This principle was applied to the two major producers after the enquiry of 1955 by the Tariff Commission into their retention prices. I hope that in the determination of the revised retention prices to apply from the 1st April 1960 there will be no departure, except where it is obviously needed by change of circumstances, in the application of this principle to all the five major units, including the three owned by the Hindusthan Steel Company Ltd., in the public sector. In order to help the Tariff Commission to obtain all the relevant information for the purpose of determining the uniform retention prices, the Hindusthan Steel Company Ltd. no doubt will put forward its case and give evidence in the same way as the two major units in the private sector. Both the sectors should most definitely have as nearly as possible the same rights and liabilities.

DOMESTIC MARKET

When all the plants in both the sectors get into production more or less according to schedule, my fear is that there will be so much iron and steel produced that it will be difficult for the producers to be able to dispose of their output. This fear has also been expressed to me by certain responsible shareholders coupled with expression of their hope that if, as I trust it may not, this position does in fact materialise, the requirements of Government which constitute such a large proportion of offtake, would be spread equitably over all the producers.

As producers we are interested not only in producing more and more, but in selling what we produce at economic prices. The manufacturers in both the sectors are likewise interested in selling all that they produce in whatever form not only to the intermediate but to the ultimate consumers. Without an extensive domestic market not only for this, but for all other manufacturing industries, the persistence in calling for more and more production by new or the existing plants may, instead of promoting, actually retard the industrial development of the country by making the manufacture of goods unprofitable or the products unsaleable. The too rapid expansion of the cement industry provides a case in point in this connection.

By and large and in the final analysis the consumer of all goods and services is the common man. Under this description comes practically 99% of the total population including the clerks, the small traders, the agriculturists, the lower and middle class people, the railway passengers and the lower grades of administrative, domestic and other services, etc. It is, therefore, essen-

tial that the Government should ask not for more production and less consumption but for more production and more consumption to absorb what is produced. For this purpose several changes in the policy of the Government are necessary, the two most important of which are, first, the lowering of the selling prices by avoiding the setting up of Government Trading organisations and the mischievous idea of obtaining revenue by monopolistic high prices which is no more than indirect taxation without parliamentary control; and secondly, the increasing of the purchasing power of these consumers by reducing taxation, both direct and indirect. The whole burden of the taxation is practically carried by these people. Until it is considerably lightened, they will have no resources from which they can buy the goods produced.

An example of this indirect taxation is the excise duty that is levied on steel ingots. A duty of Rs. 4 per ton of ingot was imposed owing to the financial stringency of the Government in the dark days of the early thirties. This was raised in 1957 to Rs. 40 per ton. This means an increase of about Rs. 50 per ton on an average on finished steel. The incidence per ton of final product is further increased when the steel is fabricated or used for the production of capital or consumer goods by 20 or 25 per cent. This will throw a burden of many crores of rupees on the consumer. It will increase the cost of many projects depending on iron and steel which have been or are likely to be undertaken by both the public and the private sectors. In addition to this heavy excise duty there are several surcharges which make the price of manufactured goods of all kinds much higher than the common man can afford. Iron and steel play an important part at some stage or other in the manufacture of almost all producer or consumer goods and, therefore, their prices can not be artificially raised without injury to the entire economy of the country.

But alleviation of taxation is not all. Cost of production must also be reduced and here, so far as the labour cost per ton of saleable product is concerned, industry finds itself faced with a further difficulty for so long as Government regards the establishment or expansion of industries primarily as a source of providing employment this cannot be done for two important reasons. First, of course, is that inflation has been constantly increasing the cost of living of all the consumers including the workmen. The latter therefore ask for increase in their wages from time to time. The industries on the other hand, are handicapped for reasons which I shall presently explain, by the compulsion to employ more men than are required. Whilst the problem of employment is an acute one, it cannot be solved merely by creating unnecessary jobs and increasing the cost of production and the burden on the consumer. The solution is to be found, if at all, in more production at lower costs and more consumption at lower selling prices as has been the case in other developed countries and not by adopting the reverse process.

As I have said, I am not at all sure that the 4½ million tons of steel scheduled under the Second Five Year Plan can be taken up by the country due to high cost and penal direct and indirect taxation measures. It is only the public sector and the larger private corporations that have accumulated reserves from their past profits or that are in a position either to raise further capital or to furnish adequate security against borrowings from Banks or other financial institutions who are in a position to expand and increase their consumption. This under present circumstances is impossible for the many hundreds of thousands of smaller concerns and the private individuals in the country who have little or no money left after meeting their expenses and their taxation liabilities. Even the black marketeer and tax dodger for whom I have no sympathy, dare not convert what is known as "black" money into "white" by either building a house to live in or starting a factory, as the taxation authorities would come down on him firstly to know from where the money came and secondly to subject him to wealth tax.

I am therefore doubtful whether a domestic market will be found for the extra steel production under the Second Five Year Plan and my doubts become positive forebodings as regards the further expansion of steel output at present under contemplation for the Third Five Year Plan unless immediate steps are taken to increase the purchasing power of the consumers and to reduce the present inflated prices they are required to pay.

EXPORT MARKET

It is commonly assumed that if the production of steel is beyond the demand of the domestic market, then the surplus can be exported, but on the existing selling price structure, loaded as it is with heavy excise duty, freight equalisation and various surcharges in total amounting in the case of Structurals to Rs. 236 per ton and in the case of Plates to no less than Rs. 274 per ton or 56.37% and 59.7% of the respective retention prices, I do not see where we can find foreign markets. In the Far East we are likely to be faced with severe competition from Japan and now probably China, and also from Australia, whose cost of production is such that I see exports have recently been made even to Russia. The Middle East and Eastern Europe will be more successfully covered by the U.S.S.R. and her satellites, and the whole of Western and Northern Europe by Western Germany, France and the U.K. whose existing and potential capacity is in excess of the demand and who depend largely for their food and many essential raw materials on imports and must therefore export to pay for these imports. All these countries may become more formidable competitors than our planners seem to realise, and it is possible we may be entirely priced out of every foreign market worth capture.

It must be remembered in this connection that any encouragement of exports as has sometimes been suggested by means of Government subsidies direct or indirect or keeping in other ways our export prices substantially below the domestic selling prices, may bring us within the mischief of anti-dumping legislation. It is therefore essential that the most serious thought be given to the gradual removal of the burden now loaded by Government on the selling prices. This however of itself is not enough, but must be accompanied by a careful consideration of the cost structure of the industry, for in considering the export market it must also be remembered that if the country has to rely on the export of iron and steel to assist in the repayment of its foreign loans, it is necessary to pause and think where to export in order to earn the necessary foreign exchange to cover the repayable currencies. It would be of little or no use if we were to export to countries whose currencies we have not borrowed unless these currencies are freely convertible or unless by means of barter deals it would be possible to reduce imports that would otherwise have to be financed in such repayable currencies. If then we have to repay loans in dollars, sterling, marks, francs and roubles on the western side and yen and Australian pounds on the eastern side, the iron and steel industry of India must be able to compete in cost of production with the steel producing countries I have mentioned above who will themselves be seeking an export outlet.

Gone are the days when labour and raw material costs in India were cheap. Inflation has taken its full toll helped and abetted by paucity of food production, our planners having concentrated their main energies on creation of heavy industry to the neglect of the vital problem of growing more food. As an indication of what inflation coupled with the loading of selling prices has led to, I would mention that I am connected with one or two large steel fabricating concerns in India and can therefore tell you that they find difficulty in competing in fabricated structural steelwork with offers from the Continent whose costs a short while ago were below ours in some cases as much as 18% to 22% excluding import duties. On analysis it has been found that the price of steel to fabricators on the Continent is anything between Rs. 175 and Rs. 220 a ton cheaper, depending on the categories than the price our fabricators in India have to pay at the controlled rates fixed by Government. This constitutes far more than a theoretical illustration since there have been recent indications that in the placing of orders for certain large public constructional works price is to be the determining factor ignoring the artificial loading of the cost of steel to indigenous fabricators and that there is accordingly very definite danger of these orders being placed abroad despite the deprivation of wages to local labour and loss of benefit of further experience to Indian constructional engineering concerns that would result from such action. The seriousness of the position caused by the great disparity between Indian and foreign prices of steel will accordingly be realised not only as it affects the direct export of steel, but also in its effect upon the internal economy of the country and yet if we go back to 1950 the Indian prices of steel were the cheapest in the world. It is true that at the moment the sales retention prices to the Indian producers, that is to say, the prices which the producers are allowed to retain as distinct from the inflated prices which the consumer has to pay, are less than the Continental prices. For the following reasons however this position must cease to apply from the 1st April 1960 from which date new retention prices fall due to be determined. Firstly, the effect of averaging over the five year period of the current price fixation the incidence of those few cost increases for which the producers are allowed to claim adjustment is that the present retention prices do not reflect the full incidence of such cost increases. And secondly, cost of production for reasons beyond the control of the producers has increased of recent years under the hundred and one heads for which according to the terms of the present price fixation no claim for adjustment of current retention prices is permitted, but for which allowance must be made in the determination of the new prices. It would furthermore perhaps not be practicable for Government to relinquish the whole of the surcharges at present imposed and therefore the domestic selling prices must continue to be above those on the Continent unless steps are taken to reduce the cost of production to the producers. It is accordingly essential that Government should set into motion machinery to reduce the inflation that has to such a large extent been responsible for the increase in production costs. Otherwise as opposed to any export of steel the country may find itself faced instead with the problem of protecting its enlarged steel industry either by direct means or by a continuation into the far future of the existing rigid control of imports.

A further consideration in regard to cost of production to which I have not referred above but to which I feel I would be failing in my duty if I did not draw attention is that cost and in fact production itself is also threatened by the alarming position that has been allowed to develop in the country in regard to the supply of suitable coking coal. Consequent upon the delay in the establishment of the Government Coal Washeries in the coalfield area serving the steel plants, the commissioning of the coke ovens of the steel plants in the public sector has increased the demand for coking coal to a point beyond the availability of supply of coal without excessive ash content. On the principle of share and share alike, the output of our established supplying collieries is accordingly being in part compulsorily diverted from us and we are being forced by Government to accept more and more of our total requirements in coal that is unsuitably high in ash with the result that the ash content of the coke produced is gradually rising. Every increase in the ash content of the coke means a reduction of Blast Furnace output, an increase in production cost and increased operational difficulties, these difficulties becoming more and more pronounced as the ash content of the coke rises until a point is reached where for technical reasons operation of the Blast Furnaces becomes impossible. The gravity of the situation will be realised when I state that we are fast approaching this critical point and yet, though the position is appreciated by the Coal Controller, we are unable to bring Government to a realisation of the impending crisis. It would appear fantastic that in such circumstances exports should be permitted of high grade metallurgical coal and yet such, I regret to say, is in fact the state of affairs.

COST OF PRODUCTION

If the iron and steel industry has to compete with other iron and steel making countries then we must follow their ways and means of production and costing. What would this mean? We have firstly to see that the manning of our plants is if possible on a par with theirs or in any event is not allowed to exceed the level at which our labour cost per ton will be competitive with theirs; then that the wage structure is brought into line with their practice, namely, that every job has its assigned wage unlike in India where wages are increased yearly by automatic grade increments with corresponding increase of the cost of production from year to year. Since retirements are few and far between, the time will come when practically every man will be at the top of his grade, resulting in costs of manufacture going beyond control and exceeding those of other exporting countries. I am all for giving a man a fair deal for the work he puts in, but until he rises to a higher graded post his pay will have to remain at that assigned to the work he does as is the practice in all other countries.

I fully appreciate that the wage earner when he retires must have something to fall back upon, but I would much rather that this was secured by an increase of the Provident Fund Account even to a 10% or 12½% contribution on either side if necessary than that we should be involved year after year in lengthy battles between the labour unions and the employers over the quantum of annual bonus, resulting in many cases in go-slow movements and strikes affecting production, most of which are engineered by trouble makers purely on political and/or personal grounds and result only in a loss for both the country and the wage earner.

In our own case, if the workers have produced more they automatically get a generous production or incentive bonus. This should cover, like other countries, extra emoluments for extra work done. It is unworthy of the dignity of labour of which we hear so much that the workers should each year come cap in hand, or as is unfortunately so often nowadays the case, stick in hand, on the question of bonus. Our object should I maintain be to get away from gratuitous payments and instead to place each worker in a position where by his own effort he may earn directly the amount necessary to maintain himself and his family in adequate comfort and dignity with margin for supplement of his retirement benefits so that he may look forward to security and peace of mind when his working days are over.

If however Government has decided as a matter of socialistic ideology on the principle that every worker shall share in the prosperity of the factory, then my contention is that he can only share in the profits with the owners of the factory, namely the shareholders. Therefore, any profit sharing that there may be should automatically be linked to the percentage or amount of dividend whatever basis of formula is worked out, and not to the total earnings of the factory from which so many extraneous amounts have to be deducted or kept apart in the various forms of taxation and reserves compulsory or otherwise required for further expansion, rehabilitation and amenities for labour.

Now that very shortly five large units and one small unit will be functioning, it is in my opinion imperative that Government by an Act of Parliament should constitute a Wage Board for the steel industry which would fix the basic wages of every type of work a worker does as well as the rate of incentive or production bonus and the extra cost of living allowance. I feel certain if the Wage Board authorities work on these lines, which are similar to other countries, there will be less anomalies in the wage structure as it would have more constants than variables and the relations between labour and employer would be very much better. At present the various allowances that have crept in either under pressure or by tribunal adjudication make the accountant's life miserable and an army of clerks has to be employed to check each other's calculations whereas by the suggested methods the accounting process could be mechanised and errors eliminated. I am not suggesting that we take anything from the total emoluments which the labour are now receiving; I am merely suggesting that the variables should be consolidated into one or two constants. Full use of labour saving devices that are incorporated in these plants must of course be taken advantage of so that these factors may go to reducing the cost of manufacture.

LABOUR

There is one point in connection with Government's labour policy to which I feel I must draw attention because it directly affects particularly the iron and steel industry in the private sector. There is a provision in the Constitution that except as regards the Union employees, the Union Government and the State Governments have concurrent legislative powers in labour matters. Whenever there is labour trouble in the steel industry we have, therefore, first to approach the State Governments. Though we have found them on the whole helpful, they have naturally a parochial bias, particularly towards the exclusive employment of labour from their own states which often leads to avoidable delay in the solution of the difficulties created by a strike covering the entire works or any one particular unit of it. Also, though each one of the two major plants is situated in a single state, the supply of the principal raw materials, such as iron ore, coal, refractories etc. and even labour have to be obtained from several states. Strikes at the sources of various essential raw materials and products are by no means unusual, and we have to approach the different states in which they may be situated. Concurrent legislation by the Centre and the States is, therefore, a great disadvantage from the point of view of the industry. The decisions of the Labour Tribunals which are appointed by the States also lack in uniformity. It is, therefore, very necessary that the Union Government in the exercise of the powers it possesses should solely deal with all labour matters and when necessary appoint National Tribunals in connection with this industry, especially as its production, prices and distribution are controlled by that Government. Indeed, it is highly desirable that all major industries which are controlled in a similar way should be subject only to the jurisdiction of the Union Government in all labour matters.

I adhere to the proposals which I have made in my previous speeches that there should be a single Union industry-wise which should have the support of the employers as well as of the employees and be guided by non-careerist leaders who have no political affiliations. I cannot, without prejudice to those proposals, help feeling that the Indian National Trade Union Congress, whatever ideological, sentimental or political justification it may have had for its creation after the Congress came into power, has come to be regarded as an institution sponsored by the Government on political grounds. The impression, therefore, has been created on large sections of industrial and other labour that there is much favouritism shown to this body and rival unions are creating trouble in an endeavour to supersede it. The most impressive evidence of this conflict was provided by the strikes at Jamshedpur and at our Ore mines some time ago. Time, tradition and sentiment have made the constitution of the Indian National Trade Union Congress irrevocable and its existence must be accepted with good grace by all those whose interest it is to keep the Congress in power. But this position obviously calls for the utmost responsibility of leadership, which I am afraid is sometimes lacking, and it is therefore essential that Government should make it its duty to instil this sense of responsibility and to curb the ambition of some of the I.N.T.U.C. leaders to aggrandize themselves on political grounds as leaders of the Supreme Union.

I cannot quit this part of my statement without expressing my concern over the creation of grave difficulties in the future in labour matters. The private sector has by making heavy sacrifices, both of monetary resources and of production extending over many years, been able to train with a relatively small number of foreign technicians a large number of higher Indian technical personnel and skilled labour in all its productive and non-productive departments. I am afraid that in order to meet their requirements attempts have been made by the public sector and may continue to be made to take away some of the men indispensable to the private sector to their own works. Even if the attempts do not always succeed, the danger is that they may create a great deal of discontent and indiscipline among the employees of the private sector who may ask for increase in their wages or better terms otherwise and practically blackmail the management. This, it will be recognised, would be a sad state of affairs.

PRODUCTIVITY

An important step was taken by the Government of India in February 1958 when the National Productivity Council was established and a fund of three million dollars was provided by the U.S.A. for organisational purposes. Five local centres, including Calcutta which I inaugurated earlier in the year, were also set up to promote the productivity of labour

Though it has become a habit of Government to blame the employers for the low productivity in

all industries per man year, we can reasonably claim that it is not due in our case either to the wages and other cash and indirect benefits or inadequacies of the Production Incentive Bonus since for the year under review the production bonus earned by the entire labour force was 70 per cent of its monthly wages and in the main productive departments was between 90 and 140 per cent of the monthly wages, while in addition to basic wages we gave the benefits in cash or in kind of profit sharing bonus, provident fund, dearness allowance, free housing or rent allowance in lieu, leave allowance, amenities and social services, and free hospital and medical facilities not only for the workers themselves but also for their families and relatives.

The reasons for the obviously low productivity are, therefore to be sought elsewhere and may be briefly summarised as follows:—

1. The compulsory retention in employment of superfluous labour under the labour laws and decisions of Labour Tribunals. Overmanning breeds inefficiency and the magnitude of the problem in our own case will be appreciated when I state that in comparison with Western European or Japanese standards our manning is approximately double the normal.

2. The certainty of remaining in employment owing to the restriction on retrenchment, or alternatively of obtaining compensation in the few cases where retrenchment is permissible. A High Court has recently ruled that this compensation is to continue indefinitely and that renovation, rationalization or mechanization cannot be allowed at the expense of labour.

3. Frequent resort to go-slow and other strikes inspired on political grounds by rival Trade Unions.

4. Some Labour Ministers' encouragement to labour to demand an increase in cash wages irrespective of any consequential increase in production.

5. Pressure on industries on provincial grounds by some States to employ local labour only irrespective of its aptitude, training or other necessary qualifications.

It would be entirely wrong if from anything I have said the impression should be gained that Indian labour is inefficient or unwilling or unable to work just as hard as the men in any other country. There is perhaps no clearer demonstration that such is not the case than is afforded by the example of our armed forces of whom many a foreign expert who has seen these men at work has remarked that they are in no way inferior to any of the best armed forces in the world. And yet do we find two men in a fighter 'plane where one man is needed, or require double the manning in a bomber? The naval complement in any of our fighting ships is on a par with that of a similar ship belonging to any other efficient Navy and our guns and torpedo tubes are manned by no more men than in other Navies. Nor does our Army consider manning in excess of world standards is required in the operation of its artillery, tanks and mechanised equipment. Why then are we forced to employ more men than are necessary in industry in general and in the iron and steel industry in particular?

The main reason is that when these industries were started, labour was cheap and many of the labour saving devices were not then considered to be warranted. During the last 15 to 20 years however, such devices have with the march of progress been incorporated in the design of every modern item of plant and yet for reasons best known to Government the question of maximum employment has been allowed to outweigh all consideration of the economy in manufacturing cost that should, if the country is to develop, result from the vast sums of money that are being spent on the modernisation and expansion of industry. The ground has thereby been well-prepared for the labour unions to swell their ranks by forcing over-manning on the employers and in this they have been ably supported by the industrial tribunals who have made it abundantly clear that the question of employment must enjoy priority and can yield to no such mundane considerations as economy in cost. Apart from the cost of manufacture being directly increased on this account, the luxury of overmanning a plant leads definitely to gross inefficiency and consequently to a still further indirect increase in cost. In the furtherance of its development plans the country can ill afford this artificial inflation in the cost of manufactured goods which threatens to price beyond the means of the consumer the goods produced and to endanger the building up of the export market that is vital to our progress.

CAPITAL STRUCTURE

In February 1959 a bonus share issue of Ordinary shares was made in the proportion of one bonus share for every five Ordinary shares held by capitalisation of a sum of Rs. 2,07,34,830 out of the amount standing to the credit of the Share Premium Account, the total issued Ordinary share capital of the Company being thereby increased to Rs. 12,44,08,990.

In my statement last year I dealt with the problem of the Company's capital structure and explained that it would normally be the policy of your Directors that a part of the increasing reserves should be capitalised from time to time by means of issues of bonus shares, but that while the penal rate of tax on bonus shares remained such a course was precluded. It is disappointing that as opposed to any lightening of this taxation the scope of the tax has in fact since been extended to cover even the issue of bonus shares by capitalisation of share premium accounts, and for the present we must therefore console ourselves with the thought that the capitalisation of the Share Premium Account was effected just in time to avoid this transaction coming within the enlarged sphere of the tax.

As you will see from Schedule C to the Balance Sheet, drawings on Loan Account from the World Bank amounted at the 31st March 1959 to the equivalent of Rs. 18,22,91,822 against Rs. 13,61,50,557 at the end of the previous year. Repayment of the first World Bank Loan commenced on the 15th April 1959 with the payment of the first half-yearly instalment of Rs. 59,54,258 due in accordance with the Loan Repayment Schedule and repayment of the second loan will commence at the 15th April 1960, both loans being repayable in half-yearly instalments due in April and October each year until their final clearance at the 15th October 1967. Repayment of the loan from Government has also commenced with payment of the first instalment of Rs. 22,45,000 due on the 30th June 1959. This loan is repayable in half-yearly instalments due in June and December each year until its final clearance at the 31st December 1967.

The total of the loans for repayment will approximate some of Rs. 29 crores with interest running on the outstanding balance and the necessity for conservation of the resources of the Company to meet these very heavy commitments over the period of the Repayment Schedules will accordingly be appreciated.

FUTURE DIVIDENDS

The year under review is the last year for which shareholders will receive credit in respect of their dividends for income-tax paid by the Company. Under the provision of the Finance Act 1959 future dividends will be declared gross and the only credit that shareholders will receive will be for the tax that must be deducted at the prescribed rates on payment of their individual dividends. Some indications of the Company's future dividend policy will therefore be expected of me.

So far as the Preference shares are concerned, the dividend on these is expressed to be 5% free of tax and the dividend at this rate will in accordance with the provisions of the Finance Act 1959 be grossed up to such an amount as after deduction of 30% thereof would represent the previous amount payable free of tax and this gross dividend then paid to the individual shareholders under deduction of tax at the prescribed rates.

It will normally be the policy of your Directors, circumstances permitting, to apply so far as possible a similar principle in determining the future rate of gross dividend payable on the existing Ordinary share capital. It will be appreciated however that the ability of the Company to compensate its shareholders in this manner will to a large extent be dependent upon the saving under the new basis of corporate taxation and that for many years to come it will be necessary to make large reserve allocations out of profits in order to provide finance for the repayment of our very heavy loan liabilities. Finance will therefore be the determining factor, and I should perhaps point out in this connection that so far as tax saving under the new basis of corporate taxation is concerned there will be no cash saving arising from the difference in taxation rates in respect of such profits as are offset by the allowance of Development Rebate since if no tax is payable according either to the old or new rates, no question of a cash differential can of course arise.

ACKNOWLEDGMENTS

In conclusion I would express on behalf of your Board our appreciation of the services rendered by the General Manager. Mr. J. McCracken, and his executive staff throughout another difficult year. An expansion on the scale undertaken by our Company throws a very great additional burden and responsibility on all staff which has been willingly and ably shouldered. It gives me pleasure to place on record this expression of our thanks.

This does not purport to be a record of the proceeds of the above Annual General Meeting.

THE INDIAN IRON & STEEL COMPANY LIMITED.

NOTICE

NOTICE is hereby given that the Annual General Meeting (being the Forty-Second Ordinary General Meeting) of the Company will be held at the Registered Office, 12, Mission Row, Calcutta, at 3 p.m. on Monday, the 21st December, 1959, for the following purposes:

1. To receive and adopt the Audited Accounts for the year ended 31st March 1959 and the Directors' and Auditors' Reports thereon.
2. To confirm as the final dividend for the year ended 31st March 1959, the interim dividend on the Ordinary Shares declared by the Board on the 11th August, 1959.
3. To appoint Directors in place of those retiring.
4. To appoint Auditors and fix their remuneration.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and a proxy need not be a member.

By Order of the Board,

Martin Burn Limited,
F. G. Liversedge,
Managing Director,
Managing Agents.

Calcutta,
24th November, 1959.

THIS ANNOUNCEMENT IS NOT AN INVITATION TO SUBSCRIBE FOR DEBENTURE STOCK BUT IS ISSUED FOR THE PURPOSE OF GIVING INFORMATION CONCERNING THE COMPANY. A FORMAL PROSPECTUS, DATED 20TH NOVEMBER, 1959, HAS BEEN DELIVERED TO THE REGISTRAR OF COMPANIES, WEST BENGAL, FOR REGISTRATION AND COPIES THEREOF, ALONG WITH APPLICATION FORMS, ARE OBTAINABLE FROM THE BANKS AND BROKERS NAMED BELOW.

INDIAN ALUMINIUM COMPANY, LTD.

(Incorporated under the Indian Companies Act, 1913)

SHARE CAPITAL

Authorised		*Issued, Subscribed & Paid Up*
Rs. 5,60,00,000	Ordinary Shares of Rs. 10 each - -	Rs. 3,97,57,540
Rs. 40,00,000	5% Cumulative Redeemable Preference Shares of Rs. 100 each - - -	Rs. 40,00,000
Rs. 6,00,00,000		Rs. 4,37,57,540

LOAN CAPITAL

Authorised		*Issued, Subscribed & Paid Up*
Rs. 2,68,13,200	5% Convertible Loan Stock (unsecured) - -	Rs. 2,68,13,200 of which Rs. 4,92,800 is outstanding, the rest having been converted into Ordinary Shares.
Rs. 3,00,00,000	6¼% Debenture Stock 1970-75 at Rs. 102 per cent being the Stock now to be issued.	

In addition to the Rs. 4,92,800, 5% Convertible Loan Stock above mentioned, the Company has bank loans with Lloyds Bank Limited, Calcutta, and The First National City Bank of New York, Calcutta (secured by an hypothecation of raw materials and finished goods in the nature of stock-in-trade and book debts), the aggregate debit balance of which bank loans amounted as at 7th November, 1959, to Rs. 2,62,00,000.

The total of the unsecured loans is stated in the Auditors' Report included in the Prospectus. Apart from the foregoing, the Company has no other loan capital outstanding.

ISSUE OF

Rs. 3,00,00,000 6¼% Debenture Stock 1970-75 at Rs. 102 per cent payable in full on application, at the rate of Rs. 510 for each unit of stock of Rs. 500 (nominal or par value).

DIRECTORS

KAILASH CHANDRA MAHINDRA,
Malabar Court, Ridge Road, Bombay. Industrialist and Chairman of the Company.

HENRY VANCE ECHOLS,
7, Mayfair Road, Calcutta-19. Managing Director of the Company.

MUTHIAH ANNAMALAI CHIDAMBARAM,
Adayar House, Madras-25. Industrialist.

JAMES ATWOOD DULLEA,
Westport, Connecticut, U.S.A. Senior Vice-President, Aluminium Limited, Canada.

JAKOB BOETSCHI, alternate for MR. DULLEA,
41, Chowringhee Road, Calcutta-16. Merchant.

DAVID PLATT DUNDERDALE,
6, Merlin Park, Ballygunge, Calcutta-19. Solicitor & Notary Public.

JAMES LESLIE ESPLEN,
6, Lyons Range, Calcutta-1. Stockbroker.

CHUNI LAL KATIAL,
5, Ratendon Road, New Delhi. Physician.

SIR UDAY CHAND MAHTAB, K.C.I.E.,
Maharajadhiraja Bahadur of Burdwan, "Aftab Ville", 14/1, Burdwan Road, Calcutta-27. Landlord.

DR. PARAMESWAR VELAYUDHAN NAIR,
"Saraswathi Sadan", Cotton Hill Road, Trivandrum, Director of Industries & Commerce, Kerala State.

MANU SUBEDAR,
Lotus House. Marine Lines, Bombay. Businessman.

SOLICITORS

SANDERSONS & MORGANS,

GENERAL INFORMATION

The entire issue has been underwritten and the Directors of the Company have been informed by the Underwriters and their friends of their intention to apply for Rs. 1,50,00,000 of the Stock. The balance of Rs. 1,50,00,000 is available for public subscription.

The Debenture Stock was created by a Resolution of the Board of Directors of the Company passed on 28th September 1959 and will be constituted by a Trust Deed whereby payment of principal and interest will be secured by a first fixed and specific charge on the Company's immoveable properties and fixed plant and machinery and a floating charge on the whole of the undertaking and assets of the Company.

OBJECT OF ISSUE

The purpose of the issue is to provide a substantial part of the finance required for the fulfilment of the Company's plans for an integrated expansion of its facilities.

DEVELOPMENT PLANS

It is proposed to expand the annual capacity of the Company's smelter at Hirakud from 10,000 tons to 20,000 tons, thus giving the Company an ingot capacity of 25,600 tons per year. Simultaneously, the Company plans to triple the capacity of its alumina plant at Muri (and related bauxite facilities at Lohardaga) to enable the Company to produce 54,000 tons of alumina per year. In carrying out this expansion, process improvements

requiring considerable modification of the existing plant will be made. This, in conjunction with the elimination of imports of alumina, should result in substantial operating economies.

In addition, the Company's rolling mill at Belur, West Bengal, will be expanded from a capacity of 9,000 tons of rolled products per year to 16,500 tons per year. The expansion of the Belur Works will enable the Company to produce foil stock, container stock, strong alloy sheet (including sheet for aircraft production) and a wider range of rolled products for construction, architectural and other industrial uses.

The Company also proposes to instal a new extrusion press at Alupuram, Kerala, which will be capable of producing heavy and large extruded sections and powerful enough to handle an extensive range of medium and strong aluminium alloys. The Company believes that the new press, in conjunction with the present one, will give much greater flexibility to extrusion operations and will enable the Company to meet the demands for a wide variety of aluminium extrusions. The rated capacity of the press will be approximately 2,500 tons of extruded sections per year.

FINANCING AND FINANCIAL INFORMATION

The amount required for the expansion programme, including additional working capital, is estimated to be Rs. 9.1 crores, part of which will be financed by the issue of Rs. 3,00,00,000 6½% Debenture Stock. In addition the Company has made arrangements for a dollar loan from Aluminium Limited, Canada. The balance will be financed by depreciation reserves, development rebate reserves, undistributed earnings and bank loans.

It is estimated that, at the end of December 1959, the written down value of the Fixed Assets will exceed Rs. 6.5 crores.

The following is an extract from the accounts of the Company as reported on by its Auditors:

	Sales.	Net Profits before Depreciation and Taxation	Net Profits after Depreciation and Taxation
		Rs.	Rs.
Year ended 31st December 1954 ...	2,37,62,809	*14,94,492	*2,74,716
Year ended 31st December 1955 ...	3,65,66,903	48,39,370	20,44,011
Year ended 31st December 1956 ...	4,24,96,849	66,75,321	24,08,344
Year ended 31st December 1957 ...	5,44,39,477	92,03,928	35,63,604
Year ended 31st December 1958 ...	7,42,97,113	1,37,52,940	57,71,738

SUBSCRIPTION LIST

The subscription list will open at the commencement of banking hours on the 1st December, 1959 and will remain open until the close of banking hours on the 3rd December, 1959, or later at the discretion of the Directors.

IN PARLIAMENT

PRODUCTION OF AUTOMOBILE VEHICLES

In a written reply to a question by Shri Anirudh Sinha in the Lok Sabha Shri Manubhai Shah, Minister for Industry, stated that 8,080 cars were produced by the different automobile manufacturers during January—September, 1959. The number of jeeps and trucks (including buses) produced were 3,942 and 13,672 respectively.

The Minister also gave percentages of indigenous content in the vehicles produced in the country. The percentage ranged from 49.4 in the case of Standard '10' car to 73.4 in the case of Hindustan Ambassador car.

These percentages, the Minister stated, were worked out by comparing the C.I.F. price of the imported components with the ex-factory cost of the vehicles in the country.

ATOMIC FUEL FABRICATION PLANT

The Prime Minister stated in the Lok Sabha that the building of the atomic fuel fabrication plant had been completed, apart from a few minor finishing items.

Replying to a question by Shri D. C. Sharma, the Prime Minister said that all the equipment for the plant had been commissioned and tested for performance under continuous production-scale operations. Sample fuel elements for the Canada—India reactor, produced in the plant, had been sent to the Atomic Energy of Canada Ltd., early in October, for irradiation tests.

STATE TRADING IN FOODGRAINS

In a written reply to a question by Mr Valvi and four others regarding the implementation of the scheme for State trading in foodgrains, Mr A. M. Thomas, Deputy Minister for Food, stated in the Lok Sabha that replies from State Government had been received. The State Governments have licensed the wholesale traders in their respective States.

Necessary measures are also being taken to organise and develop co-operative societies. About 13.6 lakh tons of rice and paddy and 2.38 lakh tons of wheat had been purchased by the Central and State Governments during the year in different States.

SPUN SILK MILL IN ASSAM

An agreement had been concluded with a Japanese firm for the import on deferred payment basis for the construction of a spun silk mill in Assam, stated Mr Manubhai Shah, Minister for Industry, in the Lok Sabha. The Minister was replying to a question by Mr Ram Krishan Gupta.

The Minister also announced that the Government of Assam had decided to form a private limited company with an authorised capital of Rs 70 lakhs in shares for running the mill. The memorandum and the articles of association of the company were being finalised by the State Government. Arrangements were also being made to obtain the services of an expert from Japan.

The construction of the building at Jagi Road was nearing completion and the mill was expected to go into production at the end of 1960.

SHORTAGE IN COTTON SUPPLY

In a written reply to a question by Mr Shree Narayan Das and three others in the Lok Sabha whether there had been any shortage in cotton supply during this year, the Minister of Commerce, Mr Nityanand Kanungo, said that scarcity of supplies of cotton might have been felt by a few mills on account of a small carry-over at the end of the last season consequent on a comparatively low crop during that season. This scarcity was to a certain extent accentuated in the beginning of the season due to reported failure of cotton crop in certain areas. Mr Kanungo added that the position, however, had changed as further reports about cotton crop during the current season were not discouraging. No liberalisation of imports had, therefore, been made so far. Government were watching the situation.

Asked whether the export programme of cotton had been affected, the Minister said that exports had in fact increased in the last season. The position for the current season should be assessed only at a later stage.

PROPOSAL FOR NATIONAL FERTILIZER CORPORATION.

A proposal to form a National Fertilizer Corporation was now under the consideration of Government, said Mr Satish Chandra, Deputy Minister of Commerce and Industry, in the Rajya Sabha. Mr Satish Chandra, who was replying to a question by Mr M. P. Bhargava, added that the Government had considered the recommendations of the Fertilizer Production Committee for setting up a Fertilizer Board to direct and control all State-owned fertilizer units. As a first step, it had been decided that the management of the two new factories at Nangal and Trombay should be entrusted to the same company viz. the Hindustan Chemicals and Fertilizers Ltd.

DECLINE IN THE VALUE OF INDIAN CURRENCY.

Replying to a question by Mr L. Achaw Singh and three others in the Lok Sabha, the Finance Minister, Mr Morarji Desai confirmed that the internal value of the Indian currency had declined by 29 per cent as stated by the Reserve Bank Governor in a recent speech. The Finance Minister added that, measured on the basis of general index of wholesale prices, the internal value of the rupees had declined by 29 per cent since 1947-48.

THE SHAHDARA (DELHI)—SAHARANPUR LIGHT RAILWAY COMPANY LIMITED.

NOTICE is hereby given that the One Hundred and Sixth Ordinary General Meeting of the above-named Company (being an Annual General Meeting within the meaning of the Companies Act, 1956) will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Wednesday the 23rd December, 1959 at 11-00 a.m. for the following purposes:—

STOCK EXCHANGES

Caution and Hesitancy

WATCH-DOG WRITES:

THE caution and hesitancy, which have characterised trading in stock markets during the past few weeks, is more pronounced this week. An important factor is the persistent rumours of a supplementary budget. Yet another development no less important is the fear of possible official measures to check speculation in shares. Also, the statement issued by the Chairman of the Indian Iron & Steel Company Limited, especially with regard to the dividend outlook and prospects for steel exports, is interpreted bearishly. The small recovery in prices, witnessed on balance, is attributed to some short-covering and replacement buying at lower levels.

The Calcutta Stock Exchange passed a very uncomfortable week when prices displayed an irregular tendency on alternate bouts of buying and selling.

The Bombay Stock Exchange was in the grip of a dull spell for the major part of the week.

Lack of fresh incentives coupled with a tendency to lessen commitments due to fears of taxation led to an easy trend in prices on the Madras Stock Exchange.

On the London Stock Exchange, there was renewed uncertainty and buyers were still reluctant to extend commitments

Prices on Wall Street showed a mixed trend.

*

Calcutta

Calcutta, Friday Evening.

CONDITIONS on the local Stock Exchange remained generally subdued during the week under review when equities suffered a sharp setback due to sustained selling pressure in the speculative scrip. Although there were signs of revival of speculative activity, they were not sustained till the close due to lack of confidence in the market.

In general, the week's trading was marked by indecision and the tone became subdued under the shadow of political fears and talks regarding likely stiffening of margins to check unbridled speculation. The increase in the defence outlay and the imminent publication of the Pay Commission recommendations gave rise to fresh rumours of a likely supplementary budget.

Another important factor was the statement made by the Chairman of the Indian Iron & Steel Company, which was interpreted bearishly by the market operators. This, bears were in a position to dominate the entire scene and depress prices to fresh lower levels. Although scattered bear-covering induced a mild recovery in prices, the undertone of the market indicated lack of confidence in higher levels.

The Giltedged market continued to remain dull with business reduced to small dimensions. Except short-dated issues which continued to be in demand, little interest was shown elsewhere. Small sellers were in evidence in the medium and long-dated issues with buyers reserved. 3 per cent 1986 Conversion Loan opened at Rs 74.10 and, after touching a low of Rs 73.95 and a high of Rs 74.50, finished the week at Rs 74.30.

Bank shares were quiet with price movements confined to a narrow range. Punjab National changed hands at Rs 20.19 to Rs 20.50, while United Commercial were rather sticky at Rs 62.50.

In the week's dealings, the lead to the general decline in prices was mainly given by the speculative issues under the lead of Indian Irons. Against the week-end closing of Rs 23.84, Indian Irons opened at Rs 23.68 and closed at the lowest level for the week at Rs 23.28 due to selling pressure, being induced by the statement made by the Company's Chairman especially with regard to the dividend outlook and steel export prospects which were interpreted bearishly, as also by rumours of fresh taxation. TEXMACO were at one time pushed down to Rs 24.10 from a high of Rs 24.55; G. K. Williams to Rs 39.99 from Rs 40.25 and Jessop to Rs 33.56 from Rs 34.44, to finish better at Rs 24.35; Rs 40.00 and Rs 33.94 respectively. Braithwaite were quiet Rs 26.44 against Rs 26.56 with Marshalls maintained around Rs 5.50.

Coal shares lacked support in the absence of any incentive. Bengal were on offer at Rs 297 against Rs 305; New Beerbhoom at Rs 21.44 against Rs 21.87 and Amalgamated at Rs 21.94 against Rs 25.06. Burrakur fluctuated irregularly between Rs 17 and Rs 17.37 on alternate buying and selling, to close finally at Rs 17.25. Western Bengal changed hands on the ex-dividend basis at Rs 5.97 to Rs 6.12 against Rs 6.50 c.d. in the previous week.

Jute shares were no exception to the general trend of the market and prices, after suffering a sharp setback due to nervous liquidation, staged a small recovery at the close on higher advices from the gunny market. Howrah were at one time depressed to Rs 23.19 from Rs 24; Barnagore to Rs 161 from Rs 178.50 and Kinnison to Rs 192 from Rs 211, to improve toward the close to Rs 23.75; 168 and Rs 198 respectively. National were 25 nP lower at Rs 24.75, while New Central moved between Rs 20.25 and Rs 20.55, to close at the latter level.

Quite in contrast to the general trend of the market, Tea shares behaved remarkably well and those scrip of the Assam and Dooars gardens met with sustained support on the belief that the current season's crop would be sold without any difficulty. Higher levels, however, attracted considerable profit-taking at the close. Betjan changed hands at Rs 23.87 to Rs 24.56 (Rs 24.37); Bishnauth at Rs 20.19 to Rs 20.81 (Rs 20. 62); Dhelakhat at Rs 23.00 to Rs 23.25 (Rs 23.06); Grob at Rs 14.25 to Rs 14.75 (Rs 14.62); Hasimara at Rs 23.12 to Rs 23.75 (Rs 23.50); Hantapara at Rs 148 to Rs 156 (Rs 151); Jayshree at Rs 15.31 to Rs 15.81 (Rs 15.44) and Methoni at Rs 23.19 to Rs 24.37 (Rs 23.75). Figures shown within brackets were the week's closing rates.

Sugar shares came in for selective enquiry, as there was a general disposition to await further developments in the sugar situation. The only firm features were Balrampore having sustained support up to Rs 3.75; Ramnugger Cane up to Rs 20.50; and Raza/Buland up to Rs 12.94. SKG moved narrowly between Rs 13.12 and Rs 13.37, while Carew turned quiet at Rs 11.50 against Rs 11.75.

Textile scrip fluctuated widely on alternate bouts of buying and selling, although the closing tone was steady on encouraging advices from the piecegoods market. Cawnpore met with business at Rs 5.44 to Rs 5.56; Elgins at Rs 14.81 to Rs 15.50 and Kesoram at Rs 18.50 to Rs 18.62. Jayshree had some sellers at Rs 10.65 against Rs 10.81 with New Victoria rulling quiet at Rs 1.28 against Rs 1.34.

The Miscellaneous section followed the general trend of the market. Although price movements were irregular, most of the scrip emerged with minor gains on balance, as will be clear from the following price trends:

	Week's High Rs.	Week's Low Rs.	Week's Closing Rs
Orient Paper ...	36.70	35.90	36.05
Shree Gopal ...	22.50	21.87	22.12
I Cable ...	30.69	30.12	30.44
I. Aluminium ...	23.00	22.44	23.25

Bombay

THE Bombay Stock Exchange opened last Thursday on a promising note as bear covering took prices in the more speculative counters to higher levels. But the recovery proved shortlived and, in the course of trading during the next two days, sentiment became subdued. Prices moved down further on Monday on bull liquidation. The undertone, however, steadied up in the next two days on emergence of bull support at the lower levels and short covering.

The earlier subdued trend stemmed from persistent reports about a supplementary budget. It would appear that such apprehension in its turn had resulted from the calculation that defence expenditure would sizably increase. That defence spending would be on the uptrend was also indicated by the Defence Minister in his speech on the occasion of the anniversary of the Territorial Army. Mr Nehru, too, had spoken about the need for building up heavy industries without any further loss of time. All this indicated an intensification of the tax effort by Government in order to meet the mounting expenditure. Moreover, the operators were not inclined to extend commitments as they feared that the Pay Commission recommendations would result in further reducing the profit margin of the corporate sector. The slight recovery noticeable in later dealings seemed to have been the result of the belief that, even if Government were contemplating fresh levies, the time to get worried about them would be some couple of months hence than at the present juncture, because there was no special reason for bringing a supplementary budget when the usual budget was not far off.

In the steel section, Tata Steel steadied to Rs 155.75 last Thursday, but, by close of next day, it came back to Rs 153.75. Although there was a recovery on Saturday to Rs 154.25, it again backed away on Monday to Rs 153.50. In the next two days, however, the scrip was in request presumably on ideas of increased output during the month. By close of Wednesday, the quotation was taken to Rs 156. Indian Iron, however, was rather subdued at Rs 23.32.

Textile shares were an irregular market although the undertone was steady. Bombay Dyeing closed higher on balance at Rs 68.30. Century rallied to close on Wednesday steadier at Rs 622.50. Kohinoor was also higher on balance at Rs 328.50.

Among miscellaneous shares rumours about excise duty on rayon depressed National Rayon in earlier dealings; but by close on Wednesday the scrip regained lost ground to be finally placed at Rs 364. After earlier easiness, Telco was well maintained at Rs 196. Tata Chemical was lower on balance at Rs 17.08. Among sugar shares, Belapur was marked down to Rs 324. Bombay Burmah was a steady feature at Rs 355.

*

London

UNCERTAIN conditions continued to prevail on the London Stock Exchange, as buyers were still reluctant to extend commitments in the absence of any incentive. With further small selling again evident, prices of Industrial equities moved lower. There was, however, a fair sprinkling of firm spots.

Steel shares were disturbed by the unchanged dividend from South Durham Steel. Most leading stocks, especially Great Universal Stores, were firm in front of the interim dividend, which is expected to be announced shortly. Ford Motors were another bright spot following the settlement to the wages and hours question.

*

New York

PRICE movements were rather mixed on Wall Street. The initial buoyancy in the market was helped by hopes of a contract settlement in the steel industry before the current 80-day back to work injunction expires. Sentiment was also aided by the subsequent news that the steel industry had offered the workers a new increase, although prices suffered a mild setback at the close when the Steel Workers' Union announced that it rejected the new offer.

A few other issues were in the forefront. There was particularly good support for Chemicals, electronics, aircrafts and motors and dealings in these shares were prominent. Anaconda Copper was quoted at $62; General Motors at $51 and US Steel at $96 7/8.

INDUSTRIAL INFORMATION

PRODUCTION AND DISTRIBUTION OF WOOLLEN HOSIERY YARN

The Government of India have decided that all woollen spinning units will produce between October 1, 1959 and September 30, 1960 the same proportion of worsted hosiery and knitting yarn as was produced by them during the period October, 1956 to September, 1957. Such units which have installed new spindles after September 30, 1957 will produce at least 30 per cent of their quarterly production of worsted yarn in the form of hosiery yarn. The Textile Commissioner may prescribe the actual qualities and quantities of the hosiery and knitting yarn that may may produced by each unit.

The Hosiery Federation of Ludhiana will allocate hosiery yarn to its members on the following conditions:

(1) The price at which the supply of yarn is made will be the same as charged by the spinners.

(2) In allocating yarn to each member, the Federation will try to accommodate the old customers of the spinners as far as possible.

(3) The allottees will make firm commitments with the spinners within 20 days from the first day of each quarter for their quarterly quota, falling which their quota will lapse.

(4) The spinners may at their discretion charge an advance up to a maximum of 5 per cent of the total value of yarn at the time of making firm commitments.

(5) The spinning units would intimate to the Federation the details of lapsed quota between 22nd and the last day of the first month of each quarter. The Federation will allocate the lapsed quota within 10 days of the next month to the parties against the quota of the next quarter. If the Federation fails to do so and the parties fail to enter into firm commitments within the prescribed time limit, the spinning units will dispose of their quotas at their discretion.

(6) Specifications of yarn would be given in the contracts and as far as possible, supplies would conform to the same.

(7) The allottees will not re-sell the hosiery yarn allotted to them under this scheme.

(8) If the allottees no longer require the quota of yarn allotted to them, exchange in no-profit basis will be permissible with the permission of the Federation. Such transactions will be reported to the Textile Commissioner every quarter.

(9) The spinning units will honour the quarterly quota of the allottees. Any failure except under the condition of "force majore" should be reported to the Textile Commissioner by the Federation for necessary action.

(10) The composite mills i.e., mills having both spinning and weaving plants will be outside the purview of the distribution scheme. They will, however, produce the same proportion of hosiery goods as was produced by them on an average during the three financial years April, 1956 to March, 1959, which will be considered as the "basic" period.

(11) The quota of wool to be earned against exports will not come under the purview of this scheme.

(12) The Federation will intimate to the Textile Commissioner the names of the allottees, their installed and working machines and average annual production during the "basic" period along with the quantities allocated to each allottee.

(13) The Federation will prepare the break-up of quantities, quality-wise and their percentages. After compilation of this data, the All-India Woollen Manufacturers' Federation, Bombay, the Spinners' Association, Ludhiana, with their non-members, will sit together to decide the production programme of hosiery yarn by each mill on an annual basis. The Hosiery Federation will give this information to the above Federation and Association of the spinners by November 5, 1959 and annual production programme will be finalised by November 20, 1959. The Textile Commissioner would be informed of the production programme of each unit.

(14) Any deliberate lowering of the quality hitherto supplied by the spinning units will be reported by the Hosiery Federation to a committee consisting of: Shri Premnath of M/s. Saligram Premnath Mills, Ludhiana, Shri J. L. Behli, M/s. Pearl Woollen Mills, Ludhiana, Shri Brijlal and Keval Krishna of the Hosiery Federation, Ludhiana.

If the committee fails to settle such cases satisfactorily, the matter will be reported to the Textile Commissioner, whose decision will be final.

(15) Sealed samples for bulk supply may be kept by the parties when mutually agreed upon.

(16) The hosiery yarn will be distributed to the members of the Federation and to the members of any recognised association as per the above scheme.

The above distribution Scheme will come into force from January 1, 1960.

* * *

HEALTHIER CATTLE FOR INDIA THE BATTLE AGAINST RINDERPEST

Since the launching of the Rinderpest Control Scheme in 1954, over 512 lakh cattle and buffaloes have been protected against the disease upto the end of March 1959. The scheme is in operation in the States of Andhra Pradesh, Bombay, Madhya Pradesh, Orissa, Bihar, West Bengal, Punjab, Uttar Pradesh, Delhi, Jammu and Kashmir, Assam, Himachal Pradesh and Rajasthan.

Rinderpest is known to cause heavy economic losses among cattle and buffaloes in India. Inviting attention to this fact the Second Plan says: "In the past rinderpest and other contagious diseases of cattle have taken a heavy toll. rinderpest alone accounting for about 60 per cent of cattle mortality."

Rinderpest or "cattle plague" is one of the most contagious and fatal diseases chiefly affecting cattle, characterized by fever and inflammatory lesions of mucous membranes, more particularly of the alimentary tract. It is the greatest enemy of the cattle breeder. The disease may be conveyed to healthy cattle by contaminated fodder, litter, water etc. Definite symptoms of the disease may not be recognised until the expiration of four to nine days after exposure. An exact knowledge of the symptoms is of utmost importance, as its extension and consequent ravages can only be arrested through their timely recognition and the immediate adoption of the necessary sanitary and prophylactic measures.

With a view to eradicating the disease, in October 1954, under the First Five Year Plan, a pilot project was taken up in the areas south of river Krishna in the States of Madras, Mysore, Coorg and parts of Bombay, Andhra and Hyderabad. Under this project, systematic vaccination of cattle and buffaloes with a Freeze dried goat tissue virus vaccine was taken up. To meet the demand of vaccine, a vaccine production centre was established at the Indian Veterinary Research Institute, Izatnagar. Under the pilot project, about 60 lakhs cattle and buffaloes were protected and about 75 lakhs doses of vaccine were produced.

The results of the pilot project were very encouraging and it was, therefore, decided to extend the rinderpest eradication scheme to cover the entire country during the Second Five Year Plan. From the progress so far made in the implementation of the scheme it is expected that the work may be completed in the States of Andhra Pradesh, Bihar, West Bengal, Punjab, Assam and Himachal Pradesh during the Second Five Year Plan.

In Orissa, with the present rate of inoculation, the vaccination programme is likely to be completed by the end of the second year of the Third Five Year Plan. In Bombay the programme is expected to be completed by 1963-64, and in Madhya Pradesh by the end of the 3rd Plan. In U.P. the scheme has been sanctioned only for 21 districts, as the State Government had indicated that the remaining 31 districts had already been covered by their normal departmental staff under the State mass immunisation scheme. It has been observed that the work in these districts was not done in the same manner as under the all-India scheme and quite a large number of animals were left unprotected and were not branded. To safeguard against these animals spreading the disease, it is proposed to take up the work in these districts during the Third Five Year Plan. As regards Rajasthan, the work was taken up only in October, 1958 and by the end of the Second Plan forty lakh animals are expected to be vaccinated and the balance of 70 lakh head of cattle will be vaccinated by the end of the 4th year of the Third Plan.

The progress of work in some of the States has been slower than what was expected. The main reasons for the slow progress are the late starting of the schemes, paucity of trained staff and in some areas the difficult terrain that has to be covered.

To meet the demand for vaccine in various States, six vaccine production centres have been established during the Second Plan period, at Izatnagar, Lucknow, Calcutta, Ranipet (Madras), Mhow and Hissar. As the vaccination programme will have to be continued in some of the States during the Third Five Year Plan and sufficient reserves of vaccine will have to be kept for any future emergency, all of the production centres will be continued during the Third Plan period.

For checking the ingress of the disease from neighbouring countries, under the Rinderpest Eradication Scheme in the Second Plan, a chain of quarantine check post is being established along the land frontiers of the country. These stations are in addition to the Sea Quarantine Stations. Since the Rinderpest epidemic occurs in severe form in the neighbouring countries, particularly in Nepal, Pakistan, Sikkim and Bhutan, it will be necessary to continue the land quarantine stations in future also.

As India has a very long common border with the neighbouring States of Nepal, Pakistan, Sikkim and Bhutan, it is felt that, in spite of the land quarantine stations which are being established on important cattle routes, there is the possibility of diseased animals crossing over to India through various other points. In order to safeguard against the possibility of such animals spreading the disease, efforts are being made to establish 20 to 25 miles deep immune belts along the border on the frontiers of the country. These immune belts will have to be kept tight, as they will form our strong line of defence and leakage through these might undo the good work done under the scheme.

By the end of the Third Five Year Plan it is hoped that the country will be free of rinderpest and it may not be necessary to continue the scheme further. However, the quarantine stations established under the scheme will have to be continued as a permanent feature.

19 NEW BILLS FOR LOK SABHA

The Government proposes to introduce 19 new Bills in the forthcoming session of Lok Sabha commencing on November 16, 1959.

Other business includes presentation, discussion and voting of Supplementary Demands for Grants for 1959-60. Excess Grants (Railways) for 1957-58 and Supplementary Demands for Grants (Kerala) for 1959-60.

New Bills

Among the new Bills, two relate to the betterment of children. One, the Children Bill, proposed to be referred to a Joint Committee, is to provide for the care, protection, maintenance, welfare, training, education and rehabilitation of neglected children and juvenile delinquents in the Union Territories of India. The other, the Indian Penal Code (Amendment) Bill, will provide for the prevention of kidnapping of children.

Another legislation, the Import and Export Control (Amendment) Bill will extend the life of the parent Act by five years. The Indian Tariff (Amendment) Bill, is meant to continue or discontinue protection to certain industries.

Through the Estate Duty (Amendment) Bill, the 1958 Act on the subject will be applicable to agricultural lands. Prevention of fragmentation of plantations is to be provided through the Plantations Labour (Amendment) Bill.

Two Bills will be introduced, one for Tripura and the other for Manipur, to provide for the consolidation and amendment of the law relating to land and land revenue in the respective Union Territory. The Tripura Excise Law (Repeal) Bill will also be introduced to repeal the Tripura Excise Act.

Motor Workers

The working conditions of motor transport workers are to be regulated through the Motor Transport Workers Bill. Another proposed Legislation, the Motor Vehicles (Amendment) Bill, aims at having a uniform law in regard to insurance of motor vehicles against third party risks.

Another proposed Bill is meant to amend and consolidate the law relating to legal practitioners and to provide for the constitution of Bar Councils and an All-India Bar.

The Indian Statistical Institute Bill is meant to declare the Indian Statistical Institute at Calcutta as an institution of national importance. Another proposed legislation, the Press and Registration of Books (Amendment) Bill, is meant to remove certain difficulties which have been noticed in the working of the parent Act.

Married Women's Property

The Married Women's Property (Amendment) Bill is being extended to former Part B States.

Two other Bills relate to displaced persons. The Administration of Evacuee Property (Amendment) Bill, is being brought to provide for separation of evacuee and non-evacuee beneficiaries interests in *wakf-ul-aulad* properties. The proposed Displaced Persons (Compensation and Rehabilitation) Amendment Bill is meant to remove certain difficulties experienced in the working of the compensation scheme.

The Haj Committee Bill is being brought to amend the Port Haj Committee Act, 1932, to bring it in line with the present requirements of Haj pilgrimage. Another bill the Indian Boilers (Amendment) Bill is to be introduced to enlarge the scope of the parent Act.

DELHI'S ANNUAL PLAN, 1960-61

An outlay of Rs 602 lakhs has been approved for Delhi's annual plan for 1960-61, the final year of the Second Five Year Plan. Out of the total outlay, an amount of Rs 166 lakhs is proposed to be spent on Power Projects during the year. An amount of Rs 32 lakhs has been earmarked for the Agriculture Sector. Other important items for which allocations have been made are: Social Services, Rs 257.6 lakhs which includes education, health, labour etc; Village and Small Industries, Rs 26.75 lakhs; Community Development, Rs 6.7 lakhs; and Roads, Rs 3 lakhs. A provision of Rs 108.5 lakhs has been made for the schemes of the Delhi Corporation.

The annual plan of the Delhi Administration was discussed recently in the Planning Commission with representatives of the Administration. The proposals were discussed by Working Groups constituted for each sector and their recommendations were taken into consideration while fixing the final outlay for the Annual Plan.

Delhi's Second Plan is of the magnitude of Rs 1,697 lakhs. It is estimated that the total expenditure up to the end of the financial year 1959-60 will come to about Rs 1,135 lakhs. For the year 1959-60 the outlay approved by the Planning Commission was about Rs 389 lakhs.

During 1956-57, the first year of the Second Plan, the Administration spent about Rs 250 lakhs under the Plan and during 1957-58 the expenditure came to about Rs 286 lakhs. For 1958-59 the actual expenditure is estimated to be about Rs 308 lakhs.

While finalising the outlay for the 1960-61 Annual Plan due consideration has been given to Delhi's growing needs and requirements of urbanisation.

WORK AND ORIENTATION CENTRES.

The Government of India have sanctioned the opening of twelve more work and orientation centres in different parts of the country in order to assist educated unemployed persons to seek avenues of employment other than white-collar jobs. Some of these centres are expected to start functioning shortly and the others in the course of next year. The new centres will be located in Mysore, Bombay, Madras and Punjab, each State having three. The two existing centres are at Delhi and in Kerala.

Although the work and orientation centres were started in Kerala and Delhi, on a pilot basis, early in 1957, the scheme was revised later as experience of working of the two centres had shown that it had not been possible for the trainees to establish independent business and that they were not able to acquire much of the skill which was imparted in the Industrial Training institutes and centres.

Revised Scheme.

The scheme has accordingly been revised to provide or a period of trade training equivalent to that industrial training institutes viz. 18 months institutional training followed by six months in-plant training. The latter training, which is being arranged in collaboration with the Small Scale Industries Organisation of the Ministry of Commerce and Industry, will help the trainees to learn, among other things, the practical problems of management and production which will assist them in launching out as private entrepreneurs.

Each of the centres will have 100 seats and admission will be restricted to persons who have read up to Intermediate. Among the trades in which training will be given are: fitter, electrician, radio mechanic, linesman, carpenter and electroplater.

HANDICRAFT EXPORTS INCREASE

Handicrafts worth about Rs 3.6 crores were exported during the first half of 1959. A sizeable increase in exports during the second half of the year is expected on account of Christmas and other seasonal demands. During the whole of last year, export earnings on account of handicrafts had amounted to Rs 6.67 crores.

The Indian Handicrafts Development Corporation has taken a number of measures to stimulate exports. Loans to the tune of Rs. 6 lakhs have been advanced by the Corporation to handicraft exporters and manufacturers to carry out firm orders from abroad. The Corporation is helpnig manufacturers in procuring raw materials at reasonable prices. Information about the market trends and changing tastes in foreign countries is communicated to manufacturers.

The Corporation has made a beginning in developing the Far Eastern markets, in collaboration with the Handloom Fabrics Marketing Co-operative Society which has sales depots in several Asian and African countries. The trade centres set up by Government in foreign countries are also being made use of for export promotion of handicrafts. A choice variety of Indian handicrafts, of particular interest to Germany and Scandinavian countries, was exhibited at the trade centre in Frankfurt recently.

FURTHER SCHEMES OF DRAW-BACK GRANTED.

Increase in rate of drawback for export of steel products as a measure of export promotion, the Government of India have decided to allow drawback of Customs and Central Excise Duty paid on materials used in the manufacture of "artificial teeth", "provisions" and "refrigerators".

The rate of drawback for exports of steel products has been increased from Rs 50 per ton to Rs 52 per ton.

For further particulars and for advice regarding the procedure for obtaining these concessions, exporters are advised to consult the Custom Houses at the ports from which the goods are to be exported.

SELLING PRICE OF CAUSTIC SODA

The Government of India have, on the recommendation of the Tariff Commission, fixed ceilings for the selling prices of caustic soda, chlorine and hydro-chloric acid.

After examination of the cost of production of caustic soda in all forms and of allied products in representative units, the Tariff Commission, in its report, had recommended fair selling prices which would be in force till December 1960.

The Tariff Commission had recommended (1) the fair selling price of used solid caustic soda should be Rs 35 per cwt.; (2) the fair selling price of caustic lye on the basis of 100% NAOH content should be Rs 25.80 per cwt., the price will include filling charges but not the cost of rental of containers; (3) the fair selling price of caustic soda flakes to be Rs 40 per cwt.; (4) the fair exworks price of dry gas chlorine, naked, supplied for the manufacture of chlorinated products within the factory or in adjacent units to be Rs 13 per cwt.; (5) the fair selling price of liquid chlorine in returnable containers inclusive of filling charges to be Rs 22.20 per cwt. and (6) the fair selling price of commercial grade hydrochloric acid, naked, inclusive of filling charges to be Rs 10.80 per cwt.

At the suggestion of the Government, the Tariff Commission again examined the advantages of sale of caustic soda in liquid form. The production of caustic soda lye led to substantial saving in fuel as well as steel, which were needed for packing the solid caustic soda in drums. Moreover, this could also be transported in tank wagons. The tariff commission, after considering this matter had suggested that the fair selling prices of caustic soda lye might be fixed at Rs 29 per cwt. on 100% strength basis in the form of liquid. In the case of solid and flakes, the price would be for material of purity of ISI specifications.

The Government of India have accepted all the recommendations of the Tariff Commission with the modification regarding the fair selling price of caustic soda lye. These prices are ceilings for selling prices for purchases ex-factory either directly or through agents or distributors of the manufacturers and will be effective from October 27, 1959.

Selling Price of Bleaching Powder

As regards Bleaching Powder, the Tariff Commission had recommended the fair selling price to be Rs 24.20 per cwt and that this price should be applied both to stable and unstable bleaching powder. In order to reduce the gap between the fair selling price of domestic bleaching powder and that of the imported product, the Tariff Commission had recommended that the Government should consider the possibility of permitting imports of bleaching powder free of duty. If this suggestion was not acceptable, a pool, operated by the State Trading Corporation would be the only way of reconciling the two disparate prices. The State Trading Corporation should acquire the entire indigenous production of bleaching powder at the fair ex-works price of Rs 23.20 per cwt., pool the imported and indigenous product and sell it through established distributors at a fair average price after providing for administrative charges and selling commission.

This recommendation is under examination and the Government's decision will be announced in due course.

INDIAN STANDARD FOR CALCIUM CHLORIDE

A Standard for Calcium chloride, Technical (IS: 1334-1918) has been issued by the Indian Standards Institution.

Calcium chloride, technical, is used by the refrigeration and ice manufacturing industries for making brine and in the chemical industry as a raw material. It is also used for purpose of spraying on the road surface as an accelerative of concrete and in the curing of concrete.

The country's major requirements of this material are met by indigenous production. The Tariff Commission, while going into the question of continuance of protection to this industry, had felt that there was room for improvement of quality of indigenous production. This standard has been prepared to assist in manufacturing a product of acceptable quality.

Copies of the Standard are available from the Indian Standards Institution, New Delhi or from its branch offices at Bombay, Calcutta and Madras.

REBATE OF EXCISE DUTY EXTENDED TO EXPORTED COTTON HANDKERCHIEFS.

The Government of India have decided to extend the procedure under rule 191-a of the Central Excise Rules, 1944, for export out of India of articles under claim for rebate of duty on the excisable goods used in their manufacture, to cotton handkerchiefs as well. It is already applicable to ready-made apparel, tents, sugar products, cotton bags, umbrellas, chaddars, pillow cases, table covers and several other articles.

It has also been decided to permit the manufacture in bond of cotton handkerchiefs for the purpose of export, under rule 191-b of the said rules.

Manufacture of cotton handkerchiefs who wish to export them out of India under these procedures, may contact the Collectors of Central Excise in whose jurisdiction their factory is situated for further detailed information.

AUDIO-VISUAL LIBRARY SERVICE

An audio-visual library of 300 films illustrating up-to-date scientific methods of running industrial undertakings has been organised by the Development Wing in the Union Ministry of Commerce and Industry.

The films depict industrial techniques such as time-and-motion study, personnel management, material handling, plant layout, production and process control, etc. adopted in the advanced countries to achieve greater productivity. Films relating to improved techniques in specific industries e.g. better methods of processing plastic materials, modern techniques of welding in engineering industries, safety measures in hazardous industries like mining, modern practices in metal industry, leather works, electric meters etc are also available in the library.

The services of the audio-visual library will be available to industrial undertakings and associations and technical institutions.

COTTON TEXTILE PRODUCTION

The cotton textile mills production for September, 1959 amounted to 148 million lbs of yarn and 412 million yards of cloth, equivalent to about 2.75 lakh bales of cloth. At the end of September 1959, the composite units of cotton textile industry carried a total stock of 6.73 lakh bales of cloth, comprising 1.81 lakh bales of unsold cloth and 1.92 lakh bales of cloth sold, but not lifted.

The total production during the first nine months of the current year was 1,279 million lbs of yarn and 3,686 million yards of cloth. The corresponding figure for the first nine months of 1957 and 1958 were 1,336 and 1,258 million lbs of yarn and 4,032 and 3,690 million yards of cloth respectively.

The production for the month of October 1959 was provisionally estimated at 146 million lbs of yarn and 412 million yards of cloth. The estimated stock of cloth with the mills at the end of October, 1959 worked out to a total of 3.35 lakh bales made up of 1.56 lakh bales of unsold cloth and 1.79 lakh bales of cloth sold, but not lifted.

EXPENDITURE AND WEALTH TAXES.

The Finance Minister, Mr Morarji Desai said in the Lok Sabha that the number of assessees registered in 1959-60 under the Expenditure Tax Act, was 7,767 up to September 30, 1959. He said the amount of tax levied from April 1, 1959 to September 30, 1959 was Rs 20.12 lakhs.

The Finance Minister, who replied to two questions by Mr D. C. Sharma said that the total amount of wealth tax collected during 1959-60 up to September 30, 1959 was Rs 1,58,13,900.

DISPUTE BETWEEN BANKERS AND EMPLOYEES METHOD OF SETTLEMENT UNDER CONSIDERATION.

Asked whether Government proposed to entrust the question of amending the Bank Award to a Commission to be appointed under the Commissions of Inquiry Act, 1952, the Union Deputy Minister for Labour, Mr Abid Ali, told Rajya Sabha that the method to be adopted for the settlement of the dispute between bankers and their employees was under consideration.

Mr Abid Ali was replying to a question by Mr Perath Narayanan Nair, Dr A. Subba Ram and Mr P. A. Solomon.

young Rajendra Kumar and his colleagues are being trained for Durgapur steelworks

Twenty-three year old Rajendra Kumar Bhandari is a long way away from his home in New Delhi. He is in the U.K. at the Abbey Melting Shop of the Steel Company of Wales, taking drilled samples of metal from the ladle trunnion and casting. Rajendra is one of the 300 young trainees taking specialised courses in various steel factories in the U.K. Upon completion of their training, the Indian technicians will come back to India, fully equipped to shoulder their responsibilities in the steelworks at Durgapur. In addition to technicians, ISCON is also helping to train up managerial personnel, who are given advanced management courses in the U.K. before they assume their positions at Durgapur.

(Phone No. 22-6263)
It's the oldest of all the Scheduled Banks founded in the State of Mysore!

FOR THE INVESTOR

Lack of Support

Investment Gossip:

The Stock market continues to rule easy with the more speculative counters in general and Indian Iron in particular, losing further ground during the past week.

The reactionary tendency has stemmed mainly from the IISCO Chairman's statement which seems to have left a deep impression on the minds of marketmen.

The fact that the pivotal scrip has given way under bear pressure has had an unnerving effect on the rest of the market. Bears have had no difficulty in strengthening their hold as there is no dearth of the so-called adverse factors.

The border situation, possibility of increased taxation as a result of heavy outlay on defence, Government's decision on the Pay Commission's recommendations, Friday's announcement on paper prices and the whispering campaign that equities have already been over-priced are some of the points that are being pressed into service by bears to scare away prospective buyers. The fact that Mr Morarji Desai is due to address the Associated Chambers in Calcutta to-morrow has also called for a cautious approach.

The market has, however, staged a slight rally on Friday and it would appear that the constructive forces are once again taking the initiative. Presumably some have not failed to note that Mr Nehru has once again reiterated Government's intention to foster the growth of private enterprise. In his monthly press conference, the Prime Minister has said that Government would not touch those industries in category 'A' that are being carried on already by Private sector, and that he wants to give private enterprise the widest possible scope for development. Referring to the need for mobilising resources he has observed: "It had to be seen, therefore, how much burden the people could carry without breaking down or weakening the nation".

£R$

The Indian Iron Accounts

Investment Special:

SALES of Indian Iron & Steel Co Ltd during 1958-59 have recorded a considerable increase from Rs 30.10 crores to Rs 38.99 crores. Departmental orders, etc., also account for a rise from Rs 4.94 crores to Rs 6.03 crores. The third head, as relating to the profit and loss account on the income side, under which there is a significant entry is the amount of nearly Rs 1 crore, at Rs 98.60 lakhs, being the sum written back from General Development Reserve; this represents the excess between the provision made for Development Rebate and the company's tax saving in respect of Development Rebate. The total income has risen smartly by more than 25 per cent from Rs 41.76 crores to Rs 52.88 crores.

Main heads of expenditure have by no means risen proportionately. Stores and Spare Parts consumed goes up from Rs 4.61 crores to Rs 5.76 crores; purchase of raw materials from Rs 7.74 crores to Rs 9.45 crores; other manufacturing expenses from Rs 4.94 crores to Rs 7.20 crores; and salaries and wages from Rs 7.94 crores to Rs 9.00 crores.

Total provisions have been marked up, though the amount absorbed by tax has shrunk almost to nothing. Provision for Repairs and Renewals goes up from Rs 1.91 crores to Rs 3.36 crores; for Depreciation from Rs 1.40 crores to Rs 2 crores; and for Development Rebate Reserve from Rs 1.05 crores to Rs 3.15 crores. On the other hand, there is no provision for tax against Rs 1.34 crores; wealth tax takes up less at Rs 18.62 lakhs against Rs 26.13 lakhs; the reserve for tax contingencies gets nil as compared with Rs 41 lakhs; and the transfers to Development Rebate Reserve and General Reserve have been skipped, against Rs 16.50 lakhs and Rs 32.97 lakhs respectively provided in the earlier year. Two transfers that have been maintained are to transfers, to the Reserve for Plant Rehabilitation at Rs 45.10 lakhs and to General Development Reserve at Rs 1 crore. The balance carried down is Rs 17.49 lakhs against Rs 17.98 lakhs.

A write back of Rs 1 crore has been made from Works and Ore Mines New Extensions Reserve for payment of dividends on which shareholders could get credit for tax grossing up. After payment of dividends, the amount carried forward is Rs 10.27 lakhs as compared with Rs 9.94 lakhs brought in from the previous year.

Now, as to the balance-sheet in its broad details. Against the subscribed capital inclusive of share premium account, of Rs 15.50 crores, the reserves and surplus, which have risen by Rs 3.14 crores over the year, are placed at Rs 17.94 crores. Ordinary capital, which has gone up as a result of capitalisation from share premium account, is shown at Rs 12.44 crores. Secured loans are higher by nearly Rs 5 crores, in rising from Rs 17.80 crores to Rs 22.51 crores. Wholly responsible for this rise is the increase in drawings from the IBRD, which have mounted from the rupee equivalent of Rs 13.48 crores to Rs 18.10 crores. The unsecured advance from Government is unchanged at Rs 10.18 crores. Current liabilities are nearly Rs 6 crores higher at Rs 23.37 crores against Rs 17.41 crores; and this, again, is due almost to one factor alone, sundry creditors, which have been marked up from Rs 11.28 crores to Rs 17.88 crores.

On the Assets side, there have been tremendous additions to block; the net block has almost doubled from Rs 23.56 crores to Rs 46.15 crores. The bulk of the increase is in the Burnpur iron section, additions in respect of which amount to Rs 18.46 crores. The Burnpur Steel Section also shows additions of the value of Rs 5.22 crores.

Capital Work-in-progress is rather lower at Rs 5.68 crores against Rs 14.75 crores. With 1958-59, the Directors' Report points out that the "1953 Extension Programme may be regarded as completed".

£R$

Investment Briefs:

Ballarpur Paper has declared a dividend of 10 per cent, taxable, for the year ended 30th June, 1959. The arrears of dividend for 1958 and the dividend for the year under reference have also been declared on the Preference shares at 5 per cent, tax-free.

Gwalior Rayon has announced an interim dividend of 80 nP per share, subject to tax, for the year ended 31st March, 1960. This works out to a net interim dividend of 56 nP per share.

Kirloskar Electric has raised the dividend from 7½ to 10 per cent for the year ended 30th June, 1959.

Woodcote Estates have announced that all outstanding Debentures will be redeemable, at par, on the 31st December 1959 after which they will cease to carry interest.

Textool has raised the dividend from 12 to 15 per cent (taxable) for the year ended 30th April 1959. It is proposed to make a new issue.

As per American orders so far received for export of the Indian handloom textiles, particularly of the variety called "Madras Bleed", the expectation is that export of handloom to America will have reached a new high this year.

During 1958, Indian handloom export was 35,167,000 yards valued at Rs 52,352,000. Up to August end 1959, cloth exported stood at more than 20,500,000 yards valued at Rs 34,757,000.

Up to July 1959, the number of handlooms registered in the country is of the order of 2,794,991. Of this, 1,119,086 are in the cooperative field.

The total estimated production in 1958 stood at 1,820 million yards. Up to the end of August 1959, the estimate was 1,248 million yards.

Orient Paper Fares Well

Balance-Sheet Reviews:

THE Orient Paper Mills Limited has reported encouraging working results for the year ended 31st March, 1959. The gross profit has shown arise from Rs 1.37 crores to Is 1.56 crores with sales higher by Rs 1.60 crores at Rs 6.98 crores. The net profit, after providing Rs 51.00 lakhs (Rs 50 lakhs) for Depreciation; Rs 30.65 lakhs (Rs 38 lakhs) for Taxation and Rs 30.65 lakhs (Rs 12 lakhs) for Development Rebate Reserve, amounts to Rs 28.76 lakhs against Rs 26.80 lakhs in the previous year. The dividend on the Ordinary shares is maintained at Rs 1.50 per share. The carry-over to next year is higher at Rs 1.69 lakhs against Rs 1.20 lakhs brought in.

Although production has increased, the rated production capacity could not be obtained due to troubles in the Soda recovery plant and short supply of caustic soda. It is expected that the position will improve in the current year. The renovated Board plant and some auxiliary and subsidiary plants have been commissioned.

While the directors visualise better production prospects and improved efficiency, they have struck a discordant note as a result of the illegal labour strike in April this year, which was, however, called off unconditionally in June, 1959. The effect of this strike will, therefore, be reflected in the current year's results. The modernisation programme is also said to have received a setback, as the various matters in dispute are now pending before the Labour Tribunal.

£R$

Belapur Sugar

The working of the Belapur Company Limited has resulted in lower profits for the year ended 30th September 1959, the gross profit amounting to Rs 48.16 lakhs against Rs 57.04 lakhs in the previous year. After setting aside a sum of Rs 3.07 lakhs for Depreciation, transferred to Depreciation Reserve, (Rs 2.75 lakhs); Rs 22,627 for Depreciation (Rs 1,514); Rs 37,500 for Development Rebate Reserve (nil); Rs 4.50 lakhs for managing agents' commission (Rs 5.40 lakhs) and Rs 12.50 lakhs for Taxation (Rs 17.25 lakhs), the net profit amounts to Rs 27.45 lakhs against Rs 31.61 lakhs in the previous year. The allocation to the Reserve Fund, which claimed Rs 11.80 lakhs in the preceding year, has been skipped. Sales of sugar have dropped from Rs 2.16 crores to Rs 2.02 crores.

The production of sugar was lower, as the quantity of cane available from the company s estate was less than in the previous year by nearly 16 per cent. There were no purchases of cane from outside sources, as this was not available.

for the year ended 30th June, 1959, sales having shown a rise to Rs 3.38 crores from Rs 3.32 crores. The net profit, after providing for Depreciation and Taxation, amounts to as much as Rs 17.17 lakhs against only Rs 11.21 lakhs in the previous year.

In the previous year's accounts, a provision for Special Depreciation amounting to Rs 6.33 lakhs on the assets of the company was made. But, as the same is not permissible under the Finance Act 1959, a lesser provision of depreciation of Rs 5.25 lakhs has been made against Rs 17.25 lakhs in the previous year. The *Taxation provision is* raised to Rs 10.35 lakhs from Rs 3.00 lakhs. A sum of Rs 17 lakhs has been transferred from Development Rebate Reserve to General Reserve, leaving a balance of Rs 2.50 lakhs. An appropriation of Rs 1.50 lakhs has been made for Development Rebate, which will adequately cover 75 per cent of the Rebate to which the company will be entitled under the Finance Act. General Reserve is allocated Rs 5 lakhs against nil. The dividend on the Ordinary shares is raised to Rs 21.50 from Rs 15.00 per share.

£ R$

Sutlej Cotton

The working of the Sutlej Cotton Mills Limited for the year ended 31st March, 1959, is satisfactory, though the gross earnings have shown a slight fall over the previous year. Before providing for Depreciation, Development Rebate Reserve, Taxation and Miscellaneous Reserves, the profit works out to Rs 51.58 lakhs against Rs 57.28 lakhs in the previous year. After providing Rs 7.79 lakhs (Rs 4.94 lakhs) for Depreciation; Rs 383 (nil) for Depelopment Rebate Reserve; Rs 33.86 lakhs (Rs 41.57 lakhs) for Taxation and Rs 1,800 (nil) for Miscellaneous Reserves, the net profit is slightly higher at Rs 9.89 lakhs against Rs 9.76 lakhs in the previous year. The dividend is maintained at Rs 6 per equity share.

£ R$

New Victoria Mills

The working of the New Victoria Mills Company Limited, Kanpur, has resulted in a loss of Rs 22.31 lakhs for 1958 as against Rs 11.96 lakhs in the previous year, after providing Rs 6.82 lakhs for Depreciation against Rs 5.93 lakhs. Sales have improved from Rs 2.33 crores to Rs 2.71 crores. A debit balance of Rs 40.33 lakhs is carried forward to next year.

The Directors state that the mills engaged in the manufacture of coarse and medium grey cloth in the Uttar Pradesh area were hard hit by the impact of cost inflation and fall in demand.

£ R$

Raza Textiles

The working of the Raza Textiles Limited, Rampur, has resulted in a loss of Rs 21.68 lakhs for the year 1958 against Rs 9.97 lakhs in the preceding year after providing Rs 4.88 lakhs for Depreciation against Rs 5.27 lakhs. After making adjustments, a debit balance of Rs 30.83 lakhs is carried forward.

£ R$

Sijua (Jherria) Electric

Despite a decline in earnings, the Sijua (Jherria) Electric Supply Company Limited has raised the dividend from 68 nP to 75 nP per share for the year ended 31st March, 1959. Total units sold are higher at 106.7 million against 103.6 million, while sales of energy have risen to Rs 63.92 lakhs from Rs 59.27 lakhs. The net profit, after providing for Depreciation and Taxation, amounts to Rs 1.74 lakhs against as much as Rs 2.46 lakhs in the previous year.

In respect of allocations, the Debenture Redemption Reserve is maintained at Rs 60,000. A sum of Rs 1.45 lakhs (Rs 1.36 lakhs) is provided for Depreciation; Rs 1.55 lakhs (Rs 1.60 lakhs) for Taxation; Rs 13,500 (Rs 14,000) for Wealth Tax and Rs 1,040 (Rs 934) for General Reserve. No provisions are made for Development Reserve and Capital Reserve against Rs 34,347 and Rs 2,000 respectively allotted against these items in the previous year.

£ R$

Hindustan Construction

The Hindustan Construction Company Limited has earned a profit of Rs 24.37 lakhs for the year ended 31st August 1959 against Rs 15.22 lakhs in the previous year after providing Rs 1.72 lakhs for Depreciation (Rs 46,544); Rs 14.54 lakhs for Development Rebate Reserve (Rs 26.08 lakhs); Rs 5.29 lakhs for Business Profits Tax (nil) and Rs 25 lakhs for Taxation (Rs 21.50 lakhs). The provision for foreign taxation amounts to Rs 14 lakhs against Rs 8.50 lakhs. A sum of Rs 1.22 lakhs is carried forward against Rs 1.21 lakhs brought in.

The directors report that the company has secured works in connection with the construction of the Perambur Coach Factory near Madras and also a number of bridges in Assam.

"The Wise Man in his attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right"—The Analects of Confucius.

A Memorable Debate

PARLIAMENT is not exactly a substitute for the psychiatrist's couch, and yet the most important gain of last week's Lok Sabha debate on Sino-Indian relations was the psychological one of catharsis. The almost universal sense of uneasiness over the border incidents and their sequels had little to do with the logical deficiencies in the policies pursued. Indeed, speaker after speaker, in last week's debate, conceded that there was hardly any alternative, in broad terms, to those enunciated and followed by Mr Nehru. But, until last week's debate, every one, including the Prime Minister, was feeling some unspecified inadequacy. Mr Nehru, who has an almost radar-like sensitiveness to popular mood, seems to have felt that he was not completely en rapport with the feeling in the country. This sense of disharmony expressed itself obliquely in his rather inchoate irritation at criticism and in his exaggerated fear that such criticism might give the impression abroad that we were weak and divided. Critics of Government policy had their own unavowed psychological difficulties. Somehow and despite appearances, they seem to have felt that not everything that should be done was being done. The debate gave everyone a chance to work off some of these unlocalised and undefined difficulties. For Authority, the occasion gave the chance to get over some of its own sense of guilt at having been too trustful in the past. Thus freed, its new mood of high and serene resolve was given expression to in one of Mr Nehru's most memorable performances. Opponents of Government policy, too, had the opportunity to get off their chest some of their particular phobias and pet aversions. With the psychological burden lightened, they were readier to feel comforted by Mr Nehu's reassurances. It is clear from the tone and content of Mr Nehru's second speech that he has been able to see more clearly the springs of the fears of his critics. There was a new understanding of the depth and complexity of the feeling in the country in his appeal for unity. Likewise, critics of Government have gained a deeper appreciation of the reasonableness of Mr Nehru's request that, as the instrument of national will, he should not be asked to blunt himself indiscriminately. Psychologically, therefore, the debate has served the wholesome purpose of rallying the country and it would be hard to exaggerate its effect on the morale of the country.

Whatever one may have thought of Mr Nehru's attitude to the question before, there is no room for doubt now that he considers the threat posed by China as the "greatest in our history". He has no illusions about China's expansionist ambitions, which he related not only to history but also to current economic realities, like its growing population and urge for industrialisation. He spoke of his sense of being on the "edge of history" and of his feeling that the Chinese acts have pushed us to a peak from which we may have to take the "plunge—one way or the other." How seriously he viewed the threat was shown by that, for him, as to so many of his countrymen, must have been crucial and heart-breaking decision: the willingness to let economic development take a second place in our priorities. In a stirring passage, he expressed himself as proud of his country's reaction to the events and uttered the grim warning that, should the choice be forced, India would become a "nation in arms". He also gave the assurance, though he could not for obvious reasons give details, that the defence of the country was in safe hands.

On a purely logical level, there was hardly any difference between the Government and the principal opposition members. Indeed, Mr Kripalani's grievance was that he and his party were being pilloried for views that they never professed. Thus, he said, his party does not want to stampede the country into a war with China. Nor does his party want the abandonment of the policy of non-alignment. In his analysis, Mr Nehru rightly saw the Chinese expansionism as a problem **sui generis** and unrelated to the rest of the current of world affairs. In this, he significantly differed from those who analysed the Chinese aggressiveness in terms of ideology. Insofar as ideology figures in the argument at all, it does so because China has become an ideological backwater and the seat of a kind of Communist Byzantism. For, insofar as the Chinese actions have an ideological motivation, it is, ironically, a motivation that Soviet Russia itself has apparently abandoned in the recent past. Mr Nehru did not make any bones about his view that "there is hardly any country in the world today which cares less for peace than China". He interestingly contrasted this with the attitude of the Soviet Union than which, even according to its opponents, there is hardly any country more anxious for peace today.

It is the unique nature of the Chinese threat that leaves the argument in favour of non-alignment intact. It is interesting that both the Soviet Union and the US—the latter, rather surprisingly, in view of its self-conscious anti-Communism until lately—have ostentatiously dissociated themselves from this quarrel. This is the direct consequence of India's policy of non-involvement in power blocks. What a great blessing this has been to the world will be realised if one visualised for a moment what would have happened if India had been a member of the Seato. It could, quite conceivably, have precipitated a war between the Soviet Union and the US. In our immediate preoccupation with the direct consequences of Chinese aggression, we may have little thought for these wider issues, but this circumstance is a major international mercy for which we have to be thankful.

Even from a narrower view of national self interest, it is folly not to isolate the Sino-Indian issues from the broader aspect of foreign policy. The moment we give them a wider context, we shall be alienating a whole group of friendly nations who have, out of genuine respect for our independence, kept out of the dispute. This they have done at considerable self-denial involving a limited abandonment of a solidarity that they have used for wresting diplomatic and propagandist advantages. To the Soviet Union and Mr Khrushchev in particular, the present attitude must have involved considerable risk, since both have to reckon with a hard core of smouldering ideological orthodoxy that is still not wholly extinct. Indeed, in the internecine power-struggle within the Soviet Union and within the Communist world, the attitude of the Soviet Union on this issue may well constitute a decisive stand. It is hardly likely that Mr Khrushchev would have taken the attitude he has if our independence had been less sturdy. In other words, far from being proved misguided, the policy of non-involvement has been most completely vindicated by the international reactions to the current Sino-Indian disputes.

Some critics of Government have mixed up the non-involvement strand of our foreign policy with the "Pancha Sheela" strand. This shows a basic misunderstanding. Pancha Sheela is a code of international conduct, enunciated, ironically enough, for the first time in a joint Sino-Indian declaration. The fact that the Chinese have chosen to break it is really no argument for a ceremonious abandonment of it. As far as our relations with China are concerned, it is obvious that Pancha Sheela has no meaning, except insofar as it implies our doing our duty to ourselves and defending our territorial integrity. This, of course, needs no ulterior justification, but should one be needed, Pancha Sheela itself provides it by implication.

And readiness to negotiate a settlement has even less need of an apology. The word "appeasement" has been bandied about in this context without any regard even to its dictionary meaning. Appeasement can arise only when specific concessions of a permanent nature are cravenly conceded in order to purchase a monetary advantage. By hypothesis, it can arise only when negotiation has started. Considering that the Chinese thoughts are farthest from conference table, accusations of appeasement are meaningless.

On the broad lines of policy to which the Government are committed, Mr Nehru left no one in doubt. He also showed himself vividly aware of his responsibilities in the matter. Indeed, by linking India's defence with that of not only Bhutan and Sikkim but also of Nepal, he showed how deeply he was committed in the matter. Neither the country nor the Chinese can now have any doubt about how seriously Mr Nehru views the threat posed by China and about his determination to meet it.

Mr Nehru is therefore surely right in insisting that the border incidents have in no way affected India's foreign policy line of non-alignment. India will continue to flourish dynamic neutralism in international politics. But, of course, amour propre has been hurt, but the danger that we must avoid, as we will avoid in view of Mr Nehru's clear stand, is being provoked to giving up non-involvement. It may be that the border skirmishes will prove to be a blessing in disguise—if they have the effect of making us forget our narrow parochial problems and instead of uniting the country in its bid to achieve industrial progress.

Complementarity and the "Big Push"

T was a rich and varied fare, some palatable and some not so very palatable to Indian businessmen, that was provided by the eminent guest speakers at the three luncheon meetings of the recent Seminar on Planning organised by the Federation of Indian Chambers of Commerce and Industry. Of the few disagreeable things they said, the reference to taxation was, of course, understandable, though easily the most controversial. Both Dr P. S. Lokanathan and Mr G. L. Mehta, for example, were in virtual agreement on the point that taxation was not so unduly high that, by itself, it could inhibit investment; here, while the former referred approvingly to "the necessary taxation," adding that "taxes can undoubtedly be increased, especially in the agricultural sector," the latter was even more blunt in his remark that "if taxes were too high, then I do not see what tax relief has been given in the past year to justify the revival that seems to be taking place, to justify going ahead—as so many are—with both small and very large schemes of investment." Even if, as some businessmen thought, taxation was unduly high, it could not possibly be avoided in the context of some incipient threats to internal and external security. In any case, there was the compensating circumstance that public investment stimulated private investment to an extent greater than what many businessmen would recognise ungrudgingly.

On this latter point of complementarity between the public sector and the private sector, both Dr Lokanathan and Professor Max Millikan were in full agreement. Here, of course, Mr Mehta seemed to strike somewhat different note. But, then, even his criticism that, "under the pressure of circumstances the complementarity which was supposed to exist between public and private activities has given way to competition," which contradicted in a way Dr Lokanathan's observation that "public investment broadens the economic base, provides overhead services which increase the rate of return on private investment and stimulates private investment directly by increasing the demand generated by the economic overhead," was made only in the context of the 1957-59 crisis on the resources front. That it did not amount to a refutation of the theory of complementarity as such could be inferred from Mr Mehta's later observation that "the policies and actions of Government are a stimulant to private activity and are helping to create an environment which promotes private industrial investment." Obviously, Mr Mehta could not have said what he did not mean, especially when he set so much store by the possible inflow of private foreign capital into India.

While, thus, all the three speakers were broadly agreed on this aspect of sectoral harmony, it was left to Professor Millikan (Director of the Centre for International Studies in the Massachusetts Institute of Technology) to deal elaborately with the complementarities of what are presented as alternatives in the less developed countries—"the alleged choices," as he called them, between agriculture and industry, small industry and big industry, consumer goods and producer goods, private sector and public sector, domestic financing and foreign financing, and private foreign investment and public foreign investment. The American economist's argument was that too much attention to alternatives on the mistaken assumption that "scarce" means were "fixed" led one to neglect the complementary relations between superficially competing things. One could, of course, roughly figure out these complementarities, but it was revealing to hear professor Millikan present some of them in their applicability to the Indian situation.

The complementarities of income and supply between agriculture and industry, for example, would mean that rising incomes in industrial production must be accompanied by rising agricultural production; over the long run, inputs into agriculture must be domestically produced in their entirety, and that would mean greater industrialisation. As for the complementarity between small industry and big industry, it could be seen that, while large industries provided much scope for the development of small industries, the latter, in their turn, made it possible for the former to operate more fully and efficiently. The complementarity between consumer goods and producer goods meant that more of the former would have to be produced and exported to finance the imports of the latter because producer goods industries, with ther capital-intensive character, took more time to develop.

While the income and supply complementarities between the private sector and the public sector were also very much there, the emergence of some competition—a purely temporary phenomenon—between them was due to the circumstance that poor agricultural performance set limits to the availability of real resources and also due to the circumstance of foreign exchange scarcity. But, here, the continuing availability of PL 480 food as an insurance against domestic inflation till such time as agriculture could be put on its feet again during the Third Plan period, and the poor prospect of large-scale substitution, in the next five or ten years, of certain specific imports by domestic production would reinforce the complementarity between domestic financing and foreign financing. Even in the field of foreign financing, there was a certain complementarity between public capital and private capital in the sense that, if the public sector was denied adequate foreign exchange, import and exchange controls would discourage both private enterprise and the inflow of private foreign capital. On the other hand, more public foreign capital for the public sector in India would stimulate the private sector much better and thus attract more private foreign capital to the country.

If these and other complementarities of the supposedly alternative choices were recognised in all their impressive range, the conventional attitude of treating resources as something inflexible would recede to the background and be there only in a broad, relative sense. But, then, if these complementarities have thus far been partly or wholly ignored, there is the excuse that they do not operate quite massively and evidently so long as an underdeveloped country is by no means trying to do too much. Since, with too little, the complementarities do not operate quite impressively, the effort to do several things together would bring forth unsuspected additional resources inasmuch as the whole is greater than the sum of its parts. India does not have the time and the right conditions to wait for development occurring piecemeal by marginal increments, neglecting complementarities. It has to do, in the opinion of Professor Millikan, simultaneously many things each of which, by itself, would not pay but all of which, taken together, would. This approach is supported by the theory of the "big push" (comparable to Mr Rostow's "take-off" theory) on which Professor Rosenstein-Rodan has been working for some time now in the United States.

If this concept of the "big push" is accepted in India in all its implications—as it well may be because our own plans have been broadly conceived, though not always strictly implemented, on comparable lines—it would mean doing more of everything than conventional finance would lead us to do. Such bold and imaginative planning would also have the merit of evoking greater response by way of foreign aid, especially from the United States where there is now a fuller understanding of the hitherto intractable problems of planning in underdeveloped countries. There is here, as far as India is concerned, the handy availability of vast untapped resources in manpower, skills and energies, and even unutilised capacities in industry, all of which could be mobilised, given the right kind of stimuli, in support of a "big push" which could produce an ascending spiral of more income, more consumption and more savings at the same time. Even PL 480 food, for example, can be utilised for producing more domestic food even in the short run in a whole range of labour-intensive projects connected with irrigation, reclamation, afforestation, and the like. The possibilities of the "big push" are truly immense, and many in this country would therefore eagerly look forward to the possible early publication of Professor Rosenstein-Rodan's thesis in all its economic and statistical bearings. That surely would silence the Cassandras and the pessimists of this country and strengthen the hands of its planners in a more cogent and reasoned way.

Pay Commission: Implications

WHILE the Pay Commission's report, a massive volume that runs to 640 pages, and their recommendations, a summary in respect of which alone comes to 30 pages, cannot be analysed offhand, we may take this opportunity of assessing the implications in so far as Government budgetting of the immediate future is concerned. The additional cost to the exchequer will not be inconsiderable; and Civil Administration may thus be expected to drain away some more money from plan purposes. Similarly, the border situation will necessitate a lager expenditure on defence, and this, again, will reduce moneys available for disbursement on plan outlays.

The immediate prospect may well be that the Central Government will be compelled to raise additional revenues from taxation in their Budget for 1960-61. This is unfortunate, since the tax effort for the Second Plan has not only been already achieved but even exceeded. However, it seems plain that, in the sphere of direct taxation, there is little that Government can do either by way of new imposts or by way of higher rates. So, it seems likely that Government will rely upon excises for, perhaps, an additional Rs 30 crores of revenue during the next financial year.

But the lager demand will be in regard to defence. It is unlikely in the extreme that the increase in the expenditure under this head is capable of being fully covered by additional taxation. We presume that Government will plan on larger realisations from their borrowing programmes. It is also possible that, having regard to the generally not unfavourable price situation during the current year, the reliance on deficit financing will be increased.

Meantime, it is as well that Government should take stock of the impact of the new rate of corporate taxation. It seems clear that the new rates will prevent many companies from maintaining the effective return to shareholders. As such, since the Finance Minister earlier this year insisted that he did not intend to increase his revenues with his new structure, it may be proper for Government to consider a reduction in the rate.

EDITORIAL NOTES

Alloy Steel

The electric steel-melting furnace opened last week by the Defence Minister at the Metal and Steel Factory, Ichapore, will help to close a big gap in the country's inventory of vital industrial materials. The furnace has a capacity of 60 tons per day of high alloy steel, which will be used mainly for defence service stores. Hitherto there was very little capacity in the country for the production of special steels, except for an annual production of 2000 to 3000 tons. During the last war special steels required for the war effort were manufactured at the Tata Iron & Steel Works at Jamshedpur under special arrangements. But the manufacture was not kept up after the termination of hostilities.

While the Second Plan had fixed overall targets for a substantial increase in steel output, it is only lately that the planners have woken up to the importance of making adequate provision for manufacture of tool and alloy steels. The import of these varieties during 1958 amounted to 26,013 tons, valued at Rs 4,74,79,849. Though the quantity may apppear small, when set against the target of steel production, it is of strategic importance for development of the engineering industry. Incidentally the four-fold growth of imports of these categories of steel during the last five or six years, affords a measure of the rapid development of the engineering industry. It will be necessary to ensure adequate supplies to maintain the desired rate of progress.

Government's programme in respect of manufacture of special steels is based on an estimated demand for 50,000 tons by 1965, which appears to be an underestimate. In addition to the proposed plant in the public sector, with a capacity of 25,000 tons of saleable steel products, there is ample scope to encourage the manufacture of special categories of steel in the private sector. Since the quantity of each particular grade required is small, it will be advisable to spread the manufacture of these categories over a number of small units in preference to one or two comparatively large establishments.

Labour Inquest

The inquest into the Labour defeat in the last election in Britain at the Party Conference in Blackpool has not resulted in any clear-cut verdict. The controversy continues to rage furiously between the advocates of more socialism and those who prefer a discreet retreat from vulnerable positions. The problem for the socialist movement in Britain, as in other countries similarly situated, is not one of more or less socialism, but to make socialism meaningful to a generation which has grown up under a Welfare State. While social justice must remain the basic plank of Socialism, it will be necessary to evolve a higher concept of social justice which will serve to correct the hardships caused by the working out of the 'Welfare' programme. It will also be necessary to show, in the teeth of recent experience, how Socialist organisation alone can lead to a steady improvement in production and standards of living. The hard task of fundamental rethinking is inescapable and must be taken up at once, if the Socialist movement is to be rehabilitated in time for the next election. How they do it will be watched with keen interest in India, where the founder of the Swatantra Party has taken the 'vorpal' sword against the Public Sector.

Spotlight on Agriculture

There is an impression that many of the obstacles to rapid economic progress can be traced to the comparative neglect of agriculture in the Second Five Year Plan. The point is arguable, though it has influential support. But, whatever the validity of the criticism of the Second Plan on this score, we may be sure of one thing, that the Third Plan is certainly not going to suffer from the same defect. If we are to judge by current trends, the danger lies the other way, leading to an unbalanced pattern of investment. For, agriculture is one of those fields in which Nature retains a very big say, and output can be related to investment only over long periods. But the increased attention that agriculture is receiving is all to the good and should lead to an effective programme of action which will be simple enough to be carried out by the millions of peasants with their small holdings.

The broad strategy of attack has already been outlined in the Ford Foundation Team's report, and the technical aspects have been further examined by a team of German agricultural experts who studied the problem on the invitation of the Ministry of Food and Agriculture. The World Agricultural Fair, which will be held in New Delhi for one month from December 15, will enable a large number of Indian farmers to gain an idea of what modern techniques have achieved in other lands. And the exhibition has been preceded by the conference of the International Federation of Agricultural Producers which was inaugurated by the President last week.

*

Statistical Legs

In the short period since taking over the portfolio of Food and Agriculture, Mr S. K. Patil has shown that he is a competent general able to devise the strategy necessary to contain the food problem. Containment is the utmost that we can expect in the near future, for, with our rates of population increase and the limitations to rapid increases in output, it will not be realistic to expect the total elimination of the food problem. Agricultural planning, as Mr Patil told agricultural statisticians, will continue to be the dominant facet of all our planning for years to come.

If an army marches on its stomach, Planning has to march on statistics. Experience has shown that the statistical legs of the Plan for food and agriculture were rather wobbly. When statistics showed a shortage of foodgrains, the late Mr Kidwai was able to push through a bold programme of decontrols. By contrast, a record crop last season has not been fully reflected in foodgrain prices, which continue higher than the ruling prices last year, in South India.

The difficulties of price control are aggravated by its immediate repercussions on production. For achieving a steady increase in agricultural production, conditions should be maintained under which it will be profitable for the cultivators to make use of improved farming techniques. That is a matter of assuring remunerative prices for the commodities they produce.

The Food Ministry has already taken the first step by announcing the decision to set up an organisation for fixing prices of agricultural commodities. Both for fixing prices, as well as for drawing up plans for increased production, it will be necessary to have reliable statistical data relating to different aspects of agricultural output and resources. The importance of training personnel for this essential task has been recognised in the upgrading of the Institute of Agricultural Research Statistics, whose work has elicited warm praise from the Food Minister.

Not so Minor

The report of the Team on Minor Irrigation of the Committee on Plan Projects should help to focus attention on what could be achieved by proper care and maintenance of minor irrigation works—a field in which small investments can yield quick and large returns. The team, which consisted of a number of experienced engineers and administrators, has recommended a phased programme for the restoration of tanks in Mysore, which is calculated to yield an additional one lakh acres of cultivable land.

Pilot projects undertaken on two tanks have shown the value of the scheme. While the cost of reclamation ranges from Rs 1,500 to Rs 1,765 per acre, the reclaimed land is valued at prices ranging from Rs 4,000 to Rs 10,000 per acre. If these estimates are valid for large scale operation, the desilting-cum-reclamation scheme recommended by the Team will be not merely self-supporting but also will yield a handsome profit.

It is not merely in Mysore that tank irrigation is important, or where derelict tanks form a depressing feature of the rural landscape. The Minor Irrigation Team has made out a strong case for inclusion of such schemes as an integral part of irrigation planning in the Third Plan.

WORLD OF FINANCE

Mr Iengar on Industrial Progress

THE latest of Mr H. V. R. Iengar's dissertations on the Indian economy has to do with industrial production; and, as has been his wont since he became Governor of the Reserve Bank, Mr Iengar has ably marshalled facts and figures together, so that he could present a picture that is at once comprehensive and, from a certain point of view, surprising. His objective on the present occasion has clearly been to bring powerfully home to the people the measure and extent of industrial progress during the plan period in India. And he has studiously tried, with the help of figures collated, to dispell the "psychology of gloom" which, Mr Iengar has pointed out, so often is created by the fact that, "we in India subject ourselves continuously to a process of self-denigration".

The difficulty is that Indian industrial statistics do not help in a correct interpretation of progress; indeed, they give a "downward bias" in interpretation. The first reason for such a state of affairs is that "there is a basic inability in all indices of industrial production, however perfectly compiled, to give an impression of the **qualitative** development in industry". Thus, while, in the recent past, India has succeeded in making almost the whole range of textile machinery, the fall that took place in the output of textiles was reflected in the index of industrial production by an actual decline. So, the impressive advance constituted by the manufacture of a whole range of textile machinery was completely concealed by the fact of a lower level of textile production.

The second reason is that "the change in the whole industrial complex since 1951 and the fact that the expansion has been more rapid in those industries which have relatively small weights, gives a downward bias to our indices of industrial production". There is also the fact that new industries have started producing, which do not find a place in the present index. Thus, in 1958, the rate of increase in industrial production seemed to have slowed down considerably; but this was because there had been a sizable fall in the textile index, and textiles have a high weightage.

Mr Iengar has then gone on to show that, comparatively speaking about the performance of other industrial countries. India has done magnificently in the period since 1951. He concludes that, "considering all the difficulties with which we started, the rates of growth not merely do not give cause for pessimism but must be regarded as highly satisfactory on any standard".

We are in entire agreement with Mr Iengar and his conclusions; indeed, we had long felt that the index of industrial production is no reliable guide to the magnitude of progress achieved. It may be that a revised index is being prepared. But that index will itself soon become out of date, so long as expansion in industrial production in India includes a diversification in the range of products manufactured. The only solution seems to be the compliation of a special new index, which will be capable of including new industries as and when they are set up and go into production. Otherise, it will always happen that statistics relating to industrial output will give a far less cheerful picture of progress than has been the actual achievement.

+

Bank Investments: Over Rs 800 crores

BANKING figures for the last Friday in November will probably represent the last week of the 1959 slack season as such. For, the beginning of the month disbursements in December should also prove to be the start of the 1959-60 busy season. It is to be anticipated that there will be progressively greater pressure felt in the money market as from the middle of December. However, it may not be until the middle of January that the pressure will begin to involve some strain for the banking system. Until then, it is conceivable that the increase in Deposit resources, which lately has not been fully utilised in an expansion of the investment portfolio, as well as the week-by-week accretion to Deposits over the next six weeks should be sufficient to take care of such rise in Advances as may be witnessed by the middle of January. Thereafter, there is likely to be an acceleration in the tempo of increase in Advances and, as such, the real busy season pressure will then be felt. Thus, the returns of the Reserve Bank for November 27 continue to bear evidence of the 1959 slack season, although conditions are not as slack as they recently were. There is a fall of Rs 4.62 crores to Rs 1679.21 crores in Active Note circulation. There has been an inflow of Rupee Coin for Rs 0.91 crores; in the result, the Reserve Bank's cash in the till has improved by Rs 5.53 crores to Rs 28.56 crores.

The return for the Banking Department does not appear to bear testimony to any element of deficit financing incurred during the week, since Investments are actually lower by Rs 3.50 crores at Rs 248.48 crores; and it is also known that, in the relevant week, the State Bank did not figure as purchaser of securities from the tap. So, unless other Scheduled Banks have taken up securities, or unless ad hoc Treasury Bills have been taken up by other entities which customarily are holders of such created money, there is little chance that the Central Government have resorted to deficit financing during the week ended November 27. Thus, if the Balances of State Governments have improved by Rs 5.55 crores to Rs 27.21 crores, signifying some element of payment received from the Central Government, such disbursements have been made by the Centre without the artful assistance of created money. The Central Government's Balances, it is true, are nominally higher at Rs 49.4 crores. The Reserve Balances of member banks are slightly lower by Rs 1.88 crores at Rs 81.43 crores; but the State Bank has shown an improvement of Rs 7 crores in its cash in hand and with the Reserve Bank and it would follow, therefore, that other Scheduled Banks found it necessary to draw upon their Reserve Balances. Since there was no specialised pressure, such as that of the busy season, operating during the week, we may advance the hypothesis here that such decline in the Reserve Balances of other Scheduled Banks is suggestive of, perhaps, tap purchases from the Reserve Bank. It is in this wise that there may have been nominal deficit financing for, say, Rs 5 crores.

The fractional rise of Rs 0.28 crores to Rs 81.18 crores in the Other Loans and Advances of the Reserve Bank is surely not due to the busy season accommodation sought by member banks. We repeat that the busy season pressure as such will be reflected in banking figures as from the first week of December.

Finally, after continuous weeks of accretion to Foreign Balances since October 9, Balances Held Abroad have declined by the small amount of Rs 0.42 crores to Rs 41.13 crores during the week under review.

+

The return of the State Bank for November 27 is also suggestive of the continuance of the slack season. Deposits and other accounts are higher only by Rs 1.09 crores at Rs 579.93 crores. But there has been a further fall of Rs 1.65 crores to Rs 154.56 crores in the total of Advances; and the decline since the busy season peak touched on March 27 exceeds Rs 53 crores. Giltedged investments are lower by Rs 0.88 crores at Rs 395.06 crores. It looks as if the Rs 400 crore barrier in respect of giltedged investments may not, until the end of 1959-60 busy season, be got over—unless the next tranche of special Deposits relating to the Public Law 480 counterpart funds becomes available in the meantime. Finally, the State Bank's cash in hand and with the Reserve Bank has been marked up by Rs 7.01 crores to Rs 29.95 crores.

