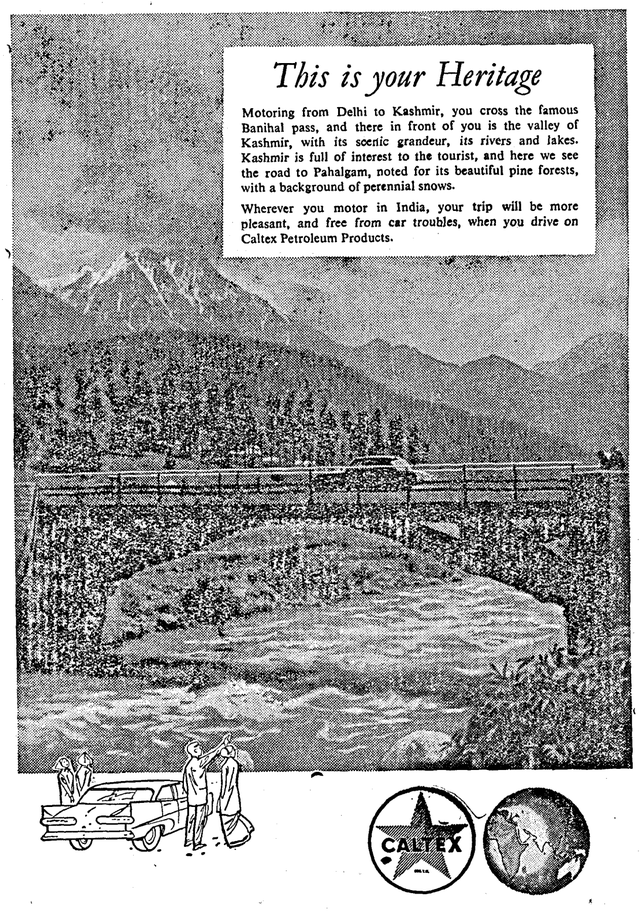
IN respect of the recent one crore Preference issue by the TEXMACO, the shareholders applying for right and additional shares and the public applying for 201 to 500 shares will get 80 per cent and those applying for above 500 shares will get about 40 per cent of the shares applied for.

The Hooghly Flour Mills have decided to issue bonus shares in the proportion of one for two shares held, by capitalising a sum of Rs 3 lakhs from the Reserves.

Jessop & Company Limited has decided to issue right shares in the proportion of one share for every share held, at a premium of Rs 2 a share.

It is learnt that the Cellulose Products of India Limited, Ahmedabad, has finalised the arrangements for the allotment of shares in respect of its recent issue. Applicants for shares ranging from 1 to 25 will be allotted one share each after drawing lots. Allotments in excess of the above number of shares will be as follows:—One share for 26 to 50 shares; 3 shares for 51 to 100 shares; 6 shares for

101 to 200 shares; 20 shares for 201 to 499 shares; 25 shares for 500 to 1,000 shares and 30 shares for 1001 shares and above. The whole allotment is expected to be completed by the end of the year.



The Structural Engineering Company has recommended a dividend of Rs 17 per share, subject to tax, for the year ended 30th June, 1959. This works out to a net dividend of Rs 11.90 per share. The dividend paid for the previous year was Rs 18 per share, free of tax.

United Breweries Limited has recommended a final dividend of Rs 52.50 per share without any deduction of income-tax for the year ended 31st March 1959, making a total Rs 60 per share for the year. This will be paid as to Rs 2.50 per share in cash and the balance by the allotment of 5 newly-created equity shares of Rs 10 each. In addition, an interim dividend of Rs 25 per share, subject to tax, is recommended for the year ended 31st March. 1960.

United Breweries Limited has proposed to sub-divide the existing equity shares of Rs 100 into shares of Rs 10 each and increase the authorised capital from Rs 8 lakhs to Rs 1 crore by the creation of 9.2 lakh equity shares of Rs 10 each. Share Transfer Books of the company will remain closed from 26th December 1959 to the 20th January 19600.

The Radio & Electricals Manufacturing Company has proposed to raise the authorised capital from Rs 37.50 lakhs to Rs 1 crore. An extraordinary general meeting, in this connection, will be held on the 23rd December, 1959.

The Kerala State-owned Fertilizers & Chemicals (Travancore) Limited, known as FACT, has on hand a Rs 8 crores scheme for expanding the factory's fertilizer output. This expansion proposal will mean an increase of 39,600 tons of ammonia by next April. In other words, the present output will be doubled. There is also a plan for conversion of ammonia to nitrophosphate, which is called a balanced fertilizer, to be sold at a very attractive cost. The distribution of the increased output will be on all-India basis as at present.

Investment Briefs:

Zandu Pharmaceuticals Works Limited has maintained the dividend at Rs 7 per share for the year ended 31st March 1959.

Rajagiri Rubber has announced a taxable dividend of 20 per cent for the year ended 30th June 1959 as against a net dividend of 20 per cent in the previous year.

Apollo Mills have passed over the dividend for the year ended 31st March 1959.

New Swadeshi Sugar Mills Limited has recommended a dividend of Rs 29 (less tax) for the year ended 30th June 1959 as against Rs 20, free of tax, for the previous year.

Orient Paper has maintained the dividend at Rs 1.50 per share for the year ended 31st March, 1959.

Premier Automobiles have declared a dividend of Rs 9 per share, subject to tax, for the year ended 30th June, 1959. This works out to a net dividend of Rs 6.30 against Rs 4.00 in the previous year.

Tube Investments of India Limited has declared a dividend of Rs 10 on the fully paid-up shares of Rs 100 and Rs 2.50 on the partly paid-up shares of Rs 25, subject to tax.

Bisra Stone Lime Company has recommended a final dividend of one rupee, making a total of Rs 1.87 for the year ended 31st March, 1959, payable on or after 7th December, 1959.

£ R$

Excellent Results of Bombay Burmah

Balance-Sheet Reviews:

THE Bombay Burmah Trading Corporation Limited has reported excellent working results for the year ended 31st March, 1959. Gross receipts have amounted to Rs 4.45 crores against Rs 4.14 crores, while the net profit, after providing Rs 31.71 lakhs for Depreciation (Rs 34.39 lakhs) and Rs 37.85 lakhs for Taxation (Rs 9.19 lakhs), is higher at Rs 24.44 lakhs against Rs 22.03 lakhs in the previous year.

The directors have provided Rs 3.70 lakhs to Development Rebate Reserve (Rs 4.41 lakhs) and Rs 7 lakhs to Investment Reserve (nil). After providing for the proposed dividends and making necessary adjustments, a sum of Rs 67,223 is carried forward against Rs 49,888 brought in.

The substantial rise in gross trading receipts reflects a material increase in sales of plantation products and of timber, partly offset by a decline in sales of manufactured goods and in the income from sundry receipts. The Corporation's South Indian tea estates have produced a record crop of 69.59 lakh pounds as against 67.38 lakh pounds in 1957-58.

£ R$

Clive Row Investments

Difficult conditions experienced by the jute industry and reduced dividends received from the tea companies are fully reflected in the working results of the Clive Row Investment Holding Company Limited for the year ended 31st March, 1959. Income through interest and dividends is shown at only Rs 15.44 lakhs against Rs 19.27 lakhs. The net profit, after providing for Depreciation and Taxation, amounts to Rs 6.78 lakhs against as much as Rs 10.35 lakhs in the previous year.

In respect of allocations, the Taxation provision is reduced from Rs 6.92 lakhs to Rs 6.30 lakhs. The directors have recommended a final dividend of 12 nP, making a total of 37 nP for the year against 75 nP per share. In addition, further dividends amounting to 46 nP in respect of two years ended 31st March 1956 have also been paid.

The directors have, in their report, stated that the company is now deriving benefit from its increased investments in miscellaneous companies in addition to receiving increased dividends from its jute mill holdings, although the shareholders may be adversely affected by the provisions of the Finance Act, 1959.

£ R$

B. B. Petrol

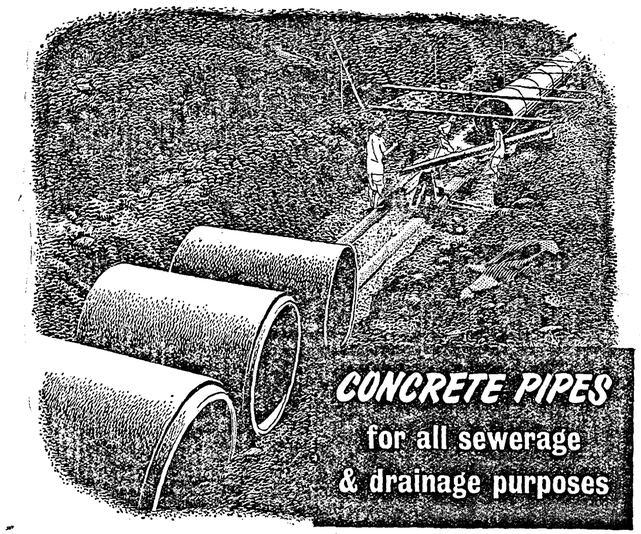
The British Burmah Petroleum Company Limited has earned a profit of £12,920 before providing for Taxation for the year ended 31st March 1959, against £30,805 in the preceding year. The whole of this amount, the directors point out, will be absorbed in providing for taxation. Actually, the sum of £1,775 brought forward from the previous year will be carried forward to next year. The dividend has been passed over.

The directors attribute lower profits to the fact that the dividend from the British Burma Petroleum Company (South Africa) (Proprietory) Limited was declared after 31st March 1959 and could not, therefore, be taken into account in the year under consideration.

The company has entered into a listing agreement with the Bombay Stock Exchange and the shares of the company will, therefore, continue to be listed as at present.

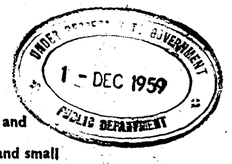
£ R$

Rampur Distillery



The Rampur Distillery and Chemical Company Limited has earned profit of Rs 58,726 for the year ded 31st March, 1959 as against : 69,605 in the previous year, ter providing Rs 61,016 for depreiation against Rs 57,477 and Rs ,500 for Development Rebate gainst nil. The directors have commended a dividend of Rs 3 er share on the Ordinary shares. ee of tax, to the extent of tax ayable by the company on its rofits.

The provision for Taxation amounts to Rs 11,000 against Rs 9,000 and a sum of Rs 6,836 has been transferred from General Reserve. After providing for the proposed dividend and making necessary adjustments, a sum of Rs 788 is carried forward against Rs 5,772 brought in.



Ahmedabad Advance

The Ahmedabad Advance Mills Limited has reported better results for the year ended 30th June, 1959. The gross profit has increased from Rs 4.28 lakhs to Rs 10.99 lakhs. After providing Rs 9.5 lakhs for Depreciation (Rs 1.5 lakhs) and Rs 1.00 lakh for Development Rebate Reserve (Rs 1.00 lakh), the net profit works out to Rs 49,711 against Rs 53,612 last year.

With Rs 11,155 brought in and transferring a sum of Rs 3.51 lakhs from General Reserve No. 1, the sum available for distribution is Rs 4.12 lakhs. The directors have

Concrete pipes can be made to fit any sewerage, drainage or water line schemes. They give the maximum –

STRENGTH AND DURABILITY to resist severe impact and to sustain heavy overburdens,

HYDRAULIC CAPACITY because of their smooth interior finish,

WEAR RESISTANCE to abrasion by suspended grit in high-velocity flow and

ECONOMICAL SERVICE because their moderate first cost *plus* long life and small maintenance expense result in *low annual cost*.

Asher Textiles

Against a loss of Rs 1,95,136 during 1958, the Asher Textiles Ltd. made a profit of Rs 1,14,164 for the year ending March 31, 1959. The profits were made after providing Rs 2,63,319 towards depreciation. Out of the profits, Rs 20,711 has been expended on charities and donations, Rs 91,009 towards balance bonus to employees of the Company for the year ended June 30, 1957 as per an award of the Industrial Tribunal. A balance of Rs 2,444 has been left out of the profits. The Directors have recommended the transfer of Rs 69,472 from the General Reserve to meet the requirements of a dividend of 6 per cent which absorbs Rs 71,916.

The report also refers to the modernisation of the mill at a cost of Rs 1,63,737. Two more Doubling Frames are proposed to be installed. Besides this, one Double Winder and one Automatic Cone Winder to meet the increasing demand of cone and double yarn are also to be installed. Blow Room and Carding Machinery are also to be modernised. The new proposals are to be undertaken on borrowings.

The sale of yarn totalled Rs 70.03 lakhs against Rs 59.03 lakhs last year. Asher textiles has shown good improvement this year.

£R$

Blue Mountain

The annual report for the year ended June 30, 1959 of the Blue Mountain Estates Ltd. shows lower profits at Rs 8.87 lakhs. This is considerably lower than the previous year's account, when Rs 19.70 lakhs were reported. For depreciation, the allotment is Rs 1.41 lakh against the previous year's allotment of Rs 1.32 lakhs and taxation provision this year is lower at Rs 1.90 lakhs against Rs 4 lakhs. Transfer to General Reserve this year is nil against Rs 6 lakhs last year. The dividend on equity shares is maintained at 12½ per cent.

There was a smaller tea crop in the year under report at 12.77 lakh pounds against the bigger realisation of 16.15 lakh pounds in 1957-58. Coffee crop was also smaller at 5.70 kilos against the previous year's 7.07 kilos. The 1959-60 estimate provides for 13.00 lakh pounds of tea and 6.74 lakh kilos of coffee.

£R$

Nonsuch Tea

For the year ended June 30, 1959, the Nonsuch Tea Estates Limited report a profit of Rs 11.90 lakhs. This was lower than the 1957-58 profits, which were Rs 16.41 lakhs. The taxation provision under miscellaneous heads is Rs 5.33 lakhs against Rs 8.08 lakhs in the previous year. Development Rebate allotment is Rs 11,430 against Rs 1,718 last year. The Contingency Reserve gets Rs 50,000, Development Reserve receives Rs 1 lakh. A final dividend of 10 per cent taxable is to be paid. The total dividend for the year is 20 per cent taxable. Last year's dividend was 35 per cent. The tea crop for the year was 10.20 lakh pounds, against last year's 12.20 lakh pounds. The 1959/60 estimates is 10.50 lakh pounds of tea.

Foreign Exchange for Shipping

THE National Shipping Board, meeting this week in New Delhi under the chairmanship of Mr G. L. Mehta, has appropriately dealt with the most pressing problem facing Indian shipping—the problem of foreign exchange—and advanced, with renewed force, the suggestion that a pool be constituted for the purpose. By all accounts, this should be comparatively easy in the case of an industry like shipping which is much too important to be kept out of the core of any Plan. There is also the more convincing reason that, whereas the total foreign exchange requirements for shipping during the Third Plan period would be Rs 133 crores, its total net earnings/savings of foreign exchange during the period might be of the order of Rs 112 crores. The Board's authoritative estimates, in this connection, of the possible foreign exchange earnings do not appear to be on the high side; if anything, they are rather conservative.

These estimates have been carefully worked out for both dry cargo and tanker tonnage. The basis adopted in the case of dry cargo tonnage is the average freight earning of Rs 640 per g.r.t. of Indian ships employed in overseas trade during the three years ending 1957-58. It is assumed here that two-fifths of the gross earnings would constitute the net foreign exchange earnings. As for the tanker tonnage in the coastal and overseas trades, it is assumed that 80 per cent of the charter hire would be the net foreign exchange earnings. On both the counts, the estimates of foreign exchange earnings are as under:

Year		
1961-62	Rs	18.36 crores
1962-63	„	20.88 „
1963-64	„	23.40 „
1964-65	„	25.92 „
1965-66	„	28.44 „
Total	„	117.00 „
Less Estimated repayments in respect of Vessels acquired on self-financing basis	„	5.00 „
	„	112.00 „

This estimate of Rs 112 crores by way of foreign exchange earnings during the Third period *does not appear* to have taken into account the likely increase in Government cargo handled by Indian shipping. If it does, it may be that the estimated requirement of Rs 133 crores by way of foreign exchange for acquiring 8.7 lakhs g.r.t. (7 lakhs as additional tonnage and 1.7 lakhs as replacement for the old tonnage which may be scrapped) during the Third Plan period will have been fully covered by net earnings of foreign exchange. Even if that does not happen, there is the point that, if the additional tonnage of 1.8 lakhs g.r.t. for coastal shipping included in the said 7 lakhs g.r.t. is reduced as it well can be in view of the continuing competition from raiways), the total foreign exchange requirement would also get reduced proportionately without affecting the calculations in regard to the likely foreign exchange earnings since coastal shipping does not earn any foreign exchange. In any case, it would appear that the credits available to a possible foreign exchange pool might adequately finance the projected expansion of shipping during the Third Plan period.

But there is here the plausible argument that, if all the net foreign exchange earnings of the shipping industry are earmarked for its expansion, some other established industries also will clamour for similar treatment. This argument, however, cannot hold water because those other industries, unlike shipping, have grown to their present sizes by spending much more foreign exchange than they have earned all along. Most certainly, Indian shipping is now in the most critical stage of its growth and would, therefore, have to be placed on a special footing if it is to expand rapidly to meet the trading requirements of the country. Above all, past neglect is the most compelling argument favouring special treatment to the shipping industry at the present time. There is some ground for the hope that the Transport Ministry, piloted by Dr P. Subbaroyan who hails from the ancient maritime state of Tamilnad, would be able to convince the Finance Ministry of the soundness and desirability of the proposed foreign exchange pool. Of course, it would be a near-miracle if the Finance Ministry can be so convinced.

So much about the Third Plan target for shipping and the means of achieving it. As far as the current Plan is concerned, it is gratifying to find that the picture of progress toward the target of 9 lakhs g.r.t. by the end of 1960-61 has now changed for the better. The date in regard to tonnage as on 31st October, 1959 are as under:—

	(Lakhs g.r.t.)
Dry cargo tonnage in coastal trade	2.55
Tankers in coastal trade ..	0.24
Dry cargo tonnage in overseas trade	4.56
Tonnage under construction for overseas trade	0.81
Tonnage under construction for coastal trade	0.03
..	8.10
Less tonnage expected to be scrapped before the end of Second Plan ..	0.36
..	7.83

Thus, it is now estimated, the tonnage yet to be acquired to reach the Second Plan target is 1.17 lakhs g.r.t. This gap, it is stated, will be more than fully covered by additional tonnage proposed to be acquired during the rest of the current Plan period in the following manner:

	(Lakh g.r.t.)
Proposal already approved ..	0.26
Proposal under active consideration	0.37
Other proposals	0.63
..	1.26

This favourable picture of progress towards the Second Plan's *shipping target*, it would appear, has now come about because the current expectation is that the larger part (1.72 lakhs g.r.t. out of 2.08 lakhs g.r.t:) of obsolescent shipping will be scrapped only during the Third Plan period. Probably, much the larger part of that scrapping will take place in the first year itself of the Third Plan. Be that as it may, what is relevant here is that the Second Plan will end with an operating tonnage of nine lakhs g.r.t. and thus formally fulfil the shipping target. The Government certainly deserve to be congratulated on their success, qualified thought it be, in reaching the target in the none-too-favourable foreign exchange situation during the greater part of the current Plan period.

Sir Biren Speaks Out

Eavesdropper writes:

Sir Biren Mookerjee is to be congratulated on his statement relating to the acounts of the Indian Iron & Steel Company Limited for the year ended March 1959. I have rarely seen more trenchant criticsm of aspects of governmental behaviour; but, equally, I have rarely read more carefully thought out argument. Sir Biren's statement is replete with thinking points; and none, I fancy, can seriously be challenged. I shall be devoting an extra-long Gossip to an assessment of his comprehensive review of the steel industry, as also his eminently correct reading of its future; and, if I have left it over for the next week, it is mainly because I need the time to digest what he has said. As an indication of his constructive approach to the problems facing the steel industry, I shall here give one example: the labour cost of Indan steel has, the evidence is very clear, shot up to alarming proportions; and this is one reason why Indian steel is no longer the vaunted "cheapest in the world" it used to be. Sir Biren rightly considers it "imperative" that a Wage Board for the Steel Industry be constituted. So that "there will be less anomalies in the wage structure". There is no doubt at all in my mind that such a Board will be constituted; and the sooner the better.

Market Reaction to the Election Result

By W. T. C. KING

THE big event in Britain in the past month has, of course, been the General Election and its remarkable result—the re-election of a Conservative Government for a third term, and with a considerably increased majority. To the distant observer of the financial scene, it might perhaps seem, at first glance, that this is a result that could be dismissed without much further thought, on the ground that its principal effect must be to ensure a continuance of the policies made familiar during the past eight years. This is far from being, however, the dominant feeling in the world of finance and business in London, as can be very

clearly seen from the dramatic events in the financial markets since the election result was announced.

Beyond memory:

On the London Stock Exchange, in these past few weeks, there has been greater excitement, for ferverish activity and a faster rise in prices than any of the present generation of stock market men can remember. The industrial share market, as I pointed out in this series of articles a couple of months ago, had been unseasonally strong and active throughout the holiday month of August, carrying the ordinary share index of "The Financial Times" to a new peak at 259.7, or some 47 points above the low level for the year touched last January. Some reaction had set in, however, just before the announcement of the date of the election, and during the middle of the campaign the market faltered again, carrying the index back to 251.3.

Then, in the final ten days a sweeping movement from the general investing public, belying the portents of the public-opinion polls, carried the market rapidly upward again, so that on election day it was already standing at a new peak—and more than 25 per cent above the year's low. In spite of this prior advance, the election result produced an even more spectacular burst of strength.