The return of the Scheduled Banks for November 20 provides the anticipated landmark in that, with a rise of Rs 15.73 crores, Investments have crossed the Rs 800 crore mark to be placed at Rs 806.64 crores; of this, Rs 11 crores was traceable to the State Bank. Deposits, in rising by Rs 6.36 crores to Rs 1880.08 crores, have touched a new record high. Advances have declined by Rs 3.10 crores to Rs 925.13 crores, but this is still somewhat higher than the slack season low of Rs 921.63 crores touched during the week ended September 25. In the result, Cash Balances have been marked down by Rs 3.52 crores to Rs 169.42 crores; but, in the relevant week, the State Bank had reported a decline of Rs 8 crores in cash in hand and with the Reserve Bank, so that it is clear that the other Scheduled Banks added to their Cash Balances during the week.

+

The next returns of the Reserve Bank and of the State Bank should be showing the impact of beginning of the month disbursements, as also of the beginning of the busy season. A large expansion in note circulation is to be expected; there should be resort to created money; and both banks' balances and State Governments' Deposits should move down. In the case of the State Bank, a rise in Advances is to be expected. The next return of Scheduled Banks, for the last week in November, should, however, bear testimony to the final week of the 1959 slack season.

+

Tenders for Rs 22,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, the 1st December 1959. Total amount offered was Rs 2,40,00,000. Tenders at Rs 99.420 were accepted in full and those at Rs 99.415 were allotted approximately 82 per cent. Total amount accepted was Rs 2,00,00,000 the average rate of accepted tenders being Rs 2.338 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on Monday, the 7th December 1959. Successful tenderers should make payment on Friday, the 11th December 1959. Other conditions are as usual.

During the week ended the 27th November 1959 Government of India Treasury Bills for Rs 38,10,75,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 2nd December to 5th December 1959 at Rs 99.431 per cent. Sales can be stopped at any time without notice if Government think it necessary.

91 days' Intermediate Treasury Bills sold from the 25th November to 28th November 1959 amounted to Rs 2,20,00,000.

Are We on the Gold Standard?

By

Paul Einzig

WHEN the Bretton Woods currency plan was published in 1944, it was subject to criticism partly on the ground that its adoption would mean the re-establishment of a particularly rigid form of gold standard. This was strongly denied by supporters of the plan, because in 1944 the memories of the difficulties caused by the gold standard in Britain between 1925 and 1931 were still very much alive. The gold standard was thoroughly discredited and unpopular. Supporters of the Bretton Woods plan took much trouble over trying to argue that its adoption would *not* mean a return to the gold standard. Speaking in the House of Lords on the legislation connected with the adoption of the plan toward the end of 1945, Lord Keynes declared:—"Those who think that the adoption of the plan means the adoption of the gold standard are unusually silly. I say unusually because one cannot expect much in matters of currency."

I was opposed to the Bretton Woods plan at the time because I entirely disagreed with Keynes on this matter. I was afraid that, if the world should be caught once more in a deflationary spiral, Britain and the Sterling Area would be prevented by the International Monetary Fund from contracting out by means of allowing sterling to depreciate as in 1931. Like so many other people, I was wrong in expecting a period of deflation to follow the war. Instead, we have been caught in an inflationary spiral. There was no need for devaluing or depreciating any currency for the sake of avoiding deflation. All devaluations and depreciations since 1945 were due to pressure on currencies caused by domestic inflation in the countries concerned.

Nor did the International Monetary Fund resist demands for permission to devalue. Indeed, in 1949, Britain was actually pressed to devalue. Even so, it is safe to assume that, had it not been for the Bretton Woods system, there would have been many more devaluations, and devaluations on larger scale, than those witnessed during the post-war period. For, thanks to the Bretton Woods principles, a stigma is attached to devaluations. Governments only resort to it reluctantly, after trying to resist pressure toward it. The competitive currency devaluations of the 'thirties have not repeated themselves. In the absence of the recognition in the Bretton Woods system that devaluation is an acknowledgment of defeat, something for which the Government responsible for it has every reason to be ashamed of itself, many Governments would have cheerfully devalued on a wide variety of occasions. In Britain, repeated devaluations by Socialist and Conservative Governments might have reduced the value of sterling to one dollar by now, and the rise in the cost of living might have been three times as steep.

We have to thank the authors of the Bretton Woods plan for having escaped such a state of affairs in which creeping inflation would have developed into gallopping inflation. And the reason why the Bretton Woods system has achieved this result is precisely because, for all practical purposes, it amounts to a form of gold standard.

Under the post-war system, a country is liable to lose or gain gold in circumstances that are strikingly similar to those operating under the gold standard. The support points fixed under the auspices of the International Monetary Fund play substantially the same part as did the gold points in the old days. Whenever a deterioration of the balance of payments or an adverse movement of capital brings persistent pressure on sterling, so that its rate depreciates to the vicinity of the lower support point, the authorities support it at the cost of losing gold. Whenever favourable circumstances lead to an appreciation to the vicinity of the upper support point, the authorities intervene to prevent its further rise, and in doing so they gain gold.

The difference is that, under the new gold standard, it is not gold arbitrageurs who carry out the gold movements but the authorities themselves, and that the latter are liable to intervene even before sterling actually reaches its upper or lower support point. Broadly speaking, the Bank of England buys foreign exchanges and secures gold whenever sterling is firm and is above its parities, and they sell gold whenever sterling is weak and is below its parities. In substance, it is none the less true that support points operate in a way similar to the operation of gold points.

From the point of view of the effect of gold movements on the domestic credit situation, too, the present system operates in a substantially similar way to the gold standard. When we lose gold, the Exchange Equalisation Account is in a position to repay out of the proceeds of its sales of gold its Treasury advances, and the volume of Treasury Bills tends to decline. As a result, there is a fall in the liquid assets of banks, and their liquidity ratio declines. This forces them to curtail credit, or at any rate go slow with granting new credits. An increase in the gold stock produces the opposite effect. It is true, the effect of gold movements on the volume of credit is not as automatic as under the gold standard, and can be influenced by funding and de-funding policies. But, under the gold standard of 1925-31, too, the authorities had means for "neutralising" gold movements if they did not wish that an influx or an efflux should produce its natural effect on the volume of credit.

What is even more important, under the present system as under the gold standard, sterling is defended with the aid of high Bank rate. This weapon fell into disuse during the long period of cheap money, but the Conservative Government of 1957 restored its use, and the success of 1957 amply justified its decision. There is reason to believe that even a Labour Government would not abstain from using the Bank rate as a means of checking unwanted gold movements.

It is, therefore, possible to claim that the present system is but a modified variety of the gold standard. Even in the old days, the term gold standard did not mean exactly the same thing during different periods or in different countries during the same periods. We had the full gold standard, the gold bullion standard, the gold exchange standard, etc. The difference between the pre-1914 gold standard and the post-1925 gold standard was almost as pronounced as is the difference between the pre-1931 gold standard and the post-1945 gold standard. After two decades of inflation, a very large section of the public is positively nostalgic for the good old days of the gold standard, so that the gold standard is no longer regarded as a dirty word the use of which must be avoided. If Keynes were alive today, he would not be ashamed to admit that, after all, the Bretton Woods scheme did mean the return to one form of gold standard.

WORLD OF JUTE

Spurt in Raw Jute

Prices in the jute markets have moved up sizably during the past week. It would, however, appear that the uptrend has not followed any substantial improvement in foreign enquiries for jute goods. As a matter of fact except for some business done with the Argentine in hessian, no notable foreign interest has been reported. It is clear, therefore, that the price appreciation has mainly stemmed from speculative calculations as to the supply of raw material during the current jute year, and to some extent, the availability of finished goods in the coming months.

As for raw jute supply, current market opinion seems to point toward a shortage. Sellers in the jute market are evidently of the view that the 1959-60 jute crop will fall far short of the previous year's and hence the total available quantity will not be sufficient to meet requirements in full. The reported slow tempo of raw jute arrivals during the current months and the rise in price levels in upcountry markets have been influencing sentiment in the forward market where Assam Bottoms March has been taken to new highs during the week. All along, mills have not shown much interest at prevailing levels but this factor does not seem to have stood in the way of the sellers in the raw jute market marking up their rates.

The fears about a shortage of the raw material, however, seem to be highly exaggerated. While it is now generally accepted that this year's crop will not be as big as last year's, indications are that there will be no shortage. In its latest issue, the Jute Bulletin has this to say about raw jute supply prospects during the current jute year: "From reliable estimates of the present crop it would appear that the raw jute production this year might be considerably lower than last year's bumper harvest, but taking into account the heavy-carryover of jute from 1958-59 season, the total supply would be sufficient to meet all requirements of the Indian Jute Industry."

Speaking on the occasion of the Golden Jubilee Celebrations of the Jute Balers' Association in Calcutta on Monday, Mr Tulsidas Kanoria has clarified the supply and demand in raw jute during the current year thus: "The carry-over of the 1958-59 crop was 24 lakh bales and about 3 lakh bales of raw jute would be imported from Pakistan. This together with the current year's crop would make available much more than 80 lakh bales during this season. The jute industry's requirements are 60 lakh bales and 5 lakh bales for other purposes and if the mills also keep a stock of their two months requirements i.e. 10 lakh bales, a surplus of more than 5 lakh bales would be left".

With the sharp uptrend in rates in the raw jute section, goods prices have also risen in sympathy. The fact that there is a shortage of ready heavy goods has further accelerated the upward movements of prices in this category of goods. Hessian has also steadied up in sympathy with the distant positions quoting at a premium over ready and near deliveries. As for sacking, the spurt is confined to the November and December deliveries though the difference between these and distance positions has been very much narrowed down. The sustained interest in heavygoods is evidently due to the calculation that, according to present arrangements, from January next the extra production of sacking will not be available.

* * *

The jute goods market opened last Thursday on a firm note with interest centering round sacking in which there was a shortage in ready goods. B Twills Ready closed Thursday at Rs 104.75. By close next day the rate was pushed up further to Rs 105.80 and by close of Saturday to Rs 106.75. Profit-tafling pushed down the rate on Monday to Rs 105.50 but it recovered again to Rs 106.25 on Tuesday to be finally placed at Rs 105.60 on profit-taking. Hessian Ready was finally placed higher on balance at Rs 40.30.

The raw 'jute market ruled firm deriving its main incentive from the futures market where Assam Bottom March after opening on last Thursday at Rs 27.14 was done upto Rs 28.52 at one time before closing on Wednesday at Rs 28.20. In the spot section Assam Bottom November-December delivery has advanced from Rs 25.75 last Thursday to Rs 26.50 at close on Wednesday.

Thai Control on Jute Goods Import

The Government of Thailand has put the import of jute goods under control to help the indigenous jute bag industry, according to the Jute Bulletin. The Thai jute industry, it is thought is capable of producing certain widths and varieties of bags and cloth of average quality at fair prices. Intending importers asking for permission to import jute goods are required to prove that local plants are unable to meet their requirements.

WORLD OF TEA

Common Grades Better

THE prices of Common grades of Tea have shown an improvement as compared to the levels prevailing last year, although those of quality grades are lower. This is mainly due to the fact that buyers on the London market have continued to show good interest. After receiving 518.2 million pounds, closely following the 1958 import of 558.3 million pounds, Britain is reported to be short of tea. With the result, the prices of Common teas are marked up in an effort to produce bulk without increasing the cost of the blended packet.

Trade quarters in London feel that there are no signs as yet of any real relief in the supply position and that the broad price structure will remain firm for some time to come. It is inconceivable that packers in London will run up the price of Common tea if they are well stocked with reserves. The only conclusion possible is, that the UK tea market is growing, as world production is not rising at the same rate as consumption, although the shortfall is of a marginal nature at present.

The world output is running behind the 1958 level, while consumption has tended to increase. Production up to September-end showed a fall of nearly 10 million pounds, South Indian production having suffered the most marked fall with a crop loss of 12 million pounds. North-East India, at the end of October, was 4 million pounds ahead, while Ceylon has nearly caught up with last year's level.

With regard to exports, South Indian exports to October-end showed a drop of about 13 million pounds, while those of North India showed an improvement of 3 million pounds. But exports to the UK were down by 11 million pounds. It is, therefore, felt that the immediate prospects for exports will be conditioned by the levy of 5 per cent purchase tax loaded on tea.

Meanwhile, in the Export Sale held in Calcutta this week, offerings consisted of 71,619 packages. There was a strong and active demand, prices tending dearer for all descriptions. Plain and medium Brokens and Fannings grades were particularly strong. Medium BOPs and OFs were sold readily and were often dearer, particularly BOPs with bright liquors. Best CTC types were barely steady, but others were very strong with secondary grades advancing in prices. Non-wither Legg cut teas were fully firm and were often dearer.

Whole Leaf grades met with good enquiry at firm to dearer rates and there was a good demand for Darjeeling teas. Tippy teas tended dearer. Following rates were quoted (per lb): Clean Black Pekoe Rs 2.12 to Rs 2.18; Plain BP Rs 2.02 to Rs 2.10; Plain Fannings Rs 2.14 to Rs 2.10; Medium BP Rs 2.00 to Rs 2.12; Medium Fannings Rs 2.20 to Rs 2.30; Best Assam CTC BP Rs 2.75 to Rs 2.90 and Best Assam CTC Fannings Rs 2.75 to Rs 2.95.

In the Internal sale, offerings consisted of 24,045 packages of Dusts and 1,346 packages of Leaf grades. There was a good general demand for dusts. Orthodox types were generally upto 4 nP per pound easier with the exception of a few black cleanly-sorted lines which were sold well. Legg-cut teas were keenly competed for and were often dearer.

CTC types continued to be in good demand; but prices were irregular except for the poorer fibrous types and the smaller bright liquoring sorts, which generally appreciated in price. The few lines of Darjeeling teas were sold well. Following rates were quoted: Medium Dooars Dust Rs 2.08 to Rs 2.22; Medium Assam Dust Rs 2.04 to Rs 2.16; Medium Assam CTC Dust Rs 2.10 to Rs 2.30 and Best Assam CTC Dust Rs 2.60 to Rs 2.90. There was a good general demand for Leaf grades.

In the Cochin market, a quantity of 11½ lakh pounds of Leaf tea was offered for exports. The quality of teas, in general, was well maintained, although high-grown teas showed a slight falling away. There was a useful enquiry for plainer descriptions and low medium teas and these were dearer. Medium and good medium teas met with an irregular demand and were slightly easier. Better liquoring high-grown, which had selective enquiry, were irregular and often sold at much lower rates than the previous week's rates. Following were the rates: Low Medium Rs 2.15 to Rs 3.05; Medium Rs 2.20 to Rs 2.30; Good Medium Rs 2.25 to Rs 2.45 and Quality Rs 2.40 to Rs 4.25.

At the London auction, buyers again focussed most of their attention on grades up to 5sh per pound. Above this level, prices showed irregularity and only the brightest liquoring invoices were wanted. The spread between the top and bottom grades continued to contract and, last week, this ranged from 3sh 8d to 6sh 8d per pound as compared with 3sh 4d to 7sh in the previous week.

In Mincine Lane, offerings were 13581 packages of Ceylon teas. Demand was good at a lower level of prices, except for coloury low-grown broken orange pekoes which met with a fully steady market. The few remaining good broken orange Pekoes were sold well; but there was considerable irregularity for other high-grown and mediums.

WORLD OVERSEAS

US Notes

Officials here are pleased with the outcome of the fifteenth session of the 37 contracting parties to the General Agreement on Tariffs and Trade (GATT). They believe that the session, which wound up its work in Tokyo last week, brought significant progress in removing barriers to world trade—GATT's principal objective.

They cite, in particular, two developments which are of prime interest to the United States. First—and considered the highlight of the Tokyo meeting—was the wide support given the movement to remove discriminatory import restrictions against American and other dollar area exports. A report was approved which concluded that on balance of payments grounds such discrimination should quickly be ended in view of the improved payments positions of most trading countries, and the steps taken by many of these countries toward external currency convertibility.

Especially encouraging is the fact that several nations announced steps to relax trade controls and remove discriminations during the GATT session, while others were able to point to recent actions of a similar nature.

These moves and others like them presumably would have the effect of stimulating a pick-up in US exports and thus of relieving the drain of gold and dollars from the United States. This drain has risen noticeably in the past two years, and has been the subject of much discussion at GATT and other international meetings.

Beyond that, the view here is that the removal of any discriminatory trade restrictions helps provide a strong incentive for the growth and development of world markets, and hence for the expansion of international trade as a whole.

It is difficult, of course, to measure just how much the trade of the US, or of the world at large, will increase as a result be undertaken in the future no one here is offering any official estimates, but it is agreed that the increase could be significant.

The other question of particular interest here concerns the heavy importation, chiefly into industrial countries, of large quantities of low-priced goods, particularly when they are abruptly moved into trade channels. Speaking for the United States, Under Secretary of State C. Douglas Dillon laid great stress on this problem at the Tokyo meeting, and the point was taken up also by delegates from other countries.

The emphasis placed on this subject reflects the possibility, if not the probability, that it could assume a growing importance over the years, and could have serious economic, social and political repercussions in the importing countries.

Some exports from such areas as Japan and Hong Kong have been mentioned in this context. But there also is the probability that as developing nations intensify and diversify their industrial growth they could begin moving increasing quantities of relatively low-priced goods into world trade channels.

The view here is that this is primarily an international problem one that is best solved through an international mechanism such as GATT rather than by the unilateral actions of individual countries. It is recognized, of course, as a difficult and complicated question. As Mr Dillon noted in Tokyo, the idea is not to restrict or stifle trade, but to find ways of ameliorating the adverse effects of these exports while continuing to provide meaningful opportunities for the orderly expansion of international commerce.

Thus, US officials welcome the decision taken at the Tokyo GATT meeting to study the matter further and to place it on the agenda on the next GATT session.

Important as these accomplishments are, they are not the only ones to emerge from the fruitful fifteenth GATT session. The first in recent years to be held outside of Geneva, there were, for instance, recommendations setting up the rules and procedures to be followed in multilateral tariff-cutting conference to begin in Geneva next September; reports and recommendations on means by which developing countries can expand their exports; reports on the progress made in the establishment and operation of regional trading groups in Europe and South America.

In addition, indicative of the growing world-wide interest in GATT, steps were initiated to bring more countries—Tunisia, Cambodia, Switzerland and Israel, among them—into full and formal association with GATT.

* * *

ONE important reason for optimism regarding the economic outlook for the year ahead can be found in business plans for capital spending for the expansion of modernization of facilities. The latest survey on this type of planning is just about the most optimistic since the peak investment year of 1957.

The survey is part of a regular series conducted by the McGraw-Hill Company, publisher of some 50 business journals. It reveals that US businessmen are planning to increase their outlays for new plant and equipment by a full 10 per cent next year. This, according to McGraw-Hill calculations, means that more than $37,000 million will be put into new facilities in 1960, not far short of the 1957 record.

McGraw-Hill's data are not easily comparable with the government's official plant and equipment statistics published by the Department of Commerce and the Securities and Exchange Commission. As past experience has proved, they are comparable, however, in terms of trends.

It is especially significant then that Dexter M. Keezer, Director of McGraw-Hill's Department of Economics and an authority on capital investment, finds American businessmen already planning to spend $34,600 million on new facilities in 1961. And since the economic curb is likely to be pointing upward throughout 1960, it also is likely that this preliminary figure will be revised upward as invesment budgets are completed. This, at any rate; has been the case during other business upturns.

But it is the more immediate outlook that is of primary interest right now. And as nearly every other facet of American business activity, this one too has been affected by the 116-day steel stoppage which temporarily ended just a few weeks ago.

Because of it, capital spending this year has failed to keep pace with the original estimates, although it is still expected to gain more than 5 per cent over 1958. Such spending has been held down by uncertainty and by steel supply shortages. This, some of the 10 per cent investment rise projected for next year probably represents spending deferred from this year.

McGraw-Hill experts stress, however, that most of the anticipated 1960 investment gain represents a real increase, not one borrowed from 1959. And one of the important developments emerging from these trends is the likelihood that the revival of business spending for new plant and equipment actually is being spread out over a longer period than might otherwise have been the case. This is in line with the assessment of most economists regarding the US economy as a whole—a lengthened business upturn as industries rebuild their depleted inventories and proceed to meet demands put off because of the production losses incurred in the wake of the steel strike.

It is surprising, therefore, to find manufacturing industries, particularly those hard hit by the steel situation, planning marked step-ups in their capital outlays next year. Manufacturers as a group will be increasing their plant and equipment expenditures by 19 per cent in 1960, according to the McGraw-Hill survey. Leading the way is the iron and steel industry itself, which plans a spectacular 76 per cent rise in capital outlays over strike-disrupted 1959. The chemicals, electrical machinery, paper and pulp, automotive and rubber industries all plan investment increases of more than 20 per cent.

In non-manufacturing fields, total outlays are expected to rise some 9 per cent in 1960. Railroads are planning a 10 per cent investment increase, other types of transportation and communications a 14 per cent increase, and electric and gas utilities a 3 per cent increase. Commercial businesses—department stores, insurance companies, banks etc.—plan to spend 9 per cent more next year than this, which would push their outlays to a new annual high.

All this will take a good deal of money, of course, and a factor to be considered is the state of the nation's money markets, which already are tight and

could become tighter if American industry were to seek large amounts to finance their expansion and modernization programmes. By the same token, tight money could conceivably act as a damper on some spending plans.

Fortunately, as the McGraw-Hill survey points out, American companies, exclusive of commercial businesses, expect to obtain the bulk of their plant expansion and modernization funds from internal sources—largely from retained earnings and depreciation and depletion allowances. The estimate is that they will seek only $6,400 million in external financing next year, compared with some $5,800 million this year.

*

Britain

World production of grains in the year 1958-59—outside Russia and China—reached the record total of 496,000,000 tons, according to the annual review of grain crops just published in London by the Commonwealth Economic Committee.

This figure was one-quarter greater than before the war, the report says. Commonwealth outturn of grain, as a whole, showed some recovery during the year, accounting for about one-fifth of the total, as it had done before the war. Rice production in Asia was generally at a high level.

The report notes an upward trend in average yields of rice in India, which is attributable to "improved methods of cultivation and fertilization and the work done on plant breeding".

The increase in apparent consumption of grain in Asian countries since before the war, the review says, reflects increasing populations as well as rising standards of life in certain countries. "Rice remains the most important grain in India, but the demand for wheat is rising."

Rice stocks in the exporting countries of South-East Asia, which showed some increase in 1957, were reported to be small again at the end of 1958. In India and Pakistan, the report adds, reserve stocks are being built up.

*

Sweden

Sweden's industrial production in September was 5 per cent larger than in the same month a year ago, according to the statistics of the Federation of Swedish Industries. The output of capital goods was up 3 per cent and consumer goods 4 per cent. Also branches not included in these two groups, primarily the chemico-technical industry, showed an upswing.

A comparison between the first three quarters of the current year and January-September 1958 shows an overall production increase of 2 per cent, including a rise of 1 per cent for both capital and consumer goods. Most of the improvement is accounted for in the third quarter.

* * *

Sweden's output of merchant iron and steel in the first three quarters of this year was 16 per cent larger than in January-September 1958, according to a survey by the Association of Swedish Steelworks. Demand showed an upward trend during the third quarter and so did prices, but also costs tended to rise.

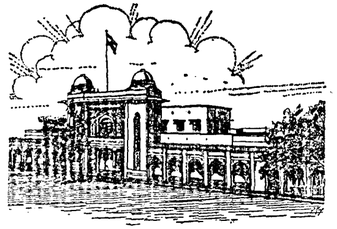
In actual figures, production of merchant iron and steel rose by 193,000 tons to 1,380,000 tons. The output of steel ingots was up from 1,730,000 tons to 2,065,000 tons; i.e. an increase of 19 per cent.

Exports of iron ore have increased from 11,005,000 tons to 11,247,000 tons from the first three quarters of last year to the same period this year, pig iron from 23,000 to 29,000 tons, sponge iron from 14,000 to 17,000 tons and shipments of merchant iron and steel from 244,000 tons to 339,000 tons.

Total imports of merchant iron and steel have increased from 532,000 tons to 613,000 tons during the periods under review. Imports of plate, however, dropped slightly from 243,000 to 236,500 tons.

* * *

Karlstads Mekaniska Werkstad have concluded an agreement on delivery of equipment for the second sage of a viscose cellulose mill to be built in the Soviet Union. The order is worth Kr 75,000,000. Earlier this year KMW obtained an order for the first stage of the mill, also worth Kr 75,000,000. Delivery is to take place in 1960-61.



The Russian mill is designed for a capacity of 200,000 tons of prehydrolised sulphate cellulose per annum, to be used for the production of rayon cord for motor tires. Several other Swedish companies will take part in the scheme as subcontractors, including Uddeholm, Svenska Maskinverken and AB Rosenblads Patenter.

* * *

This year's crop of cereals in Sweden is 37 per cent larger than that of 1958 and exceeds the average for the period 1954-58 by 2.3 per cent, according to recently published official figures. The volume is estimated at 835,000 tons of wheat and 216,000 tons of rye, which is altogether 284,000 tons more than last year. The entire increase is accounted for by autumn-sown crops.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

SIR Biren Mookerjee's 'statement' on the accounts of IISCO is, as I indicated in my short comment last week, chockfull of thinking points. It lacks none of his punch; and, what is even more important, his knocks are better directed this time than on some earlier occasions. With almost all his major conclusions I agree. The central idea behind Sir Biren's suggestions is the rather trite economic truth that production and consumption of any commodity should go hand in hand and planning for production involves planning for corresponding consumption. Trite as it is, it is not always borne in mind by the country's planners. The major part of Sir Biren's analysis is taken up with the spelling out of the practical implications of this truism and it is hard for any one to quarrel with the things he has to say on this. More important than the analytical part of his speech is the series of practical suggestions he has made. These are eminently reasonable and should commend themselves to Authority.

*

But, before I get on to Sir Biren's central argument, I should like to dispose of the question of development rebate and the conditions imposed by Government for its being allowed. Sir Biren says that the requirement that 75 per cent of the allowance should be credited to a reserve account is needlessly onerous. His argument is that the actual tax benefit he gets is not the whole of the allowance but only the tax thereon, which is slightly over 50 per cent (in the case of a company). This percentage will go to 45 when, as anticipated, the corporate rates of taxation for 1960-61 will be reduced to that percentage. He says, therefore, that the company is thus required to put by in reserve more than the benefit it gets by way of tax-relief. For instance, in the case of IISCO itself, the total compulsory reserve on account of development rebate comes to Rs 3,14,67,099. But, if the company were required to credit to the reserve only the equivalent of the tax relief, the reserve would have been less by Rs 98,59,691. Thus, a sum of nearly a crore of rupees is locked up in reserve.

*

But this argument, plausible as it looks, misses one of the most important purposes of development rebate. This rebate is not merely a tax-gift for current expansion, but a device to induce companies to make provision for **further development**. And it is the development **rebate itself** (as the name clearly indicates) and not the **tax relief thereon** that is intended to be utilised for further development. Some may even say that, in strict logic, not 75 but 100 per cent of the rebate should be kept apart in reserve, for, the inducement for development is not as high as the cost of development itself, but only roughly half of it. In this view of the matter, Sir Biren's argument would amount to requiring the Government to finance all the future expansion of the enterprise, since he would want to put by only the tax relief he obtains. By the device of asking the company to put by about 25 per cent more than what the enterprise gets by way of tax relief, Government are assuring further expansion of the company, not only at their (i.e. Government's) cost but also at the shareholder's cost. Considering that the gift by Government is quite hefty, this requirement of a little further sacrifice on the part of the shareholder (and that, too, for his own good) is not unreasonable.

*

Of course, it may be argued that development rebate is merely a reward for current expansion and to graft the idea that it is also a device for further expansion is to add to its original functions. It may also be said that many persons may not consider current expansion at all, should further self-denial be part of the condition of the grant of the rebate. And capital formation for new enterprises would be hampered if the prospect of early return on capital (made possible by lesser taxation in consequence of the rebate) is made impossible by this further draft on available profits. On the other hand, to rest on one's oars, especially when it means greater current dividends, is a temptation that not all are willing to resist. IISCO itself may plan further development without prodding from Government, by the necessary self-denial, but it is also true that many enterprises improvidently used up the rebate in current dividends. Indeed, it was this development that necessitated the imposition of this condition.

*

As regards the economics of steel production itself, Sir Biren has, as I said at the beginning, some important and valuable things to say. His fear is that production is far outstripping consumption and, when all the plants, both in the public and private sectors, are in full production, there may be a glut of steel. This fear is perhaps slightly exaggerated; but it has a factual basis in that, according to present trends, prices will be uneconomic. These trends are, on the one hand, increasing cost of production and a variety of levies that push up the sale price of steel, and on the other, a progressive corrosion of purchasing power of the people by inflation. The consequence will be not so much consumer resistance in the orthodox sense, but consumer inability to buy even if he wishes to buy. Sir Biren scoffs at the idea that export of steel may still absorb production even if domestic consumption does not. On this subject, he has some very pertinent things to say in regard to comparative costs. To the layman, it may appear somewhat startling to be told that Indian steel, which was the cheapest in the world as recently as 1950, and which has been indirectly subsidising import of steel, should be priced out of every foreign market worth capture. But Sir Biren has some telling figures to give. He is, surely, not wrong in projecting current trends into the near future when we expect to export. It is true that the current retention prices are less than the continental prices. But there is to be revision of the retention price in 1960, and among the elements that will figure in its refixation are a whole series of increases in cost. For instance, the producer can claim with justice that the current retention price does not correctly reflect cost increases and, therefore, he would be entitled to readjustments in the next revision. Moreover, costs have increased very considerably over the last few years owing to increased cost of labour and material. Again, the various levies and surcharges, amounting as they do to 56.3 per cent and 59.7 per cent of the retention prices of structurals and plates respectively, put the Indian seller abroad at a hopelessly disadvantageous competitive position. Indeed, Sir Biren gives an example of how it has actually been found by some Indian fabricators that, at the current market price, they are not able to compete effectively with their foreign opposite numbers for domestic needs. It was found that the cost of steel to the foreign fabricator was anything "between Rs 175 and Rs 220 a ton cheaper than the prices our fabricators in India have to pay at the controlled rates of Government". If this is the position, then we will be on the horns of a dilemma: whether we should go by the price factor and obtain our requirements from abroad or pay the higher price and use domestic steel. So far from being able to compete abroad, we seem to be having difficulties in holding our own domestically.

*

Of course, it is possible for us to find foreign markets for our steel, and the situation may not turn out to be as hopeless as Sir Biren now envisages. But, then, it may be that our markets are not such as to yield us the optimum benefit. For instance, since our foreign exchange needs are very selective, unless the particular currency is freely convertible, it would not finance our import. In any case, the first requisite for any export ambition is a determined effort at cost reduction.

*

This takes Sir Biren naturally to the question of labour cost. In this,

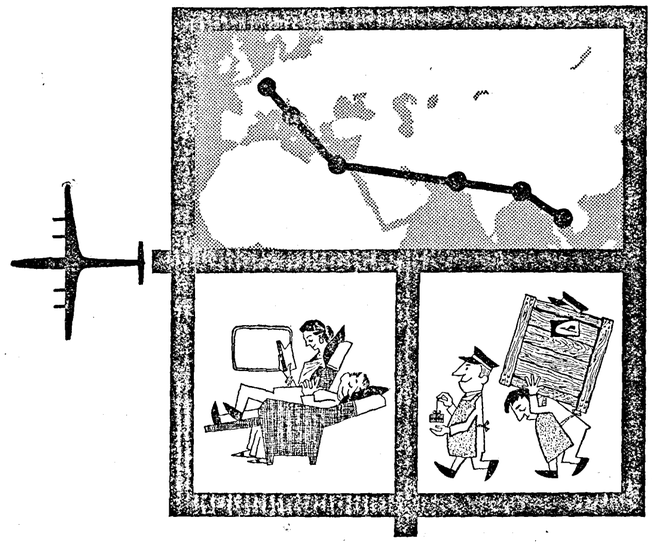
he has some pertinent, though unpalatable, observations to make. Though his objection to a time scale seems a little specious, it is true that the annual quarrels over bonus are disruptive of production and destructive of discipline and morale. His suggestion of a Wage Board is an exceedingly practical suggestion, and I commend it to the authorities. Whichever way you look at it, the linking of reward to labour to productivity is inescapable. Sir Biren has also some caustic things to say about the multiplicity of labour tribunals, their conflicting awards and suggests a centralised authority which would make for uniformity. This again is a worthy suggestion and there is no reason, except apathy, to account for the idea not being taken up.

✱

Sir Biren also commended the idea of increased productivity by scientific study of the problems of productivity. In this connection, he made a reference to the establishment of the National Productivity Council. In the not so distant future, the counsels of this body are sure to play a decisive part in increasing the efficiency of production and thus reduce the cost of production. Time was when we used labour wastefully, because labour was cheap. Indeed, Indian steel was cheap because of its low labour cost component. This situation is no longer obtaining. Though it is true that the human problems involved in readjustments of factors of production should not be lost sight of, it is necessary that the adjustments are made as quickly as possible in order to rationalise the cost structure of steel production.

Sir Biren also gave expression to some of the problems created by the existence side by side of a public and private sector in steel. The public sector has certain advantages in that, as a late comer, it has no redundant staff, has more modern and labour saving equipment and skilled staff to start with. There is also incipient fear in the private sector that there may be a variety of discrimination. This may arise in the fixation of retention prices, or in the context of purchase by Government at a time when there is glut in the market. And, in the matter of export, will distribution be fair, especially when the market is limited? Already, in an indirect way, the public sector is creating problems of scarcity in the matter of metallurgical coal, since the public sector coal washeries are not yet ready.



✱

It may well be that all these fears are exaggerated and, when the time comes, Government will do the decent thing by the private sector in steel. It may also be that, owing to new developments, steel may not be such an unwanted commodity as Sir Biren fears. After all, the largest consumer of steel is Government, and what with an unfriendly neighbour in the North, there may be new, though unfortunately, not entirely productive, uses for steel. Even the export market may not be so impenetrable as Sir Biren fears. But the basic moral that the need of the hour is not so much to produce more steel but to produce it more cheaply cannot be too forcefully rammed in. And that is what Sir Biren has done in his closely argued statement.

✱

If I may hark back, for just a moment, to Development Rebate. While, as I have said, I can understand the Government wanting companies to set by a moiety of the latter's "share" of Development Rebate, there can be, I suggest, some exceptions. For example, in the case of the steel industry, it is a moot point whether the private sector plants will (a) be keen to expand further; (b) be able to undertake the burden of further loans, if they are indeed keen to expand; and (c) be allowed by Government to expand, even if they are able and willing to go ahead with development programmes. If there is little likelihood of such expansion being undertaken, in the near future, by the private sector plants, then Sir Biren's objections are well founded. In such an instance, Development Rebate would be, not an inducement to further expansion, but reward for such development as has already been proceeded with. I should think that the experience during the Second Plan has clearly shown that expansion by existing plants is far less costly than the setting up of new units. But, then, if the private sector plants are to be allowed to expand, they must be sure that the steel will get sold. And so we would have to go back to Sir Biren's basic finding, that planning of increased output in steel is futile, if there is not simultaneous attempt to increase consumption, and higher consumption will not be possible unless costs of production are brought down.

EAVESDROPPER.

Twice Weekly—

Wednesdays & Saturdays at 6 p.m.

Fly by LUFTHANSA German Airlines

DIRECT TO GERMANY!

Connecting India with the very heart of Europe, Lufthansa, German Airlines, forges yet another link in its world-wide net-work of routes.

Twice weekly, Lufthansa flies from Calcutta to the main cities of Germany—Frankfurt, Dusseldorf, Hamburg.

Whether you're an industrialist, a businessman, a student, a government official or an educationist—you'll appreciate the traditional, generous German hospitality of Lufthansa, aboard the swift Super-G constellations.

Lufthansa, German Airlines, directly connects Germany with Bangkok, Calcutta, Karachi, Cairo and Rome.

Coordinated flight schedules provide convenient connections with Air France and Alitalia.

THE "India can make it" Exhibition, which was opened to the public on Monday in the Azad maidan in Bombay, has more than the usual significance attached to exhibitions. Exhibitions highlighting the achievements of industry always play an important role in moulding the economic life of nations. But such collection of the samples of achievements in the field of industry under one roof, as it were, at the present juncture in our country, is of special value.

The "India Can Make it" exhibition, or the ICMI for short, is not a mere collection of exhibits but seeks to show the achievements of Indian enterprise. In other words, it is mainly concerned with highlighting the progress made by Indian Industry so far. The aim of the exhibition is well brought out in the name adopted for it "India Can Make it".

As Mrs Indira Gandhi, Congress President, has said in the course of her inaugural speech, the name "India can make it" chosen by the sponsors of the exhibition, the Swadeshi League, is particularly apposite. The national objective of sizably improving the standard of living of the people can be achieved only through intense sustained national effort. Foreign monetary aid and grants can only help initiate the uptrend. In order to sustain this upward movement and to accelerate its tempo, the driving force must come from the people themselves. Our experience in working the two five year plans has opened our eyes to the dangers of placing too much reliance on foreign loans. The financial assistance we have already taken is in the shape of repayable loans and the fact that, in our anxiety to fulfil the plan outlays, not much thought has been bestowed on the type of loans, has necessitated the making of provisions in our next plan period itself for the repayment of some of them.

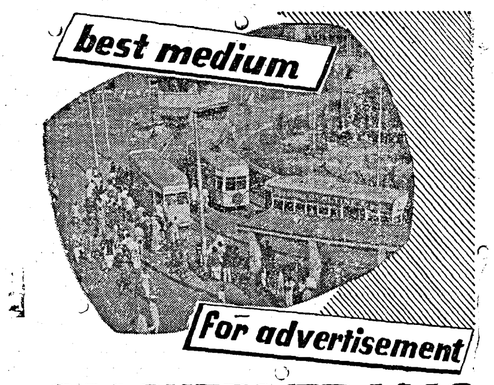
It is, however, fully realised now that a lasting solution for the problems of our economic development is to be sought in maximising exports and rapid industrialisation which will enable us progressively to reduce our dependence on imports. All this is being done, but the twin objectives of reducing imports and maximising exports require for their fulfilment the active cooperation of the people and more particularly those already engaged in industry.

It is here that the Swadeshi spirit can be canalised to much profitable use. In the pre-Independence period, the Swadeshi movement was almost inseparable from the political movement. Mahatma Gandhi's emphasis on Swadeshi did not only directly help immeasurably our cotton textile industry to forge ahead but also built a firm foundation for the ultimate political emancipation of the country as a whole. In those days, Swadeshi was a magic word and filled us with pride for things that are indigenous. For the first time in many years, people began to rate their own brethren and their handiwork however elementary they may be, as in no way inferior to foreigners and their achievements. This new awakening kindled our latent nationalism and paved the way for the attainmtnt of full self-Government.

But in the past twelve years, the concept of Swadeshi seems to have atrophied through disuse. One of the most efficacious of the mantras of the days of our political struggle had suddenly been relegated to the background. This is nothing to be wondered at because the new situation created by the vesting of the governance of the country in a national Government demanded new slogans. The emphasis shifted to increasing production and though, like some countries, we did not officially adopt some such slogans as "Produce or perish," a similar spirit permeated Authority in our country also.

It is now increasingly being realised that a good deal of our present embarrassments and difficulties could have been eliminated if we had only continued to foster the Swadeshi spirit. It is true that the rather narrow sense in which it was originally applied will have little relevance to the changed situation in the country. The concept is to be given a much broader connotation. In the new setting, Swadeshi, I think, must denote self-reliance to the maximum extent possible or concerted and untiring efforts to reach self-sufficiency in every facet of national life.

Swadeshi need not at all exclude foreign participation in our tasks; but the emphasis should always be on indigenous efforts. It will be idle to think that, at the present stage of our development, we can "do it alone." In so far as we have adopted the objective of rapid industrialisation, we have perforce to seek the cooperation of the more developed nations in the big task of building up some of the basic industries. In most cases, we have only the raw material and it will take a long time for us to work them with machines and know-how manufactured and acquired by dint of our own effort. But an undimmed spirit of Swadeshi will give a great fillip to our efforts toward the attainment of self-sufficiency as quickly as possible. The concept of Swadeshi, which Mahatma Gandhi applied with tremendous success in the matter of clothing, would have stood us in good stead, if it had been applied with necessary modifications, in the matter of food, too. I, for one feel that, if the central idea of self-reliance in Swadeshi can be put to the people of our country, our food problem will be much easier than it has proved to be so far.



Mrs Indira Gandhi has pointed out that there is need for reviving the concept of Swadeshi now in our country. There is no reason why this old and tried concept cannot be pressed into service to yield once again tremendous national enthusiasm. There is need for it now, Although the country has taken long strides in economic development during the past twelve years, we have still a long way to go to catch up with the economically developed countries of the world. But the problem of resources is dogging our steps and it will continue to govern our plans for some time to come because our requirements are so vast and our economy has still some way to go before reaching a stage whereat it can self-finance a major portion of national expenditure.

It is, therefore, of utmost importance that whatever resources we are able to mobilise, both from indigenous and outside sources, are used to the maximum advantage. It is also equally important that concerted efforts are made to manufacture our requirements in every field of our activity from raw materials available within our country. In other words, the spirit of Swadeshi should permeate every section of the country's population so that all can take part in the adventure of building up an economically strong India.

GATEWAY NOTES

The Development of the Nation

The speeches delivered by Mr Nehru at Ahmedabad emphasising the urgent necessity of the balanced progress of the nation deserve special study. Addressing a gathering of congressmen the other day, the Prime Minister stated that the capacity of a nation to withstand external aggression and internal troubles depended on the economic and moral strength of its citizens. Briefly referring to the Chinese aggression on our border areas, he exhorted the people to be prepared to face all eventualities and rally round the Government to expedite the development of our economy which would eventually enhance the country's capacity to ward off any danger irrespective of its nature and source. It would be evident from his words that he had at last felt the popular feelings aroused in the country and he had recovered from his inability in the initial stage to understand that our "friendly" neighbour would prove to be treacherous. Many and varied would be the difficulties the country has to surmount in the march to progress. But they would spell no serious inconvenience if the people are prepared to brave them with unflinching determination and indomitable courage.

The Prime Minister pointed out that the greatest asset of the nation is its man power and the proper utilisation of this power would go a long way toward the fulfilment of our ambitious plans. And it is up to those who are in power to approach the people and to clarify to them the various problems facing the country and to bring home to them our achievements after independence so that they can better realise our hardships and appreciate our achievements. This does not, however, mean that the high officials can sit back and make others undertake the whole task. Mr Nehru deplored the present high-brow attitude of the officials and wanted them not to fight shy of doing any manual labour in the hours of need and to banish from their hearts the employer-employee attitude without endangering the necessary standard of discipline in every walk of life. Hard work and sweat are the essential requirements for achieving the desired results.

In his speech at the Laski Institute, Mr Nehru pointed out that the next decade would be a turning point for our country. He added that it was necessary in the modern age to understand the past events in the history of the world and learn from that experience if we wanted to solve the problems facing the nation. We must evolve new methods in the light of those events to suit the conditions of the country.

Proper attention should also be paid to the development of our literature and enrichment of our culture along with the economic development of the country. The Prime Minister, speaking to a women's organisation engaged in rescue and educative work, pointed out that the bondage and backwardness of our women was a deadweight to the social progress of the nation. Adequate steps should be taken to release the immense energy of our women to speed up the social and economic revolutions. Otherwise, the political revolution which emancipated the country from foreign domination would be absolutely meaningless.

It is heartening to note that the necessary steps are being taken to promote the education of women and to remove the social and economic disabilities which they had to suffer. But there is greater scope for eliminating the social evils that imposed sufferings on women which retarded the progress of the country by keeping back almost half of the manpower of the land inactive and idle in moulding the society. Only a determined effort from all the sections of the people can eradicate these social evils.

*

Extension of Electricity

The paramount importance of extending electric power to the rural areas for developing agriculture and industries in the State was emphasised by the Chief Minister, Mr Y. B. Chavan, while inaugurating the sixth Philips Light and Radio Convention in the Bombay city. The consequences of the implementation of such a scheme to promote the cause of both agriculture and industry would be many and varied. Indeed, Bombay is the highly industrialised state in India, but there is greater scope for developing its industries—both large-scale and small. There will be no exaggeration in anticipating that the pace of industrialisation in the State will be accelerated with the supply of electricity in all villages. But greater will be the benefits to the State's agriculture which, at present, produces neither enough food for its rapidly growing population nor raw materials sufficient to meet the requirements of its industry. This backwardness of agriculture in the State was attributed mainly to the lack of adequate facilities for irrigation and positive flood control. An earnest attempt to tide over these difficulties can be successful only with the availability of electric power.

The Chief Minister also drew pointed attention to the role of radio as a means of mass communication for education, entertainment and information. He made a strong plea to the industrialists to endeavour to manufacture cheap radio sets so that they will be available to the common man.

GATEWAY MARKETS

Groundnut at New Peak

ON the Bombay Oilseeds Exchange, Groundnut futures registered a new peak level, not witnessed for some time, due to heavy bear-covering and sustained speculative support. The main inspiration was derived from two factors—persistent buying interest from Burma for Groundnut oil at prices as high as Rs 1,600 per ton and the Government decision to extend the period of shipments of Groundnut Oilcake against exports of groundnut oil to the end of February, 1960. It is felt that the extension may help a rally in the UK prices of expeller cake, which had declined by about 15sh per ton.

In general, the Government decision with regard to groundnut oilcake is welcomed by the exporters. It is pointed out that the extension will improve their bargaining position abroad and enable them to realise better prices. The fact that the shipments of oilcake have to be completed before the end of January have led to a keen selling pressure on the Continent.

But, some circles feel that the chances of fresh business in groundnut oilcake at the current levels are not very bright, especially because Indian groundnut oil has lost nearly £2 per ton in the overseas markets during the past few days; but an improvement in respect of cake may revive business in view of the possible setback in domestic prices on account of the improvement in the arrivals of the new crop.

Locally, trading in Groundnut is obsessed by the reports of increasing arrivals of the new crop in the prominent producing areas. With the possibility of the pressure of supplies rising during the current month, bull operators are generally inclined to withdraw from the market temporarily. Mills and shippers are also inclined to mark time in anticipation of a fall in prices. Meanwhile, groundnut bold quality is quoted at Rs 36.50 and Groundnut Oil at Rs 19.75.

In the Castorseed section, price movements have been irregular due to the uncertain outlook for castor oil. The sudden setback in the UK prices following the announcement of fresh freight to the tune of 1,800 tons for shipment in the beginning of January 1960 has chilled the buying enthusiasm. Although the long-term outlook is considered to be favourable, buyers are hesitant in view of the pressure of spot supplies. Castor ready is quoted at Rs 32.25 and Castor Oil, commercial quality, at Rs 17.37.

Trading in Linseed is devoid of interest. The UK prices of Linseed oil have continued to be unfavourable, there are reports of a possible release of supplies on world markets by the Commodity Credit Corporation. Ready Linseed is quoted at Rs 34.25 and Linseed Oil at Rs 17.12.

*

Gold & Silver

Narrow fluctuations in prices have characterised trading in the Bullion market. These are mainly due to mounting stocks and unencouraging demand in the ready section.

With the share markets irregular, prices of Silver gave way after a steady spell. Although a little bear-covering has checked the decline, fresh support is not forthcoming. Arrivals amounted to 20 bars as against an offtake of only 10 bars. Unrefined metal receipts were heavy at 33 bars. Ready rates moved between Rs 210 and Rs 210.44, to finish at Rs 210.19.

After establishing a new all-time high, Gold has suffered a setback due to persistent profit taking at the recent higher levels. Ready rates moved between Rs 125.06 and Rs 125.22, to close finally at Rs 125.12. Sovereign was quoted at Rs 81.

*

Non-Ferrous Metals

Prices on the Bombay Non-Ferrous Metal market showed a mixed trend. Copper was steady at Rs 218 per cwt, as the demand for finished goods had increased.

Zinc prices have risen to a record level of Rs 129 per cwt. The continuous purchase by industries (which had previously disposed of their allotments in the open market) and the present scarcity in the ready section are the main contributory factors to the rising trend in the price of the metal.

Tin has fallen to Rs 137.50 per quarter following lower advices from the Singapore market.

Lead prices remain almost unchanged at Rs 77.50 per cwt.

*

Chemicals

After a short period of listless, the Bombay market for Chemicals has displayed signs of activity. Most of the items in chemicals have shown improvement in prices, while there is a further rise in the prices of Dyes in general. The revival of demand and the unwillingness on the part of stockists to part with their goods at the prevailing prices are the main contributory factors to the sudden improvement of sentiment in the market.

There is a marked rise in the prices of Hydrosulphite of Soda. The French material is higher at Rs 2.14, while ICI quality is better at Rs 3.20 and the Belgian at Rs 2.10. There is practically no change in the prices of Bleaching Powder. Among the indigenous products, Mettur is done at Rs 34 and Tata at Rs 24.

WORLD OF COTTON

Import and Export Quotas Welcomed

THE long-awaited announcement about fresh import and export quotas for cotton has generally been welcomed by the trade. The quota given to actual-user mills to import 2 lakh bales is expected to give considerable relief to the industry, while the Government decision to allow an export of 75,000 bales of Bengal Deshi cotton is considered timely.

The import quota is more or less in line with the general market expectations. The Government have, so far, announced a total import quota of 4.60 lakh bales out of the annual target of 6 lakh bales. Apart from the quota for actual-user mills, a quota of about 50,000 bales has also been granted to non-actual-user mills for the import of American cotton stapling 1 1/16" and above under PL480. An advance retention quota of about 30,000 bales has also been granted to mills.

Trade circles feel that, had the announcement been made earlier, the purchases of foreign cotton could have been made at lower prices, thus effecting considerable saving in foreign exchange. It is pointed out that prices of cotton in foreign countries have moved up subsequently in the past few weeks. For instance, East African growths have advanced by about Rs 150 per candy in the past one month.

The Government decision to allow an export quota of 75,000 bales will be valid for shipment up to August 31, 1960. In this connection, an official communique states that five per cent of this quantity will be earmarked for distribution among co-operative societies and the balance will be licensed on a "first-come-first served" basis, subject to an individual quantitative ceiling of 10 per cent of the quantity allowed.

The outlook for the export of Bengal Deshi is considered bright. The previous quota of 75,000 bales has almost been exhausted. There is a general feeling among shippers that Japan will continue to evince interest in Bengal Deshi. This country has been permitted to import 24 lakh bales of cotton during the current year. There are also expectations that this quota will be increased to 30 lakh bales. It is felt that Japan will turn increasingly to India for this growth in view of reports of heavy damage to the Pakistani Deshi cotton.

⁂

FUTURES MARKET:

Prices in the Cotton futures market, after maintaining a firm front during most part of the week, displayed a slightly easier tendency at the close due to some selling pressure on fears of official action to curb the rising trend. As a matter of fact, prices at one time, reached near the margin level. Some selling was, however, noticed at higher levels in order to avert the margin penalties. Further, it was feared that Government action might be forthcoming to check the steady rise in prices. Jharilla March delivery, after touching a high of Rs 749, finished the week at Rs 747.50.

There is a growing fear that, if the present boom in the market were to continue, the Government will have no alternative but to suspend trading as they did three years ago. It is also felt that the present steady rise in prices is mainly due to the ineffectiveness of the measures so far adopted by the East India Cotton Association.

Present indications are that, before resorting to an extreme step of suspension of trading, the Forward Markets Commission will suggest to the EICA that the level at which margins should be leviable should be lowered from Rs 750. Traders say that bullish fervour is justified in view of the fact that spot cotton is being sold well beyond the ceiling levels all over the country. If prices cross the Rs 750 mark, which looks very probable in the prevailing circumstances, margins at the rate of Rs 25 will become applicable from Rs 770.

Conditions in the Spot section continued to remain firm. The Chairman of the Millowners' Association, Bombay, urged the Government of India to raise the import quota, for the current season, to 10 lakh bales, including a substantial quantity of varieties with staplings ranging from 15/16" to one inch. His argument in favour of larger imports was based on the impression that the announcement of import quota had made on the market, which quoted higher prices after the announcement than before.

Again, the Chairman seemed to doubt the correctness of the current crop, which was put at 45 lakh bales.

×

CLOTH AND PIECEGOODS:

Satisfactory conditions have continued to prevail in the Bombay Piecegoods market. The undertone in the domestic sector remains firm though the offtake is restricted due to the wide disparity in prices. This is mainly due to hopes still entertained with regard to the improvement with the progress of the season. This explains the continuance of forward bookings on the part of dealers with the mills.

In the export section, fairly large bookings are reported to have been done with the UK in the usual qualities. But, the latest news reveal that the bookings of cotton textiles by the UK from India are suspended for the time being. It is understood that uncertainty prevails among the importers in that country as a sequel to a notification issued recently by the UK Board of Trade.

According to the details now available, imports of cotton piecegoods will be controlled from January next by a licensing system, the first of its kind to be introduced in the country. Textiles which are imported into the UK, will be under the Open General Licence. Though such a licence will be necessary from January onwards for clearing goods, it is stated the quantum of imports from India will remain unaffected, as most of these goods are for re-export and as an agreement has been entered into between the two countries limiting such imports to 175 million yards per annum.

On the other hand, cotton textiles imported into the country, for home consumption, will be restricted to a quota system. The quota of these goods for established importers is cent per cent of the imports of the best of the basic years 1957-58 and 1958-59. But the quota of the new-comers including direct importers and local buyers is not specified.

BOMBAY REVIEW

THE HOWRAH-SHEAKHALLA LIGHT RAILWAY COMPANY, LIMITED.

NOTICE is hereby given that the One Hundred and Twenty-sixth Ordinary General Meeting of the above-named Company (being an Annual General Meeting within the meaning of the Companies Act, 1956) will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Monday the 28th December, 1959 at 11-10 a.m. for the following purposes:—

(1) To receive and consider the Audited Accounts for the year ended 31st March, 1959, the Balance Sheet as at that date, and the Reports of the Board of Directors and the Auditors thereon.

(2) To declare a Dividend on the Ordinary Shares.

(3) To appoint Directors in place of those retiring.

(4) To appoint Auditors and fix their remuneration.

The Register of Ordinary Shareholders of the Company and the Transfer Books will be closed from the 19th to the 28th December 1959 both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy to attend, and on a poll, to vote instead of himself. A Proxy need not be a member.

By Order of the Board,
MARTIN BURN LTD.,
S. GUPTA,
Managing Director,
Managing Agents.

12, Mission Row,
Calcutta—1.
The 2nd December, 1959.

NOTE: The Dividend, if declared will be paid on or after the 28th December, 1959 only to those persons who are registered as holders of Ordinary Shares as at that date, or to their Mandatees.

THE HOWRAH-SHEAKHALLA LIGHT RAILWAY COMPANY LIMITED.

NOTICE is hereby given that an Extraordinary General Meeting of the Members of the abovenamed Company will be held at the Registered Office of the Company, No. 12, Mission Row, Calcutta, on Monday the 28th December, 1959, immediately following the termination of the Annual General Meeting to be held on that date at 11-10 a.m. to consider and, if thought fit, to pass, with or without modification, the following subjoined resolution, namely:

"That approval be and is hereby accorded to the appointment of Martin Burn Limited as Secretaries and Treasurers of the Company for a period of 10 years with effect on and from the 16th day of August, 1960, on the terms and conditions contained in the draft Agreement submitted to the Meeting and, for the purpose of identification, signed by the Chairman thereof, and that an application to the Central Government for its approval to this proposal under Section 326 of the Companies Act be and is hereby directed to be made".

The Share Transfer Books of the Company will remain closed from the 19th December 1959 to the 28th December 1959 both days inclusive.

By Order of the Board,
MARTIN BURN LIMITED,
A. G. GIDLEY,
Secretary,
Managing Agents.

Calcutta,
Dated the 2nd December 1959.

Note:

(i) A member entitled to attend and vote is entitled to appoint a Proxy to attend and, on a poll, to vote instead of himself. Such Proxy need not be a member of the Company.

(ii) An Explanatory Statement is annexed to the Convening Notice issued to Members of the Company.

DELHI REVIEW

Majority Business Opinion on Third Plan

THE Seminar on Planning, organised and guided in a methodical manner by the Secretariat of the Federation of Indian Chambers of Commerce and Industry, concluded its lively three-day discussions over the week-end here. To say that this Seminar was a success, in that it made a substantial contribution to the current debate on the approach to and the content of the Third Plan, would be an understatement. For, in the opinion of this correspondent, it was a more significant success in that it crystallised majority business opinion in favour of a Plan of the size of Rs 10,000 crores in the teeth of opposition from a small but determined minority representing, to all intents and purposes, the Forum of Free Enterprise and the Swatantra Party. There was, above all, the unmistakable impression that, although the minority stand was logically consistent within an orthodox and conservative framework of fiscal, financial and planning policies, the majority approach had the superior merit of being more appreciative of certain social goals and of the wisdom of adopting an attitude of "responsive cooperation" with the Planners.

Viewed against this background, the plea (contained in the Seminar's preamble to the four panel reports adopted by the plenary session) for a prior modification of certain tax policies and administrative procedures so as to encourage greater savings and capital formation in the private sector and thus make a Rs 10,000-crore Plan possible, cannot be described as detracting from the businessmen's imaginative approach. For one thing, when the Seminar rejected the minority plea for a Plan of the size of only Rs 8,500 crores, the majority could not have possibly thought that retained profits and additional savings could be increased by Rs 1,500 crores through any conceivable reorientation of fiscal and administrative policies. For another, when a possible provision of Rs 1,100 crores by way of deficit financing in the Third Plan was tacitly supported by a majority of businessmen, it could not have possibly escaped their thought that they were conceding, in effect, the continuing need for certain measures of anti-inflationary taxation designed to mop up, from time to time, such surplus purchasing power as might exert an undue pressure on scarce supplies and thus on prices, or for certain other measures of egalitarian taxation designed to prevent the rich becoming richer and the poor poorer in a possible inflationary situation. This correspondent certainly did not get the impression that businessmen, by and large, were looking forward to anything more than some rational readjustments in the accepted fiscal framework. It would thus appear that, if the Seminar made a forceful reference to tax policies in the context of planning, it was probably a matter more of habit than of reasoned conviction on the part of businessmen.

It was also in the nature of a "compromise" rider intended to secure the unanimous support of the participants in the Seminar for the suggested over-all size of Rs 10,000 crores. That, however, did not have the effect of winning over the minority led by Mr Lalchand Hirachand, who contended that, if the business community accepted the larger size of Rs 10,000 crores, the Government would take it as a sort of sanction for mobilising more resources by additional taxation in disregard of the other related conclusions of the Seminar. It thus happened that a footnote to the effect that "a small section of the Seminar felt that it might be possible to have a Plan only of the size of Rs 8,500 crores" was appended to the preamble. That this was the starting-point of a bitter controversy, about which more would be heard in the coming months, was obvious, although, in fact, the stand of the minority was not consistent with the relatively ambitious character of the individual Panel reports they had supported and the stand of either side was not quite in accord with the basic observation of the Industrial Policy Panel that "it would be desirable to concentrate not so much on fixing financial outlays as on working up a schedule of requirements, on the one hand, and resources, on the other, both of which are bound to increase in the next few years."

It would be interesting in this connection to highlight some of the "requirements" as formulated by the different Panels. According to the Industrial Policy Panel (which was headed by Mr A. M. M. Murugappa Chettiar), there are four basic needs—the need to improve rapidly the standard of living of the people, the need to increase consumption alongside production, the need to ensure that the fruits of development are not vitiated by increase in prices and the need to concentrate on increasing food production. Rapid industrial development is required to fulfil these needs. Such development, in turn, can be expedited by streamlining and simplifying governmental rules and regulations governing import licences for plant, machinery and industrial raw materials, capital issue sanctions and licences under the Industries (Development and Regulation) Act. It would be conducive to rapid and harmonious development if no rigid percentages are fixed and areas demarcated for the different industries—big, medium and small. However, the small and cottage industries need special encouragement and guidance for improving their methods of operation. Both capital goods and consumer goods industries should be treated as equally important for development. Rationalisation of the tax structure by way of reduction in the incidence of tax, both direct and indirect, would bring in more revenue to the exchequer when economic activity is stimulated by the incentives provided by such reduction in taxation. Bank credit should play a bigger part in the development of industries through expansion of the bill market and underwriting of specific types of securities for public joint stock companies.

The Transport and Power Panel (which was headed by Mr Lalchand Hirachand) has suggested that the provision for transport, power and other services should represent up to 25 per cent of the feasible size of total outlay for the Third Plan because they are the essential determinants of industrial growth. In the Third Plan, development of roads should receive top priority; the obstacles in the way of inter-State movement should be reviewed and removed and the excise on fuel should replace the motor vehicles tax. In respect of railways, the essential need is for modernisation of equipment and improvement in efficiency; the attitude of viewing all other forms of transport as secondary to railways should be changed. The scope for expanding air transport services should be explored. Adequate attention should be given to inland water transport. Coastal shipping should receive a relatively high priority; the shipping target should be such as to enable Indian ships to carry at least 30 per cent of India's overseas trade; and the improvement of intermediate and minor ports should also be undertaken. As for power, the programme of doubling plant capacity during the Third Plan is ambitious enough, although, toward the end of the period, further investments in relation to power projects to be undertaken during the fourth Plan will be necessary. With first line economic hydro resources now having been tapped or in the process of being exploited, a more realistic approach would be to attempt at equal proportion as between hydro and thermal stations during the Third Plan. As for atomic power, it would be best for India to await the progress in nuclear technology before plumping for large-scale development in this field; the one nuclear power station of 250 M.W. visualised will be a forward step well worth taking in the interest of acquiring experience in this branch of technology.

OLYMPUS

The Panel on Agriculture (which was headed by Sir Shri Ram) has suggested that the community development programme should concentrate, for the first few years, on irrigation, road building and agricultural production. Minor irrigation works and improvement of existing irrigation works should be given greater importance. Soil testing laboratories and centres should be set up in different regions and the individual farmers be advised as to what fertilisers can be used in the light of soil conditions. There should be an organisation for bringing plant diseases and pests under control before they can do much actual damage. Credit should be made freely available to cultivators. Systematic steps should be taken for the breeding of dual purpose cattle; the practice in Mysore of using cows for light work in farming should be made more widespread. Greater incentives should be provided to increase the production of non-cereal foods like bananas, mangoes, roots and tubers.

The Panel on Labour (which was headed by Mr Naval H. Tata) has given the finding that no wage freeze is possible unless the price line could be held. It has also held that the unemployment problem cannot be completely resolved within the Third Plan period and that, in view of the limited employment opportunities in the agricultural sector, industrial development should be accelerated. The Panel has appreciated the argument for fixing minimum wages which, according to it, must bear some relation to the per capita national income and to the prevailing rates of wages in different regions. It has also suggested that incentive schemes should be introduced, wherever possible, to bring about greater production and labour efficiency.

The recommendations highlighted here of the four Panels are by no means exhaustive. Together with the ones not covered here, what the businessmen want for themselves and for other sections of the community add up to an impressive schedule of "requirements" which, according to the FICCI Seminar, cannot be met by a smaller Plan of the size of Rs 8,500 crores. The difference, of course, would be as to the share of the Plan that each of the two sectors should have responsibility for. The "heavy" projects presumably will go to the public sector; but, perhaps, the private sector feels it should get a look in. In any case, what is significant is that the businessmen also are in favour of a big Plan. Surely, the business community, like any other section, is now caught in what Mr Adlai Stevenson has aptly called "the revolution of rising expectations".

NORTH INDIAN NOTES

Sugar Industry in Bihar

The Bihar Government have, of late, been concerned with the deteriorating competitive strength of the sugar industry in that State. The State's percentage share of the total Indian sugar production has fallen from 20 per cent to 15 per cent in the course of the last decade. The damage seems to have been done by the faster development of the sugar industry in the Deccan and the Peninsular area. In the Bombay Deccan, alone nearly 18 sugar factories have been set up in the Second Five Year Plan. To the extent to which the Deccan and the Peninsular area, by virtue of their climate advantages, offers better scope for the scientific and intensive cultivation of sugarcane, the shifting of the industry to those area represents a correction of the lopsidedness in location which has been a characteristic feature of the Sugar Industry in the country. However, so far as the Bihar State is concerned, the growth of the sugar industry in the South poses a threat to the marketability of the sugar produced in that State. As Mr Sri Krishna Sinha, the State's Chief Minister, observed while speaking at a conference of the representatives of sugar factories and canegrowers held at Patna, while Uttar Pradesh and Bihar between themselves produce about 66 per cent of the country's sugar production, they do not consume more than one-fourths of the sugar produced in the respective States.

The freight differential apart, the discrepancies in yield and sucrose content of sugarcane would seem to favour the development of the sugar industry in the Southern region. With a lower yield and lower recovery percentage, Bihar faces the possibility of a threat of surplus production that would be hard to dispose of. The impact on the State's sugar industry of such a situation is only too obvious to need any mention.

In these circumstances, it was but proper that Chief Minister Sinha should have laid emphasis on higher per acre yield and increased recovery based on intensive sugarcane cultivation. The ills of the State's sugar industry reflect the lagging pace in this direction. Mr Sinha contrasted the present yield at 400 maunds on developed plots with 3,000 maunds obtained in selected plots on the basis of prize competition. This gap between actual and potential yield indicates the scope for development of sugarcane cultivation. Mr Sinha was, however, not ambitious about the immediate possibilities in improving sugarcane yield and recovery percentage. The primary requisite for improvement of sugarcane cultivation is extension of irrigation facilities which at present cover only about 20 per cent of the State's cropped area. Though the State has embarked on large-scale expansion of irrigation through the Kosi, Gandak Projects and the extension of the Sone Canal System, considering that these are scheduled for completion only several years hence, a lasting and final solution to the most chronic of the problems faced by Bihar's sugar industry looks like being delayed.

*

Bihar's Industrial Prospects

Presiding over the 32nd annual general meeting of the Bihar Chamber of Commerce at Patna, Mr Harak Chand Jain, President of the Chamber, dwelt on the immense scope for development of industries in Bihar. The present industrial backwardness of the State would, however, hardly seem to justify the superlatives used to indicate the potential scope for development. Hailed as the potential Ruhr of India, the State's economy presents a picture of abject dependence on agriculture which has been further accentuated in recent years by an increased inflow of population toward agriculture. The fact that, among the States in the Indian Union, Bihar produces the largest percentage of minerals as also the whole of the country's mica, has not helped in raising the rate of industrialisation. There are, of course, major industrial projects envisaged for implementation which would go some way toward rectifying the present imbalance in the State's economy. However, the hurdles in the way of a rapid expansion of industrial production are formidable and would call for special steps for their being overcome.

These handicaps, according to Mr Jain, include inadequate supply and high cost of electric power, frequent power failure and failure of voltage, mounting cost of prodution, undue delay in granting of loans, delay in acquisition of land, lack of coordination among various departments and an unfavourable industrial policy. A facilitating Government policy in respect of all these matters appears to be the prime need of the hour.

Mr Jain also stressed the need for developing internal outlets for mica in the State. In the absence of internal facilities for processing of mica, the whole production has been directed to exports. But fluctuations in international prices for mica, together with increasing competition from new countries, poses a threat to India's markets abroad, and has directed attention to the need for developing internal facilities for processing. Research in the uses of mica is, therefore, essential.

An important requirement suggested by Mr Jain for the rapid exploitation of the industrial resources was the creation of a State Planning Board. Such a Board, as Mr Jain pointed out, could ensure an intelligent and comprehensive direction of the preparation of the draft of the Third Five Year Plan and its efficient functioning.

*

Rajasthan's Development

In respect of resources, Rajasthan cannot stand comparison with more fortunate States such as Bengal, Bombay, etc. However, the known existence of untapped mineral resources would invest a scheme of mineral development' in the State with bright prospects. But industrialisation has figured less in the development plans of the State so far. Under the First and Second Plans, attention was mainly directed to agricultural development, in respect of which commendable headway has been made, particularly with the aid of Second Plan schemes. It has been pointed out, in this connection, by Mr M. L. Sukhadia, Rajasthan Chief Minister, that the food production target for the Second Plan would, according to present trends, be exceeded. This should give Rajasthan a favourable start in respect of the Third Plan schemes, which are in the process of being worked out now.

Performance under the Second Plan in other sectors is also claimed to be satisfactory. Both in respect of roads and education, the Second Plan targets are expected to be exceeded. The net effect so far as primary education is concerned would be to raise the percentage of children receiving primary education from 50 per cent at present to 53 per cent at the end of the Second Plan. Under the Third Plan, this is proposed to be raised to 90 per cent.

In respect of irrigation and power, the Second Plan targets are expected to remain unfulfilled to some extent. Absence of major rivers flowing through the State, together with lack of alternative fuel resources, limits the scope for large-scale expansion of power. This will prove to be a major handicap for Rajasthan for modernising its economy through rapid industrialisation. Though no idea of the lines of development and the system of priorities is available, it was indicated in a general way by Mr Sukhadia that the Third Plan would be so framed as to provide a sound base for the economic development of the State and to take the State to the self-propelling stage of growth. This would inevitably entail schemes for rectifying present deficiencies in the State's resources. An exhaustive survey of the undeveloped resources of the region seems to be warranted by a realistic industrial programme.

Mr Sukhadia indicated the probable outlay of the State under the Third Plan at Rs 295 crores. The plan schemes are yet to be worked out in detail. However, the draft plan is expected to be available by the end of December.

*

Public Health Under Third Plan

High weightage is expected to be given to rural water supply and sanitation in the public health schemes of the Health Ministry under the Third Plan. A tentative allotment of the order of Rs 175 crores has been made for water supply and sanitation in the draft plan prepared by the Ministry for inclusion in the Third Plan. Adequate supply of protected water is a long felt want and its lack has been the source of the continuing high incidence of diseases in the country. Out of the 558,000 villages in the country, only about 10,000 villages have figured in the National Water Supply Scheme and sanitation programme for rural areas. Extension of the scheme to the rest of the villages is going to be a formidable problem calling for large-scale outlay. Besides, co-ordination of work done by various agencies has also to be ensured to obtain maximum return for the investment incurred in the field. This was stressed by Mr D. P. Karmarkar, Union Health Minister, when he addressed the two-day session of the Central Council for Health held at New Delhi early this week.

Mr Karmarkar criticised inadequate utilisation of various allotments made for health and said that the "paradox of partial utilisation of available resources in the face of the continuance of unsatisfied needs" called for a critical analysis. A Committee presided over by the Madras Health Minister, Mr M. A. Manickavelu Naicker, is proposed to be established for "setting up efficient statistical units both at the Centre and the States."

The draft plan proposes a Central expenditure of Rs 204 crores on health schemes except for family planning for which figures are not yet available. The total allocation by States envisaged during the Third Plan—excluding Assam, West Bengal and Kashmir, from whom figures have not been received—is about Rs 330 crores.

One important need for progress in the field of health services is increase in the number of doctors, particularly in the rural areas. The output from the existing medical colleges is estimated to range between 16,000 and 18,000 during the Third Plan period. Additional requirement has been estimated at 30,000. The requisite facilities for training this number has to be ensured for the implementation of the health programmes of Third Plan. This could be done only by opening new medical colleges and increasing admission capacity in existing institutions.

A scheme for including control of communicable diseases, water supply, education, training and research and family planning in the national programmes is also being considered by the Council. These programmes are expected to be operated through the agency of the State Governments while the financial requirements would be met from grants from the Centre.

DELHI REVIEW

DELHI REVIEW

Sugar Prices Sag: Grains Depressed

PRICES in various Sugar markets have been displaying a slightly easier tendency during the past few days with the free market rates having declined from Rs 145 to Rs 134 per bag. This setback in prices is attributed to the absence of organised buying support. Another factor accounting for the easier outlook is the start of the new sugar season. The industry has been able to show a carryover of about 1.85 lakh tons, which seems to augur well for self-sufficiency in the coming months. There has been some addition to capacity also. It is generally believed that, if production is not hampered for the next few months, the Government will, in all probability, review their distribution policy and restore free trading in Northern India.

Though there is no dearth of sugar in the retail section, the supply resources of the wholesale market are extremely limited. Practically all the supplies are being received through underground channels. Dealers believe that the prices in the open market, which still command a good premium over the fair wholesale rates, will move down further in the near future.

It cannot be denied that the start of the new sugar season all over the country has mainly contributed to the gradual change in sentiment. With the recent incentives, production this year is bound to rise significantly. The number of factories in the industry will also be larger, while the supply position in respect of sugarcane is also expected to be better in view of the incentives offered to the growers.

Meanwhile, the International Sugar Council has estimated the free market's minimum net sugar import requirements for 1960 at 5,700,000 metric tons. The Council has also estimated total available supplies, during the year 1960, at about 6,800,000 tons. It has agreed that Cuba and the Dominican Republic should be entitled to carry forward into 1960 a maximum of 170,000 and 22,000 tons respectively of their 1959 quotas in addition to their 1960 quotas.

*

Gur

In the Hapur market, Gur prices have eased sharply by about Rs 2 a maund in the case of Pansera quality, while the fall is by about Rs 4 in Balti quality. Demand has been mainly from the consuming areas of the South and Gujerat. Ready gur prices in the South are about Rs 10 a maund higher than the corrsponding prices of last year. As such, the bulk demand is being diverted to this side.

Daily arrivals averaged 6,000 to 8,000 maunds, while the total arrivals, from the beginning of the current season, are put at 1.5 lakh maunds. Pansera quality is quoted at Rs 18.50 to Rs 19 and the Balti quality at Rs 19.50 to Rs 20.25.

*

Khandsari

Khandsari prices have, however, advanced to touch a new high, as demand for the new production is brisk. Crushers are busy manufacturing both gur and khandsari and are obliged to pay prices for cane up to Rs 1.62 a maund. Khandsari Old quality is quoted at Rs 42 to Rs 48 and the new variety at Rs 55.

*

Foodgrains

Barring wheat and Bajra, the markets for other Foodgrains have remained depressed, thanks to the good supply position. Prices of Pulses have continued to rule easier following slack demand.

In the Hapur market, Wheat prices have remained almost unchanged although arrivals are slightly better at an average of 100 maunds. Inferior quality Rice has eased fractionally on new arrivals. Despite better demand, Gram has shown a fall of about 25 nP per maund on weaker advices from the Punjab. Bajra has improved following increased seasonal demand. Prices of Pulses have been displaying an easier tendency against heavy stocks.

With the commencement of the busy season for crop movement, values in the Kanpur Cereals and Pulses market have suffered a noticeable decline. Thanks to the revival of interest at lower levels, the market managed to put through sizable business in coarse foodgrains like maize, bajra and gram with East Uttar Pradesh mandies.

In the Delhi grains market, farm wheat has shown small rise due to better buying. As a result of increased enquiry, Gram, too, has recorded a small gain. Barley is soft in the absence of buyers, while there has been a good supply of maize and bajra, which has caused a further small setback from the previous week's levels.

According to the annual review, released by the Commonwealth Economic Committee, world production of grains, in the year 1958-59—outside Russia and China—reached the record total of 496,000,000 tons. This figure is one-quarter greater than before the war. The review adds that the output of grain, as a whole, showed some recovery during the year, accounting for about one-fifth of the total, as it had done before the war.

*

Yarn

Wide uuctuations were witnessed in the Ludhiana Woollen Yarn market. After moving within a margin of 50 nP per pound, prices continued to exhibit a steadier tone. This was despite the fact that the woollen yarn mills here have received their licences for the import of wool tops. It will, however, take about two months actually to import the raw material.

Prices of Staple-Fibre yarns did not exhibit any marked change and price movements were confined to a narrow range. The offtake of staple cloth, however, improved and, as a result, stocks were reported to have diminished to a certain exent.

THE HOWRAH-AMTA LIGHT RAILWAY COMPANY LIMITED.

NOTICE is hereby given that the One Hundred and Twenty-sixth Ordinary General Meeting of the abovenamed Company (being an annual general meeting within the meaning of the Companies Act, 1956) will be held at the Registered Office, No. 12, Mission Row, Calcutta on Monday, the 28th December, 1959 at 11-00 A.M. for the following purposes:—

(1) To receive and consider the Audited Accounts for the year ended 31st March, 1959, the Balance Sheet as at that date, and the Reports of the Board of Directors and the Auditors thereon.

(2) To declare a Dividend on the Ordinary Shares.

(3) To appoint Directors in place of those retiring.

(4) To appoint Auditors and fix their remuneration.

The Register of Ordinary Shareholders of the Company and the Transfer Books will be closed from the 19th to the 28th December 1959 both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy to attend, and on a poll, to vote instead of himself. A Proxy need not be a member.

By Order of the Board,
MARTIN BURN LTD.,
S. GUPTA,
Managing Director,
Managing Agents.

12, Mission Row,
Calcutta—1.
The 2nd December, 1959.

NOTE: The Dividend, if declared will be paid on or after the 28th December, 1959 only to those persons who are registered as the holders of Ordinary Shares as at that date, or to their Mandatees.

NORTH INDIAN MARKETS

THE HOWRAH-AMTA LIGHT RAILWAY COMPANY LIMITED.

NOTICE is hereby given that an Extraordinary General Meeting of the Members of the abovenamed Company will be held at the Registered Office of the Company, No. 12, Mission Row, Calcutta, on Monday the 28th December, 1959, immediately following the termination of the Annual General Meeting to be held on that date at 11-00 a.m. to consider and, if thought fit, to pass, with or without modification, the following subjoined resolution, namely:

"That approval be and is hereby accorded to the re-appointment of Martin Burn Limited as Managing Agents of the Company for a further period of 10 years with effect on and from the 16th day of August 1960 on the terms and conditions contained in the draft Agreement submitted to the Meeting and, for the purpose of identification, signed by the Chairman thereof and that an application to the Central Government for its approval to this proposal under Section 326 of the Companics Act, 1956, be and is directed to be made."

The Share Transfer Books of the Company will remain closed from the 19th December 1959 to the 28th December, 1959 both days inclusive.

By Order of the Board,
MARTIN BURN LIMITED,
A. G. GIDLEY,
Secretary,
Managing Agents.

Calcutta,
Dated the 2nd December, 1959.

Note:

(i) A member entitled to attend and vote is entitled to appoint a Proxy to attend and, on a poll, to vote instead of himself. Such Proxy need not be a member of the Company.

(ii) An Explanatory Statement is annexed to the Convening Notice issued to Members of the Company.

THE PENINSULA

MADRAS REVIEW

Human Relations in Industry

EMPLOYERS should not and cannot be static while rapid changes are witnessed in industrial development; and if employers felt they could do away with trade unionism by promoting goodwill between departments, they are doomed to failure. The key to good relationship, short and long term, between employer and employee, lies in the continuous education and training of managers and also of employees.

This counsel for Indian employers from Mr John Marsh, Director, Industrial Welfare Society and Chairman, National Conference on Social Work, United Kingdom, is extremely useful to the South which is almost chronically affected by bad relations between employers and employees. Not a day passes without labour demonstrations in the City and other industrial towns of the South. Doubtless, the trouble-creating labour leaders are always there. But the prevelence of disaffection has not been confined to the private firms alone. Even the public sector,—the Madras Electricity Department—has become a victim of labour ultimatum, and the Electricity Board always finds itself in a most unenviable position.

It is appropriate, therefore, that there should be a seminar in Madras on the "Human problems in Management" organised by the Madras Productivity Council and National Productivity Council. Managements of City Industries and those from the public sector were represented at the seminar which was inaugurated by the octogenarian statesman, Dr C. P. Ramaswami Aiyer.

Dr Ramaswami Aiyer referred to the reported statement of Mr Gulzarilal Nanda, India's Labour Minister, at Kanpur that he (Mr Nanda) was opposed to socialism if it meant nationalisation, which made men soulless, lifeless and regimented. It was possible there might be a contradiction tomorrow that Mr Nanda was not correctly reported. If, however, the report was authentic, then, it meant a complete reorientation of the Government's policy. To Dr Ramaswami Aiyer it seemed to be rather hard "to concede that, outside Parliament, and what may be called the debates, discussions and resolutions of Parliament, an individual Minister should be tempted to make such observations. I leave the matter at that," he said.

In India, the interaction between labour, capital and management was of a completely different character anad calibre than elsewhere. In other countries, industry had developed very far under conditions not favourable to labour. By gradual development of trade unions, labour made its opinions felt by the country. But, in India, Dr Ramaswami Aiyer opined, almost immediately upon the emergence of an industrial society under the adult suffrage system, public opinion was directed toward improvement of the lot of labour. A spate of labour legislations was the result. Dr Ramaswami Aiyer only reflected the genuine apprehensions among the nation's progressive industrialists about the uncertainty of labour management relations in a country still comparatively backward industrially, but otherwise quite forward in its labour legislation. Dr Ramaswami Aiyer stated this was the crux of the problem of the present industrial India.

Mr Marsh spoke like Mr C. Rajagopalachari, whose insistence on the strict adherence to **dharma** in politics and state-administration is almost passing into a slogan for his newly formed Swatantra Party. Mr Marsh said that, if today's young people knew so much about God and man as they knew about science and technology, much of the present day problems need not have arisen. Two conditions prevailed today in Britain, and they were recognised for a number of years. One was collective bargaining. The second was **suman relationship.** He said that this field was well worth their effort. Cold and calculated negotiations characterised the process of collective bargaining. But, today, Britain was interested in the parallel development, along with the process of negotiations, of the human relationship. This development, Mr Marsh observed, would definitely result in satisfying all employers and employees. If the employees were made to feel that they belonged to the factory and were welcome to make their contributions, then they would have gone very far in settling a big issue with employees.

Team work at the top was essential in any factory that would have various categories of employees. Good relationship further down could not be expected if top executives do not maintain that among themselves, he said. Alongside the collective bargaining structure, there was also another informal structure. No kind of legislation could ever try to get at this structure, since it depended purely on the cultivation of human relationship.

Mr Marsh's four reasons for stressing human relationship were: firstly, from the ethical point of view, it had to be cultivated for its own sake; secondly, it was also necessary for operational reasons for increasing productivity; thirdly, individual employees would find life satisfying in a good atmosphere of relationship; and, fourthly, in an era of rapid changes in all industrial walks, men and women would not accept changes unless the relationship was sound.

Mr Marsh emphasised that employers must recognise that, within the four walls of the factory, office or shop, public or private, human relationship was very essential and they should not merely rely on bargaining process which, he thought, was only supplementary to human relationship. If an employer thought he could do away with trade unionism by encouraging goodwill between the several departments, he was doomed to failure. The key to good human relationship was in the continuous education and training of managers and also of the employees. Several changes took place in the industrial field almost daily and employers could not afford to be static. May be, they might sometimes have to relearn certain things, Mr Marsh said.

Man was the first study in an industry and he needed that study all the time, Mr Marsh stated, and it lay on the management to initiate the cultivation of human relationship. Thus, they could find further down the same teamwork if once they themselves cultivate team spirit among themselves.

As to the role of the trade unions, Mr Marsh believed that the trade union leaders and management should look at problems from all aspects before a final decision. And if they take a decision, it should be a correct one, a decision on the side of humanity.

It is so well known in industrial disputes in India, whether it be of increased wages to employees, be they of the postal or railway departments, that the union leaders or the representatives of the management are never conscious of the essential party to the bargain, namely, the tax-payers who are ultimately taxed to provide for the increased demands of the trade unions without relative improvement of the service to which they are entitled. Even disputes in other industrial organisations are decided without regard to the ultimate consumers. Even Government decisions on such disputes border on this unilateral bias. The Communist-sponsored trade unions in the country are persistent on the labour's own demands with the least regard to the further possibilities of the industry from which they claim disproportionate wages. And—all this, as Dr Ramaswami Aiyer pointed out, because of the innumerable labour pieces of labour legislations. It takes an unusually long time nowadays to get a cheque cashed in a private bank, because the employees do not care as they are safe inside the office whether they discharge their work efficiently to the satisfaction of the customers or not. The customer cannot complain because he would find similar conditions in any other bank to which he might switch over. Tis is only an illustration from the private sector; but, in the State-owned concerns, like the railways and the post office, the indifference has become proverbial courtesy weeks notwithstanding.

As regards workers' participation in management, Mr Marsh's view was that there should be skill and training for workers to participate in management. The management, he said, should answer any question freely on the working of the factory. But if it was a question of a "joint decision," then it was a different thing, he said.

Finally, Mr Marsh's words seem to prove the truth of the existing difficulty in Indian industrial relations today. The task of human relations was much more difficult in a democratic society, he told the seminar, than in a totalitarian State. He said industry in Britain had come increasingly to concern itself with the whole man and the initiative for good human relations was in the hands of management.

Whether or not this type of outlook was also one of the reasons for the Tory success in the recent British elections, Mr Marsh left to the seminar to decide.

MADRAS REVIEW

Rly. Development in the South

The Union Deputy Minister for Railways, Mr S. V. Ramaswamy, has been stating during his tour in the South, that he thought that the Third Plan allotment for Railways would be less than one-fourth of the total estimates for the railways. According to the previous plans, the railways should get at least Rs 2,500 crores in case the total outlay is put at Rs 10,000 crores. He thought that the allotment this time would be only of the order of Rs 1,600 crores.

Whether this announcement is intended to be a warning to States to cut their railway-programme in their territories is not clear, but both Mysore and Madras had stressed the point of more railway development in these areas. In Madras State, there has been a demand to lay new railway links with the Neiveli Lignite project point and the proposed Steel plant at Salem, while in Mysore, in the absence of either rail or road development, much progress could not be made in marketing the great resources of the Malnad.

Mr Ramaswamy told newsmen that there was a proposal to shift the marshalling yard to Virudhunagar from Madura to relieve the latter of congestion of goods traffic. The electrification of the Madras-Chingleput line would be completed by the Second Plan period, he stated, and added that the electrification of the Chingleput-Villupuram line could be taken up only during the Third Plan. Mr Ramaswamy said that there was no possibility of laying new lines (the Madras Government had stressed the new links in this State), and if at all new lines had to be taken up, the deciding factors would be the basis of priorities for feeding key industries like steel plants and whether such lines would promise adequate and good return.

Mr Ramaswamy ruled out the possibility generally of running additional passenger trains in the Southern Railway and he felt that, already, the maximum number was being run. In respect of haulage of goods, the Minister stated that goods trains capable of hauling 7,000 tons in one run would be introduced in the steel belt in Northern India to carry raw material to the steel plants located there. Experiments had been successfully conducted, he stated, in pulling over 100 wagons at a time by the use of three locomotives. Anyway, with the solution of some minor difficulties in this task, the experiment would be put to practical application in the near future. Such clearance of goods by rail had become necessary, the Deputy Minister said, adding that, for every million tons of steel produced, five million tons of material had to be moved to the producing area.

The Union Railway Minister, Mr Jagjivan Ram, said at Madura, where good road transport existed, that he was not in favour of opening up new railway lines. He conceded that railways were at a disadvantage with private operators. (For instance, after the Railway rate for parcels had been increased, the Madras State has been served with excellent lorry goods service and they have begun taking almost the major goods traffic from the railways. So efficient is the lorry service system operating far and wide that consigners prefer their goods to be carried by the lorries rather than by trains whose time schedule and delivery are still subject to delay.)

Food Problem

The view of the well known economist, Professor D. R. Gadgil, Director, Gokhale Institute of Politics and Economics, on the food policy of the Government of India probably would not get the same attention now as it did before. For, he found fault with the India Government's short-term food policies to tide over the difficulties that have cropped up on the food front.

The Professor declared in Madras last week that there should be a well-defined purchase and sale policy and the Union Government must fix prices with eyes on the long-term price level that would be reasonable both to the producer and to the consumer. There was no use having immobile food stocks; they must be made available to all regions, the stocks being widely scattered. It was very difficult to say, Mr Gadgil affirmed, that there was a policy at all in relation to our food. In terms of average availability, the per capita foodgrains position was no better than it was twenty years ago.

As for deficit financing, which has come under severe attack from Professor N. G. Ranga of the Swatantra Party, Professor Gadgil said that, when income went up in an inflationary structure, the pressure on food was accentuated and food prices went up. As such, the mechanism of deficit financing broke down and could not be effective to stop the inflationary pressure.

India had had no food policy since 1954-55, Professor Gadgil pointed out, and added that even the Ashok Mehta Committee was faced with a situation where there was no food policy and no apparatus for regulation or control in the Government's hands. Even a change in the Food Minister, Professor Gadgil said, had not produce any new policy. As for the present food position, he stated that, for six months in a year, there was a situation in which supplies of foodgrains were not widely distributed. He was emphatic that higher yield per acre was the answer and not the diverting of more acreage for foodgrains production.

Finance for Small Industries

As in Japan, a scheme of guarantee in respect of loans advanced by commercial banks to small scale industries will be introduced from March, 1960 in twentyone districts in the country as a pilot project.

This was disclosed to a group of small scale industrialists in Coimbatore early this week by Mr H. V. R. Iengar, Governor of the Reserve Bank.

He had gone to Coimbatore to find out how the scheme would shape in the South. It was stated that small-scale industries had highly developed in the Punjab due to the presence of great skill there. Mr Iengar admitted that the Punjabi was an extremely skilled craftsman, but he did not minimise the considerable development in small scale industries in other parts of the country. Since the past four or five years, the progress had been remarkable.

He was pressing the State Bank to take some interest in small industries. The old Imperial Bank dealt with only big people and the small industrialists had no chance. The Imperial Bank was nationalised with a view to making it take interest in small scale industries.

As the Reserve Bank could function only through other banks like the State Bank, it was his object to press the State Bank to take more active interest in the development of small scale industries. At present, their total advances to small industries were Rs 3½ crores. In Japan, they had allotted Rs 700 crores, and in comparison with Japan, India's help to small scale industries was very insignificant.

Mr Iengar stated that other banks had asked for a system of guarantee against possible losses. He felt that the loss would never be total, and private banks could not be expected to undertake a risky venture without some guarantee. He hoped that, as they progressed, the risk would disappear. In Japan, he said not even two per cent of the total credit was based on any guarantee.

Land Ceilings

The Madras Cabinet has still not concluded its discussion over the land ceiling. The Ministers met at the Secretariat last week and did not reach any decision.

Official sources do not indicate what the ceilings would be, but it is believed that it would be about 30 acres of wet land and 90 acres of dry land. The Cabinet is reportedly against ceilings on land income, as has been done in the Andhra State, which has fixed Rs 5,400 as the ceiling on income from land. The Madras Cabinet believes that such income-ceiling on land would curb production incentive and would refrain, therefore, from fixing income as basis for ceiling.

The entire question is, however, not so simple as it looks, because, in Madras, the interest evinced by even Congressmen on this subject has been known to be acutely divergent. There is always the accusation against the Congress Government that they have not finally made up their mind about fixation of ceiling. This indefinite postponement was also responsible for the confusion in the rural areas where owners are showing extreme reluctance to put their best to increase production. Small holders have already disposed of their properties and are returning to urban places to invest in housing and other properties. This movement from the rural to urban area has been due to a fear that land ceilings would be as low as 10/15 acres. Undoubtedly, the boom in house-building in Madras is also said to be due to the small landowners disposing of their property even at low prices.

Meanwhile, the leaders of the Swatantra Party are intensely campaigning in the Southern districts against such ceiling. Mr C. Rajagopalachari has been working very strenuously for the last several weeks organising the Party's district offices. He is against co-operative farming, for stopping borrowings from abroad, and for cutting the unexecuted schemes in the Plans to prevent further inflation. So far, there have been district conventions, in Tanjore Kumbakonam, Trichinopoly Tirunelveli etc.

Mr Ranga, who is presently accompanying Mr Rajagopalachari, interpreted the ceiling on land by the Government as an act against Dharma. He was inaugurating the the Ramanathapuram District Swatantra Party Convention at Rajapalayam, where he stated that, if agriculturists could be charged with exploitation and other malpractices, they could also similarly charge the non-agriculturists and industrialists. To him, the problem facing the landless in the country could be solved if the Government would place at the disposal of the agricultural workers the ten crore of acres of land in their possession instead of invading the individual land proprietorship. Reclamation cost of this 10 crore acres of land would be Rs 1,000 crores. This would have to be provided by society as a whole. This was not an impossible task. Even as the India Government were prepared to spend Rs 300 crores on the Dandakaranya project to rehabilitate the Bengal refugees, it could spend a little more than this to solve the big problem of our agricultural workers. As it is, the task was not of the **pattadars** alone but of the nation as a whole, Mr Ranga said.

UNDER SECRETARY TO GOVT. 10 DEC 1959 PUBLIC DEPARTMENT

SOUTH INDIAN MARKETS

Improved Sentiment in Groundnut

Madras, Wednesday.

Prices of groundnutoil and seeds firmed up here today after a short period of little fluctuation. Heavy rains last week have impeded arrivals of stock into Madras City that now receives upto 30/40 tons daily. This has come down to half of the prerains arrivals but when normal traffic is restored, the usual seasonal arrivals would be resumed. The United Kingdom price per ton of ready oil is today quoted at £103. Burma's price is Rs 1,550 per ton. Cake price firmed up at Rs 26 per bag of 167 lbs after the shipment announcement by the Government.

Today's prices are: Groundnutoil per candy of 500 lbs: Ready Rs 348/349: December Rs 343: January Rs 340.

Groundnut Kernels: Per candy of 531 lbs: Coromandel Rs 180: Peanut Rs 175.

Castoroil per candy of 500 lbs remained nominally at Rs 330.

Coconut oil per tin: Rs 44, Gingelly oil per maund Rs 21 (nominal), Groundnutoil Cake per bag: Rs 26.

The foreign market prices today are as follows: (all rates per ton): Groundnuts January/February £66/-, Castor seed December/January £59/10, Nigerseed (nominal) £59/-, Groundnutoil spot or alfoat £103/-, Groundnutoil December/January £103/-, Castoroil BSS, bulk December/January £125/126, Castoroil Commercial £119/120, Coconutoil Straits December £130/-, Coconutoil Ceylon December £138/139, Groundnutoil-cake (Expeller) nominal £36/-, Groundnutoil-cake January £35/10 to £35/15, Groundnutoil-cake (Solvent) December, No seller, Groundnutoil-cake (Solvent) January (Sellers) £33/10 to £34/-, Groundnutoil-cake (Solvent) February-March £32/15 to £34/-.

There is an easier outlook in the market due to the improved arrivals in southern producing centres. The Andhra and the old Nizam centres also had good and steady supplies of groundnuts. Crushers from these areas reduced their quotations accompanied by large supplies too. Calcutta interests still continued to obtain their quotas from the lower-quoted centres, in Andhra, Madhya Pradesh and Nizam areas. Shippers picked up small quantities. Ceded Districts and the Circars markets offered ready oil at a rate below that of Madras around Rs 335 per candy, and sometimes even lower at Rs 330. UK and Continental Ports showed some interest in cake positions. Burma bought some oil. This week beginning oil lost by about Rs 18/20 per ton.

Intermittent rains for three days last week all over the State resulted a set-back in the City arrivals. Coramandel and peanut both shrinked to 30/40 tons daily with the result local interests absorbed the quantity almost in entirety. The price which remained at Rs 175 for coromandel last week, spurted to Rs 180 today. It was the same more or less yesterday.

In groundnutoil, price rise was in evidence when the exchange opened Monday last. When shippers and vanaspathi interests wanted to have their requirements from the City sources the quotation went up to Rs 347 per candy but otherwise the price indicated was only at Rs 340. Actual goods became scarce and the close Tuesday was as high as Rs 349. It was only very slightly better today when price was lower by a very small margin at Rs 348 per candy. The market appeared to be nervous due to this spurt in prices.

Forward positions did not show as much increase as spot goods. There was no difficulty for November contracts to be fulfilled easily.

December position beginning at Rs 340 per candy improved by another couple of rupees following higher Bombay quotations. Last week-end it came down to as much as Rs 337 due to profit-taking. But Monday's prices improved with Bombay quotations also going up and Tuesday's closing rate was Rs 343. That stand was today steadily maintained at that level itself.

Much interest was evinced in January vaida. Builish trend developed last week-end after the quotation declined to Rs 335/8 due to profit-taking. But here again there was good demand for this position and Monday and Tuesday the price increase was maintained at Rs 340 per candy. Today also it maintained the same level as the Devember vaida.

The Groundnutoil cake continued to be steady. As a matter of fact, it firmed up today at Rs 26 per bag of 160 lbs ex-mill with gunny.

Upcountry Markets: In the Villipuram, Tirukoilur, Tiruvannamalai, Arni, Tirupattur and other centres arrivals were in good quantities. All these are new crop. In farther down South, Dindigul and surrounding places have began receiving small quantities of the new harvest. If weather improvement now seen is maintained, the prospects of sizeable arrivals are good in these places. By the middle of this month the flow would be quick and steady. These centres reported deals at Rs 347 or Rs 348, but when kernel prices went up they too put up prices on demand. Bulk interests, however, negotiated deals earlier at Rs 345 per candy.

In the northern producing centres of Nandyal, Kurnool, Guntur and Bezwada the price trend proved steady. Calcutta interests bought oil here at Rs 16/8 to Rs 16/14 per maund. Nandyal offered for a lesser rate of Rs 16/6 to Rs 16/8 per mound.

Other Seeds and Oil: Gingelly seed and oil kept steady. Only local arrivals continued to be received in small quantities.

Gingelly seed: Mysore side quality Rs 66 per bag. Vizianagaram No stock. Local varieties Rs 66/67.

Castoroil per candy of 500 lbs: Rs 330 sellers Rs 325 buyers.

Coconutoil: The West Coast market still continues to be firm due to limited copra availability. At Cochin Ready was quoted at Rs 670 per candy, December at Rs 663 and January Rs 653. Local price coconut oil is Rs 44 per tin. It was Rs 43 at Tuesday's closing.

Hides and Skins

Cow hides prices were on the decline by 10/12 nP per lb. Arrival of stocks was generally good. Demand was, however, dull.

While shippers' anxiety to sell was reflected in their good offerings but at no further reduction in price, United Kingdom did not respond. This resulted in a declining of the prices. 8/8½ lb prime fifths were sold 40d/41d. Semi prime fourths 5/5½ lb and fifths were transacted at 62d and 55d respectively. U. K. bought inferior fifths at a lower quotation of 40d/42d for 5/5½ lb average. Locally the demand improved. Tanned buffalo hide prices did not change remaining at 12/13 lb Rs 1.37 to Rs 1.50. Good trade in this was reported.

Tanned cow calf and buffalo calf too showed no changes. Cow calf was quoted at Rs 4.50 to Rs 5.00 per 1½/2 lb. Buff calf price was 1½/2 lb Rs 3 to Rs 3.37. Stock arrivals were not of the first quality. U.K. showed little interest in this section this week.

Tanned goat skins and sheep skins had as usual a fair turnover, with 2,000 and 26,000 pieces respectively being locally absorbed leaving 7,000 and 50,000 tanned goat and sheep skins respectively. Goat prime was quoted 8/9 lbs Rs 9.12 to Rs 9.25. 5½/6 lb Rs 10.37 to Rs 10.50: sheep ordinary 6/7 lb Rs 8.25 to Rs 8.50: sheep prime 6/7 lb Rs 10.87 to Rs 11.12.

No change in quotations was observed in the export section.

Following are the raw skin prices: (Previous week's prices in brackets) Bangalore raw goat skins Rs 560/620 (Rs 540/600): White Wool Sheep Rs 520/630 (Rs 520/600): Black Wool Sheep Rs 400/480 (Rs 435/485): Bezwada raw goat skins Rs 550 (Rs 540/545): He sheep Rs 520 (Rs 510/515) She Sheep Rs 420 (Rs 400/410).

Pepper

Despite heavy arrivals at the rate of about 900 tons into the producers' pool at Alleppey and Cochin, pepper prices remained firm. Last week-end the total arrivals in the neighbourhood of about 1,800 tons had all been absorbed, exporters said here today.

Effective November 18 hedging contracts have been closed for an indefinite period due to the sudden spurt in pepper prices. Therefore shippers had to buy in the ready market. There is possibility of the firmness easing only if the hedging is allowed and exporters negotiate at least 50% of their commitments in hedging contracts.

There is also another reason for the spurt in prices. Lest the Eastern shippers, including those from Singapore, should not be able to fulfil their contracts with the U.S. importers, U.S. themselves are stocking. This fear is said to be groundless. But anyway the U.S. purchase is continuing unabated. Because of this doubt they are also avoiding their usual phased buying programme. Singapore shippers are also buying spot goods at Cochin for shipment.

By Mid-November spot pepper stock in New York was reported in the region of about 2,300 tons. Another 700 tons would have reached New York by the end of November with the result the stock at New York would have risen to about 3,000 tons. This is considered to be the maximum stock New York had held for the last four years. Presently the US is interested in January, February and March contracts also.

It was thought that the hedging contracts would be resumed by December first week. A three-member delegation of the India Pepper and Soice Trade Association from Cochin would be discussing the position with the Forward Markets Commission in Bombay this week on the reopening of the forward pepper market.

Foodgrains

In the wholesale foodgrains market in Madras, slight price recession was witnessed. This is ascribed to good arrivals of wagons of paddy and rice. Also with the new Andhra paddy harvest coming into the market, city stockists want to unload their holdings. But buyers are still hesitant. Though boiled rice is scarce, there was a tendency toward an easier trend in the wholesale market. From Andhra side the popular boiled rice consumed in Madras has begun to arrive and was offered by wholesalers at 25 nP less per bag. Raw rice was firm, however, due to continued demand. The Nellore raw rice *basangi* remained at Rs 47/50 and 48/50 per 162 lbs. Boiled rice was quoted at 45 for superior quality for 48 Madras measures and Rs 45 for *motta* varieties.

Pulses new arrivals had affected prices and trading continued to be dull for the past three weeks. Though retail prices are yet to come down, whosesalers are eager to dispose of old stocks at reduced quotations if buyers are also willing. Toor dhall declined for the second sort by Rs 5 per bag at Rs 56 and first sort at Rs 75 (per 205 lb bag): Bengal gram was quoted at Rs 34.50 to Rs 35.50: Black gram first sort Rs 62 and second Rs 56 per 60 Madras Measures: Greengram 225 lbs Rs 53/54: Blackgram Rs 50/51 per 2-3/4 maunds.

Even corianders seeds which rose in price had come down due to improved supply position and lower advice from producing centres. Chillies too went down in prices due to better offer from producing Ramanathapuram district. Tamarind was, however, firm.

Coriander 80 lb Rs 48/52: Mustard big 164 lbs Rs 52/53 small 500 lbs Rs 170/175: garlic big Rs 190/200 small Rs 250/260: tamarind 500 lbs first Rs 420/425 second Rs 400/405: old Rs 375/380: Chillies 82 lbs Ramanathapuram Rs 105/115: Pettai Rs 105/110.

India Steamship Company Limited

Higher Freight Earnings: More Vessels Put into Service

New Routes Opened to Facilitate Foreign Trade

Sir A. Ramaswami Mudaliar on Effects of Competition from Tramps

The following is the address of Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L., (Oxon), Chairman, India Steamship Co. Ltd., delivered at the Annual General Meeting of the Shareholders of the Company, on November 27, 1959.

Before taking up the agenda the Chairman referred to the irreparable loss that the Company has sustained in the untimely demise of one of its Directors, Mr Gopi Krishna Khemka. Mr Khemka was virtually the originator and the promotor of the India Steamship Company. It was during the last war that he floated this company and the robustness of his optimism, his courage and the spirit of indomitable adventure could be realized from the fact that he intended from the outset that the ships of the Company should be utilized for overseas trade. It was an act of great faith that at a time of intense competition, when even coastal shipping was not reserved for National Lines, Mr Khemka should have decided on this great venture. During the last fifteen years, he devoted himself wholeheartedly to the service of the company and his advice and cooperation was of immense value to the Chairman and other Directors of the Company. He promoted various other industries, some of them pioneering industry so far as Indian venture was concerned, like the Cable Factory. But his memory will ever be associated with the progress that Indian shipping has made in the wide seas of the world during the past decade. The Chairman then moved a resolution of condolence to be communicated to his wife and other members of the family. The motion was adopted all members standing. The Chairman then resumed consideration of the Agenda and in moving the adoption of the Directors' Report, the Audited Accounts and the Balance Sheet made the following speech.

AUDITED ACCOUNTS

The Audited Accounts and Directors' Report for the period ending March 31, 1959 have been in your possession for some time. With your permission I shall take them as read.

The Directors' Report shows that the freight earned during the year was Rs 8,04,04,160 as against Rs 7,75,04,245 in the previous year and Rs 6,00,17,168 in 1956-57. The total number of liner voyages during the year was 39 compared to 30.5 in the previous year. Though the amount of freight earned was the highest so far, the figure does not reflect a comparable net profit for the Company. The increased earning was partly due to the number of ships in service, but there are other factors which continue to increase the expenditure side and to reduce the net profit of the Company.

The net profit earned by the Company after deducting all charges and setting apart a sum of Rs 75,55,777 towards depreciation, amounted to Rs 60,66,726. Though in comparison with last year's figures these results may not appear striking, I venture to state that having regard to the conditions prevailing in the shipping industry during the period, the results are not unsatisfactory.

FREIGHT RATES

I stated last year that it is the experience of all shipping companies that while boom periods are comparatively rare, lean years, when the quantity of freight falls and the rates are brought down sharply, are more common. International shipping is peculiarly susceptible to world conditions, economic or political. These anticipations were unfortunately literally fulfilled during the year. Freight rates were sharply cut down to meet the competition of tramps and the over-tonnage of some of the shipping companies has led to unhealthy conditions and further reduction in freights in some of the important commodities. The declining trade has also contributed to some extent to the fall in the profits earned. The ships had to call at many more ports both for loading and for unloading cargo than in the previous year owing to scarcity of cargo—the ports called at during the year being 768 as against 496 in the previous year.

PORT CONDITIONS

The conditions in the port of Calcutta further deteriorated, in as much as draft restrictions were much more serious during the year than in the previous period. The obvious effect of such restrictions is that less cargo can be loaded at the port of Calcutta and very often ships have to remain for long periods waiting for favourable drafts. I have emphasized on more than one occasion that the port of Calcutta is the most important port in India from the point of view of the volume of traffic both inwards and outwards. It is also the port, through which the largest amount of foreign exchange can be earned by the export cargo available at the port. On its functioning satisfactorily depends in the main the economic life of West Bengal. I trust that these factors have been fully realized and measures will be taken by the Government expeditiously and the assistance that the World Bank is giving for the reconstruction and proper navigability of the River will enable a more rapid mprovement of the port.

PROGRESS

During the year under review, two more ships, the "Indian Success" and the "Indian Strength" were added to your fleet; and three ships were under order, one at the Visakhapatnam Shipyard and two at the German Shipyard of Messrs Howaldtswerke. During the current year, the "Indian Industry", built at Visakhapatnam, was delivered and is now on her maiden voyage to the United Kingdom and the Continent. Two more ships, the "Indian Tradition" and the "Indian Trust", have been launched and their delivery is expected, the first, in the last days of the year and the second early in February. With these additions, your fleet will consist of 18 oceangoing vessels including the "Indian Industry" and one coastal vessel, the "Indian Commerce". All these vessels, as I stated at the last annual meeting, have been ordered on the basis of immediate foreign exchange payment which the Government of India allotted in 1956 when this programme was approved and for which one cannot be sufficiently grateful to the Government. One more ship has been ordered from the German Shipyard on the basis of deferred payment, the necessary foreign exchange being found over a period of years. The system of deferred payment has not proved attractive as it involves a larger capital outlay for a ship which, after all, has to compete in international waters with shipping of other companies which are not handicapped in the same way. It is hoped that by the combined efforts of shipping companies and of the Governments, both Indian and foreign, at whose yards ships are built, a fairer and a more natural solution of the foreign exchange problem may be found shortly.

NEW ROUTES

I referred last year to the new routes that have been opened up by the ships of your Company to facilitate the export and import trade of the country and to establish connexions with shippers in other parts of the world. The establishment of these new routes enables your Company to get the support of more shippers not only for the freight which will be carried by the new routes, but also for freight which has to be carried by the old established route. Shippers, especially those who have connexions in several parts of the world, desire to have facilities to ship to different places and will seek companies which are in a position to carry freight not to one destination only but to more than one destination. We have now opened our shipping to trade with the ports in the Black Sea and along the Levantine Coast of the Mediterranean. We have also opened a direct service to the Eastern ports of South America and our ships are calling regularly at the ports of Argentine and Brazil. These services call for a larger number of ships, while the existing routes also require a fair number of ships to keep regularity of service and thereby satisfy our regular shippers. These are the considerations which weighed with your Directors in increasing the fleet—an increase which was planned and programmed as early as 1956.

DIVIDEND

I have already referred to the fact that after providing over Rs 75 lakhs towards depreciation, the net profit earned by the Company amounted to over Rs 65 lakhs. The whole of this amount has been set apart as "Development Rebate Reserve" in accordance with the law promulgated on the subject. I would, however, like to mention that this Development Rebate Reserve, which with the present addition amounts to Rs. 1,14,00,000 is not available for the payment of dividends, but is available for such expenditure as payment of interest and instalments due on loans from the Government. While we have received loan from the Government for the construction of ships, your Directors have had constantly under review the financial resources of the Company for repayment of these loans. You will therefore find from the balance sheet that in addition to payment of over Rs. 19 lakhs as interest on these loans, the Company has also paid the instalments on the loans due. I may finally state that, as the financial year under review ended on March 31, 1959, the new dividend tax is not applicable to the dividend that is now paid and therefore the shareholders will receive the same amount as in the previous years.

DIVIDEND TAX

I have expressed my view elsewhere that the new proposal of a Dividend Tax is much more onerous than the previous proposal of a tax on dividend paid direct by the company. The new dividend taxation proposal was stated to be necessitated because of the complexity of grossing up the income earned in this respect before giving relief to the assessee. It was also stated that in view of the relief given to the Company by reduction of income-tax and abolition of wealth tax, this proposal would not in any way seriously affect the payment of dividends nor would it bring additional revenue to the Government. That these forecasts, whose accuracy was even then doubted, were mistaken, has been realized by every company which had to declare a dividend in a financial year which ended after March 31, 1959. Under the previous law, the declaration of a dividend of 6 per cent did not attract any dividend tax. Under the present law, the declaration of a 6 per cent dividend will mean that the shareholder will receive only 4.2 per cent on his shareholding. The relief by way of refund to such an assessee is in most cases illusory. I would put in a plea for the small shareholders who have, for many years, been dependent on the earnings from dividends on their share capital. A payment of nearly 43 per cent as tax on the amount actually received as dividend is certainly a very serious imposition on such shareholders. I do trust that the matter will be further examined and that if the complexity of grossing up the earnings is to be avoided, at least a smaller percentage of tax, may be declared as fair and just.

FOREIGN COMPANIES AND RESTRICTIVE PRACTICES

It is no pleasure to me to once more, draw your attention to the fact that we have made no progress by negotiation and argument in the claim that we have advanced, that Indian Shipping should be allowed into the conferences at least of the way-side ports on the direct route from India to the U.K. and the Continent. We have not been allowed even to participate in the freight from Colombo to the U.K. and back. On the other hand, quite recently, while we were calling occasionally at other ports in Ceylon like Trincomalee and Galle, the Colombo Conference extended its sphere to all the ports in Ceylon and announced that as the Indian Lines were not Members of that Conference, they could not call at any of the ports in Ceylon; a supreme example of the freedom of the Seas and non-discrimination of flags which some of the lines constantly speak of! This communication was considered by the two Indian Lines as adding insult to injury and they have now both definitely declared that they will call at all the Ceylon ports including Colombo as necessity demands and that they will not be bound by any rules of that Conference except that, in the first instance and in the absence of any other action by the Conference, they would observe the freight rates laid down by the Conference. I must confess that the decisions of the Conference, even in the India-U.K. Continent trade, have surprised Indian Lines and, with all the desire to co-operate with the Conference, they have found it difficult to see eye to eye with some of the members of the Conference. These decisions have been sometimes wanting in logic and sometimes clearly aimed at Indian Lines. Matters have come to a head, and unless a reasonable attitude is taken, the conference system itself is likely to be endangered. I may mention that recently, during my last visit to England, I have had frank and full discussion with the two Chairmen of the Conferences of which we are members, and I hope that there will be a better understanding of the position of the Indian Lines and their requirements very soon.

SHIPPING BOARD

During the year under review, a National Shipping Board has been constituted to look after the promotion and development of Indian Shipping, with Mr. G. L. Mehta, who has long been associated with Indian Shipping and who has held the high position of Ambassador in the United States, as its Chairman. I trust that the activities of the National Shipping Board will help in fostering the growth and development of Indian Shipping, the need for which is more apparent today than even before. The Ministry of Transport has a new Head in my esteemed friend, Dr. P. Subbarayan. The Minister of State, Mr. Raj Bahadur, continues to be in direct charge of Shipping. We are thankful to both of them for the interest they have taken in the expansion of Indian Shipping and in the development of Indian ports. We have had throughout the period, consistent and valuable help, assistance and advice from the Director-General of Shipping and his Deputies and from the Secretary to the Ministry of Transport. The Departments of Government, who are placing large orders for the import of various kinds of commodities, plant and machinery from abroad, are, I am glad to state, realizing the important part that Indian Shipping can play in the economy of the country and we are also thankful to them for this increased awareness of the position.

TRIBUTE

As I have already stated, the financial year has been a year of great difficulty in a falling freight market and it required the wholehearted and devoted services of all its officers afloat and ashore, and all its employees of every rank to enable the Company to achieve the results that it did. I must also convey the thanks of the Board and of the shareholders to the Shippers who have given their firm support to us and to the Brokers and Forwarding Agents, who have shown confidence in us and in the excellence of our shipping services. Your fleet is one of the fastest in cargo service from India to the U.K. and the Continent and, taken as a whole, I venture to state that it is the fastest existing. It has established a record for its reliability and for the reasonably careful handling of the cargo entrusted to it. Every year brings new problems to the shipping world and your Company is determined to keep in step with all the progress that has been made either in regard to shipping itself, or in regard to the services which are ancillary to carrying freight by your ships.

Over ten years have now passed since I took direct interest in your Company as its Chairman. More than a decade of strenuous and sustained work has been possible by the enthusiastic cooperation of my colleagues and of all the staff in the service of the Company, and by the generous support which you, as shareholders, have given. I trust I may have your continued confidence in the full hope that whatever the results may be, there will be nothing lacking in thought, in attention and in devotion to the affairs of your Company. I hope also that the Government will realize that a shipping company such as yours is more than a mere commercial organization and that with your encouragement, it will play its part not merely to earn profits but to be of the foremost service to the economic and political life of the country.

The above statement is not a report of the proceedings of the Annual General Meeting referred to.

THE TATA IRON AND STEEL COMPANY LIMITED

NOTICE

Applications for "A" second preference and new ordinary shares from non-resident shareholders

Notice is hereby given that with a view to enable non-resident shareholders to comply with the exchange control regulations, the Directors have resolved that the last date for receiving applications from them, which was fixed as 30th November 1959, be extended up to 31st March 1960.

Dated at Bombay this 30th day of November 1959

By Order of the Board
Tata Industries Private Limited,
Managing Agents,
J. D. Choksi
Director

THE TATA IRON AND STEEL COMPANY LIMITED

NOTICE

Applications for "A" second preference shares and new ordinary shares

Notice is hereby given that the last date for applications for the "A" second prefence shares and the new ordinary shares in terms of the Company's circular dated the 12th October 1959 expires on the 30th November 1959. However, for the convenience of the shareholders, the Directors have resolved that the Company's bankers be authorised to receive applications on and after 1st December 1959 up to but not later than 15th December 1959 for such shares provided that along with each such application and the moneys to be received with such application interest at the rate of 9% per annum thereon (which the Directors have decided to charge) shall be paid to the Company's bankers. No application received on and after 1st December 1959 will be entertained by the Directors unless such interest is paid as aforesaid. No application will be entertained after the 15th December 1959.

Dated at Bombay this 30th day of November 1959

By Order of the Board
Tata Industries Private Limited,
Managing Agents,
J. D. Choksi
Director.

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED

(Incorporated in England)

By Order of the Board,
D. H. P. HENDERSON
Agent.

Victoria House,
Calcutta, 1st December 1959.

Indecisive Trend

WATCH-DOG WRITES:

STOCK markets are still in an indecisive mood and price movements have continued to be irregular due to profit-taking at bulges. It looks as if the professional operators as well as investors have not yet recovered from the shock of recent *rumours about a supplementary* budget and they have little stamina to resist the onslaught of bears. A considerable time may, therefore, be needed for the market to regain its equilibrium.

Activity on the local Stock Exchange was at a low ebb and all attempts at recovery proved abortive.

After showing some signs of recovery, the main body of shares on the Bombay Stock Exchange developed a reactionary trend due to lack of follow-up support.

On the Madras Stock Exchange, industrials came in for moderate attention and several scrips met with absorption.

Quiet and irregular conditions were again witnessed on the London Stock Exchange.

Wall Street Closed barely steady.

*

Calcutta, Friday Evening.

RESTRICTED business and the hesitancy on part of operators to extend their commitments were mainly responsible for the subdued conditions still prevailing on the local stock exchange. Prices fluctuated both ways within a small range without any definite trend. On balance, equities disclosed small losses over a wide front.

Apart from the persistent uncertainty on the political front and the diversion of funds to new issues, the announcement that the Government of India had decided to charge interest at the rate of 5 per cent on the special advances granted to the TISCO and the IISCO, was interpreted to mean that these companies had to provide funds for the purpose of making payment of the interest. Fears were also entertained with regard to additional taxation and the imposition of excise duties on certain commodities.

Thus bears, taking advantage of the situation, dominated the entire scene and depressed prices to lower levels, while bulls found it hard to lend their support although they availed of the ensuing rallies only to reduce their commitments. But for the selective support and scattered bear-covering being induced by the subsequent clarification that the Government decision to charge interest on the loans to the steel companies would not affect their normal profits, the market would have witnessed a veritable landslide in values.

Except for short-dated scrips which met with some demand, conditions in the Giltedged section continued to remain generally dull. With money conditions easy, institutional investors were in the market to pick-up whatever discount scrips they could get. 3 per cent 1986 Conversion Loan opened at Rs 73.75 and, after improving at one time to Rs 74.25, receded at the close to Rs 73.70.

Bank shares were generally quiet with Punjab National changing hands at Rs 20.37 to Rs 20.62. United Commercial lost half a point at Rs 62.

Jute shares were practically neglected on fears that the mills might now find it difficult to make sufficient profits in view of the higher trend of prices ruling for the raw commodity. It was even reported that the brokers found it difficult to execute even the best-rate selling orders. The only relieving feature was the good resistance offered to lower levels. Howrah were pushed down at one time to Rs 23.31 from Rs 23.94; National to Rs 24.62 from Rs 24.75 and New Central to Rs 20.25 from Rs 20.81, to finish the week better at Rs 23.37; Rs 25.25 and Rs 20.44 respectively. Kamarhatty and Kanknarrah were nearly maintained at Rs 194 and Rs 102 respectively.

Coal shares were also marked down in sympathy with other sections; but there was not much anxiety to sell out in the hope that the outlook for the industry might improve with the increase in demand for coal in the coming years. East Indian had buyers Rs 21.44 to Rs 21.50; New Beerbhoom at Rs 21.56 to Rs 21.81 and Bengal at Rs 295 to Rs 297. Burrakur fluctuated between Rs 17 and Rs 17.31, to close finally at Rs 17.06.

Quite in contrast to the general market of the market, Tea shares gave a better show. Although there was a general disposition to book profits at the recent high levels, a few selected scrips maintained their best levels till the close on the belief that the estates producing common teas, which were so long incurring losses, might present better results during the current year in view of the higher prices now obtaincd at both the Calcutta and London auctions. Betjan changed hands at Rs 24.12 to Rs 24.37; Bishnauth at Rs 20.50 to Rs 21; East India at Rs 23.87 to Rs 24.50; Grob at Rs 14.37 to Rs 14.62; *Hattikhira* at Rs 14.50 to Rs 14.87; Jayshree at Rs 15.19 to Rs 15.31 and Tezpore at Rs 13.37 to Rs 19.

A general disposition to await further developments in the commodity situation was reflected in Sugar shares, which met with only limited interest. Raza/Buland were a firm feature at Rs 12.87, while Cawnpore and Champarun were quiet at Rs 14.37 and Rs 20.12 against Rs 14.81 and Rs 20.31 respectively. SKG moved narrowly between Rs 13.12 and Rs 13.19 U.P., after a long time, came in for business upto Rs 17.06 from Rs 16.87.

Textile scrips remained generally steady, thanks to better conditions *prevailing in the piecegoods market.* Cawnpore met with good buyers upto Rs 5.69 from Rs 5.52; Elgins upto Rs 15.69 from Rs 14.37 and Kesoram upto Rs 19.37 from Rs 18.44. Jayshree were a narrow market around Rs 10.44 with New Victoria rather quiet at Rs 1.19 against Rs 1.34.

In the Engineering section, price movements were mostly influenced by the speculative activity in Indian Irons which, in turn, were subjected to alternate bouts of buying and selling. After opening lower at Rs 22.98, Indian Irons receded gradually to Rs 22.97 on reports that the Government of India had decided to charge 5 per cent interest on the special loans sanctioned to the company. When it was clarified that this decision would not actually affect the normal profits of the company, there was a recovery at the close to Rs 23.16. TEXMACC were marked down at one time to Rs 24 from Rs 24.45 and G. K. Williams to Rs 39.94 from Rs 40.37, to improve toward the close to Rs 24.20 and Rs 40.00 respectively. Jessop met with some enquiry at Rs 33.62 to Rs 33.87. Britannia at Rs 12.50 to Rs 13.00 and Indian Galvanizing at Rs 20.69 to Rs 20.87.

Thanks to the encouraging corporate news, most of the miscellaneous issues finished the week with minor losses on balance, as will be clear from the following price trends of a few selected scrips:—

	Week's High Rs	Week's Low Rs	Week's Closing Rs
Orient Paper	36.35	35.75	35.90
Shree Gopal	22.75	21.62	22.69
Sirpur ...	13.50	13.31	13.50
I. Cable ...	30.31	29.81	29.94
I. Aluminium	23.44	23.06	23.31
I. Steamship	12.25	12.19	12.19
I. Copper ...	3.90	3.87	3.88
H. Motor ...	15.06	14.12	14.94
Dunlop ...	35.81	34.62	35.12
Rohtas ...	25.19	24.62	25.19
Philips ...	20.44	20.00	20.97
A. Chemical	22.81	22.60	22.81
Martin Burns	26.87	26.25	26.62
S. Valley ...	5.50	5.37	5.44

*

Bombay

The Bombay Stock Exchange ruled easier during the past week largely due to lack of buying support. Apart from the main restraining influence, the political developpment and the related apprehensions about additional taxation, the statement of the Chairman of the Indian Iron & Steel Company induced a cautious approach. The announcement that interest would be charged by Government on their loans to the steel companies also contributed to the depressed tone for some time. With the explanation that interest payment would not entail any additional burden on the compaies, there was some recovery but in the continued absence of fresh incentives, the *market closed the week on a quiet* note.

In the Steel section, Tata Steel opened the week last Thursday at Rs 156.25 but by close of the week eased to Rs 154.50. Indian Iron commenced at Rs 23.44 and was finally placed at Rs 22.96. Even the news that production at IISCO works during November had been satisfactory failed to check the downtrend.

Textile shares were also a quiet market. Bombay Dyeing eased to Rs 67.60 from Rs 68.60. Century lost ground to Rs 616 from Rs 623. Kohinoor lost Rs 10.50 to be finally placed at Rs 319.50. Svadeshi was in request in earlier dealings but turned quiet by close to Rs 256. Finlay was easier at Rs 291

Except for a few bright spots, the miscellaneous section reflected the general trend. Hindustan Motors was a steady counter and closed higher on balance at Rs 14.60. BB Petrol was well supported at Rs 1.90. Gwalior Rayon advanced to Rs 24.96 from Rs 24.60. Cements were quiet with ACC moving down to Rs 150.50 from Rs 154.50. National Rayon eased to Rs 361.50 from Rs 365.50. Bombay Burma lost Rs 7 to be finally placed at Rs 548.50.

*

London

QUIET and irregular conditions were again experienced on the London Stock Exchange. Business was restricted, *to some extent*, by the Chancellor of the Exchequer's warning on optimism regarding tax-cuts in the next Budget. Although a selective demand persisted, this was offset by small selling.

Industrials provided a number of bright spots as the result of favourable company statements; but the market generally lacked any decided trend. Steel shares were quietly irregular. A sharp rise in Broom and Wade following good results was the only noteworthy movement in Engineering shares. Breweries were selectively better. Faireys were firm in Aircrnafts. The feature of Stores was a fresh rise in Woolworths. Giltedged securities were quiet and undecided.

*

New York

CONDITIONS on Wall Street remained generally steady. Aircraft Missles attracted new buying on a hope of larger US Government spending in the next fiscal year. Douglas Aircraft, General Dynamics and Boeing Airplane were notable gainers. Solar Aircraft advanced on a report that International Harvester had offered to buy Solar through an exchange of stock. Anaconda Copper was higher in further response to good dividend action.

*

Investment Notes:

According to the figures released by the directors of the Indian Iron and Steel Company Limited, production of Pig Iron has shown a decline to 77,380 tons in November from 79,539 tons in October. This decline is attributed to one blast furnace being off for relining. Production of Steel Ingots has, however, increased to 71,112 tons from 67,901 tons, while Saleable Steel is higher at 55,610 tons against 48,868 tons. Of this, semis has amounted to 20,629 tons against 11,503 tons and finished steel to 34,981 tons against 37,365 tons. Despatches of saleable steel have also *risen to 56,138 tons from 53,009 tons.*

The outlook for Gwalior Rayon Silk Manufacturing (Weaving) Company Limited appears to be encouraging. There are indications that the earnings of the company will be substantially higher for 1959/60 than in the previous year. It is estimated that the output of staple-fibre will amount to 450 lakh pounds against 307.71 lakh pounds in 1958. The company has also proposed to undertake the manutacture of high tenacity staple-fibre yarn, which will be a substitute for Egyptian cotton. The necessary licence is expected to be received from the Government in the near future.

The Chase Bright Steel Limited - a *new company* formed for manufacturing certain categories of steel items - will shortly enter the market for raising fresh capital. The authorised capital will be Rs 1 crore and the issued capital will be Rs 30 lakhs divided into 3 lakh equity shares of Rs 10 each. The directors and their friends will subscribe for Rs 15 lakhs and the balance will be offered for public subscription.

The Tata Iron and Steel Company Limited has announced that the last date for receiving application in respect of the "A" second Preference shares and the new Ordinary shares has been extended to the 15th December, 1959. The company's bankers have been authorised to receive application on and after 1st December, but not later than 15th December for such shares provided that, along with each such application and the moneys to be received with such application interest at the rate of 9 per cent per annum thereon (which the directors have decided to charge) is paid. As for applications from non-resident shareholders, the last date has been extended upto 31st March 1960 with a view to enabling them to comply with the exchange control regulations.

The Century Spinning and Manufacturing Company Limited has received the permission from the Government for the issue of right shares in January 1960. The Transfer Books of the company will be closed about the third week of January for this purpose.

Testeels Limited has proposed to raise its share capital, subject to the consent of the Controller of Capital Issues, by the issue of 12,500 new equity shares of Rs 100 each The shares are to be offered, in the first instance, to the holders of the existing equity shares in the ratio of one new share for every share held.

It is learnt that the Ashok Paper Mills Limited—a new company—proposes to set up a paper mill near Darbhanga in Bihar. The initial capacity is expected to be 15,000 tons a year. Foreign collaboration will be made with the French firm of Empacel. The company has, therefore, proposed to offer soon Ordinary shares of Rs 10 each and 6 1/4 per cent tax-free Cumulative Redeemable Preference shares of Rs 100 each for public subscription. The *total share* capital is likely to be Rs 2.25 crores.

ASHOKA CEMENT LIMITED

Indian Finance — INVESTOR'S SUPPLEMENT

UNDER SECRETARY TO G. KELVIKAR
15 DEC 1959
FOOD DEPARTMENT

Hesitant Tone in November

CAUTION and hesitancy characterised trading most of the time during November. After a cheerful opening induced by the addition of four more shares to the Clearing coupled with the absence of any fresh disturbing news from the border, equities displayed a sagging tendency from the beginning of the second week almost to the close. Some improvement in sentiment was, however, discernible in the last one or two days of the month when most equity prices recovered to close slightly higher on balance. Among the more speculative counters Indian Iron was pushed down to a low of Rs 22.95 before closing still much lower on balance at Rs 23.04.

In earlier dealings, a broadening of activity was noticed specially around the more speculative counters. The Calcutta Stock Exchange announced its decision to include four more shares, namely, Dunlop Rubber, Rohtas Industries, Hindustan Motors, and Shree Gopal Paper bringing the total number of shares in the Clearing to 13. The uptrend was halted in the next week as it was increasingly becoming clear that even if there was no actual armed conflict, there would be still need for keeping the country's border defences in a state of preparedness for any emergency. That would mean increased defence expenditure which in its return would be reflected in higher taxes. Moreover, the long-awaited announcement of the Steel retention price also seemed to have caused some disappointment. Government announced their decision to increase the steel retention price by Rs 5 per ton for the period 1955-56 to 1959-60. Another factor that worried operators was the apprehension that some sort of curb might be applied by Authority on excessive speculation in the stock markets.

The disappointment over the preliminary accounts of Indian Iron coupled with the persistent rumours of a supplementary budget kept buying interest at a low ebb. As it was generally accepted that increased levy was in the offing, discussion centred round the probable timing of the imposition of the additional burden. Many thought that the announcement was imminent and rumour had already indicated a number of commodities on which excise duty would be imposed. The hesitancy became more pronounced during the last week of the month with the publication of the statement of the Chairman of the Indian Iron and Steel Company. The final accounts, however, disclosed a satisfactory position as far as the working of the company was concerned. Profits were higher and there had been an alround improvement in production. Good progress was also reported with regard to the company's expansion programme. It was evident that both operators and investors were depressed by some of the observations made by Sir Biren Mookerjee in his statement. Referring to the dividend prospects, he had expressed his inability to give assurance as to the return for the ordinary shareholder in view of the complications created by the Finance Act of 1959. Further, he was of the view that it would be extremely difficult for India to dispose of the increased steel production that would be available in the immediate future. In the first place, taxation had greatly reduced the purchasing power of the people in the country and hence it would be idle to expect quick absorption of steel production. Secondly, world steel price was tending toward lower levels on account of a sizable increase in production while in our country cost of steel production was going up due to lower productivity and increasing wage levels.

Sectionwise, cotton textile shares met with good enquiry in earlier dealings following good advices from the cloth market. In later dealings sentiment was adversely affected by apprehensions about increased raw material cost due to shortage of supplies. Kesoram opened the month on a steady note at Rs 19 and at one time was done up to Rs 20.31. In the second half of the month the scrip developed a quiet tendency and closed at Rs 18.44. Elgin opened at Rs 16.12 and closed easier at Rs 14.94.

Coal shares met with selected enquiry in the early part of the month on hopes of increased exports. Later on, however, the section lacked support in the absence of fresh incentives. Burrakur opened at Rs 16.75 and touched a high of Rs 18.08 before finally placed at Rs 17.00. Bengal was wanted up to Rs 312 from its opening level of Rs 293 but eased toward close to Rs 297.

An irregular tendency was noticeable in the jute section. Although the statistical position of the industry continued to be good, it was apprehended that due to the rise in raw jute prices, mills' production cost would go up thereby reducing the profit margin. Despite authoritative calculations that raw jute supplies during the current jute season would be sufficient to meet the industry's requirements in full, sellers in the jute market were reserved as in their opinion there would be shortage of supplies toward the close of the season. Howrah opened at Rs 24.62 and touched a high of Rs 25.56. In later dealings sentiment became quiet and the scrip reacted to close at Rs 23.62. Anglo India declined to Rs 235 from Rs 248.

Tea shares displayed a steady trend most of the time during the month. Apart from the satisfactory demand met with in the auctions, the indication that the current season's crop could be sold without difficulty imparted strength to the section. Although the highest levels could not be maintained to the last, closing prices were in many cases better on balance. Brooke Bond closed steady at Rs 18.69 ex-dividend. Hasimara was done up to Rs 24.50 before it was finally placed at Rs 23.50. Tezpore opened at Rs 18 and moved up to a high of Rs 19.25 to close at Rs 18.50.

In the Engineering section, Indian Iron was at one time done up to Rs 24.53 but with the publication of the statement of the Chairman of the company sentiment deteriorated and the scrip was at one time sold down to Rs 22.95. Toward close, however, the rate recovered slightly to Rs 23.04. Among other engineerings Jessop was a prominent feature and closed nearly two points higher on balance at Rs 33.87. Guest Keen Williams was a steady feature at Rs 40.37.

Among the miscellaneous shares, Hindustan Motors was an outstanding feature closing at Rs 14.37 as against its opening level of Rs 13.06. Indian Aluminium was another steady spot with its closing quotation for the month placed at Rs 23.25.

(a) After transferring Rs 2,000,000 from Dividend Equalisation Fund.

(b) After transferring Rs 1,404,391 from Property Reserve and Rs 525,000 from provision for taxation and taxation contingencies.

(c) After transferring Rs 605,246 from General Reserve.

(d) After transferring Rs 1,500,000 from General Reserve.

(e) After transferring Rs 1,10,000 from General Reserve Rs 40,000 from Dividend Equalisation Fund.

(f) After writing back Rs 50,00,000 being excess provision for taxation, Rs 2,53,369 being Holiday Pay and Gratuity, Rs 20,000 being Sales Tax, and Rs 10,850 being expenses and Rs 5,85,025 profit on realisation of Investments; Rs 8,45,930 surplus on revaluation of stores, and Rs 34,300 surplus on sale of machinery.

(g) After transferring Rs 1,300,000 from provision ... Bad and Doubtful debts.

(h) After transferring Rs 62,000 from General Reserve.

(i) After writing back £76,904 being over provision in previous years.

(j) After writing back Rs 150,000 from provision taxation.

(k) After writing back Rs 1,315,749 from provision for taxation and Rs 1,000,000 from provision for contingencies.

(l) After writing back Rs 8,39,726 from provision for taxation.

(m) After transferring Rs 200,906 from General Reserve.

(o) After writing back Rs 931,978 from provision for taxation and Rs 26,867 from excess provision made in previous years.

(p) After transferring Rs 300,000 from General Reserve.

(q) Bonus shares in the ratio of one fully paid ordy. share for every five ordy. shares will be issued in lieu of Dividend.

(r) Includes Rs 17,99,170 being indemnity receivable from the Government of India.

(s) After transferring Rs 700,000 from Repair and Replacement Reserve and Rs 64,000 from Taxation Reserve.

(t) Includes Rs 1,773,324 being profit on realisation of Investments; Rs 16,970 being surplus on sale of Machinery Rs 56,826 being provisions no longer required and Rs 125,779 being items relating to previous years.

(u) After transferring Rs 175,000 from Dividend Equalisation Reserve and Rs 64,000 from Taxation Reserve.

(v) After transferring Rs 2,00,000 from General Reserve.

(w) After writing back Rs 200,000 being provision for taxation.

(x) After transferring Rs 100,000 from Investment Depreciation Reserve and Rs 87,268 from provision for taxation and including Rs 75,962 being Income-tax refund receivable.

(y) After transferring Rs 1,592,379 being provision for taxation liabilities, no longer required and Rs 108,581 being development rebate reserve of 1957 not required.

(z) After transferring Rs 2,50,000 from Investment Depreciation Reserve.

(a1) After transferring Rs 80,000 from provision for contingency.

(a2) After transferring Rs 50,000 from Reserve for repairs.

(a3) After writing back Rs 110,265 being surplus Reserve for taxation.

(a4) After transferring Rs 73,000 from Reserve.

a5) After transferring Rs 300,000 from Contingency Reserve.

(a6) Includes Rs 112,671 being depreciation over-provided in previous years.

(a7) Includes Rs 308,219 being adjustment account of previous year and Rs 88,564 being provision for legal expenses written back.

(a8) After transferring Rs 112,000 from Dividend Equalisation Reserve and writing back Rs 29,836 from Surplus Tax provision and Rs 8,959 from Development Rebate Reserve.

(a9) After transferring Rs 100,000 from General Reserve.

(a10) Includes Rs 65,536 being surplus on claim for assets destroyed by fire.

(a11) After writing back Rs 2,400,000 being provision for taxation no longer required.

(a12) After transferring Rs 279,920 from General Reserve.

(a13) After transferring Rs 929,283 from Rehabilitation and expansion fund, Rs 300,000 workers amenities Reserve.

(a14) After transferring Rs 450 000 from Reserve Fund.

(a15) After transferring Rs 5,327,054 from General Res. No. 1 and Rs 145,381 from excess provisions.

(a16) After writing back Rs 552,592 being provision towards shrinkage, handling losses &c. of Raw Materials and General Stores &c.

(a17) After transferring Rs 155,149 from Rehabilitation Expansion Fund and Rs 65,000 from General Reserve.

(a18) After transferring Rs 100,000 from General Reserve.

(a19) After transferring Rs 75,000 from General Reserve and Rs 161,000 from Investment Reserve.

(a20) After transferring Rs 650,000 from Dividend Equalisation Reserve.

FOR THE INVESTOR

Revival

Investment Gossip:

IN marked contrast to the gloom which seemed to have come to stay at least for another two months to come, the stock market has been bright and brisk throughout the week that is just ending.

It is only partly correct to say that the return of confidence has been aided by the absence of any shock in the Finance Minister's Assocham speech. Mr Morarji Desai has been prudently non-commital on the points on which stock market men would very much like him to make even some oblique reference. And he has been mainly concerned with outlining the tasks completed and still ahead. The economic situation has shown considerable improvement over the past one year and "there is every reason for sober confidence for the future". It would appear that the very fact that Mr Desai has left alone the points that are very close to the heart of the business community, surprisingly enough, has contributed toward all-round satisfaction. The relief is reflected in the rumour that the coming Central Budget will not contain any jitters for the corporate sector.

The current upsurge has also partly stemmed from the visit of the American President. Apart from the reiteration of the USA's abiding interest in India's rapid economic development, Mr Eisenhower has also given ample evidence of his Government's great interest in the preservation of world peace. It is not unnatural that this reassurance is automatically viewed in our country against Sino-Indian relations. It will be no exaggeration to say that the American President's visit has, as expected, very much lessened the general anxiety about the possibility of the Chinese rushing to an armed conflict with India.

But I would attribute the improvement in sentiment to the unambiguous declaration about the future of private enterprise made by Prime Minister Nehru at his monthly press conference as I had noted in this column last week. He has dispelled the fear of nationalisation as he has made it clear that even those units which come under the reserved list but are in the private sector will be left untouched. It would appear that he had in mind the complaint about the already excessive taxation in the country when he made the reference to the people's capacity to mobilise resources without breaking down. This may be taken as an indication of the recognition of the demand of private enterprise not to overstrain the economy by heavy taxation in the name of rapid development.

Another important reason for optimism regarding the investment outlook can be found in the excellent working of the corporate sector. Many an industrial unit has big plans for expansion after already completing considerable additions to installed capacity. The bright prospect of increased availability of steel has centred attention on engineering companies most of whose full working is only awaiting larger availability of steel. The rate of increase of industrial production in the current year is authoritatively estimated to have been considerably accelerated and indications are that the coming year will be even better in this regard. Investors would do well to note that there is every likelihood of an additional tax levy, if any, being more than compensated by the increased earnings of the corporate sector through increased production.

£R$

Investment Special:

WHEN the House of Killick was subject to stresses and strains some little while ago, consequent to pressure groups attempting to gain control, I barely hoped that the Institution would stand up to the shocks and survive. That it has done is an index of the intrinsic strength of the organisation which, over a period of years, has established a reputation for forward planning consistent with stability.

When, at the last General Meeting of the Company, a working arrangement emerged, there was sigh of relief, not least on my part; but, lately, a certain air of uncertainty was discernible consequent on ill informed critics again attempting, shall we say, pressure tactics in relation to some of the changes in the Company's Directorate.

It would seem, however, that the curtain has now been rung down: the Company has received the sanction of the Government of India to the changes in its constitution following the retirement of Sir Chunilal V. Mehta and Mr Jaisinh Vithaldas; and the appointment of Mr Chandrakant M. Mehta and Mr M. R. Chinoy as Directors to fill the vacancies caused has also received Government's approval.

£R$

New Issue Notes

STRAW Products have decided to issue new capital amounting to Rs 2 crores, comprising 12.50 lakh equity shares of Rs 10 each and 75,000—7 per cent tax-free Cumulative Preference shares of Rs 100 each. All the shares are offered, in the first instance, to the existing shareholders on the basis of one preference share of Rs 100 each for every three equity shares held, ignoring fractions in any, with liberty to renounce their right to apply for such shares in favour of any other person.

RECORD OF ACHIEVEMENT
Sound underwriting and outstanding service to Policy-holders are reflected in the rapid progress made by the ORIENTAL FIRE. Transacting Fire, Marine, Motor, Accident and all other classes of non-life business ORIENTAL FIRE also offers specialized cover against Machinery Erection and Breakdown and Boiler Explosion risks.
ORIENTAL FIRE AND GENERAL INSURANCE CO., LTD.
Head Office: Oriental Buildings, BOMBAY-1

A sum of Rs 50 per share is payable on application in the case of the Preference shares and Rs 5 per share in the case of equity shares. The balance due on the shares will be called up at the discretion of the directors not earlier than six months from the date of allotment. The subscription list will be open on the 21st December and will close on the 30th December, 1959, unless closed earlier at the discretion of the directors, but not before the 28th December, 1959.

The Metal Corporation of India Limited has proposed to raise its capital by Rs 2 crores, subject to the consent of the Government of India, by the issue of 19 lakh Ordinary shares of Rs 10 each and 10,000—6 per cent tax-free redeemable Cumulative Preference shares of Rs 100 each. Of the Ordinary shares, 8.40 lakh shares are to be offered for subscription to the Rio Tinto Company Limited, London and 5.60 lakh shares to the Indian Steel and Wire Products Limited, Jamshedpur. The balance of 5 lakh shares is to be offered to the shareholders in the ratio of one new share for every share held. The company will have the option to redeem the preference shares, at par, in part or in whole, at any time after ten years from the date of allotment.

The details of allotment of the recent issue of Rs 40 lakh worth of 6½ per cent tax-free preference shares by the KCP Limited are now available. The subscription list closed on the 30th November, after having been over-subscribed. Full allotment is to be made against applications for 25 shares. For those who have applied for more than 25 shares, there will be a minimum allotment of 5 shares plus half the number of shares applied for. These preference shares are presently commanding a premium of Rs 2 at Rs 102.

Textool Company, Limited has now obtained the Government sanction to issue equity shares to the holders as on the 29th December, 1959.

The offer of equity capital by the Mandya National Paper Mills Limited has been heavily over-subscribed. Applications for shares less than 30 will receive allotment in full in each case. Those for more than 30 equity shares will receive allotment at the rate of 40 per cent, subject to a minimum of 30 equity shares in each case. Those for 100 and above will receive allotment at the rate of 40 per cent, subject to a rounding off to the nearest multiple of five. Applications for the preference shares will receive allotment in full.

Woodcote Estates Limited has proposed to issue 125 seven per cent tax-free First Mortgage Debentures of Rs 1,000 each. These are payable in full on application, and are repayable on or after the 30th June, 1971 and before the 30th June, 1974.

Marikar (Motors) Limited has proposed to issue 3,281 equity and 3,815 six per cent cumulative preference shares of Rs 50 each, payable in full on application to the existing shareholders of both equity and preference shares, at par. The new shares rank *pari passu* with the existing equity and preference shares and rank for dividend from the date of allotment.

Indian Aluminium Company Limited has announced that its Debenture Issue of Rs 3 crores has been over-subscribed. The subscription list which opened on December 1st closed on December 3rd, 1959.

Titaghur Paper Raises Dividend

Balance-Sheet Reviews :

THANKS to the mills having worked to full capacity and a higher production as a result of additions to plant, the Titaghur Paper Mills Company Limited has reported encouraging working results for the year ended 31st March, 1959. Sales have risen to Rs 9.42 crores from Rs 8.10 crores, while the net profit, after providing for Depreciation and Taxation, is higher at Rs 46.58 lakhs against Rs 44.11 lakhs in the previous year.

In respect of allocations, the Reserve for the New Mill Project is maintained at Rs 7.00 lakhs. The Depreciation amount is raised to Rs 29.06 lakhs from Rs 24.62 lakhs; Taxation provision to Rs 59.31 lakhs from Rs 42.19 lakhs and Statutory Development Reserve to Rs 9.13 lakhs from Rs 3.46 lakhs. Wealth Tax provision is reduced to Rs 3.25 lakhs from Rs 5.86 lakhs, while the allocation to Taxation Contingency Reserve has been skipped against Rs 4.75 lakhs. Even after these increased allocations, the directors have found it possible to raise the dividends, both on the "A" and "B" Ordinary shares, from Rs 2.38 to Rs 2.50 per share, including a bonus of 75 nP per share.

According to the directors' report, the major part of the land for No. 3 Mill at Choudwar has been acquired and this mill is expected to reach production in the early part of the next year.

£R$

NISCO

The National Iron & Steel Company Limited has raised the dividend from 62 nP to 75 nP per share for the year ended 31st March 1959 following a rise in the net profit from Rs 6.38 lakhs to Rs 7.07 lakhs, sales being shown at Rs 1.10 crores against Rs 1.01 crores. Apart from providing a sum of Rs 5.00 lakhs for Dividend Equalisation Reserve; Rs 1.34 lakhs for General Reserve and Rs 1.30 lakhs for Investment Depreciation Reserve, the directors have raised the Depreciation amount to Rs 6.25 lakhs from Rs 5.91 lakhs; Taxation provision to Rs 2.72 lakhs from Rs 1.80 lakhs and Development Rebate Reserve to Rs 38,500 from Rs 29,300.

The working of the development schemes taken up by the company earlier had to be slowed down, while new ones cannot be taken up at all due to various import restrictions.

£R$

Hukumchand Jute

Despite lower profits, the Hukumchand Jute Mills Limited has maintained the Ordinary dividend at Rs 1.50 per share for the year ended 31st March 1959. Although sales have risen to Rs 5.02 crores from Rs 4.76 crores, the net profit works out lower at Rs 14.90 lakhs against Rs 15.20 lakhs in the previous year. The directors have provided Rs 7.90 lakhs (Rs 2.00 lakhs) for Depreciation; Rs 17.28 lakhs (Rs 10.25 lakhs) for Taxation; Rs 56,156 (nil) for General Reserve; Rs 75,000 (Rs 1.45 lakhs) for Development Rebate Reserve; Rs 5,000 (nil) for Contingency Reserve and Rs 25,000 for Bad and Doubtful Debts Reserve (nil).

£R$

Agarpara Company

This jute company in B. N. Elias group has doubled the dividend to 5 per cent for the year ended 31st March 1959, thanks to a substantial rise in the net profit from Rs 2.63 lakhs to Rs 7.89 lakhs despite a reduction in sales from Rs 2.29 crores to Rs 1.70 crores.

The Depreciation amount is raised to Rs 4.35 lakhs from Rs 3.85 lakhs, while no provision is made for Taxation against Rs 3.95 lakhs. Wealth Tax is provided Rs 63,000 against Rs 1.07 lakhs. A sum of Rs 85,470 is set apart for Development Rebate Reserve and Rs 3.25 lakhs for Machinery Replacement Reserve. The sum of Rs 9.72 lakhs, as refund of contribution to Pension Fund, is transferred to General Reserve.

The modernisation programme, which the mills embarked upon two years ago, is now complete. Modernisation of the Sacking Weft machinery has been completed and a few more machines are left to be installed on the fine side to complete this phase of modernisation.

£R$

Premier Automobiles

In spite of the fact that Premier Automobiles Limited worked for only eleven months in the accounting period ended 30th June 1959 and there was an increase in the cost of production, an improvement in net earnings has been reported. Sales have risen to Rs 17.42 crores from Rs 14.47 crores. The number of cars and trucks pproduced is about 8,500. *It is expected* that there will be an increase in the number of units to 11,000 in 1959-60. There will also be an increase in the indigenous content to 60 per cent in respect of cars and 75 per cent in regard to trucks.

The net profit, before providing for Depreciation and Taxation, works out to Rs 92.12 lakhs against Rs 47.64 lakhs in the previous year. The amount set aside to Depreciation is Rs 28.54 lakhs (Rs 24.61 lakhs); Development Rebate Rs 13 lakhs (Rs 8 lakhs); and Taxation Rs 23.25 lakhs (Rs 7.66 lakhs). A sum of Rs 4.72 lakhs has been written off Debenture issue expenses. A dividend of Rs 9 per share, taxable, is payable against Rs 4 per share without deducting income-tax previously.

£R$

Binod Mills

The Binod Mills Company Limited has made satisfactory progress. Started with a capital of Rs 20 lakhs in 1913, the company has been growing from strength to strength. The capital was raised to Rs 60 lakhs in 1948 by the issue of 2 bonus shares against one share held. When the new Companies Act came into force in 1956, the managing agents voluntarily withdrew themselves after a successful tenure of 42 years. The management is now vested in a committee of management.

The mill is one of the biggest units in Madhya Pradesh with 1,306 looms and 60,640 spindles. Sales of cloth, in 1958, were Rs 2.45 crores of which exports were Rs 15.17 lakhs. According to the latest indications, sales, up to the end of November 1959, are of the value of Rs 2.51 crores of which export sales are Rs 53.33 lakhs. The company has already taken up the modernisation of its plant and has placed orders for mercerizing and sanforizing machinery worth about Rs 15 lakhs. It has also plans to instal combers for spinning fine and superfine counts and upgrading the spinning value of the comparatively longer staple Indian cotton.

results for the year ended 31st March 1959. Freight lifted has risen to a record level of 289,605 tons from 211,273 tons, while freight earnings are up from Rs 83.47 lakhs to Rs 1.07 crores.

The gross profit amounts to Rs 25.17 lakhs against Rs 15.78 lakhs; but higher outlay on interest, especially Government loans (Rs 5.56 lakhs against Rs 3.81 lakhs) and larger allocation for depreciation (Rs 17.34 lakhs against Rs 14.26 lakhs) have reversed the position, with the net profit being only Rs 92,413 against Rs 2.28 lakhs in the previous year. A dividend of 10 per cent has been proposed after withdrawing Rs 2 lakhs from the *Dividend* Equalisation Fund. Development Rebate Reserve gets Rs 1.00 lakh against nil.

£R$

Bombay Gas

It seems that the Government of Bombay have, in spite of repeated and continuous representation for a revision in the price of gas, paid no serious attention. We understand that the price of gas is to remain at the status quo. After meeting the sustained demand for higher wages and salaries, not to speak of the rise in the cost of coal and freight, the company's ability to maintain dividend is surprising. Prudent and conservative though the management may be, reserves may need to be drawn on—and this will not help the company to expand.

The accounts of the company, for the year 1958, reveal a net profit of Rs 2,98,747 (£22,406) *after deducting* Rs 3,86,545 (£28,991) for Depreciation and providing a sum of Rs 5,65,000 (£42,375) for Taxation. The directors have recommended a dividend of 4.5 per cent for the year, leaving a sum of Rs 1,18,747 (£8,906) to be carried forward.

At first glance, the profit may seem to be higher in comparison to 1957; but this is because of lower provision for Depreciation amounting to Rs 3,86,545 and secondly on account of change in the method of Billing which has amounted to an increase in the income by about Rs 2 lakhs. But for this, the result would have been worse. The setback in the profits has been due to continuous rise in the prices of coal, freight and dearness allowance.

According to the report issued by the company, it is very evident that, without any satisfactory authorised increase in the price of gas, the company's finances will be seriously embarrassed. The position of the company has become very critical and the future very obscure, as the cost of manufacture of gas continues increasing without any corresponding increase in its selling price.

"The Wise Man in his attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right"—The Analects of Confucius.

Fertiliser of Detailed Thought

MR J. D. K. BROWN'S speech at the annual general meeting of the ACCI was a judicious mixture of gratulation, hope and practical suggestions. He praised the Government for the way they had overcome difficulties over foreign exchange and ensuring financial stability. He drew comfort from the fact that last year has seen welcome revival in industrial and agricultural production, a hopeful trend that is likely to persist. He also found reason for feeling happy over the better showing in the balance of payment, especially because this was partly due to improved trade. He was cautiously optimistic about the prospects of the Third Plan and the prospects of resources, both internal and external, for its implementation. He had also a whole series of particular suggestions to make on fiscal and financial matters, some of which may come up for final determination in the near future.

Mr Morarji Desai's speech skirted expertly over the awkward points raised in Mr Brown's speech. As Mr Brown himself said in his speech, reticence on the Finance Minister's part on a number of questions raised by him would be entirely understandable. And yet, the timing of the annual general meeting of the ACCI is perfect in the sense that budgetary ideas are probably in a germinal state at the moment, and now is probably the time to provide it with the fertiliser of detailed thought on particular matters. No Finance Minister would frame his proposals without wanting to know what conclusions have been drawn by these studies and finding out whether these studies are mere exercises in special pleading or do constitute a dispassionate analysis of data. In either case, he will be better fortified in the proposals he ultimately formulates. In any event, as far as industry is concerned, whatever the Finance Minister does or does not do, its case would not have gone by default.

The resolutions passed at the meeting elaborated some of the specific suggestions made to the Finance Minister in Mr Brown's speech. The most important of these is that relating to corporate taxation. Mr Dandekar, who proposed the resolution in a witty and lucid speech, explained how the new "rabbit" produced by the Finance Minister's wand in his last budget continues to be as "omnivorous". In fact, his analysis shows it is, if anything, slightly more greedy than the old one. The claim that the new system (which abolished the fiction of the company paying the tax on behalf of the shareholder and the shareholder getting notional credit for such tax in his own assessment) is simpler and more workman-like and cuts through the whole lot of procedural red-tape is readily conceded. But it has caused unexpected inequity in some cases, two of which Mr Dandekar mentions. One is the ironical case of a prudent company which, after conserving its profit all these days, distributes it now. In such case, the withholding of "tax credit" for the shareholder by the method of "grossing up" the dividend will be a punishment for not having been feckless and improvident. The other case is that of taxation on intercorporate holdings. Mr Gorer, who followed Mr Dandekar, gave some examples of how the new system is not only inequitous to corporate shareholders, but is actually discriminatory even among such companies. Of course, companies which qualify under Section 56A of the Income Tax Act—that is to say, enterprises newly started to further industrial expansion in industries as selected as most conducive to national interest—need not worry. For, not only their profits but the dividends from such profits are exempt from tax. But there are many important corporate investors in companies in India who do not qualify for the benefits conferred by Section 56A and which are nevertheless important for the country's economy. And such shareholders, especially if they happen to be minority shareholders, get left with hardly anything after the deductions are made. These are certainly special cases that need special provision.

But the main objection to the new scheme of corporate taxation foreshadowed last year is not based on special cases where unexpected hardships have come to light. It is that, on the assumption that the new system is preferable to the old, one of the declared intentions of the scheme is not likely to be realised unless the rate of taxation is lower than that envisaged by the Finance Minister last year. In this connection, it is necessary to remember that the rate of taxation of companies on their profits earned currently **is yet to be fixed by the Finance Act of 1960.** In other words, it is not as though a change in the fait accompli is being asked for. Such a request might conceivably involve a certain amount of embarrassment for the Finance Minister. But the 45 per cent mentioned in last year's Budget proposals was merely the rate at which advance payment of tax under Section 18A was to be made. This was the rate which was provisionally estimated as the nearest approximation to the likely rate on companies for 1960-61 assessment, if the declared aim of there being neither net loss nor net gain to revenue from corporate taxation under the new scheme was to be achieved. Obviously, a lower rate for the advance payment would have had both practical and psychological complications when later a higher rate is found expedient in order to achieve the declared aim. The erring by the Finance Ministry has, therefore, been on the safer and higher side. Subsequent investigation into the possible effect of the new rate carried out by the ACCI has, it is claimed, brought out some significant conclusions. The most important is that in a majority of cases (88 out of a total of 167 examined, these 88 accounting for 60 per cent of the total taxable profits of the 167) the net tax liability would actually increase by 2 per cent or more. It is, therefore, clear that a case exists for readjustment of the rate of tax if the central assumption behind the new tax scheme is not to collapse at the very first attempt at its implementation. Mr Morarji Desai did not commit himself (on

The Known Men of Peace

The spontaneity of the welcome that was accorded to Mr Eisenhower has been in a measure such as pleasantly to surprise all interested in the fruitful growth of Indo-American relations. It is, perhaps, not wrong to describe the emotional fever that seized New Delhi—and the country at large—as bordering on hysteria. Many subconsciously tried, before the American President reached here, to assert that his was a mere goodwill trip. It seems clear now that maybe momentous significance will attach to the few days that Mr Eisenhower will spend in India as the first American President to have done so.

How are we to explain this genuine affection and elation that greeted Mr Eisenhower? For, no amount of "arrangements" could have ever succeeded in creating that electric atmosphere, compared by some to the feeling that permeated the country on Independence Day, in which Mr Eisenhower drove triumphantly from Palam to Rashtrapati Bhavan.

The answer might well constitute all the trite comparisons between America and India. The Vice-President, Dr Radhakrishnan, could scarcely have more eloquently mentioned the real reason for the responding chord that Mr Eisenhower was able to strike in the New Delhi audiences: the fact that shared ideals are a greater force than military pacts.

It is therefore Eisenhower the known man of peace, trying as hard as he could with his God-given strength to reduce tensions economic and political, who was able to reach out without effort to the denizen of a country which could talk of the might of soul-force.

Mr Eisenhower and Mr Nehru are to spend a great deal of time together; it would be idle to expect that the sum of their discussions will find facile expression in any joint communique that might be issued. What will count, and what is of importance, is that two great statesmen, the two who are respected for their dedication to the cause of peace, will have had the opportunity to pool their intellectual and humane resources in order that this troubled world may yet know a time when its energies will be devoted to war against poverty rather than to war amongst nations.

Eavesdropper.

this point), as indeed he could hardly have done. On the contrary, he referred to the liberal way in which taxable incomes are determined under the Act, thereby obliquely dampening any expectation. Moreover, if the investigation reveals an increase of 5 per cent in net burden, there is probably little likelihood of the Finance Minister acceding to a request for reduction by 5 per cent. We presume that it is the ACCI's way of providing the Finance Minister a certain amount of elbow room.

On the question of tax on Bonus shares, especially those issued from share premium account, we confess to a sense of defeat, similar to the one expressed by Mr Brown, in trying to understand the logic, equity or practical good sense behind the levy. Almost the only justification for it would appear to be the feeling that issue of bonus shares is a ruse to obtain the benefit of dividend without paying any tax thereon. But, surely, with a hundred justifications staring one in the face, it is odd that Government should have eyes only for the rather disreputable one of tax avoidance. And even this particular justification is absent in the case of bonus issue out of share premium account. By a parity of reasoning, every company should on its flotation be asked to pay a certain amount of tax. Even in the topsy turvy world of taxation, this would appear somewhat scandalous.

Of the other resolutions passed at the meeting, little needs to be said except that they are as should commend themselves to Authority. Whether they will, especially the one on Managing Agency, is a different matter. It would appear that, on this question, Government are suffering from some kind of schizophrenia. Their own investigations, through the Company Law Administration, would appear to confirm the view widely held by experts. The National Council of Economic Research, for example, confirms in a recent study that the system has a special and important role in our economy. But, from time to time, Authority is seized with a frenzy of suspicion about the bona fides—not of particular units—but of the system itself. It would be to everybody's advantage if it made up its mind one way or the other and let the people know where it stands.

Government Employment

THE report of the Central Pay Commission has come as something of a disappointment to more than one category of Government employees. The all-too-patent bitterness accompanying this disappointment is understandable because the accepted recommendations covering class III and class IV employees in particular are far below the original expectations of even the moderate sections amongst them. But what is not so very understandable is a certain lack of appreciation of the state of the exchequer which, alone, in the final analysis, has set severe limits to improvement in the emoluments and conditions of service of Government employees. And it is equally regrettable that the salutary basic principles of pay and service conditions enunciated by the Commission have not come in for as much appreciation as they deserve.

The consideration that the Commission have not found it possible to give immediate and adequate expression to these principles is not relevant in this connection. What is more relevant is that the principles, when once unreservedly recommended, represent a firm foundation for potential improvement. The crucial principle laid down by the Commission is that the minimum wage or salary, of a Government employee should not be determined merely on economic considerations, but should satisfy also a social test—both because of its intrinsic validity and because of its bearing on efficiency. Amplifying this, the Commission have stated that, "when Government are the employer, their capacity to pay cannot be assessed in the manner in which the capacity of an industry to pay can be assessed, for, the test of profit and loss is usually not there. Nor can productivity of labour be a suitable criterion in Government employment except, if at all, within certain limits." And what is more important, the Commission have not explicitly questioned the theoretical soundness of the formula, recommended by the fifteenth Labour Conference, for a need-based minimum remuneration.

What the Commission have done, on the other hand, is only to show up the impracticability of applying the formula, the monetary value of whose content works out to Rs 125/- per mensem, at the present level of our economic development. One of the grounds on which they have argued the case for a lower minimum salary—to be precise, Rs 80 which they have recommended and the Government have accepted—is that "the minimum wage cannot be of the order of Rs 125, when on the basis of the national income the average for a family works out to only Rs 97 per mensem". This, of course, is a weak and even harmful argument because, if the minimum salary cannot, at any point of time, be higher than the per-family national income, the case for high salaries at the other end—salaries so many times higher than the per-family national income—will have been undermined a great deal. The point that those who plan, guide, organise, manage and administer things in a Welfare State, whatever be its basic institutional framework governing property relations, have to be, and are being, paid vastly more than the state of per capita national income would warrant, need hardly be laboured. It is not as if the incentives can operate to the good of society only in the upper echelons.

The other ground on which the Commission have argued their case is, however, much stronger and cannot be so easily assailed. Their finding in this regard would bear quoting in extenso:

> "We have also examined the financial implications of raising the *minimum remuneration* payable to a Central Government employee to Rs 125 per mensem. There are about seven lakh employees who at present start at Rs 75, and if they were all to start at Rs 125, the additional annual expenditure on remuneration—leaving aside the effects on superannuation benefits, etc.—would be of the order of Rs 42 crores per annum. The consequential salary adjustments at the higher levels, leaving out the class I and class II staffs, might cost about that much again. These figures have only to be placed against the total wage bill of the Central Government, and against the uncovered gap in resources required for completing the Second Five Year Plan, to show how far out of the feasible financial limits a minimum remuneration of Rs 125, or anything approaching that figure, is practicable in the present circumstances."

A perusal of the bulky report of the Commission would show that, after all, this is the only valid and intelligible argument against a minimum salary of Rs 125 per mensem right now. All the other arguments are mere trappings and are, therefore, confusing. For their part, class III and class IV employees would do well to appreciate this argument and look forward patiently to an increase by stages, in the minimum remuneration to the desired and desirable level of Rs 125 per mensem in the course of the Third Plan.

For their part, carping non-official critics who have been harping on the theme of "excessive cost" of the Central Government administration would also do well to recognise some facts emerging from the statistical supplement to the report of the Pay Commission. It is seen from this supplement—which is an eyeopener in several respects—that many popular impressions of Government employment are unwarranted by facts. For example, while the average minimum remuneration has increased from Rs 55 per mensem in 1947 to Rs 75 per mensem in 1958, the index of the minimum remuneration in real terms, that is, in relation to the consumer price index with its base on 1949, has been just 94 in 1958 as compared to 92 in 1947. Again, at the other end, while the average post-tax incomes of the Central Government salary earners assessed to Income-tax have increased from Rs 6,096 in 1948-49 to Rs 7,174 in 1957-58, that is, by just 15 per cent, the average post-tax incomes of non-Government salary earners have increased from Rs 4,795 in the former year to Rs 8,122 in the latter, that is, by as much as 70 per cent. This fact alone conclusively proves that the Central Government are certainly not a "model employer" for the top executives, whether or not they are so for the lower classes of their employees.

The statistics relating to the numbers of Central Government employees are even more revealing. These statistics, which do not cover railways and Indian missions abroad, show that administrative and executive employees have increased in number from 51,860 in 1950 to 74,600 in April 1959, that is, by 44 per cent; that ministerial employers have increased in number from 132,000 in 1950 to 242,260 in April 1959, that is, by 84 per cent; that skilled and semi-skilled employers have increased in number from about 148,000 in 1950 to 159,000 in April 1959, that is, by just 7 per cent; and that the unskilled employees have virtually remained static in number, being nearly 242,600 in 1950 and 246,000 in April 1959. It would thus appear that substantial increases in employment have taken place only in the administrative, executive and ministerial services.

These increases which have taken place in the course of nine years cannot be considered excessive in the context of the enormously increased and many-sided activities of the Indian Government consequent on planning. The facts regarding employment in railways and posts and telegraphs would also appear to suggest that the total number of persons employed in them—997,000 in the former and 205,000 in the latter, as of 1957—is by no means excessive. Here it can be validly assumed that these are commercially-run enterprises and cannot, therefore, have made excessive additions to their staffs. In sheer physical terms, the functions discharged by the present Government of India are nowhere comparable to the functions discharged by the Government of India of 1947; these fully justify the increases in administrative and ministerial services. In any case, even if the increases are held to be somewhat on the high side, they must be deemed to have been socially necessary and politically expedient in the sense that they have denied so many intelligent educated recruits to the ranks of leadership of some extremist anti-social parties in the country. But it is disquieting to find that the vaunted security associated with Government employment is not very much there, with third of all employees of the Central Government still having no permanent tenure after varying periods of service.

UNDER SECRETARY TO G

PUBLIC DEPARTMENT

EDITORIAL NOTES

Industrial Relations

The importance of sound industrial relations for ensuring a steady rate of economic progress is too obvious to need any special urging. In the conditions existing in our country, enlightened self-interest, that is to say, the ability to take the long view, should induce both employers and workers to establish conventions which would ensure the maintenance of satisfactory industrial relations. Absence of strikes alone will not make for this desirable state of affairs. If that were so, there would be no problem. For, a statutory ban on strikes could be depended upon to ensure the maintenance of industrial peace. Mere absence of overt strife in industrial establishments will not by itself call forth the productive effort necessary to haul the country over the hump. This calls for cooperative endeavour, in an atmosphere of mutual understanding and goodwill, of the two factors of production whose attitudes generally are mutually antagonistic. This positive aspect of industrial relations, and its most important aspect, was emphasized in an interesting address by Mr R. S. Pande to Calcutta Rotarians.

A former member of the IAS, now Agent of TISCO at Jamshedpur, Mr Pande is uniquely qualified to illumine the topical problems of industrial relations in the context of the Third Plan. The comprehensive survey of the problems made by Mr Pande would show that Government's efforts to develop industrial relations on sound, equitable lines have not been entirely fruitless. But the laws and the machinery for resolution of disputes have also created problems, especially the heavy crop of litigation which clogged up the working of the High Courts and the Supreme Court. The solution, as Mr Pande has suggested, is to set up conventions that except when fundamental principles were involved, both parties would abide by the Labour Tribunal Award for the period of one year for which it is valid, instead of pursuing even minor matters up to the highest appellate authority.

Labour participation in Management is one of the most important elements of the positive approach to industrial relations. This is, moreover, a field in which Tatas have achieved pioneering success. Mr Pande is convinced, on the basis of experience at Jamshedpur, that Joint Management Councils could make a positive contribution toward greater efficiency. It is indeed very encouraging to learn that these Joint Councils are "increasingly devoting their attention to matters relating to production and the earlier preoccupation with welfare and amenities is decreasing."

*

Management of Public Enterprises

The UN Seminar on management of public enterprises, held in Delhi last week, is recognition of the growing importance of the subject, to which the Prime Minister referred in his inaugural address. The problem itself is the result of the compulsions of planning in underdeveloped countries. Limitation of resources imposes the necessity for planning, so that the best use could be made of what is available. The Prime Minister has explained in very persuasive language the rationale of the system of planning that has been adopted in this country and the order of priorities under it.

It is recognised that the problem of economic development has to be tackled simultaneously on many fronts. Big industries and basic industries have to be developed side by side with implementation of programmes for the resuscitation of village industries; and the entire industrial complex has to be sustained by a corresponding development of agriculture. All these ideas have now become the commonplace of discussions on planning.

The emphasis on heavy industries has been criticised in some quarters as excessive. The Prime Minister has explained how the experience of the First Plan, which did not pay much attention to this aspect, had brought about a change of approach. The delay in starting the first steel plant has proved very costly and has been responsible for most of the troubles experienced during the Second Plan period. The establishment of the heavy and basic industries in the under-developed economies means the expansion of the public sector, and that poses the problem of finding competent personnel for managing these undertakings and the more difficult one of ensuring democratic control of public enterprises through Parliament.

The first problem, it may be hoped, will be tackled in course of time, though it is one of peculiar difficulty. The managers of State enterprises have to be trained on the job, for neither the Civil Services nor Private Industry, the two sources from which personnel could be recruited, offers the suitable background. Even if the proper persons could be found or trained, the associated problem remains, of ensuring Parliamentary control. The report of the sub-Committee of the Congress Parliamentary Party, which was asked to investigate the problem, highlights its complexity. The Committee was asked to suggest ways and means of exercising broad supervision by Parliament over Stateowned Corporations without interference in the day-to-day activities of the concerns. The committee has found it easier to indicate what should not be done than to suggest any positive measures, except the appointment of a Standing Parliamentary Committee to watch the working of State undertakings.

*

Administrative Inadequacy

It is not merely in the management of State enterprises that administrative deficiencies are manifesting themselves. Even greater difficulties are encountered in the normal administration of departments controlling economic and industrial activity. Once the country has embarked on economic planning, it becomes essential, as the Prime Minister told the UN Seminar, that the strategic points of economic development should be controlled by the State, or by the planning apparatus. The operation of these controls, there are reasons to fear, imposes a tremendous strain on the Administration. Controls follow their own law of development. Rarely is it possible to confine controls to strategic points.

In an interesting address at the India Exchange last month, Mr G. D. Birla drew attention in graphic language to the paralysis of the administration by the thick undergrowth of controls. "If you want to start a venture", he said, "you have to go to nearly forty departments before you can get your application processed. You have to approach another thirty departments or so, before you get your application finalised. It takes about eight to ten months before you are out of the woods." Planners should realise in time that administrative inadequacy is as great an obstacle to implementation of plans as shortage of material resources and draw up plans so as to minimise the area of central direction and control.

*

FICCI Approach to Planning

Some stray remarks made by the Prime Minister at his last press conference, in answer to questions, have apparently been taken to heart by the Federation which has issued a statement restating its basic approach to planning. But was it really necessary, unless the intention was to emphasise that the Federation's approach was different from that of the Swatantra Party? The statement makes it clear that the Federation stands for a big plan, as big as we can make it, for adequate attention to agricultural development and for the creation of conditions which will call forth the requisite level of investment. The statement also reiterates that "there can hardly be any scope for argument which might question the wider role of the State in an under-developed economy", while properly drawing attention to the substantial contribution of the private sector in the past, present and the future. The position taken up by the Federation is just what one would expect from a body of responsible businessmen. No one who reads the Prime Minister's address to the UN Seminar on Management of Public Enterprises and the FICCI statement can fail to be struck by the identity of approach to the broad issues. In fact, consensus on fundamental issues may be taken for granted, for, without it planning—at least democratic planning—will not be possible.

WORLD OF FINANCE

The 1959-60 Busy Season Starts

THE 1959-60 busy season, which is presumed to have started from the first week in November, has only now begun to make its presence felt. Money rates have perceptibly hardened, and the continued firmness rules out the possibility that it was temporary pressure that the banking system was subject to as a consequence of beginning of the month disbursements in December. The expansion in active note circulation has been particularly heavy, the rise in the Advances of the State Bank is also remarkably sharp. It would thus appear that, even as had happened in regard to the 1958-59 busy season, the current busy season apparently has got off to a late start, but will prove to throw up as considerable a demand for funds as was the case last year.

In such a reading, it is not unlikely that the expansion in Advances of Scheduled Banks by the end of April next will amount to and conceivably exceed Rs 200 crores. This is a contingency which, as we have been repeatedly urging in this column during the past few weeks, both the Reserve Bank and the Scheduled Banks have to be prepared for. The unknown factor will be the extent of new Deposits that will be accruing with the banking system during the currency of the 1959-60 busy season. If such new Deposits are of satisfactory dimensions, the recourse to central banking credit may not be unduly high. Nevertheless, it would be the better part of discretion for the Reserve Bank to be prepared for a combination of purchases of giltedged from Scheduled Banks and advances to the banking system involving, between both of them, an amount around Rs 150 crores. This, we feel, is around the minimum that Scheduled Banks will have to depend upon the Reserve Bank for, in order to carry out their task of financing the legitimate demand arising during the 1959-60 busy season.

+

Hefty Expansion in Note Circulation

THE returns of the Reserve Bank and the State Bank for December 4 are clearly indicative of the considerable pressure felt by the money market consequent upon beginning of the month disbursements. It is also likely that, with the week ended December 4, the 1959-60 busy season will start to be reflected in monetary indicators. For, whether it is relating to expansion in note circulation or the increase in the State Bank's Advances, figures pertaining to December 4 are rather higher than the respective figures for the corresponding week in November. We may take it, therefore, though confirmation in this regard will be forthcoming only next week, that the 1959-60 busy season has commenced to make its pressure felt in the World of Finance.

There has been a hefty rise of Rs 31.05 crores to Rs 1710.26 crores in Active Note circulation during the week ended December 4. Rupee Coin went out into circulation, moreover, in the considerable amount of Rs 2.31 crores. Currency has been expanded by Rs 29 crores against Rupee Securities. In the result, the Reserve Bank's cash in the till stands reduced by Rs 13.35 crores at Rs 15.20 crores.

Investments in the Banking Department are lower by Rs 5.74 crores at Rs 242.74 crores. Since purchases through the Reserve Bank tap are not likely to have been made by Scheduled Banks, it may be inferred that the Central Government have had recourse to deficit financing for roughly Rs 15 crores. That the Centre's disbursements have been heavy is suggested by the improvement of only Rs 3.43 crores to Rs 52.89 crores in its balances, despite created money for Rs 15 crores. The dual impact of month early disbursements and busy season demand has caused a sharp decline of Rs 12.55 crores to Rs 14.66 crores in the Deposits of State Governments, in addition to an increase in the latter's Ways and Means borrowings from the Reserve Bank by Rs 3.72 crores to Rs 26.67 crores.

The commencement of the busy season pressure and month early disbursements have also had a telling effect on Scheduled Banks visa-vis the Reserve Bank. Reserve Balances of member banks stand reduced by Rs 3.19 crores at Rs 78.24 crores. Moreover, the Other Loans and Advances of the Reserve Bank are higher by Rs 5.42 crores at Rs 86.60 crores, and this is undoubtedly largely due to Scheduled Banks' borrowings from the central banking institution.

Finally, Balances Held Abroad, which had declined in the previous week, are fractionally better at Rs 41.21 crores.

The return of the State Bank for December 4 shows that the combined pressure of month early disbursements and busy season demand has compelled the State Bank to borrow from the Reserve Bank. This twin pressure has been reflected in a decline of Rs 3.10 crores to Rs 576.83 crores in Deposits and in a rise of Rs 4.63 crores to Rs 159.20 crores in Advances. Hence, the State Bank figures as a borrower from the Reserve Bank in the amount of Rs 1.06 crores. There is disinvestment in giltedged for Rs 1.33 crores, presumably relating to maturing Treasury Bills which were not offered in subscription for the new tender. As a result, cash in hand and with the Reserve Bank is marked down by Rs 2.54 crores at Rs 27.41 crores.

The return of Scheduled Banks for November 27, it may now be safely assumed, relates to the last discernible week of the 1959 slack season. The total of Advances is lower by Rs 1.63 crores at Rs 923.50 crores. Scheduled Banks other than the State Bank are responsible for the rise of Rs 6.18 crores to Rs 812.81 crores in Investments. Gross Deposits have again improved by Rs 5.57 crores to Rs 1885.65 crores. Cash Balances, consequently, are higher only by Rs 0.60 crores at Rs 170.02 crores. We may recall that the State Bank, in the relevent week, reported an increase of Rs 7.01 crores in cash in hand and with the Reserve Bank. We may infer that this rise to the credit of the State Bank has been offset by a drawing down of Reserve Balances by other Scheduled Banks in order to pay for the giltedged purchased from the Reserve Bank.

To Nationalise or no?

By Paul Einzig

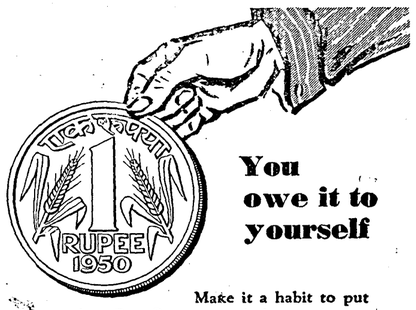
THE "inquest" held by the Labour Party over its defeat at the general election is over. The main question before the Blackpool Conference held on November 28 and 29 was what to do about nationalisation. There can be no doubt that nationalisation is unpopular outside the hard core of Socialist voters. The Labour Party was well aware of this and was doing its utmost to play it down during the electoral campaign. But the Conservatives on their part did their utmost to draw attention to the fact that the Labour Party was still committed to a programme of nationalisation. There is reason to believe that this was the main cause of the Socialist defeat, even though the unpopularity of the trade unions among housewives was a good second.

Now that the battle is lost, the time has come for the Labour Party to re-appraise the position. The Leader, Mr Gaitskell, is convinced that the Party stands no chance ever to win an election so long as the floating voter is deterred by threats of further nationalisation. But, for a very considerable section of the Labour Party—probably the large majority—nationalisation has an irresistible emotional appeal, regardless of any political or economic arguments against it. They feel that once nationalisation is dropped from the programme, there is nothing else left to distinguish the two Parties from each other. In this, they are wrong. For, in spite of Mr Macmillan's paternalistic Socialism, and in spite of the Government's unwillingness to pursue "true blue" Tory policies, there is still a considerable gap between Tories and Socialists. To mention only one issue—the Labour Party is committed to a Capital Gains Tax; Government are dead against it.

However, even Mr Gaitskell did not dare to come out at the Party Conference with a proposal to drop nationalisation. He merely suggested that the programme should be presented in a form that would be more palatable to the electorate. He did not specify, but judging by past statements, he must have had "back-door nationalisation" in mind—that is the acquisition of controlling shareholdings by various public bodies with the aid of purchases on the Etock Exchange.

A split of the Party could only be avoided by leaving the issue in abeyance for the time being. But, sooner or later, the leaders of the Party will have to face up to it. Mr Gaitskell is probably right in believing that, unless nationalisation in the form in which it is now advocated is dropped, the Labour Party condemns itself to being the perpetual Opposition. The revival of the Liberal Party, so far from having split the anti-Socialist vote, seems to have split the anti-Conservative vote. Disaffected elements, instead of giving vent to their disapproval of Government policies by voting Labour, will be able to do so by voting Liberal. That being so, the Labour Party is never likely to gain a majority unless nationalisation is dropped.

One of the main reasons why nationalisation is so unpopular in Britain lies in the conditions in the nationalised transport industry. There can be no two opinions about the deterioration of the railways compared with before the war. The British public can see for themselves the conditions in carriages and railway stations, the inadequacy of the service they receive. No amount of pro-nationalisation propaganda can argue out of existence these visible facts. It is true, railway carriages and stations of the French State Railways are spotlessly clean, and trains run on time. But only a fraction of the British public is aware of this. The bulk of the electorate identifies nationalisation with untidy stations and carriages and irregular trains.



Nor is the state of the coal industry an advertisement for nationalisation. It is true, there is a world-wide overproduction of coal as a result of the competition of oil, hydro-electric power and nuclear power. But while in Western Germany the workers in the coalfields were willing to face realities and accepted a wage cut, thereby relinquishing a fraction of what they had gained since the war, in the nationalised British coal industry the workers are still pressing for higher wages and shorter hours. At the same time there is the utmost resistance to the closing down of uneconomical pits. The coalfields have come to be regarded not as an industry but as a social service existing for the benefit of the miners. They expect to be kept on full pay even though their pits have become virtually exhausted and can only be kept going at a big loss. To spare the miners the admittedly considerable inconvenience of having to change occupation and residence the taxpayer is expected to cover the deficit of such uneconomical pits indefinitely.

But the taxpayer is growing tired of this attitude and has no desire to assume responsibility for the deficits of additional industries as a result of their nationalisation. It is widely felt that before long there will be once more overfull-employment, so that any redundant miners can easily find alternative employment in which they can contribute toward the welfare of the community instead of being kept by it.

The obstinacy with which the Labour Party clings to its decision to re-nationalise the iron and steel industry is another reason why the idea of nationalisation is unpopular. The British public has accepted the national ownership of the public services, and no Conservative Government is likely to de-nationalise any of them. But iron and steel is a totally different proposition. It was nationalised, not for economic but for political reasons. The workers in the industry itself are not in favour of re-nationalisation, judging by the election results in the constituencies concerned. If each Labour Government were to re-nationalise, the industry and each Conservative Government were to de-nationalise it, conditions would become intolerable.

The increase of the public debt arising from financing the capital development and the current deficits of the nationalised industries is yet another argument against further nationalisation. Government loans are not very popular just now, and the terms on which the investors are prepared to absorb them are rather costly. The non-stop increase of the public debt is causing growing concern among the thinking section of the people. On that ground alone it is considered preferable to leave industry in private ownership, so that its capital requirements should be covered by private instead of public issues.

WORLD OF JUTE

Sacking Stocks at New Low

FIRM conditions have prevailed in the jute markets during the past week. Under the combined stimulating influence of scarcity ideas about raw jute supplies during the current jute year and an excellent statistical position of jute goods, prices have been taken to new highs. The main incentive was provided by the raw jute section where sellers were reserved throughout the week offering only small lots at prevailing rates. Although mills generally showed little interest, the uptrend was sustained by the activities in the futures market. It was evident that an influential section of marketmen had their own idea about raw jute availability during the current season. That did not appear to tally with the authoritative estimates. It was noted last week that both the Jute Bulletin and the President of the Jute Balers' Association were of the view that supplies would be adequate. While the former opined that, although the current year's crop was no doubt smaller than the previous year's, the large carry-over with which the current year started together with the new crop would be sufficient to meet our requirements in full, the latter estimated that there would be a substantial surplus left for export. It would appear that those estimates had not found favour with a section of marketmen who had succeeded in getting their view accepted at least for the time being. Circumstances also seemed to be helping them. Arrivals of raw jute in upcountry markets and in Calcutta and mill stations were reportedly small for the time of the season. It was also reported that mills were moderately active in agencies even at the prevailing high prices. After the publication of gunny stock figures as at the end of November, speculators in the raw jute market seemed to have made the calculation that, in case mills continued to work the 2½ per cent looms for a further period beyond January 1960, raw material requirements during the current season would have to be revised upwards.

The publication of the gunny stock figures on Saturday last gave further fillip to the raw jute market. Not only did total stocks continue to maintain the downward trend first noticed some ten months ago, but the decline last month was surprisingly large. Total stocks of jute goods at the end of November 1959 were 65,200 tons as against 72,000 tons at the end of the previous month, thus showing a decrease from last month of 6,800 tons. At 26,600 tons, stocks of hessian cloth and bag were 2,500 tons lower while sacking stocks at 28,700 tons recorded a drop of 3,800 tons. Other varieties were also 500 tons lower at 9,900 tons. At the corresponding date of last year, total stocks were 105,400 tons comprising 17,300 tons of hessian, 75,500 tons sacking and 12,600 tons other varieties. While, thus, the overall statistical position of jute goods is quite good, that of sacking must be deemed excellent. Sacking stocks at 28,700 tons are much below a month's production of this category of goods by our mills and indicate a position that had not been witnessed for many a past year.

The low level of gunny stocks has brought about an interesting situation. Firstly, sacking stocks have dwindled much below expectations and, according to present arrangements, the prsent extra production of heavy goods will not be available after 2nd January 1960. But, from the trend of sacking offtake in the past few months, it would appear that the demand for this category of goods is still strong. Indications are that, in the coming months, offtake on Government account will remain at a fairly high level. If the holding of heavy stocks by the industry is to be looked upon with anxiety, it is equally important that the industry has adequate stocks of all category of goods at all times. Though it is undeniable that the steep rise in prices of jute goods in the past one or two weeks is largely due to higher raw jute prices, it must be noted that the publication of November-end stock figures has also been a contributory factor in pushing up prices of goods. In other words, there is already a squeeze in sacking and, with the present uncertainty regarding the production programme beyond 2nd January next, the speculators will have a field day in the jute markets. It may not take much time for a similar situation to develop with regard to hessian also. Stocks of hessian, too, are considerably below a month's production and there is a large unsatisfied demand in hessian both in the US and Argentina. The latter has already shown some indication of a revival of interest and reports show that the demand from this direction may pick up in the coming weeks. With an amicable settlement in the steel industry, US purchases may show a sizable improvement. Now that sacking goods are meeting with good demand, the IJMA may not find any alternative but to extend the unsealing of the 2½ per cent looms for a further period. The present seems to offer an opportunity for the Indian jute industry to consider the possibility of gradually bringing the remaining 10 per cent of the looms also into commission.

The jute markets ruled firm throughout the week and on Thursday prices closed as follows: Hessian 40" x 10 oz Dec. 41.60, B Twills Dec. Rs 108.75, and Assam Bottofs Dec-Jan. delivery Rs 29.50. In the futures market the uptrend was well pronounced in all sections. The rapid rise in prices led to the imposition of special margins which were announced on Tuesday by the East India Jute and Gunny Exchange. The margins which came into immediate effect are Rs 2.50 per 100 yards hessian cloth, Rs 5 per 100 bags of sacking (B Twills) and Rs 2 per maund of raw jute, in case the closing prices of these were at or above 41.00, Rs 105.50 and Rs 29.00 respectively. The curb, however, failed to subdue bullish fervour as will be seen from the closing rates on Thursday: Hessian 40" x 10 oz Feb. 41.70, B Twills Feb. 107.90 and Assam Bottoms March Rs 31.

WORLD OF TEA

Good General Demand

THE overall level of buying, both at the London and Calcutta Tea markets, has been good during the past few weeks, although buying in London is mainly directed at teas up to 5sh per pound. The spread between the bottom and top grades from 3sh 8d to 6sh 10d against 3sh 8d to 6sh 8d in the previous week points to the broad stability of the price structure. The stronger statistical position of the commodity is undoubtedly contributing, in a larger measure, to the overall firmness of the London market.

The trade does not think that the crop, during the remaining months of this season, can increase much; the October and November crops in 1958 were exceptionally big because of excellent climatic conditions. In this connection, the report issued by a well-known tea brokers' firm, states that "prices may decline in the latter part of the year if weekly offerings exceed buyers' immediate requirements. But, in that case, an improvement in prices can probably be looked for in the New Year once it becomes apparent that export sales are likely to end even earlier than in the previous year".

Meanwhile, in the Export Sale held in Calcutta this week, offerings consisted of 71,710 packages. There was a good general demand at fully firm to dearer rates for clean Broken grades; but plain and orthodox Fannings were 4 nP to 8 nP per pound easier, CTC Assams were sold well, but were up to 10 nP easier. The secondary grades and plainer sorts were less strong than in recent weeks. Nonwither Legg-cut descriptions showed a little irregularity and were 2 nP to 4nP easier.

Medium orthodox BOPs and OFs were also a little irregular and frequently easier, particularly OFs. Whole Leaf grades were in demand at fully firm to dearer rates, while Darjeeling teas showed little change. There was a fair enquiry for Tippy teas which were sold readily. Following rates were quoted: Clean Black Pekoe Rs 2.14 to Rs 2.20; Plain BP Rs 2.04 to Rs 2.12; Plain Fannings Rs 2.10 to Rs 2.18; Medium BP Rs 2.02 to Rs 2.12; Medium Fannings Rs 2.16 to Rs 2.24; Best Assam CTC BP Rs 2.70 to Rs 2.90 and Best Assam CTC Fannings Rs 2.70 to Rs 2.90.

In the Internal Sale, offerings consisted of 21,493 packages of Dusts and 915 packages of Leaf grades. There was once again a good general demand; but prices for most descriptions were easier. Orthodox teas were irregular and sold upto 4 nP per pound below last rates with the exception of the poorer sorts in this category which were firm and ofter dearer. Legg-cut teas also followed this trend. Darjeelings met with keen enquiry, especially the smaller flavoury sorts which were sometimes upto 20 nP dearer. Medium CTC types were upto 10 nP easier. The very best CTC Dusts were generally sold at about last rates. Following were the rates:—Medium Dooars Dust Rs 2.10 to Rs 2.18; Medium Assam Dust Rs 2.06 to Rs 2.12; Medium Assam CTC Dust Rs 2.10 to Rs 2.24 and Best Assam CTC Rs 2.60 to Rs 2.90. There was a good general demand for Leaf grades.

According to the figures released by trade circles from Cochin, tea shipments from this Port have recorded an impressive rise to 8.25 million pounds in October from 5.74 million pounds in the corresponding month of last year. The improvement in exports is mainly due to the increased offtake by the UK from 2.67 million pounds in October 1958 to 5.07 million pounds during the month under review.

Tea exports from Ceylon, in the first eight months of the current year, are lower at 239.72 million pounds as compared to 260.53 million pounds in the corresponding period of last year. With the notable exception of the USA and Egypt, shipments to all important destinations have recorded a substantial decline.

In the Chittagong market, offerings amounted to 13,657 packages. There was a fair demand; but buyers were very selective. BOPs and OFs were generally one to two annas per pound easier as also Fannings. The few Whole Leaf grades on offer were nearly always dearer and the cleaner Broken Pekoes were generally sold at higher rates. Legg-cut Fannings met with fair demand and most lots obtained prices above valulations. BOP was quoted at Rs 1.14.6; BP at Rs 1.11.0 and OF at Rs 2.2.0.

In Mincing Lane, the general pattern of demand has not changed significantly by comparison with recent weeks. More attention was paid than of late to teas over 5sh per pound. Among Ceylon teas, some of the high-grown and medium kinds showed considerable irregularity and often declined by one penny to three pence per pound.

Stocks in London, as on the 27th November, were estimated at 112.95 million pounds as compared to 110.18 million pounds in the previous week. Total afloat was 38.16 million pounds including from Calcutta 24.60 million pounds; from Chittagong 1.16 million pounds; from Cochin 1.40 million pounds; from Ceylon 8.74 million pounds and from other Ports 1.25 million pounds.

WORLD OF BOOKS

The Paternalistic Japanese Manager

The Japanese Factory by James C. Abegglen, Center for International Studies, Massachusetts Institute of Technology, Asia Publishing House, price Rs 10.50, pp. 105.

THIS study of the social organisation of a Japanese factory sheds an entirely new light on industrialisation in Japan. There has been a facile assumption in all that has been written about modern Japanese industry that its development has been on similar lines to that in the West. This, says the author of **The Japanese Factory**, is an error. For this book, he made studies, in 19 large and 34 small factories in various industries, of the relationship between worker and company and the way in which skills and energies are mobilised and directed in the group. Mr Abegglen is Operations Manager with the International Standard Electric Corporation in Tokyo, and was a Foreign Area Training Fellow of the Ford Foundation in Japan and for a year Assistant Professor of Psychology at the Centre for International Studies at MIT, so that he brought to his study practical experience as well as a well trained mind.

The wide difference in factory organisation and in the attitude of management and worker between Japan and America is traced by Mr Abegglen to the differences in social background, in the one country the emphasis being placed on the family and group, in the other on the individual, a difference which it is well to remember applies to other Asian countries also. The most fundamental—and the most astonishing—feature of the social organisation of industry in Japan is the permanent relationship between employee and employer:

"The worker commits himself on entrance to the company for the remainder of his working career. The company will not discharge him even temporarily except in the most extreme circumstances. He will not quit the company for industrial employment elsewhere. He is a member of the company in a way resembling that in which persons are members of families."

And this rule holds good for whatever the level at which the recruit enters. The managerial levels are as permanent as the workers. Even when there is shortage of work, temporary layoff does not take place. "The company holds itself responsible for the continued salary of all its employees for the duration of their employment." Small wonder that the workers are often termed "eternal" employees! Discharges normally take place only for most serious breach of conduct. One per thousand is a normal severance rate for a large company, and where the rate is higher it is explained by employees leaving the factory to return to rural occupations.

Management accepts this custom without question, arguing that jobs are scarce and the population large, and therefore it is the national duty of companies to maximise the number of positions in the plant and to refrain from reducing the work forces. Both worker and company are bound together by a personal relationship rather than a contract of employment—a system of shared obligation takes the place of the economic basis of employment normal in the West. The system is in a way self-reinforcing, that is to say, it is almost impossible for a discharged worker to find another job just because discharge is taken as proof that a man is not suitable for re-employment.

The relationship between manager and worker in the Japanese factory is much akin to that of master and apprentice in mediaeval England, where the master was directly responsible for the housing, health and wellbeing of his apprentices. In Japan the manager accepts responsibility for the welfare of his workers in their ordinary life as well as in the factory. The idea is carried still further in the case of women employees. They do not normally work in factories after the age of 22, and it is the manager's responsibility to arrange or assist in the arrangement of their marriages! Recreational and educational facilities are provided by management, which in the case of women employees include instruction in cooking and flower decoration.

This paternalistic attitude to the obligations of an employer seems to go ill with modern technological advance, and yet on second thoughts is the position really so different in Indian industry today? The Indian factory manager certainly does not have to arrange marriages for his employees, but his permanent workers are well nigh as "eternal" as the Japanese worker, for, he knows that he cannot retrench them without causing disruption to the business, and that even in the strongest case the attitude of Government will be to search for some method short of actual retrenchment to solve the problem of surplus labour. Moreover, the tendency is toward placing the responsibility for housing and other welfare measures on the shoulders of the employer.

As one would expect in such a rigid system Mr Abegglen finds "an astonishing proliferation of

make-work jobs" and jobs of a menial sort which could be reduced in number in the Japanese factory, as well as a great deal of inefficient use of time and energy on production jobs, but he notes that, since labour costs are still much lower than machine costs in Japan, this does not have such a serious effect upon the *total* costs of production as it would in America where labour costs are high. Yet where there is surplus labour, there is naturally *less* incentive to introduce modern methods or machinery, and the result is a conservative attitude toward change in the thinking of factory management. New factories in Japan may be based on a more mechanised system with less labour, but it is difficult to introduce more mechanisation in the old plants. There is at present, as part of the productivity drive, considerable pressure on managements to introduce new methods, but naturally this has the result of exacerbating the existing problem of labour surplus.

Depression in any Japanese industry may have catastrophic effects. The company will endeavour to carry its large workforce despite the shortage of work. In the post-war depression of 1949, many firms had to curtail the large work forces to which they had become committed in wartime, and had to offer considerable financial inducement to bring about voluntary retirements—a situation not unknown in India. It was more difficult to persuade staff and managerial personnel to retire, and in consequence many of these companies even now have a surplus of higher grade personnel.

How, then, does the Japanese factory cope with the problems brought about by technological change, the need for higher productivity and so on? Two factors serve to some extent as buffers against such changes. The first is the use of a temporary labour force which can be adapted to variations in work demands. These temporary workers may sometimes number as much as 10% of the total work force. Legally, they can be laid off after two months of employment. They are mostly drawn from agricultural labour surplus and can return again to the land. They usually perform only lower level tasks, often at very low pay. They seldom move from the ranks of temporary to permanent employment in the same company. This is a buffer which is used to some extent also in India, but it has severe limitations here, for both Government and organised labour are opposed to the private sector employing temporary labour on a large scale. There is constant pressure to find permanent employment for temporary men, and under the law a man who has served temporarily for 240 days or more in a year is regarded almost as a permanent worker, for, he has acquired the right to retrenchment compensation on discharge, and a tussle over his discharge is usually inevitable.

The *second* buffer in the Japanese system is that most large companies have a considerable number of affiliated and subordinate companies, and increases in demand may be met through subcontracting rather than increasing the labour force of the main unit. However, this in effect only passes on the problem to the smaller company, which may have similar difficulty in adjusting its labour force.

The commitment between employee and employer in Japan has its complementary side in the methods of recruitment and remuneration, and while they fit together to form a common pattern, they in turn raise their own special problems. Education is the main consideration in the selection of personnel in a Japanese factory. The **koin** (persons who work) or wage earners, are drawn from those with primary or middle school education; the **shokuin** (*persons in charge*), or salaried workers holding clerical and supervisory positions, are drawn from the higher educational categories, and within this group there is a further distinction between high school and college graduates, for, only the latter can become top line managers. The different categories are rigid, and there is no scope for promotion from one to the other.

Manual workers are recruited by the factory personnel department through Government employment offices, and what is sought is "persons with stable natures". Persons with too much education and a modern urban outlook may not settle down as wage earners, and so recruits are normally chosen from rural areas. They are selected by written examination suitable to their educational level, including intelligence and dexterity tests. Most come in as apprentices, living together in company dormitories and closely supervised so that they are integrated into the company from the age of 15. They may be discharged if found unsuitable in the early months, but otherwise after a certain term they become permanent employees. While the shokuin may be transferred from one factory to another under the same company, the **koin** remain in the same plant for the rest of their working lives.

The **shokuin** groups are always recruited from the head office of the company by direct contact with chosen high schools and universities not necessarily in the locality. Candidates recommended by these institutions are put through an elaborate intellectual examination and screening by interview.

> "The question of whether they are, on the basis of the results of their tests, appropriate candidates for top management positions was not raised by management in the course of discussions of selection procedures."

There is general disapproval of close relatives being employed in the *same company*, though there is a certain amount of indirect family influence on appointments through connected companies. This system of recruitment was designed to fit the older system of education in Japan, but the modern system is modelled on the American pattern, and this raises difficulties. One of the most important is that the supervisory staff being drawn from universities in large urban centres may be quite unfamiliar with the social background of the manual workers and the whole paternal outlook of the factory, and not suited by education to fit into it. Yet he has to be fitted into the pattern, and so is put to work alongside an older supervisor. It he cannot adapt himself, the curious situation may and does arise, of a permanent duality of rank, one man carrying the status and another doing the job. The already excessive hierarchy is forcibly expanded in order to maintain the principle of lifelong commitment.

The benefit of having manual workers of a "stable nature" is therefore offset by having supervisory levels who have no social contact at all with the workers. It follows that there is no grasp of the idea of communication between *management* and worker in a Japanese factory. The Japanese foreman and manager feel a responsibiliy for the well being of their workers quite beyond accepted standards in other countries, but the work relationship is one of expected orders from above and expected loyalty from below.

Although the industrial picture in India is very different from that of Japan, the very rigidities of the Japanese factory help to underline some of the pitfalls that may await us if we are not careful in India. Though the Japanese idea of commitment for life seems exaggerated to us, in effect we have moved quite a long way in the same direction, and this highlights the need for recruitment and training policies which will make the best of possible recruits for life. While not advocating the Japanese ideas of recruitment, there is need to look at our own rather haphazard methods. More and more, industrial management finds itself forced to give first preference to relatives of employees. We have to decide whether this is sound policy.

There is much greater acceptance in India than in Japan of the need for *management* training in human relations. Although social divisions in Indian industry also create problems of communication, one feels that there is much greater opportunity for management-worker cooperation in India than in Japan. There is better scope for interesting the workers in joint productivity drives in India than in Japan, and indeed Indian experiments in some places have produced very good results. One wonders, in passing, why India should have had to send a team to Japan to learn how to run a productivity drive. From Mr Abegglen's study, one has the impression that in all but the new factories in Japan to attempt the *modern* productivity approach would be like knocking one's head against a brick wall. It is not only a question of the social organisation in the factory, but the whole structure of the pay system militates against productivity techniques.

> "The whole mechanism of job evaluation, cost analysis, and incentive systems can find no place in the large Japanese factory without clashing violently with the present system."

The Japanese pay system is complicated, but it has certain similarities in India. It starts with a very low basic wage related to the level and age of entry, and to these are added allowances based on age, family, attendance, often special regional allowances and rank allowances, and productivity or efficiency allowance. Only the last is at all related to the job. Overtime pay forms quite a large item in the pay bill, and, as already noted, a company has responsibilities for housing, medical care, education, etc. which in effect increase the wage.

> "The Japanese pay system removes from the work setting the use of money as a prime incentive for higher individual productivity. . . . Motivation for work output rests in large part on loyalty and group identification . . . . Western methods rely on assumption about the nature of the work experience which are not valid for the Japanese work situation."

Here is a warning against the wholesale application of Western methods to Asian countries. To what extent do modern Western methods require adaptation in India? We, too, have now accepted in almost every industrial job the wage increment based not on efficiency but service. It does not altogether cut out individual incentive, but it certainly weakens it, and the group incentive therefore seems more likely to yield good results. Unfortunately, when it comes to a question of joint effort for productivity, we have in most cases lost the sense of group loyalty on which the Japanese rely. We need to revive this, not as in Japan in the form of exaggerated loyalty to a paternalistic manager, but in the form of a team spirit which can take pride in joint endeavour. We need, moreover, to think more deeply on the application of Western techniques to our own industry. There is no doubt of Japan's substantial industrial progress, and Mr Abegglen's study has shown that this can be achieved within a social organisation totally different from that of the West.

WORLD OVERSEAS

US Notes

EMPLOYEES of more than 25,000 companies in the United States will be receiving a $750 million slice of American business earnings this year under profit-sharing plans sponsored by their employers.

Profit-sharing, of course, is but one example of what has been called the continuing economic democratization of the United States. The American working man and his family have shared abundantly in the growth of the US economy, not merely in terms of rising living standards but also in the kind of lives they lead, which in essence differ little, if at all, from those of their fellow citizens in professional or managerial ranks. As recent US Labour Department studies have demonstrated, this similarity in the quality of living extends to virtually every facet of socio-economic existence, from the houses people live in and the schools they attend to the automobiles they drive and the medical care they receive.

Profit-sharing can be cited, however, as a particularly relevant example of this kind of progress, if only because it makes the worker an integral part of the industry in which he is employed and tends to give him a personal interest in that industry's prosperity.

But profit-sharing programmes also have other, though perhaps less obvious, advantages. These have been spelled out by the Council of Profit Sharing Industries, a private group which since 1957 has been seeking to spread the profit-sharing philosophy throughout American industry.

It is the contention of the Council that firms with profit-sharing programmes produce more efficiently at lower cost, have fewer labour-management difficulties and enjoy higher earnings than competitive non-profit sharing concerns. In the process, the Council says, profit-sharing tends to stabilize prices and thus keep a brake on inflationary pressures.

Specifically, here is the way the Council sees profit-sharing plans benefitting various segments of the economy:

—Management, by giving the employee a personal interest in the welfare of the business, stands to receive in turn a greater productive effort, more cooperation and more efficiency.

—Labour receives a tangible reward, over and above its normal earnings, in proportion to the success of the business. This is taken either as a cash bonus or as cumulative savings for the future.

—Stockholders, through the dividends they receive, share in the added earnings produced by an efficient labour force with a direct interest in the company's well-being.

—Consumers benefit from the lower prices and the better products that result from heightened labour and management efficiencies.

—The economy as a whole benefits, of course, as each of its segments benefits. But there are, in addition, two other important and direct benefits that have been cited. For one, the increased income available to workers in profit-sharing companies provides a basis for greater consumption of goods and services. For another, workers' profit-sharing gains in many instances are put into retirement trust funds which through their investments generate more capital for the nation's economic expansion.

In all, more than two million employees now share in US business earnings each year under profit-sharing arrangements. About one-fifth of the total profit-sharing payments received by these employees takes the form of cash bonuses, while the rest—the major portion—goes into retirement trust funds.

Admittedly, not all workers stand to gain equally from profit-sharing programmes. Much depends, for instance, on the company's earnings, the nature of its particular plan, and the way in which the profit-sharing funds are invested. But an indication of how a soundly devised profit-sharing plan can benefit company employees is provided by Sears, Roebuck and Company, large mail-order and retailing concern.

A recent analysis shows that Sears, Roebuck employees who retired last year after 25 to 30 years of service received an average of $67,098 from the retirement fund—and this was accumulated from total deposits which over the years averaged only $4,899.

*

Britain

Industrial production in the United Kingdom has risen 7 to 8 per cent. in a year and should go on rising, though perhaps more slowly. Exports should continue to rise, and so, on balance, should consumer spending.

These are the main conclusions of the review of the current British economic position published in London on November 30 by the National Institute of Economic and Social Research, an independent research body.

The review goes on to say that supply of labour should not set a limit to rise in output, because the level of employment is hardly higher than a year ago: capacity, in general, is not yet strained.

Neither prices nor the balance of payments, the review adds, need cause anxiety at the moment. Import prices have hardly moved at all; and labour costs per unit of output have fallen since a year ago, while profits per unit are higher.

Imports have risen appreciably, and will probably rise more; stocks of imported commodities have scarcely yet been rebuilt.

Making its own independent forecast of the current balance of payments for this year, the National Institute says that it seems likely to be of the order of £200,000,000 to £250,000,000. The institute comments that this is a quite favourable result for a year in which production has been recovering rapidly.

The review points out that the incomes of primary producing countries in the Sterling Area have been recovering, and that so far this has benefited the gold reserves. Now it should begin to benefit British exports.

* * *

Industrial production in the United Kingdom rose again in October, according to figures published by the Treasury in London on November 30.

The index of industrial production in October is provisionally estimated, on a seasonally adjusted basis, at 114-115 (1954 taken as 100).

The index for September, seasonally adjusted, has been raised to 114, compared with an earlier estimate of 112-113.

The trend in industrial production, it is pointed out in London, is still upward. In September-October, taken together, the level of production was between 1 and 2 per cent. higher than in June-August, and about 9 per cent. above the level in September-October 1958. The increase in output is now widely spread over the main branches of manufacturing industry.

* * *

A £8,000,000 development and replacement programme has just been completed by the 125-year-old firm of Patent Shaft Steel Works Ltd., at Wednesbury, Staffordshire. In a factory area now exceeding 80 acres, the firm has what is claimed to be one of Britain's finest rolling-mills.

After three years' intensive work, the new extension—including open-hearth furnaces, a rotary-hearth furnace of a type said to be the first in use in Britain, a blooming and slabbing mill, and a plate rolling-mill—now enables the company to step up steel-plate production by a considerable degree.

The firm originated about 1835, and the Wednesbury plant earned an honoured place in the history of steel since Henry Bessemer—who revolutionized the steelmaking process—conducted several experiments there.

Though Patent Shaft's products over the year have included railway wheels and axles, turntables and crossings, and steel bridgework—steel for the Banaras bridge was made at Wednesbury in 1885—the main product today is steel plate.

The firm employs more than 1,000 people in highly mechanized processes. There are at present three Indians on the staff.

* * *

"The role of sterling in international trade and finance continues to be of key importance, and it has been a matter of great satisfaction to see this truly international currency return to health and vigour", said Mr. Eugene Black, president of the International Bank for Reconstruction & Development, in an address to the Institute of Bankers in London on December 1.

Speaking on the theme "Britain and the World Bank", Mr. Black said the British Government had three aims in supporting the establishment of the Bank. One was to provide a new source of long-term investment; another was to set up an institution which would show that hard-headed lending procedures could bring a profitable return on the money invested, and thus restore the confidence of private investors in oversea investment; but the third, and chief, aim in helping to form the bank was to provide yet another source of dollars.

"British planning in this respect", went on Mr Black, "was successful beyond expectation; the Commonwealth has been a principal, if not the principal, beneficiary of World Bank lending".

Referring to the British contribution to the Bank, Mr. Black said: ". . . . We have a total contribution by Britain to the Bank of about £93,000,000, including the portion subscribed in gold or dollars". On top of that, the Bank could expect to receive, in a similar way, another £60,000,000 or so from various self-governing members of the Commonwealth.

* * *

"Another contribution to the Bank's funds", said Mr Black, "came from the London market, in the shape of two issues of World Bank bonds, each of £5,000,000 These were 20-year bonds, issued in 1951 and 1954, and enabled the Bank, so to speak, to put up its plate in the City".

The latest benefit obtained from the World Bank, added, Mr Black, had been in the form of loans to the Commonwealth. The self-governing countries had received loans totalling the equivalent of £460,000,000. The dependent territories had borrowed another £70,000,000. "So the grand total of Commonwealth borrowing from the World Bank is about £530,000,000, or one-third of all the loans made by the Bank".

After considering the problem of external help for the underdeveloped countries and the role of the new International Development Association, Mr Black concluded: "The whole world is Britain's business, and the City of London is inextricably involved in the world economy as a whole. Much of the economic development which has so far been accomplished in Africa, Asia, and America had its beginning in the square mile of banks and business houses which surround us. And such of the growth to come will also begin here, and will be better done because of the experience and wis-

dom which Britain brings to the task".

* * *

The gold and convertible currency reserves of the Sterling Area fell by £18,000,000 last month and stood at £1,062 million on November 30, it was announced by the Treasury in London on December 2.

The fall in the reserves in November, it is pointed out in London, does not come as a surprise, in view of the movement that has probably been taking place during the month of short-term funds to other financial centres, attracted there by higher interest rates and tighter money conditions. These funds, when they came in, helped to increase the reserves, and the reserves are there to meet the demand for their withdrawal.

*

France

THE index of French industrial output shows a considerable increase in activity after the vacation period. It went from 152 in July excluding building and 108 in August excluding building to 160 in September (case of 100 in 1952). The index was still less than the levels reached in May (171) and June (169) but it exceeded by 7% that of September 1958 (150).

The index including building totalled 154 compared with 145 in September 1958, which was an increase of 6%.

70 million dollars worth of hard currency entered France in October:

French reserves of gold and hard currency increased by 54,200,000 dollars in October, despite the payment of certain short term loans amounting to almost 15 million dollars.

Some 70 million dollars worth of hard currency entered France in October which is slightly more than the total for September.

On 31 October, French reserves of gold and hard currency totaled 1,911 million dollars, which breaks down as follows (in millions of dollars):

Gold in possession of the Banque de France: 875.5;

Available capital for use abroad in the Banque de France: 714.8;

Gold and hard currency on hand as security for the stability of the French franc: 320.7.

*

Australia

Statistics now published for the year ended June 30, 1958, confirm the continued flow of big overseas investment capital into Australia.

Main sources of investment were the United Kingdom, which invested £57,400,000; the United States of America and Canada, £24,500,000; and New Zealand £5,300,000. The total inflow was £97,000,000.

The latest survey by the Australian Bureau of Census and Statistics shows that the total paid-up value of shares, debentures, unsecured notes, and other obligations of Australian companies held overseas, at June 30, 1958, was £423,600,000. Ten years ago the figure was £131,600,000.

"EXPLODING"

Although British sources continue to be the strongest factor in overseas investment, there is great interest in the possibility of increased investment from the United States. This has been strengthened by the visit by the president of the New York Stock Exchange, Mr Keith Funston, who found "wonderful prospects for all sectors of the Australian economy".

Commenting upon the growing potential of Australia as a field for American investment, the United States Ambassador, Mr W. J. Sebald, recently showed himself an enthusiastic salesman. His description of Australia as: "Virtually exploding into industrial strength", and his emphasis on the desirability of his countrymen entering into partnership with Australians could do a great deal to lift the inflow of private capital and encourage more joint enterprise.

NEW INVESTMENTS

Agreements negotiated between two United States companies will result in telephone units now made by the Chicago Telephone Supply Corporation being manufactured in Australia.

A deal between the Chicago company and the Internation Resistance Company, of Philadelphia, will provide manufacturing opportunities for International's Australian subsidiary, International Resistance Holdings Ltd.

As a result of another agreement, with the Elco Corporation of Philadelphia, International is also registering a new subsidiary, Elco (Australiasia) Pty. Ltd., for new products to be made under licence.

A Dutch firm that has been operating for some years in Australia as a mechanical engineering contractor has formed a company to direct its operations. The firm is Werkspoor N.V., and its new company, World Services and Construction Pty. Ltd., with head office in Melbourne, will have a capital of £200,000.

The firm has been employing 400 people and has been undertaking a project for the Shell Refinery, Geelong, Victoria, and the Victorian State Electricity Commission at its new briquette factory.

* * *

Melbourne Stock Exchange Reorganises:

Under the impact of increased buying orders for stocks, Australian Stock Exchanges are effecting changes in the organisation of the various calls.

Latest to effect these changes is the Stock Exchange of Melbourne, which will shortly begin near-continuous trading in the 80 most active stocks, by calling these stocks five times a day.

This decision has been reached after studying the methods adopted in Great Britain, Europe, Canada, and the United States of America.

The Melbourne Exchange favours this arrangement, as against that of post-trading, recently adopted in Sydney. The belief is that post-trading, while providing facilities for a very big volume of sales, does so somewhat at the expense of accuracy and economy.

The 80 most active stocks will be called in No. 1 room three times in the morning and twice in the afternoon. Remaining equities, and Commonwealth Loans, will be called once in the morning and once in the afternoon.

The Stock Exchange of Melbourne has created 10 more seats, which it proposes to offer at £10,000 each. Intending purchasers will be required to have had four years' experience in a sharebroker's office, or one year if they have special qualifications.

The extra seats will increase membership to 144.

The last sale of a seat was made at £6,000, nearly a year ago.

*

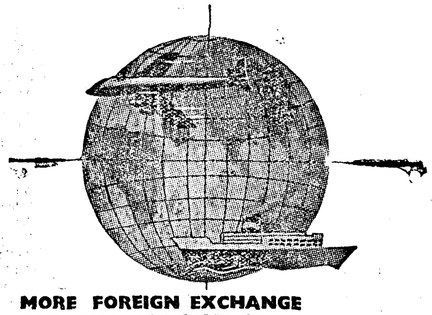
Germany

The Federal Republic's total imports from developing countries (31 per cent of total imports) rose by 4.1 per cent to DM 50,298 million in the first half of this year in comparison with the same period last year.

Of these imports, 86 per cent were bought overseas and 14 per cent in developing countries in Europe. Almost three-quarters of West Germany's requirements of certain beverages and tobacco, almost two-thirds of total raw materials and one-half of vegetable foodstuffs were bought in the dveloping countries. Of the total amount spent, DM 2,9412 million was spent for industrial goods, of which raw materials accounted for DM 2,1932 million (up 8.9 per cent), semi-finished goods or DM 5453 million (up 8 per cent) and finished goods for DM 2027 million (up 42.1 per cent).

Exports of the Federal Republic to the developing countries have shown a sharp downward trend. The gap between exports and imports narrowed by DM 159 million as compared with the first half-year of 1958.

* * *



The number of persons employed in industry during September 1959 in the Federal Republic of Germany was 7,570,000, the largest figure in post-war years.

* * *

Private investments abroad from the Federal Republic of Germany during the first nine months of 1959 amounted to DM 1,800 million (nearly Rs. 202 crores). This marked more than a two-fold increase over a total of DM 780 million (nearly Rs 87 crores) in 1957. The investments during 1958 were DM 1,100 million (nearly Rs. 124 crores).

* * *

Per Capita earnings from employment in the Federal Republic of Germany rose twice as much as the cost of living index between 1950 and 1959 August. While the nominal per capita earnings increased by 76 per cent the cost of living index went up by only 21 per cent, this giving wage and salary earners a 46 per cent real increase in their monthly income.

MORE FOREIGN EXCHANGE FOR THE NATIONAL PLAN

Extensive international trade is essential for the development of national economy. A country's foreign trade largely depends on efficient banking service.
With a network of correspondents at all important trade centres of the world the United Bank is equipped to render adequate service and give expert guidance in matters of foreign trade.