As soon as the extent of the Conservative majority became apparent, the index shot up by 16 points in a single day, a much larger single leap than any previously experienced. The rise went still further in the next week or so, to the accompaniment of an unprecedented volume of dealings; and in spite of a modest set-back that accompanied the heavy settlements, the index, as I write, has climbed to yet another peak, at 297.7. The relatively staid blue-chip stocks included in this index—there are 30 of them—have, therefore, advanced by no less than 18 per cent in just over four weeks; more volatile stocks, and especially steel shares which had been depressed by the expectation that a Labour Government would renationalise the steel industry, have, of course, shown much larger gains than these.

Nationalisation Problem:

This excitement, in the stock market, reflects the reading of the stock exchange to the outcome of the election and its interpretation of the implication of the result. In the City, and beyond, this third successive defeat for the Labour Party at the polls is being construed as the unmistakable vote of public opinion against the traditionally socialistic aspects of Labour policies—most notably, of course, the policy of nationalisation. The optimism in the stock markets today thus stems, to a very large extent, from the conviction that these particular threats may never loom seriously again. The next Labour Government, it is already being confidently assumed, will have dropped these particular policies from its programme.

The market boom reflects also, however, the positive achievements of Britain's economy in the past twelve months or so, and a confidence that the expansionary movement can and will go a good deal further before running into inflationary dangers or before the brakes have to be applied in order to avoid that sort of development.

The market advance before the election was, indeed, partly a response to the evidence, which I noted last month, that the budgetary reliefs and easier credit were inducing an ever faster growth of demand and of output than had first been generally expected. The business indices of recent weeks have shown this trend to be continuing.

Room For Growth,

In a first governmental statement on the prospects of the economy after the election, the new President of the Board of Trade, Mr Reginald Maudling, has emphasised that there is still room for the growth of demand and growth of employment "within the capacity available to industry", and he regarded the prospect as "definitely encouraging". There should be, indeed, no danger of the economy slipping back through any flagging of demand. A much bigger risk is that the present mood of optimism may push it ahead too fast. That could happen if the hoped for revival of investment by private manufacturing industry were suddenly to take a major surge forward, so as to superimpose substantially increased demands from the capital goods industries upon the still rising demands for consumer goods and for exports. A major change in investment outlays, however, takes time to get under way; and, as yet, it is by no means clear that the trend in manufacturing industry is not still slightly downwards.

The curve of consumer demand is perhaps even less likely to steepen rapidly in the early future. Earlier in the year, indeed, it had been taken for granted that by now it would be flattening out, on the ground that the sharp advance set in motion in the fourth quarter of last year was based on the boom in hire perchase credit and the surge forward in bank advances, movements that could not be expected to continue indefinitely at the same rate.

Personal Income Rise:

In fact, the rate of credit creation in these two forms has so far slackened less than had been expected, and such slackening as has occurred does not appear to have had corresponding effects on consumer demand, possibly because of the sharper rise in personal incomes that has been associated with the growth in production. It has been estimated, indeed, that by the second quarter of this year the increase in incomes had already overtaken the rise in consumption, thus restoring the margin of personal savings to the point reached before the boom in consumer durables began.

This welcome restoration of the savings margin, it might have been thought, would have lessened the demand for hire purchase credit, but it was not until August last that the rate of growth in the total of hire purchase credit outstanding slackened at all markedly—and even that slackening was thought to be attributable mainly to seasonal influences and to physical difficulties in the supply of new motor cars (which, of course, absorb a very large proportion of hire purchase finance). The total debt outstanding rose in that month by £14,000,000, compared with increases of more than £30,000,000 in each of the preceding few months; by end-August the total had been raised to £756,000,000, compared with just under £480,000,000 twelve months previously. It is inconceivable that in the months ahead credit expansion can play as big a part in promoting consumption as it has done in this past year.

Rising Investment:

The rising investment outlays planned in the public sector of the economy are, of course, adding their quota to the expansionary trend, but there is no reason to fear that an inflationary threat will develop from that direction. The Government emerges from the election without having given any commitments to embark upon any substantial new programme involving uncovenanted expenditures; and it is certainly no less conscious than it was before the election of the importance of taking every possible precaution to avoid a new inflationary pressure.

It is evident, however, that, from now onwards, the trend will need to be watched with ever-sharpening vigilance. One of the points to which attention is already being directed in some City circles is the behaviour of bank credit, on the ground that the whole volume of bank deposits has lately begun to move up a good deal more rapidly. During the eight months from September 1958 to last May, the period in which bank advances were rising most rapidly—the aggregate outstanding advances of the clearing banks then expanded by no less than £534,000,000—bank deposits were rising quite gently. Over this period the seasonally corrected index compiled by Lloyds Bank rose by no more than 2.6 points, to 114.7 (1948=100). By contrast, in the latest four months, up to mid-September last, the rise in bank advances slackened to £176,000,000, yet the index of net deposits jumped by a further 3.5 points to the new high point of 117.2.

Seasonal factors:

This contrast is to some extent a reflection of seasonal factors, since a large part of the Government's revenue is collected in the first quarter of the calendar year, so that, in this period, bank deposits always fall steeply as a result of tax collections and a large consequential repayment of floating debt by the Treasury. There is no doubt, however, that in the earlier of these two periods the Government's repayment of indebtedness to the banking system (whether by specific repayments of floating debt or by operations which directly or indirectly assisted the banks to realise substantial lines of gilt-edged securities) were on a more than seasonal scale, whereas in these latest four months, conversely, the Government has been borrowing from the banks more than seasonally.

These differences are, presumably, in part a reflection of the fact that, until recent weeks, the condition of the gilt-edged market has been much less propitious for "funding" sales by the authorities. There is no reason to suppose, however, that the resultant more than seasonal creation of liquid assets in the hands of the banks has been contrary to official wishes. So long as there is thought to be sufficient safety margin of "slack" in the economy, it is right that new credit should be available to finance the business expansion; and, in the absence of these new liquid assets, the banks would have found their additional advances pressing hard up against the limits set by their conventional liquidity ratios.

Free Economy:

In the sphere of external economic policy, as in the domestic sphere, the result of the election is a clear vote for the policy of the free economy; and this certainly means that it is a vote for a continuance of the policies affecting sterling that have been progressively developed in recent years.

One sign of this was seen, indeed, within a fortnight of the election, when the authorities announced changes in exchange regulations that are tantamount to complete withdrawal of restrictions from expenditures upon foreign travel. And, as this is written, it is generally assumed that the Government is on the point of announcing further moves towards non-discrimination in Britain's import arrangements, following, in particular, the promises given during the Commonwealth Economic Conference just over twelve months ago.

It is hardly necessary to add that one of the other major external economic policies that will continue to rank as a prime objective is that Britain should play its part in providing aid and loans, in various ways, to underdeveloped countries both within and without the Commonwealth.

No Justification for Illegal Strikes

By M. SUR

THE Industrial Disputes Act of 1947 laid down the circumstances in which a strike would be illegal, and to the layman these seemed clear enough. A strike is illegal if it takes place during the pendency of conciliation or adjudication proceedings, or of settlements reached in the course of these proceedings, or of awards of industrial tribunals. The only problem seemed to be: Who was entitled to declare a strike illegal?—for, it soon became evident that Labour Commissioners did not feel competent to make such a pronouncement. And so the question became one for frequent adjudication. One cannot believe that it was the intention of the legislature to provide yet another cause for dispute. The whole tenor of the Act made it clear that the framers merely had in mind the importance of maintaining a calm atmosphere during and after conciliation and adjudication. Making a strike in these circumstances illegal was intended to be a deterrent, and yet illegal strikes have become normal; workers have been taught by their leaders to ignore with impunity this part of the law; and whether a strike is illegal or not has become an exercise in verbal ingenuity for the lawyers.

Why should this have come about? It is because in recent years the industrial courts have produced a legal monstrosity: the strike which is "illegal but justified". How an illegal act could ever be justified has been a puzzle to the poor layman. What could be the purpose of passing laws which make certain acts illegal, if those acts can subsequently be held to be justified? An illegal but justified strike seemed to make a mockery of the law, and yet in case after case in the industrial courts justification of an illegal strike has been argued and won. Now, at long last, the layman has found support from the highest court in the land. The Supreme Court has roundly declared that an illegal strike cannot be characterised as justified—"These two conclusions cannot in law co-exist." This judgment, therefore, is extremely important for industry. In recent years innumerable awards have reinstated workers, sometimes with full back pay, sometimes with partial back pay on the ground that though they had taken part in an illegal strike, that strike had been justified. It had become difficult for managements to decide whether they could dismiss a man found on proper enquiry to have led an illegal strike, or even whether they could declare a lockout in consequence of an illegal strike without finding themselves in the wrong if the case were to go to adjudication.

It is rather difficult to understand how this conception of the illegal but justified strike arose. Perhaps, by analogy from criminal law, there were felt to be extenuating circumstances in a case where management's action had provoked the workers, but crime is nonetheless crime even if there are extenuating circumstances, and the criminal does not on that account get off scotfree. Yet, in industrial cases, those responsible for illegal actions have in a great many cases been reinstated and suffered even no monetary loss. This, as the Supreme Court now points out, amounts to "wholly condoning the illegal act of the strikers." The only distinction that can be made is between the leaders and the led, or between violent and peaceful strikers, and then it is a question not of whether they are liable to punishment, but "of the degree and kind of punishment according to the gravity of their guilt."

The case cited is a judgment by Chief Justice Sinha dated 14th October, 1959 in Civil Appeal No. 86 of 1958. The case concerned the Joint Steamer Companies: India General Navigation and Railway Co Ltd, and the River Steam Navigation Co Ltd of Calcutta. The Companies had formerly employed a labour contractor to supply labour for loading and unloading their vessels at Dhubri and transhipping goods from railway to seamer, but as a result of a tripartite conference called by the Assam Government an agreement was made between the companies and the INTUC to introduce permanent directly employed labour at this ghat. The workers were organised under two unions affiliated to the INTUC and recognised by the companies, although after the agreement dissension arose between the two and recognition was withdrawn pending a satisfactory settlement of the internal differences, while the companies continued to deal with the INTUC. Subsequently, both unions addressed strike notices to the companies with separate lists of demands. Since inland water transport is a public utility service in Assam, strike was only legal after the elapse of seven days from the date of failure of conciliation proceedings. Government started proceedings, but, without waiting for the statutory period, the workmen went on strike on 10th August, 1955.

The strike was clearly illegal and was so held by the Industrial Tribunal in his award in December, 1956, but he proceeded to the conclusion that nevertheless the strike was "perfectly justified," a conclusion that the Supreme Court has rejected in the following words:—

> "It is a little difficult to understand how a strike in respect of a public utility service, which is clearly illegal, could at the same time be characterised as 'perfectly justified'. These two conclusions cannot in law co-exist. The law has made a distinction between a strike which is legal and one which is not. but it has not made any distinction between an illegal strike which may be said to be justifiable and one which is not justifiable. This distinction is not warranted by the Act. and is wholly misconceived, specially in the case of employees in a public utility service .....The only question of practical importance which may arise in the case of an illegal strike, would be the kind or quantum of punishment.....The tendency to condone what has been declared illegal by statute must be deprecated, and it must clearly be understood by those who take part in an illegal strike that thereby they make themselves liable to be dealt with by their employers."

The Chief Justice, moreover, passes serious strictures on the Industrial Tribunal, stating in one place that "the Tribunal has been rather generous to the workmen without being just to the appellants", and elsewhere that the Tribunal in "its inordinately long award" has "indulged in language which is not characteristic of a judicial approach." It is, therefore, of interest to study the grounds advanced by the Tribunal for holding the strike "perfectly justified". The first reason given is that the Companies' Agent "provoked the Union"; the second that leave was not granted to union representatives to attend the conciliation proceedings; thirdly, that management had interfered with the internal affairs of the union; and finally that the companies had used lockout to intimidate the workers.

The alleged provocation by "a backdoor policy to suppress the demands of the workers" was based on a letter from the Agent to the authorities asking for adequate police protection at the ghats "in the interest of maintaining the vital link in Assam's flood-stricken communications and protecting our property and staff." The letter was copied to the INTUC, and, as the Chief Justice says, there is nothing sinister in it. An allegation in a letter addressed by one of the unions to the police to the effect that the Agent had "hatched a plan to create a trouble" by raising a "ballah" that picketting labourers were looting ships, was accepted by the Tribunal without adducing any proof other than the letter.

From the evidence on record, the Supreme Court found that it "would be a travesty of facts to suggest that the appellants were not prepared to grant leave" to the five worker representatives. On a belated request from the union that the men should be given leave, the management had replied that leave would be granted on verbal request from the individual workmen, which was the procedure in line with the agreement. This the union refused to arrange. "In our opinion", says the Chief Justice, "the conciliation proceedings failed because the Secretary took an unreasonable attitude. The Tribunal, therefore, was in error in throwing the blame for the failure of the conciliation proceedings on the Management."

Examining the allegation that the management was "propping one union up against the other," the Chief Justice notes that the companies were throughout in touch with the INTUC to which the two unions were affiliated, and that the record showed that the INTUC was not in favour of a strike, and in fact it seemed that a negotiated settlement could have been reached without recourse to strike. Finally, in considering the lockout, "the Tribunal had ignored the provisions of S. 24 (3) of the Act", for the lockout being in consequence of an illegal strike was clearly not itself illegal.

In fairness to the Tribunal, it must be recorded that the Supreme Court has not quashed the whole award. It rescinded the reinstatement of 37 workmen who had been convicted of acting in defiance of S. 144, and who were clearly violent strikers; but, in the case of others who could be said to be peaceful strikers, reinstatement was allowed but with only half back pay to the date when the award was enforceable, for, to give them full back pay would be to condone their illegal act. In their case, some irregularity in the proceedings of the departmental enquiry was accepted as sufficient cause for modifying the punishment inflicted by the management.

It is important to note the Supreme Court distinction between the peaceful and the violent type of striker and the bearing it may have on the quantum of punishment, but the liability of those who indulge in illegal strikes to punishment by management after proper enquiry has been made quite clear.

This case has a significance far beyond industry. It is absolutely essential in a democracy that the law should be upheld and that there should be a constant watch kept on courts which, as in the case of industrial tribunals, have a certain freedom of action not found in the ordinary civil or criminal courts. They should not be allowed to arrogate to themselves the function of the legislature and to make or amend labour law. The evidence of bias on the part of the tribunal judge is disturbing, to say the least. It is not even the first time that the Supreme Court has had to be so outspoken. There appears to be some confusion in the minds of certain industrial courts between the functions of adjudication and that of arbitration. They must not forget that industrial adjudication is part of the machinery of law and governed by the ordinary rules of law. That the judiciary must be above reproach applies as much to the industrial courts as to any other.

EDITORIAL NOTES

Dams and Floods

The suggestion made by the Chairman of the Central Water and Power Commission in his presidential address to this year's annual meeting of this body of top-notch technical experts, that Third Plan projects for power and irrigation should also provide for flood control, is particularly opportune in the context of the raging controversy about the role of the DVC in the floods which devastated half of West Bengal last month. The controversy has resulted in a spate of statements each attacking the DVC from a different angle. While most of the criticisms are of dubious validity, it is difficult to escape the conclusion that the DVC has fallen short of the great expectations it had aroused in the minds of the people. This adverse experience should be a warning against expecting too much of dams and reservoirs.

As Mr Hayath has pointed out, action has to be taken on a broad front, covering flood forecasting, soil conservation, afforestation, surface drainage, diversions, channel improvements, collection of data and so on, in order to ensure the efficient functioning of multi-purpose reservoirs. It should not be overlooked that the main purpose of a reservoir is to even out the supplies of water available for irrigation and power generation between the wet and the dry seasons. During years of normal rainfall, it may also serve to prevent flooding of the lower reaches of the river. But it will not be a practical proposition, if only for reason of cost, to construct a system of dams and barrages which would be capable of impounding flood waters in all contingencies. The monsoon, unfortunately, is under no obligation to respect the conclusions drawn from the rainfall statistics of previous years.

The practical way to deal with floods is to assist nature in helping the flood waters to find the quickest route to the sea. That may not be able to stop the floods, but it can certainly prevent them from becoming national catastrophies. If that is done, sufficient attention can be paid to the most profitable use to which the reservoirs can be put, namely, power generation. In giving primacy to power generation, the claims of irrigation need not be ignored. But in view of the fact that only a fraction of the vast irrigation potential that has been created by the mutipurpose projects has been utilised, the accent must remain on power generation, as far as these big projects are concerned. The needs of irrigation, as President Rajendra Prasad has pointed out in his inaugural speech, can be better served by a balanced programme of big and small projects.

*

Trend of Inventions

The annual report of the Patent Office for 1958 shows that the experience of previous years has been repeated, with only slight variations. The bulk of the applications come from abroad, mostly from the UK, USA, Switzerland and West Germany. Applications originating in India still account for less than a quarter of the total. While the total number of applications for patents increased to 3,572 in 1958 from 3,456 in the previous year, the number of applications originating in India decreased from 699 in 1957 to 602 in the year under report. Of these, applications made by Indians show a slight improvement from 527 to 529. The steady upward trend in the number of applications from Indians, from 222 in 1947 to 529 in 1958, that, is from 9.6% to nearly 15% of the total number of inventions, also affords room for satisfaction.

The inter-action between industrial progress and the growth of inventions is a fascinating subject for specialised study. While the faculty of invention is a peculiarly individual gift, it is the environment, and especially the state of the industry, which ultimately determines whether the vague ideas floating in the minds of the individuals bitten by the Promethean bug find concrete shape, and whether the inventions actually made find industrial application. The close correlation between industrial development and fecundity of inventions is also borne out by the distribution of the applications for patents according to country and State of origin. The largest number of applications originating in India came from Bombay, followed by West Bengal, Delhi, Mysore, Madras UP, Punjab, Bihar, Andhra, Kerala, Madhya Pradesh, Orissa, Assam and Rajasthan, in that order. An arrangement of the States according the level of industrialisation will not show any notable variations in the sequence.

Conditions in which a large number of persons have opportunities to get familiar with industrial processes provide the environment for the birth of inventions of practical importance. The alertness of those responsible for the direction of industry is also an important factor fostering the growth of inventions. It is not without significance that a number of inventions in the field of mechanical and electrical engineering related to the manufacture of fans—an industry with a remarkable record of enterprise in India and abroad.

But the attitude of managements in general and even of Government toward Indian inventors is not particularly helpful for the further development of their inventions. Many of those who take out patents find it hard even to recover the expenses by selling their patents. Indian craftsmen and artisans who may be expected to make inventions are of notoriously limited means. The difficulties that stand in the way of people of small means developing their inventions have now been recognised. Government have set up the "Small Invention Development Board" to assist inventors in the small scale sector by providing financial assistance and research facilities.

The annual report of the Patent Office gives figures of the number of inventions for which patents are taken out. It will be useful if there is some arrangement to follow up the inventions and find out to what extent they are utilised on a commercial scale.

*

SEATC

The Colombo Plan Consultative Committee, at its latest session in Jogjakarta during the first half of this month, has arrived at the conclusion that conditions in the area require the continuance of the Plan for sustaining the economic development of the region. The annual report, a section of which was released during the final session of the Consultative Committee, stated that the task ahead of the Colombo Plan countries remains essentially the same as recognised at the foundation of the scheme in 1950. That does not mean, however, that the programme has made no impact on the economic life of the region. The annual report has drawn attention to "the encouraging evidence of quickening pace of economic activity" in the recipient countries, though the effect of the improvement in living conditions has been masked by inflationary pressures resulting from the considerable increases in money supplies. In this connexion it may be mentioned that the beneficent effect of external assistance of the order of $6,000 million has been largely offset by the fall in export earnings consequent on the decline in the price of primary commodities on which the economies of many of the countries in the region are based. This world suggest that a programme of mutual cooperation among these countries for the expansion of trade and of export earnings can be of as great significance as external aid for stepping up the pace of economic development. The formation of the EEC and the EFTA raises the question: why not a South East Asian Trading Community? The SEATC can be a more effective bulwark of democratic freedoms than the SEATO can ever hope to become. The best way in which the Colombo Plan can fulfil its basic aims will be to clear the ground for such regional development in the field of trade.

And, certainly, the Colombo Plan is a significant aspect of institutions and schemes by which underdeveloped countries are enabled to industrialise. Constituted as it is, there is little doubt that it is best equipped to foster the growth of an entity like the SEATC. It is in this way that the Colombo Plan do much to help out the under-developed regions in respect of their foreign exchange problems.

WORLD OF FINANCE

The Lengthening Slack Season

ALL who had interpreted the banking returns for the last week of October as signifying the start of the 1959-60 busy season have been confounded. For, the 1959 slack season has been going merrily on, with three weeks in November, including the first which normally should have felt the pressure of month-early disbursements, showing successive declines in bank Advances, Meantime, also, the new additions to Deposits have gathered fresh momentum, so that banks have again been put in the unenviable position of securing a wealth of unwanted resources both by way of contraction in Advances and increase in Deposits. What has made their plight even more uncomfortable than has been the case throughout the current slack season is the fact that, with the forthcoming busy season imminent, they have not been able to use up their resources in the purchase of giltedged; as such, they have been showing a revived interest in the Treasury Bill Auctions, and they have even made considerable purchases of the intermediate Treasury Bills. As an index of such money market easiness, both the inter-bank call money rate and the average rate of allotment for Treasury Bills have both discernibly fallen.

Why have the slack seasons of the last two, three years run a rather longer course than in the past? One reason, of course, is that it is only apparently that the slack season extends itself well into November. This is because the continuing additions to Deposits ease the money market situation; and also because constituents use a moiety of such improvement in their balances to reduce the size of their overdrafts. In fact, however, we suppose that the busy season as such appears on the scene as from the last week of October.

In much the same way, it has been happening that busy seasons are tending to end much sooner than is their wont. Why?