United Bank of India Ltd.

HEAD OFFICE: 4, CLIVE GHAT STREET, CALCUTTA-1

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

MUSIC is storming citadels traditionally considered impregnable by it. A languidly surprised world learnt the other day that there existed a Stock Exchange Orchestral Society in London. The Times printed a photograph of its members rehearsing after business hours and did not resist—as indeed who could have!—the compulsive pun "City Notes". And, at the annual general meeting of the Associated Chambers of Commerce last Saturday, Mr Morarji Desai brought off a neat musical analogy. Allaying Mr Brown's misgiving about possible repetitiveness on his part, the Finance Minister said, "All that either you or I can claim for ourselves is that we try, to the best of our ability, some variations on a theme which, in essence, cannot but be the same." This is a profoundly true description of the limits both of the discussion and the endeavour. The basic "theme" is that of a stagnant economy trying by democratic means to turn itself into a dynamic one of self-sustaining growth. The limits of this endeavour are, on the one hand, the available resources stretched to their utmost, and, on the other, the minimum investment that should be attempted if the dynamism aimed at is to be generated at all. It is difficult music to play by any manner of reckoning though (or because?) its range is limited. Therefore, to impatient critics, from the left and the right, one is entitled to say, "Don't shoot the pianist. He is doing his best".

*

Perhaps I am overworking the musical analogy, but it seems fair to describe Mr Desai's speech as in some respects contrapuntal to Mr Brown's. On the general economic situation during the current year, there was interesting variation, though both agreed that there was much to be grateful for. Both drew attention to the improved showing of both industrial and agricultural production. The nation's balance sheet for 1959 will reflect, according to Mr Brown, not only the recovery of old units but also the good showing of new ones. International demand is picking up, and the adverse trend in trade balance would "seem to have halted and may indeed have been reversed". Export promotional efforts are beginning to bear fruit, and the diversification of our exports has become more than a mere ideal. The foreign exchange situation has come under control and, in short, "throughout the year things have gone reasonably well and, because of that, encouraging progress has been made in the mobilisation of resources and production which it is the object of Government policy to achieve". Indeed, Mr Brown would seem to believe that, in some senses, 1959 is a climacteric year of "deep vital adjustments", though he very properly desisted from too rashly asserting it.

*

Mr Desai, too, seemed to think that things had gone rather well. But, whereas Mr Brown thinks that serious inflationary price increases have been held in check, Mr Desai thinks that the "price level has not fallen; in fact, it has shown some rise". The interesting point is not the statistical one of who is right, but the moods behind these assessments. Actually, Mr Brown's reading would appear to be slightly more up to the minute, because the most recent trends in food prices are mercifully downward. But Government are so often accused of complacency over inflation by the "private sector" that it is mildly ironical that the roles should have been on the occasion reversed.

*

But, on the question of the fall in profit ratios, to which Mr Brown drew attention in his speech, Mr Desai had the bland riposte that "profits are by nature variable". Mr Brown's analysis was the familiar one of increased costs digging into profits, because of the comparative inelasticity of prices, especially world prices. The Finance Minister, however, feels that the data regarding fall in profit rates should be further analysed in terms of specific industries before any firm conclusion of a definite trend over a period of years and over the whole industrial front can be safely drawn. Mr Desai has certainly a point there, for, the comparatively poor performance of textiles, cement and tea has, without doubt, distorted the overall picture not only in the matter of profit rates but of production. As has often been argued in this journal, our index of industrial production is far too heavily weighed with the performance of traditional items like cotton textiles, and the index of industrial production as an indicator of a trend is sometimes misleading for this reason. Mr Desai's objection to a similar distortion in trends of profits seems well taken. Mr Desai also made another rather shrewd debating point—it was nothing more than that. The "eagerness of the investor" as reflected by equity prices and the downward trend in yields would, he said, seem to show that the fall in profit does not worry the investor as much as it seems to worry the management. Of course, Mr Desai knows that an "investment decision" is a far more complicated process than he has made it appear. Likewise, his other point about progressive net accretion to fixed assets and the even slyer dig about the level of dividends continuing the same despite the fall in profits, are oversimplification. Net accretion to fixed assets does not dispose of the argument that the servicing of the liability incurred for asset formation can be onerous relative to current returns from such assets.

*

As an excercise in the art of the "retort courteous", Mr Desai's performance was brilliant. Obviously deciding to play on a low key, Mr Desai wryly quipped about its being natural for Chambers of Commerce to worry about profit trends in the same way as it was natural for the Finance Minister to worry about the trends in tax yields. He blandly hoped that "those who seek more profits and those whose duty it is to find more money for the public exchequer will be able, one way or the other, to get reasonable satisfaction". Perhaps, Mr Brown was overstating his case, but the relationship between increasing costs and profit rates, on the one hand, and the relationship between increased loan commitments and declining profit rates, on the other, cannot be disposed of by adroit debating scores.

*

On the question of the structure of corporate finance Mr Desai was giving nothing away. Mr Brown was understandably worried about mounting debt obligations that were displacing internal resources for expansion. Mr Desai pointed out that, considering everything, it is not very surprising that this trend in corporate finance should be increasingly in evidence. That is true enough, and Mr Brown himself said as much. But Mr Desai went on demurely to list the advantages of borrowing as a source of development finance. "If a concern is investing wisely and has a good prospect of profits, it would probably prefer to borrow at a fixed rate of interest so as to give a larger share of its profits to its shareholders." Touche! or is it?

*

If I have given the impression that Mr Desai's speech was merely an exercise in debating virtuosity, I would have wronged him. Mr Desai was far more constructive than that. He was certainly right in saying that "the solution to many of our problems today is to be found not by looking at different sectors of the economy in isolation from one another but by considering the needs and possibilities of the economy as a whole. If this admirable sentiment gets translated into action more continually, no one can seriously quarrel with Authority. While Mr Brown specifically referred to the danger from the North, of which we have been made vividly aware in recent months, Mr Desai found the real answer to such threats in the development of material and human resources.

On a number of specific points relating to fiscal and financial policies raised by Mr Brown, Mr Desai was understandably reticent. Obviously, Mr Desai cannot very well take the public into confidence about the financial proposals for the coming year. And yet, Mr Dandekar's invocation of Omar Khayyam to back his request to deal with the public "gently, brother, gently pray" will probably not have been in vain. And the reason will not be that Mr Desai is particularly susceptible to poetry. (His reputation which, however, may quite likely be wronging him is otherwise!) It will be that investigation has apparently cut the ground under one of the main assumptions behind the scheme of corporate taxation outlined by Mr Desai last year. While the virtue of procedural and other simplifications claimed for it is readily admitted the expectation that a rate of 45 per cent with no tax credit for the shareholder on his dividend would leave the net tax burden on companies and shareholders the same as it was before has proved to be incorrect. The ACCI has come to this finding as a result of examining the financial statements of some 167 companies. It was found, as Mr Dandekar explained in a lucid speech on the resolution on the subject passed by the ACCI, that, in as many as 88 cases, the net tax liability increases by 2 per cent under the new system, whereas it decreases by 2 per cent in 43 cases. I have not before me the details of the investigation and I am not therefore able to say anything definite about how representative or typical the analysis is. But this conclusion roughly corresponds to other rough calculations made by me and others. Mr Desai expressed himself as interested in the investigation referred to by Mr Brown and said that he was prepared to do all he could to see that there "was no avoidable hardship or inequity." This is welcome assurance. Of course, he added a little too quickly that it is necessary not to look exclusively at the rates of tax, and the concessions in the computation of the taxable income itself should not be lost sight of. He is presumably having in mind the development rebate and other liberal depreciation allowances. He is also probably harking back to the Kaldorian view that the Indian tax system is needlessly liberal in its basic computation of income while it is equally needlessly stringent in rates. It is an arguable case either way; but, arguable or not, is one that does not arise in the context of realising the avowed intentions behind the proposed mode of corporate taxation. It is evident that, if those aims are to be realised, the rate of corporate taxation will have to be reduced to a percentage below 45.

*

The other important question dealt with both by Mr Brown and Mr Desai was the shape and size of the Third Plan. Here, again, there was a certain tentativeness on the part of both, for the imponderables are many. The figure of Rs 10,000 crores, which has fixed itself in the public mind, is unlikely to turn out to be very inaccurate. Mr Brown feels—though the New Delhi Seminar of the FICCI had some difficulty in accepting it—that, "subject to the calls of defence, this can be achieved". Mr Brown was also of the view that the real challenge of the Third Plan will be encountered, not so much in finding the resources, as in their sensible deployment. He also warned about the limited scope for further deficit financing. Mr Desai is unlikely to be unaware of the dangers of such financing, since he himself dryly remarked that, if purchasing power can be increased by increase of money in circulation, "no country need be poor". On the Plan itself, he contented himself with pointing out the extent to which we were better and worse off than before, and how the formulation of both shape and size of the Plan was still some distance off. But he reiterated his belief that the necessary foreign assistance would, with reasonable certainty, be forthcoming, a hope which Mr Brown shares.

*

To sum up, there was evidence in the speeches of both Mr Brown and Mr Desai, of a fundamental community of purpose. There were, also, interesting differences in emphasis. In a word, they provided interesting variations on a basic theme. Together, they provided far less discordant music than what incessant chatter about public and private sectors would have led one to fear.

Bifurcation of Bombay

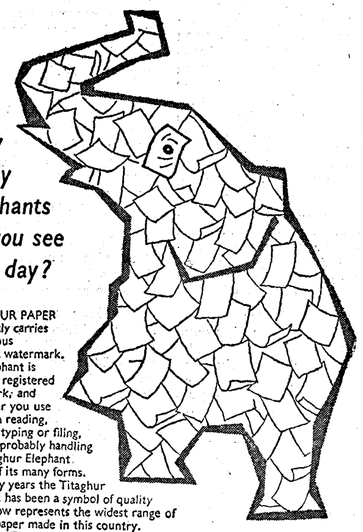
BOMBAY REVIEW

THE bifurcation of Bombay State may now be deemed an accomplished fact. The Congress Working Committee is said to have declared the discussion on the Bombay issue closed after adopting a resolution on the subject. The resolution itself is yet to be released to the press, but its salient features are already an open secret. According to these reports, the present Bombay State is to be divided into two unilingual parts. It is said that the Congress Working Committee has generally based its conclusions on the findings of the nine-man Bombay Committee which had been appointed earlier to go into the whole question of the breaking-up of the existing State. Perhaps, the main task of the latter Committee has been the examination of the claim for a separate Vidarbha State. Press reports from Delhi early last week pertaining to the deliberations of this body headed by Home Minister Pant indicated that the task facing it was unlikely to be completed without causing some disappointment. It was reported that the Vidarbha deputation was not amenable to any compromise on its stand while Mr Pant was working toward one. In the meantime, there were also reports that 23 Congress Legislators from Vidarbha in the Bombay State Assembly had threatened to resign from the Congress in case the demand for a separate Vidarbha State was not acceded to. Viewed against this background, it must be accepted that the Congress decision to have only two States out of the present bilingual Bombay State is a bold step.

To assume, however, that there will be no further cause for friction is to be too optimistic. There is no denying that the Congress decision to bow down to the will of the people in these parts will go a long way toward eliminating the biggest obstacle in the way of devoting wholehearted attention on constructive endeavours; but one has to reckon with the fact that even an ideal solution to the problem of reorganisation of the Bombay State cannot be expected to satisfy all shades of opinion. And the latest Congress proposal cannot certainly be described as ideal. The Samiti members of the Bombay Legislative Assembly have already protested against what they describe as unilateral action on the part of the Congress in dealing with the bifurcation question. Although latest indications are that the 23 Vidarbha Congress Legislators who were earlier said to have taken an uncompromising attitude have decided to abide by the decision of the Congress High Command, all is not quiet in Nagpur. The Nag Vidarbha Andolan Samiti is plainly not satisfied with the Congress proposal. Protagonists of a separate Vidarbha State may continue to recall the fact that the States Reorganisation Commission had recommended an independent status for the Marathi speaking areas in the former Madhya Pradesh.

While it will not be correct to say that the decision not to have a separate status for Vidarbha is widely condemned, it would appear that a large section of the people in the region have by no means abandoned the idea of a Vidarbha State. There may not be much support for the agitational approach but it is not unlikely that wide support may be forthcoming for the method of advancing the claim in a peaceful manner after accepting the present award. For, the Congress decision has made ample compensation for Vidarbha's merger with the Maharashtra region. It is said to have substantially accepted the Nagpur Agreement of 1953. The main features of this agreement are the institution of a second seat of the high court, and the holding of at least one session of the State Legislature in a year in Nagpur. The agreement also provided for equitable representation for the Vidarbha region in the administration and other safeguards.

The bifurcation is bound to bring many problems in its wake. Valuable time and much else have been expended to effect unification of the administration in the various areas that go to make up the present Bombay State. The arduous task has been completed only recently. Now, the process will have to be reversed, and more valuable time will be lost to both the new states. But considering the fact that the deep sense of frustration which was weighing heavily on the minds of an overwhelming majority of the people of the State will be banished with the bifurcation of the area into two unilingual States, there is every reason to expect that the administrative readjustments will be at once speedy and smooth.



The reported arrangement that Gujerat is to receive from the other unit Rs 50 crores over a period of ten years to enable it to become self-supporting may not be seriously objected to. For, Gujerat has first of all to build itself a capital. The original objection to the formation of a separate Gujerat State stemmed from the fact that it would not be a financially viable State. As for the other unit, there are also problems, but they are comparatively simple. One of these pertains to the choosing of a name. Maharashtra seems to be the automatic choice. But it is pointed out that Bombay has also a strong case in its favour. There is a general feeling that the retention of the existing name for the State may go a long way toward reassuring people in the city that its cosmopolitan character will be maintained. But it would be prudent to leave the problem to the Legislature.

There is one important point in which not only the people of the two States, but, in a manner of speaking, the entire country, are interested. This concerns the future of Bombay city in the new set up. It is now included in the Marathi speaking region, but the fact that it is an important commercial centre in which a wide variety of communities live cannot be ignored. This cosmopolitan character is not peculiar to Bombay alone. All our big cities have a cosmopolitan population in varying proportions and the fact that they are situate in different States has not stood in the way of their continuing to remain as cosmopolitan as ever. There is no reason to believe that, just because Bombay City has been included in a unilingual State, it should cease to be the common living and working place of different linguistic groups.

*

Incabloc

The watch trade is awaiting with interest the arrival next week in Bombay of Mr Philippe Braunschweig, Executive Vice-President of Universal Escapement Ltd, of La Chaux-de-Fonds, Switzerland. The Universal Escapement Limited is a leading firm engaged in the improvement of horological techniques. The "Incabloc" shock absorber, which is manufactured and sold only for jewelled-lever watches, is one of the well-known products of this company. It is said that, so far, 175 million jewelled-lever watches have been equipped with the famous Incabloc. Incabloc performs the functions of protecting the balance staff and its jewels while providing a dust-free oil reservoir. The entire system recentres perfectly immediately after each shock. Universal Escapement have other revolutionary new inventions such as "Secticon", a transistorized clock and "Triostat", a new watch regulator. Mr Braunscheweig will organise a new information campaign in India designed to educate the public about the famous Incabloc shock absorber which will also provide a reliable key to the selection of a quality watch. During his brief stay in India, he will also study the Indian market for further development of sales of his firm's present products and the introduction of their new inventions.

How many elephants do you see in a day?

TITAGHUR PAPER frequently carries the famous Elephant watermark. The Elephant is also our registered trademark; and whenever you use paper, in reading, writing, typing or filling, you are probably handling the Titaghur Elephant in one of its many forms. For many years the Titaghur Elephant has been a symbol of quality and it now represents the widest range of quality paper made in this country. Today, the Titaghur Mills produce more bamboo pulp and paper than any other mills in the world.

BOMBAY REVIEW

Report on Machine Screw Industry

The Machine Screw Industry has been enjoying protective duty to the tune of 31.5 per cent ad valorem from December 1951. This protective duty, which was to expire on 31st December 1954, was, on the recommendation of the Tariff Commission, extended up to the end of 1957, with levy of a higher rate of duty, namely, 50 per cent ad valorem or 9 annas per gross whichever was higher. After the enforcement of the Finance Act of 1957, the special duty was rounded off to 60 nP. On the recommendation of the Tariff Commission, the protection was again continued to be granted till the end of 1959.

Considering that the existing protection is due to expire on the close of the year, the Tariff Commission were again engaged to enquire into and report on any further step required to be taken in relation to the protection granted to the industry. The enquiry was accordingly conducted during February-June. The recent enquiry covered machine screws made from iron and steel including mushroom head roofing bolts, hexagonal head bolts and mudguard cycle bolts. The Commission, after the enquiry, were convinced that the industry, if it was given regular and adequate supply of raw materials, would be able to reduce the cost further so as to dispense with the need of protection altogether. The industry has during these years made considerable progress and has been manufacturing nearly 90 per cent of the domestic requirements of all types of machine screws. But the Commission also pointed out that there is greater scope for the expansion of the industry as a whole by investing more capital in the installation of automatic machinery for the manufacture of precision and specialised types of screws. Keeping in view for the remarkable stability of the industry, the Commission recommended that the protection granted to the industry need not be extended further.

The Commission, after discussing the various estimates available, came to the conclusion that the domestic demand for machine screws during the year would be near about 3 million gross and there is every possibility of increasing the demand to 4.5 million gross in 1960 and 6 million gross in 1961

The Commission also recommended that the Government should take adequate steps at an early date to establish additional capacities for producing both ordinary types of machine screws and precision and specialised types of screws so that the industry may derive the economies and other benefits of mass production.

Besides, the Commission suggested that the Development Commissioner of Small Scale Industries should adopt the necessary measures to assess carefully the capacities on single shift of the three small scale units, namely, Bombay Engineering and Metal Works (P) Ltd, Dogra Steel Industries, Faridabad, and Khemchand Vijay Kumar, Jullundur.

It was also reported by the Commission that the present unsatisfactory position of supply of wires to the industry was due to the shortage of billets. Therefore, the Commissioner of Iron and Steel Control should take the necessary steps for the timely supply of additional quantities of billets to the National Rolling and Steel Ropes Ltd, to enable it to meet the demand upon the industry.

Complaints were received from various consumers about the inferior quality of home made machine screws. There were also allegations about the technical defects. Crompton Parkinson has brought to the Commission's notice that dimensional tolerances with regard to both threads and diameters are not adhered to by the various manufacturing units in the country. Other defects reported by the Commission include the imperfect cutting of slots, and the backwardness of the finish. The absence of quality control and the general unpreparedness of the manufacturers to improve the quality of their products were found to be the serious causes for the defects found in the products of the industry. The Commission suggested that the Indian Machine Screw Industry should take immediate steps to improve the quality of its products by purchasing only standard steel wire rods and adopting careful supervision at every stage of production. It was also suggested that the Indian Standard Institution should lay down, as early as possible, standards for iron and steel wires and rods utilised by the various manufacturing concerns, so as to ensure their quality.

The Iron and Steel Controller should obtain quarterly returns from Indian Steel and Wire Products Ltd., and National Rolling and Steel Ropes Ltd., providing all details of the billets they received for converting into the various articles required for the machine screw industry and despatches of wire rods to the units in the industry against their indents. The small units were also required to furnish the Controller with reports of their actual receipts of wire raw materials against their indents and the way in which they have been utilised.

The manufacturers engaged in the production of machine screws were also alerted to the necessity of applying for wires and wire rods in standard guages with the prescribed tolerances and for reasonable quantities in each guage. It was also suggested by the Commission that the Development Wing and th eIron and Steel Controller should, at the time issuing quota certificates, satisfy themselves that they are made out in standard guages and with standard tolerances.

The Government of India have accepted the suggestion of the Commission and decided to lift the protective measure granted to the industry at the end of this year. The Government have also given due credit to the recommendations of the Commission for assistance to the industry and it is expected that early steps will be taken for their implementation. The attention of the various industrialists engaged in the production of the screws has been drawn to the Commission's suggestions calculated to improve the quality of the finished products of the industry.

*

Combined Air Service

The pooling agreement reached by Air India International (India), British Overseas Airways Corporation (UK) and the Qantas Empire Airways (Australia) at Bombay last week to co-ordinate their operations to expand their share of the world's international air traffic in the present jet age, marks a significant land-mark in the history of air transport. The announcement of the agreement arrived at by the three international airlines has at last laid at rest the needless speculations and uncertainties that have cropped up in the minds of the people during the last few days.

Mr B. R. Patel, the spokesman for Air India Internaional, observed at a press conference immediately after the signing of the agreement that the recent arrangement will be beneficial both to the airlines and the travelling public. The joint operations and coordinated reservation system of the three airlines would provide the travellers an unrivalled airline service touching almost all the important centres of the world. Moreover, the ticket issued by the three airlines could be interchanged without causing any inconvenience to the holders and each airplane would sell the services of the others. Such amenities, besides enhancing the prestige of the respective airlines, will necessarily encourage tourism. The prospects of a new era of expansion and service to the public will provide immense scope for developing tourism and thereby for promoting goodwill and mutual understanding among the people of the different countries. It is also expected that the new agreement would open new career opportunities for the various employees of the three airlines.

GATEWAY NOTES

Scope is also available for the development of promotional services under the new arrangement. Each partner airline is at liberty to maintain complete independence without fearing any encroachment on its freedom from the partners. Besides, it is also left to its discretion for chalking out plans for its development. Air India International, the only airline in the agreement which does not possess jets at present, would introduce jet service during next April.

The details of the agreement cannot be considered final, for, they are awaiting ratification, by the boards of the airlines and the respective Governments. The new scheme is expected to be implemented during the beginning of next April if ratification is granted sufficiently early.

*

Enhanced Rates

Mr Joshi, the General Manager of the BEST Undertaking, has recently announced the proposed enhancement of the rental rates of electric meters, fares of buses and trams with a view to raising revenue. Certainly, this would not be welcome news to the citizens of Bombay city, especially the consumers of electricity and the travelling section. Explaining the reasons for the present increase in the rates in the Committee meeting, Mr Joshi pointed out the recent trend in the revenue of the organisation and stated that the net surplus of the undertaking had shown a progressive decline over the last few years in spite of the fact that the overall income had been on the increase mainly arising out of the extension of electric supply and the bus routes. In addition to the above factors, the other reasons that led to the decline of the revenue were, as the spokesman pointed out, the high cost of production of electric energy and the increase in the dearness allowance of the employees. He also said that, out of the forty two routes in the city run by double-deckers, nine were running below the economic level. A similar decline in the revenue from single deckers in a majority of the routes has also been recorded.

According to the new scheme, the rental rates of the electric meters hired to the consumers will be raised from 25 nP to 50 nP, the minimum fares on "Limited and Express" bus services will be increased to 20 nP from 15 nP. The minimum fare on the ordinary buses plying through the city will be enhanced to 10 and the minimum tram fare will be fixed at 10 nP in lieu of the present fare of 7 nP. The additional revenue for the Undertaking from the new rates, according to a recent estimation, will be to the tune of about Rs 45 lakhs.

WORLD OF COTTON

Reaction to New Curbs

THE week under review proved to be the most eventful in the 1959-60 cotton season in Bombay. The trade, the textile industry and the Government watched the rising market with concern till the Forward Markets Commission came out with a directive asking the East India Cotton Association to treble the margin payable above the level of Rs 770. The Commission were of the view that the rise in cotton prices was due to excessive speculative pressure. A section of the trade, however, pointed out that the rise in the Indian contract was negligible when all the world markets were taken into consideration. A few others, after fully reckoning the supply position, were sceptical whether the higher margins would really act as a brake on the rising trend.

Under the revised rules, the rate of margin on outstanding long positions has been raised from Rs 25 to Rs 75 per bale when the closing price of the Indian cotton contract is above Rs 770 per bale. The rate of margin in the first slab, which becomes operative when the price is above Rs 750, remains unchanged at Rs 15 per bale.

The FMC have also issued a general warning to the operators to use restraint in their activity so as not to embarrass the authorities to precipitate an action which will result in undue hardship to them. Meanwhile, the textile mills in the country are forbidden from buying or possessing stocks of cotton exceeding the quantity equal to their three months' consumption. Millls, which have already got or possess cotton in excess of their three months' consumption, will be allowed to retain such quantity, but not add by further purchases except when they can do so up to the prescribed limit. Mills have been asked to inform the Textile Commissioner before the 15th December about their stocks of cotton as on the 1st December.

Mills manufacturing yarn are prohibited from purchasing or otherwise acquiring Kapas. Ginners in the States of the Punjab, Rajasthan and Uttar Pradesh have been asked to gin cotton before 15th February 1960 and, in the Maharashtra areas of Bombay State and certain districts of Madhya Pradesh, before 31st March 1960.

The FMC have been watching the situation, hoping perhaps that prices would adjust themselves without any interference with their normal working. The Commission have, however, called for a daily list of transactions of members, both in the hedge as well as the delivery contracts instead of a weekly statement.

The above action has a salutary effect on the price trends. The drastic increase in the amount of margin has induced a section of the trade to unload its purchases. The heavy burden is also likely to deter fresh support, especially because the buyers have already been obliged to pay the margin of Rs 15 per bale. Observers, however, doubt whether the increase in the amount of margin itself will be able to bring about a substantial relief in the present situation. It is felt that the heavy burden will only widen the already big gap between the spot and forward rates. Much will, however, depend on the price trends in the spot and the delivery contracts over which the Commission have no control; nor does the East India Cotton Association.

Trading in the forward market has already been paralysed as a result of the above measures taken by the Government. Reports from upcountry centres indicate that many mills have stopped their purchases of both Kapas and cotton, pending a clearer view of the implications of the latest measures. In this connection, it is pointed out that the forward market has only been following the pace set by the spot section. Textile mills, which are realising steadily increasing prices for cloth and which have already entered into commitments for future deliveries, are likely, in the present set-up, to resort to purchases of delivery contracts and spot cotton as the only means of effective protection.

Meanwhile, the Government of India are trying to provide adequate raw material to the textile industry. According to the limited payments agreement concluded between India and Pakistan, India will import about 20,000 bales of Pakistani cotton valued at Rs 1 crore. An announcement, permitting the import of this cotton, is likely to be made very shortly. It is possible that, as a special case, the staple length will be lowered to 15|16" to permit import of this cotton since cotton stapling 1 1|16" and above is not available in volume in Pakistan. It is learnt that the quantity, which will be available for import from this destination will not be linked with the Export Incentive Scheme for textiles and that it will be licensed on a "first-come-first-served" basis on both mill and trade account. Many Indian mills are already enquiring about this cotton, which is likely to provide some relief to these units, since they are finding it difficult to obtain equivalent Indian vaireties even at much higher prices. The Pakistani cotton crop for the current season has been placed around 15½ lakh bales, while mill consumption there is likely to range from 10 to 11 lakh bales.

The tight supply position of cotton is also expected to ease by the end of next month when the marketing season in Khandesh, Vidarbha and Malwa areas will gather momentum. Arrivals of the new crop in those areas have, so far, been hardly 50 per cent of the normal figure, because of a delay in the marketing season this year. But, the pressure on indigenous cotton is expected to ease, as imported cotton will start arriving next month. Many traders have, therefore, approached millowners to extend the period for December delivery by a month.

But, confusion prevails among ginners over the Government's stipulation that ginning operations in some areas should be completed within a specified period They complain that growers are taking advantage of the situation and are not bringing enough Kapas for ginning. The spurt in cottonseed prices has also induced them to defer their sales of Kapas. To what extent cotton prices will react to the Government measures remains to be seen.

The current crop is estimated at 45 lakh bales (Punjab 8.55 lakh bales; Rajasthan 1.25 lakhs; Berar 5.50 lakhs; Madhya Pradesh 3.35 lakhs; Moglai 1.75 lakhs; Khandesh 1.75 lakhs; Bombay 12.50 lakhs; South India 9.00 lakhs; Uttar Pradesh 50,000; Assam 25,000 and other areas 60,000). With consumption estimated at 47 lakh bales and exports at 2 lakh bales, the supply position is tight.

Sentiment in the forward market remains depressed with prices displaying an easier tendency. At the lower levels, however, there was some short-covering and scant mill buying, resulting in a small recovery in prices toward the close of the week. Jharilla March delivery closed easier at Rs 753 from the recent high of Rs 764.

In the ready section, business was done by the local mills in styles like Porbundar, Khamgaon and C02.

Among exportable varieties, Bengals were in good demand. This was mainly due to covering against previous commitments and no fresh business was reported done.

BOMBAY REVIEW

WORLD SUPPLY OF COTTON:

According to the International Cotton Advisory Committee, the supply of extra-long staple cotton, in the current season, is expected to increase to 2,699,000 bales from 2,598,000 bales in the 1958-59 season. While production of this kind of cotton in the world is placed lower at 1,895,000 bales this season as compared to 1,941,000 bales in 1958-59, the opening stocks were higher at 804,000 bales against 657,000 bales.

As regards consumption of extra-long staple cotton, the long-term prospects will depend on the extent to which the promotional efforts bear fruit while, in the short run, this kind of cotton stands to benefit from the expected improvement in the overall consumption outlook this season and the low level of prices.

The trade prospects this season depedn mainly on consumption; but the demand from the Communist block accounts for 644,000 bales of extra-long staple cotton out of a total distribution of 1,616,000 bales.

×

HANDLOOM CLOTH

Production of Cotton Cloth in the handloom sector nas shown a remarkable increase in recent years. It is expected to reach 1,863 million yards in the current year as against 1,109 million yards in 1952. The upward trend in production is almost entirely due to the series of official measures of support and encouragement. In addition to the reservation of markets in certain fields, these measures included tax exemption, loans, grants, and rebate on sales of handloom cloth. Handloom cloth is also exempted from excise duty and other taxes imposed on cotton cloth produced in the mill sector. This exemption means a loss of Rs 10 crores to the Union Exchequer on every 1,000 million yards of cotton cloth produced by the handloom sector.

BOMBAY REVIEW

Alround Firmness in Oilseeds: Linseed Dull

THE upward trend in the prices of Oilseeds continued unabated, deriving strength from frantic short-covering. The only exception to the general trend was Linseed trading in which remained generally dull.

Castor has again been in the news of late, almost monopolizing the attention of the operators on the Bombay Oilseeds Exchange. Prices have firmed up generally on bright prospects of exports to the United States. It is common knowledge that the UK and France had already purchased something like 2,500 tons of oil over the past two weeks.

There are reports that business has been concluded by a few prominent shippers with the USA at 14.5 cents a pound. Although it is difficult to assess the quantity for which business has been concluded, estimates are between 500 and 1,000 tons of oil. The USA, which hitherto paid a price up to 14.40 cents, has now come forward to pay a higher price, which reflects the prevailing high price for Brazilian oil. This naturally leads one to think that the USA is obliged to buy Indian oil to meet its requirements. Shippers are confidently looking forward to business at up to 15 cents a pound. Locally, Castor ready is quoted higher at Rs 33 and Castor Oil, commercial quality, at Rs 17.81.

The fresh vigour in the Groundnut section is attributed mainly to the continued strength in the spot secuon and a favourable reckoning of the export outlook. Although the inflow of new groundnut has tended to improve in certain areas, the overall supply position is more or less unrelieved, as crushers and vanaspati manufacturers are lifting the arrivals against their own commitments. As a matter of fact, it is stated that a leading vanaspati manufacturer has bought about 5,000 bags of groundnut at prices ranging between Rs 38.75 and Rs 39.25. Good demand is also evinced in oil from vanaspati dealers as also from shippers who are covering against their previous commitments, paying prices as high as Rs 20.50. Ready Groundnut Bold is quoted at Rs 37.37 and Groundnut Oil at Rs 20.25.

Conditions on the export front are a little sluggish; but persistent claims of business in groundnut extraction and expeller and of overseas demand for HPS groundnut have strengthened the sentiment in the section. It is also claimed that Yugoslavia and Czechoslovakia have bought about 8,000 tons of extractions and about 5,000 tons of expellers and that the shippers have been able to sell abroad nearly 5,000 tons of HPS groundnut. Operators feel that the export business will further tighten the supply position.

In contrast, trading in the Linseed section continues to remain dull. Reports, that the US Commercial Credit Corporation will release a substantial quantity of linseed oil, have contributed to the depressed sentiment in the section. Linseed ready is quoted at Rs 34.50 and Linseed Oil at Rs 17.12.

*

GATEWAY MARKETS

Gold & Silver

An easy sentiment manifested itself on the bullion market following the absence of demand in the spot section coupled with heavy arrivals. The fall in prices was accentuated by selling by spot houses and bull operators. Contango rates broke the stipulated level of eight annas. With the result, the margin penalities of Rs 10 per tola were made applicable on sellers in Magsar settlement. Arrivals amounted to 4,000 tolas against an offtake of only 2,500 tolas. Unrefined metal receipts totalled 3,000 tolas. Ready rates moved between Rs 124.44 and Rs 124.75, to finish at Rs 124.44. Sovereign remained steady at Rs 31.

The movements in the Silver section were of a similar nature. The principal factor to influence the sentiment was the sale in Calcutta of a substantial quantity, which produced a concomitant reaction in the local market. Arrivals were very heavy at 25 bars as against an offtake of only 10 bars. Unrefined metal receipts amounted to 20 bars. Ready rates moved between Rs 209.25 and Rs 209.94, to close finally at Rs 209.37.

*

Non-Ferrous Metals

Prices in the Bombay Non-Ferrous Metal market showed a mixed trend. Copper prices ruled steady with Copper Scrap quoting Rs 216 per cwt on reports that the Indian Copper Corporation had increased the price of its brass and copper sheets by Rs 29 and Rs 35 per 100 kilograms respectively with other producers of following suit.

It may not be out of place to mention here that the Supreme Court Judgement, nullifying a clause of the Non-Ferrous Metal Order 1958, has created some confusion in the market. There is a feeling of doubt amonst traders whether transactions in copper can be fully entered into in view of the legal position now created and await clarification from Delhi.

Zinc shot up further to Rs 140.50 from Rs 136 per cwt, being induced by a feeling that the Supreme Court Judgement would, in no way, affect this metal which has to be distributed under import trade clause.

Some Deficiencies in Statistics

DELHI REVIEW

THE Eighth Conference of Central and State Statisticians, convened by the Central Statistical Organisation of the Cabinet Secretariat, is in session this week in New Delhi. The discussions at this conference highlight some major statistical deficiencies which could well be remedied in the near future. One such deficiency is in respect of industrial statistics which, notwithstanding the improvement thus far effected in their collection and presentation, still remain incomplete in their coverage, being limited to 29 industries. Although the annual census of these 29 manufacturing industries has been supplemented by a sample survey covering all industries, Mr P. N. Nayer (Secretary, Standing Committee on Weights and Measures) thinks that this particular combination of census and sample survey, though judicious in a way, is by no means a satisfactory arrangement. His argument is that a sample survey, by itself, is of limited utility for planning or administration because, while a sample of, say, 2,000 establishments could give sound and reliable estimates, for instance, of the total capital or labour employed in the industrial sector as a whole, it may not give dependable estimates for individual industries in all-India or in a particular State inasmuch as the error would increase proportionately as the sample is broken down. And his reply to the argument that the census is subject to more non-sampling errors than are possible in a well designed sample survey, is that both the census and the sample survey obtain data from the same source, namely, statistical or other records of industrial establishments and are, therefore, equally subject to the same non-sampling errors, if any.

There is, thus, no particular virtue in replacing the census wholly by a sample survey. A better alternative would be to have, in conjunction with an annual sample survey, a complete census, once in two or three years, of all industries and all establishments employing, say, 50 persons or more. Mr Nayer's arguments, it would appear, are wholly sound because exclusive reliance on a sample survey, without a census check on it, would be extremely hazardous, especially in the present stage of rapid industrialisation when the basic statistics of capital, production and employment, etc., would have to be thoroughly dependable. It is expected in this connection that the present CSO conference will finalise the draft rules designed to place the entire collection of data on a statutory basis so as to cover all industries and establishments. It is further expected that the conference will recommend that the field work relating to the collection of data both for the census of manufacturing industries (covering all industrial establishments registered under the Industries Act, 1953) and the sample survey of manufacturing industries (covering all the above establishments and also a selected sample of the remaining industrial establishments) be entrusted to the National Sample Survey which has already established a record for thoroughness, efficiency and reliability in the matter of collecting a variety of other basic statistics. Commercial organisations in the country, it is to be hoped, may welcome this development not only in the interests of individual industries but in those of planned industrialisation as such.

Another statistical deficiency is in respect of the small scale industries which have not been defined so far in a clearcut and uniform manner for the purposes of detailed statistical coverage. The two kinds of definition used up till now—one covering establishments employing less than 10 persons with power or less than 20 persons without power and the other covering establishments employing less than 50 workers with power or less than 100 workers without power—have involved the collection of sets of data not comparable with or complementary to one another. Recently, the Government have decided to revise the definition of small-scale industries so as to include all industrial units with a capital of not more than Rs 5 lakhs irrespective of the number of persons employed, the term "capital" here including cost of machinery, equipment, land and buildings other than workers' housing. This definition does not fit in with the other two definitions; according to the CSO, it is not suitable from a statistical standpoint. It is, therefore, being discussed at the conference whether small-scale industries should include establishments employing more than 10 workers but less than 50 with power or less than 100 without power and whether establishments employing less than 10 workers with or without power should be covered by the National Sample Survey in their regular rounds.

Thirdly, there are also many gaps in the statistical series required for planning. One gap is in respect of employment statistics which are now up-to-date for employment in the public sector only. As regards the private sector, employment statistics now cover only a few centres in each State; on account of this limited coverage, small-scale industries, shops and establishments, corporate business, cooperative institutions, etc, are left out. The CSO conference is expected to devise suitable measures for better and wider coverage of employment. Another gap is in respect of road haulage statistics which are badly required for road transport planning. Many States have yet to carry out pilot surveys (like the one conducted by the Ministry of Transport in Delhi State in 1957) covering both motor vehicles and animal drawn carts. A related gap is in respect of the statistics of traffic intensity, a knowledge of which is necessary for planning the right type of roads and for improving the existing ones. Yet another gap is that there is presently no series of average index numbers of sale prices received by producers of each important kind of manufactures. The CSO considers it desirable to collect price series from a sample of large establishments and get indices prepared from these with weights from the production series which are already available.

For purposes of planning, some other kinds of statistics are also required. They are the unit consumption requirements or norms of consumption of raw materials for various categories of output for the purpose of building up targets of requirements of key materials; the norms for construction materials such as steel, cement, timber, etc, for factory buildings, power houses,, water works, etc; the estimation of the outstanding payment liabilities under various heads at any given point of time so as to help in avoiding a difficult foreign exchange situation developing into a crisis; and the maintenance and analysis of import and import licensing statistics. Particularly in regard to the last-mentioned statistical requirement, the CSO has proposed a scheme which is being examined by the agencies concerned. Under this scheme, the grouping of import commodities would be by economic use, also indicating the end uses; there would be information regarding the sectors of economy to which imported goods are flowing so as to determine whether these were in conformity with plan priorities or not; and there would also be collating of information regarding licensing with foreign exchange payments and the actual imports against them, this being intended to give a clear picture of the utilisation, time lags and outstanding liabilities at a point of time to supply a basis for the formulation of future import policy in the light of the availability of foreign exchange.

The CSO conference is also likely to recommend regional surveys for planning. Such studies, it is emphasised, will indicate the optimum course of development of the resources, optimum utilisation of land and location of industries. The evaluation of the resources of any area, which will necessarily correspond to the area of a State, will no doubt provide useful information for purposes of planning. But it is by no means clear why regional surveys should be taken up by other organisations while the National Council of Applied Economic Research has already taken on hand techno-economic surveys in almost all the States of the Indian Union. These surveys are sufficiently comprehensive and are adopting the geographical approach. In the circumstances, it would appear, there is no justification for duplication of what is a costly effort by a number of agencies. After all, the CSO has so much to do in the matter of sample surveys and the like that it may not be advisable for it to over-extend itself.

DELHI REVIEW

Third Plan

Since the discussion on the Third Plan had its official start, interest in the subject has been gathering momentum and it has begun to figure prominently in every discussion of commercial organisations and business associations. Only a fortnight ago, the Federation of Indian Chamber of Commerce and Industries conducted a special session devoted exclusively to the discussion of the Plan. The Half-Yearly meeting of the Merchants' Chamber of Uttar Pradesh held on 28th November at Kanpur provided an opportunity for Mr Parshattamdas Singhania, President of the Chamber, to speak out his mind on the subject of Third Plan and the problems of mobilisation of resources raised by it.

Mr Singhania considers the provisional plan outlay at Rs 10,000 crores as a very formidable one, which could be met only by vigorous mobilisation, both internal and external. Though the Finance Minister has assured favourable prospects for foreign exchange under the Third Plan, Mr Singhania points out that, with a considerable part of the resources likely to be absorbed for repayment of commitments under the short-term credits obtained in connection with the previous Plans, the amount available for development schemes would be very small. In such a situation, the foreign exchange problem according to Mr Singhania, could be met only by vigorous efforts from the side of imports as well as exports. While effective vigiliance has to be maintained on imports, greater emphasis should be laid on stepping up exports. Measures for expansion and diversification of export trade both in relation to destination and the nature and quality of products have to be explored. While prospects for markets abroad and particularly for the new products could be considered bright, one discouraging element is the growing competition offered to the traditional items of the country's exports. However, Mr Singhania feels that the competition could be met if the export promotion councils address themselves more seriously to improving the saleability of Indian goods.

Mr Singhania also pleaded for a change of attitude on the part of the Government toward the private sector. He considers that the 1956 Industrial Policy Resolution has reduced the scope for the private sector. Tax burden on industries has, according to Mr Singhania, been raised to penal magnitude which has tended to kill incentive for enterprise. While pleading for reduction of the tax burden on the business community, Mr Singhania has suggested that the fall in collections could be made up by raising additional resources from the rural sector.

*

Role of Technology

Delivering the J. C. Bose Memorial Lecture at the Bose Institute, Calcutta, Sir Jehangir Ghandy explained the role of technology in the economic development of the country. While, against the background of industrial development in the West achieved mainly through technological improvement, the importance of technology for India's industrialisation is to be accepted and recognised, the adoption of technology in the peculiar conditions obtaining in Indian industries and factories poses a number of problems. One of the important arguments advanced against wholesale introduction of technology is that it would lead to some amount of displacement of labour from their occupations. This makes it necessary that technological processes should be adapted to the particular conditions obtaining in different industries and factories. Sir Jehangir stressed this need for more labour-intensive adaptations. In view of the scope for adapting technological processes to varying degrees of labour intensity, it should be possible to evolve more labour-intensive adaptations to suit the conditions in Indian industries and factories.

In the present conditions of the country, the most important requirement for facilitating technological improvement is the development of the heavy industries. The importance given to these in the policies of the Government is one of the most favourable signs for the industrial development of the country. While agreeing with this need for "lumpy" investment in heavy industries, Sir Jehangir also pointed out that investment of available capital stock should be so dispersed between basic and secondary industries that the largest possible increase in output was achieved in the short-term. The radiational effects of secondary industries, according to Sir Jehangir, give a wider spread of the benefits from industrialisation.

Sir Jehangir also urged greater attention being paid to the development of small scale industries which alone offer scope for more employment opportunities. This could be facilitated by the adoption by the large-scale industries of the practice of sub-contracting as is being done on an extensive scale in the industrially advanced countries. For example, in Japan, sub-contractors contributed nearly 26 per cent of the total output in the engineering industries, while the corresponding figure for India is only 6 per cent.

*

Heavy Industries

Addressing the Employers' Association of Northern India, Mr Manubhai Shah, Union Minister for Industry, stated that a massive industrialisation programme is being envisaged under the Third Plan. The basic feature of such a programme would be the shift in emphasis toward the development of heavy industries. These constitute the cornerstone for industrial development in any country. This emphasis on heavy industries has already begun to reveal itself in the plans chalked out for certain sectors. In respect of steel, for example, a target of nearly 10 millions ingot has been envisaged. This would work out to more than double the Second Plan target.

Another important sector in which large-scale expansion is envisaged is power generation. A target of 15 million kilowatt power, which is double the Second Plan target, has already been fixed. According to Mr Shah, this would take the per capita consumption of power to 50 units. However, even after reaching this point, the country would continue to occupy a back place in respect of per capita consumption of power as compared with more advanced countries.

Mr Shah suggested a power-oriented plan for Uttar Pradesh. This is of extreme importance since power consumption in that State is the lowest at present. Immediate possibilities for increasing power production lie in establishment of thermal stations. Mr Shah has also suggested the setting up of hydro-electric grids.

Mr Shah stressed the need for effective steps for modernising the textile industry in Uttar Pradesh. Uttar Pradesh specialises in the production of medium and coarse varieties of cloth which command a very limited market. Mr Shah has assured Government help in modernising the Kanpur textile industry. In this connection, he pointed out that six types of automatic looms would be produced in the country and import licences would be issued for the requirements of the industry.

Modernisation of machinery is equally urgent for the sugar industry of which the State has the largest number of factories. The competitive position of the industry in the State is already being threatened by the growth of sugar industry in other more favourably placed States.

NORTH INDIAN MARKETS

Sugar Prospects

DELHI REVIEW

SUGAR prices, in various centres, have continued to rule steady due to the tight supply position, although hopes are still expressed that, following the announcement of the recent incentive scheme and the release of 1.75 lakh tons for free sale, the present scarcity of sugar will subside soon.

Production of sugar in West Uttar Pradesh is now in full swing and cane supplies are reported to be adequate. But some circles fear that the industry may face a crisis after the second week of this month if the strike by the Cane-Growers' Union to demand an increase in the cane price from Rs 1.62 a maund to Rs 2.00 materialises. Others, however, believe that the strike will not materialise, as their demand for a further rise in the cane price is regarded as unrealistic and unjustified in all quarters. But the trade and industry feel that the Government should review the distribution policy about sugar.

Sugar prices, on the New York market, have also risen slightly although they are still only around 3 cents a pound. Thus, the market continues to linger below the level of 3.15 cents at which the International Sugar Agreement aims. It is not clear how soon this level will be attained. For much of this year, the Sugar Council has been struggling to put more strength into the market, but without success. It has only been the unexpected fall in European beet production which has taken prices away from their earlier low point of 2.60 cents a pound.

The Sugar Council has now fixed initial export quotas for next year at 87.5 per cent in exports. Apart from the fact that this decision by the Council is of only academic interest so far as India is concerned, there is an acute shortage of the sweet commodity in India which cannot possibly think of exporting any quantity for at least a year or two. More important is that, at the present international price, Indian sugar cannot be sold except at a considerable loss. If the Indian industry hopes to sell sugar abroad in the distant future, the price must be brought down to a more competitive level.

*

Khandsari

Khandsari prices have been drifting to lower levels following increased new production. This commodity is being converted into Boora for outside despatches. In the Hapur market, wet quality is quoted at Rs 32 to Rs 38 per maund and the dry quality at Rs 40 to Rs 46 per maund, according to quality.

*

Gur

Gur prices, in the Hapur market, have sagged heavily due to the pressure of arrivals at an average of 8,000 maunds daily. Total arrivals, from the beginning of the current season, are placed at about 2 lakh maunds. Balti quality, however, continues to be in good demand from Gujerat, Saurashtra, Bengal and Rajasthan. It is estimated that over 33 per cent of the crop has already reached the market. Pansera quality is quoted at Rs 16.50 to Rs 17.25 and Balti at Rs 18.50 to Rs 19.25 per maund.

*

Foodgrains

Sentiment in the Hapur Foodgrains market remains depressed owing to slack demand coupled with pressure of "kharif" crop arrivals. Condition of the "rabi" crop, sown early last month, is reported satisfactory; but much depends on timely and adequate winter rains.

While average wheat is maintained at Rs 17 a maund, the farm quality has eased from Rs 18.50 to Rs 18.12 a maund. Thanks to good supply position, Rice prices have also eased by 25 nP a maund. Moreover, imports of rice from the US have been arranged. According to the latest agreement, the US has agreed to supply India 150,000 metric tons of rice. This is supplementary to the one under PL/480 signed early this month, providing for the supply of 3 million tons of foodgrains, mostly wheat.

Gram attracts good consumer demand and, as a result, stocks are reported to have gone down by 4,000 maunds to 37,000 maunds. Bejher prices have sought lower levels in sympathy with Barley. Despite good consumer demand, the Maize market remains depressed due to heavy arrivals. Trading in Jowar is listless, while the prices of Pulses are ruling easy in the absence of demand.

*

Yarn

Although licences for Woollen Yarns Tops have been received, mills in the Amritsar area have been experiencing difficulties in the import of the same. Stocks are practically exhausted; the woollen yarn spinning mills are lying practically idle and the production is very limited. On account of these factors, prices have registered a further rise of 19 nP per pound.

There is only moderate demand for Art Silk fabrics, as the total offtake is estimated at only Rs 10 lakhs against the total production of Rs 15 lakhs worth of goods. Imports from other centres have declined to 1,282 packages as compared to 1,642 packages in the previous week. Prices, however, remain unchanged.

*

Salt

According to official figures, the production of Salt is showing a downward trend in the current year. The decline in production is attributed to the large accumulation of salt in the producing centres following over-production last year. Poor overseas demand also contributed to the decline in production.

ASP/LIC/AS-12A

1959 BONUS YEAR

Purchase a with-profits policy now

Second Valuation Soon

The second valuation of the Life Insurance Corporation will be made as at 31st December 1959. All eligible with-profits policies in force on the valuation date will be entitled to participate in profits disclosed as a result of that valuation.

The first valuation of the Corporation made as at 31st December 1957 disclosed a surplus large enough to support bonuses at the following rates on with-profits policies issued by the Corporation :-

Endowment Assurances: Rs. 14 per thousand sum assured per annum

Whole Life Assurances: Rs. 17½ per thousand sum assured per annum —

Important: Policies which are converted into reduced paid-up policies or lapsed before 31st December 1959 will not qualify for bonus.

Preserve your policy, keep it up-to-date by regular payment of premiums and make sure that your policy qualifies for bonus to be declared as a result of the second valuation.

Remember 1959 is the Bonus Year

LIFE INSURANCE
—the day you insure you are secure

MADRAS REVIEW

Governor's Address

THE Winter session of the Madras Legislature began with the Governor's address to the joint session. The address was chiefly devoted to unravelling the trends in the economic conditions in the past year and to indicate the economic prospects that lie ahead for the State. The Governor was able to present a highly encouraging picture of both past conditions and future prospects.

Going through the address, it would be evident that the State has continued to make encouraging advance in industrial production, as also in other activities facilitative of development. Industrial production has maintained an upward trend and major industries like cotton textiles, sugar, light engineering, etc., have registered commendable success in their expansion plans. Spectacular advance was made in power generation. The year saw the completion and commissioning of some major schemes connected with power generating. The Periyar Hydro-Electric Project was completed during the year and has added nearly 105,000 kilowatts of power to the Madras Grid. The first generator of the Kundah Hydro-Electric Project is nearing completion and is scheduled for commissioning early next January. Besides paving the way for the removal of the restrictions imposed on industrial uses of power, this has also enabled acceleration of rural electrification programmes.

The Lignite project has not lagged behind and the thermal plant, the fertilizer factory, and the briquetting and carbonising plants are expected to go into production in 1961-62.

The State thus seems well poised for an accelerated rate of industrial expansion in the Third Plan. The Governor has also drawn a bright picture of potentialities for industrial progress under the Third Plan. The key for such development is held by progress made in the Neiveli project. Priority attention has therefore to be directed to development at Neiveli. What makes the Neiveli project a key factor in the State's development is the scope it offers for setting up small-scale steel and aluminium plants.

Industrial development also calls for investment of more resources for transport of all types. The Governor has urged high priority for the Sethusamudram project. Neiveli is in need of rail links with both Madras and Salem district where deposits of iron and bauxite ores are available. However, the limited potential for power development is likely to put a ceiling to immediate possibilities in the way of industrial development. The problem of adding to the power supplies has been time and gain raised without any constructive suggestions for a solution. Setting up of atomic reactors has been suggested as a way to get over the limitations placed by shortage of hydro-electric sources. Exploitation of atomic power is only in the experimental stage, and large-scale expansion of power supplies through this source has to be ruled out, at least in the short run. The proposal for a common grid for the whole of the area covering the Southern States that was mooted some time back has remained in cold storage. Such a scheme would have been of advantage to the Madras State. Mr Medhi has also mentioned the proposal for diversion of surplus waters of adjacent states for power generation in Madras. Dr Ramakrishna Rao, the Kerala Governor, has echoed the same sentiments for sharing off common resources between States in the Southern region. He has referred to the need for an exchange of Kerala waters in return for surplus food production in the neighbouring States. So far as the Madras State is concerned, there is need for such agreement with both Kerala and Mysore. The signing of the agreement by the Madras Government with the Kerala Government for the sharing of the Parambikulam river marked a hopeful development in mutual co-operation in economic matters. In the interest of mutual progress, such agreements should be extended to obtain wider area of co-operation.

The scheduled implementtaion of the development projects under the Second Plan would seem to spell out hopes for a successful launching of the Third Plan on which all attention is now being concentrated. A tentative target of more than Rs 250 crores has already been fixed as total outlay for the Third Plan. The Governor referred to the setting up of an all-party Committee of the Legislature by the Government with a view to enlisting the co-operation of the parties in the preparation of the Plan and its implementation. And, in his capacity as the head of the State, he issued an appeal to the parties to extend their co-operation.

A depressing element in the prospects for the future is the persistent upward trend in prices of essential articles. Madras has perhaps been worst hit by this trend since it has affected a greater number of articles of daily consumption than in any other State. Supply of almost every essential item of daily consumption like tamarind, chilli, coffee, sugar, vegetables, rice, etc., has gone short of demand and has been subject to high rise in price. Though, as pointed out by Mr Medhi, some rise in price is inevitable in a developing economy, the actual rise in price would seem to have exceeded even such reasonable limits. This should be the signal for initiating effective steps to halt the spiralling prices. Considering that the first development which started off the inflationary spiral began in the foodgrain sector, fight against inflation has also to begin there. The Governor referred to the progress made in foodgrain production in the State under the Second Plan. It is evident from the figures given by the Governor that fulfilment has fallen short of the target. Against a target of 12 lakh tons of additional rice, accomplishment in the first three years amounted only to 6.37 lakh tons. The balance of production is considered unattainable in the remaining two years of the Second Plan. Foodgrain production would therefore remain a matter of concern even after the Second Plan has run its full course.

THE PENINSULA

The Governor has referred to many measures taken by the Government to effect improvement in the food situation. Rice procurement, setting up of fair price shops and the building up of a buffer stock were some of the steps taken in the emergency created by rising prices. These are only palliatives and would be of no avail as a lasting solution which would have to be sought in terms of a substantial increase in actual production. Besides the Ford Foundation scheme, the Governor also referred to the programme, now envisaged, for extending the cooperative credit movement in the State. At present, the cooperative movement covers 90 per cent of the villages and provides nearly Rs 17 crores of rural credit to about 40 per cent of the population. A scheme for setting up 500 more credit societies and for revitalising 500 small-sized societies is now being considered. Being the original home of cooperation, the Madras State has always been in the forefront of it and, with the completion of the present scheme, would probably become the first State in the country to give the benefit of co-operative credit to every village.

Another measure referred to in the Governor's address which should have favourable effects on agricultural production is extension of electricity to rural areas. Already remarkable progress has been made which bears evidence to the importance attached by the Government to progress in this field. By the end of the Second Plan about 10,000 villages are expected to be brought under the scheme of rural electrification leaving a balance of 8000 villages to be covered in the course of the Third Plan.

The prospects for development under the Third Plan as indicated by present trends in economic conditions and the policies sought to be pursued by the Government appear bright. The State Government have been able to raise more than its share of resources for implementing the Second Plan. Consideration of this point by the different political parties should serve to minimise party differences in the matter of implementing the Third Plan. It was this oneness of purpose which the Governor appealed to the legislators to bring to bear on the major issue of development facing the State.

UNDER SECRETARY TO GOVERNMENT 15 DEC 1959 PUBLIC DEPARTMENT

SOUTH INDIAN NOTES

Agricultural Cooperation

LAST week, the All-India Conference of State Co-operative Apex Banks concluded its three day meet at Bangalore. A variety of subjects in connection with the Banks' credit operations to agriculturists was discussed and the conclusion arrived at was that both the Union and State Governments should bear risks for a liberalised credit programme envisaged under the new deal to farmers.

In the context of the present co-operative policy insisted upon by the Central and State Ministries, whether these Banks' conclusion should prove a healthy sign for rural credit that it should be more dependent upon the creditors who deserve to be made credit worthy by a combination of efforts of the allied departments, needs to be properly assessed. The Conference had made the suggestion thta 15 per cent of the total loan advanced should be treated as a "bad debt reserve fund."

The Conference wanted the present credit limits to be raised to thirty times of the owned funds from the present fifteen times. At the district level, the limits were sought to be raised twenty times from the present twelve times. The primary societies should get fifteen times credit from the eight times given now by the States.

The conclusions of this Conference would naturally be sent to the V. L. Mehta Committee on Co-operative Credit and the suggestion for liberalisation of credits to the co-operative society would naturally be the most important one.

All told, the Conference wanted liberalisation of credit alround. The period of repayment of medium-term loans should be extended to five years instead of the present three years. This time extension should be of particular benefit to the agricultural creditors who want to improve their land, instal a pump set and so on. The Reserve Bank was asked to liberalise limits of medium-term loans extended to low productivity activities.

Government participation through share capital contribution to primary societies and service co-operatives was favoured. But the Conference limited Government participation in the management to one-sixth of the total strength of the managing committee of an institution or three nominees, whichever was higher.

The Conference welcomed the Government of India's suggestion to advance loans for agricultural production on a family basis. But such needs have to be calculated on an individual basis in the private sector and not on community basis in the public sector. It wanted the needs of every family to be assessed and the requirements met.

Inter-State mutual exchange of business among State Co-operative Banks should be promoted so as to bring all the State Banks together for better understanding and business. State Co-operative Banks should be allowed to settle this matter upon an agreed commission, the differences from State to State being kept in mind.

The Conference felt strongly that, for increasing food production in the country, the avenue of servive co-operatives was the best method. These service co-operatives should be viable, being left for organisation by the different States in accordance wih local requirements and resources. There was no agreement on the co-operatives being based on area or population basis; for, it was felt that this condition would present difficulties in the successful implementation of the service co-operative schemes, In view of the small initial turn over and the lack of adequate resources, the Conference favoured Government's contribution by way of subsidies and share capital to these cc-operatives for the first five years to meet at least the managerial costs and other administrative expenses.

The Conference felt the need for more sugar factories in the country on co-operative basis and pleaded for liberalised licenses for import of machinery for such sugar factories. The Industrial Finance Corporation's rate of interest was considered high and it was felt that the percentage could be lowered on loans.

It was the unanimous desire of the Conference that State co-operative banks at the national level should be brought into existence.

This is an important conference whose deliberations and conclusions should have some bearing on the new policies in the co-operative movement in the country.

Having done all this, the Conference has not discussed some of the criticisms levelled against such co-operative organisations. Undue delays, avoidable red tapism, political leanings of the Bank's presidents and their members in key positions, and many other complaints now coming to the surface against the co-operative institutions ought to have found a place in the discussions. This Conference was attended by almost all States in the country and was convened in pursuance of the recent New Delhi suggestion for considering the problems arising out of the insistence on co-operative methods in everything.

The allegations against co-operative working heard in Madras, Andhra, Kerala and Mysore should have been heeded by the Conference. There is the question of high foodgrain prices, and the members had not felt it proper to discuss ways to avoid the price spiral at a time when they could step in to organise co-operation and allow the members of the system the benefit of co-operation. Nor did the Conference think it proper to pull up many of their own colleagues for paying insufficient attention to the benefit of the members and instead being interminably entangled in local politics. Even a token resolution that co-operation should be free from any kind of political influence would have imparted a genuineness to the Conference deliberations. In the mounting charges levelled at these institutions throughout the South at present, it would indeed be difficult for them to hold on to the claim that they still stand for the motto: "Each for All and All for Each."

*

MADRAS REVIEW

Development Councils

With effect from December 1, 1959, Madras State will be delimited into twenty-one development districts. Each of these districts will have a Development Council under the Madras District Development Councils' Act, which becomes operative from that date. The existing revenue districts would continue to be territorial units for land revenue and other general administrative purposes. The headquarters of the revenue district will also be the common headquarters for the District Development Council.

At an informal press conference in the Secretariat last week, Madras State's Chief Minister, Mr K. Kamaraj, made this announcement, informing the people through the press that the Acts pertaining to the development councils had been passed by both the houses of legislature in the State. He fervently hoped that the village needs would be held supreme by the inhabitants who should not be swayed by any kind of political considerations. An analysis of the existing panchayats working in the State showed that politics existed only in a minority of the panchayats, about 20 per cent in the State, Mr Kamaraj said.

Mr R. A. Gopalaswamy, Development Commissioner, stated that the Madras Panchayats Act would be implemented with effect from January 1960.

This new announcement about district administration will have relation to the working of development schemes only in the districts. All chairmen of the panchayat councils will also be members of the district development councils. Panchayat Unions will be established after the Act is enforced. A number of contiguous panchayats will be formed into a union, and the Union members would be elected out of the panchayat members from each panchayat. As panchayat unions have not yet been constituted, one representative from every development block consisting of several panchayats will be chosen by the panchayat representatives in the block.

The Madras Panchayats Act of 1958 involves three main administrative operations: completion of panchayat coverage (at present there are 10,000 panchayats and by next year it is expected the number would have increased to 15,000); panchayat union constitution; and rural development devolution.

With regard to administration, these unions are given autonomous powers in respect of education, local needs of public works and such other things, though with financial subsidy from the State. This is termed devolution of powers and the needs of the union of panchayats are assessed and financial resources met both from the State and through taxation by the Unions. Already, there is a cess collected by the State for the scheme and the amount has been allotted for its implementation.

All blocks would have formed the panchayats under the first operative clause before the end of 1960. Thus, by the beginning of 1961, there won't be any area in this State that had not come under panchayat rule.

The second stage of Panchayat Unions will be the establishment of territorial limits of such unions after hearing objections if any. After this, the union becomes a block acquiring a statutory status. Panchayat Union councils would choose its members who will also include co-opted members, who may be experts in particular fields. The idea is to divide all the development blocks delimited under the National extension service scheme into three batches and a phased constitution of panchayat unions would be put through by October 2, 1961, as specified under the Act.

The first batch comprises 75 blocks. These are a little over one-third of the total number of blocks where the National Extension Scheme has already been introduced. The second batch will comprise all other blocks where there is National Extension Scheme. The third batch will comprise those areas where the National Extension Scheme had not been introduced.

Toward achieving such an end, the Government of Madras have decided that committees already constituted under the National Extension Service scheme should be enlarged so as to include all panchayat presidents of the block. In areas where the National Extension Service had not been introduced yet, similar committees will be constituted. These committees will take over all functions now handled by the Block Advisory Committees under the Community Development scheme. These will also advise all panchayats in the block on question relating the implementation of the Madras Panchayat Act of 1958.

MADRAS REVIEW

"Remote Control" in Oilseeds

Madras, Wednesday.

At a time when there are such surging arrivals of groundnut and oil into the market as the new season has begun, the control of their prices is in the hands of Bombay bulls who had pushed them up very high. The Oil Exchange told "Indian Finance" here today that this position is "peculiarly odd" and the real advantage to genuine shippers in the trade for a long time has been robbed by such bull operations with remote control at Bombay. The following prevailing prices today at the exchange would testify to the facts:

Groundnut oil per candy of 500 lbs: Ready Rs 356/357; December Rs 354; January Rs 347; February Rs 348/349.

Groundnut kernels per candy of 531 lbs: Coromandel: Rs 187; Peanut: Rs 182.

Castoroil was quoted today at Rs 330 (sellers) per candy of 531 lbs.

Coconut oil per tin Rs 41.

Gingelly oil was lower at Rs 20/8 per maund.

Gingelly seed was quoted at Rs 66 per bag.

Groundnut cake per bag remained firm at Rs 26.

United Kingdom groundnut oil rate, however, did not change at £103 per ton.

Burma's price for groundnut oil *was the same as in the last week of* November at Rs 1,550 per ton.

Arrival in the City of groundnut average now between 75 and 90 tons daily, stated to be of good size. In the producing southern and northern centres, arrivals per day are reported at 70 to 90 tons daily.

Early this week, the rains had retarded the progress of arrivals at producing centres and this resulted in the curtailment of offerings. This was one of the reasons for the spurt in the prices. But the bullish sentiment in the futures market added not inconsiderably to the upward trend. Bombay, particularly, had a firm grip on groundnut and castor futures. The February position in the Madras market of groundnut oil at Rs 348/349 is itself evidence of the bullish grip. Though sizeable quantities had been covered by shippers by actual goods, they nevertheless continued to press their demand. It is true, the actuals in northern centre markets were cheaper than in Madras. From these centres, December shipments were mostly covered.

As the incentive scheme of the Government referred only to November deals, no overseas transactions could be put through. But Burma is willing to offer Rs 1,550 per ton c.i.f. in tins from approved shippers. For mid-December drum shipments, the price indicated is Rs 1,600 per ton. UK and Continental inquiries were subdued. There is a feeling in the Exchange that, even on a renewal of the incentive scheme, the chances of bulkier shipments are less now because of the price line still holding high. Before the end of last week and since then, the oil price marked a gain of Rs 32 to Rs 35 a ton. Groundnuts had a still higher marking at Rs 38/40 per ton.

From the daily average arrivals of 40/50 tons of groundnuts during the rainy season, arrivals had now increased to almost double the earlier figure *this week. Local crushers* absorbed most of last week's quotas, while bigger vanaspati and crushing interests created demand for kernels at Rs 180/182 per candy. The price even went up once to Rs 183/184. Peanut price ranged around Rs 172/175. *Monday's prices improved* to Rs 183 and Tuesday the Coromandel variety was offered at not less than Rs 187/188 at which it closed today. Peanut was equally very heavy in demand at Rs 182 from Monday, and it shows an inclination toward higher rate rather than a lower one.

While shippers' and vanaspati interests absorbed little quantities of groundnut oil beginning this week, the demand noted as accentuation from Monday onwards. Crushers from southern centres began to dispatch oil as sunshine had appeared for the drying of kernels. As and when oil crushing gained volume, the price also gained; and, from Rs 348 per candy, it rose to Rs 356 on Monday. But the price on Tuesday was very steady at Rs 357 and today it is at the same level.

There was not much activity in forward positions. This is because December being the delivery month, operators did not want to go long or short. The Government policy is yet to be known on January shipments. *Therefore, there was absence* of risks. Turnover continued to be small, but the spurt, appeared today to give higher impulse to Bombay shipments.

December vaida had good support early last week. Today, it had been reinforced by Bombay strength on groundnut futures. The rate of Rs 433 per candy last weekend was not long maintained and it went up to Rs 356. The rise was abrupt from Rs 343 to Rs 356. The upward trend is continued today.

January position was also similar to December. Beginning with Rs 340 per candy, it went up to Rs 342 Saturday and on Monday it went up suddenly to Rs 350. It went up still further to Rs 354 on Tuesday. That is the price at which this position could be negotiated at today's close.

February position began with firmness on Monday at Rs 347, and it went up to Rs 350 Tuesday. It is steady today at Rs 348/349.

Upcountry Markets: Better disposition is seen this week in these markets with sizeable arrivals. South and North Arcot districts reported good turnover at higher rates in both kernels and oil. Hesitancy in the beginning of the week changed into firmness on sellers' part who are willing to negotiate at Rs 347/348 per cany. Early this week, however, vanaspati interests in South India obtained decent quantities at Rs 342 to Rs 345 per candy.

Other Seeds and Oils: Gingelly seed and oil continued to maintain a steady level. Small quantities arrived from Gulberia, Raicher and other places in Andhra State. The folowing are today's prices:

Gingelly seed: Gulberga/Raichur (Madras) quality Rs 66/67 per bag; Bombay quality Rs 69/70 per bag; Mysore side quality Rs 65/66 per bag; Local varieties Rs 66 per bag.

Gingelly oil wholesale basis Rs 20/8 *and retail Rs* 21 per maund.

There was no significant activity in castoroil. Sellers offered at Rs 230 per candy, but buyers were not inclined to go up higher than Rs 225/226 per candy.

West Coast sources maintained firm level in coconutoil. At Cochin, Ready rate of coconutoil was Rs 667 per candy, December Rs 666 and January Rs 652. In Madras, the price per tin of coconutoil today was Rs 41 (sellers).

The foreign market rates ruling today:

Groundnut: January/February £66 per ton; Castorseed: Decr./January £57/15 per ton; Nigerseed (Nominal) January £59 per ton; Groundnut oil spot £103 per ton; Groundnut oil January/February £102½/103 per ton; Castor oil, BSS. Dec./Jan. Bulk £125 per ton; Castor oil, Commercial £119 per ton; Coconut oil, Ceylon £132/133 per ton; Groundnut cake: (Expeller) Decr. £35/10 per ton; Groundnut cake: Jan. £35 per ton; Groundnut cake: February £34/10 Groundnut cake: (Solvent) January £34/10 per ton; Groundnut cake: (Solvent) February/March £34 per ton.

The following are the prices prevailing in southern centres in G'nut oil and kernels:

	Kernels* Rs	Oil† Rs
Guntur/Bezwada ...	177	345
Vridhachalam ...	182	346
Nandyal	172	337/8
Villipuram ...	184	347
Cuddappah/Yerrangatla	175	342/8
Pollachi (Superior)		
Nominal	185	345
Tanjore	180	345
Tiruvannamalai ...	180	345
Salem	180	345

*531 lbs candy. †500 lbs candy.

★

Hides and Skins

Generally, prices of skins and hides have gone lower in the past several months. Improved clearances were seen in the market today, though prices did not change materially from last week's levels. Shipping enquiries were better, particularly from the United Kingdom. The contracts were, of course, on a lower level and Madras shippers accepted the quotations. Premium marks in 5/5½ lb average was turned at 81d, 71d and 61d or run, fourths and fifths respectively. Fifths alone were quoted at 62d. Semi prices were available; 5/5½ lb average were treated on the basis of 73d to 75d. The 8/8½ lbs average were transacted at 54d, 50d and 45d respectively for run, fourths and fifths. Inferior fifths had good demand but did not improve in prices.

SOUTH INDIAN MARKETS

Tanned buffalo hides had good business at unchanged prices. In tanned cow and buffalo calf, no change was recorded. Clearances in this section were quite regular and easier.

Over 2,000 pieces of market quality tanned sheepskins were sold. In tanned sheepskins, the turnover was about 47,000. The bazar still had about 7,000 and 50,000 tanned goat and sheepskins respectively. Sheepskin prices were lower by 6 to 12 nP in the higher averages, but light weights were unavailable. The 7/8 lb average had good demand.

The prices per lb were: tanned cow 5/5½ lb Rs 2.75 to Rs 3.12; 6/6½ lb Rs 2.50 to Rs 2.69; 8/8½ lb Rs 2.12 to Rs 2.25; 10/12 lb Rs 1.87 to Rs 2.00: buffalo: 12/13 lb Rs 1.37 to Rs 1.50; *cow calf* 1½/2 lb Rs 4.50 to Rs 5.00: bug calf 1½/2 lb Rs 3.00 to Rs 3.37: goat prime 8/9 lb Rs 9.12 to Rs 9.25; 5½/6 lb Rs 10.37 to Rs 10.50; sheep ordinary 6/7 lb Rs 8.25 to Rs 8.50; sheep prime Rs 10.87 to Rs 11.12.

The following are the prices for tanning materials: Avaram Bark Rs 82/105; Konam Rs 82/68; Myrabolams (Salem) Rs 115; (Bombay) Rs 75.

The following are the quotations for raw skins: (Last week's prices within brackets): Bangalore Ram Goatskins Rs 580/630 (Rs 560/620); White Wool Sheep Rs 540/630 (Rs 520/630); Black Sheep Rs 450/480 (Rs 450/480); Bezwada Raw goatskins Rs 565 (Rs 525); She Sheep Rs 430 (Rs 420); He Sheep Rs 530 (Rs 525).

The total shipment during November of skins and hides outside India from Madras was 6,147 bales. This was less than in October.

UK imported: 2,147 tanned cow hides; 216 bales calf hides, 31 bales buff hides, 211 bales calfskins; 693 bales goatskins and 447 bales of sheep skins.

Continental imports were: 9 bales of cowhides, 33 bales of calfskins, 51 bales of buff calfskins, 682 bales of goatskins and 490 bales of sheepskins.

USA imported: 2 bales of cowcalf skins, 67 bales of buff hides, 45 bales of buff calfskins, 279 bales of goatskins, and 3 bales of sheep skins.

Japan imported 9 bales of goatskins and 38 bales of sheepskins.

Eastern Europe: 51 bales of cowhides; Aden: 23 bales of cowhides; Berbara: 4 bales of cowhides; Australia: 1 bale of goatskin and 2 bales of sheepskins; and New Zealand: 7 bales of goatskins and 5 bales of sheepskins.

Indian Finance

THIS WEEK'S LANDMARK

The Panchet Dam

THE Damodar Valley Development Scheme is essentially a measure for the control of the river Damodar and its tributaries and the utilisation of its waters for irrigation and concurrent power generation. The long felt need for the control of the river Damodar, often described as a River of Sorrow, reached a climax in 1943 when it caused catastrophic damage to the entire lower Valley as a consequence of abnormal flooding. The Government of India requisitioned the services of Mr W. L. Voorduin, an expert with extensive experience in the TVA, for preparing a comprehensive master-plan for the development of the Damodar basin. In order to take up the execution of this scheme and complete it expeditiously, the Government created the Damodar Valley Corporation as an autonomous body for undertaking this development. The scheme envisaged the construction of eight dams, supply of water for irrigating about a million acres, providing water for industrial and domestic uses, power generation and navigation. As a first stage of construction, the Corporation was authorised to build four of the Dams and the Bokaro Thermal Power Station. The flood control capacity of the first stage construction was estimated at 650,000 cusecs. The final scheme as envisaged was worked out to afford protection up to one million cusecs. The Dams at Tilaiya, Konar and Maithon have already been completed and the Panchet Dam is the last of the series in the first phase. *Hydro-Electric Stations have* been attached to Tilaiya, Maithon and Panchet and provision has been made for an installation at Konar. The Barrage at Durgapur and an extensive net-work of canals taking off on either bank at Durgapur will command an area of *about a million* acres. For the distribution of power in the valley and areas adjacent to it, an extensive high voltage transmission system has been designed and built.

The 1943 floods were of the order of 350,000 cusecs only and even this flood caused damage assessed at about Rs 50 crores to public properties and utilities at the current price index. The September-1958 flood was quite an unprecedented one with a peak discharge of 665,000 cusecs and the dams were able to moderate this flood to a mere 205,000 cusecs. The Lower Valley was thus saved what would have been another catastrophy, which, in terms of money, would have amounted to a figure far in excess of the 1943 damage. It is no more than a statement of fact that the DVC dams have already paid for their cost.

In October 1959, another unprecedented flood, which would have amounted to 800,000 cusecs below Durgapur for a no-Dam condition, occurred. This was moderated to about 250,000 cusecs below the Dams, but even this, together with the discharge from the uncontrolled catchment, created a serious situation in the Lower Valley inundating large areas in Burdwan and Hooghly districts. Nevertheless, both the D.V.C and the people of the lower valley have reason to be grateful for the fact that the existing four dams reduced the intensity of flooding by over 50%.

The Dams:

Four mighty Dams at Tilaiya, Konar, Maithon and Panchet tower high today above the rivers that wind through the region. Hydro-electric stations at Tilaiya, Maithon and Panchet Dams together with the Thermal Power Station at Bokaro send power humming along the network of 1,012 miles of transmission lines. The water discharged from the Dams is diverted into a net-work of canals through a gigantic Barrage at Durgapur which forms the heart of the lower valley's *irrigation system* and supplies water to 1550 miles of irrigation and navigation canals. The principal irrigation-cum-navigation canal will provide 85 miles of navigational waterway joining Durgapur with Calcutta. Work at Durgapur Thermal Power Station and on extension of the Bokaro Thermal Power Station is progressing satisfactorily and at Chandrapura it has just commenced.

The 19-crore Dam at Panchet Hill across the main Damodar is the biggest of all the Dams so far built by DVC. It is a composite Dam of earth and concrete and is about 22,155 ft. or approximately 4¼ miles long. As the sand deposit on the river bed extends to a considerable depth, the earth embankment has been built across the river and the spillway section has been located on the left bank of the river, where the level of the rock *is closer to the* surface.

The present alignment is the 5th one, the previous four having been rejected, as in all the places deep fault zones were encountered. The earth dam is 134 ft. high above the bed level of the river. The concrete dam—167 ft. high at the deepest foundation has been built on the left bank of the river across the diversion channel. The Hydro-electric Power House, a reinforced concrete structure, is located downstream of the right non-spillway section of the Concrete Dam. The total quantity of earth in the embankment is over 7 million cyds and the total quantity of concrete in the Concrete Dam and Power House is nearly 3.8 lakh cyds. The spillway has fifteen crest gates for flood control—each 40′×41′. There are also ten undersluice gates—each 10′×5′-8″.

Along with the dam the civil works of the Power House designed to house 2 hydel units of 40,000 kW each were completed in July 1959. About 100,000 tons of Cement and 9,000 tons of steel have been consumed in the construction of the concrete dam and Power House.

About 140 Nos. of different major types of Earthmoving machinery and other machines were engaged in the Project besides minor equipments and plants. The total value of plant used was about Rs 2.2 crores. The equipments were mostly used machines from other Projects. The value of spares consumed is roughly Rs 1.1 crore.

Manual labour was also given its due importance. The placing of riprap, sodding, formation of road, pavements, parapets, guardrails, etc., was entirely done by local workers, mostly Adibasis, and over 10,000 men and women were engaged during the peak of construction.

Power House:

The erection of one 40,000 kw Hydel unit, the largest in Asia, was completed by the 15th August, 1959, and finally put into commercial operation by the 12th September, 1959 and in time to give relief to the Bokaro units which had to work on overload since last year.

Water for the turbines is taken through the intake blocks and conveyed by penstock pipes of 28 ft. dia., the largest in Asia, to the turbines. The penstocks were manufactured in DVC workshops. The second unit will be installed when another dam is built on the Damodar.

Agency of Construction:

All principal items of construction have been done departmentally and without the agency of any contracting firms and it can be confidently said that "Quality" work has been done within the cost and the time schedule. With the experience gained, works of greater magnitude can be executed departmentally both economically and expeditiously.

Our men have assembled and repaired the most modern heavy construction machinery and equipment. The hydro-electric turbines and generators, the various gate structures obtained from abroad have been wholly assembled and erected by our own engineers and technicians helped by only a few supervisors from the foreign supplying firms as advisers. Given a chance, Indian engineers and technicians are now capable of executing assignments that, until recently, were supposed to beyond indigenous capacity. "Indian engineers are second to none," observed Mr Komora, the late Chief Engineer, DVC, when relinquishing charge of his office in the DVC.

Panchet Construction Organisation:

From Tilaiya through Maithon to Panchet was a long way and the momentum of construction speed gained from Project to Project was gratifying. At Panchet, the construction organisation had developed into so well knit a unit that one could see everything move with clock-work precision. In a press interview, commenting on the Panchet team, Mr Komora remarked. "As of today, the construction organisation at Panchet is equal to that of any in the world." He added, "It would be wise for the Government to transfer this group, intact in so far as possible, on to a new Project. A certain price has been paid for training the men to do their various jobs. This training would pay dividends on another similar Project."

A most cordial relationship existed between the officers and workers throughout all the stages of the work. They worked in perfect harmony each shouldering and discharging his own responsibilities.

Men uprooted from the submergence areas having lost their hearth and home and means of livelihood were treated with special care. As far as possible, preference was given to them in employment. Practically all the unskilled labour—men and women—hailed from the neighbouring localities. Some of these men have now emerged as good artisans and skilled workmen. They can earn their livelihood elsewhere, if they so choose, with the knowledge and experience they have gained with the DVC. Petty contracts were also given to the local men for earth works, felling and removal of the trees and roots from the submergence areas.

Under the blaze of the summer sun and driving rain, hundreds of thousands of men hewed and blasted and hauled with their teams and tractors. They pitched in, realising that the work was for the country's benefit.

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

No subscriptions are invited on the basis of this announcement. Intending subscribers should obtain from the Registered Office or the Calcutta Office of the Company or any one of the Bankers or Brokers referred to hereunder, copies of the PROSPECTUS to which are attached the Forms of Application.

A copy of PROSPECTUS having attached thereto the necessary documents has been duly field with the Registrar of Companies, Madhya Pradesh, as required by Section 60(2) of the Companies Act, 1956. Some of the particulars contained in the PROSPECTUS are set forth hereunder.

Consent of the Central Government has been obtained to this issue by an Order of which a complete copy is open to public inspection at the Registered Office of the Company at Chola Road, Bhopal. It must be distinctly understood that in giving this consent the Central Government do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

A licence has been obtained from the Central Government for the establishement of this new Industrial undertaking of which a copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in granting this licence the Government of India do not take any responsibility for the correctness of any of the statements made or opinions expressed in regard to it.

The existing Equity (Ordinary) Shares are quoted on Calcutta, Bombay and Delhi Stock Exchanges. Applications will be made to these Stock Exchanges for permission to deal in the shares offered hereunder and for quotation of the Preference shares now being offered.

The Subscription list will open at the commencement of Banking hours on the 21st December, 1959, and will close at the close of Banking hours on the 30th December, 1959, unless closed earlier at the discretion of the Directors but not before the 28th December, 1959.

STRAW PRODUCTS LIMITED

(Incorporated under the Indian Companies Act, 1913)

(J. K. PAPER MILLS)

SHARE CAPITAL

AUTHORISED CAPITAL

OBJECTS

The Company was incorporated on the 6th August, 1938 with the objects mentioned in its Memorandum of Association and in particular with a view to set up a Straw Board Industry and to own Paper Mills, etc.

PRESENT BUSINESS

The Company has been carrying on the business of manufacturing Strawboard from Straw and Grass and marketing the products since its inception. By adding a new Cylinder Mould Machine the Company has recently extended its activities to other types of Boards such as Simplex, Duplex and Triplex Boards and Straw Paper for currugation. Due to this extension the capacity of the factory has been increased from 4,500 tons to 10,500 tons per annum

NEW PROJECT

The Company has been granted a licence under the Industries (Development and Regulation) Act, 1951, for the establishment of a new Paper Mill at Singhpur Road, Orissa, with a manufacturing capacity of 18,000 tons per annum of high grade Writing and Printing Paper.

LOCATION OF PAPER MILL

A site in the vicinity of Singhpur Road Railway Station (near Rayagada) in the State of Orissa has been selected.

RAW MATERIALS

Bamboo, the raw material for manufacture of pulp and paper, is available in abundance from the forests adjoining the mill. The Government of Orissa has already allotted forests to the Company which will yield enough bamboos. Some forest development work has already been under-taken for the last three years and recovered bamboos are being marketed.

LAND

An agreement for the acquisition of adequate land for the Paper Mill has been entered into with the Government of Orissa and the required land is expected to be handed over to the Company at an early date.

WATER SUPPLY

Water for the Mill will be taken from the River Nagavalli on which the Mill site is situated. This is a perennial river and will supply the required amount of water.

ELECTRICITY

The Government of Orissa will supply necessary electrical power from the Machkund Grid. Power necessary for erection will be made available to the Company by March, 1960 and thereafter power necessary for operation of the Mill as required.

TRANSPORT FACILITIES

Singhpur Road is situated on Raipur-Vishakhapatnam Broad Gauge Railway Line and is also connected by road directly with the Vishakhapatnam sea port which is an additional advantage for the transportation of goods by sea route. Suitable road transport facilities also exist with other important commercial towns. The distance by rail from Singhpur Road to Vishakhapatnam and Calcutta is 123 and 593 miles, respectively.

PLANT & MACHINERY

The Company has entered into an agreement for supply of pulp and paper mill machinery with J. M. Voith G.M.B.H., of Heidenheim Brenz, West Germany. Machineries other than pulp and paper mill machinery have also been arranged through Messrs J. M. Voith to be supplied from renowned manufacturers in West Germany, such as, Siemens for Electrical equipments, Steinmuller for Boilers and Recovery Furnace, Dorr-Oliver for Recausticising plant etc. etc. Messrs. Voith are manufacturers of pulp and paper mill machinery and enjoy a world wide reputation in this line. They are also well known in India and have supplied pulp and paper mill machinery to various paper mills in India, specially based on bamboo as raw material, which have been found very satisfactory in working. Messrs Voith are also engaged as Engineers for the complete Project. They will be responsible for erection and bringing into operation of the mills and the training of the Company's personnel.

GUARANTEE FOR DEFERRED PAYMENTS

The State Bank of India have agreed to give necessary guarantee to the foreign suppliers for the deferred payment of the plant and machinery amounting to Rs. 3,00,00,000/- with interest amounting to approximately Rs. 53,50,000/- thereon. The Company will create a security by way of mortgage of its complete assets in favour of the State Bank of India in consideration of the guarantee and the Managing Agents and Sir Padampat Singhania, Kt., Shri Lakshmipat Singhania and Shri Hari Shankar Singhania, three of their Directors, will also execute personal guarantees in favour of the Bank.

CAPITAL REQUIREMENT

The total cost of the project is estimated as under:

1.	Land and Building	Rs. 60,00,000
2.	Plant and Machinery, including freight and duty ...	Rs. 3,20,00,000
3.	Erection, Preliminary and Miscellaneous expenses ...	Rs. 34,00,000
4.	Interest on Deferred Payments	Rs. 53,50,000
	Total	Rs. 4,67,50,000

SOURCE OF FUNDS

The total sum will be provided as under:

1.	New Issue of Capital	Rs. 2,00,00,000
2.	Other Resources including those of the Company ...	Rs. 80,00,000
3.	Deferred payments balance	Rs. 2,67,50,000
	Total	Rs. 5,47,50,000

The excess provision will be available as a contingency margin and for meeting a part of the working capital requirements, the balance of which will be arranged through Banks by hypothecation of stocks and stores.

PROSPECTS

The production of Paper in the country is not sufficient to meet even the present demand which. in view of the rapid industrialisation of the country and increase in literacy and general standard of living envisaged in the Five Year Plans, is bound to rise considerably in the coming years. In consequence, the demand of paper will be excess of supply for some decades to come so that the Company's prospects in this line are bright.

PROFITS

The Paper Industry in India has shown a reasonably high potentiality for profit earning. The mill be equipped with upto date plant and machinery incorporating latest methods of production. The Company has reasonable scope for earning profits.

FINANCIAL INFORMATION

The following is condensation of the Auditors' Report by the Company's Auditors Messrs Lodha & Co., as published in the Prospectus:

STRAW PRODUCTS LIMITED

Year ended 31st Dec.,	Sales	Profit before Depreciation and Taxation.	Net Profits after Depreciation and Taxation.
1954 ...	Rs. 19,52,719	Rs. 2,73,315	Rs. 48,708

The Directors reserve the right to refuse any application wholly or in part without assigning any reasons.

The shares when issued shall be subject to the Memorandum and Articles of Association of the Company. The Share Certificates will oe issued within six months of the date of allotment.

STOCK EXCHANGES

Values Make Headway

WATCH-DOG WRITES:

THANKS to the emergence of buying support at the recent low levels and encouraging advices from Bombay, stock markets have taken a sudden turn for the better during the week under review. With the speculative issues making steady headway, prices of all other scrip have displayed a firmer tendency.

The Calcutta Stock Exchange was in a more confident mood and provided several firm features.

Sentiment on the Bombay Stock Exchange remained, on the whole, cheerful. Selective scrip encountered fairly heavy speculative buying and frantic short-covering.

Selective buying led to a firmer trend in assorted shares on the Madras Stock Exchange.

Uncertain conditions continued to prevail on the London Stock Exchange.

Price movements on Wall Street were rather irregular.

*

Calcutta

Calcutta, Friday Evening.

THE local stock market, which had been presenting a quiet appearance for the past few weeks, exhibited a cheerful sentiment and prices staged a marked recovery from the recent low levels due to the emergence of speculative support coupled with short-covering.

A feeling, that no additional levies would come so late in the year, lifted up the general price level from the beginning of the Week. Unconfirmed rumours, that the Indian Iron & Steel Company Limited had a proposal to diversify its activities as in the case of the TISCO, also contributed to the improvement in sentiment. Again, investors, who kept out of the market so long, showed some buying interest following the rise in the yields now obtained on equities as a result of the sharp decline in prices in recent weeks.

Above all, it was felt that the visit of the American President would strengthen the friendly relations between India and the USA, which might eventually lead to more profitable co-operation between the two countries in various matters, whether political or economic. Most of the professional operators, therefore, took an optimistic view of the market and indulged in heavy buying, resulting in a marked improvement in prices and a consequent expansion in turnover.

Giltedged securities ruled fairly steady and the demand for the short-dated issues continued to be maintained. Long-dated issues were, however, neglected. 3 per cent 1986 Conversion Loan opened at Rs 73.50 and, after touching a high of Rs 73.95 and a low of Rs 73.25, finished the week at Rs 73.45.

Except for some enquiry in United Commercial upto Rs 64.75 from Rs 62.00, Bank shares were generally quiet. Punjab National were quoted at Rs 20.37.

The lead to the general improvement in prices was mainly given by the speculative issues under the lead of Indian Irons which, in turn, were subjected to a good deal of buying on rumours of the company's proposal to diversify its activities as in the case of TISCO. The rise in prices was also aided by encouraging advices from Bombay although profit-taking erased some of the extreme gains at the close. Against the week-end closing of Rs 23.15 Indian Irons opened higher at Rs 23.23 and, after advancing steadily to Rs 23.82, finished the week at Rs 23.58. TEXMACO were taken up to Rs 24.65 from Rs 24.20; Jessop up to Rs 23.87 from Rs 22.50 and Indian Galvanizing up to Rs 21.75 from Rs 20.81. G. K. Williams witnessed a sharp spurt to Rs 46.00 from Rs 40 on rumours of the company's proposal to issue bonus shares shortly.

Jute shares also participated in the general rise in prices although turnover remained restricted. This was mainly due to fears that the threatened token strike of mill-workers this month and the renewed firmness in raw commodity prices might increase the production cost of the industry which, it was felt, might reduce the profit margins of the mills. With the result, any rise in prices attracted considerable profit-taking. Howrah were at one time taken up to Rs 24.06 from Rs 23.50; National up to Rs 25.75 from Rs 25.06; New Central up to Rs 21.50 from Rs 20.19; Anglo-India up to Rs 222 from Rs 215 and Gourepore up to Rs 431 from Rs 422. The closing was slightly lower than these levels. Ganges moved narrowly around Rs 9.00 with Chitavalsah quiet at Rs 14.94 against Rs 15.00.

Coal shares were a steady feature on the belief that there would be a further upward revision in the selling price of the commodity. Bengal hardened to Rs 300 from Rs 294 and Western Bengal to Rs 6.00 from Rs 5.87. Burrakur fluctuated irregularly between Rs 17.06 and Rs 17.56 on speculative buying and selling, to finish the week at Rs 17.37. New Beerbhoom were nearly maintained at Rs 21.69.

Although Tea shares were vulnerable to profit-taking, a few selected scrip maintained their best levels on the belief that the estates, producing Common teas, might present better working results for the year in view of the higher prices obtained at the recent auctions and the firmer prices ruling on the London market. Shares especially of those gardens situated in Pakistan, were keenly sought after on expectation of an improvement in relations with that country. Birpara were marked up to Rs 181 from a low of Rs 164; Patrakola up to Rs 195 from Rs 164 and Teliapara up to Rs 141 from Rs 130. Among the shareas of other gardens, Bishnauth changed hands at Rs 20.25 to Rs 20.62; East India at Rs 22.50 to Rs 26.50; Hattikhira at Rs 14.69 to Rs 14.81; Jayshree at Rs 15.37 to Rs 15.50 and Methoni at Rs 23.12 to Rs 23.50.

Sugar shares displayed a firmer tendency on higher advices from the

BALMER LAWRIE & CO. LTD.

NOTICE is hereby given that an Interim Dividend on the Ordinary Shares of the Company of 5% for the year ending 31st December, 1959, was declared by the Board of Directors on 7th December, 1959, payable on or after 30th December, 1959, to those Members whose names are registered in the Register of Members of the Company on the 30th December, 1959. Dividend Warrants will be despatched to Members and no application to the Company is necessary.

Tax will be deducted from this Dividend in accordance with the provisions of the Finance Act, 1959.

The Register of Members of the Company will be closed from 17th December, 1959 to 30th December, 1959 both days inclusive.

By Order of the Board,
D. MANSON
Secretary.

21, Netaji Subhas Road,
Calcutta.
7th December, 1959.

commodity market. An outstanding feature in this section was Dyer Meakins which advanced by Rs 3 to Rs 22 on reports of the dividend being increased to 16 per cent, free of tax, for last year, from 15 per cent in the previous year. Carew were enquired up to Rs 11.81 from Rs 11.37 and SKG up to Rs 13.37 from Rs 13.00. Raza-Buland were quiet at Rs 12.69 against Rs 12.75 with Belsund changing hands on the ex-right basis at Rs 15.25.

Textile shares remained firm on better outlook for the industry. Elgins met with good business at Rs 15.69 to Rs 15.75; Kesoram at Rs 19.06 to Rs 19.50; Cawnpore at Rs 5.62 to Rs 5.87 and Jayshree at Rs 10.50 to Rs 10.75. New Victoria were slightly better at Rs 1.22 against Rs 1.15.

Miscellaneous issues followed the general trend of the market. The only exception were Paper shares which developed a slightly reactionary tendency following the announcement of a reduction in paper prices. Following were the price trends of a few selected scrip:—

	As on Dec. 5 Rs	Week's High Rs	Week's Closing Rs
I. Cable ...	29.87	30.44	30.12
I. Steamship	12.12	12.25	12.00
I. Aluminium	23.31	23.50	23.31
I. Copper ...	3.88	3.91	3.89
Dunlop ...	35.19	36.00	36.00
Rohtas ...	24.87	25.31	24.69

Shree Gopal	22.56	22.81	22.50
Sirpur ...	13.50	13.75	13.62

*

Bombay

AFTER a hesitant start the Bombay Stock Exchange developed a firm trend on reemergence of bear covering and fresh buying interest. The satisfactory production figures for November from the two steel companies coupled with good corporate news imparted stability. As the week progressed the absence of any shocks in the Finance Minister's Assocham speech paved the way for revival of buying interest. Rumour was also in favour of the bulls with the indication that the coming Central Budget would not bring any fresh tax burden. The fact that selected shares all along the list met with sustained support also contributed to the alround improvement in sentiment.

In the Steel section, conditions were steadier. Tata Steel which opened last Thursday at Rs 154.25 moved up steadily to be finally placed on Wednesday at Rs 156.75. Indian Iron was also steadier on balance at Rs 23.64.

Cotton textile shares were generally in good demand with selected shares coming in for sustained attention. Bombay Dyeing advanced to Rs 69.50 from Rs 67.80 on reports of higher export earnings. Kohinoor was in the forefront on interested buying but in later dealings became rather subdued to close only four points higher on balance at Rs 324. Standard was a strong feature and moved up briskly to Rs 749 from Rs 697. Century advanced from Rs 618 to Rs 639. Svadeshi gained more than six points to Rs 262.25.

Many bright spots were seen in the miscellaneous section. Premier Construction was taken to Rs 359 from Rs 349 on good corporate news. Bombay Burmah was in request and advanced to Rs 577 from Rs 549. Hindustan Motors and Premier Automobiles met with sustained interest to close sizably higher on balance at Rs 15.40 and Rs 152 respectively. National Rayon was fully steady at Rs 373.50 as was Telco at Rs 201.25. Voltas was a bright spot in earlier dealings but later on fell back on lack of support to close lower on balance at Rs 181.

*

Madras

Madras, Thursday.

INDUSTRIALS and coffee shares were much in demand and there were brisk transactions in these sections today. Textiles were weak, while in both electricals and banks, there was not much activity.

Government Securities: 3 per cent 1986 were marked lower at Rs 73.50. The 3 per cent 1960 Madras Government loan was quoted at Rs 99.30. The 4 per cent 1963 Madras Government loan could be had at Rs 100.55. The 4½ per cent 1970 loan was unchanged at Rs 102.00 and the 4 per cent 1971 loan was marked at the previous rate of Rs 100.12. The 4½ per cent Mysore Government Loan, too, was unchanged at Rs 102.00 and the 4 per cent 1971 loan was priced at Rs 100.10. The Andhra 4½ per cent 1970 loan was quoted at Rs 100.97 and the 4 per cent 1971 was put down at Rs 99.90. The 4½ per cent 1970 Andhra State loan was marked at Rs 101.95 while the 4 per cent 1971 loan went up by a single nP to Rs 100.06.

Banks: Pandyan Bank was quoted lower at Rs 33.50, and Travancore Bank was up at Rs 28.00. Business was done in United Commercial Rs 50 paid, at Rs 64.25. Indian Bank Rs 100 paid share remained steady at Rs 180.00 and Rs 80 paid share at Rs 150.00. Punjab National was unchanged at Rs 20.65.

Electrics: All scrip in this section remained unaltered. Karaikkal was quoted at Rs 10.60, Negapatam at Rs 10.00 and South Madras at Rs 11.20. Tinnevelly-Tuticorin 10 per cent cd was at Rs 12.62 and Vellore at Rs 13.00. West Coast was done at Rs 12.75.

Sugar and Breweries: Deccan with 18½ per cent f.t.cd. was available at Rs 13.90. In EID also, demand was at the lower price of Rs 46.80 at which level it was transacted. Cauvery was at Rs 124.00. India Sugars was unaltered at Rs 12.60 KCP xd xr was marked at Rs 16.63 and Kirlampudi at Rs 77.00. Travancore apreciated to Rs 11.10. United Breweries (a) cd was quoted at Rs 575.00.

Plantings: Interest in Coffee shares continued unabated. Alagesswar went up to Rs 2.88. Bababuddin was at Rs 9.55 and Balanoor at Rs 18.75. Be Be 5 per cent cd was at Rs 2.85. Blue Mountain was at the unaltered rate of Rs 3.47. Chandramalai had demand at Rs 3.12. Cochin Malabar was an active counter at Rs 7.17. Coffee Lands 25 per cent t.cd was steady at Rs 26.20. Consolidated Coffee 25 per cent t.cd was firm at Rs 25.90. Coonoor was also firm at Rs 25.25. Coorg tea was at Rs 4.95. Cowcoody was lower at Rs 4.46. Haileyburia was quoted at Rs 16.25. Highland was available at Rs 14.50. Kalpetta went up to Rs 12.75. Kil Kotagiri had buyers at Rs 4.80. Kumergode was at Rs 6.25. Malabar Industrial at Rs 14.50 was dull. Midland xd was quoted at Rs 11.90. Mysore Plantation 6 per cent cd remained at Rs 1.50. Nenmeny was at Rs 16.00. Nilgiri went up to Rs 7.15. Nonsuch xd was priced at Rs 25.60. Ouchterlony at Rs 5.61 attracted good attention. Panchura 40 per cent cd at Rs 4.20 was unchanged and Parkside with 20 per cent f.cd was available at Rs 25.70. Periakaramalai was firm at Rs 3.63. Puthutotam at Rs 2.82 was idle and Rajagiri at Rs 19.50 had several transactions. Rajendra, too, at 50 per cent t.cd was marked at Rs 18.00. Sangameshwar was quoted at Rs 2.82. Stanes Amalgamated 6 per cent t.cd was priced at Rs 16.75. Travancore Rubber was quoted at Rs 14.62 and Travancore Rubber and Tea shares had buyers at Rs 7.80. United Nilgiri had buyers today at the higher price of Rs 21.25. Velimalai 10 per cent t.f.cd went down to Rs 5.80 and in Wartyhully business was done at Rs 3.63.

Textiles: Textiles were very quiet. Mettur noted a small change at Rs 409.00. Bangalore Woollen was done at Rs 195.00 and Buckingham was sticky at Rs 197.50. Coimbatore group also did not show any change. Coimbatore Cotton was at Rs 164.00, Coimbatore Kamala was at Rs 102.00, Coimbatore Murugan at Rs 95.00 and Coimbatore Spinning at Rs 48.50, Kothari was steady at Rs 11.30. Lakshmi remained firm at Rs 151.00. Madura was unaltered at Rs 29.90. Travancore Rayon improved to Rs 26.45. Vasanta was quoted at Rs 239.00, Vijayakumar at Rs 103.00, and Virudhunagar at Rs 40.75.

Miscellaneous: Aluminium Industries at Rs 22.65 had several buyers. Good inquiries for Ashok Leyland pushed its value to Rs 7.35. Andhra Cement was quoted at Rs 9.05. Dalmia Cement, too, had good demand at Rs 10.45. Enfield did not change at Rs 14.00. FACTs had buyers at the lower level of Rs 10.00. Forest Industries was the same at Rs 3.00. General Papers declined to Rs 13.25. There was good turnover in India Cements at Rs 6.23. Indian Steel Rolling also reported demand at the lower price of Rs 13.09. Madras Safe was available at Rs 47.20. Madras Vanaspati was unchanged at Rs 15.00. Marikar was placed at Rs 47.50. Mettur Chemicals was listed at Rs 12.70. Mysore Coffee Curing at Rs 16.00 had good buyers. Mysore Lamp was at Rs 20.52. Parrys Confectionary today was fancied at Rs 4.50. Radio-Electricals was quoted at Rs 21.00. Spencer improved to Rs 19.75. Textool moved up from Rs 189.50 to Rs 194.00 on buying fervour.

London

UNCERTAIN conditions continued to prevail on the London Stock Exchange where sentiment was still affected by fears of higher interest rates. These were confirmed, to some extent, by a sharp rise in the UK Treasury Bill Rate.

Industrial equities suffered a fairly general fall due to selling pressure and the absence of any desire to open commitments for the new account. There were, however, some occasional firm features. The outstading movement was a sharp rise in Turner and Newall followink excellent results. Stores were generally better, while Motors were dull. Oil shares failed to maintain their recent upward trend. Although Gold shares were firm, they were selectively so. Giltedged securities were affected and there was a general setback in prices.

*

New York

PRICES on Wall Street showed an irregular tendency although there was good resistance to profit-taking and other selling following the recent advance.

Consolidation forces, however, assumed command of the market toward the close of the week, mainly due to hints that the Steel Union might make a new offer to the industry. Steels were among stocks moving upwards and recorded gains ranging to two dollars. On the other hand, Motors attracted new selling and losses ranged to two dollars. Anaconda Copper closed at $62 5/8; General Motors at $51 7/8 and US Steel at $100.

*

In Briefs

Bombay Safe Deposit Company has announced a dividend of Rs 30, subject to deduction of tax, for the year ended 30th September, 1959 as against Rs 26, free of tax, for the previous year.

The lighting-up of the Coke Oven battery No.1 marks a new stage in the progress of the Durgapur steelworks With the lighting-up of the Coke Oven battery No. 1 on 24th August, the Durgapur steelworks of Hindustan Steel Limited enters a new stage. ISCON is proud to announce that work on this battery has been completed nearly ten weeks ahead of schedule. When the process of gradually heating up the battery to operating temperature is completed, the Coke Ovens will be ready to supply coke for the first blast furnace to produce Durgapur's first pig iron.

HIGHLIGHTS OF THIS ISSUE

The shared ideals between the World's two largest democracies were evidenced in the welcome New Delhi accorded to Mr Eisenhower.

The memorable visit and the New Eisenhower are described in the Leading Article and Clive Street Gossip.

UNDER SECRETARY TO GOVERNMENT 22 DEC 1959 PUBLIC DEPARTMENT

man's faith

Faith that makes man aspire, strive ...
awakening him to tasks in the early-glow of dawn.
That melts rock, shapes granite; transforms
still waters to surging power.

faith in the living future:
a world that offers a little more—
little less of the care, a little more of the joy.
faith that gives meaning to life.

Today, as in the past, our products help to make homes cleaner, healthier, happier. But today we are also working for ... Tomorrow, when the evergrowing urge for better living will demand still greater efforts. And we shall be ready with wider service, new ideas, new products ...

Tomorrow... Hindustan Lever serves the home.

Stephens Ink claims its importance as far back as 1886 and there are authorities enough to prove that STEPHENS INK was used for all important documents.
Stephens Ink is known for its fluidity because it does not clog. Old and new pens 'feel' better and behave better. Use STEPHENS INK and your pen will never fail you.
Every batch manufactured is not bottled until it is tested in the laboratories in England.
The ink that doesn't clog

FOR THE INVESTOR

Investors to the Fore

Investment Gossip:

AFTER an initial setback equities have staged a recovery this week. It would appear that operators are regaining confidence in the pivotal scrip on the Calcutta stock market. I must mention here that ever since the publication of the Statement of the Chairman of IISCO, *Indian Irons* have tended to weigh heavily on the market and that marketmen were inclined to the apprehension that this scrip might be relegated to the background yielding its place to a new comer. The main reason for this line of thinking is the fact that all through the past few weeks investment counters have been ruling steady. Intrinsically Indian Irons are sound as ever but if it has been sluggish, it is the doing of those marketmen who had chosen to place an unduly bearish construction on the observations of the IISCO Chairman.

The steadiness of the generality of equities has stemmed largely from the sustained support from genuine investors, who have not been slow to comprehend the prospects of the corporate sector. True, even investors have been now and then worried over the deterioration of the Sino-Indian relations and the consequent indication of higher defence outlay by our country. But they have been carefully noting the fact that the Indian economy has also been gaining in strength from the rising tempo of industrial activity. And what is more important, indications have been in the past few months that 'Authority will not be placing obstacles in the way of the continued progress of private enterprise.

One may not be wrong, therefore, if one says that latterly the initiative has passed to investor from the speculators. And that is as it should be.

It would appear that the stock exchanges are at long last coming to their own deriving their strength from a wide variety of people. There are quite a large number of small priced shares with excellent growth prospects and even people with moderate funds are finding it profitable to take interest in equities. Against this investment backing the speculative elements seem to be finding it rather difficult to sway the market according to their whims and fancies.

New Issue Notes

Kirloskar Brothers Limited has decided to offer 20,000 new equity shares of Rs 25 each to the existing shareholders in the ratio of one new share for every eight shares held by them.

Cottanad Plantations Ltd., Madras, has proposed to issue 20,000 equity shares of Rs 10 each, at par, to equity shareholders, as on the 11th, January, 1960, in the proportion of one new share for every two shares held.

£ R$

Investment Notes:

It is understood that the Indian Rayon Corporation Limited, plans to commence production on the basis of 10 tons of viscose yarn per day instead of five tons as envisaged earlier. The doubling of the capacity is estimated to require an additional expenditure of about Rs 2.5 crores on the plant. According to present indications, this extra finance will be obtained from abroad.

The Ordinary shares of the Jessop & Company Limited have been a firm feature. The rate, after being pushed up to Rs 28 from Rs 25.25, is presently quoted around Rs 26 on profit-taking. This sudden rise in prices is inspired by reports that Sahu Jain has acquired the controlling interest in the company.

The Directors of the Mysore Silk Filatures Limited have stated that, as the resumption of operations of the factory is not thought profitable, they are thinking of giving the factory space, power and water facilities on lease.

Kirloskar Brothers Limited have recommended a dividend of 12 per cent, subject to deduction of tax, for the year ended 31st July 1959, on the increased capital. The company paid a dividend of 10 per cent, free of tax, in the preceding year.

Nellithanam Rubber, Madras, has reduced the dividend from 10 to 7½ per cent for the year ended 31st March, 1959.

Chandramalai Estates have declared a taxable dividend of 12 per cent for the year ended 30th June 1959 as against 15 per cent net in the previous year.

Ashoka Cement Pays Maiden Dividend

Balance-Sheet Reviews:

THANKS to a gradual improvement in production, the Ashoka Cement Company Limited has reported excellent working results for the year ended 31st March, 1959. Although production was affected at times due to the inability of the State Trading Corporation to provide despatch orders, production in the current year up to November is reported to be as much 126,922 tons against only 114,018 tons for the full year 1958. Despatches are also higher at 131,245 tons against 116,617 tons.