The heavy governmental disbursements marking the fiscal year-end are responsible for the release of such powerful new resources, in the first and second weeks of April, that some sort of busy season peak—certainly relating to scheduled bank borrowings from the Reserve Bank—is registered around that time. On the one hand, the new Deposits arm the banking system with resources sufficient for it to reduce the quantum of borrowings. On the other hand, the new additions to their balances enable constituents to reduce the size of their overdraft accounts.

But here, too, it is only apparently that the busy seasons run a shorter course. The traditional peak, and the real peak in busy season pressure, does occur in the first or second week of May. It is true, for some years, the slack season appeared to have disappeared. Even more strangely, in 1957-58, the busy season appeared to have been "missing". It is also true that, of late, the distinctions between the busy and slack seasons have been restored. But, for the future, it is important to note that slack seasons will seem to be longer, and will appear to begin in the second week of April and end in the last week of November; and, correspondingly, the busy seasons will apparently be shorter by some month and a half.

We may add a word about the significance of the year-end disbursements of Government. In earlier years, the bulk of such expenditures related to inter-governmental adjustmests. But, in the last year or two, the Centre has been paying the States by instalment; as such, the outstanding payments at the end of the fiscal year are, relatively speaking, small. So, the great part of governmental payments in March-end today relates to entities other than government. It is worth noting, in this regard, that deficit financing also, in the process, gets spread over the whole year. As at the end of the second week in November, created money (including public though Investments in the Banking Department, by dint of the transfer from the Issue Department, are higher by Rs 8.70 crores at Rs 251.99 crores, we have to bear in mind the fact that, in the relevant week, the State Bank has purchased Rs 10 crores of securities from the Reserve Bank. It is in this wise that ad hoc Treasury Bills sold in favour of the Reserve Bank during the week ended November 20 have been concealed. The proceeds from such deficit financing have been utilised by the Central Government in meeting the liability arising from maturing of Rs 9.25 crores worth of Treasury Bills purchased and discounted by the Reserve Bank. As such, the Centre's balances are down by Rs 0.99 crores at Rs 49.45 crores.

The position of the State Governments vis-a-vis the Reserve Bank, has demonstrably improved. On the one hand, their Deposits are marked higher by Rs 2.82 crores at Rs 21.67 crores. On the other hand, indebtedness of State Governments, in the matter of Ways and Means borrowings from the Reserve Bank, has been reduced by Rs 4.36 crores to Rs 21.47 crores.

Similarly, member banks have also witnessed an improvement in their position vis-a-vis the Reserve Bank. Though Reserve Balances appear to have declined by Rs 3.24 crores to Rs 83.31 crores, it must be borne in mind that the State Bank utilised Rs 8 crores of its balances for purchase of securities from the Reserve Bank. That is to say, member banks other than the State Bank added to their Reserve Balances by roughly Rs 5 crores during the week under review. At the same time, the borrowings of Scheduled Banks from the Reserve Bank must be deemed to be at a nominal level. Indeed, no advances against usance bills are outstanding.

There continues to be an accretion to Balances Held Abroad which, in the latest week, are marked up by Rs 1.58 crores to Rs 41.56 crores. Balances Held Abroad, it may be recalled, have risen without a break week by week since the week ended October 9.

+

The return of the State Bank for November 20 shows that its portfolio of giltedged is knocking at the Rs 400 crore mark with the acquisition during the period under review of Rs 11.31 crores, almost certainly from the Reserve Bank. Deposits and other accounts moved up by Rs 2.73 crores to Rs 578.84 crores. Advances have again fallen by Rs 2.41 crores to Rs 156.21 crores. Thus, the sum that had to be drawn down on cash in hand and with the Reserve Bank to effect the purchase of securities from the Reserve Bank was only Rs 8 crores.

+

The return of Scheduled Banks for November 13 shows clearly the two-pronged impact upon Scheduled Bank figures of slack season conditions. Deposit liabilities have staged a further rise of Rs 12.61 crores to a new peak of Rs 1873.72 crores. At this stage, it is safe to predict that before the end of the month, the gross deposits of Scheduled Banks will have crossed the Rs 1900 crore mark. Of this week's rise in Deposits, Rs 4.19 crores is traceable to the State Bank. The other slack season attribute is the fall of Rs 6.50 crores to Rs 928.23 crores in the total of Advances. By the time the 1959-60 busy season is apparently seen to begin, it may well happen that the level of Scheduled Banks' Advances stands reduced to something like, say, Rs 900 crores. The growth in resources has been taken advantage of by Scheduled Banks to reduce their borrowings from the Reserve Bank from Rs 10.63 crores to almost a nominal figure of Rs 1.65 crores. It is not unlikely that we may this year, before the ostensible commencement of 1959-60 busy season, witness Scheduled Banks as being in no debt to the Reserve Bank. However, the giltedged portfolio of Scheduled Banks has again fallen slightly by Rs 1.85 crores to Rs 790.90 crores. In consequence, however, Cash Balances of Scheduled Banks have improved by just a shade under Rs 8 crores to Rs 172.94 crores.

It is to be expected that the returns of the Reserve Bank for November 27 will continue to offer evidence of slack season conditions. A further contraction of currency circulation is likely, as also a further rise in Balances Held Abroad. As regards the State Bank, it is to be expected that it will add to its giltedged portfolio and report also a decline in Advances. Then, in regard to the Scheduled Banks' return for November 20, apart from both an increase in Deposits and a decline in Advances, it should be noteworthy for Investments crossing the Rs 800 crore mark.

+

Tenders for Rs 2 crores of 91 days' Government of India Treasury Bills were opened on Tuesday, the 24th November 1959. Total amount offered was Rs 3 crores. Tenders at Rs 99.410 were accepted in full and those at Rs 99.405 were allotted approximately 50 per cent. Total amount accepted was Rs 2 crores, the average rate of accepted tender being Rs 2.370 per cent per annum.

Tenders for Rs 2 crores of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on Monday, the 30th November 1959. Successful tenderers should make payment on Friday, the 4th December 1959. Other conditions are as usual.

91 days' Intermediate Treasury Bills will be sold from 25th November to 28th November 1959 at Rs 99.426 per cent. Sales can be stopped at any time without notice if Government think it necessary.

91 days' Intermediate Treasury Bills sold from the 18th November to 21st November 1959 amounted to Rs 3.70 crores.

Further Addition to Foreign Balances

SLACK season conditions continue to hold sway into the middle of November 1959, as the latest banking returns bear out. Figures of the Reserve Bank for November 20 show that there has been a further decline of Rs 12.18 crores to Rs 1683.84 crores in Active Note circulation. Rupee Coin has also returned from circulation for Rs 1.19 crores. There has been a contraction of currency against Rupee Securities for Rs 10 crores by transfer to Investments in the Banking Department. In the result, the Reserve Bank's cash in the till has moved up slightly by Rs 3.69 crores to Rs 23.03 crores.

The return of the Banking Department shows that the Central Government's liability in respect of maturing Treasury Bills held in the Reserve Bank's portfolio of bills purchased and discounted has necessitated deficit financing. For,

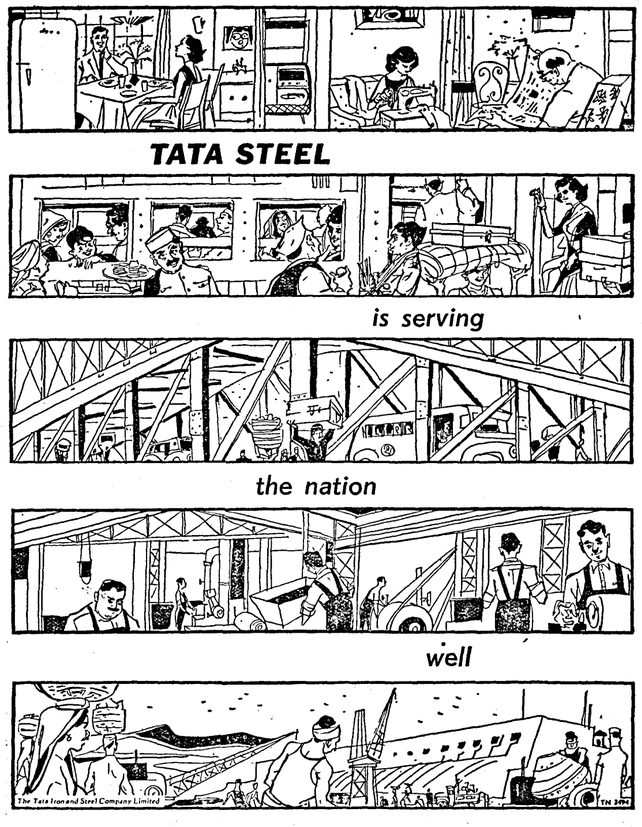
Convertibility for UK Residents?

By Paul Einzig

THERE is a growing pressure on the Government in favour of extending the convertibility of sterling over residents in the United Kingdom. A by no means unimportant step to that end was taken recently through the virtual abolition of the limits to tourist allowances. But the principle that UK residents cannot benefit by convertibility for capital transfers is upheld. Indeed, the reason why tourist allowances are automatically allowed up to £250 only, while special application is still required for larger amounts, is precisely the desire of the authorities to prevent the freedom of tourist allowances from being misused for capital exports.

Before the Government are likely to change their attitude, it will be necessary first to free capital export for non-residents in the Sterling Area. Once that is accomplished, and if it is found that is unaffected by the change, then the question of capital exports by residents may be reconsidered. Beyond doubt, there is strong temptation for taking advantage of the coincidence of several favourable circumstances to make a dash for complete freedom.

The result of the general election has ruled out the possibility of a Labour Government until 1963 or 1964. This means that, in the meantime, there is no reason for UK residents to transfer their money abroad for fear of anti-capitalist legislation or penalising taxation. The chances are that the next year or two will witness a reduction of Income Tax and Profits Tax, so that there will be less inducement for transferring capital abroad. This means that if the ban on the export of capital is removed in 1960, the change would not be followed by an immediate exodus.



Another important argument in favour of an early return to full convertibility is that the next year is likely to witness a pressure on the dollar. Unti 1958, the bulk of an outflow of British capital following on a removal of the restriction would have gone to the United States. As a result of the dollar scares toward the end of 1958 and early in 1959, and the possibility of a recurrence of such dollar scares in 1960, the United States is not now likely to attract capital that might conceivably want to escape from Britain. The possibility of a victory of the Democrats at the Presidential election in November 1960 is borne in mind, because a Democrat Administration might not necessarily be so firm against dollar devaluation. Also, the possibility of large-scale repatriation of French funds from the United States in case of the settlement of the Algerian trouble is borne in mind. Even though the dollar is strong enough to withstand such pressure, it may have to be defended by high Bank rate, which would mean a fall in Wall Street.

In any case, the yield of American equities is too low to attract capital from Britain. In spite of the recent rise on the London Stock Exchange, the yield in London is still much higher than in New York, so that most British investors would think twice before switching over to American industrial equities at their present prices. At its present level, Wall Street is not likely to induce many investors in the UK to take advantage of the liberalisation of capital exports.

For all these reasons, it is arguable that 1960 might be a suitable year for removing the ban on the free export of UK capital. There is strong temptation to do so, because some continental countries have forestalled Britain in this respect, and it may be considered a matter of prestige not to lag behind in respect of liberalisation. In any case, if the remaining restrictions on the transfer of capital by non-residents are removed, it will be found very difficult technically to enforce restrictions on capital transfers by UK residents. So long as the temptation to export capital is not very strong, there will be no evasion. But, if and when the situation should change, UK residents would take advantage of the loopholes, so that the continued existence of restrictions on transfers by UK residents would not prevent a large-scale outflow.

The situation is liable to change in a few years with the approach of the next general election, if the prospects of a Labour Government should revive. In the absence of restrictions on capital exports, many people are likely to play for safety during election year and transfer their capital while the going is good. This might weaken sterling on the eve of the general election, and would necessitate once more unpopular defensive measures, which would not help the Government's chances. Should the Government decide to remove the ban on capital movements, it would be an indication of its confidence in the prospects of another Conservative victory at the next election. For, if the prospects should remain favourable, the outflow of capital on the eve of the election would remain moderate.

Even if we allow for the above arguments, it is by no means certain that the next year will witness a complete liberalisation of sterling. The British authorities like to proceed slowly, and there is still much to be done before the final step would be taken. Security sterling would have to be abolished, so that foreign holders of securities could sell the proceeds of their investments in the ordinary way. The restrictions on holdings of foreign exchanges by British banks would have to be removed. Restrictions on the granting of credits abroad by the banks would have to follow. Then and not before will be the turn of UK private investors. (Copyright)

WORLD OF JUTE

Need for Vigilance

ACCORDING to a FAO commodity note on jute (details of which were published in this column last week) world jute production is steadily on the increase during the past few years. It is expected that the world jute crop in 1959-60 will be slightly larger than the record total of about 3 million tons in the previous year. It would appear that India is not alone in the drive toward self-sufficiency in jute production. Among the countries striving to increase jute output, Mainland China has made rapid progress and it appears that it will reach self-sufficiency by 1962. Nepal, Burma, Thailand, Taiwan, and North and South Vietnam are other Asian countries which are expanding their jute cultivation. Elsewhere, Russia, Brazil, Gautemala, Haiti, Cuba, Mexico and Africa are also evincing keen interest in this regard.

Although the main purpose of the drive toward self-sufficiency in these countries is to meet domestic demand, export possibilities are also being actively considered. Recently, Burma has sent a small consignment of its jute to the UK where it has been *favourably* received. It would appear that the possibility of the emergence of Burma as a serious competitor to its near-monopolistic position in the European raw jute markets has already impressed upon Pakistan the need for following a more acceptable jute policy.

This growing competition in world jute markets—already stiff competition is encountered in world jute goods markets—also sets a new problem for both the two important jute goods industries in the world. For the Indian industry, the steady rise in world jute production emphasises the need for constant vigilance and the strengthening of its competivity.

The present unenviable position of the continental industry should not lull our industry into the feeling that the threat from this direction has for ever been eliminated. The continental jute mills incorporate latest technological developments in jute machinery and their only handicap is their dependence on foreign countries for their raw material. At present, Pakistan is supplying their requirements. With the steady increase in world jute production, more jute may, in the coming years, finds its place into world markets and once the *continental mills* are able to obtain a plentiful supply of raw jute at equitable prices, they may again begin to figure prominently in the field of jute goods exports.

*

A steady undertone was noticeable in the jute goods market during the past week ended Wednesday. The improvement in sentiment was largely due to the recovery in heavy goods. Hessians also displayed a steadier tendency. From the very beginning of the week heavy goods began to attract attention. In early dealings interest centred round the ready position but later on speculators evinced keen interest in the forward deliveries also. It would appear that the revival of support *mainly stemmed from* the steadiness in the raw jute market. Presumably operators argued that in the event of a shortage of the fibre in coming months it would not be practicable to keep down price levels especially in the sacking section because the higher rate of production of this category of goods would continue only for another couple of months or so.

The revival of interest in forward deliveries is clearly seen in the futures market. Last Thursday B Twills November opened at Rs 101.65 while B Twills February opened at Rs 100.50. But by close on Tuesday both deliveries were almost on level at Rs 102.60 and Rs 102.30 respectively. In the hessian section February position was *slightly higher than* the November position from the beginning itself. Hessian 40" x 10 oz November opened the week at Rs 39.32 and closed on Tuesday at Rs 39.84. The February position improved from Rs 35.52 to close at Rs 40.20. The speculative fervour was also evident in raw jute Assam Bottoms December improved from 24.54 last Thursday to Rs 25.70 at close on Tuesday. The March position moved up from Rs 26.04 to Rs 27.40.

The gunny market met with sustained interest last Thursday around sacking. B Twills November closed higher at Rs 103 on overnight buying interest. B Twills Jan-March quoted at Rs 101.05. The undertone was rather weak on Friday on emergence of selling pressure and B Twills November came back to Rs 102.65 with Jan-March at Rs 100.55. Saturday again found the rates higher with B Twills November at Rs 103.10 and Jan-March at Rs 101.45. From Monday onward interest centred mainly on the forward positions while the near delivery remained almost unchanged. On Monday B Twills November was placed at Rs 103.65 but B Twills Jan-March was taken up to Rs 102.60. In Tuesday's trading while the November position was slightly easier at Rs 103.40, the Jan-March position at Rs 39.80. At close on Tuesday the November delivery was only slightly higher on balance but the Jan-March position was 50 nP higher on balance at Rs 40.30.

During the past few days Assam Bottoms have gained about Rs 1.50. The improvement as in the case of the goods section stemmed mainly from the activity in the futures section. Although mills did not evince much interest earlier, they were inclined to extend commitments in later dealings at advancing price levels. Assam Bottoms which was done at Rs 24 per maund November-December delivery last Thursday steadily moved up to Rs 24.25 by Saturday. The rate was pushed up to Rs 25.25 by close on Monday on substantial mill buying. The rate advanced further on Tuesday to be placed at Rs 25.50.

STC & JUTE MARKET

For the present the State Trading did not intend to enter the jute market for the purchase of jute for stabilising its price, the Minister for Commerce, Mr Nityananda Kanungo, told the Lok Sabha on 19th November. Mr Kaungo said that from the beginning of the jute season in July, the prices of raw jute had been steady. Moreover, the demand for jute goods was likely to go up this year and the Government would release quotas for the export of raw jute. In view of this, there was no necessity for the STC to enter the jute marke and purchase raw jute.

WORLD OF TEA

Plain Teas Firm in London

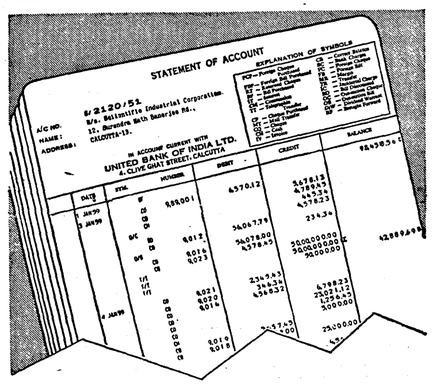
TEAS under 5sh a pound have been in good demand in London during the past many weeks, while the higher-priced grades have continued to decline on quality. Over the past three months, the plain tea price range has risen by around 9d per pound. The overall supply and demand position is reckoned to be fairly evenly balanced now, and it is believed that prices for the plainer sorts will be maintained for some time to come. This belief is based on the fact that available London auction supplies are insufficient to match weekly deliveries of fully 10 million pounds. The blenders in the UK have, in consequence, had to make good purchases from Calcutta and Colombo.

Dealers in London have been impressed not only by the rise in the prices of plain teas which has occured in the past two or three months, but also by the far greater quantity sold at this stage of the season as compared with last year. The quantity aspect is particularly important in the case of Dooars teas, which have, in fact, been, on average, slightly cheaper than in 1958. Both Cachars and Assams have been doing very much better, both in terms of price and of quantity.

In this connection, it is to be added that October is the last heavy production month for North India and in that period it turned out 96.60 million pounds as compared with 101.90 million pounds in October, 1958. Moreover, large quantities of tea have been going to out-markets from the producing countries, while the seasonal build-up in the UK stocks is very slow in getting under way.

Meanwhile, the US tea market is giving cause for concern for the Indian tea industry and for the Government. India's share of the US market has fallen by two million pounds, while Ceylon's has gone up by five million pounds. India, the largest contributor to the Tea Council's funds, lagged behind Ceylon by 12 million pounds in exports during the first eight months of this year. India's share of the US tea market had thus fallen from 30 to 25 per cent, whereas Ceylon's went up from 37 to 41 per cent. The Council is charged with the task of promoting the consumption of tea. As such, the Council has a hard enough job, trying to maintain its position against powerfully-advertised competitive beverages. The advancement of Indian tea, therefore, calls for vigorous efforts.

In the Export sale held in Calcutta this week, offerings were 69,906 packages. There was a very strong and general demand for all sorts. Clean black teas, medium Assam BOPs and Whole Leaf grades were particularly strong features. Although some of the poorer CTC types were at times easier, the best sorts met with strong competition and were sometimes dearer.



Brown-leafed Dooars teas were also in strong demand and dearer. Following rates were quoted:— Clean Black Pekoe Rs 2.10 to Rs 2.16; Plain BP Rs 1.92 to Rs 1.98; Plain Fannings Rs 2.08 to Rs 2.14; Medium BP Rs 1.94 to Rs 2.08; Medium Fannings Rs 2.12 to Rs 2.14; Best Assam CTC BP Rs 2.70 to Rs 2.90 and Best Assam CTC Fannings Rs 2.70 to Rs 2.95.

In the Internal Sale, offerings were 22,815 packages of Dusts and 909 packages of Leaf grades. The market opened on a very strong note with exportable orthodox kinds selling at 20 nP and sometimes more above last rates. As the sale progressed, however, prices declined and, at the close, these descriptions were sold at from 4 nP to 10 nP above last rates. Darjeelings, on offer, shared in the stronger demand. CTC teas were keenly competed for and were fully firm and often from 10 nP to 20 nP dearer, particularly the poorer types. Following rates were quoted: Medium Dooars Dust Rs 2.08 to Rs 2.24; Medium Assam Dust Rs 2.04 to Rs 2.18; Medium Assam CTC Dust Rs 2.10 to Rs 2.30 and Best Assam CTC Dust Rs 2.60 to Rs 2.90. Leaf grades met with a strong general demand and most teas realised prices which were well above last rates.

In the Cochin market, offerings were 360,000 pounds of Dusts. There was very strong general demand. Prices for every sort advanced by 5nP to 10 nP per pound excepting high-grown teas, which were firm.

In the Chittagong market, offerings were 12,419 chests for export. There was a strong demand and most teas were dearer to buy with the exception of Whole Leaf grades, which met with less competition and were often easier. Fannings were barely steady. The rate remained unchanged at Rs 2.0.0 to Rs 2.2.0.

Clean Broken Pekoe were a strong feature of the sale, appreciating by As 3 to As 4 per pound. BOPs were also up by As 3, while well-made Orange Fannings were 6 pies to one anna per pound dearer. BOP was quoted at Rs 1.15.0 to Rs 2.0.0; Broken Pekoe at Rs 1.10.6 to Rs 1.11.0 and Pekoe Fannings at Rs 1.14.0 to 1.14.6.

They are so neat!

These mechanised Statement of Accounts! They save the customers so much time and bother. The Bank's Head Office and some branches supply them regularly. More and more branches will be supplying them soon.

Amongst the Banks in India the UNITED BANK is in the van of mechanization.

WORLD OF BOOKS

Indian Tax Laws

Elements of Indian Income-Tax: by R. N. Lakhotia, Published by Asha Publishing House, Ahmedabad-14 *Price Rs 2.80 pp 160.*

Illustrated Income-Tax Law: by B. D. Nagpal; Published by Kitab Mahal, Allahabad Price Rs 7.50 pp 380.

Taxation Handbook: by S. K. Lahiri. *New Book Society*, 4A, Wellington Square, Calcutta-13 Price Rs 12/-.

The three books under review bear witness to the growing complexity of the system of direct taxation in this country and the need that is felt by the tax payers, tax practitioners and students for authoritative guidance through the maze of legislation on the subject. For more than a half a century after Income-tax was first imposed in 1860, it remained a simple affair. Except for minor amendments, the basic legislation remained unaltered till it was recast by the Income tax Act of 1918. This Act was again replaced within four years by the Indian Income-tax Act of 1922, which remains the basic framework of the present system. But major alterations have been made by Amendment Acts of 1939, 1951 and 1954. With the growth of business enterprise throwing up new problems, amendments have followed in quick succession in recent years. Drastic changes have been introduced through the yearly Finance Acts. Finally, the integrated system of taxation has given an entirely new look to the Indian tax structure which sets it apart from the tax systems of other countries as well as from what obtained in this country till a few years ago. In view of the rapid succession of amendments, not only laymen and students who have to study the subject for their examinations, but even professional tax lawyers find considerable difficulty in keeping track of the changes.

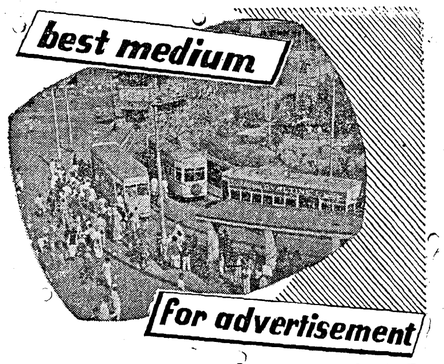
The Elements of Indian Income Tax, by R. N. Lakhotia, is primarily meant as a text book for B.Com and LL.B. students at Indian Universities. But the lucid presentation of the basic principles of Income tax law, illustrated by numerous examples, will help the ordinary taxpayer to gain an understanding of the subject necessary to fill up tax returns. The book has been made up-to-date by the inclusion of the Finance Act of 1959. In addition, B.Com. Question papers of the Agra and Rajputana Universities for the last five years, along with their answers, are also given. An alphabetical index of topics dealt with facilitates easy reference. The publication has been recommended to the students and teachers of commerce by Mr K. P. Bhatnagar, Vice-Chancellor of Agra University who contributes a foreward.

Illustrated Income-tax Law, by B. D. Nagpal, includes in addition to a comprehensive treatment of the problems of income tax law, chapters devoted to the law relating to Wealth tax and Expenditure tax. The sub-title describes it as a text book on Income-tax and Accounts with illustrations on all complicated points. The book has been primarily written for students preparing for professional examinations in accountancy as well as those studying for university and Departmental examinations. While standard text books on other professional subjects, like accountancy or cost accounts, published abroad can be utilised by the students to gain comprehensive knowledge of the subjects, the same facility is not available for Income-tax, as the law on the subject differs from country to country and changes from time to time. So, any text book on the subject to serve any useful purpose has to be written with particular reference to the legislation currently in force in the country. The book contains at the end of each chapter a large number of questions set at different professional and university examinations. And, in this connexion, it is relevant to mention that changes have been made in the questions in view of changes in law and dates. The book which was published in 1958, contains an addendum which discusses the effects of the Finance Act of 1958 on various chapters discussed in the book. Similar addenda discussing the effects of the changes made by the Finance Act of 1959 and subsequent years, if made available to the purchasers, will increase the attraction and utility of the publication.

In contrast to the two publications mentioned above, **Taxation Hand Book,** by S. K. Lahiri, is meant for Tax Lawyers who are frequently called upon to advise their clients on intricate points of Revenue Laws. The Direct Tax Laws, in our country, as Mr A. K. Roy, Secretary, Ministry of Finance has pointed out in a short preface, are spread over five different Acts. The practitioner has to consult different publications before he could tackle any problem. A compilation which brings together the most important of the Statutes will be a welcome addition to the library of any professional man who has to deal with tax matters. This compilation, containing as it does the text of the Acts dealing with Income tax, Estate Duty, Expenditure Tax, Wealth tax and Gift tax, together with the Rules framed thereunder, as well as the Indian Contract Act, the Indian Partnership Act and the Indian Finance Act, is good value for the money. Mr Justice P. B. Mukharji, who contributes a foreword, has commended the "handbook to the lawyers and public alike as a very practical and useful volume whose guidance they need at every turn.

*

Food Facts



An Introduction to Food Economics by Gorakh Nath Sinha; Published for the Bihar University, Patna, by Kitab Mahal, Allahabad. Price Rs 3/-.

The Food Problem in modern India first became headline news with the tragedy of the Bengal Famine of 1943, and it has remained in the headlines ever since. Numerous commissions of enquiry have studied and reported on the subject, starting with the Gregory Committee in 1944; and the establishments of the Ministries of Food and Agriculture at the Centre and in the States have grown in size and importance. But, to judge by the confusions that still beset food policy, it would seem that the fundamentals of the food economy of the country continue to elude understanding. The author of this study of the subject is a distinguished economist who retired as the Director of Public Instruction, Bihar, and has served as Vice-Chancellor of Patna University for several terms. He was also member of different committees of enquiry including the Farms and Agricultural Enquiry Committee set up by the Government of Bihar in 1953. The book is based on the Food Survey Report 1946 which recorded the results of Sample Food Survey operations carried out for the Bihar Government. The approach to the subject is scholarly and the treatment is comprehensive. The author has brought to bear on the subject an original outlook derived from detailed personal knowledge of the conditions of agriculture and of the agricultural population. While all aspects of the complex subject have been dealt with, the estimates of consumption and deficit, the discussion of standards of nutrition and of the reliability of statistics are particularly revealing. Though the statistical information analysed in the book relates to Bihar, the presentation is such as to be of real help in organising in meaningful form the mass of statistics put out by the Union Ministry of Agriculture during the last decade. The serious student of the subject of Indian food economics will be grateful to the author for this excellent introduction.

Agricultural Situation in India: (Annual Number, 1959) Editor: S. Ramaswami. Issued by the Ministry of Food and Agriculture. Available from the Manager of Publications, Civil Lines, New Delhi Price Re 1.

Those who want to gain a comprehensive idea of the development of Indian agriculture in all its major aspects, firmly based on up-to-date statistics, cannot do better than acquire a copy of the August number of the Agricultural Situation in India, which incidentally is its first annual number. In addition to the valuable statistical section covering the latest crop estimates and forecasts etc the publication has been embellished by authoritative contributions dealing with developments and progress since the advent of independence. Statewise breakdown of statistics of production and area under different food crops, and tables giving the percentage distribution of rice and wheat production in India according to districts, are of special interest.

WORLD OVERSEAS

US Notes

ONE sunny morning last week, a bareheaded Secretary of Labour James P. Mitchell stood on the steps of the US Labour Department building here and proceeded to eat his "hat" in full view of an assembled throng of newspapermen and interested onlookers.

From a distance, the "hat" looked much like any other felt fedora. Closer inspection revealed it to be an ingeniously designed cake, with mocha icing and chocolate trim. As he sliced into this odd-shaped delicacy and munched on a piece of it, Secretary Mitchell was living up to a promise, one of which he has no doubt been reminded many times in recent months.

It was last April that the Secretary told a skeptical labour meeting here that unemployment would be down to 3 million by October, and employment up to 67 million. If things did not turn out that way, he promised the labour leaders that "I will eat the hat you said I was talking through."

The October employment estimates, published last week, showed unemployment at 3,272,000 and employment at 66,831,000. While Mr Mitchell did not miss his prediction by much, he is a man of his word. The "hat" looked delicious; how much enjoyment the Secretary may have had in eating it is another matter.

In all fairness to Mr Mitchell, one must concede, with him, that there are extenuating circumstances behind his missed prediction. He himself took note of them when he dedicated the first piece of his "hat" to R. Conrad Cooper, chief negotiator for the industry in the 116-day steel work stoppage, and the second to David J. McDonald, President of the United Steelworkers of America and chief union spokesman in this bitter labour-management contract dispute.

As the figures themselves clearly show, Mr Mitchell undoubtedly would have been right if there had been no steel stoppage, or if the stoppage had been a shorter one. Certainly, no one can attribute the October employment statistics to any weakness in the United States economy, which has demonstrated remarkable strength in the face of the shutdown of the key steel industry.

As a matter of fact, the employment total of 66,831,000 set a record for the month of October. It has been exceeded only in a few summer months. When employment is invariably higher because of the seasonal influx of new workers.

Actually, employment rose by 484,000 last month, despite the steel stoppage. And the consensus among economists and government officials is that the increase would have been significantly greater if it had not been for the stoppage. Reflected in the larger number of jobholders was a normal seasonal expansion in retail and teaching positions.

But the real story of the hat-eating incident is on the unemployment side of the picture. Labour Department economists estimate that unemployment usually falls by 200,000 in October, and the jobless total for the month would have been down to 2,800,000 if it were not for the steel shutdown.

Available data indicate that as of mid-October, when the figures were collected, unemployment directly attributable to the steel shutdown—in such related industries as coal mining, railroading and metal fabricating—was more than 300,000. They also indicate that it has climbed another 200,000 or so since. These figures do not include, of course, the 500,000 members of the steelworkers union who were out on strike and hence were not included in the jobless total.

Last week, the steel shutdown was ended for an 80-day "cooling-off" period under the Taft-Hartley Act, the nation's basic labour relations law. As a result, steel workers are returning to their jobs en masse, and the output of steel is being steadily increased.

For laid-off workers in related industries, however, the return to their jobs will be more gradual, as steel supplies are built up. It is entirely possible, therefore, that the statistics for November, when they are published a month from now, in effect will be understating the current number of jobholders while overstating the number of jobless. This is because the data are gathered as of the middle of the month.

One measure of the US economy's strength despite the 17-week steel shutdown is the fact that long-term unemployment—defined as 15 weeks or longer—has shown no appreciable change for the past several months. It was only 726,000 this past October, as against 1,392,000 in October a year ago.

*

Britain

United Kingdom exports in October were valued at £306'000,000, and imports at £360'000,000, both figures being a big increase on recent months, according to an announcement by the Board of Trade in London on November 19.

These are the full trade figures for October, and confirm the provisional figures issued earlier this month.

Taking the two months September and October together, exports to Western Europe and North America accounted for most of the increase in total exports compared with a year ago. But exports to all the main areas showed some increase; and exports to the Sterling Area seem to have been responsible for a large part of the increase compared with the first eight months of this year.

The commodity pattern shows that the exports ranged over a very wide field, particularly engineering products, machinery, and commercial vehicles and chassis.

The increases in imports in September-October came from most of the main areas. Imports from sterling countries were 7 per cent up on a year earlier, but the bulk of the increase came from North America (17 per cent), Latin America (31 per cent), and Western Europe (10 per cent).

* * *

It is pointed out in London that the October figures of imports and exports, even after allowing for the normal seasonal fluctuations, represent a substantial increase on recent levels. They confirm that the underlying trend is one of expansion both in exports and imports.

United Kingdom exports in September-October were 10 per cent more in value than a year ago: in the first eight months of this year. they had been 3 per cent up.

Similarly, imports, which had been 5 per cent more in value in the first eight months of this year compared with a year ago, were 9 per cent more in September-October.

* * *

The United Kingdom official index of retail prices was the same at October 13 as at September 15, the Ministry of Labour announced in London today (November 19).

The index, which measures changes in the average level of retail prices compared with that at January 17, 1956 (taken as 100), was 109.

Calculated to one decimal point, the October index was 109.2, compared with 108.7 for September.

This is the sixth successive month that the retail prices index, rounded to the nearest whole number, has remained at 109. At this time in the past two years it had gone up by approximately one point.

The latest index continues the stable trend in prices which has marked the period between May and September, when it was less than one-half per cent up on September 1958.

* * *

The "reasonable hope" that orders for Comets would reach 50 early in the new year has been expressed by a spokesman of the de Havilland Aircraft Co., the makers of the aircraft. He said negotiations were in progress with a number of airlines, and some were in an advanced stage.

Orders for Comets at present total 39. Twenty-one aircraft have been delivered, and the remainder are being awaited by six airlines—BOAC, British European Airways, the Argentine airline Aerolineas Argentinas, East African Airways, Olympic Airways of Greece, and Mexican Airways.

The spokesman added that de Havillands would have to sell about 60 Comets at approximately £1,000,000 each to meet development costs before making a profit.

* * *

Britain's record summer has put the highest-ever yields of cereals into her granaries. Farmers have harvested 28.6 cwt of wheat to the acre and 25½ cwt of barley, both records. Oats averaged 22.1 cwt to the acre, the second highest figure known. Even potatoes, which are sensitive to drought conditions, did well, with 8.4 tons to the acre, which has been exceeded only four items.

Provisional estimates of total crops are: wheat, 2,627,000 tons; barley, 3,567,000 tons; oats, 1,223,000 tons; and potatoes, 4,549,000 tons.

* * *

The British Motor Corporation plans to spend about £50,000,000 in the next three years to boost production capacity to a million vehicles a year, the corporation's chairman, Sir Leonard Lord, said in the annual statement to shareholders published today (November 23).

Sir Leonard said planned output of the group's "baby" cars was already insufficient. Immediate steps were being taken to double output to 8,000 cars a week—including a new range of light commercial vehicles early next year.

He added: "Currently we are producing at the rate of 750,000 vehicles per annum. When the extra facilities become available in 18 months to two years' time, the magical figure of 1,000,000 units a year will be within our reach.

"In the last five years we have spent £39,000,000, and an estimate of the fresh capital expenditure involved is £15,000,000 this year (1959-60), £20,000,000 in 1961, and £14,000,000 in 1962—a total of £49,000,000".

*

France

French electrical engineering activity during August 1959, based on the ratio between the number of workers and the number of hours worked per day (on the basis of 100 in 1949), showed a decrease of 0.8 per cent compared with August 1958. For the twelve months from 1st September, 1958 to 31st August, 1959, the decrease in activity was 2.9 per cent compared with the preceding year.

The turnover of French electrical engineering companies during August totaled 40.6 milliard francs.

Exports of electrical equipment abroad accounted for 5.8 milliard francs, which is an increase of 39.7 per cent compared with August, 1958; and combined exports abroad and to the franc zone totaled 9.2 milliard francs, which was 38.3 per cent more than in August 1958.

Imports from abroad in August 1959 totaled 2.8 milliard francs, which is a decrease of 9.4 per cent compared with August 1958.

The French textile industry continues to prosper. In the woollen department, 10,350 tons of carded wool were produced during July and August, compared with 8,659 tons during the corresponding two months of 1958. During the same period, 9,709 tons of worsted yarn compared with 8,138 tons were produced.

Although the production of artificial textiles was less (75,336 tons during the first time nine months of 1959 compared with 91,834 during the corresponding period of 1958), this branch of the industry was not affected by the textile crisis. The traditional fabrics, wool and cotton, have again found favor with buyers, perhaps even to the detriment of artificial products.

* * *

With 300,800 tons during September 1959, compared with 213,900 tons during the same month of last year, the French oil production increased 40.6 per cent. The cumulative output for the year ending 30th September, 1959 was 3,033,000 tons, compared with 2,155,600 for the year ending 30th September, 1958, which was an increase of 40.7 per cent.

Within this total, the output of metropolitan France alone (141,000 tons of oil compared with 116,100 tons in September, 1958) increased 21.7 per cent. The output of the Sahara increased 102.7 per cent while that of the French Community increased 35 per cent.

The output of natural gas in France in September, totaled 256,600,000 cubic meters, compared with 104,500,000 cubic meters during the same months of last year, which is an increase of 145.5 per cent.

A total of 77,600 meters were drilled, compared with 62,200 meters during September 1958, which is an increase of 24.7 per cent.

* * *

During the first half of 1959, energy resources represented 25.6 per cent of the value of French imports from foreign countries. Of 235.2 milliard francs worth of energy resources imported, oil products accounted for 154.7 milliard francs and solid fuels for 79.5 milliard francs.

Imports of oil products included 13,542,746 tons, of which 12,254,765 (or 90 per cent) came from the Middle East; 1,145,175 tons from Venezuela; 56,012 tons from the United States; 53,338 tons from Russia; and 33,456 tons from Italy.

A total o 21 milliard francs worth of oil products were exported, as were 18.4 milliard francs worth of solid fuels.

1.5 million tons of refined oil products worth 24.8 milliard francs were exported to countries of the franc area. However, a substantial increase in imports was registered, with 6.9 milliard francs worth of oil from the Sahara and from Gabon, representing twice the amount imported in 1958. During the first half of 1959, 338,132 tons were imported from Gabon compared with 200,334 tons during the corresponding period of 1958.

The opening of the Hessi-Messaoud-Bougie pipeline will come too late in the year to make any great difference in the amount of crude oil received from the Sahara during the second half of this year with relation to the total amount of energy imported from abroad and from the franc zone. However, beginning in 1960, there will be a progressive transfer from French dependency on foreign countries for crude oil to a dependency on the franc zone. This movement will be further accelerated by the opening of the Edjeleh pipeline at the end of 1960.

* * *

In August, exports of the French jute industry totaled 1,376 tons of rope and jute bags compared with 1,627 tons in July, and 704 tons in August 1958, including respectively 647,962 and 232 tons sent to foreign countries.

During the first 8 months of 1959, exports totaled 15,061 tons compared with 15,754 tons during the same period of 1958, including 5,656 and 5,062 tons sent to foreign countries.

* * *

Harvesting has been completed in all regions, and, as predicted, the yields are very satisfactory. The specific weight is high, the dryness is very good and large quantities are being delivered to storage depots.

Wheat:—Harvest estimates by the Agricultural Services confirm those made a month ago. Totaling almost 116 million quintals, the harvest is the largest ever obtained, despite a slight decrease in the surface areas planted (200,000 hectares less). The average yield is good with 26.2 quintals per hectare.

Rye:—The increase in the yield (+1.7 quintals per hectare) made the total harvest greater than it was last year, despite the fact that less surface areas was planted.

Maize:—Harvesting of the early varieties has begun. In the regions which benefited from some rain at the end of the summer, that is south of Lyons and Bordeaux, prospects are rather good. However, in the areas north of the Lyons-Bordeaux line, drought has somewhat damage the crops. In the Landes region, floods destroyed several fields, and in other areas ripening was retarded by September rain.

Oats:—The slight derrease in surfaces planted was compensated for by the considerable increase in the yield (+1.7 quintals per hectare).

Barley:—This crop benefited both from an increase in surfaces planted (+200,000 hectares) and from a higher yield (+3.1 quintals per hectare), meaning that there was a considerable increase in the total output (+11 million quintals), which is some 12 million quintals more than the average harvests between 1954 and 1958.

This abundant harvest facilitate the feeding of livestock, and will alleviate the lack of fodder during the coming winter.

Rice:—Weather conditions were often poor in September, consequently the harvest will not be any greater than it was last year.

In September for the fifth consecutive month, the French trade balance with foreign countries showed a credit. The value of exports (157 milliard francs) was ten milliard francs more than imports (147 milliard francs), which is a covering percentage of 107 per cent, compared with 109 per cent in August.

Between August and September, there was increase in imports of 14 milliard francs which more than compared for the 12.5 milliard francs increase in exports. However, compared with September 1958, the 102 milliard francs exported this year were exactly 50 per cent greater, while imports only increased 15 per cent from one year to the next, corresponding to a slight decrease in volume following the devaluation of the franc at the end of December 1958.

* *

Exports to the countries in the franc zone during September (64 milliard francs) were 25 milliard francs more than imports (39 milliard francs), which is a coverage of 164 per cent.

* * *

An agreement calling for increased trade between France and India and signed on 18th October.

This agreement provides for the creation of a combined Franco-Indian commission which will meet either in Paris or in New Delhi at the request of one of the two parties for the purpose of examining practical steps to be taken to increase trading.

The "Dauphinoise" car, a modified version of the "Juvaquatre" which Renault proposes to manufacture in India with the assistance of the Mahindra Company, was presented in New Delhi. This car will cost approximately 6,400 rupees. It is well known that the Indian government is seeking to encourage the production of small cars in India.

*

Sweden

Orders on hand in the Swedish engineering industry, excluding the shipyards, were 7 per cent larger in August than in February this year, the increase over August 1959 being 3 per cent, according to a survey published by the Swedish Institute of Industrial Investigations. In the shipbuilding industry order books showed a decline of 15 per cent compared with August last year.