Sales have gone up to Rs 1.08 crores from Rs 98.79 lakhs, while the net profit, after providing for Depreciation, is susbtantially higher at Rs 5,52,351 against Rs 30,035 in the previous year. The Depreciation amount is raised to Rs 6.52 lakhs from Rs 21,936 and Development Rebate Reserve to Rs 2.99 lakhs from Rs 23,620. The directors have recommended a final dividend of 15 nP per share, making a total of 45 nP, being the maiden dividend for the company.

According to the directors' report, the company has set up in collaboration with certain other cement manufacturers an organisation under the name and style of "Sahu Cement Service" for rendering technical service to users of cement and for promoting the use of cement in construction by providing information on new and improved methods. The directors hope that the working results for the current year will show further improvement.

£ R$

Indian Plastics

Indian Plastics Limited has reported a net profit of Rs 98,914 for the year ended 31st March 1959 as against Rs 86,892 in the previous year. Sales have risen to Rs 71.21 lakhs from Rs 62.95 lakhs. The Depreciation amount is maintained at Rs 1.50 lakhs, while the sum provided for Development Rebate Reserve is raised to Rs 15,468 from Rs 3,824. Wealth tax provision is reduced to Rs 24,304 from Rs 49,722. The directors have been able to recommend the dividend only on the Preference shares .

The development work is going on satisfactorily. Production of Urea powder has already started, though on a small scale, which has been sold in the market. The working of the current year is much better in comparison with that of last year and the directors hope to show better results.

Valuable Protection for Valuables

Your home is perhaps a vulnerable place for keeping costly jewellery and important documents. Why run the risk of losing your valuables by theft, fire and other hazards?

The local head offices and branches of the State Bank of India afford facilities for the safe custody of your personal effects at moderate charges.

Facilities are also available at local head offices and at a number of important branches for hiring lockers of various sizes.

By depositing your valuables in the State Bank, you will save yourself the worry about their safety.

Please contact the nearest Branch Agent for further particulars.

Sarugaon Tea

The Sarugaon Tea Company Limited has shown an increase in the net profit from Rs 1.07 lakhs to Rs 1.96 lakhs for 1958. The directors have provided a sum of Rs 33,048 (Rs 50,021) for Depreciation; Rs 1.65 lakhs (Rs 94,500) for Taxation; Rs 75,000 (nil) for General Reserve and Rs 1.781 (Rs 25,000) for Development Rebate Reserve. The final dividend of Rs 2 makes a total of Rs 5 per share for the year as against Rs 2 in the previous year. The crop outturn is higher at 9,273 maunds against 7,809 maunds and the average price realised at Rs 1.92 against Rs 1.78 per lb.

£R$

Midnapore Zemindary

The Midnapore Zemindary Company Limited has again incurred a loss of Rs 1.25 lakhs for the year ended 14th April 1959 as against a loss of Rs 1.87 lakhs in the previous year. The Depreciation amount is lowered to Rs 2,100 from Rs 58,219. A debit balance of Rs 20.86 lakhs is carried forward to next year.

The company's Zemindary rights, which have been acquired by various State Governments, have been shown at their book value of Rs 82.24 lakhs. Little progress has been made by State Acquisition authorities toward the settlement of the company's various claims in respect of acquired properities and the position continues to be most unsatisfactory.

A return of capital of Rs 7.50 per share was sanctioned in March 1959. The Board of Directors now consider that the funds of the company are sufficient to enable a further return of Rs 7.50 per share to be made, although this requires the sanction of the High Court.

£R$

British India Corporation

The British India Corporation Limited seems to have turned the corner. Somewhat better results have been obtained for 1958, showing a surplus of Rs 28.29 lakhs. Out of this, the directors have provided Rs 8.72 lakhs for Bad Debts; Rs 11.76 lakhs for Depreciation; Rs 5.92 lakhs for Development Rebate and Rs 9.79 lakhs for Investment Reserve, making a total of Rs 36.21 lakhs. This leaves a loss of Rs 7.92 lakhs which, with the carry-forward debit balance of Rs 11.35 lakhs, makes a total of Rs 19.28 lakhs. This loss has been adjusted against Reserves, which now stand at Rs 1.36 crores.

Although results for the year show an improvement, they are still unsatisfactory due to losses sustained by the Cawnpore Cotton Mills branch and the Copper Allen branch. Production and sales at the company's woollen branches have, however, continued to be satisfactory. The full control and management of the Corporation's afairs now rests in the Board of Directors, appointed by the Allahabad High Court.

why we advertise

Mr. Dharamsey Khatau, well-known industrialist, Chairman of The Associated Cement Companies and Director of several manufacturing concerns

A POTENT FORCE in the world today—a force which affects the way we live and think, a force of which we can never be entirely unaware, is Advertising. A great power for good, a tremendous educative force, its message and influence are brought to bear on us in many places, in many ways.

My own experience in industry has convinced me that Advertising not only assists the *manufacturer* in the development of his business. It also brings many very real benefits to the consumer—to *you*.

Misunderstandings exist about Advertising. Questions are asked: What service does Advertising perform? What can it actually achieve? Does it bring any benefits to the public, apart from stimulating the sale of goods? Does it improve our standard of living? Does it not *add* to the cost of the things we buy?

We feel the time has come to answer the questions, clear the misunderstandings—and help the *public realise the facts about this* beneficent force. This is the first of a series of announcements about Advertising which will appear in this paper...a series to which well-known personalities will contribute, telling you how and why advertising is used in many fields of merchandising.

Good advertising serves *you*

to Rs 22 lakhs. Out of the previous year's loss, Rs 11 lakhs was set against General Reserve. With the result, the carry-forward loss came to Rs 10.77 lakhs. This, together with the current year's loss, makes a total of Rs 28.90 lakhs, which is carried forward to next year. Sales have declined to Rs 2.06 crores from Rs 2.44 crores.

£R$

Britannia Building & Iron

Although sales have declined from Rs 81.79 lakhs to Rs 77.89 lakhs, the Britannia Building & Iron Company Limited has reported a slight rise in the net profit to Rs 2.89 lakhs for the year ended 31st March 1959 after providing a sum of Rs 2.65 lakhs (Rs 1.86 lakhs) for Depreciation and Rs 16,600 (Rs 16,000) for Wealth Tax. A sum of Rs 1.30 lakhs is set apart for Taxation Reserve. The dividend on the Ordinary shares is raised to 60 nP from 50 nP per share.

Jaipur Udyog

The working of the Jaipur Udyog Limited shows a setback for the year ended 31st March 1959 with the gross profit declining from Rs 58.19 lakhs to Rs 52.04 lakhs. After providing Rs 30 lakhs (Rs 35 lakhs) for Depreciation and Rs 22 lakhs (Rs 40,000) for Development Rebate Reserve, the net profit works out to Rs 4,961 against Rs 21.66 lakhs in the previous year. The directors have passed over the dividend as against 12½ per cent paid for the previous year. Sales have, however, moved up from Rs 3.51 crores to Rs 3.78 crores.

Nothwithstanding the substantial increase in installed capacity, production during the year was maintained practically on the same level as in the preceding year. There has since been some improvement in offtake and, therefore, in production. Better working results are, therefore, expected for the current year.

"The Wise Man in his attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right"—The Analects of Confucius.

A Memorable Visit

PRESIDENT EISENHOWER has left New Delhi after a five-day visit that will long abide in his and other memories as a cherished experience. By all accounts, nothing like this has ever happened to Mr Eisenhower, not even when, a conquering hero, he visited London in 1945. Nearly two million people from far and near had gathered in Delhi last week to get no more than a mere glimpse of him. The why and wherefore of this magnificent demonstration of warm-hearted affection will long continue to be debated, but of the fact there is no doubt. No stage-managed, made-to-order enthusiasm could have had the spontaneity and unaffected goodwill that characterised the welcome accorded to Mr Eisenhower.

What lay behind this phenomenon, in describing which hardened journalists, as Mr Eisenhower jokingly remarked, had run out of superlatives? Crowds are not particularly new in India, as any one who has seen the great congregational festivals religiously ordained would testify. In a sense, the "mela" gives a clue to the understanding of why millions on bullock carts and on foot went to the Ramlila Grounds on Sunday. Reverence is a basic Indian trait and a good man will never lack a worshipper in India. We have often enough been rated for this idolatrous self-abasement. But Swami Vivekananda—a name appropriately invoked in an Indo-American context—had long ago exposed the shallowness of the cynicism that derides the worship of the Mahatmas. Of the two million people that greeted him, hardly more than a few thousand knew about the military claims to greatness of the President or even about the new dimensions to his political personality he is currently adding. Their curiosity was mainly about that elusive quality, human goodness, and their faith was that it is meritorious to honour a good man.

This is only part of the explanation. Mr Nehru and Mr Eisenhower pointed to others in the course of their various speeches during the eventful week. The most important of these is a community of ideals at conscious and unconscious levels, a common way of thinking and feeling about human affairs. Unconsciously, the two people have come to regard certain values as absolute. The roots of these convictions go deeper than accidents of history and politics, and they are sustained by a shared fundamental attitude toward the inviolate character of the human spirit. By and large and until recent times, the source of this feeling in India was religious. Its most characteristic expression was the profession and practice (as far as humanly possible) of a certain contempt for secular and temporal affairs. In the US, too, the principal influence was that of non-conformist Christianity that asserted the importance of the human spirit. But, more recently, humanist ideals have fostered the same reverence for the human personality both in the US and India. At conscious levels, both countries have had a self-conscious colonial past in which freedom and representative Government have been sanctified by sacrifice and suffering. What is even more significant, both countries have found themselves obliged to enshrine in set legal terms the political and social values that they hold fundamental. In the American and Indian Constitutions are to be seen not only the end products of a struggle, but a distillation of a faith. India and the US can become totalitarian only after ceremoniously burning their respective constitutions; and, when they do that, they would have burnt out their entire past and the most important part of themselves.

It is these shared ideals that made the Indian people instinctively honour the distinguished visitor from the US. In fact, the historical similitude applies not only to the coincidence of a colonial past but also to the accidents of our particular great men and compulsions of policy. The resemblances between Gandhiji and Lincoln are so many and on so many points of detail that, in retrospect, it does not come as a surprise that even their manner of death should be so symbolically identical. Likewise, the Jeffersonian strand in Mr Nehru's character is there for any one to see. It manifests itself particularly in the foreign policy he is pursuing and the motives that are behind it. Jefferson's first inaugural in 1801 spelt the US foreign policy as "peace, commerce, and honest friendship with all nations—but entangling alliances with none". It describes accurately our own today. It is a policy to us ten years after our independence as inevitable as it was to the US twentyfive years after its independence and for much the same reasons. Nothing that has happened in the last twelve months has made this policy in any way obsolete. On the other hand, as we pointed out two weeks ago, from the point of view of world peace, this was the best thing that could have happened.

Another shared ideal that makes these two largest democracies "neighbours", though separated by ten thousand miles, is the pursuit of world peace. To Mr Eisenhower personally, the present endeavour constitutes the most significant act of his life. There can hardly be any doubt that, in the last year, Mr Eisenhower's personality has acquired a new stature and he seems to have sensed a historic destiny that has been thrust on him. This alone explains the series of well-coordinated moves he is making to ensure, as far as is humanly possible, a world free from the threat of instant annihilation. Significantly, roughly about the same period, there is everywhere a certain sense of suppressed anticipation, as though history was "holding her breath". If Mr Eisenhower succeeds in his endeavour, even partially, he would have been probably the most important benefactor of mankind in modern times. In this endeavour, he needs all the goodwill of mankind; and, in the welcome given to him in Delhi, he must have seen a measure of the Indian goodwill for his great task. A good man engaged in a great purpose will never fail to evoke an instantaneous response from an Indian heart. This perhaps is the real explanation of the phenomenon witnessed last week in Delhi.

Discharge of Workers cannot be Lockout

By M. SUR

A FORTNIGHT AGO, we commented on the Supreme Court's decision upholding the common sense view that an illegal strike could never be justified. Now, the Supreme Court has again come to our aid over the interpretation of the word "lockout". Discharge of workers cannot be interpreted as a lockout, says the Supreme Court. To the layman, it would not have occurred that termination of service could be argued to amount to a lockout, but that has been the line of argument in a number of cases in recent years

The Industrial Disputes Act defines lockout as "the closing of a place of employment, or the suspension of work, or the refusal by an employer to continue to employ any number of persons employed by him." The earlier Trade Disputes Act of 1929 had made clearer the intention behind lockout, namely, that it must be "for the purpose of compelling those persons or affecting employment", but this phrase was dropped in the later Act and gave rise to the argument that the omission must have been deliberate and that "refusal to continue to employ any number of persons" must include cases of termination of more than one person at a time.

Away back in 1952, the Labour Appellate Tribunal had tried to knock this argument on the head and had declared authoritatively that "lockout is the counterpart of strike, the corresponding weapon in the hands of the employer to resist the collective demands of the workmen or to enforce his terms", and had added that lockout must be in relation to a dispute. (Presidency Jute Mills, L.A.C. 52.67) The Madras High Court also held that "lockout is a means of exerting pressure on employees" (Sri Ramchandra Spinning Mills, A.I.R. 56. Madras. 241). Subsequently, the Labour Appellate Tribunal held that retrenchment could not come under the definition of lockout, and the Supreme Court in the case of Banaras Ice Factory Ltd (LLJ. 57.I.253) held that termination of service on account of bona fide closure of an establishment could not be treated as lockout.

Still the question of whether ordinary discharge of several workmen could come under the definition of lockout in the Industrial Disputes Act continued to be agitated, and we can only hope that the recent judgment in the case of Indian Iron & Steel Co will finally lay the ghost to rest.

The Labour Appellate Tribunal in 1952 had pointed out that it would be absurd if lockout were to be applied to ordinary termination of service, as this would mean that a public utility service could never discharge more than one worker at a time without prior permission from the Conciliation Officer. It is exactly this situation which faced the Indian Iron & Steel Co. Certain workers had been found guilty of instigating others to take part in an illegal strike, and the Company gave them notice of dismissal. The workers argued that, although the strike had taken place, it was not illegal because it had been brought about by

an illegal lockout declared by the management. Both the lower court and the High Court had rejected this contention, but the workers appealed to the Supreme Court.

On the contention that the employers had declared a lockout, the Supreme Court held that, on a proper construction of the notices issued to the concerned workmen, there was not a refusal on the part of the company to continue to employ them, as contemplated in the definition of lockout, but merely a discharge of the workmen. Further, they held that the definition in the Industrial Disputes Act could not include the discharge of employees. Lockout, observed the court, is the counterpart of a strike by the workmen, and during a lockout, as during a strike, the relationship of employer and employed still subsisted between the parties.

RIGHT TO PROHIBIT TRADE

In a very interesting judgment on the petition of Narinder Kumar and others against the Union of India concerning the Non-ferrous Metal Control Order, the Supreme Court held that the Constitution permitted the enactment of laws wholly inconsistent with the exercise of the fundamental rights of property and business, provided such restrictions were reasonable and in the public interest, and that the power to restrict trade must also be construed to include the power to prohibit it completely.

It was argued by the petitioners that the effect of the order concerned was to prohibit completely the right of middlemen to do business in imported copper, and that this violated Article 19 (1) F. & G. of the Constitution, which guaranteed the fundamental rights to acquire and dispose of property and to carry on any business or trade. The petitioners complained that the Controller, acting under the Non-ferrous Metal Control Order, had refused to give them permits to purchase copper for which they had entered into contracts in the market. The order had prohibited sale or offer for sale of any non-ferrous metal at a price which exceeded the amout represented by an addition of 3½ per cent to its landed cost. This, the petitioners said, would have the effect of completely removing the dealers from the trade, and would thus violate the Constitution. With this the Supreme Court did not agree, holding that the authorities had the power to prohibit as well as to restrict, though in the particular case the clause of the control order was declared void because the Government had not notified the principles regarding the issue of permits in the Gazette and placed them before Parliament.

Utilisation of Foreign Loans

THE historic Eisenhower Week in New Delhi was happily marked by a mute demonstration by the surging crowds of their gratitude to the United States. It was happily not marred by too much a public discussion of foreign aid. Now that the American President has left, the question is coming to the fore again in two of its aspects—the extent of utilisation of foreign loans authorised for the Second Plan and the problem of interest and repayment obligations during the Third Plan.

There has been some public criticism in recent months of the delay in the utilisation of authorised foreign loans. This criticism is not quite justified, for, after all, the amount of unutilised foreign aid (mostly loans) expected to be carried forward beyond 31st March, 1961, will only be Rs 128 crores, as compared to Rs 94 crores of unutilised foreign aid which was carried forward from the First to the Second Plan. That the larger volume of foreign aid for the Second Plan will have been utilised faster than the smaller volume of aid that was utilised during the First, is thus clear. Such delay as there is in utilisation, as the Finance Minister has recently stated, is due to the fact that certain credits may be utilised only for purchases within the countries which extend the credits. The selection of projects suited to the availability, at reasonable prices, of equipment therefor within the countries extending such credits has necessarily involved some delay. This point has to be kept in mind while the reader runs his eyes over the tabular statement.

The delay in utilisation has been particularly in evidence in respect of the US Export-Import Bank credit of $150 negotiated early in 1958. The principal difficulty in utilising this credit, which is tied to purchases in the United States, is the comparatively higher prices of certain items of US machinery and equipment. Moreover, the credit is restricted for procurement of capital equipment for which there would naturally be a time lag between credit arrangement and actual procurement. The progress of utilisation of this line of credit has, therefore, been comparatively slow: the value of orders placed and the amount reimbursed so far in respect of public sector schemes are $31.3 million and $8.2 million respectively and in respect of private sector schemes, $24.0 million and $3.8 million respectively.

As for the problem of repayment and interest obligations, it is estimated that they may amount to slightly under Rs 100 crores per annum during the Third Plan. Although the "going into production", during the Third Plan period, of projects (in both the sectors) having an import saving potential will enable the country to save a portion of the foreign exchange needed to meet the repayment obligations, the more crucial effort would have to be made in the sphere of export trade. The Finance Ministry's view appears to be that exports should be maximised by restricting, if necessary, current consumption and that, in the context of the heavy repayment obligations, the present import restrictions would have to be continued for a considerable time. Continued austerity is thus foreseen. But it is not inconceivable that the rigours of this austerity may be mitigated by greater aid from the United States, whose President has just carried with him some heartening impressions of the strength and stability of India's democracy. It is here that one may reasonably look forward to President Eisenhower and his successor (whether Republican or Democratic) taking the US Congress with him on the question of expanded economic aid.

EDITORIAL NOTES

Food Strategy

Mr Patil's reply to the food debate in Rajya Sabha gives a clear indication of the strategy he would like to pursue to get on the top of the food problem. The long-term objective is to release the forces of production by appropriate incentives and particularly by minimising the area of Government control. To that end larger zones are to be set up as the first step to replacing them by a single zone covering the whole country. The adverse effects of marginal shortages are to be countered by judicious use of the buffer stock of five million tons of wheat and rice which he proposes to build up. The long term strategy indicated by Mr Patil would have appeared more satisfactory, if the steps that are to be taken in the immediate future to keep prices in leash were less hazy. Neither Orissa nor Madhya Pradesh has shown any enthusiasm for the link-up with neighbouring deficit states. The question whether Orissa has any genuine surplus will also bear more detailed investigation. According to official statistics of production given in the annual number of the Agricultural Situation in India the per capita availability of cereals in Orissa is less than in West Bengal even without taking into consideration supplies from the Central pool to the latter State. The result of a link-up in such circumstances will be to aggravate distress in Orissa. Mr Patil however is perfectly right in seeking to dispel the psychology of scarcity. He can do so to greater effect, once he has built up the buffer or, is at least able to give a firm indication of where the five million tons are to come from.

Rural Survey

An exhaustive survey of rural credit in India in three massive volumes has been made by the Committee of Direction set up by the Reserve Bank in 1951-52. The preliminary investigations covered a very wide field, extending over 1,30,000 families resident in 600 villages. The all India report was based on detailed monographs on the rural economy of 75 selected districts spread over different regions. The Reserve Bank has rendered great service to students of Indian Economics by making some of these valuable monographs available in book form. So far 13 monographs have been published, the latest relating to West Godavari in Andhra Pradesh.

The recommendations of the Committee's report regarding rural credit may soon become out of date and inapplicable in the rapidly changing conditions of rural areas. But these monographs with their wealth of factual information regarding different aspects of rural life will continue to remain the source books for study of the economics of the Indian countryside. They can also be of invaluable assistance in drawing up workable programmes of rural reconstruction. The monographs are in three parts, respectively describing the main features of the agrarian economy of the district, in particular the villages selected for field investigation, analysis of the demand aspects of rural credit, and description of the working of rural credit organisations. Together the monographs make up a fascinating mosaic of India's rural economy.

The West Godavari district, the subject of the latest monograph, is one of the most fertile rice-growing areas in the country. The district also grows important commercial crops like, sugarcane, oil seeds and tobacco and has a well-developed transport system. A substantial proportion of the district is also under irrigation. But the average annual gross produce of the upper strata of cultivators was found to be only about Rs 1,800 per family. In the case of the lower strata of agriculturists, who supplemented their income by casual labour, their total cash receipts amounted to Rs 667 per family, of which Rs 342 represented the value of the agricultural production. These figures show the great leeway that has to be made up before rural standards of living can be raised to adequate levels.

The report shows both the scope that exists for extension of cooperative organisations as well as their inadequacy. The bulk of the credit to cultivators came from private agencies. And it is interesting to learn that the rates of interest charged by the private agencies were not exorbitant, and, besides, they offered several advantages, such as informality in procedures, promptness in giving loans, flexibility in volume of credit etc., which are greatly appreciated by their clients. The Co-operative movement, on the other hand, has not made much headway, in spite of existence of the well-organised administrative machinery of the Co-operative department specially designed for working the system and well-established channels of finance. The outstanding defects of the Societies, as the Survey points out, were that of indifferent or improper management, and domination of the Societies by powerful local groups who monopolise the benefits. These defects of the Credit Societies, which have been established for a long period, should serve as warning against hasty attempts to place agricultural production in charge of co-operatives.

*

Salt Report

Salt has been described as an article of daily necessity which is also a vital industrial raw material. In India the importance of this dual purpose material is heavily overlaid with political associations. Salt provided Mahatma Gandhi with the inspiration for the movement for Independence launched in 1930. Government policy regarding Salt, after the attainment of independence, has been an uneasy compromise between the commitment not to tax the poor man's salt, and the practical requirements of organising production on an efficient basis. The Salt duty was abolished in 1947 and the limited concessions allowed to villagers under the Gandhi-Irwin Pact of 1931 were extended to units covering not more than ten acres, along with removal of the restrictions on transport or sale. A cess of two annas per maund, with marginal adjustments, was levied from larger manufacturers. If increase in the volume of production is the only criterion, the policy pursued has been crowned with complete success. From being heavily deficit in salt production at the time of the Partition, India is now producing not only enough for domestic requirements but also for export. Production has increased from about 1.9 million tons in 1947 against an estimated consumption of 2.1 million tons to over 3.6 million tons in 1957 which left a surplus of 300,000 tons for export. The target set for the last year of the Second Plan has already been exceeded, and the manufacturers are now facing the problem of overproduction.

With the rapid expansion of chemical industries that is envisaged there cannot be any real over-production of salt. It is estimated that the requirements of the chemical industries alone for manufacture of soda ash and caustic soda by 1966 will be of the order of two million tons. Taking into account the increased demand for food processing, fish preservation, cattle feed etc, the total requirement for edible and industrial purposes, including provision of half a million tons for export, is estimated round about 5.5 million tons. A substantial effort will, therefore, be necessary to step up production in order to cope with the increased demand that is expected to develop in the near future. But the pattern of development that has taken place so far does not enable the industry straightaway to take full advantage of the great scope for expansion that exists. Salt used for industrial purposes in the chemical industry must satisfy exacting standards of purity. Only large units can be expected to take the steps necessary to maintain requisite standards of quality. Production of salt is spread over 148 large units of more than 100 acres each, 413 medium units of between 10 and 100 acres and 9119 small units of less than 10 acres. The small units are not required to take out licences, and the salt manufactured by them is exempt not only from levy of cess but also from quality control which is enforced on big manufacturers. The result has been that unlicensed salt of indifferent quality has priced out salt of higher standard, and large manufacturers find themselves in a disadvantageous position, while some of them have been actually driven out of business.

What the salt industry requires is a coordinated programme of development which will enable the large units to meet the new industrial demand, without driving small units out of business. The Committee appointed by the Government of India to examine the question, had to reconcile conflicting considerations in making its recommendatons. The Committee has recommended that all manufacturers should be licensed or registered and suggested that exemption from cess for small units should be replaced by a graded system of cess levied on all units, with total exemption for the first 5,000 maunds. The Committee has also recommended measures to encourage formation of co-operatives of small producers, which will be exempt from cess on their entire production.

WORLD OF FINANCE

Bleak Prospects For Bank Profits

LESS than two weeks remain for Scheduled Banks to strike their balance as at the end of 1959 and arrive at the profit made for this year. We are afraid that it seems to us extremely unlikely that the banking system generally will be able to give a good account of itself in respect of the current year. For, the average of Advances of Scheduled Banks for the first nine months of 1959, at Rs 970 crores, shows an increase of only Rs 61 crores over the average of Fridays over the year to March 1959, against which the average of Time Liabilities alone has risen from Rs 862.80 crores for the year to March 1959 to Rs 997 crores. In other words, the average of higher costing Deposits exceeded the average of higher earning assets, in the case of the banking system, during the first nine months of 1959. Again, as against an Advances-Deposits ratio working out to an average of 58.05 per cent for all Fridays in 1958-59, the relative figure for the first nine months of 1959 is 57.53. It is known that the Advances-Deposits ratio was lower in October and November, (the average for October is 51.82 per cent, and the average for November even lower at 50.88 per cent). It is thus clear that, on the one hand, banks were utilising a lower proportion of Deposits in higher earning Advances. On the other hand, higher costing Deposits exceeded higher earning assets.

However, the fate of Scheduled Banks for 1959 will have been partly saved by the fact that Scheduled Banks have been consistently adding to their giltedged portfolio from their new accruing and newly freed resources. Nevertheless, it seems to us that the few figures which have been given in this article presage a year of declining profits for the banking system generally.

Such a state of affairs does not surprise us, since we have been apprehending that banks, profits would be squeezed by the fact of Deposits costing more and Advances earning relatively less. We hope to make a fuller study of this subject next week, and to suggest at that juncture the means whereby the lessons painfully learnt from the experience in 1958 and 1959 can be put to proper use.

+

Sharp Rise in Bank Advances

BUSY season conditions are confirmed by the returns of the Reserve Bank for the week ended December 11. On top of the expansion in active notes of Rs 31.05 crores in the previous week, the latest return for the Issue Department shows there has been a further rise of Rs 21.11 crores to Rs 1731.37 crores in notes in circulation. Similarly, there has been an outflow of Rupee Coin in the not inconsiderable amount of Rs 0.73 crores. Currency has been expanded for Rs 15 crores against Rupee Securities by transfer from the Banking Department. Notes held, consequently, are shown lower by Rs 6.84 crores at Rs 8.36 crores.

The figures relating to the Banking Department suggest that the expansion in currency circulation is owing to normal busy season needs rather than governmental transactions, although there is evidence of the latter. For, the governmental transactions appear to relate to monthly repayment by the States to the Centre, Deposits of State Governments being shown Rs 5.32 crores lower at Rs 9.34 crores, despite a rise of Rs 1.20 crores to Rs 27.86 crores in their Ways and Means borrowings from the Reserve Bank; and the Central Government's Deposits, with no evidence of deficit financing, are higher by Rs 7.17 crores at Rs 60.06 crores.

On the other hand, there has been a sharp decline of Rs 9.70 crores to Rs 68.54 crores in the Reserve Balances of member banks. This is despite an increase of Rs 4.35 crores to Rs 90.95 crores in the Reserve Bank's portfolio of Other Loans and Advances. It is hard to accept the proposition that banks felt the pressure during the week ended December 11 of the spill-over of month early disbursements into the second week; for, evidence of this pressure was considerable enough during the week ended December 4.

There is a smart rise of Rs 10.27 crores to Rs 16.53 crores in Government Treasury Bills purchased and discounted by the Reserve Bank. We are to infer that State Governments sought in this wise to replenish their balances in order to make payment to the Central Government.

Investments in the Banking Department, by dint of the transfer to the Issue Department for covering the note issue, are lower by Rs 15.59 crores at Rs 227.15 crores.

Finally, Balances Held Abroad have again improved, though by only a shade under Rs 1 crore from Rs 41.21 crores to Rs 42.18 crores.

+

In the return of the State Bank for December 11, however, there is no such evidence of busy season conditions. The Advances portfolio shows a fractional rise from Rs 159.20 crores to Rs 159.28 crores. Similarly, the decline in Deposits is a nominal one of Rs 0.64 crores to Rs 576.18 crores. It is possible, we suggest, that busy season conditions during the week under review have perhaps been camouflaged by the drain on Deposits being offset by new, accruing Deposits. In any case, giltedged investments are somewhat higher at Rs 394.15 crores. An increase of Rs 4.09 crores to Rs 22.52 crores in Other Assets is mystifying, because, though it is possible, it is unlikely that this should presage the purchase of securities from the Reserve Bank. In the end result, cash in hand and with the Reserve Bank is reduced by Rs 6.77 crores to Rs 20.64 crores.

+

Month early disbursements and the emergence of busy season demand are sharply reflected in the return of Scheduled Banks for December 4. The total of Advances has jumped up by Rs 11.89 crores to Rs 935.39 crores; the share of the State Bank being Rs 4.63 crores. Gross Deposits have been drawn on to the tune of Rs 10.67 crores, and are placed at Rs 1874.98 crores; the share of the State Bank, in this case, is Rs 3.10 crores. In the light of such pressure, Scheduled Bank borrowings have increased considerably. Indebtedness to the State Bank has gone up from Rs 4.56 crores to Rs 7.67 crores. Borrowings from the Reserve Bank have risen by Rs 5.17 crores to Rs 6.74 crores. The investment portfolio shows a drop of Rs 1.26 crores, wholly ascribable to State Bank. In the end result, Cash Balances have moved down by Rs 8.34 crores to Rs 161.68 crores.

+

It may be expected that busy season conditions will continue to be reflected in the next banking returns. However, the busy season as such is likely to gather momentum only from the middle of January. But then, it should not be forgotten that the next three weeks, in the case of the Scheduled Bank returns, will also reflect transactions connected with the usual year-end window-dressing. We wonder whether some of the Scheduled Banks will not try to bolster their cash position with sales of giltedged.

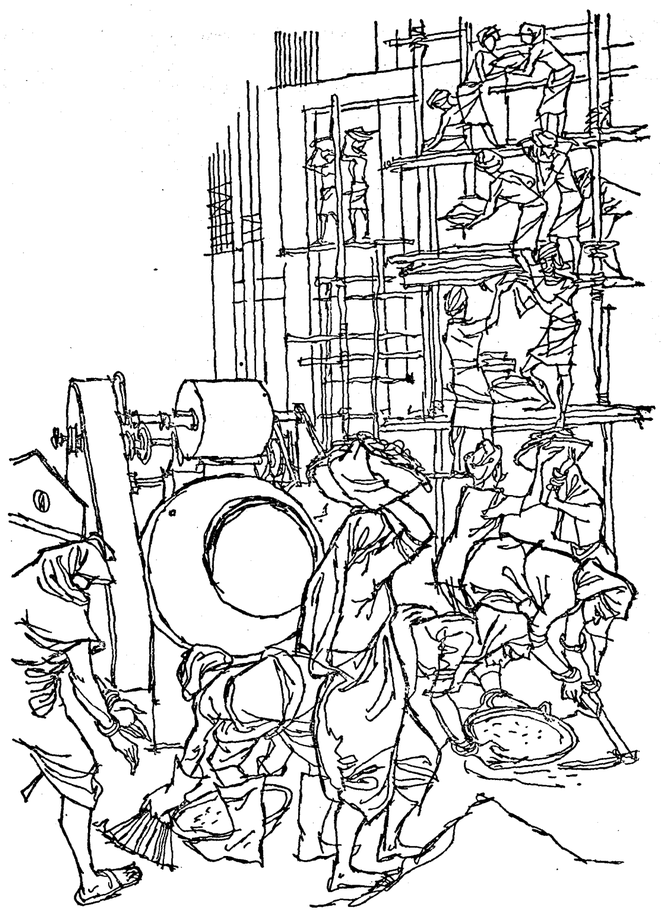
The British Bank Rate Outlook

By Paul Einzig

THE London Stock Exchange appears to have got over the Bank Rate scare that dominated sentiment earlier this month. Indeed, the **Financial Times** index of industrial equities has risen above its previous records. The rise is now much more selective than it was before, so that it is no longer possible to buy indiscriminately and to rely on the general rising trend. Until recently, it took an overdose of bad luck for anyone to choose an industrial share which remained aloof from the rising tide. The recent rise in some prices more than offset the almost complete absence of increases in many other prices and the fall in some prices. The trend is still upward, owing to the fact that the market does not expect at the time of writing an increase in the Bank rate in the immediate future.

Sterling, too, became somewhat firmer during the second week of December, and for a day or two it rose once more to a premium against the dollar, only to slide back to a discount. This renewed weakness is not so pronounced, however, as to foreshadow a higher Bank rate. The authorities must be losing gold by supporting sterling in the market, but the extent of the losses is not believed to be alarming. The widening of the gap between imports and exports in November is viewed with dismay but without undue alarm at any rate as far as the immediate future is concerned. For the present at any rate, Britain can afford to lose some gold without having to take drastic steps to check the outflow.

The recent reversal of the flow of gold to Britain must be viewed in its bearing on the American gold position. To the extent to which Britain's loss is America's gain, enlightened opinion in London would almost welcome the outflow—at any rate so long as it remains within moderate limits. The importance of checking the gold drain from the United States is widely realised in Britain, especially in official circles, which would not in existing circumstances try to check a westward flow of gold either by raising the Bank rate or by resorting to the device of supporting forward sterling in order to discourage the withdrawal of funds through interest arbitrage, unless the extent of the losses should become embarrassing.



Up to the time of writing, Britain's loss of gold did not seem to have been the gain of the United States but of Western Germany. The increase of the German Bank rate appears to have drawn to Germany considerable amounts of gold from various countries. Hence, the recent increase in the German gold reserve. The German Bank rate policy, intentionally or otherwise, attracts gold to increase a gold reserve which is already too large in relation to Germany's international requirements. Of course, it is arguable that this is merely an incidental effect of the Bank rate increase which was decided upon primarily in order to resist domestic inflation. But the German monetary authorities would be well in a position to neutralise such effect of the Bank rate, if it is unintentional, by selling forward Deutschmarks, thereby making it less profitable for arbitrageurs to transfer funds to Frankfort. This has not been done, however.

There is no intention in London at present to follow the German example. The London Bank rate is expected to be kept low for some time, in order to avoid interfering with the efforts of the American authorities to check the outflow of gold. There is, of course, a limit beyond which Britain could not afford to allow the reserve to weaken. But that limit is still at some distance, and no defensive measures are considered necessary for the present.

In order to form an idea about British Bank rate prospects, it is necessary to focus our attention on the British domestic situation rather than on the tendency of sterling or of the gold reserve. The index of the cost of living in Britain continues stable. That being so, a further decline in the gold reserve is in itself not likely to induce the British authorities to raise the Bank rate to a level unwarranted by domestic economic conditions. Only if and when British prices should resume their rise would such a measure become considered necessary. The Chancellor of the Exchequer, Mr Amory, is intensifying meanwhile his efforts to induce industrial firms to lower the prices of their goods. These efforts have not been altogether unsuccessful in recent months, as there have been a number of cuts the effect of which has been to neutralise the continued rise in other prices. Whether this resistance to the resumption of inflation will continue to be successful will depend on the possibility of resisting wage demands.

The outlook in this respect is none too satisfactory. Although resisting excessive wage demands, employers in a number of industries have conceded shorter working hours to their workmen. This may be the smaller evil, because the resulting increases in overtime pay are more flexible than an increase in basic wage rates. It is inconceivable today that any trade union would ever consent to a cut in wages, but a decline in demand for manufactures can be met by a reduction of overtime. In existing conditions, amidst the growing scarcity of labour, however, additional overtime pay is fully as inflationary as an increase in wages. The Government are hoping against hope that an obvious decline in prices might induce the unions to abandon or moderate their claims. it seems to be unlikely, however, that the unions would do so under the existing balance of power.

WORLD OF TEA

Crop Statistics and Prospects

ACCORDING to trade sources in Calcutta, the price gap between teas of the best varieties and plain sorts has narrowed down considerably during the current season. This phenomenon is attributed to the strong demand for Common teas and the deterioration in the quality of the top grades. Thus, the price differentials between the best teas and the Common sorts now range from 60 nP to 80 nP a pound as against Rs 2.00 to Rs 2.75 at the beginning of the current season.

Again, sales and absorption of tea, at different centres, have increased considerably during the current year when the tea outturn is expected to be lower than last year. In this connection, it may be added that statistics, published in London, show that the surplus of 50 million pounds of tea that existed last year has now been fully taken up demand. Some traders in London have even predicted an actual shortage next year.

Despite some increase in production in North India and East Africa, the total outturn of tea in the major producing countries, in the current season, is running about 8.6 million pounds behind last season. With the advent of an early cold weather, the North Indian output, during the current month, is expected to show a further fall. Not only will teas of autumnal manufacture be scanty but also the decline in quality, when it sets in, may well be more abrupt. The relative arrivals may also show more pronounced tapering off toward the close of the year.

The North-Indian crop declined by 2.5 million pounds to 54.5 million pounds in November as compared with the same month in 1958. The total crop, up to the end of November, amounted to 545.1 million pounds against 543.1 million pounds in the corresponding period of last year. Since the crop in the current month is not expected to be over 10 million pounds, the total crop for the year may not differ much from the previous year's level.

The tea crops of the other major producing countries to date are as follows (figures in million pounds):—South India 14.5 (estimated) for October (total up to October 122.1 against 135.4); Pakistan 6.1 for November (total from April to November 53.5 against 52.5); Ceylon 308 for October (total January to October 335 against 341.8); Indonesia excluding West Sumatra 7.0 for July (total January to July 54.00 against 58.00); Nyasaland 0.9 for October (total January to October 19.8 against 18.6) and British East Africa 4.5 for October (total January to October 36.8 against 32.6). Thus, it seems more than likely that the world tea crop will not show any increase in the current year over last year's outturn.

Meanwhile, in the Export Sale held in Calcutta, offerings consisted of 71,661 packages. The demand was fair, but rather less general than in the last two sales. Plain and medium brokens were steady; but Fannings grades were irregular. Medium Assam BOPs and OFs tended easier; but any with improved liquors were sought after. Best CTC Assams were up to 20 nP a pound easier, while others were sold at about 10 nP below last rates. Non-wither legg-cut teas were a little irregular and often in buyers' favour.

Whole Leaf grades were strong and generally dearer. There was only fair enquiry for Darjeelings. Tippy sorts were well supported. Following rates (per lb) were quoted:—Clean Black Pekoe Rs 2.18 to Rs 2.24; Plain BP Rs 2.04 to Rs 2.12; Plain Fannings Rs 2.10 to Rs 2.18; Medium BP Rs 2.02 to Rs 2.12; Medium Fannings Rs 2.16 to Rs 2.24; Best Assam CTC BP Rs 2.55 to Rs 2.75 and Best Assam CTC Fannings Rs 2.55 to Rs 2.75.

In the Internal Sale, Offerings consisted of 22,869 packages of Dusts. There was a good general demand. Orthodox teas were absorbed readily; but showed a drop of up to 4 nP except for the few selected lines which were firm. Legg-cut teas followed the trend. The few lines of Darjeeling teas on offer were firm to dearer. Medium CTCs were irregular, the poorer kinds and powdery types being firm and often dearer. Best CTCs declined in value by up to 15 nP and were often difficult of sale. Following rates were quoted:—Medium Dooars Dust Rs 2.10 to Rs 2.16; Medium Assam Dust Rs 2.06 to Rs 2.10; Medium Assam CTC Dust Rs 2.16 to Rs 2.24 and Best Assam CTC Dust Rs 2.50 to Rs 2.80.

In the Cochin market, approximately 500,000 pounds of Dusts were offered. Though there was strong general demand, prices were irregularly 5 nP to 10 nP easier for all descriptions, particularly the coloury mediums. There was, however keen competition for high-grown dusts, which were sold at dearer rates following quality. A small selection of clean, black, grainy descriptions were sold well. CTC Dusts met with useful support.

A further sharp narrowing between the top and bottom grades of tea took place in Mincing Lane. Prices finally ranged from 3sh 8d to 6sh 1d per pound. The closing levels reflected the continued demand for the plainer descriptions and the easier trend in the better sorts in sympathy with their seasonal fall in quality. Offerings of both North India and Ceylon teas are less attractive as they were mostly of "rains" manufacture.

Stocks in London, as on the 4th December, were estimated at 112.71 million pounds as against 112.95 million pounds in the previous week. Total afloat was 45.27 million pounds including 30.95 million pounds from Calcutta; 2.10 million pounds from Chittagong; 2.26 million pounds from Cochin; 8.45 million pounds from Colombo and 1.50 million pounds from other Ports.

WORLD OF JUTE

Speculation or Shortage?

HECTIC activity was noticeable early last week, especially in the futures market. The special margins imposed proved of little avail and the uptrend in prices continued unabated. This led to the enhancement of the margins and the East Indian Jute and Hessian Exchange, Calcutta, announced on Friday last the revised rates. In a press note issued on that day, the Exchange said that the step had been taken by the Board of Directors "in view of further rise in the prices of raw jute". The margins have been enhanced from Rs 2.50 to Rs 3 per 100 yards of hessian cloth, from Rs 5 to Rs 6 per 100 bags of sacking (B Twills) and from Rs 2 to Rs 7 per maund of raw jute, in case the closing prices of these were at or above Rs 41.00 (for hessian cloth), Rs 105.50 (for sacking) and Rs 29.00 (for raw jute) respectively. It would appear that the high margins have achieved the desired result, for, in the last three or four sessions, rates have steadily declined, though prices in the futures market are still at levels which attract the enhanced margins.

The steep rise in raw jute prices that has occurred during the early part of the week under review is generally attributed to the activities of speculators. But knowledgeable quarters aver that it is wrong to think that the present sustained uptrend in raw jute prices is solely due to speculative manipulations. They believe that the price appreciation has at least partly stemmed from a genuine apprehension that, in months to come, raw jute supply will be found to be inadequate to meet the industry's growing requirements.

The low level of stocks of jute goods with mills and the prospects of good offtake of gunnies point to the need for larger production. It seems a foregone conclusion that the present level of output is to be maintained even beyond 2nd January 1960, the date fixed for the resealing of the 2½ per cent looms opened with effect from August 24. (It has since been reported that the UJMA have decided to postpone the resealing to 1st February in the first instance).

There is then the trend of burlap consumption in the US during the last month to consider. There has been a rise of nearly 10 million yards in consumption during November as compared with the previous month. Indications are that, once the steel dispute is out of the way, the pent-up demand for burlap will be reflected in increased offtake in the coming months. Hessian has another important buyer in Argentina which is yet to lift a large portion of its normal requirements. And our mills are by no means overfilled with hessian goods. The emphasis of production continues to be on sacking and mills have been working with additional looms devoted to sacking output for more than three months. Even so, November-end stocks of heavy goods dwindled to an all-time low. Government are evincing a keen interest in this category of goods and foreign buyers, too, are figuring as steady customers.

There is thus a clear case for maintaining production at the current level. But it is also necessary for the industry to consider whether it will be in its own interest to allow conditions of artificial scarcity to prevail. This is not to say that a decision to increase production further can be lightly taken. In the first place, the decision to continue the working of 90 per cent of looms for another month and possibly for a longer period will require an upward revision of raw jute requirements during the current jute year. If the percentage of sealed looms were to be further reduced from the present level of 10, mill requirements of raw material will be correspondingly higher. Therefore, a decision from the industry to unseal an additional quota of looms at the present stage will send raw jute prices to uneconomic levels with the goods section in its turn getting out of hand. While it is true that jute production this year, together with the large carry-over from last season will be adequate to meet our requirements, it is to be noted that this assessment of the raw jute supply position perhaps is valid only if mills work with 12½ per cent of the looms sealed from January next as earlier planned.

Prices moved up sharply in early dealings in the futures market. The East India Jute and Hessian Exchange announced on Friday last that, having regard to the present state of trading in raw jute and jute goods in the futures market and the prevailing prices, trading in all hedge contracts had been suspended for December 11 and that trading would be resumed the next day. In a press note issued on Saturday, the Exchange announced the enhanced special margins. When the market reopened on Monday, it appeared that even the enhanced margins would be of no avail, for, during early dealings, Hessian February was taken to a high of Rs 42.72, B Twills February to Rs 110.90 and Assam Bottoms March to Rs 31.30. Although the higher levels attracted some profit-taking, the undertone at the close of the day remained steady. During the next two days, however, sentiment was easier on sustained selling pressure touched off by reports about postponement of resealing of the 2½ per cent looms to 1st February. Even so, prices at close on Wednesday were above the margin-levels as follows: Hessian February Rs 41.80, B Twills February Rs 108.50 and Assam Bottoms March Rs 29.78.

In the spot market, price movements generally followed the trend in the futures section. On Friday last, B Twills December was done at Rs 108.70 with Hessian December at Rs 41.70. Prices moved up further on Saturday and B Twills December was finally placed at Rs 109.50 and Hessian December at Rs 42.35. Prices continued to be steady on Monday, presumably on reports of a Government tender for 30,000 bales of B Twills coupled with the news that US burlap consumption in November has risen to 79.6 million yards compared with 64.5 million yards in the corresponding month of the previous year and 69 million yards in the previous month. The trend, however, was downward in the next two days largely in sympathy with the futures section. The closing prices on Wednesday were as follows: B Twills December Rs 108.25, Hessian December Rs 41.55. Assam Bottoms December-January Delivery was taken to Rs 31 before finally being placed on Wednesday at Rs 29.50.

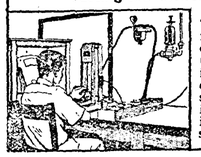
"Pratap, isn't that shirt too big for you?"

"MUMMY says my clothes get torn so fast that this is all I can have."

"Poor lad! Ask your mummy to buy BINNY'S cloth. BINNY'S Quality Control* their production."



"Quality Control? Can you tell me what that means, uncle?"

"If you go to a textile mill, you will see machines that turn cotton into cloth work at terrific speeds and often small defects which we cannot see with our naked eyes get into the cloth. Cloth that contains these defects gets torn easily. At BINNY'S they have a special department which is continuously looking out for these defects and preventing them from getting into the cloth. That's why their cloth lasts so long."

"Thanks a lot, uncle. I must ask mummy to buy BINNY'S cloth straightaway."

BINNY - a great name in textiles

*Testing the fineness of cotton fibres

This instrument measures the fineness of the cotton fibres and enables the technician to select the right type of cotton suitable for the various qualities of cloth BINNY'S make. Only specially selected cotton goes into BINNY'S fabrics. That is why BINNY'S cloth lasts so long.

BINNY'S manufacture nearly 90 million yards of cloth every year. Here are some of the varieties they make:
Shirtings - Khaki Drills - Bleached and Dyed Drills - Towels - Anticrease Suitings - Tussores - Union Fabrics - Silk Sarees - Rugs - etc etc

US Notes

With the advent of the last month of the year, economists and businessmen in the United States are busy preparing their forecasts for the year ahead—a procedure that has become something of an annual ritual.

But there is something special about December this year. It is not only the last month of 1959, but also the last of the decade. It is not surprising, therefore, to find that the outlook not just for 1960, but for the 1960 as a whole, should be a subject of discussion these days.

Few experts are so bold as to make hard and fast predictions. But a good many are venturing projections about broad trends, projections based largely on the economic growth of the past two decades. Virtually without exception the appraisals of the 1960's are thus couched in terms of optimism and confidence.

A case in point is a new book on "new forces in American business." As its sub-title says, it is "an analysis of the economic outlook for the sixties," written by Dexter M. Keezer and associates. Mr Keezer heads the economics department of the McGraw-Hill Company, publisher of leading business journals, and has won renown as an analyst of long-term trends, particularly in the realms of business investment and consumer spending.

In the book, the authors go on record with the prediction that short of some unforeseen and earth-shaking cataclysm, the American economic will continue to grow and prosper in the decade ahead. They concede that this course is not entirely fool-proof, since the basically free and variegated economy of the United States necessarily rests in large measure on the independent decisions of many people. It is their view, however, that at worst only a new temporary interruptions to the broad upward movement are likely largely in the form of brief and relatively minor dips along the way.

Their confidence in the future is based principally on the fact that the American economy has undergone important changes in the past, notably since the unsettling depression of the early 1930's. At the head of the list of basic changes that place the Employment Act of 1956, which made it official government policy to help promote high levels of production, income and employment.

The authors also cite the economy's "automatic" or "built-in" stabilizers. These include such government programmes as social security, unemployment compensation, farm price supports and minimum wages, all of which have become part of the nation's economic structure since the early 1930's.

Then there are what can be called the non-automatic stabilizers. In the case of the government, these refer largely to monetary and fiscal policies, in such fields as money and credit regulation, budgetary programmes, public works outlays and changes in tax rates. All of these are flexible instruments, and can be attuned to the needs of the times.

In the private segments of the economy, the authors cite such factors as the high and sustained levels of business investment, the expansion of industrial research which is creating a flood of new products and technological improvements. Broader and steadier consumer spending accompanying the rise in personal incomes.

Mr Keezer and associates see in these developments a "social revolution in the distribution of national income, within the framework of a free enterprise system which has visibly and repeatedly demonstrated its vigour and viability throughout the past two decades.

On the foreign front, the authors expect the revitalization of Western Europe and the economic improvement in developing lands to offering growing markets for US goods. And this, too, could have an obviously favourable effect on American economic activity.

Of course, one cannot expect such a book as this to explore every possible development that might occur in the next ten years but on the basis of what they have explored, one can well agree with the authors that another prosperous decade is in prospect.

*

Britain

Britain's steel production in November was a record, averaging 458,600 tons a week, according to figures just released by the Iron & Steel Board in London.

The November weekly average compares with 441,400 tons in October and 351,900 tons in November 1958.

Production in November was thus 30 per cent higher than a year ago. The previous record weekly average production figures was 443,200 tons, reached in May 1957.

Steel production, it is pointed out, is an important indicator of economic activity because of the widespread uses of steel in any highly industrialized country. The November steel figures, therefore, underline the speed and extent of industrial expansion in the United Kingdom.

The British steel industry is now working not far short of capacity. The increase of nearly four per cent between October and November has brought the percentage of capacity worked to about 95.

Britain's oversea trade continued at a high level in November, exports being valued at £236,300,000, imports at £337,100,000, and re-exports at £9,500,000. These provisional figures were issued by the Board of Trade in London on December 10.

After allowing for normal seasonal variation, United Kingdom exports in the three months to November were 6 per cent more than in the three months June to August.

On the same basis, imports were 7 per cent more than September-November than in June-August.

The trend in both exports and imports, it is noted in London, is still upward. Their recorded values in November are very near the high levels reached in October, when exports topped the £300,000,000 mark for the first time.

The Board of Trade now provides seasonally adjusted values for trade figures—which take account of normal seasonal variation—and, on this basis, exports are shown as £287,000,000 in November and imports as £370,000,000, the latter being the highest figure since September 1951. The rise in imports reflects the pace of industrial expansion in Britain.

The chairman of the International Tin Council, Mr Georges Peter, announced in London on December 8 that the technical committee was beginning work this week on a new agreement. The draft would be sent next year to United Nationals members for study.

Mr Peter referred to the council's recently announced decision to fix the total permissible export amount for the producing member countries at 36,000 tons, and said: "We are now at 95 per cent of exports prior to control".

Some of the delegations wanted to continue export control in order to dispose of stocks in an orderly manner. What would happen after April 1 next he did not know; the decision would be made at a council meeting in March.

Referring to Russian exports, he said: "We made a gentlemen's agreement which was not signed, but which was kept by the Russians, whose exports up to now are below the 13,500 tons per year in the agreement. My relations with the U.S.S.R. have been excellent, and I have every reason to believe they will be excellent in 1960. I have no reason to think exports from Russia will give us trouble, or that they will exceed this year's figures".

*

France

In October, French output of crude steel was 1,416,000 tons and that of crude cast-iron was 1,114,000 tons. These figures were considerably higher than the previous monthly records held by the French steel industry.

Compared with the figures for September 1959, these results show a production increase of 9.6 per cent for crude steel and 5.7 per cent for crude cast-iron. Compared with the high output in October 1958, the figures for October of this year show respective increase of 6.2 per cent and 4.3 per cent.

During October 1959, French gasoline consumption totaled 587,000 m3 compared with 604,200 m3 for the previous month and 592,100 m3 for the same month of 1958. Consumption of these products is therefore slightly less compared with October 1958. Consumption during September 1959 was also slightly less than that for September 1958.

Gas-oil deliveries in October 1959 totalled 171,500 m3 compared with 186,700 m3 in October 1958 and 166,000 m3 in September 1959.

An increase in the consumption of fuel was noted during October 1959 compared with September 1959, which is normal considering the seasonal drop in temperature. A considerable increase in the delivery of domestic light fuel was also noted. On the other hand, a decrease in the consumption of heavy fuel has been noted by comparison with last year. This decrease is due to a decrease in orders from the French Railways and Electricite de France. The decrease was noted for the first time in September 1959.

Deliveries of domestic fuel in October totalled 308,000 tons compared with 278,800 tons in October 1958 and 219,000 tons in September 1959. Deliveries of light fuel totalled 179,800 tons compared with 162,100 tons in October 1958 and 119,700 in September 1959. Deliveries of heavy fuel totalled 568,800 tons in October 1959 compared with 609,200 tons in October 1958 and 495,800 tons in September 1958.

* * *

In October, French jute output included 8,000 tons of spun jute and 6,200 tons of woven jute compared respectively with 7,729 tons and 5,913 tons in September and 8,749 tons and 9,945 tons in October 1958.

During the first ten months of 1959, production totaled 67,033 tons of spun jute and 53,445 tons of woven jute compared with 79,492 tons and 61,966 tons during the same period of 1958.

* * *

French coal output during September and October 1959 was 4,976,400 tons and 5,519,400 tons respectively. Compared to the corresponding months of 1958 and to the monthly average for 1953 (in thousands of tons), these figures show a slight decrease in production.

* * *

The monthly statistics of Electricite de France indicate that in October a total of 5,603 million kWh of electrical energy was produced and that 5,516 million kWh were consumed, including losses due to transportation and transformation.

This difference in the two figures results from trade with foreign countries, including 60 million kWh of electric energy imported and 147 million kWh exported, which leaves a balance of 87 million kWh in favour of exports.

22 DEC 1959 PUBLIC DEPARTMENT

The French output during October came from two sources: 2,021 million kWh from hydraulic sources and 3,582 million kWh from thermal sources.

The amount of water in the reservoirs compared with the maximum capacity at the end of the month (assuming that 10 per cent is a reserve of 3,510 million kWh) was, in general, 77 per cent. This percentage was made up as follows: 81 per cent in the Alps, 78 per cent in the Pyrenees and 73 per cent in the Massif Central.

The consumption of combustible fuel by the thermal power plants of Electricite de France totalled 650,500 tons in October. At the end of the month, the stocks on hand at the power plants in the Paris region were 767.197 tons, and total stocks on hand at the EDF power plants were 2,060,000 tons.

For the first ten months of 1959, the production balance (consumption plus losses) totaled 50,482 million kWh, compared, respectively, with 58,752 million kWh and 45,113 million kWh during the corresponding periods of 1958 and 1957.

* * *

French exports to European countries during October totalled a record figure of 190 milliard francs, which was 35.5 milliard francs more than in September and 60 milliard francs (or 46 per cent in absolute value) more than in October 1958. The previous export record had been 170 milliard francs in June 1959.

Imports from abroad also totaled a record in absolute value: 178 milliard francs, which was 31 milliard francs more than in September, and 42 milliard francs more than in October 1958. The previous record had been 167 milliard francs in April 1959. Considering the devaluation at the end of December 1958, the volume of purchases was, however, lower than in March 1958, during which they totalled 163 milliard francs, which represented approximately 190 milliard francs at the present rate of exchange.

The covering percentage of imports by exports was 107 per cent.

89 milliard francs worth of merchandise was exported to countries of the franc area in October and 48 milliard francs worth of items was imported from countries of the franc area.

The French trade balance for October totalled 279 milliard francs worth of exported products and 226 milliard francs worth of imported products, which was a credit of 53 milliard francs and a covering percentage of 123 per cent.

* * *

The National Savings Bank had deposit of 228.8 milliard francs between January and September 1959 compared with 175.5 milliard francs during the same period of 1958, which is an increase of 30 per cent.

Total deposits (including capital interest) of France and the overseas countries were an absolute record in September with 2,457 milliard francs compared with 2,099 milliard francs one year earlier, which was an increase of 16 per cent.

The excess of deposits in the National Savings Bank during the first three quarters of 1959 totaled 86.1 milliard francs compared with 64.4 milliard francs during the same period of last year (+33 per cent); and in the ordinary banks deposits increased from 110.9 milliard francs to 142.7 milliard francs (+28 per cent).

However, in September, the difference between deposits and withdrawals was 18.8 milliard francs for the two types of banks compared with 36.5 milliard francs in August. This relative decrease (since the difference totaled only 13 milliard francs in September 1958) is explained by the traditional expenses made at the end of the summer which reduces the possibility of saving.

However, since the beginning of 1959, there has been a steady and progressive increase in confidence on the part of Frenchmen in the French currency which has been stabilised.

*

Germany

According to Frankfurter Allgemeine Zeitung the strong seasonal upswing of industrial production, which was noticeable in the Federal Republic of Germany in August, when the index of industrial production increased by 8.2 per cent, continued in September, with an increase of 7.4 per cent. Thus, despite practically fully utilized capacities, the growth rate accelerated again in the third quarter of 1959; it was 3.2 per cent in the first quarter of the year, 6.6 per cent in the second quarter, and 6.9 per cent in the third.

The expansion was mainly in the basic and producer goods industries, whose output in September was 15.2 per cent greater than in September 1958; the increase was 25.6 per cent for the steel industry, where production again reached the record high level of November 1957, 16 per cent for the chemical industry, and 22.5 per cent for petroleum refining. Capital goods industries expanded rather less, by 6.9 per cent; within this group, machine building increased by only 0.9 per cent and output of the electrical industry by 5.2 per cent, whereas expansion in the automobile industry continued, with a growth rate of 17.9 per cent. The development of the nondurable consumer goods industries continued favourable, production increasing by 8.4 per cent; in the textile industry, the growth rate was 7.2 per cent, and in the shoe industry, it was 8.1 per cent.

Sweden

The Swedish Riksdag at a joint vote on December 1 passed the Social-Democratic Party's proposal for a 4 per cent turnover tax to come into effect on January 1, 1960. The tax, estimated to yield about Kr 1,400,000,000 (£96,550,000; $270,000,000) in 1960, will be levied on consumer goods and certain investment goods plus services.

The Bill was passed with a vote of 185-178, since the Communists, though opposing the tax scheme, chose to abstain from voting rather than vote with the non-socialist opposition.

* * *

A supplementary Bill for an increase in the energy tax on heating oil, petrol, coal and coke—estimated to yield a further Kr 225,000,000—was rejected with a vote of 186-184. On this issue the Communists joined the non-socialist parties.

* * *

Sweden's exports reached a new monthly peak of Kr 1,155,000,000 in October as did imports at Kr 1,163,000,000. Over the first ten months of the year exports total Kr 9,279,000,000 (£640,000,000; $1,802,000,000) and imports Kr 9,903,000 (£682,900,000; $1,923,000,000), resulting in a deficit of Kr 623,00,000 (£42,965,000; $121,000,000). Last year the January-October trade deficit was Kr 1,207,000,000.

Imports, Kr 20,000,000 less than in the first ten months of 1958, show lower values for fuels, textiles, metal manufactures, cars, vessels and food-stuffs while machinery imports were larger. In terms of volume, oil imports fell from 8.7 to 8.3 million tons and cars from 109,000 units to close on 96,000 units, whereas steel imports were up from 597,000 to 694,000 tons.

Exports, up Kr 564,000,000 on the figures for 1958, showed higher values for forest products, steel, machinery and apparatus, cars and ships. Shipments of timber rose in volume from 651,000 stds to 795,000 stds, pulp from 1,896,000 tons to 2,183,000 tons, newsprint from 220,000 to 253,000 tons and other kinds of paper from 561,000 to 617,000 tons. Exports of iron ore went up from 12.5 to 12.8 million tons, merchant iron and steel from 254,000 to 323,000 tons and automobiles from 28,454 to 38,106 units.

* * *

The geographical distribution of Sweden's trade over the first three quarters of the current year compared with the same period 1958 shows in conformity with the general decline in the trade deficit, a smaller deficit vis-a-vis the Six-Nation Group, particularly Western Germany, whereas there was a slight increase in the adverse balance vis-a-vis the sterling area. In trade with the dollar area the deficit declined, following a minor drop in imports and a substantial increase in exports.

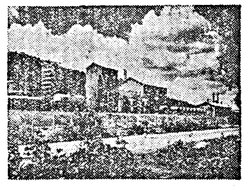
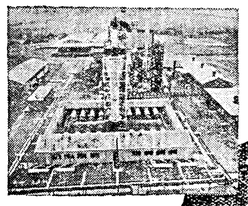
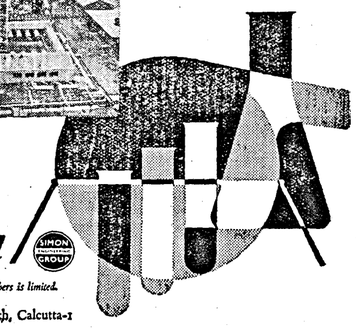
Here are a few examples of Simon-Carves' ability to combine their long experience of engineering design and construction with the specialised technical knowledge of their clients and to accept responsibility as main contractors for complete industrial plants on a major scale.



ENGINEERING CHEMICAL PLANTS BASED ON CLIENT'S KNOW-HOW



India's first 3,500 tons per annum Polythene Plant at Ridra, West Bengal, set up by the Alkali and Chemical Corporation of India—Simon-Carves were the main contractors for engineering and for detail design and construction of plant and buildings.



Over 40 million lb. of phosphates from phosphate rock are produced from this factory at Portishead, U.K., every year for Albright & Wilson; Simon-Carves were the main contractors for civil engineering and building and for detail design and construction of plant and buildings. Two travelling pneumatic unloaders were supplied by Simon Handling Engineers.

The Indian Explosives Factory at Gomia, Bihar, where Simon-Carves were responsible for design, construction and erection of the sulphuric acid and oleum plant, for construction and erection of the denitration and acid blending unit and ammonium nitrate plant, and for erection of the nitric acid plant.

60,000 lb. of carbon black are daily manufactured in this plant by the "furnace process" for Cabot Carbon Ltd. (wholly-owned subsidiary of Godfrey L. Cabot Inc. of USA) at Stanlow, Ellesmere Port, U.K. Simon-Carves were the main contractors for the entire plant on a green-field site.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

THE development of the political personality of President Eisenhower is one of the most remarkable facts of recent history. Before he became President in 1952, he had no politics to speak of. His qualifications, professionally speaking, were wholly military and there is understandable prejudice in the US (as probably in all democracies) against a soldier becoming a politician. But Ike had a far greater qualification, and that was symbolised in the slogan, "I like Ike". Mr Adlai Stevenson got to the root of the matter when he explained why he was defeated in 1952. Alistair Cooke of the Manchester Guardian recently reported a memorable conversation he had with Mr Stevenson in January 1953. "What happened?" he asked, coming straight to the point. An egghead first and last, Mr Stevenson quipped, "Who did I think I was, running against George Washington?" There was more to it than the famous Stevenson wit and the Stevenson modesty in this. George Washington, the conquering hero, albeit something of a prig—his boyhood was one of monstrous rectitude—was not merely the first President, but America's "father figure". In many ways, this is unjust to Mr Eisenhower, but it is not a wildly inaccurate description of the sort of image that was being projected. But worse was to come. By the time the next presidential elections came along, a subtle transformation was taking place. The heroic was being soft-pedalled and he was being increasingly presented as an amiable fuddy-duddy. The President's heart attack and a certain trait of self-effacement of his presidency lent themselves easily to the sort of build-up that was being attempted. The incidents of the highest political office were reduced to the level of cosy and sometimes anxious domesticity. Nor was this wholly a product of public relations backroom boys. One of President Eisenhower's administrative innovations was the introduction of the notion of "Staff" (drawn from his military experience) to discharge the duties of the President. This seems to be rather a pet notion of his since even now he is said to be toying with the creation of an agency like a "super-cabinet". It is doubtful whether he will succeed, for, the position of the President under the American constitution makes it difficult to accommodate the "team". There is hardly any office, democratically conferred, which enjoys such absolute executive power as that of the President of the US. But the price for this is an agonising personal responsibility. "The President is king, Prime Minister, Mayor of Capital Hill and the whole executive arm of the Government." It is an eminence, but in many ways a lonely eminence. The difficulty in even unofficially making it a team by the system of aides that Mr Eisenhower devised was that it tended to distort the constitutional intentions. Thus, there was a feeling that, until recently, the President was tending to abdicate crucial duties laid on him by the constitution. This feeling was particularly widespread and articulate during the period of his illness when many felt that the brassier among his aides were probably extra-constitutionally usurping his functions. This was the period when the President's political reputation was at its lowest, when he was described in a New Statesman article rather unfairly as the "plain cipher in the White House".

✱

But things have changed almost completely since then. The President's recovery and his astonishing physical resilience went hand in hand with a new assurance and a sense of positive purpose in his political acts. It is rather difficult to date precisely this change. But if a symbolic date is necessary, then, I would put it with the exit of Sherman Adams. Others date it with the death of Mr Dulles, but I think it would be wrong for several reasons. For one thing, it is demonstrable that the rigidities of the US policies were softening toward the end of Mr Dulles' life. The reasons for this are complex, but one of them is certainly the fact that Mr Eisenhower was at long last beginning to direct instead of being directed by Mr Dulles.

✱

It is, of course possible to read too much into this coincidence, but those who were aware of the involutions of policy-making in those days would agree that Mr Adams enjoyed considerable power while he continued as the President's aide. Apart from that, the President himself might have realised the constitutional ambiguities in the situation and was only waiting for a suitable moment to effect the necessary change. So, when Mr Adams had to quit office, Mr Eisenhower probably decided quietly to take on himself the rigours of decision.

✱

Whatever the reasons behind the change, there can be no doubt that the change has taken place and that that change is refreshingly for the better. It has manifested itself in various ways, most important in the readier response from the American side to friendly proddings from allies, principally Great Britain, to try to examine whether there was at all any common ground with the Russians. There is no sense of being stampeded into it, but a quiet deliberate tread. The first important consequence has been that the crawl toward the summit has begun. Though the summit is still hid in the clouds, there is no longer any disposition to think that it is chimerical and cannot be reached. Mr Khrushchev has visited the United States, and the way in which this visit was handled by the President must have dispelled such lingering doubts as there were about the President having arrived politically. He gave nothing away, but met the Russian leader more than half way. And, since then, he has been energetically working for a coordinated and constructive solution for coming to terms with the Russians. He has broken through the chrysallis and emerged into the wider international arena with a new venturesomeness.

✱

What could have prompted this sudden resolution and urgency? I believe that it has been borne in on him that, as the President of the US, history has thrust on him a responsibility he dare not shirk. The grim logic of the nuclear stalemate makes it imposible for sane men to conceive of war as an instrument of policy. The topsy-turvydom of nuclear defence soberly contemplates a retaliatory defensive action that occurs even before the attempted aggression has had time to materialise. And the possibility that a nuclear war that might destroy us all may start by the sheerest misunderstanding of signals is only too real. In such a situation, it becomes the first duty of any one with political responsibility to make such wars as nearly impossible as he can. Admittedly, the primary responsibility in this matter rests with the rulers of the USSR and the US. Whatever one may think of the Russian attitude on particular issues, it is no longer possible to argue on the premise that the rulers of Russia do not mind a nuclear war. Mr Eisenhower himself has testified to this, and it is this conviction that has made him redouble his efforts.

✱

The President's break-through has also been America's. For a nation so notoriously peripatetic, its Presidents have been curiously stay-at-homes. There was also, one suspects, a certain snobbery in this aloofness, quite unaccountable in so friendly and democratic a people. Mr Stevenson, who is usually so perceptive, has been saying some rather odd things about Mr Eisenhower's present trip. He considers it as a confession of the failure of American policy. But the significance of the fact that this is the first visit of an American President to Asia is something that Mr Stevenson,

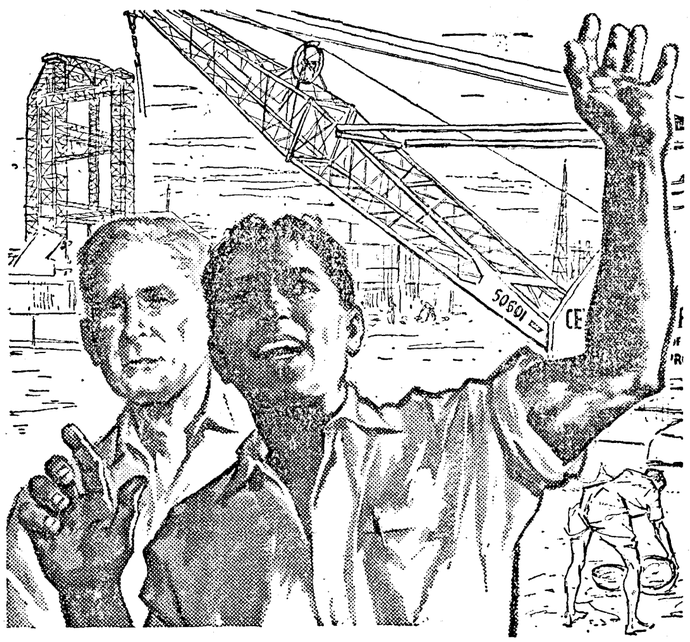
CALCUTTA BOMBAY MADRAS NEW DELHI

of all people, should not miss. With this (which one hopes is the beginning of a new trend) the US is shedding the last vestige of its traditional isolationism. It is part of America's effort to take the whole world with it in its supreme effort at achieving a modus vivendi with the Soviet Union.

*

At the special convocation of the Delhi University, at which a doctorate was conferred on Mr Eisenhower, Dr Radhakrishnan had some felicitous things to say about the "New Eisenhower". "Man's nature has to be modified," he said, "and you as the youngest graduate of our university must work for the future. Today it is essential for us to realise that there is one race, and that is the human race, and our loyalty should be to that race." Dr Radhakrishnan was thus providing the real dimensions for the practical endeavours of the American President. It is only natural that we should think with renewed urgency of the oneness of humanity, when the nuclear threat hangs over the entire race. Ironically, it is the hydrogen bomb that has brought home this sense of unity of mankind. It is not only peace and prosperity but the possibility of nuclear annihilation that is indivisible. Christmas being not far off, Dr Radhakrishnan commended a new thought most appropriate for that occasion: "Put off the old man and put on the new." The world of tomorrow, if it is allowed to exist at all, will be peopled by the "new men" whose loyalty will transcend national frontiers to embrace the whole of the human race. It is this vision that sustains the efforts of those like President Eisenhower and Mr Nehru.



*

Of course, in many ways, it is a pity that Mr Eisenhower has left it rather late to find his true vocation. Since he is constitutionally prevented from running for presidential office for a third time, he has about a year to do what he has set out to do. Considering, however, the complexity and intractability of the problems, it is likely that Mr Eisenhower may not be able to complete his chosen task while in office. Mr Khrushchev is better provided in this respect. (Or is he?) But then, to have begun it and laid the foundations for it is to have done a great deal. The next year will, therefore, see what may turn out to be the crowning achievement of Mr Eisenhower. We in India, who showed him last week "a little of our heart", will wish him the success he richly deserves.

*

I was interested to see that Time did a cover story on Mr Nehru to coincide with Mr Eisenhower's visit to India. This, if memory serves me right, is the second occasion that Mr Nehru has thus been done honour. In its way, I suppose, it is a good piece of work; but the usual Time brashness and brassiness are strangely missing. There are very few positive statements made; there are even fewer instances of the often irritating Time mannerisms. A rarely subdued Time piece, I thought. And almost sympathetically inclined to India and Mr Nehru. Is this a straw in the wind? If Mr K. Balaraman of The Hindu is to be believed, such indeed is the case. The contingent of press correspondents that travelled with the American President was no doubt overawed by the sort of reception that greeted Mr Eisenhower. It is, I fancy, not to be doubted that Indo-American relations as portrayed by the American press attitude to India will have greatly benefited from the successful visit. It seems to me that it would be a good idea for the Government of India to invite out a sort of high powered press delegation from America, so that they could see for themselves the industrial progress that is being steadily achieved. (Some years ago, a visit did fructify of financial experts from the British press). This would be a smart piece of public relations, and it is in this department that India has been considerably suffering. For instance, I am sure that, had the Indian case been properly explained or "briefed" to the American press, its attitude on Kashmir would have been more sympathetic. To go back to Time in conclusion: it seems safe to predict that Mr Eisenhower will be chosen the Man of the Year; and if such choice is in fact made, it will be fully justified.

EAVESDROPPER.

TEAM SPIRIT

helping to build Durgapur for India

A partnership of 30,000 Indian and British people is completing a jigsaw of concrete and steel at Durgapur—building a vast new steelworks for the nation.

By their team spirit, the men of CEMENTATION-PATEL are helping this partnership—and the plan to make over a million tons of steel every year for India.

Together, they work on a site the size of a small city: 13,500 Indian and 75 British engineers, technicians and workers.

Together, they have built foundations for the greater part of the project's seven square miles of buildings and plant. Together, they are laying a network of roads, railways and pipelines.

CEMENTATION-PATEL, Durgapur's civil engineers, were first to get to work at Durgapur. In three years, they have moved mountains of earth and concrete to a strict schedule—three years that crown THE CEMENTATION COMPANY'S 30 years of service in India.

The Week in Bombay

BOMBAY REVIEW

ALTHOUGH December has lost much of its glory during the past ten or twelve years, it is still a busy month for our larger cities. Many important all-India associations and organisations continue to hold their annual meets during this month. Apart from its being the last month of the Calendar year, it also offers climatic conditions in most parts of the country more conducive to cool deliberations than other months.

This year, we have in Bombay an additional attraction in the shape of the "India can Make it" exhibition which is daily attracting large, interested crowds. This exhibition is timely because there is urgent need for conserving our foreign exchange resources. One of the ways of reducing the outgo of foreign exchange is to cut down our imports as much as possible. This is, of course, already being done by Government but in view of the need for rapid industrialisation this process of cutting down imports cannot be taken too far, for the simple reason that some essential raw materials and equipment needed by our industries are still to come from abroad. This is not to say that there is no further scope for reduction of imports in this sphere also. The strict control on the spending of foreign exchange imposed by Government in the past one or two years has done much to stimulate the growth of ancillary industries and many a specialised industry, like the automobile industry, has achieved signal success in sizably increasing the percentage of indigenous components in its final products. The results obtained in the past few years, when our industries have had to rely on imports, but to the barest minimum, have revealed that a far larger degree of self-sufficiency can be reached. Exhibitions like the one we are having in Bombay will help accelerate the growth of indigenous industries.

Now that bifurcation has become a settled matter, attention has come to be bestowed on details. The Samiti leaders are agitating for the inclusion of the Dangs district in the proposed Maharashtra region. Chief Minister Y. B. Chavan, however, told a public meeting that the people of the district themselves are interested in joining the future Gujerat State. The Parliamentary Secretary to the Chief Minister tried in vain to tell the Assembly that any discussion on the future of Dangs would be redundant because the matter would have to be discussed again when the issue of bifurcation of the State came before the Assembly. Opposition members took objection to what they characterised as keeping the Assembly in the dark about bifurcation when the Finance Minister moved a token demand under the head "General Administration" for the creation of an additional establishment in the political and services department. The explanatory note to the Supplementary demand stated that the Finance Department had advanced Rs 51,000 in November for the new establishment. It was complained that the State Government were implementing decisions taken on bifurcation by the Congress party without taking into confidence the members of the State Legislature. The Chief Minister explained that what the new establishment was doing was in the nature of preliminary work in connection with the allocation of staff and that actual allocation would commence only after a decision was taken by the Central Government and that all questions connected with the bifurcation of the State came up before the State Legislature for a full discussion.

Toward the middle of the week, interest shifted to the Cowasjee Jehangir Hall where the Seventh All-India Leprosy Workers' Conference was inaugurated on Wednesday by the State Governor, Mr Sri Prakasa. Eradication and cure of leprosy have become urgent tasks in our country which, as Mr Balwantrai Mehta said in his presidential address, has more than half the number of the world's leprosy patients. It is estimated that the leprosy patients in India number about 2 million. In Bombay State, there are about 2 lakhs patients and this state is the first which has evolved a plan to control the disease completely within the next 20 years. Speaking at the conference, Mr D. P. Karmarkar, Union Minister for Health, said that it would be possible to eradicate the disease in the country in the next fifteen or twenty years as, by the end of the Third Plan, Government hoped to "cover the whole country with facilities for the treatment of the disease."

It is gratifying to note that a good deal of pioneering work for the eradication of the disease had been done in the Bombay State. There are about 25 institutions working for leprosy relief with a total of about 350 beds. Two more hospitals are under construction, one each in Ahmedabad and Baroda with a provision for 250 and 150 beds respectively. In the Second Plan of the State, a sum of Rs 112 lakhs has been allocated for leprosy relief work. As experience has shown that there is need for a mass survey of leprosy, education of the people and treatment of the affected, the State Government established all over the State Survey Education and Treatment Units. There are 70 such units working in the State and it is planned to train as many as 130 leprosy assistants before the end of the current plan period. It is also proposed to establish 25 subsidiary centres before the end of the plan.

Perhaps the biggest handicap in the way of an effective control and ultimate eradication of this disease in our country is the social stigma attached to the leprosy patients. This is largely due to ignorance. Modern medical research has proved that leprosy is a curable disease. Official and non-official organisations are doing yeomen service in combating the disease but much remains to be done for completely eradicating the widespread ignorance about the disease. For, only when the general public come to realise that leprosy like most other diseases, can be cured through prompt medical treatment, will it be possible to achieve any appreciable headway in controlling the spread of leprosy in our country.

1959 BONUS YEAR

Purchase a with-profits policy now

Second Valuation Soon

The second valuation of the Life Insurance Corporation will be made as at 31st December 1959. All eligible with-profits policies in force on the valuation date will be entitled to participate in profits disclosed as a result of that valuation.

The first valuation of the Corporation made as at 31st December 1957 disclosed a surplus large enough to support bonuses at the following rates on with-profits policies issued by the Corporation:-

Endowment Assurances: Rs. 14 per thousand sum assured per annum

Whole Life Assurances: Rs. 17½ per thousand sum assured per annum

Important: Policies which are converted into reduced paid-up policies or lapsed before 31st December 1959 will not qualify for bonus.

Preserve your policy, keep it up-to-date by regular payment of premiums and make sure that your policy qualifies for bonus to be declared as a result of the second valuation.

Remember 1959 is the Bonus Year

GATEWAY NOTES

Cotton and Hair Belting Industry

The Cotton and Hair Belting Industry, which has been receiving protection from 1948, will be deprived of the shelter from January 1960, as a result of the Government's decision to implement the recommendation of the Tariff Commission not to continue protection beyond the end of this year.

Considering that protection is due to expire at the year end, the Tariff Commission were empowered by the Government to investigate into the working of protection granted to the industry and to recommend any further action required with a view to its increase, decrease, modification or abolition according to the circumstances of the case. The enquiry, which was conducted during February-July, convinced the Commission that the industry has reached the stage where it can dispense with the protection it had hitherto enjoyed. It should be noted that the present enquiry was confined only to solid woven cotton and hair rubberised or bituminised beltings, and it was found that the price of indigenous products compared favourably with that of foreign products. Moreover, the Commission felt that the industry has now virtually a protected market because of the severe restrictions imposed on imports. These facts, according to the Commission, led to their recommendation to discontinue the protection. However, they expressed their view that the hair and woollen yarn used for the manufacture of hair belting should be exempted from paying the customs duty as at present.

During the enquiry, Jay Shree Textiles Ltd complained that the licences issued to it were totally insufficient and suggested that the quality of wool tops available would not be sufficient to meet the requirements of the belting industry. The Commission, therefore, suggested that the Textile Commissioner should give urgent and sympathetic consideration to the firm's requests to help the industry to pass through the present crisis.

The Commission also recommended that the import policy in respect of hair belting yarn should be liberalised so that the belting units may be allowed to import such quantity of good quality of hair or woollen yarn as cannot be procured indigenously at an economic price.

The urgent need of adopting early steps to rectify the position in regard to the submission of applications by belting manufacturers for import of belting yarn by specifying a single authority to whom all manufacturers should apply for import licences for the said yarn was also emphasised by the Commission.

The manufacturers of belting complained that the quality of indigenous yarn is not satisfactory and alleged that the absence of any standard specification for such yarn is the main reason for the production of defective yarn. The Commission suggested that the Indian Standards Institution should give top priority to the formulation of standards for belting yarn.

The Commission decried the unnecessary delay in disposing of the applications for certification marks to the beltings put in by the Birkmyre Bros Ltd and Eastern Belting and Spinning Mills Ltd. Considering the urgency of the matter for maintaining the quality of beltings, the Commission suggested that the Indian Standards Institution should expedite the disposal of the pending applications submitted by the above companies.

It was reported that the low quality of indigenous yarn has led to the decline in the offtake of hair belting and that, as a result of this trend, a large number of looms in West Bengal are remaining idle. The Commission revealed that many of the defects found in the industry could be eliminated if Jay Shree Textiles would make it a point to suppply only yarns spun on its modern spindles. They also emphasised the urgent need for assisting the hair belting units in West Bengal with cheap and quality yarn in order to help them survive the present crisis, failing which the Commission apprehended that they would be forced to close down. And it was also recommended that Jay Shree Textiles should supply to the belting industry properly conditioned yarns only. They also reiterated their suggestion contained in the previous report that the Government departments should in future purchase only such solid woven bituminised beltings bearing the stamps of the Indian Standards Institution.

It is gratifying to note that the Government have accepted the recommendations of the Commission and it is expected that necessary steps will be taken at an early date. The attention of Jay Shree Textiles has been drawn to the recommendation of the Commission to supply only well conditioned yarn in future. The Indian Standards Institution was also alerted by the Government for the speedy disposal of the applications for certification marks expect those detained at the express desire of the parties themselves.

*

Development of Hotel Industry

The general backwardness of the hotel industry in India, in spite of the growing increase in the flow of tourists to this country, reflects the lethargic attitude of those engaged in the industry and the lack of adequate encouragement from the Government. It is indeed disheartening to note that the number of modernised hotels in this country is comparatively insignificant to meet the growing demands. The big hotels in the cities, which alone can cater to the needs of the tourists, have also failed to make any appreciable progress in this direction. All these facts only lead to the conclusion that greater attention should be paid to providing suitable and sufficient accommodation to attract more tourists to the country.

It was in the fitness of things that Mr S. K. Patil, the Union Food and Agricultural Minister, emphasised the importance of constructing more modern hotels in the country with a view to promoting tourism, in his inaugural address to the Second All India Hotels and Restaurants Convention held in Bombay. He revealed that the necessary encouragement would be forthcoming from the Government in the future. The decision of the Government to start four catering colleges in the four major cities, —Bombay, Calcutta, Madras and Delhi—can be rightly considered a suitable step in this direction. Besides, the Government have also decided to leave the industry entirely in the private sector for a pretty long period. This would necessarily provide the fillip to private entrepreneurs to invest more and more capital in the industry. The problem of securing adequate financial help to the industry, which has hitherto been a serious handicap to its development, can be thus solved to a considerable extent.

Rai Bahadur M. S. Oberoi, the President of the Federation of Hotels and Restaurants Association of India, in his welcome speech, urged the necessity of setting up a separate financial corporation with a capital of about Rs 10 crores to finance the construction of small hotels on the lines of motor hotels and motels which would be within the reach of the average tourists whose number has been ever on the increase. The advantages of setting up such a corporation are obvious in the interest both of the industry in particular and of the country in general. The gain to the nation by way of more foreign exchange and better understanding among the people of the different countries would be indeed great. Within the country, it will promote more contacts between the people of the different communities and provide opportunities to understand the difficulties of one other. The more frequent the contacts, the greater will be the chance of developing the incentive to work for the common good of the nation.

Moreover, in the present era of advanced methods of communications and travel great changes are taking place in the lives of the people all over the world and we must endeavour to the best of our capacity to fit in with this new age.

WORLD OF COTTON

Tight Supply Position

THE Indian Cotton Mill Federation has now come to the conclusion that cotton supply, in the current season, is tight indeed in view of the fact the crop in India is not likely to exceed 45 lakh bales. In fact, it may be some where between 43 and 45 lakh bales. In fact, it may be somethat the aggregate monthly rate of production by mills, handlooms and powerlooms this year is higher than the average monthly output in 1956 and 1958, but slightly lower than in 1957. Similarly, the average monthly delivery of mill cloth for civilian consumption, in the current year, has been much higher than the monthly rate of deliveries since 1956.

The Federation, therefore, feels that cloth production at the present level can be maintained only if assured and adequate supplies of cotton are made available to the industry. It is argued that, unless the Government allow more imports, mill production will be hampered due to cotton shortage.

As a matter of fact, the Government of India are examining the question of importing about 1.5 lakh bales of medium staple cotton equivalent to 15|16″ staple of indigenous growths in a bid to arrest the rising trend in the prices of domestic cotton. The shortage of medium-staple cotton is expected to be acute after April 1960, as the domestic crop is likely to be only 45 lakh bales this season. Imports of medium-staple varieties may, therefore, be permitted as a special case.

The scope for such imports, is, however, limited, as only Pakistan, Syria and America are in a position to supply the requisite growths. Besides, their prices are about Rs 100 per candy higher than those of equivalent Indian growths. This is mainly due to the current high level of activity in textiles in all the major manufacturing countries. According to some observers, spinners have been busier in the past three months than they have been since 1951.

The demand for raw cotton in the world market has been particularly heavy, because of the low level to which stocks have been allowed to fall. As far as supplies are concerned, there is no doubt that America, with a crop of three million bales higher than last year and carryover of nine million bales, has more than enough cotton to supply world requiremenst. But it is possible that, because of the good demand, the American authorities will cut the export subsidy on US cotton and thereby automatically increase prices.

The chances of getting a large quantity of cotton from Pakistan are not very bright. Moreover, the announcement allowing the import of 20,000 bales from Pakistan for a value of Rs 1 crore has failed to enthuse the trade, as the quantity is so small. Pricewise also, there is no substantial advantage as this is only Rs 50 cheaper than the indigenous growth. The procedural details are yet to be announced; but it is understood that the shipment period will be three to four months.

But cotton circles in Bombay have welcomed the news of the US authorisation for the purchase of about one lakh bales of American upland cotton of staple length 1 1/16″ and above under the PL/480 programme. American cotton is said to be the cheapest in the world market and this, being supplied under the PL/480 programme, is expected to be lifted within a short time. Procedural details of shipment of this cotton are expected to be made known very shortly. Meanwhile, contracts for purchases have to be entered into before May 21, 1960.

Foreign cotton imports in India, for the first three months of the current season (September to November) have totalled 80,000 bales as against 71,800 bales during the corresponding period of last year. Imports into the Bombay Port accounted for 62,900 bales as against 53,900 bales; Calcutta, 2,270 bales against 1,716 bales; Madras 7311 bales against 10,297 bales and Cochin 6,786 bales against 5,809 bales.

×

FORWARD MARKET:

In the absence of any new developments, there was a lull in trading in the cotton futures market. It looked as if nobody appeared to be inclined to rig up prices and pay heavy margins. Attention is now focussed to the forthcoming EICA Board meeting. Meanwhile, Jharilla March delivery moved between Rs 754.25 and Rs 756.25, to finish at Rs 756.

×

SPOT MARKET:

The Spot market also presented similar conditions. Spinners preferred to wait and watch the situation for some time. Mills confined their buying to the barest needs. The fears of qualitative control had a softening effect on CO2 cotton.

On the export front, there was limited activity.

Total exports of Indian cotton, including Zoda and Yellow Pickings, to foreign countries for the first three months of the current season, were 40,300 bales as against 103,452 bales in the corresponding period of last year. Exports from the Bombay Port accounted for 36,430 bales as against 85,890 bales; Calcutta 2,770 bales against 12,700 bales and Cochin 940 bales against 2,070 bales.

In the import front, there was good demand for American cotton. Californian cotton, which is preferred by the Indian mills, is presently offered only in small quantities. This has been attributed to active demand for this cotton by the US mills. Again, the sharp rise in Uganda varieties, in the past few days, has brought fresh business by the Indian mills to a virtual standstill, since shippers are offering only reluctantly and in a very small volume.

According to latest indications, the new cotton crop in Sudan is progressing satisfactorily. Some prominent shippers have estimated that the private estate 1960 crop will probably be around 200,000 bales. This apart, the Sudan Gezira Board's preliminary estimates place the "L" varieties at 500,000 bales and "S" varieties at 200,000 bales. The Sudanese crop is, therefore, expected to be the highest on record.

Indian spinners are making enquiries for new crop Sudan long-staple cotton; but the shippers are hesitant owing to a number of uncertainties. First, the Sudan Gezira Board has not yet notified its marketing policy. Secondly, there are uncertainties about export duty, which is now 2.48d a pound. It may be noted that the official guarantee, that any change in this rate will not affect the buyers, is applicable only to shipments made till the end of February, 1960.

'Half as old as Time'—is what they say of the massive cyclopean walls of Girivraja, in Bihar, 65 miles from Patna. Coming to recorded history, in the sixth century B.C. King Bimbisara founded the city of Rajagriha which is known today as Rajgir. Close by lie the ruins of the famous Nalanda University of the 6th century A.D., to which at one time came thousands of students from all over Asia. Even today pilgrims from far and wide come to Bodh Gaya, where Gautama Buddha attained enlightenment. About 9 miles from Biharsharif is the village of Powapuri hallowed by the memory of Mahavira, the famous Jaina leader. Here in the midst of a vast lake stands a small marble temple known as the Jal-Mandir — the temple can be entered only through a door so low that the visitor must bow in reverence.

WHEREVER You go in India, from the sun-drenched fields of Bihar to the green retreat of the Kulu Valley, there is the full, rich flavour of Wills' GOLD FLAKE —the perfect companion for your travels.

Wherever you go . . . they're good

BOMBAY REVIEW

Outlook for Zinc and Tin

THERE are indications that the present unusually firmer tendency in Zinc prices will subside shortly. The Bombay Metal Exchange, which has been handling distribution of imported zinc to non-scheduled industries, has already issued delivery orders for nearly 450 tons in the past three weeks. Orders for another 200 tons are expected to be finalised during the course of next week. The actual users have already started receiving supplies against these orders and, with the tempo of releases picking up, the pull on the market is likely to relax significantly. The rate for Zinc is quoted around Rs 166 per cwt.

Futures trading in Tin, which has remained suspended for several months, is likely to be resumed in the Bombay metal market shortly. The Board of the Bombay Metal Exchange has approached the Forward Markets Commission for its permission and the question of resumption is not expected to present any difficulty.

The decision of the International Tin Council to increase the tin export quota for the first quarter of 1960 to 36,000 tons from 30,000 tons in the current quarter is expected to help hold down the price of tin. The new quota amounts to 95 per cent of output capacity of the six exporting countries.

Although the Buffer Stock may not have much tin left, after the frequent sales during the past few months, it proposes to sell nearly 2,500 tons from the UK stockpile soon. Moreover, the Singapore producers are believed to have accumulated 12,000 tons, which can be brought to the market as soon as they are wanted. In the Bombay market, Tin is quoted at Rs 136.50 per quarter.

Meanwhile, the Government of India have laid down a new procedure for the import of copper and zinc under the export promotion scheme. Import licences for virgin copper against export of brass semis will be issued to the manufacturers-cum-exporters of semis, duly registered with the registration authorities.

The Tariff Commission has estimated the current demand for copper sheets and circles at 4,000 tons, for copper strips in cut lengths or coils 1,200 tons; for copper rods other than electrolytic 300 tons; for copper pipes and tubes 800 tons; for brass sheets and circles (commercial) 25,000 tons; for brass strips (industrial) in cut lengths or coil 2,000 tons; for zinc sheets and strips 3,000 tons and for lead sheets and strips 700 tons. The demand for commercial sheets and circles of copper and brass, in future, will remain more or less stationary at the 1959 level.

According to the Indian Bureau of Mines, the production of lead-zinc ores in India, during the period January to September 1959, was 121,275 metric tons. This represents an increase of nearly 47 per cent as compared to the production in the corresponding period of the preceding year.

*

GATEWAY MARKETS

Oils & Oilseeds

Prices on the Bombay Oilseeds Exchange continued to display a firmer tendency under the lead of groundnut. The strength in groundnut was derived from the buying support from Saurashtra along with replacement buying and short-covering, being influenced by the shortage of supplies. Shippers were found to be eager buyers of groundnut oil and oil-and oilcake against their export commitments.

Although fresh export business in both groundnut oil and oilcake continues to be difficult due to unremunerative foreign prices, observes feel that the outstanding commitments are large enough to exercise a bullish effect on the domestic market. Ready Groundnut Bold is quoted at Rs 38 and Groundnut Oil at Rs 20.44.

The firmness in groundnut had a sympathetic effect on the Castor-seed section, although higher levels could not be retained till the close of the week in view of the discouraging outlook for export of castor oil. Fresh business continues to be difficult, since the domestic market maintains a steady trend, while the US prices of castor oil have also risen sharply in sympathy with the firmness in India. Castor ready is quoted at Rs 32.75 and Castor Oil, commercial quality, at Rs 17.62.

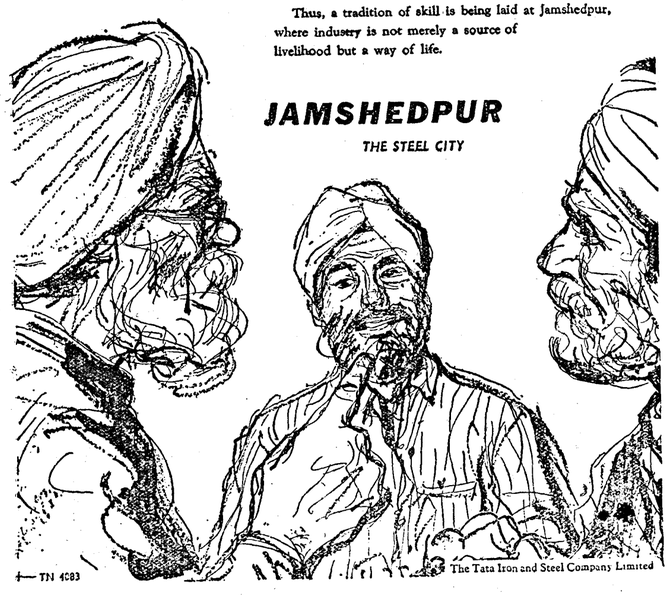
The overall tendency of prices, in the Linseed section, was downward. Reports regarding the release of linseed oil from the US stockpile have continued to create a nervous feeling among the operators. Linseed ready is quoted at Rs 34.5 and Linseed Oil at Rs 18.12.

*

Yarn

A smart rise in Acetate Yarn was the main feature of trading in the Bombay Yarn market and the rise in prices was mainly due to hectic buying on fears of a shortage in the near future.

Other sections have been ruling steady. Rayon and cotton yarns have continued to be firm; but staple-fibre yarn and nylon yarns have faced the protracted absence of support. Prices are moving within a narrow range and the turnover continues to be limited.



the beginning of a tradition

FIFTY YEARS AGO, Sardar Pratap Singh Bhumra, now 87, was assembling cranes and electrical equipment as India's first steel works was taking shape in the wilderness of Chhotanagpur.

His son, Jwala Singh, joined the steel works his father helped to build. Drawing upon his mature technical skill, he suggested an improvement to soaking pit cranes which won him a reward from Management and appreciation from the American manufacturers.

Hari Singh, Jwala Singh's son, imbibed the family tradition early in life. A young electrician in Tata Steel's Skelp Mill, he was recently sent to Japan to study advanced crane maintenance.

Thus, a tradition of skill is being laid at Jamshedpur, where industry is not merely a source of livelihood but a way of life.

Export of Iron Ore

PARLIAMENT'S Informal Consultative Committee for the Ministry of Commerce & Industry has recently been provided with a full and uptodate picture of the conditions relating to iron ore exports. According to the note prepared for the Committee, India has vast deposits of iron ore estimated at about 22,000 million tons approximately equal to a fourth of the total reserves of the world and the largest known to exist in any single country. Apart from these deposits which are of high grades (containing 63 per cent iron and above) there are much larger deposits of low grade ores containing about 35 to 50 per cent iron estimated at about 85,000 million tons. But India's domestic requirements of iron ore for the steel industry are modest. Out of a total quantity of 5.8 million tons produced during 1958, about 3.2 million tons only were consumed by the Indian steel industry. Allowing for future increases in domestic steel production which will be approximately 6 million tons at the end of the Second Five Year Plan and about 10 million tons on the completion of the Third Plan, there will, in the foreseeable future, therefore, always exist a large surplus available for export.

Notwithstanding the size of its deposits, exports from India in the past have been extremely small. Prior to 1952, India's exports did not exceed two lakh tons. During recent years, there has been an almost tenfold increase in our exports. The export potential of the country is, however, capable of much further expansion.

The limiting factors to any substantial increases in exports have hitherto been the inadequacy of the trading mechanism and rail and port facilities available in the country. In order to overcome these organisational deficiencies, Government of India entrusted the STC with the export of iron ore in August 1956 and a third of the export quota was allotted to the STC and two-thirds to the Private Sector. Since 1st July 1957 the entire exports of iron ore are canalised through the STC.

By rationalising rail movement, making use of road transportation to the maximum extent practicable, increasing the handling capacities of the existing ports and opening up new ports, it has been possible, within the resources available, to develop export capacity during the last two or three years to about 4 million tons per year. By rationalising railway movement, and making use of road transportation wherever practicable, movement capacity has increased from two million tons to 4 million tons; by mechanising certain ports and making arrangements for bulk handling of cargoes at the ports, leading rates at the ports have increased substantially; by opening up new ports such as Karwar, Belikeri, Mangalore, Cochin, Cuddalore, Paradip etc, port capacity has been further increased.

The cumulative effect of these measures has been that exports of iron ore have risen steadily as will be evident from the following figures:

	(In lakh tons)
1951-52	2.8
1952-53	8.8
1953-54	12.4
1954-55	10.2
1955-56	15.6
1956-57	21.4*
1957-58	21.2**
1958-59	23.9**

*Partly by STC & partly by private shippers

**Entirely by STC

During 1957-58 the exports were a little less than in 1956-57 but this was due to acute recession in the world market. In 1958 the world steel production was falling but India was able to maintain her exports. During 1958-59 exports were the highest ever materialised from India so far.

Some overseas buyers are turning to India as a stable source of supply. Japan already has a contract with the STC to buy 7.2 million tons between 1957-62 (approximately 1.5 million tons each year). She has increased her purchases for 1959-60 from 1.5 million tons to 2.25 million tons. Czechoslovakia is India's second largest buyer and this country has progressively increased her purchases from less than 3 lakh tons in 1955-56 to nearly one million tons each year. As a result, India has emerged as the largest supplier of iron ore to Czechoslovakia excluding the USSR. Likewise, larger and larger supplies are being taken by various other countries such as Italy, Yugoslavia, Poland, East Germany, Hungary and now Rumania. A statement is given at the end, showing India's exports to various countries.

Internal resources being limited, to take care of the growing demand of iron ore, efforts are being made to develop additional capacity in collaboration with the traditional buyers. An agreement has been concluded with the Japanese Steel Mills for the supply of an additional two million tons of iron ore per year from 1964 onwards for a period of 10 years, in addition to their normal purchase of about 1.5 million tons each year. Since the existing rail and port facilities could not sustain additional exports of this magnitude, the Japanese have been persuaded to collaborate with India in the development of the Rourkela-Vizag project. This project envisages development of a mine site in the Kiriburu area in Rourkela, laying of a railway line from Sambalpur to Titlaghar and the construction of two additional berths with mechanical loading facilities at Vizag. The total cost of this project is estimated at $40 million, of which $20 million will be found from the assistance to be received from the US President's Asian Development Fund, $8 million from Japan and the balance from our own resources. Japanese Steel Mills have expressed a desire to purchase a further four million tons each year from 1964 onwards for a period of 10 years based on certain developments to be undertaken in the Bailadila area in Bastar Region of Madhya Pradesh. The feasibility of this project is being examined. A Japanese Delegation is coming to India in January next for spot discussion of the project.

Simultaneously, negotiations are going on between India and certain traditional buyers of Indian ore in Europe, such as Italy, West Germany etc., for the development of a project to sustain export of an additional 1½ to 2 million tons to Europe from the West Coast of India. The project under consideration envisages laying of an additional railway line from the mining areas in Mysore State and the development of Mangalore port. If the proposals which are under consideration materialize, it is expected that, by 1966, India's exports of iron ore will rise to nearly 12 million tons. The aim of the Corporation has throughout been to diversify its markets and to reduce its dependence on any one market. As a result, the exports from India to European countries and to Japan are presently almost in balance, as will be evident from the tabular statement.

Having regard also to the very extensive deposits available in the country of low grade ore the Corporation has also been endeavouring to increase the exports of low grade ores from this country. Hitherto, exports of low grade ores from India were extremely meagre. As a result of the efforts which have been made, exports of low grade ores today account for nearly 16.3 per cent of the total exports from this country. The main difficulty in enlarging our exports of low grade ores is that such ores are unable to bear the high incidence of railway and shipping freights. Considering that railway freights account for about 30 to 40 per cent of the f.o.b. cost of iron ore, and shipping freights at times are as high as the cost of the commodity itself, it is but natural that buyers should be reluctant to buy low grades of iron ore from distant sources of supply.

DELHI REVIEW

While, on the one hand, the Corporation has been endeavouring to develop exports of high and low grades of iron ore and pig iron and also to diversify its markets so as to reduce dependence on any single market, it has simultaneously been endeavouring to improve the terms of trade. As a result of these efforts, the average export price of iron ore for 65-63 grade which varied from 76 to 78 sh. prior to 1956 was raised to nearly 84 shillings per ton and has for some time past been stabilised around 80 shillings. A small reduction in price had to be conceded (from 84sh to 80sh) on account of the weakness in the world ore and steel markets consequent on the world-wide recession, but even now, Indian prices are generally somewhat higher than world prices for iron ore.

DELHI REVIEW

Discussion on Food

The discussion on the food situation in the Rajya Sabha that was initiated by Mr A. M. Thomas, Deputy Minister for Food, elicited a reiteration from the Minister of the Government's decision with respect to State trading in foodgrains, though with some modifications. But, as the Minister himself has admitted, the difficulties in the way of smooth implementation are formidable. The initial effects of some of the measures introduced as part of the State trading programme, such as procurement, had not been encouraging. Procurement was particularly difficult in the deficit States. in West Bengal and Bihar, procurement was greeted by closure of rice mills which made operations of price control by the Government difficult. It is these results that have forced the Government to seek modifications in State trading.

According to the new policy, procurement for the next khariff season would be enforced only in the Punjab, Madhya Pradesh, Andhra, UP, Orissa and Assam. In view of the embarrassing results that followed the first attempts at procurement in Bihar and West Bengal, it has been indicated by Mr Thomas that procurement is not likely to be undertaken in these two States.

The experiment with procurement and State trading would seem to point to their limited effects in conditions of scarcity. On this consideration, the hopeful prospect for increase in foodgrain production in the next season, indicated by Mr Thomas, would seem to offer a favourable sign for the enforcement of the modified scheme for State trading now envisaged by the Government. The foodgrain crop is expected to be better than last year's in areas not affected by floods. Late rains in UP and Bihar had relieved the earlier draught conditions that prevailed in these States. The position of the rice crop in the South is considered to be satisfactory. Increase in rice production is also anticipated in Madhya Pradesh and Punjab.

It was on this need to increase production that most of the members who participated in the discussion laid the emphasis. However, Dr H. N. Kunzru, a senior member of the Rajya Sabha, expressed doubts about the claim made by the Minister about the favourable prospects for the coming season. It was pointed out by him that the average yield per acre both in respect of rabi crops and pulses was not such as to give ground for satisfaction. He made a plea for a greater emphasis on irrigation in the future plans of the Government for stepping up foodgrain production.

*

Colourization of Vanaspati

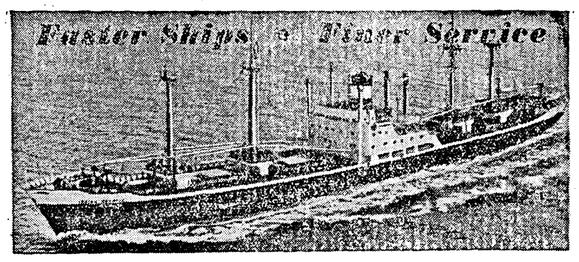
A Congress member's resolution urging the Government to take early steps for colouring hydrogenerated oils was the subject of an animated discussion in the Rajya Sabha. The need for colouring of vanaspati lay in the free scope uncoloured vanaspati gave for mixture with ghee. As such, the resolution was unobjectionable. However, the resolution was withdrawn at the instance of the Deputy Minister for Food who assured the House the Government's acceptance of the need for colourization of hydro-genated oils.

In the course of the discussion, widely divergent opinions about the utility and importance of vanaspati were expressed by the members. It was pointed out by a Congress member that hydrogenation of oil was unnecessary and that it served only as an adulterant for ghee. The argument that use of hydrogenated oils led to coronary diseases was also advanced against the use of vanaspati. From this, it was easy to make out a case for the complete ban of vanaspati production in the country. It was a Communist member who pleaded for a dispassionate consideration of the question of the use of vanaspati. He was against any undue haste in banning vanaspati production and pointed out that a proper decision on the subject should be preceded by a thorough investigation.

The Deputy Minister for Food, Mr A. M. Thomas, was also not impressed with the argument that use of vanaspati led to heart diseases and observed that available evidence did not support any such conclusion. In support of this, he quoted from the latest survey of researches made at several centres. It was further pointed out by Mr Thomas that there were several gaps in the existing knowledge about heart diseases and no definite conclusion about the connection between use of vanaspati and heart diseases was possible.

However, he accepted the need for making colourization of vanaspati compulsory on the part of the producers, and said that experiments in this connection had not yielded satisfactory results.

*



India Steamship

In the growth of Indian shipping, a major contribution has come from the India Steamship Company. Being one of the foremost companies in the line, and more particularly because companies are not as numerous in shipping as in other sectors, the progress made by it has vital importance for the progress of Indian shipping in general. Considered in this light, Sir A. Ramaswami Mudaliar's address at the annual general meeting of the Company's shareholders summarising the activities of the company during the last working year should cause satisfaction. Sir Ramaswami Mudaliar has reported progress both in respect of new fleet and opening of new routes. The "Indian Success" and the "Indian Strength" are the two noteworthy additions to the company's fleet, which now consist of 18 ocean going vessels including the "Indian Industry" and one coastal vessel, the "Indian Commerce". New lines had been opened to ports in the Black Sea and along the Levantime Coast of the Mediterranean. Opening of a direct service to the Eastern ports of South America was another achievement. These achievements attest to the determined efforts being directed by the management of the Company for the expansion of the Indian shipping industry.