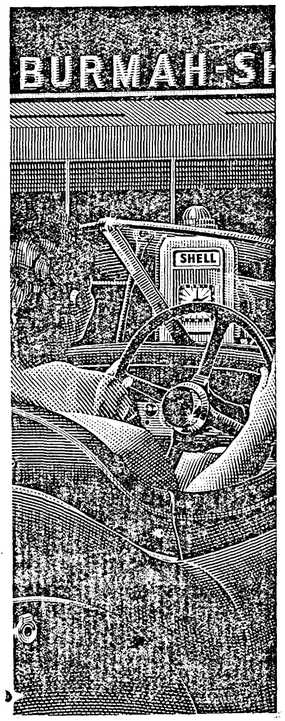
A comparison based on the influx of new orders shows that a major improvement has taken place this year, particularly in the period June-August, when new orders in the engineering industry proper were up 20 per cent on the figures for the same period of last year. The highest increase, 45 per cent was noted for the electrical engineering industry, while the corresponding figure for the mechanical engineering industry was 20 per cent and for the steel and other metal manufacturing industry 15 per cent. For all three branches the relative share of export orders in the total of new orders showed an upward trend.

In the shipbuilding industry the influx of new orders in the period March-August 1959 was the largest on record for the past two years, although still being comparatively small compared with the immediately preceding years.

Overall figures for the entire engineering industry, including the shipyards, show that the total stock of orders was somewhat larger in August than in February this year, although it still fell short of the figure for August 1958 by 4 per cent The inflow of new orders, however, was 20 per cent larger in March-August this year than in the corresponding six-month period a year ago.

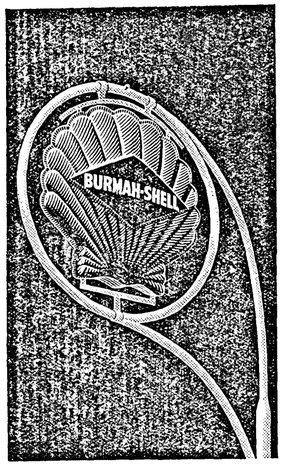
* * *

An agreement on iron-ore sales for 1960 has been concluded between LKAB, the Grangesberg company and their joint sales company Malmexport on the one side and the German ore purchasers on the other, it was announced last week. The agreement provides for larger quantities of ore at unchanged average prices.

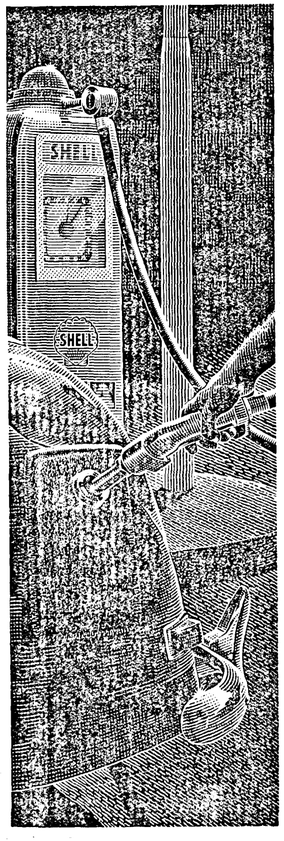


* * *

The Confederation of Swedish Trade Unions, at a meeting last week, decided to bid for a 6 per cent increase in wages—or a minimum of Kr 0.34 per hour—in the co-ordinated negotiations to be held with the Swedish Employers' Federation for next year's wage contracts. This is the first time in many years the Confederation makes a public statement on its bid before the negotiations start.



The Confederation further proposes that women shall receive the same pay as men for identical jobs and that the current rules for holiday pay be revised. The affiliated trade unions will be entitled to take up for discussion with their respective employer organizations questions not brought up at the coordinated negotiaions.



Commenting on the autumn report recently published by the Swedish Institute of Economic Research, which recommends a prolongation of current wage contracts in order to avoid cost inflation, the President of the Confederation of Trade Unions, Mr Arne Geijer, said that he found the report biassed since it dealt only with the wage side and not with the risk of inflation emanating from the employer side. "State institutions should refrain from trying to influence forthcoming negotiations and restrict themselves to give an account of the economic development that has taken place and the economic prospects for the future, Mr Geijer said.

In a statement refuting Mr Geijer's criticism the head of the Economic Research Insitute, Prof Bent Hansen, says that the Institute cannot pay consideration to the fact that objective information on the prerequisities for and consequences of wage developments may influence wage negotiations.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

AUTHORITY may have appearances to keep up, but popular interest in the Finance Minister's annual visits abroad is frankly in terms of "brass tacks." And small wonder. Even if the public could summon up the necessary technical interest in the formal duties that take him abroad, it has so little to go on. The two annual engagements of the Finance Minister abroad are the meeting of the Commonwealth Finance Ministers (in London this year) and the annual Conference of the Fund-Bank institutions in Washington. Of these, the former is a confidential occasion, and the latter a formal one. In the first, you speak frankly but privately; in the latter, you make sonorous speeches without adding a jot to the public knowledge on details. And when the itinerary of the Finance Minister also includes a highly selective list of countries whose Governments have invited him (which invitations he could hardly decline with propriety!) and he also tells us that everywhere they wanted to know not only about the progress of our present plan, but also about the requirements of the next, the public naturally thinks that the "worth while part" of the story, as far as it is concerned, is the result of the unscheduled discussion. Mr Morarji Desai has, therefore, quite rightly taken the earliest opportunity in satisfying public curiosity in the matter by making report of his visit abroad in Parliament last week. And he has cheerful news to give.

*

Of course, he was cagey in telling us about it. He "had not gone abroad for asking for foreign assistance or to negotiate such assistance for the Third Plan." We are ourselves "not yet certain about the precise needs of foreign assistance during the plan, for, we are still processing the data." We are likely to have the final draft of the Plan only toward the end of March next; and so on. But, despite all this hemming and hawing, he has this assurance to give: "On the whole, insofar as any general statement can at all be made at this stage, the prospects of continuing external assistance for the Third Plan strike me as good." He could hardly say more, if for no other reason, than at least for the sake of appearances.

*

But he had more solid reasons for his tentativeness. The reference to the uncertainties of the size of the Third Plan is no longer a polite evasion of firm commitment too prematurely. The recent border incidents and the possible Chinese motives behind these have given a new and tangible meaning to professions of uncertainties about the Third Plan's final form. They have thrown into the melting pot not only the size but the shape of the next Plan. As is well known, the requirements of defence threw into some confusion some of the calculations of the Second Plan, by cutting more deeply into the size of the "cake" originally allotted to the Plan. We may have the wry satisfaction that, during the Third Plan, we may not be caught unaware as we are sure now to make a more precise reckoning of our needs in this regard, if only because military preparedness has taken on a more tangible urgency. But some of us had hoped for a certain easing up of the concentration on basic industrialisation in the interest of expansion of secondary and tertiary sectors. It appears we may have to defer such hopes, for the simple reason that military preparedness is inextricably tied up with a heavy industrial base. The alternative suggestion of obtaining our defence requirements from abroad is not satisfactory. For, it does not solve the foreign exchange problem, and has the added disadvantage of not making us more self-reliant and self-sufficient: If the People's Republic's aggressive activity has been designed, as some believe it has been, to retard our economic development, it must be admitted ruefully that the enterprise has succeeded. Unfortunately for mankind, the cynical moral of the fable of the man who was willing to forego one of his eyes if the other lost both is only too well founded in experience.

*

But, subject to this uncertainty, it is reasonable to assume that the requirements of foreign exchange for the Third Plan are likely to be met by the various agencies that are already there and are being devised. As I had suggested in these columns some time ago, it is perhaps reasonable to take the current official estimate of foreign exchange requirement of the Third Plan period at Rs 2,500 crores. This would include the amounts required for servicing and paying instalments in respect of earlier loans that become due during that period. Now, according to Mr Desai, the total aid promised so far for the Second Plan—excluding Rs 432.6 crores of PL 480 assistance—is Rs 908 crores. Until October 1959, we have drawn only Rs 458 crores of this total, and it is expected that, by the end of the Second Plan period, a further sum of Rs 322 crores will be utilised. This means that Rs 128 crores will spill over into the Third Plan (as against Rs 100 crores spilled over from the First Plan into the Second). This carry over is due not so much to lack of projects to spend on: (indeed, as Mr Desai has suggested, we need another Rs 140 crores before the end of March 1961 to meet our net foreign exchange needs) it is that part of the Rs 128 crores is tied up with specific projects like the Koyna hydro-electric and Calcutta and Madras port development projects and the machine building projects (this last tied up with USSR assistance) whose work-schedule goes beyond the Second Plan period.

*

In any event, the total assistance that will be available for the Second Plan (inclusive of the Rs 140 crores we need for the next sixteen months, which we have every reason to hope is assured) is Rs 1048 crores without taking into account the PL 480 assistance. If you take into account the drawing down on sterling balances, the Second Plan's utilisation of foreign exchange will work out to roughly Rs 1600 crores (Rs 908 crores plus Rs 140 crores plus Rs 550 crores). If that is so, requirements on even a slightly larger scale, taken together with maturing liabilities during the Third Plan, will seem to make the estimate of foreign exchange necessary for the Third Plan at Rs 2,500 crores an underestimate.

*

Mr Desai has, as a result of discussion abroad, felt reassured that we may get the assistance we need. It is not entirely clear, at this stage, whether this hope is based on a reckoning of the smallness of our own requirement (which seems, to my mind, unlikely) or the largeness of the hearts of our friends abroad. Two other possible explanations occur to me. One is that Mr Desai may have found basis for great hopes in the increased resources of the international monetary institutions, notably the World Bank. Since the New Delhi discussion of the World Bank in October last year, the needs of the under-developed countries are more particularly brought into focus, and these institutions have become more overtly committed to their responsibilities in this regard. Secondly, Mr Desai has great expectations from institutional ingenuity in the matter of international economic cooperation, especially in relation to underdeveloped countries. The International Development Association, sponsored by the US during the New Delhi session, is sure to be one of the important sources of credit for development. The International Finance Corporation, too, is expected to play an increasingly important role in developmental finance. Individual countries have also shown lively awareness of the needs of countries like India. The US senate, as Mr Desai reported to Parliament, has suggested the setting up of a congressional committee to study the developmental needs of South East Asia and make recommendations for modes of assistance. In Great Britain, the election was fought recently on commitments by all the parties to aid the undeveloped

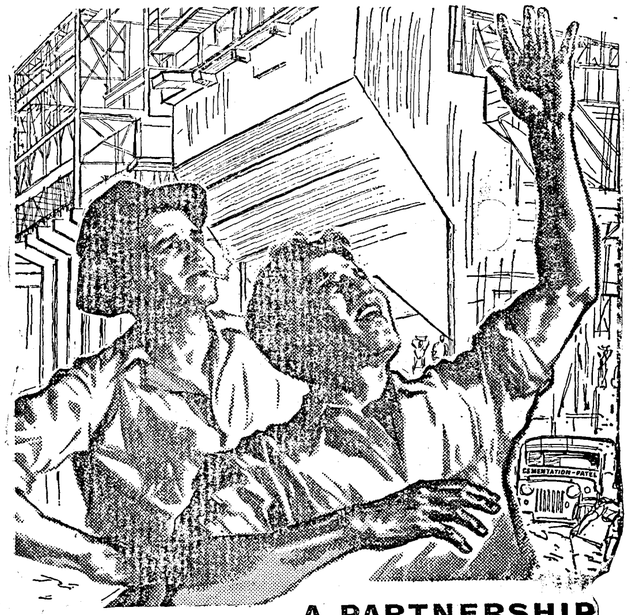
countries. The Labour Party even named a stated percentage of Britain's national income to be utilised for this purpose. Elsewhere, too, a sense of international responsibility for developing the under-developed region is heartening in evidence. In Mr Desai's assessment, all these are sure to have entered.

✱

What is perhaps even more important, there is realisation of the special problems of these regions in the matter of credit utilisation and repayment. There is a distinct veering round to the view that it is futile to expect under-developed countries to be short-term debtors. Their problems being what they are, they should have a fairly long time to be in a position to make their investments pay. To have short-term obligations is to add to the considerable other worries of actual tasks of development. An honest country is inhibited from venturing forth for fear of not honouring its obligations. The International Development Association was conceived as a source of developmental finance with fairly long-tern repayment obligations, and is sure to play a key role in the future.

✱

Secondly, as Mr Desai pointed out to foreigners both on formal and informal occasions, tie-up with specific projects, as in current World Bank loans, creates certain problems for the user of credits offered. I am far from suggesting a carte blanche should be given to any applicant for assistance: nor am I suggesting that the present mode of assistance on specific projects should be entirely discontinued. But I do suggest that there is room for assistance of a general nature which the recipient country is free to use as best suits its needs. This does not mean indiscriminate charity, nor does it involve underwriting inefficiency. It only means a more practical way of looking at creditworthiness. There has been a general realisation of the force of this argument and the International Development Association is also to fill this particular desideratum in existing international credit facilities.



✱

The combined result of the fruition of these various ideas, rather than any specific commitment, is what gives Mr Desai ground for his hope that the foreign exchange needs of the Third Plan are not likely to embarrass us unduly. The repayment obligations during the Third Plan period will lose some of the obsessional terror they have for some of us, if it is realised that these can conveniently be replaced during the Third Plan period by others with specific long term obligations. And to the extent this pressure is released, the Plan's prospects are brighter. Moreover, long-term planning becomes a less uncertain affair. The Fourth Plan will not start with the mill-stone of accumulating short-term obligations, and to that extent planning becomes less of a hand-to-mouth affair.

✱

There is another factor that must have given Mr Desai cause for optimism. During the last two or three years, we have forged an admirable administrative and organisational set up that is continually tackling our foreign exchange problem. I do not think that there is any other under-developed country which has so continually shown alertness and ingenuity in the devising of new modes of getting over difficulties caused by imbalance due to developmental efforts. In these, we have revealed a versatility in negotiation and flair for finding answers to new needs that are truly remarkable. It is hard to over-praise Mr B. K. Nehru, our roving economic ambassador, and his colleagues who, over the last three years, have not only devised particular answers to particular difficulties, but have almost reduced to a routine, thinking on foreign assistance problems. It would be rewarding labour (aspirants of doctorates to note) to collate and analyse the innumerable bilateral and multilateral agreements entered into by India over foreign assistance in some form or the other, in the last four years. It would, I am sure, reveal an amount of disinterested international idealism that would cause a distinct shock to facile cynics who think that it is a commodity in short supply: it would also reveal administrative effort on a scale and of a competence on the part of Government of India hardly suspected by the common man. Mr Desai's hopes for the Third Plan are, I fancy, founded as much on the first as on the second.

A PARTNERSHIP

helping to build Durgapur for India

The joint effort of thousands of hands is raising a tracery of steel against Durgapur's skyline. It is a joint Indian and British effort...the building of a great new steelworks that will make more than a million tons of steel every year for India.

CEMENTATION-PATEL—its 13,500 Indian and 75 British engineers, technicians and workers—are part of this effort. They have shared the task of turning sparse jungle into foundations of concrete for most of Durgapur's plant and buildings. Together, they are building 140 miles of railways, roads and pipelines.

CEMENTATION-PATEL, the project's civil engineers, were first to arrive at Durgapur three years ago. In this time, they have moved enough earth and used enough concrete to build a small city...an achievement that crowns THE CEMENTATION COMPANY'S 30 years of service in India.

Need of the Hour

BOMBAY REVIEW

THAT important sections in the world are not yet ready for showing abiding faith in the principle of Panch Sheel has again been demonstrated. This time, it is India that has happened to be at the receiving end of the shock. Well may some of our leaders pat themselves on their backs for their extraordinary lack of emotion at the grave provocation—a provocation which has been attended with the killing of several of our men on patrol duty on our border—but the generality of the people have been filled with anger. In this week's Lok Sabha debate on Sino-Indian relations, Government members have complained that opposition are utilising the present border situation to sow discontent in the country. It is their contention that, at a time of national crisis, it is the duty of all patriotic people to support the foreign policy of their Government. This is what happens, they aver, in Western democratic countries. But it is the self-same people who maintain in the same breath that the situation is not as grave as it is made out to be by the opposition parties.

But the facts of the matter, as the people know them, it must be accepted, do give cause for some anxiety. In the first place, there can be no satisfactory answer to to the question why Government had not taken the country into their confidence soon after the first Chinese incursion. Today, Prime Minister Nehru is telling us that the trouble with the Chinese is that they have a one-track mind and that, historically, they think that all other nations are under their suzerainty. In this connection, Mr Nehru has recalled the Chinese Emperor's statement when the English in India sent him some presents. It is a legitimate complaint that Mr Nehru had forgotten these national Chinese traits when he readily agreed to have common borders with China and sincerely believed that the present generation of the Chinese were staunch believers of Panch Sheel. According to Mr Nehru, there has till recently been no claim for our territory from the Chinese. Today, the Chinese have not only caused our blood to shed but are still in occupation of our territory. Our Communists may well aver that the latest letter from Mr Chou En-lai has compensated for the earlier Chinese "blunders"—but the people in this country have already formed their own opinion of the present powers-that-be in China. Mr Nehru's reply to the Chinese Premier's letter and the unequivocal declaration of the Government of India that any further aggression will be met with force, generally reflect the national attitude. Whatever the politicians may say, the people now fully realise the urgent need for national preparedness for meeting any emergency.

This is not the time to apportion blame. An invader is in occupation of our territory and he is claiming more. Our refusal to be drawn into an armed conflict even after our men have been killed seems to have encouraged the Chinese into thinking that they can have their way with India. This is the greatest threat that is confronting us today. Our firm faith in non-alignment does not rule out strong action against any invader into our territory. The need of the hour is to demonstrate to the world at large in general and to the Chinese in particular that the entire nation will back as one man our Government in whatever steps they may hereafter take to protect the integrity of our territory.

The need for getting nationally prepared to meet any external aggression is now generally accepted. This involves both an immediate and long-term preparedness. Mr Nehru has himself outlined the long-term plan. To make our army strong it must be provided with adequate modern armaments. But the arms have to be made by us in our own factories. It is extremely risky and costly to depend on foreign sources for the supply of these armaments. The only satisfactory solution to this problem is the rapid industrialisation of the country with special emphasis on the building up of heavy industry. Strong foundations of heavy industry are also inextricably bound up with the prosperity of the nation. In the present context of the threat of external attack, the question of building up heavy industry has become doubly important and can brook no delay. But heavy industry cannot be had without tears, because of the tremendous national effort that will be needed to bring it into being. Circumstanced as we are, the objective can be reached only through the willing sacrifice of the people. The price is worth paying because it will at once pave the way for national prosperity and fortify the nation against external aggression.

The immediate plan is firstly for the entire nation to speak with one voice in dealing with the intruder. In this regard, it will be suicidal to allow any group of people to function as the champion of the intruder's cause. Secondly, it is incumbent on every able-bodied person in the country to demonstrate in a tangible form one's readiness to defend the integrity of the country. Some demand immediate conscription, which is another way of saying that we must keep in readiness a big army. Such a procedure will involve the diversion of precious resources from essential nation-building activity. Therefore, the building up of a big army is a step that cannot be taken in a hurry. But more or less the same level of national preparedness, as can be attained by an army commensurate with our population, is possible even under present arrangements. We have already a regular army fairly well equipped even according to present-day military standards and our army is capable of safeguarding our borders from any further intrusion. Every able bodied person in the country can also make tangible contribution toward strengthening our defence by getting military training without prejudice to one's normal vocation. The Territorial Army provides this facillity. It consists largely of persons who are not professional soldiers but ordinary citizens who are eager to contribute their spare time to the defence of their country. It provides an opportunity for the youth of the country to receive military training without disturbing their normal work. The Territorial Army is often described as the second line of defence but a more correct description would be that it is a section of the regular army because, in times of emergency, it is able to assist the Regular Army in diverse ways by maintaining the essential services.

But it would appear that, even after ten years of existence—the tenth anniversary of the TA was celebrated throughout the country last week—this second line of defence has not reached its stipulated strength. Speaking at the TA anniversary celebration in Bombay, the Union Defence Minister has pointed out that the effective way of showing their concern by the people for the defence of the country is to join the Territorial Army in large numbers. This army is open to all able-bodied citizens of India between the ages of 18 and 35. Most technicial personnel have an upper age limit ranging from 40 to 45 years and this age limit is also relaxed in the case of certain categories of people like Government officials, medical practitioners, etc. Thus, most able-bodied people in the country can help strengthen the defence of the country. An immediate task of the people in the context of the present threat from outside to our territorial integrity is to bring up the Territorial Army to a level that will be commensurate with the size of the country.

BOMBAY REVIEW

Additional Funds For Education

The need for allocating additional funds to promote primary education in Bombay city was stressed by Mr B. S. Dhume, Chairman of the Education Committee of the Corporation, in his speech to a special meeting held to discuss the new Budget Estimates of the Committee. He deplored the present policy of the State Government of shoving the entire burden of primary education on the shoulders of the Corporation. He drew pointed attention to the fact that the financing of primary education, by its very nature, is beyond the capacity of any local authority like the corporation, and added that the Government, by clinging to their present policy, are doing injustice both to primary education and the civic body.

The Chairman, during the course of his speech, wanted the authorities to change the present attitude to the Corporation, failing which the entire civic body would be forced to consider the whole matter seriously and to decide whether it would continue to shoulder the responsibility of primary education at all or face the issue with the Government.

While discussing the new Budget Estimate, Mr Dhume ridiculed the suggestion that the Government should resort to fresh taxation for allotting more grants to the corporation. He brought home the need for creating a single budget, thus removing the compartments separating the various services. Moreover, he suggested that the Bombay Government should cut down their wasteful expenditure on prohibition and police, and divert the funds thus saved into the hands of the educational authorities. He also recalled the various financial problems facing the Corporation. Even though the Corporation increased the salary of the teachers, it has still to consider the various demands made by the teachers. Besides, there is the need for starting new research units of the department and repairing the school furniture. All these involve great expenditure and to meet the fresh demands the Government alone will be able to provide the necessary funds to the Corporation.