A serious bottleneck to faster development of shipping in the country, which has to make up a great leeway to cover a sizable portion of the country's coastal as well as foreign trade, is constituted by shortage of foreign exchange, Sir Ramaswami Mudaliar suggested the need for a natural solution on the basis of combined efforts of shipping companies and Governments, both Indian and foreign. He described the system of deferred payment for foreign exchange as unsuitable in view of the larger capital outlay it involves.

Sir Ramaswami Mudaliar also referred to other developments in the shipping world which have unfavourable implications for the progress of Indian shipping. There has developed a tendency for tramps to offer unfair competition by means of unnatural cuts in freight rates. This, together with overtonnage of some of the shipping companies, has led to a sharp decline in freight rates in some of the important commodities. Unless a solution is found to end these unhealthy practices the Indian shipping companies, which are new to their business, would be hard put to it to make further progress.

A development of great significance for the future progress of Indian shipping was the constitution of the National Shipping Board under the chairmanship of Mr G. L. Mehta. Referring to this, Sir Ramaswami Mudaliar expressed the hope that the Board would help in fostering the growth of Indian shipping.

NORTH INDIAN MARKETS

Foodgrains Markets Depressed

CONDITIONS in the Foodgrains market have remained generally depressed in the absence of any activity. In the Hapur market, wheat prices are stationary, while coarse grains have eased fractionally. Trading in the Pulses section continues to remain dull and featureless.

Wheat is quoted at Rs 17.25 for the average quality and Rs 18.25 for the farm variety. Arrivals in the open market are expected to increase shortly, as farmers are in a mood to lighten their stocks. Thanks to easy supply position, Rice prices have eased by 25 nP to 50 nP per maund. The Uttar Pradesh Government are reported to be purchasing rice for building up stocks and the response is good.

Gram and Maize continue to be in good demand; but stocks of the latter are mounting as maize is reaching Hapur from other parts of the State. With better supply position, Bajra prices have developed an easier tendency. New produce Jowar and Guwar is reaching the market in good quality and prices, as a result, have been drifting to lower levels. Among Pulses, Arhar has eased by about 75 nP due to slack demand. The market for Pulses rules quiet in the absence of demand and heavy stock position.

*

Sugar

In the Hapur market, Sugar prices have declined sharply by about Rs 7 a maund in view of the better supply position.

The Muzaffarnagar market remains weak on lack of demand for the sweet commodity. Consequently, the price of sugar has eased by Rs 2 to Rs 3 per bag and is quoted at Rs 125 per bag.

*

Gur

Gur prices have recorded fresh declines during the week under pressure of arrivals in Hapur as well as in other mofussil centres. While the fall in Pansera quality is slight, the Balti quality has registered a sharp fall of Re 1 to Rs 1.25 a maund. Arrivals were estimated at 7,000 maunds. Total arrivals, since the beginning of the season, are put at 2.5 lakh maunds. Pansera is quoted at Rs 17 a maund as against Rs 14.25 quoted on the corresponding date of last year.

After a lapse of 10 months, trading in Gur Phagun was resumed in Delhi at the end of last week. Delhi is the fifth centre which has been recognised by the Central Government for forward trading in gur. Other four centres are Hapur, Agra, Muzaffarnagar and Meerut where forward trading has already started.

It may be recalled that hedge trading in gur was suspended on the 11th February this year after the imposition of a ban on forward trading by the Central Government to curb a speculative rise in prices.

In the Muzaffarnagar market, good quality gur Chakku remains in good demand from all the consuming centres. Consequently, the price for this variety has gained about 75 nP a maund, to be quoted at Rs 18.50. Pansera quality is in enquiry from Gujerat and Madhya Pradesh.

*

Khandsari

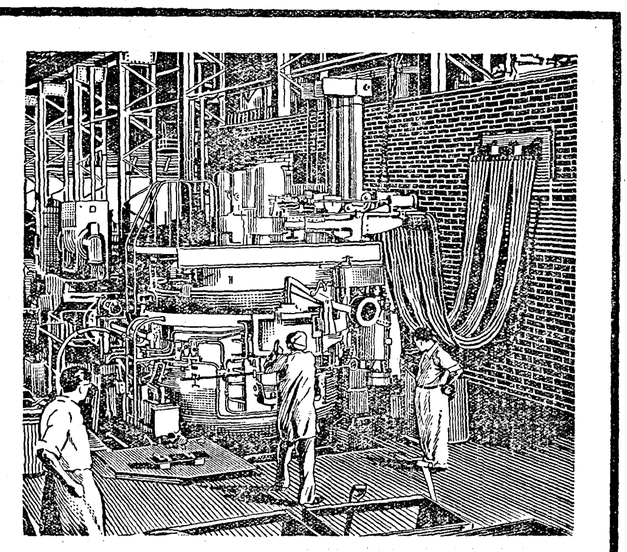
The production of Khandsari is in full swing. Old stocks have been exhausted and the new produce reaching the market is reported to be of inferior quality. Wet quality is quoted at Rs 32 to Rs 38 and the dry quality at Rs 40 to Rs 46 a maund, according to quality.

Silk and Wool

The Amritsar market for Artificial Silk goods has not shown any recovery from the recent shocks. Despite reduced production by most of the local mills, fresh business has been on the downward grade, causing anxiety to traders and manufacturers. Outside buyers are interested only in small lots of cheap thicker goods.

Wholesale enquiry in the Woollen section having ended, retail business remained progressive during the week under review. There was some interest shown by outside buyers. Interest in quality goods was restricted owing to their high prices. Out of 415 cases received in the market, practically the whole lot was sold without difficulty.

DELHI REVIEW



Oils & Oilseeds

Thanks to reports of business done with foreign countries, conditions in the Calcutta Linseed market developed a firmer tendency with the ready rate quoting up to Rs 24.75 per maund. The decline in the arrivals from the upcountry centres also contributed to the bullish trend in the market.

The Oilcake market is steady, as shippers are buying to cover against previous sales.

The price of oil is steady; but little business is transacted.

There is a substantial improvement in Groundnut prices, partly due to the increased domestic demand from the vanaspati manufacturers and partly to the increase in foreign enquiries.

STEEL CASTINGS

Steel Castings up to 3 tons are produced to B.S.S., I.R.S., or customer's specification in the most modern and mechanised steel foundry at the Kulti Works of the Company.

MADRAS REVIEW

Discussion on Land Ceilings

THE legislature debate that follows the Governor's address is generally an occasion that is devoted to a critical assessment of the achievements and policies of the Government in power. By bringing in focus the problems of immediate importance with suggestions reflecting individual and party opinions, such discussions contribute, though in a small way, to Governmental legislation on the subjects. It is, of course, true that the attitude of the Government toward major problems is pre-determined by party ideology, which rules out scope for influencing decisively Government's policies on such subjects. However, even here, legislative discussion reflecting different opinions, though it cannot alter the Government's stand, becomes invaluable for the constructive suggestions it throws up and for preparing the public mind for receiving the legislation when it is passed.

One such subject having ideological links, to figure prominently in the legislative discussions that followed the Governor's address to the joint session of the Madras Legislature, related to land ceilings. The idea of land ceilings is an article of faith with Congress Governments and they are wedded to its implementation. Legislation on the subject has already been passed in some States while, in others, it is the subject of imminent legislation. It was indicated by Governor Bishnuram Medhi, in the course of his address, that the bill seeking to implement ceilings would be introduced in the course of the present session. This announcement evoked a discussion on the subject in the course of which widely divergent views about the benefit of the proposed legislation were expressed by members of both houses.

So far as the Madras Government are concerned, the decision to bring in legislation on land ceilings would seem to signify a departure from the stand taken earlier by some of the Ministers. It is, in this connection, to be recalled that, when the idea of land ceilings was taken up at the Hyderabad session of Congress in 1958, it was vehemently attacked by Mr C. Subramaniam, the State's Finance Minister, on the ground that, by tending to further fragmentation of individual holdings, ceilings would least subserve the cause of increased production—the only benefit that was supposed to justify it. The only explanation for the subsequent change of attitude could be the need for a uniform land policy for the whole country, which would have been damaged had the Madras State refused to toe the all-India line.

The reaction to the announcement about the impending introduction of the Bill was varied. Members having leftist leanings were only too ready to welcome it and even held the Government blameworthy for the delay in taking it up. It was in the Council, which almost everywhere is the more conservative of the two, that opposition was voiced to the proposed measure. It was Dr Lakshmanaswami Mudaliar, the Leader of the Opposition in the Council, who led the attack against the idea of land ceilings. He questioned the very validity and legitimacy of the idea and asked whether the Government with any propriety could tell a person that he could not hold more than so much of land. He contrasted the silence now being maintained by the State Government about the compensation payable to these deprived of land in excess of the minimum ceilings to be fixed by the Government, with article 17 of the Constitution which protects a person against arbitrary deprivation of his property.

Another Senior member to oppose imposition of land ceilings was Mr P. T. Rajan. As an alternative to ceilings, Mr Rajan proposed heavy taxation of land and introduction of Death duty as in England. Though taxation could be carried to the point where the bigger landlords would be no better off than the small-holder. Mr Rajan's suggestion has the advantage that it would ensure the technical optimum for land holdings which is of prime importance for scientific and intensive cultivation. Another argument against land ceilings is that it creates uncertainty in the minds of landholders till such time as the measure is finally enforced. That this should disrupt agricultural operations is only too evident. To avoid such uncertainty and the adverse effect on agricultural production, Mr Rajan has argued for a period of grace during which the land holders could get rid of their lands without much difficulty. This according to Mr Rajan, would save the Government the trouble of paying compensation. Whatever might be the merits of this suggestion, rehabilitation of the landless by distribution of the surplus land among them, which is one of the important objects sought after by the Government by means of this measure, would be lost by this suggestion. It would also encourage benami transfer of land and delay the evolution of a land system based on the idea of ceilings on individual holdings.

Mr O. P. Ramaswami Reddiar, a former Chief Minister of the State, and Mr M. Patanjali Sastri, a former Chief Justice of the Supreme Court, expressed themselves against any hasty and ill-considered action on the subject. Mr Reddiar was for postponing consideration of the issue. If at all it were to be implemented, it had to be done having due regard to its ramifications. He particularly pleaded for protection of the interests of widows, minors, and orphans depending on land for their means of livelihood. Though he was not hostile to the idea of land ceilings, Mr Patanjali Sastri expressed himself in favour of a ceiling as high as 100 acres. Certainly, such a limit would not subserve the objects for which land ceilings are now being considered by the Government. If the Madras Government had taken up the question of land ceilings in the interest of a uniform land policy, it is only natural to expect that the actual ceilings fixed would also bear relation, though not necessarily exact, to ceilings elsewhere in the country. However, about the need for reasonable compensation for excess land expropriated there should be no difference of opinion. Mr Bhaktavatsalam, the State's Home Minister, himself has agreed to this suggestion and has assured that the Bill would be shaped on that basis and presented to the legislature.

SOUTH INDIAN NOTES

Objectives of Education

Professor M. S. THACKER struck a new note while delivering the 33rd Convocation Address to the Andhra University at Waltair with a plea for a synthesis of the study of both humanities and sciences, which between themselves should strike a balance. He warned against the danger of groups of specialists elaborating what he called "esoteric" knowledge, which is self-perpetuating and self-aggravating and is progressively becoming more and more inaccessible to the rest of society. That Prof Thacker should have in mind the rivalry between the two power blocs about the atomic secrecy, there could be no doubt.

In his view, a new tested proposition revealed by scientific research not merely constituted an addition to the body of knowledge; it might in conjunction with known propositions suggest a new hypothesis leading to more tested propositions. According to him, this cumulative growth had made specialisation in narrow fields inevitable and each specialisation had its own vocabulary and a precise language system. Progress outstripped the comprehension of any but the specialist and the difficulty of communication not only between the scientist and the layman, but also between specialists subscribing to different disciplines was continuously increasing. Prof Thacker therefore felt that the situation created left the scientist smugly parochial, and that the chasm that separated him from others had tended to become progressively wider.

Dealing with the education of young men and women as scientists, Prof Thacker said that they were concerned not merely with instruction in a subject or subjects, but with studies at depth and training for scholarship. He said that, while the requirement that the student should be introduced not to one but to several subjects was imperative, the embarrassing rate at which knowledge was growing had created a grave problem, a serious dilemma. It was possible to distinguish sharply between various sciences, and fields of enquiry which were seemingly disparate came into contact and important growing points appear where margins of common interest were established. A wise selection was possible out of the illimitable material on the basis of their relevance to the present problems and issues. Nothing was more disastrous to educational enterprise than inert ideas, and dotage on the past must be avoided.

Instruction in the frontiers of science held the greatest fascination to the student and that was because he was taken, as it were, to the edge of what was known and given the opportunity to share the fervour of the attack on the unknown as it was being waged. The intellectual courage which scientific study any inquiry instilled was the greatest asset to the scholar, courage not only of agreement or disagreement, but the courage to own what he did not know and venture to go ahead of his learning, break new ground and find ways of dispelling the ignorance. A distinction was possible between the "know-how" of professional education and its intellectual components. The "know-how" component was best supplemented in separate institutions or by industry. Therefore, Prof Thacker claimed that scientific studies were productive of most beneficent results when pursued as an intellectual discipline.

Scientific studies were not an end in themselves, and there was need for every one to understand the society and the economic and social forces that were moulding contemporary civilization. There was need also to study the value of judgments of philosophies and religions and ideas and ideals that had swayed multitudes. The most pressing educational problem of the moment was to restore the balance between the divergences brought by specialization in the two main branches of knowledge, the sciences and the humanities. The Professor asserted that the balance would not be reached until the specialists in one branch learnt to speak the language of those in the other. Modern developments called for the obliteration of the distinction between humanistic and scientific studies and demanded collective dedication to the deeper forms of understanding.

Prof Thacker wanted that stress should be laid on efforts to inculcate and complement understanding of the central core of values in the interests of ensuring a literate and educated citizenry. That was an immense task implying, among other things, a reorientation of the curricula, of studies, text-book improvements and teaching aids and so on. The need for harmony between thinking and doing was according to the Professor, never more urgent.

*

Higher Education in Madras

When brilliant students seek admission into technological and medical colleges, there is naturally a depletion in the strength of the humanities and higher sciences courses. This problem in Madras has caused concern among the Principals of the arts and science colleges. Last month-end, out of the 56 colleges in the State, fifty-three Principals met in the City to consider the question in various aspects.

A committee of principals was constituted to consider the question of the wide gap between authorised strength in the State's Arts Colleges and the actual admissions into them during last year. Another Committee was also named to find out as how best a few of the brilliant scholars could be retained to prosecute higher scientific courses rather than their electing to study engineering or medicine. Naturally, with the ample employment opportunities, these technical studies are preferred to others.

The meeting of these principals was not open to the Press. But newsmen were later on briefed by the respective spokesmen of the Government and the Principals. Mr C. Subramaniam, Education Minister, was present.

The secrecy of the session was apparently due to the insistence of the Minister that, from 1963-64, those colleges which use other than Tamil as medium of instruction in Colleges would not be entitled to Government aid. Putting this in other words, the Education Minister should have tacitly told these principals that English could no more be the medium and, by the 1963-64 academic year. English in the higher courses of study should find no place.

That humanities courses are not held of much importance by the students is proved by the following fact: The 56 colleges combined have seats in the three-year B.A. course numbering 4,619. But, actually, only 2,358 students sought admission, rendering 2,261 seats vacant. Thus, about 49% of the seats in the humanities studies are vacant. The position in respect of science studies is not alarming, but not, however, encouraging. The sanctioned total strength in the State's 56 colleges in the B.Sc course is 5,417 in the last academic year beginning July 1959: and the seats filled were 4,680: Unfilled seats numbered 737 or worked out to 13.6%.

No college in the State reported full strength in the B.A. degree course. Also, in the pre-university course, the gap between sanctioned strength and the actual strength is getting depressingly wider.

Various have been the causes for this. May be, the policy pursued by the Government should be held responsible, not the least being the total ban on English medium by 1963/64. There are migrations of brilliant talents to outside the State. They might not be in very large numbers; nevertheless, their flight away from the State shows that they are discriminated against on grounds of communalism.

Will English become a banned academic language altogether in the State of Madras? The Principals of the State Colleges who met in the presence of the Education Minister should have convincingly answered the question. The pros and cons of such an action should have been thoorughly discussed and many among the Principals, lest they should offend the Minister, may have unwillingly agreed to the proposal of switching over to Tamil by the specified time.

On this question, the Madras University, represented ably by Dr A. Lakshmanaswamy Mudaliar, and the Education Minister are continuously in conflict. Education has been the plaything of successive Congress Party Education Ministers of the State. Dr Mudaliar has been expressing genuine apprehension about the language policy of the State and has warned it should not keep out knowledge from youths studying in Colleges. English, which has been the medium in higher courses of technological and scientific studies, should be continued and there was nothing infra dig about having it for higher learning. A tiff was touched off by Mr Subramaniam some years ago, when he threatened to interfere with the University Administration if it did not help the Government in introducing Tamil as the medium of instruction. That the University is always an autonomous body with which the Government should not interfere, was powerfully pleaded by Dr Mudaliar at an all-India level. There was the University Grants Commission, under the shrewd direction of Sir Chintaman Deshmukh, which did not uphold Mr Subramaniam's plea. But the subject was revived and again it has been decided that those colleges which do not toe the line of the Government policy of having the regional language medium in college courses would not be entitled to government aid.

MADRAS REVIEW

Groundnuts Easy

SOUTH INDIAN MARKETS

Madras, Wednesday.

PRICES of groundnut oil and kernels were easier today in the Groundnut-oil and seeds exchange. The recession in price was not considerable. Heavy arrivals at the rate of about 80-85 tons of kernels from producing centres into the City had stopped prices going up. There was also fair activity by both shippers and local interests.

Today's quotations were: Groundnut oil per candy of 500 lbs; Ready Rs 351; December Rs 349; January Rs 342; February Rs 343. Kernels per candy of 531 lbs; Coromandel Rs 180; Peanut Rs 177-178. Castor oil per candy of 500 lbs Rs 330; Coconut oil per tin (Local) Rs 41; Gingelly oil per maund Rs 20-8; Groundnut oil cake per bag Rs 26.

The United Kingdom price for groundnut oil per ton was quoted today at £104½ and for Burma Rs 1,600 per ton for near shipments.

Last week, a firmer trend was visible in the prices of both groundnut and groundnut oil; arrivals continued very heavy but shippers' anxiety to fulfil near contracts sent up prices. Bombay coverings also imparted a bullish tendency. Later on, that interest having worn out with the shippers having covered almost all their contracts, prices began a downward trend. Nevertheless, oil recorded a gain of Rs 30-35 per ton and kernels Rs 25-28 per ton.

Last week-end, the arrivals of groundnut into Madras market averaged 100 tons daily. It has now become less though the offtake has been consistently larger. When there was a set back in weather, the coromandel varieties touched Rs 190 per candy and the peanut Rs 185 per candy. But, after the week wore out, cautiousness marked the trading. While yesterday's rate stood at Rs 185-186 for coromandel, today it had gone down to Rs 180. Peanut new crop was also quoted yesterday closing at Rs 182 but it had gone down to Rs 177-178.

Vanaspati and shipping interests went in for bulk last week. In the nearby deliveries, good quantities were absorbed. The Enquiries emanated generally from the southern side. Spot goods were at Rs 353 and continued at that rate till the last week end. On Monday and Tuesday, the telling effect of the buyers' hesitancy reduced the price to Rs 352 and today it stands at Rs 351. Forward positions also weakened. Sellers were ready to dispose of bulk at Rs 351 for a little over 3 days delivery, almost equal to spot goods prices.

January and February positions commanded good turnover. In December, activities were mainly of the squaring up nature. January was supported at Rs 347-348 per candy, but the rate tapered off to Rs 345-344 and closed at Rs 343 on Tuesday. It was Rs 342 at today's closing.

February showed the same trend. From Rs 346, it went down lower to Rs 343 today. It was at Rs 350 last weekend. Short covering early last week also produced a spurt in prices, but this was only momentary. Sellers are offering today at Rs 343. There is likelihood of this quotation going down further as the week progresses.

In most of the North and South Arcot producing centres, groundnut kernel arrivals were mostly steady and good. About 800-900 tons of kernels are being received daily in these two districts. Prices of both oil and kernels have declined. Crushers obtained their quota at Rs 177-180 per candy in kernels. In Tanjore, Madurai and Dindigul, arrivals have begun only now. The momentum of larger arrivals would be at its height by the end of the month. Substantial price declines may then be anticipated.

In castoroil, there was no activity. The price quoted today was steady at Rs 330.

In gingelly oil and seed, there were no changes.

Also, in coconut oil, no change was observed.

The following prices prevailed in upcountry markets in kernels and oil today:

	Kernels* Rs	Oil† Rs
Guntur/Bezwada ...	183	350
Vridhachalam ...	180	345
Nandyal ...	175	340
Villipuram ...	185	346
Cuddappah/Yerragantla ...	174	345
Pollachi Superior nominal ...	183	348
Tanjore ...	175	345
Tiruvannamalai ...	175	345
Salem ...	175	345

*per candy of 531 lbs
†per candy of 500 lbs

Pepper prices were firm at Cochin and were quoted at Rs 1,100 for 672 lbs and went up to Rs 1,225. Light pepper was quoted at Rs 700. Turmeric went up to Rs 275 from Rs 225.

OTHER COMMODITIES:

Ministerial declarations in the State and Central legislature on the decline in foodgrains prices seem to be vouchsafed by actual facts available from producing centres. Particularly in paddy and rice, the Tanjore deltaic district reports show there is paucity of enquiries from outside the state, including from Kerala, with the result that prices had slid down by Rs 2 to Rs 3 per bag. Dull trading in these centres was thought of as a surprise after so much of buying fervour all these weeks. Tanjore's major exporting centre of Kuttalam reported a paddy price of Rs 16/50 to Rs 17/50 from Rs 19.50 per bag. The price of boiled rice declined by Re 1 or Rs 1.50 per bag of two maunds. Retail prices of paddy and rice were firm in Tanjore. But Andhra rice varieties ruled cheaper.

The Tadepalligudem rice centre continued dull since wagon supplies were fair. As prices here had come to recede, arrivals from fields were poor lest there should be further depression. Millers have completed their delivery to the Union Government. Paddy New akulu was sold at Rs 23.50 per bag, old akulu at Rs 28.50; basangi Rs 23.50; Sannakrishnakatukolu Rs 26.25; old Rs 30.50; bangarutheekalu Rs 31; sanna basangi Rs 25.75; raw rice local akulu Rs 35.75, akulu old Rs 44; Sannakrishnakatukolu Rs 47; Export rates f.o.r. akulu new Rs 37.75; old Rs 46.50; Sannakrishnakatukolu Rs 47/49; Bangarutheekalu Rs 51; boiled rice Akulu/Basangi Rs 37.50 to Rs 37.75.

In Madras city foodgrains prices in the wholesale market remained unchanged. Supplies were normal, as also the offtake. Reticence continued to mark buyers who were content to meet their immediate requirements. Further lower prices in these commodities are expected. Large scale arrivals of good paddy from the main samba harvest from the Tanjore and Trichinopoly districts down South and also from Andhra districts of Krishna and Godavari are to arrive in the City by the month-end. In anticipation of such arrivals, prices of old stocks went down by about half a rupee per bag. In boiled rice, there have been regular supplies to lessen scarcity with the result the price fell by a rupee per bag.

Pulses remained the same as in the last week. Black gram, however, was quoted one rupee lower. Toor dhall Rs 56/75 (205 lbs); Bengal gram dhall Rs 36/42; Bengalgram Rs 34.50 to Rs 35.00; Blackgram dhall 60 Madras measures Rs 56/62; Greengram dhall Rs 65/75; Greengram 225 lbs Rs 52/53: Blackgram 2-3/4 maund Rs 49.

Higher prices drove away pulses buyers who expect still lower prices at which offers will be made in the coming weeks.

Tamarind, as heretofore, continued to be the ace commodity and food articles trade. New varieties commanded renewed buying. The 500 lb bundle went up by Rs 10 to Rs 15 at Rs 380/425.

Coriander 80 lb Rs 50/52; mustard big 164 lb Rs 52/53; small 500 lb Rs 165/170; garlic small Rs 180/195 big Rs 235/240; tamarind new Rs 380/425; old Rs 300/310 (per 500 lbs bundle); soapnuts Rs 160/165; jaggery Rs 125 to Rs 175; brown sugar Rs 160/175; betelnuts peetan Rs 76/78; bold rasi Rs 80/84; venthi vettai Rs 52/54; soor vettai Rs 42/44; Chillies Ramanathapuram 82 lbs Rs 115/117; Pettai Rs 115/118.

*

Hides and Skins

Improvement was recorded in the Skins & Hides market today, and prices went up by 3 to 6 nP per lb. Better export inquiries also came in. The price decline was halted by these enquiries. The premium marks 8-8½ lb run and Fourths were sold at 59d and 56d and 3d less per lb according to the marks. Bangalore Prime came in for enquiries at 75-78d 5-5½ lb average. 8-8½ lb average run were generally in greater demand, as also average run and fourths. The prices were between 47d and 52d.

Inferior fifths 5-5½ lbs were at 42d. Domestic demand was good and the quotation went up by 2d per lb. Better United Kingdom offer is expected.

There is no change in tanned buffalo hides, as also in tanned cow calf and buffalo calf. Premium marks 1-1½ lb average were in for good enquiries, but there is very little of actual selling.

Tanned goat skins totalled 1,000 pieces sold and tanned sheep skins sold were 31,000 pieces. The left over was larger at 10,000 pieces of tanned goat and 53,000 tanned sheep skins. In the c.i.f. 'section, tanned goat skins were slightly better with quotations higher by 6d per lb.

Prices: tanned cow prime 5/5½ lb Rs 2-12 to Rs 3-2; 6/6½ lb Rs 2/8 to Rs 2/11; 8/8½ lb Rs 2/2 to Rs 2/4; 10/12 lb Rs 1/4 to Rs 2/-. Buffalo 12/13 lbs Rs 1/6 to Rs 1/8; Cow calf 1½ to 2 lb Rs 4/8 to Rs 5/-. Buff Calf 1½ to 2 lb Rs 3 to Rs 3/6; Goat Prime 8/9 lb Rs 9/2 to Rs 9/4; 5½/6 lb Rs 10/6 to Rs 10/8; tanned sheep ordinary 6/7 lb Rs 8/4 to Rs 8/8; Sheep Prime 6/7 lb Rs 10/14 to Rs 11/2.

The prices of raw skins were: Bangalore raw goat skins Rs 580/640; Whitewool sheep Rs 560/650; Blackwool sheep Rs 430/490; Bezwada raw goat skins Rs 565/570; He sheep Rs 535/540; She sheep Rs*435/500.

*

Bangalore Silk

There was hardly any noticeable change in the price trend, for silk and silk products, obtained in the Bangalore Silk market during the week ended December 10, 1959.

While filature silk, in general, remained at the same levels noticed in the previous week. T. Narsipur started the week at Rs 38.25 and moved up to quote between Rs 39.02 to Rs 40.40 throughout the rest of the week.

In the case of Charka silk, 1st Quality moved up to be placed at around Rs 31.50 as against Rs 30.00 in the previous week. A similar trend was seen in respect of 2nd and 3rd Qualities also. Cottage Basin remained unchanged at between Rs 36.00 and Rs 37.00.

As regards Reeling Cocoons, while Sidlaghatta moved up by 12 nP., Channapatna declined by 13 nP. to be placed at between Rs 2.00 and Rs 2.62 and Rs 1.50 and Rs 2.37, respectively.

There was only a minor variation in respect of the price trend of Seed Cocoons.

22 DEC 1959 PUBLIC DEPARTMENT

The Titaghur Paper Mills Company, Limited

Statement by the Chairman, Sir Walter Michelmore

I take this opportunity of submitting a few remarks on the activities of your Company and the paper Industry, to be read in conjunction with the Directors' Report and the Company's accounts for the year ended 31st March, 1959.

Shareholders will observe from the Directors' Report that Mr. F. S. Mitchell has retired as an ex-officio Director of the Company after 33 years of service with your Managing Agents. During his career Mr. Mitchell has been closely associated with your Company in various capacities and has been, in a large measure, responsible for the position in the industry which your Company enjoys today. We extend to Mr. Mitchell our best wishes for the future and trust that before long we shall be able to make use of his services again in an advisory capacity as a member of your Board.

You will have noted that it has been possible to recommend an increased dividend to ordinary shareholders. The improved results have been due in large measure to an increased production of 11% over the figure of the previous year and have been achieved in the face of increasing costs of raw materials, chemicals and labour. The electricity duty imposed by the West Bengal Government has cost your Company Rs. 10.23 lacs in this year and we are now faced with a new tax imposed by the Orissa Government on the transportation of bamboo which, thought it has not affected this year's results, will in a full year cost about Rs. 3.70 lacs. In addition, no less than Rs. 124 lacs have been paid to the Central Government in the shape of excise duty.

Your Company is the largest user of bamboo pulp in the world and still continues to be the largest producer of writing and printing papers in India. Renovations in the Mills in West Bengal have continued and it is interesting to note that a sum of no less than Rs. 297 lacs has been spent on machinery and plant in the last fifteen years. No. 3 Mill at Choudwar in Orissa is nearing completion and is expected to be in production in early 1960. We may take legitimate pride in the fact that the planning of the Mill was undertaken by your Managing Agents without the assistance of any specialist firm and that the fabrication of a large part of the machinery was carried out by the Company's own resources.

The Indian paper Industry is now producing about 330,000 tons of paper, paper-board and newsprint per annum, and by the end of the Third Five Year Plan demand will have risen to about 700,000 tons. This target is a challenge to the industry and to achieve it the twin problems of adequate supply of indigenous raw material and of finance must be overcome.

It is very necessary that the expanding paper industry finds new sources of indigenous raw materials for pulping. It seems probable that for a few years at least recourse must be had to larger imports of woodpulp, more expensive it is true than indigenous pulp, but nevertheless cheaper than imported finished paper. Here again paper prices must allow for this higher cost or the incentive to increase production by using woodpulp disappears. A vigorous drive must be made to increase the sources of Indian made pulp, though bamboo is and must remain the industry's staple material. The State of Assam is largely un-exploited, mainly due to inadequate collection and transport facilities, but a step in the right direction has been taken by the formation of the Assam Pulp Company Ltd. which should be of great assistance in meeting the industry's increased demands. Other sources of bamboo remain untouched or under-developed, and it is to be hoped that State Governments will continue their efforts to increase forest resources by achieving a better yield per acre, and, where necessary, replanting in areas damaged by flooding or careless felling. Other paper-making fibres are bagasse, soft or hard woods, cotton linters, and Sabai grass, the cultivation of which is now in a state of some neglect and might well repay more attention.

As you are aware, Government requested the Tariff Commission in September 1958 to enquire into paper prices, and on the basis of the Commission's recommendations Government have called upon paper mills to issue a revised price list, effective from 1st January, 1960, which will contain very severe reductions. The full implications of these price changes are being studied, and though it is too early to forecast their precise effect on the future profits of your Company, it is clear that the value of sales will drop by at least 8%. I feel it my duty to make plain my considered opinion that this reduction in prices at the present stage of the industry's development is a retrograde step and a severe blow to companies like yours which follow a conservative policy of ploughing back into Reserves funds required to provide for further modernisation and expansion. Many mills have borrowed large sums of money to construct new units or expand old ones, and it will be a matter of great difficulty to meet interest charges and provide for repayment with the reduced profit margins now available. It should also be borne in mind that depreciation, which forms an element of cost, is usually calculated on the purchase price of fixed assets, and sufficient resources must be available to provide reserves for eventual replacement at higher prices. Moreover an attempt to defeat the fundamental economic principles of supply and demand by enforcing a reduction of prices in a time of scarcity can only result in failure, in an encouragement of the black market, and the consequent loss of revenue to Government.

Since the Tariff Commission commenced its deliberations, further variations in cost have taken place, and although prices fixed contain an allowance of 5% to cover increases, it is inadequate, and already some revision appears necessary. It seems to me that some method should be worked out whereby paper prices may be revised speedily and without friction where there are good grounds for so doing. While it might be argued that the rise in civil prices in April 1958 was too sharp in the case of certain qualities, the reduction to take effect in 1960 is too severe and cannot be looked on otherwise than as a considerable set-back to the industry. It would be extremely unfortunate if the opinion that the paper trade is merely looking for a source of quick profit and has no thought for its own future were to gain general currency. The industry must be in a position to plough back sufficient funds for continuous renovation and expansion, and at the same time paper mills must be allowed a margin of profit sufficient to pay a reasonably attractive dividend on ordinary shares and thus attract equity capital instead of relying on loans from outside sources. The Tariff Commission has calculated the fair return on capital employed at 12% but this figure has to carry Managing Agents' commission, interest on loans and provision for their redemption, taxation, dividends and reserves for replacement of machinery, expansion and other purposes. For an industry which is expected to treble its capacity by 1965 this return is completely inadequate, and in my view at least 20% is required, particularly since the cost structure adopted by the Commission provides for depreciation on two shifts only at the rates allowed for income tax purposes on written down values of the fixed assets, and contains no provision for replacement at higher price levels. The ordinary dividend which your Directors recommend for the year to 31st March 1959 is Rs. 2.50 per share and represents about 5½% of the value of the equity capital; that is, the face value of the ordinary shares themselves and the reserves. This does not seem a very excessive return, but I have grave doubts of our ability to maintain that return after this revision of prices and the new system of Company taxation introduced in the 1959 Finance Act.

As a matter of interest I give below in the form of index numbers a comparison since 1949 of the variations in Titaghur Paper Mills' average selling price, overall cost per ton including depreciation and all charges except Managing Agents' commission, as well as the selling price of White Printing on both civil and Government account. On Titaghur's figures at least it would seem that the present prices are by no means too high, and it should be remembered that Indian mills still produce cheaper paper than British, American or Continetal mills.

Base 1949-100	Average Selling Price	Overhead Cost.	Price of White Printing Govt.	Civil.
1950	109	110	100	100
1951	113	103	100	105
1952	116	107	102.3	105
1953	115	108	103.5	105
1954	116	118	103.5	105
1955	113.5	111.5	102	105
1956	114	109	101.5	105.2
1957	116.5	113.7	102	105.2
1958	125.5	122	106	111
1959	129.5	127	110	116.7
New Prices from 1-1-60.			110	108

The Tariff Commission has suggested that manufacturers should have a trained staff of travelling salesmen and inspectors to see that anti-social activities in regard to prices and distribution are put down. This suggestion is praiseworthy but the implementation thereof will yet further increase costs. Your Company has always taken great care to see that as far as lies in its power paper reaches the consumer at a fair price, and this will continue to be its policy.

In conclusion I would express on behalf of your Board our appreciation of the services rendered by executive and supervisory staff, particularly those connected with the construction of No. 3 Mill in Orissa now nearing completion. It gives me great pleasure to record this expression of our thanks.

The above statement is not a report of the proceedings of the Annual General Meeting, which will be held on 30th December, 1959.

THE HOWRAH-AMTA LIGHT RAILWAY COMPANY LTD.

NOTICE is hereby given that the Board of Directors has sanctioned payment of dividend on the 5% tax free cumulative preference shares in the Company for the period 1st July, 1959 to 31st December, 1959.

Payment will be made on or after 1st January, 1960, to those Preference Shareholders whose names appear on the Register of Preference Shareholders on the 30th December, 1959, or to their mandatees.

By Order of the Board,
MARTIN BURN LTD.,
F. G. Liversedge,
Managing Director,
Managing Agents.

Calcutta,
The 16th December, 1959.

MACHINERY MANUFACTURERS CORPORATION LIMITED

NOTICE

THE THIRTEENTH ANNUAL GENERAL MEETING OF THE MEMBERS OF MACHINERY MANUFACTURERS CORPORATION LIMITED will be held on Thursday, 14th January, 1960 at 5.00 p.m. at the Registered Office of the Company, Gateway Building, Apollo Bunder, Fort, Bombay-1, to transact the following business:

1. To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st March, 1959.
2. To appoint a director in place of Mr. K. C. Mahindra who is a director and associate of Mahindra & Mahindra Ltd., the Managing Agents and who retires by rotation and offers himself for re-appointment and to consider and if thought fit to pass, with or without modification, if any, as may be agreed upon at the Meeting, the following Special Resolution of which special notice has been duly received by the Company and is hereby given:

"RESOLVED that the age limit specified in Section 280 of the Companies Act, 1956, shall not apply to Mr. K. C. Mahindra who is now 65 years of age and that Mr. K. C. Mahindra who is a director and associate of Mahindra & Mahindra Ltd., the Managing Agents, be and is hereby appointed a director of the Company whose period of office is liable to determination by retirement of directors by rotation."

3. To appoint a director in place of Mr. M. A. Chidambaram who retires by rotation and who, being eligible, offers himself for reappointment.
4. To appoint Auditors for the current year and fix their remuneration.

BY ORDER OF THE BOARD,
K. S. IYENGAR
SECRETARY

BOMBAY,
19th November, 1959.

(i) A MEMBER ENTITLED TO ATTEND AND VOTE AT THE MEETING IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

(ii) The Transfer Books of the Company will be closed from 28th December 1959 to 14th January 1960, both days inclusive.

ANNEXURE TO THE NOTICE DATED 19th NOVEMBER 1959.

EXPLANATORY STATEMENTS.

ITEM NO. 2 OF THE NOTICE:

Mr. K. C. Mahindra, director and Chairman of the Company, attained the age of 65 on 15th March 1959. Mr. K. C. Mahindra, Mr. D. N. Bhattacherjee and Mr. A. K. Mitra, were appointed directors of the Company on the same day and it has been agreed among themselves that Mr. K. C. Mahindra should retire by rotation at this meeting.

Mr. K. C. Mahindra is also the Chairman, director, member and associate of Mahindra & Mahindra Ltd., the Managing Agents of the Company. The proposed resolution seeks to have Mr. K. C. Mahindra reappointed as a director of the Company and the necessary declaration of the members is also sought that the age limit specified in section 280 of the Companies Act, 1956 shall not apply to him. Your directors are of opinion that it is in the interest of the Company that the Board should continue to receive the benefit of Mr. K. C. Mahindra's long experience and able guidance.

Mr. K. C. Mahindra, Mr. Jal H. Mehta and Mr. A. K. Mitra are interested in this item of business as directors and members of Mahindra & Mahindra Ltd. The Managing Agents, Mahindra & Mahindra Ltd., are also interested therein as members of the Company.

To the shareholders of the Company and in particular to:

Mrs. Maryam Akhund, Bai Bachubai Sorabji Anklesaria, Messrs. British Cotton Growers Association Ltd., Mrs. Tehmina Hormasji Dalal, Mr. C. De Souza, Mr. Nadarshaw M. Dinshaw, Mr. R. C. Fernandes, Mr. Sorabji Hormusji Shahookar, Dr. (Miss) Shaikh Amna, Mr. Zaka Rahmatulla, Mr. Barkatullah Khan, Mr. Andrew Dollar Gillespie, Mr. Donald Gladding, Major Alastair Cameron, Mr. Mirza Ahmed Ispahani, Sir William Roberts, Major General Shura Shum Shere Jung Bahadur Rana, Mr. Nootan Deb Pant, Mr. Mahendra Prasad, Sardar Soma Prasad Upadhya, Senior Comdg. STOCK EXCHANGES

Support at Lower Levels

WATCH-DOG WRITES:

TWO-SIDED hectic changes in prices have characterised trading in stock markets during the week under review. Although the opening was on an easier note due to heavy bull liquidation, short-covering and some replacement buying at lower levels helped to wipe off major losses.

Except for a sharp setback in prices early in the week, conditions on the Calcutta Stock Exchange remained generally steady although buying was confined to a few selected shares.

Trading on the Bombay Stock Exchange depicted somewhat conflicting trends; but the closing rates were a little higher than the week's lowest.

The Madras Stock Exchange gave a mixed performance and a buying pattern highlighted the selective interest of operators.

The London Stock Exchange took a slight turn for the better.

Wall Street closed barely steady.

*

Calcutta

Calcutta, Friday Evening.

AFTER a prolonged spell of sluggishness, there were signs of returning confidence in the local stock market. Although many of the shares were sharply marked down early in the week due to heavy selling pressure in the speculative scrip on reports of incursions by the Chinese troops on the Nepal border, lower levels attracted sizable short-covering, resulting in a smart recovery in prices. Consequently, the picture, at the end of the week, was one of general buoyancy.

In general, the market was in a more confident mood than in the previous weeks. This confidence was inspired by the expectations of further large-scale financial assistance from the USA. Even investors, who were hitherto out of the market, showed some buying interest on the belief that some adjustments under the Defence Budget would enable the Finance Minister to take a more liberal view and avoid the imposition of new drastic tax measures in the next budget. Thus, the general undertone in the various sections was steady and, with selective buying, prices of most of shares were marked higher.

The Giltedged section was devoid of activity. Whatever enquiry was noted, was for short-dated issues. With money tight, little interest was shown elsewhere and consequently price changes were negligible. 3 per cent 1986 Conversion opened at Rs 73, and after touching a high of Rs 74, receded gradually to Rs 73.15 at the close.

Bank shares were a steady feature. Punjab National were enquired up to Rs 20.25 and United Commercial up to Rs 64.25.

Jute shares came in for cautious trading. It was felt that the emergence of a difficult situation for the industry, relating to the procurement of the required quantities of raw material, would create a problem for the industry and consequently the margin of profits might be affected. There was, however, no selling pressure on the belief that most of the mills, who had already bought and stocked jute at much cheaper rates, could show a substantial profit on the average price. Howrah were depressed at one time to Rs 23.25 from Rs 23.62; New Central to Rs 20.81 from Rs 21.25 and Kinnision to Rs 179 from Rs 190, to improve toward the close to Rs 23.31; Rs 21.31 and Rs 185 respectively. Nuddea, however, met with good support up to Rs 61 from Rs 56.50, while Alliance were well maintained at Rs 114; Ganges at Rs 8.87 and Gourepore at Rs 440.

Except for scattered buying, Coal shares remained generally dull. Operators were inclined to await a further upward revision in the selling price of the commodity. Bengal were nearly maintained at Rs 299; New Beerbhoom at Rs 21.69 and Western Bengal at Rs 6.25. Burrakur fluctuated between Rs 16.94 and Rs 17.31, to finish the week at Rs 17.06.

There was fair activity in the Tea section, thanks to the release of the November crop figure showing a drop of 2.5 million pounds over the corresponding figure for 1958. Shares, especially of those gardens situated in Assam and Dooars, met with sustained support on the belief that there would be more excessive supplies in the world markets and that, if the present trends in Common teas were maintained, the average prices realised for the current season might be as good as in the previous season. East India were in good demand up to Rs 31.50 from Rs 26.69, while Grob changed hands at Rs 14.06 to Rs 14.19; Hantapara at Rs 151 to Rs 154; Huldibari at Rs 24 to Rs 24.31 and Methoni at Rs 23.50 to Rs 23.75. Tezpore were slightly lower at Rs 18.25 against Rs 18.62, while Jayshree hardened further to Rs 16 from Rs 15.50.

Sugar shares were quiet with prices displaying a slightly easier tendency following a steady setback in the commodity price. The only steady feature was Raza/Buland at Rs 12.69. Carew were, however, on offer at Rs 11.69 against Rs 11.87; Champarun at Rs 19.75 against Rs 20.12 and SKG at Rs 13.25 against Rs 13.37. Dyer Meakin remained very firm at Rs 22 following the announcement of the increased dividend, free of tax, from 15 to 16 per cent.

Textile scrip came again into limelight due to the steady setback in cotton prices following the measures taken by the authorities. Kesoram were a special feature, having spurted to Rs 21.87 from Rs 19.12 on persistent support from influential quarters. Dunbar improved to Rs 190 from Rs 182 and Jayshree to Rs 11.87 from Rs 10.69. Cawnpore remained very steady at Rs 5.87, the highest level touched for the week being Rs 6.00.

In the Engineering section, price movements were mostly influenced by the speculative activity in Indian Irons which, in turn, were subjected to settlements till Wednesday. Against the week-end closing of Rs 23.46, Indian Irons opened better at Rs 23.54 and gradually receded to Rs 23.04 at which level some replacement buying coupled with short-covering caused the scrip to recover to Rs 23.33 at the close. Jessop were taken at one time up to Rs 26.75 from Rs 25.25 on reports of the change-over in the controlling interest of the company, to close finally at Rs 25.50 on profit-taking. G. K. Williams were a firm feature at Rs 46 on persistent rumours with regard to the possibility of a bonus issue. TEXMACO touched a low of Rs 24.10 and a high of Rs 24.45, to finish the week at Rs 24.45. Braithwaite were, however, quiet at Rs 26.12 against Rs 26.56; Burn at Rs 431 against Rs 442 and Britannia at Rs 12.12 against Rs 12.50. Kumardhubi and Marshall were nearly maintained at Rs 6.44 and Rs 5.44 respectively.

Miscellaneous issues followed the general trend of the market. Although there was a sharp setback early in the week, most of the shares emerged with major gains on balance, as will be clear from the following price trends of a few selected scrip:—

	Week's High Rs.	Week's Low Rs.	Week's Closing Rs.
Orient Paper	38.44	37.70	38.44
Shree Gopal	22.37	21.81	22.12
Sirpur	13.94	12.94	13.94
Rohtas	25.37	24.69	25.00
Dunlop	36.25	35.62	35.75
H. Motor	17.62	16.25	16.75
H. Lever	36.62	36.12	36.50
A. Chemical	24.00	22.94	24.00
Clive Row	9.75	8.75	9.69
I. Cable	31.00	29.94	30.94
I. Oxygen	32.00	29.25	31.75
I. Steamship	12.03	11.81	11.91
I. Aluminium	23.50	23.12	23.25
I. Copper	3.89	3.80	3.85

*

Bombay

STEADY conditions prevailed on the Bombay Stock Exchange during the past week. In earlier dealings almost the entire list participated in the upsurge but later on interest was mainly confined to the investment counters. The comparative sluggishness of the more speculative shares seemed to have stemmed from rumours of fresh Chinese incursions. But it would appear that investors had derived considerable encouragement from prospects of sizable foreign aid following the visit of the American President and anticipations of unchanged taxation in the coming Central Budget. Excellent corporate news also aided the buying fervour.

In the steel section, Tata Steel ruled steady in earlier dealings but in later transactions were somewhat subdued as support became halting. The scrip closed the week on Thursday at Rs 155.75 against the opening rate of Rs 156.25. Indian Irons were quiet at Rs 23.28.

Textile shares were a steady market on sustained buying interest. Prospects of textile shares were believed to be good as it was generally apprehended that at the present rate of cloth offtake, there would be a shortage of supplies if steps were not taken to increase production. Century was an active counter and was done upto Rs 658 before closing on Thursday at Rs 458.50 xr. Bombay Dyeing closed slightly lower at Rs 69.60. Kohinoor was six points higher on balance at Rs 327.50. Svadeshi moved to Rs 262. Standard came in for spirited support and spurted to Rs 888 from Rs 780.

Selected shares in the Miscellaneous section were in good request at advancing rates. Automobile shares were particularly in request and Hindustan moved smartly to Rs 17.48 from Rs 16.16 while Premier Automobiles gaind 8 points to be finally placed at Rs 160. Bombay Burma was quiet at Rs 574. Premier Construction was wanted up to Rs 367.50.

*

Madras

THERE was a mixed trend in the Madras Stock Exchange today. No changes were noticeable in the Securities counter. Sugars continued active. Plantings had been in good demand. Industrials secured a modest turnover.

Government Securities: Transactions reported in this section include 4% 1968 Madras Loan at Rs 100.40. 4½% Mysore State Loan had sellers at Rs 101.90. The 1970 Mysore Loan carrying the same interest available at Rs 101.90. Kerala's 1970 4½% Loan had also been in the buying list at Rs 100.90. 3½% 1964 National Plan Loan was sold at Rs 100.20. Orissa Government 1970 4½% loan was marked at Rs 101.75 and 4% 1971 loan of the same State was also put up Rs 99.90.

Banks: Shares in this counter were unchanged. There were sellers in the Bank of Baroda and Mysore shares at Rs 96.00 and Rs 330.00 respectively. Indian Overseas Rs 100 paid shares were bought at Rs 170.00 and the Rs 80 paid Indian Bank shares were transacted at Rs 148.00. Travancore Forward Bank had sellers at Rs 6.40 (Rs 10 paid share) and the same Rs 2 paid shares could be had at Rs 2.00. The Canara Bank was sold at Rs 80.00 and the Canara Banking Corporation at Rs 75.00. As usual, the Indian Bank Rs 100 paid share remained at Rs 180.00.

Sugars & Breweries: This was a counter very much in demand today. Andhra went down to Rs 24.00. Cauvery remained unchanged at Rs 120.00, but Deccan was marked up at Rs 14.00. E.I.D. was unchanged at Rs 45.75. K.C.P, too, remained at Rs 16.63. Kirlampudi Sugars were quoted at Rs 75.00. Mysore was around Rs 56.50 while Travancore Sugars on selling went down to Rs 10.80. United Breweries went up to Rs 627.50 from Rs 600.00 that was yesterway's closing.

Electrics: No change was noted in this section. South Madras was transacted lower at Rs 10.18. West Coast went down to Rs 12.50. Tinnevelly-Tuticorin remained at Rs 12.75. Kumbakonam remained respectively at Rs 10.60 and Rs 10.00.

Plantings: Tea shares maintained a firm tone. Be Be was up at Rs 3.10. Bababudin was at Rs 9.55. Balamadies was quoted at Rs 2.95. Blue Mountain was unchanged at Rs 3.50. Chambera was bought at Rs 4.23. Cochin Malabar was a bit lower at Rs 7.10. Coffee Lands and Cons. Coffee were at Rs 26.35 and Rs 25.70 respectively. Coonoor was not changed at Rs 25.25. Coorg Teas were bought at Rs 5.20. Cowcoody was fractionally lower at Rs 6.32. Kil Kotagiri and Kumergode were in demand at Rs 4.75 and Rs 6.15 respectively. Kuchermala at Rs 8.75 and Lucky Valley at Rs 12.15 were unaltered from the previous closing rates. Mercara was quoted at Rs 9.60. Mysore Amalgamated at Rs 6.90 and Mysore Coffee at Rs 4.90 were the same as the last day. Naillithanam (7½ per cent cd) was available at Rs 12.80. Nenmeny was quoted at Rs 16.25, Nilambur at Rs 17.50, and Nilgiri at Rs 7.15. Ossoor was available at Rs 3.70 and Ouchterlony went up to Rs 6.25. Periakaramalai tea were also in demand at Rs 3.75. Pullangode was higher at Rs 1.89. Rajagiri and Rajendra remained unaffected at Rs 20.12 and Rs 16.25 respectively. Talayar was at Rs 1.75. Tirumbadi improved to Rs 1.95. Travancore Rubber appreciated to Rs 14.80 and Travancore Rubber and Tea went up to Rs 14.80. Tropicals gained at Rs 21.62. United Nilgiris was bought at Rs 21.25. Velimali was lower at Rs 5.70.

Textiles: Textiles were slightly better. Bangalore Woollen and Buckinghams were above yesterday's closing rates at Rs 196 and Rs 198 respectively. The Coimbatore groups were unaltered. Cauvery Spinning had been quoted at Rs 13.40, Coimbatore Cotton remained unchanged at Rs 164.00. Coimbatore Pioneer was at Rs 322.00 Coimbatore Spinning was at Rs 48.00. Kothari was up at Rs 11.30. Lakshmi was in demand at the improved price of Rs 145.00, a rupee higher than the previous quotation. Madura registered yet another rise at Rs 30.00 from the last closing of Rs. 29.75. Rajalakshmi too registered improvement at Rs 65.50. Travancore Rayons was unchanged at Rs 26.25. Venkatesa was unaltered at Rs 26.00. Vijayeswarai was quoted at Rs 107.00. and Virudhunagar at Rs 40.75.

Miscellaneous: Aluminium Industries was marked up at Rs 22.45. Andhra Cement was at Rs 9.00. Ashok Leyland was lower at Rs 7.15. Binny did not change at Rs 155.00. Dalmia Cement, too, at Rs 10.62 was unaltered. FACTs improved to Rs 10.12. India Cement was sold at Rs 6.22, the same as the last evening. Kirloskar was available at Rs 12.75. Madras Safe was lower at Rs 47.20, Madras Vanaspati did not improve at Rs 15.00. Marikar remained the same at Rs 47.50. Mysore Lamp was available at Rs 20.52 and Mysore Paper at Rs 23.75. National Rubber Mfrs. was at Rs 13.62. Orissa Cement was quoted at Rs 13.40 and Panayam Cement at Rs 95.00. Parrys Confectionery was the same at Rs 4.37. Radio & Electricals was unaltered at Rs 4.35. Rane improved to Rs 6.50. Sen-Raleigh was unchanged at Rs 20.00. Singareni, too, was unaltered at Rs 16.55. Spencer was quoted at Rs 19.75. Textool quoting at Rs 194.50 was the same as the last closing. W.I. Plywood was unaltered at Rs 235.00.

*

London

THE London Stock Exchange took a slight turn for the better last week when buyers became more active, especially in the industrial section. Sentiment was helped by the recovery in sterling.

Industrials gave a good account of themselves, although Steel shares were lower on disappointment with the latest dividend announcements. Motor shares displayed a better appearance. Shipping shares were generally firm. Elsewhere, Crosse and Blackwell were outstanding following news of the bid from an undisclosed buyer. British Funds were quietly maintained although best prices were not always held.

*

New York

THERE were several developments attracting investor attention on Wall Street. These included the reported plans of American industry to step up capital spending in the first quarter of 1960, price increases planned by major producers and further expressions of confidence regarding earnings provided the steel strike was not resumed. The market, however, failed to extend the rise in prices due to profit-taking.

The Steel companies' rejection of the Labour Secretary's suggestion that a third party would settle the dispute, attracted attention. Ford Motors were fractionally lower following public offerings by underwriters of two million shares of Ford stock, purchased from the Ford Foundation. There was a general decline in Electronic shares due to increased pressure.

INVESTMENT BY LIC

The Minister for Revenue and Civil Expenditure, Dr B. Gopala Reddi said in the Rajya Sabha that the net investments made by the Life Insurance Corporation in the public and the private sector during January 1, 1959 to August 31, 1959 were 88.92 per cent and 11.08 per cent respectively.

The Minister who was replying to a question by Mr Babubhai Chinai and Mr Lavdi Lakhamshi said that the investments by the LIC in 1958 in the public and the private sector were 86.52 per cent and 13.48 per cent respectively.

RESERVE BANK LOANS

The Finance Minister, Mr Morarji Desai, informed Mr Kalika Singh in the Lok Sabha that the short-term and long-term loans to the various State Cooperative Banks and long-term loans to State Governments by the Reserve Bank of India were granted in the light of the actual needs.

He, however, added that in the case of the Apex Cooperative Banks, the financial position and the extent of the unutilised credit limits were also taken into consideration, and in the case of State Governments, loans for the purposes of enabling them to participate in the share capital of the cooperative institutions were generally limited to one-half of the requirements for such capital.

The Minister said that since April 1, 1959, loans specifically for participation in the share capital of large-sized cooperative societies were not being sanctioned. He said the short-term loans were repayable within a period of 15 months or 12 months as the case might be, depending on whether they were sanctioned for agricultural purposes or for the development of cottage or small-scale industries. Medium-term loans were repayable in instalments after the expiry of 15 months from the drawal of each loan but before the end of five years from that date, and long-term loans were repayable within a maximum period of 20 years, Mr Desai said.

NEW LENDING POLICY OF DLF.

The Finance Minister, Mr Morarji Desai, told the Rajya Sabha that the new lending policy of the US Development Loan Fund announced on October 21, 1959, would not affect past loan agreements between the Government of India and the Fund, but affected only future loans.

He was replying to a question by Mr Nawab Singh Chauhan and two others. The Finance Minister said that since prices were generally known to be higher in the USA for various types of capital goods of interest to India, the new policy would mean that the effective aid to be received in the form of commodities would be less. Orders so far placed under loan agreements already signed had been placed both in the USA and outside. But orders for the major part had been placed in countries other than the USA. If information was needed for purpose of comparison of price level etc, about the extra price that might have to be paid if the goods covered by these orders were now to be bought from the USA, the Minister said that it was not possible to do so without detailed investigations. This, he said, would necessarily have to take into account factors such as difference in specifications, quality, delivery schedule etc, in addition to day-to-day fluctuations in prices. As for the extent of extra cost of items to be purchased in future from the USA an exact idea was not possible as it would depend upon the particular items to be ordered and the state of the market of those items.

The Finance Minister placed on the table a copy of the Press release issued by the US Development Loan Fund.

METRIC WEIGHTS AND MEASURES

There are about 305 factories including factories in the public sector which can manufacture metric weights and measures. The State Governments of Andhra Pradesh, Bombay, Kerala, Madras, Mysore, Punjab, and the Aministration of the Union Territory of Delhi have so far licensed 106 factories for the manufacture of metric commercial weights. Other State Governments and administrations are expected to grant licences to factories in their jurisdictions shortly.

According to a survey conducted by the National Sample Survey, there are 54 million weights and one million measures in use in the country. These will have to be replaced by an equal number of metric weights and measures during the next two or three years.

Weights and measures will be produced by manufacturers licensed by the State Governments, and sold to the public through licensed dealers. There is enough capacity in the country to meet the demand.

This information was given in the Rajya Sabha by the Deputy Minister of Commerce and Industry, Mr Satish Chandra, in reply to a question by Mr Nawab Singh Chauhan.

ERECTION OF SILVER REFINERY AT CALCUTTA

The Finance Minister, Mr Morarji Desai said in the Rajya Sabha that the erection of the plant and machinery of the Silver Refinery at Calcutta had been completed but some technical difficulties had been encountered in the melting department. He said the crucible for melting the quaternary alloy as designed by the technical consultants, had not proved to be satisfactory. A better crucible was being designed. Pending the finalisation of the new design, silver was being produced at a somewhat reduced rate, with the help of a graphite crucible.

The Minister, who was replying to a qdestion by Mr Maheswar Naik said the expenditure so far incurred was Rs 122.28 lakhs, as against the amount of Rs .88 lakhs originally sanctioned and the revised estimate of Rs 126.94 lakhs.

For thousands of young men a new life begins at Durgapur Training completed, this young apprentice in Durgapur is on his first practical survey job in the field. When he becomes an experienced hand, efficient at his work, he will command a good salary and will have a future ahead, bright with promise.

In Durgapur today, ISCON, who are entrusted with the construction of the giant one million ton steel plant, have already helped to train up a large group of young Indians in the technical field. This is part and parcel of the ISCON scheme of collaboration—to work side by side with Indian technicians and workers, to instruct them on the spot and in steel factories in England so that in the future India will have, not only her steel plants but also technicians to run them.

READY
LATEST AND UP-TO-DATE
THE LAW OF INCOME-TAX IN INDIA
By V. S. SUNDARAM.
The 8th edition of this comprehensive treatise on income-tax brings it up-to-date in the light of statutory changes and recent rulings of Courts, of both of which there has been an abundance since the last Edition was brought out in 1954. The book has been thoroughly revised. The Index has also been expanded. This edition will therefore be found to be very useful as a standard book of reference on this intricate and abstruse subject.
The Amendments of the Indian Finance Act of 1959 have been incorporated in the book.
"On the whole this is a most exhaustive, most comprehensive and most elaborate commentary on the Income-tax"
—*Bombay Law Reporter.*
"The Book under review is a most comprehensive exposition of the Income-tax Law".

This expert has won the trust of millions in the label *'Sanforized'*

Meet our American-trained expert who makes sure that any fabric marked 'Sanforized' won't shrink. Every day, all through the year, he tests fabrics bearing this international label; so that your clothes won't shrink out of fit—even after many, many washings!

This is how he does it:

Travelling from mill to mill, he advises and helps them with their technical problems; and makes on-the-spot tests that ensure value in the cloth you buy labelled 'Sanforized'.

Whenever he visits the mills, he takes at random several samples from their godowns as well as off the processing machine. These samples are first measured, and then given a standard wash test.

And then, the samples are re-measured. This is the first stage of ensuring quality. All fabric must meet the Company's strict anti-shrinkage specifications *before* it can use the label 'Sanforized'.

These tested samples are sent to the New York office for re-checking, and with them goes the expert's detailed report. These documents record the progress and prosperity of each individual mill.

The New York office checks thousands of samples from all over the world. This is your assurance that fabric labelled 'Sanforized' is of a uniformly high standard, and is welcomed *everywhere* in the world!

Look for ·SANFORIZED· REGD TD MK *on the label*

and your clothes will never shrink out of fit!

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

For information: 'Sanforized' Service, 95, Marine Drive, Bombay-2

Cautious Trading

Investment Gossip:

CONDITIONS have been dull but steady on the stock exchanges during the past week which has been reduced to only three working days in Calcutta on account of the intervention of the Christmas holidays. Operators' reluctance to extend commitments seems to have primarily stemmed from the proximity of the extended week-end and the end of year considerations.

It cannot, however, be gainsaid that buyers have become somewhat cautious during the past few days. This is largely due to the fact that most major industries have lately been worried by the bogey of a rise in their cost of production partly on account of the prospects of higher wages and partly because of the rising trend of raw material costs.

Two of these industries, the cotton textile industry and the jute goods industry, are currently being obliged to pay sizably higher prices than a few weeks ago for their raw materials. Despite stern Government measures against unbridled speculation, prices of cotton and jute have shot up to uneconomic levels. As far as the cotton textile industry is concerned, the high raw material cost seems to have been somewhat compensated by the continued good offtake of piecegoods so much so that it is feared that a cloth famine will overtake the country if immediate steps are not taken to increase production in the organised sector. The position in the jute goods industry is somewhat different in that there has been only a steep rise in raw jute prices without much scope for selling our jute goods overseas at the present high rates. Even so, with Government's recent warning to speculators and authoritative indication that jute supplies will be adequate to meet mills' requirements in the current jute year, it may be expected that raw jute prices will come down to realistic levels once again enabling mills to show equitable profits on the sale of their manufactures.

Shareholders of the steel companies have also had far from reassuring news this week. In an address to the Engineering Association of India on Thursday, Sir Jehangir Ghandy, Managing Director of the Tata Iron Steel Company Limited, disclosed that the state of the order book for some categories of steel was alarming. He further pointed out that if there was no immediate improvement, the operation of the structural mills would have to be restricted both at Burnpur and Jamshedpur. This statement of the Managing Director of TISCO is in line with the doubts raised by the Chairman of IISCO in his statement to the shareholders a few weeks ago. Sir Jehangir has also ruled out the possibility of exports at current prices of steel. Sardar Swaran Singh, Union Minister for Steel, Mines and Fuel, speaking in Bombay earlier in the week, however, seems to be quite pleased at the prospects of the end of the steel shortage in the country by 1960. It is also to be noted that he has mentioned that the claim that Indian steel is the cheapest still holds good.

Paper shares have been subdued following the Government's directive to paper mills to issue a revised price list from the 1st of January next. Referring to this the Chairman of the Titaghur Paper Mills Limited has characterised the step as retrograde and has further observed that the reduction in prices at the present stage of the industry's development will be a severe blow to companies which have already incurred heavy expenditure for expansion and modernisation. As most paper mill companies have either completed their expansion programmes only recently or just have embarked on the work of expansion, it is generally apprehended that their dividend paying capacity may be adversely affected in coming years.

£R$

Owing to the intervention of Christmas holidays, there will be no issue of Indian Finance on January 2, 1960. The next issue will, therefore, be published on January 9, 1960.

—Manager

New Issue Notes

For some months it was in the air that the 79 year old HINDU, the well known English daily published from Madras, would be converted into a Public Company. All kinds of rumours were afloat. If all those rumours were not contradicted by the Hindu management, it was because they were only waiting to release the announcement concerning the new floatation.

The authorised capital of the new company is one crore of rupees, in 100,000 shares of Rs 100 each. The paid-up capital is Rs 33 lakhs, in equity shares of Rs 100 each. All these equity shares are held by the members of the Kasturi family. These shares, not even in part, is offered to the public. Additional capital for Rs 45 lakhs consisting of Rs 15 lakhs of cumulative redeemable preference shares and Rs 30 lakhs in redeemable debentures will be raised. The cumulative redeemable preference shares will carry interest at 6.3% tax free. The company has the option to redeem these shares any time after 12 years. The debentures carry interest at 6½% taxable, redeemable at any time after December 31, 1970, on giving six months notice of such redemption and not later than December 31, 1974.

The Associated Cement Companies Limited has received the sanction from the Controller of Capital Issues for the issue of bonus shares by capitalising the Premium on Shares Account. But, in view of the indication given by the Finance Minister in his last budget speech that such capitalisation would be subjected to tax, the directors have decided to keep this proposal in abeyance until the Government's final intentions on this subject become more plainly known.

The stage is now set for Premier Tyres Limited to enter the market for raising fresh capital. The subscription list is expected to open on the 11th January 1960 and close on the 16 January. The authorised capital of the company is Rs 4 crores and the issued capital Rs 2 crores, comprising 50,000 6½ per cent tax-free redeemable cumulative preference shares of Rs 100 each, redeemable at par at the company's option after ten years, but not later than 15 years, and 150,000 equity shares of Rs 100 each.

Of the issued capital of Rs 2 crores, the Government of Kerala has agreed to take up 50,000 equity shares. The promoters, managing agents, directors' associates and their friends will absorb 45,900 equity shares. The Dayton Rubber Company, Ohio, has agreed to take up 10,000 equity shares. 25,000 preference shares will be taken up by the promoters and their friends and institutional investors. The balance of the capital comprising 44,100 equity shares and 25,000 preference shares will be offered for public subscription.

Investment Notes:

THE Jumna Thread Mills Limited is to be renamed J. and P. Coats (India) Private Limited. From January 1, 1960, the new firm will undertake the production and distribution in India of sewing threads, which was previously carried on by the Jumna Thread Mills and the Central Agency Limited respectively.

£R$

Investment Brief:

BRITANNIA Biscuit has announced an interim dividend of 6 per cent, subject to deduction of tax, for the year ended 31st March 1960. Transfer Books will be closed from the 6th to the 13th January, 1960.

Cannon Dunkerley has repeated the dividend on the Ordinary shares at 6 per cent for the year ended 31st March, 1959.

The offer of 3,500 shares by the Laxmi Starch Factory Limited has been oversubscribed.

Machinery Manufacturers Corporation has again passed over the dividend for the year ended 31st March 1959.

Sugar Results

Balance-Sheet Reviews:

THREE sugar mills—New India, Dyer Meakin and Deccan Sugar—have presented their reports and accounts for last year. All the companies have raised their ordinary dividends, New India from 25 to 36½ per cent; Dyer Meakin from 15 to 16 per cent and Deccan Sugar from 18 to 25½ per cent. The detailed accounts of these companies are given below.

£R$

New India Sugar

Although sales are lower at Rs 1.36 crores against Rs 1.48 crores, the New India Sugar Mills Limited has reported a higher profit of Rs 6,60,724 for the year ended 30th June, 1959 as against Rs 4,64,883 for the previous year, mainly due to a cut in manufacturing expenses. The Depreciation amount is raised to Rs 2.02 lakhs from Rs 1.98 lakhs and Development Rebate Reserve to Rs 68,027 from Rs 11,789. General Reserve is maintained at Rs 2.50 lakhs. Taxation provision is, however, reduced from Rs 2.02 lakhs to Rs 1.98 lakhs and Contingency Reserve to Rs 7,350 from Rs 25,000.

The quantity of cane crushed is lower at 32.88 lakh maunds against 36.98 lakh maunds and this lower crushing is due to the cane crop being affected by drought and red rot disease.

£R$

Dyear Meakin

Dyer Meakin Breweries Limited has reported excellent results for the year ended 31st March, 1959. The profit works out to as much as Rs 24.73 lakhs against Rs 19.39 lakhs in the previous year after providing Rs 2.35 lakhs for Depreciation (Rs 1.85 lakhs); Rs 1.20 lakhs for Development Rebate Reserve (Rs 1.15 lakhs) and Rs 27.90 lakhs for Taxation (Rs 21.41 lakhs). The directors have recommended a dividend of 16 per cent, free of tax; the new shares rank for dividend for a period of three months only.

Sales of beer, spirit, abrasives, etc., have risen from Rs 2.04 crores to Rs 2.61 crores. The General Reserve absorbs Rs 9 lakhs against Rs 10 lakhs and Development Rebate Reserve Rs 10.88 lakhs against Rs 5.00 lakhs. The allocation to the Dividend Equalisation Reserve is maintained at Rs 2 lakhs.

£R$

Deccan Sugar

After providing for managing agents' commission at Rs 2.98 lakhs (Rs 3.35 lakhs) and for Depreciation Rs 6.43 lakhs (Rs 5.45 lakhs), the profit of the Deccan Sugar and Abkhari Company, Limited has amounted to Rs 26.14 lakhs for the year ended 31st May, 1959, against Rs 28.89 lakhs. From this, taxation, including Rs 3.36 lakhs on dividends, has been provided at Rs 16.39 lakhs against Rs 12.81 lakhs. The directors have provided Rs 3.45 lakhs for

Development Rebate Reserve against transfer of Rs 4.82 lakhs to various other funds in the previous year.

At Samalkote factory, the company produced 9,134 tons of sugar against 10,015 tons. At Pugalur, 4,497 tons were produced against 5,805 tons.

Sales have fetched Rs 3.63 crores against Rs 3.28 crores. Excise duty paid thereon came to Rs 93.50 lakhs against Rs 64.98 lakhs. Cost of sales including production charges came to Rs 2.46 crores against Rs 2.34 crores.

£ R$

Karwar Electric

The revenue of the Karwar Electric Supply and Trading Company, Limited, for the year ended 31st March, 1959, by way of sales of energy amounted to Rs 82,365 against Rs 71,738 in the previous year. After providing for Depreciation at Rs 1,161 and agents' remuneration at Rs 3,527, the profit amounts to Rs 8,240.

Out of the profits, the directors have provided Rs 1,555 for Contingency Reserve, while the dividend of 25 nP per share will absorb Rs 6,558.

£ R$

Associated Hotels

The Associated Hotels of India Limited has passed over the dividends, both on the Ordinary and Preference shares, for the year ended 31st March, 1959 in view of the need for paying back some Debentures. The turnover, during the year, increased to Rs 68.97 lakhs from Rs 60.73 lakhs. The gross profit amounts to Rs 12.54 lakhs against Rs 9.56 lakhs. Out of this, managing agents' commission absorbs Rs 1.23 lakhs (Rs 93,223); Depreciation Rs 2.71 lakhs (Rs 2.63 lakhs) and Taxation, (India and Pakistan, Rs 7.20 lakhs (Rs 4.46 lakhs). These leave a net profit of Rs 2.62 lakhs as against Rs 2.46 lakhs in the previous year.

£ R$

Kelvin Jute

Despite a decline in profits, the Kelvin Jute Company Limited has raised the Ordinary dividend from Rs 12.50 to Rs 14.00 per share for the year ended 31st May, 1959. Sales are lower at Rs 1.52 crores against Rs 1.81 crores, while the net profit, after providing for Depreciation and Taxation, is lower at Rs 4.63 lakhs against Rs 5.64 lakhs.

In respect of allocations, a sum of Rs 4.85 lakhs (Rs 5.10 lakhs) is provided for Depreciation; Rs 5.35 lakhs (Rs 6.67 lakhs) for Taxation; Rs 1.00 lakh (same) for General Reserve and Rs 56,000 (Rs 1.00 lakh) for Development Rebate Reserve.

Plans for the modernisation of the Preparing section of the mill were completed and the installation of this machinery should be completed by March, 1960.

The Problem of Tax Evasion

ANY effort at streamlining the country's tax administration with a view to rendering it more effective in the collection of all the revenue that is due, under law, to the State is to be welcomed for the simple reason that it will minimise, if not wholly eliminate, the need for fresh imposts which a constitutionally tax-hungry permanent administration can always justify in ingenious ways. Such an effort is particularly welcome in relation to the present integrated structure of direct taxes, the revenue-yielding potential of which does not appear to have yet attained its optimum level because it has been all too hurriedly evolved in recent years without full regard to administrative difficulties and inadequacies. It is in this light that the report of the Direct Taxes Administration Enquiry Committee, a comprehensive summary of which has just been issued, acquires a deal of significance. **Prima facie,** the report is commendable, for, many of its recommendations are designed, with meticulous care, to improving tax collection without, at the same time, subjecting the taxpayer to hardship and harassment.

This is particularly true of the recommendations relating to assessment procedures. A crucial recommendation in this regard is that the Income Tax Department should complete all assessments, as far as possible, in the assessment year itself and that, save in exceptional cases, no assessment should remain pending for more than two years. The related recommendations covering small-income assessees are, therefore, appropriately to the effect that their returns of income should be generally accepted after preliminary scrutiny and that detailed examination of their accounts be made only once in four years. This new approach, in the opinion of the Committee, will improve the relations between the Department and nearly five lakhs of small-income assessees. The merit claimed for this new scheme is that it will greatly reduce the disproportionate time and energy now spent on such cases with their small revenue potential; it will also have the merit of not subjecting innumerable small assessees to harassing delays.

The related recommendation covering middle and large-income assessees is that where returns or accounts have been accepted in the past, they should not be subjected to detailed enquiry every year, unless the assessing officer comes in possession of definite information regarding concealment of income in such cases. Here, the only stringent conditions recommended are that all assessees be required, under the Income-tax Act itself, to furnish statements of total wealth every fourth year along with their returns of income and that audit of accounts in all non-company cases where the assessed income in any of the last three years exceeds Rs 50,000 or where the returned income, for the first time, exceeds Rs 50,000, be made compulsory by law and the auditors required to give audit certificate in a prescribed form.

The first of these two recommended conditions, it will be seen, means that the Committee has rejected Professor Kaldor's proposal that each taxpayer be required to submit a comprehensive return concerning personal balance sheet, income account, gratuitous transfers, purchase and sale of capital assets during the year (split up into income yielding assets and bar gold, and capital assets for personal use), borrowing and lending, other capital or casual transactions, and personal expenditure. Actually, the Committee has come to the general conclusion, at the very beginning, that it is not worthwhile to introduce a system of assessment based on one comprehensive return of income, wealth, expenditure and gift. It may be recalled in this connection that Prof. Kaldor had argued the case for such a return on the ground that it would reduce the scope for tax-evasion through falsification of accounts; but, then, the Central Board of Revenue had done a counter-estimate which placed tax-evasion at only about a third of what Prof Kaldor had roughly figured out. Although the present Committee also has given the finding that the quantum of tax-evasion is not of the magnitude indicated by Prof Kaldor, it has nevertheless confirmed that it is undoubtedly high. It would be interesting to know from the full report of the Committee why it thinks tax-evasion, whatever be its magnitude, cannot be reduced by the Kaldorian technique of "comprehensive return."

The other stringent condition is, however, in line with what Prof. Kaldor himself had recommended, although it is a shade more stringent than his. It may be recalled in this connection that the Cambridge economist had recommended compulsory auditing of the accounts of taxpayers whose income exceeded Rs 100,000, not because that could, by itself, check the falsification of books from which the accounts were compiled but because such auditing could at least check malpractices which consisted in the presentation of false and misleading accounts. Prof. Kaldor, it may be recalled again, had recommended a limit of Rs 100,000 for the purpose because, in his view, the limit had to be rather high in the beginning owing to the shortage of auditors. One wonders if, in the opinion of the present Committee, there is a plenitude of auditors now, justifying the lower limit of Rs 50,000 it has recommended. Be that as it may, there can be no gainsaying that the proposed requirement of compulsory auditing in all non-company cases will, incidentally, give a further fillip to the profession of auditing.

All this, however, may not significantly reduce tax evasion and tax avoidance if these twin evils really owe their origin to the high incidence of tax rates. The Committee, while admitting that the higher the rate of tax the greater will be the temptation for evasion and avoidance, has nevertheless given the finding that the tax rates, by themselves, are not to blame for the large extent of evasion in the country. Here, again, it has refuted Prof Kaldor's contention that the high tax rates were mostly responsible for tax evasion and avoidance. It is probably right because, whether the tax rates are high or low, there will always be some evasion and avoidance because human nature is generally allergic to taxation as such. It would, however, be interesting to know from the full report why the Committee thinks the high tax rates, by themselves, are not responsible for tax evasion or avoidance.

What, then, are the more likely causes of tax evasion? According to the Committee, they are, firstly, the complicated provisions of the direct taxes Acts, not all of which are easily intelligible; secondly, the inadequacy of the powers vested in the personnel of the Department; thirdly, the non-resort to prosecution and the non-levy of deterrent penalties; fourthly, the secrecy provisions of the direct taxes Acts standing in the way of the pressure of public opinion; fifthly, the suppression of the sales in the case of retail trades in an attempt to evade sales tax also resulting in evasion of incomt-tax; sixthly, the element of mutual distrust between the assessing officers and the taxpayers; and, above all, the slow development of a better civic conscience. The remedy against the first is contained in the Committee's recommendation that the complications in the calculations of tax be reduced by incorporating in the statute itself the basic rates of income-tax; by generally varying only the rates of surcharges through the Annual Finance Acts to meet the budgetary requirements, if any, from time to time; by merging with the basic income-tax rates such of the surcharges as go to the divisible pool, without affecting any of the reliefs at present available; and by specifying in the Act itself the effective rate of supertax for each type of companies instead of prescribing, as at present, the rate of supertax at 50 per cent and then providing several rebates therefrom for various types of companies.

The Committee has also suggested suitable remedies against some of the other causes of tax evasion. Perhaps, the most important of these is that the Tax Administration should take the initiative and trust the assessees, for, trust is bound to beget trust and their will be less tax evasion. At the same time, post-audit of tax calculations must scrupulously bring to light mistakes which have resulted in excess recoveries of tax from assessees. Such a high sense of justice and fairplay on the part of the Tax Administration is bound to be warmly appreciated by taxpayers who will then be inclined to trust the departmental officials. Above all, again, it is heartening to be told that an improvement in tax collection is possible within the existing legal framework by proper planning of assessment work, securing agreement on payment of taxes in cases involving substantial demands at the stage of assessment itself, issuing and serving notices of demand without delay, disposing of appeals involving large sums expeditiously, disposing of applications under Section 277 of the Income-tax Act and passing of orders of rectification, etc., expeditiously, improving the manner of issue of recover certificates to the Collectors, relieving assessing officers of their routine administrative duties, issuing distress warrants on a large scale and establishing better relationship between Cenral and State officials. Where such an improvement in tax collection is possible, there can conceivably be no need for such draconian measures, albeit sanctioned by law, as deterrent penalties including imprisonment which are more appropriate only in a dictatorial set-up.

A Turn-round in the Gilt-edged Market

By W. T. C. KING

THE London financial markets, after the boom touched off by the result of Britain's General Election in early October, have been much quieter during this past month. The rise in equity share prices did, indeed, continue for almost a fortnight from the date of my last letter, and the Industrial share index compiled by the "Financial Times" reached a dizzy peak of 309.6, on November 12, at which it was not far short of 100 points above its lowest 1959 level.

Since then, however, the market has suffered a moderate set-back, and at the moment of writing the index stands at 304.2. A pause for profit taking and consolidation of the new level was natural enough after so very steep a climb; even after this reaction, the index is more than 20 per cent above its level of early September (when the Election campaign opened), nearly 30 per cent above end-July, and more than 40 per cent above the year's low (212.8 at end-January).

General Mood of Confidence

The change has not, however, been wholly due to technical market factors. A notable influence at the outset was a comment from the Governor of the Bank of England, who prefaced an important public speech (mainly devoted to indicating the Bank's reaction to the Radcliffe Committee's plea that the Bank should go further and faster in assembling and publishing financial statistics), with an allusion to the "marked and sometimes slightly disquieting boom in equity prices on the Stock Exchange".

More recently, the markets have come under fire as a result of unofficial discussion of the possibility of a rise in Bank rate, and the decline in industrial equities has been led by the gilt-edged market. This turn-round in the gilt-edged market is, indeed, rather more significant than the pause in equities, since giltedged had for a few weeks been enjoying their only major phase of strength for a long time past. Just before election day, the "Financial Times" index of Government stocks was standing at its lowest for the year, at 84.04; but the market then began to reflect the general mood of confidence, and it went still further ahead after equities began to fall, reaching 87.74 on November 20, its highest since 1957, under the influence of switching induced by the low levels to which the current yields on equities have been forced.

Traditionally, the dividend yield on equities, as measured by the average return shown by the 30 leading industrial stocks included in the "Financial Times" index, has always stood above the yield from long-term gilt-edged stocks, as measured by that afforded by the so-called irredeemable 2½ per cent Consols (which is repayable only at the option of the Government, and has no final "date").

The Equity Yield

Until this year, any very close approach of the equity yield to the Consols yield has always been a signal for the starting of a reverse movement, notably by a fall in equity prices and a rise in equity yields. This year, however, over most of the period when equities were rising so strongly, the gilt-edged market was at best steady, and, more often, sagging, with the result that the equity yield for the first time dipped below the gilt-edged yield.

By the eve of the Election, when the gilt-edged market reached its low point, the Consols yield was almost 5.1 per cent, whereas the average yield on the industrial index stocks was under 4.7 per cent. At this point, the high return offered by gilt-edged brought in buyers, but the post-Election leap in industrials far out-distanced that in gilt-edged, so that, at the peak of the equity market, the industrials yield was actually a shade under 4 per cent, and the unaccustomed "reverse" gap between the two yields had widened to more than ¾ per cent. Even after the recent reaction in equities, the same differential obtains, with the equity yield at 4.1 per cent and the Consols yield at slightly over 4.9 per cent.

Distinctive Characteristic

The fact that so wide a gap of this kind has persisted is in part a reflection of the market's recognition that past experience of these yield relationships may now be a poor guide to what is likely to happen in future. The distinctive characteristic of British monetary policy during these past two years of recovery from the crisis of 1957 is that it has tended throughout to prevent the long-term rate of interest from following very far the downward course of short-term rates: whenever the gilt-edged market has shown signs of strength, there has always been an available supply of stock offered from official portfolios—so that official "funding" sales of stock have had the effect of moderating the market's advance.

The principles that lie behind this particular aspect of policy have been very clearly analysed in the Radcliffe report: it points to a number of factors that have tended to drag up the required rate of interest on long-term fixed-interest securities and that may make necessary a continuance of moderately high rates in future-even at times of relative slackness in production (though not, of course, in a phase of major unemployment, should that ever happen again). The so-called cult of the equity stock, it is now well understood, does not rest only on investors' fears of inflation; even in the absence of inflationary dangers, it can be justified (within due limits) by the attractions of good equities as "growth" stocks in a world that is expected to be one of continuing high employment and freedom from major slumps.

Maintenance Of Equilibrium

In such conditions, the dice may be loaded in some degree against fixed-interest stocks, yet the very attainment of those conditions may involve a continued flow of new borrowings on such stocks—because these are the instruments for financing not only the major parts of the public sectors of the modern economy (which play a very large role in any policies directed to the regulation of aggregate domestic demand), but also an important proportion of aid, of one kind or another, afforded to under-developed territories (which, in its turn, plays a significant role in the stabilisation of world demand).

Moreover, so long as inflation appears to be a more proximate danger than deflation (as it is likely to do in conditions of high employment), a wise monetary authority will generally seek to finance as large a proportion as possible of the public sector's requirements by medium or long-term securities sold to the general public, thus to ensure the minimum of borrowings from the banking system and the minimum risk of creating a dangerous excess of liquidity in the economy.

These considerations all suggest that, in Britain at least, maintenance of due equilibrium in the security markets will require the yields on fixed-interest securities to be higher, relative to the yields on equities, than they have generally been in the past (though not, of course, necessarily always absolutely higher than the equity yields, as they are at present). But, given that sort of relationship, there is no reason to suppose that gilt-edged securities will not continue to be attractive, at the margin, to particular types of investor.

Need For Vigilance

Recent experience shows, however, that even when the yield differential looks really attractive, the medium and long-term market will still be to some extent vulnerable, psychologically, to fluctuations or fears of fluctuations in the short-term market. It is easy to see why gilt-edged should take fright at the threat of inflation; but a rise in money rates that is designed to ward off such a threat may still be, in the short run, a source of weakening in the gilt-edged market. The latest weakening, however, does not stem from any such cause. In spite of the Governor's comment on the psychology in stock markets, there is no general supposition that the expansion of the general level of demand is getting out of bounds.

Nor is there any immediate threat to the stability of prices. The City, like the authorities themselves, is conscious of the need for increasing vigilance in guarding against any revival of inflationary strains. The talk of possible rises in London money rates thus springs, not from any sudden fear of renewed inflation, but solely from the trend of short-term rates overseas. In recent weeks, the official re-discount rates have been raised in West Germany, Holland and Japan, and the rate for the three-months bills of the United States Treasury has risen still further in the New York market, to the new peak of 4½ per cent—more than one per cent above the London Treasury bill rate. At the same time, several developments, including the hopes of a final settlement of the labour dispute in the American steel industry, have given the United States dollar a better undertone in the exchange markets.

Basic Strength Of Sterling

In these circumstances, it is hardly surprising that foreign short-term funds have lately been tending to leave London for New York. Some Continental balances, notably German balances, have also been repatriated from London in order to meet the growing stringency in the local market. A part of the mobile balances that came to London in such large volume during the main phase of sterling's recovery from the pressures of 1957, and also, subsequently, during the main phase of weakness of the dollar, is now flowing out again.

This natural capital outflow, and not any sudden deterioration in Britain's balance of payments on current account, explains the moderate reduction sustained by the central reserve of gold and convertible currencies during November. The reserve then fell by £18,000,000, to £1,062,000,000—its first "true" decline for many months. There had also been a decline in October, by £93,000,000, but that movement was more than accounted for by Britain's repayment of £91,000,000 in dollars to the United States Export-Import Bank, and by certain other special transfers.

This repayment, comprising the whole amount that Britain had drawn under the line of credit granted by the Export-Import Bank in 1957, had not been due to commence until October 1960, and was then to have been spread over the period up to April 1965. The decision to clear the whole debt forthwith was thus a striking demonstration of official confidence in the underlying strength of sterling—and the gesture was made the more noteworthy since it occurred on the very eve of the dismantling of import restrictions foreshadowed in my last letter.

EDITORIAL NOTES

CD Helps Those

The Community Development Programme, hereafter, will only help those who help themselves. This salutary decision was taken by the Central Committee for Community Development which met last week in New Delhi under the Chairmanship of the Prime Minister. The opening of a Community Block in an area, it was emphasised at the meeting, should be conditional on a "test of the villagers' self-reliance and enthusiasm for collective work". Hitherto, the aim of the programme was to cover the entire country within the Second Plan period. And, from time to time, publicity was given to the number of new blocks set up in the different States. It appears that the report of the UN Evaluation Mission has induced a radical change of attitude. The emphasis has now been shifted from expansion to consolidation. The proliferation of CD Blocks will be strictly controlled. The Union Ministry has been asked to lay down firm conditions which must be fulfilled by the local people before the area was brought under the Community Development Programme.

Simple norms have been suggested for judging the fitness of a village for being brought under the Programme. Keeping the village clean and membership and participation in the capital of the village cooperative society have been suggested for the purpose. Hitherto, the public were encouraged to believe that Community Development Blocks were being established to help the villagers just in these directions. Perhaps, the Community Development Programme will discharge more important functions in future. But what these are has not been made explicit.

In giving a "new look" to the village with the help of external funds, the CD Blocks have scored notable success. So much so, a visit to a CD Block in the vicinity of Delhi has become a "must" for visiting foreign dignitaries. But, so far, it has not been possible to do much to strengthen the economic basis of rural life, so that the Community Development Programme could go forward as a self-propelling movement of rural reconstruction. It remains to be seen whether the limitation of the area of its operation will enable the programme to show better results.

*

Administrative Adjustments

The annual report of the Organisation & Methods Division of the Cabinet Secretariat, a copy of which was placed on the table of the Lok Sabha last week, is timely in the sense that it comes soon after the powerful broadside against administrative inadequacies fired by no less a person than Mr G. D. Birla. The report details the efforts that have been made speed up the progress of work in the different Ministries and Departments of the Government of India during 1958-59. As a result, the average carryover in many Ministries and Departments has declined to a noticeable extent.

The O & M Division functions through internal O & M cells in the different Ministries. It undertakes case studies to diagnose defects in procedure and watches the speed of disposal of cases. Joint meetings are also held to discuss matters of common interest to more than one Ministry. The report points out that the officers of the O & M Division carried out special studies of problems causing delay in disposal of work. These included a special study in the Ministry of Commerce & Industry of the delay in the disposal of cases regarding foreign collaboration.

It is interesting to note that considerable attention was paid to the problem of delegation of powers to the middle and lower ranks of officers, and that some Ministries have already taken action in this direction. The concentration of the power of decision at the highest levels, even in regard to minor matters, is one of the potent causes of delay in the disposal of work. Efforts have also been made to shorten the pipeline for the transit of papers. Experienced Assistants are now allowed to submit cases direct to their Branch officers or Deputy Secretaries. A rule has also been made that not more than two Officers within a Ministry should note on a case.

While these measures may help to some extent in speeding up the disposal of papers, they will leave untouched the major causes of delay inherent in the system, to which Mr Birla had referred. Delegation of powers to lower echelons will only complicate the problems created by loading the Administration with functions for which it was not designed. The administration of public enterprises has received considerable attention in our country and abroad. While the ideal machinery has yet to be devised, it is generally conceded that Departmental administration is least suited for the purpose. But the analogous problems of the administration of the far-reaching controls of Commerce and Industry have so far been practically ignored.

Veteran Congressman

Dr Pattabhi Sitaramayya, who passed away last week, was a veteran of the Indian National Congress, who narrowly missed the ranking of elder statesman. In the zestful pursuit of causes dear to his heart, he was not always mindful of cultivating the esteem of influential congressmen. For fifty years, he laboured for the formation of Andhra State, and after it was formed, the Andhras were content to leave him as the Governor of Madhya Pradesn. Dr Pattabhi was drawn to the Congress at a very early age and, since 1916, has been a prominent member of its inner councils. The same year, he renounced a lucrative medical practice in order to devote himself to national service. He took part in all the Congress struggles for freedom and courted imprisonment several times. Though he was a member of the Congress Working Committee for several years running, the highest honour of the Congress crown eluded him till after Independence, when he presided over the Jaipur Congress. His unsuccessful fight for presidentship of the Tripuri Congress is part of the history of our times.

Throughout his life, Dr Pattabhi remained devoted in his allegiance to the Congress of which he wrote a monumental history. With a brilliant intellect at the back of a barbed tongue, Dr Pattabhi was not always an easy colleague for other members of the High Command. A man of versatile talents, Dr Pattabhi could have attained distinction in any walk of life to which he chose to devote himself. He had a remarkable head for business and sponsored many important business ventures in Andhra Pradesh. For a period of fifteen years, he was in charge of the All India Spinners' Association and rendered valuable service in making it a viable organisation. He was a vigorous writer and author of a number of books. For some years he edited the **Janmabhoomi** in English.

Dr Pattabhi was a pioneer in campaigning for linguistic provinces, an aim he pursued with indefatigable zeal. He was one of the three authors (the other two being Jawaharlal and Vallabhbhai) of the JVP report which paved the way for the eventual formation of the Andhra State. And, before he died, he had the satisfaction that the last bastion of opposition to linguistic States had fallen, with the Congress Working Committee setting its seal of approval on the bifurcation of Bombay State.

Bankers' Assessment

Three bankers will be shortly visiting India as members of an international mission sponsored by the World Bank for studying the developmental needs of this country. The members are Mr Joseph Dodge of the USA, Sir Oliver Franks of Britain and Mr Herman Abs of West Germany. It is possible that experts from Canada, France and Japan may also join the team. The World Bank has taken the initiative on two previous occasions in sponsoring meetings of India's creditor nations to help this country to meet its foreign exchange commitments. But the accommodation in these two instances was provided on an ad hoc basis, after crises had developed. There are now fairly reliable indications that the importance of arranging for the foreign exchange requirements of the Third Plan well in advance is recognised, not only in this country, but also in circles most competent to provide assistance.

Bleak Prospects for Bank Profits—II

IT is patently clear, on the basis of the data given in the last week's article on this subject, that it is impossible for bank profits to be maintained during 1959. For, the facts are, to recapitulate them briefly, as follows:

(1) The weekly average of Advances, during January-September 1959, is higher only by Rs 61 crores over the relative figure for the year to March 1959.

(2) Over the same period, the relative figure for Time Liabilities alone has risen by Rs 134 crores.

(3) In absolute figures, the weekly average of Time Liabilities during the first nine months of 1959 exceeds the weekly average of Advances during the same period.

(4) During the twelve months to March 1959, the weekly average of the ratio of Advances to Deposits worked out to 58.05 per cent. The relative ratio for the first eleven months of 1959 is distinctly lower at 56.41 per cent; indeed, this ratio is the lowest during any of the financial (i.e., to March) years since the beginning of the First Plan.

Such are the incontrovertible facts of the situation. But banks will be most reluctant to show any decline in their profit; and, since methods will not be unavailable of boosting the gross income, the balance of profit shown may conceivably, in a limited number of cases, be maintained, although the strict banking profit will undoubtedly have declined. We fancy that the most popular of the methods will be to "book" the profit on giltedged, in the sense that surplus in valuation will be taken to the profit and loss account.

But, even if the balance of profit through such means is made to be maintained, it is extremely doubtful that the gross return to the shareholder will not suffer. In other words, the rate of dividend may not in most cases be allowed to fall; but the effective return will decline, because the shareholder will not be getting, on his dividend for 1959, the benefit of "grossing up" in regard to tax deemed to have been paid on his behalf by the company.

So, the saving grace as far as banks' profits are concerned will in 1959 prove to be the "profit" on giltedged.

The pity is, that the banks' anxiety to maintain profits may have the same unfortunate consequence as did banks' concern, during 1957 and 1958, to report an increase in the level of their Deposits. It was not until, we may recall, early in October 1958 that a halt was cried to the Deposits war, which had been waged particularly bitterly as from the beginning of the 1956-57 busy season. It was announced, around the same time, that the beneficial import of the agreement on Deposit rates would not be reaped in full for a full year, since money for twelve months had already been taken by banks at the "competition" rates. The futility of bidding for Deposits, which banks could not anyway put to fruitful and earning and profitable use, was again realised in 1959, when it was freshly agreed to reduce the maximum rate payable on Deposits as from September. So, it has happened, during 1957 and 1958, that the bitter pill of lower banking profits has been sugar-coated by the fact of a mouth-watering increase in Deposits. We very much fear that, if the subterfuge of non-banking profits contributing to the maintenance of the balance of profit is widely used, banks will—or may—find some complacent comfort in the further spectacular rise that has been registered in Deposits during 1959.

The situation, for quite another reason, is rather more complicated at the present moment. We are today witnessing the strange spectacle of banks being **over-extended** when the ratio of their Advances to Deposits is still lower than 52 per cent! This, of course, is because, in order to mitigate the effect of a larger volume of higher costing Deposits, banks during the last two years have added incredibly to their investment portfolio. So much so, as at the end of November, when only did the 1959-60 busy season apparently begin to exert its influence. Advances accounted for 50.34 per cent and giltedged Investments for another 44.30 per cent of the Deposit liabilities of Scheduled Banks. It would be tragic if banks were to reason that they should continue to "buy" Deposits at today's high price; that they could hedge against these Deposits by purchase of giltedged; and that they could wait for their profit by borrowing from the Reserve Bank as and when they experienced an expansion in Advances.

Tragic it would be, because sound banking requires, not the full utilisation of resources, but the optimum, profitable utilisation of them. And banks may easily mistake the former for the latter.

What, then, can be done to rectify the situation? What are the lessons that the last three years have to offer?

Firstly, no bank today has to "buy" Deposits; money is keen and willing to find sanctuary in banks' vaults.

Secondly, therefore, the current range of maxima payable on Deposits, at 3 per cent to 3½ per cent, is still rather too high.

Thirdly, whether by convention or by agreement, rates on Deposits should be linked with the Bank Rate.

Fourthly, the minimum differential between the two, in our opinion, is one per cent.

Fifthly, for sound banking, it is also essential that, by convention or by agreement, minima be laid down as to the rates on Advances.

Sixthly, this, too, should be linked with Bank Rate.

Seventhly, the differential we have in view in this respect is a minimum of ¾ per cent.

Finally, in order to compel action along these lines, the Reserve Bank may perhaps direct the banks that such incidental and non-banking income as surplus on giltedged investments should not be used for the payment of dividend.

We hope, by these means, that reason will at last come to the banking system in 1960.

+

Expansion Again In Bank Credit

While the return of Scheduled Banks for December 11 bears the hall-mark of the busy season, the figures pertaining to the Reserve Bank for December 18 show a more subdued progress of the seasonal pressure for funds.

According to the latest returns of the Reserve Bank, there has actually been a drop of Rs 2.40 crores to Rs 1,728.97 crores in Active Note Circulation. Also, rupee coin has returned from circulation for Rs 0.48 crores. The Reserve Bank's cash in the till, therefore, has moved up by Rs 2.90 crores to Rs 11.26 crores.

There is, in the return of the Banking Department, evidence of considerable inter-governmental transactions. A rise of Rs 9.82 crores in Investments (Rupee Securities in the Issue Department were unchanged) to Rs 236.97 crores suggests deficit financing. Over and above this, the Centre's balances stand reduced by Rs 10.56 crores at Rs 49.49 crores. The beneficiary is the State Governments, whose balances have improved by Rs 16.62 crores to Rs 25.96 crores, on top of a reduction of Rs 6.44 crores to Rs 21.43 crores in their ways and means borrowings from the Reserve Bank.

The Reserve Bank's portfolio of Treasury Bills purchased and discounted shows a rise of Rs 3.65 crores, and this is perhaps linked with the disinvestment of Rs 4.50 crores by the State Bank in the same week. The rise of Rs 5.30 crores to Rs 73.84 crores in the Reserve Balances of member banks is ascribable as to a moiety to the State Bank. There is, however, a further rise of Rs 1.82 crores to Rs 92.77 crores in the Other Loans and Advances of the Reserve Bank. It is also significant that advances to Scheduled Banks against usance bills have passed the Rs 1 crore mark for the first time since October 30, which was the week during which the dewali demand for funds was experienced by the banking system. It would thus appear that banks' figures vis-a-vis the Reserve Bank confirm that busy season influences have been prominently felt by the banking system.

Finally, hearteningly, Balances Held Abroad have again risen by Rs 3.61 crores to Rs 45.78 crores.

The State Bank's return for December 18 does offer some evidence of the busy season. Advances are higher by Rs 1.55 crores at Rs 160.83 crores. Deposits are, however, higher by Rs 2.35 crores at Rs 578.53 crores. Borrowings from the Reserve Bank are somewhat lower by Rs 0.60 crores at Rs 1.18 crores. There has been disinvestment, perhaps in Treasury Bills, for Rs 4.50 crores, presumably for adding to cash balances; cash in hand and with Reserve Bank has improved by Rs 2.31 crores to Rs 22.95 crores.

The return of Scheduled Banks for December 11 records another sharp increase of Rs 9.06 crores to Rs 944.45 crores in Advances. Moreover, Deposits are a shade lower, by Rs 2.73 crores, at Rs 1,872.25 crores. Though borrowings from the State Bank are fractionally lower, indebtedness to the Reserve Bank has risen by Rs 3.09 crores to Rs 9.83 crores. As anticipated in this column last week, presumably to add to cash balances, there has been disinvestment in giltedged for Rs 8.21 crores to Rs 803.34 crores. Nevertheless, cash balances have been denuded by Rs 10.62 crores to Rs 151.06 crores.

+

Govt. of India, Treasury Bills

Tender for Rs 2 crores of 91 days' Government of India Treasury Bills were opened on Tuesday, the 22nd December 1959. Total amount offered was Rs 2 crores. Tenders at Rs 99.400 and above were accepted in full. Total amount accepted was Rs 2 crores, the average rate of accepted tenders being Rs 2.390 per cent per annum.

Tenders for Rs 2 crores of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on Monday, the 4th January 1960. Successful tenderers should make payment on Friday, the 8th January 1960. Other conditions are as usual.

During the week ended the 18th December 1959 Government of India Treasury Bills for Rs 140,48,75,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from the 23rd December 1959 to 2nd January 1960 at Rs 99.421 per cent. Sales can be stopped at any time without notice if Government think it necessary.

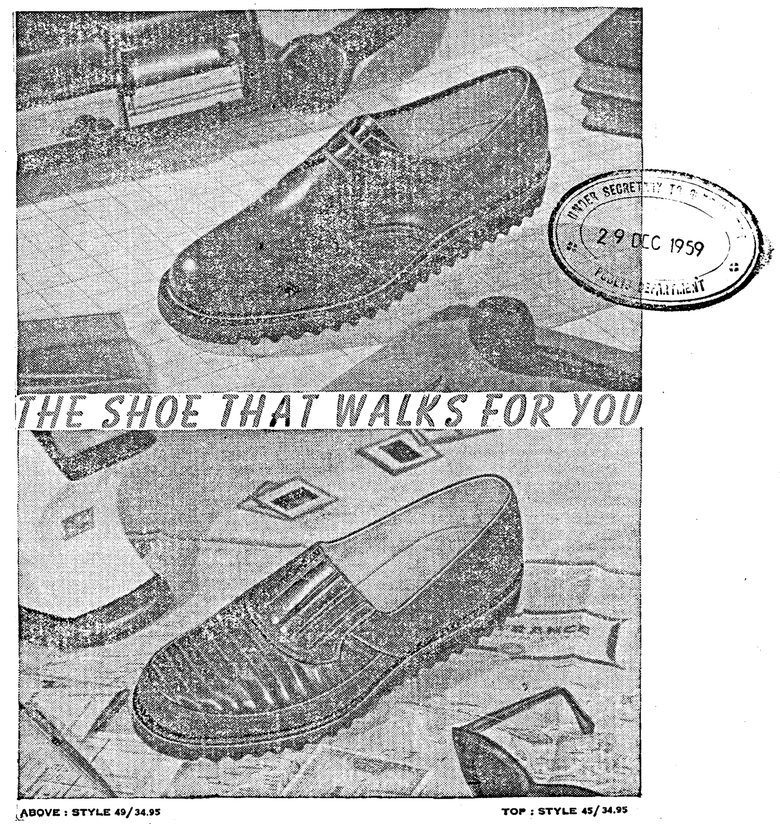
91 days' Intermediate Treasury Bills sold from the 16th to 19th December 1959 amounted to Rs 5,00,000.

+

Can Britain Reverse Price Trend?

By Paul Einzig

SOME four years ago, when Mr Macmillan was Chancellor of the Exchequer, it was his declared ambition to achieve stability of the price level after its non-stop rise since the beginning of the second World War. He achieved that ambition during the second and third year of his Premiership. Now, his Chancellor of the Exchequer, Mr Amory, wants to go further. His ambition is to reverse the trend of prices. During the last few months, he has declared on repeated occasions that a reduction of prices must be achieved. It has become the main target of the Government's economic policy that prices should not only be held at their present stable level but should be actually reduced.



Even a few months ago, this would have sounded too fantastic to be considered seriously. Surely, the world is fated to a secular trend of inflation and there is nothing mankind can do about it. We might as well try to make the rivers flow upward. The vicious spiral may be halted for a while, but, surely it cannot be reversed. But, as month after month has passed, and the cost of living index remained where it was in the spring of 1958, more and more people began to think that after all, Mr Amory is not crying for the moon. If it was possible to achieve the impossible by keeping prices stable for such a long period, surely a reduction of the price level should also be within the realm of practicability!

As a matter of fact, quite a number of firms brought about appreciable cuts in the prices of their manufactures during recent months. And several price cutting wars between rival industrial or commercial interests are in progress. Until recently, such a thing was inconceivable. All business firms kept on putting up their prices at frequent intervals. The consumer has actually forgotten that prices can move in two directions. The younger generation of consumers has never experienced any price reductions and many of them did not know that things could be cheaper instead of being dearer and dearer.

The indefatigable Chancellor has not missed any opportunities during the last few months to stress the need for more and more reductions. He exhorted industrial interests again and again that they should give the public the benefit of lower production costs resulting for higher productivity. He exhorted the merchants to be content with a narrower profit margin. He even appealed to the trade unions not to spoil things by their immoderate wage demands. If only everybody played according to the rules of the game, this country might experience a drastic decline of prices. The question is, will they play?

As far as industries are concerned, many of them would be very keen on cutting prices. Their managements are sufficiently enlightened to realise that they could increase their profits in spite of lower profit margins, through the resulting increase in their turnover. But a great many manufacturers feel it is of no use to try to cut prices, since the next wage increase would necessitate their restoration to or even above their previous high level.

In the circumstances, the only way in which the majority of manufacturers could be induced to listen to Mr Amory's exhortations would be by removing all restrictions to free competition. There should be more price-cutting wars. To that end, it is the Government's intention to introduce legislation against resale price maintenance. In 1946, the first step was taken in that direction by outlawing collective resale price maintenance, establishing a registry of restrictive practices and setting up a restrictive practices tribunal. All the effect of these measures was nullified, however, by a provision under which individual resale price maintenance arrangements—as distinct from collective resale price arrangements, would be henceforth enforceable before the Law Court. In other words, while manufacturers are no longer in a position to join forces to assist each other by collective action in enforcing resale price arrangements, they are now in a position individually to force merchants by legal action to abstain

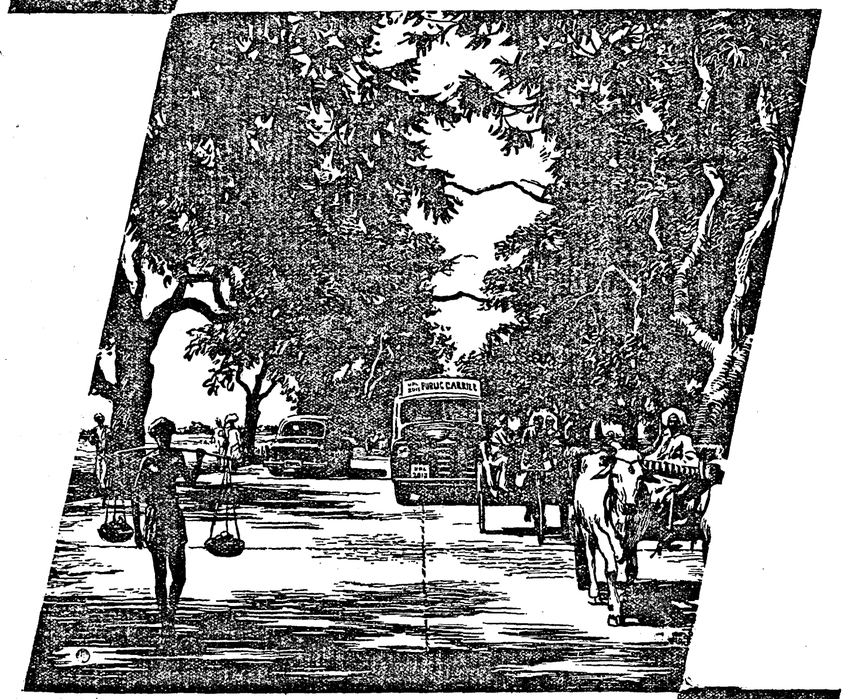
from selling their goods at prices lower than those fixed by the manufacturers.

The next move will be to remove this provision and give merchants a free hand to cut prices regardless of the wishes of manufacturers who supply them. There is a great deal to be said on both sides of this highly involved problem. My own view is that, during the period of creeping inflation, resale prices tended to slow down the rise in prices, because manufacturers were reluctant to raise the nationally advertised prices of their goods in too frequent intervals. On the other hand, during a period of stable maintenance would delay and or declining prices, resale price weaken the efforts to bring prices down, precisely because it prevents price-cutting contests.