*

Import Restriction on Indian Currency

The Reserve Bank of India, in a recent communication, announced the imposition of a ban on the import of Indian Rupee notes in excess of Rs 75 to arrest the fraudulent practice of smuggling Indian currencies in large amounts by passengers arriving from abroad. The new policy will be implemented from December 10, and from that date onwards all the notes brought from abroad in excess of the prescribed amount will be confiscated by the customs authorities and dealt with according the relative rules.

Clarifying the reasons for imposing the restriction on the import of Currency, the press communique stated that, since last October 17, persons going out of this country were not allowed to carry along with them rupee notes in excess of Rs 75 per person and the imposition of a similar restriction in order to prevent the import of Indian currencies unauthorisedly taken out of the country is only a natural corollary to the step already taken.

The communique further states that the new limitation will not apply to special rupee notes issued by the Reserve Bank for circulation in the Gulf States and those coming from those states are permitted to bring any number of notes provided they inform the authorities of the necessary details on their arrival in the country.

There are ample reasons to believe that the implementation of the new scheme will not in any way affect the country's tourist trade. India is not the only country in the world which has imposed restriction on the import of its currency. Moreover, foreigners who intend to tour this country can transfer funds to this country through usual banking channels and the limitation will not cause inconvenience to the foreign travellers.

The press communique said that, as a result of the new policy, rupee notes may be quoted at a discount in foreign countries; such a discount, however, would not have any bearing on the intrinsic strength of the Indian rupee.

*

Report on Diesel Fuel Injection Equipment

The Government of India engaged the Tariff Commission during the first half of 1959 to enquire into the operation of the protection granted to the Diesel Fuel Injection Equipment Industry and to make suitable recommendations with a view to its increase, decrease, modification or abolition according to the circumstances of the case. The existing scheme of protection, aimed at the development of the industry as a whole, covers single cylinder fuel injection pumps of stationary diesel engines and component parts thereof and nozzle holders and nozzles of stationary and automobile diesel engines and component parts thereof.

According to the report of the Commission on the continuance of protection, only three units, namely, Motor Industries Co Ltd, Bangalore, Fuel Injections Ltd Bombay and Kulko Engineering Works Ltd, Kolhapur, are manufacturing diesel fuel injection equipment in our country. The Commission, after their enquiry, recommended the extension of protection to the industry for a further period of four years, that is, till the end of December 1963 and the reduction of the rate of protective duty to 25 per cent ad valorem (standard) from the existing level of 60 per cent ad valorem. The Government accepted the recommendation and it is anticipated that relevant legislative measures will be undertaken without much delay. It is also learnt that the revised rate of protective duty will be enforced with immediate effect.

During the course of the enquiry, Motor Industries Co of Bangalore drew the attention of the Commission to the fact that the prevailing method of basing import licences for raw materials on past consumption limited its capacity to meet the needs of the consumers. MICO suggested that the situation can be tackled by the issue, during one licensing period, of licences for raw materials to the company and also for the requirements of its prospective customers. The Commission referred this representation to the Government for favourable consideration, keeping in view the fact that the allotment of increased foreign exchange for a single period would offer substantial prospects of future economy in foreign exchange. It is relevant to note that the Government have accepted this recommendation also and necessary steps will be forthcoming for its proper implementation.

The Commission during the public inquiry discussed at length the question of standardisation in relation to diesel fuel injection equipment and recommended that the Indian Standards Institution should make a comprehensive study of this problem.

Another recommendation contained in the report is that the Development Wing should furnish to the domestic manufacturers of fuel injection equipment a list of fleet owners to whom actual users' licences are being issued and the manufacturers should furnish to the fleet owners once in every six months a complete list of all the items they manufacture. The Commission suggested that the contention of importers that licences for such items that are not manufactured in our country should be issued liberally, should be referred to the import control authorities.

The Commission found that the goods manufactured in India are functioning well and that they are of good standard. But they did not fail to divulge that there is much scope for further improvements in that field. A large number of customers expressed their satisfaction and recorded their appreciation of the home products. But this need not necessary lead to the conclusion that the entire working of the industry is free from blemish. Two or three transport authorities alleged that a large number of nozzles supplied by the Fuel Injections Ltd were found to be defective and they were subsequently replaced by the manufacturers. The representative of the company, however, contended that that was the only instance where the company's products were found defective and that in no nother case was such complaint against the quality of the Company's products raised. In order to prevent further room for such complaint, the Commission recommended that Fuel Injections Ltd should further strengthen its inspection arrangement and carry out a number of tests before supplying its products to the customers.

The Commission also drew pointed attention to the fact that the Motor Industries Co should bring its selling prices into reasonable relation with fair ex-works prices in order to reduce the wide margin and to pass on to the consumer and the country in general a substantial portion of the benefit conferred on it by the protection granted by the Government.

*

Coastal Shipping

The importance of coastal shipping in the various sectors of the economy was stressed by the National Shipping Board when it met to review the much publicised report of its ad hoc Committee on shipping targets for the Third Five Year Plan.

The Board indicated the indispensability of a well developed system of coastal trade especially in India with its long coastline which offers excellent avenues for the growth of active coastal trade. The Board has urged the Government to evolve and adopt a long term policy so that continuous development may be recorded along this line. To back their claims, which do indeed seem valid, they have drawn attention to the importance of coastal shipping in emergencies and its role as the nation's second line of defence. The training and the ancillary services provided for the merchant navy by coastal shipping were also pointed out.

To improve shipping industry as a whole, other tentative suggestions which the Board offered were in the nature of giving preferential treatment to the industry such as placing it in the core of the Third Plan, liberalisation of long term loans, etc.

GATEWAY NOTES

WORLD OF COTTON

Suggestions to Curb Rising Trend

PRICES on the Bombay Cotton futures market, after ruling initially firm on spot and upcountry advices, suffered a sharp setback toward the close on fears that the authorities might impose strong restrictive measures to check the unbridled speculation in ready delivery contract. Jharilla March delivery after touching a high of Rs 744.25 from Rs 737, declined to Rs 737.25, to close finally better at Rs 738.75.

The situation arising from the recent rise in the spot and forward prices of cotton figured prominently during the discussions at an informal meeting of the Board of the East India Cotton Association, held on Tuesday this week. The Board is reported to have discussed several suggestions to curb the rising trend of prices. The consensus of opinion was, however, that the imposition of a margin on purchases in delivery contracts would not serve any purpose in view of the limited business in such contracts. It was felt that the recent strength in delivery contracts could be attributed mainly to the firmness in the prices of unginned cotton, i.e. Kapas, which was free from any control. The Board did not appear to be in favour of effecting any changes in the present limits of margins on forward purchases also.

Although the talks are said to be inconclusive, certain tentative decisions appear to have been taken. The EICA has agreed, in principle, on the present margin level being kept up and also to allow a free limit up to which the net outstanding position either on a member's account or on behalf of his client will be exempt from the application of margin. The Board will, however, call for a deposit of Rs 15 per bale beyond the free limit whenever the price of the hedge contract goes up to Rs 770 and Rs 25 per bale when the price touches a level of Rs 700.

Certain changes are expected in the mode of payment also. With regard to the delivery contract, it appears that the FMC authorities want the Association to submit to them a statement of information every week. The Board has agreed to this. In this connection, it is said that the Association has no control over the situation prevailing in upcountry centres, as its members are mostly from the City. This being so, it is rather difficult for the Association to have a check over the rising trend of prices in the interior. The Board is understood to have considered the feasibility of raising the ceiling on delivery contracts to a more reasonable level.

Meanwhile, the Cotton Buyers' Association has represented to the Ministry of Commerce and Industry that, with the linkng of import of cotton with exports of cotton piecegoods under the export incentive scheme since July 1958, importers have been hard hit. It is pointed out that the shortcomings inherent in the present import policy can, in a large measure, be rectified by permitting participation of trade in the import of foreign cotton. The Association has submitted proposals to meet with the situation. Like "Food Bank", it has also urged facilities to the shippers abroad to consign cotton to importers in this country to deal with the acute shortage of cotton in the country.

There is, therefore, a proposal for the setting up a "cotton bank" on the lines of a "food bank". This proposal needs to be considered in all its aspects at the highest Government level. The chief merit of the proposal, which involves imports of foreign cotton on consignment basis, is that it will not entail blocking up of Government funds in any manner. On the contrary, the shippers take the risk and consign cotton to their agents in India for storing on their behalf, who will have to concern themselves with the financing of their shipments to this country in the preliminary stages. In other words, cotton consigned will be paid for only when it is sold to the spinners in this country and thus, to that extent, the immediate pressure on the country's foreign exchange will be much less than if direct imports were allowed. At the same time, qualities which the Indian spinners will require will be at our shores before they are exhausted.

×

SPOT MARKET:

The Spot market ruled steady despite subdued demand from spinners. Sellers were also not eager due to the smaller volume of arrivals of the new crop.

On the export front, "choice" Bengals were in demand, while others failed to hold their previous level. The special export quota for 75,000 bales for Bengal Deshi recommended by the Cotton Advisory Board did not maerialise, though the trade is anxiously awaiting an official announcement in this connection. Of the 75,000 bales already allowed, shippers are reported to have sold 59,000 bales out of their share of 67,500 bales and the balance is reserved for the co-operative societies.

In the foreign section, there is a good demand for all growths, especially for the new crop AR Uganda, Sudans and Egypitans.

It is learnt that the Government of India will shortly allow the import of cotton from the East African countries. The quantity of cotton to be imported is likely to be round about one lakh bales. This will be in addition to the one lakh bales that will be imported from the USA under PL/480. It is understood that India will also try to import some more cotton from the USA under a supplementary agreement to the PL/480.

×

COTTON AND PIECEGOODS:

Lively conditions have continued in the Bombay Piecegoods market. The offtake was better at enhancing rates while, on, the export front, the UK and the USA were the main buyers.

Seasonal goods are active with good forward business being done at enhanced rates. Almost all the consuming centres are active buyers in Bombay, presumably because the dealers are finding it difficult to obtain their requirements at lower rates.

BOMBAY REVIEW

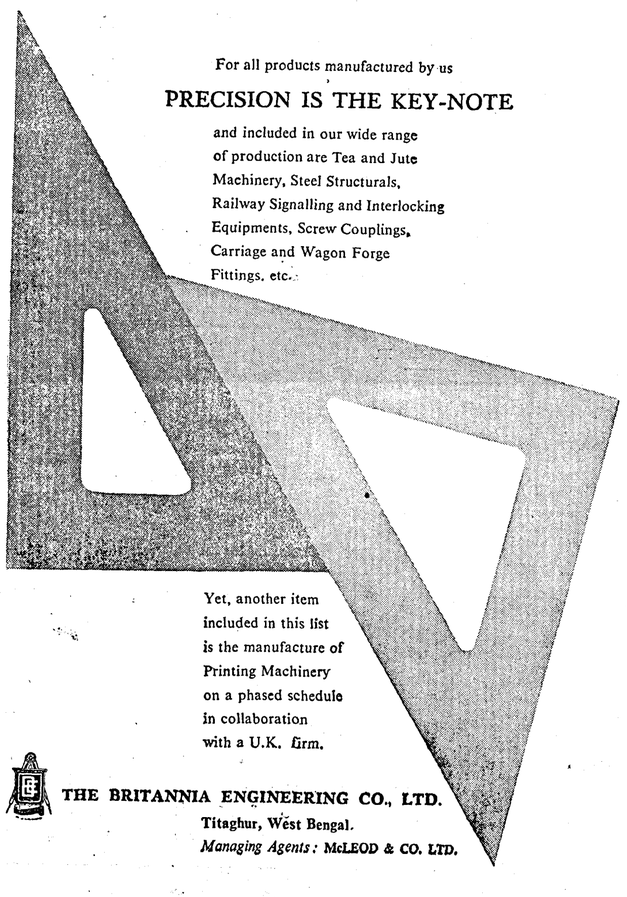
Outlook for Castor

CASTOR continues to be in the news, virtually mobilising the attention of the speculators on the Bombay Oilseeds Exchange. The marked strength in castor reflects optimism about the export outlook for castor oil. While the US buyers have been merely feeling the market, the UK and France have purchased about 2,500 tons over the past few weeks. More significant than the size of the business is the high prices fetched by oil abroad.



The extremely difficult freight position has given strength to the London market where the price of castor oil BSS has soared to £124 a ton. Importers in the UK are in no mood to resell their stock at the present level as they are confident that export houses from India will not be in a position to make offers for prompt shipment. This freight situation is exploited by the UK importers to squeeze the market, while, in view of the higher trend of prices there, exporters here have accumulated oil in anticipation of good export business.

With the result, shippers have been actively lifting castor oil in the Bombay market and the mills, in turn, are showing a greater interest in castorseed, which is quoted at Rs 31.87. Castor Oil, commercial quality, is quoted around Rs 17.19.

The firm behaviour of Groundnuts in the face of the mounting pressure of arrivals is indeed remarkable, particularly so because export business in oilcakes has been rather slack recently. The spot position continues to be good with the mills lifting arrivals of groundnut and shippers groundnut oil. There are also reports of good demand for goundnut extractions from Norway, and a substantial quantity is expected to be sold shortly.

Moreover, the recent recovery in oil prices abroad has encouraged exporters to take an optimistic view about the Indian oil. Infomed sources believe that West Germany will take a fairly large quantity of Indian groundnut oil under some barter arrangements. The freight, it is said, will be provided by the buyer. In return, Germany is expected to supply machinery and electrical goods. Groundnut Bold quality is quoted at Rs 35.75 and Groundnut Oil at Rs 19.31.

Buying interest in the Linseed section is rather subdued in the absence of fresh developments. Operators are eagerly awaiting enquiries from Australia. Linseed ready is quoted at Rs 34.62 and Linseed Oil at Rs 17.12.

For all products manufactured by us

PRECISION IS THE KEY-NOTE

and included in our wide range of production are Tea and Jute Machinery, Steel Structurals, Railway Signalling and Interlocking Equipments, Screw Couplings, Carriage and Wagon Forge Fittings, etc.

Yet, another item included in this list is the manufacture of Printing Machinery on a phased schedule in collaboration with a U.K. firm.

GATEWAY MARKETS

Gold & Silver

Prices on the Bombay Bullion Exchange displayed further firmness under the lead of gold, sentiment being aided by political uncertainties. Firmness in commodity markets and a sizable buying by Madras operators also contributed to the strength of the market.

Gold spurted on speculative buying and short-covering, although higher levels attracted some profit-taking toward the close. Arrivals amounted to 4,000 tolas as against an offtake of 3,000 tolas. Ready rates moved between Rs 125 and Rs 125.69, to finish at Rs 125.47. Sovereign was quoted at Rs 80.75.

Higher Calcutta avices were responsible for the rise in Silver prices. Arrivals amounted to 30 bars as against an offtake of 8 bars. Ready rates moved between Rs 210.87 and Rs 211.44, to close at Rs 211.19. The underlying tendency remains firm on expectations of revival of spot demand in the coming months.

*

Rayon

Exports of Indian Rayon and synthetic textiles and manufactures have made remarkable progress. In September, the month for which the figures are now available, these exports amounted to Rs 27.20 lakhs (comprising textiles Rs 25.59 lakhs and manufactures Rs 1.61 lakhs) as compared with only Rs 7.61 lakhs in the previous month. The value of exports, during the first nine months of the current year, was Rs 3.02 cores.

Exports of pure silk textiles, too, showed a significant rise in September, the figure being Rs 7.52 lakhs as against Rs 3.5 lakhs in the previous month. In fact, the performance in September this year is a record for any month since 1956, the previous best being Rs 5.54 lakhs in November, 1958.

*

Non-Ferrous Metals

Conditions in the Bombay Non-Ferrous Metal market have continued to rule firm. Copper Scrap is quoted at Rs 222 per cwt; Zinc at Rs 121.50 per cwt; Lead at Rs 78.50 per cwt and Tin at Rs 140.50 per quarter.

On the London Metal Exchange, however, Copper, which was quoted above £260 per ton only a few days ago, has fallen now to around £245, as the possibility of an early end to the strike at the American copper mines has appeared to be growing. Speculators have, therefore, been liquidating their positions, while the demand from the consumers has been slackening.

OLYMPUS

Representations Regarding Mines Bill

THE Mines (Amendment) Bill, 1959, seeking to amend the Mines Act 1952, is now before the Lok Sabha. It is likely that, in view of its controversial provisions, it may be referred to a select committee of Parliament after it is shortly taken up for consideration. The stated objects of the Bill are to clarify certain provisions in the original Act, to provide for proper enforcement of certain others and to insert some new provisions so as to bring the Act in line with the Factories Act 1948. But representations so far made on behalf of the coal industry and other mining interests are to the effect that some provisions of the amending Bill may adversely affect the efficient working of the mining industry and that some others will place undue financial burdens on it. Some of the clauses in the Bill which have been criticised are covered in this despatch along with the representations made thereon.

*

Clause 9 seeks to delete the proviso to existing Section 18 under which the owner or agent is absolved of the responsibility for any contravention of the Act if he can prove that either he had made all arrangements, financial or otherwise, for the manager to enforce various provisions of the Act or the offence was committed without his knowledge or he had no connection with the management relating to such matters. Here the criticism is that, in the absence of such a proviso, the owner or the agent will be liable to be prosecuted for all offences, minor or major. It is apprehended that owners or agents and managers would be harassed by the inspectorate even in cases of a very minor nature. It has been the experience of industry in respect of factory legislation that, despite the provisions under Section 101 of the Factories Act, the "occupier" of the factory has been unnecessarily harassed and in some cases even called back from abroad to appear before the court and give explanations for the offences with which he was not concerned at all.

*

Clause 13 seeks to empower the court of enquiry appointed to inquire into cases of accidents, to hold further enquiry as to the fitness of such persons to hold the certificate granted under the Act as are found guilty of misconduct or negligence in the performance of their duties in relation to the accident. The criticism here is that there is no provision for appeal against the decision of a court of inquiry and that it is an abridgement of the right of the defendant to go on appeal

*

Clause 17 proposes to amend the rate of extra wages for overtime provided under Section 33 of the Act. Under the existing provisions, a miner working on surface is paid at the rate of 1½ times the ordinary rate of wages, and a miner working below ground at the rate of twice the ordinary rate of wages, the working hours being 48 in a week. The amendment proposed seeks to raise the rate of overtime for miners working on surface to twice the ordinary rate of wages if they work in excess of nine hours a day or 48 hours in a week. The miners working below ground will be paid overtime if they work in excess of 8 hours a day or 48 hours in a week. It has been represented in this connection that the proposed amendment runs counter to the conclusion of the ILO Coal Mines Committee, which, at its 7th Session held in Geneva in April-May 1959, (in respect of general wage problems in coal mines) recommended that "underground workers should in general receive wages at a higher rate than surface workers". This criticism means, in effect, that the existing differential rates of overtime wages for surface and underground workers should not be disturbed. It is further pointed out that the coal industry is working on a fixed price structure and any financial liability will have to be met from the industry's own resources inasmuch as the recent Coal Price Revision Committee, which based its findings on the conditions prevailing in 1956-57, recommended that the new price of coal should continue for a period of 5 years. Though the Committee has recommended an increase in the price for any increase in wages, it would obviously take some time to revise the price so fixed by the Committee. The industry would, therefore, have to bear the additional financial burden without any immediate compensation. Moreover, the cost to the industries using coal will also go up.

*

Clause 30 seeks to amend Sections 49 and 56 of the main Act relating to leave with wages. At present, the quantum of leave with wages is different for employees paid on monthly basis, piecerated and other employees working either above-ground or below-ground. The monthly rated employees are entitled to 14 days' leave for a period of 12 months' continuous service. Those paid on weekly basis, loaders or other persons employed below ground on piece-rate basis are entitled to 7 days' leave. Under the proposed amendment, persons employed below ground will be eligible to leave at the rate of one day for every 16 days of work performed by him during a calendar year, other employees at the rate of one day for every 20 days in a calendar year. The calender year will be 190 attendances in the case of miners working below ground and 240 attendances others. (Under the present provisions in the Act, 190 days' attendance forms a calendar year for loaders and miners working underground and 265 days' attendance in other cases.) The criticism regarding this clause is that facilities for annual leave with wages form an integral part of the wage structure and that, therefore, the amendment will impose a financial liability on the employers for the reasons given against Clause 17 relating to payment of overtime wages.

*

Clause 40 proposes to introduce a new provision for a penalty of (i) six months' imprisonment or a fine of Rs 2,000 or both for any contravention of certain rules, regulations or by-law framed under Section 57, (ii) imprisonment for two years or a fine of Rs 5,000 or both for any contravention of the orders of the inspector in cases of danger not expressly provided against or when the employment of persons is dangerous under Sub-sections (1A) (2) and (3) of Section 22; (iii) two years' imprisonment or a fine of Rs 5,000 or both for any contravention resulting in loss of life, (iv) one year's imprisonment or a fine of Rs 3,000 or both for any contravention resulting in serious bodily injury; (v) three months' imprisonment or fine of Rs 1,000 or both for any contravention causing injury or danger to persons employed and double punishment for second conviction; (vi) six months' imprisonment and a fine of Rs 2,000 or both for subsequent conviction within a period of two years of the previous conviction. The representations on this clause are that the penal provisions in Section 73 of the main Act are quite stringent to meet the situations, that the penalty of Rs 1,000 in that Act for continued offences is quite deterrent, that the penalties now proposed are very severe, particularly for offences which are, by and large, of an administrative nature and that, in some cases, they are more stringent than those provided in the Indian Penal Code, e.g. penalty for habitual offenders.

*

Clause 43 proposes to amend Section 79 of the principal Act by way of adding an Explanation thereto. The existing Section 79 provides that no court shall take cognizance of any offence unless a complaint thereof is made within six months of the detection of the offence, either by the inspector or any court of inquiry. The amendment proposed provides that, in cases of continued offences, the period of limitation shall be computed with reference to every point of time during which the offence continues or from the expiry of the extended period where the period of limitation has been so extended by Government for the performance of any act. It is stated in criticism of this clause that the proposed Explanation would nullify the whole purpose of Section 79, and that it is an indirect admission of inability on the part of the Mines Department to take legal action against contraventions within the period of six months. It would be only fair to stipulate a definite time-limit.

*

Clause 47 introduces a new Section imposing statutory obligations on owners, agents and managers for giving any notice or furnishing any information to an authority prescribed under the Act. Any contravention thereof would attract the penalties provided under Section 176 of the Indian Penal Code. Here, the criticism, again, is that the imposition of penalties, provided under the Indian Penal Code for offences of a criminal nature, for offences of an administrative nature under the Mines Act is highly unjustifiable.

*

DELHI REVIEW

A New Manurial Scheme

It is rarely that the Union Ministry of Food and Agriculture hits upon a bright, new idea. So, when they do, it is news as in the case of the latest manurial scheme they have evolved. This commendable scheme, which the State Governments have just been asked to implement, is intended to accelerate the production of farmyard manure and rural compost by cultivators and their consumption in the field through the simple expedient of linking up the issue of inorganic fertilisers with the quantity of organic manures which the cultivator can produce himself or manage to secure from elsewhere on an assured basis. To ensure satisfactory implementation of the scheme, the arrangement suggested is that the intending buyers of chemical fertilisers be asked to produce a certificate, duly authorised by a village official or panchayat officer or gram sevak, to the effect that he has shown evidence of having the necessary quantity of organic manure in his possession. Only then should the corresponding quantity of chemical fertiliser be issued to the cultivator in question.

This scheme is eminently practicable because it is so very simple. Apart from the strong point of simplicity, there is to be found in it a realistic and judicious combination of organic and inorganic manures as a sound and beneficial manurial practice in Indian soil conditions. Recent research has also shown that 40 tons of organic manures used with one ton of sulphate of ammonia produce the best results. In the case of food crops for which 100 to 200 lbs of ammonium sulphate per acre are used on the average, the organic manure requirement would be 1.8 to 3.6 tons per acre. Such balanced use of both types of manures should ensure scientific soil management without impairing the delicate organic structure of Indian soils with their thin humus contents. That, incidentally, should be a happy, though temporary, compromise in the controversy between organic manures and inorganic fertilisers—a controversy which, like the one between idealism and materialism in philosophy, is endless.

DELHI REVIEW

Industrial Cooperatives

Extension of the principle of co-operation to the running of industrial enterprises is part of the industrial policy of the Government. The cooperative principle has already found industrial application in certain lines such as sugar and cotton. A few sugar factories have already been set up mainly in the Bombay Deccan, with the financial assistance of the Industrial Finance Corporation. The reopening of some of the closed textile mills on cooperative lines has also been vigorously sponsored by the Government. The Government's interest in promoting industrial cooperatives led to the setting up of the working group to report on industrial cooperatives, particularly on ways and means of extending governmental assistance to them. The report of the Group and the Government's resolution on it were placed on the table of the Lok Sabha last Tuesday by the Minister for Industry, Mr Manubhai Shah.

In its report, the group has recommended that Government assistance to these cooperatives be liberalised, liaison established between them and large-scale industries, preferential treatment be meted out to them in the supply of raw material, and cooperation be introduced as a subject for instruction, advanced study and research in schools, colleges and pniversities.

The group also envisages the conversion of a proprietory concern into an industrial cooperative provided the entrepreneur and the workers join the society as members and the entrepreneuer is not given any special privileges in the society and is entitled to only one vote and a reasonable remuneration and bonus for services. With a view to protecting the interests of the workers from being subordinated to the private interests of the entrepreneur, it has been stressed that the registrar should, before registration of such societies, educate the workers as to their rights.

This is a step that has been renderel inevitable by the commitment to the socialistic pattern of society. The main appeal of industrial cooperatives is that they afford very little scope for the play of the exploitational nexus which tends to mar industrial relations in organisations of private enterprise. But the lack of a central directing agency with a personal risk may tend to inefficiency in the working of industrial cooperatives unless special steps are taken for proper training in business principles and management.

*

Fisheries Under Third Plan

That fisheries development has not received attention corresponding to its potentialities is a fact that has been admitted by ministerial spokesmen. A plausible explanation could perhaps be the limitation placed by shortage of foreign exchange. The tentative estimate of foreign exchange requirements for fisheries development in the Third Plan at Rs 12.5 crores should encourage hopes of faster progress in fisheries development. The prospect of foreign exchange to the tune of Rs 25 crores that could be earned in the first year of the Fourth Plan itself through implementation of the schemes that have been now chalked out by the Union Ministry of Food and Agriculture should make this a worthwhile investment.

The Third Plan schemes for fisheries envisage exploitation of both marine and inland sources. The target has been laid down at 340,000 tons for the former and at 160,000 from tons for the latter. The schemes include the exploitation of fish reservoirs, development of derelict fisheries and survey of cultural waters. Setting up of demonstration farms, canning and freezing plants are the other important aspects of development stressed in the scheme of the Union Ministry of Food and Agriculture. Large-scale mechanisation of fishing with provision, on a subsidised basis, of modern equipment to fishermen is also envisaged. The aim is to step up production by 500,000 tons to reach a figure of 2,000,000 tons.

The schemes are estimated to involve a total outlay of Rs 45 crores of which expenditure on inland fisheries will amount to Rs 20 crores. In view of the large amount of foreign exchange that would be necessary for fisheries development, a programme for export promotion should form an integral part of the fisheries development schemes. In this context, the decision to invite foreign capital and know-how to join hands with Indian private enterprise for exploiting fisheries should be welcome. Such foreign collaboration would, by ensuring development along right lines, enhance prospects for exports.

An important part of the fisheries plan is comprised by measures for the welfare of fishermen. These include housing schemes, better education for their children, provision of better roads etc. High priority has been given to setting up fishermen's cooperatives and an amount of Rs 4.8 crores has been set apart for this. Provision has also been made for training and research.

*

Heavy Industries

Addressing the fifth Delhi Pradesh Congress political conference, Prime Minister Nehru stressed the paramount necessity of laying firm and strong the foundations of heavy industries in the country. The undeveloped nature of such industries being the basic aspect of the general backwardness of the economy, a prior condition for progress should be the development of these industries. In retrospect, the First Plan, which concentrated on the agricultural front without providing anything substantial for heavy industries, would seem to have implied a certain misdirection of resources. Even Mr Nehru owned that it was a mistake not to have provided for one or two steel plants in the First Plan. However, it is arguable whether the modest outlay that was provided in the First Plan would have given scope for any major schemes for the development of the heavy industries.

This omission of the First Plan has been made up in the Second Plan which marked a shift in policy toward industrialisation, a natural corollary to which was concentration on heavy industries. The giant steel works that have sprung up at Bhilai, Rourekela and Durgapur are the fruits of the policy that was embodied in the Second Plan. While the achievement in the Second Plan in the field of heavy industries is impressive when considered in relation to the limitation on resources, the leeway in development could not be said to have been bridged to any substantial degree. There cannot therefore be any question of the relaxation of efforts in the development of heavy industries at the present stage. On the contrary, rapid industrialisation would require diversion of more resources for the development of heavy industries than had been done so far. The decision to allot larger funds for heavy industries in the Third Plan should therefore be gratifying.

The troubles that had developed in the country's northern border and the standing threat from Red China to the country's security have created conditions in which any tarrying with schemes for building the heavy industries would prove suicidal. It was against the background of this new situation that Mr Nehru himself laid the stress on development of heavy industries. As Mr Nehru pointed out, in present day conditions, it is the heavy industries which furnish the real fighting materials to meet foreign aggression. In the light of this bearing on the security and defence of the country, some temporary sacrifices incurred for the development of heavy industries, cannot be considered unwarranted.

*

New Companies

The review of the work done by the Regional Director, Department of Company Law Administration, Eastern Region, Calcutta, discloses that, during the six-months ending September 30, 1959, 253 new companies with a total authorised capital of Rs 14.35 crores were registered under the Companies Act, 1956 in the Eastern region comprising West Bengal, Bihar, Assam and Orissa. Out of this, 222 were private companies with an authorised capital of Rs 11.61 crores, 13 public limited companies with an authorised capital of Rs 2.74 crores, while 8 were companies limited by guarantee.

NORTH INDIAN NOTES

The distribution of the new companies as between the different States comprised in the region shows a marked concentration in West Bengal which alone accounts for 215 companies with an authorised capital of Rs 13.14 crores. Of these, 12 were public companies with authorised capital of Rs 2.24 crores, and 195 private companies having an authorised capital of Rs 10.90 crores. The 8 companies limited by guarantee were all accounted for by West Bengal.

The industry-wise break-up of the new registrations in West Bengal reveals that, with a share of 71 companies, processing and manufacture of metals and chemicals and products thereof alone account for nearly one-third of the total. "Commerce" which comprises trade and finance accounts for 49 of the new companies. The 8 companies limited by guarantee belonged to community and business service.

Among the other three States of the region, Orissa with a share of 15 private companies accounts for more new companies than the other two. In Assam, one public limited company with an authorised capital of Rs 50,00,000 and 8 private companies with authorised capital of Rs 20,00,000 were incorporated during the period; while, in Bihar, only four private companies with authorised capital of Rs 10,50,000 were incorporated.

West Bengal has also the highest percentage of companies that went into liquidation as also of companies that were dissolved. Out of the 72 public and private companies involving a capital of Rs 4.47 crores that went into liquidation during the period, 63 companies having authorised capital of Rs 2.81 crores were in Bengal. Similarly of the 46 public and private companies that were dissolved, 42 were in Bengal. The number of companies that were struck off under Section 560 of Companies Act was 153 for West Bengal while for the whole region the number was 278.

The review also discloses a large number of cases instituted under various provisions of the companies Act against Management of different companies. This is a proof that the Companies Act is being rigorously enforced. In West Bengal alone the number of such cases instituted against companies was 296.

NORTH INDIAN MARKETS

Divergent Trends in Sugar Prices

WHILE the price of Sugar in the Indian markets has been ruling very firm in view of the tight supply position, prices on the London market have been drifting gradually in recent weeks after their recovery to 3.15 cents per pound. They have lately been around 2.90 cents.

The Government of India's announcement of their policy of no further export of sugar had little effect on the market. Most of the factories in Uttar Pradesh have started crushing operations earlier this season and the cane supply to them is reported to be adequate. In the Hapur market, the rate for crystal sugar is quoted around Rs 128 per bag.

In the Delhi market, prices have remained generally unchanged. Arrivals are satisfactory, while the demand from the retailers is good. Following rates (per maund) are quoted:—Daurala (C29) Rs 41.25; Meerut (D29) Rs 40.12; Mansoorpur (A29) Rs 41.62; Simbhauli (E29) Rs 40.44 and Sakooti (C29) Rs 40.19.

The spurt in demand for the sweet commodity, on the London market, caused by the fall in the European beet crop, which was hit by the weather, has died down and consumers have now got all the supplies they require without coming to the world market. This is expected to continue for some weeks.

The basic position of sugar has improved little, though prices have moved away from their lowest point this year of just under 2.60 cents and seem unlikely to return there. Stocks in Cuba are reported to be still large and the Sugar Council's export quotas are simply causing them to grow bigger. The situation really requires a cut in production.

According to the latest information, the world is faced with a huge surplus of sugar. Total world stocks of sugar, at the end of August 1959, were estimated at 12.23 million tons (raw value) against 10.1 million tons a year ago and 10.3 million tons on the corresponding date of 1957.

The persistance of a huge surplus of sugar is attributed to expansion in the production of the commodity in the world from 41.83 million tons in 1956-57 to 45.19 million tons in 1957-58 and 50.6 million tons in the last season. On the other hand, world consumption of sugar showed a comparatively lower increase at 48.47 million tons in 1958-59 against 45.39 million tons in the previous season and 41.93 million tons in 1956-57.

*

Foodgrains

Prices of Foodgrains have generally displayed an easier tendency due to slack demand in the face of comfortable stocks. While average quality wheat is unchanged at Rs 17, the firm quality has eased by 25 nP to Rs 18.25 a maund. Thanks to the pressure of the crop arrivals, the Rice market rules quiet with prices showing a drop of about Rs 2 a maund. The Uttar Pradesh Government are reported to be buying rice in the surplus districts at Rs 17 to Rs 19.

Gram prices have eased fractionally. Despite good consumer demand, Maize and Bajra have sought lower levels due to good supply position. Trading in jowar is listless. Among Pulses, Peas and Arhar are quoted lower due to sufficient stocks coupled with anxiety on the part of the stockists to clear their stocks.

Harvesting of Urad and Moong is being done and new grain will soon reach the market in larger quantities. Germination reports of Peas are satisfactory and the condition of the standing arhar crop is reported fair.

A quiet tendency has prevailed in the Delhi grains market. Wheat prices have declined by 50 nP a maund in the wake of increased arrivals. Bajra prices remain unchanged and so also Pulses. Maize prices have declined from Rs 11 to Rs 11.50 to Rs 10.75 to 11.00.

*

Khandsari

Khandsari prices have registered sharp gains on the Hapur market, thanks to brisk demand and the removal of export ban from Uttar Pradesh. New production has not yet commenced; but most of the crushers are now manufacturing "rab" with the ultimate object of converting it into khandsari later. Crushers are buying cane at Rs 1.25 to Rs 1.37 a maund. Superior quality khandsari is quoted at Rs 44 to Rs 54 per maund, according to quality.

DELHI REVIEW

Gur

The Hapur Gur market has continued to rule steady. Arrivals are mostly of Balti quality, which is in keen demand from Gujerat and Saurashtra. The entire arrivals, averaging 6,000 maunds daily, are being lifted for outside despatches. The following table gives an idea of the trend of prices ruling now as compared to those prevailing in the corresponding period of the last two years (rates per maund):

	Nov. 20 1959.	1958.	1957.
	Rs.	Rs.	Rs.
Gur Pansera ...	20.75 to 21.50	14.50	13.87
Crystal Sugar (per bag) ...	126.50 to 127	102.50	97.50
Khandsari Average) ...	45.00	34.00	30.00

from the seed...

In the steel blaze of noon,
men of the earth 'drag the sun upon their backs',
toiling in the furrowed fields.

For a tomorrow, when the seed will burst to plant, flower and fruit.

For the fruits of tomorrow then, the striving, the effort,
For a world that offers a little more—
a little less of the care, a little more of the joy.

Today, as in the past, our products help to make homes cleaner, healthier, happier. But today we are also working for ... Tomorrow, when the evergrowing urge for better living will demand still greater efforts. And we shall be ready with wider service, new ideas, new products ...

MADRAS REVIEW

New Departments for Madras University

THE Senate of the Madras University held one of its most fruitful sessions last Saturday, when it resolved to establish three new departments—a Department of Library Science with a Professor, a Reader and two Lecturers and to institute a degree course in that subject; a Department of English to take up research and teaching with a Professorship for the present; and a Department of Ancient History and Archaeology. That the University did not have a chair in these subjects could probably be due to the lack of resources to implement an expansion programme. In all these cases, it is outside assistance that has been the decisive factor in the finalisation of the proposals by the Senate.

The institution of a department of Library Science was a project that was dear to the heart of Dr S. R. Ranganathan, former Librarian of the Madras University and a renowned specialist in that science. It is a measure of the interest evinced by him in the establishment of a separate department in that subject that he should have thought fit to make a munificient donation of a lakh of rupees. The financial uncertainty that would have impeded the early implementation of the scheme was further lifted by the recurring and non-recurring grants occasionally made by the University Grants Commission. The members were effusive in their expressions of gratitude to Dr Ranganathan and suggestions were made to honour him with the first professorship of Library Science. However, Dr Lakshmanaswami Mudaliar, the Vice-Chancellor, who presided over the meeting, pointed out that international obligations might not permit Dr Ranganathan to accept the offer.

The proposal to institute a chair in English is as old as 1951, when the Academic Council approved the report of the Board of Studies in English for the establishment of a Department to take up reasearch and teaching. That nearly eight years should have been allowed to pass without any concrete steps being taken only underlined the helplessness of the university to meet the financial obligations. As in the case of Library Science it was assistance received from extraneous sources that made it possible for the Senate to give its thought to implementing the proposal. The Universities Grants Commission has sanctioned a grant for a period of two years. Moreover, the British Council also has made an offer for subsidizing the scheme and has undertaken to help in selecting a fully qualified person to occupy the Chair and to meet part of his salary.

Both these are steps that have been taken in timely response to the changing needs of education. Library Science is, at least so far as India is concerned, a comparatively new field of study, facilities for which exist only in a few universities in the whole country. The lack of progress, in a numerical sense, that was a feature of University education before the attainment of Independence was a factor that tended to the neglect of this branch of study. Being a professional course, no need was felt for instituting course of study when colleges and libraries were few and far between. For the same reason, the schemes now under way for the expansion of university education have made library science a line of study that could no more brook any neglect or delay in instituting facilities for its study. Though there were facilities in the Madras University for diploma course in Librarianship, it was an anomalous situation in which students had, at great trouble and expense to themselves, to go abroad for degree courses. By agreeing to establish a full Department in the Science, the Madras University had only elevated the study of the subject to its position of importance.

In respect of English, it sounds odd that a University which has celebrated its Centenary and which has won recognition for the high standard of English teaching of its constituent colleges should not have felt the need for a Chair in English with facilities for research both in English language and English teaching. That the move for creating a Department should have come at a time when the language is being relegated to unimportance as the medium of instruction in colleges is also paradoxical. As in the case of librarianship, the only explanation could be that the institution of the Department at the University level was not warranted by the educational needs of the State, which, so far as English teaching and learning were concerned, were being adequately met by the affiliated colleges. However, the scheme for doing away with English as the medium of instruction in colleges without risking its importance as a language of which every student should have a tolerable command has put the question of English study in an entirely new light. The guarantee of adequate command, which was inherent in its use as the medium of instruction, would certainly cease with its replacement by the mother tongue or the regional language. Further, fear has been expressed that mere emphasis on quantitative results in education would lead to the tendency to tone down standards of English study. Already, there is widespread anxiety about the deterioration in student performance in the English language at the university level. This is true not only of students in Madras but also of students elsewhere. Mr A. Rama Iyer, who seconded the resolution for the setting up of a separate Department, took out a leaf from his own personal experience as both a teacher and examiner and pointed out that he had the misfortune of wading through hundreds of answer papers in English at the Degree Stage, of students of a neighbouring State which boasted of a fairly high standard in English, in which what the majority of them had written could by no stretch of imagination be called English. The justification for the new Department is that, besides promoting research in English language, it would also maintain proper standards in English study in the Colleges.

The establishment of a Department of Ancient History and Archaeology was the third scheme that was approved by the Senate of the University. The University has already a Department of History and Archaeology. The new Department would, therefore, seem to have been intended to promote research in ancient history and archaeology. A large part of the unravelling of the ancient history of the country would consist simply of archaeological studies since they constitute the only modern links with the country's ancient past. This would explain the grouping together of the two subjects of study in one Department. Considering that lack of written record obscure a proper knowledge of the country's ancient history, the scope for research appears great.

The report of the General Inspection Commission that was read out at the Senate meeting by Prof R. Krishnamurthi, testifies to the progress made by the University in establishing new colleges to meet the growing pressure for admission. Thus, notwithstanding the fact that consequent on States reorganisation the Madras University had to lose nearly 31 colleges, these having had to be affiliated to the Kerala and Venkateswara Universities, the total number of colleges under the jurisdiction of the Madras University actually showed an increase in 1958 as compared with the last decade. The total number of students on the rolls in 1947-48 was 29,376 and this rose to 37,203 in 1957-58. Mr Krishnamurthi has aptly described this decade as a "period of efflorescence in University education".

Mr Krishnamurthi also reported all-round improvement in all the colleges particularly in their financial conditions. The very conditions for affiliation imposed by the university were contributory factors to such a result. The improvement also owed much to the endowment fund prescribed by the University. It was, in this connection, pointed out by Mr Krishnamurthi, that permanent recognition of a college was given only when the endowment fund was fully secured. The introduction of the post-graduate courses of study facilities for which are at present available only in three colleges in the whole State in more colleges, as recommended by the inspection Commission will mark another important stage in the expansion of University education in the State.

In all these major schemes of expansion, the assistance rendered by the University Grants Commission has been a material factor. It was disclosed by Mr Krishnamurthi, that the Commission had given a grant of Rs 100 lakhs to the university at the time of its centenary celebration.

One regrettable fact about the working of colleges is the low salary paid to the teachers, circumstance which tends to drive the best talents away from the teaching profession. Though the UGC has recommended higher scales of pay, it is a pity that the State Government have not yet found their way to make the matching grant.

S. E. RLY TENDERS

Sealed tenders are invited for Tender No. COS|PD|1418|GB11|59 for supply of Tracing Cloth 42" x 24 yds. a roll imported, sagar vellum or any other standard quality—150 rolls.

Tender forms are obtainable from the Controller of Stores (PD Section) at Garden Reach, Calcutta-23 on remittance of Rs 2/- (not refundable) per copy per tender by Money Order to him direct in the case of outside firms and on production of Cash Receipt from the Chief Cashier, S. E. Rly., Garden Reach, Calcutta-23 by local firms. Closing date is 22-12-59 at 12 noon.