This is of course only one aspect of the problem. But it is a very important aspect. Resale price maintenance tends to discourage manufacturers from changing their prices too often in a downward as well as in an upward direction. For this reason, the Government are now determined that resale price maintenance must go. By this decision, the difference between Conservative and Liberal economic policies is further lessened. Indeed, the Tory Party is becoming liberal with a small "l" even if it is not liberal with a capital "L".

WORLD OF TEA

Final Sales for the year

THE Tea trade is ending the year on an excellent note; and this was evident from the improved demand at the final export sale held on Monday this week. Basically, the market is ruling still firm and the two major elements are the smaller size of the world crop this year and the increase in tea consumption abroad.

World production of tea for the third year in running may be just short of current estimated consumption, the gap being the largest in 1959. The trade seems to be faced with the prospect of a shortage of supply in the internal market. Britain's import, during the eleven months just ended, was lower than last year's. Visible stocks were down by nearly 60 million pounds toward the end of last month.

According to the news from London, the quantity of tea, held in stock in London and on its way, is considerably less than twelve months ago. At the end of November, stocks amounted to 113 million pounds as compared with 145 million pounds in November last year, while the quantity "afloat" is down from 64 million pounds to 38 million pounds.

It is encouraging to note that, despite increased arrivals, the trend of prices in the Calcutta auctions has been maintained during the past many weeks. Arrivals in the Port of Calcutta, during April-November 1959, were higher at 3.65 million packages as against 3.63 million packages in the corresponding period of last year. This improvement was mainly due to increased arrivals by rail, which accounted for 986,201 packages in April-November 1959 as against 885,796 packages in the similar 1958 period.

Direct exports of North-East Indian tea to the UK, during the seven months ended 31st October 1959, were, however, lower at 95.49 million pounds as compared to 97.74 million pounds in the corresponding period of last year. Out of the total shipments in April-October 1959, a quantity of 89.98 million pounds was despatched for London auctions; 5.51 million pounds against private sales and forward contracts as compared to 91.93 million pounds and 5.81 million pounds respectively in the corresponding period of last year.

Meanwhile, in the final Export Sale held in Calcutta this week, offerings were 55,129 packages. There was a better tone in the market and the demand was strong and general. Plain Brokens and Fannings grades tended dearer, particularly clean black sorts. The poorest plain liquoring types of unattractive appearance were occasionally easier. There was a fair support for medium BOPs and PFs which showed little change in values. CTC teas were well supported; but these were often 5 nP to 10 nP lower. Non-wither leggcut teas came to a ready market and the cheaper varieties were often firmer.

Whole Leaf grades were again firm and sometimes dearer. Darjeelings were about steady and there was quite a useful enquiry for Tippy teas. Following rates were quoted:— Clean Black Pekoe Rs 2.18 to Rs. 2.24; Plain BP Rs 2.04 to Rs 2.14; Plain Fannings Rs 2.10 to Rs 2.20; Medium BP Rs 2.02 to Rs 2.12; Medium Fannings Rs 2.16 to Rs 2.24; Best Assam CTC BP Rs 2.50 to Rs 2.70 and Best Assam CTC Fannings Rs 2.50 to Rs 2.70.

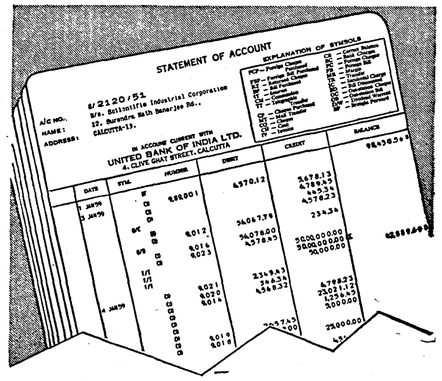
In the Cochin market, just over 1,500,000 pounds of Leaf tea were offered for export. All teas, with the exception of high-growns, showed a further seasonal decline in quality. The market met with a strong demand, Plainer descriptions and low medium teas being dearer. There was good support for Medium and Good Medium teas, which were fully firm.

According to trade sources from Ceylon, production of tea rose to 30.8 million pounds in October 1959 from 29.5 million pounds in the corresponding month of 1958. Total production in Ceylon, during the first ten months of the current year, is lower at 338.5 million pounds as compared to 342.3 million pounds in the corresponding period of last year. It is estimated, however, that this shortfall will be more than made up in November when crops in excess of last year's total of 34.1 million pounds were harvested.

In the London auction, a good and generally well-distributed demand prevailed for the 63,843 packages of North Indian, Ceylon, South Indian and other miscellaneous teas offered. Prices were well maintained, especially for Ceylon descriptions where advances of 1½d to 2d per pound often occurred. There was no further narrowing in the price spread between the top and bottom grades. The closing range was 3sh 9d to 6sh 3d per pound as against 3sh 8d to 6sh 1d in the previous week.

In the Internal sale, offerings consisted of 22,163 packages of Dusts. There was a strong general demand. Black exportable teas of orthodox manufacture were a strong feature and were firm to dearer, while the remainder in this category generally sold at 2 nP and occasionally 4 nP below last rates. Leggcut teas were irregular, while Darjeelings were sold at about last rates.

Medium CTCs received better support than in recent weeks; but were once again irregular. The few exportable rainy sorts and powdery descriptions were well supported at generally dearer rates; but the rest were sometimes up to 6 nP easier. Following rates were quoted:— Medium Dooars Dust Rs 2.14 to Rs 2.22; Medium Assam Dust Rs 2.08 to Rs 2.16; Medium Assam CTC Dust Rs 2.16 to Rs 2.28 and Best Assam CTC Dust Rs 2.50 to Rs 2.80 (nominal). There was a good general demand for the 947 packages of Leaf grades on offer.



WORLD OF JUTE

Need for Stability

AFTER a comparatively subdued start, jute markets during the past week have firmed up once again on renewed speculative interest. The excitement became intense on Wednesday on reports of fresh enquiries from China and sizable gains were recorded in all sections. In the futures market, B Twills February briskly moved up from the previous closing of Rs 109.35 to be finally placed at Rs 113.45 on Wednesday; Hessian 40"×10 oz February to Rs 42.92 from Rs 42.04 and Assam Bottoms March to Rs 32.70 from Rs 30.94.

It is evident that Wednesday's spurt in prices has been brought about mainly by the reportedly large quantity of goods purchased by China. If it turns out to be true that the market has been depleted of a sizable quantity of stocks, Wednesday's excitement cannot be unduly frowned upon. This is not to say, however, that marketmen have acted in an altogether unexceptionable manner. There may not be anything wrong in taking advantage of a needy buyer who is evidently quite unmindful of the price he is called upon to pay. But enlightened self-interest demands that our jute marketmen do everything in their power to maintain fairly stable price levels in the long-term interests of themselves, the jute cultivator and the jute goods industry. It is, no doubt, a valid argument that prices should be allowed to be governed by demand and supply. Even so, it is always to be borne in mind that the behaviour of the domestic markets has an important bearing on the future attitude of overseas consumers of jute goods. But the question arises whether there is real justification for the hectic rise in prices noticed in the past few weeks and particularly on Wednesday.

The answer, according to Government spokesmen, is an emphatic "no". At a press conference held in Calcutta on Wednesday afternoon, the joint Secretary, Ministry of Commerce and Industry and the Jute Commissioner, Government of India, have pointed out that the apprehension about the size of the current jute crop is unfounded. The supply position is such as to meet the requirements in full and leave a comfortable balance for a normal carryover into the next season. The current year's jute and mesta crop is now officially estimated at around 57 lakh bales. To this is to be added

They are so neat!

These mechanised Statement of Accounts! They save the customers so much time and bother.
The Bank's Head Office and some branches supply them regularly. More and more branches will be supplying them soon.

Amongst the Banks in India the UNITED BANK is in the van of mechanization.

United Bank of India Ltd.

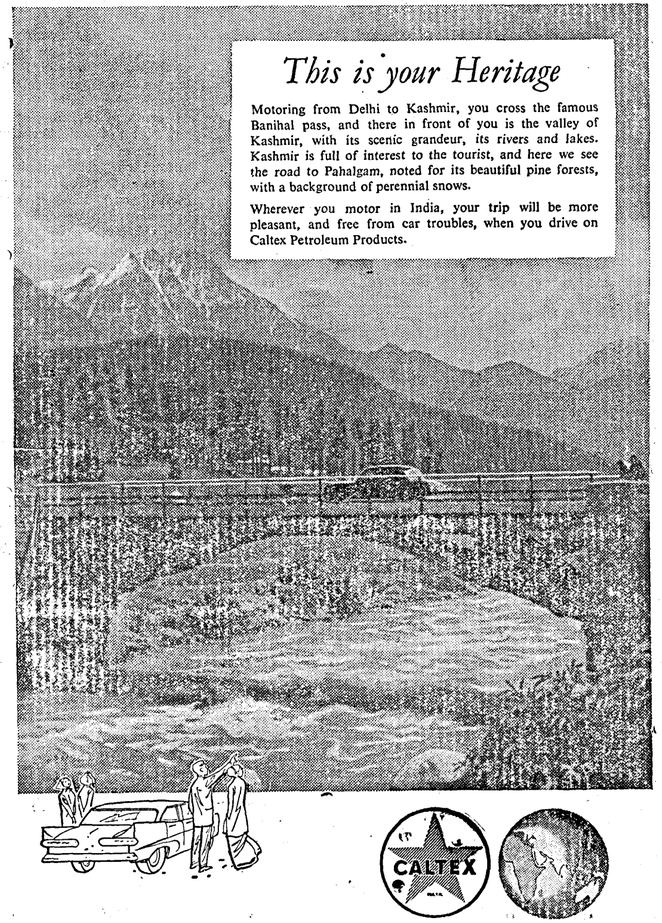
HEAD OFFICE: 4, CLIVE GHAT STREET, CALCUTTA-1

the IJMA estimate of the carry-over of 24 lakh bales and normal imports of 2.5 lakh bales to give a grand total of 83.5 lakh bales. Since the current year's total consumption is estimated at 67 lakh bales, there will be left a fairly large quantity to be carried over into the next season. In addition, Government have decided to permit immediately the import of 2 lakh bales of jute cuttings from Pakistan. A Government Press Note issued on Wednesday has further assured the industry that Government will take such further steps as may be necessary from time to time to see that full production is maintained.

Government's perturbation over the steep rise in prices in the jute markets is understandable. Jute goods are one of our principal foreign exchange earners and anything that some marketmen do to make our jute goods unpopular in world markets should necessarily receive the urgent attention of Authority. Wide fluctuations in prices in the domestic market will result in a further shrinkage of the overseas market for our jute goods. One of the main reasons for the considerable headway that has been made by bulk handling and substitute packaging materials in the jute goods consuming countries is the uncertainty as to supply and price that had been allowed to prevail in the domestic market. Thanks to the increasing realisation of the vital role of jute goods in our economy, the need for bringing about stability in our jute market is more widely appreciated now than ever before. It is to be hoped that the tribe of traders in the various jute markets will also realise that in a sense, they have the future of the industry in their hands.

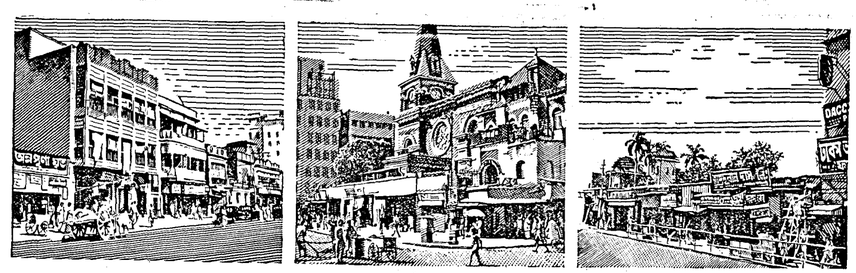
The jute goods market opened the week last Thursday on an easier note due to selling Pressure in the futures section. Reports of US interest in Hessian and purchases of woolpacks by Australia failed to arrest the downtrend and Hessian 40"×10 oz Dec closed at Rs 41.55 and B Twills Dec. at Rs 107.80. Sackings steadied up to Rs 108.70 on Friday following news of a Government order for 30,000 bales of B Twills, but Hessian was barely steady at Rs 41.85. Gunny despatches during November showed a slight rise at 94,620 tons as compared with the previous month's total of 94,575 tons. Total despatches of hessian were higher at 39,281 tons as compared with the previous month's total of 33,092 tons. Sacking despatches were lower at 49,859 tons against 56,602 tons. Other varieties were higher at 5,480 tons against 4,881 tons. While total exports were lower at 74,164 tons as compared with the previous month's total of 75,220 tons, internal consumption was higher at 20,456 tons against 19,335 tons in the previous months. Heavy goods continued to move up in the next few days and, on Wednesday, following reports of sizable orders, the price shot up to Rs 114.50 with hessian also rising in sympathy to Rs 42.95.

The raw jute market opened rather subdued with Assam Bottoms at Rs 29.50 but by Saturday had steadied to Rs 30. From Monday the rate gained further ground as sellers became reserved. It would appear that the scare of a shortage had again begun to influence the market. Presumably, marketmen were swayed by the trend of raw jute arrivals during November. Arrivals during November were lower at 780,060 bales as against 855,150 bales in the corresponding month of last year. Arrivals of Indian jute totalled 745,770 bales and those of Pakistani origin 34,350. In the first five months ended November 1959, total arrivals of jute declined to 2,316,140 bales from 2,625,530 bales in the corresponding period of last year. Although sentiment seemed to have turned quiet on the publication of the Government Crop estimate, the undertone firmed up on Wednesday presumably on reports of fresh Chinese orders. Assam Bottoms closed on Wednesday Rs 3.50 higher on balance at Rs 33.



*

Jute Crop Estimate



The All India Final estimate of jute for 1959-60 places the area under jute and production at 1,707,000 acres and 4,548,000 bales as compared with the previous year's partially revised estimate of 1,811,000 acres and 5,158,000 bales.

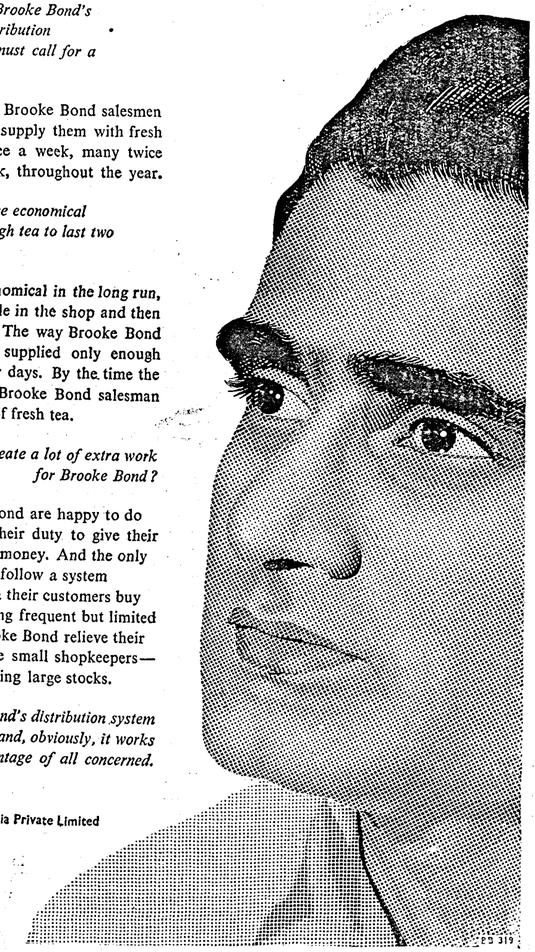
SEE YOUR COUNTRY ON CALTEX PETROLEUM PRODUCTS

"Over 5,00,000 shops"

You mean, Bhai Sahib, that Brooke Bond's own people do this job of distribution to over 5,00,000 shops? It must call for a small army of salesmen!

Yes! It does. Over 2,000 Brooke Bond salesmen visit the shops and supply them with fresh Brooke Bond Tea once a week, many twice a week, throughout the year.

Wouldn't it be easier and more economical to supply each shop with enough tea to last two or three weeks, or more?



Easier—yes, but not economical in the long run, because the tea might go stale in the shop and then nobody would buy it! The way Brooke Bond do it, their retailers are supplied only enough stock to last for a few days. By the time the shopkeeper has sold it the Brooke Bond salesman is back with another supply of fresh tea.

Doesn't this create a lot of extra work for Brooke Bond?

Indeed it does, and Brooke Bond are happy to do it because they believe it is their duty to give their customers full value for their money. And the only way they can make sure is to follow a system whereby the Brooke Bond Tea their customers buy is always factory-fresh. Making frequent but limited supplies also means that Brooke Bond relieve their retailers—many of whom are small shopkeepers—of the risk and worry of carrying large stocks.

Brooke Bond's distribution system must be quite unique—and, obviously, it works to the advantage of all concerned.

Brooke Bond India Private Limited

WORLD OVERSEAS

US Notes

THE recent visit of US Undersecretary of State C. Douglas Dillon to several Western European nations should have helped clear up some important questions regarding the emerging international trade relationships of the two new regional trading groups in that area, and US attitudes toward them.

These groups are, of course, the European Economic Community (EEC), the socalled 'inner six', and the European Free Trade Association (EFTA), the socalled 'outer seven'. It is obvious that the activities of these two groups, which encompass 13 of the world's leading trading nations, could have a decided impact on the trading patterns of the United States and many other counries.

The older of the two is the European Economic Community, also known as the "Common Market", which embraces France, Italy, the Federal Republic of Germany, Belgium, the Netherlands and Luxembourg. This is designed to become eventually, a full-fledged customs union, with the elimination over some 12 to 15 years of tariffs and other trade barriers among the member nations, along with a growing integration—or "harmonization"—of many of their internal economic programmes. In effect, therefore, the EEC would in time present to the rest of the world a single economy instead of six separate economies.

This kind of economic relationship, it is believed, could provide a storm incentive for closer political ties as well among the six countries—although political integration as such is not a specific provision of the Treaty of Rome, which formally set up the Community as a working body on January 1, 1958. Closer political integration in Western Europe has been a goal since the days of the Marshal Plan and, it can be assumed, would be welcomed in Washington particularly as it tended to ease historical differences between France and Germany and to bring those two countries closer together. This kind of political integration is not now foreseen in the case of the EFTA, which was set up only recently as a result of discussions in Stockholm, Sweden. As members of a free-trade the "outer seven"—the United Kingdom, Australia, Switzerland, Portugal, Denmark, Norway and Sweden—also could be expected to eliminate, in time, tariffs and other trade barriers among them. EFTA would not however, be a full-fledged customs union, as in the case of the EEC, since each of the seven countries would maintain its own trade and tariff barriers against outsiders. Nor, presumably, would they be "harmonising" their internal economic policies. It is not surprising, therefore, that American officials, while they do not oppose the EFTA, are not greeting it with the same enthusiasm as was the case with the EEC.

As things stand now, then, two major trading groups have emerged in Western Europe, each with the prospect of eliminating its internal, but not its external, trade barriers. And these external barriers would apply to the other group as well as to countries not participating directly in either. The question naturally arises, therefore, of trying to arrive at some workable agreement between the two groups.

US interest in all this is rather obvious. In the first place, American officials would not want to see anything happen that might jeopardize EEC's chances of closer political integration.

In the second place, American officials would not want to see the two groups erect high external trade and tariff barriers or to come to some preferential trade arrangement between themselves which would operate to the disadvantage of the United States and other outside countries. The viewpoint is particularly relevant now, when the United States is very much interested in stepping up its exports to ease its balance of payments problem. As a matter of fact, US interest in seeing European countries continue to remove their restrictions against American goods is another subject Mr Dillon is reported to have discussed during his recent European trip.

To help find a solution to these problems, the US has expressed a willingness to participate in any discussions between the EEC and the EFTA. No mechanism as yet exists in Europe for dealing with this matter, however, nor is there as yet any visible meeting of minds as to just how the discussions would be conducted and what they would cover.

It should be borne in mind, of course, that Mr Dillon did not go to Europe for the express purpose of reaching a definite agreement on this subject, or on any similar subject. His mission was mainly an exploratory and explanatory one, and the view here is that his visit may well have helped clarify the issues as far as US attitudes are concerned, and thus may have helped bring closer a settlement of the EEC and EFTA problems to the satisfaction of all interested parties—both those inside and those outside the two groups.

In any appraisal of these problems, the question of the 41 nation General Agreement on Tariffs and Trade (GATT) obviously looms large. Both the EEC and the EFTA can exist as exceptions within the GATT framework, insofar as reduction and elimination of their internal trade barriers can lead to long-term benefits for member nations in such fields as production and general economic activity, and hence to a broadening of their international markets but to fully realise these benefits which imply ultimate advantages to outside countries as well as to those inside the two groups, the external tariff structures of the EEC and of the EFTA members also would have to be low—and this certainly is in keeping with the GATT principles.

It is the feeling here, then, that the two European groups can do much to demonstrate a continuing interest in following liberal trade policies with the rest of the world. And they will have opportunities to do this even before GATT's forthcoming multilateral tariff-cutting sessions, scheduled to get under way next September in Geneva.

*

Britain

Britain will spend about £150,000,000 on economic and technical assistance to oversea countries during the current financial year, the Financial Secretary to the United Kingdom Treasury, Sir Edward Boyle, told the House of Commons on December 17.

Replying to the debate on aid for underdeveloped countries, Sir Edward said: "It is perfectly true that there is more interest taken than ever before in Britain and other Western countries in this very vital question of helping less-developed territories.

"I am told that expenditure from United Kingdom public funds on economic and technical assistance to oversea countries and territories rose, according to the latest estimate, from roughly £75,000,000 in the financial year 1957-58 to £100,000,000 for the financial year 1958-59, an increase of one-third. It seems quite likely that the outturn of this expenditure for the current year may be around £150,000,000".

Sir Edward emphasized that a favourable balance of payments and a sufficient surplus was "absolutely fundamental" to what Britain could afford to do in this field.

He added that on July 20, the Government had said it was prepared to join in working out plans for international aid, and that Britain would contribute 14 per cent, or about £50,000,000.

"I think there is a good prospect that IDA (International Development Association) will be brought into being before long".

* * *

The British Government intends to make full payment on December 31 of the principal and interest due on the United States and Canadian post-war loans.

The total of payments which will be made to the United States and Canada is $184,100,000.

Under the financial agreements with the United States and Canada dated March 6, 1957, the United Kingdom Government was enabled to defer up to seven annual payments of both principal and interest on the US and Canadian loans if it thought postponement necessary for foreign-exchange reasons. One deferment of the payment of principal and interest was availed of under the agreements in December 1957.

Payment in full on the loans was resumed in December 1958, reflecting the increasing strength of the United Kingdom's external position, and it was expected that payment in full would be made this year for the same reasons.

The main payments due are in respect of settlements reached in 1945-46 on all outstanding wartime and immediate post-war financial obligations.

A massive 105-ton anvil block has just left the English Steel Casting Corpn. Ltd., Sheffield, on the first stage of the journey to the Durgapur Steel Works in West Bengal. The block is to be used with the forging hammer which B. and S. Massey Ltd., of Sheffield, are supplying to the firm of Davy & United Engineering Co., Ltd., Sheffield—a member of the consortium of British firms building the Indian steel works.

The block, which is due to arrive in Calcutta by January 19, is the heaviest single piece of equipment for the Durgapur Steel Works.

SOUTH EASTERN RAILWAY

FABRICATION OF GARMENTS

The General Manager, South Eastern Railway invites Tender No. GM|S.1|A|4 (60-61) for fabrication of Garments for the staff of the S. E. Rly. during 1-4-60 to 31-3-61. Tender Forms are obtainable from the Office of the CONTROLLER OF STORES (ADMS. SECTION), South Eastern Railway, Garden Reach, Calcutta-23 on remittance of Rs. 5|- (not refundable) by Money Order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, S. E. Railway, Garden Reach, Calcutta-23 by local firms. Earnest Money against the tender is Rs. 2,000|-. Closing date of the Tender is 7-1-1960.

S86 GENERAL MANAGER.

NEWS about the Tyagi Committee's report on the Administration of Direct Tax have been appearing in the press for some time now, and the report itself was placed before Parliament last Monday. I cannot, therefore, legitimately defer comment any longer. But I do wish I had the full text before me, for, I feel that only the more "colourful" recommendations have found their way into the press, and the more "technical" and therefore important ones have yet to catch the public eye. At any rate, it has not caught mine, and for no fault of mine. For instance, the summary published says little about what I thought was one of the principal tasks of the committee—the examination of how far the present array of direct taxes is a truly "integrated tax system", and what should be done to make more of such a system. These are two questions, among others, on which guidance would have been most welcome.

*

But the published summary does not indicate what the committee has to offer in this connection. The only reference to this aspect of the matter I could find was the recommendation that it is not worthwhile to introduce a new system of assessment on the basis of one comprehensive return of income, expenditure, Wealth and gifts. One of the things I shall look up when the full text becomes available will be the discussion of the reasons for this suggestion. In one sense, such a suggestion is inevitable. The comprehensive return, as Professor Kaldor conceived it, was to be the base of a comprehensive system of taxation. In other words, the Kaldorian system, whatever its other defects, had a clear title to the name of an "integrated tax system". But the present array of direct taxes is a patchwork made mostly of such suggestions of Professor Kaldor as suited a tax-hungry Government. Indeed, by the time the Government of India had done with it, the Kaldorian system was mangled beyond recognition. Instead, we have a piece of botch that has left tax laws even more untidy than before. Subsequent efforts to clear up the mess (like abolition of Wealth Tax on companies) has improved matters but little. Indeed, if the summary of recommendations is an indication of the report itself, and the full report also has little to say on the subject of a compact and integrated tax system, it will not be altogether surprising. For, it would have probably involved a recommendation for wholesale revision of the present structure. And yet, it seems to me that a truly integrated tax system demands nothing less. It may be urged in extenuation that it is too early to revise the present bases of direct taxes, most of which are less than three years old. But it does seem to me that the further we postpone a real and rational integration of the tax system, the more difficult such integration is going to be later.

*

However, the Tyagi Committee has chosen to take a modest view of its task. At least, the published summary gives such an impression. It would seem that it has conceived itself more or less as a successor to the Varadachariar Commission on Income Tax Evasion. I am not suggesting that income tax evasion is too unimportant for investigation. Indeed, as has been stated only too often in these columns, income tax evasion is a major evil controlling which calls for our resources in ingenuity. And the last decade (roughly corresponding to the period after the Varadachariar Commission reported) has also been a period of rampant and even triumphant tax evasion. Indeed, honest tax payers have had the mortification of seeing during this period tax evaders successfully invoking (of all things) the Constitution for obtaining immunity. The successive assaults on the validity of the Investigation Commission's activities, which culminated in its final demise, have clearly demonstrated how very powerful and well served tax evasion is. Authority's fumbling attempts at salvaging something from each successive wreckage has been pathetically ineffectual. Therefore, even if all that the Tyagi Committee has done is to give some useful suggestions to combat income tax evasion, its labours would have been worth while.

*

Here again, I would reserve my final comment on the committee's recommendations till I have seen the full report. For, I cannot help feeling that the summary does not, except in a distant way, give the impression that the committee got into a real grip with the problems involved. Take, for instance, the question of "Benami transactions". People who know about the ramifications of tax evasion have told me that, next to the former princely states (which have mercifully disappeared), the Benami transactions are the most serious problem for the taxing authorities. And yet, the only recommendation on this subject I could find in the published summary is an extraordinarily unimportant one. This says, "In order to discourage tax evaders from entering into benami transactions for the purpose of achieving their object, statements made by any party to such transaction before the direct tax authorities with regard to the ownership of an asset should be made available to the other party concerned in the case, if he applied for a copy of it. The secrecy provisions of the Income-Tax Act should be modified to secure this."

*

I really cannot believe that this is all that the Tyagi Committee has to say on this subject. For, if it were, it would argue an extraordinarily simple minded approach to the problem of Benami. In practice, the problems that arise in the context of Benami transactions are far more difficult than the comparatively trivial one of scruples about telling X that Y has been claiming that the property standing in his (X's) name really belongs to Y or vice versa. Indeed, if any such luck came the taxing authority's way, the problem of Benami would be far simpler. For, in that case, the merest confrontation of the two versions would make things easier for it. In fact, however, the essence of the difficulty in Benami, from the point of view of taxation, is the collusive concoction of the same story by both parties. It is rarely, if ever, that Benami transactions are put through without the Benamidar knowing that he was being implicated in it and therefore being ready with his story, which circumstance makes all this solemn farce about the tax department letting him have copies of statements, if applied for, wholly unreal. In ninety nine out of a hundred cases, the Benamidar does not have to go to the taxing authorities to know that his name has been used.

*

Almost the only use that this document can serve the second party is that, in case the first party and the real owner pretends that it belongs to the second, the second party can make use of the first party's assertion before the income tax people to appropriate the property. But, here again, knowledgeable people assure me that the generality of cases would probably confirm the paradoxical and (in other contexts) not wholly disreputable fact of "honour among thieves". It is rarely that a Benamidar hoists his principal with his own petard.

*

In other words, tax even is a conspiracy—of at least two persons—and Benami is the most common of examples of a conspiracy of two. To the taxation department, it offers peculiar difficulties, both factual and legal. Factually, unless it stumbles on to the fact of real ownership, it cannot even know what is going on. Only the most extensive collation of data collected all over the country would lead to it and often the final clinching proof may still be lacking. For, the legal

difficulties in proving Benami are enormous. The general principles governing this law are unexceptionable from the point of view of equity and commonsense. In simple terms, it requires, quite sensibly, that, if a particular property ostensibly belongs to X, then it is the duty of the man alleging it to prove it. On this logic, if the taxing department says that if the property standing in the name of the tax payer's wife is really the tax payer's then it is its duty to prove this assertion. The interesting point is that this is not capable of being done negatively, by, for instance, proving that the wife could not possibly have had the funds to acquire it. This circumstance would not necessarily lead to the inference that the husband provided the funds. It is easy to see what a wonderful answer to a tax dodger's prayer this eminently reasonable provision of law can be.

*

The same protection is available for Benami businesses. All that one has to do is to get the service of a "name-lender" and put through your transactions and blandly disown any connection therewith. If the "stooge" will play the game, (which he will, for a consideration, for, it is money for jam as far as he is concerned) the principal saves a substantial amount of tax.

*

I am sure that the Tyagi Committee must have a number of things to say on all these aspects, and the full text of the report will make interesting reading. I am also looking forward to reading what it has to say about the use made of charitable trusts for purposes of tax avoidance (which is not the same thing, by the way, as tax evasion.) This is a comparatively recent development, and though probably there is nothing that any other country can teach us in the matter of tax avoidance, it is believed that, in the US, this is a device widely used. The summary contains a reference to certain amendments of law suggested by the Committee and it is worth while examining them when the full text becomes available.

*

I shall make two other comments for the present. One will be on the much publicised recommendation on the tightening up of the penal provisions of the Income Tax Act and the increasing use of such provisions. The committee has also suggested a whole series of concrete steps to ostracise socially known tax evaders and to deny official patronage. There can be little quarrel with such social and financial pressures (the latter, the really more irksome to the confirmed tax-dodger). But the suggestion that prosecution should be more extensively launched seems to me rather unrealistic. A very able Public Prosecutor once told me how difficult and time-consuming a process was a public prosecution. Obviously, once the criminal procedure code comes into the picture, every technical plea will be available to the defendant and we may quite conceivably have the spectacle of a known tax dodger getting away with it on a minor technical flaw in proceedings. Indeed, the experience of Constitutional litigation over income tax matters has not been such as to encourage the department to launch into fresh litigation, and criminal liigation at that. And when we realise that the courts are already smothered under *creating arrears*, fresh sources of litigation seem unwise.

*

But the real remedy for tax evasion is, as the Tyagi Committee seems to have realised, the gearing up of the administrative machinery, provision of new sources of data and new methods of processing them and, above all, a system of intensive investigation of the really big fish. I entirely endorse the suggestion that the department should not waste its time on investigating petty assessees. The probable loss in tax is not commensurate with the energy wasted; and, what is more important, the gain in goodwill from honest tax payers will be enormous. I would even suggest that, in such cases, the legal formalities must be reduced to the minimum and a periodical check-up of increases in wealth should be sufficient to see that no major evasion occurs. The bigger assessees should be put through the closest scrutiny and then the department will have a sporting chance of gathering a portion of the now evaded taxes.

Small Scale Industries

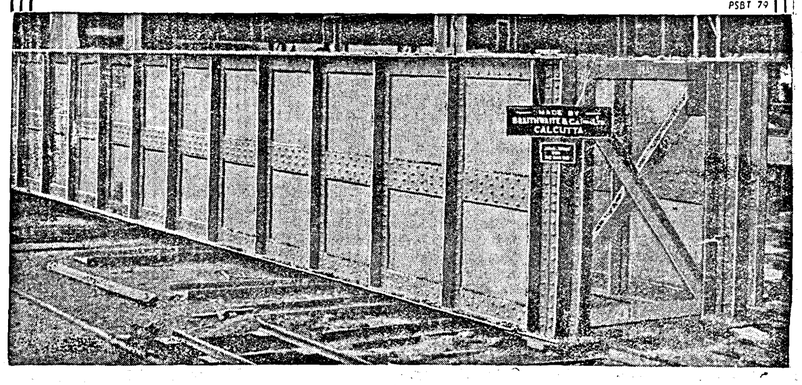
BOMBAY REVIEW

IT is being increasingly realised in our country that a rapid growth of small scale industries will go a long way toward solving some of our major problems. This is not to minimise the importance of large scale industries, the setting up which is going on apace. While it is undeniable that large scale industries have a vital role to play in strengthening our economy, it is idle to expect that, in a country which has a large and growing populaion, the large scale industries alone can absorb the major portion of its working force. But the problem of providing gainful employment to the people cannot brook delay as our other achievements will be meaningless so long as there is widespread unemployment. The solution to this problem is to be sought in small scale industries, the setting up of which is easy and involves only small capital outlay.

Small scale industries are given an important place in their economy by many an advanced country. In Japan, for instance, small scale industries play a vital role as they provide employment for more than half the working force and participate to a sizable extent in the country's total export. It will be evident, therefore, that small scale industries, if properly organised, can also sell their products overseas. Even now, India's small scale industries products are finding profitable outlets in foreign markets, and a recent delegation to some of the overseas countries has pointed out that, provided we can maintain good quality, there is immense scope for expanding overseas markets for our handlooms. The great advantage of our handicrafts in foreign markets is that there will be no competition because they are unique. There is also good overseas demand for some of our small scale industries' products like light engineering goods and other manufactured articles. Many consumer goods for which there is a large unsatisfied domestic demand can be conveniently produced by the small scale industries set up throughout the country to meet local requirements.

It is gratifying to note that the need for fostering the growth of small scale industries is now fully realised by the State Governments. Commendable progress has been made in the past one or two years toward utilising the allocations under small scale industries. It would appear that the tempo of expenditure in this regard has further quickened during the current year. There is now discernible in many States increased activities toward strengthening the organisational set-up in regard to the development of small scale industries. Inaugurating a conference of small scale industries in Bombay early this week, the Chief Minister, Mr Y. B. Chavan, gave a detailed account of the progress of small scale industries and the steps that the State Government were taking for fostering their growth. Referring to future plans, the Chief Minister said that the State Government were thinking of establishing a chain of rural industrial estates and workshops. By the end of the current Plan, there will be 15 industrial estates. The State Government would like to double or even treble this number by the end of the Third Plan. The aim of setting up a large number of industrial estates will be easy of achievement beause there will be no dearth of trained personnel. It is expected that, by the end of 1961, 20 out of the 43 districts in the State will have polytechnics. It is expected that the question of providing each district with a polytechnic for imparting technical education will be taken up before the Third Plan for the State is finalised. The progress of small scale industries in the State gives the confidence that the prospects for the growth of these industries are bright. In the first two years of the current plan, more than a thousand small scale factories have come into existence in the State.

As Mr Chavan pointed out, an important function of small scale industries is the creation of an industrial climate in relatively under developed areas. Regional disparities in industrial development have come about because industries have a natural tendency to crowd around regions offering facilities like easy access to raw material, availability of power supply, transport, etc. Small scale industries will help remove these disparities as they can grow and function with not too great a dependence on the various facilities without which the establishment of large scale industries is a near-impossibility. But small scale industries, too, have certain basic requirements. Although it will be much easier for the people in the underdeveloped regions to set up small industrial units than to establish large scale industrial enterprises, not much progress will be possible if there is no helping hand to initiate the rehabilitation process. Certain regions have been left behind in the race of industrialisation by a process of elimination based on considerations of availability of requisites for the growth of industries. It is, therefore, incumbent on Government to pay special attention to the needs of the backward regions. This will be best achieved by making substantially increased allotment for these regions in the Third Five Year Plan.



The fact that a large number of small scale industries are independent of foreign imports confers on this sector of national activity a special advantage in these days of acute shortage of foreign exchange. The machinery, equipment and tools needed by many a small scale industry can be locally fabricated and manufactured. But a few of these industries do depend on foreign exchange, and it is therefore gratifying to note that the Bombay Government are making efforts to give essentiality certificates in a liberal measure.

An indication of the importance attached by Authority to small scale industries is the proposed trebling of the allocation for this sector under the Third Five Year Plan. There is every reason to believe, provided all State Governments succeed in stream-lining their respective departments concerned with the development of small scale industries, that the unemployment problem will be reduced to manageable proportions by the end of the Third Plan.

GATEWAY NOTES

New Policy

THE new wage agreement reached at Nagpur between the Manganese mineowners and the Rashtriya Manganese Khandan Prantik Kamgar Sangh, affiliated to the INTUC, to foster better relations between the employees and employers will be widely acclaimed. In a country like India, where conflicts between the employers and employees have been a common feature, any attempt to promote better understanding between the two sections would not go unnoticed. According to the press note issued by the Mineral Industrial Association, representing the principal mineowners, the representatives of labour have evinced a keen desire to settle their grievances amicably, keeping in view the various complicated problems facing the industry to-day. It should be recalled that their main demand was, inter alia, the payment of bonus. But the representatives of labour seem to have been satisfied that the existing position of the industry does not allow the mineowners to pay bonus. Besides withdrawing their demand for bonus, they have consented to discuss the question of bonus with the mineowners from time to time, taking into consideration the improvements made by the industry in future. This marks a welcome departure from the agitational method which has hitherto been the main weapon used by the working class in seeking their demands. The mineowners also rose to the occasion and expressed their readiness to follow a peaceful settlement of the problem and readily consented to creating a joint consulting body consisting of the representative of the labourers and mineowners. A salient feature of the new agreement is that all future disputes in respect of matters connected with labour legislation will be referred to this joint committee. It appears that the workers' union has agreed to refer other disputes also to this select committee before approaching the Government or any other conciliation board, to find out an agreement acceptable to both the parties.

The new agreement, which will be in force from this month onwards, has retained all the clauses dealing with the wage rates and sick leave that were embodied in the previous agreement. It would be too premature, at this juncture, to predict the working of the new agreement and its repercussions in the industry in general. But it would not be inappropriate to anticipate that the new venture should create an atmosphere which could help promote better understanding between employers and employees, which would naturally pave the way for the betterment of the two sections and the general development of the country.

*

Increased Quota Allocations

The decision of the Government of India to issue quota allocation in respect of Indian cotton to mills within a few days to the extent of 50 per cent of last year's consumption will be a welcome relief to the textile industry. It may be recalled that production in the industry has been suffering recently due to inadequate supply of cotton. Prices of cotton cloth in the wholesale and retail markets have registered a sharp rise by the end of last week and it was alleged that the recent increase in prices was the immediate result of the shortage of supply of raw cotton. The industrialists can expect adequate supply of raw materials in future and there is every possibility of increasing the quota "as and when cotton arrives in the market and the size of the crop is more definitely known."

Revealing these facts in a meeting of the Cotton Textile Advisory Committee, Mr D. S. Joshi, Textile Commissioner, stated that the new procedure would necessitate the introduction of quality surveys and where obvious violations of orders are detected, the powers of requisitioning would have to be employed. He struck an optimistic note, that with the assurance of full supplies of raw materials and with the strict enforcement of controlling measures, "both industry and trade will settle down to the primary purposes of augmenting production and undertaking the further work of distribution in confidence of ample supplies of cloth."

Mr Joshi admitted that there was a certain amount of scramble for the available quantities of cotton which resulted in the increase in price. However, it is heartening to understand that, in future, the available supplies of cotton would be distributed to the various mills on a quota basis and that, in allotting quotas, any special requirements of particular areas would be given due consideration.

The industry has shown great improvement and it is estimated that exports during the year will be about 750 million yards as against 600 million yards in the previous year. And it is up to the industrialists to adjust things in such a way that the public is assured that there will be no shortage of cloth and that all their needs will be met fully.

These decision were taken by the Government on the recommendations of the Cotton Advisory Board which met in Bombay to review the serious situation which has been precipitated by the sharp rise in prices. The Board also recommended an early release of import quota for about 300,000 bales of cotton stapling.

GATEWAY MARKETS

Futures Trading in Groundnut Oil

FUTURES trading in Groundnut Oil will commence on the Bombay Oilseeds and Oil Exchange on December 24. The basis of the new oil contract will be raw groundnut oil and the trading unit will be 10 tons. The delivery months will be December/January; April/May and August/September. Business will generally be permitted against these deliveries in the months of July, November and March respectively. The delivery against the contract will be in Bombay and the goods will be delivered by godown delivery.

The bye-laws of the Exchange, while specifying the tenderable variety, provide that the goods for delivery will be "oil obtained by a process of expressing groundnut only. It will be free from admixture with any other oil or substance and free from moisture, suspended matter or sediment". Six other centres provide facilities for groundnut oil trading in Bhavnagar, Rajkot, Adoni, Delhi, Madras and Hyderabad.

Meanwhile, the upward trend in groundnut prices has gathered fresh momentum due to speculative support, inspired by the fears that the new crop in Saurashtra may prove smaller than earlier estimated. Even the Government decision to advise the scheduled banks to restrict their advances against groundnut and other oilseeds has not had a sobering effect. This is mainly due to the fact that the dealers are not inclined to believe that the measures will succeed in pushing down the prices in view of the sustained demand for oil from exporters as well as vanaspati manufacturers. Groundnut Bold quality is quoted at Rs 38.50 and Groundnut oil ready at Rs 20.50.

With the steady rise in groundnut prices, the Castorseed section has been presenting a firm front The firmness in prices is also aided by claims of large business in castor oil with the Communist countries, the USA and the UK. Castor ready is quoted at Rs 33 and Castor Oil, commercial quality, at Rs 18.44.

Trading in Linseed, however, reveals a lack of enthusiasm, although prices have scored a modest improvement in sympathy with other oilseeds. Apprehensions in respect of the US stockpile release of linseed oil and the absence of overseas demand have imparted an easy tone to the market. Linseed ready is quoted at Rs 34 and Linseed Oil at Rs 16.50.

The steep rise in Cottonseed prices has compelled the Forward Markets Commission to impose a third marginal line on open long positions of cottonseed futures contracts on an all-India basis. How far the heavy margins will improve the situation and curb the rising trend in prices remains to be seen. In the past two years, the shortage of cotton, the rise in oil prices and the excellent export demand for cakes have always come to the rescue of the bull operators in cottonseed.

*

Gold & Silver

Prices on the Bombay Bullion Exchange have continued to rule very firm, thanks to the increased buying in the spot section and the speculative support from Calcutta and local bulls.

Silver commenced the week on a firm note on support attracted by strong Calcutta advices. Thereafter, the bull speculators and the professionals were reported buyers, presumably on account of the expected revival of ready demand in the ensuing busy season. Arrivals amounted to 12 bars as against an offtake of 10 bars. Ready rates moved between Rs 209.62 and Rs 210.06, to finish at the last-quoted level.

Although prices in the Gold section suffered a setback early in the week, the market staged a marked recovery toward the close on hopes of revival of ready demand. Arrivals amounted to 3,000 tolas as against an offtake of 2,000 tolas. Ready rates moved between Rs 125.37 and Rs 125.37 and Rs 125.62, to finish at Rs 125.56. Sovereign remained steady at Rs 81.

*

Art Silk Yarn

The Textile Commissioner has decided that the allocation of indigenous art silk yarn to the art silk powerloom weaving units for January/March 1960 period can be made on the basis of an average number of looms worked during July/September 1959 at a rate of 250 lbs per working loom. The allocation will be made only to such units who have been submitting their monthly production returns regularly in the prescribed form to the Textile Commissioner.

*

Mercury

In the Bombay market, Mercury prices have been considerably firm during the past few days, being quoted at Rs 2,950 per flask of 75 lbs as against Rs 2,825 quoted early in the month. The firmness is attributed to the scarcity of stocks with the trade and the tendency among stockists to hold on to their stocks.

It is not surprising that sellers are reserved, because the October-March import policy for mercury is not yet announced. Even if it is announced immediately, goods against new licences cannot be expected before February/March. The supply position is, therefore, expected to continue to be tight for some more time. Based on the prevailing London price of mercury at £78, the current price in Bombay is about 2½ times the landed cost.

WORLD OF COTTON

Distribution on Quota Basis

IN recent weeks, the prices of Cotton have been ruling very high. This appears to be due partly to expectations of a low Indian crop and partly to the fear that the total quantity of cotton, which will be allowed to be imported, may not meet the requirements of the industry. The position is closely under review and the size of the Indian crop will be fully known only after some time.

The Cotton Advisory Board, which met in Bombay at the end of last week, discussed the overall supply and distribution of cotton vis-a-vis the present high level of prices. The Board decided to recommend to the Government to allow immediately an import of three lakh bales of cotton stapling one inch and below. Half of this quantity should be allowed to be imported by the mills and the trade on a "first-come-first-served" basis. The other half is to be imported under the retention quota, which is to be increased from 30 to 100 per cent for the purpose.

On the above basis, the total quantity of cotton to be imported during the season will amount to 12 lakh bales. The Board has been assured that the Government will ensure adequate supplies of cotton to the mills and see that they do not suffer for want of cotton. It is also believed to have recommended that the mills be allowed a quota of 75 per cent of their consumption in the last season and that not more than 50 per cent of this should be allowed to be covered by them. In other words, a sort of voluntary rationing would appear to have been agreed upon. The Board is understood to have agreed upon extending the delivery contract by another two months.

In this connection, the Textile Commissioner has stated that the quota to the mills will be issued to the extent of 50 per cent of last year's consumption and will be "progressively increased" as and when cotton arrives in the market and the size of the crop is more definitely known. As a necessary corollary to these steps, a quality survey will be introduced. He adds that, because of the small Indian crop this year, imports of foreign cotton will "necessarily" have to be very much larger than last year.

×

FUTURES MARKET:

Within a narrow range of irregular movements, the cotton futures presented a steady front. Opening with small gains, the Jharilla March contract improved further on support from Akola operators and bear-covering. It was even able to absorb selling by Gujerat operators. Activity was, however, at a low ebb toward the close, as mills and spot dealers were anxious to await further details with regard to the Government measures now taken and their implications. Jharilla March moved between Rs 754.50 and Rs 756.75, to finish at the latter level.

×

SPOT MARKET:

The Spot market was dull and inactive.

In the foreign section, good turnover took place in Californian cotton. Small transactions were also done in AR/Uganda. Interest in Egyptian Karnak and Menufi was, however, limited on account of high prices. Besides, mills were inclined to await full results of the first Sudan new crop situation. There were some enquiries for Syrian growths also. There are indications that enquiries for foreign cottons will broaden after the Government's declaration of the import procedure and quota allocations to mills.

×

CLOTH AND PIECEGOODS:

Cloth stocks with the mills, at the end of last month, have decreased further by 27,000 bales to 3.08 lakh bales—a new low level. These stocks are the lowest for any month during the past few months which, in turn, indicate a very tight supply position. Last year, at the end of November, stocks amounted to 579,800 bales out of which 251,500 bales consisted of sold but unlifted and 328,300 bales of unsold. This year, at the end of November, the stocks of 3.08 lakh bales consisted of 1.61 lakh bales of sold but not lifted and 1.47 lakh bales of unsold. It is, therefore, difficult to realise as to how the situation will develop next month if the usual seasonal demand emanates.

But, fears are expressed by the piecegoods trade about the likelihood of a cloth shortage in the next few months when the seasonal demand will be in full swing. To meeet this shortage, the trade has suggested some measures which, it is hoped, will receive the immediate attention of the authorities. It may be noted that cloth stocks, at the end of November, are the lowest on record. Similarly, the stocks of yarn are also the lowest on record.

It is rather unfortunate that, of all the industries, the cotton textile industry is the only one which has failed to pick up production. During the month of November, the output of cotton cloth is provisionally placed at 396 million yards as against 410 million yards in October 1959 and 377 million yards in November last year. Thus, the total production of mill-made cloth, for the eleven months, has come to 4,496 million yards against 4,491 million yards for the corresponding period of last year.

Cotton yarn production has totalled 1,567 million pounds for the eleven months as against 1,531 million pounds for the same period in 1958. Unless the authorities realise the gravity of the situation and come to the rescue by reopening of some of the closed mills as early as possible, the position will provide a big headache.

Of late, the short supply of new cotton and the high ruling prices for Indian cotton have caused some thinking about the probable level of production in the immediate future and the level of profits, too. The sharp rise in the price of imported cotton will also cause a rise in the cost of production. It is, therefore, wondered as to what extent the measures to curb speculation will actually reduce the cost of cotton to the mills in the prevailing conditions of short supply of Indian cotton.

Having regard to the steady improvement noted in the internal offtake as well as exports of cloth and yarn, it is felt that the present rate of production in the country should be improved upon. Otherwise, shortage of cloth and yarn is expected to result. The outlook for the textile industry being what it is, the present position of rising internal offtake has to be viewed in conjunction with the present scarcity in the supply of cotton. Apart from the rise in the cost of production resulting from the higher price of cotton, inadequacy in the supply position will have its impact on production. It is felt that the textile industry should, therefore, be given all facilities for augmenting production.

DELHI REVIEW

Production of Ferro Alloys

THE progress so far made in the indigenous production of ferro alloys and the plans for their future manufacture have been discussed at a recent meeting of the Informal Consultative Committee of Parliament for the Ministry of Commerce and Industry, it is learnt. The Tool & Alloy Steel Industry, it is stated, would be completely indigenous only when all the seven ferro-alloys, namely, ferro-manganese, ferro-silicon, ferro-chrome, ferro-titanium, ferro-tungsten, ferro-molybdenum and ferro-vanadium, are manufactured within the country. At present, there is indigenous manufacture of only ferro-manganese, ferro-silicon and feror-chrome on an organised basis. A review of the progress of these three industries is given in this despatch.

At the time of the commencement of the Second Plan, the Tata Iron & Steel Company were manufacturing ferro-manganese intermittently. The capacity was estimated at about 5,000 tons per month for about three months in a year. The Indian Iron & Steel Company also produced very small quantities. Prior to March 1956, six firms had been granted licences for manufacture of ferro-manganese up to a total capacity of 153,000 tons per annum. These resulted only in an installed capacity of 79,000 tons, though one more firm is expected to go into production shortly.

The installed capacity and production of ferro-manganese in the country in the last three years compared with the targets in the Plan were as follows:—

Year	Installed Capacity	Production 1958-59	Exports. Quantity (tons)	Value (Rs. lakhs)	Rate per ton (Rs.)
1956-57 ...	1,800(a)	1,460(a)	...	...	...
1957-58 ...	8,800(b)	7,323(b)	3,000(b)	22.71	757
1958-59 ...	79,000(c)	44,048(c)	10,553(c)	81.78	775

(a) For the Calendar Year 1956. This does not include production in the blast furnace.
(b) For the Calendar Year 1957. This does not include production in the blast furnace.
(c) For the Calendar Year 1958.

The target capacity to be attained by 1960-61 has been fixed at 171,800 tons and the target of production at 160,000 tons. Out of this, 60,000 tons is the estimated internal consumption and the balance is to be exported. So far, licences have been granted under the Industries (Development and Regulation) Act for a capacity of 221,300 tons.

The exports are now being made predominantly to USA (85 per cent) and the balance to the UK, Canada, Greece, and Belgium. There is scope for development of export trade in ferro-manganese. The USA is now importing about 15 per cent of its requirements (about 120,000 tons per annum) from abroad. At present, the f.o.b. price of Indian ferro-manganese is only about Rs 775 as compared to the international price of Rs 1,000 to Rs 1,150 per ton. It is not known whether this is, to any extent, due to inferior quality. It is considered desirable to make attempts to utilise low grade manganese ores occurring near the ferro-manganese plants after due processing, as some of the plants are not favourably situated near the high grade ores.

It is reported that there are accumulated stocks of ferro-manganese of about 32,000 tons. The reason for the accumulation of stocks is not known. It is also understood from the State Trading Corporation that the export markets have yet to be established and the demand is now weak. It is, therefore, considered desirable to watch the progress of this industry before new schemes are started.

The total estimating requirements by 1965-66, including exports of about 120,000 tons per annum, have been fixed at 200,000 tons. To achieve this production, it is considered that an installed capacity of about 225,000 tons per annum would be adequate. If all the schemes for which licences have been issued are implemented, the installed capacity of this order would be achieved. For achieving the production target of about 200,000 tons, the industry will require 400,000 tons of high grade ore, 110,000 tons of coke and 110,000 tons of limestone. Plant and machinery worth about Rs 2 crores would have to be imported and the overall investment has been estimated at Rs 2.5 crores.

The function of ferro-silicon is mainly as a deoxidiser and vehicle for the supply of alloying element in the production of electrical grade silicon steels. This product has made considerable progress with the protective duties imposed between 1947 and 1953. The pioneer in the manufacture was the Mysore Iron & Steel Works. The production has doubled during the period 1950-1959 from 2,841 tons to an estimated production of 6,000 tons in 1959. The internal requirements were estimated at 4,500 tons per annum by the end of the First Five Year Plan. Consequent on the expansion of the production of steel during the period of the Second Five Year Plan and demands from the Foudry Industry and from re-rollers industry, it was estimated that the demand would increase to about 20,000 tons by 1960-61. The following schemes were approved for increasing the production of ferro-silicon:—(1) Expansion of manufacture at the Mysore Iron & Steel Works from 5,000 tons to 20,000 tons per annum and (2) Manufacture of 5,000 tons under the composite scheme of Serajudin & Company for ferro-chrome and ferro-silicon in Orissa. These schemes would make an additional capacity of 25,000 tons of ferro-silicon available by the commencement of the Third Five Year Plan.

It is proposed that a capacity of 40,000 tons of ferro-silicon should be planned to meet the requirements of the last year of the Third Five Year Plan. This could be achieved by the installation of one furnace for production of 50 tons per day. The investment is estimated at Rs 2 crores including foreign exchange of Rs 1.2 crores. The question of the most suitable location for expansion of the industry, i.e., whether it should be by expansion of the existing capacity in the Mysore Iron & Steel Works or in the main steel area, i.e., Bengal-Bihar, Orissa-Madhya Pradesh, is under consideration. The possibility of exports is also being explored.

At present, ferro-chrome is not made in the country on a commercial scale, although it is reported to be manufactured in small quantities by the Mysore Iron & Steel Works, Bhadravati. Messrs Serajuddin & Company have been granted a licence for the manufacture of 8,000 tons of ferro-chrome per annum, but no progress has been made in the implementation of the scheme. The Kalinga Industries Limited were also granted an industrial licence on 15-1-1955 for the manufacture of 7,500 tons of ferro-chrome besides ferro-manganese, etc. Production has not yet commenced.

The other ferro-alloys of importance are ferro-titanium, ferro-tungsten and ferro-vanadium. The quantum of offtake for each of these would be linked with the production targets for the manufacture of different categories of alloy and tool steels. Unless arrangements for the manufacture of those particular ferro-alloys, the demand for which is likely to be sizable for the alloy and tool steel plant and for which the necessary raw materials are available in the country, are planned, the alloy and tool steel industry will not be truly indigenous. Arrangements for securing these ancillary developments could be made either under the alloy and tool steel plant visualised by the Government or under plants for ferro-alloys manufacture formulated on a composite basis in the private sector.

NORTH INDIAN NOTES

Govt's Tax Policy

Addressing the Rajasthan Chamber of Commerce at Jaipur, Mr Morarji Desai, Union Finance Minister, appealed to the business community to create a climate of hope and faith and cooperation. It was his view that the apprehensions entertained by the business community about the adverse effects of Government tax policy on capital formation were misplaced in the context of the state of the money and share markets. The fact that the share market had continued to remain buoyant throughout in spite of the tax measures instituted by the Government constituted clear evidence of the harmlessness of the Government's tax policy. If every new share that was floated in the market was sold without difficulty, it could not be maintained that the Government's tax policy was hindering the formation of capital.

It was also pointed out by Mr Desai in defence of the Government's tax policy that the Government had, in framing their policy, to keep in mind the need to raise the living conditions of the impoverished millions in the country which could be done only on the basis of large-scale expenditure for development projects. Moreover, the Government were under obligation to provide incentives to workers also.

Earlier, welcoming the Minister, Mr S. P. Jain pointed but that the excise duty on sugar, oil, cotton and cement industries had obstructed their modernisation. Mr Desai was not impressed with this reasoning and observed that the ills of the cotton industry were not the result of the excise duty and there were concerns in this sector functioning efficiently. Only concerns whose management was weak and which did not utilise Goverment loans to modernize their machinery suffered. In regard to the cement industry, it was the view of Mr Desai that the industry has been regaining its momentum in recent months. Mr Desai appealed to the industry to see that prices were not raised with even a small fall in profits. The best guarantee for industrial growth was people's purchasing power.

Mr Desai also referred to the importance of developing small industries, since they constituted the best means for increasing employment opportunities in the country. Mr Jain, on his part, emphasised the role of constructional activity for creating more employment opportunities. For alround progress in the economic sphere what was needed was cooperation and hard work.

New Industries for UP.

Reports emanating from official sources indicate that the Uttar Pradesh Government have formulated a proposal for establishing 26 industrial units for paper ind pulp in the State during the Third Plan period. The total capital investment estimated to be required for implementing the proposal is Rs 64.87 crores.

This capital would be provided by the public and private sectors together. In the public sector, it is proposed to set up plants for the production of 150 tons per day of newsprint and 50 tons of rayon grade pulp. The estimated cost of this project is about Rs 10.60 crores. The other 24 units are likely to be established in the private sector.

The project for the production of newsprint and rayon grade pulp would call for 27,000 tons of fir and 40,500 tons of spruce. This is expected to be available to the extent of 68,000 tons annually from the Tehri forest division.

Another scheme approved by the Government relates to the setting up of an industrial unit for manufacturing high grade pulp and paper from "sunn" fibre at Varanasi at an estimated cost of Rs 303 crores. The "sunn" fibre is considered to be excellent raw material for manufacturing high grade pulp and paper. Most of the fibre is at present exported to foreign countries where it is used for paper making.

With its extensive forest wealth, UP offers excellent facilities for paper manufacture and, therefore, schemes for exploiting the resources for the purpose of paper manufacture were long overdue. The current shortage of paper and the potential rise in demand consequent on expansion of education also point to the need for setting up more paper mills.

UP is a State which is not industrially developed to the same extent as Bombay or West Bengal or even Madras. Sugar is the premier industry at present and its position is being threatened by developments in other States. Similarly, the cotton textile industrp in the State has been experiencing unhappy conditions because of extreme specialisation in the coarse varieties. In respect of heavy industries development also, the State has lagged behind and only recently was a scheme for setting up an aluminium plant finalised.

In the circumstances it is but proper that UP should plan for more industries during the Third Plan. In the Second Plan emphasis was laid on agricultural production. Though agricultural and particular foodgrain production should continue to have emphasis even in the Third Plan, the industrial backwardness of the State would warrant more attention than had been bestowed so far to the development of industries.

NORTH INDIAN MARKETS

Sugar Outlook

SUGAR markets have been ruling generally firm during the past many weeks, mainly due to the tight supply position. Naturally, the distress of the consumers has increased and it looks as if available supplies are being withheld from the market. It is, therefore, necessary that despatches are expedited.

Considering that the crushing season has now started in right earnest, there should be little difficulty in rushing supplies to the consuming centres, especially when production during the current season is expected to improve as a result of the incentives which have been given for increasing output.

The sugar industry and the trade have suggested to the Government of India to withdraw control on the commodity. The latest position in the industry has encouraged thoughts that the Government may be inclined to relax the control, to some extent, provided it is assured that the domestic prices will not rise beyond a certain limit. The Sugar Development Council is scheduled to meet in Delhi on the 31st December, and the outcome of the meeting is awaited.

Although it is too early to assess the overall performance in the new season, based on the record of the first few weeks, some circles think that, provided the industry is allowed to function without much outside interference, the production this season may show an impressive rise.

According to the Indian Sugar Mills Association, sugar production during November 1959 (the last month of the 1959-60 season) was 1.80 lakh tons as against 90,000 tons in the corresponding month of last year. This excludes 32,000 tons produced by some factories for the 1959-60 season prior to November as against 31,000 tons produced last season by this date. The offtake of sugar from factories, during November, was 1.30 lakh tons against 1.65 lakh tons. The closing stock with the factories as on the 30th November, was 2.22 lakh tons as against 2.86 lakh tons on the same date last season.

Meanwhile, quiet conditions have been prevailing in the Muzaffarnagar market where the rate has fallen by Rs 2.75 per bag due to arrivals from other places. This fall in price is attributed to reports of the likelihood of early decontrol of sugar.

*

Gur

In the Hapur market, Gur prices have sagged heavily by about Re 1 per maund following the stoppage of loading facilities indefinitely to all consuming areas of Gujerat, Saurashtra, Madhya Pradesh and Rajasthan. Daily arrivals have run down to about 5,000 maunds, as cultivators are reported to be busy irrigating their "rabi" sowings. Total arrivals, since the beginning of the current season, are estimated at 2.75 lakh maunds against 2.85 maunds in the corresponding period of last year.

In the Muzaffarnagar market, demand is slack due to booking restrictions. Pansera quality is, however, in enquiry from Rajasthan, Saurashtra and the Punjab; but prices have fallen by Re 1 per maund.

*

Foodgrains

Prices in the Hapur Foodgrains market have shown a mixed trend. While Wheat prices have improved fractionally due to tight supply position, Gram and other coarse grains have remained unchanged. Peas and Arhar prices have drifted to lower levels as demand is dormant.

Meanwhile, the Government of India have taken certain steps to stabilise the price of Rice in West Bengal at a suitable level and also enable the cultivators of Orissa to get a higher price for their produce. They have decided to continue the distribution of the commodity from their stocks in Calcutta and also to maintain a reserve stock in Orissa, which will be distributed in those areas where prices may rise. The reserve will be 75,000 tons which will be built in Orissa by purchases locally and for which a levy scheme will be introduced by the State Government.

*

Shellac

The price of Shellac has been ruling very steady in the Calcutta market, the rate for Pure TN quality being quoted around Rs 76 per maund. This steadiness is attributed to good foreign enquiry and the hope of steady buying from the UK where stocks are reported to have declined to 8,083 packages in November 1959 from 22,922 packages in the corresponding month of last year. The market's steadiness is also attributed to the feeling that there will be no difficulty in holding the prices at the current levels during the next few months.

Although the Katki crop this year is expected to be above the average, the increased demand appears to be well in balance with the supplies.

Total Shipments, during the curren month till the 16th, were, however, substantially lower at 8,444 packages against 16,551 packages in the corresponding period of last month. These shipments comprise 3,685 packages of shellac (7,323); 3,802 packages of seedlac (7,488); 296 packages of buttonlac (425) and 661 packages of other varieties (315). Figures shown within brackets were for the corresponding period of last month.

MADRAS REVIEW

Writers' Conference

THE All-India writers' conference which met at Madras last week concerned itself with the problems facing writers throughout the world and was addressed by Sir C. P. Ramaswami Iyer and Mr Tarasankar Banerji of Bengal. The keynote of the speeches delivered at the conference was the freedom of the writer to practice his profession unfettered by pressure of any kind that might be brought to bear on him. As Mr Banerji put it, "the spirit of the writer is the song of freedom." And throughout history, the writer's has been a voice raised against oppression and tyranny of all kinds. In our own country, the freedom movement inspired a renaissance in writing which was best represented by Rabindranath Tagore.

A writer can find self-fulfilment only in a condition where, as Sir C. P. pointed out, he is able to pursue the path dictated by his reason, by his emotions or his craftsmanship without restriction or fear or political or economic pressure or the organised opposition of vested interests. It is a moot question whether this reign of unfettered freedom is vouchsafed to the writer in the present day society. Both the capitalist and communist societies demand of the writer a conformism to their respective creeds and ideologies which cuts at the very freedom of conscience. A democratic society would seem to offer an atmosphere which is better suited to the realisation and expression of personality. But, even here, there is the danger of the writer being subjected to the tyranny of a clamant majority. In such a situation, it becomes the duty and responsibility of the writer to claim and seek to establish cultural freedom, which, as Sir C. P. Ramaswami Iyer pointed out, includes not only freedom from State regulation and patronage and freedom from fear of persecution, but also freedom from the danger arising from mob prepossessions and the effect of crowd psychology as manifested in the cinema, radio, television and in sensational writings.

The radio and the cinema have, of course, provided the facility of mass communication and have made it possible to reach larger audiences. At the same time, they have opened up possibilities of mass commercialism with its byproducts of trivial sensationalism. To resist this trend toward cheap entertainment, Sir C. P. suggested to the writers assembled at the conference that they should take up the task of diffusing throughout the land an aquaintance with and appreciation of the literature of knowledge and of the emotions extant throughout the world. Knowledge of both western literature and the Indian languages should be broadcast and popularised.

Mr Bhaktavatsalam, Home Minister of Madras, who also spoke on the occasion, confined himself to the ideals which should inspire the writer. The writer, according to him, should keep the flame of hope and faith burning in the mind of man. "The writer writes in a thousand different scripts; but, he speaks the universal language of love, sympathy and understanding." In this connection, he referred to ancient Tamil literature and observed that they were the passionate outpourings of a dedicated being in its reverential quest to reach the feet of the Lord. They were aimed at personal enlightenment and salvation. In the same way, it should be the duty of the writer now, Mr Bhaktavatsalam said to join the crusade against darkness and intolerance.

Referring to recent contributions made by India to world literature, Sir C. P. regretted that there were not many inspirational poets after Tagore and Sri Aurobindo Ghosh nor serious drama of the classical type. He was also of the view that the novels and romances written in India in recent times were below world standard. That the writers have maintained the old tradition of turning away from the deification of wealth for its own sake, and have also eschewed the modern forms of chauvinism and race hatred, is, however, comforting. The success attained in the realm of short story and social problem play was another redeeming feature.

Sir C. P. Ramaswami Iyer also referred to the question often posed whether Indian languages were adequate for the expression of contemporaneous life and tendencies for the creation of scientific and technical literature, and answered that the situation could be dealt with if the authors avoided pedantry and high born treatment and endeavour to be simple and interesting in their narrative. The existence of a common treasure-house of basic ideology and philosophical terminology for all the Indian languages was an advantage for the evolution of a common terminology for science and technology.

Mr Tarasankar Banerji condemned the slavish mentality of measuring our achievements and shortcomings by Western yardsticks. He appealed to the writers to shed this mentality and set up their own standards which were as good as and even better than western standards. In this connection, he commended the intellectual balance being maintained by the South, which refused to be hustled into accepting any dogma or doctrine which has not proved itself as acceptable. Contact with the South, he said, would temper impulsiveness and promote cordial understanding which could be a bulwark against physical and ideological onslaught from any quarter.

Mr Banerji also touched on the need for a permanent association of writers to deal with the numerous problems with which they are faced. Though there is the Sahitya Akademi, which provides a forum for the writers to discuss their common problems, it was explained by Mr Banerji that, in its working, the Akademi had not proved itself adequate to meet the needs and aspirations of the literary community. Therefore, the idea of a permanent association for the writers, though given up on earlier occasion when it was raised, is, from the hint Mr Banerji gave, likely to be taken up again. In this connection, Mr Banerji pointed out that the idea has received extensive support from members in the literary field.

ASP/LIC/AS-12A

1959
BONUS YEAR

Purchase a with-profits policy now

Second Valuation Soon

The second valuation of the Life Insurance Corporation will be made as at 31st December 1959. All eligible with-profits policies in force on the valuation date will be entitled to participate in profits disclosed as a result of that valuation.

The first valuation of the Corporation made as at 31st December 1957 disclosed a surplus large enough to support bonuses at the following rates on with-profits policies issued by the Corporation :-

Endowment Assurances: Rs. 14 per thousand sum assured per annum

Whole Life Assurances: Rs. 17½ per thousand sum assured per annum

Important: Policies which are converted into reduced paid-up policies or lapsed before 31st December 1959 will not qualify for bonus.

Preserve your policy, keep it up-to-date by regular payment of premiums and make sure that your policy qualifies for bonus to be declared as a result of the second valuation.

Remember 1959 is the Bonus Year

LIFE INSURANCE
—the day you insure you are secure

SOUTH INDIAN NOTES

A Complicated Matter

MADRAS REVIEW

WILL the deliberate abstention of a section of legislators from both the houses constitute a breach of privilege of the House?

This is indeed an interesting question that is exercising the mind of the Madras State Assembly Speaker, Dr U. Krishna Rao.

The communal political party, the Dravida Munnetra Kazhagam, ever since it took the oath of office in either of the Houses in Madras, purposely refused to attend the joint sittings of the legislature addressed by the Governor. The plea is that the governorship is a north Indian institution, held by a north Indian and appointed by a north Indian body.

A Congress Party Member of the Assembly brought this as a privilege motion on December 11. Speaker Krishna Rao felt that this is a peculiar position and wanted to hear the parties leaders views on the matter before he is to give his ruling. Here are briefly the views of the various political parties in the Assembly over the matter.

Mr K. Kalyanasundaram, Communist Party leader, on a point of order, stated that, for three times successively, there were deliberate abstentions by the DMK. In 1957, the DMK was joined by the Praja Socialist and Socialist blocs in the Assembly in the boycott of the Governor's address. Since this was not a recent occurrence, no privilege motion could be sustained. But the Speaker held that this was a matter of recent origin and so Mr Kalyanasundaram's point of order was ruled out.

House Leader C. Subramaniam observed that this "complicated matter without precedence" was bound by the Rules of the Constitution and ultimately by the interpretation of the Speaker himself. It was now a concern on the conduct of the DMK members with its consequences. The motive behind this would have to be adjudged. An analysis of the political policy behind this would have to be carefully made.

Mr Subramaniam argued on the following lines. The DMK had its own political motive—viz., separation of the Tamil speaking region from the North and boycott of all things in which what they believed the North Indian functioned as the State head. The DMK's faith was not based on political unity of the country. The DMK believed that the Indian Constitution was an instrument with which the North dominated the South. Mr Subramaniam held that the DMK wanted to break the constitution which, he said, was used as an instrument according to the DMK faith to dominate the South. (This was objected to by a DMK member, Mr K. Anbazhagan, who asked how, having taken the oath of allegiance to the Constitution, the DMK could think of breaking that Constitution?

Mr Subramaniam, however, persisted in his argument that the DMK wanted to break the Constitution with their demand of separate Dravidisthan, an independent State. A sense of hostility in the people was created by the DMK's ridiculing the Constitution day in and day out. Though they did not advocate adoption of violence, Mr Subramaniam was sure that the DMK was determined to adopt methods constitutionally to break the Constitution. Boycott of such joint sessions addressed by the Governor was a means toward the breaking up of the constitution.

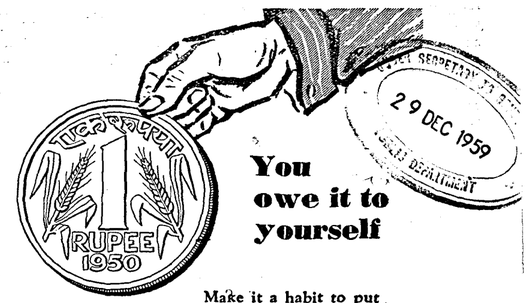
Mr Subramaniam, relying upon several Articles of the Indian Constitution, particularly Article 168, stated that the Governor was not separate from the legislature but formed an integral part of it. Under Article 174, the Governor had power to issue summons to members for attending sessions. Governor's address to the legislature was part of the legislature session, and it was not like any other dignitary, such as the USA President Eisenhower, addressing a joint session of Parliament.

Such contempt of the head of the State like the Governor need not have happened within the house. Contempt for the part was contempt for the whole. Therefore, any disrespect to the Governor constituted disrespect to the legislature, too. Personal regard to the Governor, as vouchsafed by the DMK, did not matter and it provided no extenuating circumstance for the boycott. It is known very clearly, Mr Subramaniam declared, that the DMK's boycott involved deep and deliberate political motives of bringing into contempt the post of the Governor and therefore a clear breach of privilege had been done to the legislature.

The opposition members' plea were as follows:—

V. K. Ramaswamy Mudaliar's point was that no member could be compelled to attend a joint session. Such abstension was nothing new as the Congress itself had set an example during the British rule.

Mr C. N. Annadurai, leader of the DMK, held that it was nothing wrong to seek amendments to the Constitution. The party had not an iota of disrespect to the Governor as the legal head. But by their boycott of his address, the party wanted to show disapproval of the institution of Governorship that was not an elective one but a nominated one by the President. Even if there was any necessity for the Governorship, that post should be thrown open to election and should be held by the "son of the soil." In regard to the DMK's speaking about North versus South, Mr Annadurai pointed out no individual mention of any North Indian was, however, made by his party. The Constitution, he complained, vested with extraordinary powers designed for the domination of the Central Government over the Madras Government." On the contrary, the DMK had great regard to the present Governor who had put up so much struggle against the domination of Assam by the Central Government.



Mr Annadurai argued further that the Governor was no member of either of the houses. Addressing these did not mean participating in the proceedings. Privilege question arose only when the person said to have been affected was a member of either of the Houses. The very fact that the Governor issued summons to the members showed he was distinctly a different entity. He could not issue summons to himself. The privilege motion did not concern himself. If the DMK criticised the Constitution, it could not be brought under the privilege purview and the absence of his party members did not impede the work of the House at all.

Mr Annadurai reiterated that it did not mean they should not agitate for the constitution amendment if they had taken oath of allegiance. Their boycott was intended to emphasise the disapproval of the institution of Governorship. He recalled how the Congress Party itself entered the legislature in 1935 to "wreck the Constitution."

The Communist Party leader, Mr Kalyanasundaram, argued that any disrespect to the Governor would amount only to a disrespect to the President. The Governor was not an integral part of the legislature. The Praja Socialist Party leader, Mr P. S. Chinnadurai, held that no memeber could be forced to attend the session.

The Speaker's ruling on the matter would have to be considered as one without precedent in the history of the Indian legislature so far.

Mr Subramaniam's argument, on the surface of it, proved very effective against the DMK. Undoubtedly, he was very clear, unambiguous and unequivocal in so far as his analysis of the political motives of the DMK. All the opposition leaders' views were heard with the respect they deserved, but they did not go beyond the limit that the Governor was no part of the legislature. But, so far as the legal facts were concerned, Mr Subramaniam provided more facts for the Speaker's consideration than any of the opposition members including Mr Annadurai, who merely reiterated his own animosity in otherwise soft words to the North by repeating that he wanted a "son of the soil" to be elected to the position of a Governor.

MADRAS REVIEW

Good Arrivals

Madras, Wednesday.

WITH good arrivals both in Madras and South Arcot centres, the price of both groundnut and groundnut oil have receded here today. Having paid a higher price, stockists do not want to risk lower quotations. Daily arrival of seeds in the City will be of the order of about 50 tons, whereas in South Arcot the daily arrivals are easily in the neighbourhood of 800/900 tons.

Today's prices are:

Groundnut oil per candy of 500 lbs: Ready Rs 345; December Rs 345; January Rs 341; February Rs 343.

Kernels per candy of 531 lbs: Coromandel: Rs 175; Peanut Rs 170. Castor oil per candy of 500 lbs Rs 330. Coconut oil per tin Rs 40.75. Gingelly oil per maund Rs 20.50. Gingelly seed per bag Rs 64/65. Groundnut oil cake per bag Rs 25.75.

The groundnut oil price for United Kingdom is £105½ to £106 while shippers are inclined to offer Rs 1,600 to Rs 1.625 per ton of oil for Burma shipment

Bombay advices were firmer early this week closely followed by the same kind of quotations from other centres. The nearby and forward position rates had to yield in the face of big arrivals and prices declined. While there were absorbers of the stock in the beginning of the week, there was considerable reluctance from big bulk buyers due to lack of any indication of an incentive to shipping interests by the India Government. Forward positions thus declined to an extent not expected by the Oil Exchange itself. Thus, this week oil recorded a fall of Rs 42/45 per ton.

In the groundnut section, coromandel had good support in price. The Rs 185 per candy could not be sustainable in the market when it was beaten with heavy arrivals and the price receded to Rs 175. Even then crushers took up only small quantities. Bigger crushing interests were disinclined to offer beyond Rs 173. And peanut varieties were not fancied beyond Rs 171 per candy.

With crushing mills humming after a good provision for oil extraction, a good volume of business was seen through in oil. Both nearby and spot deliveries were negotiated on a decent scale in southern centres. With spot goods being absorbed at Rs 355, the rate could no more be sustainable throughout last week-and, the price began to touch down to Rs 346. Monday's quotation was around Rs 345.50 and it closed on Tuesday at the same rate. There was also no difference in the January offerings which closely fluctuated along with the spot and December rates. As usual, December vaidas were of the squaring up nature. January/February showed weak sentiment.

Though last week's sentiment on January position seemed to hold good, the change came following the spot price decline at Rs 342. The level of fluctuation was only very small and it was between Rs 341.50 and Rs 341.00. But it held good at the same rate from early this week and closed today at Rs 341.00. The rate of Rs 338 per candy was attractive for those who were successful enough to finish deals at that rate

The February position held its level in a better manner at Rs 343/344. The margin of fluctuation in this vaida was very small and was well within eight annas The rate on Monday was only Rs 342.50. It increased by another 50 nP and on Tuesday, it closed at Rs 343.50. It was lower today closing at Rs 343.03.

In view of the crushing operations being in full speed, oilcake prices also declined. While it was quoted at Rs 25.75 last week, it was further down by another 25 nP closing at Rs 25.50 yesterday, but it had again gone upto Rs 25.75.

*

Upcountry Markets:

Sizeable arrivals of groundnut had been reported in the producing centres of the South, and North Arcot towns like Villipuram, Vriddhachalam, Tirukoilur, Tindivanam, Cuddalore, Tirumannamalai, Arni, Vellore and so on. The quantity reaching these points was at 1,500 tons last week. In the extreme South of Madurai and Dindigul, good arrivals are reported. The early week price of Rs 176/178 per candy of kernel declined in these places to Rs 172 per candy. In these centres, shippers transacted good business in oil at Rs 345 per candy for December end delivery. A few other transactions were also done at Rs 336/338 per candy for same period delivery.

Gingelly market maintained a steady level. The latest ruling prices are:

Gingelly Seed:

Chanda/Worara	...	No stock
Mysore	...	Rs 66/67
Local varieties	...	Rs. 64/65
Dharmavaram	...	Rs 63/64

Gingelly Oil: On wholesale basis Rs 20.50 and retail Rs 21 per maund.

Castor Oil: Market continues to be quiet with no large scale demand. The nominal indication is Rs 330 per candy for commercial quality.

Coconut Oil: There is a decline in West Coast prices. Larger copra arrivals is responsible for this decline. At Cochin, the price is Rs 652 per candy for ready, December was quoted at Rs 652 and January at Rs 639 per candy. Local price is Rs 40/12 per tin.

The following prices ruled today in upcountry markets of groundnut and groundnuts oil:

	Ground-nut* Rs.	Ground-nut oil† Rs.
Guntur-Bezwada ...	180	346
Vridhachalam ...	172	338
Nandyal ...	172	340
Villipuram ...	172	338
Cuddappah-Yerra-guntla ...	174	342.50
Pollachi Superior (Nominal) ...	175	345
Tanjore ...	175	340
Tirucannamalai ...	170	337
Salem ...	175	345

*Per candy of 531 lbs.
†Per candy of 500 lbs.

Hides and Skins

Tanned cowhides advanced by a further 3 to 6 nP per lb. Though business with UK has been better than a few weeks ago, the exact nature of the transactions is not yet known. But thetre have been better enquiries from that quarter. It is, however, pointed out here that businessmen again have put up prices when they came to know business is coming through from United Kingdom. Naturally, there is again resistance to higher quotations from UK.

While inferior fifths had good demand locally, foreign quotations were at 44d to 46d to United Kingdom for 5/5½ lb average. United Kingdom offers were known to have been made at 44½d at which business was reported. There were, practically no sales in tanned buffalo hides Cow calf skins too were not altered with poor arrivals.

In tanned skins section, tanned goatskins sales were only about 1,500 while 38,000 pieces were sold in sheepskins. In the market, there were 50,000 tanned shipskins and 5,000 tanned goatskins left. No fresh business was reported in the c.i.f. section.

Quotations per lb; tanned cow prime: 5/5½ lb Rs 2-12 to Rs 2-14; 6/6½ lb Rs 2/8 to 2/9; 8/8½ lb Rs 2/2 to Rs 2/4; 10/12 lb Rs 1/14 to Rs 2: Buffalo 12/13 lb Rs 1/6 to Rs 1/8; cow calf 1½ to 2 lb Rs 4/8 to Rs 5; Buff calf 1½ to 2 lb Rs 3 to Rs 3/6: Goat Prime 8/9 lbs Rs 9/2 to Rs 9/4; 5½/6 lbs Rs 10/6 to Rs 10/8: Sheep Ordinary 6/7 lbs Rs 7/12 to Rs 8: Sheep Prime 6/7 lb Rs 10/12.

Tanning materials: Avaram Bark Rs 82/105; Nonam Bark Rs 62/68; Myrabolams Salem Rs 115/117; Bombay Rs 72 to Rs 75.

Raw Skins: Bangalore Goat Rs 590 to Rs 665; White Wool Sheep Rs 580 to Rs 650; Black Rs 430 to Rs 500; Bezwada Raw Goatskins Rs 570 to Rs 585; He Sheepskins Rs 535 to Rs 545; She Sheepskins Rs 435½/445.

During December first fortnight the following shipments of skins and hides were made:

United Kingdom: Tanned cowhides 1,486 bales: tanned cow calf 90, Buffalo hides 5 bales, calf skins 176 bales; goatskins 293 bales, sheepskins 282 bales.

To the Continent: Cowcalf skins 28 bales, buffalo hides 17 bales, buff calf skins 22 bales, goatskins 214 bales, and sheepskins 98 bales.

To USA: Buffalo hides 35 bales.

Japan: Goatskins 2 bales, sheepskins 109 bales.

Australia: Goatskins 2 bales, sheepskins 5 bales.

New Zealand: 40 bales sheepskins.

Aden: Cowhides 28 bales. The total export was 2,936 bales.

OTHER COMMODITIES:

Stocks of rice have been arriving with the result there is a decrease in the prices. But the decline is not yet reflected in the retail prices. The essential tamarind, however, is registering further higher records in prices. Stocks in this commodity are meagre. Jaggery also advanced by Rs 20/40 per 500 lbs. Coriander was lower by Rs 2 per 82 lb.

Paddy and raw rice price: 162 lb budama Rs 26; basangi 164 lbs Rs 27; raw rice Nellore 142 lbs Rs 46.50 to Rs 48; bangarutheekalu 154 lbs; Rs 49.50 to Rs 50.50; bassngi 164 lb Rs 41/42; boiled rice 48 Madras measures Rs 42; kichidi new Rs 41/42; second Rs 40/42; inferior varieties Rs 38/40; Andhra basangi 155 lb Rs 37/38.

Pulses: Toor dhall 205 lbs Rs 56/75; Bengalgram dhall Rs 36/42; Bengalgram Rs 34.50/35.50; Greengram dhall 60 Madras measures Rs 65/75; Blackgram dhall Rs 56/62; Greengram 225 lbs Rs 52/53; Blackgram 2-3/4 maunds Rs 49.

Coriander 82 lbs Rs 50; mustard 164 lb Rs 52/53; small 500 lbs Rs 165/170; garlic Rs 175/180; big Rs 210/215; Tamarind new Rs 430/455; old Rs 400.

Soapnuts 500 lb Rs 165/170; jaggery Rs 150/175; brown sugar Rs 180/215; betelnuts per maund peetan Rs 76/78; bold rasi Rs 80/84; venthivettai Rs 52/54; soor vettai Rs 42/44.

A Madras Government Press Note on *groundnut cultivation* in the State said last week:

The area under groundnuts for 1959/60 is estimated at 1,265,000 acres against 1,255,900 acres in 1957/58: It shows a rise of 0.7 per cent. It shows an increase of 1.7 per cent when compared with the average area of 1,243,500 acres calculated for the five years ended 1958-59.

The yield per acre is expected to be below normal in all the districts. The total yield works out to 697.600 tons of unshelled nuts against 611,500 tons for the corresponding period of previous year. This represents a decrease of 0.6 per cent.

*

Bangalore Silk

The price trend for silk and silk products in the Bangalore Silk market, during the week ended 17th December ,1959, showed a slight upward movement, especially in the case of Charka silk and Reeling Cocoons. There was moderate offtake of Filatures which showed no variation in price.

There was a rise of 50 nP per lb in the prices for 1st, 2nd and 3rd quality Charka silk and Re 1.00 per lb for Cottage Basin.

A similar rising tendency was noticed in the price levels for Reeling Cocoons also. Sidlaghatta quoted betwen Rs 2.25 to Rs 2.67 as against Rs 2.00 to Rs 2.62 while Channapatna ruled at between Rs 1.87 to Rs 2.50 as against Rs 1.50 to Rs 2.37 and Mugur around Rs 1.50 to Rs 2.00 as against Rs 1.30 to Rs 1.84.

In respect of Seed Cocoons, Mysore ruled at Rs 3.75 to Rs 6.00, while Foreign quoted Rs 2.00 to Rs 12.00.

It would appear that quite some quantity of Silkwaste of Government Silk Filatures at Kollegal, Mysore and Kanakapura has been lifted for purposes of export. The total quantity of the off-take is placed at 53,000 lbs.

SOUTH INDIAN MARKETS

Assam Sillimanite Limited

*

A Good Year in Compan's History

*

Mr. S. M. Wahi, the Chairman, reports on Development Projects

In the course of his statement to shareholders of Assam Sillimanite Ltd. at the Eigth Annual General Meeting held at Gauhati, Assam, on Saturday the 19th December 1959, Mr. S. M. Wahi, the Chairman said:—

1958/59 has been again a good year in the Company's history and after eight years of waiting this Mining Company has transferred its profits to Reserves for larger dividends next year. When I was speaking to you last year, I mentioned that the last three years of operation enabled us to maintain a steady profit which went to make up the losses of the earlier years. After wiping out the losses amounting to Rs. 6,80,021-1-11 we carried forward a net profit of Rs. 11,746.38 nP. Adding the profit of this year of Rs. 1,62,236.73, and writing off an amount of Rs. 734.50 on account of freight rebate, as also providing an amount of Rs 13,366 for Wealth tax and Rs. 76,668 for Income tax the net balance is Rs. 83,214.61 nP. I hope the Company will continue to maintain the same upward trend of profits in the coming years.

The Directors' Report and the Balance Sheet along with the Auditors' Report have been with you for some time and, with your permission, I shall take them as read.

During the year under review we maintained the quality of the material, and, because of this, the growing demand for Khasi Sillimanite is being progressively maintianed. In fact, our quality control is attracting new customers notwithstanding the fact that Mullite or some other substitutes are being marketed under the trade name 'Sillimanite.' Even with the increased production of 6255 tons this year we could not meet the market needs. Once again we are left with large pending orders for 7742 tons valued at Rs. 25.00 lakhs, which would have to be executed next year. This situation and increasing demand have come about even after our accepting orders with much restrictions and only against confirmed letters of credit from new parties.

Last year, I mentioned about the proposed refractory Project which was one of the major conditions imposed by Government in liberalising our export quotas. With the rapid expansion of the steel and other industries in the country there is a gap between the installed capacity for Refractories and the anticipated requirements in the second and Third Five Year Plan periods. The present installed capacity of Refractories in India is 444000 tons per annum approximately whereas the anticipated requirements by the end of the Second Five Year Plan period alone are estimated at twice the present installed capacity. Imports of refractories have registered a steep rise; from Rs. 30 lakhs in 1953 to Rs. 3.32 crores in 1958, entailing large foreign exchange to the country. This, therefore, necessitates augmenting the indigenous production of refractories. With the big developments in steel plants these requirements will continue to rise even beyond the 1 million ton target envisaged at the end of the Second Plan period.

Refractory Project: In this context I have the pleasure to inform you that your Company has been granted a licence No. 6(37)/L. IND.58 dated 15th September 1953, by the Ministry of Commerce & Industry to manufacture 44720 tons of refractories per year.

I mentioned in the last report that a project of this magnitude is beyond the resources of your Company—both technical and financial —and that it was proposed to get financial and technical collaboration with some established and renowned Refractory Works in Europe and that negotiations were going on. These negotiations have been successfully concluded with the Vereinigte Grossalmeroder Thonwerke, A. G., Grossalmeroda, West Germany, for technical collaboration and tentatively with the International Finance Corporation, Washington, for financial participation. Under the proposed arrangements, the IFC of the World Bank will meet the financial requirements of capital plant and machinery to the extent of US Dollars 1,400,000 represented by unsecured Notes. You accorded sanction last year for increasing the authorised capital of the company by the creation of 600000 Equity shares of Rs. 10/- each with a view to taking care of the needs of the Project.

The total investment on this Project is estimated at Rs. 65.00 lakhs for the first stage and Rs. 42.00 lakhs for the second stage. IFC has agreed to put up the entire foreign exchange composition i.e. Rs. 44.00 lakhs in the first stage and Rs. 21.00 lakhs in the second stage. Balance rupee capital required for the first stage of Rs. 21.00 lakhs is being arranged locally and, with the wide requests of investments from several parties, the raising of this amount, would not present much of a problem. Of course, in due course, the Company shall call for subscription and every one of our friends would have equal opportunity to invest.

As per scheduled programme, the first stage investment of Rs. 65.00 lakhs on the refractory Project during 1960-61 should result in production of Refractories worth Rs. 40.96 lakhs by 1961-62; Additional investment of Rs. 42.00 lakhs for second stage in 1961 should result in a total production of Refractories worth Rs. 99.07 lakhs in 1962-63; and Rs. 1.31 crores in the financial year 1963. Nett estimated profits after paying taxes etc. available to shareholders, on this project are likely to be low at Rs. 14.64 lakhs in the earlier two years but would steady out to an average between Rs. 24.65 lakhs to Rs. 27.00 lakhs.

Mining Project: With extensive and valuable contacts with the Refractory Works in the World market as also with industrial Works in India, it was considered essential to expand the mining activities of the Company to enable it to meet the requirements of Raw materials needed for Refractory Industry. With this end in view the Company applied for and has obtained Certificates of Approval for prospecting Quartzite and Chrome Ore in Orissa; Magnesite and Steatite in Uttar Pradesh; Kyanite, Quartzite and Fireclay in Behar. In some cases Mining leases are in course of being signed by the Company.

Thus the Company would be shortly in a position to offer good quantities and excellent qualities of Kyanite, Magnesite, Chrome and Quartzite ores to its Overseas customers; as also meet the needs of industries in the country, including our Refractory Works.

The Directors wish to express their appreciation of the endeavours of the Mine Manager who continues to look after the Mine work in increasingly difficult and hard conditions. They specially commend the welfare work that has been done for workers in this period by the Managing Agents and hope that the hard work of all those deeply attached to their duty, would continue to be recognised and respected.

Note:—

(The above statement is not a report of the proceedings of the Annual General meeting referred to)

STOCK EXCHANGES

Renewed Support for Selective Scrips

WATCH-DOG WRITES:

EXCEPT for a few selected shares which have maintained the upward trend, stock markets have generally provided an irregular price pattern in the absence of any new incentive. Moreover, with the approach of the Xmas holidays, operators are inclined to restrict their commitments.

Trading on the Calcutta Stock Exchange was dull and, except for a few firm spots, there was very little of note.

Prices on the Bombay Stock Exchange showed a mixed trend.

On the Madras Stock Exchange business was mostly confined to the Planting issues, which recorded an improvement in prices.

The London Stock Exchange finished the week on a firm note.

Wall Street closed very steady.

*

Calcutta

Calcutta, Thursday Evening.

ACTIVITY on the local Stock Exchange was restricted during the short week under review when price movements were narrowly irregular in the absence of sustained support. This was mainly due to a general feeling that, with the busy season now in full swing and money conditions becoming tight, there would be no possibility of surplus funds seeking investment in industrial equities, especially when a great deal of money had already been absorbed by the new capital issues.

Moreover, with the renewed uneasiness about Sino-Indian relations and the approach of the Christmas holidays, there was a general disposition to restrict commitments and book profits at bulges. Individual considerations, however, weighed with the operators in pushing up the rates of a few selected shares, both on the forward and cash lists.

With the stringency developing in the short-term money market, the Giltedged section, remained dull. Whatever enquiry there was, was confined to the short and medium-dated issues. Even so, they were ruling at considerable discount. 3 per cent 1986 Conversion Loan opened at Rs 73 and after improving at one time to Rs 73.50, receded again at the close to Rs 73.10.

Bank shares were quiet although Punjab National were better at Rs 20.62 against Rs 20.25 in the previous week. United commercial were quoted at Rs 64.25 and Hindusthan Commercial at Rs 16.25.

Jute shares were practically neglected in view of the rising trend of prices for raw jute. It was feared that, despite the higher prices obtained for the manufactured goods, the mills would not be in a position to show increased margins of profits in view of the industry facing the problem of procuring the required quantities of the fibre. National and New Central were the only two firm features having sustained support upto Rs 26 and Rs 21.56 from Rs 25.87 and Rs 21.19 respectively. Howrah touched at one time a high of Rs 23.81 from Rs 23.50, to recede toward the close to Rs 23.75. Birlas were supported upto Rs 25.06 from Rs 24.19, while Anglo-India were nearly maintained at Rs 211 and so also Delta at Rs 150.

Coal shares were listless, as most of the operators believed that the present prices of coal were uneconomic for the companies in the face of the current inflationary trend of wage rates and other costs. The only three steady features were Bengal having buyers upto Rs 296; Central India upto Rs 7.50 and Western Bengal upto Rs 6.37. Equitable were, however, quiet at Rs 31 against Rs 31.56, while Burrakur fluctuated irregularly between Rs 17.06 and Rs 17.37 on alternate buying and selling to close finally at Rs 17.31.

Tea shares were also quiet and only a few dealings were recorded. There was a general reluctance to enter into fresh commitments on the feeling that, despite the better prices obtained at the auctions, the dividends of most of the companies for 1959 would not be encouraging. East India came in for offer at Rs 28.75 to Rs 29.25 against Rs 30.75; Brooke Bond at Rs 17 against Rs 17.44; Jayshree at Rs 16.12 against Rs 16.31 and Hoograjuli at Rs 25.50 against Rs 26. Methoni changed hands at Rs 23.44 to Rs 23.62; Rydak at Rs 34 to Rs 34.31 and Hantapara at Rs 153 to Rs 156.

Sugar shares came in for selective support although there was not much change in prices. Raza-Buland were done at Rs 12.75 to Rs 13.06; Balrampore at Rs 3.69 to Rs 3.87; Belsund at Rs 14.50 to Rs 14.69 and SKG at Rs 13.12 to Rs 13.44. Ramnugger were slightly better at Rs 20.50 against Rs 20.25.

Textile shares fared well and most of the scrip staged a sharp recovery from the recent low levels following the measures taken by the Government to check the rising trend in cotton prices and to make an adequate supply of cotton to the mills through imports. The rise in the Birla group of shares was marked with Jayshree touching a high of Rs 12.56 from Rs 11.94 and Kesoram Rs 23.50 from Rs 21.87 although the closing levels were slightly lower at Rs 12.19 and Rs 23.44 respectively due to profit-taking. Cawnpore were enquired upto Rs 6.75 from Rs 5.94 and Elgins upto Rs 17.75 from Rs 16.31. In sympathy, New Victoria improved to Rs 1.34 from Rs 1.12.

Price movements in the Engineering section were mostly influenced by the speculative activity in Indian Irons. Against the week-end closing of Rs 23.33, Indian Irons opened at Rs 23.27 and, after moving irregularly between Rs 23.17 and Rs 23.31, finished the week at Rs 23.28. TEXMACO were, however, pushed upto Rs 25.60 from Rs 24.95 due to sustained support from influential quarters, to finish at Rs 25.50. G. K. Williams met with some business at Rs 45.25 to Rs 45.56; Braithwaite at Rs 25.62 to Rs 25.81 and Britannia at Rs 12 to Rs 12.25. Jessop receded further to Rs 24.56 from Rs 25.69 on lack of support. Marshalls were maintained at Rs 5.53 with Kumardhubi better at Rs 6.56 against Rs 6.44.

The Miscellaneous section provided several bright features on investment account as well as sustained buying from influential quarters although higher levels could not be retained till the close due to profit-taking. Following were the price trends of a few selected scrip:—

	Week's Low Rs	Week's High Rs	Week's Closing Rs
Orient Paper ...	38.15	38.75	38.25
Shree Gopal ...	22.00	22.44	22.31
Sirpur ...	13.56*	13.75*	13.69*
Rohtas ...	24.69	25.25	24.94
Dunlop ...	35.62	36.06	36.00
I. Oxygen ...	31.62	32.12	31.87

✱

London

PRICES on the London Stock Exchange displayed generally a firmer tendency. Buying of industrial equities was on an increased scale, but still rather selective.

Steel shares were exceptionally firm in response to good results. Textiles were strong with Courtaulds outstanding following investment buying in a market short of stock. Shipping shares met with renewed support, while Newsprints attracted some attention.

Giltedged securities advanced further, reflecting the Treasury's decision not to renew the International Monetary Fund stand-by credit; but gains were partially reduced following a fresh rise in the UK Treasury Bill Rate.

✱

New York

BUYERS on Wall Street showed no disposition to add extensively to their commitments. This followed the failure, for two consecutive days, of the Dow Jones Industrial average to maintain new peak levels. Aluminium shares were, however, favoured in response to recent price increases in the metal. Expectations of good 1960 sales results helped sentiment in Motor shares. News of a new 10-point offer to the steel companies by the Steel Workers' Union aided Steel shares. Anaconda Copper was quoted at $64¼; General Motors at $53⅜ and US Steel at $99-7/8.

KAMARHATTY COMPANY, LIMITED.

NOTICE

The Board of Directors have-to-day declared the following Interim Dividends in respect of the year ending 31st December, 1959:

(1) On the Preference Shares—@3% free of Income-tax but subject to the provisions of Section 18(3E) of the Indian Income-tax Act.

(2) On the Ordinary and 'B' Ordinary Shares—@Rs. 5|- per share less Income-tax and Super-tax at the prescribed rates.

These dividends will be payable to those members whose names are registered in the Books of the Company on 29th January, 1960 or to their Mandatees.

The Share Transfer Books of the Company will be closed from 19th January, 1960 to 29th January, 1960, both days inclusive.

By Order of the Board,
JARDINE HENDERSON, LIMITED,
D. FORDWOOD,
Secretary,
Managing Agents.

4, Clive Row,
Calcutta—1.
18th December, 1959.

SOUTH EASTERN RAILWAY

TENDER NOTICE

Sl. No.	Tender No.	Brief Description.	Specification.	Quantity.	Due date of Opening.	Earnest Money.	Cost of Tender Form.
1.	PC/COS/9/1153/G(b)4/58 ...	Drop stamp die steel of sizes to be obtained from tender schedule.	IRS. Specn. No. M-12-58.	...	20-1-60 at 12 Noon.	Rs. 238/-	Rs. 2/-
2.	CON/GM/71/F2/59 ...	Guy Anchor complete.	Ex. B.N. Railway Drg. No. 23027/1/SE.	3,000 Nos.	19-1-60 at 3 P.M.	Rs. 900/-	Rs. 5/-
3.	CON/COS/115/H(e)b/59 ...	Loud speaker 8" dia. permanent magnet, box, type, 3 to 5 watt complete with line transformer suitable for 100 volt line as per specn. shown on the schedule.	.....	180 Nos.	19-1-60 at 12 Noon.	Rs. 350/-	Rs. 2/-
4.	COS/COS/116/H(e)b/59 ...	Loud speaker 10 watts metal horn re-entrat type, etc.	.....	108 Nos.	19-1-60 at 12 Noon.	Rs. 600/-	Rs. 2/-
5.	CON/COS/117/F1/59 ...	Mather and platt or similar single geared type steel rolling shutter suitable for a clear opening 14'-0" high ×14'-2" wide complete with all fittings, etc.	.....	8 Nos.	20-1-60 at 12 Noon.	Rs. 600/-	Rs. 2/-
6.	CON/COS/118/H(c)b/59 ...	Rectifier unit RA Mains as per specn. enclosed on the schedule.	.....	16 Nos.	21-1-60 at 12 Noon.	Rs. 500/-	Rs. 2/-
7.	CON/COS/119/H(d)/59 ...	Fluorescent ceiling fittings white stove enamelled complete with 1×80 watt 5'-0" long tube.	(As per GEC Cata. ref. F.36580 or similar).	156 Nos.	21-1-60 at 12 Noon.	Rs. 260/-	Rs. 2/-
8.	CON/COS/120/F2/59 ...	Circuit Controller 2 way Lever.	IRS Drg. No. 202013 (Advance).	432 Nos.	22-1-60	Rs. 600/-	Rs. 2/-

Tender forms are obtainable from Controller of Stores, South Eastern Railway, Garden Reach, Calcutta-23 on remittance of cost of tender form (not refundable) by Money Order direct to him in case of outside firm and on production of cash receipt from the Chief Cashier, S. E. Rly., Garden Reach, Calcutta-23 by local firms. Firms not on the Railway's list of approved contractors must enclose a valid Income Tax Clearance Certificate along with the Earnest Money receipt with the tender.

CONTROLLER OF STORES

S87

IN PARLIAMENT

STOCK EXCHANGE DIRECTORATE

The Finance Minister, Mr Morarji Desai, said in the Lok Sabha that Government had decided to establish a Stock Exchange Directorate and the decision was in the process of implementation.

Replying to a question by Mr Ram Krishan Gupta, the Finance Minister said the main purpose of the Directorate was to administer the Securities Contracts (Regulation) Act 1956. The Directorate would have its headquarters at Bombay and branch offices at Calcutta and Delhi. It would maintain close contact with the governing bodies of the recognised stock exchanges in the country and their members and keep Government posted with the working of these exchanges, the Minister added.

MANUFACTURE OF TRUCKS IN ORDNANCE FACTORIES

The approximate saving accruing to the Ministry of Defence with the starting of 'Shaktiman' truck in the country in collaboration with a German firm was detailed in an answer to a question in Rajya Sabha. The Deputy Minister of Defence, Mr K. Raghuramaiah replying to a question on the subject by Mr Niranjan Singh said:—

"Starting with a saving of Rs 7,500 per truck in the beginning, the saving is expected to increase as the percentage of indigenous manufacture goes up. 'Shaktiman' truck has additional advantages over other trucks which the Army have been getting like better increased payload by 30 per cent, multifuel engine and other special features as to make it a sturdy cross country vehicle more suitable for military purpose.

The agreement provides for assistance in establishing complete indigenous manufacture. The production programme envisages progressive manufacture of trucks in India, so that by June 1964, the entire truck will be made in India. The percentage of indigenous manufacture of truck components to be achieved are as under:—

First year—30 per cent; second year—50 per cent; third year—70 per cent; fourth year—80 per cent and fifth year—90 per cent. This schedule has been improved upon already and an earlier total truck production may be anticipated."

OIL REFINERY AT BARAUNI

The main features of the agreement between the Governments of India and the USSR for the establishment of an oil refinery at Barauni in Bihar were detailed by Mr K. D. Malaviya, Union Minister for Mines and Oil, in a statement in reply to a question by Mr V. K. Dhage, in the Rajya Sabha.

The Agreement, which was signed on September 28, 1959, provides inter alia that the Soviet organisation will be responsible for the following:—

1. To conduct research and analysis of the Nahorkatiya crude oil;
2. To prepare a project report, design and working drawings;
3. To determine, on the basis of research and analysis carried out on the crude sample, the techno-economical expediency of producing oils, including lubricating oil;
4. To supply the equipment, steel structurals and certain other materials, as may be mutually agreed upon;
5. To render technical assistance in selecting the site, in collecting initial data for designing, erecting and in tuning up the equipment, in commissioning the refinery and in reaching the rated capacity of 2 million tons per annum;
6. To train Indian specialists and skilled workers in designing, construction and operation of the refinery, both in USSR and in India.

A credit of 100 million roubles, at 2½ per cent per annum has been extended by the Government of USSR to cover the cost of equipment, materials and technical services to be provided by their organisation. Such further amounts, in excess of 100 million roubles, as may be required (not exceeding 50 million roubles) will be met from the 1,500 million roubles credit offered by the USSR Government for the Third Plan schemes.

The credit will be repaid within 12 years in equal annual instalments, the first repayment commencing one year after the completion of deliveries of equipment and materials to be made from the USSR.

COST OF NAHORKATIYA-BARAUNI OIL PIPE LINE

The total cost of the pipe lines to be laid between Nahorkatiya oil fields and Barauni (in Bihar) via Gauhati (in Assam) will be approximately Rs 54 crores (£40,500,000) said Mr K. D. Malaviya, Union Minister for Mines and Oil, in reply to a question by Mr S. A. Mehdi, Mr Hem Barua and Shrimati Mafida Ahmed in the Lok Sabha.

The Minister said that the amount is based on the first estimates of the project prepared by Burmah Oil Company (Pipelines).

He added: the section from Nahorkatiya oilfields to Nunmati (Gauhati)—distance of 261 miles—is to be completed by April 1, 1961 or the date on which the Nunmati refinery is ready to receive crude oil, whichever date is later.

The remaining section between Nunmati and Barauni (Bihar)—a distance of 450 miles—is to be completed by April 1, 1952 or the date on which the Barauni refinery is ready to receive crude oil whichever date is later.

SEARCH FOR OIL IN INDIA

The Government of India have decided to invite foreign oil explorers also to join in the quest for oil in India subject to mutually acceptable terms for exploration and also assuring that such arrangements with foreign oil explorers fall generally within the ambit of India's industrial policy resolution, said Mr K. D. Malaviya, Union Minister for Mines and Oil, in a statement in the Lok Sabha. A similar statement was made in the Rajya Sabha also.

The following is the text of the statement:

"The rapidly rising consumption of petroleum products is a clear index of the pace of industrialisation of the Indian economy. From two million tons in 1947, the total consumption is already about six million tons. Authoritative forecasts, based on present trends and the likely size of the Third Plan, are that consumption would increase to fourteen million tons of crude oil equivalent by 1966, and at that rate, 25 million tons by 1971.

India's annual oil import bill (including crude oil for the three coastal refineries) is already of the order of Rs 100 crores per year. Lest the increasing foreign exchange cost of oil imports for the maintenance of the developing economy handicaps the Third Plan, the search for and production of oil within the country will be given topmost priority in the Third Plan as, for instance, steel was given in the Second Plan.

Indigenous production of crude oil is hardly 0.5 million tons at present, with the exploitation of the new oilfields in Assam jointly by the Government and Burmah/Assam Oil Companies, the reserves already established are expected to yield about four million tons per annum by 1965. Therefore, new reserves have to be established quickly enough to sustain by 1965 addtional produce of at least ten million tons, if not more.