Firms not on the list of Railway approved contractors must enclose a valid Income Tax Clearance Certificate along with the tender. Earnest money is Rs 370/- to be deposited with this Rly's Chief Cashier and the Cash Receipt may please be submitted along with the tender.

SOUTH INDIAN NOTES

Wages in Cashew Industry

The report of the Minimum Wages Committee for the cashew industry, appointed by the former Communist Ministry of Kerala, has disclosed divergence of views in regard to the question of wage increase. Whereas some members had recommended increased wages, the employers' representatives have presented dissenting minutes. The recommendations are not yet made public as efforts are being made towards a workable award acceptable both to the labour and employer representatives. Government themselves would have to arbitrate and announce their own award, failing this effort.

In a stalemate of this type, manufacturers of cashew kernels are not enthusiastic about imports of raw nuts from Africa for processing. The employers of cashew labour would like to know their commitments according to the impending standardisation of wages. Meanwhile, new African nuts are ready for shipment to India from African ports. This is a shortage season, and many of the Quilon factories have sent closure notices to their employees. The stalemate is expected to continue till the New Year.

About 100,000 tons of cashew may be imported from Africa this season, according to Trade interests. Local production is placed at 60,000 tons. Last season, African import was 83,000 tons. In the season previous to that, the import was 105,000 tons. Consistent demand has been maintained for processing.

Russian and its allied countries' demand for cashew kernels is having a stabilising effect on prices. American price currently is between 49 and 50 cents per lb. USA continues to be the largest importer of Indian cashew kernels.

Cashew kernel earned Rs 15.5 crores worth of foreign exchange in 1958. Export then was of the order of 39,045 tons.

*

Indian Exim Corporation Ltd.

To make small producers export-conscious in the Southern region, a new Company, "India Exim Corporation Limited", was formed in Madras last week. The businessmen who attended this function at the Indian Overseas Bank, Mount Road Branch, included leading industrialists of this State. The initial capitals is Rs 5 lakhs.

Mr M. Ct. Muthiah, who is the Chairman of this newly formed Corporation, referred to the urgent need to fill the gap between available foreign exchange and the amount required for completion of the Second and Third Five Year Plans. He also suggested the necessity of exploring new avenues for the Indian export trade apart from developing the traditional ones. Despite Government efforts, he stated, exports has not developed as fast as was desired. A number of new items were available for exports to countries outside. Though they might not be very large, he was inclined to think that, by pooling all such items, the export market could be expanded. In this attempt the new corporation, broadbased as it should be, would render all assistance to such small producers both for export and import.

South India's exports constituted 25 per cent of the total exports from the entire country. The Corporation, Mr Muthiah stated, would try to help increasing the volume of such exports.

Mr J. V. Somayajulu said that the Corporation would function on a cooperative basis with as wide a number of subscribers as possible. The initial capital would be Rs 5 lakhs now, but he said it would be increased when necessary.

Mr A. M. M. Murugappa Chettiar said there was no export house for smaller commodities though there were export houses for tea, coffee and jute.

Here is another High Court Judgment from Madras in which a claim for extra depreciation for diesel engines installed in buses has been allowed for income-tax calculation purposes.

*

Depreciation for Diesel Engines

A Vellore bus operator claimed additional or extra depreciation besides the normal or initial depreciation. Claim for normal depreciation was allowed by the income-tax officer who, however, disallowed the extra claim for depreciation. The Income-tax Appellate Tribunal upheld the income-tax officer's view.

The bus operator claimed that the bus diesel engine had become a plant by itself apart from the bus. The Appellate Tribunal held the view that no separate claim could be made as depreciation on a part of the plant, viz, the Diesel engine, because it held that the diesel engine also had become part of the machinery not entitled to extra depreciation.

The question was referred to a full Bench of the High Court. Their Lordships, Mr Justice P. Rajagopalan and Mr Justice S. Ramachandra Aiyar, allowed the operator's claim on the basis that "machinery does not cease to be machinery merely because it has to be used in conjunction with one or more machines."

Their Lordships also stated that machinery had not been given any statutory definition. But if the diesel engine was machinery for the purpose of normal depreciation, it should continue to be machinery also for the other two classes of depreciation mentioned. They also disagreed with a Bombay High Court decision, taking machinery as part of the "plant", and finally held that the assessee was entitled to all the three classes of depreciation mentioned in the relevant Income-Tax sections.

SOUTH INDIAN MARKETS

Groundnuts sticky

THE groundnuts oil and seeds exchange showed great stickiness from the last week-end. The price line was fluctuating very much, though kernels arrival in the local market is considerable around 90 tons daily which crushers are eagerly absorbing. Oil prices were higher commensurate with kernels arrivals.

Today's closing prices of groundnut oil per candy of 500 lbs were:

Ready Rs 346 (Last closing: Rs 348).

November Rs 347 nominal. (Last closing also was Rs 347 nominal).

December Rs 341. (Last closing Rs 341.50).

January Rs 340. (Last closing Rs 339.50).

Kernels: Per candy of 531 lbs. Superior bold. Rs 175 (last closing Rs 175).

Peanut variety Rs 170/171. (Last closing Rs 170/171).

Castoroil per candy of 500 lbs: Rs 328 sellers Rs 325 buyers. (Last closing Rs 330 sellers).

Coconutoil per tin: Rs 41. (Last closing Rs 41.25 to Rs 43).

Gingelly oil per maund Rs 20/12. (Last closing Rs 21).

Gingelly seed per bag Rs 65/66.

Groundnut oil cake Rs 26.

The United Kingdom price for groundnut oil was quoted here today at £103/104 while Burma price for November shipment was at Rs 1,550 per ton and Rs 1,500 for near December shipment.

Arrivals were taken up eagerly by local crushers as there is no carry-over of stock of kernels.

The following were the foreign market rates prevailing today according to the Oil and Oilseeds Exchange reports:

Groundnuts January-February, 1960 £66 per ton. Castorseed November-December £57/10 per ton; Niger seed nominal December-January £59 per ton; Groundnut oil Spot (Rotterdam) £105/106 per ton; Groundnut oil November-December £104/105 per ton; Groundnut oil November-December, UK £103/104 per ton; Groundnutoil Chinese 1½ per cent FFA, £106 per ton; Castoroil November-January Bulk BSS £122/123 per ton; Castoroil Commercial £116/117 per ton; Coconutoil Straits November-December £135 per ton; Coconutoil Ceylon £141/142 pen ton; Groundnutcake (Expeller) December-January £36 per ton; Groundnutoil cake February-March £35/10 per ton; Groundnutoil (Solvent) December-January £34 per ton; Groundnutoil (Solvent) February-March £34/10 to £33/15 per ton.

It was a good week of groundnut arrivals in the market, both in Madras and in the producing centres of the south. But price levels of both kernels aid oil improved. Bombay contributed to the aforesaid increase also. There is steady increase in the actual goods enquiry section by shippers. Evidently their enquiries imparted the bullish trend witnessed in the oils and seeds exchange today. Following the spot and nearby deliveries demand, both December and January *vaidas* also were on the up trend. Andhra centre crushers and dealers were, from last week-end, unloading their stock substantially, improved their quotations also at the beginning of this week. Oil therefore showed an increase of Rs 27/28 per ton this week from its last week's price.

In groundnut, arrivals had steadily increased from 80 tons to 90/95 tons. Coromandel qualities, too, are available in good quantities. Peanut were quoted last weekend at Rs 170 per candy of 531 lbs, but this week the price went up to Rs 172/173. Coromandel varieties went up to Rs 175 to decline by week-end to Rs 173. Buyers' hesitancy contributed to lower levels after this week's higher opening.

Demand for spot goods appeared to be increasing. Shippers were eager to fulfil their contracts and so they thought of lifting their needs from the lower-price-quoted Andhra centres. But they, too, appreciated their quotations and so spot goods in Madras were available at Rs 345 per candy. That was only the last week's tail-end quotation, which, appreciating higher still, was available only at Rs 347 per ton Monday. It went down a bit on Monday closing and Tuesday evening and today it closed firm at Rs 346. However, a few transactions last week-end were put through even around Rs 349 and the quantity lifted would be around hundred candies.

Operators found profit in December *vaidas* in groundnutoil. Usually, December is the period of maximum shippers' activity, and so, at around Rs 338 per candy, activities were reported. It went up by the week-end to Rs 342 from Rs 340 quoted on Monday closing. November improved to Rs 351 during the week-end but it was closely following spot level prices. November *vaidas* Monday's quotation was Rs 348, which came down to Rs 347 on Tuesday evering, and continued at Rs 347 at today's closing. It was in December *vaida* that good transactions materialised. From the rate of Rs 338 on Monday, it improved to Rs 340 in the evening and closed at the same level today.

Operators' interest in January position was at Rs 338/339. Buyers remaining a bit hesitant, went in at that rate, which went up to Rs 340 by Monday closing. It closed today at the same rate.

Groundnutoil Cake: There is now a glut in the cake position. Stockists believe the position of shipment should improve by January. Rates, however, did not go down, remaining at Rs 26 per bag of 160 lbs.

Upcountry Market: In the important South Arcot and North District producing centres, arrivals of kernels improved, averaging 25/35 tons daily. Goods already arrived were, however, available at a slightly lower price of Rs 172 per candy of 531 lbs. But crushers stepping in, and the quotations improved to Rs 175/180 per candy.

The result was that oil quoted at lower than Madras prices became unavailable in these centres which also in line with the City appreciated their prices.

No large-scale decline in oil prices could be expected in the near future since reports show a lower oil content in kernels received in many of the uncountry centres.

In gingelly seed, there is yet no large scale movement. Mysore centres are dispatching small quantities. From Gulbarga, new crop is reported on the move and it would take another week for large scale operations. The following are today's prices in other seeds and oils here:

Gingelly Seed:

	Per bag
Arisikere Mysore quality	Rs 66/67
Vizianagram nominal ...	Rs 65/66
Local varieties ...	Rs 65/66

Gingelly Oil:

	Per maund
On wholesale basis ...	Rs 21/
Retail basis ...	Rs 21/4

In Coconut oil, West Coast market was still ruling high due to shortage of copra arrivals. After mid-December, larger copra movements in Kozhikode would lower down prices. The present prices were:

At Cochin:	Per candy
Ready	Rs 670
December	Rs 664
January	Rs 652
Local price ...	Rs 41 per tin

Castoroil: There was only small demand early last week at Rs 330 per candy of 500 lbs. Today, buyers are interested only at Rs 325 while sellers are quoting Rs 328.

The following prices prevail today in various producing Southern groundnut kernels and oil centres:

Kernels per candy of 531 lbs.	Oil per candy of 500 lbs.
	Rs.
Guntur/Bezwada	175 340
Vridhachalam	176 345
Nandyal	172 335
Villipuram	176 344
Cuddappah/Yerraguntla ...	174 337/8
Pollachi (Red) Superior ...	185 350
Tanjore	175 342
Tiruvannamalai	173 342
Salem	180 345

The Forward Markets Commission approved of this closure.

Considerable business at this rate of Rs 1,250 per candy was also reported from Kozhikode market by shippers from Bombay and Cochin. About 1,000 candies were reported bought last week-end. Foreign buying, it is reported, was extensive.

Skins and Hides: Prices declined in the tanned cow hides market. Arrivals were steady. United Kingdom buyers also continued in their indifference, waiting to see prices get lower. Anyway, business was done in 5/5½ lb mark at the average price of 60d to 62d and 57d respectively and in 8/8½ lb average at 56d, 52d and 44d respectively. Also premium marke in 8/8½ lb run and fourths were transacted at 59d and 55d respectively.

Enquiries for fifths of inferior quality were good locally. When prices went down, demand improved.

Prices were lower in tanned buffalo hides by 3 nP.

Prices ruled easy in tanned cow calf and tanned buffalo calf. There were no changes: cow calf 1½ to 2 lb was quoted at Rs 4.50 to Rs 5, buff calf 1½/2 lb was quoted at Rs 3 to Rs 3.37. Goat prime was quoted at Rs (8/9 lb) Rs 9.12 to Rs 9.25, 9½/6 lb Rs 10.37 to Rs 10.50.

About 3,000 pieces of tanned goatskins were sold. There were 80,000 pieces of tanned sheepskins of market quality. The left over in the market was reported at about 6,000 goat and 32,000 tanned sheep skins. Prices did not change, both sellers and buyers sticking to their own rates.

German interest was active in the prime tanned and sheep and semi-prime market. Inquiries for fifths and interior fifths in semi-primes were good.

Following are the quotations here today of raw skins. Last week's prices are within brackets:

Bangalore raw goatskin Rs 540/600 (Rs 540/580): White Wool Sheep Rs 520/600 (Rs 525/600): Black Rs 435/485 (Rs 440/500): Bezwada Raw goatskin Rs 540/545 (Rs 535/545): He sheep Rs 510/515 (Rs 500/510): She sheep Rs 400/410 (Rs 390/400).

During the first fortnight of November the following shipments to foreign countries were made: United Kingdom: 1713 bales tanned cow hides, 110 bales of calfskins, 16 bales of buff hides, 132 bales of calfskins, 486 bales goatskins, 275 bales sheepskins.

To the Continent: cowhides 13 bales, calfskins 22 bales, bug calfskins 29 bales; goatskins 429 bales, sheepskins 248 bales.

Pepper: As foreshadowed in Indian Finance last week, there was such a sudden rise in the pepper prices at Kozhikode from Rs 850 to Rs 1,250 per candy during the last week-end that the Board of Directors of the India Pepper and Spice Trade Association had to enforce closure on the outstanding December and January hedge contracts effective November 23. However, the December 1959 and January 1960 deliveries were ordered to be negotiated at the closing price of November 17 at Rs 162.50 for December and Rs 160.50 per cent for January deliveries.

Bangalore Silk

Conditions in the Bangalore Silk Market for the week ended November 19, 1959, reflected a generally declining trend following substantial improvement in the supply position of raw silk. It would appear that the supply position of reeling cocoons in most of the rainfed areas of the State has improved considerably. The prices of Government filature silk were revised and fixed with effect from November 13, 1959, at between Rs 38.35 and Rs 39.25 per lb for T. Narasipur and at Rs 40.30 for Kanakapura. The rates for Kollegal and Channapatna have not been quoted.

There was a general slackness in demand for all silk. Among Charka varieties, while Superfine was maintained at between Rs 32.00 and Rs 35.00 per lb there was a decline of Rs 2.00 per lb in the case of 2nd Quality, Rs 1.50 for 3rd Quality and Re 1.00 each for 1st Quality and Cottage Basin.

In contrast, Reeling Cocoons showed a nominal improvement with Sidlaghatta moving up by 13 nP per lb and Mugur by 5 nP per lb during the week under review. There was no change in the price of Channapatna quality. In the case of Seed Cocoons, Mysore showed a rise of 25 nP while Foreign Rs 2.00 per 1000, respectively.

FOREIGN TREND

THE TITAGHUR PAPER MILLS COMPANY, LIMITED

NOTICE is hereby given that an Annual General Meeting of THE TITAGHUR PAPER MILLS COMPANY, LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 3 P.M. on Wednesday, the 30th day of December 1959, for the following purposes:—

As Special Business:

1. To consider and, if thought fit, to pass with or without modification the following Resolution which will be proposed as Special Resolution, namely:—

   RESOLVED that with effect from the first day of March, 1958, the Company may borrow money from time to time from its Managing Agents provided the Managing Agents are agreeable so to lend, bearing interest at a rate lower than the prevailing Bank rate as may be agreed upon between the Managing Agents and the Directors of the Company but so that the money lent shall not at any time exceed Rs. Twenty Lacs in the aggregate, which may be repaid by the Company without notice and shall be repaid within three days of demand by the Managing Agents.

As Ordinary Business:

2. To consider and approve the Audited Accounts of the Company for the year ended 31st March, 1959, and to receive the Directors' and Auditors' Reports thereon.
3. To declare Dividends recommended by the Directors.
4. To appoint Directors in the place of the retiring Directors.
5. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from 9th to 30th December, 1959, both days inclusive.

By Order of the Board,
F. W. HEILGERS & CO.
(PRIVATE) LIMITED
Managing Agents.

Chartered Bank Buildings,
Calcutta.
20th November, 1959.

Note:—

(a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(b) The relative Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, in respect of the Special Business set out above is annexed hereto.

(c) The Dividends, if declared, will be paid on or after the 20th January, 1960, to those shareholders so entitled whose names appear in the Company's books on the 30th December, 1959, or to their mandatees. No application for Dividend Warrants will be necessary.

Explanatory Statement:

As explained in the Directors' Report your Company has the benefit of financial accommodation afforded to it by its Managing Agents who lend money to the Company from time to time as required by it at a rate of interest which is more favourable than the Company could have obtained from its Bankers. Section 370 of the Companies Act, 1956, as well as relative clauses in the Articles of Association of your Company empower your Company to take loans from the Managing Agents at a rate of interest to be agreed upon between them and the Board. The Auditors of your Company are of the opinion that granting of loans by the Managing Agents constitute a service by them in terms of Section 360 of the Act, and as from the first of March, 1958, such arrangement should be approved by the shareholders by Special Resolution pursuant to the above Section. Counsel's opinion on the question is to the contrary but in order to remove any doubt in the matter it is proposed to pass a Special Resolution confirming the arrangement.

Sir Walter Michelmore and Mr. J. M. Addison Scott, Directors and members of your Company, are also Managing Director and Director respectively of Messrs. F. W. Heilgers & Co. (Private) Ltd., the Managing Agents of the Company.

To the extent indicated above the Managing Agents of the Company may be deemed to be interested in the business referred to in the resolution.

Indian Iron & Steel Company Limited

Welcome Increase in Ingot Steel Production

Apprehension of Excess Steel Supplies

Need for Reducing Cost of Production

Comprehensive Review of Steel Industry

Statement of the Chairman, Sir Biren Mookerjee

UNDER SECRETARY TO F
1 - DEC 1959
PUBLIC DEPARTMENTS

The Annual General Meeting of the Indian Iron and Steel Company Limited will be held at 12, Mission Row, Calcutta, at 3 p.m. on Monday, the 21st December, 1959. The following statement by the Chairman, Sir Biren Mookerjee, has been issued to the shareholders along with the Directors' Report and audited accounts for the year ended 31st March, 1959.

At the Annual General Meeting held last year, members indicated their desire that the procedure of issuing a Statement by the Chairman along with the Annual Accounts should be continued. This procedure is accordingly now adopted as standard.

PRODUCTION

Production of ingot steel at 608,205 tons showed a welcome improvement of 100,625 tons over the previous year, but the factors to which I drew attention last year continued to keep output well below plant capacity. There were no fewer than nine sporadic strikes in different Departments during the year and the discipline of the workers leaves much to be desired. Disorganisation of operations by reason of the extensions works continued and it will be some little time before facilities are freely available to enable the expanded plant gradually to be worked up to its full output capability.

I commented last year as an exception on the good performance of the Sheet Mills in 1957-58, and I should again like to commend their very creditable performance in having established a yet higher production record for 1958-59.

Production of castings at the Kulti foundries improved owing primarily to the operation of the Second Spun Pipe Plant, total output of castings being 147,325 tons against 115,969 tons in the previous year.

ACCOUNTS

I must apologise for the delay that has again occurred this year in presentation of the Accounts. This however arises through no fault on the part of the Company but is due to the fact that closure of the Accounts has had to await notification by Government of the revised sales retention prices of steel and pig iron. Inclusion of the amounts involved is necessary to avoid complete unbalance of the Accounts from year to year, and with the very large amounts involved your Directors do not consider it desirable to work on unconfirmed figures. It had been hoped that the machinery of Government could have been induced to turn somewhat more quickly in regard to the examination and settlement of the Company's annual claims in this connection; unfortunately however, it would seem that the relative Governmental procedure becomes more and more cumbersome as one fresh authority after another is drawn into the sphere of reference of this comparatively simple matter.

I commented last year on the taxation provisions relating to the allowance of development rebate and expressed my inability to understand why against a tax saving of 51½% a Company should be required by Government as a pre-requisite to the grant of such allowance to set aside to reserve 75% of the amount of the rebate, the difference of 23½% being thereby thrown as a dead charge against available profits. It is right and fair that the tax saving by reason of the development rebate should be carried to reserve, and we ourselves have always in the past voluntarily acted in accordance with this principle. But it is difficult to appreciate the reason for the statutory requirement as to the additional amount to be set aside, the inequity of this being highlighted when figures of the magnitude applicable in our case are involved where the compulsory reserve for the year of Rs. 3,14,67,999 amounts to no less than Rs. 98,59,691 more than the saving in tax. We may count ourselves fortunate in the strength of our reserves which makes it possible for us to compensate this position by writing back to profits the sum of Rs. 98,59,691 from the General Development Reserve so that the ultimate effect is a net charge against the profits of the year of the actual saving in tax. In the case of a Company with small reserves, the position in regard to any major development of its undertaking would indeed be serious as the incidence of the compulsory allocation to reserve might preclude the payment of a dividend. The grant of development rebate was intended to constitute an inducement for the expansion of industry; it will be appreciated however that in certain cases the conditions now imposed on the allowance of the rebate can in fact constitute an actual deterrent. It is greatly to be hoped that Government will see fit to modify these conditions which will become still more onerous following upon the change in the basis of corporate taxation introduced by the Finance Act 1959 since at the indicated revised taxation rate of 45% the compulsory reserve at its present level of 75% would throw a charge against available profits of no less than 30% of the amount of the development rebate.

FUTURE RETENTION PRICES

The Government of India took an admirable step in 1956 when it made the following declaration "that with effect from the 1st day of April 1955 the retention prices for all categories of steel by the Company (The Indian Iron & Steel Company) and any other main producer of iron and steel, either in the public or private sector, shall be the same and in respect of such categories solely manufactured by the Company the retention prices shall be fixed on a comparable basis."