Large Sedimentary area:

Fortunately, recent efforts have exploded the old myth that the country has no oil potentialities. India has 400,000 square miles of potential oil-bearing sedimentary areas, spread over (from the east) Assam, Tripura, Manipur, West Bengal, Ganga Valley, Punjab, Himachal Pradesh, Jammu and Kashmir, Rajasthan, Cambay and Cutch, the eastern and western coastal tracts (in Madras, Andhra Pradesh, Orissa, Kerala) and the Andaman and Nicobar Islands. In August, 1956, Government set up the Oil and Natural Gas Commission (converted in October this year into a statutory commission by an Act of Parliament). The Commission has already carried out extensive geological and geophysical surveys in far-flung areas. Oil sands have been discovered at various places. Oil having been struck in the Cambay area, further deep drilling is in progress there to find whether reserves exist in commercial quantities, deep drilling is also in progress in two areas in Punjab and in one area in Assam. Government have decided that the Commission will continue rapid exploration of the areas where it is actively engaged and production, if oil is found.

But large-scale oil exploration programme must be undertaken involving expenditure of great amounts of foreign money in a comparatively short time if we have to attain the target of producing about fourteen million

THE TATA IRON AND STEEL COMPANY LIMITED.

NOTICE

Submission of Coupons in respect of "A" Second Preference shares and New Ordinary shares.

Notice is hereby given that the last date for submission of **coupons** in respect of the "A" Second Preference shares and the new Ordinary shares in terms of the Company's Circular dated the 12th October 1959 expires on the 15th December, 1959. However, for the convenience of the shareholders, the Directors have resolved that the Company's bankers be authorised to receive applications on and after 16th December 1959 upto but not later than the 15th January 1960 in respect of such coupons Provided that along with each such application with the required coupons and the moneys to be received with such application interest at the rate of 9% per annum thereon (which the Directors have decided to charge) from the 16th day of December 1959 until payment shall be paid to the Company's bankers. No application in respect of coupons received on and after the 16th December 1959 will be entertained by the Directors unless interest is paid as aforesaid. No application will be entertained after the 15th January, 1960.

Dated at Bombay this 15th day of December, 1959.

By Order of the Board,
TATA INDUSTRIES PRIVATE LIMITED, Managing Agents,
J. D. Choksi
Director.

tons of crude oil by 1966. Government have, therefore, decided to invite foreign oil explorers also to join in the quest for oil in India subject to mutually acceptable terms for exploration and also assuring that such armaments with foreign oil explorers fall generally within the ambit of India's Industrial Policy Resolution. With a view to creating these conditions the Government have finalised their new Petroleum and Natural Gas Rules and they are being published immediately.

New Rules:

The new rules consist of two portions; one deals with licences and leases for oil exploration and production and sets out the terms and conditions for such licences and leases. The former concept of "petroleum concessions" and the grant of licences and leases upon application is being replaced by the provision that negotiated agreements will be followed by licences and leases. The new rules provide that the term of a licence shall ordinarily be four years with two yearly renewals and the area covered by it shall ordinarily be 3,000 square miles. The four stages contemplated by the Petroleum Concession Rules, 1949, have been reduced to two stages of the exploration licence and the mining lease. The rules relating to conservation and development have been kept as simple and as few as possible."

FOREIGN AID FOR OIL EXPLORATION PROGRAMME

The nature of aid received from various foreign Governments for India's oil exploration programme up to September 1959 was detailed by Mr K. D. Malaviya, Union Minister for Mines and Oil, in reply to a question by Shrimati Mafida Ahmed in the Lok Sabha last week.

Aeromagnetic survey of Rajasthan and the Indo-Gangetic plain was arranged by the Government of Canada under the Colombo Plan.

Training facilities for officers of the Oil and Natural Gas Commission had been made available in USA, Canada, USSR, France, Holland, Iran and Czechoslovakia under various aid programmes and other foreign Governments' scholarships.

Scholarships and facilities for training the officers of the Oil and Natural Gas Commission had been offered by the French Institute of Petroleum and ENI, Italy.

Government of West Germany had offered one seismic team for carrying out investigation in Gangetic valley for a period of one year.

MODERNISATION IN TEXTILE INDUSTRY

The Minister for Commerce, Mr Nityanand Kanungo, stated in the Rajya Sabha that the Working Group formed by the Government of India to study the modernisation programme in textile industry was expected to finish its work by the middle of January next year and submit its report by the end of that month.

Mr Kanungo, who was replying to a question by Mr Nawab Singh Chauhan, said that as soon as the report was received, it would be examined and the question of granting aid to the textile industry would be considered thereafter.

The Working Group, Mr Kanungo added, was now visiting important textile mills centres in the country. They had held meetings in Bombay and Kanpur already and would be visiting Bewar, Jaipur and Calcutta shortly. The Secretariat of the Group, in the meantime was analysing the information gathered from the various textile mills. Some of the members of the Group had gone abroad for studying the modernisation programme of various countries.

CLOTH EXPORTS TO BRITAIN

An agreement has recently been reached between the representatives of the cotton textile industry in India and the U.N. under which exports of cotton textiles from India to U.K. will be subject to certain ceilings for the next three years. The agreement is unlikely to have any adverse effect on India's exports to U.K.

The Minister of Commerce, Mr Nityanand Kanungo, gave this information in the Rajya Sabha in reply to a question by Mr Maheswar Naik.

MANUFACTURE OF MOTOR VEHICLES

The number of motor vehicles produced in the country would be about 35,500 this year as against 26,788 in 1958, said Mr Manubhai Shah, Minister for Industry, in the Lok Sabha in reply to a question by Mr Anurudh Sinha.

Mr Shah further stated that production of motor vehicles had been short of demand since last year primarily because the import of components had been allowed on a restricted scale, in view of the foreign exchange shortage. During the current year, however, sufficient foreign exchange had been released to automobile manufacturers for the import of components. The situation, the Minister said, had, of late, considerably improved and was expected to further improve in the next six months or so, as the impact of larger releases of foreign exchange would be more felt during 1960.

The number of motor vehicles on the road as on March 31, 1958, Mr Shah said, was approximately 4.99 lakhs. No estimates of the current replacement demand were available. The Tariff Commission, in its Report on the Automobile Industry (1956) had estimated the annual replacement requirements at 14,000 passenger cars and 17,000 commercial vehicles. The Minister observed that the demand has since gone up and that the Jha Committee had been asked to assess the overall demands of motor vehicles.

ALLOY AND TOOL STEEL PLANT IN PUBLIC SECTOR

The Government of India have selected an Indian private limited firm of consulting engineers for the preparation of the detailed project report as well as the subsequent detailed designing of the proposed alloy and tool steel plant to be set up in the Public sector.

This was stated by Sardar Swaran Singh, Minister for Steel, Mines and Fuel, Government of India, in reply to a question by Mr R. C. Majhi and 15 others in the Lok Sabha.

The Minister added that the report was expected to be received from the firm by June, 1960.

The firm was to be paid a total of Rs 59,69,000 for the preparation of the detailed project report as well as for subsequent services as consulting engineers.

Background:

There is no capacity in the country at present for the production of stainless steel, excepting an annual production of nearly 2,000 to 3,000 tons of special steels including alloy steel, tool steel and die steel. The import of tool and alloy steel during 1958 was 26,013 tons valued at Rs 4,74,79,849. The demand of special steels, bulk of which has been met by imports, has been increasing steadily. The import of these categories was only 6,000 to 7,000 tons five or six years ago. Judging by the likely tempo of development in the Third Plan the demand might grow over 50,000 tons by 1965.

The Government of India have decided to set up an alloy and special steel plant with a capacity of 40,000 tons of ingots per year in the Public Sector. The plant is expected to yield about 25,000 tons of saleable steel products with provision for expansion at a later stage to 80,000 tons of ingots.

TAXES IN ORISSA STATE

The Finance Minister, Mr Morarji Desai said in the Lok Sabha that the amount of money collected by the Government of India by way of taxes and other revenue measures in the Orissa State during 1957-58 and 1958-59 was Rs 3,03,95,000 and Rs 3,73,49,000 respectively.

Mr Desai, who replied to a question by Mr Panigrahi, added that these figures did not include receipts under various major heads in the group "Civil Administration, Currency, Mint, Civil Works etc" as these were receipts not on account of any revenue measures adopted, but on account of services rendered and supplies made.

PRODUCTION OF COAL

An annual rate of production of 47.25 million tons of coal against the target of 60 million tons by the end of current Plan period has already been reached, said Sardar Swaran Singh, Minister for Steel, Mines and Fuel, Government of India, in reply to a question by Mr D. I. Sharma, in the Lok Sabha.

The actual production of coal up to the end of September this year amounted to 35.44 million tons.

The Minister added that every effort would be made to reach the target of 60 million tons by pushing forward with the implementation of the programme already drawn up for the purpose.

ASSISTANCE TO COMMON TEAS

The Government of India have approved a pilot scheme for the grant of loans by the Tea Board to weak gardens in the Cachar District. The object of the scheme is to afford some financial assistance for essential repairs, replacements and renovation of tea machinery to such gardens as are at present at an uneconomical level after repairs, replacements etc many have reasonable prospect of showing sufficient improvement in their standards. The scheme will be started during this year.

The Deputy Minister of Commerce and Industry Mr Satish Chandra, gace this information in the Rajya Sabha, while replying to a question by Mr P. N. Rajabhoj on the schemes for helping exporters of common teas.

Mr Satish Chandra also gave details of another scheme approved by the Government of India for subsidising the cost of fertilisers and transport charges of the tea gardens in Cachar and Tripura where mostly common tea was purchased. The rates of transport subsidies would be Rs 1.58 per maund for transport by rail and Rs 0.6 per maund for transport by river in Cachar. For Tripura, the rate of subsidy would be Rs 3.68 per maund for transport by air. The rate of fertiliser subsidy would be Rs 1.22 per ton of sulphate of ammonia purchased by the gardens. The Deputy Minister said that this scheme came into operation from October 13, 1959 for a period of one year initially.

IMPORT AND EXPORT LICENSES

The Investigation and Vigilance Division of the Import and Export Trade Control Organization dealt with 710 cases up to November 10 during this year. Of these, 131 cases were disposed of departmentally and 64 cases handed over to the Special Police Establishment. Three cases were blacklisted and 74 other cases were placed on the suspense list.

The Minister of Commerce, Mr Nityanand Kanungo, gave this information in the Lok Sabha in a written reply to a question by Mr Ramkrishan Gupta.

Banking Today and Tomorrow

WHERE stands banking in India today, in the ninth year of this country's planned endeavours? How has the banking system been put to test? What are the problems, and what are the solutions that we have found for them? More specifically, what was the kind of job that the banks were called upon to perform, and how were they equipped to discharge their duties? What has been the experience in regard to Deposits and in regard to Advances? How has activity of the sort that the banking system has had to participate in been reflected in its earnings? And what of the expenditures? What does the future hold in stock? In short, what has been the role of the banking system in the First and Second Plans, and what is the responsibility that will now devolve upon banking in the third and further quinqueniums of planned endeavour? These are the questions which we have felt need more urgently to be assessed and answered than ever before in the chronicles of Indian banking. Urgency is there because, frankly, there is a great deal in the experience of banks during these last eight years which is puzzling and perplexing, which is sometimes paradoxical and even aggravating. But experience is supposed to be a guide and it is the intention in this composite series of articles to set out the facts, and then to draw what lessons they seem to offer. If our interpretation of banking development does not go awry, then, we shall have a fund of experience to guide Indian banking over the greater duties and responsibilities in store.

At the outset, we might paint the broad landscape of banking in India since 1951.

The first year of the First Plan was inflationary, because the commodities boom in the wake of the Korean war, owing to the stock-piling programmes of America in particular, was at its height. But, by the latter half of 1951, the bubble had burst and, in January 1952, there was a collapse in the commodity markets. To add to these difficulties of the banking system in this country, bank rate in India, which had remained at 3 per cent for 16 years, was raised on November 15, 1951, to 3½ per cent. The depreciation in giltedged values was of calamitous proportions, and the balance sheets even of some of the bigger Indian Scheduled Banks showed a yawning gap as between the market and book values of their giltedged investments. It was not, certainly, an inspiring start for India in terms of planned endeavours. During 1952-53, there was again no upsurge in the Deposits of Scheduled Banks. However, in that year, as far as the resources position of the Scheduled Banks was concerned, it was comfortable enough because Advances also declined. Thus, during the first two years of the First Plan, Deposits fell and Advances contracted. We shall, in its proper place, analyse the relationship of bank Deposits with other factors in the Indian economy, but we need to remark here that the first phase of Indian banking under planning conditions comprised the first two years of the Plan.

The second phase may be said to have started from April 1, 1953. Partly due to the quickening tempo of the economy, both as a result of Government disbursements on the Plan and as the consequence of increase in industrial production in the private sector, Advances and Deposits began to rise. During the second phase, which lasted till the end of March 1956, the expansion in Advances exceeded the rise in Deposits of Scheduled Banks. As such, Scheduled Banks operated under considerable strain. The reasons why the expansion in bank Deposits was inadequate to the increase in Advances will presently be analysed in some detail.

The third and most active phase of the development and expansion of banking started from April 1956 and can be seen to be continuing at the present time. This phase is characterised by a much greater rise in Deposits as compared with the expansion in Advances. For particular reasons, this accumulation of additional resources, rendered surplus because Advances did not rise proportionately, was responsible for transforming the giltedged market which, until then and from the time that bank rate had been raised in 1951, had been in a lassitudinous state.

All these three phases are important. We shall now proceed to study in greater detail the actual developments over each one of these phases.

During the first phase, except for the inflationary conditions that were in evidence during the first half of 1951, the economy was generally in a slack condition. It may be recalled that it took some time for the First Plan to get under way. The period of the First Plan had already started before the draft was ready and two more years were to elapse before any significant implementation of schemes had commenced. This, again, was as true of the public sector as of the private sector. Because, firstly, Government disbursements in the first two years of the Plan were low; because, secondly, there was a time lag before such monies spent by Government could return to the banking system; and because, thirdly, there had, meantime, occurred a debacle in commodity prices, the trend in bank Deposits in 1951-52 and 1952-53 was downward. The emphasis of the First Plan was on agriculture. Hence, the disbursements of Government were widely dispersed and that, too, in relatively unbanked regions and in favour of small and new entrants to the earning class. So, such expenditures tended to get lost in the unmonetised sectors of the economy during the first phase. Moreover, in the wake of the Korean war inflation, India's imports during 1951-52 were particularly heavy. The large import surplus arising from inflationary pressures exerted a contractionist influence on bank Deposits. Therefore, Notes in circulation also declined during this period. Lastly, the Advances of Scheduled Banks also showed a contractionary trend, because, on the one hand, industrial production in the private sector had not significantly improved by 1953 and because, on the other hand, the fall in commodity prices during this period resulted in a smaller quantum of financing being necessary for the same physical volume of stocks.

In the second phase, there was the beginning of the return to the banking system of funds representing Governmental disbursements in the first phase. Meantime, industrial production was headed steeply upward. It was during this period that bank Advances, which traditionally are meant to be short-term accommodation, came partly to be utilised for the medium term purpose of purchase of plant and machinery. Indian Finance was first to draw attention to the possibility of short-term accommodation being used for medium term purposes. It was, we imagine, around 1956 that Advances of this kind were at their highest. No doubt, the far from satisfactory investment climate and the near impossibility of raising money from the capital market induced Indian industry to finance its expansion programmes through utilisation of bank accommodation. In effect, this meant that medium term needs of industry were superimposed not only on the larger volume of financing necessary for increased agricultural production, but also on the higher quantum of bank Advances owing to the rise in industrial production. The position of the banks might have been worse except that, during the period between 1953 and the beginning of 1956, the balance of trade was slightly in India's favour. Normally, this would have meant that an export surplus would have contributed to an improvement in bank Deposits. This indeed happened; but, nevertheless, the magnitude of the rise in Deposits was insufficient to cater to the expansion both in Advances and in giltedged investment. Consequently, by the end of March 1956, it began to appear as if the banking system would be put to severe strain in the next few years. For, the expenditure of nearly Rs 2,000 crores by Government on the First Plan notwithstanding, the rise in bank Deposits over this period worked out to less than Rs 150 crores. It was at such juncture that gloomy Jeremiahs concluded that Government disbursements would not have so beneficial an impact on bank Deposits as this journal had suggested. As the second phase drew to its close, therefore, with the growth in Deposits apparently not keeping pace with the expansion in Advances, there was the intensification of competition for Deposits among the Scheduled Banks.

On the face of it, the second phase seems to have extended up to March, 1957, since, in 1956-57 also, the rise in Deposits fell short of the expansion in Advances. In the sense that the rise in Advances was greater, there can be no questioning the fact that the severest strain upon the banking system was being experienced during this period. But we must not overlook the fact that, during 1956-57, and in spite of substantial receipt of foreign assistance, the exchange reserves fell steeply. It is now recognised on all hands, as we had at that time suggested, that the very sharp decline in exchange reserves in the first year of the Second Plan betokened the attempt by the private sector to complete its allotted role in the Second Plan ahead of schedule. Thus, the magnitude of the contractionist influence of the fall in exchange reserves upon the Deposits of the banking system in 1956-57 should have been of vast dimensions. There was, therefore, an unprecedented camouflaged rise in Deposits which had been utilised for payment for imports. But for this import surplus on private sector account in that year, bank Deposits would have risen by such spectacular fashion as to have resulted in a comfortable surplus being left available for meeting the whole quantum of the rise in Advances. It is hence that we suggest that the third phase may properly be said to have commenced early in 1956, when Government disbursements began significantly to be reflected in the Deposits of Scheduled Banks.

The third phase has been particularly interesting. The banking system did not realise early or quickly enough that new Deposits were being added at a pace much faster than the rise in Advances. Hence, the keen bidding for Deposits, which had characterised the last part of the second phase, continued late into 1958. In the result, the new Deposits were costing the Scheduled Banks dear, the while that there was no significant improvement in the earnings from Advances. Meanwhile, also, establishment charges, by dint of a steady branch expansion programme were going up. If 1956 profits constituted a record for the banking system, because there had been full and profitable utilisation of resources, 1958 quickly showed that fortunes had reversed. The dawning realisation that there was a yawning gap between resources and earning assets compelled, later in 1957, a new-found interest in giltedged. In recognition of the much easier money market conditions, Government announced, during this phase, the recommencement of public auction of Treasury Bills. Sales of giltedged through the Reserve Bank tap were considerable and sustained. Indeed, a specially created issue, for Rs 30 crores, had to be sold in the first instance to the Reserve Bank, and then to banks, for meeting the demand for giltedged. With 1957 profits showing a drop, the need for action, if the profit squeeze was not to develop into something calamitous, came to be urgent and imperative. But it was not until the autumn of 1958 that, under the auspices of the Indian Banks Association, an agreement fixing maxima of interest payable on Deposits was arrived at. While this largely did away with cut-throat and ruinous competition for Deposits, the decision itself was taken too late to have any substantive effect in respect of earnings for 1958.

The experience in 1959 promises to be better, because the demand for Advances was much keener during the 1958-59 busy season. Nevertheless, with the advent of the 1959 slack season, it is clear that, during the second half of the year, the earnings from Advances will shrink considerably. It is this which pinpoints the problem of banks, which may thus be pithily stated: Firstly, the gathering Deposit resources with the banking system will be of such magnitude as to meet fully even a record expansion in Advances; secondly, while the increase in Advances will be sustained, the gap between resources and earning assets may widen from time to time; hence, thirdly, the banks will have no problem in meeting the legitimate demand for the financing of industrial development; but, fourthly, it will be of supreme importance for banks to keep a tight check on the expenditure incurred, on the one hand, in the form of interest paid on Deposits and, on the other hand, with respect to establishment charges.

Trends in Bank Deposits

THE first principal analysis that we have to make, after the broad bird's eye picture of the banking situation that we have been able to take, is in regard to the trends in bank Deposits. As already indicated, bank Deposits were sluggish in the first two years of the First Plan, but, since then, the accumulation of new resources with banks has acquired considerable momentum. We wish to state that the growth in bank Deposits is a phenomenon which primarily owes its source to the growth in Government disbursements. It was not until 1956-57 that the upward trend was emphatically to be discerned. We may also state here that, while we can hint at a possible relationship between governmental disbursements and growth in bank Deposits, no proof can be adduced to establish beyond all reasonable doubt that the accruals to bank resources represent in fact the return of funds in respect of outlay on the Plan. But we suggest that the data available are still sufficient for us to interpret the figures in such manner as will provide us with a clue to the destinies and fortunes of the Indian banking system. In 1951-52, the post-war Korean boom slowly yielded place to lethargic conditions arising from the debacle in India of commodity prices. Germane to the issue is the course of foreign trade. A large import surplus was experienced in the first year of the First Plan. Consequently, Deposits felt the impact of the excess in imports and fell in that year from Rs 906.21 crores to Rs 848.34 crores. In the next year also a small decline was registered in bank Deposits. The upsurge in Deposits began to be manifested only in 1953-54. Now, while it is true that Government disbursements in the Plan got into top gear only in the third year of the First Plan, the fact remains that the level of Central Government disbursements, both in 1951-52 and in 1952-53, were relatively higher than in previous years. Various questions need in this context to be answered. Why then did Deposits decline in 1951-52 and 1952-53? Secondly, as we shall see in our study of bank Advances, the total accommodation extended by the banking system rose in 1951-52, but declined even more sharply in 1952-53: are we to interpret this as meaning that, during this period, industrial expansion was conspicuous by its absence? Most important of all, did the fact that bank Deposits and Advances contracted in spite of a somewhat higher tempo of Government disbursements indicate that outlay on the Plan is not the main cause of the spectacularly upward trend in Deposits since then? While the purpose of this article is to try and discover what proof is available about a possible link between Government disbursements and bank Deposits, it will obviously devolve upon us, first, to find the answers to the questions we have just posed.

The bias of the First Plan was toward agriculture. We have already seen that an agriculture-orientated Plan will have meant widely dispersed expenditures and in favour of new entrants to the earning class. For such money to seep back into the monetised sector of the economy would necessarily take time. The new earners would have to spend monies on new consumer goods, and, slowly, gradually, this money, as if by some process of osmosis, would percolate into the monetised sector of the money. In this light, in the first place, we wish to suggest that Government outlays in the first two years of the First Plan could not possibly be reflected in the Deposits of Scheduled Banks. But, by 1953-54, the flow back would have started. In that year, presumably with the first trickle into the money market proper of disbursements relating to the first year of the First Plan, Scheduled Bank Deposits rose by Rs 12 crores to Rs 856 crores. We would strictly have preferred to restrict this article to a study of Deposits, but some reference to the trends in Advances is also necessary. The fact that the emphasis in the First Plan was not on industry, precluded a higher quantum of demand at the outset for Advances. It was not until 1953-54 that signs were also available of any worthwhile increase in industrial production. Hence, we may perhaps be permitted to characterise the first phase as being one during which the money market was biding its time against the day when acceleration in the tempo of economic activity would bring the banks face to face with the task of participating in the planned development of the country.

1953-54 constituted the turning point. The purchasing power released in the first two years of the First Plan had to be satisfied by additional production. Output in the private sector picked up perceptibly around this time. As a consequence, there was greater need of bank funds. Meantime, there was a quickening in the return to the money market of governmental disbursements. Not only was the idle capacity pressed into service for larger output, industry itself began to expand. New plant and machinery were being acquired. But, because the investment climate and the capital market were inhibitive, industry was compelled to finance its expansion through bank loans. That is to say, loans taken against stocks of finished goods were sometimes in part used really to pay for new plant and machinery. It is in this wise that short-term accommodation acquired from banks was put to medium term use. In the sense that a period of roughly three years elapses before such plant and equipment are paid for, short-term Advances in this behalf were inelastic for the period up to 1955-56. Because of the expansionary activities of the private sector, the distinction between the busy and slack seasons came to be obscured. This was because although, in early May of each year, bank finance advanced to agriculture from the previous November onwards started to return from the mofussil, the expenditure incurred, both to finance a higher volume of industrial production and to pay for new plant and equipment, caused the return of agricultural funds to be offset by an increase in industrial demand.

Because of this pressure upon Advances, the increase in Deposits in 1953-54 was barely adequate to cover the expansion in Advances in 1953-54 and 1954-55; and, in 1955-56, the expansion in Deposits fell short of increase in Advances by Rs 38 crores. So much so, by the eve of the 1956-57 busy season, the banks were clearly in an over-extended position. So apprehensive were the monetary authorities of stringency in the next few months, that the Reserve Bank had a series of consultations with bankers with a view to evolving measures to tide over the coming difficult months. The first decision that was arrived at that time was that the Reserve Bank would freely extend Advances against usance bills; and credit lines for a total of Rs 150 crores were approved by the Reserve Bank. In broad terms, this meant that the monetary authorities were prepared for the contingency that the expansion in Advances during the 1956-57 busy season would exceed the new accumulation of Deposits by Rs 150 crores. In all such discussion, however, no regard was had for one significant factor. On the one hand, governmental disbursements had, in 1955-56, reached their highest pitch in behalf of the First Plan. On the other hand, there was a very steep import surplus in 1956-57. Because of the considerable Government outlay on the Plan in the two immediately preceding years, it was to be expected that the Deposit resources of Scheduled Banks would beneficially feel the impact. But, then, the contractionary influence on Deposits of the import surplus was also at its most powerful. This is because it is in retrospect clear that the heavy import sur-

plus in 1956-57 was substantially on private sector account. It is, therefore, despite the sizable contraction in Deposits owing to import surplus that bank Deposits rose during 1956-57 by Rs 134 crores; the exchange reserves fell in that year, it may be recalled, by Rs 220 crores; and this figure of Rs 220 crores is net of drawings from the International Monetary Fund amounting to Rs 60 crores. It is thus that we would like to stress that 1956-57 marked the beginning of large scale accretions to Deposit resources of Scheduled Banks.

Then came a series of factors, as 1956 ended, which confused the banking situation. In the wake of the very heavy depletion of foreign exchange reserves, drastic import restrictions had been imposed; with the greater accumulation of purchasing power as a result of governmental outlay, in certain spheres of the economy, shortages began to be experienced and hence prices tended to rise. The commencement of the Second Plan saw a further growth in governmental disbursements. The greater bias of the Second Plan on industry and transport meant that a larger proportion of Plan outlays were in the monetised sector. The failure of two food crops provcked negotiations between India and the USA, and these, in turn, led to Public Law 480 Agreements whereunder foodgrains were to be imported on a vast scale. It is these five factors which have caused the banking situation to be what it is today, much more than midway past the Second Plan.

With the virtual embargo on imports, the import surplus that was measureable, as for example, in 1957-58, was mainly on public sector account. The lack of any significant import surplus on private sector account meant that there no longer was the contractionary influence of import surplus upon bank Deposits. To the extent that, in the future as well, imports on private sector account will have mainly to be on projects against which foreign credits can be arranged, the first important point that we make with regard to bank Deposits in the foreseeable future is that Deposits of the banking system will not suffer as a result of any contractionary influence arising from import surplus.

In the second place, counterpart funds in rupee currency have been and are being built up in respect of foodgrains obtained from America under Public Law 480. The agreements envisage that the bulk of such counterpart funds is re-lent or given as a loan to India for development purposes. Until the funds are actually disbursed, they have obviously served to add to the Deposits of the banking system. We have lately reached the stage where disbursements from the counterpart funds have begun. But there is the prospect that additional agreements will be entered into with India. Thus, over the short-term, one of the important implications of assistance under Public Law 480 is that the banking system benefits by accretions to its resources on a vast scale. Thirdly, we would again draw attention to the heightened tempo of Governmental disbursements from the commencement of the Second Plan. While it is intended that the conclusion of this article should point to the establishment of a clearly discernible link between Government outlay and bank Deposits, we may state here that, if such a link does exist, bank Deposits now and in the future are likely as a result to rise considerably.

Lastly, the industrial bias of the Second Plan, we wish to stress, will mean that less time lag is necessary for the osmosis process to return governmental disbursements to the banking system.

As we shall see, in another context, meantime, the demand for Advances has been moderated. As a result, free resources of Scheduled Banks have tended pronouncedly to increase. In effect, therefore, with their enlarged resources—and costly resources at that—not being able to afford to keep on any idle funds, banks have no option other than to add to their giltedged portfolios. To the degree that banks have extra resources on hand, they have been better equipped to deal with the task of financing the further development of industry. But we have still to see whether there is any connection between governmental disbursements and bank Deposits. The following table sets out the total of Central Government disbursements, in connection both with the Revenue Budget and Capital Budget, trends in Note circulation and gross Deposits of Scheduled Banks.

As at end of	Bank Deposits	Notes in Circulation	Revenue and Capital Expenditure*
1950-51	906.21	1247.41	489.59
1951-52	848.34	1141.11	618.59
1952-53	843.93	1153.12	606.44
1953-54	855.77	1185.92	786.89
1954-55	951.14	1277.09	873.31
1955-56	1051.02	1466.64	1131.37
1956-57	1185.54	1526.09	1237.06
1957-58	1481.39	1579.13	1574.42
1958-59	1638.13	1701.53	1653.98

*During the year; all figures are Budget estimates.

As already noted, Deposits declined in 1951-52 and 1952-53. These are the two years during which there was no considerable increase in Goevernment disbursements. These are the two years during which Notes in Circulation fell. But, as from 1953-54, a substantial quickening in all sectors of the economy can be observed. In the period till 1955-56, growth in the Deposits of Scheduled Banks does not compare favourably with the growth in Government disbursements. This fact, we are led to believe, is suggestive of the time lag element in the return of Government disbursements to the monetised sector. Moreover, the growth in Deposits during 1954-55 and 1955-56 took place at a time when the foreign exchange reserves in India showed little change. Thus, there was no import surplus to speak of, which could have had a contractionary influence upon bank Deposits. So, the rise in bank Deposits is net of any other influence which might have had a contractionist influence. Then, during 1956-57, bank Deposits rose by Rs. 134 crores, but the complaint continued to be made that the new resources accruing to the banks were not keeping pace with the enlarged demand for finance. The trend in Advances bears this out. As from March 1954, Advances began to rise, and, both in 1955-56 and 1956-57, the expansion in Scheduled Bank credit exceeded the increase in Deposit resources. Consequently, it was all too facile to foresee a persistent strain upon the banking system. At the time, not much was made about the possible beneficial effect of Government expenditures upon bank Deposits, but what was overlooked during 1956-57 was the fact that, in that year, the import surplus as measured by the decline in foreign exchange holdings amounted to the very considerable figure of Rs 220 crores. This is in spite of purchase of currencies from the International Monetary Fund to the tune of 127.5 million dollars in February and March 1957. In other words the import surplus, net of the IMF transactions, exceeded Rs 280 crores.

During 1956-57, as we have already stated, the import surplus on private sector account was very large indeed. Imports on private sector account have ultimately the effect of drawing down the foreign exchange balances; but, the immediate effect of such imports is to cause a decline in the Deposits of the banking system, since funds had to be drawn in order to pay for the purchase of foreign exchange. Thus, Deposits of the banking system increased by Rs 134 crores in 1956-57, a period during which the contractionary influence of an import surplus on private sector account was vast. It was clear, then, to those who had studied the situation with some care, that the tempo of rise in bank Deposits was rather higher than was suggested by the actual increase that took place in Deposit resources. By the end, of 1956, severe import restrictions had been imposed, and various other developments occurred in the economy, which together acted to reveal, in the next year, the full extent of the rise in Deposits.

On the face of it, even the rise in Deposits in 1957-58 continued to be partly camouflaged by a steep import surplus. However, it is known that the private sector's share in the running down of foreign exchange reserves was much smaller during 1957-58. That is to say, if, in 1957-58, there was a considerable decline in the foreign exchange reserves, this did not affect the trend in Deposits as such. But, because it related to disbursements in the Government sphere, what occurred was a moderation in the expansion of currency circulation. In spite of a very much higher level of Government disbursements during 1957-58, the bald fact remains that Notes in Circulation rose by scarcely Rs 50 crores. Thus, whereas, in 1956-57, the import surplus affected mainly the Deposits of the banking system, in 1957-58, this influence was largely felt in the sphere of currency circulation.

For reasons already stated, it is extremely unlikely that there will recur an import surplus of any considerable size on private sector account in the next few years to come. Consequently, it is fair to assume that the rise in Deposit resources of the banks, traceable to the growth of Government disbursements, is likely to be maintained so long as Government disbursements are maintained.

The implications of such improvement in the resources of banks are, as we have seen, three fold. A stage has been reached when banks are as anxious today as they were unwilling three years ago to extend new Advances. The problem of financing trade, commerce and industry has largely been solved. This is the first favourable implication of the growth of Government disbursements leading to the rise in bank Deposits. Secondly, with the yawning gulf between Advances and Deposits, the banks are bound inescapably to increase their investments in giltedged. This, of course, directly contributes to an expansion in the resources of Government. Thirdly, the greater financing possible by banks and the larger investment in giltedged by banks will both mean that taxable earnings go up and, therefore, the Government tax revenues also benefit.

Last Friday in March	SCHEDULED BANKS Gross Deposits	Total of Advances	Investments in Giltedged	RESERVE BANK Notes in Circulation	Exchange Reserves
1951 ...	906.21	546.81	NA	1247.41	884.18

(Figures in Rs Crores)

Trends in Bank Advances

WHAT time bank advances have touched new altitudes and rates paid by banks on deposits are suggestive of strain on resources and stress on the system, developments of a markedly favourable import to banks operating in this country received little notice and even less appreciation. It was as the 1957 slack season got into stride, that it became clear that the 1956-57 busy season, which, on its eve, was looked forward to as a testing and even critical period for banks, had witnessed trends and wrought changes which were of far reaching significance and which should be hailed as auspicious omens. There is, in various ways, a great parallelism between the 1951-52 busy season and the 1956-57 busy season, as this journal has repeatedly stressed in this context. It may be recalled that, at a time when crisis mongering was the fashion, we suggested that the forewarning of the difficulties to be anticipated in the 1956-57 busy season would impel the monetary authorities to take such fore-arming measures as would minimise the occurrence of intolerably stringent conditions.

In December 1956, we had suggested that the expansion in advances during the ensuing busy season would be between Rs 150 crores and Rs 200 crores, adding that we thought that the figure would approximate to the higher rather than the lower level envisaged. Secondly, in spite of the asseveration in some circles that bank deposits were not showing satisfactory increase, we put down accretions during the busy season as between Rs 75 crores and Rs 100 crores. Thus, we felt that the extra resources that would need to be found by banks would range between Rs 100 crores and Rs 125 crores. On the assumption that the busy season peak was touched on May 10, 1957, the expansion in advances actually worked out to Rs 175.53 crores: and deposits improved in an even more heartening fashion than we had dared hope, the increase over the period being placed at Rs 132.77 crores. The remaining resources for meeting the advances were found partly from disinvestment in Government securities and partly from an increase in borrowings from the Reserve Bank. Under the former head, banks were able to secure Rs 27.47 crores, the while that they increased their borrowings by Rs 31.83 crores. Thus, without fuss and without difficulty, the demands of the 1956-57 busy season were fully met.

The role of the Reserve Bank in thus enabling the banking system to discharge its busy season responsibilities cannot be exaggerated. The first step taken by the central banking institution was to encourage in every way possible the securing of advances against usance bills. The Reserve Bank prepared itself for meeting an "unprecedented" busy season by approving lines of credit against usance bills for a total of Rs 150 crores. Secondly, the Reserve Bank also made outright purchase of giltedged from member banks. Since there was a lag between the expansion of advances and the accretion to deposits, the peak of borrowings from the Reserve Bank was touched in the week ended March 29, 1957, when they were placed at Rs 103.16 crores; and, of this figure, Rs 71.54 crores represented borrowings against usance bills. However, by the time the busy season achieved its peak, deposits had improved in such wise as to enable a reduction of over Rs 13 crores to Rs 89.64 crores in borrowings.

It is at this juncture that we have to draw emphatic attention to the manner in which the reliance upon the Reserve Bank for meeting the 1956-57 busy season needs was minimised. This reduction, as we have made clear, was primarily due to the remarkable increase in deposits. We think that there has been an insufficient recognition of this factor in the working of the banking system. We would therefore, urge a closer study of this phenomenon of bank deposits. We present below a table of notes in circulation and bank deposits from 1951. The table will be found extremely revealing: the 1950-51 figure is taken as base and the figures thereafter are indices. Thus, in the following table, 1950-51=100.

Date	Notes in Circulation	Deposits
1950-51 ..	100.0	100.0
29-6-51 ..	108.1	100.0
27-6-52 ..	97.0	97.0
26-6-53 ..	97.8	97.7
2-7-54 ..	101.2	100.5
1-7-55 ..	112.9	113.8
29-6-56 ..	126.8	124.3
28-6-57 ..	132.6	145.4
27-6-58 ..	135.6	173.8
26-6-59 ..	147.3	194.4

It will be seen that the relationship between deposits and notes in circulation was more or less unchanged until the middle of 1956; thereafter, the improvement in deposits is out of all proportion to the increase in active note circulation. This pinpoints the significant thesis that we advanced in the columns of this journal that activity is such as to cause an in India, the tempo of economic expansion in deposits at a much faster pace relative to the increase in notes in circulation.

Secondly, a comparison may be made of bank deposits and bank advances with a view to discovering whether any relation can be noticed between them.

(In crores of Rs)

Date	Deposits	Advances
1-7-55 ..	998.63	617.71
29-6-56 ..	1090.99	754.47
28-6-57 ..	1276.41	919.08
27-6-58 ..	1563.42	902.77
26-6-59 ..	1788.59	984.82

It will be noted that, while the expansion in advances exceeded the rise in deposits during 1955-56, the obverse is true since 1956-57. We are reluctant to suggest it, but it occurs to us that, conceivably, this may be read as indicating that, as in the industrially advanced countries, new advances are creating new deposits.

While the subject at hand is the trend in bank advances, it will be necessary for us at this stage as incidental to our study to take into consideration various other factors relating to working of Scheduled Banks. First, in this regard, we may refer to Deposits and their high cost. This is because high cost in Deposits may be responsible for instituting a vicious circle whereby banks, in order to meet additional expenditure to be incurred on their Deposits, are willy-nilly compelled to seek an increase in their earnings from Advances; the resultant increase in the quantum of Advances—which, fortunately, is kept in check by the vigilance of the Reserve Bank—would once again cause the advances deposit-ratio to rise; as soon as this ratio reaches a high figure, again, there is once more an intention to lure new deposits at high rates; we have turned full circle, and banks now wish to increase their Advances.

However, we are certain that the tempo of increases in deposits, in future years, may be even further quickened. For, the Second Plan's stress on industrialisation, and therefore its disbursements being more greatly concentrated in the money market proper, will result in speedy benefit being derived by the banking system. Furtherfore, as we have just remarked, the mere fact of industrial development may have contributed to the establishment in this country of new advances creating new deposits.

Not only have the resources of the banking system sufficiently increased to enable the provision of expanded credit requirements postulated by the Second Plan, but it is also a fact that the accelerated tempo of activity has necessitated a sustained demand for funds. In the result, as against the experience of banks some years ago, when their funds were profitably utilised during the busy season and when, for the so called slack season, the ratio of idle funds was quite high, it happened for a while that the advances of Scheduled Banks, far from showing any slack season abatement, actually recorded an increase throughout the year; and the more fruitful utilisation of resources over the whole year naturally added substantially to bank profits. So, whether on the score of banking resources or on the score of bank profits, we would suggest that recent developments have been most heartening. But we are afraid that the banks have not understood these significant changes; for, they would otherwise have made the consequential adjustments. For one thing, it is incomprehensible that, at a time when bank deposits have risen so substantially, there should be a feeling that there is an acute paucity of resources and that, therefore, maxima of interest paid on Deposits should be so high. Indeed, the failure on the part of the banks to recognise the essentially favourable trend in the national economy did boomrang upon the banking system. Directly as a result of the deposits war, there has been a movement from demand liabilities to time liabilities. The following table analyses the ratio of time liabilities to total deposits:

RATIO OF TIME LIABILITIES TO TOTAL DEPOSITS

	1 Total of Deposits (In Crores of Rupees)	2 Time Liabilities	Ratio of (2) to (1) (Percentage)
24-6-51 ...	885.82	289.65	32.7
27-6-52 ...	859.28	300.63	35.0
26-6-53 ...	857.82	327.56	38.2
2-7-54 ...	881.97	335.62	38.1
1-7-55 ...	998.63	397.91	39.8
29-6-56 ...	1090.99	452.88	41.5
28-6-57 ...	1276.41	553.02	43.3
27 6 58 ..	1563.42	806.87	51.6
26-6-59 ...	1788.59	1028.10	57.5

Since the middle of 1957, there has been a switch from demand liabilities to time liabilities; in other words, more and more of deposits on which little or no interest is paid is being transformed into interest bearing liabilities. We would here refer to a study made by a banker friend, whose essential conclusion is that, with the raising of interest rates offered by banks, the cost of new resources to the banking system during 1956 worked out to the incredible figure of 15 per cent or thereabouts. We should hasten to point out that this study has worked out the ratio of the increase in interest paid to the increase in deposits. This, of course, is an over-simplification, since the higher level of interest charges also relates to the higher interest being paid on the then existing deposits as well. But, to this, the retort is that, had there been no such increase in the deposit rates, the increase in the expenditure under this head would have been very much less.

It seems to us a task of primary importance that some action is taken in respect of the rates of interest paid by Scheduled Banks.

We would again refer to the fact that banks today are, by virtue of the pace at which their resources are being added to in various ways, in a position of strength. The banking system can, therefore, borrow from strength; and borrowing from strength implies that interest offered is reduced.

We have thus far taken up one particular aspect of the banking system; and there are two other matters which, in our opinion, need also to be appreciated. The first of these relates to what we may call a new classification in the breakdown of assets and liabilities. Although the augmentation of deposits is, in comparison to the increased demand for funds at a satisfactory pace, we must make allowance for the fact that the banking system will be from time to time, in need of replenishing its resources by borrowings from the Reserve Bank. For, it is a recognised tenet of the monetary authorities that finances must be fully available for all productive ventures. Therefore, the expansion in advances may, at periods, be at a rate exceeding accretions to deposits. Thus, it may be that the advances-deposits ratio is shown much higher than what used to be the traditional 60 per cent or so. We would think that the banking system is reconciled to this ratio going above the 70 per cent mark. For purposes of a bank's balance sheet, sometimes the advances-deposits ratio even offers a distorted picture. To correct this, we would suggest one of two alternatives. On the one hand, advances in the form of bills purchased and discounted could be omitted for purposes of determining the advances-deposits ratio. On the other hand, where there have been borrowings against usance bills, such borrowings and the usance bills so pledged could be shown as contra items. A ratio so arrived at would not, as is the case now, present a distorted picture.

The second suggestion that we have has regard to the convention of liquidity ratio in the UK banking practice. While there is no such convention in this country, Indian banks are statutorily required to keep 20 per cent of their deposits in cash plus unencumbered securities. In actual practice, most banks have holdings of unencumbered securities plus cash in excess of this statutory minimum of 20 per cent. But we feel that there is a good case for raising this minimum to 30 per cent or even 35 per cent.

As we have seen, it was during the 1956-57 busy season that, in respect of bank resources, matters came to a head. Hence, our rather detailed discussion of the period till that time, particularly in respect of Advances. The experience since the 1957 slack season has been one where, for a number of reasons, there appears to have been a deceleration in the rate of expansion of Advances. We may briefly sum up the reasons which contributed to this slowing down in the rate of growth of Advances.

Firstly, drastic import restrictions were imposed by the end of 1956. As a consequence, on the one hand, less of bank credit was necessary to finance imports; while, on the other hand, the difficult foreign exchange situation also effectively reduced, for a while, the quantum of bank accommodation necessary in respect of those industries which depended upon imports for their raw materials.

Secondly, the period since the middle of 1957 and up to the end of 1958 witnessed some extent of slowing down in economic growth in the country. During the First Plan, the increase in industrial production had been achieved by pressing idle capacity into service. By the time the Second Plan began, there was little by way of idle capacity from which additional output could be secured. In other words, new production had to wait upon the setting up of new capacity. We suggest that private sector imports during 1956-57 were considerably in the form of new plant and equipment. But such new plant and equipment could not be expected, for some time, to result in new production. Hence, the 18-month period up to the end of 1958 was a time during which slackness in the economy was to be discerned.

Thirdly, Advances were also less dynamic, as it were, from the middle of 1957 because two consecutive agricultural crops had been relative failures and, consequently, the extent of accommodation for agricultural finance was less. In this regard, moreover, in view of the upward trend in the prices of foodgrains arising from shortages in food, the Reserve Bank issued directives restricting Advances in this respect, and this was one more reason why Advances tended to be sluggish.

Meantime, from the high level of Advances to cotton textiles at the beginning of 1957, there was a very slow and gradual decline in stocks with cotton mills, so that financing in this respect also tended to be less. Furthermore, the cotton textile industry was itself compelled to reduce output, due to a decline in demand and, hence, the financing of cotton textile production was also of smaller magnitude.

We now come to the 1958-59 busy season. Although the busy season got off to a late start, the expansion in Advances over the period constitutes the highest on record. This is because there is reason to believe that industrial production, so long sluggish, tended emphatically to rise from about this period. Then, the seasonal demand for funds also rose considerably, because the current agricultural crops were bumper ones. To this, we have to add the distinct possibility of some banking credit being utilised for speculative purposes, a gambit which was recognised by the Reserve Bank in February 1959, whereupon Mr H. V. R. Iengar called upon Scheduled Banks to observe restraint in the further expansion of Advances during the busy season. But it is the first two reasons which, we believe, were mainly responsible for record expansion amounting to Rs 182 crores in the 1958-59 busy season. This was a period of some strain to the banking system, because, meantime, until the period ending, say, November 1958, the high cost of Deposits compelled them to increase considerably their holdings of giltedged. Thus, with Deposits rising at the same time, the Advances-Deposits ratio, by the peak of the 1958-59 busy season, did not touch too high a level. Nevertheless, the 1958-59 busy season seemed to suggest that expansion in Advances again tended to outstrip the accretion of new resources by way of Deposits. However, with the beginning of the 1959 slack season, it became quite clear that the trend in Advances is now much more healthy. Near the half-way mark of the 1959 slack season, Advances had already contracted by over Rs 62 crores from the peak touched during the previous busy season. Allowing for some element of increase, net, in Advances as a result of the growth in the economy, this seems to suggest that the expansion in Advances during the 1958-59 busy season was not untoward, for the simple reason that the decline in Advances during the 1959 slack season is tending to be of satisfactorily large proportions.

What of the future? Inevitably, with increase in Indian industrial production, no less than in agricultural production, there should occur a sustained net rise in Advances with, for the second reason, an increasingly sharper expansion in Advances during the busy season. In other words, inescapably, the banking system and the monetary authorities must be prepared for a steady, sometimes substantial, and sometimes steep, expansion in the Advances of the banking system. All that the monetary authorities must satisfy themselves about is that the new Advances are the legitimate result of an expansionary economy.

While on the subject of Advances, there is one more aspect that we would like to touch upon. We have already remarked that, from some time in April 1956, some part of short-term credit obtained from banks was put to medium term use —that is to say, for the purpose of new plant and machinery—because of an unfavourable capital market. Today, the investment climate is very much better, but there would, nevertheless, be need for medium term credit on the part of industry. It is true, the Refinance Corporation has already come into existence with the avowed purpose of extending medium term credit to medium scale industries. But, so far, nothing much seems to have been done. It may be that, so long as the investment climate continues favourable, industry may not feel the lack of the proper and requisite facilities in respect of medium term credit. Nevertheless, it is an essential part of the money market that medium term resources are freely available for industry, so that industrial production is helped steadily to rise. Since it is the objective of the Reserve Bank, no less than that of Government, that industrial production in every way be encouraged to rise, we believe it to be an important duty of the central banking authority that constructive thought be paid to enlarging, if we may use the word, the activities of the Refinance Corporation.

There should, in this regard, be little difficulty about finding the resources for the RFC. It may be recalled that, over and above its capital, the RFC starts out with an element of Rs 26 crores allocated from counterpart funds under Public Law 480; and counterpart funds should, if and when necessary, be a source of further assistance for the RFC.

Banks and Government Borrowing Policy

WHILE, under the impetus and inspiration of Mr T. T. Krishnamachari, the Reserve Bank, in connection with the bill market scheme, effected such liberalisation as has endowed the banking system with the potential resources, which can be converted into actual resources in response and in proportion to the demands, there are abundant and gratifying omens that analogous changes of a favourable kind, in compliance with preessure and advice from the same source, were carried out in respect of giltedged policy and open market strategy. There is an element of relationship between the new policy vis-a-vis the banking system and the new policy vis-a-vis open market operations. The link is that both the policies are calculated to augment the availability of central bank credit to the scheduled banks.

The difference in purpose is even more significant. The liberalisation of the bill market scheme is designed in the interest and for the benefit of the private sector. The liberalisation of the open market strategy is designed in the interest of the public sector. The first has to do with the working capital requirements of industry and trade in the realm of free enterprise. The second is concerned with the capital needs of the projects promoted in the sphere of State ownership.

The new policy may, in brief, be described as the reversal of that which had held sway for over five years. On November 15, 1951, to be exact, the Reserve Bank announced a rise in the Bank Rate and coupled it with a declaration which amounted to a virtual cessation of open market purchases of securities. In the Bank Rate Supplement issued by Indian Finance at that time, we questioned the competence, and doubted the wisdom, of the Reserve Bank in thus setting an openly proclaimed limitation on the wide charter of open market strategy conferred by the Reserve Bank of India Act.

The limitation remained in force till late in 1956. The immediate effect of that policy was a disastrous fall in giltedged values. During this period, the Reserve Bank was mainly a seller of securities in its open market operations; and, as and when it did buy securities, it insisted that the seller should buy from it other categories of securities for a corresponding amount. Soon after the initial landslide, the Reserve Bank indicated that prices had declined low enough, and that stabilisation at such low levels was desirable. 3 per cent 1986 conversion loan, the barometer of the giltedged market, suffered a fall from Rs 96 to Rs 81 and was stabilised round-about the latter price. Then, early in 1956, it suffered another calamitous fall until the Reserve Bank indicated its readiness to support the price at Rs 73. Of the many vicissitudes through which giltedged in India had passed since the first World War, the period between mid-November 1951 and end-December 1956 constitutes the cruellest era for the investor in government securities.

During the few days when the list for a new loan remains open, the investor is coaxed and cajoled; he is called upon to subscribe in the name of patriotism; and even an appeal from the universally admired and loved Prime Minister is pressed into service. Once the list for the loan is closed; official attitude to the investor is: "Let him wince. How is that our concern?" This blend of defeatism and opportunism was the giltedged policy on which was based the open market strategy of 1952-56.

We have reasons to think that, in the Reserve Bank's open market policy, since 1956, there is not any outlook of defeatism or any attitude of opportunism. For, the worst sufferer in such a regime is the Government; and if the large market loans needed for the implementation of the Second Plan were to be successfully pilotted, Government's policy with regard to giltedged should be self-confident and confidence-inspiring; in this view, what benefits the investor can alone benefit the Government; and conversely, what hurts the investor must be greatly damaging to the Government.

Of this change from defeatism to optimism, and of Authority's awareneses of the mutual ties between the investors and the Government, there has been convincing testimony in the period since 1956.

The first emphatic evidence of such a new attitude was the support given to the 1956 State Loans which in spite of (and, in some cases, because of) their spectacular success, performed a nose-dive and, for a few days, had all the look of being utterly orphaned. Mr C. Subramaniam, Finance Ministere of Madras, took the initiative in this matter and approached the Finance Minister for permission to divert to open market purchases such amount as was in excess of the target originally fixed for the State Loan. The example of Madras was quickly followed by other States; and those who had subscribed for the Loans were soon able to feel reassured that Government support for the maintenance of prices would be forthcoming when needed. Not all the State Finance Ministers are verst in the rites and schooled in the virtues of open market strategy; and it is up to the Reserve Bank and the Finance Ministry to put them wise in this respect so that, in regard to future State loans, the Reserve Bank could, without delaying formality, take timely steps to implement open market strategy.

The next significant evidence of the new giltedged attitude was the Reserve Bank's declaration of its willingness to buy securities maturing up to 1961 without the seller being obliged, as till then, to buy back aught else in return. This was soon followed by unofficial hints that the Central banking institution would be prepared to buy, without conditions, also securities of any maturity. That the Reserve Bank did, in fact, buy large parcels of securities, was indicated by the substantial rise in the Bank's Investments in the weeks ended February 15 and 22, 1957.

The same solicitude for the well-being of giltedged is discernible in the limited character of the higher cost of Central bank credit. The four per cent interest applies only to scheduled banks and definitely excludes the credit extended to the Government on the one hand and to co-operatives on the other. The recognition of the likely effects of such a selective and flexible control of interest is responsible for the brave showing which giltedged securities have made, particularly February, 1957.

The new policy has, thus, the following facets: (I) It is recognised that open market strategy can no longer be confined to Central Loans, but must also embrace State Loans; (2) State Finance Ministers are being educated in the uses and techniques of such a strategy; (3) Open market strategy has to abandon the thesis that the Reserve Bank will buy securities only on the basis of a "swap"; (4) Likewise the thesis that the Reserve Bank will buy only very short-dated securities has to be discarded; and (5) If open market strategy is to be effective, it must be set in motion at the right time, in vigorous style and on an impressive scale. The aim, the way and the goal of such a strategy is robust confidence in the credit of the Government and determination to cherish, defend, uphold and support that credit.

Operating from this position of strength, the stage is soon reached when the investors' confidence is so reinforced that they emerge as buyers on a steadily increasingly scale. The pressure of buying must be fostered to become more broad-based. Then is the time to offer a suitable type of security through the tap. The sales through the tap should be closely watched; and, when conditions are propitious, the tap-rate must be stepped up. This would soon bring about conditions warranting a further increase in the tap-rate. The sales will snowball by this process; and, in appropriate stages and by appropriate margins, the stepping-up of the tap-rate must continue.

Those who are now in the Finance Ministry and at the Reserve Bank at the level of policy decisions may not be aware of details of the two experiments carried out in the first half of the forties with striking results and on a vast scale. The credit for the first goes to Sir Jeremy Raisman who applied this technique to 3½ per cent undated stock; and that for the second goes to Sir Archibald Rowlands who applied the same technique to 3 per cent 1970-75 loans, the prices in both cases being stepped up from Rs 96 to Rs 100, and the tap sales accounting for the disposal of considerable parcels of these stocks.

It is not as generally known as it should be that the sums received through tap sales on the basis of this ascending grade of rates form a significant proportion of the total amount which Government succeeded in mobilising from the market first for defence loan purposes and later as part of the anti-inflationary programme.

Conditions as created by the new outlook on giltedged and by the new concept of open market strategy are, we believe, favourable to the successful revival of techniques of tried and proved worth.

In this light, experience has proved that, from the time that certain changes were effected in the Government's monetary policy, there has been a wonderful transformation of the capacity for the absorption of giltedged. Government borrowings during the period of the Second Plan are seen to be as follows:

	Central Govt.	State Govts.	(in Rs crores) Total
1956-57	157.73	68.71	226.44
1957-58	136.17	9.91	146.08
1958-59	201.81	54.42	256.23
1959-60*	183.84	60.00	243.84

*Estimate.

That, in this greatly increased absorption of giltedged, the greatly accentuated demand for giltedged on the part of Scheduled Banks had an important bearing can be seen from trends in the holdings of Government securities of Scheduled Banks:

End of	(in Rs crores)
1955-56 ..	359.90
1956-57 ..	347.18
1957-58 ..	440.45
1958-59 ..	613.37
July 24, 1959 ..	688.43

While, undoubtedly, part of the reason for this improved showing of Government borrowings is to be ascribed to Authority's realisation that they were in a position to borrow from strength, we must also note, at this stage, that trends in Deposits and Advances were such as to compel the Scheduled Banks squarely to face and then to solve the problem of utilisation of idle resources. It is in this sense that the increased demand for giltedged, consequent to a sustained increase in Deposits and no corresponding rise in Advances which, in compelling greater Scheduled Bank interest in giltedged, was a significant contributory factor, in the strengthening of the giltedged market. Indeed, that it is Government which have been borrowing from strength is brought out by the fact that, whereas, at the end of December 1957, holdings of securities which matured between five and ten years accounted for 31.4 per cent of the total investments of Scheduled Banks, the particular figure rose to 38.8 per cent by the end of December 1958. Furthermore, with no short-dated securities issued so far in the Government's borrowing effort in 1959-60, the maturity pattern of the holdings of Scheduled Banks should, at the end of 1959, show that the largest block has a maturity period between five and ten years.

As far as can be foreseen, as we have already noted, Deposits are likely to be headed upward. At the same time, also for reasons we have already indicated, the trend in Advances should be one of moderate rise. Therefore, again as far as can be foreseen, prospects are for the effective giltedged policy that came to be evolved early in 1957 to be strengthened year by year.

Selective Monetary Control

THE circular letter addressed to Scheduled Banks by Mr H. V. R. Iengar, Governor of the Reserve Bank, in June 1957 was interpreted in some quarters as the orthodox beginnings of a credit squeeze. Such an interpretation was quite wrong, as will be shown by a study of the various measures set afoot by the central banking institution since the commencement of the Second Plan. Not credit squeeze, but credit restraint as part of the Reserve Bank's selective monetary control is what is comprised in the Reserve Bank's communiques in this regard since then. To understand what selective monetary control is, it is necessary to be appraised of a brief resume of some of the measures instituted by the Reserve Bank in recent months.

At the outset, it may be stated that the Reserve Bank is showing a lively awareness of the duty that it will need to perform in the course of the Second Plan. Its vigilance and watchfulness have time and again been displayed since the beginning of the Second Plan. This selective monetary control first showed itself in the directive from the Reserve Bank, in May 1956, that Scheduled Bank credit against foodgrains should, in view of the speculative interest directed to this commodity, be curtailed. A few months later, in September, there was again an occasion for the Reserve Bank to advise the banking system that its advances in another sector of the economy should be reduced. The pre-Puja rise in prices of cotton textiles led to the Reserve Bank directive in September of 1956 that advances in this regard should be brought down. Meantime, flexible monetary control had also the aspect in which, not restriction, but liberalisation of credit was called for. To this end, on the eve of the 1956-57 busy season, the Reserve Bank made it known that the needs of the busy season must be within the capacity of the banking system to meet. Scheduled Banks were encouraged to replenish their resources by borrowing from the Reserve Bank against usance bills. The sign and symbol of the central banking institution's wideawakeness in this matter was the greater weight given, from that time, to the bank under whose auspices the advances against usance bills had been made. It consequently became possible for the Reserve Bank to approve credit lines to the amount of Rs 150 crores against usance bills. The effect of these prudent preparations was that the 1956-57 busy season proved less awesome in its rigours than had been anticipated.

Again, in 1957, speculative pressure on foodgrains came to be more pronounced. Swift action followed: the Reserve Bank directed that, according to a phased schedule, Scheduled Bank credit against foodgrains ought to be cut down. Thus, by June in 1957, selective monetary control as a policy was already on its way of having been tried and proved effective.

It has been known that Mr H. V. R. Iengar has, since he took over the reins as Governor of Reserve Bank, been in the process of clarifying for himself and for India's financial authorities the task and role which the Reserve Bank would be called upon to play in the emergent economic conditions of the Second Plan. That task, put simply, will entail some careful tightrope walking. To fall to one side would be to allow the country to be overcome by the forces of inflation. To lose one's footing and fall the other way would be to court the economic disaster entailed by any curtailment or abandonment of the Plan. Thus, Mr Iengar's difficult chore has been to ward off inflationary pressures in the less resistant sectors of the economy, while, at the same time, ensuring that sufficient money was available to make a success of India's industrial progress. It would now appear that the Reserve Bank Governor is clear in his mind as to the line of action he will need to take over the period of the Second Plan.

The announcement came from Bombay early in July 1957 that sugar was a sector of the economy in which the Reserve Bank had sound reason to believe that bank credit was being utilised for speculative purposes. In stating that the price of sugar had risen unconscionably, particularly in view of the fact that the year's production had marked an increase of over 10 per cent, the Reserve Bank then directed that, as from July 26, advances against sugar should not exceed 110 per cent of the level in the corresponding week of the previous year. The 10 per cent cushion, it may be added, relates to the increased advances necessary for the higher level of production achieved.

We should add here that the Reserve Bank directive on sugar advances did not specify that, in working out the admissible level, export financing is to be excluded. It was not the intention of the Reserve Bank to place a hurdle on sugar exports.

It has also become known that selective monetary control is part and parcel of the Reserve Bank's armoury of monetary weapons. A spokesman of the Reserve Bank stated: "It is our intention to make use of this credit control wherever it is found necessary". The spokesman added that the Reserve Bank would not hesitate to issue a directive calling upon scheduled Banks to restrict credit against commodities in which the price rose beyond a reasonable level.

It may be emphasised that it is not the Reserve Bank's intention to prescribe a credit squeeze as the panacea for, inflationary pressures in particular sectors of the economy. On the contrary, the central banking authorities will seek by means of selective monetary control, to minimise the scope offered for speculative activity in those sectors by restricting the availability of bank credit against those commodities. Moreover, as Mr Iengar stressed in his first circular letter to banks, it is not the Reserve Bank's policy to take any measures which will affect, disturb or disrupt the progress of the industrial projects. In his circular letter, Mr Ienger had stated, as a general proposition, that the level of bank credit must be reduced. This reduction was to be in respect of advances against agricultural commodities in the slack season and generally accommodation against all commodities likely to be in short supply. In this context the Reserve Bank Governor said:

> "It seems particularly necessary to exercise caution in respect of imported goods, as, in view of severe licensing restrictions, these goods are likely to become scarce and to be hoarded in anticipation of rising prices".

Mr Iengar had also explicitly stated that the Reserve Bank does not suggest a reduction in what may be called productive advances. As he put it, it should be possible for banks to reduce their volume of credit without diminishing their assistance to the essential sectors of the economy, and, in particular without affecting the rising trend in industrial production".

In a word, the Reserve Bank's policy is: Discourage advances which might aggravate inflationary tendencies; be particularly wary of accommodation against commodities likely to be in short supply; and, by these means, sufficient resources will be available for providing the full quantum of advances needed for speeding up industrial production.

The June 1957 circular letter was, it was later clear, the first of a series to be addressed by the Reserve Bank Governor to the Scheduled Banks. Late in February 1959, Mr Iengar felt that the pace at which Advances were expanding during the 1958-59 busy season seemed to be more than would be warranted by the legitimate needs arising from the financing of crops, etc, as the following table shows:

Year	Expansion in Busy Season November-April
1955-56 ..	Rs 165 crores
1956-57 ..	" 148 "
1957-58 ..	" 89 "
1958-59 ..	" 182 "

At that time, he urged that the Scheduled Banks might exercise moderation and show a restraint in the further expansion of credit during the busy season. But, by the time the 1958-59 busy season ended, it went on record as having witnessed the largest net expansion ever. It is here that Mr Iengar indicated precisely the role of the Reserve Bank as watching over the Indian monetary situation. In a circular in June 1959, after drawing attention to the record expansion of bank credit, Mr Iengar stated:

> "To the extent that credit has been expanded for the purpose of industrial production, including maintenance of stocks of raw material at reasonable levels, it is fully justified. Indeed....I specifically pointed out that such expansion is not merely justified, but the legitimate functioning of banks. It does not appear, however, from such information as is available to the Reserve Bank that the expansion that has taken place could be fully justified on these grounds."

We have here the emphatic assertion that, as far as the Reserve Bank is concerned, selective monetary control is not by any means intended to withhold credit for purposes of production. But, in an economy that is functioning under strain, where shortages are inevitable, it is the Reserve Bank's duty to ensure, through selective monetary control, that Scheduled Bank credit is not utilised for the speculative withholding or financing of stocks. Hence, the series of directives from time to time calling upon Scheduled Banks to restrict advances against particular commodities. Over and above this, there is the fact that, on the eve of the slack season, the Reserve Bank Governor has stated it would be desirable for a certain minimum contraction in Advances being achieved. This, of course is to ensure that the financing of the busy season that follows will present a less serious problem. It is in this way that Reserve Bank policy is geared to planning in India—ensuring the supply of resources for production, while prohibiting the availability of credit for speculation.

THE PUNJAB NATIONAL BANK LTD.

Head Office: NEW DELHI

UNDER SECRETARY TO GOVT. PUBLIC DEPARTMENT 11 AUG 1959

Emerging Role of Exchange Banks

THE financing of trade between the industrialised West and the under-developed or undeveloped countries east of Suez was long the monopoly of the Eastern Exchange banks. In particular, in the days when the British Empire was witnessing its most prosperous era, the trade-banking structure was established on such firm foundations as to have ensured for the exchange banks of British origin a long tenure of useful, and not to say profitable, working. But that which had taken root over a period of a century and more was swiftly upset in the brief space of three decades. The beginning of the Second World War was to mark the beginning of a new phase in the operations of exchange banks.

While the war years as such are not germane to this study, it needs to be pointed out that the war itself was significant in the impact it had upon the region in which, over the years, the exchange banks had built up their business. It is possible to suggest that the Second World War was indirectly responsible for the intensification of the struggle for freedom on the part of the colonial and subject countries east of Suez. Be that as it may, the fact is that the immediate post-war years saw the gaining of independence by a number of countries in the area. Such new-won independence has, in a variety of ways, changed the outlook for the exchange banks and transformed the role that they usefully could play in the world economy.

Firstly, one might say that the opportunity for and the prospect of trade with industrialised countries other than Britain began to open up. Although, in the event, British trade with its erstwhile colonial markets has actually increased, it remains nevertheless true that, on the part of the undeveloped countries, there is to day more of a tendency to pick and choose the country from which they make their purchases.

Secondly, indigenous banking was, in the first flush of freedom, not disposed to permitting the exchange banks solely to be responsible for the financing of foreign trade. Banks in this area began to spread out and to interest themselves in what had hitherto been an area of operations closed to them. Such banks with greater seriousness and earnestness set about the establishment of branches oversea, so that they could capture in part at least some of the banking business comprised in foreign trade.

Thirdly, the intensification of the cold war between the democracies and Soviet Russia, and the attempt by the latter to open up trade links with the undeveloped countries, were both reflected in the completion of the trade cycle: as in the days when man first began to exchange goods, the so called Iron Curtain countries were anxious to arrange barter deals. That, in fact, such deals have been put through meant that there was a diminution in the trade to be financed in the normal way by exchange banks.

Fourthly, the revolutionary change in the political composition of South-East Asia and West Asia was responsible for some areas being lost altogether to exchange banking.

Finally, Britain's continuing financial difficulties, and especially its almost unceasing battle against inflation, have rendered more troublesome the task of the exchange banks in finding additional resources within Britain.

It is at such juncture that Chairmen of Exchange Banks, almost coincidentally in 1957, began to give expression to the changing role of Exchange Banks. What follows are some of the points made by Exchange Bank Chairmen in that year.

It is in this light that we can appreciate the description by Mr V. A. Grantham, of The Chartered Bank, of its New York office as one "which progressively increases in importance in our branch system"; and also his reference to the Hamburg agency as "an active link between our branches in the East and trade and industry in West Germany". We can, moreover, expect the eastern exchange banks to establish new links in the industrialised West with which the undeveloped East is likely to do increasing business.

The challenge offered by the increasing participation in foreign trade by indigenous banking is another matter. In India, for example, the United Commercial, the Central Bank, Indian Overseas and the Bank of India are already accounting for a fair share in the financing of foreign trade; and the prospects are, if anything, that the participation will steadily increase. Mr Grantham offers a clue as to the manner in which this challenge is to be met; but, of this, later.

Sir Evan M. Jenkins, of The Eastern Bank, has referred to the renewing of "the agreement for the shipment of sheet rubber to China" by Ceylon. The Chartered Bank Chairman states that, in theory, "half Burma's exportable surplus of rice during the present year....is committed for shipment on barter account". That the exchange banks have not been quite happy about such barter deals is to be inferred from the assertion by Mr J. K. Michie, Chairman of the National Bank of India, that "there is a welcome trend to curtail barter transactions". It is true, it may be remarked in this context, that the agreements for exchange of goods have usually been of advantage to the Communist countries, and not the other way around. To the extent that Burma, Ceylon and Pakistan have all fared disappointingly in barter deals, the prospect may be one wherein less of such arrangements will be concluded. At the same time, however, any increase in trade with the Communist countries (with one exception) will stand to reduce the scope for the exchange banks.

The one exception lies in the possibility of reopened trade ties by Communist China. Japan, of course, is anxious that normalcy should be restored in trade with China. Sir Kenneth W. Mealing, of The Mercantile Bank, has expressed the view that Japan may probably have "closer trading relations with China". Mr Grantham is even more explicit in this regard: The Japanese authorities "are obviously trying to hedge against the disastrous effects that a recession in the United States could have on Japan's economy." To this end, he states that Japan "must make certain of larger participation in the China market, which involves delicate negotiation with the United States".

Britain, too, would not be averse to increased trade with China. But, so long as the US is determined not to recognise the fait accompli in China, and so long as the cold war continues, trade with China may not much increase.

An interesting paradox is also available on China. Sir Kenneth Mealing records the "further substantial progress" toward "the final settlement of our affairs in Shanghai." The Mercantile Bank, in other words, is out of the picture in China, though Sir Kenneth complains that "no progress has yet been made" in the steps agreed to be taken with a view to closing the books. On the other hand, Mr

The bank receives deposits, gives advances against approved securities, purchases bills, sells drafts and telegraphic transfers and transacts all types of Foreign Exchange business. Through its internal and external network of branches and world wide business arrangements it provides every kind of banking service.

RUPEE TRAVELLER CHEQUES ISSUED IN CONVENIENT DENOMINATIONS

G. D. BIRLA *Chairman.*

S. T. SADASIVAN *General Manager.*

Grantham reports that, "under encouragement from the authorities", The Chartered Bank is again participating "directly in mainland China's oversea trade". It is, therefore, open to question whether China will choose to make use of the available foreign exchange banking facilities, when its trade returns to normal levels.

One more obstacle that was faced by the exchange banks was the disparity between bank rate in Britain and in the countries in which they operated. This rendered it relatively uneconomic for funds to be obtained in Britain for use elsewhere. The money market tightness, especially in India in 1956, is a topic touched by every Chairman. Mr Grantham remarks that "more and more strain is being put on the banks who, whilst unable to attract sufficient extra deposits, are being faced with demands for fresh or increased facilities, and we for one have reluctantly been unable to entertain many of the propositions placed before us". The manner in which this difficulty is overcome is indicated by Sir Evan Jenkins: "Banks, including ourselves, are making free use of the Bill Market Scheme, under which borrowing from the Reserve Bank of India is permitted against bills". Sir Kenneth Mealing has referred to the anxiety caused by "the monetary stringency in the Banking system", among other factors. And the difficulty faced by banks is, as Mr Michie points out, that they, "while assisting their customers to the greatest possible extent, have the mundane and paramount duty of maintaining a reasonable liquidity and that can be achieved only by finding more deposits or by restricting their lendings".

It is possible to suggest that, arising from the factors mentioned earlier in this article, the competition that will be faced by the exchange banks is likely to be aggravated in the near future. But this does not mean that fewer opportunities will be offering to them. On the contrary, there is one more development in the countries of this region which is of heartening significance. We refer to the fact that, since independence, the undeveloped countries have drawn up and are proceeding with the implementation of schemes intended to bring about a quicker tempo of industrialisation. This fact may be said in two ways to throw up what is at once a challenge to and an opportunity for the exchange banks.

Planned industrialisation will entail much larger imports on the part of the under-developed countries. That is to say, the quantum of trade to be financed by the banking system is likely to rise considerably. Furthermore, the variety of financing required is unique, and possibly beyond the ability or capacity of indigenous banking. But the exchange banks are ideally equipped to take on hand the new business that is emerging.

Both Mr Grantham and Sir Oliver Franks of Lloyds Bank have recognised this new role of the exchange banks. The Chartered Bank some time ago promoted the CBI Development Corporation Limited, a wholly owned subsidiary; and the Corporation is intended "to engage in medium-term and similar credit operations connected with economic development in the eastern countries to which the oversea representation of the Bank extends". Sir Oliver has made a detailed study of this "relatively new form of accommodation". As the Lloyds Bank Chairman notes, although medium-term credits are not altogether new, "the way to an expansion of this method of assisting exporters" has been cleared by the authorisation of the "Export Credits Guarantee Department to provide direct guarantees to British banks for a large proportion (normally 85 per cent) of the amount in question". Exchange banks should not find it difficult increasingly to offer medium-term loans; for, Sir Oliver makes the following points: (1) "The Export Credit guarantee embraces by far the greater part of the lending"; (2) "any unguaranteed portion is covered by normal banking procedures"; (3) "these credits are actually more liquid than an investment in bonds of similar maturity, for under the terms of the contract a substantial proportion of the outstanding amount is coming back each year"; (4) "these operations combine safety and enterprise, offering a profitable use for our resources"; and (5) "it is satisfactory to have been able to play our part in developments so clearly and directly in the national interest".

Confining ourselves to India, it will be seen that industry in this country would find greatly helpful any facilities available in the form of medium-term foreign credit. In the light of our present foreign exchange position, it has become incumbent upon both Government and industry to secure all possible credits in foreign exchange. For Britain's part, its export sales to India will be facilitated. The exchange banks, by dint of their operations in this country, are in a position to judge the merits of those who apply for such credit and accommodation. Secondly, their resources would allow them to increase the level of advances. Thirdly, in Sir Oliver's words, such credit is "in the national (British) interest". The challenge before the exchange banks is, as Mr Grantham has put it, that they should realise that their "endeavours in the East must in future be related to common economic interest". The measure of the challenge met will lie in the extent to which exchange banks provide the new kind of accommodation— medium term credits.

An Analysis of the Inter Bank Call Market 1951-57

By C. B. PADMANABHAN.

NATURE of the Indian Money Market—The simultaneous existence of of an organised and an unorganised sector is a unique feature of the Indian money market as of the money markets of other under-developed economies of South East Asia. While the organised sector consists of the Reserve Bank of India, the State Bank of India and all the foreign banks as well as the Indian scheduled banks and unscheduled banks, the unorganised sector is dominated by indigenous bankers and money lenders. An intermediate position is occupied by a number of co-operative institutions which have been set up mainly to replace the money lenders. "Quasi government bodies and large sized joint stock companies also participated in the operations of the money market as lenders, the money lent by them usually being termed as house money" (1) Thus in 1957, the total money supply was Rs 2,274.94 crores of which only Rs 748.75 crores or 37.3% was accounted for the deposit money. (2) The absence of banking habits and the lack of development of the organised sector are both indicated by the low level of the above ratio as compared with the corresponding ratios of other countries, which are given below:

Year	Country	Ratio of deposit money to money supply-percentage	
1953	U.K.	72%	
	U.S.	79%	
	France	50%	(3)

The Need for a Well-Developed Money Market:

A well developed money market is essential—especially in short term funds for the smooth flow of funds for purposes of trade and for the efficient working of the commercial banks and as the "basis for an effective monetary policy". (4) Such a requirement is partially fulfilled in the prevalence of the inter-bank call money market which is localised in the 3 centres, Bombay, Calcutta and Madras.

What is the Inter-Bank Call Money Market?

A money market is the place for dealings in monetary assets to meet the short term requirements of borrowers. It is the place where the short term investible funds at the disposal of the banks are let out to other banks in need of funds. The London Discount Market provides an outlet for the surplus cash of the London commercial banks. Such a discount market being absent in the Indian Money-Market, commercial banks lend out their surplus funds to needy institutions on condition that they are repayable at call. This type of advances is growing in importance and is termed money at Call and short notice. Its growing importance is indicated by the fact that, whereas, in 1951, it was .01 of the total assets, in 1957 it was .03. (1)

The call money rate is one of a wide variety of rates of interest which do not exhibit any logical relationship among them. The extent of this lack of correlation among them is a measure of the under-developed and ill disciplined nature of the Indian money market. The unorganised sector is, in particular, characterised by widely divergent rates.

In the organised sector the following rates of interest are of significance.

(1) The Bank rate and allied rates of the Reserve Bank of India.

(2) The Advances and Call rates of the State Bank of India.

(3) The deposits and advances rates of the Commercial Banks.

(4) The Inter-bank call money rates.

Why a Study of the Inter-Bank Call Money rate?

In the absence of a developed money market in India and within its limited sphere of the organised sector, the inter-bank call market occupies a place comparable to the London Discount Market. "The core of the Indian money market is the inter-bank call money market. Although the magnitude of the funds dealt in this market is not large in relation to deposit resources of banks, perhaps this is the most sensitive sector of the money market". (2)

The above claim of the Reserve Bank of India may be critically examined. A study of the inter-bank call money rates from 1951-57, which were published every week by the Reserve Bank of India, has interesting lessons to offer. 1951 is taken as the starting point for the study on account of the fact that, in 1951, the Reserve Bank of India adopted a new monetary policy involving a switch over to dear money policy and an attempt to have a greater control over the economy.

The Participants in the Call Market.

The major borrowers in the market are the foreign banks, as the exchange banks are called. Out of 92 scheduled banks in the country at the end of March 1958, there are 16 foreign banks. Although they generally specialise in the financing of foreign trade, latterly they have extended their activities to internal trade and industry also and to this extent they form an integral part of the domestic banking system. The growing predominance of the exchange banks as the major borrower in the call money market is a relatively recent development.

The following table brings out the position clearly.

TABLE No. I.

Ratio of Inter-bank Borrowings to Total Deposits (percentage).

	Foreign Banks.	Scheduled Banks.
1951 ...	5	4
1952 ...	9	2
1953 ...	5	1

1956 ...	26	6
1957 ...	29	1

Source:—Trends and Progress of Banking 1951 to 1957.

Statement on some Important Ratios.

The reliance of the exchange banks on the inter-bank call market has been on the increase on account of emergence of dear money conditions in the London money market.

The need for funds on the part of scheduled banks is related to the conditions in the economy. In 1951, there was heavy pressure of demand for funds which is reflected in the ratio of inter-bank debt to total deposits. The 1952 and 1953, the ratios have been falling on account of the emergence of easy conditions in the Indian money market. From 1954 onwards, the ratio has been on the increase reflecting the inflationary conditions in the Indian money market. The low ratio in 1957 is to be attributed to the expansion of deposit resources that has accrued to the banking system. The exchange banks have always been in greater need for funds than the scheduled banks because the surplus cash that they maintain with the Reserve Bank over and above the statutory minimum is far lower than the corresponding figures of the scheduled banks. The following table illustrates the comparative position.

TABLE No. II.

Ratio of Cash in Hand and Balance with the Reserve Bank to Net Deposits (percentage).

Year.	Exchange Banks.	Scheduled Banks.
1951 ...	10	11
1952 ...	8	10

lend money at call at specified rates of interest or on an advance basis. The commercial banks were given the option of resorting to either of the two methods—call or advance basis and this choice enabled the emergence of a relationship between Advances rates and call money rates. It is significant that the Imperial Bank of India announced its decision to lend at call in 1935—when the Reserve Bank of India was established—perhaps to retain its influence over the Indian money market lest it should be snatched away by the Reserve Bank. The Imperial Bank succeeded to a large extent as is brought out by the close and parallel trends of the inter-bank call rates and the Imperial Bank of India rates, the former being generally ½ per cent lower than the latter.

TABLE No. III.

Call Rates.

Year.	Imperial Bank call rates.	Highest call rates.
1951 ...	2¾	2¾
1952 ...	3½	3
1953 ...	3½	3
1954 ...	3½	3
1955 ...	3½	3
1956 ...	3½	3¾
1957 ...	4	3¾

When, in 1956, the Imperial Bank of India was nationalised, the inter relationship between the two rates disappeared. In fact, the inter bank call rate has even exceeded the rate at which the State Bank of India was willing to give loans at call. This was the case in 1956 and is explained by the stringency in the money market during that year. However, the rate came down in 1957 on account of the rise in deposit resources of the banking system.

Seasonal fluctuations and call rates:

"A noteworthy feature of the Indian economy has been the seasonal character of the movements in currency. These are reflected in an almost rhythmic ebb and flow of currency in the slack and busy seasons which are related mainly to the periods of agricultural harvests and movements of produce. Seasonal movements of currency take place in industrial countries also e.g. during Christmas or the holiday season, but the seasons pertain to unusual movements in the expending of incomes rather than in their accrual. What is significant in India is the division of the year into two seasons of fairly equal length. This stems mainly from the character of the economy and the predominance of cash transactions. Broadly speaking the busy season requiring more currency begins sometime in October when crops are harvested and moved and lasts till the end of April".(1)

TABLE No. IV.

Seasonal variations in Money supply.

	Busy season (—)	Slack season (—)
1950-51	236.9 crores	...
1951-52	24.5	214.1
1952-53	84.7	126.7
1953-54	171.6	127.6
1954-55	222.1	77.4
1955-56	263.6	3.2
1956-57	239.4	105.1
1957-58	167.6	82.7

SOURCE: Report on currency and Finance—Reserve Bank of India—1957-58.

Call rates fluctuate seasonally. During the busy season, i.e., between mid November and May, when there is pressure of demand for funds, interest rates harden and the highest level is reached during this period. During the slack season rates fall and the lowest level is touched. Thus, the call money rates are sensitive to changing conditions of supply and demand in the economy.

Range of Fluctuations—Its implication.

In analysing the call rate fluctuations below, the calendar year is chosen. It begins with the busy season, experiences the slack season and by the time the year comes to a close the ensuing busy season commences. Thus, e.g., 1951 begins with the busy season of 1950-51, experiences the slack seasons of 1951-52, and ends up with part of the busy season of 1951-52.

The range of fluctuation in call rates is a measure of the extent to which slack seasons witnesses fall in demand for funds or return of funds to the banking system. The greater the fluctuation the greater is the difference between busy season expansion and slack season contraction and vice versa. The very narrow range of fluctuation in call rate (¼% leaving aside the rise consequential to bank rate change) in 1951 is a measure of the acute financial stringency. The ratio of advance to deposits stood at 64%.

The over extended position was brought out by the fact that whereas on 11-5-1951 at the height of the busy season advances and discounts stood at Rs 586 crores, on 26 10-1951 the slack season low of Rs 500 crores was reached (2). Thus the contraction was only to the extent of Rs 86 crores which was very low compared to subsequent years. The seasonal expansion from 24-11-1950 to 11-5-1950 was Rs 180 crores. The seasonal low of Rs 150 crores on 26-10-1951 was Rs 95 crores in excess of previous slack season minimum. The unusually large demand for bank credit which continued unabated was due to—

(1) The continuation of Post Korean rise in price trend.

(2) Liberal import policy and the consequent rise in the volume of import.

(3) Free flow of goods following Indo-Pakistan agreement.

(4) Higher Industrial production.

But these factors do not explain the failure of credit to contract during the 1951 slack season. The only explanation is that traders must have continued to take a bullish view and, therefore, overstocked and held back supplies from the market in the expectation of higher prices. They could have even obtained advances against stocks at that time as the Reserve Bank of India had not yet begun to make use of devices like selective credit control and prescribing margins against advances. The result was credit inflation and the consequent stringency in the market is reflected in the narrow range of fluctuation in call rates.

(1) The Reserve Bank of India—Functions and Working—Page 16.

(2) Trend and Progress of Banking in India—1951.

The expansion of bank credit gave rise to 3 problems which were:

(1) Urgency to prevent further credit expansion without adversely affecting production.

(2) Instituting a measure of credit control.

(3) Introducing an element of credit elasticity.

The Reserve Bank of India tackled these problems in 1951 by adopting a new monetary policy. This policy involved:

(1) A rise in Bank rate from 3% to 3½%.

(2) Suspension of the traditional method of buying Government securities for relieving seasonal stringency in the money market.

(3) Willingness on the part of the Reserve Bank of India to rediscount usance bills at bank rate and relieve seasonal stringency.

Bank rate in 1951 and call rates:

The bank rate was raised in the middle of November 1951 at the advent of the busy season. It had its impact first on the Imperial Bank of India which raised its call rate from 2¾% to 3½% in 3 stages. Exchange banks raised their rates by ½% to 1½% in 2 stages and inter bank call rates hardened from ½% to ¾% in November and to 2½% in December. Thus the problem of busy season finance assumed serious proportions which was reflected in the narrow range of fluctuation in call rates.

The succeeding year—1952—was one of transition to normalcy, the busy season expansion of bank credit being Rs 99.96 crores as against the 1950-51 busy season expansion of Rs 180-29 crores. The range of fluctuation in this year was 2 3/8%. But the 1952 slack season contraction outstripped the busy season expansion. The return of funds took place in an orderly manner which was an indication that funds were required for genuine seasonal purchases.

1953 was a normal year, the range of fluctuation being 2½%. The slack season contraction outstripped the busy season expansion of bank credit.

Expanding resources and greater activity were the characteristics of the succeeding year as reflected in the narrow range of fluctuation of 1 7/8%. The position of the commercial banks with regard to their credit was at a higher level. They were not in a very comfortable position, the advances deposit ratio being 62.7%. The slack season was short and the return of funds was smaller than the expansion in the busy season.

In the next year, the range of fluctuation was about ¼% less than the call rates in 1954 and was marked by a greater degree of financial stringency than in 1954. The busy season expansion was Rs 107 crores while the slack season contraction was only Rs 32 crores. During the slack season, funds were returned to the banks in a smaller volume indicating the continuance of the demand for funds throughout the year irrespective of seasonal fluctuations. As the Reserve Bank of India suggests, this was a sign of growing diversification of the economy. Even though the demand for funds for agricultural purposes continued to display seasonal variations, the growth of secondary and tertiary sectors had a moderating influence on the extremes of seasonality.

The range of fluctuation in 1956 was low as in 1951 and was of the order of ¾%. (1951—¼%) But the reasons for the narrowness were different. No doubt, in both the years the slack seeason demand was high. But while in 1951 it was due to speculative reasons, in 1956 it was due to genuine demand for funds emanating from new industries. The level of advances, therefore, stood during the slack season, i.e., in October 1956, at the busy seeason level, i.e., April 1956, level of Rs 716 crores.

The succeeding year was one of extreme financial stringency as reflected by the narrow range of ¼% within which the call rate in Bombay fluctuated. This year witnessed the intensification of the strains which made their appearance in 1956. Bank credit expanded to such an extent that the Reserve Bank of India was compelled to make use of the instruments of credit control.

Rise in call rates in recent months has assumed disturbing proportions. It touched 4 7/16% in 1958 in Bombay while in Calcutta it went up to 4 1/8% in 1956 itself.

Bank rate, term money rates and call money rates:

In the light of the foregoing analysis, the relationship between the call money rates and the Bank rate and term money rates may be examined. Generally, call rates can be expected to be lower than Bank rate because when accommodation is available from the Reserve Bank of India it is unnatural to expect the commercial banks to approach the call market for loans at a higher rate. Although this was broadly true there was one exception. In Calcutta, the call money rates had gone beyond the Bank rate because the exchange banks preferred the call market on account of its greater flexibility. No securities were insisted upon, whereas the Reserve Bank of India advanced only against securities.

Generally, the term money rates, i.e., the interest rate on three months' and six months' deposits, follow the lead given by the call rates, but the term rates were more rigid than call rates. Fluctuations in term money rates were common in Bombay while in Calcutta and Madras they were not. But when the Bank rate was put up, the term rates rose in all the centres.

A peculiar feature of the relationship between 3 months' and 6 months' rates may be pointed out. The 6 months' rates should be higher than those of the shorter term and in Madras and Calcutta this held good. But in Bombay the 3 months rates' were higher than the larger term ones because of the greater importance the banking system attached to 3 months' deposits.

Recent Developments in the Inter-Bank Call Money Market.

Increasing competition for funds by the exchange banks had been a major cause responsible for the rse in call money rates in recent months.

The recent increase on their dependence on the call market had been due to the emergence of dear money conditions in the UK making it uneconomic for them to rely on the London market for funds. The emergence of dear money conditions is brought out by the table given below:

TABLE No. V.

UK Bank Rate.

1952	4%
1953	3½%
1954	3%
1955	4
1956	5½%
1957	5½ to 5 to 7%

Moreover, even though the deposit resources of the banking system have been expanding, the share of deposits accruing to the exchange banks has not been commensurate with their rising needs for funds. Page 14.

Implications of High Call Rates:

Prevalence of high call rates makes the banks regard it as an ideal outlet for their surplus cash. To this extent, commercial banks' investments in other assets, in particular in treasury bills, are adversely affected. In view of the heavy borrowing programme that the Government have for the execution of the plan, adequate response to the issue of treasury bills and securities and moderate costs in terms of interest charges are of importance.

Besides, high call rates had led to high deposit rates which meant a deposit war. High rates on deposits had led to low earnings to the commercial banks as the review of the working for banks had shown.

When, consequently, the rates on time deposits go up, the business sector locks up its funds in the form of time deposits. This is reflected in the greater rate of growth of time deposits than demand deposits of business people. This restricts the business activity in the economy.

Moreover, call rates which are in a way anticipated would if sustained for a long enough period, prevent further downward readjustment of the interest rate structure. This was described by the Governor of the Reserve Bank of India as a situation where "the present interest rate structure is disorganised and illogical".

It was this type of reaction in August 1958 that precipitated the disappearance of call rates except for inter bank in India.

Measures for lowering interest rates alongside with the abolition of the call rates:—

The need for a downward readjustment of rates was felt and consequently 37 prominent exchange and Indian Banks entered into a voluntary agreement about the best interest terms to be conceded by them from 1st October, 1958. The terms of the agreement were:—

(1) Maximum rate of interest on any time deposit for less than 3 months and deposit at 7 days' notice or more shall not exceed 3-7/8 per cent per annum and on time deposits for 3 months and over shall not exceed 4 per cent.

(2) Minimum period for deposits shall be 7 days or subject to a minimum of 7 days' notice.

(3) No interest shall be paid on deposits payable on call or no notice of less than 7 days.

(4) On savings deposits the agreement has fixed the maximum rate of interest as 2½ per cent and the maximum amount on which interest is payable as Rs 50,000/-.

CONCLUSION.

The present need for resources and certain developments in the economy make the determination of the proper interest rate difficult. One of the recent tendencies noticed in the composition of deposits is the rise in time deposits compared to demand deposits. The major factor responsible for this shift in deposits is the higher interest rates offered on time deposits. Such a development provides the proper atmosphere for the success of the Government's loan operations. The Government have been floating loans offering high rates of interest to attract savings for employment in public sector. Such a policy is bound to have its impact on the structure of interest rates in the form of an upward tendency. But high rates of interest with mounting public debt year after year are sure to enhance the burden of interest payment to the exchequer.

From such a point of view, the Agreement on call rates is a step in the right direction. With this Agreement a great obstacle preventing the downward adjustment of interest rates has been removed. The absence of such a remunerative short term outlet for funds for the commercial banks will induce them to increase their bills portfolio and thus enable the development of a bill market in the country.

A Five-Year Plan for Banks

"The institution of Banking has transformed itself into different shapes and forms in different countries and at different times in the same country in order to meet the requirements of changed contexts."

—Necessity for a Banking Plan:

By B. K. DUTT

THE growing tempo of economic activity in the country has called for increasing pressure on banks' resources, in that demand for accommodation has risen sharply. Besides, there has been medium-term use made of short-term accommodation. As a result, both the outlook for and the role of the banking system have undergone a revolutionary change. Thus, it has become apparent, as Mr B. K. Dutt has remarked, that a Banking Plan is necessary for meeting the situation in view of the changed context. Mr Dutt suggests that, "to remain useful, the Indian banking system has to undergo certain changes in its thinking and objectives." And this, Mr Dutt says, consists in the need for the banking system "to think in terms of conforming to the requirements of the changing social pattern and the national economy as it emerges out of its colonial form."

The underlying reasons for the banking position as it obtains today can be traced back to the fact that India is now in the process of taking strenuous steps swiftly to transform its economy from its erstwhile colonial one to that of an industrialised nation. For this purpose, a set of projects under the title of the First Five-Year Plan has already been completed; and a second set of schemes comprised in the Second Plan is now being implemented. Both Plans have a direct impact upon the banking system; unfortunately, it would appear that few have realised this inter-connection. It is certainly true that little has been done by way of a study of banking needs, except for the Shroff Committee's deliberations on Finance for the Private Sector. But, as we shall presently show, the repercussions of planned endeavours have been keenly felt by the banking system; and it can be taken as certain that, in the forseeable future, the new strains imposed upon banks will be greater. Consequently, it has become a matter of vital importance to the national economy, that careful thought should be paid to the evolution of a Banking Plan.

When the First Plan was drawn up, it was taken for granted that the tempo of economic activity would show a rise forthwith. What actually happened was, however, to the contrary. In 1951-52, both Notes in Circulation and Deposits of Scheduled Banks declined by sizeable margins; and the experience in the next year was the same, except that the declines were smaller. It was not until 1953-54 that the process was reversed. We may, at this point, consider why this was so.

It was assumed—erroneously, as it turned out—that Plan expenditures at the rate of Rs 400 crores a year were bound to be reflected in currency circulation. But what was overlooked was the fact that the disbursements in this regard were made largely on agricultural projects; and money spent thereon, although it had a currency of its own, obstinately refused to percolate into the banking system. Secondly, insufficient regard was had for the fact that India has more than one money market. There is, in the first place, the money market proper, which functions in the urban areas: There is, in the second place, the black money market, in which all transactions are in cash representing tax-evaded incomes. There is, in the third place, the residual money market consisting of the large tracts of this country which are not urbanised. (For the purposes of this study, we can leave aside the second money market since the process of transforming black money into white is beyond the scope of this article. But the other two money markets are important; both have grown in recent years, both require modification and dynamic action on the part of banks). What sets a poser for the Indian economy is that there are no effective links between the urban and agricultural (or rural) money markets. The banking habit, for reasons we need not go into, is not so much in vogue in India as it should be. It thus happens that the currency circulating in the rural money market enjoys a restricted and limited field; and, on this account, the money market proper suffers.

Since the emphasis laid by the First Plan was on agriculture, it was inevitable that Plan disbursements did not immediately benefit the urban money market (or, to use a term which in this article will be interchangeable, the banking system). The First Plan also had a series of projects for the industrial sector; and, because the state of the capital market was such as not to allow of money flowing easily for new enterprises, industry in its own way set about the task of finding the resources needed for expansion.

For the future, since the Second Plan's emphasis upon industrialisation, it is to be presumed that planned expenditures will more immediately be reflected in the banking system. For these reasons, it is to be suggested that, in the presently functioning banking system, the pace of increase in Deposits will be more satisfactory. But such increase in Deposits will not suffice for the successful contribution by banks to the Second Plan. For, the resources needed in behalf of the Second Plan are for a substantial amount. The planners originally relied upon deficit financing to take care of 25 per cent of the resources for the State enterprises. The other avenues open to Government are taxation and borrowings. It need scarcely be stated that, firstly, the scope for increasing rates of taxation is limited; and secondly, it is proper that development plans are financed by borrowings. It is in this context that Mr Dutt's thesis on the Necessity for a Banking Plan is greatly useful. A properly devised programme, he says, should create conditions whereunder:

"(a) the Government can float new loans to the extent the Plan requires, instead of frequently looking to taxation measures or undertaking excessive deficit financing.

"(b) the private sector can raise additional risk capital, long-term finance, medium-term finance and short-term finance, and

"(c) the banking system may attain an improved status through its service to the society, so that its assistance will be sought and advice properly considered in shaping the national economy."

It is to be suggested that the pithy answer to the problem lies in the consolidation, rehabilitation and development of the banking system. Consolidation and rehabilitation engender confidence; and confidence paves the way for development. Development brings about an increase in Deposits; and higher Deposits enable larger subscriptions to Government loans. Mr Dutt has given considerable thought to the question; and his proposals need to be closely examined by all the concerned interests.

Mr Dutt advocates the formation of a Rehabilitation Finance Corporation for a constructive assessment of sub-standard banks. In order to prevent disturbance of the economic life, "a plan of rehabilitation requires to be formulated on the basis of a constructive attitude to borrowers and protection of depositors of the substandard banks other than those in the course of winding-up." For this purpose, the Rehabilitation Finance Corporation, wholly owned by the Reserve Bank or by Government, would:

"(i) make a quick survey of the assets of the Banks in liquidation, acquire them at such price as it, in consultation with the Reserve Bank of India, considers proper and hand over the value to the liquidator for distribution to the depositors of the banks in liquidation. (It should be possible to carry out this operation within a period of, say, 18 months);

"(ii) provide capital (on a preferential and redeemable basis) for those banks whose deposits have not been impaired;

"(iii) arrange merger or coversion into subsidiaries, of banks whose deposits have been impaired, on the basis of proportionate reduction of their deposit liabilities;

"(iv) arrange consolidation of banks in units of suitable size and having regard to their area of operation;

"(v) arrange with the Licensed banks for taking over the management on behalf of the Corporation, of all or some of the assets of the Banks in liquidation;

"(vi) arrange progressive disposal of the bank shares held by the Corporation, in the first instance to licensed banks with consequential conversion into subsidiaries of the banks whose shares are to be so acquired, and then, gradual resale by the licensed banks to the public, when the subsidiary banks may operate as independent units;

"(vii) arrange proper training of employees in sub-standard banks."

The Rehabilitation Finance Corporation is an integral part of Mr Dutt's Banking Plan, for the simple reason that the spread of the banking habit is to substantial extent dependent upon the confidence enjoyed by the banking system as a whole. Estimates prepared by Mr Dutt indicate that attention needs urgently to be paid to the taking of timely action for forestalling any weaknesses that may emerge in the banking system because of the sub-standard banks.

Mr Dutt suggests that a five-year programme should be prepared for the opening of 1,000 new bank branches annually. The immediate reaction is likely to be that banks cannot afford such a costly (not to say extravagant) venture. For, the main reason for the nationalisation of the Imperial Bank lay in the fact that it could not, as a private shareholders' bank, undertake the financial responsibility for establishing 400 branches over a period. New branches lose money; and banks cannot afford such loss.

—It is, however, clear that such a programme of expansion of bank branches is desirable in the national interest. What is more, it is also desirable from the narrower standpoint of the banking system. The spread of branch banking will bridge the gap between the rural and urban money markets. Flow from the one to the other will be facilitated. The banking system will in due time be enabled to possess itself of resources which had hitherto been denied to it. It is in the national interest desirable because resources now idle will be mobilised for the country.

Over 750 Offices and Enlarged Services

Do you know how rapidly the State Bank of India is expanding? On 1st July 1955, when the Imperial Bank of India was reconstituted into the State Bank of India, there were only 243 branches. As at the end of May 1959, 295 additional branches were opened in urban and semi-urban areas. The rate of growth now exceeds 100 branches a year. The Bank has also 240 sub-offices.

With a net-work of more than 750 offices spread all over the country and many more to follow, the State Bank is particularly suited to handle your remittance and collection business.

Thousands of account holders have benefited by the wide range of services offered by the Bank. You too can take advantage of the Bank's services.

Why not contact the nearest Agent of the Bank to talk things over?

All-India Inter-Bank Agreement on Maximum Rates of Interest on Deposits

(1) This agreement shall not apply to inter-bank transactions.

(2) It shall apply to all banks incorporated outside India and to banks incorporated in India having deposits of Rs 5 crores or more as shown by their respective latest balance sheets.

(3) Banks not coming within the purview of this agreement shall not be allowed on their deposits with the participating banks rates and/or terms better than those agreed to herein.

(4) Current, Savings, deposit accounts of members and ex-members of the staff either singly or jointly with their close relatives and accounts of the banks' staff provident fund will be outside the purview of this agreement.

1. CURRENT ACCOUNTS:

Interest at 1/4 per cent, on daily or minimum monthly balance at the option of the banks except at Bombay, Calcutta, Madras, Delhi and New Delhi where interest at 1/4 per cent should be allowed only on minimum monthly balance of Rs 4,000 and over.

Interest should be paid only if it amounts to Rs 5/- and over per half-year. Existing special arrangements to be terminated on giving three months' notice from the date of agreement. Banks which are parties to the agreement should inform the Committee without disclosing the details of the special arrangements that they have terminated them on giving the required notice from the date of agreement.

Banks are free to make special interest arrangements not exceeding 1 per cent per annum for charity accounts.

EXCEPTIONS: If countervailing interest is paid on a credit balance against a debit balance in the same name, the rate shall be at least one per cent lower than the rate at which interest is charged on the advance provided however that the countervailing interest on a credit balance may be allowed at the same rate as that charged on the debit balance if the separate accounts are maintained only to meet the accounting requirements of the Reserve Bank of India Bill Market Scheme. Interest shall not be paid on any amount in excess of the debit balance, at a rate higher than 1/4 per cent per annum.

2. CALL AND TIME DEPOSITS:

The maximum rate of interest on any time deposit for less than three months and deposit at notice of seven days or more shall not exceed 3.7/8 per cent per annum and the maximum rate of interest for any time deposit for three months and over shall not exceed 4 per cent per annum. The minimum period for a deposit shall be 7 days or shall be subject to a minimum notice of 7 days.

The minimum amounts for which deposit receipts may be issued shall be:—

(a) Rs 25,000 for money at 7 days' notice.

(b) Rs 10,000 for money at more than 7 days' notice, upto one month.

A deposit of less than Rs 10,000 can be received for a period of more than one month.

Any interest allowed on a time deposit after its maturity date, or on a deposit payable on notice after the expiry of notice given, shall not exceed 1/4 per cent per annum.

EXCEPTIONS: When a bank is subsequently asked to renew a deposit either wholly or partially for a further period not less than the period for which it has remained overdue or seven days whichever is longer, interest may be allowed on the portion renewed at a rate appropriate for the period of renewal or the renewal receipt may be issued as being effective as of the date the original receipt became due for payment.

No interest shall be paid on deposits payable on call or on notice of less than 7 days.

Banks in their discretion may make payment of time deposits before due date but in such cases either no interest shall be paid or a loan may be granted against the time deposit, at a rate of interest of 1 per cent above the deposit rate. Overdraft or cash credit may be allowed against a time deposit at 1½ per cent above the deposit rate.

No optional terms shall be allowed on time deposits. Time deposits for more than two years should not be accepted except by way of Cash Certificates mentioned in the agreement.

3. SAVINGS BANK ACCOUNTS:

The maximum amount on which the interest will be paid shall be Rs 50,000/-.

The maximum rate of interest shall be 2½ per cent per annum on minimum monthly balance.

Withdrawals by cheque may be permitted, but the amount should not be used as a Current Account.

4. CASH CERTIFICATES:

Cash Certificates shall not be issued for a period of less than three years and the rate of interest shall not exceed 4 per cent compound per annum on Cash Certificates for less than five years and 4½ per cent compound per annum on Cash Certificates for five years and more.

Amounts of Cash Certificates may be paid before their due dates at the option of the banks and interest may be allowed for the expired period at a rate which shall be at least 1/4 per cent less than the rate allowed on the full period. No interest shall be paid for a period less than six months and thereafter they shall be payable on a minimum of 7 days' notice.

Printed terms and conditions in respect of rate of interest, issue prices and notice period for withdrawals should not be relaxed.

If any banks have any cumulative or recurring deposit schemes already in existence, they may continue the schemes, provided that the rate of interest paid does not exceed 4 per cent compound per annum.

5. NO OTHER DEPOSITS:

No deposits of any class or type other than those described in the agreement should be accepted.

6. RATES OF INTEREST:

The rates of interest on the various types of deposits mentioned above will be effective for a period of six months at a time, and may be varied at the end of such period by a referendum, but may be revised during such period, by the Executive Committee according to changes in the Reserve Bank of India rates.

7. BROKERAGE:

Brokerage shall not exceed 1/8 per cent per annum. It shall not be paid to the depositors.

8. GENERAL:

Banks with head offices in India having deposits of between Rs 25 crores and Rs 5 crores as shown in their latest balance sheet will be allowed a latitude of 1/4 per cent interest per annum for term deposits.

The Devkaran Nanjee Banking Co. Ltd., and the Union Bank of India Ltd. voluntarily agree not to take advantage of the above latitude of 1/4 per cent interest per annum on term deposits unless their accounts at the end of 1958 show their deposits to be less than Rs 22½ crores.

This rule is however subject to immediate revision if it is found that the interests of the larger banks are being adversely affected to an appreciable extent as a result of this concession.

A member bank may withdraw from the agreement by giving minimum six months' notice in writing to the Executive Committee. If as a result of the withdrawal or resignation of one member, other member or members wish to withdraw, their notice period will count from the date of notice of the original member.

9. COMPOSITION, VENUE AND POWERS OF THE ALL-INDIA INTER-BANK AGREEMENT EXECUTIVE COMMITTEE:

The above Committee shall consist of the Chairman of the Indian Banks' Association as Chairman and two representatives of the Exchange Banks and two representatives of the Indian Banks' Association as members.

The Committee shall function in Bombay where the Central Office of the Reserve Bank of India is located.

The powers of the Committee shall be—

(1) to examine all disputes that arise from alleged infringements of the All-India Inter-Bank Agreement on Maximum Rates of Interest on Deposits. The findings of the Committee shall be final and the Committee may, at its discretion, circulate the name of a defaulting member among other subscribing banks.

(2) to change rates as authorised in 6 above.

Bank Earnings & Expenditures

We have seen, in the course of this Supplement, that the Deposit resources of the banking system have, since around the 1956 slack season, been gathering at a spectacular rate. But, well into 1958, there continued to be unremitting competition for Deposits. As a result, the rates of interest paid on Deposits have consistently been high. Due to the availability of attractive rates for term money, not only have new resources been mainly in the form of Time Liabilities, but there was also a tendency for a switch-over from Demand Liabilities to Time Liabilities. As such, a larger portion of bank Deposits came to bear a higher rate of interest.

We have seen that, on the other hand, the expansion in Advances, which had outstripped, until the 1956-57 busy season, the growth in Deposits, came from that time to be moderated. It was only during the 1958-59 busy season that the demand for bank accommodation was such as to cause some element of stringency in the money market. Indeed, in both 1957 and 1958, the smaller rise in Advances relative to the increase in Deposits caused bank earnings to be adversely affected. It is true, banks at this time showed heightened interest in giltedged. But, clearly, the high cost of Deposits could not be offset by the earnings possible from interest on giltedged holdings. As far as Advances are concerned—we may add—the prospect is one of steady expansion, but, at the same time, the expansion is likely to fall short of the rise in Deposits.

It was, thus, only in the closing months of 1958 that concerted action was taken by the banks to eliminate the ruinous Deposits war. The action was taken too late to be beneficial in respect of 1958 accounts. What is more, if the results for the first half of 1959—when Advances showed a satisfactorily large expansion—offer any clue, it is that, without further limitation on bank expenses, the earnings of the banking system will be exposed to a further squeeze. This would not in the least be desirable, since a sound banking position is necessary if the sometimes doubtful risks are, in behalf of planned endeavours, to be taken by banks.

How disquieting the earnings experience of banks is, can be seen from a study of the Big Nine among Indian Scheduled Banks. (We may note here that one or two of the Exchange Banks, in respect of their Indian operations, disclosed a loss during 1959). The figures given at the foot of this page may in this regard be analysed.

It will be seen that, in the five-year period since 1954, the gross income of the Big Nine practically doubled. This bears testimony to both the increase in Advances and to the higher holdings of giltedged. In broad terms, gross income in 1958 was higher than the 1954 figure by Rs 24 crores. But this did not much avail the banks. For, interest paid has trebled over the same period, the actual rise working out to Rs 14¼ crores. With salaries and allowances rising by over 50 per cent as compared to the 1954 figure, a further Rs 6 crores of the increase in gross income was dissipated. The balance of profit which, by 1957, had risen by over Rs 2 crores as compared with the figure for 1954, fell in 1958 by nearly 10 per cent or Rs 61 lakhs. We may also remark that the smallest increase has been registered in the amount absorbed by dividend.

We wish to emphasise, therefore, that, without delay, banks must themselves institute measures so that they are able to effect a reduction in their expenditures. This, clearly, must be in the form of lowering the maxima allowable as interest paid on Deposits. Both the state of the money market and the position of the banking system require such downward revision of the interest payable, in terms of the inter-bank agreement, on Deposits. In the second place, the authorities should recognise that the banking system cannot afford a higher burden in the form of higher wages for labour. It is quite a different thing if the work load is bettered, and in consequence a higher wage is sought. But bank wages should be linked with productivity, and any move for higher wages, merely because banks conserve earnings by limiting interest on Deposits, must be firmly resisted.
